and Greek. No doubt this scheme has its difficulties, but *the facts* which we possess leave us nothing but a choice of difficulties, of which we can only choose the least. It seems the opinion is gaining ground that the Sanscrit, the Greek, and the Latin, have been all borrowed from some lost language. But it is difficult to believe that a written language should be quite lost, after it had been brought to such a high state of refinement as it must have been, to have furnished the points of similarity in the three languages. Where did this language live? It is incredible that such a language should have existed, and no traces of it be left? It must have had books innumerable. I am every day more convinced that the Sanscrit was a secret language formed by its priests, who had travelled to the West, before the founding of Rome or the institution of the Olympiads of Greece; but still after the time of Homer,—perhaps in the seventh or eighth century before Christ,—in the Saturnian times of Italy, and when several of the most important Indian customs came to Thrace and Europe, as I shall shew, and when that language, which Plato says was lost, was still spoken in Greece. When the Christian Roman Emperors became masters of Upper Egypt, the Ethiopians were converted to Christianity, and then it would be that the temples containing such groups of mystical figures as that at Ipsambul, described in Book V. Ch. XI. Sect. 6, would be dismantled. I think it probable, that the original Christianity of Upper Egypt was correctly the Christianity of Buddha or Cristna. The Brahmins, as I have already mentioned, often tell the English to reform their religion, which they say is only corrupted Brahmanism. If we do not discover many remains of it except the style of writing, and the other examples of identity in the two languages pointed out by Sir W. Jones, &c., we need not be surprised. We must not forget that the country was for many hundred years in the hands of a ruling power, whose exertions to secrete truth never ceased, and whose successors in India and England still continue the practice to the utmost of their power. Their studied concealment of the contents of the temple of Bal-iji, at Punderpoor, proves the fact past contradiction. They may abuse me for illiberality if they please: belief is not a matter of choice but necessity, and I feel obliged to believe that they have not noticed the contents of the temple, because they knew it would let out some unpleasant truths. Why was Mr. Moore tampered with to suppress it?

In Book V. Ch. IV. Sect. 11, I have made a reflection upon our orientlists of Calcutta, which will be scouted for its illiberality. Since I printed that passage, I have discovered the following speech by Sir William Jones, their great *Aleim*: “The two engravings in Giorgi’s book, from sketches “by a Tibetan painter, exhibit a system of Egyptian and Indian Mythology: and a complete “explanation of them would have done the learned author more credit than his fanciful etymo- “logies, which are always ridiculous, and often grossly erroneous.”¹ This refers to my figures in the plates, number 14. Georgius did not give an explanation because he could not give it, not understanding it. But he did not suppress, but published the fact, which Sir W. Jones, to all intents and purposes, suppressed. He then censured the Jesuit for his candour in having printed it. It is an exact counterpart to his disgraceful misrepresentation of the great Bailley.² He was not angry because the Jesuit did not explain it, but because he published it, which was done with the consent and approbation of the Roman See, as witnessed by its imprimatur. I am ashamed for my country when I am obliged to say, that when Sir W. Jones made the observation or accounted for the events in the life of Cristna, (related in Book IV.,) by their being copied from Apocryphal Gospels, he knew and concealed the fact of the crucifixion in Nepaul. Thus he stands convicted of a pious fraud. We need go no farther now for the cause of his having been bespattered with praises by the priests.

¹ Disc. on Mount. of Asia, Asiat. Res. Vol. III. p. 11, ed. 8vo.

² Vide Celtic Druids, p. 45.

I entertain a strong suspicion, that figures and arithmetic, as well as writing, were for many generations confined to the order of priests; that they were considered to be magical or judicial astrology; and that, after they became commonly known, Hieroglyphics were invented to supply their place. When the priests could no longer conceal the art of writing, which most likely came to be known in the struggles and desperate wars for empire between the swordsmen and the gownsmen in the East, various contrivances were resorted to.

Actuated by the same selfish desire of retaining in their own hands the *Key of Knowledge*, as I before stated, the Jews yet keep a solemn fast, on the day on which they believe the LXX translation was finished.¹ This is as a penance for their great national sin in having permitted it to be translated by Ptolemy, and thereby made public. This is the last proof which we possess, and a decisive proof it is, of sacred writings concealed, and also of their forced exposure. In this system of Masonic secrecy we have the reason why, on the Cyclopean or Druidical buildings, there is no inscription, although the cycles, &c., which they exhibit, most clearly prove the profound astronomical learning of their founders.

I must now make one more observation on the antiquity of the language of the tribe of Abraham. Whether or not their sixteen-letter system were that of the Samaritan or Synagogue Hebrew, (Chaldee,) it must be very ancient. It must have come from India before the Sanscrit was increased to *fifty* letters. It is the most simple of all the languages with which we are acquainted. I contend that it betrays, as I have stated, in its construction, the most unequivocal signs of almost primeval simplicity, and evident proofs of formation by *degrees*, as we should say in a great measure *accidentally*, without any preconcerted plan. Our learned men have endeavoured to reduce it to system, but, in fact, almost in vain. Among other things they have divided the letters of the Synagogue Hebrew into radical and servile, making of the latter, which ought never to form a root, ELEVEN in number. But this is merely an imaginary and arbitrary, and indeed unfounded, division or rule, as it is clogged with great numbers of exceptions. I am satisfied, however, that nothing like a *rule* can be formed, nor is it likely, from the nature of the case, that it should. We may be very certain that neither the tribe of Abraham nor any other nation would increase its number of letters until it found it wanted them; and when it did add more letters, we may be very certain that it would instantly use them. The language must have deviated from its first simplicity, in the method of speaking words, which made those who used it feel a want of new letters. If they had not wanted new sounds and letters representing them, the number *sixteen* would have been abundantly sufficient; but they must have formed words or sounds for the representation of which they must have imagined that the old letters were inconvenient or inadequate. Learned men fall into a great mistake in supposing that written language was the produce of profound learning: it was, on the contrary, generally the produce of ignorance and of the necessities of, comparatively speaking, unlearned and uncivilized man, and, probably, as I have said in my Preliminary Observations, must have consisted, at first, of right lines. Of this more hereafter. I beg it may be understood that I by no means wish to throw any impediment in the way of philosophical inquiries into the origin of language or letters; but I do most unequivocally protest against the assumption, in the first instance, that language is the produce of philosophy, or indeed even of system. Letters are like language, the offspring of circumstance, not of system; and grammar is an attempt to reduce them both to system. To this the PERFECTED or the comparatively speaking *modern* Sanscrit is, of course, an exception. The existence of Sanscrit words, in the languages of the nations West of the Euphrates, although those nations have not the Sanscrit number of letters, shews that an old language must have existed common to them all before the Sanscrit was per-

¹ Hale's Chron. Vol. I. p. 73.

fectd. It goes to prove that all the nations had at first a sixteen-letter system ; the Ioudi and Hellenes increased them to *twenty-two*, and other or later orientals to *fifty*.

The Buddhists in Upper India have their sacred books in the Bali or Pali, by which I mean the Pracrit language, and for the better understanding of it they interline it with the Sanscrit as an explanation.¹ This is something similar to the old practice of the Jews in their synagogue, who read their Pentateuch Hebrew a verse in the original, then the same verse in the Chaldee, alternately, for the use of the people to whom the old language was obsolete. This tends to prove the Sanscrit in Upper India, i. e. Mewar, *new*.

21. I think I may safely lay it down as an indisputable principle, that if a colony or number of emigrants come from one country to another and bring a written language, they will bring the whole number of letters they used in their old country, and that, with perhaps some very trifling exception, not fewer will ever after be used. From this it follows, that the Sanscrit words and forms of construction, which are both in the Greek and the Latin, must have come to the West before the Sanscrit was perfected to *fifty* letters. This consideration renders it highly probable that Col. Wilford's assertion, that the Sanscrit alphabet originally consisted of the Pelasgic or Cadmæan letters, is correct. It is a most important observation, and of itself almost proves the truth of my theory, of the universal dissemination of the Cadmæan system. I very much suspect that almost all the languages of India, Sanscrit excepted, are now of the nature of a Lingua Franca. India is in language very much like Europe. Each of the two is a little world to itself; every province or kingdom of which has a separate and distinct language, and, in writing, though not in printing, also a separate and distinct letter; but all having, from intermixture by conquests and other causes, a great intermixture of words; and all having a close connexion with the dead language of its learned men and priests—the Sanscrit. The Latin is now to Europe what the Sanscrit is to India; and if it were not for the art of printing, the forms of letters in Europe would be just as various as the languages. The letters in unprinted languages vary as often as the handwriting of individuals. The art of printing has given a degree of fixedness to letters unknown in ancient times, and still unknown in oriental countries. Although I dissent from much of what I find in Col. Van Kennedy's book, I quite agree with him, that he has proved the absolute uncertainty of the translations of the ancient oriental manuscripts and medals. We must always recollect that when an oriental professor claims to give us a translation, we have, in many cases, no means of judging either of his honesty or of his capacity for what he undertakes: whatever he tells us we take and must take. I mean by this no reflection on oriental scholars, farther than to place them pretty much on the same footing with translators of the Bible; only that their translations of medals and manuscripts may and ought, in most cases, to be considered somewhat more doubtful, as we have seldom the means of correcting them. A pretty good example is afforded in the translation of Ferishta, by Dow. My friend Col. Briggs declares that it bears not the most distant resemblance to the original: then which of these two translations are we to believe? The answer cannot be doubtful when all the circumstances of the two are considered. Again, Mr. Colebroke declares that the translation of another work, made by one of the missionaries, has no similarity to the original. Here again I can entertain no doubt to which of the two the credit is due. Oriental scholars are not entitled to claim exemption from human frailties, any more than Hebrew translators. They are equally liable to make mistakes; and, what is much more to be dreaded, to be influenced by religious prejudice. Of the latter, Van Kennedy is no bad example: for though

¹ Col. Tod's Hist.

his work is full of useful information and sound observation, yet a religious motive is evidently at the bottom of it, and throws a shade over it.

22. The result of all my inquiries respecting the Sanscrit is, that I conclude it was invented in the kingdom of Oude or Iouda or Youdia, in North India, by a people speaking a language, the words of which were nearly Hebrew or Chaldee, perhaps improved by the addition of the vowels to the syllables, making it nearly African Ethiopic, and being in fact an improved Syriac, and Pushto, or the first Tamul; that the letter of this people was nearly the oldest Samaritan, and that it was the produce of a great number of years, and brought to its last perfection about the time of Alexander by Brahmans returning to India from the West; that its letters, the Devanagari, were formed on the Samaritan, and the language modelled on the Latin and Greek; that it was invented after the composing, perhaps after the committal to writing, of the Poems of Homer; and that its object was to secrete the learning and elevate its owners above the people, perhaps above the princes of their country. When I come to that part of my work where I shall explain the origin of letters and of the language of ciphers, which was the first written language, I shall return to the subject of the Sanscrit, and shall support what I have said above by some additional observations and circumstances.

CHAPTER II.

MARQUIS SPINETO. — HIEROGLYPHICS NOT ANCIENT.—EDINBURGH REVIEW ON CHANGE OF LANGUAGE.—KNOWLEDGE OF HIEROGLYPHICS SUPPOSED LOST BY GREEK AUTHORS.—NAMES OF THE PTOLEMIES AND ROMAN EMPERORS ON MONUMENTS.—TRANSLATION FROM CLEMENS AND THE ROSETTA STONE.—JEWISH EXOD PROVED.—AN OBSERVATION OF MR SALT'S.—SIR W. DRUMMOND ON HIEROGLYPHICS.—ROSETTA STONE A FORGERY.—REWARD OFFERED BY AN EMPEROR FOR THE DISCOVERY OF THEIR MEANING.—VARIOUS PARTICULARS RESPECTING THE NATURE OF THE SUPPOSED LANGUAGE.—MARQUIS SPINETO NOT A SCEPTIC, &c.—BENTLEY: ZODIACS. ESNE. DENDERA.

BEFORE I proceed to the subject of this chapter, I shall submit to my reader a few observations upon the far-famed *discoveries*, as they are called, by Messrs. Young and Champollion.

1. Some time ago a learned foreigner, the Marquis Spineto, gave a course of lectures at Cambridge, on the discoveries of Messrs. Young and Champollion, which he has since published, and in which he has explained them at great length. To these lectures, as the most authentic account or summary of those discoveries with which I am acquainted, I shall very often apply in the course of this chapter.

Among the Western nations, in general, Egypt had the credit of being the parent of letters. This idea probably arose from the circumstance, that they were used in Egypt a considerable time before they arrived in Europe. Mon. Champollion thinks he has reduced the number of the Hieroglyphical letters, in one system, to *seventeen*, and the Marquis Spineto, in his lectures,¹

¹ Page 95.

says he thinks that the Egyptian alphabet in the time of the Pharaohs consisted of this number of letters. These circumstances powerfully support the system of the sixteen letters advocated in the *Celtic Druids*, and in the Preliminary Observations to this work.

2. After having inquired with great care and attention into the discoveries believed to have been made of the meaning and history of the Hieroglyphics of Egypt, by Messrs. Young and Champollion, I have found nothing which satisfies me respecting either their great antiquity or their priority to the art of alphabetic writing. I still continue convinced that the knowledge of letters preceded the invention of hieroglyphics. But I see no reason whatever for maintaining that the same process should have taken place in the invention of them, both in the old and the new world. I am equally convinced that the discoveries of Messrs. Young and Champollion are mere chimeras; that either they are deceivers, or that they have been deceived. But before I proceed, I must beg my reader to recall to mind what I have said in the first chapter of the Preliminary Observations, and the proofs I have there produced, that the Pyramids preceded the invention of Hieroglyphics.

It has been maintained, and is demanded by many of the learned to be admitted, *as a postulatam*, that in every country the first attempts towards writing consisted in a rude delineation of material or physical objects. Now this I cannot allow: and I call for proof of the assertion. I maintain that there is not only no evidence in its support, but I am quite certain that there is much evidence of the direct contrary. Plato, Cicero, Pliny, Diodorus, and others, have been quoted to prove that the Egyptians were the inventors of letters; but all they say, when their whole text and context are considered, is, that letters came from Egypt to the West, or that a certain Thoth, whom I have clearly proved to have been the Buddha of India, invented them. The very circumstance of Thoth or Buddha having invented them, proves them not of Egyptian original. The idea that the Egyptians should invent and use the complicated system on their monuments, when they knew the more simple system now practised, has been turned into ridicule. But the same arguments apply against their continued use of the complicated system to the time of the Antonines as to their first adoption of them, if they did so long use them. The argument will prove that they had not the use of alphabetic writing in the time of the Antonines. I take up the argument and say, It is proved by Messrs. Young and Co., that hieroglyphics were in use in the times of the Roman Emperors: this, therefore, is a clear proof that the Romans as well as Egyptians were ignorant of the use of alphabetic writing, *q. e. d.* This is a fair and conclusive argument against Messrs. Young and Champollion. But irony apart, I must say I can see no other way of accounting for the continuance of this system, if it did continue, to the time of the Romans, than a wish for concealment from the vulgar. What else could induce them to continue this most complicated system, when they might have used the beautiful Greek letters, well known and always common in Egypt after the time of Alexander, nearly four hundred years before Christ? For my theory, viz. that they were used for concealment, I shew a plausible reason in addition to the support of historical evidence; but the opponents of my opinion can give no reason for theirs. In addition to the above, many rolls of Papyri, covered with letters, have been found inclosed in mummies, of which the cases are covered with hieroglyphics.

3. It is said by a very able writer in the Edinburgh Review, who is considered the great advocate of Messrs. Young and Champollion's discovery, "That the hieroglyphic inscriptions, executed so late as the reign of Antoninus, are read into the very same language as those which belong to the age of Sesostris. Nor is this at all remarkable or extraordinary: for in the East, language, **LIKE EVERY THING ELSE**, is immutable." Immutable in the East! Good God! immutable! Yet there are hundreds of different languages, hundreds of sects, the highest refinement and skill in manufactures of all kinds, which must have been brought to perfection by degrees, great changes in Religions, and accounts of unceasing revolutions in governments! But in the state

they now are, they must have been created thousands of years ago, *for nothing changes in the East!* Every thing is as it was originally created! All is immutable! This seems very extraordinary. I know no spoken language which has not greatly changed, except the sacred language of the Pentateuch, and the sacred artificial language of the Hindoos, the Sanscrit,—and even they have not been entirely exempt from the law to which every thing in this sublunary world, and probably in the whole creation, is subject. Every *constantly-used language, like every thing else*, has changed and always will change, and that greatly in long periods; and one of the most suspicious circumstances which I know of, relating to this subject is, that the hieroglyphics of the time attributed to Sesostris should be capable of being read into the Coptic of the time of Antoninus,—the Coptic not being a sacred or secret, but a commonly-spoken, language. Notwithstanding the ingenuity displayed by Messrs. Young and Co., and the apparent reasonableness of their arguments, this simple fact seems to me to be so contrary to all experience and to all probability as to cast a shade of suspicion over their whole system in the very outset. It is quite impossible not to believe, that the Coptic, admitted to have been the commonly-spoken language of the country, (passing through the times of the Ethiopians, the Shepherd Kings, the Israelites, the Persians, the Greeks, in the whole for more than two thousand years,) must have so changed as to render it impracticable to read the symbolic or hieroglyphic writing of the Coptic language of Sesostris into the Coptic of Antoninus.

My opinion upon this point is fully confirmed by an observation of Dr. Young's, in one of his letters:¹ "In the four or five hundred years which elapsed between the date of the inscription and that of the oldest Coptic books extant, the language appears to have changed much more than those of Greece and Italy have changed in two thousand." Again he says, "The Egyptian language must have varied considerably in the time which elapsed between the publication of the decree, and the date of the earliest Coptic works which we possess."²

I think no one will deny that the Egyptian system, as explained by Messrs. Young and Champollion, is one of extreme complication; and for this reason, if they be right, among all the others which I shall give, I think it probable that it was a secret system. This is nothing against their theories, and agrees with mine, the reasoning on which, I feel confident that they cannot refute. If their theory be admitted, they seem to have succeeded in making out the names of some of the kings; but I yet fear, even with the above admission, which I make only for the sake of argument, that, in *whole sentences*, from the great number of the Phonetic characters, their explanations cannot be depended on.

I think it has been satisfactorily proved, that Egypt was not the original birth-place of letters, that is, of science or learning; but that it came to her, as well as to Greece, from the East, and that, as it could not well come any other way, it probably came by way of Babylon. Then, if she were not the inventress of letters, how else are we to account for the hieroglyphics, except that they were a secret system? The system of secrecy was in perfect keeping with the general practice of priests and philosophers all over the world at that time. All ancient authors agree in telling us, that their secrets were concealed under the garb of hieroglyphics.

4. Respecting the change in the Coptic language, I consider what I have stated to constitute a very formidable objection; but there is one much more formidable in the fact that Strabo, one of the most respectable of the ancient Greek authors, believed their meaning to be lost.

Strabo³ expressly says, that the Egyptians were mere sacrificers, without any knowledge of their ancient philosophy and religion. Mr. Payne Knight, in his essay on Symbolical Language,

¹ Mus. Crit. Cambridge, No. VI. p. 172.

² Ibid. p. 182.

³ Lib. xvii.

after making some observations on the above-cited passage, gives a number of striking reasons to prove that the meaning of their hieroglyphics was lost by the Egyptians in the time of Strabo, as well as that of their religion.¹ Mr. Knight observes, that “in Egypt, probably AS IN OTHER COUNTRIES, zeal and knowledge subsisted in inverse proportions to one another.” The observation is very severe, but, alas! too true. I believe that Diodorus Siculus may be ranked with Strabo.

It has been replied to me, that Strabo and Diodorus do not *say* the meaning of the *hieroglyphics* was unknown. This is true: but it is as clear as the sun that they were unknown to the former, and that he thought them lost. Can it be believed that, if they had known the meaning of them, and if they had contained accounts of the mythology or history, they would not have quoted them? If they had been historical, they must, in some measure, have been mythological: and when Diodorus was professing to describe the mythology, and censuring his predecessors for declining to describe it on account of its difficulty,² it is impossible to believe that he would not in some way have referred to them. As they were always supposed to contain the history, if they had really contained it, these authors must have told us the particulars of it. There are two things which appear irreconcilable—the plausible accounts of Messrs. Young and Champollion, and the ignorance of the historians at the very time that the Roman Emperors and Ptolemies are alleged by Messrs. Young and Champollion to have been using them.

If the passage of Diodorus were taken by itself, it would certainly be against me: but when it is considered in connexion with the other circumstances, I think it will amount to nothing more than the idle boast of the priests, unwilling to admit their ignorance to the inquisitive Greek; and it most clearly proves that he did not understand these letters, said to be *applicable to the purposes of common life*, and that the priests did not explain them to him. But the following is the passage taken from Booth's translation. Every one must judge for himself.

“But lest we should omit things that are ancient and remarkable, it is fit something should be said of the Ethiopic characters, and of those which the Egyptians call Hieroglyphics.

“The Ethiopic letters represent the shapes of divers beasts, parts and members of men's bodies, and artificers' tools and instruments. For, by their writing, they do not express any thing by composition of syllables, but by the signification of images and representations, the meaning of them being engraven and fixed in the memory by use and exercise. For sometimes they draw the shape of a kite, crocodile, or serpent; sometimes the members of a man's body, as the eye, the hand, the face, and such like. The kite signifies all things that are quickly dispatched; because this bird flies the swiftest almost of any other. For reason presently applies it by a suitable interpretation to every thing that is sudden and quick, or of such nature, as perfectly as if they had been spoken. The crocodile is the emblem of malice: the eye the preserver of justice, and the guard of the body. Amongst the members of the body, the right hand, with open fingers, signifies plenty; the left, with the fingers close, preservation and custody of men's goods and estates.

“The same way of reasoning extends to all other parts of the body, and the forms of tools and all other things; for being that they diligently pry into the hidden signification of every thing, and have their minds and memories daily employed with continual exercise, they exactly read and understand every thing couched within the Hieroglyphics.” Lib. iii. cap. 1.

The silence of the Marquis Spineto respecting the passages of Strabo and Diodorus,³ seems to shew a consciousness on his part that they contained nothing in his favour.

¹ Vide Sect. 64—66.

² Vide Preface.

³ See p. 9, Preface.

I believe the Hieroglyphics were never intended to be read, except by those who received, by tradition, the explanation of the different symbols or figures. The priests having been murdered by Cambyses, the secret was lost. (It was not the same with the Mexican Hieroglyphics. There was this important difference, that their traditional meaning was not lost; for the Spaniards obtained it and preserved it, in Latin or Spanish, although they murdered the priests.) No doubt this traditional knowledge of the Egyptians would constitute a great part of the learning of that day.

5. According to M. Champollion, we have not only the names of the Ptolemies and their wives on the public monuments, but we have the names of Roman Emperors, to a date long after the time of Strabo and Diodorus,—and those names, in some instances, in such situations on them, that there is no room whatever for suspecting that they have been engraved upon old names erased, or on buildings renewed. The fact of these names being found, by M. Champollion's process, will of itself prove that his plan will enable him, as I suspected, to make the hieroglyphics speak just what he pleases.

If the names of the Ptolemies, Cleopatra, the Roman Emperors, &c., are now to be found upon the buildings, obelisks, &c. in Hieroglyphics, it is very certain that in their time they must have been understood, and of course they could not have been lost in the time of Strabo and Diodorus. But upon this subject what says the very able writer, and friend of the discovery, in the Edinburgh Review? He shall speak for himself: "The fact undoubtedly is, that the classical writers supply us with only a few vague and general notices, which, but for recent discoveries, would be nearly unintelligible: while they at once aggravate and apologize for their ignorance by asserting, that, as Egypt was the parent of art and science, so the Hieroglyphical inscriptions on its public monuments contain a summary of the most important mysteries of nature, and the most sublime inventions of man, but that the interpretation of these characters had been so studiously concealed by the priests from the knowledge of the vulgar, and had indeed been so imperfectly understood even by themselves, that it was soon wholly lost and forgotten."¹ Nothing can be more true than the account of this learned Reviewer. But why afterward deny that the Hieroglyphics were a sacred system? I willingly end the argument by saying, let us substitute for sacred, the Reviewer's own word, concealed or SECRET. I want no more. It was for the sake of this SECRECY or concealment that they were invented, and were continued long, very long, after the invention of alphabetic writing, and by no other means can their continuance be accounted for.

How can any one read the extract above from the Review, and not see, if it be true, that all the classical writers, many of them in the time, and in the confidence, of the masters of Egypt, the Roman Emperors, and consequently the Emperors themselves initiated in the mysteries, believed the knowledge of the Hieroglyphics to be lost?—a fact admitted even by the Reviewer. How is it possible to believe that they were all deceived? If it were lost, it is pretty much the same as if it were concealed. How is the opinion of the classic writers given above to be reconciled with what the Reviewer says, that the Hieroglyphics *constituted a real written language applicable to the purposes of history and COMMON LIFE?*²—and this written language unknown to such an inquirer as Strabo—a man professing to give the best information respecting them which he could collect! But I shall be told that we have the authority of a father of the church, Clemens Alexandrinus, who tells us what they were. Yes, indeed, and in such language, so clear, that no two translators have yet been able to agree in opinion as to his meaning. For my own part, I

¹ Edin. Rev. No. LXXXIX. p. 98.

² P. 107.

believe he had no clear idea, but merely expressed an opinion,—in fact a suspicion, of the nature of the system, properly called Hieroglyphical.

6. The following is the translation of the passage of Clemens,¹ given by the *Encyclopædia Britannica*:² “The pupils who were instructed by the Egyptians first learned the order and the arrangement of the Egyptian letters, which is called *epistolography*, that is, the manner of writing letters; next the sacred character which the sacred scribes employed; lastly, the Hieroglyphic character, one part of which is expressed by the first elements, and is called *cyriologic*, that is *capital*, and the other *symbolic*. Of the symbolic kind, one part explains properly by imitation; and the other is written tropically, that is, in tropes and figures; and a third by certain enigmatical expressions. Accordingly, when we intend to write the word *sun* we describe a circle; and when the *moon* the figure of that planet appearing horned, conformable to the appearance of that luminary after the change.” From an attentive consideration of the above passage, it must be allowed that it conveys no reason whatever to believe, that the Hieroglyphics were understood in the time of Clemens either by him or by any one else. In reply to this it will be said, But we know that they were not lost in the time of the Ptolemies, because we have the Rosetta stone in three languages. This appears at first sight a very fair and plausible argument—an argument very difficult to answer, and a fact very difficult to reconcile to the unanimous admission of the classical writers, that they were no longer known. For, how is it possible to believe, that all these writers should be ignorant that in their time, it was the practice to write inscriptions on stones in Hieroglyphics, accompanied by translations into the Coptic and Greek languages?

But when they were inquiring into the meaning of the Hieroglyphics, why did they not go to the triple inscription for information?

When the Egyptians made the inscription in Greek and Coptic, what could be the object of using also the secret letter? Was it to inform the priests ignorant of Coptic or Greek; or, was it for fear these languages should be lost, and therefore they used the sacred character, that the valuable information should be preserved in it, when the others were gone? It may be said, that though it seems foolish enough to use three languages, yet this kind of folly is very common. I grant that the argument seems good, for we can scarcely ever give man credit for too much folly, or for too little wisdom.

I contend that the Hieroglyphics were a system made complicated, as M. Champollion has described them, if they be so complicated, for the express purpose of preventing their discovery; and I contend, also, that this removes all the difficulties of their history, and renders every part of it consistent with all the historical accounts, with experience, and with my theory.

7. I pretend not to fix the year of the Jewish Exod; but I believe in that Exod, and that Hieroglyphics were invented after it. The conquests of Joshua, I contend, are **DECISIVELY PROVED** by a species of evidence which no philosopher can deny, in the sixth chapter and thirtieth section, and the note upon it, in the last page of the Appendix to my *CELTIC DRUIDS*; not by the evidence of lying priests, but by circumstance and the evidence of an unwilling witness; and this pretty well carries with it proof of the Exod of Moses. From the Hieroglyphics being nowhere noticed in the Pentateuch, there arises a probability, (but not a *proof*, I admit,) that they were unknown when the Israelites left Egypt. But even if they were known in the time of Moses, my principal argument is not affected thereby. I suppose that the Pyramids were not inscribed with the names of their builders, because (notwithstanding the idle stories told to Herodotus) they

¹ Strom. Lib. v.

² Art. Philology, Sect. 72.

were, with their history, unknown; therefore, upon them, there are no hieroglyphics. If there be upon the buildings the names of kings who lived thousands of years before the time of Moses, this does not invalidate my argument. Nothing is more likely or natural than that when the priests invented their system to *record their history*, they should inscribe it on their old buildings as well as the names of the kings by whom they were believed to be built. Some foolish Scotchmen, I am told, are at this time erecting a monument to *John Knox*, the bigot, the persecutor, and the enemy of literature, the disgrace of their country, long after his death; so the Egyptians may have done to their worthies. On this supposition, it is very natural that the history and names of kings, in the time of Sesostris, should read into the Coptic of the time of the Ptolemies, as it is asserted above that they do: and thus a considerable impediment to a belief in the reality of M. Champollion's system is removed, and I would, with pleasure, remove all the difficulties if it were in my power. It seems to me to be probable that they were invented during the period, embracing many hundreds of years, which passed¹ between the Exod of Moses and the conquest of Cambyses. If they were invented much before this time, they would not read into modern Coptic. What I contend for exactly agrees with what Herodotus and Diodorus say, that there were two kinds of character—the *ἱερα* or sacred, and *δημοτικά* or the popular. This also agrees with the authority of the Rosetta stone,² (if we allow it any credit,) which *makes mention of only two kinds of characters—the one called ENCHORIAL, (εγχωρια γραμματα,) or “characters of the country,” evidently identical with the demotic characters of Herodotus and Diodorus; and the other SACRED (ἱερα).*

8. Mr. Salt has observed,³ that there is not the trace (in Hieroglyphics I suppose he means) of any monument remaining throughout Egypt or Nubia, of earlier date than Rameses Thothmosis, who, he says, the best chronologists agree was nearly contemporary with Moses. If Mr. Salt be right in this, I need not point out how much it tends to confirm my hypothesis. It is said by the Marquis Spineto,⁴ that the names of the later kings of Egypt and emperors of Rome are found on the monuments of the earliest periods; and that they were so inscribed by these kings or emperors in order to obtain for themselves the honour of having erected them; that the names of all the Roman emperors, from Augustus to Antoninus Pius, except Galba, Otho, and Vitellius, are found on several of them, both in Egypt and Rome; that the several obelisks now existing at Rome, such as the obelisks of the Barbarini, the Albani, the Borgian, and Pamphilian, and a part of the public buildings at Philoe, and the temples at Esne and Dendera, are covered with legends, containing the names and titles of Hadrian, Titus, Tiberius, Nero, Claudius—in short, of almost all the Roman emperors, down to the fourth century, the whole written in Phonetic hieroglyphics⁵

Now this is monstrously absurd in the case of the obelisks brought to Rome, because they were brought as antiquarian curiosities, as a species of triumphal monument of the conquests of the Romans over the Egyptians. It would have been even more absurd for the Romans to insert their names on the obelisks, than for Mr. Banks to engrave his on the obelisk which he brought from Philoe. This seems to me to strike a deadly blow at the whole system.

Mr. Salt, in p. 31 of his Essay,⁶ has given an account of an old name which, in his opinion, has been erased and a modern Ptolemy inserted in its place, but, from bad workmanship, in one instance discoverable. If a modern fraud have been executed, this must have been a part of it,

¹ There being in reality no system of chronology.

² Edin. Rev. No. LXXXIX. p. 101.

⁴ P. 366.

⁵ P. 100.

⁶ Vide Spineto, p. 366.

and was evidently necessary.¹ But notwithstanding the opinion of Mr. Salt, whose zeal may have blinded his judgment, I must say I have seen no satisfactory proof that the letters of this name are of more recent workmanship than the others on the same edifices; therefore I am warranted in believing that there is no such proof, that there is no foundation for such an assertion: besides, if they be so, as I have just said, they are probably modern frauds. I do not recollect in history any thing equal to this foolish vanity of the Ptolemies and Cæsars—the gratification of a vanity which must have rendered them contemptible in the highest degree to their subjects, who could surely never pass one of these inscriptions in this *real written language, applicable to the purposes of common life*, without a smile of contempt—even though it were the gratification of such a vanity by Marcus Aurelius or Trajan. I hope these gentlemen do not judge of such men as Trajan and Antoninus, by themselves.

9. Sir William Drummond has made the following very ingenious observations on this subject: “The Greeks were no doubt curious to know all the secrets of the hieroglyphics: and the priests of Egypt were not willing to acknowledge to their masters, that they had lost the keys of those mysterious symbols. It is very possible that they may have been acquainted with the meaning of the kuriologic hieroglyphics, and may also have retained the knowledge of the epistolary characters: but of the tropical and enigmatical, and allegorical signs and symbols, I cannot easily believe that they knew the meaning, and it may be presumed that they often imposed on the easy credulity of the Greeks. They chose symbols to denote their new monarchs and their queens: they enclosed between lines, or placed in circular, quadrangular, or oval frames, the emblems of their new divinities: and Ptolemy and Berenice, admitted to the honours of the apotheosis, beheld their hieroglyphics placed by the side, and perhaps sometimes in the room of those of Osiris and Isis. Long and adulatory inscriptions recorded the titles and the virtues of the Ptolemies: and these Gods, as they were styled, promulgated their decrees not only in the Egyptian and Greek characters, but in hieroglyphics, symbolical and tropical. But it is difficult to acquit the Egyptians of fraud on these occasions: nor is it easy to avoid suspecting the Greeks of sometimes lending themselves to the impostures practised by their flatterers.”²

10. But I must return to the triple inscription or rather inscriptions, for I am told that two more have been found in other parts of Egypt, by some of the French sçavans. I ask why Clemens, living at Alexandria, did not go to them to remove his ignorance? Why Strabo did not apply to them? To these writers there could be no difficulty in reading the Greek; which even the best of our Greek scholars cannot now understand, and by going to the triple inscriptions they would have had all their difficulties removed in a moment. I am not ignorant of the frauds of the infamous Fourmont, exposed by the Earl of Aberdeen. I am not ignorant of the character of the Parian Marbles. I have heard of Annius of Viterbo, and of M. Bonelli’s dispute with Mr. Payne Knight, and the Cameo in the Museum; and I must freely declare that I believe the triple inscriptions are ingenious forgeries; that the name of the king, ill executed, discovered on a monument by Mr. Salt, has been placed there for the purpose of being discovered, and that the deed described in the Edinburgh Review, has been forged, and the counterpart placed purposely to be discovered—as antiques are placed every day in the ruins of Pompeii to be discovered by visitors; I suspect that they are all parts of a great lie. I shall be told of the difficulty of executing so great

¹ From Mr. Salt’s Essay (p. 25), it appears that the name of the king who erected the obelisk now standing at Matarea was Misarte. Pliny says, *Mestres* and Kircher, from a Vatican MS., *Mitres*. This seems to connect it with the Persian *Mithra*, the name of that God taken by the person who erected it. The Indian and Egyptian practice of kings calling themselves by the names of Gods seems to render all ancient history doubtful.

² Drummond on *Zod.* p. 23.

a lie, and that Dr. Young and Champollion must have been in a league. Without difficulty there would be no probability of successful deceit. Are we not deceived with copies from Raphael, with Etruscan Vases from Staffordshire, by Bonellis with Cameos, and with manuscripts, every day? The difficulty is no objection. I desire an answer to the question, why the inquiring authors, Clemens and Strabo, did not inform themselves from the triple inscriptions. In the Morning Herald for June 24, 1830, is the following curious account: "At the last meeting of the London Medico-Botanical Society, Professor Houlton mentioned the following extraordinary instance of the protraction of vegetable life.—A bulbous root, which was found in the hand of an Egyptian mummy, in which situation it had very probably been for more than two thousand years, germinated on being exposed to the atmosphere, though when discovered it was apparently in a state of perfect dryness. The root was subsequently put into the ground, where it grew with readiness and vigour." This seems to shew us pretty clearly that what has been for some time suspected is true, that alleged ancient mummies are now manufactured in Egypt every day. This forms a good match for the Rosetta stone.

II. But another damning fact creeps out very unwillingly from the Marquis. A reward was offered by one of the first of the Cæsars to him who should give a proper interpretation of the inscription on the obelisk which had been carried to Rome.¹ This single fact overthrows the whole system. It is quite impossible to believe that the hieroglyphics should have been in common use, for the inscribing on them the names of Roman Emperors and other matters, (*a real written language applicable to the purposes of history and COMMON LIFE*, as the Edinburgh Reviewer says,) and yet that the Roman Emperor and his ministers should have had occasion to offer a reward to discover their meaning.

I believe it is an admitted fact, that the Romans inscribed hieroglyphics on some modern obelisks in Rome to make them imitate ancient Egyptian.² If this be admitted, it is totally incredible that they should erase the real names from the real ancient Egyptian obelisks in that city, to insert their own, and thus make them appear to be modern.

It appears to me that the fact of the ignorance of the Greek authors is of itself a presumptive proof, that the trilingual stones are modern fabrications. Their existence is totally incompatible with the admitted ignorance of Strabo, Diodorus Siculus, and the inquisitive Clemens Alexandrinus the Egyptian.

A careful attention to the history of the world for the last eighteen hundred years has shewn me, that the priests of all religions have practised fraud to forward their objects; and that with a few exceptions in the first centuries of Christianity, when they avowed that it was meritorious to practise it, they have solemnly declared their innocence, while their guilt has been clear. The consideration of these circumstances must be my excuse for my apparent illiberality; but whenever a Bourbon, the élève, the protégé of the Jesuits, protects a man, I suspect him. I cannot forget that the priests in every age have protected, as ours do now protect, impostures, and that in every age numerous examples of pious fraud may be found. The Reviewer, when speaking of the deeds and counterparts, says, he suspects the age of Magic is not over. I reply, Magic is pretty nearly over, but fraud seldom throve better.

These considerations destroy my faith in the discovery. I cannot bring myself to the belief that the later princes, the Trajans, Antonines, &c., would stoop to so despicable and unavailing a fraud; that they would, with their eyes open, expose themselves to the ridicule of all mankind. But the evidence of the deeds and counterparts exhibited in the *ninetieth* number of the Edinburgh

¹ Spineto, p. 48.

² P. 51.

Review seems conclusive against me. Then what am I to make of these inconsistencies? When I consider the respectable characters of Messrs. Young and Champollion, I cannot believe them capable of practising a fraud: but I am obliged to believe that they have been in part deceived, and partly deceive themselves; and that in consequence of their mode of proceeding and of the great number of the phonetic forms for one letter, they are able to make the hieroglyphics speak what they please.

Whether the French scavans were the inventors or the dupes of the fraudulent Rosetta stone I know not; but I can more readily believe that the priests have been at their old game, than that Diodorus, Strabo, and Clemens, and the Roman Emperors while offering rewards,¹ have all been ignorant of the state of the simple question, whether Hieroglyphics were in common use in their time or not.

No doubt, to charge the scavans of France with having caused the Rosetta stone to be made for fraudulent purposes, will be considered, in any man having a regard for his literary or even moral character, to be very hardy; but this, notwithstanding, I must do. I find that Dr. Young did not begin his researches till after the finding of the Rosetta stone; that they in a great measure depend upon it—are founded upon it; and that he, in fact, had nothing to do with it, but simply believed what we have been told respecting it by the French in Egypt, who made such a terrible outcry for the loss of it. If they hid the stone for the purpose of having it found, they performed their parts, as indeed they generally do every part they undertake, very well. He must know very little of the French character, who finds a difficulty in believing that such of them as were likely to undertake an adventure of this kind, would be deficient in talent to carry it into effect. And as to the other stones, having on them inscriptions in the three kinds of characters, the same as those on the Rosetta stone, those who were capable of making one, were capable of making the others, and also of placing them where they, or, what would be still better, the English, would find them. The size and nature of all these stones precludes the idea, that they were intended to be kept, or were, in fact, in ancient times, kept secret. Then I again ask, how came Clemens the Egyptian—the Alexandrian—or Strabo, or Diodorus Siculus the Antiquarian, when they were inquiring into and regretting the loss of the Hieroglyphics, not to go to these stones and remove at once all their difficulties? The Greek, at that day, could not only not form a difficulty, as at present, but it must have instantly removed every difficulty, and this is the strong point upon which I ground my charge of fraud. Let the fact be accounted for. How came they not to go to these *common* triple inscriptions scattered about the country in different places, for a solution of their difficulties, and an explanation of all the ancient mythologies or histories? The very great ingenuity required to give these stones the appearance of antiquity, is to me no objection, when I consider the character of the French nation, and the perfection to which the art of simulating the works of the ancient masters, in the arts of painting and sculpture, has been carried—and the manufacture of Etruscan vases, and the forgeries of the works of Berosus by Ennius, of the manuscripts of Shakspeare, by Ireland, and the various well-known forgeries of ancient inscriptions on stones, &c., &c., &c.

This brings me to make one more observation on the deed and counterpart. The moment I heard of these, they struck me to be very like a modern indenture, but having no suspicion I hastily passed them by, and there may be nothing in it. But the persons who could make the Rosetta stone, I have no doubt could make these deeds, and could bury them too, where the proper persons would find them. It is well known that articles are constantly buried at Pompeii in particular

¹ P. 48.

places, where visitors of eminence are allowed to search. I once *saw* an Archduke of Austria uncommonly successful at Pompeii. There is so large an interest now concerned in this matter, and interest and passion are so much engaged, that I should not be surprised if the *French* and *English* between them, were to find a hundred Rosetta stones. But to save them *further trouble*, I beg leave to point out to them, that the more Rosetta or triplicate stones there are found, the more the difficulty will be increased of accounting for the blindness of Clemens and Strabo.

In addition to the above, I beg to refer my reader to an article in No. VIII. of the Foreign Quarterly Review, published by Teutzel and Wurtz, p. 466. In this essay the writer maintains, that he has convicted Messrs. Champollion and Sallier, of Aix, jointly, of a gross fraud. I am unwilling to decide between these gentlemen and the Reviewer, upon hearing only one side; but I confess I do not see how they are to defend themselves; and I need not point out to my reader that, if the Reviewer should be right, no man of common sense will ever pay the slightest attention to any thing which Messrs. Champollion, and Co. may say in future.

12. I might here, perhaps, safely drop the subject; but it may be satisfactory to my reader to inspect a little more minutely the machinery by which Messrs. Champollion and Co. raise the profound learning from the well where it has so long lain buried. M. Champollion¹ teaches, that many of the consonants and almost all the vowels are often represented by the *same* hieroglyphical characters. To apologize for this he says,² they are to represent the different dialects of the different districts of Egypt, but where he learnt the Coptic dialects he does not tell us. The most extraordinary of all delusions is that which blinds this gentleman and his friends to the absurdity of admitting, that there are three distinct modes of writing, and that they then have recourse to the whole three *promiscuously* in their explanation of a sentence. They cull out a part of the eight or nine hundred figures on the monuments, which they divide among the letters, giving to each a number of figures, even in some instances amounting to twenty-five in number;³ the remainder they call allegorical, and symbolic, and then, in order to expound the inscriptions, they bring all the three into play at once. Thus, if the letters will not answer to the drawings so that there is a figure unexplained, it is then called one of the other kinds of writing; it is an allegorical or a symbolic letter; by this process a meaning is, at all events, made out. The Marquis Spineto says, alphabetical signs were of three kinds—Demotic, hieratic, and hieroglyphical properly so called.⁴ Hieroglyphics are divided into three classes—Hieroglyphics proper; Hieroglyphics abridged; Hieroglyphics conventional.⁵ There are also symbolical or enigmatical hieroglyphics; and conventional figurative hieroglyphics; and figurative abridged hieroglyphics; and the enigmatical hieroglyphics may be again divided or used in three ways.⁶ The alphabet published by M. Champollion contained 134 hieroglyphical characters, strictly speaking phonetic; yet he found out the meaning of 730 more, some symbolical, others figurative.⁷ Some of the consonants, and almost all of the vowels, are often represented *by the same hieroglyphical characters*;⁸ and as there are no vacancies between the words, they are divided at pleasure. They are read from top to bottom, from right to left, from left to right, and in groups, all in the same inscription. Thus, in writing, the signs or figures may be placed in four different ways, and are often found so to exist in the same monument.⁹ In another place M. Spineto says, all the three kinds of writing, viz. the phonetic, figurative, and symbolic, are often found in the same inscription, mixed together, not one below another, as translations of one another,¹⁰ but used *promiscuously* (to repeat his word) in the same sentence,¹¹ and the words written in the sentence are not divided. The hieroglyphical

¹ P. 86.² P. 87.³ P. 88.⁴ P. 85.⁵ P. 116.⁶ P. 120.⁷ P. 85.⁸ Pp. 86, 88.⁹ Pp. 96—98.¹⁰ P. 169.¹¹ Pp. 177, 179.

figures stood as letters; for a letter which began the name of the animal, as a Dog, would stand for a D.¹ Thus the hieroglyphic as Dog standing for D, or Horse for H, it seems to follow as a necessary consequence, that letters must have preceded them; in fact, that they must be an invention founded upon letters.² Thus, if we wished to write London, we might take a lion, a lamb, a lancet, or a leaf, &c.; and a net, a negro, a north star, a nave of a church, and so on, for as many words in the language as begin with the letter L, in the first instance, or with N, in the second. I think M. Champollion has been very moderate to take no more, in any case, than twenty-five!

In addition to all the above, we have yet one more kind of hieroglyphs, called Anaglyphs.³ I shall not attempt to describe them; we have surely had enough.

13. The capacity of the Marquis Spineto for believing, may be judged of by his belief that a subterraneous passage was carried from Thebes to Memphis.⁴ This is at least two hundred miles. As the Marquis justly observes, how contemptible does this make our Thames tunnellers appear! I believe that the reason why we cannot find this subway now, is that, *for the sake of dryness*, it was carried under the bed of the river. I hope I shall no more be accused of *scepticism*, for surely I believe as much as the Marquis; and what is more, I believe it merely out of compliment to our learned visitor the Marquis, and I hope he will sufficiently appreciate my politeness!

It is very seldom that a fraud of any length can be successfully carried through; the performer is almost certain to let something escape to betray it. Thus, if the Rosetta stone be a forgery, the manufacturers of it forgot that the knowledge of Hieroglyphics was proved, by the historians whom I have named, to have been lost in the time of the Ptolemies, and thus he made his inscription bear their names in the Greek. The Hieroglyphics will bear to be construed into almost any thing; and I have little doubt, if it were wanted, William of Britain might be made out of them. I suspect that some of the French scavans formed the stone with great ingenuity, in such a manner as would enable them to make the inscriptions speak what they pleased, and that the Jesuits discovering this, induced the Bourbons to take advantage of it to support, as they supposed, the Mosaic history.

M. Champollion was sent to Egypt, by Charles the Tenth, to search for inscriptions, and, of course, with the perfect approbation of the Jesuits. He kept up a close correspondence with the well-known Duke de Blacas, Ambassador from France at Rome, and his discoveries, as described by the Marquis Spineto, exhibit, in every part, a predetermination to support the Mosaic system; and this also creeps out from the Marquis perpetually in his Lectures. In Chapter XI., he must pardon me for saying, rather *ridiculously*, to serve his purpose,⁵ he makes the usual age for females to marry to be thirty-five years, when it ought to be, in that climate, fifteen or sixteen. In one place⁶ he incautiously admits that he is not authorized to state all he knows;⁷ and in another,⁸ that he does not think it *necessary to mention* what would have been of the first importance. I suppose it would have made the learned Cantabs, to whom he addressed his lectures, too learned. The moment I find a person beginning to talk of concealment and holy scriptures, I suspect him. The word *holy* involves the consequence, that every question is prejudged which relates to these scriptures. The question is begged; particularly when this is assisted by the repetition of the old cant about philosophy being dangerous.⁹

The Marquis¹⁰ says, that Hebrew translations of many of the consecrated rolls of papyrus are to be found in the Bible. This again, coming in the manner it does, tends to create doubt; but, for

¹ P. 82.² P. 91.³ P. 411.⁴ Pp. 212, 220.⁵ P. 376.⁶ P. 253.⁷ "The French proverb of *L'oiseau de St. Luc*, the origin and signification of which I do not feel myself authorized "to state in this place." P. 253.⁸ P. 369.⁹ P. 490.¹⁰ P. 6.

reasons which I shall give hereafter, of the nature of which the Marquis has not the slightest suspicion, I think it very probable, that much which is recorded in the Old Testament, may be recorded also on the Egyptian monuments.

Lecture XI., on Chronology, may be called a mistake, as I think there is scarcely a sentence which is not wrong. It is, however, rather whimsical to find this learned gentleman-hierist informing not merely the *boys* of Cambridge, but also the *wise men*, that Usher established the Chronology of the LXX.¹ I think we shall not be much longer troubled with the *modern discoveries* in the Hieroglyphical branch of learning.

14. If Frenchmen should stand convicted of a Hieroglyphical fraud, their neighbours in England will not be far behind them. Mr. Bentley, of whom I have before spoken, has given an explanation of the Zodiacs of Esne and Dendera, and undertaken to prove them Calendars, for the year 708 of Rome. But his pretended copy of the Zodiacs is false in a great number of places, and the whole exhibits a most extraordinary example either of pious fraud, or of the grossest blundering. Mr. Bentley is dead and cannot defend himself, and therefore I would willingly attribute the fact to the latter of these causes; but the evident object being to bolster up the Mosaic chronology, it is impossible to avoid suspicion of the former. This suspicion is strengthened by what appear to me, in several instances, to be *wilful misrepresentations*, and by a recollection of the misrepresentations of which we have already seen him guilty respecting the forgeries of the Brahmins, and his determination, at all events, to run down the Indian learning.

He founds his system upon a comparison of the Zodiacs with the Roman calendar of Numa. Both the Egyptian Zodiacal Almanacs, according to his exposition of them, pretend to mark the corrections introduced into the Roman Calendar by Julius Cæsar,² and to commence with a conjunction of the Sun and Moon at Rome, not in Egypt,³ in the year of Rome 708. Now at this time Antony was living with Cleopatra in Egypt.

It seems impossible to believe, that the Romans at this early period should have succeeded in having their calendar inserted into the roofs of Egyptian temples, which must have been rebuilt at the time when they were inserted. The adoption of this calendar seems necessarily to carry with it the adoption of the Roman festivals, and this, again, a complete adoption of the Roman ritual—in fact, a complete change in the religion of the Egyptians. When I consider all the circumstances of the histories of Egypt and Rome at that date, if there were no other objections, I cannot bring myself to believe this. If the date of the calendar had been placed in the times of the Antonines, or of other Emperors, who were absolute Lords of Egypt, and who, we know, took a pleasure in repairing and adorning its public edifices, the case would be very different. These considerations I think Mr. Bentley overlooked.

The following observations of the ingenious Mr. Landseer will shew the extreme absurdity of believing, that the Romans could succeed in placing their calendar on the top of an Egyptian temple, so early as the time of Ptolemy and Cleopatra:—"For the whole time that the classical nations were in possession of that interesting country, they appear to have exercised but a conciliatory controul in any other than military and municipal matters, and to have been so far from dictating, in what concerned the truth of science or the dogmata of faith, that they evidently chose, or were, from prudential motives, constrained to recognize and follow, what they found established—perhaps without comprehending its essence, or fathoming its depth: yielding to the pontifical authorities of that ancient land, the same species of deference that the modern Catholics, of the rest of Europe, pay to the mother Church of Rome. They erected

¹ P. 383.

² P. 274.

³ P. 253.

“there no Greek nor Roman temples, or we should have found their ruins at least: but, if they built at all, (which they certainly did,) re-edified the more ancient temples of Egypt, with so much of strict adherence to the original designs; or constructed others so much in the same style, that modern antiquaries have been fairly puzzled by them.”¹ Nothing can be more true than these observations, as I believe all will allow; but they place in the strongest point of view possible the absurdity of believing that they were the builders of the temple of Dendera or Esne *in the time of Cleopatra and Antony*. I have a great suspicion that these Zodiacs will turn out to be perpetual calendars for the Metonic cycles or the Neros, or of both. And this will account for their appearing to suit the very remote ages, as some gentlemen have supposed. It seems also extremely absurd that the calendar should be suitable to the climate, latitude, and longitude, of Rome, and not of Egypt. If it be an almanac, I think it is one to serve for the whole Soli-Lunar cycle, for both the Zodiacs are said to begin with a conjunction of the sun and moon.

The following short passage from the *Encyclopædia Britannica*, completely disposes of Mr. Bentley's Roman calendar in Egypt: “The Egyptians used no intercalations till the time of Augustus, when the corrected Julian year was received at Alexandria, by his order: but even this order was obeyed only by the Greeks and Romans who resided in that city: the superstitious natives refusing to make any addition to the length of a year which had been so long established among them.”² This order, by Augustus, for the correction of the year according to the Julian improvement, implies that it was not previously adopted; it would not, therefore, have been inserted into the roofs of the temples many years before, in the time of Cleopatra and Antony. This, I think, invalidates Mr. Bentley's explanations of the Zodiacs of Esne and Dendera, and I think strikes a hard blow at Messrs. Young and Champollion's system—it being manifest that any thing may be made out of the Hieroglyphics—and that thus, in fact, they can teach us nothing. If some of Mr. Bentley's explanations were not founded, as in reality they are, upon *false* drawings, but even upon *true* ones, this would completely blow them into air. I have somewhere read that the order above given by Augustus caused an insurrection.

Mr. Bentley admits that the same letter of the alphabet may be rendered ten or a dozen different ways,³ and that the same number is represented by several distinct characters, as described in his plate No. IX. On turning to the plate, I find *nine* different characters for the *unit*, and *eight* for the number *four*, and others in the same way. From this great number of signs for *one* idea, or letter, or number, the expounder may construe them into what he pleases.

The exposure of Mr. Bentley's frauds or mistakes, is of the very first importance, as his explanation has been taken advantage of by the priests to overthrow all the former theories respecting these Zodiacs, and to draw conclusions inimical to all further inquiry. It has afforded to them a grand triumph over the philosophers, and is so plausible, that it has deceived some very learned orientalists. But its exposure is of very great consequence for another reason: it shews that by Messrs. Young and Champollion's system of making many phonetic signs for one letter, they may be made to speak whatever the expositor chooses; for they take much greater liberties than Mr. Bentley took in this respect, and he succeeded in making out what he wished, though totally destitute of any foundation in truth. But the exposure is of consequence for yet one more reason—it proves that arbitrary figures, which are *not Hieroglyphics at all*, may be made to give out such a meaning as the expositor wishes; for several of Mr. Bentley's drawings are not Hieroglyphics, but merely arbitrary, unmeaning figures, not in the Zodiacs. This fact was discovered in the following manner; I was told by a very learned orientalist, that he was quite convinced by

¹ Sabæan Res. p. 218.

² Art. Chron. p. 751..

³ Pp. 257, 258.

Mr. Bentley's book that the Zodiacs were Roman calendars ; and that all questions respecting them were closed. Judging from the dates as given above I could not believe this, and being at the time very much engaged, I requested my friend Richard Makenzie Beverley, Esq., LL.D., to examine the work for me. In consequence of my request he wrote a paper which was read, by my desire, to the Asiatic Society, and, as I was told, for I was not present, with great applause. But, for reasons unknown to me, the council refused to publish it in their Transactions. When I consider all the circumstances relating to this paper,—the fact that it prevents the priests from closing the door upon any further inquiry into those curious monuments ; and, again, since IT PROVES that, by the new system, Hieroglyphics may be made to say any thing or every thing, and that it thereby overturns the whole of M. Champollion's system, I am induced to take the liberty of telling this learned body, that Mr. Beverley's paper was of more consequence than all the papers hitherto published in their Transactions put together ; many of which are notoriously nonsensical enough. These Asiatic gentlemen are constantly complaining that the Universities treat them and their learning with neglect ; how can they expect any thing better, when they thus refuse to publish the paper, *not anonymous*, of a Cantab of high academical rank ? For, however I may regret the line he has taken since that paper was written, read, and refused to be printed, I feel bound to say, he is a gentleman of great learning and talent. I think the circumstance altogether strikingly confirms my observation respecting the Orientalists, in Book V. Chap. IV. Sect. 12. However, the refusal to publish the paper will not succeed in keeping the world in ignorance. After what I have written here, Mr. Bentley's work will be soon compared with the plates in Creuzer, and in the grand work of the French in the British Museum, and the falsity of it made public. I shall return to Mr. Bentley, of whom I shall have something of much importance to say before I finish my work. I have no doubt that the societies of our three Presidencies in India, may justly be called, Three Societies for the Suppression of Oriental Knowledge. I hope the Society in Grafton Street will be more cautious in future, and will not give their enemies an opportunity to say, that *they* make a *fourth*. To say the very least, whoever advised them not to publish Mr. Beverley's paper, did not exercise a sound discretion.

CHAPTER III.

SEMIRAMIS THE SAME NAME AS HELEN.—SEMIRAMIS WORSHIPED AS A DOVE.—CAUSE OF QUARREL BETWEEN THE JEWS AND SAMARITANS.—PHILO ON THIS SUBJECT.—SEMIRAMIS CRUCIFIED.—STAUROBATES. PHOENIX.—ORION. PHOENIX CONTINUED.—CECROPS. IXION. DIVINE LOVE CRUCIFIED.

1. I will now add a few more observations respecting the celebrated Semiramis, or the Indian Sami-Rama-Isi. Nimrod says, "The name of Semi-Ramis will occur to every reader ; she was both a queen of unrivalled celebrity, and also the Goddess mother, worshiped under the form of the Dove that accompanied Noah in the Ark.

"Her name signifies the *supreme Dove*, and is of precisely the same value as the *Peleias* or *Pleias* of the Greeks, and the *Iona* of the Syrians, Babylonish Chaldees, and Culdees or HEBRI-

“DEAN¹ Chaldees. The learned Lycophron calls *Helen* a dove by two names of that bird, “*Peleias* (which has been explained) and *Oinas* or the *Bacchic dove*. *Helen*² was born out of a “waterfowl’s egg, and that which Hyginus relates evinces fully that she was the Babylonian “*Venus and the Dea Syria*.”³ She was the daughter of *Dercetis*, of *Ascalon*, of the *Philistines*. She was also said to have been nursed by the river *Simois*. This connects her with the *Hellen* of *Troy*. If she were the same as *Diana*, like *Diana*, she would, of course, be black.

Helen, like *Semiramis*, was supposed to have been born from an egg: and she is said to have been deceived by a phantom, substituted by *Juno*, in the likeness of *Menelaus*; and, according to some accounts, she must have been ninety or one hundred years old at the siege of *Troy*. She is called ‘*Ελινα* and ‘*ΕΛΕΝΗ*.⁴ I think her identity with *Semiramis* will scarcely be doubted, or the identity of their mythological characters. It is probable that the Greek name had its origin from the Asiatic אל *al* with its dialectic variations, הל *el* על *ol* אלה *ale*, &c., and נח *nh* the *anima*. The Holy Ghost was generally female.

In the Syrian temple of *Hierapolis*, where between the statues of *Jupiter* and *Juno* stood the statue of *Semiramis* with the dove on her head, it was the custom of the priests to emasculate themselves, and to wear the dress of women. The same practice prevailed in the temple of *Cybele* in *Phrygia*. Mr. Knight knows not how to account for this. I believe it was done in honour of the female principle, the *Ionism*, which prevailed in these places in a peculiar manner. *Lucian de Dea Syria* says, that between the statues of *Jupiter* and *Juno* in the temple of *Hierapolis*, in *Syria*, was a statue of a God, which had not the shape of any of the other Gods, on which stood a dove. This must have been a plain stone pillar, probably of great antiquity. He says there are two *Priapuses* in front of the temple 300 fathoms high, on which devotees went at certain seasons and remained *seven* days. From this we see that the pillar saints were not peculiar to *Christianity*, and that they preceded it many generations. *Lucian* also says, the temple at *Hierapolis*, or the sacred city, resembles the temples of *Ionia*.

2. At *Hierapolis* the female statue with the dove upon its head was called *Sema*.⁵ This was the *Semi-ramis* of the *Assyrians* converted into a *Dove*, and the *Rama-Sema* or *Sema-Rama* of *India*.⁶ In a future page we shall find that the *Zamorin* of the promontory of *India*—of *Cape Comorin*—where, in a very particular manner, the *Cama*, or, as it is spelt in *Java*, *Como*, was adored, was a *Semiramis*; on this account I am induced strongly to suspect that the *Sema* above was a corruption of *Cama*; but I shall return to this.

The Goddess of *Dodona* had a dove on her head, and was called *Dione*.⁷ This *Dione* was evidently *Di-ioni* or *Di-iune*, that is, the holy *Iune*—*diva Iune*. *Noah*, or *Nh*, or *MNH*, or *Menu*, or *Mind*, sent out a raven—the emblem of darkness—which made no return, produced nothing; he then sent out the *dove*, the emblem of *Love*, which brought back the *olive*, the emblem of wisdom, of *Minerva*. *Ερωσ*, *Divine Love*, was the *Protogonos*, the same as wisdom.

The above observations are strikingly supported by the following passages of the Jewish writings: *Jeremiah* xxv. 38,—facta est terra eorum in desolationem à facie iræ columbæ. Again, ch. xlvi. 16,—à facie gladii columbæ (*Vulgate*). Again, ch. l. 16,—For fear of the oppressing *Iönah* יונה (*iune*,) they (the nations in captivity) shall turn every one to his people, and they shall

flee every one to his own land.¹ The Seventy translate this passage, as also that in ch. xlvi. 16, in a very particular manner: *απο πρώτων μαχαιρας Ἑλληνικῆς.*

3. In confirmation of an idea which I entertain that the division between the tribes of Juda and Israel was religious more than political, several passages may be cited. The sin of the Samaritans was in part, no doubt, a return to the adoration of the Sun in Taurus, as the Divine manifestation. Of this the god Apis, set up at Sinai, at Dan, and at Bethel, is the first and a decisive proof. This is confirmed by another passage,² which shews, that the festivals that Moses had regulated, with regard to the precession of one month, were restored by Jeroboam. The one month is exactly the time of the equinoctial precession between Taurus and Aries, which, of course, would regulate all the other festivals. So “Jeroboam ordained a feast in the eighth month, like unto the feast that is in Judah.—On the fifteenth day of the eighth month, *which he had devised of his own heart.*” The expression marked in italics seems to shew that the festival had been a matter of dispute. And it is added, that the feast was a sacrifice *vitulis*, or to the images of Taurus, which he had set up in Bethel and Dan. “God commanded the observation of the feast of tabernacles on the fifteenth day of the seventh month. Jeroboam, in order to corrupt the established worship, appointed a feast on the fifteenth day of the eighth month.”³

The crime of the Samaritans was a return to the adoration of Taurus and the double principle, evidenced by the setting up of the calves, doubtless both *male* and *female*, at Dan and Bethel, and by the Dove found in their temple, as reported by Rabbi Meir.

In this dispute the priests and Levites would, of course, be very much implicated. When the persons, called in the Jewish books David and Solomon, removed the sacred place from Gerizim to Jerusalem, they would take the priests along with it. The king would wish to have the high priest near him, that he might have a watch upon his enormous power. The priest would like to be near the king, to watch and controul him: for a priesthood is always, without any exception, *an imperium in imperio*, always, either more or less, struggling for power. When Jeroboam restored the old worship, he would wish to have the old priests; and whether he had any of them or not he would claim to have them. This appears from 1 Kings,⁴ where he is charged by the Jews with making priests out of all the people. This is again confirmed by a speech of King Abijah (son of Rehoboam) made on mount Ephraim: “Have ye not cast out the priests of the Lord, the sons of Aaron, and the Levites, and have made you priests after the manner of the nations of the other land, so that whosoever cometh to consecrate himself with a young bullock and seven rams may be a priest?”⁵ It may be true that Jeroboam did this, but as it is made a charge against him by his enemy, and his enemy is our only witness to the fact, we cannot receive it as a thing established, on which we can reason.

In the time of Rabbi Meir, as I have already stated, the image of a dove was found in the temple of Mount Gerizim.⁶ This serves to shew, that one reason of the schism between the Jews and Samaritans was the return of the latter to the adoration of the Queen of Heaven. The *Μαχαιρας Ἑλληνικῆς*, the Hellenic Sword, clearly proves the truth of what I have before said, that Helen and Ione had the same meaning—that of *the female generative power*. The Septuagint often serves as a most useful gloss.

4. Philo Judæus says, that Moses learnt the rest of the sciences of the Hellenes: *την δε αλλην εγκυκλιον παιδειαν Ἕλληνας ἐδιδασκον.*⁷ And Clemens Alexandrinus says, that the Hellenes

⁷ In Vita Mosis, Vol. II. p. 84.

educated him in Egypt as a princely child, and instructed him in the whole circle of the sciences.¹ Zoroaster is, by Ebn Batrick, styled Iüna-Hellen. Mr. Bryant says, “From what has been said, it appears plainly, that the Hellenes and Iones were the same people under different appellations. They were the descendants of Hellen and Ion, two names of the same personage; among whose sons idolatry first began in the region of Babylonia. He was styled Iön, Iönan, Ionichus, and was supposed to be the author of Magic. From him the Babylonians had the name of Iönim, as well as of Hellenes; for these terms were used as in some degree synonymous.” Mr. Bryant justly observes, this accounts for the Seventy repeatedly translating the Hebrew *from the Hellenic sword* *απο προσωπε μαχαιρας Ἑλληνικῆς*, instead of from the sword of the Dove, *יונה הרב יונה* *hrb iune*.² “The Iones were the leaders of this people, according to the best information. They were descendants of one Ion or Ionah, who was concerned in the building of the tower, when the language of mankind was confounded.”³ This confirms my idea that the Babylönians were followers of the Yoni, and were emigrants from India. When Mr. Bryant wrote, the blaze of light which has shone from the East, had not fallen upon these subjects.

5. Thus Semiramis, or Semi-rama-isi, was the same as Helen, or, in short, Venus, or Divine Love. Her visible form was that of the dove, as well as that of the woman, who was the Io of the Ionites, or Ionians of Syria, who was carried on the back of the TAURI-form Jove to Europe, where her followers were known by the name of Ionian Pelasgi, or Ionian sailors. The following are the words of the learned devotee Nimrod: “Semiramis is said to have been slain by the last survivor of her sons; while others say she flew away as a bird. I believe that she perished by that ancient and cruel punishment, crucifixion. Helen (as we are told) was put to death by certain women dressed up as Furies or Erinnyes, by suspending her to a tree.⁴ In honour or rather in expiation of her suspension, she was worshiped as Helen Dendritis. But the modern punishment of hanging is only a modification of the ancient crucifixion, introduced quite as much by the devotion as by the humanity of Christendom; and it was an ancient custom to use trees⁵ as gibbets for crucifixion, or, if artificial, to call the cross or furca a tree—in felici arbore suspendito. The Deuteronomy says, ‘He that is hanged is accursed of God;’⁶ upon which St. Paul thus comments:⁷ ‘*Christ hath redeemed us from the curse of the law, being made a curse for us: for it is written, Cursed is every one that hangeth on a tree.*’ That (I think) explains the ceremony of the Erinnyes or Curses suspending Helen upon the fatal tree. The same tradition may be traced in the history of the bird Iynx or Venereal Dove, into which Semiramis was changed; but that change was her Apotheosis, and the crucifixion is made into a glorious mystery by her infatuated adorers.” So far the pious, not the infidel, Nimrod. In reply to his last words, which I have marked by italics, the Ionian followers of this incarnate *Ἐγως*, if we had them here to question, would most likely indignantly deny every thing which we read of her, to her disadvantage, in the pages of opponent sects, her enemies, or in the poems of wicked unbelieving poets. Again Nimrod says,⁸ “The wheel upon which criminals were extended was a cross, although the name of the thing was dissembled among Christians; it was a St. Andrew’s cross, of which two spokes confined the arms and two the legs. The Dove of Venus (born on the banks of the Euphrates) was a mænad or fanatic bird, crucified on a wheel with four spokes,

Ποικιλαν ιυγγα τε
 Τρακναμον Ουλυμποθεν
 Εν αλυτφ ζευξασα κυκλω
 Μαιναδ' οριν Κυπρογενεια φερεν
 Πρωτον ανθρωποισι.¹

“The δεσμος² τετρακναμος of the wheel is elsewhere described by Pindar as a punishment of “the accursed, the eternal crucifixion of Ixion.”³

Who is the Ixion crucified, but the second person of the Hindoo Trinity, called Ixora?⁴

6. In both Grecian and Hindoo histories this mystical queen Semiramis is said to have fought a battle on the bank of the Indus, with a king called Staurobates, in which she was defeated, and from which she flew away in the form of a Dove. On this Nimrod says, “The name *Staurobates*, “the king by whom Semiramis was finally overpowered, alludes to the cross on which she “perished.”⁵

But Βαινω means *to carry*, so that Staurobates might very correctly mean cross-borne. I have little doubt that it meant Palm-tree cross and *cross-borne*; a very interesting reason for the latter signification I shall give when I treat of the *ninth* Indian Avatar. The apparent contradiction in the account of Semiramis' *flying away* and *being crucified* is reconciled by supposing, that, on her death, her soul flew away in the form of a dove, as was always supposed to be the case with the souls of the Roman Emperors, who were apotheosised. I think it is not improbable that the word *Staurobates*, known in India and Greece, may be a contraction of two words found in Greek, viz. Σταυρος a cross,⁶ and Βαιων a Palm or Phœnix tree. It would then mean the Phœnix or Palm-tree cross. It might also mean *cross-borne* from Βημα (Jones). It is a compound word used by the Greeks. But the Phœnix, as I have shewn, was identified with the cycle of 600 or 608 in Ireland, or with the Sun or Ethereal fluid, or the still higher principle. Here, perhaps, we may find the origin of the mystical idea of some of the early Christians, that Jesus Christ was crucified in the heavens; and it may lead us to a suspicion (recondite and mystical enough I grant, in this mystical history) as to what bird the Phœnix really was. It was a portion of the generative principle, the divine love, the ερωσ, which first moved on the waters, and which, in the form of a dove, was incarnated every 600 or 608 years, when the Sun and Moon became in conjunction and a new sæculum arose. Ερωσ or Eros, we learn from the Orphic Argonaut, ver. 11, had the name of PHANES;⁷ that is, Phenn or the Phœnix, which has the meaning of 608. Phenn is the same as the Greek Φαινω *to shine*, and Φανος *a torch*, and Φαναι *the orgies of Bacchus*.

Dr. Clarke observed a Phœnix on an obelisk of the Sun at Heliopolis. He thinks it was a symbol of reviving nature. Herodotus says it was like an eagle. Ovid says it is an Assyrian bird;⁸

⁶ See Matt. xxvii. 32.

I doubt not the Assyrian bird of Semiramis. “Memnon when dead was transferred into a bird, “incomparable (as he had been among men) for beauty and sagacity; the Orion of the Indians, and “Phoenix of the classical writers. Memnon was the son of Aurora, or (by another account) of “Semiramis, whose Persiau name is Hom-ai or the bird of Paradise. Now Phoinix was the bird “of the morning and also of Paradise; his dwelling was in the very East, at the gate of heaven, “in the land of the spring, and the grove of the sun, upon a plain of unalloyed delights, lying “twelve cubits higher than the highest of mountains.” “Phoinix was also a tree.” “Upon the “highest convexity or umbo of Achilles’s shield stood a palm or Phoinix tree.”¹

Diodorus Siculus had learnt something relating to the cross, but he evidently did not understand it. He says that Staurobates sent to inform Semiramis that, if he conquered her, *he would nail her to a cross.*² From such scraps of traditions collected together may be found the secret meaning of the ancient mythoses, and by no other method will they ever be discovered.

7. The Arion or Aour-Ion just named was a king, who was said to have lived among the Chaldeans. He is one of the constellations. The Grecian accounts of him are absolutely ridiculous, and exhibit a perfect sample of the manner in which they accounted for the traditions and superstitions of their country. He was known by the Assyrians by the name of Al-aur, and was said to have taught them to worship fire. The word is a compound of the Hebrew אור *aur*, Aour or Ur denoting *fire*, (or that higher principle to which both belong,) and Ion, a Dove, or Ioni. Not only both of these things, but both of these words, have been much concerned in the mysteries of religion, from the days of Adam to those of Christ.³ Orion may also be construed to mean *the mountain Dove*, and in this exactly coincides both with Semi-ramis and with the Indian Parvati.⁴ Pindar says,

Εστὶ δ' εἰκοσ
Ὀρειαν γέ Πελεϊαδῶν
Μη τηλοθεν Ὀριωνα νεῖσθαι.

Orion was said to have been nursed in a land called Hellopia,⁵ or Ia-pi-el, *country of the Sun.*

Mr. Bryant⁶ has shewn that Phoinix was not the name of a country only, but was also a term of honour, applied to many places. He also observes, that it was the name of *a tree* which was always held in the highest honour, and was thought to be immortal, as, if it died, it obtained a second life by renewal. Hence it was an emblem of immortality among all nations. It is probably to its renovating property that the Psalmist alludes when he says, *the righteous shall flourish like the Palm tree.*⁷ Its name in Hebrew is תמר *Tmr*. In John xii. 13, we find the expression, τα βραία των φοινικων—*branches of palm trees.* It is mentioned in the Maccabees⁸ that the Jews entered the temple upon a solemn occasion, Μετα αινεσεως και βαιων. It was called βαι or Bai in Egypt, and from its supposed immortality the Egyptians gave the name *Bai* to the soul. Εστὶ μὲν γὰρ το βαι ψυχη.⁹

The inside of the holy of holies, in the Jewish temple, was surrounded with palm trees or Phoinici, which overshadowed the cloven or ox-footed beings which guarded the Ark. See print of it in Walton’s Prologomena to his Polyglot. In the front of the Church of Maria Maggiore in Rome, is a very large Corinthian column, the capital of course ornamented with palm leaves. Come from where it would, it was probably placed there before the Church of the Queen of Heaven,

for the same reason that the obelisks were placed before the temples at Dodona, at Delphi, and in Egypt, and this I will prove before I finish my work.

When the Pharaoh of Egypt gave a title of honour to Joseph, he called him Zophnat Paneach, פֶּנַח זֹפְנַת *ponh zpnt*. After a long disquisition the learned Pfeiffer brings out the word פֶּנַח *zpnt* to mean γῶσιος or *Augur*. I think the פֶּנַח *ponh* is the Phen or Phoinix—used metaphorically as illustrious, grand, great, the great Augur, or prophet, or wise man—the Paragon or Phoenix of Augurs.

Justin Martyr cites the example of the Phoenix burning itself to prove the immortality of the soul. If this do not prove the wisdom of the holy father, it proves the prevalence of the superstition and its probable connexion with Christianity. He has mistaken the number of years of its period; but authors differed about this, not understanding the nature of the cycle concealed beneath the allegory.

I apprehend the palm tree or the Phoinix tree was the sacred tree, the tree of wisdom, for another reason, viz. from the use of its leaves for the purpose of writing. It had the name of Doum tree—tree of the Oum or Om, D'Om. The Phoinix was the Om, the cycle of 600. It was the ornament of the Holy of Holies of the Jewish temple, of the Αἰὼν τῶν Αἰώνων, the eternally renovating cycle, which was one of his names.¹ In ancient Egyptian Pheneh meant cyclus, periodus, ævum. SCALIGER.

Phoenix, Egyptiis astrologiæ symbolum. BOCHART.

Una est quæ reparat seque ipsa reseminat
Ales Assyrii Phœnica vocant. OVID.²

The Meneiadæ, or the priests of Menes, were said to have been changed into doves, because, says Mr. Bryant,³ they were Ionim. Here is a remarkable proof of the ignorance of the Greeks. They found the priests to be Ionim—that is, the Hebrew plural of Ioni—or the followers of the Ioni, which had the meaning of *dove*, as we have seen. This they understood, but not understanding the other meaning, viz. the sectarian term, they had no alternative but to make them doves, and Doves or Peleïades they made them. The priestesses at Dodona were Ioni-ans, but not, as Hesychius calls them, Πελεῖαι Greek doves: nor were they, as Servius described them, CHAONIAN DOVES.⁴ Herodotus has informed us what this means: he says they were black women, μελαινας, who came from Egypt. Where they came from is not now the question, but I dare say they were black women, Ionim, followers of the black queen of heaven—Pythonesses, or Sibyls, perhaps—Asiatic Ionim—Ionians. But it seems that he did not understand the whole of the matter, for he says, he supposes these black women were foreigners, because they were called doves—a reason foolish enough. This explains all the difficulties about the priestesses being *doves* of the different temples.

From the Sibylline oracles I learn that the Dove sent out by Noah was black. The mysticism of this *black* dove is pretty clear. I have seen very dark-coloured but never a *raven-black* dove. The *dove* was the only bird offered in sacrifice by the Jews.

8. Cecrops was said to be the founder of Athens, and to have been the inventor of a certain

¹ Vide Book V. Ch. IV. Sect. 10.

² Book V. Ch. II. Sect. 5; Ch. XIII. Sect. 2.

³ Anal. Anc. Myth. Vol. II. p. 290.

⁴ The word Chaonian is very curious. I suspect it had the same meaning as the Apolló Cunnius; and that there never was such a town as Chaon or Caon in Greece, although there might be mountains so called by the priests.

kind of cake made of fine flour and honey, offered to the Queen of Heaven.¹ These cakes were said to be made with horns, and were called *Boun*² or *Βουν* or *Βεν*. A similar kind of cakes are called by Jeremiah³ *כונים cunim*. The Seventy translate this by the word *χαυωνας*. *Μη ανευ των ανδρων ημων εποιησαμεν αυτη χαυωνας*.⁴ All this relates, I think, to the joint adoration of the Beeve and the Yoni—to the Baaltis; and I think the *כונים cunim* were the cakes alluded to by Mr. Bryant and described by Herodotus.⁵ At Athens there was an Apollo Cunnus.⁶ Cecrops sacrificed nothing that had life. Here we go back to the Buddhists.⁷ In almost all nations when we go to their origin, we meet with some circumstance of this kind to connect them with the oriental doctrines, and particularly to the abstinence from animal food.

The following observations of the very learned and pious Nimrod cannot fail, I think, to excite some sensations of a curious kind in the mind of the reader: “Candace denotes, as I believe, the *She Hawk of the Wheel*, that is, the Anima Mundi or Divine Spirit of the world’s rotation. We read in Pindar of the venereal bird Iynx bound to the wheel, and of the pretended punishment of Ixion.⁸ But this rotation was really no punishment, being, as Pindar saith, voluntary, and prepared by himself and for himself: or if it was, it was appointed in derision of his false pretensions whereby he gave himself OUT AS THE CRUCIFIED SPIRIT OF THE WORLD.”⁹

The mystic union of the *Ερωσ* and the *Ψυχη*, Cupid and Psyche, is celebrated by the Greeks in a vast variety of beautiful allegories; but we almost always find the dove and the flaming torch to be part of the ceremony. The butterfly or the chrysalis, emblematical of the metempsychosis or change of state, is generally seen.¹⁰ Varro itaque eam definit, “Anima est aer conceptus ore,

¹ Bryant, Anal. Vol. I. p. 299.

² I believe that it was from this *βεν* we derived our word *boon* for a service rendered by a tenant to his landlord, or a piece of work done *gratis*—and our word *bon-fire*, on days of great rejoicing. I suspect that they all came to England with Cunobelinus or Apollo Cunnus, after whom our king was so called, if there were such a king.

³ Ch. vii. 18, xlv. 18, 19.

⁴ Jeremiah xlv. 19.

⁵ Anal. Ant. Myth. Vol. I. p. 301.

⁶ Ibid. p. 350.

⁷ Pausan. Lib. viii. p. 600.

⁸ *Τετρακναμον επραξε δεσμον Εον ολεθρον Ογ*. Pyth. 2, v. 74. The four spokes represent St. Andrew’s cross, adapted to the four limbs extended, and furnish perhaps the oldest profane allusion to the crucifixion. This same cross of St. Andrew was the *THAU*, which Ezekiel commands them to mark upon the foreheads of the faithful, as appears from old Israelitish coins whereon that letter is engraved. The same idea was familiar to Lucian, who calls T the letter of crucifixion, and seems to derive it from the word *σαυρος*. (Luc. Jud. voce ad finem, et vid. Chishull, Ant. Ass. p. 21.) Certainly the veneration for the cross is very ancient. Iynx the bird of Mantic inspiration, *μαινας ορνις*, bound to the four-legged wheel,

*Τετρακναμον Ολυμποθεν
Εν αλυτω ζευχθεισα κυκλω,*

gives the notion of divine love crucified. The wheel denotes the world, of which she is the spirit, and the cross the sacrifice made for that world. Iynx is used for Love, Desire, Appetition, and thence the Latin word *iungo* or *yungo* *I unite*, and our name for the age of sensual love, Young—*ποικιλαν ιυγγα*. Having explained thus much, I may add with Columella, Lib. x. ver. 349,

HINC Amythaonius, docuit quem plurima Cheiron,
Nocturnas CRUCIBUS volucres suspendit, et altis
Culminibus vetuit feralia carmina flere. Thus far *Nimrod*.

I shall make no observation upon the crucifixion of *the dove of Venus, the mænad or fanatic bird*, born at Askelon and on the Euphrates, of divine love, before Christianity existed, except, 1st, that the priests for almost 2000 years have been employed in destroying every thing which they thought made against their system, and how *this* has escaped them I do not know; and, 2dly, that *Ερωσ*, or divine love, as the reader has seen, was the first-begotten son of the Platonists.

⁹ Nimrod, Vol. I. p. 278, Suppressed Edition.

¹⁰ Vide Spon. Miss. Erad. Ant. p. 7.

“ defervefactus in pulmone, tepefactus in corde, diffusus in corpore.” Imo Latinè Anima à Græco *ανεμος*, ventus : sic Plautus, Virgilius et alii animam sæpenumero pro vento usurparunt. Inde animam efflare dixerunt, quod eam pro vento flatûve haberent, comprobaturque sequenti marmore, ubi papilio à mortuo efflatus circumvolitat. Hinc Græci animam Psychen nominarunt, vel *δια τὸ ανωθεν εψυχωθαι*, quasi cœlitus inspirata, ut dit Nicetas Choniates, vel à verbo *ψυχρος*, quod Hesychio, levis et debilis est. Anima, inquit Poteta, par levibus ventus, volucrique simillima somno, quando scilicet à corpore divortium fecit. Addendum et *ψυχην* Græcis æquivocatum esse, animamque significare et papilionem : unde Hesychius, *ψυχη πνευμα και ζωϋφ πτηνον*.¹

“ When Agamemnon sacrificed at Aulis, in Bœotia,² the Gods sent no fire to consume the victim. This fire is figured as a breeze to be sent by the Gods to speed the ships on their imaginary voyage, but it is called by the same word which meant the sacred fire, *ουρος*. Whenever the Gods sent a wind, it is called *Ικμενος Ουρος*,³ and it is well known to all readers that the Creator spirit is equally represented in holy writ by a fire or luminous glory, and by a rushing wind. Aura, in Latin, may be used for a breeze, and the divine particula auræ in a man is called *ανεμος* or animus, and anima *πνευμα*, spiritus.⁴ Upon this occasion it is said that the king sacrificed his daughter which pacified the Gods and procured the *αυρος*.”

Centre de toute puissance, de toute intelligence, de toute perfection, Dieu existoit avant tous les tems, avant toutes les choses, avant tous les êtres animés. Invisible par son essence, son invisibilité fut la nuit primitive, qui précédâ les tems et la lumière. Dans elle, il produisit par sa puissance, ce qu’il avoit conçu par son intelligence ; c’est pour cela, que la nuit fut appelée la Mère, la Génératrice de tout ;⁵ Dieu renferma, dans un œuf immense, les principes et les germes de toutes les choses : de cet œuf, sortit un être qui possédoit les deux sexes ; c’étoit le fils, la première production de Dieu : il se servit de lui, pour séparer les élémens confondus dans cahos, et pour développer les germs des créatures vivantes. Sa vertu ou sa puissance suprême confiée à son fils, fussit à la création du monde matériel, mais pour vivifier les germes, il fallut le *souffle*, *l’esprit* qui les échauffa. Cet esprit fut appelé l’amour. Orphée lui donne le titre de *πνευμα* et de *παντογενεθλα*. Et suivant Hésiode, il fut contemporain du cahos.⁶ *Ητοι μεν παρωρισα χαος γενετ’, αυταρ επειτα Η δ’ Ερος*. Au moment où le monde en sortit, il n’existoit que Dieu, sa force suprême, ou sa vertu, sa sagesse, ou son esprit. Ces deux êtres Metaphysiques personifiés produisirent le Fils, ou l’être Générateur, et l’Amour, par lequel il engendra d’abord, et conserva dans la suite, toutes les créatures.⁷

CHAPTER IV.

AMAZONS. GENESIS.—AMAZON, MEANING AND HISTORY OF.—INVASION OF ATHENS BY THEM.—AMAZONS IN THE TIME OF ALEXANDER, AND NOW IN INDIA.—OBSERVATIONS ON THE RAM AND THE BULL.—RELIGIOUS WARS AND SUCCEEDING PEACE.—LETTERS KEPT SECRET.—CHRONOLOGY.

I. WE will now inquire into the origin of the Amazons. Among the ancients, many persons thought that the book of Genesis meant to describe the man and woman as at first created, to have been *one* and an androgynous being. It is there said that God created man *in his own image*, and, PRIOR TO THE CREATION OF WOMAN, *created he him, male and female* created he them. Many persons formerly believed that the first man and woman were united in one body.

Mr. Faber observes that this construction put upon the passage “*God created man in his own image, in the image of God created he HIM, male and female created he THEM,*” was adopted by some of the most learned Rabbis, whose names he gives at full length, who maintained that the word rendered *rib* means *side*.¹ This we shall find has an evident tendency to prove that the mythos (as Dr. Geddes calls it) of Moses, is in reality the same as the mythos of the Hindoos.

The text says man was formed after the image of God; but God himself was believed to be androgynous. The text of Genesis (ii. 21) is *אֶחָד מִצְלָעָתָיו* which means either, one from his *sides* or one from his *ribs*; but the latter is inconsistent with the context, which says in the 23d verse, that the woman was made not only from the bones, *but from the flesh of the man*.² The double being, out of which it is said God formed the man and the woman, is nothing but the Amazon of the ancients; and the Amazon is nothing but a Venus Hermaphrodite—the same as that described in plate 31, figure 8, of the Supplement to Montfaucon’s *Antiquity Explained*. They appear to be both the same in one respect, being both one half *male*, the other half *female*. The Isis sitting on the lotus, with the solar glory, is another example of this kind of double being, divided in various ways—sometimes *crossways*, and sometimes *lengthways*, as shewn in Montfaucon. Speaking of the worship of Artemis, by the Amazons, Creuzer says, *On l’adorait dans le royaume de Pont, avec l’épithète significative de Priapina*.

2. The word Amazon is composed of two very ancient words. The first is *Ama* or *Ma*, which, in old languages, means Mother. Its ubiquity proves its extreme antiquity. The second is an ancient name of the Sun, which was called *Zon*, *Zan*, *Zaon*, and *Zoan*. The *Suanes* and *Soanes*, of Colchis, were sometimes called *Zani*, *Zainai*, *Zanitæ*, and also *Sanitæ*. There was a city on the Thracian coast called *Zona*, to which the trees of *Pieria* are said to have come and ranged themselves in order to the music of Orpheus’s harp.³ *Heliopolis*, of Egypt, or *On*, was also called

¹ Pagan Idol. Vol. III. p. 71.

² The idea of the learned Jews and others alluded to by Mr. Faber, does not seem so absurd to us, since we have seen the Siamese Boys. And if it be said that had they been male and female they could not have increased the breed, the answer is very short—had the ligature which bound them together been a few inches longer, they could have done it. There have been many instances of double persons. A double lady, the daughter of Fulk de Pagnel, formerly lived, and left a large property to the town of Newport Pagnel, which it now holds from her. Vide her monument in the centre aisle of the church.

³ Argonaut. Lib. i. ver. 29; Mela, Lib. ii. Cap. iii. p. 140; Herod. Lib. vii. Cap. lix.; Bryant, Anal. Vol. III. p. 476.

Zoan, and Taphnes, and *Fons Solis*, and Balbec, and Bahalbeth.¹ Taphnes was probably Taph-hanes. Bahal-beth and Balbec mean Balbit, *house of the Sun* or *Bal*.

There was a city in Africa called Zona taken by the Roman general Sestius; also a city of Zona of the Amazons in Cappadocia,² or Armenia, &c. There was a temple in Thrace called Σαον. The following facts are extracted from a long passage of Mr. Bryant's Analysis.³ The most considerable body that went under the name of Amazons, settled upon the Atlantic in Africa, at the extreme verge of that region. Of their exploits a long account is given in the history of Myrina.⁴ She is supposed to have lived in the time of Orus, the son of Isis, and to have conquered Africa and the greater part of Asia: but was at last slain in Thrace. Amazons were also found in mount Caucasus, in Albania, and near the Palus Mæotis. Polyænus speaks of Amazons in India: and they are also mentioned by Nonnus. They likewise occur in Ethiopia. They at one time possessed all Ionia: and there were traditions of their being at Samos, and in Italy. *Αμαζονες υπεσρεψαν αυθις εις Ιταλιαν.*⁵ There was a town in Messapia, towards the lower part of Italy, named Amazonia.⁶ Even the Athenians and Bœotians were of the same family: hence it is said that Cadmus had an Amazonian wife, when he went to Thebes, and that *her name was Sphinx*: *Καδμος εχων γυναικα Αμαζονιδα, ἡ ονομα Σφιγξ, ηθεν εις Θηβας.*⁷ He went first to Attica. The reader will not forget that the Sphinx was half Lion, (not Lioness,) and half woman. There were also Amazonian Colchians, who were noticed as being peculiarly black. The Iberians, the Cimmerians, the Mæotæ, the Atlantians of Mauritania, and all the Ionians, were Amazonians—and were called Azones, Amazones, and Alazones. They were also called Syri, Assyrii, Chaldæi, Mauri, Chalybes. They are said to have founded the cities of Ephesus, Sinyrna, Cuma, Myrina Latorea, Anæa, Eldæa, Myrlæa, Paphos, Cuna, besides many others. Lucian, in his dialogue between Vulcan and Jupiter, calls Minerva an Amazon.

I believe, with Mr. Faber,⁸ that the statues of Amazons, said to have been worshiped at most of the places named above, were statues of the double God, or of the first man of Genesis, made after the image of God.

They are represented to us, by the Greek writers, as a most turbulent and warlike race. Pliny says, their shield was in the form of the leaf of the Indian fig-tree: and on it they carried a lunette. This, I think, was the Argha or boat of India, which must have been like a lunette. Monuments were shewn in various places where they are said to have had battles, and been killed; as at Megara, Chæronæa, Scotussæa, Cunoscephale, also in Ionia and Mauritania, and even *within the walls of Athens*.

3. A very celebrated and marked invasion of Attica by them is recorded. The Athenians shewed the place where, in this invasion, the battle was fought,—a subsequent truce made, and a stone pillar erected to record it, called Amazoneum. The commander of the Amazons is stated to have been a foreigner from Egypt, a Thracian and an Athenian, whose name was Eumolphus. Sacrifices were offered by the Athenians to their Manes; and a temple in Athens was said to have been built by them. The place where the truce was made was called Ὁρχωμοσιον, Horcomosium. Here we have an excellent example of Grecian history. Here are all the particulars of the war-monuments to those slain in battle; places deriving their names from the events of the war; temples erected—treaties of peace exhibited. And yet, taken literally, every word is false: for no one can believe that there ever was an Amazonian army of women with one breast. This

serves to shew how all Grecian early history ought to be estimated. It is all mythological. I cannot help here observing, that we have no sacred HISTORICAL record better authenticated than this at Athens, and not one of the same date bearing, in its literal sense, more the character of real history.

The confusion of the history of the Amazons has hitherto set all theory at defiance. But I think a little consideration of what we have said respecting the divisions and wars between the rival sects of the Brahme-Maia in conjunction, the Yoni alone, the Linga alone, and at last the reunion of the three, will enable us to account for it all. The wars of the Amazons were those between the followers of the *male* and the *female* principles, and their alternate successes. The truce with the Athenians, is a most important circumstance; for, after it is said to have taken place, they were heard of no more.¹ The reunion of the two sects took place at the time described in this truce: this is the figurative mode of describing the reunion of the religions.

The Amazons are said to have burnt the temple of Ephesus, which they erected themselves;² and which was the chief seat of the Amazonian Iönim.³ Mr. Bryant⁴ acknowledges that he knows not how to account for this, because he is satisfied that the Amazonians and Iönians were the same. The difficulty is easily explained. The first founders were worshipers of the double principle, the Brahme-Maia; their successors fell into the Yonian heresy, and were conquered by people of the original religion, when it became restored, according to the accounts in the Hindoo histories, as it was at last almost every where, either by truce, as at Athens, or by force. But at Ephesus, though they burnt the temple, the female, in Diana, seems to have recovered its power. At first we find them founding cities and settling countries; here was the act of the persons holding the double principle; afterward we find them making war on the cities and countries which they had formerly founded. This was when these places had gone into the adoration of the Yoni alone, or in other cases of the Linga alone; for the Ama-Zon must have been at equal enmity with the two taken separately; and at last when the two reunited they all merged into the *double* worship: and the Amazons, as distinguished from the others, are heard of no more; so that, as Lysias says, their name became extinct,—at least in Greece, or the Western world. But to the general pacification, the Persians and Jews formed an exception: in consequence, we find Cambyzes restoring the temple of the *male* principle at Jerusalem, destroying the temples, and, where he could, the sphinxes, but leaving the obelisks, the emblems of the Linga, untouched in Egypt, where some, and particularly that at Heliopolis, the finest of them, remain. I consider the fact of the obelisks—the Lingas—being left by the Persians when the temples were destroyed, as very important. Why were they left? They were much more easy to overthrow than the temples; and they are most of them covered with hieroglyphics of Gods and Goddesses. Though the temples and their idols were odious to the iconoclasts, the figures of idols on the *sacred* obelisks, which were used only as *letters*, were spared, for the sake of the pillar, the Linga, on which they were engraved.

Something similar to the story told of the race of Amazons has been found in India, among the natives of Malabar, in a tribe called Nairs. A government actually exists there, in which the *women*, not the *men*, bear rule. But although this is singular enough, there is not in their traditions the least appearance of the breast having ever been amputated. They seem to have been in

existence in the time of Alexander the Great. The account of them may be seen in the fifth volume of the Asiatic Researches. Nimrod¹ has some curious observations respecting them.

4. When we come to the time of Alexander, we arrive at a period in which we may expect something like rational history. Bryant says,² "Some ages after, in the time of Alexander, an "interview³ is mentioned to have passed, wherein the Queen of the Amazons makes proposals to "that monarch about sharing for a night or two his bed: and even, in the time of Pompeius Mag- "nus, during the Mithridatic war, they are supposed to exist; for, after a victory gained by that "general, the Roman soldiers are said to have found many boots and buskins, which Dion Cassius " (in bello Mithridatico) thinks were undoubtedly Amazonian." When I consider the unquestionable fact, that there is now a powerful and civilized tribe in India where the women are the governors and choose the men they like, and where the men are held in subjection, I cannot help thinking the story relating to Alexander probable. I suspect that they have had their origin from the extremes to which devotees have run in the times of the fierce contentions which arose between the followers of the *male* and *female*, the Linga and Ioni. It is difficult to doubt the story respecting Alexander; and the fact of the existence of the present Nairs, very near to or in the country where he marched, cannot be doubted. When I consider the excesses to which party and religious zeal, about the most contemptible nonsense, will often carry people, I can believe it possible that some frantic women may have cut off their own or their children's breasts, which may have been exaggerated and applied to all the armies of the followers of the *female* sect, who may hence have been all called Amazons. Perhaps these armies of the followers of the female Solar principle may have been commanded by women like Boadicea, of Britain, and hence the fable may have arisen.

Homer states the Amazons to have come from India. There is an Amazon with only one breast in the cave of Elephanta, in India.⁴ Mr. Faber says,⁵ "The Amazon of the Elephanta "pagoda, and of the *wonder-loving* Greek fabulists, is manifestly no other than the compound "Hermaphroditic deity, who, by the Hindoos, is called Ardhanari, and who is formed by the "lateral conjunction of Siva with Parvati. This monster, as delineated by the mythological "painters of India, has, from the head to the feet, the right side of a man and the left side of a "woman." "Near the statue in question reposes the mysterious Bull Nandi." On the Amazon of this cave, Col. Wilford⁶ says, the figure with one breast has been thought by most to represent an Amazon: it, however, appears to me a representation of the consort of Siva, exhibiting the active power of her Lord; not only as *Bavani* or courage, but as *Isani*, or the *Goddess of Nature considered as male and female*, and *presiding over generation*.⁷ The Amazon is also found in the caves at Maha-bali-pore.⁸ In all parts we read of the Amazons, but generally confounded with the Cyclopes. Perhaps the Cyclopes were husbands of the Amazons, that is, had their wives in common. This custom formerly prevailed in Thrace, in Arabia,⁹ according to Strabo, and, as we have just seen, yet prevails in one part of India, among the people called Nairs. In the Institutes of Menu it is written, "Having divided his own subsistence, the Mighty Power became half " *male* and half *female*."¹⁰ Brahma is said to have manifested himself in a human shape, when

one half of his body sprang from the other, which yet experienced no diminution; and out of the severed moiety he framed a woman, denominated Iva or Satarupa. After some time the other half of his body sprang from him and became Swayambhuva or Adima.¹ From their embrace were born three sons.

In this wild mythos it is impossible to be blind to the account of the creation in the second book of Genesis, as expounded by the Jewish Rabbis, in the *double being* out of which man and woman were formed. At the same time I conceive it absolutely impossible to believe it to have been simply a copy of our Genesis, as we have it, unexplained, by the Rabbis. This proves that the Hindoo cannot have copied from the Hebrew. The Hebrew is a part of the Hindoo: the Hindoo cannot have copied what is not there, but only understood. There is no way of getting over the difficulty except by supposing the modern Rabbis have learnt the exposition from the Hindoo. This is hardly credible, though possible.

The same doctrine as that of the Jews respecting the union of the male and female—of whom one with four hands, four legs, two faces, was formed—may be found in Plato, as detailed by Mr. Faber.²

This subject affords a direct proof that the true esoteric religions of Homer, the Hindoos, and the Jews, were all the same. It is impossible to believe that the coincidence of all three could be the effect of accident in an idea or doctrine outwardly so absurd as the Amazon, and the man and woman conjoined in one body. The mode in which the learned Rabbis, enumerated by Mr. Faber, treat the subject, shews, that though they knew very well there was a secret meaning, yet they did not understand it. I once more warn my reader to recollect, that I cannot be expected to account for ALL the fooleries which the cunning of priests, and the fanaticism of devotees, in long periods of time—several thousand years—have engrafted into the ancient doctrines, which, without these assistances, would vary from the original, in consequence of the law of change alone always acting. The sacrifice of Melchizedek is an example, so beautiful in its primeval simplicity, (admitted by the Roman Church to be the origin of their Mass,) and so horrible in the *body and blood verily and indeed taken*, into which, in modern times, it has grown.

5. When I say that Moses substituted the Ram for the Bull, it does not necessarily follow that he designed to make the Ram an object of adoration or idolatry. To all idolatry he had an utter repugnance. But it seems certain, though I can perceive no reason for it, that wherever the worship of the Yoni prevailed, there was also idolatry. The prayers to the god Bull, which may be seen both in Faber and Bryant, are expressed as being offered to him merely as the emblem of a Superior Being. If Moses meant to keep his festivals in order, when the signs changed, he must of course provide against that change. The Ram never became an object of idolatry with any of the followers of Abraham, until the Yoni was again joined to the Linga. The change of the commencement of the year from the first of May to the first of April, from Taurus to Aries, was the most probable way to abolish the adoration of the former. It is generally much more difficult to destroy an old superstition than to prevent a new one; and the new festival of the Yajna or Passover, was altogether of a very different character from the old one of the Bull.

The view which I take of this subject is strikingly confirmed by the fact, that the Beeve or Urus was constantly of both sexes; but in no instance can the least appearance be discovered among the followers of the Sheep, except of the *male*; for when the Sheep succeeded among the Assyrians to the Beeve, Astarte, &c., had the head of a ram, not of an ewe. In the adoration of the Beeve, the Heifer or Cow is continually found; but in that of the Ram or Lamb of God, no in-

¹ Asiat. Res. Vol. VIII. p. 376; Faber, Vol. I. p. 318.

² Orig. Pag. Idol. Vol. III. p. 70.

stance of a female is, I believe, known. In the worship of Cristna, I also believe that no female will be found, except what existed in the previous system. All the allegories of his nine Gopies, Milkmaids, or Muses, the radii or rays of the sun with which he danced, do not amount to any thing like the female power; and this, in a striking manner, confirms my idea of his close connexion with the Jewish system. The Jews must have emigrated, when his enemies are said to have prevailed; for the alternate successes of the sects are described in his wars with the evil demons.

The image of "the Lamb of God, which taketh away the sins of the world," never was an object of adoration with the Jewish sectaries, till it was adopted by the Christians, among whom it is yet to be found in the temple of St. John Lateran, and in many other places, both Romish and Protestant, and particularly about Florence, of all which I shall treat hereafter. The Jews were correctly followers of the God *Iao* alone. The Romish Christians have, along with the God *Iao*, adopted the Queen of Heaven, the Mother of God, the Regina Cœli, as they call her. They are followers of the double principle, and with it they adopt the adoration or use of images. These two have always gone together. The Protestants refusing the *feminine* principle, refuse also, as usual, the use of Images. Such is the fact. Are we to attribute this to accident or design? The female and the image do not seem to have any necessary connexion.

6. If we examine carefully, without preconceived system or dogma, into the origin of the affairs of the world, I apprehend that we should find proofs of their having been in ancient exactly or very nearly what they have been in modern times. There were great wars about religious opinions of the most trifling and unimportant nature, which extended to all countries, and lasted many hundreds, nay thousands, of years. At last the world grew tired of these wars, or had become sufficiently enlightened to see their absurdity, and for many hundred years before Christ they appear to have so completely ceased in the West that in fact the recollection of them was almost lost. Europe is now following the same route. Religious animosity is every where subsiding, and we have reason to believe that the world, on this subject, will be at peace, that is, *religious* peace, as it was before,—verifying Solomon's adage, that "there is nothing new under the sun."

In the Greek and Roman writers we find an extraordinary confusion of Hellenes, and Ionians, and Argives, and Pelasgi, &c., &c. All this arises from their not knowing, that nearly all these were sectarian terms. If the press do not prevent it, posterity, two or three thousand years hence, will be in exactly the same situation with respect to us. They will find Greeks in Turkey, Greeks in Asia, Greeks in Russia, Greeks in Rome. This is like the Ionians in Athens, in Asia Minor, at Dodona, in Egypt teaching Moses, and in the islands of the Mediterranean. They will find Papists in Rome, in France, in Russia, in Syria, in Ireland. They will find Protestants also, having their temples in all these places. What, if they do not carefully attend to the secret meaning and history of these terms, will they make of them? They will be lost as we have been. I could, if I would, fill fifty pages in elucidating this part of my subject, but I wish to diminish, not to enlarge my book. I cannot afford to waste the paper. My book is not to raise money; a dead loss it is certain to be. It is to *instruct* my countrymen, not to *amuse* them. If I wanted to make money I would attempt to write some pretty, amusing but really worthless novels. Thus, perhaps, I might not only make money, but be made a baronet into the bargain. For my reward I look elsewhere. But why should I say worthless? If the novels amuse idle people, and keep them out of mischief, they are not worthless: and we are much obliged to the gentleman who has written them. But, had he attended a little more to the instruction of his countrymen, without making his works less amusing he might have made them more useful; and, in the eyes of the great and good of future ages, he would have occupied a higher place.

7. When I had advanced thus far in my work an opinion began to gain strength with me, that

the reason why all these ancient superstitions were not understood by the nations after about the time of the Trojan war, arose from the use of letters either not having been known or having been kept as a masonic secret among a class of initiated persons, and that the histories, such as they were, in reality were mere traditions. I think every step we take we shall find new reason to believe this to be true. It exactly accords with the history of the Indian Vedas. We have found in them proofs that the Indians had the mythos of the Jews, but it is very evident that it is with them mixed up with a great mass of nonsense, from which the Mosaic Judæan mythos is free. It appears that in all nations religions have advanced in complication along with time. Now, is it not possible that the art of writing may have been known to the Chaldeans only, and that Abraham may have brought it with him, and along with it the historical part of Genesis, &c. ; that after his tribe left India the mythos was not committed to writing or communicated to the people there, till it became much more corrupted or complicated than that of the Iudi; and is not this enough to account for the difference of the style of the two? Certainly the style of the Judæan mythos speaks superior antiquity; and if with the Indians the peculiar dogma of the Iudi did not prevail, viz. that not an iota should be changed, we may readily account for the simplicity of the one, and the complication of the other. The Judæans were latterly both followers of the male and Iconoclasts, and this may furnish a reason for their superiority. Whether they corrupted their sacred books when they were idolaters, worshipers of the *female*, and cannibals, and afterward restored them to purity, I know not. That they were all three, we learn from their Prophets. Their cannibalism has been proved by Lord Kingsborough, in his fine work on the antiquities of Mexico.

8. Chronology. We will now stop to make a few observations on this subject; but they will not detain *us* long; though it *has* occupied the pens of innumerable persons, and served to waste millions of reams of paper. To pretend to fix the dates of the earlier events with which we are acquainted, except in respect to their order of succession, would be as absurd as to adopt as *literal* histories the plagues of Egypt or the labours of Hercules. A probable theory, perhaps, may be formed as to their succession, but there is no dating events to years till about the time of Cyrus, when the famous eclipse of Thales took place. M. Volney, in his researches into ancient history, has settled this question.

I apprehend the first race of people with whom we are acquainted, we know only from the Tauric worship, the Zodiacal division into 360 parts, and the book of the deluge, which fixes the year to 360 days. We have an obscure view of this doctrine existing almost every where over the globe. Its professors lived after the time that the sun entered the sign of the Bull at the Vernal Equinox, more than 4500 years before Christ. After these people came the Amazons and Cyclops, who invented *arithmetic* and perhaps *letters*, who worshiped upon the tops of mountains, in stone circles which they invented, and which they erected in accordance with the fine cycles with which those buildings clearly prove that their fabricators were acquainted. They were the race supposed by M. Baillie to have been highly civilized. These people may have flourished for a thousand or fifteen hundred years before the sun entered Aries. They were Negroes. They were Buddhists—by degrees adopting the Linga and Yoni as emblems, and the protecting Cobra. The first book of Genesis, the *rasit* or *book of wisdom*, is probably a work of these people. It contains enough to prove that its authors possessed great science, and a knowledge of the nature of the world, and of natural philosophy. Of this, a moment's consideration of Chap. IV. and Sect. XVI. XVII. of my CELTIC DRUIDS, will convince any one. M. Cuvier has settled this question. If in some parts it be obscure or not intelligible, this may be attributed to the numerous translations of ignorant persons, through which we have it; and in fact to the language in which it is contained being in great part lost, particularly the *esoteric meaning* of words, which Jews and Christians in late years have equally endeavoured to keep out of sight; of this the word *rasit* is an example.

At the latter part of the time when these Cyclopes lived, arose the disputes and wars about the two principles. For a time, the Amazonian doctrines, or the adoration of the female principle, seems to have prevailed among them. This elucidates the account that both they and the Amazons were the builders of Argos, Ephesus, and many other towns. This is supported by the Indian histories, from which we learn that, about 3000 years before Christ, great and dreadful civil wars raged every where respecting religion, during which, as happened in the times since Christ, the world rapidly sunk into a state of ignorance, and the fine science of the makers of the Cycles was lost. This accounts for many hitherto unaccountable facts or traditions. For instance: Ephesus was built by Amazons, and destroyed by them. The histories state the wars to have been attended with alternate successes—sometimes one party prevailed, sometimes another. The wars about the *male* and *female* principles were accompanied by wars about the change from Taurus to Aries. Men seem to have been as absurd in ancient times, and to have destroyed each other and their fine works, for dogmas as trifling and childish as those contended for by Homoiusians and Homousians, Papists and Protestants, in modern times; proving, as observed before, the truth of what Solomon said, that there was “nothing new under the sun.” It is evident that the theory here proposed is capable of being worked up into a system, and might afford room for much talent and ingenuity. It is founded on the facts which we know, and the most rational historical statements which we possess, but it is at the best but a theory, and I see not that to spend more time upon it would be of any use. It, in a word, contains all we know and all it is probable that we ever shall know. If my reader be not satisfied, he may go to the priests, and they will give him an apple of knowledge, and tell him the year, the day, the hour, the minute, and the second, in which the world was created, Abraham left the land of Vr-ii, each of the plagues of Egypt happened, or Elijah went in a chariot to heaven. On chronology I shall say no more, but shall proceed to the consideration of many facts which are extremely interesting, and which will support and elucidate what I have proposed.

CHAPTER V.

CYCLOPES.—CYCLOPÆAN BUILDINGS.—ALL ANCIENT HISTORY FABLE OR ÆNIGMA.—MUNDORE, &c.—THE CYCLOPES IN MUNDORE.—ABURY AND SERPENT WORSHIP.—FREEMASONS IN MUNDORE. ALMUG.—FOURMONT. THE TEMPLE OF ONGAR.

1. THE explanation which I have given of the Argives, the Hellenes, the Ionians, and the Amazons, seems to me to be satisfactory, but I cannot say quite as much of the Cyclopes; though certainly the fact of their building Argos, &c., seems to connect them with the Ionic superstition. But this is not enough. The consideration of the prodigious number of buildings attributed to them, seems to demand something more. The French Institute, in 1804, made out that there were 127 towns in Europe, which had anciently been, at least in part, built in the Cyclopæan style. The Cyclopes must have been as general as the Amazons.

Dr. Clarke supposes the Cyclopæan style to have been cradled in the caves of India. The Cyclopæan Gallery at Tyrins is curious on account of the *lancet arch*, which is common in very old buildings, in India.

In the works of the later Greeks, the Cyclops are represented with only one eye. I suppose this arose from their absolute ignorance of what they were and who they were, or indeed of any thing about them; and, there being merely a tradition that such persons did once live, the Greeks were obliged to have recourse to etymology, and from the word *κυκλος*, it is said that they made *round eye* or *one eye*. Round eye is easily accounted for, but I do not see how the Cyclops hence came to be supposed to have had only one eye.¹ Winkleman, in his *Monumenta Antiqua inedita*, observes, that in the earliest periods the Cyclops were represented with *two* natural eyes, and a *third* in the middle of the forehead. This seems to connect them with Jupiter, who, before the Trojan war, was called Trioptolemos—Trilochan: and this again with the Hindoo Gods, some of whom are described in pictures in the cabinet of the Asiatic Society, with *three* eyes. Thus when we really get to the bottom of the Greek mythologies, we always find ourselves in India. This reminds me that Jupiter appeared at Lacedæmon, in very early times, with four heads or faces—thus identifying him with Janus of Italy and Brahma of India.

2. The Cyclopæan buildings, including the Druidical circles of large stones and tumuli, were common in Greece: but the Greeks knew not by whom they were fabricated, nor does it appear that they ever entered into a rational inquiry either whence their fabricators came, or who they were. The ignorance of the Greeks I believe arose from the buildings having been constructed long previous to the knowledge of letters, unless the use of letters was kept a secret by a few individuals or an initiated class of society, which I think it was: and I think *that* initiated society were themselves the persons called Cyclopes. The buildings were executed under the direction of a great, powerful, and dominant priesthood. The remains of buildings which we call Cyclopæan, and with which I include those called Druidical, are of so peculiar a character, that they can be compared to no others in existence. If we did not see them, but only knew of them by report, we should believe the stories of them to be no better than fairy tales. It is evident that they were in existence before the time of known history, and that their fabricators must have possessed considerable knowledge of astronomy and skill in the mechanical arts. The former is proved by the cycles exhibited in their construction, as I have shewn in my *CELTIC DRUIDS*, and in Book V. of this work; and the latter is proved by the size of the stones which are so large, that without much mechanical skill they never could have been moved.² As the Buddhists are the oldest religionists with whom we are acquainted, we are naturally led to appropriate them to this sect, which many circumstances tend to confirm.

Mr. Bryant has proved that the Cyclopes were supposed to have been once established in Argolis, and that they were said to have built Argos, Mycænæ, and Tiryns.³ These circumstances seem to connect or identify them with the Ionians and Amazons: and I think it will ultimately turn out that they were the same people under different names. The Cyclopes were ἔς ΕΠΙΤΑ μὲν ἵναι ἐκαλεισθαι δὲ γασεροχειρας. They were called γασεροχειρας and ἐκχειρογασερας. These evidently allude to the womb or the female organ of generation.⁴ “The Cyclops, Cocles, or Arimasp, is any Theocrator of universal dominion, and the ten Arimasps of Mount Riphæus,

— decem coclites quæ montibus alteis
Riphæis sedere,

¹ Pliny, Nat. Hist. VII., has something about them. Balbec is Cyclopæan.

² For example—the stones in the walls at Balbec, in Western Syria, and at Mahabalipore, in India, and at Abury, &c., in Britain.

³ Class. Jour. Vol. V. p. 294.

⁴ Strabo, Lib. viii. p. 540.

“are the ten Antediluvian kings.” “These are the Cyclopes who perished at the time when Apollo was banished from heaven for a year, that is to say, in the long night of the Catoulas.”¹

Might not the kings named above, allude to the seven millenaries and the ten Neroses, and the Catoulas to the state of nature when Brahma reposes on the great deep, previous to a new creation, after the millenium? Might not the *επτα γασεροχειρας* be the *seven* circular planetary bodies, each sacred to a millenium; and the *ten* Coclites sacred to the ten Neroses? This is very mystical: but the Cyclopes are almost always found along with the Amazons: and the *γασερας* and the peculiarity of the numbers seem to connect them in some way or other.

3. I have several times before used the expression, that a matter was *sufficiently mystical*. But, in fact, we can never give the ancient mythoses credit for too much mysticism. It was evidently almost the only employment of the idle priests to convert every historical account into a riddle, and again to give their doctrines and riddles the appearance of history. Sacred and profane history are both the same, from the ænigmas of Samson, that given by the Queen of Sheba to Solomon, and the beautiful fables of Æsop (of which I shall treat by and by) to the parables of Jesus Christ. And the reason why all our learned men have totally failed in their endeavours to discover the meaning of the ancient mythologies, is to be found in their obstinate perseverance, in attempting to construe all the mythoses meant for ænigmas to the very letter. I have no doubt that anciently every kind of ingenuity, which can be imagined, was exerted from time to time, to invent and compose new riddles, till all history became, in fact, a great ænigma. In modern times as much ingenuity has been exercised to conceal the ænigma, and, by explanation, to shew that it was meant for reality. Under these circumstances, how was it likely that the riddles should be understood? Before the time of Herodotus every ancient history is a mythic performance, in short a gospel—a work written to enforce virtue and morality, and to conceal the mythos—and every temple had one. This was the case with most of the Jewish writings, the Works and Days, the Iliad and Odyssey, the plays of Æschylus, the Cyropædia, the Æneid, the early history of Rome, the Sagas of Scandinavia, the Sophis of Abraham, the secret book of the Athenians, the Delphic verses of Olen, the 20,000 verses repeated by heart, (*Q. art?* artificially learnt,) of the Druids, the Vedas or Bedahs, which is a collection of hymns or psalms.

The absurd superstition, as exhibited in the verses of Virgil, that the transactions of the lives of mankind came over and over in short periods, perhaps every 600 years, of course prevented any history from being written, as long as it had influence: and it was not until that superstition began to be despised, that we have any thing of the nature of real history. To have written a real history would have been to have overturned the religion. The first history written in Europe, which was independent of the Mythos, is that of Herodotus. But I think it probable, that some of the tracts in the Bible were the same.

It cannot be denied that to most inquirers, the early history of the world presents nothing but a scene of incredible absurdities. There is scarcely a page of it which can satisfy any reasonable mind. Take what history you please, it is the same. This is carried to such an excess, that previous to about six hundred years before Christ we can be said to have no history at all. Then what is to be done? Are we to give up all inquiry into the early transactions of mankind? It is a difficult question. At all events, we must have recourse to some other plan than retailing the labours of Bacchus, or the loves of Venus. In this work I am making an attempt to separate religion from history, at least to shew what religion is. This will conduce to shew afterward what history is. The only fault I have to find with the histories of India by Col. Tod and others is,

¹ Nimrod, Vol. III. p. 85; Ennii Fragmenta, Zenobius, I. Prov. 18.

that they do not sufficiently mark the lines of separation between the real and fabulous æras. It is allowed that Cristna is the sun, and yet they talk of him as of a man. He is like Hercules, Bacchus, &c., always the sun; and every great family traces its origin either to him as Cristna, or to him in some other avatar—as Rama, Bali, or some other. I know the difficulty of marking the line is great; but of this we may be perfectly assured, that these adored mythological personages, and their miraculous adventures, are nothing but inventions, added by the genealogists to the pedigrees of their employers, when they could go no higher—when, perhaps, they found the ancestor to have been some bandit, or ministerial traitor, or upstart soldier of fortune.

To return to our subject.

It is remarkable that in the Latin, the famous Cyclopes have no singular number. From this I think it probable, that they were *Latin* before they were *Greek* personages. Their grand abode was the island of Sicily. Virgil says, Sicilides Musæ; but why, in his mystic poem, does he invoke the Sicilian Muses, in preference to any other muses? May the original word for one of these persons have been *Cyclo*—making in its genitive Cyclopis—and meaning, the cycle of Clo? We must remember that Sicily is the peculiar land of the Cyclopes. Clo is the same word as that which ends the Agni-cula, the Jani-cula, the Hera-cula, and many other mystic words. No doubt every profound classical scholar will laugh at me for supposing it possible, that when Virgil was celebrating the renewal of Cycles, and particularly the sacred cycle of 600, he should invoke the Muses of Cycles instead of pastoral Muses, with whom his subject has little or no connexion. I shall pursue this inquiry by and by.

4. If my reader will look to the map and back to the last book, he will find it stated, that close to Jodpoor were the ruins of a very ancient city, called Mundore. Respecting this city, in the following passage of Col. Tod's beautiful book, we have what I think will lead us to the origin of the Cyclopes: "Whoever has seen Cortona, Volterra, or others of the Tuscan cities,¹ can form " a correct idea of the walls of Mundore, which are precisely of the same ponderous character. It " is singular that the ancient races of India, as well as of Europe, (and whose name of *Pali* is the " Synonym of *Galati* or *Keltoi*,) should, in equal ignorance of the mechanical arts, have piled up " these stupendous monuments, which might induce their posterity to imagine ' *there were giants* " " *in those days.*' This Western region, in which I include nearly all Rajapootana and Saurashtra, " has been the peculiar abode of these ' *pastor kings,*' who have left their names, their monu- " ments, their religion and sacred character, as the best records of their supremacy. The *Raj-* " *Pali*, or Royal Pastors, are enumerated as one of the thirty-six royal races of ancient days: the " city of *Palithana*, ' the abode of the Pali,' in Saurashtra (built at the foot of mount SATRUNJA, " sacred to Buddha) and Palli in Godwar, are at once evidences of their political consequence and " the religion they brought with them, while the different nail-headed characters² are claimed by " their descendants, the sectarian Jains of the present day."³

Again, the Colonel says,⁴

¹ We constantly read of the Tusci being one of the names of the progenitors of the Romans, or, at least, of the people before the Romans, occupying a large part of their country. The word Tusci has no singular number. I believe in this word we have an example of another unobserved emphatic article, and that Tusci is THE *Osci*, the same as the English emphatic article. In like manner, I think the De of France was also used by the ancients. *The* and *De* both mean God. It is remarkable that, in almost every case, the emphatic article means God. Θυσκοος, a seer; Θυος, a thing offered in sacrifice; hence Thusci: Θεος-osci, *The Osci*. The language of the Osci was the Latin. Pezron, p. 241. The Etruscans wrote from right to left. Astle, p. 183.

² *Nail-head*, the characteristic of the Etruscan numerals.

³ Tod's Hist. Raj. p. 726.

⁴ *Ibid.*

“ As I looked up to the stupendous walls,

“ ‘ Where time hath lent his hand, but broke his scythe,’

“ I felt the full force of the sentiment of our heart-stricken Byron,

“ ‘ There is a power

“ ‘ And magic in the ruined battlement,

“ ‘ For which the palace of the present hour

“ ‘ Must yield its pomp, and wait till ages are its dower.’

“ Ages have rolled away since these were raised, and ages will yet roll on, and find them immovable, unchanged. The immense blocks are piled upon, and closely fitted to, each other, without any cement, the characteristic of all the Etruscan cities termed Cyclopean. We might, indeed, smuggle a portion of Mundore, into the pages of Micali, amongst those of Todi or Volterra without fear of detection.”

This extract, from the work of my friend Col. Tod, will, I think, enable me to shew, at least with some probability, who were the Cyclopes, the builders of our Cyclopæan cities, and circular temples, and whence they had their strange name. In the first place, if the Palli be Celts, this exactly accords with every thing which I have said, in my *CÉLTIC DRUIDS*, respecting the Celts' coming from North India, and building Stonehenge, Abury, Iona, &c.

In the next place, their religion and name of Jain or Janus, and their Nail-headed letters, connect them with the ancient Italians—Etruscans.

Colonel Tod very justly considers the Palli or Raj-pali, or the country of Pali-stan, to extend over all Rajapootana and Guzerat, or Syrastrène or Saurashtra. But we have the Pali, or Pallestini, on the Hellespont; the Pallestini, at the mouth of the Padus, of Italy; and the mount Palatinus of Rome, and Palestræna, or the Sacrum Præneste, and the celebrated Pali-Raj or Royal pastors of Egypt, the builders, probably, of the Pyramids. In the term Roy-al we see an example of the utility, and even necessity, of having recourse to mixed etymology. This Raj is the Roi of Gaul. I think the word Raj is the same as *ray*, or *radha*, or *radius*, an emanation from the Sun, and probably the kings, monarchs,¹ affected to be emanations from the Supreme, or from the Sun, or, as they called themselves, sons of God.² The coincidence more important than all the others is, that we have here the Pallestini or Philistines (as our *book* has it for the sake of disguise) of Western Syria—the capital of which was GAZA. In the country of the Palli, above described by Col. Tod, on the summit of a hill, close to an artificial lake, in about lat. 26, 20, long. 40, (noticed before,) is the very ancient city called Ajmere or Ajimere or Ajemere. This was existing in the time of Ptolemy, and was called by him Gaza-mera.³ Here is Gaza on the border of a mere or piece of water, an artificial sea, in India, and Gaza on the sea-shore, in the Western Syria. There was a Gaza also in Egypt; and when Memphis was near the sea, before the emergence of the Delta, Gaza was its port.

In this district we find a town (Govindgurh) founded by a person called *Oodi*, and the tribe is called *Joda*; and, in the neighbourhood, is a river called Sarasvati—(Sara-iswati?)—which runs into the artificial, elliptic-formed lake or mere above-named, called Poshkur—one excepted, the most sacred of the lakes of India. On its banks stands the only temple now in India, solely

¹ Monarch Mn—Αρχη.

² At the side of a mountain scooped out of the solid rock, Col. Tod says, p. 726, “ is a noble *Bowli* or reservoir.” What will the enemies of mixed etymology say to this? Will they be so obstinate as not to see the English *Bowl* in the Indian *Bowli*? Most likely this was a *Piscina*.

³ Tod, Hist. p. 772.

dedicated to Bramha, containing a quadriform image. It is surmounted with *a cross*.¹ At a little distance rises a shrine to THE MOTHER, Mama-deva.² Not far distant, on a rock called the *Nag-pahar* or serpent rock, are ruins said to be those of the palace of a monarch who formerly ruled the tribe of the Chohans, called Aja Pal, or the Shepherd King, or Goatherd Aja.³ This Aja Pal was the ancestor of a famous chief called Beesildeva or Visala-deva, and was the builder of Aji-mere, the Gaza-mera of Ptolemy. He was the contemporary of a celebrated person of Rajaht'-han called *Ulysses*. The Chohans of Aji-mere were existing 1000 years before Christ, as the histories say that a certain Udyā-Dit, who died about that time, served under them. In my *CELTIC DRUIDS* may be found an account of a circular temple of very large stones in Persia, which, the tradition of the country says, was built by a tribe called Coans, who were pigmies, but who were persons of supernatural strength, a species of fairy. Here I think we have the tribe of Chohans of Aji-mere. There was a tribe of them near Egbatana, and we have them again in Greece, in the several towns called Caon, in the different Argolises. These Coans or Pigmies were the builders of the monument described by the learned Physiologist Sir Anthony Carlisle, in Book V. Ch. VI. Sect. 6. From the mount on which Ajimere stands, runs the river, one branch of which is called Saraswati, which joins, near a town called Doon-ara, a river on which stands a town named Palee or Pali, and another river on which stands Mundore, in lat. 26, 20—long. 73, 5—which was formerly the capital of the present Marwar; its immense cyclopæan ruins, thirty-seven miles in circumference, alone remain. But a new capital has been built about six miles from Mundore, called Jod-poor. Of the date of Jodpoor I have no information; but it no doubt had its name from a reference to the old name of the tribe Iodi or Yuda. The date of the building of the cyclopæan Mund-ore, or even of its destruction, is, I believe, unknown even to tradition.

5. In the word Mundore, I think we may find the origin of the Cyclops the fabricators of these buildings. The words Munda and *κυκλος*, *circulus*, are synonymes—*κυκλος* is a mere translation of Munda, and they mean cycle. The Greeks, through profound ignorance, from *κυκλος* made cyclops, or *round* or *one eye*.

It is probable that the Cyclops were named in allusion to *κυκλος* a cycle, and *οφίς* or the Hebrew אוב *aub* a serpent, the circular serpent, or the serpentine circle. There cannot be devised a more proper emblem of an eternally-renovating cycle, than the Cobra Serpent, with its tail in its mouth, periodically renewing itself by casting its skin. The deadly poison of the Cobra is an emblem of the *destroying* power; and the Hood which, in thousands of instances, we see him extending, sometimes over the sleeping Kanyia, and sometimes over the conjoined Yoni and Linga, and sometimes over the figure of Buddha, is, under this peculiar circumstance, a beautiful emblem of the *preserving* power. Then might not the people of Mundore be *Ophites*—followers or inventors of the serpentine cycle? ⁴ The word Cyclopes, then, will mean *the founders of cycles*. Munda correctly means cycle, as well as circle and the mundane revolution. Col. Tod has observed that the Palli and Keltoi are synonymous. I need not remind my reader of the very

¹ Hist. Raj. pp. 772, 774. Col. Tod says it was only built four years ago by a minister of Scindia. That it was built I do not doubt, but I think the legend and tradition prove that this building must have been a rebuilding: if it were not a rebuilding, here is the old superstition revived or kept alive.

² Ibid. p. 773.

³ Aja we see means goat; Gaza has the same meaning. I shall resume the subject of Ajemere, and the Rayjah and Palli, in my next book.

⁴ *Οπις* divine vengeance; *Οψ* a voice; *φω* to bring to light; *Οφίς* a snake.

extraordinary manner in which the ancient Druidical or Celtic monuments are constructed in reference to the different ancient cycles, of the oriental nations—the 3, the 7, the 12, the 19, the 30, the 60, the 144, the 188, the 600, the 608, the 650,—all in the serpentine temple at Abury; and, I have no doubt, the famous Carnac, for the age of the world. We must recollect, that *Mundus* means *κοσμος*, which means *beauty* arising from the orderly disposition of the heavenly bodies, moving in their cyclic revolutions.

Thus the Royal Shepherds were the founders of the system of cycles, *perhaps* expelled from India; afterward *certainly* expelled from Egypt. In the *Saturn-ja*, sacred to Buddha, and the *Saturnia Urbs* of Virgil, the ancient city on which Rome was built, may be found the father of Jove, Buddha,—also the Bal or Pal, or Palli in Godwar, the fathers of the *Heri-culas* or *Hericlo-es*, (found on the coast of Malabar,) and the *Agni-culas* or *Agni-clo-es*, a race who might first adopt the adoration of the ram, or unite it with that of the *Zur-aster*, or the fire or solar orb. The *Heri-culas* and *Agni-culas*¹ are very like the *Jani-cula* of Rome, and from the *Palli* might come the *Mons Palatinus*.

The mixture of the *Naga* or *Serpent* worship, with the traditions relating to *Mundore* and the *Pali* and *Ioudi*, often noticed by Col. Tod, is very striking; and, notwithstanding the brevity of the records of *Western Syria* or *Judæa*, the *Nehusthan* of *Moses* shews it was as really common to the religion in the *Western* as in the *Eastern Syria*. And the *Serpent* temple at *Abury*, with its *Hakpen* or *Nag-pen*, shews the union of the two in *Britain*.

6. The Head of the *Serpent* Temple at *Abury* is called *Hackpen*. This is evidently the *Pen head*, and *Hag*, the old English word for *Serpent*. In *Hebrew* חג *hg* means circle or circular motion. *Job*, xxii. 14, says, חוג-שמים *hug samim*, the circle of the planets, or heavens; and in *Syriac* חגלות *hglut* means a circuit. Now, I think the נחש *nhs* or *serpent* was called *Hag* from its circular, and, of all the beasts, solely circular, form, from its likeness to eternity—to the renovation αιων των αιωνων—joined to its eternally renewing itself by casting its old skin or residence when decayed, and putting on a new one—added to its most deadly power as destroyer—thus uniting it, in every thing, with the *Logos*, the wisdom, the self-existent, the cycle, the creator, preserver, and destroyer. The *serpent* laid eggs, which, like those the offspring of the selected human female, were impregnated with the solar ray. (This will be explained presently.) As the emblem of the nursing mother of all, the earth, when its young are alarmed, they flee, or were believed to flee, for refuge, into the bosom of their parent. I am not surprised that the most refined of philosophers should have invented so beautiful an allegory.

It is a bold speculation, but I cannot help suspecting that the חג *hg* and חכ *hk* of the word חכמ *hkm* and the *αρχη* had all a close connexion; that they were all corruptions or formations of each other. חגה *hge* meditari, eloqui. In *Irish* *Eag-gnaisi*, a philosopher,² *i. e.* in the singular, חג *hg* snake—with *M. Mag-us*. *Magi* appellatur quod patria sua lingua idem sonat, quod apud nos *sapientes*; Gn. by *Metathesis* *ng* *nega* *Gonesa*—*Irish* and *Indian* *God of Wisdom*: *Naga* the *Cobra*: *Druids' Eggs*. Q. *Eag* of the *Eag-gnaisi* Γωσις *knowledge*, *wisdom*, *wisdom* of the *serpent*, when in the state of a circular animal, and also of its *Egg*,—*Egg* of *Wisdom*, *i. e.* *Egg* from which the world sprung? The world came from *Wisdom*. I shall return to this etymon in a future page.

In these countries are many towns called, either wholly or in part, *Munda*, the same as the *Munda* of *Spain*; and also many *Oodipoors*, and towns and rivers, which bespeak corruptions of names relating to the *Jewish* history, as well as the very early mythologies of the *Gentiles*. Such

¹ *Yaj-niculas*?

² *Ouseley*, Coll. Vol. II. pp. 325, 345.

are the words Noah, Japhet, Shem, Lot, Ulysses, Achilles, Cæsar. No doubt the observation respecting such names as Lot would be very trifling if it were not connected with very many other circumstances. And we must always bear in mind, that we are endeavouring to recover the view of objects just vanishing from our sight. The words Ulysses and Achilles are of the same family of words with Ileyiam, and Prometheus, and Baghis, and Hercules, and Nysa, and Meru. The word Cæsar, is the Æsar of the Kelts or Gauls, and was adopted by Julius in honour of his conquest of Gaul, as Scipio took the name of Africanus, but he took the name of Cæsar also to encourage the superstition, that he was the divine incarnation promised by the Sibyls, which we shall fully explain in a future Book.

7. On the ruins of Mundore may be seen various mystic emblems, as the quatre-feuille, the cross, the mystic triangle, the triangle within a triangle , &c. Col. Tod says, “ Among “ ancient coins and medals, excavated from the ruins of Oojein and other ancient cities, I possess “ a perfect series with all the symbolic emblems of the *twenty-four* Jain Apostles. The compound “ equilateral triangle is among them ; perhaps there were masons in those days among the Pali “ (i. e. the PHILISTINES of the Indian GAZA—and of Gaza, a few miles from Solomon’s temple in “ Western Syria). It is hardly necessary to state that this Trinitarian symbol (the double “ triangle) occurs on our (so called) Gothic edifices, e. g. the beautiful Abbey-gate of Bury St. “ Edmund’s, Suffolk, erected about A.D. 1377.”¹ So, my good friend, Col. Tod, you are surprised that there should be masonic emblems upon the ruins of Mundore, the capital of the Ioudi, or Juds of Yuda, in the country of the Palli, or Philistines of Gaza-mera, where Jessulmer was, and unquestionably the earliest of the Mounts of *Solyma*—of Bit-Solumi or temples of Solomon. But though this may surprise you, it will not surprise his Royal Highness the Duke of Sussex, or any Mason of high degree. But the author is himself a Mason, and that of high degree ; HE MAY SAY NO MORE. Yet he will venture to add, that though much of the learning of that ancient order remains, much is lost, and much may yet be recovered. But it is not every apprentice or fellow-craft who knows all the secrets of the order.

The following observation is made by Col. Tod :² “ The wood of Solomon’s temple is called “ *al-mug* : אלמג *almg*, 1 Kings x. 11 : the prefix *al* is merely the article. This is the wood also “ mentioned in the annals of Guzzerat, of which the temple to ‘ Adnath’³ was constructed. It is “ said to be indestructible by fire. It has been surmised that the fleets of Tyre frequented the “ Indian coast ; could they thence have carried Al-Mug for the temple of Solomon ?”⁴ I suppose I need scarcely point out how strongly this casual observation of Col. Tod’s tends to support my doctrine, of the intimate connexion of the tribe of Western Ioudi with the religion of India ? We have seen the Guzzerat God *Ad* of Western Syria, in Adad, Hadadezer, &c. A few verses afterward, in 1 Kings, ch. x., shields of gold are said to have been made. Of what use could shields be in the temple ? These shields were salvers or waiters, after the custom of Central India, where, when a person is treated with high respect, every thing is handed to him on a shield or buckler.⁵

8 The infamous Fourmont who destroyed the inscriptions on the marbles in the Morea, discovered the temple of a God or Goddess called Ongar, i. e. Minerva. The shrine of this deity is

¹ Hist. Raj. p. 729.

² Ibid. 282.

³ i. e. God-ad, di, dis.

⁴ Brother mason, what do you know of Solomon’s temple ? Here are the word *Almug*, in Syrastrène, and the masonic emblems in Mundore,—the town of Cycles or Cyclopes. Be assured the wood was carried for certain sacred parts of the building, and by Free-Masons too. Probably all the fourteen temples of Solomon, of which we read, were partly constructed of this sacred wood, and by Free-Masons too.

⁵ Vide Tod, Hist. Raj.

one of the twelve most sacred places in India. It is in the sacred island of Mundana or Mundatta, (i. e. Munda-datta,) peculiarly sacred to the God OM or M, i. e. 600,¹ on the Nerbudda in Lat. 22, 16—Long. 76, 20—called by Sir John Malcolm Ongkar. It is not far from Burg-oonda and Maundoo, and not very far from the great Mundore, which was once thirty-seven miles in circumference, whose ruins bespeak a most magnificent city in *very ancient* times.² Munda-datta means correctly the cycle or circle of Buddha, Datta being one of his names—Book V. Chapter I. The ruins of the ancient cities of the Buddhists, in this country, shew them to have been a race of people of prodigious power and magnificence. The Mundas are all Buddhist and I doubt not Cyclopæan. If the Buddhist Cyclops of the West, were any thing like what the ruins of their cities in the East shew them to have been, we need not be surprised at the vastness or grandeur of their temples and buildings which remain to us. These cities in North India, were the thousand cities alluded to by Strabo, the existence of which is treated of with great talent in the unpublished manuscripts of the learned Mr. Moyle, of Southampton, now in the possession of his descendant, Sir Joseph Copley, Baronet, of Sprotsborough.

A few pages back I observed that the Palli were called Raj-Palli or royal shepherds. I have often wondered why the shepherd tribe who conquered Egypt were called *royal* shepherds. We here see the reason: they were the Raj-Palli or Roi-Palli. They were Rajah-poutans, or Rajah-palitan, or Rajah-poutan shepherds. These are beautiful coincidences. I shall return to this by and by.

I must now beg my reader to recall to his recollection that the discovery of the origins of ancient nations and religions, the object of our research, is the most difficult undertaking that can be imagined—that it has been the subject of anxious pursuit by the learned in all the ages to which by writing or tradition we have access; that to Pythagoras, to Plato, to Cicero, to Pliny, to Bacon, to Newton, to Bryant, and to Faber, the common or acknowledged literal accounts have been unsatisfactory, and that, by the successors of each, in turn, the failure or the unsatisfactory nature of the results of the inquiries of their predecessors has been admitted; that a state of society of a very superior kind existed long previous to any Grecian historians or traditions, I think no one who meditates upon the remains of Druidical and Cyclopæan buildings can entertain any doubt. How is it possible to doubt that an uniform system must have prevailed, which gave rise to the same style of building, the same names of towns, rivers, and districts, in all quarters of the globe? The same superstition is apparent every where, and it is very clear, that the superstitions of the ancients with which we are acquainted, are only the remains or corruptions of a previous and universal system of which we have no history, but part of which I am now rescuing from oblivion. I beg to remind my reader that originally in Rome, Greece, and Egypt, which conveys with it India, there was no idolatry, except it was simply the *Linga*, as the emblem of the creative power. This was the religion of Buddha, the *ראשית* *rasit* of Moses, the religion of Melchizedek, which, in the second preface to my *Celtic Druids*, I said I should unveil.

CHAPTER VI.

SERPENT OF GENESIS.—OPHITES.—SERPENT OF GENESIS THE LOGOS.—DIFFERENT ÆRAS OF
BUDDHISM.—DUPUIS.

1. THE reason why the serpent became the emblem of the *destroying power*, in Genesis, has never been satisfactory or clear to me. It is said that, according to that mythos, he is made, by the Ophites, the emblem of the Creator, because, by persuading Eve to eat the apple, he was the immediate cause of the propagation of the species—that without the opening of the eyes, by which expression is meant, in fact, the exciting of the desire of procreation, the race of man would not have been multiplied—and that, without its influence in making man in this respect wise, he would have for ever continued in a state of unprolific though innocent ignorance. According to the allegory in Genesis, little as it is understood, we may certainly conclude, that the serpent put in motion the human formative power, and was at the same time the cause of the death, or at least apparent destruction, of man—of his decomposition or return to dust.¹ But I think the Cobra was emblematic of something more than *the destroying power*. Buddha was the protogonos or first-begotten, the first emanation of divine power, wisdom, *by whom and for whom* all things were created. But the creator of all things was also the destroyer; and the Naga being the emblem of the destroyer, and the destroyer being divine wisdom, it became also the emblem of divine wisdom; *the serpent was more subtil than any beast of the creation.* Gen. iii. 1.

Few persons, I believe, have read Genesis, without having had their curiosity excited to discover why the serpent was the *wisest* of the animal creation. The Elephant, the Dog, or the Monkey, might have had some pretension to this honour; but I think the serpent has, from its natural properties, just as little pretension to it, as the frog or the lizard. But from the refined deductions above, it might have become the emblem of wisdom. It might be the emblem of eternity for another reason—for the same reason which made the Phoenix or Palm-tree the emblem of eternal life. It possessed the faculty of renewing itself without the process of generation or fructification, as to outward appearance, by annually casting its skin. This annual renewal made it emblematical of the sun or the year. Thus we see how all these refined allegories rise out of one another, almost without end; generally to outward appearance absurd, but, when understood, often beautiful. I think no unprejudiced person reading Genesis would ever suspect that the serpent there named was the evil principle or the Devil. The literal meaning both of the text and context in fact falsifies any such idea: and yet almost all Christian priests (choosing to have recourse to allegory to serve their own purpose,² though they never cease abusing those who teach that

¹ I think if I can shew that the literal meaning of Genesis contains an absolute impossibility in itself, we must, for that reason alone, have recourse to an allegorical meaning, after the example of all the ancient Jews and Christian fathers. Adam and Eve are ordered to increase and multiply; and had not the serpent brought death into the world, before the end of the first four thousand years the number of persons on the earth would have been so great, that they must have devoured every animal, and have been obliged to feed on one another. Long before the expiration of this period of time, the surface of the earth would have been so covered with people, that they could not have stood for want of space to stand on.

² The Devil is the grand ally of priests. In these days certainly, no Devil no Priests.

the book is an allegory) maintain, that a real devil or evil principle is meant; and that by the text merely a common serpent is not literally to be understood. The fact is, they have among them the tradition of its true oriental meaning, but how to explain it they know not. I beg my reader to refer to Cruden's Concordance on the word Serpent, and there he will see both the difficulties of the learned, and an extraordinary example of the meanness of understanding in a very learned, pious, and good man, produced by the thing miscalled religion.

2. It is very certain that, in ancient times, the serpent was an object of adoration in almost all nations. The Indians, the Egyptians, the Greeks, and the Romans, kept serpents in their temples alive; and treated them with the highest respect. From this superstition, I do not doubt that the Ophites, of whom we know very little, took their rise. I can pay no attention to the calumnies of Origen and other fathers whose evidence our modern writers are so weak as to receive—the evidence of men who professed to believe fraud to be meritorious, if used against the opponents of their religion. Nothing which appears to be told by the orthodox fathers, in a regular and systematic manner, against the heretics, is *credible*. Nor are they to be believed even when they profess only to refute doctrines, for it was not uncommon with them to charge their opponents with absurd opinions which they never held, for the double purpose of disgracing those opponents and gaining credit to themselves. This has always been considered, by priests, a mere allowable *ruse* in religious controversy. It is yet had recourse to every day. For these reasons I can pay little attention to the accounts of the Ophites retailed from Origen, by Matter. I can only receive a few insulated facts, which are confirmed by other evidence. They seem to have placed at the head, or nearly at the head, of all things, and most intimately connected with the serpent, a certain *Sophia*. This is clearly a translation of the word Buddha into Greek, and strongly reminds me that the old Buddhas are always under the care of the Cobra Capella. I think we may conclude from this, that they honoured the Serpent as the emblem of the God of wisdom. Their enemies tell us, that they professed to derive their veneration for the serpent from Genesis.

The famous Brazen Serpent set up by Moses in the wilderness, called Nehustan, is called in the Targum *a Saviour*. It was probably a serpentine crucifix, as it is called a *cross* by Justin Martyr.

Mr. Bentley says that in India the serpent is the emblem of *wisdom*. He cites no authority, but I do not dispute his assertion.¹

As I have just now stated, I do not doubt that the sect of Ophites had its origin from the consideration, that the *destroyer* was the *creator*, that *destruction* was *regeneration*: and the Cobra, as being the most deadly of the serpent tribe, which annually renewed itself, with its tail in its mouth, was considered the most appropriate emblem of the *destroyer* and *regenerator*, in fact, of the *saviour*. Thus we see Buddha, the creating power, constantly protected by the destroying power. The Cobra, the Ioni, and Linga, seem to be the only emblems admitted in the early Buddhist monuments, while I have no doubt that the *earliest* had no emblem. The God was represented seated, naked, contemplative, and unornamented. By degrees emblems increased in long periods of time. If we suppose only *one* emblem to have been admitted in a generation, in thirty generations or one thousand years there would be *thirty* emblems. A single new emblem in a generation would not alarm the worshipers, and thus the abuse might creep on till it arrived at the state in which we find it both in India and in the Romish Church at this day. The Protestants are doing the same thing; the last generation introduced pictures into churches: the cross is now following in order. They go on slowly at first: at length the minds of men becoming accustomed to inno-

¹ Hist. Ant. Hind. p. 60.

vations they proceed in geometrical progression. Thus, figments of nonsense go on increasing, till some intrepid fanatic takes offence at them, and preaches against them—a bloody civil war then arises about nothing, and the emblems and the beautiful temples which contain them are destroyed.

This is their history in India, in Egypt, and in ancient and modern Europe. A high state of civilization, and skill in the fine arts and sciences, do not prevent, but seem rather to encourage, the increase of this foolery. Let us look at Rome and Greece. There we see a few philosophers crying out against the abuse; but the mass of the people, with their deceiving and flattering priests who live on their folly, running into the greatest extravagancies. When Socrates exposed the follies of the priests, what was his reward? When Numa forbade the use of *images*, who attended to him?—his uncivilized followers. When they became civilized, his commands were forgotten.

3. The Ophites are said to have maintained, that the serpent of Genesis was the Λογος and Jesus Christ. This confirms what I have said above. The Logos was *divine wisdom*, and was the Buddha of India. The Brazen Serpent was called Λογος or the word by the Chaldee Paraphrast,¹ and for this word they use the Chaldee מַמְרָא *mmra*.² Thus the Cross, or Linga, or Phallus, with the serpent upon it, was called by the letters which conveyed the idea of word, or voice, or lingua, or language. Hence came the phallus, the emblem of the generative power in India, to be called linga. The serpent was the emblem of the evil principle or destroyer, but, as before stated, the destroyer was the creator, hence he had the name of ΟΦΙΣ; (in Hebrew אֹוֹב *aub*;) and as he was the Logos or Linga, he was also ΟΨ *a voice*, and in Hebrew מַמְרָא *mmra*. Query, hence Συφραγ *a seraph* or *serpent*,³ and Σοφος *wise*? The Συφ and Σοφ are both the same root. Besides considering the Serpent as the emblem of the Logos or of Jesus Christ, the Ophites are said to have revered it as the cause of all the arts of civilized life. But still the question recurs why this animal should have been selected as the emblem of the giver of the information, except as the emblem of the creator and destroyer, and therefore of wisdom.

In Exod. iii. 14, God is called אֵיִה *aeie*. This word is formed from the root הִיָּה *eie* or הוּוֹה *eue*, which signifies *to live, exist, or be*.⁴ But הוּוֹה *eue* or חַיָּה *hiua*, or, as we miscall it, Hevah, but correctly Hiva, was the name of Eve and of a serpent. The Bacchantes invoked Eve by name, in their ceremonies.⁵ Mr. Bryant has shewn, that both the Phoenicians and the Egyptians adored the serpent; that two were kept alive at Thebes; that it was adored at Eleusis, also at Epidaurus; that one was kept in the Acropolis at Athens; and that the Deities Cneph, Hermes, and Agathodæmon, were described by this emblem. It was, says Mr. Bryant, an emblem of DIVINE WISDOM and of the creative energy by which all things were formed: Divine Wisdom, that is, of Buddha. Maximus Tyrius states, that when Alexander entered India, he found a prince who kept an enormous snake as the image of Bacchus.⁶ Arrian also informs us, that when Alexander advanced into India he met with one of the princes who adored a large serpent, which he kept confined. This is exactly what we are informed was done by the Christian Ophites. In a future page we shall find that several illustrious females were believed to have been selected and impregnated by the Holy Ghost. In these cases, a serpent was always supposed to be the form which it assumed. This was the incarnation of the Logos; this was what I alluded to when I spoke of a *selected female*, in Chap. V. Sect. 6, of this book.

⁵ Parkhurst, in voce נְחֻשׁ *nhs*, IV.

⁶ Class. Journ. Vol. XXIII. p. 14.

In almost all the emblematical groups of the Indians, we meet with the serpent in one shape or other. When it has its tail in its mouth, no doubt it is the emblem of eternity. But though it is admirable for this purpose, that is but a small part of its meaning. It is worthy of observation that it is found on very nearly the oldest of the Buddhist monuments. And the serpent most particularly chosen in India, and often found in Egypt, where it is not a native, is the Cobra or Naga, or hooded snake. This Buddhist foreigner, in Egypt, sufficiently shews that the Buddhist worship came to Egypt before the invention of Hieroglyphics. I apprehend, as I have already intimated, that the serpent, which was thought to be more deadly in its bite than all others, was selected as the most perfect emblem of the *destroying power*: and it is always found with the united Yoni and Linga, as the emblem of the *creating power*, the doctrine seen every where, that *destruction was creation or formation*. I suppose it was a brazen Cobra which Moses set up on a cross in the Wilderness. The Cobra, with its tail in its mouth, would denote eternal formation and destruction, the eternal renewal of worlds. It is very clear that a great variety of beautiful allegories present themselves where the Cobra may be used.

It is said that the word $\eta\tau\psi\eta\eta$ *nhstn* *nehusthan* cannot be understood by the Hebrew or Arabic scholar, because, though one part be Hebrew, the other is pure Persian. The $\psi\eta\eta$ *nhs* is Hebrew, the $\eta\tau$ *tn* is Persian or Oriental. The first means serpent, the second means place.¹ But this may have a very different meaning; it may mean $\eta\eta$ *nh* or mind, and *stan* a place, the place of the Divine Mind, of the Holy Ghost.

4. I think the different æras of Buddhism may be observed in its monuments. Its first æra is shewn, by Budda, as a Negro, seated cross-legged, perfectly naked, without any ornament whatever. This is the first stage of idolatry, unless it were preceded by the stone pillar anointed with oil. In the next, he is slightly ornamented or clothed, and accompanied with the Naga or Cobra Capella. In the next, he is accompanied with vast numbers of figures, of men, women, children, and animals: but he is never himself a monster, with several heads or hands, nor are his attendants monsters. In the next stage, he is accompanied with the Cobra with many heads—but with no other monster. After this comes Cristna with every absurdity that can be conceived. In this manner I think may be shewn the relative dates of the Buddhist monuments; and, in the second and VERY EARLY stage, a degree of skill and elegance in the workmanship may be observed, to which the later works can make no pretension. These were the works of the primeval, learned race spoken of by Baillie, the inventors of the Neros, supposed to have lived before the flood.

After a most careful comparison of the large specimen of the Cobra Capella, in the Museum of the Royal College of Surgeons, with the monuments in the British Museum, I am quite satisfied that the serpent or protuberance on the foreheads of the Memnon, and of many other figures, are cobras.

“As far as these Egyptian remains lead us into unknown ages, the symbols they contain appear not to have been invented in that country, but to have been copied from those of some other people still anterior, who dwelt on the other side of the Eythrean ocean. One of the most obvious of them is the hooded snake, which is a reptile peculiar to the South-eastern parts of ASIA, but which I found represented, with great accuracy, upon the obelisk of Rameses, and have observed also frequently on the Isiac table.”² The Aspic, called Thermutis, was believed to be immortal by the Egyptians.³ Mr. Payne Knight has repeated an observation of Stukeley’s, that the original name of the temple of Abury was the *snake’s head*: and he adds, it

¹ Gerrans in Ouseley’s Coll. Orient. p. 281.

² Payne Knight, Wors. Pr. p. 90.

³ See Jurien, Vol. II. p. 225.

is remarkable that the remains of a similar circle of stones in Bœotia had the same name, in the time of Pausanias. Κατα δε την ες Γλισαντα ευθειαν εκ Θηβων λιθοις χωριον περιεχομενον λογασην Οφεως καλουσιν οι Θηβαιοι κεφαλην.¹

The three most celebrated emblems carried in the Greek mysteries, were the Phallus, the Egg, and the Serpent; or, otherwise, the Phallus, the Ioni or Umbilicus, and the Serpent. The first in each case was the emblem of the Sun, of fire, as the male or active generative power; the second, of the passive, and the third of the destroyer, the re-former, and thus of the preserver;—the preserver eternally renewing itself. The universality of the Serpentine worship or adoration no one can deny. It is not only found every where, but it every where occupies an important station; and the farther back we go, the more universally it is found, and the more important it appears to have been considered.

5. About thirty years ago, a very learned Frenchman, of the name of Dupuis, published a work² called The History of all Religions, in which he undertook to shew, that the labours of Hercules, and almost all ancient mythology, were astronomical allegories, applicable to a state of the sphere corrected or thrown back to a very remote period. His success, as to many parts, cannot for a moment be doubted, and particularly as to the labours of Hercules. That those labours which we read of in Diodorus Siculus and other authors, are all depicted in the heavens cannot be denied. Those labours are so closely connected with the signs and divisions of the Zodiac, as not to be separable from them. They must, I think, be contemporaneous or nearly so. Now, when my reader considers what has been said respecting the Indian origin of the Ionians, the Argives, the Hellenes, and the Amazons,—that, in fact, they were sectaries driven out from upper India, is it not possible that these labours had their origin in the wars which then took place, all over the world, between the different sects; and, consequently, that it was about that time that the sphere was invented by Chiron the Centaur?—Κεν-ταυρ-ος. Let my reader recollect that he has found the same towns in India, Asia, and in Europe; the same Gods, intelligible in India, but not in Europe; and all the other marks of simultaneous identity, and then doubt, if he can, that these constellations must have had a common origin, and probably at a common time. Let him consider the wars of Hercules with the Amazons, and he will agree with me, that all, or nearly all, the mythoses have reference to the wars of the different sects of the Ioni and the Linga—of the Hellenes and Trojans, the Argives and the Amazons. The battles of Hercules and the Titans, &c., &c., are only the European counterpart of the Indian battles of Cristna described in the Mahabarat; they are the same thing painted according to the peculiar taste of the two nations.

¹ Pausan. Bœot. Cap. xix. S. 2.

² This book, I am told, is now becoming extremely scarce, the devotees every where having made desperate war upon it, particularly the Jesuits of France. The globes which were made on purpose for it I have never been able to obtain either in Paris or elsewhere. Persons who have not perused this work, have no right to give an opinion on the subject of ancient mythology.

CHAPTER VII.

MOON RESUMED. WATER. ISIS.—PRITCHARD ON THE MOON.—PLUTARCH ON THE MOON AND ISIS.—ISIS UNKNOWN TO GREEKS AND ROMANS.—CRESCENT, ORIGIN AND ADORATION OF IT.—BAPTISMS.—ICE. PAYNE KNIGHT'S EXPLANATION OF ITS NAME.—INFLUENCE OF THE MOON.

1. Among the attempted explanations of the immense mass of confusion which the ancient mythologies exhibit, there is nothing much less satisfactory than those relating to the rank and character which they ascribe to the moon. As I have before observed, in Book VI. Chapter II., to me they are indeed any thing but satisfactory. She is represented as Isis, the wife of Osiris, that is, of the sun. And if she were barely this, and nothing more, we might be contented to consider it as merely a nonsensical local superstition, or perhaps a figure of speech. But the moon was masculine as well as feminine. This raises an awkward obstacle to his being the wife of Osiris. And yet Osiris is said to enter into the moon and impregnate her. On the 17th of the month Athyr, Osiris entered into the moon. On this day Noah entered into the ark. This alone, if every thing else were wanting, would be sufficient to prove the identity of the two mythoses.

In reply to what I have just observed about the moon's being masculine, it may be said, that this only arose from the superstitions of different countries. But this is not satisfactory to me; because I am convinced that the system of the trinitarian nature of the foundation of the ancient mythology which the reader has seen, with its metempsychosis, its revolving cycles, renewal of worlds, and abstinence from animal food, pervaded all countries. A beautiful and sublime system was the foundation of all the nonsense which ignorance and selfish craft at last engendered, and engrafted upon it.

I am quite certain that by the word $\kappa\omicron\mu\omega$ *smim* in Genesis, the planets were meant, and they were always called the erratic stars. Speaking of these, Porphyry makes a marked distinction between them and the moon, for the *purposes of divination*. He says, "In order, therefore, to effect this, they made use of the Gods within the heavens, both the erratic and the non-erratic, of all of whom it is requisite to consider the sun as the leader: *but to rank the moon in the second place.*"¹

2. Dr. Pritchard observes of the moon, "The name Isis seems only to have been applied to the moon, in the same manner in which Virgil gives the appellation of Ceres to that celestial body. The general acceptance of both these names is much more extensive."² "Plutarch generalises all the attributes or characters of Isis, and considers her as representing the female qualities or powers of nature, which are the passive principles of generation in all productions; whence (he says) she is called, by nature, the *nurse* and the *all-receiving*, and is commonly termed Myrionymus or possessing ten thousand names."³ The same idea is more diffusely expressed by Apuleius, in a passage in which Isis calls herself, '*Natura, rerum parens, elementorum omnium domina.*'"⁴ Again, "On the whole, we may conclude that Isis represented the $\Phi\upsilon\sigma\iota\varsigma$ $\pi\alpha\nu\alpha\iota\omicron\lambda\omicron\varsigma$, the *natura multiformis*, of the Greek and Roman mythologists."⁵ This is proved by several engravings in Moutfaucon, where we find her with the inscription $\Phi\upsilon\sigma\iota\varsigma$ $\pi\alpha\nu\alpha\iota\omicron\lambda\omicron\varsigma$ under her figure, in one of which she may be seen rising from the lotus.

¹ De Abs. Taylor, Book ii. p. 71.

² Pritchard, Egyp. Myth. p. 132.

³ Plut. de Iside, Cap. liii.

⁴ Apul. Lib. xi.; Prit. ib. p. 133.

⁵ Ib. p. 134.

After this, in p. 145, Dr. Pritchard observes that, according to Apuleius, Isis was called in Egypt *triformis* or the *triform* Goddess, and was worshiped both as a malignant and benignant Deity. Here we have most distinctly the Indian Trinity, the creator, or preserver, and the destroyer. The Doctor warns his reader to “beware in making researches into the fictions of mythology, “not to discover more wisdom or *more* contrivance than ever really existed.”¹ We must also, I think, beware not to discover *less*. But sure I am that if nothing more was to be discovered than the unconnected collection of statements (nonsensical enough if taken by themselves) on which the learned Doctor has wasted his time, much too valuable to be thus thrown away, the pursuit would be of very little use. The Doctor observes, that it is strange and absurd to suppose (as the devotees did) that the moon exercises an influence over women in childbirth. This is an example of the mistakes of the moderns. It arose from mistaking the moon for Isis, the *female* generative power of nature. The moon was only the planet dedicated to Isis. But the supposition that the moon influenced women, is not more absurd than to suppose that it influences lunatics.

It cannot be doubted that the word Isis often means the moon. But what is there that she does not mean? Jablonski says, “Præter ISIDEM cœlestem quæ Luna est, religiose quoque colebant “(Ægyptii) terrestrem, ipsam scilicet Terram, quæ proinde ISIDIS nomine designabatur.”² Macrobius says, “Isis est vel *Terra* vel NATURA RERUM subjacens Soli.—Isis nihil aliud est, quam terra, NATURAVE rerum.”³ Very true—*natura-ve* rerum, either one or the other. When we read of the moon as the wife of the sun, and of the sun entering into the moon and impregnating her, their conjunction, at the beginning of each new cycle, was probably alluded to. The produce of their conjunction was the new cycle—the renovation of nature.

3. Plutarch says, the moon was called Μητηρ Σελήνη τσ κοσμος. But Selene was the same as Cybele, Da-Mater—in fact, the Great Mother.⁴ Cybele was called the *Idean Mother*, or *Mother Ida*. This is the title of the mother of Meru, called *Ida-vratta* or *the circle of Ida*. On the highest part of Ida was a Gargarus or stone circle, called, from the Sanscrit, Cor-Ghari.⁵

The sun was the emblem of the male, the moon of the female, generative power. They appear to be, as they are called, the two greater lights, and from this the moon came to be perpetually confounded, as an object of adoration, with the female generative power, and her crescent with the Omphalos, the Argha, or the Ioni. Her crescent, from its shape, in a very peculiar manner favours the mistake—for we never see a half moon or a full moon. The emblem became the object of adoration; the object of the emblem was often forgotten. Nothing of this kind could so easily happen to the sun. Isis, as identified with the moon, is said to have all the attributes of the mother of God. I apprehend that, chiefly among the later Egyptians and Greeks, after they had lost the meaning of their mysteries, by mistake the crescent was taken for the Argha, which had the form of a crescent. Isis, the female generative power represented by the Lunette or crescent-shaped Argha, was mistaken for the crescent-formed moon, to whom, among astrologers, the second day of the week or Monday was dedicated. When we see the Beeve or Bos or Urus, called Taurus, marked on the side with a Lunette or Lunar crescent, this, though in honour of Isis, was not in honour of the moon, but in honour of that higher principle, the principle of generation, whence the moon herself, along with all nature, proceeded. The Theba or Tibe, תבה *Tbe*, or Cow, with a crescent on her side, which founded Thebes, was not the moon—but it was that which the Ioni represented. In this manner, in almost innumerable instances, mistakes have

¹ P. 156.

⁴ Bryant, Anal. Vol. II. p. 442.

⁵ Faber, Anal. Vol. III. pp. 31, 229.

arisen. I repeat, it is worthy of observation, that we never meet with a half moon or a full moon as an object of adoration: it is always a crescent; always that which was called an umbilicus, at Delphi, which at that place was of stone, of great size, as it was also in Egypt, and carried by seventy-two men, in their sacred processions—a *navis-biprora*. If it be said that the moon was used as an emblem of the female generative power; then I reply, I will not dispute about a word. If the moon, by the lunar crescent on the side of the Bos, Theba, or Io, was meant, it was not so meant as an honour to the moon as *the* moon, but to it as an emblem only. And if these distinctions be carefully attended to, all the difficulties will be removed.

Plutarch, as stated above, says, that the Egyptians called the moon *the mother of the world*. Sir William Drummond, after shewing that the Greeks and Romans did not understand the Egyptian mythology, says of Plutarch, “This author would have adhered more exactly to the Egyptian mythology, if he had written Minerva or Neitha, instead of the Moon, and Pthah or Vulcan instead of the Sun.”¹ Proclus makes Neitha say, The fruit which I have brought forth is the sun:² then how can she be the moon? Neitha was also divine wisdom.

4. But, as I have said before, the Greeks and Romans knew as little of the real oriental doctrines, indeed, I may say less, than we do at this day, therefore it is not surprising to find them making mistakes. Thus Plutarch says, that the Egyptian statues of Osiris had the phallus to signify his procreative and prolific power: Πανταχου δε και ανθρωπομορφον Οσιριδος αγαλμα δεικνυουσιν, εξορθιαζον τω αιδοιω, δια τογονιμον και τροφιμον.³ The extension of which, through the three elements of air, earth, and water, they expressed by another kind of statue, which was occasionally carried in procession, having a triple symbol of the same attribute: Αγαλμα προτιθενται και περιφερουσιν, ου το αιδοιον τριπλασιον εστιν.⁴ From these and other expressions of the same kind, I conclude with Sir William Drummond, that Plutarch had no idea of the real sublime nature of the oriental and original Trinity, or if he knew it, he did not choose to disclose it.

Apuleius calls Isis QUEEN, the Greek word for which is Βασιλεια. Diodorus Siculus⁵ informs us that Uranus and Titea had two daughters, one called Basilea. He says, “Basilea being the eldest, brought up her brothers with the care and affection of a mother, whence she was called ‘the GREAT MOTHER.’” She married Hyperion, one of her brothers, by whom she had Helio and Selene. Her other brothers assassinated Hyperion, and drowned Helio, then a tender infant, in Eridanus. He then shews how Cybele, who was descended from Basilea, was called *Mother of the Mount*, and joined Bacchus at Nysa.⁶ The Indian mythos of Bacchus, Mount Meru, &c., &c., is evident in all this,—a tradition of the true meaning of which Diodorus was probably perfectly ignorant. The whole was taken from the East, and located in a part of Phrygia.⁷

The famous inscription on the Temple of Isis, quoted at length in Book VI. Chapter II. Sect. 8, proves that Isis was not the moon, and that, in fact, the moon was only a planet dedicated to the Goddess. In addition to the evidence afforded by that inscription, we learn from Proclus, that it had originally the following words, ὃν ἐγὼ καρπὸν ἐτεκον, ἡλῖος ἐγενετο, that is, “The fruit which I have brought forth is the Sun;” the same as Neitha. I should think this at once proves that Isis cannot be the Earth or the Moon. How can any imagination invent a mythos, allegory, or history, which shall make the sun the produce of either of these bodies?

⁷ Vide Lempiere; also Drummond on a Punic Inscription, pp. 86—88.

5. Although what I have stated may be sufficient to prove that the consideration of the moon, as the wife of Osiris and the female generative principle, must have been, comparatively speaking, of modern date, yet I think the origin of the Crescent, as the emblem of the female generative power, may be found in another quarter. The Crescent is no more applicable to the moon, than the circle or semicircle; nor, indeed, so much. But if the ancients knew the nature of the planet Venus, the Alma Venus, the Mother—we have a reason for the adoption of the Crescent. She is *always* gibbous, *always* a crescent. This they would know, if they had the telescope: but I have been told that there are some persons, in very clear northern oriental climates, who can distinguish her gibbous form with the naked eye. Here, then, I think we have the reason why we always see the Crescent as the emblem of the female generative power. And hence, when the meaning of it was quite lost in the Western countries, the ignorant devotees converted the Lunus, because it was sometimes gibbous, into the female Luna.

6. Among all nations, and from the very earliest period, water has been used as a species of religious sacrament. This, like most of the other rites of the ancients when examined to the bottom, turns out to be founded on very recondite and philosophical principles, equally common in all countries. We have seen that the sun, light, or fire, was the first preserver, at the same time that he was the creator and the destroyer. But though he was the preserver and the regenerator, it is evident that he alone, without an assistant element, could regenerate nothing, though that element itself was indebted to him for its existence. That element was water. Water was the agent by means of which every thing was regenerated or born again. Water was in a peculiar manner the agent of the sun: without the Sun, either as light, heat, or fire, water would be an adamantine mass. Without water, the power of the sun would produce no living existence, animal or vegetable. Hence, in all nations, we find the *Ερωσ*, the Dove, or Divine Love, operating by means of its agent water, and all nations using the ceremony of plunging, or, as we call it, baptizing for the remission of sins, to introduce the hierophant to a regeneration, to a new birth unto righteousness. In like manner, in almost all nations we find sacred rivers. The priests of all countries wished to have the river which run through their territory sacred; from this it is that we find so many rivers dedicated to the sun, and called in the different languages by a name answering to the word sun. At present I shall not particularize them: they must be in the remembrance of every reader—the Ganges, the Nile, the Po, &c., &c. This is the origin of the different baptizings or baptisms of the followers of Mithra and of Christ. The Greek word *Βαπτίζω* means to plunge into any thing, or be immersed in any thing, not *to sprinkle* merely with water. From these principles arose the custom in their ceremonies of constantly baptizing the Ioni and Linga with water. And it is on the same principle that, when in a state of union, they generally float on the water in the Arga. Sometimes an artificial fountain is contrived to throw water upon them, as may be seen in two exemplars in the India-House.

Meru, with its concentric circles of land and water, surrounded by the ocean, is an emblem of the creating and destroying powers. When this system was established, the north-pole was believed or feigned to be surrounded with seven dwipas or concentric circles, the last surrounded by the ocean. All this, in later times, was an emblem of the sun surrounded with the planets; but probably it first arose from the belief that the earth was the centre, the north-pole arising in the middle of it, and the planets revolving around it.

Fire and water are beautifully emblematical of the creating and destroying powers of nature. Water is the opponent and destroyer of its creator, fire. In turn fire evaporates and destroys water. Yet fire, as already intimated, is the former of water, from the icy adamantine block, its natural state. Without water, fire with all its creating powers can produce nothing. Thus they are destroyers and creators in alternate succession. Hence, from not distinguishing between the first

fine principle and its emblem, the water, fire, and earth, have been taken for the original objects of adoration.

The absolute necessity of the presence of water with the solar ray, to produce fructification, is obvious. The apparent effect of the moon in producing dew and water, and its connexion with the tides, were probably one cause of its being feigned to be the spouse of the sun, and also of its dedication to the female generative power, or Isis. As the second of the planets the moon was thus feigned to be the wife of the sun. *Jointly* they produced; without her, as water, the sun produced nothing.

7. Having seen the close connexion between the creating, the preserving, and the destroying powers, we shall not be surprised to find that the mystical baptism extended to them all. Thus there were baptisms by water, by fire, and by air. The baptism by air is in perfect keeping with the baptism by fire and water. We have before seen that air, the breath or spirit of God, the AIR IN MOTION, the *ἀγίον πνεῦμα*, the קדוש רוח *qdis ruh*, or Holy Ghost, was emblematical of the regenerative power—the spirit of God brooding (as Bishop Patrick says) on the face of the waters. All the three are found, both in the doctrines of the Gentiles,¹ and in the secret doctrines of the gospel of Jesus. John says, *He shall baptize you with the Holy Ghost and with fire.*² When Jesus was plunged in the Jordan, or the river of the sun, as I shall presently prove it to have been called, Divine Love descended upon him in the form of a dove, and a fire was kindled in the water.³ All this will be called mystical. Indeed, it will be *truly* so called. But it is an intelligible mysticism, easy to be understood by those who give their minds to it. It contains nothing above or beyond the grasp of the human understanding. It is founded upon principles of sound philosophy and truth. It is no small proof of the good sense and sound philosophy of the professors of the Buddhist religion, that when they come to the boundary line beyond which they cannot go, they stop and call it illusion. The very idea of illusion, thus used, is beautiful. And now we begin to have a distant yet obscure view of an universal system of philosophy and truth, connected, by this baptismal ceremony, with the religion of Jesus—a really *universal* system; and, perhaps, in the end, we may find, that the followers of the Pope have a better reason, if they chose to give it, for their assumption of the name of Catholic, than the ridiculous one which they generally assign, viz. the universal dissemination of their church: an assumption, in the sense in which it is received by their followers, *false* and *absurd*.

I fear my reader will think I have gone to sources sufficiently recondite and abstruse for my doctrines, but I must yet take him a little farther. Buffon and Bailly have been most unmercifully ridiculed and grossly misrepresented, (by those who ought, consistently with their pretended great piety, to have acted otherwise,) for going to a high latitude for the birthplace or origin of man. But at the risk of being ridiculed like them, I must go thither for the origin of my doctrine. Among a people residing under a vertical, or an intensely hot sun, we are apt to forget that *cold* must be as great a luxury as *heat* is to us; that their season of happiness, of health, of comfort, is the *winter*, not, like ours, the *summer*. It should be recollected that, during the summer, in Egypt and in India, the country is covered with water—in winter with vegetation. For these reasons the inhabitants of those countries would not have the same objections to cold, or to any thing connected with it, which we have. The reader has seen that I have derived the name of Isis from the Hebrew *ישו* *iso* and the Greek *ζωω* *to save*; and I think this very probable: but Mr. Payne Knight, first premising that he thinks the *Io* of the Syrians to be the same as Isis, says, “Her name seems to have come from the north: there is no obvious etymology for it in the Greek

¹ Nimrod, Vol. I. p. 119.

² Luke iii. 16.

³ Justin against Apion.

“tongue : but in the ancient Gothic and Scandinavian, *Io* and *Gio* signify the earth : as *Isi* and “*Isa* signified ICE, or water in its primordial state : and both were equally titles of the Goddess “that represented the productive and nutritive power of the earth : and, therefore, may afford a “more probable etymology for the name Isis, than any that has hitherto been given.”¹ I give no opinion on Mr. Knight’s theory ; but before my reader decides against him, I beg him to recollect that water was considered as the emblem of the passive principle, in opposition to fire, the active principle ; that water, in a *purser* state, is actually Ice, the emblem of the passive principle : when compounded with fire, the active principle, it is the emblem of the two—the regenerator—the *Linga* and *Ioni*—the *Isa* and *Isi*, from *ישו* *iso* to save ; and, by the water of baptism, to be saved. I should think this ridiculously abstruse if I did not know that nothing can be too abstruse for the philosophers of India and Egypt. On this subject I shall have much more to say when I treat of the Christian baptism.

I think no one will deny, that the explanation of Mr. Knight is ingenious and probable ; but how is this to be reconciled with the theory stated in Book I. Chapter II. Sect. 1, that Isis was the *Bona Dea* or Mother of the Gods, and with the statement lately made that her name was derived from the Hebrew word *ישו* *iso* to save, or the Greek word *ζωω*? Are there to be two derivations to the word Isis? In Book I., cited above, I have shewn that the sun came to be considered the Saviour, in consequence of the mode in which he appears to preserve and renovate the face of nature. Now, if we consider a little, we shall find that without the assistance of water in the form of rain or dew he can produce nothing : hence the name of his wife, Isis, came to be applied to water. In India *Is-wara* and *Isa*, or *Brahma* and *Sara-iswati*, in Egypt *Osiris* and *Isis*. *Osi-ris* was often written *Isi-ris* ; and *Plutarch* says also, *Usiris* and *Asiris*.² This shews that the two words are only the same in the different genders. In numerous Egyptian monuments we see Isis seated on, or rising from, the lotos or water lily, as in my plates, fig. 10.

8. We all know, independently of theory, that a general belief prevails in the world, that the moon exercises an influence on the weather, particularly in respect to the production of rain. From this belief might she not come to be considered as presiding over water, to be called by the name of the saviour Isis, to be converted into a female, and made the wife of *Iswara*, or *Osiris* ; and water, when entirely by itself, free from solar influence or in its congealed shape, to be called Ice? This seems to have been comparatively speaking a modern refinement, as we find the moon in Tartary, in India with the *Rajpoots*,³ in Arabia, in Egypt, in Germany, and in Etruria, to have originally been of the masculine gender. Here we see why she was called *Helena* and *Theba*, and why she is every where connected with the generative principle. In her lunette form she is peculiarly calculated to represent the *Arga*, or vehicle, or medium in which the germ of animated nature was carried, the united *Linga* and *Yoni*. In the prayer of the Persians to the God *Taurus*, water is also invoked, joined with him by the name of rain, which seems to be introduced in an awkward way, but which is thus accounted for. I think there can be no doubt that if *Plato* ever taught, that the trinity of *Orpheus* or *Zoroaster* consisted of the sun, the moon, and the earth, it must have been to conceal the higher theory from public view. As we have the origin of the word Ice in Isis, so, in similar manner, we have the origin of the name of water in the *Is-wati* or *Is-wara*, *ישו-אר* *iar* to flow ; *ישו-אר-די* *is-iar-di*.

Is it possible that the word *Sarah* may be found in the Greek word *χαρα* *laughter*? She was the mother of *Isaac*, which name *Cruden* says means *laughter*, and that he was so called from his mother’s laughing. Before I conclude, I have no doubt I shall prove that there is no instance in

¹ Payne Knight on Symb. Lang. of Anc. Myth. S. 54.

² Ed. Squire.

³ Tod, Hist. Raj. p. 538.

which the name of a God or Goddess, when uncorrupted, is without some meaning ; or who had not his or her name given for a specific reason.

I apprehend the word IS to be a word of the most ancient language : in English is, in Hebrew *יש* is. It means existens or perhaps hypostasis. As *existens*, it meant self-existent or the formative power ; and as this power or creator was the preserver, the words *ישו* *iso* the saviour, and Isis, came to be formed from it. In the Hebrew language it has exactly the same meaning it has in English. It is also found in the Mexican language, which bespeaks its great antiquity. The Mexicans, to mark the time of the day, point to the sun, and say, *Is Teott, there God will be.*¹ But the expression manifestly means (there) *is* God—Teott meaning God.² Mr. Crawford evidently adopted an incorrect mode of expression, to indulge his (pardonable because not ill-meaning) prejudice against the English expression or language in Mexico. But this kind of prejudice has been exceedingly detrimental to the discovery of the truth. Here we have the English word, in sound, in sense, and even in letters.—In a former section I said that I should explain the word Eridanus. Having shewn the importance of water in the mysteries of the ancients, I shall now perform my promise, and it will be seen that the meaning of the name of this river is closely connected with the sacred character of water. It is for this reason that I have made some observations upon the baptism of the ancients, which would otherwise have been better delayed till I treated of the Christian baptism.

CHAPTER VIII.

RIVERS OF SAME NAME.—JORDAN.—VARIOUS RIVERS CALLED DON.—DONCASTER, &c.—PHILISTINES OR PALLI.

I. A LEARNED friend has observed to the author, that, in his opinion, all names of rivers and of places have taken their origin from accidental local circumstances, arising in the very earliest stages of society ; that the man wholly or half savage, for instance, who happened to ramble to the confluence of the Rhone and Arve, would not think of distinguishing the Rhone from the Arve by calling one of them the river of the sun ; but would most likely call one the *blue* river, and the other the *muddy* river, names arising out of their accidental peculiarities ; that the giving such a name as the sun, is much too artificial and refined a motive for the half savage, who must have given the first names to rivers and places. This remark seems reasonable enough in many cases ; but it does not apply where colonies are settled by civilized nations, as every day's experience in the Americas, New Holland, &c., proves. That rivers have been called *rivers of the sun* cannot be doubted, as the Nile proves. This was first called *Sir* after the name of the sun, and Grecized into Osiris.

When I find widely-separated countries, towns, and rivers, called by the same names, I cannot consent to attribute so striking a coincidence to the effect of accident or of unconnected causes.

¹ Crawford, Hist. Ind. Arch. Vol. I. p. 288.

² Teott-Teut-Tat-Θεοτ-ΘεοΣ.

I feel myself obliged to believe that some common cause must have operated to produce a common effect. I find rivers by the name of Don in many different countries, and under very peculiar circumstances, and on these I must now make some observations.

Almost all great rivers have been called rivers of the sun. May not the origin of this be found in the abstruse consideration, that they appear to be directly the produce of the sun; and may they not originally have been thus called as a sacred name? In all the Asiatic countries they are the fullest in the summer, when the sun causes their floods by melting the mountain snows. When he is in his glory, they are at their full; as he withdraws, they decline. At the same time that he causes them to increase, he thereby fertilizes the plains of India, and the valley of the Nile. The name of the rivers, the Nile for instance, is said to mean *sun*—not that it means the river of the sun, but *the river sun*.¹ If I be right, that a first language existed like the Hebrew in its formation, this misnomer might arise from inattention to the system (formerly named) of what in the Hebrew language is called being *in regimine*. For example: we say *house of God*; the Hebrews say, אל בית *al bit*—*bit al, house God*, wanting the particle; and then the word *bit* or *house* is said to be *in regimine*, the particle of being understood. The Nile was said to be both the gift and the emblem of Osiris, and an emanation from him—Ὅσιριδος Ἀπορροή.¹ The Ganges was said to have flowed from the head or the foot of Seva. The Eridanus of the sphere flowed from the foot of Orion or Orus, as any one may see by casting his eye upon the sphere of Dupuis, Plate No. 10. It is there called also the Nile. In No. 9 it flows from the foot of Prometheus. In No. 8 it flows from the foot of Amalthea, and also of Orus and Orion.

Dr. Hyde informs us, that the constellation Eridanus was called ποταμὸς ἀστεισμός, the asterism of the river, by Ptolemy; and, by the Persians, ποταμὸς Ὠρειωνος, *the river of Orion*.² I will now examine the rivers on the globe and try if we can find any of this celestial name there.

2. The first river I shall notice is the Jordan, called in Genesis xiii. 11, הַיַּרְדֵּן *e-irdn*, that is, as our translators say, *the Jordan*. The word הַיַּרְדֵּן *e-irdn* consists of, in fact, three words. The first is the emphatic article, הַ *e THE*; the second the word יַר *ir* which, in the Hebrew language, means RIVER,³ from the Hebrew word יָרַר *iar* to flow, a vowel (א *a*) being dropped, as is very common in the Hebrew language. For example, in the word תֹּר *tur* a turtledove, often written תֵּר *tr*.⁴ I believe that the rendering by Mr. Bellamy of the word יַר *ir* river, will not be disputed. It is proved to be correct by the striking circumstance, that although the Jordan is named in the Old Testament many times, it never, in any case, has the word river prefixed to it. The reason is, that if it were, it would create a rank tautology, and would read *the river river Dn*. From this Hebrew word *Iar* or *Ir*, the name of different rivers has been derived; for instance, one in Norfolk, called *Yar*, (the town *Yarmouth*,) and the *Jaar* in Flanders. Respecting the word דֵּן *dn*, Parkhurst gives as the meaning of it, *to judge or rule*; as a noun, with י *i* דֵּן *din*, *a judge*, and, with a formative אֵדֵן *Adn*, *a ruler, director, Lord*—spoken of God. “Hence the word *ADONIS* “had his name,” and the Welsh *Adon* a Lord. I have no doubt that it had, in the form דֵּן *dun*,⁵ the meaning of judgment, discretion, understanding, and, in fine, wisdom. But of course Parkhurst would keep this last offensive word out of sight, as much as possible. If Adonai or Adonis were the second person of the Trinity, of course he would be Wisdom. Hence we have the meaning of this river—the river of Adonis. I suppose I need not remind my reader, that Adonis

¹ Plut. de Isid.

² Maurice, Hist. Hind. Vol. I, p. 355.

³ Bellamy's Anti-Deist and Translation of Bible, Gen. xiv. 14.

⁴ Vide Downs's Grammar, p. 27.

⁵ Vide Frey's Lex.

was the sun ;¹ therefore, the Jordan ought to be, or might be, translated *the river of the sun*. When Moses gives an historical account of Abraham's success in driving his enemies to the bank of the river, or of the name of the river on which Lot chose to settle, it is out of all question to suppose that he would, as Mr. Bellamy thinks, give it a new name and call it *judgment*, because Abraham had driven his enemies to judgment. But it was called Jordan before Abraham fought his enemies, when Lot chose its borders for his residence ; thus *that* question seems settled.

In the *Ἐπεα Πτεροσύντα*² may be seen the attempts of Mr. Tooke, as well as of great numbers of other learned men, to explain the word *dun* or *don* ; in all of which I think my reader must agree with me, that there is a complete failure. This is one of the proofs how vain the attempt is to explain the English language, without going to the Hebrew. The Hebrew is of much more importance than the Saxon, because the Saxon is itself, in great part, derived from the Hebrew. So that if in many cases you pass over the Saxon and go to the Hebrew no bad consequence arises ; for, though you miss a step, you get to the real root : but in few cases, perhaps, will you get to the real root by stopping at the Saxon. If Tooke had understood Hebrew, he would have made a very different book. The observations of Mr. Taylor, the editor of the new edition of Tooke, on many words, as well as on that of *don* or *dun*, though learned and ingenious, confirm what I say. All that can be made out from these learned men is, that this name of so many rivers means HILL, a very singular name it must be allowed for river. But it is exactly like the Mere of India. This universally means Hill, (though generally a hill with a piece of water on the top of it,) but in our country it also commonly means *lake*, and I think it has become appropriated to lakes from the hill lakes of India.³ I shall return to this subject in the next book.

From Burckhardt's Travels in Nubia,⁴ it appears that the river Jordan is now called El Dhan. I found this authority after I had finished my article on this celebrated river. I think I could not have desired a more decisive proof of the truth of my theory than this. *El* is the Arabic emphatic article THE.

3. The word *duna* was the Median name for a river, and was carried into Europe by the tribes migrating from upper Asia. Thus it makes its appearance in the names Tanais, or Don, D'ni-per, Rha-danus, Rho-danus, and Eri-danus.⁵ In North India the Don is called *Dena* and *Dond*.⁶ that is Don-di, or Dis, or Divus, *holy*.

The celebrated river called by the ancients *Ister*, is now called Danube. It was also called Don-eau, as appears from old local authorities. Dan-ube and Don-eau, both mean *water of the Don*. The Danube or Ister was known also by the name of Danusius or Tanais : in which the Puranas coincide with Horus, Apollo, Eustathius, and Strabo.⁷ Tanais is evidently a corruption of Dan-usius,—I-ster : I, the Celtic emphatic article ; Ster, star, astrum, THE planet.

In Russia there is a river which flows into the Sea of Azof or the Palus Mæotis, (but whose true name Ritter makes to be Palus Maietis,) now called Don but anciently Tanais ; and about one hundred and fifty years back, as appears, by old voyages, it was called Tane. Dr. Lempriere says, " Don is a corrupt appellation of the ancient *Tanais*. There is a city at its mouth now

¹ Drummond, Œd. Jud. p. 231.

² Part I. Chap. ix.

³ The hill lakes in India were dedicated to Buddha, and in succession to Cristna or Kaniya. The hill lakes in England are called Tarns : *e. g.* Mallum-Tarn, a lake on the top of a hill in Yorkshire. May they not have been called from the *Buddha* or *Teut* or *Hermes* of Britain, *Turan-is* ? The Meres of India were all mothers from whom the sacred rivers descended. They were Merus, each of which was both hill and lake.

⁴ Mem. p. xxxvii.

⁵ Cab. Enc. Vol. I. p. 41.

⁶ Rennell, Mem. p. 88.

⁷ Eustath. on Dionys. Perieg. V. 298 ; Wilford, Asiat. Res. Vol. III. p. 453.

“ called *Azof*, but the Slavonian traditions say it was anciently called *Aas-grad* or city of *Aas*.” This shews the meaning Tan-ais, was Don-ais or Don-aas—and I think meant *outlet of the Don*: and *aas-zof* is *aas-sophia*, or *eau-σοφ*, Sea of Wisdom. The Don is called Donnez, Danaetz, Tdnaetz, Tanaets, and Tanais.¹ In Sogdiana, not far from the Jaxartes, was a city called Gaza, and the river Jaxartes itself was called Tanais.² According to Rennell it was at first called Sirr—the same name as that of the ancient Nile. The Tanais we have seen was also the same as the Don. Rennell makes the Jaxartes to be bounded by the mountains called Tag Arga. “ In our modern maps it appears as the Don: but this word is a palpable corruption of Tanais, by which appellation it was known to the Greeks.”³ In the Eastern golden Chersonesus or Siam, is a district called, in ancient times, Daonæ, which is now called Tanasserim. This is evidently the name of its river Don, corrupted into Tanasserim.⁴ Beyond the Ganges, again, we find a river called Daona.⁵ I believe it was Constantine Porphyrogenitus, in the tenth century, who first called the river Dnieper, Danapreos. Contrarini, who travelled in 1473, says, “ La fiumara che si chiama Danambre nella loro lingua, e nella nosra Leresse.” It is worthy of observation, and can scarcely be accidental, that the Don of Yorkshire flows into the Uumber, or Umbre. There must have been some connexion between the Don and Uumber, and Dan-ambre.

4. In the North of Scotland we have a river, which flows through the town of Aberdeen, called Don. This is the same as the river Don or Dn in Syria, and the town of Aberdeen is עבר *obr* the *far* or *distant deen*, whatever the word *deen* may mean: but probably the *far don* or *dun*. The river at Whitby in Yorkshire is called Dunum or Don.⁶ In Yorkshire is another river called Don, on which the Romans had a station, or castrum, whence a beautiful town took the name of Don-caster. It is celebrated for its beauty. I have known it well for more than fifty years, and I think I am qualified to say, it does not deserve more praise for the beauty of its buildings and the cleanness of its streets, than for the moral qualities of its inhabitants.

In my CELTIC DRUIDS, plate 24, will be found a view of a fire-tower at Brechin, in Scotland. This town is on the east coast, not very far from Aberdeen or עבר דן *obr dn*, or Aberdeen on the river דן *Dn* Don; and near it is a small town called Dun. On this tower is a man crucified, with a lamb on one side of him, and an ELEPHANT on the other. When I published my CELTIC DRUIDS, I thought this proved that the tower was not very ancient; but I now begin to doubt of this matter. In the estate of Lady Castles near Aberdeen, about forty years ago was dug up the large ring, of which the print, No. 27 A, is a very close representation. The figures are not mere outlines or alto-relievos, but they are of full-raised form, and well executed. The pious, and also the learned of the priests say, it may have been brought from the East by Crusaders. No doubt they consider this to be satisfactory. For my own part, I think it equally satisfactory to be told, that the river and town of Aberdeen had their names given by the crusaders, and that the fire-tower and the ELEPHANT were placed upon it by them also. I dare say these valiant heroes would be said to have given names to the Uumber, Northumberland, Brigantia, &c., if they had not been known from Roman authors to have had them long before the Christian æra, and even before the arrival of the Romans. For example, Brigantia the country of Queen Boadicea.

In Lombardy, in Cisalpine Gaul, there is a celebrated river called Eridanus. This is evidently Eri-dan or E-ir-dan, with a latin termination *us*, which being left out we have ה e THE ר *ir* RIVER דן *Dn*, DON or Adonis. Into this river Phaëton was supposed to have fallen, when he drove the

⁵ Drum. Orig. Vol. IV. p. 174.

⁶ Young's History.

chariot of the sun. The country about the mouth of it was inhabited by the Om-bri, and there was a town at its mouth called Palestinos. This river is now called Padus or Po, which is one of the names of the Ganges and of Buddha. The country was also called Pagus Tro-ianus, and at the vertex of the Delta formed by the river, the city of Padua was built.

Ille urbem Patavi sedesque locavit
Teucrorum, et genti nomen dedit, armaque fixit
Troia.¹

The river in the sphere proceeding from Orion is called Eridanus, but Eratosthenes maintains that it is the Nile. "The river flowing from Orion's foot, graphically illustrates Homer's Διπτερος ποταμιου, or the river flowing from Dis. But in truth there is no difference between the Nile or dark blue river of hell and the fabled Eridanus: in the fortunate groves of Hades, so Virgil sings,

"Plurimus Eridani per sylvam volvitur amnis."²

The Roman poets feign, that Amber arose from the tears shed by the sisters of Phaëton for his misfortune, but the Po never produced Amber.

Nimrod again says, "But the river Ganges bore the same name (being that of the God Buddha or Batta) as the Eridanus of Italy; Ganges qui et *Padus* dicitur: and as the Nile was fabled to be the Euphrates, reascent in Ethiopia, so again, it was pretended, that the Euphrates and Tigris did not really rise from their apparent source in Armenia, but after travelling one thousand miles from the East, juxta³ Armeniæ montes manifestantur, or in other words, that, as Paradise was at the source of the Indian river, by fabulous tradition, and of the Euphrates by Scripture authority, the Euphrates must be the Ganges Eridanus prolonged."⁴ A Coptic name of the Euphrates is *eu* water, and Φρη=608—River of the Sun as usual. See Ouseley, Transactions of the Society of Literature,⁵ where it appears that Phrat was not the Persian name, but Fala or Flad or Fulat. Is Flad *flood* or fleuve-ad, river of Ad? Has *fleuve al* become Fala or Fulat?

5. "Next to the emigration of the *Yadavas* the most celebrated was that of the Palis, or Paliputras: many of whose settlements were named Pálist'hán, which the Greeks changed into Palaistine. A country so called was on the banks of the Tigris, and another in Syria. The river *Strymon* had the epithet Palaistinos. In Italy we find the Palestini: and at the mouth of the Po, a town called Philistini: to which may be added the Philistinæ fossiones, and the Philistinæ arenæ in Epirus. As the Greeks wrote Palai for Pali, they rendered the word Paliputra, by Palaigonos, which also means the offspring of Pali: but they sometimes retained the Sanscrit word for son: and the town of Palaipatrai to this day called Paliputra by the natives, stood on the shore of the Hellespont."⁶ Here the two Palibothras are sufficiently clear. And the Palestini or Philistines, as we call them, in India, on the Tigris, in Syria, on the Hellespont, on the Strymon, and on the Po, are very striking. They are all derived from the Indian name Palli, and Stan, a *stone* or *place*.

Pliny says,⁷ Inde ostia plena Carbonaria ac fossiones Philistinæ, quod alii Tartarum vocant. That is, the fossiones of the Palli, or Pallestini the shepherds or nomades. Here we have the first example of the name of Tartars, but it beautifully supports all my opinions of the arrival of the Palli from the East;⁸ it also shews, that we must not conclude that names are necessarily modern,

⁷ Lib. iii. p. 173.

⁸ Bryant, Anal. Vol. I. p. 376.

because we do not meet with them in ancient Greek or Latin authors. We shall find that these Tartars were probably Sacæ or Saxons.

Mr. Bryant observes, "It is said, that the Eridanus was so called first by Pherecydes Syrus."¹ And Plutarch² says, that the Strymon is a river of Thrace, which runs by the city of Edonis (Ἐδωνίδα): it was of old called the river of Palæstinus.³ The town he calls Edonis, is called also Εἰον. I have before observed, that I take this to be a corruption of Yoni or Ione; and this Edonis I suspect was Adonis, and in this, again, connects it with the Syrian Ionian superstition. The *Strymon* in the North of Greece was originally called *Ioneus*, as Conon (Narr. iv.) tells us.⁴ There was, according to Pausanias, also a river in Attica called Eridanos. Mr. Dodwell thinks the channel which joined the Ilissos near Ampelo-Kepous was the Eridanos.⁵

Another river Don is found in the Rhodaun, now called the Vistula, falling into the Baltic near Dantzic. This was anciently a celebrated place for amber. To this river the Phœnicians and Carthaginians resorted for the purchase of amber, with which they supplied the Roman empire. It had the name of Eridanus, and by its name Rhodaun, it evidently connects the Rhone with all these Dons. The Rho-daun is the *River-Daun*. It is said that Herodotus mistook a river for the Tanais which he called Rha, now the Wolga or Volga. The reader will not fail to perceive, that the name of the river at Dantzic consists of the river of Herodotus, and the river Don. The Rha is the ῥεω and the יר *iar*. The Wolga is called the Oarus by Rennell: this is only a corruption of יר *iar*, with the Latin termination. When Herodotus was told that the Wolga was called Rha, if he had had the least knowledge of etymology he would at once have seen that *Rha* merely meant *river*—the same as the Greek ῥεω *to flow*, or the Hebrew יר *ir* river. The Dwina also is probably a Don.

That I am not singular in the opinion that the Rodaun is the same as the Eridanus, I copy the following from Lempriere: "The most curious circumstance connected with the story of Phaëton is the fact, that the name Eridanus, into which he is said to have fallen, belongs properly to the Rodaun, a small stream in the north of Europe, running near Dantzic."

The word *Lar* or *Laura* is still used in *Gaelic*, (*Loar* or *Lomhar*), and in the dialect of the Cymri, Llueru signifies *resplendence*. *Laurus* is the Laurel, sacred to the sun. *Daphne*, another name for the *Laurus*, is derived from the Sanscrit *Tapana*, a name of the sun, as the author of heat; for that place in Egypt called *Tapana* in the *Puranas*, is called *Taphnai* by the LXX: and *Daphanæ* or *Daphne* by Greek and Roman authors.⁶ I suspect in *Lomhar* there is the origin of Lombardy, and in *Tapana*, of India, the name of *Daphne*, always connected with the story of Phaëton. Nimrod says, "Phaëton was not only prince of the *Ethiopians* but son of Tithonus,⁷ and his fall from heaven is indisputably the same event as the death of Memnon. "How art thou fallen from heaven, Lucifer, son of the morning! Thou art cut down to the ground, which didst weaken the nations. For thou hadst said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God, I will sit upon the mount of the congregation in the sides of the North."⁸ The above extract from the religious Nimrod is very striking.⁹

⁹ Don and Douno pro Domino utuntur Hispanica Picardi 168.

I think most persons will agree with me in opinion that the following extracts, from an essay of Col. Wilford's, which I found after I had written the foregoing, confirm my theory in a remarkable manner. It does not appear that Col. Wilford had any idea when he wrote them of the connexion between the two rivers of India and Italy. The Eridanus in India, in Greece, in Italy, and in the sphere, flowing from the foot of Orion, all prove the mythological nature of the connexion between the Eastern and Western countries. "The *Brahma-putra* is also called *Hrádini*, as I observed in a former essay, on the geography of the Puránás. This word, sometimes pronounced *Hládini*, signifies in Sanscrit a deep and large river, from *Hřida*, to be pronounced *Hrada*, or nearly so, and from which comes *Hradána* and *Hrádyni*. In the list of rivers in the *Padma-purána*, it is called *Hrádya* or *Hrádyn*, and its mouth is called by Ptolemy the *Airradon Ostium*, or the mouth of the river *Hrádan*: and according to him, another name for it was *Antiboli*, from a town of that name, called also by Pliny *Antomela*, in Sanscrit, *Hasti-malla*, in the spoken dialects *Hátti-malla*, now Fermgy-bazar, to the S. E. of D'haccá." ¹

My reader will please to observe in the above extract, the *Hradána* and *Hrádyn*. I then beg him to pronounce them aloud, and immediately afterward pronounce the name of the Wolga as given by Herodotus *Rha*, and also the river Rhodanum or Rhone, which runs past Lyons, and doubt if he can, that all these rivers had once the same name; that the connexion was mythological, and that the mythological system extended to the Vistula, to Doncaster, and to Aberdeen, or עבר *obr* דון *dun*. *Hrádyn* is the word *Rádun*, and with the Hebrew emphatic article would be the *Rádyn* or *the river dyn*. Col. Wilford observes² that Ptolemy called the river *Brahma-putra* *Daonas*. This is evidently *Don* or *Dwina*. This is the same as the *Dwina* of Russia.

The observation respecting the Rhone, is confirmed by the name of Lyons, which was *Lug*—which means *high*—and *dun-um*, the town of the upper *Dun*.³ In Gibelin may be seen some very curious examples of the names of rivers, being *Var* or *Ver*—all which I suspect are derived from the Hebrew *IAR*.

Lyons is situated at the confluence of the Rhone and the Soane. In India also there is a river called the *Soan*, which takes its source from the same lake as the *Ner-budda*, that is (the word נהר *ner* being correctly Hebrew) *the river Buddha*. But in my observation on the river Jordan I have shewn how the Rhone is connected or identified with the *Padus* or *Po*, or, in other words, *Bud*.

Let us reflect a little upon what I have said relating to the emigration of the tribe of Ioudi from the kingdom of Oude, in which is the river *Burrampouter* or *Brahma-putra*, and we must be struck with the singularity of its having the same name as the famous *Jordan* or river *Don* of Western Syria. It was also called, as we have seen, *Padus*, one of the names of *Buddha*. We have seen that the Rhone or *Rhadaun* is the *Ir*, or *Rha*, or river *Daun*—bringing it to the same name, only translated, as the *Padus* of Italy. We have also the *Dan-aub*, i. e. the *Aub-dan*, or river *Dan*. *Doab*, or *Duo-ab*, or *Mesopotamia* of India, shews the meaning of the *aub* to be *river*. If the word *Soan* be read *Zoan* we have the two rivers of the Sun *united* in India, at their source, as we have in Europe, at their confluence. A third river, which takes its rise in the same mount as the *Soan* and *Nerbudda*, is called *Mandaha*, or the river of the cycle; for I take *Manda* to be our *Munda*. On, or not far from, this river is a town called *Sone-pour*, and near it one of the towns is called *Odey-pour* or *Ioudi-pour*; there is also a town called *Pada*, and at its mouth, in the *Brahmin* country, is the famous temple of *Jaggernaut*,⁴ or of the *Great Creator*; where

¹ Col. Wilford, *Asiat. Res.* Vol. XIV. p. 426.

² *Ibid.* p. 420.

³ Gibelin, *Monde Prim.* Vol. VIII. p. 453.

⁴ If *Jaggernaut* mean *Great Creator*, may it not be thus dissected—*Ie* self-existent; *Ger* great, or circle, or cycle;

the Bull projects, and where there is no distinction of castes, or, I believe, of sects, but pilgrims of all religions eat together. This is because it is a Buddhist temple. How it has escaped the fury of the Brahmins is not known. OUGGIN is the capital of Malwa, through which the Nerbuddha flows. It is one of the most ancient cities of India, noticed both in the Periplus of the Erythræan sea, and by Ptolemy.¹ On or near the Nerbuddha is a town called Munda and one called Mundala, and one called Mundatta.² I feel little doubt that the mount whence the three rivers flowed was in very ancient times the high-place of Malwa, as Moriah was of Syria.

In India will be found Dana-poor, (*poor* means city or town,) whence the names of all our towns which end in *bury*. The burghs come from the Saxon, and Dana-poor probably from the same source. This city is on the Soan, which name we have seen, is the same as the river Rhone, the Danube, the Po, &c. In the same neighbourhood will be found also Cawn-poor, or the city of Caon, and Bet-ourah, (or in Hebrew, the house or temple of Aur,) and near Agra, on the Jumna, a Betaisor, house or temple of Æsar.

I think no one can believe that all these circumstances of curious coincidence could be the effect of accident. I will not undertake to put them together, but he must see that there are the links of a chain. I have no doubt that the whole is connected with a Buddhist mythos, and that the story of Phaëton is of Oriental extraction. Lucian has given a witty description of a voyage up the Po, in search of amber, poplars, and musical swans, respecting any of which the sailors could give him no information, but for which they only laughed at him. I think this will now be a proper place to point out some strong marks of identity in the mythologies of India and Italy, which are perceptible in the names of their respective places.

CHAPTER IX.

LORETTO.—OBSERVATIONS ON HOMER, THE ILIAD, AND THE ÆNEID.

In Book V. Chapter X. Section 2, I said I should shew that the philosophers of India, not only brought the *black* mother and her child to Italy, but that they brought her house also. I now proceed to redeem my pledge.

In lat. 25, 50—and long. 73, 10, on the road from Pali or Palee to Jod-poor, is a hill called Poono Gir, or Poona.³ (Now Col. Tod says, Poono means *virtue* and Gir *hill*.) It has on the

Naut Wisdom? The Brahmins only know that it means *great creator*; its *etymon* they do not pretend to understand. Neith, not Nepthe, with the Egyptians, meant wisdom. Of Neith it is said, "I am what is, what was, what shall be; mortal has not raised my veil. The sun is the fruit of my womb." (Savary's Letters on Egypt.) Phtha is the supreme God of Egypt. (Ib.) This Neith is the Nath described in Col. Tod's Hist. Raj. pp. 545—548. It is the Rasit of Genesis, and correctly means the same as Jehovah Aleim, i. e. the self-existent God.

¹ Malcolm's Hist. of Malwa, Central India, p. 23.

² Mundul-ooe and Mundul-eeh, in Sanscrit, mean a circle or tract of country. (Elphinston's Cabul.)

³ Tod, Hist. p. 702.

top of it a small Jain temple, which was conveyed by supernatural power, by a Buddhist magician, *as is said by the Brahmins, the enemies of the Jains*, to the place where it now stands, from a certain mount called Saturn-ja, in a district now called Guzzerat, and the kingdom of Balli-caroes, or Balcarra, or Saura-stra, or Syra-strene, or Saura, but most anciently Larice,¹ that is, evidently, Larissa. This country is also called Palli-thana,² that is, Pallestan or Pallestine, or country of the Pali. Poono-Gir is now called *the hill or temple of virtue*. What this temple contains Col. Tod has not told us, but it was a temple of the Jains, that is, of Janus, the name of the great God of the Italians. It was brought by the power of magic to the neighbourhood of the ancient city now called Mundore, the ruins of which, as already noticed, are *thirty-seven* miles in circumference: but the present name of the new city, close to it, is Jod-pore, that is, town of Juda. In this part of the world, there yet exists a sect of religionists called Nazoreens, or Nazoureans, or Mundaïtes, or Christians of St. John—a sect of which I shall treat at large by and by. But it is evident that the Munda of these people is the same as the Munda of this great ancient Cyclopæan city. In the country of Larice or Palli-thana, the adoration of the mother of God seems much to have prevailed. The river near Pallithana is named Mahie, that is, Maia or Maria, and, by Ptolemy, called *Mais*. This is the country whose shores are washed by the Erythræan Sea, and it is therefore probably an Erythræan country. In this country is the city of *Aje-mere*, not far from which is a temple of Mama-Deva, *the holy mother*. The peculiar object of adoration in this part of India now, is Kanyia, the son of Maia, otherwise called Cristna: but Maia herself is often called Kanya. At no great distance, in this country, is the Jessulmer, formerly noticed, or Jerusalem, anagrammatically written: as Cupid, the Greek God of Love, read Hebraicè, in this country, is the same name as their God of Love, Dipuc.³

The Casa Santa of Loretto, every one knows, according to the Romanists, is the real house in which the mother of Jesus Christ lived at Nazareth, or the city of the Natzir, or the hermit, or the flower, whence he was called a Nazarene and his followers Nazarenes. This house was removed by angels, from Syria, to its present situation. It was first conveyed to Dalmatia; but it having been discovered by the angels, that they had placed it among thieves, they took it up again and brought it to where it now stands, a place called Loretto, on the Italian shore of the Adriatic Sea. Here sits the mother of God, the Mama-deva, the Regina Cœli, with her infant in her arms, both as black as jet, loaded with diamonds, and every other kind of precious stone. Her humble cottage is covered with a casing of beautifully worked stone, to skreen both it and herself from impertinent curiosity, and over the door, to guard it or to ornament it, stands the statue of the Erythræan Sibyl. In Syria, whence she came, there was a town, on the Orontes, called Larissa: this word, it is evident, has been softened down in the Italian fashion into Loretto. Thus she was brought from one Lar-issa to another. In Syria were Juda and Palestine. Italy, where she is now placed, is the country of Saturn-ja, where also is the Urbs Saturnia of Virgil. It is in the district of Palitana, the district of the Palli or Palestini, which has been before noticed, at the mouth of the river which has the same name as the great river of the country whence she came, Padus, or Buddha, or Po, or Fo. This country was also called Ombria or the country of Om.

When Jesus was on the cross, he ordered John to take charge of his mother, and he, from that time, took her to his own home. Was this the city of Munda where the Mundaïtes, or Nazoureans, or Nazarenes of St. John come from?

I have little or no doubt that the fable of the Virgin's house was taken from the fable of Poona

¹ D'Anville.

² Col. Tod.

³ Query, the Puck of Shakspeare?

GIR. POONAH or PUNAH is the Mexican term for woman. It is, I strongly suspect, the Greek *Γυνή*. Here we have in the hill of virtue the first idea of virtue, as applied to a chaste female. This will be better understood when I treat of Mexico.¹

There was also near to the Saturn-ja Pali-thana of India, a place called Diu, and near it, in the sea which washes the shore of Syra-strene, called the Erythræan Sea, (the name of the Erythræan Sibyl, which stands in the screen of the Casa Santa at Loretto,) a sacred island of Diu, the same as the name of Diu in the mount Athos in Europe, which is on an isthmus, the very picture of Syra-strene or Guzzerat. The mount Athos is called Monte Santo, and the mount Palithana of India is also called a sacred mount, or a Monte Santo. There is another Diu now called Stan-dia, which is probably a corruption of Stambul-diu. It is in the Thermatic Gulf, near to the tomb of Orpheus and Olympus; and a second LARISSA.² Near Athos was a city called Pallene. If a person will only view the respective countries, in the East and West, where the remains of the mythos are found, he will see that in the choice of localities, a similarity of shape and circumstance has been selected to make the two mythoses agree. The peninsula of Athos and Surastra afford a very good example. The river in India, close to Surastra, called by the ancients Mais, I should have thought nothing of, if I had not found it called in Col. Tod's map Mayhie, evidently Maia or Maria; and, not far from it, as I have just now observed, the temple to THE MOTHER, as I conceive, Queen Isi or Isha.

Thus we have the ruins of the sacred, and most ancient, Cyclopæan city, called Mund-ore, in India, and Munda in Spain, and Mundus having the same mystical meaning as Kosmos. We have Virgil's city of Saturnia, and the Palli at the mouth of the Eridanus, or Padus, or Buddha, of Italy. In India we have the mount of Satrun-ja, in or near to Pali-thana, the same as the Roman mount Palatine, at the mouth of the *Ner*, or river Buddha, the same as Padus in Sura or Syra-strene, whence the sacred temple was carried: which Syra-strene was also called by the ancients³ Larice, that is, Larissa, which I beg may not be forgotten, as I shall have to make an observation upon it and its meaning hereafter. Not far from the Satrun-ja Palithana is a place called by Ptolemy Byzantium. The old name of Constantinople was Byzantium, but this was changed by Constantine to Constantinople, and it is now called by the Turks Estambul, or Stambul, which has been thought a corruption of Constantinople; but this opinion Mr. Bryant has refuted. When I find several places in India called Stambul, I then come to the conclusion that Stambul has been the first name corrupted by the Greeks into Byzantium. Stambul in India is not far from the river Chumbul, called by D'Anville *Sanbal*, and I believe they have both had the same name. There was a second place called Stambul, close to the Balkan mountain, not far from Chumla, in Europe: was this also a corruption of Constantinople? The city of Roma, is the city of Rama, equally found in India, Western Syria, Italy, and by its other synonym Valencia, in Spain and Ireland. Not far from Rome is the Indian town of Viturba,⁴ now Viterbo. There is also Palæstrina, now Præneste Sacrum.

When a person reflects upon the histories of the Old and New Testament, found in India and the ancient temples of Egypt; the adventures of Cristna in India, and of Joseph and his family in Nubia; he will not be surprised to find the legend of Loretto in Syra-strene, or Jodpoor, or Yuda-pore. However, surprised or not, here it is in high preservation, and it cannot be denied. The temple belonging to the Jains connects it with the Janus and Janiculum, and the Palitini

¹ David Malcolm's Essay on Ant. of Britain.

² Larissa, Theba, and Argos, were synonymous. Bryant, Anal. Vol. II. p. 451.

³ D'Anville.

⁴ Tod, p. 216.

with Mons Palatinus. I regret exceedingly that Col. Tod has been so concise in his description; but he does not seem to have the least suspicion of its connexion with the Lady of Loretto.

2. I consider the Æneid to be a sacred epic poem, and to contain a complete description of the ancient mysteries, as far they were known, but conveyed in language which should only be understood by the initiated.¹ In the following lines, Virgil declares that Rome was built on the ruins of two successive cities, which had both gone to destruction; one called Janiculum, the other Saturnia, i. e. Satrun-ja:

Hæc duo præterea disjectis oppida muris,
Reliquias veterumque vides monumenta virorum,
Hanc JANUS pater, hanc SATURNUS condidit urbem:
JANICULUM huic, ille fuerat SATURNIA nomen.

We all know that Rome was built on seven hills. Its mysterious character I have sufficiently proved. Constantinople, Nova Roma, we know had the same sacred peculiarity. Troy has been shewn by Nimrod to have been the same. Many authors have thought the Iliad to be copied from the Jewish books. Certain marks of identity may be discovered in them. In the Jewish and Gentile mythoses, we have Samson and Hercules, Jonas and Janus, Jephtha's daughter and Iphigenia. We have an Ileyan or Illium at mount Meru, in India; Pergamos, the capital of Troy, is Perg-om or Berg-om, the mountain of Oin, one of the names of Meru. We have a tribe of Hericulas, on the coast of Malabar. We have the names of Ulysses and Cæsar: and, in addition, Achilles and the Hero of the Mahabarat, of Valmic, are each invulnerable in every part but the heel, and by a wound in the heel of each hero he is killed—as Cristna was, or ought to have been, when bitten by the serpent—as the serpent bit the heel of the seed of the woman of Genesis.

The poems of Homer I consider to have been originally sacred Asiatic songs or poems, adopted by the Greeks, and that, for perhaps many generations, they were unwritten; and, as they related to the cyclic Mythos, they would, in the principal part, suit every cycle,—new Argonauts and new Troys. They were like the plays of Æschylus, each an epic, but all combining to form the history of the cycle, to those who were initiated, and they were the origin of the cyclic poems. I consider, also, that it was on the religious account that Alexander had them in the casket, under his pillow, when he slept, as our devotees now use their Bible; and I think it very likely that Ossian's poems might have been moulded to produce a similar effect, if Macpherson, like Aristotle and his coadjutors, had understood the mythos. Had we the whole of the plays of Æschylus, as we have the crucifixion of Prometheus, uncorrupted by our modern emendators, I think it probable that, with our knowledge derived from India, we should find in them the development of the system. When the poems of Homer were composed, the art of writing, if known, was a magical and masonic secret. At that time the digamma or *vaυ* was in use. When they were committed to writing by Pisistratus, it had gone out of use. This is the reason why they are without it. Poetry was not invented for its beauty, but for the purpose of aiding the memory; and it was applied to music for the same reason. A song in verse can scarcely be forgotten.

The learned Basnage says, “Several authors have attempted to make Homer consistent with the sacred writers in four things; 1. In the style; for there are so many Hebraisms in his verses,² that one can't avoid perceiving that he had read Moses, and the one may be often explained by

¹ All our translations of Virgil's works, in consequence of the translators' not knowing or not attending to the mythos, are absolutely ridiculous.

² Vide Bogani *Homerus Hebraizans*, in which he would prove that there is no poet comes so near the sacred writers; *neminem poetam tantopere referre sacros scriptores.*

“ the other. 2. This poet relates many rites that have an evident relation to those of the Old
 “ Testament. 3. His two poems, which may be justly called the two eminences of Parnassus, are
 “ full of admirable sentences, and therefore they are compared to those of Solomon, and a parallel¹
 “ is drawn betwixt this king’s thoughts, and this ancient poet’s. Scaliger went too far in saying
 “ that Homer was divinely inspired; but at least he entered into a kind of *enthusiasm*, which in-
 “ spired him, and rendered his genius next-kin to divine.

“ Est Deus in nobis; agitante celescimus illo:

“ Impetus his sacræ semina mentis habet.

“ The ancients have said, that Homer travelled into Egypt, and the Egyptians asserted that he
 “ was born there.² No wonder then that he was acquainted with the books of Moses, and in-
 “ structed in the Jewish religion in this country. If the Egyptian pretence be false, it can’t how-
 “ ever be disputed, but that this poet lived long at Samos, and had a correspondence with the
 “ Phœnicians for a great while, who had taught him the history of the Jews. ’Twas the notion
 “ of Justin Martyr, ‘ that Homer had taken a great deal from the writings of the Old Testament;
 “ but without insisting upon this discussion, it suffices that the sentences, which are innumerable
 “ in this poet’s verses, are like those dispersed in the books of David, Solomon, and sacred au-
 “ thors.’ A modern author has filled a great volume with this parallel of sentences and maxims,
 “ because if St. Paul has sanctified a saying of the poet Menander, he might likewise sanctify the
 “ maxims of Homer. But amongst a thousand examples, we’ll content ourselves with one:

Βελομ’ εγω λαον σου εμμεναι η απολεσθαι.

“ Homer here introduces a prince saying, *He had rather have his people safe than see them perish.*
 “ ’Tis first observed, that this is not the true meaning of this maxim. The king meant, no doubt,
 “ that he would die in order to save his people. However, take the words as you please, they
 “ have a great resemblance with those of scripture. The fourth article of conformity is much
 “ more important than the rest, since Homer, under pretence of recounting the adventures of
 “ Ulysses, is PROVED to have related those of *Abraham*, *Isaac*, the Judges, and heroes of ancient
 “ *Israel*. To give the greater authority to this conjecture, ’tis observed, that the ancients have
 “ given this testimony to Homer, that he generally made use of allegories. Heraclides made a
 “ collection of this poet’s allegories.”³ There is quite discrepancy enough between the poems of
 Homer and the Jewish writings to shew, that they were not copies of one another; but when all
 the other circumstances are considered, which I shall lay before my reader, I feel confident I shall
 convince him, that they are but different versions of the same mythic history. Homer, as remarked
 by Basnage, is said to have resided a long time in Samos. Not far from this island, on the con-
 tinent, are the Mount of Solomon or of the Solumi, and the Holy Ladder, &c., described in the last
 book, chapter III. sect. 7. Near this place there are a river Indus, a mount of Carmel, and a town
 of Jasus, evidently Jesus, and near it also was Miletus, where there was a shrine of Apollo, cele-
 brated for his prophecies; among which is the following, which may be added to those of Virgil,
 of Plato, of the Apollo of Delphi, of the Sibyls of Cuma and Erythræa, of the infant of the Virgo
 Paritura of Gaul, of the prophecy noticed by Tacitus, and that of Figulus, of Zeradust, and of the

¹ “ Homeri Gnomologia duplici parallelismo illustrata, uno ex locis sacræ scripturæ, quibus *Gnomæ Homericæ*, aut
 “ prope affines, aut non prorsus absimiles; altero ex gentium scriptoribus, per Jacobum Duportum Cantabrigiensem,
 in 4to. 1660, Cantabrigiæ, p. 4. There are 291 of them.

² The Greek poet Naucrates accuses Homer of having copied his poem from a book in the library of the God Ptha,
 at Memphis. Spineto’s Lect. p. 330. It is probable that poems of *Om-er existed both in Egypt and India.*

³ Basnage, Book iii. Ch. xx.

Druid of Bochara in Ireland. Lactantius makes the Apollo of Miletus say, "He was a mortal according to the flesh; wise in miraculous works; but, being arrested by an armed force by command of the CHALDEAN judges, he suffered a death made bitter with nails and stakes."¹ In this, of course, devotees will see nothing but a Gentile prophecy of Christ. Perhaps they may be right. But at all events we have a crucified God in North India, in South India, at Miletus, and in Syria. In the above we have most clearly the mythos of the Indians and of the tribe of Juda united. The scene of it lies in Phrygia, where the City of Ilion in Troy was placed, whence the Romans got their Pessinuncian stone, and which the natives of India to this day call Roum, in which they include the whole peninsula of Asia Minor. The reference to the Chaldean judges shews, that this can have no reference to the crucified saviour of our Bible. Who this crucified person of Roum or Roma was, I shall shew in a future page.

CHAPTER X.

ENOCH. LAURENCE.—MOUNT MERU.—THE DELUGE.—CHANGE FROM TAURUS TO ARIES.—PROPHECY OF A SAVIOUR.—PROPHECY OF TEN CYCLES.—THE ELECT ONE SLAIN.—CHANGE IN EARTH'S AXIS.—GENERAL OBSERVATIONS.

1. MR. BRUCE, on his return from Abyssinia, brought with him three manuscripts which purported to be exemplars of the Ethiopian version of the long-lost and much-desired book of Enoch. I did not examine or pay any attention to them, till after the whole of what the reader has seen respecting the cycles was written; and, after much consideration, I have judged it better that my observations on this curious work should be placed here by themselves, though it may perhaps be thought that they ought to have appeared in the fifth book.

This celebrated and very interesting remnant of antiquity has been translated into English, by Bishop Laurence, a professor of Oxford, who maintains that he has succeeded in shewing, from internal evidence, that it was written after the Babylonish captivity, but before the reign of Herod. I am of opinion, if I understand the Bishop, that it contains internal evidence of a much earlier date. A learned writer in the Monthly Magazine, No. 385, August 1823, Vol. LVI. pp. 18—20, denies that Bishop Laurence has shewn that there are marks of more recent date than Ezra in the book of Enoch, and observes that it is alluded to in the last chapter of Malachi. I do not profess to be certain that I understand either the seventy-first chapter, or the Bishop's note upon it; but if I am right in my supposition that the writer makes the Equinox fall, in his time, at the beginning of Aries, then the date of the work must have been above 2400 years before Christ, at the latest. The Bishop says, "The *fourth* gate in his description is that which is situated due East at sun rising, and due West at sun setting, and which, answering to the sign Aries, the sun enters at the Vernal Equinox. It is very clear that if the sun, at the Vernal

¹ Propterea Milesius Apollo consultus utrumque Deus an Homo fuerit, hęc modo respondit: Ὀνήτος ἐν κατὰ σάρκα, σοφὸς τερατοῦδεσιν ἐργοῖς. Ἀλλ' ὑπο Χαλδαιῶν κριτῶν ὀπλοῖς συναλωθεῖς, Γομφοῖς κατὰ σκολοπεσσι πικρῆν ἀνετιμῆσε τελευτην. Lactant. Inst. Div. iv. Cap. xiii. See also Euseb. Demons. Ev. iii. Cap. viii. p. 134.

Equinox, was at the beginning of Aries, the book must have been written as early as I have stated above. Though Bishop Laurence limits the period, before which it must have been written, to the end of Herod, the fact noticed by Maurice,¹ that it is quoted by Eupolemus, shews that it was well known in Greece previous to the year B. C. 200.

Bishop Laurence, in his Preliminary Dissertations, p. xxxiv., endeavours to disguise the fact of the quotation of this book by Eupolemus; but I think he fails. Mr. Maurice states it broadly and honestly as he generally quotes, and, as I think, every one who carefully examines what Laurence has said may see reason to believe, correctly too. After observing several *wilful mistranslations* of Bishop Laurence's, if there were any doubt of the two, I would much prefer the respectable old Maurice.

The following are the passages which I contend are wilful mistranslations, pious frauds of the Bishop's: *Ἐν ταῖς ἐκκλησιαῖς οὐ παντὶ φέρεται ὡς θεία*—*The church considers it not an inspired production.*²

Again. *Non recepi a quibusdam*—*Not universally rejected.*³

No doubt I shall be accused, as I have been before, of a rage against priests, and for illiberality in what I say against them in many passages of this work. How can I do otherwise than speak against an order, against whose frauds and usurpations on the rights of mankind this work is expressly levelled—this work whose leading object is to undeceive mankind, now the slaves of its arts? I trust I am not insensible to the private virtues of great numbers of priests the dupes of their order—of their chiefs; but what am I to say or to think when I find a reverend doctor of Oxford, in the nineteenth century, guilty of such baseness, as that which I have exhibited above, and as a consequence, instead of being disgraced for such an act, made an archbishop? Since his promotion he has, I am told, suppressed his translation. If the suppression of it be an act of remorse, let him say so. I hope it is so. But I believe it is suppressed for a very different reason.

Of course it is held by our priests, who have already more sacred books than they can manage, to be a forgery; but Bishop Laurence admits that it is noticed by Clemens Alexandrinus and Ireneus, and *that neither of them alludes to its spurious character.*⁴ The truth is, that it is quoted by them precisely like any other canonical sacred scripture.

It allegorically foretells the coming of Samuel, Saul, David, Solomon, the captivity, &c.,⁵ so clearly, as to leave no room for doubt; and this clearness of completed prophecy is, in Bishop Laurence's opinion, a proof that it is spurious; while it is remarkable that supposed clearness of the same kind is a proof that Isaiah is genuine. The argument of Bishop Laurence is good in every case. Unless the genuineness of a book purporting to be prophetic be taken for granted, the proof of the verification of a prophecy is rather a proof of spuriousness than the contrary.

Faustus quoted the book of Enoch against Augustine,⁵ who, instead of denying its genuineness, admits it, and I do not think it appears that this admission is granted by way of *argumentum ad hominem*. In short, I have no hesitation in saying that it is, in my opinion, to the full as well established as a work existing before the time of Christ, as Isaiah is; for Isaiah is not quoted by any author that I remember before the time of Christ. Josephus says that the Pentateuch only was translated by the LXX: and by whom, or when the remainder of the Jewish books were translated, no one knows. Every argument which applies against Enoch as stated above, applies against Isaiah; and I am much mistaken if the argument does not go farther. The argument from fulfilled prophecy is as fair for one as for the other. I think there can be no doubt, though direct authority

⁴ Ibid. p. xiv.

⁵ IX. 3.

be wanting, that both the works were written after the Babylonish captivity, but before the time of Christ: and in defiance of Bishop Laurence's misrepresentations, I think there is evidence to prove that they were both *generally* admitted since the time of Christ; that is, as much admitted as any other books of the canon, by the generality of Christians. But there were no books, against which some Christians did not make objections; and the class of books called *ὁμολογουμενα* by Eusebius, never did exist—as that word cannot be restricted in its meaning to his own sect, a very small one indeed, compared with the great mass of Christians. His sect might be greater than any other, but it is ridiculous to believe it more numerous than all the other sects united.

Bishop Laurence has *astronomically proved* the book of Enoch to have been composed between 45 and 50 degrees of north latitude. (This is not far from the north of India, central Asia, the kingdom of Ioudia, where I have shewn that the first great nation flourished, and where I have placed Shinar. See my Map. It must not be supposed that this great nation did not spread over a considerable space of land. I have been accused of ignorance and blundering in placing Samarkand half a degree wrong. How can I be expected to answer such critics?) He has shewn also, that its original language was the Hebrew, which was formerly proved by Scaliger, from the fragments preserved by Syncellus, which are found in the present book. Now I beg my reader to tell me, whether he would wish for a stronger circumstantial proof of what I have been saying of the Hebrews or foreigners being a race of emigrants from Upper India, bringing with them the Arabic and Hebrew languages to Ethiopia? I think the evidence must be pretty strong to compel the Bishop to admit the two facts. Since he became *a bishop*, this learned Orientalist, perhaps, has discovered that it contained proofs of disagreeable circumstances, and these may have caused its suppression.

We have seen that in northern India we have the Jewish history of Solomon, David, &c., and that the Arabians had the same history. There is also in each of these countries the story of Saul; but it is very remarkable that, in both of them, he is called by a name unknown to the Western Jews, viz. Talut. Under all the circumstances I cannot conceive a stronger proof that the Arabians came from India, and not from the Mosaic Jews of Judæa.

Every page exhibits the Judæan mythos, which we have seen to have existed both in Eastern and Western Syria; but there is quite difference enough between the two mythoses to shew that they cannot be copies of each other. Of the sacred book or mythos of Eastern Syria, we have not particulars enough to form an accurate opinion. The name given to Saul, in North India, of *Talut*, a name unknown in the Bible, is a very strong circumstance in favour of its oriental extraction.

The language in which we find the book of Enoch, the African Ethiopic, when combined with the variety of circumstances relating to this language in Ethiopia, which I have laid before the reader, furnishes ground for much curious observation, and supports, in a very remarkable manner, what I have said respecting the migration of the Jewish tribe from Upper India.

If it be said that the latitude of 45 or 50 will suit Armenia as well as the East of the Caspian, I reply, this is not supported by any circumstances like the other, for there are no traditions, except what are very trifling and evidently the invention of Christians. There are no remains of great cities, no Jewish similarities, no statues of the patriarchs, no Jewish names, no Temple of Solomon, like that in Cashmere; and the fact is directly contrary to the history of Genesis, which makes the descendants of Noah to have left the hilly country and come down from the East into the plains: that they did thus migrate has been proved by both Sir Walter Raleigh and Dr. Shuckford, whose testimony strikingly confirms the hypothesis as maintained in my *CELTIC DRUIDS*.

2. The following passage of the book of Enoch, ch. xxiv., is so clearly descriptive of Mount Meru, that it cannot be mistaken, and proves the author to have been intimately acquainted with the Hindoo doctrines.

“ 1. I went thence to another place and saw a mountain of fire flashing both by day and night. I proceeded towards it : and perceived seven splendid mountains, which were all different from each other.

“ 2. Their stones were brilliant and beautiful ; all were brilliant and splendid to behold : and beautiful was their surface. Three mountains were towards the East, and strengthened by being placed one upon another ; and three were towards the South, strengthened in a similar manner. There were likewise deep valleys, which did not approach each other. And the seventh mountain was in the midst of them. In length they all resembled the seat of a throne, and odoriferous trees surrounded them.

“ 3. And among these there was a tree of an unceasing smell : nor of those which were in Eden was there one of all the fragrant trees which smelt like this. Its leaf, its flower, and its bark, never withered, and its fruit was beautiful.

“ 4. Its fruit resembled the cluster of the palm. I exclaimed, Behold ! this tree is goodly in aspect, pleasing in its leaf, and the sight of its fruit is delightful to the eye. Then Michael, one of the holy and glorious angels who were with me, and one who presided over them answered,

“ 5. And said, Enoch, why dost thou inquire respecting the odour of this tree ?

“ 6. Why art thou inquisitive to know it ?

“ 7. Then I replied to him and said, Concerning every thing I am desirous of instruction, but particularly concerning this tree.

“ 8. He answered me saying, That mountain which thou beholdest, the extent of whose head resembles the seat of the Lord, will be the seat on which shall sit the holy and great Lord of glory, the everlasting King, when he shall come and descend to visit the earth with goodness.

“ 9. And that tree of an agreeable smell, not one of carnal odour, (*of flesh,*) there shall be no power to touch, until the period of the great judgment. When all shall be punished, and consumed for ever, this shall be bestowed on the righteous and humble. The fruit of this *tree* shall be given to the elect. *For towards the North life* shall be planted in the holy place, towards *the habitation of the everlasting King.*

“ 10. Then shall they greatly rejoice and exult in the holy one. The sweet odour shall enter into their bones : and they shall live a long life as their forefathers have lived : and neither in their days shall sorrow, distress, trouble, and punishment, afflict them.

“ 11. And I blessed the Lord of glory, the everlasting King, because he had prepared *this tree* for the saints, formed it, and declared that he would give it to them.”

I think the reader must see in verse 4, in the *Palm* the *Phoenix tree* of Meru ; and in ver. 9, the mount of God in the sides of the North mentioned by Isaiah, ch. xiv. 13.

When I reflect upon this tree, I cannot help suspecting it is connected with the allegory of the trees of *life* and of *knowledge* in Eden, whose branches are words, whose leaves are letters, &c., &c.

In chap. xxxi. he again gives a description of seven mountains of *the North* with odoriferous trees.

There are many passages which have a close resemblance both to the Hindoo books and to the Jewish prophets. Of the former is the allegory of the mountains of various metals ;¹ of the latter, the comparison of the heavens to a book. The lunar period of 28 days is distinctly named, chapter lxxvii.

3. In chapters lxxxvii. and lxxxviii. is a very clear allegorical description of the deluge : and a

¹ P. 166.

star is said to have fallen from heaven. This is all closely connected with animals of the Beeve race in which a cow is distinctly marked as of the masculine gender. The allegory is carried on through several chapters, in which the personages named in the Pentateuch are supposed by Bishop Laurence to be described—till it comes to a being who is called a *white cow*, and who, in ch. lxxxviii. ver. 18, is said to have brought forth a *black wild sow* and a *white sheep*. With the production of the sheep, the allegory of the bull or beeve ends: and although many other animals are named continually, the beeve is never once named afterward, till the conclusion, when the bull is said to return; but the sheep, which was never once named before, takes the lead. The *white cow*, supposed by the Bishop to be Abraham, introduces it, although almost every other domestic animal is named distinctly many times. The distinction between the beeve and the sheep is marked in a way that is most extraordinary, and cannot possibly have been so marked without a clear and distinct meaning. The change from the Bull *Taurus* to the Ram *Aries*, is so clear that it cannot be mistaken.

The Bishop, in notes, shews or gives the names of the Jewish worthies as far as Solomon, to whom he supposes the allegory applies. And in many cases his observations seem very probable; but there are many circumstances which do not apply to those worthies, which seem to shew that the allegory cannot be founded upon them, but rather that it is a mythos common to both. For instance, the Bishop, in his translation and note, states a cow, Abraham, to have brought forth a sheep, Isaac, and the sheep, Isaac, to have brought forth twelve sheep. Now I think with the Bishop, that this alludes to the story of the Israelites; but if it had been a copy, it would not have omitted Jacob, who changed his name to Israel. Other similar instances might be pointed out, where the mythoses are the same, but the variation is so great, that they cannot be copies. Let it not be forgotten that almost all the histories of Genesis have been long known to be in the Vedas; and when the places in India called after David and Solomon are considered, it will not be thought surprising, that their histories should be found there also.

4. It is not possible to give an idea of the nature of the marked distinction between the Beeve and the Ram, unless I copied several long chapters, much of which could no way interest the reader; I must therefore refer him to the book itself. There is also something very remarkable in the way in which the Cow or Heifer is constantly spoken of in the *masculine* gender. I suspect that the studied confusion of the *colours* of the kine, and of their genders, has a reference, which I do not understand, to the different sects, and to the wars about the Linga and Ioni. When the allegory changes from the Beeve to the Sheep, one of the sheep is said to become a man, and to build a house for the Lord. In short, when I couple the wild but still methodical mysticism of this book with what the reader has seen, I can feel no doubt but that it contains a concealed history of the change of the religion from Taurus to Aries. The house to the Lord, the Bishop thinks, is the temple of Solomon. Of this there can be no doubt: but it may have been the temple in Cashmere; and, considering it *proved* that this work was written in the North of India, it is most probable that it *was* the temple of Solomon in Cashmere.

The deluge of Noah and Noah himself are distinctly noticed by name; but I think in such a way as to shew that it cannot have been copied from the Jewish book. The Trinity is also most distinctly named, under the appellation, as Bishop Laurence translates it, of Lords—*two of whom*, together *with the Lord of spirits*, are said to have been engaged in the formation of the world. Here is again the Oriental doctrine. What words are in the original for Noah and Lord cannot be known from the translation. They may or may not be Menu and Iswara. On the meaning of such words as these no dependence can be placed on Bishop Laurence's translation. Without we had the words represented to us, as I do now in the word Jehovah, יהוה *ieue*, no conclusion can be come to.

5. The forty-eighth chapter contains the prophecy of some one to come, of a new incarnation, of a saviour, which cannot be disputed, in the following words :

“ 1. In that place I beheld a fountain of righteousness which never failed, encircled by many springs of WISDOM. Of these all the thirsty drank, and were filled with WISDOM, having their habitation with the righteous, the elect, and the holy.

“ 2. In that hour was this son of man invoked before (*ad, apud*) the Lord of spirits, and his name in the presence of the ancient of days.

“ 3. Before the sun and the signs¹ were created, before the stars of heaven were formed, his name was invoked in the presence of the Lord of spirits. A report shall be for the righteous and the holy to lean upon, without falling, and he shall be the light of nations.

“ 4. He shall be the hope of those whose hearts are troubled. All who dwell upon the earth shall fall down and worship before him : shall bless and glorify him, and sing praises to the name of the Lord of spirits.

“ 5. Therefore the elect and the concealed one existed in his presence before the world was created, and for ever.

“ 6. In his presence *he existed*, and has revealed to the saints and to the righteous the WISDOM of the Lord of spirits : for he has preserved the lot of the righteous, because they have hated and rejected the world of iniquity, and have detested all its works and ways, in the name of the Lord of spirits.”

In several other places this incarnation is named ; he is said to be present with the *ancient of days*, whose head was like *white wool*. It is said that he shall raise up kings and hurl mighty ones from their thrones, because they will not praise him, or humble themselves before him. He is identified with the Lord of spirits. He is called WISDOM² — the ELECT ONE, THE MESSIAH. It is said that he shall sit upon a throne of glory, and shall judge sinners.³ And finally it is said, that the saints shall rejoice because the Lord of spirits has executed judgment, for the *blood of the righteous WHICH HAS BEEN SHED* ; alluding to the blood of the elect one.

How can this be accounted for ? Does the prophet not here allude to the crucified Buddha, Cristna, or Balajü ? Here we see long before the death of Christ, the righteous blood of the elect one had been shed. At all events, at the death of Christ the doctrine of the death of *the elect one* was not new.

This passage respecting the blood of the elect one HAVING BEEN shed, clearly PROVES that this can be no forgery after the death of Christ. It is impossible to attribute such absurdity to any fabricator of such a work, professing to have been written before the time of Christ.

6. But to me the most interesting of all the passages is one which clearly makes out the cycles which I have been contending for among the Jews. The book says,

“ Chap. xcii. ver. 4, Enoch then began to speak from a book and said : I have been born the seventh in the first week, while judgment and righteousness wait with patience.”

Here is evidently the first cycle ending with the translation of Enoch. See Book V. Chap. III. Sect. 2.

“ 5. But after me, in the second week, great wickedness shall arise, and fraud shall spring forth.

“ 6. In that week⁴ the end of the first shall take place, in which mankind shall be safe.”

This is curiously contrived to describe the eight years of the Cycle of 608 running into the next or seventh century.

¹ Signs of the Zodiac.

² Ch. xlii.

³ Ch. xlv. Sect. vii.

⁴ *In it.*

“ 7. But when the first is completed, iniquity shall grow up : and he shall execute judgment upon sinners.

“ 8. Afterward, in the third week, *during its completion*, a man of the plant of righteous judgment shall be selected : and after him the plant of righteousness shall come for ever.”

Here are the three cycles, ending with the birth of Noah the righteous.

“ 9. Subsequently, in the fourth week, during its completion, the visions of the holy and the righteous shall be seen, the *order of generation after generation shall take place*, and an habitation shall be made for them. Then, in the fifth week, during its completion, the house of glory and of dominion shall be erected for ever.”

Here in the fourth, probably, is meant what answers to the ark coming to Gerizim or Shilo, as the Samaritans say, and in the fifth is the temple of Solomon.

“ 10. After that, in the sixth week, all those who are in it shall be darkened, the hearts of all of them be forgetful *of wisdom*, and in it shall a man ascend. (Elijah.)

“ 11. During its completion also the house of dominion shall be burnt with fire, and all the race of the elect root be dispersed. (Babylonish Captivity.)

“ 12. Afterward, in the seventh week, a perverse generation shall arise : abundant shall be its deeds, and all its powers perverse. During its completion, the righteous, selected from the plant of everlasting righteousness, shall be rewarded : and to them shall be given seven-fold instruction, respecting every part of his creation.”

Though the allusions, as explained by Bishop Laurence in the words in parentheses, are sufficiently clear, I think it is evidently not copied from the Jewish Bible as we have it.

“ 13. Afterward there shall be another week, the eighth of righteousness, to which shall be given a sword to execute judgment and justice upon all oppressors.

“ 14. Sinners shall be delivered up into the hands of the righteous, who during its completion shall acquire habitations by their righteousness : and the house of the great king shall be built up for ever. After that, in the ninth week, shall the judgment of righteousness be revealed to the whole world.

“ 15. Every work of the ungodly shall disappear from the whole earth : the world shall be marked for destruction : and all men shall be on the *look out* for the path of integrity.

“ 16. And after this, on the seventh day of the tenth week, there shall be an everlasting judgment, which shall be executed upon the watchers : and a spacious, eternal heaven shall spring forth in the midst of the angels.

“ 17. The former heaven shall depart and pass away : a new heaven shall appear : and all the celestial powers shine with seven-fold splendour for ever.”

Thus ends the numbering of the weeks ; and I think the reader must confess, that I could scarcely have wished for a confirmation of my theory of the ten cycles more decisive. And I think we may fairly infer, that if the arrangement of the former part shew, that it is not a copy from the Jewish Scriptures, the absence of a more particular prophecy in reference to JESUS, shews, that it must have been written both before the Gospels and before his birth : for most assuredly the writer would have imitated the prophecy relating to the Messiah, Cyrus, in Isaiah, and have named him by his name if it had been in his power.

7. I cannot well conceive any thing more corroborative of my theory than that this curious work should be written in the Hebrew language, be located in the mountains of Afghanistan, and be found in the country of the African Ethiopians. That all these facts should be made out for me by the learned Bishop, for very learned he most unquestionably is, without having the least suspicion of the nature of my theory, which, if he had had, he would have been most violently

opposed to it, and without having any theory of his own—what can be more striking than that it should so clearly describe my *ten cycles*!—what more curious than its prophecy of the *Saviour*!

In this book we find a clear description of a future Messiah or incarnate Saviour. It is also foretold that he is to be put to death. Most of the Jewish history, as well as the Pentateuchian history, is found here, as are also some of the most striking of the doctrines of the Hindoos—particularly their mount Meru and their Trinity—so that the close connexion between India and its author, cannot be disputed. The Christian professor of Oxford maintains that it is not genuine; but he proves that it was written before Christ. Then how is the prophecy to be explained,—the fulfilled prophecy? The fact is, there have been two Messiahs, or elects, or sons of man; two Jewish mythoses; two Noahs; two tribes of Juda. On this subject I shall have much more to say hereafter. However this may be, the whole serves to shew the absolute uncertainty of a religion founded on documents of this kind. It is much more clear than Isaiah, and has, to say the least, as much evidence in favour of its genuineness. When was the prophecy of Isaiah first known? Josephus proves that it was not translated with the Pentateuch; and though he pretends to shew that Isaiah was known to Ptolemy, and gives a letter of Ptolemy's respecting him, this is not contemporary evidence, but the mere assertion of a partisan, hundreds of years after Isaiah's death. In its prophecy of a Saviour, the book of Enoch is much clearer than Isaiah, though it does not (as Isaiah does in the case of Cyrus) give him by name. But from its whole character I cannot doubt, that if it had been written after the Christian religion had made any progress, it would have followed the example of Isaiah, and have given the Saviour's name. I therefore conclude that it was written before the time of Christ. The book is of great consequence to me, because it proves the truth of the system of renewed incarnations in renewed cycles.

It is impossible to read the book of Enoch, and not to be struck with the similarity of style to that of the Jewish prophets, particularly Isaiah and Jeremiah: the same expressions are perpetually recurring. The same may be said of the celebrated Desatir (which was so highly prized by Sir William Jones) in the account therein given of the *fourteen* Maha-bads or Great Buddhas or Prophets who had appeared, or were to appear, to enlighten the world: the first of whom, Hushang, divided mankind into four classes—the religious, the military, the commercial, and the agricultural. Of the genuineness of the Desatir, Sir W. Jones had no doubt. I am not so easily satisfied: though it may be true that it was translated by Moshani from a language now not in use. It clearly alludes to the Christian and Mohamedan systems, or to two systems which answer to them. By and by my reader will see that this is no proof either of its spuriousness or its corruption.

I suppose at this day *no one* will be weak enough to maintain that this book of Enoch is *divinely inspired*, as it is rejected by our conscience-keepers the bishops. Then what are we to make of it? Here are all the leading doctrines which I have been contending for clearly maintained. The residence or birth-place of the theology, Upper India; the signs of the Zodiac; the change of the Equinox from Taurus to Aries; (of which no one can judge who has not read the whole work;) the Hindoo Trinity, than which nothing can be more clear; the description of Mount Meru, with its paradise or hanging gardens, surrounded by its seven mounts, where the Gods sat on the sides of the North; the sacred Phoenix tree, and a history similar to the Jewish, but not copied from it; the prophecy of an *elect one* as described by all the prophets, including the prophecy of Virgil, and the elect one put to death, noticed by me in the cases of Buddha, Cristna, and him of the Apollo of Miletus; and lastly, the clear elucidation of the ten ages, alluded to by Virgil, and taught by the Buddhists and Brahmins. It has been the object of this work to shew that an universal system extended over the whole of the old world; and the principal facts for which I

have contended are supported by this curious and unquestionably genuine document: for no one can doubt that it is the actual manuscript brought from Ethiopia by Mr. Bruce. When all these things are considered, it surely affords very extraordinary evidence. I have shewn that the history in Genesis is, in all its leading particulars, to be found in the East; and, in several of the most important points, that it is a copy from the oriental one, if either be a copy. The fact shewn by Dr. A. Clarke that the serpent bites the *foot* not the *heel*, is one example—and the Doctor's observation is decisive and invaluable: for, when the Brahmin *icon* or *picture* makes the reptile bite the *foot* he does not bite the *heel*; and, therefore, it cannot have been copied from Genesis. But when the writer of Genesis makes the serpent bite the heel, he may have copied from the East, for he does bite the foot. It will not be denied, that it is very extraordinary that this book, written in the Hebrew language, between 40 and 50 degrees of North latitude, should be found to be part of the SACRED CANON of the Ethiopians of Africa—the people who, as we have seen, have such striking marks of affinity in their language with the Hindoos; and, that the oldest copy we have of it, is in the language of this country. Bishop Laurence admits, that it was written before the time of Christ, but he does not attempt to account for the expression of the blood of the righteous being shed. The circumstance most remarkable in this book, is the mixture of the different doctrines of countries so widely separated from each other. When I consider that, in many countries, these doctrines had become forgotten or were lost, that in no one country in the times of the Romans, were they all known, and that they are the doctrines or rather the fragments of the doctrines, of different ages and of widely separated countries, which doctrines, as I have contended, constituted those of a primeval nation, I cannot help looking to a very remote æra for its existence. When I find the account of David and Solomon alluded to in this Indian book, I am almost induced to consider them like the heroes of Troy. For, when they are alluded to, it is not by name, and their names given by the bishop, in parentheses, are not in the original, but are only inferences of his own, but which inferences are so clear that I think they cannot be doubted. Then do we at last come to this, that the whole is a mythos concealed under an apparent history; or, is it blended with true history in order the better to conceal it?—like the poem of Homer, a true *basis* and an allegorical or fabulous *superstructure*. But we must not forget that the history of Solomon, his temple, &c., may all refer to the Eastern as easily, and indeed much more easily, as to the Western Syria. I must once more remind my reader, that all attempts hitherto made to account for the anomalies of ancient history and mythology, have utterly failed to satisfy any persons, except mere devotees, who, in every nation, are the same, and are always satisfied with what their priests tell them; and that my exertions to discover the truth are in opposition to the frauds of the priests of all religions, as well as the effects of time, which is always aiding them in their system of suppressing evidence and in keeping mankind in ignorance.

8. I must not omit to notice a very extraordinary part of the prophecy relating to Noah and the flood. It says, Ch. lxiv. Sect. xi. ver. 1, p. 163, “In those days Noah saw that the earth became inclined, and that destruction approached.”

This is a most extraordinary assertion, that the flood was caused by the disturbance of the axis of the earth, and is so totally original and unexpected that Bishop Laurence has placed it at the end of the book, because, he says, it is an evident interpolation; but he gives no reason for this, and has none, I suppose, except that he cannot give the author credit for the astronomical doctrine of the change of the earth's axis. I look upon it as a very curious and ancient tradition respecting the cause of the flood, which has been considered to have been its real cause by many both of the ancient and modern philosophers. I shall return to this subject hereafter.

But who was referred to in the blood of the *elect one* put to death? Was it Prometheus crucified on Mount Caucasus? Was it Ixion? Was it the mystic dove or Divine Love under the form or the name of Semiramis? Was it Bal-ji, the *Lord Ji*? Was it Cristna, or was it Buddha? Or, was it the person foretold, or said to be crucified, by the Apollo of Miletus?

9. I flatter myself my reader will begin to perceive that my object is to prove, that an universal language and philosophy, in very remote times, pervaded the whole of the old world; that it was a philosophy, beautiful and fundamentally true; that it had for its basement the existence of one God, to whom were ascribed the attributes of creating, preserving, and destroying; that its professors were *black* in colour, and *PROBABLY negro* in form; that it was a race of Herbaceous beings, killing no harmless animal, perhaps no animal whatever. Whether it were as learned as Mons. Bailly supposed his antediluvian race to have been, may be matter of doubt, or whether it may not have been the original race itself. But the Neros must have been invented by some persons, and we can trace it no farther back than the race of which I now speak, and it is found in their possession. After a certain time we find historical accounts in India, of the followers of the first principle having become split into parties, or, in other words, of its professors having fallen into differences of opinion, succeeded by wars of great length and cruelty; in the course of which, various tribes were driven out to the West: whence, by degrees, arose the number of variations of the mythos, with which the world has been tormented or amused. Though these were different mythoses in some respects, yet in the fundamental principle they were all the same, and bore, through all their different ramifications, one universal family character—viz. the Trinity, the metempsychosis, the renewal or regeneration of worlds, at the end of every cycle of 600 and 6000 years, the absence of idols, and, as I have just now said, the abstinence from animal food. These were the Cyclopæan Buddhists, the builders of Stonehenge, of Abury, and of Carnac. They were succeeded by the founders of Oxford, Cambridge, and Iona, upon the Cyclopæan ruins. They were the Atlantides or sons of the earth; they were the sons of the ethereal fire or of Vulcan, whose Cyclopæan buildings yet serve to astonish our mechanists, and excite the wonder and despair of our antiquarians.

I think my reader will have no difficulty now in perceiving the general characteristic marks of one system every where prevailing. It has been the great misfortune of the world, that its professors, its Vyasas, Pythagorases, and Platos, have all been deluded with the idea that the doctrine was too sublime for the mass of mankind: this imagination inducing them to conceal it in various ways, afforded an opportunity to their successors to form priesthoods, in fact corporations and corresponding societies, whose interest it became to take care, by keeping the people in ignorance, that the doctrine should always remain too sublime for them. Thus from the days of Bishop Vyasa to the days of Bishop Laurence, the same course has always been pursued; and, with as much zeal and as much system as the improved state of mankind will permit, it is yet continued. Before I conclude this work, I hope I shall be able nearly to strip off the tawdry disguises which have been piled upon both Gentilism and Christianity, and to restore them to the identical system practised in the sacrifice of bread and wine or water, at the shrine of the *πρ' ie*, IE or Jah, at Delphi, by Pythagoras, and by Abraham, in the same rite, at the altar of the priest Melchisedek, the King of Justice—of the Dherma Rajah, of the same religion of which Jesus Christ is said to have been declared a priest. I shall shew that the religions of Melchisedek, of Jesus, and of Pythagoras, were the same, and that the celebrated Christian father, Justin the Martyr, spoke nothing but the truth, when he declared that Socrates was a Christian. I am not the first person who broached this doctrine. Sixteen hundred years ago a very celebrated, and probably, all things considered, the most learned of all the Christian fathers, Ammonius Saccas, taught this doctrine—that all the Gentile religions as well as the Christian, were to be illustrated

and explained by the principles of an *universal philosophy*, but that in order to do this, the fables of the priests were to be removed from Paganism, and the comments and interpretations of the disciples of Jesus from Christianity. This philosopher might well be called, as he has been, the ornament of the Christian cause in the second century. But the seed which he sowed fell on rocky places, and brought forth no fruit. He threw his pearls before swine. Alas! his doctrine was much too sublime for the wretched and miserable race which succeeded him. For such men as Irenæus, who saw the statue of Lot's wife,¹ and as the learned Origen, his pupil, (really in languages learned,) who castrated himself for the glory of God, and Augustine the *glory* of Africa, who says he saw men in Ethiopia without heads, but with one eye in the breast. Fabricius and Lardner, as if fearful lest something really good and respectable should be found among their predecessors the fathers of the Christian Church, wish to exclude Ammonius from the list; but Mosheim, who was originally of their opinion, saw cause, on further examination, to change it, and, in such change, as Mr. Taylor truly says, shewed the marks of a master mind.² But Mosheim had what has been seldom found in the Christian cause, he had sincerity, as well as learning. Although for my system I go not to the support of great names, yet I am not insensible to the value of the opinion of such a man as Saccas, who, in addition to his learning, united the advantage of being nearer to the fountain-head, the origin of things, by no contemptible period—sixteen hundred years.

¹ The story of Lot's wife is the best proved miracle which we have on record. If persons will not believe this, they will believe nothing. If ever I have the happiness to go to Syria, the first thing I shall do will be to visit Lot's wife. The history of the fate of this unhappy woman is first told in Genesis, xix. 26. This was about two thousand years before Christ. It is next noticed in the Wisdom of Solomon, supposed to have been written by Philo, or about his time. This author says, ch. x. 7, *a standing pillar of salt is a monument of an unbelieving soul*. The next witness is the Jewish historian, *so universally celebrated for his veracity*, Josephus, Antiq. Lib. i. Cap. xi., who says, *I have seen it, and it remains at this day*. The next witness is Clement, of Rome, who attests that it was standing in his day. (Whiston's note in loco, in his translation of Josephus.) But the most perfect and complete evidence, with *particulars* which are really surprising, is given about 150 years afterward, by the Christian bishop, saint, and martyr, of Gaul, Irenæus. I shall give the passage from his work at full, in the *original*, for various reasons. He says, "Quemadmodum et Lot, qui eduxit de Sodomis filias suas, quæ conceperunt de patre suo, qui reliquit in confinio uxorem suam statuam salis usque in hodiernum diem. . . . Et cum hæc fierent, uxor remansit in Sodomis, jam non caro corruptibilis, sed statua salis semper manens,¹ et per naturalia,² ea quæ sunt consuetudinis hominis, ostendens, quoniam et ecclesia, quæ est sal terræ, sub relicta est in confinio terræ, patiens quæ sunt humana: et dum sæpe auferuntur ab ea membra integra, perseverat statua salis, quod est firmamentum fidei, firmans et præmittens filios ad patrem ipsorum" Iren. Cap. li. p. 354, ed. Oxon. 1702. And in the eleventh century it was still existing. Benj. de Tudela (Ch. ix.) says, "From this mount you have a prospect of the sea of Sodom; from which sea it is about two parasangs to the pillar of salt, into which Lot's wife was metamorphosed. The pillar or statue is indeed daily wasted by the cattle, who are perpetually licking, or rather rubbing against, it, but it is likewise daily restored, and becomes as it was before." I only regret that I cannot indulge my reader with an account of its present state, from the travels of Mons. Chateaubriand; for, of course, he would not go to the Jordan to fetch water to baptize the Duke of Bourdeaux, without examining this very interesting pillar.

² Mosheim, Vol. I. p. 170, note.

¹ "Statua salis semper manens.] Ita et Clemens Rom. in Epist. ad Corinth. Memorat, *σηλην ἄλος ἕως της ἡμέρας ταυτης*. S. xi. Atque ex Judæis, Josephus. Antiq. Lib. i. Cap. xi."

² "Per naturalia, ea quæ sunt consuetudinis hominis.] Menstruum fluxum muliebri sexui naturalem indigitare videtur, utpote quem uxori Loti, licet jam in statuam salis versæ, quosquam adscripsisse, vel affinxisse, docet auctor "Carminis de Sodoma, quod inter Tertulliani atque Cypriani opera extat, post medium ita de uxore Loti canens: "Dicitur et vivens alio jam corpore sexus munificos solito dispungere sanguine menses."

BOOK X.

CHAPTER I.

GENERAL OBSERVATIONS.—SECRET DOCTRINES.—SUBJECT CONTINUED.—OBSERVATIONS.—TWO CLASSES OF AVATARS.—ROMISH MISSIONARIES.—STAR OF ABRAHAM, MOSES, &c., &c.—PYTHAGORAS.—SIBYLS.—CABALA.—CHANGE IN RELIGION.—MEANING OF THE WORD SIBYL.—BY WHOM QUOTED.—ACROSTIC.—NAME OF CHRIST.—CLARKE'S INSCRIPTION.—SUBJECT CONTINUED.—CICERO ADMITS ACROSTIC.—EXTRACT FROM DUPUIS.—BISHOP HORSLEY.

1. IN all our speculations we must never forget, that the whole Mythos, of which I have been treating, was not known, but in great part lost, by the ancient Greeks and Romans, in their day, and also by the Brahmins when the modern Europeans arrived in India. The only difference between them and us is, that they really believed the mythos, little as it was known to them, to be true, and thus made every thing bend and fit to it, as far as was in their power. We have been equally ignorant, but have endeavoured to disguise to ourselves the reality—the existence of it;—philosophers and inquirers in general have done this from incredulity, arising from what appeared to them the improbability of the nature of it: for one example, that there should be a nation of Jews or kingdom of Judah in central Asia. Another example may be found in the name *Solomon*, disguised into Soleiman, Solyman, &c. It is inconceivable what an influence this feeling has had on philosophers and inquirers generally in disguising and concealing the truth. These are facts which cannot be denied; and these are facts which we must not lose sight of for a moment; for, without them, we cannot form a correct idea of the real state of the case. They will enable us to account for many circumstances: they particularly support me in shewing, that the ancients had recourse to expedients and contrivances to remove difficulties, and by this means to make the prophetic part of the mythos come true.

The system had its origin from the discovery and adoption of the Cycles, which I have explained in the fifth book;—a system which arose out of the first necessities of civilized man. With the beginning of his civilization they must have begun. How this took place I shall shew by and by. Upon these, by an union of cunning and credulity, the religion was by degrees formed. Circumstances were so favourable to it, that I cannot conceive any thing more natural. It was the regular course of events. There never has been a religion invented *de novo*. In fact, before I finish I shall prove that, in the civilized world, there never was but one religion. What we have called different religions, because we did not understand them, were but modifications of one religion. All these considerations we must bear in mind, in our future speculations.

2. It is a very extraordinary circumstance that though every one of the ancient rabbis, and perhaps every one of the ancient fathers of the church, who must necessarily have known the truth, have admitted that the Jewish and Christian religions contained secret and mysterious doctrines not known to the vulgar, and although great numbers of the most eminent moderns, such as Thomas Burnet, &c., &c., have professed their belief that the religion did contain such secret doctrines, yet that no one of them has set himself seriously to the task of unveiling them—of dis-

covering what was their nature. The ancient Gentiles, also, always professed the same thing of their religion, and Ammonius Saccas and his few Christian and philosophical followers always held that, at the bottom, the Christian and Gentile mysteries were the same. Writers against the modern or the exoteric Christianity we have had in abundance, but never have we had a Hobbes, a Herbert, or a Bolingbroke, to endeavour to discover this secret. Thus their attempts to expose the error and nonsense of the vulgar exoterism, have been successful enough. But the real and proper question for these philanthropists and philosophers ought first to have been, not whether it were credible that God made Eve from the side of Adam : but whether there were a *secret* religion for the Conclave—the Lateran ¹—and a *public one* for the senate and people : and if there were such secret religion, what was its nature ? En passant, I may observe, that if there be a secret religion, all the objections of Mons. Voltaire and other philosophers to such passages as that relating to the side of Adam, which never have been removed, are at once answered, and the religion relieved from a mighty mass of obloquy. For though it may be very wrong to have a secret and a public religion, this does not make it foolish or absurd.

Suppose I were to inquire into the nature of the earliest Mohamedism, and I were to find that all its followers, of different and inimical sects, maintained the existence of four Gods ; however absurd, or weak, or dishonest I might believe these votaries were, should I not be compelled to believe that they did admit four Gods ; and that four Gods constituted the ground-work of their religion ? Thus it is with the very early Christians : all their writers admitted an esoteric religion, however much they might differ on other points. If there were any exceptions, they were perfectly contemptible in number or talent. I know of none. Then how is it possible to doubt that this was the principle of the religion ; more particularly when we find the Gospel histories teaching in parables or allegories, and teeming with numerous mystical expressions, unintelligible in common language, and Jesus himself declaring that he taught in these very parables that he might not be understood, (as of course he must mean,) by the people who listened to him.

I am firmly persuaded that in the following books of this work, the foundation at least, indeed the principal part, of the esoteric doctrines of the Christians, Jews, and Gentiles, will be unfolded, and at last justice will be done to the Pythagorasses, Platos, Philos, Clemenses, and Ammoniuses of antiquity ; and, however false my philosophical or religious reader may think their doctrines, he will no longer think them base or contemptible.

3. In the affairs of religion, the world has always been in one respect the same as it is now. From the most remote period there has been the esoteric religion, of which I have just spoken, the existence of which the vulgar rabble of low priests have denied, but which has always been well known and admitted by a select number, who wore the mitre. This was anciently observed

¹ The Papal decrees always issue from the church of St. John Lateran. I suspect this is mystic, and means *secret place*. The root of Lateran is the Hebrew *לַט* *lat*, secret ; Latin, *Latco* ; joined to the word *ana*—place of. It is the place of the *Λατρεία* or *secret religion*. The Lateran is both a domus and a templum—the palace and the church adjoin. The decrees which issue from this place are called Bulls, from the Greek word *Βελη* consilium, counsel. Children anciently wore a sacred emblem, in the form of a heart, called a Bulla, as Macrobius says, to teach them *wisdom*. (Littleton's Dict. in voce.) This heart was the emblem of divine love, which was *wisdom*. It is almost always accompanied with a dove. The heart may be seen in the Vatican, upon innumerable ancient inscriptions, which the Romans call Christian. I have little doubt that anciently every person had his signet, which was some holy device, adopted probably *ad libitum*, or families might pass it by descent. This was the family Bulla, and with it the sign was made on the wax or metal, when deeds came into use ; thus the seals appended to deeds were called bulls ; but more reconditely, the whole probably came from the name of God, *Bal*, the God of *Wisdom*.

I suspect that the word Vatican has come from the word vates, which is Veda, Beda, Vati-cania.

by a few philosophers, who occasionally shewed some knowledge of it, and endeavoured to explain its nature to the people. For this endeavour they were persecuted. They would never have been persecuted merely for discovering the secret; they were in reality persecuted for making their discovery known. In like manner in modern times, a Romish bishop will not refuse absolution even to an Atheist, but then he must keep his opinion secret. He is punished for telling—not for knowing, believing, or disbelieving. This knowledge applies chiefly to the Romish and Greek priests; the Protestant bigots, the Luthers, Calvins, and Knoxes, never knew any thing of the philosophy of Christianity; they were in reality insane with fanaticism. The Romish Church would have been very glad to have let them into the secret, if it had then the secret, in order to have stopped their proceedings; but how could she trust persons in their unfortunate state of mind, whom it was evident no oath would bind?¹ This is one of the great inconveniences of a double religion, but by no means the greatest. But the people will no longer be kept in the dark: on the very day² on which I am writing these prefatory observations to my *tenth* Book, a great nation, which has had the good fortune to have been for thirty years out of the trammels of the priests, and therefore is more enlightened than any of its neighbours, is striking the last blow at their rule. Their authority will be gone, but the French will not abolish the order—priests and excisemen will probably always be necessary. Let it be so! Only let them keep their proper place.

4. I think my reader will have begun to form a pretty correct idea of the nature of the Christian esoteric religion. I think he must see that Jesus, at least the *Romish* Jesus, was believed to be no other than a renewed incarnation of divine wisdom, of the Logos, called, in India, Buddha, or Saca, a revival or rather a continuation of an old system. In this book I shall discuss several detached points which will clear up this matter, if there be any remaining doubt, and proceed further to unveil the esoteric doctrine of Isis, and of ETERNAL Rome.

In my fifth Book I traced the history of the Avatars and Cycles in India and Judæa up to the ninth, the time of the birth of Jesus. I there said that I should return to that subject, and for the sake of clearness I have hitherto studiously avoided noticing any thing on this side of that epoch. If my theory be right, I ought to find traces of the ninth Avatar in a late day; and as, in all the other earlier Avatars, we have seen a certain similarity take place in the mythoses of the East and West, so we ought to find the same in the ninth. I flatter myself my reader will not be disappointed in this *expectation*. Like the renewal of the Argonautic expedition, the renewal of the Trojan war, &c., prophesied of by the Sibyl, we shall find in the latter Avatars a certain degree of similarity to the former; as we have seen, in many particulars, Buddha to be imitated by his successor Cristna. In fact, the theory of the system was, that every thing should be renewed at the end of certain periods, and that a new incarnation should take place. What periods these were may have been matter of doubt. This is proved very clearly by the passage in Virgil, and this it was which caused the history of the divine person in every age to resemble that of his predecessors. The fact of the imitation cannot be denied; it is clearly seen in the instance of Cristna, Buddha, and Bala-Rama, and, again, in Cyrus and Cristna, and, as I shall shew, in many others. I repeat, if my reader feel any doubt that it was the doctrine, let him read again the passage in Virgil. In the ninth Avatar, we shall find this proved still more clearly, and in a very remarkable manner.

¹ Luther's breach of vows, and his marriage, as he called it, with a nun, prove that if the Pope had trusted him with a secret under the most solemn obligation, though he might have kept it to-day, however innocent in its nature, he might have thought it right to divulge it to-morrow.

² July, 1830.

After we have discussed the ninth Avatar in the East and in the West, the next object of this book will be the tenth and last, and perhaps the most important of all.

In India, in consequence of the Mohamedan and other invasions from the North, which totally destroyed the Brahmin system of government, and overturned their seminaries of learning, not much can be found relating to the *tenth* Avatar; but this will be amply compensated in the West.

5. If my reader have attended closely to the argument, he will have perceived that there were always two classes of Avatars running at the same time: and yet, though *two* they were but *one*. This was because the Avatars were identical with the cycles, and the two cycles united formed a *third*. These were the ten presiding Geniuses of the Neroses, and the ten presiding Geniuses of the signs of the Zodiac—and the Neroses and signs revolving over and over, and crossing each other, until all, at the end of the ten signs, ended at the same moment, after a period of 21,600 years; or, if larger cycles be taken, 43,200 years, or 432,000 years. I suspect that the Vulgar were taught to expect a new divine person every six hundred years, and a millenium every 6000; but that the higher classes were taught to look to the year of Brahm 432,000 years, or, perhaps, to 4,320,000 years.

One more observation I must make on the renewed incarnations, which took place previous to the Christian æra before I proceed.

A singular admission is made by the learned Nimrod¹ in the following words: “The legend of the birth of that bloody Cyrus, (he of the Gorgon’s head,) concerning whom the Babylonians informed Herodotus, is, though a strange and complicated one, precisely the same as that of Romulus, and they are but one man.” In another place² he says, speaking of a certain Habides, “In other particulars the reader will perceive the adventures of Perseus, Cyrus, Quirinus, Hercules, Buzyges, and Triptolemus.” Here we see the renewal of the incarnation just spoken of, in the fact of identity in the history of most of the ancient hero Gods, which has been fully demonstrated by Creuzer in his second volume. The case was, that all the hero Gods were incarnations—Genii of cycles, either several of the same cycle in different countries at the same time, or successive cycles—for the same series of adventures was supposed to recur again and again. This accounts for the striking similitudes in all their histories. Some persons will not easily believe that the ancients could be so weak as to suppose that the same things were renewed every six hundred years. Superstition never reasons. Let such persons as find a difficulty in this, read the work of the learned person who calls himself Nimrod, or a page or two of the work of the elder Pliny, on the cure of diseases, and they will no longer be surprised at absurd credulity. But I shall account for this satisfactorily hereafter.

The ancients of the West had not only the renewed cycle of the 600 years, but they had also that of the 6000,—at the end of which, ignorant devotees, who did not understand it, supposed that what was called the millenium, for 1000 years previous to the renewal of the world, would come. This proves the truth of the foregoing calculations. It completes the Hindoo system. In India, two systems may be perceived; one of the philosophers—merely the renewal of cycles; the other of divines, at the end of the 6000 years, expecting a day of judgment and a millenium. The latter is a branch grafted on the former, by weakness and credulity.

If my theory be well-founded, two kinds of Avatars ought to be exhibited about the time of Christ. We have found an Avatar in the form of the celestial Taurus, and also one in the form

¹ Vol. I. p. 122.

² Ibid. p. 218.

of the celestial Agnus or Aries, and we ought to find, in course, a third in the form of the succeeding Zodiacal sign, the celestial Pisces, the FISHES. This will be the next principal object of this book. In the performance of this part of my task, I shall have occasion to discuss several subjects which may at first appear irrelevant, but they will all be found necessary, more particularly for the purpose of elucidating the minor parts or the detail of the Romish system. In the course of this book I shall very often return to the secret religion which in the early ages of Christianity was held in the Roman conclave, and is probably yet held there.

If the identity of the modern Roman religion with the ancient be admitted, it does not appear surprising that the Pope should endeavour to revive all the ancient superstitions, which were not in themselves detrimental to public morals, but were in any way conducive to the increase of their own power, or that of the priesthood. In fact, we shall see that the *modern* Roman religion was only a reformed *ancient* Roman religion. This is not said with the least wish to insult the followers of the Romish Church, though no doubt it will offend, because it is unveiling what the church wishes to conceal. I will not say positively of the Roman Church at this time, but until about the time of the Crusades, I believe it was its faith, that the millenium foretold by the Sibyls would come. Whether they understand the length of the ages may be very doubtful; and it is very possible that the experience of the non-arrival of the millenium in the last 600 years, may have caused them to lose the esoteric religion: for it would throw all their doctrines into confusion and uncertainty, and apparently falsify all their calculations.

It is very certain that the earliest Christians, of whom we have any account, depending upon the reported words of Jesus, that the final end and millenium should come before the people present at his speech should die, continued to entertain the expectation of it as long as possible; and, in the same way, I have no doubt that the Popes entertained the hope, at the end of the 600 years, as long as possible, supposing when the end did not come that their calculations were wrong a few months or years, or that they had calculated by a wrong year; and at the last, when their hopes were quite extinguished, they concluded that another period was to pass away before its arrival.¹

Soon after the time of Christ this astrological superstition prevailed, both among Christians and Gentiles. Nero was thought to be, or pretended to be, a divine person, and to open a new cycle. Again the same thing was thought of Pope Gregory the Great, and again of a Saracen called Hakim Bemrillah.² I have called it astrological superstition, and so, in reality, it was; but astrology was so connected with religion that it was impossible to separate them. This superstition prevailed very much in the early ages of Christianity, but has been kept out of sight as much as possible by the priests in later ages. It was never the policy of the popes to instruct the people in the mystery—in that which the ancients kept concealed—even if they knew it. The popes wished for a gross religion for the people, such as, in their opinion, suited them—a refined one for the episcopal palace; their Jesus was an incarnation of divine wisdom, of Iao, of ΥΗΣ. He was the

¹ For proofs that the end of the world was prophesied of in the Gospels, &c., see Matt. xxiii. 36, xxiv. 34, xxviii. 20; Mark xiii. 30; Luke xxi. 8, 9, 32; John v. 25; Philip. iv. 5; 1 Thess. iv. 15—17; 1 Tim. vi. 14; James v. 8; 1 Pet. iv. 7; Rev. xxii. 12, 20—and many other places, where *last time*, *latter days*, and *end of the world*, are named. So clear is this that such Christian writers as have any regard to decency have been obliged to allow, that the apostles in these matters were mistaken. Vide Baron. Tom. I. p. 656, Edit. Rom. Spondan. Epit. An. 57, S. 54; Mill's Prolog. to the New Test. p. 146, col. 2, apud Chishul's Sermon on Proph. When it was found that the end did *not* come almost immediately on the death of Jesus Christ, some of the latter Epistles were evidently written to account for and explain away the mistake which had taken place, probably arising from the doubtful meaning of the words Γενεα, Αιων, Παρρησια, and Τελος.

² Nimrod, Vol. III. p. 493.

ninth incarnation ; and in the gospel history of St. John, he is made to promise another, and a last, i. e. *a tenth*. See John xiv. 16, 17, 26.

The charge against Socrates of Atheism long appeared to me quite incomprehensible, but the cause was this : he held one unmade, self-existent Deity, but denied the generated or created Gods, the produce of the first Deity. Onatus, the Pythagorean, declared that they who asserted one only God and not many *understood not what the majesty of the divine transcendency consisted in, namely in ruling over other Gods*. And Plotinus conceived, that the Supreme God was most of all glorified not by being contracted into one, but by having multitudes of Gods *derived from him* and dependent on him.¹ This, most clearly, is nothing but the doctrine of the Christians, in which the word *angels* is used for *Gods*. Every step which I take serves to convince me of the truth of what Ammonius Saccas taught, that the Gentile and Christian doctrines were identical, and that the quarrels of their professors were mere logomachy.

6. A very singular circumstance may be observed in the conduct of the Romish missionaries in the oriental nations. Where they find the doctrine of the renovating Avatars or incarnations already understood, and where of course concealment of their own doctrine is of no use, they avow and proclaim it, and announce themselves as messengers of Buddha, Cristna, &c., and that Jesus was only a renewed incarnation of the Divine mind. To the Brahmins who already know it they unveil the mystery. This enrages the Protestant missionaries to the highest degree. They accuse the Papists of the basest motives, never having the slightest suspicion of the truth. Some of the Jesuits actually turned,² or pretended to turn, or to be Brahmins, and preached the union of Papism and Brahmanism ; maintaining that the religions of the city of Rāma in the East, and of Rōma in the West, were the same, with the single exception *that the head of the religion was then existing in the West* ; and that the Avatars were continued for ever by succession in the Popes. They may have said to the Indians, “ We are all agreed except as to one point, and indeed we do not disagree in that in substance, but merely in name. Your Cristna is our Jesus Christ, only he appeared or was incarnated in the West 1830 years ago. We do not dispute what you say, that he was incarnated in a much earlier period, or at different periods for *your* salvation ; on this we give no opinion, but he also appeared again at the time above named, in the West, both for *your* and for *our* salvation, thus completing the salvation of the whole world. You know very well that you are split into hundreds of sects ; all this arises from the want of a head, or hierarch. Your Cristna did not give you this head, because he foresaw that he should return : he did return in our Cristna or Christ in Judæa, and he then completed for ever his mission, his last Avatar, and he left all power on earth immediately transmitted by the hand of St. Peter to the Pope, his Vicramaditya.³ If your Cristna were the *ninth* Avatar, as you allege, Jesus of Judæa was the *tenth*—the tenth who, you all acknowledge, was to come after Cristna. That he was *that* person, he proved by his miracles, which were universally known to be true throughout all the Western world, still witnessed by the continuance of the Papal power, which is acknowledged by all its princes and rulers.”—The speciousness of this mode of address no one will deny. I shall return to it presently.

7. Among the ancients there seems to have been a very general idea, that the arrival of the great person who was expected to come would be announced by a star. The births of Abraham, Moses, Cæsar, &c., &c., were all foretold by a star.⁴ Calmet says, “ I wish we could ascertain the ideas annexed to the rising of the star said to occur at the birth of Abraham.”

¹ Cudworth, Bk. i. Ch. iv. p. 544.

² For instance, Robertus de Nobilibus.

³ Vicramaditya, explained by and by.

⁴ Vide Calmet, Hist. Bible, Vol. I. add. art. Abraham.

The author of the Supplement to Calmet says, "I wish we could trace enough to ascertain the ideas annexed in that country to the 'rising of the star,' said to occur at the birth of Abraham: perhaps it might explain the prophecy of Balaam,¹ or might elucidate the ready apprehension of the Eastern Magi, who, when they, in the East, saw a certain star rise in a certain manner, and in a certain portion, &c., of the heavens, inferred that a remarkable child was born: indeed, no less than the lineal King of Judea: and they journeyed many miles to visit him. How came the rising of a star thus connected in idea with the birth of a child? Was the idea ancient? And what might be its origin? This alludes to the birth of Abraham having been expected, and reported to Nimrod, as the Easterns say, by the Magi at his court. The same is said in respect to the king of Egypt at the birth of Moses: we read also of a king, who dreamed that *immense splendour from the pregnant womb of his daughter illumined his kingdom*. The classic reader will recollect instances of other stars connected with great men: as the star Venus with Julius Cæsar, and his family, Augustus, &c., in Ovid and Virgil."² Here we see this gentleman as near to the discovery of the mythos as possible. I have no doubt that if we had the full histories of the Herculeses and Bacchuses, we should find them all said to have stars at their births, like Moses, Christ, &c. As the conceptions were immaculate, the gestation ten months, the father of the child a holy spirit or other supernatural being, so they were all announced by a star. I flatter myself I shall convince my reader, that this story of the *star* was no fiction, but only a mythological or allegorical method of representing the conjunction of the sun and moon, and the conclusion of the cycle, at the end of every six hundred years, and the periodical restoration of some star or planet to its old place, or to its periodical rising in a place relative to the sun and moon, at the end of the time. Thus, whenever that star arrived at its proper place, they knew that a new cycle commenced—a new saviour would be born; and for every Avatar, a star was said to have appeared. It was the astrological expectation of an incarnation on the renewal of every cycle: and the irregularities of the planetary motions, the precession of the equinoxes, and the neglect of making the necessary intercalations, rendered the times of the arrival of the periods and of the consequent incarnation doubtful. The time of the renewal of the cycle the astrologers could always nearly foretell, and we find they did foretell it at the same time, both in the East and West, as accurately as could be expected, when it is considered that, in later times, the principle was lost in both: but the fact that it was foretold in the East, is proved by Cassini and Abulfaragius, and in the West by Virgil, and the prophecies which I have detailed in Book V., the eighth Avatar of India, and the eighth Seculum of Virgil ending with the birth of Christ. The cycle, without regard to astrologers, would regularly renew itself. The changes in the heavens they could regularly foretell, but it was not thus with the Messiahs or the incarnations; so that they scarcely ever exactly agree with the beginning of the cycle. Thus the astrologers foretold some one before he came, but who he would be they could not foretell. This is so *marked* that some of our divines set down the passage about Cyrus to be an interpolation, because he is named. And yet as his name is of so peculiar a nature, viz. a *solar* title, the word Cyrus meaning SUN, the prophet might give him this name in the prophecy, and, in consequence, the epithet might be given to him afterward as a title of honour. The true character of Cyrus כורש *curs*, is apparent from the fragment of his history, which Herodotus got hold of, and which has been thought to be a part of the history of Christna. This speaks for itself, and strongly supports all my system. It binds the parts together beautifully. The prophets or astrologers might very safely foretell an incarnation for every next cycle or sacred period, in the period before it took

¹ Numb. xxiv. 17.

² Taylor's Sup. to Calmet, Dict. in voce Abraham.

place. If by the prophecy he incited his countrymen to such a thing as an insurrection or to do any other then desired act, his object would be obtained. If he failed, when he was in his grave, what evil would come to him? He would be like our modern prophesiers of the Millenium, *forgotten*, that was all. If he succeeded, he then was a great prophet. A hundred persons—Dr. Mede, Mr. Faber, Mr. Irving, &c., have fixed the time of the completion of Daniel's 1260 years. If some great event should happen to support Mr. Irving, he will be a prophet—all the rest forgotten; they are nearly so already. Is it not evident that if the art of printing had not been known, unless a mere accident had prevented it, Dr. Mede's explanation of the prophecies would have been lost? I may thus speak of the celebrated prophecy of Isaiah, because the Rev. Doctor ADAM CLARKE has declared it to be no prophecy at all.

8. When all the circumstances relating to Pythagoras, and to his doctrines, both in moral and natural philosophy, are considered, nothing can be more striking than the exact conformity of the latter to the received opinions of the moderns; and of the former to the moral doctrines of Jesus Christ. Had the moral doctrines of Pythagoras been adopted by the Western nations, in his day, there can be no doubt that the same good effects and improvement would have followed, which we know from experience followed the adoption of the same doctrines when taught by his successor Jesus Christ. In both cases, as usual, the philosophers were persecuted by the priests: in the case of *Jesus* they are said to have succeeded in crucifying him. In the case of Pythagoras, it is said, they succeeded in burning him and suppressing his doctrines. The mass of mankind were not in so improved a state of understanding as to be able to appreciate their worth: the success of the priests was owing to the ignorance of their followers. Yet notwithstanding the fate of the illustrious Nazarite, of Samaria, the state of things was widely different in his day: the human mind between the death of the Samian and the birth of the Samaritan had wonderfully improved. With the absolute loss of the secret meaning of the mythoses had sprung up a general contempt for their literal meaning, and thus the world had become prepared for the restoration or the revival of the salutary doctrines which before, under the discipline of the priests, it had despised. If it be admitted that the priest Caiaphas murdered the teacher, the philosopher, in spite of the remonstrance of the too easy Gentile Pilate, he could not suppress the doctrines. Thus the fine moral philosophy of Jesus, the Nazarite, flourished; but it is curious to observe how soon philosophy and philosophers became reprobated by his followers: BUT it was not till his beautiful system had been spoiled by fanaticism, and at the same time had begun to be loaded by artful priests with the trash, the corruptions, of the ancient mythology, fragments of which when they acquired power they never ceased adding to it, until at last, as I have shewn, or shall shew, it became nothing else but a commixture of the mysteries of the Magna Mater and of Eleusis with the nonsense of the vulgar Paganism. The whole of the ancient mythology was adopted and re-enacted and continued till new sects arose under the command of the insane persons Luther and Calvin, about the time of Leo the Tenth. These men in many countries struck off a great part of the abuses, but they were *fanatics*, not *philosophers*: another pruning knife must be applied.

Of the learned ancients of the West, Pythagoras was assuredly the greatest; and as he was some ages in advance of his ignorant countrymen, he was laughed at and persecuted. Some persons without any good reason have doubted his existence. The superiority of his doctrines to those of his contemporaries, affords to me a convincing proof that he actually lived. The beauty of his morals, the novelty but truth of his astronomy and geometry, all which he professed to bring from the East, are of so superior a nature to those of his Western contemporaries, that it is really not credible that they should have created an imaginary being, to whom they could attribute these obnoxious, unheard-of doctrines: for instance, the 47th proposition of Euclid, the elliptic orbits of the comets. These considerations prove his existence, and the state of Eastern learning

in his day, for it was only among the Brahmins of India that he could have learnt them. We know little certain of his doctrines: for, as they were not left in writing, his followers attributed to him all their own follies, but they were in perpetual contradiction to one another. Certain facts, however, they agree in, the truth of which is now admitted, and others the reason of which we may now discover. The golden thigh which he exhibited, no doubt was a golden Meru—probably a Linga and Arga, or Yoni, several of which are in the India-House, not explained to the vulgar, and therefore turned into ridicule, and taken literally by the priests of the day, in Greece, who had lost the meaning of the same emblems in their own mysteries. The same emblems are found among the ruins of the temples at Pæstum, the meaning of which was totally unknown at Naples, till my friend Col. Tod explained them.

In Herodotus there is an account of a certain Zalmoxis, a Scythian. Mr. Upham, in his History, has observed,¹ that the story of this person evidently shews, that Buddhism was the religion of the inhabitants of the banks of the Ister previous to the time of Herodotus, and thence he infers that Buddhism was the religion of the Celtic tribes. Now it is a very remarkable thing that Pythagoras was called Zalmoxis. In all this there is evidently some mystery concealed. Assuredly the particulars told of Zalmoxis have every appearance of being oriental.

9. We have seen in a former book, that Virgil in his poem alluded to certain prophecies of females called Sibyls. I think it necessary now to make my reader a little more acquainted with those persons. By the expression *the Sibyls* was generally meant a collection of books, written partly in very early and partly in later times by female prophetesses bearing that name. In the earliest time of Christianity they were considered by the fathers of the church as of the very first importance, in fact, of such very great importance, that the Christian religion might be considered to be almost founded upon them, and by most of the early fathers their genuineness was not only never disputed, but it was expressly admitted. They are now despised. The reason for this it will not be difficult to discover. I shall make a careful inquiry into the genuineness of these books, in the course of which we shall see various proofs as to who was the *ninth Avatar* in the West; after which I shall proceed to point him out in the East.

I repeat, if that, which *all* Christians professed, was *not* Christianity, I should be glad to know what was. They all expected the Millenium. The expectation is as clearly expressed in the Gospel histories as it is possible for any language to express any thing. Jesus, in some places, is made to say that another person would come after him, at a future period, while in others he is made by the compilers of those histories to say, that the world should end before the generation then living should pass away—even that some then present, standing by, should not die till the event took place.² All this proves, what is proved by a thousand other circumstances, that the principle of the Millenium was admitted universally, but that the detail, the particulars, were so far lost as to be a matter of very general doubt and dispute. The great difficulty seems to have been between two æras. Most of the Christian devotees imagined the consummation was to take place at the termination of the age then about to end, or just ended, and this the words of the Gospel tracts prove. Others of the Christians, judging from other expressions in the same collection of tracts, but probably in different tracts, which say that another person should come before the grand consummation, looked forwards to a more distant day. The most learned of the Gentiles supposed only that a happy æra was commencing, that some great and good man, some most excellent king, or great philosopher, or second Pythagoras—in short, they could not tell what—would arrive, only that a happy arrival would take place. This expectation the FACTS which remain to us clearly

¹ Hist. Buddhism, p. 27.

² Matt. xvi. 28; Luke ix. 27.

prove. The various Heathen and Jewish prophecies all clearly prove this ; and the Heathen Sibyls much more clearly than the Jewish Prophets. All these prophecies, and the circumstances attending them, have long been a stumbling-block, a mystery equally to philosophers and to Christians. All explanations by either party have been alike unsatisfactory, and *this* both parties very well know, whatever they may pretend to the contrary. The mystery, I am perfectly satisfied, I have in part developed. At all events I am quite certain that the theory which I have unfolded and shall unfold, has accounted or will account for all the difficulties attending these prophecies, in a manner consistent with common sense, which none has ever done before. My scheme requires no miracles or interpositions of divine power. It requires nothing but the application of common sense, and that we should pay a little attention to the lessons of experience, and avail ourselves of the circumstances and scattered rays of light which have penetrated to us through the mist of antiquity. My theory only requires that we should believe man to have been in former times what we find him now, and reason upon him accordingly. Solomon's adage *that there is nothing new under the sun* is neglected because it is trite ; but it is true : and I believe it was meant to convey a meaning much more recondite and learned than has been suspected.

10. It is an undisputed fact, that the ancient Jews founded their Cabala, although they held it to be unwritten and only handed down by tradition, on the book of Genesis, and particularly on the first verse. In this verse I have been endeavouring to shew may be found the oriental doctrines. Persons who attend to authority more than reason may be better disposed to attend to my reasoning, when they find it supported by the opinion of one of the most learned of our priests. Bishop Laurence says, speaking of the Jewish Cabala, " That singular, and to those, perhaps, " who penetrate its exterior surface, fascinating system of allegorical subtleties, has no doubt its " brighter as well as its darker parts ; its true as well as its false allusions : but instead of re- " ducing its wild combinations of opinion to the standard of Scripture, we shall, I am persuaded, " be less likely to err, if we refer them to the ancient and predominant philosophy of the East : " from which they seem to have originally sprung, and from which they are as inseparable, as the " shadow is from its substance."¹ Indeed, the Bishop is quite right in what he says of the secret Jewish doctrines having come from the East. And if he be right, my reader will not be surprised that I should be able to point out in the Jewish books the oriental doctrines. That I am not able to make them *more clear* may be attributed to the fact, that I have no lexicons or other books to refer to except those of Christians, who exert all their ingenuity to disguise the truth, as I have shewn in the case of Parkhurst, in voce ראשית *rasit*.

The early Christians, in general, were fanatics, in the highest state of excitement : and most of them in that state became Monks or Carmelites, (all Monks being then in one order,) and thus under their head or superior they formed a secret, corresponding society, spreading over the whole world ; and, directly in the teeth of the laws, holding their love-feasts and meetings in the night. They were not secret because they were persecuted ; but they were persecuted because they were secret. Their meetings were directly in defiance of other laws as well as the law of the *twelve tables*. There can be no doubt that in the fourth or fifth century, the head of the order of Carmelites had power enough to correct or destroy, at pleasure, every gospel in the whole world, which was not preserved by heretics, and *they* were not likely to preserve them, as they did not admit their authority : and this is the reason why we have no manuscripts older than the sixth century. For one reason, when the Millenium did not arrive at the end of the sixth century, they were corrected or corrupted, as the Mohamedans say, to spiritualize the Paraclete. Although

¹ Pref. to Enoch, p. xlvi.

the seculars and the regulars often quarreled for power, and sometimes about opinions, yet there were various points in which they always agreed, and one point, and a most important one it was to the world, was the reprobation of the learning of the ancients. This object began to shew itself first in the burning of books at Antioch, as described in the Acts of the Apostles, and was continued by a succession of councils till the last canon of the Council of Trent against Heathen learning. All the manuscripts, which they preserved in the monasteries, were thus preserved for the sake of the vellum or skin. They were in fact preserved for the purpose of destruction. Here we have the cause, and almost the sole cause, which effected the darkness of the world for many generations. This is remarkably confirmed by the multitudes of Panimceste manuscripts which are found. Exceptions no doubt there were to this rule, but yet it almost universally prevailed.

St. Gregory is said by John of Salisbury, to have burnt the imperial library of the Apollo.¹

11. There is one very important circumstance which is overlooked by writers on these subjects, which is, the change which was continually taking place in all religions. It is out of the question to suppose, that any of the systems or sects in the time of Strabo or Diodorus were exactly like what they were 2000 years before. No doubt every sect claimed to be *unchanged*, as all sects do at this day. But the whole which can be admitted is, that the original principles remain. On these accounts it is absolutely absurd to expect the Avatars to be found exactly the same, in successive periods, but they will be found more nearly so than, all things considered, could be expected.

Among all nations of the Western parts of the world, the prophetesses called Sibyls were anciently known. There were eight of them who were celebrated in a very peculiar manner, and a work is extant in eight books,² which purports to contain their prophecies. This work in several places is supposed to foretell the coming of Jesus Christ. They have been in all times admitted to be genuine by the Romish church, and I believe also by that of the Greeks; in fact, they have been literally a part of the religion; but in consequence of events in very late years not answering to the predictions, the Romish priesthood wishes to get quit of them, if it knew how; several of its learned men (Bellarmine for instance) having called them forgeries. It is the renewed case of the ladder: being no longer useful, it is kicked down. The Protestant churches deny them altogether, as Romish forgeries. These Sibyls were held in the highest esteem by the ancient Gentiles. And it appears from the unquestionable text of Virgil, that they did certainly foretell a future Saviour, or something very like it. We find, on examination of the present copy of them, that they actually foretell in an *acrostic* the person called Jesus Christ by name. The most early fathers of the Greek and Roman churches plead them as genuine, authentic, and unanswerable proofs of the truth of their religion, against the Gentile philosophers, who, in reply, say, that they have been interpolated by the Christians. This, when merely asserted by them in argument, is not evidence; nor is that which is asserted by modern Protestants. But when I reflect upon the prophecies which the reader has seen in the preceding chapters, I cannot help thinking that the acrostic prophecy is in good keeping with the others. I saw pictures of the supposed authoresses of these prophetic books in several places in Italy. Their figures are beautifully inlaid in the marble floor of the cathedral church at Sienna, and their statues are placed in a fine church at Venice, formerly belonging to the barefooted Carmelites; they are also found placed round the famous Casa Santa at Loretto.

Dr. Hyde³ says, "Chaldæis et Phœnicibus שבולא seu שבולה, Σιβυλλα, est cœlestis virginis

¹ Forsyth's Travels, p. 134.

² Published by Gallæus.

³ De Rel. Cap. xxxii.

“ signum: unde (cuique hoc perpendenti) fabula Sibyllarum tam obvia est, ut quisque fortè “ dolebit quod, sine me monente, haud citius rem perceperit.” He shews also that this is the same word (litterâ mutatâ after the Hebrew custom in certain cases) as the word שְׁבוּלַת *sbult*, shibboleth. He then proceeds to shew how this celestial virgin was adopted by the Greeks and Romans, and became their famous Sibyl. This famous Sibyl became afterward the Queen of heaven, Maria.

12. Many authors, as well as Dr. Hyde, have endeavoured in vain to ascertain the meaning of the word Sibyl. Vallancey has observed, that in the *old Irish* the word means cycle; and he goes on to say, that as the Sibyls were beloved by Apollo, he supposes the cycle must have been that of the sun. Here I believe we have the truth. There was supposed to be a prophetess of each Sibyl or Cycle. We have the prophecies of eight. There was one for each cycle as it passed. At the time of Christ one was to come. For it may be observed, that as there could not be one for the first, that is, before the creation, there could in all be only nine to the consummation of all things.

The location of these Sibyls around the Casa Santa at Loretto clearly proves, that the Roman church privately maintained the mythological character of the Virgin Mary, and her close connexion with these celebrated ladies. It is absurd to suppose that they were placed in this very remarkable place by accident, or in ignorance. Then why should they be connected with the Virgin?

13. The Apostolic Constitutions quote the Sibylline oracles, and say, “ When all things shall “ be reduced to dust and ashes, and the immortal God, who kindled the fire, shall have quenched “ it, God shall form those bones and ashes into man again, and shall place mortal men as they “ were before: and then shall be the judgment, wherein God shall do justice.” Here is, I think, in this very early work (for early it certainly was) an admission of the doctrine of a renewal of worlds.

Josephus quotes the Sibylline oracles concerning the tower at Babylon.

The earliest undisputed Christian writer, of whom any entire works remain, is Justin, and he pointedly says, that the Cumæan Sibyl prophesied the advent of Christ in express words.¹ Justin’s first Apology was published not later than about A. D. 160. If the Sibyls were then forged, they shew how early the Christians began these practices. Justin tells the Greeks that they may find the true religion in the ancient Babylonian Sibyl, who came to Cuma and there gave her oracles, which Plato admired as divine. Clemens Romanus also quotes the Sibyls in his Epistle to the Corinthians.² They are also quoted by Theophilus Antiochenus, Athenagoras, Firmianus, Lactantius, Eusebius, St. Augustine, &c.

Clemens Alexandrinus quotes these words from St. Paul: *Libros Græcos sumite, agnoscite Sibyllam quomodo unum Deum indicet, et ea quæ sunt futura.* Clemens Alexandrinus also quotes Heraclitus as an authority that the Sibyls were inspired by God. St. Austin says the Sibyls, Orpheus, and Homer, all spoke truly of God and of his Son.³

There are several works extant, purporting to be the writings of Peter, Paul, and other early Christians, in which the Sibylline oracles are quoted as authorities in support of the Christian religion. These writings, for instance the preaching of Peter, are quoted as the works of the persons whose names they bear, by Clemens Alexandrinus, and, in fact, are as well supported in point of genuineness as the orthodox gospel histories themselves, though rejected by modern Christians.⁴ Jeremiah Jones has laid down some rules of criticism by which he pretends to try the genuineness of ancient works. These rules or canons are false, to a ridiculous degree.

¹ Floyer’s Sibyls, p. 225.

² Ibid. p. 329.

³ Sir John Floyer on the Sibyls, p. ix.

⁴ Vide Jones on Can. Pt. II. Ch. XXXIII. XXXIV., Vol. I. pp. 348—350.

Dr. Lardner admits that the old fathers call the Sibyls *prophetesses* in the strictest sense of the word.¹ The Sibyls were known as prophetesses to Plato, to Aristotle, Diodorus Siculus, Strabo, Plutarch, Pausanias, Cicero, Varro, Virgil, Ovid, Tacitus, Juvenal, and Pliny. Under all the circumstances it is absolutely impossible to deny that certain written prophecies did anciently exist; and the only question will be, whether we have the real originals, and if the originals, whether uncorrupted or not. It is evident that in the time of Plato they must, at least part of them, have been written; and the question arises, what can they have foretold? I think I am entitled to answer, The same as Isaiah, as Enoch, as Zoroaster, as the Vedas, as the Irish Druid from Bocchara, and as the Sibyl of Virgil—a renewed cycle, with its hero or divine incarnation, its presiding genius; but this I think will appear more clearly presently.

The Sibyls which we now have are of two or three dates or authors, and though, without exception, they all admit the *ten* ages, yet they are not agreed as to the time when the ages commence; some making them begin with the creation, some with the flood. This again proves that the system was lost. The first book makes five ages or generations before the flood. But whatever they may be, this want of connexion and system proves them to be unconnected works of different times and different persons. It clearly proves that they are not the produce of ONE fraudulent system, moment, or person. It adds greatly to the probability that they are, at least part of them, the produce of the cheats, or self-deluded fanatics, called Sibyls—dupes of judicial astrology.

It seems that by the word age or generation different things were meant by different persons, from which confusion has arisen. But the Sibyls *all* agree that there were to be what are called *ten* generations or ages of the world in all; but the Erythræan Sibyl is the only one who correctly states them to begin from Adam. Erythra was the name of a town in Ionia and also of the oriental ocean, at least as far as Ceylon or Taprobana. In a former book I have shewn, how the Jews and other nations expected the six millenaries: here is a clear admission of the ten periods which could be nothing but the Neroses, or periods of 600 years, as in 6000 there are ten six hundreds.

It has been said that the Erythræan Sibyl is the same as the Sibyl of Cuma.² I can admit this in the sense only of renewed incarnation. The Sibyl was said to have lived from the flood of Noah. Indeed, it was supposed, that she would live through ten γενεας generations, i. e. ten Sæcula, Neroses—which was the secret meaning, in the sense of Cycle, of 600 years. The Sibyls differ in their accounts in many respects from our present Bible, though evidently alluding to the same facts. This is a proof that they were not copied from it. For example, one of them says, that the ark rested on the top of a mountain in Phrygia. If the book of the Sibyl had been merely a Jewish or a Christian forgery, she would not have placed Ararat in Phrygia. The Sibylline oracles, in foretelling³ that Joshua should rise again and re-establish the Jews, plainly allude to the renewal of incarnations. Indeed, this is clearly recognized in the Psalms: “Thou takest away their breath. They die and return to their dust; thou sendest forth thy spirit and they are created.⁴ Thus thou renewest the face of the earth.”⁵ This was the Hindoo doctrine, and Judaism was virtually Protestant Brahminism.

14. The most important part of these oracles, is a very celebrated collection of verses in the *eighth* book, or the prophecy of the ERYTHRÆAN Sibyl, which in the first words forms the following Acrostic in the Greek language: ΙΗΣΟΥΣ ΧΡΕΙΣΤΟΣ ΘΕΟΥ ΥΙΟΣ ΣΟΤΗΡ

¹ Cred. Hist. Gosp. Bk. i. Ch. xxii.

⁴ i. e. renewed.

⁵ Psalm civ.

ΣΤΑΥΡΟΣ. It will not be denied that this is among the very earliest of the records of Jesus Christ, whether it be a forgery or not, and it is very important, as it proves to every Greek scholar that the name of Christ does not necessarily come from the Greek word *χριστω* to anoint, but may come from the word *χρηστος* *benignus, mitis*; for it is here written in the manner which was common in very ancient times, but in the later times disused, when the *ει* became changed into the *η*—as in *σωτειρα*, which became *σωτηρια*.¹ Thus *χρειστος* became *χρηστος*. The *η* constantly changed into the *ι*, but I believe seldom or ever did the *ι* change into the *η*. This I say with diffidence, not professing to be learned enough in the Greek language to give a decided opinion on so nice a point, or to say that in all the Greek writers the change never occurs. However, no Greek scholar will deny that it *may* as readily have changed from the *ει* to the *η* as to the *ι*, and that any word which was written in ancient times with the *ει*, like *σωτειρα*, may have changed, like it, into *σωτηρια*.

The first name of Jesus may have been *χρειστος*, the second *χρηστος*, and the third *χριστος*. The word *χρειστος* was used before the H was in use in the language.

If the name of Jesus were to be correctly represented in the Latin language from the Greek, it ought to have been Chreestus, because the Greek EI changed into the H—for the EI corresponds with the long E in Latin as Nimrod² observes. Of the mode in which the H in proper names changed into the I, M. Beausobre³ has given a striking example in the name of Manes. He says, “Premièrement St. Augustin témoigne, que notre hérésiarque s'appelloit MANIN, c'est-à-dire *Manen*, Μάνην, parceque les Latins substituent souvent un i à l'e long des Grecs.” Thus *Χρησ* became Cris or Chris. All this tends to prove, that the original name must have been spelt with the EI or the *η*, and not with the *ι*.

On the change in the letter H to I, Mr. Taylor⁴ says, “The complimentary epithet CHREST, (from which by what is called the Ioticism, or change of the long E into I, a term of respect grew into one of worship,) signified nothing more than a good man. Clemens Alexandrinus, in the second century, founds a serious argument on this paronomasia, that⁵ all who believed in Chrest (i. e. in *a good man*) both are, and are called, *Chrestians*, that is, *good men*.”⁶

15. There certainly at first sight is nothing improbable in deriving the word Christ from the word *χριστω* to anoint; but yet, on more consideration, it seems absurd to apply this to Jesus, who certainly could not with any truth be called either crowned or anointed, if the four gospel histories be correct; as he never was either one or the other. It is true that kings and prophets were called by the name of Messiah or Anointed; but unless a prophet had undergone the ceremony of anointing, he could not properly be called anointed. For these reasons it is not unlikely, that the pretended derivation of the Latin word Christus from the Greek word *χριστω* was an after-thought, adopted to serve some particular purpose.

There is unquestionably great difficulty respecting the name of Christ and the Christians. At first they certainly went by a great variety of names, and among others, by a very extraordinary one, namely Pisciculi or *little fishes*. But for *the present* we will pass this over. Dr. Heuman Witsius and Usher think, that the name of Christians was given them first by the Heathen Ro-

⁶ Strommata, Lib. ii.

mans, because, among other reasons, they shew this name has a *Latin*, not a *Greek termination*. This is a very important remark. Some observations on this subject may be found in the *Palæoromaico*, Disq. iv. The name Christ may be fairly derived from the word *Cristna*, and the traits of similarity in the lives of *Cristna* and *Jesus*, which have been pointed out, will probably compel the reader to believe, that the *black God* of Italy was called in some way or other from the *black God* of India, or both from some common source, and not from the anointing of a man who *never* was anointed. We will now try to find how this arose.

The first unquestionably genuine *heathen* evidence we have respecting the name of *Jesus Christ* and the *Christians*, is found in *Suetonius*.¹ Here he is cited by the name of *Chrēstus*, not *Christus*. *Suetonius*, if he speak of the *Christians*, and that he does so speak I conceive no impartial person can doubt, must be allowed to be, in this case, a perfectly competent and unimpeachable witness, according to every principle of fair reasoning. The following are his words :

Judæos, impulsore Chresto assidue tumultuantes Roma expulit.

Tacitus speaks of *these same persons*, but calls them *Christians*, and their master *Christus*. This, on first view of it, seems probably a corruption, because one of the two must be a corruption, and who in later times could ever think of corrupting *Suetonius* into the *Chrestus* from *Christus*?

Lactantius ascribes the name of *Chrestus* to the ignorance of the *Greeks*,² and says, *Qui propter ignorantium errorem cum immutata litera Chrestum solent dicere*.³ Here is a most clear admission of an unimpeachable witness in this case, that the *Greeks* were *accustomed*, *solent*, to call *Christ* by the name of *Chrestus*, and not *Christus*.

Justin Martyr is the earliest *Christian* author of whom we have any undisputed works entire, and the very best authority in the *Christian Church*. In his first *Apology* he calls the *Christians* *Χρηστιανοι*. On that passage *Ben David* (that is, *Dr. John Jones*) says,⁴ “ To this meaning of *χρηστος*, *Justin Martyr* in his first *Apology* thus alludes, *ὅσον τε εκ του κατηγορουμενου ἡμων ὀνοματος χρηστοτατοι ὑπαρχομεν* i. e. from the mere name which is imputed to us as a crime, “ we are the most excellent.” On this passage *Thirlby* has the following note: *χρηστοτατοι*, *Allusio est ad vulgatam eo tempore consuetudinem*, quâ *Christus* ignorata nominis ratione nominabitur *Chrestus*. (*Sylburgius*.) Here is another decisive proof that in the time of *Justin* the *Christians* were commonly called *Chrēstians*. In the next page *Justin* calls the *Christians* *χρηστιανοι*, and he adds, *το δε χρηστον μισεσθαι ε δικαιον*—“ To hate what is good, *chreston*, is not just.” On this *Thirlby* in a note says (*χρηστιανοι*) *χρηστιανοι* legendum haud immerito conjectavit *Sylburgius*, ex mente scilicet seu potius voce adversariorum. (*GRABE*.) And certain it is, that *Sylburgius* conjectured very truly. For it cannot be doubted that the *χρηστιανοι* of *Justin* is a corruption, and a very absurd corruption. If he have been corrupted in one place he may in others.

Again *Justin Martyr* says,⁵ “ For we are indicted by the name of *Christians*, but now *χρηστος* “ is a word for *kind* or *good*; and such a word cannot surely be a just foundation for hatred.”⁶ It is impossible not to see that here the word *Χρηστιανοι* or *Christians* is a corruption, and that it ought to be *Χρηστιανοι* or *Chrēstians*. Without this emendation the passage is nonsense, as every *Greek scholar* must see. In many other places, where *Justin Martyr* is made to speak in

⁵ *Sect. iv.*

⁶ *Reeves's Justin.*

the Greek of Christ and Christians, his page is evidently corrupted; but an attentive observation of the above passage will shew the reader why the word *χρησος* is excepted in it, namely, because it was *impossible*, consistently with the sense of the context, to do it. Therefore it is *half* corrupted; the word *χρησος* could not be corrupted. Certainly Justin would not have called them *Χρησιανοι* if *Χρησος* had not been the common name by which Christ was known; and when, in other places, he calls him *Χρισος*, this being in opposition or contradiction to the former, one of the passages must have been corrupted. But it is absurd to suppose the *χρησος* to be the corrupted orthography, because the corruption must have been made by the advocates for the *ι*, not for the *η*—the work of Justin having always been in possession of the followers of the *ι*.

Tertullian says,¹ *Christianus quantum interpretatio est, de unctioe deducitur. Sed et cum perperam Chrestianus pronunciat à vobis (nam nec nominis certa est notitia penes vos) de suavitate vel benignitate compositum est. Oditur ergo in hominibus innocuis etiam nomen innocuum.*

Bingham² says, the Christians were not called Christians, i. e. Christiani, till the time of St. Ambrose. I suppose this was because they were called Chrēstians.

Lucian, in a book called *Philopatris*, makes a person called *Triephon* answer the question, whether the affairs of the Christians were recorded in heaven, “All nations are there recorded, “since Chrēstus exists even among the Gentiles:” *ει τυχοι Χρησος και εν εθνεσι.* Thus it is perfectly clear that they were called Chrēstians by the Gentiles, as well as by Justin Martyr, the first of the Christians in his day.

But the following evidence is conclusive upon the subject: Dr. Jones³ observes, that this word is found in *Rom. xvi. 18.* He says, “And in truth the composition of it is *χρηστος λογια, i. e. λογια περι τε χρηστω, oracles concerning Chrestus, that is, oracles which certain impostors “in the church at Rome propagated concerning Christ, Χρισος being changed by them into “Χρησος, THE USUAL NAME GIVEN HIM BY THE Gnostics, AND EVEN BY UNBELIEVERS.”*”⁴ Here I think enough is admitted by Dr. Jones to shew pretty clearly that his original name was *Χρησος*, and that the *ι* was not changed into the *η*, but the *η* into the *ι*.

Again, Dr. Jones says, “Now it is my object to shew that the Apostle Paul, in two places, has an “obvious reference to the above interpretation of the word *Χρισος*. The first is in *Philipp. i. 21:* “‘For me to live is Christ, and to die is gain,’ where the parallelism requires *χριστος* in the sense “of *χρηστος* to correspond to *κερδος*.”⁵ “Onesimus was a slave of Philemon, a friend of Paul, “and his brother in Christ. While at Rome, that person was converted to Christianity by the “Apostle, who being now in chains, and as such having occasion for his service, detained him for “some time from his master, and then sent him back with this letter as an apology to Philemon: “‘I beseech thee, in behalf of my son Onesimus, whom I have begotten in my bonds, and whom I “‘again send back to thee, receive him as my own bowels.’ His argument is this: ‘As Onesimus, “‘while yet a stranger to Christ, was a mere eye-servant, driven by fear and compulsion, and “‘therefore worthless to his master, so by imbibing the spirit of Christ, he is now become a “‘faithful and valuable servant—*τον ποτε σοι αχρηστον, νυνι δε σοι και εμοι ευχρηστον, i. e.*

¹ *Apol. Cap. iii.*; Ben David, pp. 277, 278; Bingham, Vol. I. p. 12.

² Book i. Chap. i. p. 7.

³ *Lex. in voce.*

⁴ To shew how far absurdity can go, Dr. Jones says, on the word *Χρισος*, “Christ, he whom even God ANOINTED “WITH DIVINE POWER.” He might as well say that the man who was hanged last week, was anointed with a rope; or, that when the Lord Mayor gave the King a dinner, he anointed him with *beef*.

⁵ Ben David, pp. 278, 279.

“τον ποτε ὡς αχριστον, οντα σοι αχρηστον, νυνι δ' ὡς εν Χριστω σοι και εμοι ευχρηστον.”
 “The paronomasia is perceptible only to those who understand Greek, and cannot be translated
 “into any modern language.”

Julian calls the Baptist *Χρησος Ιωαννης*. But, as I have said before, this matter is put out of all doubt by the doctrine being expressly called by St. Paul *χρησολογια*, Rom. xvi. 18: *Και δια της χρηστολογιας και ευλογιας εξαπατασιν τας καρδιας, τον ακακων*. St. Paul was writing expressly against the Gnostic Christians.

But Jesus was called *χρησος* by St. Peter¹ as well as by St. Paul. I shall be told that this is a various reading. True, all the manuscripts have not been corrected. But what says the learned Bishop Marsh on this? “1 Pet. ii. 3: *χρηστος*, others *χριστος*, where the preceding verb “*εγευσασθε determines the former to be the true reading.*”² The Rev. Joseph White, in his *Criseos Griesbachianæ*, has very prudently not noticed this various reading: certainly one of the most important in the book. This is either an accident or a fraud.

If my reader will consider with attention the passages which I have given above from Dr. Jones; he must see the Doctor has shewn most clearly, that not only the Gentiles commonly called Christ *Χρηστος*, but that the Gnostic Christians, as is I believe admitted, beyond all comparison the most numerous sect of Christians, (because many sects were comprised in the term Gnostic,) as well as the most learned and respectable, also called him *Χρηστος*. The important fact that Christ was first called *Χρηστος*, and the Christians *Χρηστιανοι*, was as nearly lost as possible. The accidental discovery of an inscription, which I shall presently notice, given by Dr. Clarke, in his *Travels*, alone saved it. The orthodox must have been very industrious. But, as we have seen, it is also quite clear that he was so called by both St. Peter and St. Paul, and surely this will not be disputed.

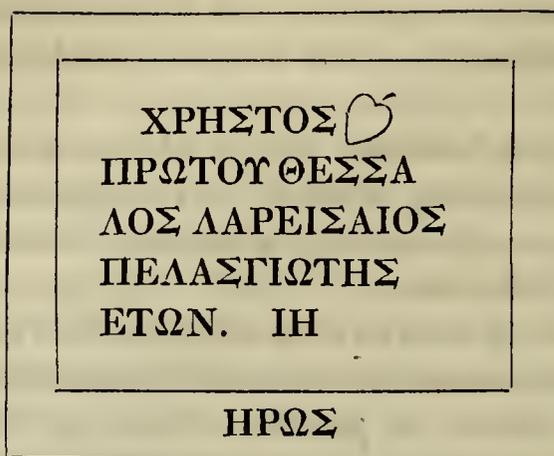

In the *Chrēstologia* of St. Paul and Justin Martyr we have the esoteric religion of the Vatican, a refined Gnosticism for the cardinals, a more gross one for the people. It seems very extraordinary, that when Lardner was noticing the *Chrestus* of Suetonius he should pass over the most important fact—that Jesus was commonly known by the name of *Χρηστος* among that sect of Christians, which was by far the most numerous and learned in the world. There never was born a more cunning man than Lardner, nor one who knew better when to speak, and when to be silent. In this instance he seems to have followed the example of Eusebius, when, in the life of Constantine, he concealed the murder of his son Crispus. I cannot believe that Lardner was ignorant that the Christians were called *Χρηστιανοι*. I have examined his indexes, but can find nothing on the subject. And, in his pretended *surprise* that Suetonius should call Jesus, *Chrestus*, he betrays the grossest disingenuousness. It is impossible that this learned man can have been ignorant of it. But he found that if he noticed it, even to endeavour to refute it, he would bring into observation what was as good as lost, and what it was very desirable to keep out of sight. I cannot help suspecting that the conduct of both Lardner and White proceeded from the same source—a wish to conceal the fact, a small part of the importance of which they saw.

16. The following extract from Dr. Clarke's *Travels*, relating to the Heathen monument just named, furnishes a proof that the *Χρηστος* was known before Christ.

“Within the sanctuary, behind the altar, we saw the fragments of a *marble cathedra*; upon the
 “back of which we found the following inscription, exactly as it is here written, no part of it
 “having been injured or obliterated; affording, perhaps, the only instance known of a sepulchral
 “inscription upon a monument of this remarkable form:

¹ 1 Epis. ii. 3.

² Marsh's *Mich. Various Readings of the N. T.* Vol. I. Ch. vi. Sect. viii. p. 278.

“ It is in honour of a youth of Larissa, in Thessaly, who died at eighteen years of age. As to the words *χρηστος* and *ηρωσ*, it may be remarked that ALL' THE EPITAPHS UPON LARISSÆANS, which Spon has preserved, contain these words. There were many cities having the name of Larissa; consequently the city, whereof the youth here commemorated was a native, has the distinction of *Πελασγιωτης*. It is named by Strabo. Though out of the *Pelasgiotis* it had the name of Larissa Pelasgia.”¹ I consider an ancient inscription of this kind as the very best species of evidence of any fact.

I consider the words *Χρηστος* at the top and *Ηρωσ* at the bottom of this inscription, to have a mystical meaning, and to be used as monograms, or as the D. M. are used on Roman monuments; that *Ηρωσ* is a dialectic mode of writing *Ερωσ*²—and that both mean *the benignant being* or *Divine Love*. All the Heroes, who were properly so called, were Demigods or Incarnations of Divine Love or Wisdom. The fact of these words *being on all the monuments*, proves, that they are neither of them the name of a deceased person.

The *heart* may be seen in great numbers of the Christian monuments in the Vatican palace at Rome. The Roman Church has an office for the bleeding heart. As an emblem scarcely any thing is more common. But the way in which it is connected with the Romish Christian sepulchral monuments, and with those of the Heathens, shews a close connexion between them. The heart, being the emblem of the passion or sensation of affection of one person to another, came very naturally to be the emblem of divine love.³ At first it may be thought that a figure of this kind is a trifling circumstance and not worth notice. I dare say it will be so considered, by persons who spend their lives in idle attempts to supply a Lacuna or two in a Greek play; but, trifling as it may appear, I will compel the sceptic to belief, in the opinion I myself entertain. Here we have the heart upon an ancient Grecian monument before Christ, and connected with the word *Χρηστος*, and the name of Cupid or divine love *Ηρωσ*. We have it on an Indian monument of Bal-ii an incarnation of Vishnu crucified in the heavens, and we have it on vast numbers of modern Christian monuments in the Vatican at Rome. I defy any one to doubt the close connexion of the three. Circumstances of this kind are better than any written evidence whatever. This heart is often represented in Romish Churches with darts or spears stuck in it. Images of Christ are often seen with a spear thrust into the side. The image of Bal-ii has also a hole or wound in the side, and is described by an epithet which might be rendered into English *side-wounded*.

¹ Clarke's Travels, Vol. IV. p. 189, 4to.

² Dialectus Attica, *ηδυναμην* pro *εδυναμην*. SCAPULA.

³ Over the altar of the Abbey-church at Tewkesbury, which is more ancient, I think, than the church, a winged heart is placed below the dove.

The Latin name of Christiani¹ was first given to the followers of Jesus at Antioch, probably as a term of reproach; which is the reason, though they were perhaps not often insulted with it, why the Christian fathers in the earliest time never use it. And I believe it was not adopted till the doctrine of Paul was grafted into the gospel of Jesus, by the Roman or Popish Christians; and then, for the first time, along with the *Christ crucified* of Paul, came the Latin word *Christus*.

Now, with respect to the word *anointed* it may be recollected, that every thing which was anointed had converted to it the quality peculiarly meant to be described by the word *χρησος* of good, holy, sacred. To make the stone of Jacob holy and sacred it was anointed. To install a prophet into his office, he was anointed. To render kings sacred, they are yet anointed; from this came the idea that Christ had his name from being anointed. And Cryso-polis and Christ are examples of the same confusion of language and idea. If the word Christ had its origin from the Greek word *Χρισω* to anoint, in the acrostic it would not have been written *Χρεισος* but *Χρισος*.

For all these reasons collectively, I conclude that the original name by which Christians were called was, followers of *Χρησος* or *Χρησιανοι*. I need not waste more words upon this point, for the fact cannot be disputed that they were thus called both by Christian fathers and Gentiles. But it is a point of very great importance. Dr. John Jones's admission, that the Gnostics and other early Heretics called Jesus by the epithet *Χρησος*, *Chrēstus*, coupled with the indisputable fact that Justin Martyr calls his followers *Χρησιανοι*, is quite enough for me, without the authority of St. Peter and St. Paul.

17. No doubt I shall be asked the reason why this discovery which I have made of the ancient name of Christ has never been made before. To which I reply, Look to the decrees of Emperors, Popes, and Councils, almost innumerable, for the destruction of the writings of those persons who were likely to state or name the fact in ancient times, and you will see the reason. Had we the large and learned work of Porphyry or the works of Ammonius Saccas, no doubt we should have this and many other points cleared up.² If I be asked why Lardner did not discover it, I reply, No one is so blind as he who will not see. It is impossible that he can have been ignorant: and it is one of many examples of his disingenuousness. For the cause of truth it is a most fortunate circumstance that the priests in transcribing the works of Justin Martyr have overlooked the passage which the reader has seen. There can be no doubt that every place where he uses the word *Χρεισος* instead of the word *Χρησος* is a corruption, and the same is probably the case with every writer before his time, *if any there were*.

Of all the Christian writers of antiquity there is no one of whose works I regret the loss so much as those of Ammonius Saccas. From him I have no doubt that we should have had the whole explained.

The word *Χρησος* among the Gentiles, did not only mean *benignus*, *mitis*, but it also meant, when applied to a person, a being superior to man, of a benevolent nature; precisely a divine incarnation. *Ηρωσ* had the same meaning—a *demigod*. The result of the whole is, it is clearly proved that the Papal Christians changed the first name of Jesus from that of *Chrēstus* to that of *Christus*, with the Latin termination. In a future page I shall produce some very curious circumstances which will trace this *Chrestos*, foretold by the Sibyls, to India.

18. I will now return to the consideration of the Acrostic of the Sibyls. It is very certain from the passage in Virgil, that a great personage to renew the ancient times, to act again the Trojan

¹ Acts xi. 26.

² Vide Lardner's Works, Vol. IV. Ch. xvii. p. 111, 4to.

war, the Argonautic expedition, &c., was foretold by the Sibyl. It is very certain from the following passages of Cicero also, that a great person was foretold, and that for the purpose of this enunciation an Acrostic was used; for though he is in violent opposition to the Sibylline prophecy, because it was used to justify the setting up of a tyranny, and asks, what man, and in what particular time the man is foretold, yet he does not deny the prophecy. And though he argues against the *ακροσικος*, he does not deny its existence, but admits it.

Sibyllæ versus observamus quos illa furens fudisse dicitur. Quorum interpres nuper falsa quædam hominum fama dicturus in senatu putabatur eum, quem revera Regem habebamus, appellandum quoque esse regem, si salvi esse vellemus. Hoc si est in libris, in quem hominem, et in quod tempus est? ¹ (N. B.) Callidè enim, qui illa composuit, perfecit, ut, quodcumque accidisset prædictum videretur, hominum et temporum definitione sublatâ. Adhibuit etiam latebram obscuritatis, ut iidem versus alias in aliam rem posse accommodari viderentur. Non esse autem illud carmen furentis, cum ipsum Poema declarat (est enim magis artis, et diligentia, quam incitationis et motus) tum vero ea quæ *ακροσικος* dicitur, cum deinceps ex primis versuum literis aliquid connectitur. ² “We take notice of the verses of the Sibyl which she is said to have poured out in a fury or prophetic phrenzy; the interpreter whereof, was lately thought to have been about to declare in the Senate-house, that if we would be safe we should acknowledge him for a King who really was so. If there be any such thing contained in the Sibylline books, then we demand, concerning what man is it spoken, and of what time? For whoever framed those Sibylline verses, he craftily contrived that whatsoever should come to pass, might seem to have been predicted in them, by taking away all distinctions of persons and times. He also purposely affected obscurity, that the same verses might be accommodated, sometimes to one thing, sometimes to another. But that they proceeded not from fury and prophetic rage, but rather from art and contrivance, doth no less appear otherwise than from *the Acrostic in them.*”

It is perfectly clear that in the time of Cicero there was an acrostic in the book. If that which is there at this time be not it, pray where is it? If the Christians had forged this acrostic after the time of Justin, they would have contrived to insert *Χριστος* and not *Χρηστος*.

But I shall now produce in this case, I think, an unimpeachable witness, that the present acrostic was that in the Sibyl in the time of Cicero; for *Eusebius* affirms, that Cicero quoted these very verses which contain the acrostic, and which he says was in the Erythræan Sibyl. If the father of ecclesiastical history may be credited, the fact of the existence of our present acrostic in the time of Cicero cannot be doubted. ³

Justin says, “that the Sibyl not only expressly and clearly foretells the future coming of our Saviour Jesus Christ, but also all things that should be done by him.” ⁴ This was in the early part of the second century, and it exactly answers to our present Sibyls. It is very evident that, supposing the name of Jesus Christ to have been unknown as a man’s name, which it might be in the time of Cicero, the poem might pass generally without the meaning of the acrostic being discovered, or without its being perceived that the letters formed an acrostic, except to the initiated.

The acrostic suited both the Heathens and the Christians. If it were Heathen, there was no occasion for the Christians to expunge it; if it were Christian, there was no occasion for the

¹ See Floyer’s Sibyls, last page, App. 336; and consult Martianus Capella, Lib. ii.

² De Div. Lib. ii.

³ Vide Floyer’s Sibyl, Pref. p. xx.

⁴ Cohort. ad. Gr. p. 36, ib. 37, A; Lard. Works, Ch. XXIX.

Heathens to expunge it: if the Heathens interpolated it, it served the Christian; if the Christians, the Heathen. That the Christians should have corrupted the oracles is very likely, and even in some degree the verses which form the acrostic—but still keeping the acrostic. Indeed, after the observation in Justin, that all the things which had happened to Jesus were in the Sibyl, was noticed, I have no doubt that if there were any thing in the Gospels which was not in the Sibyl, the Christians would put it there. There is undoubted evidence that our Gospel histories underwent repeated revisions. Those who would revise the Gospels, would not scruple to revise the Sibyls.

Dr. Cudworth, in his fine fourth chapter has observed, that these oracles, though pretended to be kept locked up in the time of Cicero, were apparently well known. If this were the case, the difficulty of interpolating them was greatly increased. If the acrostic which we have were not the one alluded to by Cicero, I, again, beg those who deny it, to tell me to what the acrostic could possibly allude. It evidently alluded to the good being whose name was placed at the head of the epitaph on the youth of Larissa, who was not a hero as the learned and respectable Christian advocate of Cambridge, Mr. Hughes,¹ has expounded it. The circumstance noticed by Clarke, that it is on all the monumental inscriptions of Spon, shews that Clarke is right, and that the learned Cantab. is mistaken.

I beg my reader to recollect that if he expect ancient secrets of the kind here described—secrets guarded by the initiated with the greatest care and most solemn oaths, to be proved like a proposition of Euclid, he will expect what is very unreasonable, and what he will never find—secrets, too, endeavoured to be concealed by our modern priests. A probability, an approximation to a demonstration of the truth, is all that can be expected. Under all these circumstances, I cannot doubt that the acrostic which we have, was actually the acrostic referred to by Cicero, and that it meant $I\text{H}\Sigma\text{ XPH}\Sigma\text{TOS}$ the benignant Genius or new incarnation of Bacchus, or Buddha, or Divine Wisdom, the Protogonos of God, or $\Theta\text{EOY}\ \text{YIO}\Sigma\ \Sigma\Omega\text{THP}$. Although Cicero, in the passage I have quoted, does not give us the words of the acrostic, it is evident that it referred to some great person—but still it gave only a mystical name of him. In short, there is not the least evidence against either the genuineness of the book or of the passage.

How the Sibyls originally came to Rome it is difficult to say, for, to the story of their purchase, by Tarquin, I suppose no one now attends: but after they were burnt, in the time of Sylla, others were procured from Erythræa by ambassadors sent for the purpose, a fact which shews that they were well known to exist. Afterward, others were sought for by Augustus, whose measures Tacitus thus describes:² *Quæsitis Samo, Ilio, Erythræis, per Africam etiam et Siciliam et Italicas colonias carminibus Sibyllæ, datum Sacerdotibus negotium, quantum humanâ ope potuissent, vera discernere.* Here we see that these books were collected by Augustus from various places: of course the Erythræan from Erythræa, the Cumæan from Cuma, &c., &c.; and for several hundred years after his time, it may reasonably be believed, that their identity could not well be disputed. It is very certain that, though known to exist, they were not thrown open to the public, and I think it seems probable, that they were not published till the Christians got possession of them, and, for their purposes, published them, though they were quoted to support the tyranny of Augustus, and the attempted tyranny of others before him.

It is very certain that Scipio and Sylla both founded their claims to power upon the prophecy of the Sibyls—that an illustrious person or a saviour would come on the opening of some unknown, but speedily-expected, new age. This is confirmed by Virgil, and he is allowed to be

¹ See his Travels in Greece, Vol. I. p. 360, Ed. 4to.

² Annal. Lib. vi.

named in an acrostic by Cicero. In the time of Cicero *Ἰησους Χρησ* or *Χρησους* was mystical, and meant, in Greek, the *good saviour* IE. Now a suspicion unavoidably arises, that *Jesus* (who was so called as we learn from Matthew, because that name meant *Saviour*) was also called *Chrēst* from this very oracle—*that* certainly being one of the sheet-anchors of the religion of Jesus in the earliest times. In the sense of divine incarnation, the appellation *Ἰησους Χρησους* applies to all the pretenders to power noticed above; and when Cicero was writing against the acrostic as a thing well known both to him, and to the persons to whom he was addressing himself, it was not a necessary consequence that he should recite the words of it. Almost every particular in the life of Christ as detailed in our Gospels, is to be found in the Sibyls, so that it can scarcely be doubted that the Sibyls were copied from the Gospel histories, or the Gospel histories from them. It is also very certain that there was an Erythræan Sibyl before the time of Christ, whatever it might contain. Where this Erythræa was, we shall presently try to discover.

No one can deny, that the Greek verses are of an inferior description: just such as might be expected from the Latin messengers sent by Augustus to translate them out of one foreign oriental language into another—neither of which, probably, they understood. Had he sent Virgil, it is likely that they would have been translated better. In order to produce the acrostic, the translator evidently worked with tied hands. The originals might be in Hebrew, or some other Eastern dialect, and might have the acrostic in that language in a word which might mean at once Saviour, Sun, and 608, (such for instance as *Mithra* in Hebrew,) and be translated at full length into Greek. We know acrostics were used by the Hebrews, from those used in the Psalms for the letters of the alphabet. Cicero could not quote the words of the Sibyls, without being guilty of a great breach of the law.

19. The following passage of Dupuis shews that the Erythræan Sibyl might easily write the acrostic, and that in the Greek and Latin languages, for it is in both, as the reader will find in Gallæus: that is to say, that the knowledge of such a person as *Χρησους* the benignant *Σωτηρ*, or in Hebrew-Greek, *ΙΗΣΟΥΣ*, might be easily known to her, previous to the date of the birth of the Jesus Christ of the Romish Church.

“ But the Virgin of the constellations, Isis, the mother of Orus, is really this famous Virgin
 “ mother of the God of light, as we have shewn in another part of this work, to which we refer the
 “ reader. We content ourselves here with saying, that the celestial virgin, of which the heaven
 “ offers us the picture at the equinox of the spring, with the celestial ark and the serpent, was
 “ effectually represented in all the ancient spheres with all the characters of that of the Apoca-
 “ lypse, that is to say, as a female newly laid in, and holding in her arms a young infant, which
 “ she suckles, and which has all the characters of Christ. Behold how the sphere of the Persians
 “ or of the Magi, in the first decan of the celestial Virgin is expressed: *Virgo pulchra¹ capillitio*
 “ *prolixo duas spicas manu gestans, sedens in siliquastro, educans puerulum, lactans et cibans eum.*
 “ *Caput Bestiæ:* and the sphere of the Barbarian adds, *pars caudæ Draconis.*” “ The Arabian
 “ Alboazar or Abulmazar goes farther. He gives, after the ancient traditions of the Persians, the
 “ real name of this infant. This is, according to him, he whom some persons call *Jesus* and
 “ others *Christ*, as we have seen in our chapter on the Christian religion, where we have reported
 “ this passage.”²

One finds here, as in the Apocalypse, an infant newly born, placed on an elevated throne, and in the arms of a female lately delivered, who nurses him. And this infant is the Jesus, the Christ, the God who ought, as the child of the Apocalypse, to reign over the world. Can more marks of

¹ Scaliger, not. ad Manil. p. 341

² Tome III. p. 46.

similarity be expected? This is the young infant, the image of the sun born at the winter solstice, at midnight, the 24th of December, of which the Persians celebrated the birth, as may be seen in the ancient calendars, which fix it to the same day—*Natalis Solis invicti*—and of which the effigy was placed by them in the first degrees of the sign which, by its ascension at midnight on the 24th of December, fixed the epoch of this birth. This was as the horoscope of the God *Light*, who commenced his career with the year, and who ought, in the spring, under the sign of the Lamb, to make the day triumph over the night, and to repair the mischief done to nature by the winter¹

That the work called the Apocalypse of St. John, just referred to, is of *very great antiquity* is clearly proved by the fact that it makes the year only 360 days long—the same length that it is made in the third book of Genesis, as Bailly has proved and Dr. Hales admitted. It assigns twelve hundred and sixty days to three years and a half.² The pious get over these matters by saying, that this was the prophetic year. It is impossible to help smiling at the credulity of these good people. No reason can be too absurd to be received by them.

Mosheim³ says, they ALL (*i. e.* ALL the fathers of the second century) attributed a double sense to the words of Scripture, the one obvious and literal, the other hidden and mysterious, which lay concealed, as it were, under the veil of the outward letter. The former they treated with the utmost neglect.

“God also hath made us able ministers of the New Testament; not of the letter, but of the spirit: for the letter killeth, but the spirit giveth life.”⁴

The learned Burnet says, in his *Archæologia*, p. 279, “*Duplex erat apud veteres, maxime orientalis, theologiam et philosophiam tradendi modus δημωδης, και απορρητος: atque duplici hoc stylo, in rebus naturalibus explicandis, uti mihi videtur Scriptura sacra: quandoque ad occultiorem veritatem.*” Clemens Alexandrinus and Origen, the most learned of the Christian fathers, are much censured by the fashionables among the moderns for attributing a mystical sense to the Scriptures; but it accidentally drops from Eusebius, that he, probably in secret, held the same opinion: he observes, *κατα τινας απορρητους λογους Μωσεως, secundum arcanos sensus Mosis.*⁵

Origen, against Celsus, distinctly admits,⁶ that there are *Arcana imperii* in the Christian religion, which are not fit to be entrusted to the vulgar. He excuses it by saying, that there are the same in philosophy. Now I maintain, that this is evidence of the fact which cannot be impeached; for he admits it with obvious unwillingness. And I have a right to ask, what were these arcana? It will not be sufficient to say, that they were only certain arcana concealed from catechumens: before I conclude, I shall shew that these were but a very small part of what constituted the mysteries of Christianity. Whatever fanciful meanings Origen might apply to the sacred books, it is very certain he would not publish in writings what he confessed to be the arcana. To publish these would be to confess his own infamy; therefore, whatever he might pretend, his allegories were not the esoteric doctrines. I think I am justified in saying that, at least, part of these arcana were the doctrines connected with the millenium and the renewal of the cycles, and the secrets contained in the favourite Sibyls. Good God! if all the authorities which I have produced, not only of learned *moderns* but of learned *ancients*, the chief persons of the religions, joined to the clear words of Jesus in the Gospels, will not prove that a *mystery* was concealed, what can be expected to do it? And surely, if there were such mystery, I have a

right to endeavour to find it out: and I am certain that in great part, at least, I have found it out.

20. Bishop Horsley has some observations upon the Sibylline oracles, which are deserving of notice. He observes, that no *quotations* are to be found from these books in any of the Heathen authors, because to quote them was a capital offence. This seems a satisfactory reason why the acrostic was alluded to by Cicero, and no quotation of it made. But it is no reason to such of the Christians as sought the honour of martyrdom.

On this subject, it is said in a note of the Bishop's book, "It is remarkable, however, that Celsus charged the Christians of his time with interpolating the Sibylline books. Origen challenges him to support the accusation by specific instances of the fraud, and insinuates that the most ancient copies of those books had the passages which Celsus esteemed insertions of the Christians."¹

There seems to be something very curious respecting a pretended debate between Celsus and Origen, in which I think we may find a little uncommonly well-managed priestcraft in Lardner and his coadjutors. The reader will please to observe, that it was the object of Lardner to *run down* the oracles, as it was the object of Origen to support them; and therefore he really wished to prove this famous Christian Apologist in the wrong; and, in so doing, to take the merit of candour in deciding against the Christian in favour of the Pagan—hoping that his secret reason would not be perceived. He therefore says, that Origen's answer to Celsus is not satisfactory. Now how stands the question? Celsus says, the oracles are interpolated, Origen replies that the passages in dispute are in all the copies, and that Celsus ought to have produced copies in which the alleged interpolations are not found. Now, I say this is a fair and satisfactory answer of Origen's. For, though Celsus was dead when Origen wrote, yet the answer must have been meant for the followers of Celsus, who could have answered Origen as easily as Celsus could have done, if he had been alive, by saying in what places the copies not interpolated were. And if they had not the passages called interpolated, they could at once say, Look, for instance, to the copy in the temple—which was in the custody of the friends of Celsus. Origen's answer is a challenge to produce it, or any copies not interpolated; and I say it is satisfactory, according to the received laws of modern biblical criticism. Origen could not be expected to produce copies, which he said, and his argument required him to say, did not exist; that is, copies wanting the passages. Lardner allows Origen to fail in the argument, (knowing that he did not fail according to the laws of biblical criticism,) to serve his own purpose, which was not an honest one. He used an economical argument.

In the time of Origen the manuscript of the oracles must have been in the temple under the statue of the God, and in the keeping of the Pagan high-priest, where it was totally impossible for the Christians to get access to it. And yet it seems, according to Justin, that this manuscript contained every thing which had been done by Jesus Christ. If we admit that the present copy is all corrupt, yet we must allow that the real Sibyl contained the same in substance as the one we have, at least if we can believe Justin.

The Bishop has observed, that it is to the Cumæan Sibyl that Virgil refers for the prediction, that a great person would appear. Now this is true, and it is very remarkable, that this shews a duplication of the prophecy, because it is the Erythræan Sibyl in which we have the acrostic. This proves that we have them only in a mutilated state, as well as a corrupted one, as is evident enough: but this cannot apply to the passages relating, as Justin says, to Jesus Christ, because they must have been in the copy in the temple which was not destroyed till after Justin's time.

¹ Contra Celsum, pp. 368, 369, E.

The Bishop repeatedly observes, that the style of the prophecy is exactly that of the Jewish prophets.¹ This justifies me in what I have said about Isaiah. He says, "The sum of the character is the same in both: in its nature unequivocal, and such as even in the general outline could not possibly belong to different persons in the same age." Before this, in p. 17, he has shewn from dates, that this use of the prophecy by Virgil, in foretelling a child to be born, (how like Isaiah's!) *cannot by any possibility have been meant at that time for Julius Cæsar or for any child of Pollio's*. It shews that it was of the same nature as the prophecy of Isaiah. But if we recollect that we have found all the Gentile rites and ceremonies, and many of their most recondite doctrines, with the Jews, it is not very surprising that what may be called their mythologic prophecies should be found with them also. When the *Interpretatio novi Sæculi*, Virgil's fourth Eclogue, was written (U. C. 714), Nimrod has observed, that Octavius had not laid open claim² to the supreme power, but I think his family always affected it. Nimrod says³ he believes, "that the conduct of Octavius flowed from the same superstition, as the poem which Virgil wrote the same year." This I think to be correct, and that he was believed to be the presiding Genius of the *ninth* age, as Juvenal properly marked it. The expectation of the new Iliums, new Argonauts, &c., evidently shews a knowledge of the system. It is much the fashion to abuse Virgil for baseness and servility, and he may have been both base and servile, but I think it very likely that he really believed that Augustus was the promised person. I shall, however, discuss this matter more by and by, when I examine the characters of the first two Cæsars.

The *ultima Cumæi venit jam carminis ætas* of Virgil, exactly agrees with the doctrine of Juvenal, for Virgil announces, that *the end* of the age sung of or celebrated by the Lady of Cuma had arrived. He says, "The last age (or time) of the Cumæan verse has now arrived." The Cumæan Sibyl might have sung of the *eighth* age, the Erythræan of the *ninth*; but both, of the advent of an expected Saviour,—new Iliums, new Argonauts, &c.: and, in the expression of Virgil, if I rightly understand it, an equivoque is included. It is usually construed to mean, that the Cumæan Sibyl sung of the last or finishing age: but it may, and no doubt did, mean also, the last end of the cycle or age celebrated in the verses of Cuma; but this did not necessarily mean the last of all ages, past and future. But it is not Cicero only who recognizes the acrostic, for I learn from Floyer in his Sibyls,³ (who, however foolish, is a very useful writer for authors referred to,) that the acrostic was noticed by Dionysius of Halicarnassus, who lived more than thirty years before Christ: and by Varro, who lived more than a hundred and twenty: and, what is very important, they both admit that there were disputes about the acrostics in their day,—some persons maintaining that they were forgeries,⁴ others the contrary. But the disputes prove the existence of the acrostic. The disputes are what we might expect: the followers of Scylla would maintain, that *he* was the *benignant Saviour*; the contrary party, that the acrostic was a forgery: for, it may be observed, that the words *Ἰησους Χρησος* or *Χρησος* are not necessarily *a proper name*. But if they constitute an honorific solar title, they would be circumstanced exactly as the name of Cyrus was—a solar title adopted by a man—and thus it might be given to Jesus Christ, or to any one else.

I now conclude what I have to say of the Sibyls, but it has naturally brought me to the consideration of Cæsar, who, I shall shew, was a *ninth* Avatar. But before I proceed to the proof, I shall, in the next chapter, discuss many preparatory matters.

¹ Page 22.² Vol. III. p. 464.³ P. 463.⁴ Pref. p. xx.

CHAPTER II.

Χρησ, CHRES.—INDIANS IN THRACE.—COLIDA.—CERES, Χρησ.—SUBJECT CONTINUED.—HERALD, KERUX.—CHALDEANS WHERE FROM.—GOSEN.—ERYTHRÆA, DIU, DIS.—COLLIDA OF SOUTH INDIA.—INDIANS IN THRACE.—RITTER.—MEANING OF THE WORD Χρυσος.—CHERSONESUS.—MYTHOS IN AFRICA, MARCUS.—GAZA-MERE.—BACCHUS.

1. In the first chapter of Book VII., on the Ionians, it was observed, that the city of Amphipolis, near the Strymon in Macedonia, was called by the names of Chryso-polis and Orpheus. Now I think this Chrysopolis is the same as Χρησος or Χρησος-πολις, and we have here the city of the Χρησος or *good Genius*, the Messiah Cyrus. We see here the Χρησος or Χρησος converted into the Χρισος or Χρισος.

In Polydore Virgil¹ is the following passage: *Alii demum sine conjugibus degere, ut quidam Thraces, qui CTISTÆ, id est, creatores vocantur: et Esseni, tertium apud Judæos philosophorum genus.* The following is the translation of Thomas Langley.² “Some people lived single, as certain nations called CRISTE and Esseni among the Hebrews, which did abhor the calamities and trouble in marriage.” This shews that the Ctistæ is an error of the press and ought to be Cristæ: and here we have probably the Christian monks in Thrace, ancestors of the monks of mount Athos, long before the time of Christ.

If we turn to Scapula we shall find that *χρησις* and *χρησις* have precisely the same signification, and are convertible terms. In short, it is evident that they are used indiscriminately for one another. It is not to be supposed that in the very early times, perhaps before the invention of letters, when the names of places first took their rise, the same strictness in the pronunciation, or at first, after the invention of letters, the same strictness in the writing of them, took place, as was observed by the Greeks when they became, in regard to their language, the most fastidious people in the world. It has been shewn that the Tau in the ancient languages was constantly written by a cross. For reasons which will appear hereafter, I think the root of the *χρησ* has been ΤΡΣ-ΧΡΣ. It was the constant practice of the Greeks to soften the harsh sounds of their language. Thus Pelasgos became Pelagos, Casmillos Camillos, Nesta Nessa, Cristos Crissos; where a strong consonant comes after the σ, it is often dropped. *Αγνωστος* became ignotus, the island of *Χρησος* *Χρητος*, the country of Crestonia had its capital *Crisa* and its port *Crysos*. In the Eastern languages we find *Hindo-stan*, *Chusi-stan*, *Turque-stan*. In the West, where the Greek prevailed, we have *Mauritania*, *Aquitania*, *Bri-tania*. We can scarcely doubt that the *stan* and *tan* are the same. We have the town of *Cressa* in the *tan* or *stan* of *Cres*.

Cortona in Tuscany was formerly Croton,³ from Croston, Croton; Tyrseni, Tyrrheni; Hetrusci, Hetrurii; Crete, Crete. The identity of the Cretans and the Cressæans is proved by their traditions, that the latter came from Crete.⁴ The same effect is found in other languages; for instance, in the English, *Fasten*, *Fassen*; *Whitsunday*, *Wissunday*; *Christening*, *Chrissening*. With the Chaldeans the Sigma and Tau were convertible, as in *Tur* and *Sur*, and in Assyria called *Aturia*, as Dion Cassius has observed.⁵ I suspect it was from the indiscriminate use of these two letters that

⁵ Apud Drummond, Orig. Vol. I. p. 152.

at last the sigmatau arose. The S was not only in Chaldaic and Syriac, but also in Greek so frequently changed into the T, that Lucian composed a dialogue upon it.¹ In the Latin language, in old manuscripts, the c and the t are often written indiscriminately; as, for instance, *initiale* with a c. From this, I think, came the French ç, which is really in figure nothing but the sigmatau of the Greeks.² But though I have met with an assertion that the sigma and the sigmatau were used indiscriminately by early Greeks, I rather believe the change was from *χρησος* to *χρησος*, and *χρισος* to *χρισος*, conformably to the practice of softening, similar to that of Casmillos to Camillos, of Nestos to Nessos, &c. The sigma has something very particular about it; it is neither a mute, liquid, nor aspirate; therefore it has been called *solitarium*. It partakes something of the sound of the *Theta*, and, accordingly, we find that it was frequently employed by the Lacedæmonians for that aspirate. Thus Aristoph. *Lysistr.* 1302, *Ἀπολλω σιον*—1303, *Ἀσαναν*.³ This, I think, in part accounts for the indiscriminate use of the Sigma and the Tau, and the rise of the Sigmatau.

Col. Van Kennedy⁴ says, “As long, therefore, as the etymologist confines his identifications of “words to those only which agree in sound and meaning, he proceeds on the surest grounds.” Now where I cannot proceed on sound and meaning, I have proceeded on identity of letters and meaning. I have shewn that the letters are identical, or are those letters which, in the use of the alphabets, have actually, in each case, been exchanged: as C for G, as Camel for Gamel, H for Ch, or Heth for He, &c., &c.—the latter example evidently a corruption, and the former, the third letter in each alphabet—identified by its position, the third, and its power of notation, 3.

2. I have already proved that Thrace was peopled by a colony from North India; and, that the *Χρησος* or Cristna or holy person appertaining to the latter country was crucified. From this, I think, there can be no doubt that on that account it was accounted *χρησης* in its sense of a *prophet* or an *oracular* or *benignant* person. It was a holy land; in every thing as far as possible an imitation of a holy land in India. In some maps it is written Grestonia, and a little to the North the Greæi are placed, and in the Peninsula of Mount Athos is Crossæa, often written Cryssæa.⁵ Jesus was sometimes called Chrostus, that is, Chrost or Crost, and the district noticed above called Crossæa, was probably Crost-ia; both evidently corruptions. In the country where the sacred Strymon or *Palestinus* or Ioneus runs, there is a Doab or Mesopotamia, formed by the Strymon, or more largely by the Nessus, and the Haliacmon or Ioni-cora; it is called Sintica, and by Ptolemy Sindus, which is Sinde, a corruption of the Sinde or country of Indus of Asia. It had also another most important name which I take to be its first name—Crestona or Crestonia,⁶ that is, Creston-ia, which means the country of Creston or the good Genius or Crestus. By D’Anville it was called Grestonia, and its capital Cryssa. My reader will recollect what I have said of Cristna having his name from the idea of good Genius. This Crestonia is a very sacred district; in it is the town called Chrysopolis or, as I have before shewn, Chrystopolis, *i. e.* Chrystos-polis. This town was also called Eion or Adon, and Iamboli or Emboli, the same name as the town of Emboli-ma on the Indus, and Ioni-keni, and Orpheus,⁷ Or-phi, the voice of Aur, or of the oracle of Orus and Iona, and Amphi-polis, or city of Amphi or Omphi, or the OM, or the voice or oracle of OM. The district around it was called Edon or *Ἡδωνίδα*, the same as the Garden of Eden; and, as I have just said, the country in which it stands is called Crestonia⁸ and Sintica. In this district stands a town called Heraclea Sintica.⁹ There is also adjoining to the country of Crestonia, a Bothæa,

⁸ Rennell.

⁹ D’Anville.

that is Buddhæa. I have before noticed that all the monumental inscriptions found by Spon in this district, called Larissa Pelasgica, had, at the top of them, the mystic word $\chi\rho\eta\sigma\omicron\varsigma$, and at the bottom the equally mystic word $\text{H}\rho\omega\varsigma$. This was precisely similar to the practice of the Romans in placing the letters D. M. at the head of their sepulchral monuments. This was evidently a country sacred to the God of Delphi, the *Ie* or *Ii* or Jah of the Hebrews, which is the name we find used for the God of the Hindoos, either by itself, or compounded with some other word.

The whole country of Crestonia may be correctly called a Doab or Mesopotamia, as I have just said, formed on the West by the Axius or Oxus, or more largely by the Haliacmon, now Ionicora, and on the East by the *Nessus*, on which stands the city of Nyssus, and Nico-polis, which shew the real name of the river. These rivers, noticed by me in Book IX. Ch. V. Sect. 8, flow from a chain of mountains called Bactriana or Balk¹ or Balkan, and through them is a pass called Chumla, the very names of the mountains, and a pass through them, on the North of India, leading to the country where the above-named places are found. In this Mesopotamia of Greece are Mounts PAN-gæus and BAL-beus and TRI-CALA, all Indian names. In Mount Bal-beus was the town before noticed called Heraclea Sintica² (i. e. the Indian Heraclea). The promontory on which Byzantium stood was called Cryso-ceras; and the present Scutari, opposite to it, was called Chryso-polis. The circumstance of the Chryso-polis being in the district of Crestonia, proves what I have before said to be true, that Chrysopolis ought to be Chrēstopolis, and the letters i and y ought to be the η; and, that they were not sacred to Gold or called from Gold, but that they were sacred to the good Genius, or called from the good Genius, and that, therefore, originally the name was Chrēstopolis. It was, probably, in reference to this superstition that Constantine selected this place for his city.

The tablet on which is the inscription with the $\chi\rho\eta\sigma\omicron\varsigma$ and $\text{HP}\Omega\Sigma$, was found by Dr. Clarke in a place where I should expect to find it; at Delphi, in the temple of the God called IE.³ Under Parnassus, in a Gymnasium, where a monastery called Pana-ja (a name sufficiently Oriental—Hindoo I should think) now stands; adjoining to the Castalian fountain which flowed by the ruins of CRISSA, probably the town called Crestona, into the Crissæan Bay, i. e. Cresta and Crestiæ bay. Dr. Clarke has observed what I should have expected to find, that the foundations of the ruins at Delphi are Cyclopæan. The spelling of the $\chi\rho\eta\sigma\omicron\varsigma$ on the Tablet, and of the district Crestonia, clearly prove that the word Crissæan and Crista are the same.

In Dr. Clarke's map, Delphi, or a place close to it, is called Crissa; and an ancient scholiast upon Pindar affirms, that under the name of Crissa, the city of Delphi was designated. This is a most important fact, but it is nothing but what other circumstances would lead us to expect.⁴ I think I may assume that the $\chi\rho\eta\sigma\omicron\varsigma$ on the tomb of the youth of Larissa was the name of Apollo: but we have his priest called Chryses, not Chrystes. In Guzerat or Syra-strene there are a place called Iuna-stan and a district called Larice. In Thrace there were a town called Iona, and a place called Larissa, names evidently the same. In the Indian Larice the Palli were located, and there is a town called Palli-stana. Not far from the part of Thrace above-named were situated the

¹ It cannot be said that the Turks have given the name of Balk and Chumla to the places in Mount Hæmus, in remembrance of the places which they left in their own country, because they never possessed the Eastern places of this name. Their residence was beyond the mountains to the North.

² Heraclea, in Lat. $39\frac{1}{2}$, Long. $49\frac{3}{4}$, the Turks now call *Erekli*. (See D'Anville.) Another town in Long. $44\frac{3}{4}$, Lat. about $40\frac{3}{4}$, is called Heraclitza. Heraclea Sintica is now Seræ, or qu. Tricala?

³ We must not forget that all orthodox persons maintain that Jesus Christ was the Jehovah incarnated; that is, the IE incarnated, whom they call Jah.

⁴ Travels in Greece, Ch. vi. p. 183, 4to.

Palli or Pallestini; and the Strymon was called Pallestinos, and near it was Larissa. In Guzerat is a mount, a place called Satrun-ja. Here, as I have before remarked, is the Saturn of the Latins and Greeks. Not far from the Strymon is the promontory of Mount Athos, which is the very picture of Guzerat, and on each is a town of Diu or Dium, and near the latter an island of Diu, and both are sacred isles or districts. Athos is the Egyptian Goddess Athor¹ *the Mother*, and close to Guzerat is a river, called anciently Mais, now Myie, or Maia, or Maria. And what marks the similarity more between the Sinde or Indus of Thrace, and the Sinde or Indus of the East, and indeed puts identity out of doubt, is, that Herodotus informs us that, in his time, like the Indian wives now, the Thracian wives were sacrificed on the death of their husbands, and that it was a point of contest among the wives which should have the privilege. This I think completes the picture. The Thracians of rank were generally burnt after their death, and their ashes put in urns and buried in tumuli. This practice is noticed by Solinus² and Herodotus.³ Stobæus,⁴ who cites Herodotus, says, that the case of the Thracian women was exactly parallel with that of the wives in India, for they were burnt with their husbands. There is also a passage of *Mela*⁵ which I think can mean nothing else; but the words *fatum jacentis*, used by him, are of doubtful import.⁶ The Indian practice, I believe, was known to Diodorus, Cicero, Propertius, Strabo, and Plutarch.⁷ The Jupiter Patröos at Larissa, (*Ζεὺς Πατρῶος* of Pausanias,) was represented with three eyes: this is evidently Indian.

In the Arabic language of the Koran *Jesus Christ* is called Ischa. From this has come the word Larice or Larissa. The word Lar is in fact Lord—a word I shall explain hereafter. The whole name has arisen from the *regimine* style of the Hebrew, to which in fact the names of almost all cities and proper names are to be attributed. Larissa was the country of the Lar-ischa the Lord Ischa, or the Saviour Lord, from the Hebrew *yw' iso*, *to save*. Thus it became the country called Lar-ischa. We only know the names of most places from the sacred books of the respective countries, and thus we only know their sacred or mythic names. There were no books before the time of Herodotus, which were not merely *mythic*, although called *historical*. And as there was an universal mythos, we find the universal mythos every where shewing itself in the names of places. I do not remember one of the Gods of the Western world, who had not the title of *Saviour*, as *Ζεὺς, Σωτήρ*. In the same way we find most of the Gods of India to have the word *iswara* or *iswati* attached to their names; for instance, Sara-iswati, Buddhiswara,⁸ which our Indian scholars tell us, means LORD, and, when applied to the female Sarah, a mere title of honour, as *Lady*. This, as I have previously remarked, is nothing but the Hebrew and Greek word for Saviour, *yw' iso* and *ζωω to save*, with a local, an Indian, termination.

I think the words Venus and Cupid were often used for the same idea, and also the Indian Cama, and the word Ischa the wife of Abraham, and the Arabic name of Jesus. This almost identifies the benignus *Χρῆς*, with the saviour Isis. In the same way Kanyia was the name of the Indian Venus, but it was also the name of Cristna. From a passage in Burckhardt's Travels in Arabia⁹ I think the adoration of the mother and child, the latter called *Aysa*, must have prevailed in the temple of Mecca before the time of Mohamed. The ancient name of the temple was Beitullah, *house of God*.¹⁰ Solis et Lunæ nomina in sacrâ literali Brahminicâ linguâ omnia sunt generis masculini. Bartholomeus¹¹ says, Chandre seu Soma, Luna Brahmanibus masculini generis.¹²

¹ Drummond, Punic Inscrip.² Cap. xv.³ Lib. v. p. 183, ed. Steph.⁴ Cap. cxx. p. 521.⁵ Lib. ii. Cap. ii.⁶ From the very valuable collection of most learned manuscript treatises of the late Mr. Moyle, now in the possession of Sir J. Copley, of Spotsborough, Bart, his descendant, to which I have before referred.⁷ I quote these names from memory.⁸ Tod, p. 519.⁹ P. 164, 4to.¹⁰ Ib. p. 165.¹¹ Syst. Brach. p. 2.¹² Ib. p. 7.

Neanthes Cyzicenus writing concerning the Macedonian priests says, they invoke $B\epsilon\delta\upsilon$ to be propitious to their children.¹ This $B\epsilon\delta\upsilon$ is Buddha.

I have just now noticed a town called Heraclea: this leads me to repeat an observation on the termination, by the word *cula*. We have Jani-*cula* or the *cula* of Janus; we have Hera-culas without end in the West; and we have the Hera-culas on the coast of Malabar, in India, where we have also Igni-culas, and Tri-calas or Tri-culas. I have in another place derived the word Hercules from *Heri* the saviour and *clo*—the Chaldee $\gamma\lambda\kappa$ *clo*: κ *k* final=500, λ *l*=30, γ *o*=70=600. Then Mount Janicula would be, the mount of the cycle sacred to Janus; Igni or Agni-cula, the cycle of the Saviour or of the Lamb, (as I have shewn was the meaning of the Sanscrit word Agni in the Yajna sacrifice,) or of Fire, or the sacred Sol, invictus, the Saviour: and Tri-clo, or the cycle sacred to the Trimurti or Trinity. If this is accused of being very mystical, I reply, It is not more mystical than the increase and decrease of Jesus and John at the equinoxes and solstices; or than the baptism by fire and the Holy Ghost—all parts of the same mythos.

3. Mr. Bryant shews that the Gymnosophistæ Æthiopum are mentioned by Hieronymus,² and that they extended from the INDUS to the GANGES under the name of Ethiopians and ERYTH-RÆANS. He adds, they resided, according to Arrian, below Carmania, in the mouth of the great river, near the island Crocale.³

Again,⁴ he says, “ Arrian, Hist. Indic. p. 336, Oras tenent ab INDO ad GANGEM Palibothri: à Gange ad COLIDA (or Colchida) atræ gentes, et quodam modo Æthiopes. Pomp. Mela. Lib. iii. Cap. vii. They worshiped Zeus Ombrios. Strabo, Lib. xv. p. 1046. He mentions THE PROMONTORY TAMUS, and the island Chruse. Tamus was the name of the chief Egyptian Deity: the same as Thamuz of Syria.”

The words in parenthesis (or Colchida) are Mr. Bryant's.

Here we have the Buddhists or Gymnosophists, in the *tenent oras, they hold the coast*, and from the Indus to the Ganges. This clearly points out the Guzerat of Syrastrène, or Palli-tana. Here we have also the island Cro-CALE and the island CHRUSE. The termination of the first is almost the same as the Agni-cula, and Heri-cula, whom we found on the coast of Malabar, and the Jani-cula of Rome, of the mount which had the nomen Janicula in Saturn-ia, near Palli-tana, both in Italy and in India; and, in the *Zeus OM-brios* of India, we have the OM-bri of Italy.

Pliny⁵ says, without the mouth of the river Indus two other islands there be called Chryse and Agyræ. These people have the same name as the Greæi in Mount Athos named in Smith's Classical Atlas.⁶ Again he says, that there is a country of the Cryseans, whom he places on the East of the upper part of the Indus. The Cryseans here mentioned, are positively nothing but Crestians or Christians. The country on the North-east of the Sinus Thermaicus is called Crossæa and Chalcidiæ, and the point, the peninsula, is called Pallene, prius Phlegra. I think we have, at last, found the famous St. Thomas of the Portuguese in the promontory Tamus: and when I consider

¹ Georgius, Alp. Tib. p. 127.

² Lib. iv. in Ezekiel, Cap. xiii.

³ But the Gymnosophistæ Æthiopum were also found in the Isle of Meroe (Maria or Meru, or perhaps the Mere of the Ethiopians) above Egypt.

⁴ Vol. III. p. 211.

⁵ He also says, that Rome had a secret name, and that where Rome now standeth was formerly a city called Saturnia, which is the same as the city of Surastrene, called Satrun-ja. Rome was, correctly speaking, the Saturnian kingdom, its capital being placed on Mons Saturnia, afterward called Mons Capitolina. Niebuhr, Vol. I. p. 226. When I find this city of Roma in Saturnia in Italy, and the Saturnia of Rama in India, followed by the two histories of a black infant God, born of an immaculate conception, crucified and raised from the dead, and both bearing the same name—Crist—it is impossible not to believe in the identity of the mythoses.

⁶ Chap. xxi.

many other very extraordinary circumstances which have been detailed in this work, and contemplate the ignorant mistakes of the Greeks, I am compelled to suspect that the Cro-cale and the Chruse are the same, and near the island of Diu, the same as the Diu of Mount Athos; and that they ought to be represented by the Greek word χρῆς or chres-tos a Chrys-opolis. The word χρῆς has the same meaning as the word Div. And I think the island of Cruse is the same as the Diu of Guzerat and of the Diu of Mount Athos and Crestonia of Thrace. I know that I am taking a great liberty with the words Cro and Crus, but I only state my own feeling that I have a *suspicion*. Some persons will feel much where others feel little or nothing. I merely state facts and leave them to the reader. The word Crus changed from χρῆς, is by no means so great a corruption as many which we have; and when I reconsider what has been said respecting the promontory of Taurus, the black Cristna in India, the black Crist or Crest at Loretto, &c., &c., in Italy, I cannot help concluding that the χρῆσις of Greece may increase the number of Mr. Van Kennedy's Sanscrit words in Greek from 300 to 301. In Siam, where we have found a mount Sian and its capital called Judia, Ptolemy gives us also a river called Fluv—Cresoana, that is, the river Creston. In some maps it is called only Soan.

The name of the Hindoo God Cristna is spelt in various ways, so that it is not in my power to discover which is the most proper; but Vallancey, in Ireland, and Sir W. Jones, have spelt it Creeshna, which Mr. Maurice says it ought to be. This has a strong tendency to identify it with the χρῆς of the West; indeed, it does identify it. I hope after Mr. Volney has been abused in very gross language by Mr. Maurice, for not calling him Creeshna, I shall not be turned upon and abused for calling him what these gentlemen say is his true name.

My reader will probably have anticipated an observation which I am going to make on the above; but whether to attribute it to premeditation or not, I do not know: we have in India a *Chrēs* or *good genius* who is a man crucified, and we have in Europe a man crucified who is the χρῆς or *good genius*. But, respecting the crucified saviours, more hereafter.

The learned German, Ritter, has observed, that Dodona is often written Bodona, from which he makes Buddha. Herodotus says, that Dodona was Ἀρχαιοτατων των εν Ἑλλησι χρῆσηριων. I believe the word χρῆσηριων can mean nothing but *holy places* or places of the χρῆσις, and this connects the Buddha and the χρῆς. Bodona or Dodona is said by Ritter to be placed in the country of Cestrina. This must be a corruption of Crest-ina. It is a change not greater than Crestona to Cortona. ☩☩ was called χρῆσηριον,¹ and was the monogram both of Christ and Jupiter Ammon. Thus we find the same χρῆσις in Egypt, Greece, and India.

The name of Sind or India was given to the Promontory, *absurdly* called peninsula, of India, by the Greeks, because it was the name of all the part with which they were originally acquainted; but its Sanscrit name was Bharata.² This is the Hebrew ברית *brit* יא *ia*, and means *pure* or *holy country* or *land*. It is derived from the Hebrew ברא *bra*, *creator*. Thus the country which Abraham left was called by his ancestors the Holy Land, and thus his successors, in like manner, gave the same name to their new residence—the *Holy Land*, which we call it to this day. Wars of Mahabarat mean the *wars of the great Creator*, in the Hebrew the *wars of the Lord*. ברא *bra*. Barat is the proper name; Maha means *magnus*, *great*.

Authors have found great difficulty in an expression of Herodotus's. Speaking of a people of Italy, he says, "The Crestoniatas (which some would read Cortoniatas) and the Placians, the remnants of that nation, although they speak one and the same language, are not intelligible to

¹ Apud Basnage, B. iii. Ch. xxiii., Scaliger in Euseb. Chron.

² Rennell, Mem. Introd. p. xx.

“those who live around them.”¹ Niebuhr thinks Creston meant Cortona.² This is probably correct, and serves to account for the Indian temples at Pæstum, with the unknown Linga and Yoni found there by Lieut.-Col. Tod, as well as for their Janus, Saturnia regna, &c., &c. All this tends to prove that the same people who came to Italy, also came to Thrace.

When the striking similarity of the doctrines of Pythagoras to those of the Christians is considered, it will not be thought surprising that the place in Italy where he founded his school was called Crotona, which, as appears above, some would read *χρησονα*. In the south point of Italy, the town which in our map is called Cortona is called Crotona.

In their invocations the Hindoos chaunt forth the cry Rhada Krishn ! Rhada Krishn ! and Col. Broughton says, this has a much more holy meaning than the name Kunya (*i. e.* Col. Tod's Kanya). I feel little doubt that the Rhada is the Latin Radius and Krishn the Greek *χρης*, *benignant*, and Hebrew *כרס hrs* the *solar fire*. Kun-ya or Kunieya is the Apollo Cunnus, the IE on the temple of Delphi; the word *Cun* having the same meaning as Rhadha³ —jointly an androgynous Deity. Col. Broughton says, Kan is one of the numerous appellations of Krishna. Again, Kunue, ee, or Kunya “*the beloved*.” Here is most clearly the Chaldee emphatic article.⁴ Vallancey⁵ has proved that the Indian *Eeswar* is the Irish *Aosfhear*, pronounced *Eesvear* and the Etruscan Esar: and that “*the Bramanick Kreeshna, an incarnation of the Deity, is the Irish Crisean, holy, pure;*” whence *Crisean a priest*. Here I think we have the origin of Cæsar, and Hesus of Gaul; and when I reflect on what has been shewn respecting the Crysos by Mr. Bryant, and the indiscriminate use of the σ and ς by early Greeks noticed before, I cannot help feeling that here is a strong confirmation of the identity of the Krishna of India and the *Χρησος* of Delphi.

We must not forget that the black Apollo of Delphi was called by the Hebrew word IE and also by the name Cunnus; that we, in a neighbouring country, found the people sacrificing their wives; that these people were called Sindi; that this black Apollo is called on the tomb of the Youth of Larissa *Χρησος*, and that we found a Chrys in Youdia of India. All these matters considered, I come to the belief that when the Brahmins perfected their Sanscrit, on the foundation of the old language of the country, they applied to the word Kris the meaning *black* or *dark blue*; but that its original meaning was *benignus, mitis*. In the Hebrew, the word *כרס hrs* or *כרש hrs* has the same meaning as *Δελφους*, which again brings us to to the Cun-ie-ya. Col. Broughton's assertion, that Kanya means *beloved*, looks very like the Greek *Ηρως*, on the tomb of the Youth of Larissa, in opposition to the *Χρης* at the top.⁶

4. In the CELSIC DRUIDS, Chap. V. Sect. XV., I have shewn that the Irish *Ceara*, the wife of Ceares, was the Goddess of Nature, and the same as *Ceres*. She had a daughter called *Porsaiibhean*, pronounced *Porsaivean*, the *Persephone* of the Greeks, and the Proserpine of the Romans. According to Schelling, *Ceres* is the Hebrew *כרש hrs* or *chrs*, and *Kersa* the Chaldæ *כרשא hrsa* or *chrsa*, from *כרש hrs*, *aravit, sata*. The meaning of this name was *præstigiatrix, mago, or fabricatrix*.⁷ The Maja of India was the same as the Maia of the Greeks, but she was the same as *Persephone*,⁸ and *Persephone* was *Ceres*, and *Ceres* was the mother of the Gods and Queen of

heaven. From the same source came the $\chi\rho\upsilon\sigma\omega\rho$ and Chrysaor of Sanchoniathon. Cres or $\kappa\rho\eta\varsigma$ or $\kappa\rho\eta\varsigma$ *hrs*, was the being to whom the astrologers came on the birth of Christ, the 25th of December, to make the solar offerings at the temple of Bethlehem or Ceres, where Adonis or Adonai was worshiped, as described in Book V. Chap. II. Sect. 3. Gen. Vallancey says, Creasean, Crisean, a priest. It is the Chaldæan $\kappa\rho\eta\varsigma$ (*hrs*in), *i. e.* Magus, supposed by the Orientalists to be derived from $\kappa\rho\eta\varsigma$ (*hrs*) Chris, siluit, whence $\kappa\rho\eta\varsigma$ (*hrs*a) Chrisha, incantator, magus, præstigiator. Syr. Chrasa, magus, incantator, magicam artem exercens: $\kappa\rho\eta\varsigma$ (*hrs*) Chris, apud magistros, mutus, vulgarissimè respicitur.¹ Krishen, one of the thousand names of God in the Hindostanee dialect.² Creas, Creasna, Cheres, Creeshna, Cur, Cores, and $\kappa\rho\rho\varsigma$ all mean the sun.³ Jupiter was called Chrysaoreus.⁴ Drummond says, " $\kappa\rho\eta\varsigma$ *hrs* may be sounded *choras*, *chros*, *chrus*. This word signifies faber, artifex, machinator."⁵ He shews that this was the Chrysor or Chrus-aor, of Sanchoniathon. Our *choras* descended by the regimine from the praise of $\kappa\rho\eta\varsigma$ *hrs*, or $\chi\rho\eta\varsigma$, called Lord or $\kappa\rho\rho\iota\varsigma$, and came to be our $\kappa\rho\rho\iota\epsilon$, $\epsilon\lambda\epsilon\eta\sigma\omicron\nu$, "Lord, have mercy upon us," which was, as Cudworth has proved, a part of the ancient Pagan Liturgy or Litany.⁶ In the *Lord, have mercy upon us*, the congregation joined in *choras*.

Volney says, "The Greeks used to express by X or the Spanish Iota, the aspirated Ha of the Orientals, who said Haris: in Hebrew $\kappa\rho\eta\varsigma$ (*hrs*) *heres* signifies the sun, but in Arabic the radical word means *to guard, to preserve*, and Haris *a preserver*."⁷ Again,⁸ "If Chris comes from *Harish* by a *chin*, it will signify *artificer*, an epithet belonging to the sun."⁹ One of the names of the Vulcan of Phœnicia, according to Sanchoniathon, was Chrysor: of this Bochart makes $\kappa\rho\eta\varsigma$ *hrs aur*, which he renders $\Pi\rho\rho\iota\tau\epsilon\chi\nu\iota\tau\eta\varsigma$, an artificer by fire. Here we have $\chi\rho\eta\varsigma$ or Chrēs. "The Chaldæan name of the sun is $\kappa\rho\eta\varsigma$ (*hrs*) Chris, hinc et Persis Sol dicitur $\kappa\rho\rho\varsigma$, teste Plutarcho;—hence $\kappa\rho\eta\varsigma$ (*hrs*) Ghir-he Chris, Heliopolis, *i. e.* Civitas Solis. "This seems to be the Chrysor or Cearas, or ($\kappa\rho\eta\varsigma$ *hrs aur*) of the Phœnicians."¹⁰ The name of Cyrus is $\kappa\rho\eta\varsigma$ *hrs*; from this comes the $\kappa\rho\rho\omega$ *to be*, of the Greeks, and the Core of Proserpine or Persephone. In the $\kappa\rho\eta\varsigma$ or $\kappa\rho\eta\varsigma$ *hrs* we have assuredly the persons Ceres, $\chi\rho\eta\varsigma$, Cyrus, and Core, or Proserpine, otherwise called Persephone, which latter is only Perse-phun, or $\phi\upsilon\nu=600$, or $\phi\eta\nu\nu=608$ —the Phenn or Phœnix of Persia¹¹—the cycle renewed every 600 years.

It is from the Ceres or $\chi\rho\eta\varsigma$, that the Christians got their custom of burning candles before their saints, and of carrying them in their processions. Ceres was called Tædifera.

Quos cum Tædifera nunc habet ille Dea.¹²

See Jurieu¹³ for many other proofs.

As we might expect, one of the sons of the *Yadu* of India was said to be *Croshta*, or *Croshtdeva*. Here we find the Christ as *Crost*, and the *Cras-devas* of Arrian: and here we see the mythos of

the $\chi\rho\eta\varsigma$, or $X\rho\eta\sigma\tau$, or Crest, most clearly proved to have been in existence long anterior to the Christian æra.¹ Christ was called Crost by the Ethiopians. In Book I. Chap. IV., I have shewn that the Ethiopians were a colony from India.

The Tetragrammaton of the Pythagoreans I have shewn, in my *CELTIC DRUIDS*, was the word יהוה *ieue*: on this account they had great reverence for the Quadrangle, and said it corresponded to Ceres. The reason of this was, because in the secret science the sacred four represented Jehovah, who was the Logos Incarnate, the $X\rho\eta\varsigma$. Ceres was the Deity androgynous, the Creator from whom abundance and all blessings flow.

The earth is called the nursing mother of all creatures, the Ceres. This was because the earth, like all other things, was an emanation from the Creator—was but a link in the chain of emanations proceeding from the highest to the lowest, or vice versâ. Thus the mysticism of Plato, noticed in B. I. Ch. II., may be reconciled. Thus the earth, in the sacred metaphorical language, was a Ceres; and all rivers were Adonises or Donis, or Sirs or Surs—*rivers of the sun*. They were, in fact, Cereses, for they were the nurses of the creatures living on the lands fertilized by them, and which, without them, would be arid wastes. I have a strong suspicion that every place had a *mystical* name for the priests', and a *common* name for the people's, use.²

When I consider the identity of the history of Cyrus with that of Cristna, and the mythological character of its date or birth, that he was the same as Adonis whose history was very similar to that of Persephone or Proserpine, who was also called by the same name as Cyrus, *Core*, in Hebrew כורש *curs*, I cannot help doubting his existence as a human being. He was a Messiah foretold by name, a solar appellation, to save the Jews; and he was most assuredly the presiding Genius of the *eighth* cycle, being born on the first year of it.

In the male and female $X\rho\eta\varsigma$, M. Cruzer³ might have found the Kiris or Kyris who came to Argos of Peloponnesus, and whom he shews to have been identical with Adonai or the Lord, or Adonis and Osiris, and afterward⁴ with Proserpine, called also⁵ Core. All these Cruzer shews to have been identical with a God called Æon,⁶ or the eternal Creator or Demiurge.⁷ I suppose I need not point out to my reader how all my system is here unconsciously confirmed by this learned German. And further, he has shewn them all to be identical with Oannes, Anandatus, Derceto, the Patares of Lycia, and the Hom or Omanus, called also Comœus;⁸ and again with an Autochtone called *Cresus*,⁹ the builder of the temple of Ephesus, and he with Semiramis, and Chersiphron;¹⁰ and again with Omphale, daughter of Jordanus, (this shews a river Don probably in Lydia,) who had a son called Crœsus¹¹ by Hercules, whose name was *Here* and *clo*;¹² *Here* being *Chore*, *Core*, or *Cere*, or *Ceres*; and again with Axiokersa, (another corruption of Ceres,) who was the same with De-meter; but Demeter was Bacchus, the Saviour, *as was also Ceres*.¹³ Thus Bacchus was the androgynous Saviour, IHΣ—and IHΣ is Jesus; and Jesus is

the Logos and the $\chi\rho\eta\varsigma$, an incarnation of divine wisdom, the $\epsilon\rho\omega\varsigma$ or $\eta\rho\omega\varsigma$, or divine Love. Thus we see how, as Ammonius Saccas taught, all the vulgar plurality of the Gentiles, of the East and West, melt at last into precisely the same trinity of the Indians, the Jews, and the Christians. In the explanation of these identifications, no doubt, partly consisted the Eleusinian mysteries.¹ In the above I am supported by the Scholiast of Apollonius Rhodius, who affirms, that Axierus was Ceres.²

5. I think there can be no doubt that from a corruption of the $\eta\rho\omega\varsigma$ *hrs* we have the *Cyrus*, the Messiah of Isaiah, whose history was copied from the history of Cristna, though the letters in the Hebrew do not exactly suit; and I think, also, that we have here the androgynous or male Ceres of the Greeks, to whose temple at Bethlehem the Magi came at the time of the birth of the new incarnation of divine love. Parkhurst says, $\eta\rho\omega\varsigma$ *hrs*, *the solar fire*. He also says, “ $\eta\rho\omega\varsigma$ *hrs*, Machinator. “From this root the Greeks had the name of their God $\epsilon\rho\omega\varsigma$ or $\eta\rho\omega\varsigma$, by which it is evident they “meant the material light, considered as possessed of the plastic or formative power.” Surely all these quotations, from men not having the slightest idea of my theory, places its truth beyond a doubt.

It is impossible to dip into the inexhaustible treasury of Creuzer, without seeing my theory confirmed. Could we but make out the whole, no doubt a beautiful system would shew itself in every part. Probably many Christians, from the indulgence of their prejudices and, I fear, from the bigotry and hatred instilled into their minds in youth by their priests, (who, as usual, will fear that some change of opinion may affect their emoluments,) will be much shocked to find their religion to be, at last, nothing but that which they have been accustomed to designate with every opprobrious epithet. But why should they object to the religion of the Gentiles being, *when uncorrupted*, the same as theirs? Are they not always at work endeavouring to make proselytes? Then I hope they will not be angry with me for at once bringing all the religions of antiquity, *stripped of their corruptions*, into their pale. I am, in fact, the greatest proselytist in the world. I proselyte those that have lived, those that live, and those that will live.

We have seen that the Thracians were Jews, Ioudi, and Orpheans, and Indians; that their wives sacrificed themselves on the death of their husbands. Orpheus charmed the beasts with his music, and the trees of Pieria came down to listen to him. He was accompanied by the nine Muses. Kanya of India or Cristna, or Crishna, or Creeshna, or $\chi\rho\eta\varsigma\nu\alpha$, charmed the beasts with *his* music, as Orpheus had done. He was accompanied by nine Gopys, each called Radha.³ All the same things are told of Apollo in the neighbouring Temple of Delphi or Kanya, or of the Grecian Apollo Cunnus—Kan-ia. The last syllable is the IE on the Delphic temple, $\eta\iota$ *ie* or Jah of the Jews, the Jah of the Sanscrit, and of Apollo or A-pol, or ηe $\epsilon\lambda\beta$ *e-bol*—the God Bol or Bal or Pal, of whom the shepherd kings of India, that is, the shepherds of Rajah-stan or Royal shepherds, Pallestini, were followers. Apollo had his nine muses; he was the God of Music, like Kanya, and he performed on the Lyre as Orpheus did, and as Kanya did on the same instrument, called Vina.⁴

Among the ancients nothing was guarded with greater care than their mysteries; and nothing is more difficult to account for, than the apparent ignorance of many of the great men who must have been initiated—such as Cicero. If they understood the mysteries why did they pretend ignorance, and also pretend at the same time to give an account, though not an explanation, of them? Was the meaning of them lost in the temples, the forms only remaining? I much suspect

¹ Creuzer, *Liv. v. Ch. iii. p. 315.*

² Nimrod, Vol. III. p. 258.

³ Vide Tod's *Hist. Raj.* and plate—Crishna on the flute.

⁴ See a figure of an ancient violin in Montfaucon.

the latter. Various moderns, such as Warburton, Gebelen, &c., have undertaken to explain them, but they have all failed. The obvious reason of this is, that the mysteries being only a part of a system, these gentlemen have all failed in proposing any thing like a satisfactory explanation. I think the mysteries were like masonry; indeed, we shall soon see it is highly probable that the Masons were a branch of the initiated—Masonry a branch of the art. The *Konx om pancha* of the Indians, and the burning of widows, found in so remarkable a manner at Eleusis, which was, in fact, in the Sintica, at once identify the western with the eastern devotees. Eusebius, like every other author, at the same time that he confesses his ignorance, tells us, that there were four ministers in the ceremonies. The *first, whose name must not be given*, represented the Demiourgos; (was this *Χρης*;) the second the Sun, the third the Moon, and the fourth Mercury. I think it is not difficult, from this incongruous nonsense, to perceive the First Cause, and the Trimurti. This is what we might naturally expect where we have found the *Konx om pax*. This was all celebrated at the temple of Ceres, at Eleusis, *i. e.* the Bit-lehem or house of Ceres, or Cyrus, or *Χρησνα*, which was situate not far from Delphi, or *Δελφους*, or the town of *Χρησα*. Among their officers one was called *Κηρυξ* or Ceryx, or Herald, and one of them a king. The former carried the Caduceus; and the rites of the infant Saviour *Æsculapius*, to be treated of in the next book, were there celebrated. I have no doubt that we have here the origin of our Herald's office, introduced into the West about the time of the Crusades, and of course supposed by our learned men, because they can trace it no further back, to have then first arisen in the world. But Gebelen¹ has shewn that it existed many centuries before.

6. The word *Κηρυξ* or Ceryx, the Herald, was derived from the Hebrew word *קִרְשׁ qrs*, and meant the cross or the caduceus of Mercury or of Buddha. The Herald or Ceryx, Littleton translates Caduceator, and from it Lardner derives the word *crux*. It is very curious to observe how every thing connected with a cross comes at last, when sought to the bottom, to be connected with Hermes, Mercury, or Buddha—the Taranis of the Druid oak. The caduceus was either a crucifix or a cross. I very much suspect that our coats of arms, and particularly our crests, came from the Crestian or Crêtian mythos. The ancients had their crests.² The figure carried on the shield or banner was the emblem of the *χρης* or good *dæmon*; therefore every people who adored the *χρης* or good *dæmon* would have a crest. From the first word *emblem*, or whatever word stood in the place of emblem, being in regimine, it came to have the name of crest. This style of the first language accounts for innumerable names, and in particular for the priests having the names of their Gods: for if it were said, the priest of Apollo, it would be exactly the same as to say, priest Apollo.

The Druids of Ireland carried in their hands the *Crux ansata*, called a key, or in their language *kire* or *cire*.³ This we must recollect was carried by the Gods or priests of Egypt, and is also found in a very remarkable manner in the hands of many of the bearded Druidical-looking figures, given by Mr. Hammer, either as figures of the Templars, or as emblematical figures used by them. I cannot help suspecting that this *cire* was closely connected with the *Cris* and *Ceres*. *קִצִיר qzir* *הַג hg* means *solemnitas messis*.⁴ One of the Apocryphal Gospels states, that when Jesus celebrated the last supper—his last *solemnitas messis*—he and his apostles sang a hymn, and performed a circular dance: and *הַג hg* has this meaning. I suspect also, that this *qzir* has a near relation to the word *Cæsar*. This key was what unlocked or opened the door of eternal and of human life. It was a *polis* or *pole* and a *tri-pole*. Ceres was often written for *wheat* or *bread*

¹ Vol. VIII. p. 220.

² See Book VIII. Chap. II. Sect. 1.

³ Vall. Coll. Vol. VIII. p. xlix. Pref. to No. XII.

⁴ *Ib.* p. 1.

“Sine Cerere, et Libero friget Venus.” The Solemnitas Messis is the offering of bread of the Romists. This is the meaning of the mass. In the Eleusinian mysteries, the day when they were completed was said to be, to the initiated, the day of regeneration and new birth.¹ See our baptismal service. The day when the initiation was finished was the day, to the initiated, of the Βαφεις Μητις—Bafomet, to be explained by and by.

The Temple at Eleusis had a very large dome, which was of great antiquity, long before the time usually allotted to the invention of the arch, with radiated stones.² Strabo and Vitruvius have given an account of this immense dome,³ said to have been built by Ictinus, about 430 years B. C. for the celebration of the mysteries; and Chrysostom has described the ceremonies of initiation to have taken place with great magnificence under it. In the procession, the votaries called out what Gebelen calls, in his French, *Khairé Déméter, Salut, Ceres*. In the *Khairé* of Eleusis may not the *heri* of India or the Cyrus be found? In the dome of the temple we have a duplicate of the Dome in the temple at Komulmar—described in Col. Tod’s book. I request my brother Masons of the *Royal Arch*, to place themselves in the middle of the new room at Freemason’s Tavern, when lighted up, and then to reflect upon all their ceremonies, on which, of course, I cannot enlarge, and I suspect they will find themselves both at Eleusis, and at Bit-lehem, and in India. Count de Gebelen says, Ceres signifies *creator*, and *creo to create*.⁴ “On voit dans Hesychius qu’en Grec Cérès s’appelloit Kyrus; ce peut-être le même mot.” En Hébreu *שרה hrs* signifie *faire*.⁵ Thus I am not singular in my idea of Ceres and Cyrus being the same: the difference of sex can be easily accounted for, from the known fact, that every God and Goddess was androgynous. Ceres was Demeter, but Bacchus was also Demeter; thus IHΣ or Bacchus was Ceres,⁶ It is a striking circumstance, that Ceres had the same name as Cæsar, viz. *Ισλω*.⁷ This seems to identify Cæsar, Ceres, and *Χρης*.

7. For the present I add no more respecting the Crest, but return to the Chaldees. In section 3 of this chapter, to which I beg to refer, Mr. Bryant has noticed a country of Colida. Here we have the original Chaldea, where was the Ur—Ur of the Chaldees.

Almost all writers respecting the Chaldeans have laboured under the mistaken idea, that they were identical with the Assyrians; hence they have used the words Assyrian and Chaldean as convertible terms. The error of this I have shewn in *THE CELTIC DRUIDS*, and I need not repeat it. There can be no doubt that many Assyrians might be Chaldeans, and vice versâ. But the Chaldeans, most assuredly, were a sect or order of some kind, totally independent of the Assyrian or Babylonian empire. They were no doubt numerous in Babylon, as they were afterward in Rome, but who would say that the Romans were Chaldeans, or the Chaldeans Romans? Ancient history shews traces of them in many places besides Babylon. Zoroaster was always said to have been their founder: but who was Zoroaster? I shall not discuss this question at present, but content myself with saying, I suspect that he was merely the supposed genius of a cycle. Seven Zoroasters are recorded by different historians.

⁵ Monde Prim. Vol. IV. p. 577.

⁶ לְכוּרֵשׁ *lkurs* לְמַשִּׁיחַו *lmsihu*, Isaiah xlv. 1; הַמְשִׁיחַ *e-msih* from מִשַׁח *msih*, unxit; מוֹשִׁיעַ *musio* from יָשַׁע *iso*, to save. Hence the female incarnations of the nine cycles were the nine muses of Apollo, and the nine wives, or Rhadiæ or Rays of Kanya.

⁷ Spanh. Observ. in Callim. p. 649; Jamieson’s Herm. Scyth. p. 137.

In the Colida or Colchida of Arrian, noticed by Mr. Bryant, I think we have the origin of the Culdees or Chaldees. They are in the district of Ur-ii or Ur-iana, where Abraham or the Brahmin came from. He came from Ur of the Cullidei, or Chaldees, or Culdees, or from Colida. This completes the proof of my system.

The country of Calida or Colida in North India, between the Burrampooter and the Indus, is the country of the holy Cali—Cali-di, *i. e.* dis or divus and Cali.

Cali is the Greek *καλος beautiful*. It is remarkable that, in the Celtic, the word *Cal* means *wise*:¹ whence comes a *calling* or *vocation*. When a person was called, he was deemed wise for the purpose for which he was called. The Roman meeting for the election of priests was called Calata Comitia. From this comes our Gala-day, *Whit-sunday*, when the Druids granted the orders or functions to priests.

I believe myself that the Ariana, said by Col. Van Kennedy² to be bounded by the Indus, was Uriana, which extended thus far; that *all* the Doab between the Ganges and Indus was Ariana and Ur-iana, and perhaps Ara-bia also. The word UR in the Indian language signifies also *country* or *town*³ —*Ἐρα* of Greece. Then, when it is said that Abraham came from “Ur of the Chaldees,” it may mean, that he came from the country of the Chaldees or from Colida, not from the fire of the Chaldees. The use here of the word Ur, without any word prefixed, having the meaning of town or country, is exactly like the use of the word Jordan, *the Jordan*. The persons translating did not know the meaning of the first words in each case. The words in the old Hebrew are never divided like ours—but all run together. Now I have no doubt that Bartholomæus is right: yet I think it was also the proper name of a country. As, if I be right, it will be merely a district of the country of Callida, it will make no material difference to the argument. The Hebrew regimine will account for this word meaning, both *country* and *fire*. It was the country of fire or Vesta; in the Hebrew style, *country fire*.

Ammianus Marcellinus, in the following passage, seems to imply that the Chaldees were eastward of Bactriana; this will take them to my Colida: “Cui scientiæ (Magiæ) sæculis priscis, multa ex Chaldæorum arcanis Bactrianus addidit Zoroastres: deinde Hystaspes rex, prudentissimus Darii pater, qui cum superioris Indiæ secreta fidentius penetraret, ad nemorosam quandam venerat solitudinem, cujus tranquillis silentiis præcelsa Brachmanorum ingenia potuntur,”⁴ &c. The whole passage evidently alludes to a Chaldea far Eastward of Assyria. We must remember that the name of the God of the Jews, Jah, IE, was the name of Apollo of Delphi. But the Oracle of Apollo, preserved by Porphyry,⁵ said, that the *Chaldeans* and Jews were the only people who honoured a God produced by himself, *αυτογενεθλον*. Now Abraham was a Chaldean, for he came from Ur of the country of the Chaldees. And, assuredly, they were the Chaldees of Abraham whom the Oracle meant, whose God had the same name as the God of the Oracle, not the Moloch-adoring Assyrians. The coupling of the Chaldeans and Jews was natural enough, if they were originally from the same country. The place here found for the Chaldeans fully justifies Jeremiah’s assertion, that they came from the ends of the North and the sides of the earth.⁶ *i. e.* from a very distant country. The fact of the Colchians having come from India is strongly supported by Tzetzes, who says, *Οἱ δὲ Κολχοί, ΙΝΔΙΚΟΙ Σκυθοί εισιν.*⁷ Hesychius says, *Χαλδαίοι, γένος μαγῶν πάντα γινωσκόντων.*⁸

⁸ Lex. voce Χαλδαίοι.

But there was another Colida at the south end of the Peninsula of India, not far from Cape Comorin, as well as that of the Doab of the Ganges and Indus; thus there were two Colidas.

It has been shewn by Bryant that the word Colida is the same as Colchida. This I believe was the place in South India to which the Argonauts, fifty-two in number, according to Onomacritus, were said to have gone in search of the golden fleece of a ram. A Colida, I think, I have proved to have been the place whence Abram came,—from Ur, or Uri-ana, of Colida. Every one knows that Abram was said to be a great astrologer, and no person at all conversant with the history of the Roman Emperors can be ignorant that the Chaldeans from India were their great astrologers or tellers of fortunes.¹

Thrace, as we might expect, was called Aria, as well as Thracia.² This was, I have no doubt, after the Aria or Uria of Colida between the Indus and Ganges,³ Duret says, it was called *Χρησωνη*, and that some of its inhabitants were called Sapæ and Sapæi. These were, I feel little doubt, Sophees—of whom I shall treat hereafter. I think the most blind and credulous of devotees must allow that we have the existence of the Cristna of the Brahmins in Thrace, many hundred years before the Christian æra—the birth of Jesus Christ. Now, what could Mr. Maurice, Sir W. Jones, and Mr. Bentley, say to this? Did the Cristna of Thrace take his name from the Apocryphal Gospels? The Apollo EI, *Χρης*, in the country of Sind, with his flute or music, his nine muses or nine Rhadii, with the Brahmin custom of burning the widows cannot be doubted or evaded. How is it that this has never been seen before? How, but because, if roguish priests *did* see it, they in every case endeavoured to suppress it; and because prejudice is so strong in devotees as to blind them even to an unclouded sun at noon! I beg my reader to refer to my observations in the first section of this book. In throwing out the acrostic from the Sibyls, the silly devotee Floyer, has shewn how his class corrupted books. A similar instance is to be found in the respectable antiquarian Mr. Davies, who has omitted to translate the last couplet of an ancient Welsh bard, because, he says, its reference to an *infant* Saviour shews it to be a Christian interpolation. This Saviour, I doubt not, had reference to the three Maries and *Virgo Paritura* of Gaul, and to the Jovi crescenti, fig. 20. Every ancient author, without exception, has come to us through the medium of Christian editors, who have, either from roguery or folly, corrupted them all. We know that, in one batch, all the fathers of the church and all the Gospels were corrected, that is, corrupted, by the united exertions of the Roman See, Lanfranc, Archbishop of Canterbury, and the Monks of St. Maur. And the conduct of Sir W. Jones, relating to the crucifixion of Indra, shews that the same system is now carrying on in India. But on all these points my reader will see much more important matter presently.

8. Colonel Tod has given an account in his History, of an order of priests called Gosaen. They now officiate in the temple of Eklinga, in Mewar. But the present religion of this temple is that of Kanyia or Cristna, and is said to have come from Matura. When I consider that I have found Maturea, Ur or Uria of the Colida, or Doab, or Mesopotamia of the Chaldees or Culdees, and Ayoudya, or Oude, or Judia, and the Jooges or Jews, all in India, nearly together, I cannot help believing that in the Gosaen of India we have the Goshen of Egypt, and of the Old Testament, called in the Hebrew *גשן* *gsn*, I leave the case to my reader, with the often-repeated observation, that it is not an individual name of this kind that is of any weight, but the number

¹ To these Chaldeans I attribute the invention of our dice and playing cards. The latter were clearly astrological instruments, and I have no doubt were connected with the system of cycles—for which, by accident or design, they were peculiarly adapted. I think they were probably invented expressly for the purpose: I pay no attention to the story of their invention in France.

$\pi e=8, \gamma r=200, \tau t=400=608, Tre-ia.$

³ Vide Duret, *Trésor des Lang.* p. 729.

of them. These Gosaen were priests. The Hebrews dwelt in the land of *Goshen* or of the *Goshaen*.¹

Vallancey says, Goseyn a magus, wise man, priest; in Irish it is Gaosna *wise*.² A Hindoo religious is called *Gosine*; their chiefs are called *Omrahs-Raj-Om*.

We have seen the various signs of Hercules in the Syrastrene. Every one has heard of his killing the Erymanthian boar in Arcadia, or I should say the country of the holy Arca, or Arga, of Greece. In the Gulf of Cutch or Sinus Canthi, which washes the shore of Syrastrene, the river *Erymanthus*, now called the river Bunwas, empties itself, in about lat. 23, long. 71½.

9. I must now make some observations upon several very important words; and first, the word Erythræa.

All learned men will tell me that Erythræa means *red*, and thus, that the country between the Indus and Ganges, a great part of which must have a beautiful verdure, and the *green* Erythræan Sea, are so called from their *red* colour. This is, as usual, Greek ignorance and learned credulity. I apprehend the name of the Erythræan Sea had the same meaning as the Goddess *Προθραια*, or the Juno Lucina, or Diana Lucina of the Romans.³ I think the words have been *Προθραια* and *Ερυθραια*, and mean, the one *Προ*, the same as *Pra*, the Siamese name of creator, former, or giver of forms, added to the word *θρε*: and the other *Ερι* or *Heri*, the Saviour, added to the word *θρε*. I think this is confirmed by the great similarity, in the very old alphabet, of the Φ and Θ \ominus Th.⁴ I consider them both of the same family with the Venus Aphrodite, the Sea Goddess, or the Goddess from the froth of the sea. I take this lady to be A-Phre-Dite, in the Coptic language; A, emphatic, $\Phi=500$, P=100, H=8,=608; sacrum nomen, cognomen, et omen. And the Dite is evidently the Dis, ditis, of Latium or the Etruscans, and the oriental Aditya or Dit, which is a term for the sun,⁵ and which also means holy or sacred. The $\Phi\rho\varepsilon$, *Phre*, is also the Northern Freya, the Goddess of Friday, the day sacred to Venus, all over the world. The observation respecting the Venus Aphrodite, is confirmed by Nonnus, who says, *Ινδων ικετευσεν Ερυθραιην Αφροδιτην*.⁶

The *Θρη*, *Thre*, is the *Tre* of the Egyptians, by which they designated the Nile, the *fleue-ocean*,⁷ on which, in their ceremonies microcosmically, floated the heavenly bodies. Every thing was a microcosm; every reptile was a microcosm of man; man of the globe; the globe of the planetary system; the planetary system of the universe; and the universe of God; and thus, in the image of God was man created—in the image of God male and female created he him. The *Ερι* was the Here (Juno), the Heri, Hera, the saviour of India—the destroyer and regenerator. Thus the Erythræan Sea was the Sea of the Here-thræ. In short, it was the universal sea; as we find it at the Straits of Gades washing the shores of the Atlantic, and on the other end of the Mediterranean washing the shores of Asia Minor, and again carrying on its bosom the sacred Tabrobane in India.

The word *Dius*, for God, in the old Latin, every one knows. It makes *Dii* in its genitive. This is in fact Hebrew. The Logos is constantly spoken of by the Targums, particularly that of Jerusalem, by the term מֵמְרָא דִּי *memra dii*, the Logos of God. This is the Diu of mount Athos and of Guzerat.⁸ It is impossible to doubt that the מֵמְרָא דִּי *Dii* is an old Latin or Etruscan word, though found in the Hebrew. What say the opponents of *mixed etymology* to this?

⁸ Vide Parkhurst's GREEK Lexicon in voce Διους .

Mr. Costard, in his *Astronomy*, derives the word *Ζεϋς*, Jupiter, “from the Arabic root *Du* or “*Dsu*, a word which signifies Lord; whence he conceives are derived the *Dyu* of the Welsh, “the *Deu* of the Cornish, *Due* in the Armoric, *Dia* in the old Irish, and the *Deus* of the Latins. “The words *Dew* and *Diva*, however, constantly occurring in nearly the same sense in Sanscrit, “as in *Dewtah* and *Divatah*, I cannot avoid putting in a claim for the Hindoos on this occasion, “*whose language bears a striking similitude to the old Chaldee*.—The planets are represented as “personified *Dewtas*; and it is remarkable that the Indians have a *Divespiter*, in *Eudra*, their “God of the firmament, endowed with exactly the same functions as the Grecian *Jove*.”¹ In my preliminary observations, Sect. 32, Gen. Vallancey says the *יד id* or *iod* stood for ten. We have seen the sacred character of the *iota* and the mysticism belonging to it, and that the Targum always calls God “*ii*—whence, I conclude, that the *יד id* ought to be “*יד iid* the holy ‘*i*. The Targums bear me out in this correction. Dr. Smith says, that the word mostly used by the Celts for the Supreme Being was *Dia* or *Dhia*, which, in the oblique case, has *De* and *Dhe*; that of this the *Esus* or *Hesus*, said to have been worshiped by the Druids, seems only to have been a corruption, and the *Θεος* and *Deus* of the Greeks and Latins were manifestly derived from it; that the *Dhia* or *Dia* of the Celts is the same as the *Iah* of the Hebrews.²

Bishop Marsh says,³ “It has been thought indeed *anomalous* to insert the Digamma in such a “word as *Δίι*. But, to judge of the Digamma, we should not speak of insertion: for it was a “constituent part of the primitive Greek alphabet: and our present forms were occasioned by “the omission of it. Let us ask, therefore, in the first place, in what manner the nominative “*Ζεϋς*, or rather *Δεϋς*, according to the *Æolic* form, was originally written by the Pelasgi. “They could not *at first* have written *ΔΕΥΣ*: for *Υ* was an *addition* to the primitive Greek “alphabet, which ended with *T*, like the Phœnician, Samaritan, Hebrew, Chaldee, and Syriac “alphabets. *F* on the other hand was a constituent part of the primitive Greek alphabet; it “was the sixth letter in the Greek alphabet, as the corresponding letter was in all the alphabets “just mentioned. The word, therefore, which was afterward written *ΔΕVΣ*⁴ and then *ΔΕΥΣ*, “must at first have been written *ΔΕFΣ* and *ΔIFΣ*. But the genitive and dative of *ΔIFΣ* “could have been no other than *ΔIFOΣ* and *ΔIFI*, which, when the Digamma was *dropt*, “because *Διός*, and *Δίι*. Hence, also, we see the *reason* why *Διός* and *Δίι* came to be the “genitive and dative of *Ζεϋς*.”

10. The poet *Dyonysius* says, that *Taprobana* was placed IN THE *Erythræan Sea*. *Bryant*⁵ shews, that *Gades* or *Gadir* was also called *Syrus Erythreia*. Thus we have the *Erythræan Sea* at nearly the extreme East and the extreme West. How absurd to suppose that this name was taken from a petty king of *Asia Minor*! The *Erythræans* are said to have founded colonies in *Ionia*, *Libya*, *Cyprus*, *Ætolia*, and *Bœotia*. *Erythræa* is only a translation of *Ery-phrea*, and means the Saviour 608: $\phi=500$, $P=100$ $H=8=608$: or, as it would be in Hebrew, $\tau t=400$, $\gamma r=200$, $\eta h=8=608$.

The *Erythræan sea* washed the island of *Diu*, or the holy island, and the coast of *Malabar*, as

² P. 16, *Celtic Druids*, Ch. V. Sect. XXXVIII. note

³ *Horæ Pelasgicæ*, Pt. i. Ch. iii. p. 64.

⁴ When the *Υψιλόν* was first introduced, it had the same form with the corresponding letter of the *Latin* alphabet, namely *V*. By degrees one of the sides was lengthened, and it acquired the form of *∇*: but it was some time before the two lines, which form the angle, were bent into the present form *Υ*.

⁵ *Anal.* Vol. III. pp. 187, 189, 4to.

well as that of the island of Serendive, or Taprobana, or Palæsimunda,¹ or Ceylon, on which stood Columbo, and, according to the Samaritan Pentateuch, mount Ararat; and where the mark of Adam's foot was; and it washed also the coast of Cōromandel, or Colamandel, or Chiol-mandala. On this coast, according to Ptolemy, there were a river called Manda, a gulf called Colchicus-sinus,² and a place called *Malliarpha Emporium*, or Melliapour, where the Christian St. Thomas was said to have been martyred. But was he not the Tammuz who was killed, for whom the Jewish women made their lamentations, the God who was also called, in Western Syria, Adonis? Of both of these we shall see more by and by.

In the Colchicus Sinus is a town now called Cochin,³ and near it the Sinus Arga-ricus.⁴ Here we have the Cholchos, to which the Argonauts went, as is proved, by what Ptolemy calls the Sinus Argo-ricus, in its neighbourhood. The meaning of Chiol or Chol is the same as Colida, Cali-di. The Manda or Munda of the coast, or of the island, or of the river, we know means cycle. Thus we have two Cholchoses and two Argonauts. But as few people will now believe the story of the Ethiopian colony with their curly hair going from Egypt to the shore of the Euxine, they will be obliged to believe the reverse—that the whole story came from India to the West, and was not understood by the Greeks. At the top of the coast of Malabar is the gulf of Cutch, which is the Cuttaia, called by Ptolemy the Sinus Canthi. And near to this gulf is a promontory of Tammuz.

Mr. Bryant has shewn that the Colchis of the West was also called Cutaia, and some of its inhabitants Sindi, that is, Indi. Some of the inhabitants of Colchis were called Iberi or Hebrews, and were said to come from Ur: that, of course, is the Urii or Uri-ana of Colida. The circumstance of these Iberi being divided into the four Indian castes,⁵ proves them Indians pretty clearly. A little beyond Ceylon is the Chersonesus, called Golden, on which are found the river Creso-ana, and the mount Sian, the capital of which is called Judia, and the Jewish looking people. It is from this country that the Malays or Lascars come, whose language, in the depôt in Wapping, my respectable friend, Salome the Jew, understood.⁶ It is on the coast of Malabar, near Ceylon, that the black Jews were found by Dr. Buchanan, and also the Christians of St. Thomas, whose service is yet performed in the Chaldee or Jewish language. In the Golden Chersonesus or Siam we have several of the same places as those we found on the coast of Malabar, Cambay, Cochin, &c. The circumstance of the promontory of *Tamus* being found in India, near to the settlement of the St. Thomas Christians of Malabar, as pointed out by Mr. Bryant, at once renders the story of St. Thomas in India doubtful. Then how are these persons called Christians, *using the Chaldee language*, to be accounted for except as I have stated, that they were a tribe of Afghans or Ioudi, having the doctrines of a person called Salivahana, (of whom I shall presently treat,) or of Bal-ii, named before, in Bk. IV. Ch. II. Sect. 1, who were made into Christians by the Portuguese, by means of a little blundering, a little lying, and, by what we know was the case, a good deal of persecution. The fact, of tribes of black Jews without the Pentateuch in this Chaldee-speaking country, agrees very well with and supports my theory.—They were *Xρησ*-ians, Creseans, as Pliny properly called them.

Servius on the *Æneid* says, that the Sibyl received the boon of long life on condition, that she

⁵ Bryant, Anal. Vol. III. p. 455, ed. 4to.

⁶ Mr. Salome is the author of a Hebrew Grammar.

would quit the *Isle of Erythræa*.¹ Now I apprehend this island could be no other than Ceylon, unless, indeed, it was Diu. One of them, I think, it must have been.

Much has been said respecting the priority of the Scythians or the Celts. As I have said in my *CELTIC DRUIDS*, the question is of no value. The same race of men are evidently meant, who were resident to the North, between the Indus and the Ganges, extending to the North into Tartary. Gen. Vallancey has pointed out a most important passage of Dionysius :

Ἰνδὸν παρ' ποταμὸν Νοτιοὶ Σκυθαὶ ἐνωαίεσιν,² &c., &c.

Upon the banks of the great river Ind
The *Southern Scuthæ* dwell : which river pays
Its wat'ry tribute to that mighty sea
Styled Erythræan. Far removed its source,
Amid the stormy cliffs of Caucasus :
Descending thence through many a winding vale
It separates vast nations
.
These were the first great founders in the world—
Founders of cities and of mighty states ;
Who shewed a path through seas, before unknown :
And, when doubt reigned and dark uncertainty,
Who rendered life more certain. They first viewed
The starry lights, and formed them into schemes.

Afterward the same author says, that the people above alluded to also lived upon the Syrian Sea, and were called *Φοινικες*, Phœnicians, and that they were descended from the true Erythræan stock.³ These Scuthæ were also Sacæ.

Strabo describes one of the Greek kings or generals, in his war with the Indians, to have penetrated as far as the *Συροὶ* and *Φαυνοὶ*. From this it is clear, that if the names have become lost, yet that formerly there were Syrians and Phœnicians on the East of the Indus. Surely if I wished for a confirmation of all my doctrines by a Greek author, I could not have desired any thing more to my purpose. Here, in these *Φοινικες* from Central India, we have the people over whom Melchizedek was king ; the people whose ancestors gave Jewish names to the cities of India, and who were afterward joined by their countrymen, driven out under Abraham ; who brought with them the Indian mythos, and who gave the same names to the places in their little mountain province of Judæa of the West, that they had left in the mighty empire of India, extending from Cashmere to Comorin, and from the Indus to Sian, or the Siones, or Sions, and Yudia of Pegu—to the Pan-dæan, that is, the Catholic kingdom.

Bartholomeus says, *Æthiopes*⁴ *ab Indo* (nota bene) *flumine consurgentes juxta Ægyptum consederunt*. Idem habet Syncellus apud Marshamum.⁵ Et Eupolemus apud eundem Eusebium.⁶ *Chus esse Æthiopum patrem et fratrem Mizraim*.⁷ Chus autem Bacchum Indicum esse suspicantur Calcuttenses Angli, et Reverend P. Georgius, qui etiam duplicem Æthiopiam scite distinguit, atque Indos adstipulante eidem De Guines a Chus oriundos esse existimati. Quod si verum est, alia profecto Indis antiquitas tribui debet, quam tribuat eisdem R. P. Marcus. Philostratus, (Lib. iii. Cap. vi. de vita Apollonii) scribit, *Erat aliquod tempus, quo Æthiopes consederunt hac in parte, gens Indica Æthiopia enim nondum erat* (nempe Æthiopes seu Indos portans). Et Lib. iv. Cap. vi. ait, *Æthiopes ab Indis venientes*. Et paulo infra, *Sapientissimi mortalium*

⁶ *De Præp. Evan.* Lib. ix.

⁷ Ita legit Bochartus in suo Phaleg. Lib. iv. Cap. ii.

Indi sunt: coloni autem eorum Æthiopes. Profecto hæc omnia de veris Indis dici liquet, ac proinde ab iis potius religio per Africam in Ægyptum penetravit.¹

11. Until I had written the above, respecting the Grecian towns, &c., I did not observe the following passage of Mr. Bryant's:² "The river *Indus* was often called *Sindus*, and nations of "the family whereof I am treating were called *Sindi*. There were people of this name and family "in Thrace, named by Hesychius: *Σινδοι (της Θρακιης) εθνος Ινδικοι*. The *Sindi* (of Thrace) "are an Indian nation. Some would alter it to *Σινδικον*, *Sindicum*: but both terms are of the "same purport. He mentions, in the same part of the world, *πολις, Σινδικος λιμην λεγομενη*: "a city, which was denominated the *Sindic* or *INDIAN* harbour." In the next page Bryant repeats what the reader has before seen, that Apollonius of Tyanea affirms, that the African Ethiopians were originally an Indian nation. After this Mr. Bryant goes on to shew,³ *on the authority of the ancient authors*, that the Indians were divided into castes; that their priests were formed into societies, in colleges, as recluses; that their religion was that of Ammon (Om-man)—that they worshiped the sun—that their priests were called, from the name of the sun, Chom, *Chomini Sophites*, from which the Greeks, he says, made *Γυμνο-σοφοιται*, and *Γυμνοσοφισται*, or *Gymnosophists*. The *σοφος*, I doubt not, was both a Greek and Indian word for wise, and I think no one can read the long dissertation of Mr. Bryant, and not see that the *Gymnosophists* were the wise men or Magi, or priests of Ammon, or of the *ιερον Ομ-μανε*.

The *Sophites* are the *Asophs* and *Eusofzyes* resident on the mount *Suffaid*, noticed by Mr. Elphinston in his *Cabul*.⁴ Of them I shall treat hereafter.

That a party of *Judaites* penetrated into Thrace cannot be doubted, after the visible marks of Judaism, which have been discovered in that country. The *Odomantes*, according to *Aristophanes*,⁵ were Jews. The scholiast upon that author says, *Οδοματων εθνος Θρακιικον, φασι δε αυτες Ιεδαιεσ ειναι*—"The *Odomantes* are a people of Thrace; they say that they are Jews." *Hermippus*, in the *Life of Pythagoras*, observes, "Pythagoras performed and said these things in "imitation of the Jews and Thracians."⁶ The identity of the doctrine of the *Trinitarian* and *Thracian Orpheus* with the *Trinity of India* and of *Genesis*, again proves the *Thracians* and *Jews* both to have been colonies from *India*. The latter part of the word *Odomantes* I do not understand, but I have a suspicion that the first is a corruption of *Ioudi*.

In Thrace we have, in the doctrines of *Orpheus*, the triune God of *India* and of the *Jews*. In the names of towns, rivers, &c., a repetition of similar places in *India*: in the *Χρης* we have the *Cristna*; in the widows sacrificing themselves, the widows of *India* burning themselves; in the mysteries of *Eleusis*, the *Indian Concha om pancha*, &c., &c. How is all this? Did the people of Thrace send a colony to *India*; or did the *Hindoos* colonize Thrace? It is impossible to be blind to the identity of the two: the sacrificing of the widows and the castes prove them of the tribe *Yudi* from *Youdia*, not of the nation of *Moses*, of *Western Syria*.

Curtius, speaking of the very people above noticed by Mr. Elphinston, says of *Alexander*, "Hinc in regnum *Sophitis*⁷ perventum est Gens, ut Barbari credunt, *SAPIENTIA* excellit, bonisque "moribus regitur." I think I may now safely consider that every thing which I have formerly said of the *Ammon* being the *Om* of *India* is satisfactorily *PROVED*. The tomb of *Orpheus* was shewn in Thrace, and a perusal of what Mr. Bryant has said respecting him, I think must con-

⁷ Σοφια.

vince any person that there never was a man of this name, but that the Orpheans were a sect or tribe having the religion of the Trimurti, and were the Iudi who came from the East, and who were also called Iberi, or foreigners, or Hebrews. They were a tribe or sect, like the Jews of Syria, expelled from the East, who settled in Thrace, and gave the places the same names as the places they left in India; and they brought with them the Trinity, a little altered in the time of Plato, but evidently the same: and the female sacrifices, and the worship of the *Χρησος*, as found on the monument at Delphi. They were, as we shall see, the *Χρησιανοι* of St. Thomas, or Tammuz. It was from the Orpheans that Plato had his Trinity described in the early part of this work.

12. On the other side of the Grecian mountains, where I have formerly pointed out the Argos, the Ionnina, the Chaonia, Dodona, called by Ritter, as I am told, Bod or Bud-ona, &c., opposite to the head of the Haliacmon or Ionicora, is the town of Nicæa, and near it Chrido-dio: this is *χρισος* or *χρησος* the holy. Nicæa is the name of the God Bacchus, or Nysus, or *ΙΗΣ*, and *Χρησος* is his epithet. My reader will not forget that I formerly pointed out that in the sixteen-letter alphabet *χρησος*, must have been written *χρησος* or *χρεσος*, the root of Crestonia.

A learned friend, the Rev. Mr. Kenrick, of York, has given me the following particulars of the German work of Ritter, which I regret that I cannot read: “ He himself thus states the purpose of it in his 8th page: ‘ I intend to shew, from the most ancient monuments which geography, antiquity, mythology, architecture, and religious systems present, that Indian sacerdotal colonies, with the old Buddha worship, proceeding from Central Asia, occupied mediately or immediately, even earlier than the historical age of the Greeks, the countries on the Phasis, Pontus, Thrace, the Danube, many places in Western Europe, and even Greece itself, whose religious influence may be traced not only in Asiatic memorials, but in the old historical fragments of the Greek, the people of Asia Minor, and in Herodotus’ account of the Scythians in his fourth book.’ These Buddhic priests he finds in the *Βέδιοι*, whom Herodotus mentions along with the *Μάγοι*, I. 101; the doctrine in *Βάαυτ* of Sanchoniathon: and the name of Buddha in the Bod-her of the Wends, (a Slavonic tribe,) and the Bogh of the Slavians, in the Odin of the Saxons and Woden of the Germans, whose day (Wednesday) is sacred to Buddha even in the calendars of the Brahmins, in the Khoda of the Persians and Goth of the Germans; in the Budini, among the Scythians on the Oaros, the Budixæans and Bottixæans of Macedonia and Iapygia, the hero Bodo, founder of Dodona, (originally Bodona,) in Minerva Budia, worshiped in Thessaly, (Lycophr. Cap. 359,) in Hercules *Βεδώνης*, in Hesychius, in the Budeion of Homer, II. 16, 572, in the festival Budoron, in Salamis, in the Butades and Eteobutades, the most ancient priests of Minerva, in Attica, the Botachidæ of Arcadia, and the Butakidæ of Naxos, Caria and Sicily, builders of the temple at Eryx. The Budoricum and Budorgis of the Sudetes, Maro-boduum of the Marcomanni, Budissin, and Butinfeld, the Boden-see, (Lake of Constance,) the Bothnian Gulf or Codanus Sinus, are proofs according to him, that the same names were widely diffused also among the Germans to the North. In pursuing his argument he endeavours to shew that the Colchians on the Euxine Sea were not, as Herodotus supposed, and as has been generally considered, an Egyptian colony, left by Sesostris, but an Indian colony, by shewing that the dark complexion, curly hair, and manufacture of linen, by which he proved them to be Egyptian, are equally explicable of an Indian origin. The name Colchi he considers as allied to the *Κόλχοι*, mentioned by Arrian, on the Southern coast of India, (vinc. seq. to Periplus, p. 113,) and the *κόλπος κολχικῶν* of Plotemy, vii. 169; the *Κῶλοι* on the Euxine, with the worship of Venus Colias in Attica, and the name *Κώλιας*, given by the

“ Greeks to Ceylon and Cape Comorin; the Palus Μαιῆτις (for so he spells it) with the Maha
 “ Mai of the Buddhists in Nepaul; the κοραξοί and κορικοί on the Euxine, with the Κῶρυ ἄκρον,
 “ now Ramanan Kor, and Κῶρυ νῆσος, now Ramisur Kor, in Southern India, which Pliny calls
 “ (vi. 24) Solis insulá; and the Σίντοι, also dwelling on the Euxine, with the Indi on the Sind.
 “ This word Kor, is then pursued through a variety of combinations; it is a name of the sun;
 “ the Kur of the Persians, whence κῦρος, whose name meant sun; Araxes or Kor as sacred to
 “ the sun; Chorasán the land of sun-worship, and the town of Κοροκανδάμη (Strabo xi. 1) on the
 “ Palus Maetis, a sanctuary of sun worship, from Kor and the Bactrian Kanda, signifying a
 “ fortified town; whence Maracanda and Sindocanda. (Ptol. vii. 180.) ‘There is a Hypanis,
 “ one of the principal rivers of the Penjab, and a Hypanis falling into the Bosphorus, Strab. xi.;
 “ we have a Phasis in Colchis, another in Armenia, and another in Ceylon (Taprobane). This
 “ same country, thus connected with India, appears to him to be also in relation with the North
 “ of Europe. This is properly Asia; here are the Ἀσπεργιανοί, Strabo, xi., (Asa-burgers)
 “ inhabitants of Asgard; here is the Asof sea; Kauk-asos, this was the country of the As-kenaz
 “ of Moses; hence came Odin and his Asa into Scandinavia. He compares the Buddhist doc-
 “ trine, that, during the deluge, Buddha put his foot on certain places to preserve them from being
 “ covered by it, and left there an impression, with the account of Herodotus, iv. 82, of the
 “ gigantic footsteps of Hercules, said to be left in the land of the Scythians.”

13. Berenice was called Πανχρυσος or Panchrysos, or *all gold*, from a mountain near it, where the Ptolemies were said to get gold. I have some suspicion that the gold here was like the swans and poplars in the Padus of Italy, sought for in vain, and ridiculed by Lucian. It is my firm belief, that the doctrine of the Χρης or ΙΗΣ or sacred nomen, cognomen, et omen, was at first a secret, and that the epithet of *golden* was applied in a double sense: then Πανχρυσος would be *the beneficent* or *good Παν*. There were a golden age and a holy age: and a golden city and a holy city. However, the Χρησος and Ερωσ on the monument of the Crestonia Sindica PROVE that *gold* cannot be there meant.

In this opinion respecting the meaning of the word χρυσος I am completely borne out by Mr. Bryant, whose learning no one will deny. He has undertaken to shew that, in many places, where the words γενος χρυσειον, or γενος χρυσειου or χρυσειοι πατερες are used by Greek authors, such as Hesiod, Pausanias, &c., and translated *golden age* or *golden race* or *golden fathers*, &c., those expressions are nonsense. In order to get over this difficulty, he proposes the violent measure of expunging the Greek consonant ρ, which is not only contrary to all admissible rules of etymology, but carries along with it the consequence that the Greeks did not understand their own language. But if we leave the ρ as it is, and only suppose the change of the η for the υ, we have good sense, and have *pious* or *holy* or *benevolent* race, or age, or fathers.¹ I believe that originally the Greek χρης, meaning *excellent* or *good*, and also perhaps the solar *golden yellow rays* was applied to the metal we call gold, and in time became corrupted into χρυς: it meant the precious metal.²

This observation of the learned Bryant's is of the very first importance, for if he be right, he completely justifies and bears me out in the only questionable part of my theory on the χρησος and χρυσος. He cannot have done this in accommodation to my system. What is here said is

¹ Bryant, Vol. III. pp. 164, &c.

² I beg my reader to refer to Book IX. Chap. I., Sect. 4, p. 452.

strengthened by an observation of Vallancey's in a note on Sir W. Jones's calling *Cristna Krishen*. *Krishen*, the Sun, Apollo; Hæb. *chors*, hinc Græc. *Khrusos*, aurum. Cast. p. 1409.¹ Here Vallancey agrees with me in identifying the *χρησος* and the *χρυσος*.

14. The natives of Siam and Ceylon are said by both to have once had the same religion. As we have seen a river *Cresoana* in Ceylon, so Ptolemy gives us a river *Cresoana* in Siam, (which is called a golden Chersonesus,) and in Ptolemy's map there is a cape a little to the east of what is written, *Locus unde solvunt in Chrysen navigantes*. I am of opinion that the Golden Chersonesus ought to be the Holy or Sacred Chersonesus.

Greek scholars explain Chersonesus by *χερσος land* and *νησος island*, that is, land-island. This only shews how soon they are satisfied. There were various Chersonesuses—as Chersonesus Aurea, Cimbrica, Taurica, and Thracia, which are now thought to be Malacca, Jutland, Crim Tartary, and Romania, and many others.² The explanation of land-island I consider ridiculous, and that it only proves the meaning unknown; and, in consequence, I go to collateral circumstances: finding several of them having no appearance of a peninsula, but having an evident connexion with the *χρησ*-tian mythos, I consider it not improbable that it may be a corruption of the word *χρησ*, and may have been the island of *Crs*, or *Krs* or *Ceres*, or holy or sacred island. It has also been explained to mean *desertus*—desert place. Although this is not foolish, like land-island, yet I think my explanation more probable, when all the collateral circumstances are taken into account. Upon the whole, I consider that the *Chrisen* of Ptolemy (see his map) to which people sailed, was clearly the *Chersonesus aurea*, and that *Chrisen* had the same meaning as *Cherson*.

The island of Java is called by the natives *Tana Jawa*, that is, *Ieuetana*, (the last syllable the same as in Mauritania, &c.,) and *Nusa Iawa*, that is, island *Ieue*; here we have the Greek *νησος*. A part of it is called the district of *Kedu*: this is nothing but *Iodu* aspirated and corrupted.³ The residence of the prince is called *Craton*; this I have no doubt is *Χρησον* or *Crestonia* or *Croton*, and the town where it is, is called *Yugya-carta*—this is also *Carta-Iudia*. The minister of the king is called *Ade-pati*, that is, father *Ad*. *Mataram* is *Matarea*. *Batavia* is *Buddha-via*. They have also *Cheri-bon*. The king is called by a name which means head or chief *Rato*: this is *Rasit*. In the Greek language the national termination makes the word *Χρησ* or *Χρηστ* into *Χρησ-ος*: in the Tamul the national termination made it *Χρησ-εν* or *Χρηστ-εν* or *Crisen*.⁴ This was evidently the Chersonesus, and it was not the golden Chersonesus, but (as Mr. Bryant's argument proves) the sacred peninsula island, or *νησος*. The golden cherson-nesus is a tautology, like river *Jordan*, arising from the Greeks not understanding the meaning of the mythos.

The word Chersonesus cannot be held to mean peninsula exclusively, as a general term, because we find it means also promontory. Besides, I repeat, the term land-island is absurd. I believe the *χερσον* in the case of Siam is the *Chrysen* which we find in Ptolemy's map, and the *νησος* answers to the *nasus* of the Romans, and means promontory; and, that the whole of what we call the golden Chersonesus was the golden or the holy promontory of *Chrysen*. I believe the *νησος*, *nexus*, *nasus*, and our word *neck*, had all the same origin, and meant any projection. On the coast of Malabar, in lat. 15 N., there is no peninsula, nor can South India be called a peninsula, though it may be denominated a cape or promontory. But there is a small promontory at the above-named latitude. All that I have said respecting the meaning of Chersonesus, is confirmed by an expression in Wilkinson's Atlas, in his map of *Achaia*, No. 28, in *Eubœa*,

⁴ See Ptolemy.

Chersonesus vel Nasus. In Hall's Atlas there is a Cape Nose, in lat. 24, close to Emerald Isles. In the Sea of Marmora is found the island of Proconnesus. In the Chersonesus of the Hellespont may be seen, lat. $40\frac{1}{4}$, Alopecon-nesus applied to a neck of land: thus it is plain that nesus means both. Chalcidon or Chrysopolis is evidently City of Chrysos or Chersos. In the old language, without vowels, they would be both the same. Though *νησος* means *island*, it is very clear that it does not mean island exclusively, but that it also means peninsula, and answers to the Hebrew *אֵי ai*, and the Greek *αἶα*, which my lexicon tells me means at once land, island, and country. To support the common explanation all peninsulas ought to have been Chersonesuses, which was not the case, at least we have no reason to believe that they were. I shall be told by Sanscrit scholars that *ia*, in Sanscrit, means victory; no doubt it has several meanings, the same as the *ii* and *ie* and *ia* of the Hebrews. The God *Ιαω*, Jah, was always the God of the host of heaven, of armies, and of victory. *Χερσος*, Jones says, means a shell, and comes from the Hebrew *חֶרֶס hrs, chers*. I dare say it comes from the Hebrew *Hrs*, or Chres, or Cres, or Ceres, or Cyrus. Axiokersos was Ceres, that is, Axios worthy or good *Χερσος*. Nimrod¹ says, the *Dii Magni* of Samothrace—Axieros, Axiocersos, and Axiocersa, plainly correspond with the Indian names Asyoru, or Asyoruca, Asyotcersa, and Atcersa or Asyotcersas.

Georgius² says, *Nam obvii sunt multi forte cum articulo Pi à Græcis dictus Bi-cheres, Acen-cheres, Mer-cheres, Tar-cheres, et Μοσχερις, Mos-cheris*, ab Eratosthene, ne mihi litem moveas de significatione vocis, (quæ non minus Ægyptiaca, quam Hebraica est *חֶרֶס hrs, cheres*,) Græce versus *Ἡλιοδοτος* sole datus, aut solis natus, quemadmodum eruditorum plures ante hac observarunt. Again,³ *Cheres Sol*, unde *Men-cheres*. Here we have the Chres in Egypt, as might be expected.

I beg it may be observed, that in my explanation of the word *Χρης*, I have not availed myself of the usual practice of etymologists of changing letters for one another; as for instance, dentals into dentals, labials into labials, &c., because they are dentals or labials, but when I have changed a letter, it is because I have authority for it: for example, *Crest-ona, Cort-ona, Crest-onia, Cris-sa*. And in every case the changes which I have made are supported by collateral written or circumstantial evidence. Minerva was called *Βεδεια*, or *Budea*⁴ in Thessaly. This is what we might expect to find in the country of the Sindi, and where the wives sacrificed themselves on the deaths of their husbands. It supports my system in a wonderful manner. The marks of the succession of the religions of Buddha and Cristna are every where apparent.

15. A learned Jew, of the name of Marcus, has given an extract from Philosturgius, a Greek of the fourth century, who says, that the inhabitants of the East shore of Africa, as far as Cape Guardafui, were called *Συροι*, and were tout-a-fait basanés par la chaleur du soleil, or nearly blacks. These *Συροι* I suppose to have been the same people who were called *Συροι* and *Φαννοι* in the Mesopotamia between the Indus and the Ganges. M. Marcus observes, that the Geez translate the word *Συροι* by *Saman*, which resembles *Samen*. Claudien calls the Abyssinians *Judæi*. Now these *Judæi* or *Saman* or *Samen* were the Samaneans whom we have found in Meroe, and proved to be the East Indian Gymnosophists of that state, and who were sometimes called, by the Greek and Roman writers, the people of the *nether* India, and, at other times, of *India* alone.⁵

We have seen the derivation of the Gazas, and that Ajmere was Gazimera. This is exactly like the Gaza of Syria, and Gaza of Egypt, the sea-port of Memphis. These would be Gazameres,

¹ Vol. II. p. 505.

³ Ibid. p. 84.

⁴ Littl. Dict.

⁵ Journal Asiatique Nouveau, No. 18, 19, June, 1829.

in fact. Gaza is Goza ; for it is spelt with an *oin* not with an *aleph*. Mons. Marcus, the learned and ingenious Jew, thinks the Geez of Abyssinia, and the Philistines, meant *exiles*. I think they were not called by these names because they meant exiles ; but that they were called exiles, because they were from Gazimera and Pallitana of India.

Juba, in the early part of the Christian æra, wrote that the country between Syene and Meroe was occupied by Arabians, and that this country had the same names of places as Arabia : for instance, Ptolemy places in Nubia, Primis, Sacole, Nacis, Tathis, and Napata ; in Arabia, Priom, Saklé, Nascos, Thades, and the nation of the Napatei. M. Marcus allows that the Abyssinians call their country Gys, which, he says, signifies *emigration*, because they emigrated from Philistina in Syria. But he does not observe that these people were called by the same name in the country they left. This I have already accounted for in observing that they were called emigrants, because they were Geez—not Geez, because they were emigrants : for they and the Palli were equally emigrants or exiles in Western Syria and Nubia.

M. Marcus observes, it is astonishing that notwithstanding the high antiquity of the first establishments of the Jews in Abyssinia, the industry of these people throws no light on the sojourn of their fathers in Palestine, or of the civilization of the Phœnicians, Assyrians, &c. The reason of this is very simple—because they came at the same time with those who are called their fathers, and before Moses lived : and this is the reason why they had no Pentateuch till they obtained one from the Christians. M. Marcus also observes, that the founding as well as the decline of the kingdom of Meroe are involved in equal obscurity.

The country of the Chaldeans was Northern India ; in which there was a district called Syra, (Syra-strene), and Pallitana ; and as the people were Judi or Judæi, they spoke the Chaldee or Syro-Chaldee language. The same took place in South India : Mysore is Maha-Sura or the Great Syria.¹ Here there was also a Colida or Chaldea, the people Judi or Judæi speaking the Syro-Chaldee language ; and there also were found the Samaneans.

In Abyssinia, the country was called India and *nether* India ; in a large district of which, the people were called Συγοι—a sufficient proof that the country was called Sura or Suria : there also people were called Judæi, and they likewise spoke the Chaldee or Syro-Chaldee language. In all these countries the Pallestini and Samaneans are found ; and what is more remarkable, the Phannoi or Phœnicians are found in Egypt, and in two of the Eastern Syrias, together, as the reader has seen, with several other striking coincidences. In three of them, all the Mosaic mythos is found, but without the Pentateuch, which was a later compilation of the people of the fourth country, and in all the four, Crestians or Chrestians are found, though their origins are forgotten and variously accounted for. The persons whom Manetho calls *Royal Shepherds* he also calls *Phœnices* and *Hellenes*.²

The tribe of Juda was not stopped in its migration westward by the sea ; or, perhaps when it was driven out from Egypt, part of it moved to the West, along the coast of the Mediterranean, till it got round to Guinea, and there it is yet, with its native curly head, possessing a beautiful country, full of fine rivers, among which are found a river Phrat and a Jachin.³ It would be very curious to examine the language of this people. Edrisi, in the twelfth century, says that Jews occupied the country on the river *Lamlem*, and that it is called *Yahandi*. This is confirmed by Mr. Bowditch, in his account of the Ashantee country. Every thing proves that they were of the tribe Judi, though, as they have no Pentateuch, it is clear that they came not from the tribe

¹ Buchanan.

² Bryant's Anal. Vol. III. p. 250.

³ See Mem. de Berlin, Tom. XVII. by M. de Francheville.

of the Western Asiatic Judæa, or at least that they did not emigrate from it after the time of Moses. Near lat. 10, N., will be found a country called Soolimana, and near it are places called Kisse and Boodyæa and Cambodia and Nalanbes—all Indian names.¹

I have lately found that it is stated in the Talmud of Jerusalem, that Joshua, before he entered Canaan, sent to inform the inhabitants, that such as wished to escape might do so, and that, in consequence of this permission, great numbers, despairing of being able to defend themselves, fled into Africa.² Pieces of evidence of this kind, unexpectedly occurring to support my theory, are very striking. These Canaanites may have been the people who set up the pillars at the Straits of Gibraltar, (noticed in the last page of the Appendix to my CELTIC DRUIDS,) described by the Gentile Procopius. They may have advanced along the coast till they came to where they are now found.

In the Melpomene of Herodotus, Sect. lxiii., will be found an account of one Sataspes who attempted to sail round Africa, by going through the Pillars of Hercules. After sailing a long time he came to a nation in Ἐσθητι Φοινικηῖη. This has much puzzled the learned. These people were an early tribe of Ioudi, and they were dressed in Phœnician dresses. That is all. But this and other circumstances prove the truth of Herodotus's history. They were probably the people just now noticed, who *fled from before the face of Joshua the robber, the son of Nun*.

16. The Gaza of Syria is evidently the same in name as the Aj-mere of India, treated of in Book VIII., for in Ptolemy they have both the same name: one being called Gaza-mera, the other Gaza. The Western Gaza was also called Iona; thus Iona is the same as Aj, or, read in the Hebrew style, Ja, the famous Io of Syria, both male and female; the $\eta \epsilon$ converted into the \omicron (in their dialect making the Io) from the Hebrew male and female $\text{י} \text{ו}$. But the town of Gaza or Iona in the Hebrew is spelt $\text{ג} \text{ז} \text{ע}$ *Oze*. This we see answers to the Aji of India; and as the ז is not one of the *sixteen* letters, it is probable that it has originally been like the Indian, the ז or ז . Thus, again, we get at last to the $\text{ז} \text{י}$ *ie* or Jah of the Hebrews, which was of both genders, or perhaps more correctly we should say, of neither. The $\text{ז} \text{י}$ *ie* was substituted for the $\text{ז} \text{י}$ *sdi*, which Parkhurst clearly shews to have been the Dea Multimammia. Thus it seems that the object of the change was, to get rid of the worship, *exclusively female*, of Hellenism.

Col. Tod says, that the word *Mer* means Hill. Now, as I have already remarked, as far as I can make out, near each of these hill towns there is always a sacred lake, often upon the hill, and frequently made at very great expense. Rivers generally flow from these hills, and the spring-head was converted into a lake, in a peculiar manner sacred. These lakes by being used for the purposes of agriculture, were real and great blessings to the countries below them. There was a great and sacred lake at Ajmere, Gaza of India. A mer, the *mr* or artificial ocean, is found at Gaza or $\text{ג} \text{ז} \text{ע}$ *oze* of Western Syria, in the real ocean: it is found at Memphis, of Egypt, in Gize near the famous Lake Moëris, the head or bank of which was of very great length—Egypt of which Memphis or Gize was once a sea-port. If the *sea* were not there, the *lake* was. There is also in Ceylon a Lake or Tank, the banks faced with stone, of a size almost beyond credibility. We have also mers or meers very common in England. Now I cannot help observing, that these words *Mr* are all composed of the two letters which form the word for Maria or the female generative principle. I apprehend the case of the *Mere* is precisely similar to that of the *Oceanus*. The element round Mount Meru was called Oceanus, and, in imitation of Meru, no one will doubt that all the Mount Olympuses were consecrated. In imitation of these Rome was built, and round it

¹ See large Map at the Oriental Club, Hanover Square, London.

² Talmud Hierosol. apud Maimonid. Halach. Melachim, Cap. vi. Sect. v.; Sayle's Prel. Dis. to Koran, Sect. vi. p. 192.

a fosse was dug answering to the Oceanus called *Mundus* and *Orbis*, and *Urbs* (all the same): but this *Mundus* is called by Plutarch, in Greek,¹ *Olympus*. Here is the mount most clearly used for the oceanus. Thus it was with *Mere*. It was a mount and a maris or sea—as, *Horn-sea-mere* and *Wittlesea-mere* and *Mount Meru*, and *Aj-mere*, and *Casi-mere* or *Cash-mere*.

It is a very curious natural phenomenon, that upon the top of almost every mountain a spring is found. This was the mere or meer: and from this the hill came to be called mere; in like manner lakes on the tops of hills came to be called mounts. The mere or *lake* is the mother of the river; the mere or *mount* is also the mother of the river. There was a lake in Wales called *Pemble* or *Pendle Meer*, in which was a sacred island.² We have also mounts of the mere: we have *Sled-mere*, and *Pen-mawr*, and *Pen-maenmawr*.

The word mere or meere was used for a lake by Pliny,³ who says, “where now is the mere or lake Sale?” This was near *Erythræa* on the coast of *Asia Minor*; and in the next sentence he says, it was near a mount *Colpe*. There was an *Erythræa* near *Gades*, and *Calpe*, now *Gibraltar*, is close by it. By *Mount Meru* was probably meant *Mount of the mere*—*Mount rising out of the Mere*—*Mother Ocean*—*Mother Isis*.

The lake *Mareotis*, *Moeris* is called *Maria*,⁴ and the island *Meroe*. It was called *island*, probably, to make it assimilate to *Meru*, though it was not naturally an island. All these superstitions are evidently closely connected: and it is clear to me that the adoration of the male and female generative principle is at the bottom of them all; and the terrible wars which took place, with alternate successes and reverses, between the sects, furnish cause enough to account for the mixture which we every where find. I think the *יה* *ie* or *Jah*, the *Self-existent*, was the foundation on which all was built; and what could be more likely? It was the *Aji* in *India*; *Io* in *Syria*; *Ei* at *Delphi*; and at *Gaza* in *Pali-stan*, it was *היז* *oze*, corrupted from *Aji*. The mer and the *Aji* we find always together; it was the *Mount Meru* with its ocean surrounding it. But we have found the lakes or inland seas called *Mareotis* and *Maretis*, and in *England* *Meres*. We have found the mounts in *India* called *Meres*, on which, generally, were artificial lakes; or the meer contained a sacred island and temple, as in *Cashmere* or *Cashimere*. We have found a *Meroe* in *Egypt*, being an island, artificially made, for the sake of making a mere round it. This was an imitation of *Mount Meru* surrounded with its ocean, and in imitation of the *Mount of Maria*, on which the Gods sat on the sides of the North, at *Jerusalem*, mistranslated *Moriah*, which was formed as nearly like the others as circumstances would permit. For, though it was impossible to make a sea round this fortress—this acropolis, yet, in lieu thereof, it had its brazen sea within. In *Wales*, in *Ireland*, in *Arabia*,⁵ we meet with meres or lakes containing sacred islands. All these arise from the first imaginary *Meru*—the pole of the earth, with its star of *Judé* over it, in the heavens. All these mounts were mounts or islands of *Meru* or *Maria* or *Maia*; and the sacred *Argha*, in which the *linga* or pole was erected, was an emblem of the *Maria* or the ocean, from this called *Mare*.

The word *Aja* means self-existing, according to *Col. Wilsford*.⁶ How is it possible to doubt that we have here the *יה* *ie* of *Genesis*? The female energy of nature is described by the word *I*.⁷ This is the *I* or *li* of the *Targums*.

It is true that *Ajmer* is hill of victory, or hill of *Ajya*, as *Col. Tod* says;⁸ because *Jah* or *IE* or *יה* *ie* or *איהו* *aeue* was the God of victory, as he is repeatedly called in the *Old Testament*.

Aja, in Sanscrit, means goat; and Gaza, in Hebrew, also means goat;¹ this proves the identity of the two: but Aja means both goat, and sheep, and Aries.² The goat copulates with a sheep and breeds forward; (goat in Hebrew is זֵּז oz;) being of the same class of animals, like the greyhound and pointer, and not like the horse and ass. Here we have the reason why the goat is often found instead of the ram. The bull, the ram, and the goat, are the three animals of which the sacrifices of the ancients chiefly consisted. The two last, I doubt not, were considered, as they are, of one genus.

When I reflect upon the fact, that the origin as well as, in a great part, the meaning of their mythologies were lost by the Greeks, I am inclined to go to the East for an explanation of the Gaia of Plato, and calculate upon his ignorance of his own mythology.³ I find one of the most holy places of India called Gaya or Gaia, famous as the birthplace of Buddha. It is in lat. 24, 49; long. 85. In this case the Gaia must have been a mystical term for the generative power. Gaia would be synonymous to Chaonia or Caonia. If I be right, this case is exactly similar to that of the *konx om pax* of Eleusis noticed before; that is, it is an Indian word adopted by the Greeks. I suspect it has, in some way, come from the same source as the Aj, Aja, Agi, Aje. A city is often alluded to in the mythic histories called Aiai—that is, *place of Ai*; the same meaning as the Aje and Gaia.

17. Of the different names of Bacchus, there was not one more common than that of Dio-nusus, or Dio-nisos, or the holy Nisus. The *Dio* means *holy*, and the *us* or *os* is merely a Latin or Greek termination. Then NIS is the name. In Pagninus's Exodus the name of Jehovah Nisi is written two ways, one in the text, the other in the margin— נְסִי *nsi* and נְסִי *nss*. But the Samechs being new letters, if we want its meaning, we must put it in the letters of the old or Cadmean or sixteen-letter system; then it will be נְשִׁי *nsi* and נְשִׁי *nss*, and will mean

I..... י = 10	Again	S..... ש = 300	S..... ש = 300
S..... ש = 300		S..... ש = 300	I..... י = 10
N..... נ = 50		N..... נ = 50	N..... נ = 50
360		650	360
360		650	360

Can any man believe that these peculiar, sacred numbers come out by accident?—The first, the supposed length of the solar year, and the number sacred to Bacchus, or the Sun? Let us recollect that Pythagoras's learned secrets were all founded on numbers. We have here the Jehovah Nisi. יְהוָה נְשִׁי *ieue nsi*. ש Sin and ס Samech are indiscriminately used, as appears from the authority of Elias in Thisbi, and the constant practice of oriental writers.⁴

It appears from the book or history of the Exod, that it was on the leaving of Egypt that Moses changed the object of adoration from Taurus to Aries. It was then that he represented God as having ordered, that he should be called יְהוָה נְשִׁי *ieue*, and not by his old name of שְׁדֵי *sdi* or Multimammia. It appears that the change took place on the mountain of *Sin*, or *Nisi*, or Bacchus, which was evidently its old name before Moses arrived there. The Israelites were punished for adhering to the old worship, that of the Calf, in opposition to the paschal Lamb, which Moses had substituted—"the Lamb which taketh away the sins of the world," in place of the Bull or Calf which took away the sins of the world. See Faber for the prayer to the bull *Taurus the saviour*—and Bryant, end of his Vol. III., for the same.

I suppose the expression *the Bull or Calf taking away the sins of the world* will be most unmercifully ridiculed. It has been in part done by a very worthy priest, to whom I opened the

¹ Drum. Œd. Jud. p. 361.

² From Dr. Wilkins's MS. given me by Prof. Haughton.

³ See Bk. Ch. II. Sect. 4, of this work.

⁴ Gerran's note on Benj. de Tudela, Ch. xvii.

subject. But I beg to be informed by the dealers in ridicule, why a calf should not take away the sins of the world as well as a lamb? Verbum Sapienti. If it be said that the Lamb was the emblem of the second person in the Trinity, I reply that the Bull was, in a former period, the same. The word for the Sun is in Hebrew *Sur*, in Chaldee *Tur*. In the Hebrew this would be TR, the same as *Taurus*. Here we have T=400, R=200=600: but I think it would probably have been T=400 R=200 H=8, תרה *trh*. May we not in the TPH find the meaning of the *thre* in the name Ery-thre-a?

Adressez votre prière au Taureau excellent: adressez votre prière au Taureau pur: adressez votre prière à ces principes de tout bien: adressez votre prière à la pluie, source d'abundance: adressez votre prière au Taureau devenu pur, celeste, saint, qui n'as pas été engendré: qui est saint, &c.¹ When the Greeks became refined, they did not like to see their Bacchus with the horns of a bull, like Moses: but, as they could not mythologically be dispensed with, in the statues which are really old, they are there hidden under vine or ivy leaves. "Come, hero Dionusus, to thy temple on the sea-shore: come, HEIFER-footed deity, to thy sacrifice, and bring the graces in thy train! Hear us, Bull, worthy of our veneration; hear us, O illustrious Bull."²

As the Gods all carried heads appropriate to the solar sign to which they were sacred, a Bull's head to Taurus, a Sheep's head to Aries, so their games bore appropriate names, and were called Taurobolia and Criobolia. "But whence the more common Greek name Διουσσος is derived, or what it signifies, is not so easy to determine, or even to conjecture, with any reasonable probability. The first part of it appears to be from ΔΕΥΣ, ΔΙΟΣ or ΔΙΣ, the ancient name of the supreme universal God: but whether the remainder is significant of the place from which this Deity came into Greece, or of some attribute belonging to him, we cannot pretend to say: and the conjectures of etymologists, both ancient and modern, concerning it, are not worthy notice."³ As we have seen before, it is said by Ausonius to be Indian, and by the mystics it was called Phananin—that is, Phen. I think this allowance by the learned Payne Knight of the general ignorance opens the door most beautifully to my explanation above: and I think in almost every case, if not in every one, where I have explained these proper names from numbers, like the name *Nisi* of Bacchus, they admit no other derivation, and this, in the end, will be found to be an observation of the first importance. This is the common case with the names of the Gods; they seldom or ever admit an etymological explanation. The reason of this I shall explain in a future book. On the identity of Bacchus and Iacchus, Mr. Payne Knight says, "They are in fact the same name in different dialects, the ancient verb FAXΩ, in Lacaonian, BAXΩ, having become by the accession of the augment FIFAXΩ. υ ιαχω."⁴ The IAX is Iacchus and our Jack.

The Taranis of the Druids, noticed in my CELTIC DRUIDS,⁵ as their object of worship, and, in fact, having the same name as the Scandinavian God Thor, and as the Belinus, the Hesus, and the Thau, and called their High Spirit by Vettius Valens,⁶ is, in Hebrew, תרן *Trn*, T=400, R=200, N=50, total 650—the number of stones in the temple of Abury, and in the Hebrew name Mitra. The original name, probably, was *Tarn*, the *is* being a corruption of the Greek *os*.

In my *CELTIC DRUIDS*, Chap. VI. Sect. XXV., I have given the following explanation of Meithras :

No. 1.		No. 2.		No. 3.
M - - 40		M - - 40	Or, in Hebrew, thus: - - -	מ = 40
E - - 5		I - - 10		י = 10
I - - 10	But it would be better, as more ancient, thus: }	⊙ - - 9		ת = 400
⊙ - - 9		P - - 100		ך = 200
P - - 100		A - - 1		650
A - - 1		Σ - - 200		
Σ - - 200		360		
365				

The word is often written *Mitra*, particularly in India; thus we have two sacred numbers for it, as we have for *Bacchus*. Is this accident? What says the enemy to double etymology to this? We learn part of the Pythagorean secret from the Greeks, and a part from the Hebrews. On this, very much hereafter.

CHAPTER III.

CÆSAR THE NINTH AVATAR.—ZARINA.—CÆSAR HONOURED AS A GOD.—TWELVE CÆSARS.—ADRIATIC.—SIBYL'S PROPHECY OF CÆSAR.—ILIAD A SACRED MYTHOS.—CÆSAR'S DEATH FOLLOWED BY DARKNESS.—STAR.—ROMA.—NIEBUHR.—PALLADIUM.—HISTORY OF ITALY.—MUNDUS.—RAJAH.—PALA.—HELLEN.—ATTILA.—HIEROGLYPHICS.

1. WE are now prepared, I think, for another divine incarnation—the *Ninth*—and we shall find him in the celebrated *Julius Cæsar*.

In the history of *Julius Cæsar*, and, indeed, in that of his whole race, there is something peculiarly curious and mystical. He was of the family of the *Julii*, who were descended from *Venus*, by her son *Æneas*, the son of the Trojan *Anchises*. From *Æneas* and *Creusa* descended *Ascanius*, also named *Julius*, who lived in the mystic *Alba*, till that city was ruined by *Tullus Hostilius*, who, it is said, instead of destroying the family of his enemy as usual, removed it to *Rome*, where it flourished for many generations, until it achieved the sovereignty not only of *Rome*, but almost of the world, to which, in a very particular manner, it may be said *to have brought peace*. The greatest of the *Cæsars* was *Caius Julius*, who was born about half a century before *Jesus Christ*. The word *Julius* is the same as the ancient *Yule*, who was *Saturn*. The *Quintile* month, the month in which the great *Julius* is said to have been born, was sacred to *Yule*. See *Nimrod*,¹ who has shewn how the *Saturnalia* became our *Christmas gambols*. We must not forget, that the *Mons Capitolina*, the Roman capitol, where *Julius* established his empire, was first called *Saturnia*.

The *Rev. Dr. Barret*² says, “ the woman of the *Revelation* clothed with the sun, and having on

¹ Vol. I. pp. 155, 156, 158.

² P. 143.

“ her head a crown of twelve stars, brings forth a child, *which is הוּלַי oull or Christ.*” This is Yule, Julius, or Iulus. In honour of this child, on the 25th of Dec., we have the Yule clog and the Christmas gambols, and on this day, in the morning, the old women go about with a child begging from door to door, singing, *to us a child is born, &c.* From this came, if it be not itself, the Huli festival, to celebrate the Vernal equinox, or the new year, with the Hindoos and Persians. Now what, at last, is the meaning of the Yule or annual games—whence comes the Julius or the Genius of the Sæculum or Cycle? I believe that it comes from the Hebrew הוּלַי *oullm, sæculum.* Abraham¹ invoked God in the name of Ieue the *Aleim* of the *Sæculum.* And Cyrus was called *Pater futuri sæculi.* Thus Julius means *sæcular* or *sæculum*—*αιων των αιωνων.* The letter *I* is prefixed to the הוּלַי *oull*, making Julius, for the same reason that it is prefixed in the word ΗΙΧΘΕΥΣ, in the Sibylline acrostic, to be discussed presently. The passage in Genesis xxi. 33, rendered by me, in Book II. Chap. I. Sect. 4, *Ieue Deum æternum,* is rendered by Pagninus *in nomine Domini Dei sæculi.* This, I doubt not, was the true meaning. He invoked God in the name of Jehovah or Ieue, the God of the *sæculum*, cycle, or age; and in many other places Ieue is called the God (הוּלַי *oullm*) of the *sæculum*, and from this came our word *holy.*

The similarity between the expressions in the fourth eclogue of Virgil and in the prophecy of Isaiah, is very observable; and has been noticed by Bishop Horsley, and, as we have before said, by many other divines. The reader must now see, that as they were poems relating to the same mythos, this was almost a necessary consequence. From the peculiarly mystic character of Creusa, daughter of Priam, and wife of Æneas, (vide Lempriere,) I cannot help suspecting that she was a Latin Crees, or Crees-ta. It may be observed, that she was the *stirps* whence the Roman nation, or at least its highest branch, sprung, as I have lately observed. I do not understand the derivation of the word Æneas, from whom Julius was descended, but the mystic character of that hero, and of the history of the kingdom of King Latinus or Lateinus, may be seen in Nimrod,² where the Æneid is satisfactorily shewn to be a second Iliad. Respecting the name of King Latinus, Nimrod has pointed out a peculiarity which, when coupled with other circumstances, and the very common practice of giving numeral names to persons, is well worthy of attention, and will be accounted for hereafter. Nimrod says,³ “ A passage of Irenæus is as follows:⁴ *Sed et Latinos, (lege, Lateinos,) nomen sexcentorum sexaginta sex numerum: et valde verisimile est, quoniam verissimum regnum hoc habet vocabulum, Latini enim sunt qui nunc regnant; sed non in hoc nos gloriabimur.*”

666

This sacred number being found equally among the Etruscans and Latins, and in the *very ancient* Apocalypse, proves to me its very great antiquity. Æneas, in fact, conquered Latinus, and by force of arms obtained his kingdom. The beast 666 was overcome. This standing alone,

¹ In Gen. xxi. 33.

² Vol. III. pp. 6, &c.

³ Ibid. p. 500.

⁴ Advers Hær. Lib. v. Cap. xxv. p. 365, ed. Gallasii, 1570.

would not be worthy a moment's consideration. It is the connexion of circumstances with it, which gives it any value.

Of Æneas and Virgil Nimrod says,¹ " This poem originally called *Gesta Populi Romani*, represents Æneas as a descendant of the Gods, himself also a God, a *necromancer*, and the High priest, Flamen, and Hierophant, establishing and expounding the religions of Roma-Troja, and unfolding its future destinies. He is not idly called *pious Æneas*, but his sanctity as a priest and prophet was the main object to which Virgil sought to draw his readers' admiration, his warlike achievements being but a menstruum in which he might convey this political poison."

If Julius were the family name, Cæsar was his title of honour, which might be taken from the God Hesus of his own conquered Gaul: and this Hes-us I cannot help suspecting will turn out to be, when examined to the bottom, a corruption of the IHΣ of Bacchus. But Nimrod² says, " Æsar, which is the chief part of the word Cæsar, meant God in *Etruscan*: and no doubt the same family which inherited the name of the Ænead Hero, and Indigete Julius, were also the cognomen Æsar, or Deus, with an honorific prefix." Now, what could this honorific prefix be? If Cæsar took his title from the Celts of Gaul, whom he had conquered, and if their letters were, as we have reason to suppose, the letters of Greece, they would not then have the sibillant ç, but might, in lieu thereof, have the Greek X, and then the word would be Xæsar: and then this honorific prefix would be, what we might well expect, the sign of the 600, or XH-σαρ the Sar, 608, the sacrum nomen, cognomen, et omen. If read Hebraicè it would be Ras-HX. Of all the mystic names of antiquity, there was not one more universal than that of Æsar or Cæsar. It prevailed in all nations. If I be right in this, we see that the monogram will correctly apply to Cæsar, or Tzar. T=300 Σ=200 P=100 H=8=608: HX=HTσρ=608. Hence the Tzars of Muscovy, and the Cæsar of Germany. As Cæsar was held to be an incarnation of the Xρησος, his birth was fixed to a period which we have found, by modern inquiries, was one of the sacred æras of India, when the ninth Xρησ was supposed to be born, or the ninth benignant incarnation was believed to have taken place, or when the ninth sæculum began.

Suetonius relates, in his Life of Augustus, that " the letter C being struck off by lightning from the inscription on his statue, this response was given, that he had only a hundred days to live, which was the number pointed out by the deficient letter: but that he should be afterward reckoned among the Gods, because *Aesar*, which forms the remaining part of the name of Caesar, is in the Etruscan language the denomination of God.³ In the Gothic language, As, Aes, Aesus, is the name of Odin, or by way of distinction, that of God. In the plural, it is Asar and Aesir." Now Odin will not be denied to be the same as Woden, and Woden we have traced from the Carnatic, where we shall find the Kesari, the Xρησ, &c., &c. Sol, in Hetrusca etiam lingua Esar vocatus est.⁴ The Etruscans made it a law not to represent Æsar by any image: this was the Etruscan name of the invisible God, the *great Creator*. The Pagan Irish worshiped him under the same name, and made no image to him: the word Æsar or Esar, is undoubtedly Phœnician. יצר *izr*, *iasar* formavit.⁵ " The God Esus is the Celtic Mars, where we have the sense of destroyer; and is a reduplication of the element S, as Es-us, in order to express the idea more strongly." Again, " I have before produced the Hebrew מוצ *Oz-Uz*, *very* or *excellently* strong, and the Syriac Az-Az-os (Αζαζος) and the Arabic Az-Eez, *excellent, precious*."

¹ Vol. III. p. 466.

⁵ Vall. Coll. Vol. IV. p. 461.

He adds that, in the Arabic term Az and Azar, the idea of excellence united to strength seems to prevail; and also whatever tends to support life.¹ Here, I think, both the good and evil principles seem to be found. A town of Cilicia was called Cæsar-Augustini, but was anciently occupied by the Anazarbenes; these were evidently the Beni-azar, the sons of Æsar or Cæsar.² These preceded Julius and Augustus Cæsar.

2. The Zarina of Russia, the name of the queens of that country, is evidently the $\gamma\psi$ *sr* with a feminine termination. This is the Phœnician or Chaldæan *Sar* or *Zar*, a prince or grandee.³ Thomyris, the Scythian queen, who was said to have conquered Cyrus, was called Zarina. I have a strong suspicion that the despots of Russia and Germany both affect the name of *Cæsar*, for the same reason that the family of Cæsar kept its mythic name. I have no doubt that the person who claims this title, claims, though secretly, to be autocrat of the world, both by right of the sword and of the book,—both as priest and king.

It is notorious that Nero was thought by the Romans to be a peculiarly sacred person, or to have opened some sacred period. On this account he was, in more than an usual manner, hated by the Christians, who took him to be Antichrist, that is, another or opposition Christ. The name of Nero, which he bore, looks very like the name of the Neros, a coincidence which would never have occurred to me had it not been for the other circumstances. We very often hear of the wickedness of Nero, but we seldom hear of the wickedness of Constantine the GREAT, who murdered his son, his brother-in-law, his wife, his nephew under age, and amused himself by making the kings taken prisoners in war fight wild beasts in the circus. Notwithstanding all this, the Rev. Dr. Lardner tells us this GREAT man “*was not a bad man,*” and his general conduct is marked with the approbation of the Christian world, by his equestrian statue being placed, at this very day, June 1832, in the porch of St. Peter’s Church at Rome!!!

3. Cæsar had all the honours paid to him as to a divine person, and that particular divine person of whom we have been treating. He was called Father of his country, that is, the Αἰων τῶν αἰώνων , *Pater futuri sæculi*. At the end of five years, a festival was instituted to his honour, as to a person of divine extraction. A college of priests was established to perform the rites instituted for that occasion. A day was dedicated to him, and he had the title also of Julian Jove: and a temple was erected to him.⁴ His temple bore the appellation of Heroum Iuleum, and contained images of Venus. Julius was followed by his nephew Octavius, who was also called Cæsar, to which was added the mystic title of Augustus,⁵ which meant *sanctity* and deification upon earth.⁶ *Augusto* augurio postquam incluta condita Roma est. And to make the mythological circumstances complete, we have the astrological number of 12 applied to the first 12 Roman Emperors, called Cæsars, by the historians of those times. We know that different Roman families had mythoses applicable to them, or they were in some respects sacred. This was the case with the Fabii; the same with the family who had the care of the ceremonies on Mount Soracte, &c. I suppose that the family of Julius had, or affected to have, some sacred character of this kind, and maintained the reality of their imaginary pedigree, from the mystic Ilium or Troy. And this, probably, in no small degree, aided the brilliant Julius in possessing himself of the supreme power—the prophecy conducing to its own fulfilment, as was the case of another great man in a

⁶ Ennius ap. Suet. Octav. Cap. vii.; Hor. Lib. iv. Cap. xii.

later day, as I shall presently shew.¹ It is probable that when Julius was killed, some of the devotees would admit that they were mistaken in the person, but this would not in the slightest degree injure the credit of the mythos. The superstition only transfers itself. Evidence or experience in these cases is of no avail. Octavius became the expected *great one*; and of *him* his followers had no doubt, at least the fools of his followers. He was born like Bacchus, Hercules, Nimrod, Cyrus, Alexander, Scipio Africanus, Solomon, *mense decimo*. He had Apollo, in the form of a serpent, for his father, and at his death his soul, like that of the Holy St. Polycarp, flew away to heaven in the form of a bird. All this and much more of the same kind, may be found in different parts of Nimrod's work, but particularly in Vol. III. p. 458. But the murder of Cæsar was his Aphanasia—his Apotheosis. It was an imitation of that of Romulus. In every case the founder of the Cycle seems to have suffered a violent death, in some way or other, and the earth to have been darkened; but we shall see much relating to this hereafter.

4. The observation made respecting the twelve Cæsars only applies to a part of an universal mythos. There were twelve tribes of Israel, who all assembled to worship at one temple. There were twelve tribes of Ionians, who all assembled in like manner at one temple. There were twelve tribes of Etruscans, who all assembled at one temple; and who, by colonies, founded twelve tribes in Campania, and twelve more in the Apennine mountains. There were twelve Cæsars, and twelve Imaums of Persia, followers of Ali, all believed to be foretold by Esdras, 2, ch. xii. 11—15. When Moses built a Druidical temple near to Sinai, he set up twelve stones; at Gil-Gal again twelve unhewn stones, and on Gerizim, again, twelve stones in circles. I need not point out the circles of twelves so often found in the remaining Druidical temples—all Pythagorean and Masonic—still intelligible in many of our chapter-houses, for the builders of these were the oldest monks (probably Carmelites) and masons. For thousands of years there were no *stone* edifices except those for the use of the sacred order, religion, and the walls of towns; all others being of sun-burnt brick and wood of course, have disappeared.

The first information which we have of Æsus or Aosar is, I think, in the history of the celebrated Abaris, who came from the Hyperboreans to visit Pythagoras. He is said to have struck his harp to the Delian Apollo or Aosar. Of all titles of honour among the ancients, perhaps there was not one so common as that of Cæsar. This will be thought extraordinary, but I shall prove it true. A religious mythos or prophecy always has a tendency to cause its own fulfilment, or at least apparent fulfilment. It is natural that the devotees attached to it should force every indifferent circumstance to fit to it, to suit it. And if the prophecy were really true, numbers of trifling circumstances, indifferent in themselves, would be found to aid it or support it. Thus the person called Cæsar took that name, and, in imitation of the Lucumones of the Etruscans, he was followed by eleven other Cæsars. And his assassination and six hours' darkness formed his aphanasia, similar to that of Romulus and others.

We have found the Mount Ararat in South India, or, what is the same thing, in Ceylon. (This island, I have no doubt, was formerly connected with the main land, and was probably disconnected when the city of Maha-bali-poor² was sunk in the sea, and when the Aral; Caspian and Euxine seas broke their banks, as noticed in Book VI., Chapter I.) We have found it in North India, in Il-av-ratta or mount of Naubanda; and the Sibylline Oracles give us another in Phrygia, or Roum or Rome. It had the same name as the Rama of India. I have no doubt that the whole mythos was repeated in Asia Minor: for, Montanus, who came from Phrygia, was believed to be the *ninth* or *tenth* Avatar. He was the Phrygian Avatar.

¹ On this subject, see the 4th Eclogue and the 6th book of the Æneid.

² For a treatise on Mahabalipoor see Trans. Asiat. Soc. Vol. II. p. 1.

5. At the first sight of that part of the Sibylline oracle which relates to the Emperors, down to Hadrian, every person will instantly say, it has been written to suit the history; but when I consider that Julius Cæsar was named certainly after the month, the mythos, and not the mythos after him, and the circumstance of the twelve Cæsars, I cannot avoid a suspicion that the Emperors to Hadrian took their names to suit the mythos as Cæsar did. That the history is deeply tainted with judicial astrology cannot be doubted, or why should there be twelve Cæsars, and why should NERO (Q. Neros the Cycle of 600?) be considered the expected Messiah or tenth incarnation—the genius of the tenth cycle of the NEROS? I beg my reader to reconsider the singularity of the name, coupled with the tradition. I had written the above when I discovered that the Adriatic Sea was called the Adriates, Ἀδριας, by Herodotus; and also by Horace. This at once proved that my suspicion was well-founded, and from this we may learn, that we ought not to be too hasty in determining a work to be spurious from anacronisms—not till they are very carefully examined. It is probable that the other Cæsars before Hadrian had their names from the mythos; at all events, we can no longer conclude that the Sibyls are spurious from the names of Roman Emperors. However corrupted they may be, we cannot conclude them mere forgeries. When we consider that we have not a single book which is not corrupted, it would indeed be a miracle if the Sibyls had escaped. When I find two mystical persons called by the same name, I suspect mysticism. In the East Elias is called by Musselmans Kheser, and Khizir, which looks like Cæsar. Elias was said to be a divinely-inspired person, and so was Cæsar, and here we seem to have them by the same name.

We have heard of the death of Adonis only from the Greeks; Mars was jealous of Venus. In Gaul Mars was called Esus, and Æsus, and Hesus, and Hesar. What was it in Chaldæa that killed Adonis? חזר HZR, Chesar, Cæsar. But חזיר hzir, a wild boar, was taken for חזר hZR, and thus a wild boar killed Adonis. The evil principle prevailed over the good, but the good one rose again to life and immortality.¹ But in Saurashtra, the God Bal had also the name of *Cesar*. We need not therefore be surprised to find a Cæsar in Italy, where are the Palli, the Saturnia, the temple of Loretto, &c., of Surastrene.² Jajati (Yayāti) Kesari was the name of the prince of Orissa.³ Kanya is called Kesar and Kesu, which means *imperial, royal*. The Arabian historians inform us that Japhet had a son called *Khazar*, from whom came the Khozarians on the Wolga, North of the Caspian Sea, and that the Caspian itself was named from this person. In Arabic it is called *Bahr-Khazar* the Sea of Khazar.⁴ Cæsar is the Iswara of India.

The Isan and Isuren of South India was the same as the Hebrew ישי iso to save, or the Greek Ζωη life, and Σωζω or Σωω or Σωω to save. I think the root of the Hebrew ישי iso has been the word ישו so, the 'i, jod, prefixed for the sake of the mystery; then it would be 'I the saviour. From the mixed nature of the Sigma and Tau it became Itzur-en and Itzar and Tzar. All these words are found in South India, having the meaning of the *crucified God, the Wise, or the Saviour*. From this came Isar, Hæsar, Isar-di or dev, and Isard, and Vizard, and Wisard, and Wise man; and, by a similar process, Wit, Witz, Wizard. Æsar parait être employé, aujourd'hui encore, en islandais, comme pluriel de *As*, signifant Dieu. Again, du reste, le nom générique de la divinité se disait en langue Etrusque Æsar, qui fut rapproché de César ou Cæsar, mais qui rappelle beaucoup plus naturellement les *Ases* des Scandinaves.⁵ I believe originally the word Cæsar was

⁴ D'Herbelot; Vallancey's Coll. Vol. VII. p. 24.

⁵ Creutzer, Vol. II. p. 409.

As-sar, or in the Hebrew style of reading Ras-sa, closely connected with the Ras-sees of India. Upon these the word Cæsar or Tzar was formed.

In Irish, God is called AOSAR, pronounced AÆSAR. In Hisdostanee it is Eashoor, Esur, Iswur. In Sanscrit it is *Eswara*. Arabicè Usar, perlustrans Deus. (El. Scheid.) Egyptiorum plerique id nomen pronunciarunt Oishiri, Oisiri, Usiri (Jablonsky); and in Chaldee we find אִסְרָא *aisra* Jupiter. (D. de Pomis.)¹ I think no one can doubt why Julius took the Gallic epithet of Cæsar: and after all the vituperation which has been lavished on him for making himself a God, he applied to himself only what the Romish Church applies to its saints, the *θελεια* not the *λατρηια*—a distinction which very nearly (I do not recollect an exception) all orthodox Protestant writers keep carefully out of sight, when they treat on these subjects; in order that they be able to call their Romish fellow-countrymen idolaters. But scarcely any thing can be more gross than the idolatry of our Protestant bishops and nobles. For, did they not, when they anointed George the Fourth *King*, place him on the sacred black stone brought from Scotland for the purpose, and kept in the most sacred temple of the empire, Westminster Abbey, and never on any account removed—on that very stone, which, as every body knows, Jacob anointed with oil? In fact, thousands of the superstitions of the Papists, Hindoos, Greeks, and Romans, were no more idolatrous than that described above, and they are just as fairly represented by modern writers, as I have represented the above English *θελεια* or superstition.

6. The interpretatio Novi Sæculi, as the fourth eclogue was called, was a sacred mythos, and would, like all other sacred mythoses, have an esoteric and an exoteric meaning. In the same poem a new golden age is promised; but new Trojan wars are also promised. This account of Trojan wars to arrive in the Saturnian times is, in some degree, inconsistent with itself, and this would form a difficulty if we supposed the system to be true; but it agrees very well with my idea, that the system of Avatarism in renewed cycles, though in itself in the chief part false, was all believed by the mystics to be true. Then, of course, they would run into inconsistencies and contradictions to support their faith, as we see all erroneous religious system-believers do every day. Nothing is too absurd for most persons to believe, if they be only educated in the belief of it. Absurdity not being observed, raises no obstacle. It is very certain that, if the system were part of the mysteries of the religion, Virgil could not describe it in any other way than ænigmatically: so that it might be understood by the initiated, but not by the vulgar. The infant alluded to in the eclogue has been a subject of much dispute, but whoever it might be meant for, I think it is very clear to whom it was afterward accommodated by Virgil: unless it was (a thing not unlikely) interpolated by him afterward to make it suit to Octavius; when he became apotheosised, or called Augustus. The following passage of the *Æneid*, Lib. vi., puts this out of all doubt:

— Turn, turn thine eyes! see here thy race divine,
Behold thy own imperial Roman line:
Cæsar, with all the Julian name survey;
See where the glorious ranks ascend to-day!—
This—this is he!—the chief so long foretold
To bless the land where Saturn ruled of old,
And give the Lernean realms a second age of gold!
The promised prince, AUGUSTUS the divine,
Of Cæsar's race, and Jove's immortal line.

All this theory respecting Augustus Cæsar, receives no little confirmation from the fact noticed by me in Book V. Chap. II. Sect. 7, that his birth was coeval with the æra of Vicramaditya, or Buddha of Siam, which shews beyond all doubt the actual identity of the two systems.

¹ Vallancey, Col. Vol. VI. p. 87.

It appears from a passage in Suetonius, that the death of Julius Cæsar *was in a peculiar manner deplored by the Jews—præcipuèque Judæi*. I think from this and many other circumstances that the two Cæsars were not only held up by a few contemptible retainers, (hangers-on for bread, as they have been represented,) as the Cyrus or the Great One of the age, foretold by the ancient prophecies, but by a great and learned body of mankind, who were believers in them. The Cæsars were supposed by their followers, when they were alive, to be renewed incarnations, like the Lamas of Tibet. The Popes say that Constantine gave up Italy to them. This I think was very likely as the price of his absolution, when he received baptism on his death-bed. At the same time he probably surrendered all claim to the pallium and the other privileges of Pontifex Maximus. From that time I think the emperors ruled by the sword only, the Pontifex Maximus by the book. Cæsar ruled by both. Whenever a king is crowned, he is always made to swear that he will support the rights of the church. This is really nothing less than fealty disguised.

7. If my reader will make allowance for the credulity of the author of the Cambridge Key to the Chronology of the Hindoos, in the following passage, he may observe several very curious and interesting statements.¹ “In the Mahabharat, we are presented with a beautiful epic poem. So are we in the Iliad. The latter was written about two centuries after the former: and I have been inclined to think that each was taken from the same mythology: the Gods and Goddesses being no other than the patriarchs of the antediluvian world. That Vyasa was a name assumed by the author of the Maha-bharat, I have little doubt. That is, I believe, the heroic poem, as it is now extant, to have been taken from the history, as recorded by the antediluvian sage: and that the post-diluvian author, being a follower of Vishnu, ascribed to the black Shepherd, as Vishnu or Crishnu, a principal part of those events which are admitted, beyond controversy, by every Hindu, to have taken place in the antediluvian world. Homer, on the contrary, brings the ancient patriarchs, as deities, forward to the seige of Troy. It is not on either that we can safely rely for historic truths: although both poems, it is more than probable, were founded thereon. *There is a great resemblance between the Crishnu of Valmic, and the Achilles of Homer. Each of them, in mythology, is supposed invulnerable, except in the right heel: each was killed by an arrow piercing that part; each was the son of the mother of the God of Love; and the presence of each was indispensable, for the overthrow of the enemy.*” The latter part of this passage of the ingenious Cantab, is no doubt very striking, and we must recollect that we have before found an Ili-vratta, an *Ilium*, and an *Achilles*, in India, and all the Greek Gods—Bacchus, Hercules, &c.; and that we have also found the Jews in India, Jephtha’s daughter in Iphigenia, and the Jonas and Samson in Hercules. The learned Joshua Barnes thought that the Iliad was written by Solomon. This was very odd. The seed of the woman in Genesis was bitten in the heel, Crishnu and Achilles are both shot in the heel!!! Respecting the close connexion between the poem of Homer and Solomon, or the Jewish mythos, Basnage, if my memory do not deceive me, has somewhere expressed the same opinion as Barnes.

The sacred books of India, from being called the books of Wisdom, were at length called *Wisdom* itself. In somewhat a similar way the Muses acquired their name. All sacred doctrines were contained in verse, which was invented for the purpose of preserving them, and every cycle had its epic, or song, or musa, to record its Saviour or משיח *mse*. Thus Homer celebrated the Greek Avatar of the Asian Cyrus, and Virgil, the vates, sung the arrival of the Xæsar. So completely mythic is it, that the historians have made the early life of Virgil almost a close copy of that of Homer, as the modern author of his life, W. Walsh, Esq., has pointed out and detailed at length. This affords an admirable example of what I have observed in another place—that all history has

¹ Vol. II. p. 221.

been corrupted by judicial astrology. No one can help seeing the similarity, almost the identity, of the histories of Homer and Virgil; but no one can doubt that Virgil lived; yet as true biography the account cannot be received. It is like the early history of Rome. No one can doubt that Rome existed, but its early history is a mythos. Every cycle had its muse, its song, its saviour. Virgil intimates that the Iliad is a sacred or mythical poem. The expectation of the generality of persons who treat on these subjects is extremely unreasonable. They expect the hidden secret to be so slightly veiled, that all who read it may discover its meaning; and if they have not this unreasonable expectation gratified, they cannot be brought to get the better of their early prejudices.

If my reader will now turn back and run over in recollection the early history of Greece, he will at once see, that it has no more claim to the name of *real* history than that of Tom Thumb, or Jack the Giant-killer. It is quite clear that a Brahminical nation has existed in the South part of Thrace and the North part of Greece. The proofs of the fact are complete. Then *when* did it exist?

After giving the subject all the consideration in my power, and a diligent examination of ancient documents for many years, I have become quite convinced, that almost all the ancient histories were written for the sole purpose of recording a mythos, which it was desired to transmit to posterity—but yet to conceal it from all but the initiated. The traditions of the countries were made subservient to this purpose, without any suspicion of fraud; and we only give them the appearance of fraud, when we confound them with history. This is the case with all early histories. They were all anciently composed, or, *if written*, they were written in verse for the sake of correct retention by the memory, and set to music for the same reason. They were all of the same nature as the Iliad and Æneid. The most ancient of the ancients had nothing of the nature of our real histories. Real history was not the object of their writing, any more than of Virgil's or Milton's. Herodotus was the inventor of history. If it be true, that all these epics or pretended histories are under one disguise or other, but particularly under the guise of real history, intended to conceal a secret mythos, or religious system from the vulgar, how could they be otherwise than as we find them? They are, no doubt in some respects, different, but there are striking marks of identity here and there to be perceived. The marks of identity are facts which cannot be denied. Let them be rationally accounted for otherwise than as I have accounted for them, viz. by one general system's prevailing, in secret, through all the ages. But enough of this digression.

8. When Cæsar was murdered there was a darkness over the earth. Virgil says,¹

Cum caput obscura nitidum ferrugine texit
Impiaquæ æternam timuerunt sæcula noctem.

Servius in his note on this place, says, this darkness lasted ab horâ sextâ usque ad noctem, i. e. from noon till night, which at that time of year must have been six hours.² Here we see the history accommodated to the mythos, but are we therefore to suppose that there was no Julius Cæsar? Here we also see a confirmation of what I have said, that Cæsar, at the time of his death, was believed to be the presiding genius of the age: and as was the case at the death of Romulus and many others, the death did not change the mythic character of Cæsar. Soon after Cæsar's death, when Augustus obtained the power, *he* was believed to be the person, and the Æneid was written to celebrate him. The Death of Cæsar, so like to that of Romulus, rather tended to prove him a sacred character like Romulus. The darkness was easily invented afterward to complete the picture.³

¹ Georg. I. 467.

² Costard, Astron. p. 92.

³ I much suspect that all chronology was corrupted for mythical purposes, as we are very sure history was. Sir

It is Cæsar that Virgil celebrates in all his verses. The mythos taught that there were to be twelve Cæsars, and Julius's praise will suit all or any of them. If the generation in this case were taken at *thirty* years, it brings us to the mythos of Constantine, who founded Nova Roma on the seven hills, 360 years after the first of the Cæsars. I have no doubt that the mythos was, that the Julian family should last for twelve generations—in all 360 years—till a new period arose. I think it not unlikely that the flatterers of Constantine (the son of Hellen by Coilus) might persuade him, that notwithstanding the actual number of Roman despots, yet that before him there were only twelve legal Emperors; and that *he* was the divine or inspired or incarnated person destined to found a new cycle and a Nova Roma. The divine character of Cæsar is the continual theme of Virgil's praise.¹

The circumstances respecting the Cæsars, when all considered, are surely very curious. In the first place, the family name of Julius seems to shew a latent claim to sovereignty, only waiting a fit opportunity for the family to display itself. It must be recollected that in those days hereditary high-priesthoods in families were very common, and with the high-priesthood a sovereign claim, similar to that of Tibet, mostly shews itself. Several families possessing something of this kind may be perceived in Rome. Augustus was pretended to be begotten by a God, in the form of a serpent, in the temple, and to be brought forth *after ten months*. However we may vary this in language, it is evidently what we should call an immaculate conception. And the ten months' pregnancy shews it to be a mythos, similar to that of Cristna, Hercules, Bacchus, SOLOMON; and, I doubt not, that, had we all the apocryphal gospels entire, similar to another immaculate conception also. The name of the Indian, Etruscan, and Celtic God Æsar or Cæsar, followed by eleven other Cæsars, again shews the ancient mythos, and that the twelve Lucumones of the Etruscans were perhaps princes and high-priests in succession. Julius declared himself high-priest, Pontifex Maximus, and probably, though perhaps secretly, pretended to the office by hereditary or divine right. He certainly pretended to be the great one of the ninth age, who was to come, and was believed to be so, both by Jews and Romans. And though this is scarcely perceptible, yet it may be perceived in the fourth eclogue of Virgil, and in the regret of the Jews. His aphanasia and six hours' darkness at his death liken him to Romulus and to Jesus Christ. The suffering of a violent death seems a necessary part of the mythos; and I suspect that the deaths of Calanus, of Cyrus, of Cræsus, of Hercules, of Romulus, &c., &c., &c., all had a connexion with it. The following two verses are of themselves enough to shew that the fourth eclogue refers to the mythos of which I have written so much.

Isaac Newton thought the founding of Rome was 120 years wrong. I suspect that the æra of Nabonassar, that of the first Olympiad, and that of the founding of Rome, were all meant to begin the eighth Sæculum, and that they were meant to be 650 years before the commencement of the ninth.

¹ Tuque aded, quem mox quæ sint
habitura Deorum

Concilia, incertum est, urbisne invisere, Cæsar,
Terrarumque velis curam, et te maximus orbis

Auctorem frugum, tempestatumque potentem, accipiat. Virg. Georg. Lib. i. 24.

And chiefly thou, O Cæsar, concerning whom it is yet uncertain what the Gods in council may determine—whether thou wilt vouchsafe to visit cities, and undertake the care of countries, and the widely-extended globe receive thee, giver of the fruits and ruler of the seasons.

Again, in Georg. II. 503. Again, II. 170. This passage is clearly not understood.

Again, in Georg. III. 16, Virgil says, he shall place Cæsar in a Temple. He praises the boy Hylas, which is nothing but the boy *Iulus*—Yule—the infant Jupiter. See Fig. 20, the black Bambino.

Again, Æneid. I. 285—295, VI. 775, &c., and VIII. 678—714.

Incipe, parve puer, risu cognoscere matrem :
Matri longa decem tulerunt fastidia menses.

Here is the child laughing at its mother as soon as born, and its mother suffering a pregnancy of ten months. Zoroaster, Buddha, and Jesus Christ, are all represented to have laughed as soon as they were born.

9. Whether an angel appeared to the mother of Cæsar to warn her not to have connexion with her husband during gestation I do not know, but this is precisely what happened to Aristo the father of Plato, according to Apuleius, Plutarch, and Hesychius. So that there can be no doubt that it was a part of the mythos.¹ A star was said to foretell the birth of Cæsar. This seems to have been a necessary part of the mythos; refer to Book V. Ch. II. Sect. 7. I believe when Virgil wrote the line

Ecce Dionæi processit Cæsaris astrum,

he meant the star which appeared on the birth of Cæsar. Col. Tod says,² "The Chinese account of the birth of Yu (Ayu) their first monarch,³ (Mercury or Fo,) a star struck his mother while travelling. She conceived and gave to the world Yu, the founder of the first dynasty which reigned in China." Here we have the same mythos of the immaculate conception in China, and of the same God if I mistake not—*ie.*

In Basnage is a very curious account of a kingdom of Cosar or Cæsar, which has been much sought after.⁴ It alludes to another kingdom of the Jews somewhere in the East. Lord Kingsborough has noticed this in his magnificent work on Mexico.⁵ I believe this arose among them from meeting every where with remains of a mythic kingdom of a Cæsar which they could not understand. They learnt that there was a kingdom of Cæsar or Cosar or TZR or Tzarina ruled by Jews on the North of India, which they fondly flattered themselves must keep alive the prophecy that the sceptre should not pass from Juda till their Messiah came; but when they examined it, it vanished from their touch. They were the remains of the kingdom of Oude which they found.

There is yet one more circumstance of the mythos of Cæsar which shews, in a very extraordinary manner, how all history, even almost to our own day, has been corrupted to conceal or record the mythos. We have seen that Buddha was born from the side of his mother, and that the Christian heretics taught the same thing of Jesus. To complete the secret doctrine, Cæsar was said to have been born by means of what we call the Cæsarean operation, *from the side of his mother*. No doubt this was told to the vulgar, but to the initiated the doctrine of Buddha was told. When all the other mystical circumstances relating to Cæsar are considered, the nature of this story cannot be doubted. The doctrine of the birth from the side, he probably learnt, with much more that has not come to us, from the *Chaldeans*⁶ whom he employed to correct the calendar.

Dez Prez, the author of the notes on Horace in Usum Delphini, begins his dedication thus: "Ensem dextra, læva librum tenens Julius ille Divus quondam in numismate voluit effingi, cum hac epigraphe, *Ex utroque Cæsar*. Julius Cæsar ordered his effigies to be stamped on a coin, holding a sword in his right hand, and a book in his left, with an inscription that imported, he was Cæsar both by the one and the other." Malcolme's Letters. By this he meant, as an incarnation of the God Mars or Hesus or Æsar, and not as conqueror of his country, and by the secret doctrines of the book. By right of the Liber, Bacc, Boc, Book, I have no doubt that he and his family always, though perhaps secretly, claimed to be Pontifex Maximus, which only

¹ Vide Taylor's Jamblicus, p. 6, note.

² Hist. Raj. p. 57.

⁴ Bk. vii. Chap. i. Bk. viii.

⁵ Vol. VI. p. 284.

⁶ Proved hereafter.

waited a favourable opportunity to display itself. The claim by the biber, the book, is a very curious part of the mythos, which I hope to be able by and by to explain. Many circumstances might be pointed out which tend to shew that in all countries, in very early times, the office of Pontifex Maximus was hereditary in families, as in that of Aaron; and I think in that of Rome several families had pretensions to it, which were kept down by the jealousies of their countrymen.

In the time of Octavius one of the priests told a noble matron of Rome, that Apollo was in love with her. In consequence of this she went to the temple and, as she believed, slept with the God, but having more vanity than prudence, she boasted of it, which caused it to come to the ears of the Emperor, who ordered the priest to be put to death. The Emperor did not approve of this intrigue: he *smelt a rat*. Our priests, not so wise as the Emperor, are shocked at the immorality carried on in the temples, and praise him for his regard for religion and morality. But they may be assured that, if there had not been some other reason, the God might have intrigued at his pleasure. The Emperor wished *for no sons of God*. It is pretty clear that but a very small part of this story has come down to us. I have no doubt that if the produce of this holy amour were a boy, Augustus took care to provide for it, only with more success than we are told Herod's plans were attended at Bethlehem.

If Pompey had defeated Cæsar he was prepared with his divine claim exactly as Cæsar was. He would have been an incarnation of Buddha or Mercury.

—— καλω δ' αμα
Πομπαιον Ερμην χθονιον.¹

A Ptolemy of Egypt was called Soter; this shews the claim again: and the name of the Ptolemies was often written Mptolemeus, when the M could not be emphatic: this was, for the same reason that the prefix X might be given to Cæsar. From the same principle proceeds the divine right of all our kings. The kings claim it by birth. The popes and priests pretend to give it by imposition of hands—*χειροτωνια*. It was to conceal the origin of this claim, that kings and priests have always been so solicitous to conceal this mythos. They wished to profit by it, but they feared that the people should understand it.

In the same way, it appears that Mark Antony was provided with *his* divine right, if he had succeeded in possessing himself of the empire. Jurieu says, Mark Antony was called M Arca Antonia, alluding to an Egyptian superstition; but he does not try to explain it. A tower in Jerusalem was called Antonia. The Arca floated from Egypt to Byblos. Was Byblos called Antonia? Some very ingenious speculations may be found in Mr. Barker's Lempriere,² by Professor Anthon,³ respecting the old Roman nobility; he supposes that they were the remains of a sacred caste. This seems to me to be extremely probable. They were hereditary landholders, legislators, and sacred persons or priests, each perhaps aiming to be the Pontifex Maximus—who was unquestionably the first man in the state—all jealous of one another, and perhaps agreeing in nothing but in the choice of the most imbecile for that situation, as Bishops of Canterbury and Popes of Rome are said to be selected.

The Avatars seem to have been very numerous. M. Creuzer, who, I suspect, from his some-

¹ Ajax, v. 1292; Nimrod, Vol. II. p. 479.

² In voce Rome.

³ I beg leave to draw my reader's attention to this work of Mr. Anthon's. It exhibits in a very favourable point of view the literary character, and the enlargement of mind, of our former countrymen. It is a wonderful improvement upon the obsolete and contemptible priestisms of old Lempriere. It is the best book in our language for the education of youth. It might be greatly improved by making it more of an ancient Gazetteer, and I hope when a new edition is printed, Mr. Barker will add to the obligation under which he has laid his country by making this addition to it. By this means alone the size of it might be almost doubled with very great advantage.

times using the word *Avatar*, had a glimpse of the true and secret system of the ancients, shews that the same mythos was applied to great numbers of ancient Grecian heroes, such as Theseus and Hercules. This is perfectly correct. We have seen proofs from the names of towns or places in different countries, that each independent district had its system of Avatars: then, of course, there ought to have passed, in the time of Julius Cæsar, eight Avatars in each country; this accounts for their great number, and for the great numbers of persons or hero Gods of the same name. Each country had its Jupiter; and the only thing which surprises me is, that the devotees did not quarrel about them in the West, as they seem to have done in the East. That the system is not more apparent is easily accounted for. It was a secret alluded to in the celebration of the highest mysteries only, and perhaps understood merely by some of the professors of them. Time has long been at work with his all-destructive scythe, aided by the power of the Christian priests, to destroy or put out of sight all the facts that transpired respecting it in the works of the ancients, which had any relation or similarity to the facts related of Jesus Christ. How can any proof of this assertion be required more clear than that of the different crucifixions of Prometheus, Ixion, &c., so completely disguised, as they are, and which by good luck only have escaped destruction?

Much nonsense has been written concerning the heroes of antiquity being converted into Gods; but now, in the Cæsars, I think, we may see the real nature of the apotheosis. They were not supposed to be men converted into Gods, but incarnations of a portion of the Divine Spirit; at least this was the real and secret meaning of the apotheosis. They were men endowed with the Holy Ghost. They were nothing but men supposed to be filled with more than an usual portion of that spirit which our bishops profess to put into their priests, when they ordain them by the imposition of hands—by which they give them the unconditional power of remitting sins; at least so the book says. Like the Christian saints, they were not *generally* declared, till after their deaths; though during their lives they might be believed, by many of their followers to be divinely inspired, as was probably the case with St. Francis,¹ as I shall presently shew. In his case, his followers were only fools; in such cases as that of Octavius a due admixture of rogues would also be found. Octavius was a second Cyrus. On this account he was called *Augustus*, and, as the last and most holy appellation, the same as Cyrus, FATHER OF HIS COUNTRY, the *Αἰών των αἰώνων*—*Deus fortis futuri sæculi*.² I am surprised that we have not a life of Octavius by a Latin Xenophon, to match the *Heathen gospel called the Cyropædia*. I have very little doubt that the prophecies, in the case of Octavius, conduced to their own fulfilment, and I think it very probable that he really believed himself foretold, as many others, with much less pretensions, have done since; such as Brothers, Swendenborg, &c. All this was in strict keeping with what I suppose was the fact, that the early history of Rome was merely a mythos, which is strongly supported by many of its pretended events being only copies from the *heroical* history of Greece, as noticed by Lumsden and Niebuhr, which I shall immediately examine. Then, as the Argonautic expedition, the Trojan war, &c., took place at the end of the former millenary, or neros,—they would take place again at the end of that then coming. If we consider that the principal events said to have happened to the early Romans are only Grecian fables repeated, it is not unlikely that the devotees really believed that new Argonauts, &c., would arise in a few years. I suspect some Gentile mystics found that the time was shortly coming when the tragedies of Babylon, Thebes,

¹ And Johanna Southcote, whose religion continues to flourish, she having, to my knowledge, learned Protestant priests among her followers, in A. D. 1830—one of the rank of *honourable*.

² Isa. ix. 6, 7.

and Troy, would be repeated in Rome—Nova Troia or new Babylon. These were the Irvings and Fabers of their day, and probably this was the correct mythos.

10. Before I proceed, I beg my reader to look back to Book VII. Chap. VIII. Sect. 2, for what I have there said respecting Rome. The Targum of Jerusalem says, Rex Messias egredietur ex urbe Româ. Edit. Buxt. Lex. in Româ.¹ This confirms my suspicion, that there was much more mythologic matter appertaining to Rome, than what we have been accustomed to calculate on. I suspect that new Troys, &c., were expected every 600 years. In the case of the Romans this was a superstition, which could not be corrected by that kind of experience which we acquire from history, because they had no history. What we call their *history*, Mr. Niebuhr has shewn was mere *mythos*. This will account for a degree of superstition which would be otherwise scarcely credible, among the higher ranks of the Romans.

A great many years ago, the question of the truth or authenticity of the history of the first four hundred years of the Roman empire, was discussed in the Transactions of the French Academy of Inscription,² by Mons. De Pouilly and the Abbé Sallier. The former asserted the same as had been asserted by an Englishman called Lumsden, in his travels in Italy—that many of the incidents in the Roman history were identical with those in the heroical history of the Greeks, and therefore must have been copied from them. In reply to this, the Abbé shewed, from dates and circumstances, that they could not have been copied by the Romans from the Greeks, and, therefore, that if either copied, it must have been the Greeks who copied from the Romans, which was bringing the matter nearly to a proof *ad absurdum*. But that which seems probable has never been suspected,—that they were not copies of one another, but were drawn from a common source; were, in fact, an example of remaining fragments of the almost lost, but constantly renewed, mythos, which we have seen every where in the East and West,—new Argonauts, new Trojan wars, &c., &c. But these gentlemen, not having the least suspicion of any thing of this kind, were, as well as their readers, very much puzzled to know what to make of these odd things; for both parties seemed to be right, as, in fact, in great part, they were.

The Abbé Sallier observes, that although Dionysius, of Halicarnassus, fixes the date of Rome, yet he does not determine whether it was then first founded or only repeopled. Dionysius contends, that facts have been received from father to son in families, as a sacred inheritance; but to this is opposed an observation of Livy's, which we know from experience to be very probable—that families have inserted things in their own praise which have never happened: *multa enim scripta sunt in eis, quæ facta non sunt: falsi triumphi, plures consulatus, genera etiam falsa.*³

But there is another passage of Livy's and one of Plutarch's, which seem, taken together, to place the absolute uncertainty of the Roman history out of reach of reasonable doubt, even if its similarity to the Grecian fables did not do this: because these writers must be considered as unwilling witnesses to an unwelcome truth. Livy⁴ says, *Vitiatam memoriam funeribus laudibus reor, falsisque imaginum titulis, dum familia quæque ad se famam rerum gestarum, honorumque fallente mendacio trahunt. Inde certe et singulorum gesta, et publica monimenta rerum confusa. Nec quisquam æqualis temporibus illis scriptor extat, quo satis certo auctore stetur.* Plutarch says, at the end of his treatise on the fortune of the Romans, speaking of the times which preceded 603 of the foundation of Rome, *Τί δεῖ περὶ ταῦτα διατριβεῖν, σαφὲς οὐδὲν, οὐδὲ ὠρισμένον ἐχει.*

11. In August, 1830, after this work was sent to press, a notice of Mr. Niebuhr's work made its appearance in the Edinburgh Review. That notice surprised me greatly, for it is not in the usual style of the Review. It consists of a loose tirade against the probability of Mr. Niebuhr's

¹ Nimrod, Vol. III. p. 381.

² For the year 1729.

³ Liv. Lib. viii. Cap. xl.

⁴ Ibid.

doctrine, that the early history of Rome is a mythos. It notices his observation of the peculiarity of the number of the years of its kings, 360, without noticing the collateral facts which confirm the mythic character of the history, viz. the circumstance that they are only copies of facts recorded of the heroes of Greece. Suspicious as the numbers are, they would not of themselves, perhaps, have been enough, but surely the collateral circumstances ought to have been noted. In direct opposition to the ingenious Reviewer, who, I complain, has not treated Mr. Niebuhr's work fairly,¹ I maintain, that it is not credible that the very singular number of 360 years should have elapsed between the fall of Troy and the building of Rome; 360 between the building of Rome and its destruction by the Gauls; 360 more to the foundation of the monarchy by the capture of Alexandria; and from the latter to the dedicating of Constantinople 360 more;² the whole making the sum of 1440. I contend that the numbers *connected with the other matters* do clearly prove a mythos,—a mythos which, like all other mythoses, was originally concealed in poems for aiding the memory—and, perhaps, when letters came into use, acrostic poems too. Directly against the Reviewer I also contend, that though the astrological taint of the early histories does not prove them all false, yet it does render them doubtful, wherever there is the least reason to suspect that the mythos may be concerned. And I contend that it is philosophical to *hold in suspicion* (ROGER BACON) all such histories, and unphilosophical to receive them without it. For, as I have observed, although the mythic character of the history does not prove it all false—that there was no Rome, that there were no kings—yet it places it in the same situation with the heroic history of Greece, the history of Theseus, &c., until the mythos is made out. I contend that wherever the mythos shews itself—and it appears that an historian has, like the Reviewer, not considered such mythos to be a suspicious circumstance—the whole is for that very reason to be doubted in a greater or less degree. The mythos has corrupted all history. Who can doubt that the Argonautic history is a *recurring* mythos? It is noticed by Homer, and some of its heroes are said to have lived long after his time. Now, our historians have endeavoured to concoct the history, so as to make out one probable story; which, if its cyclic character had been understood, they would instantly have seen it was impossible to do, consistently with truth. As Virgil has told us, new Argonauts would arise from time to time. The Reviewer says, that “historians draw largely upon their own and their readers' credulity in matters connected with religion, when in recording common secular events they observe the most scrupulous fidelity.” But the mischief is, that the mythos is historical, and all history is closely connected with it. I am sorry for the line which this influential review has taken, because it tends to aid the priests in their attempts to run down Niebuhr, and thus to stop *in limine* the attempts, by establishing the fact of the mythos, to remove the hitherto insuperable difficulties attending all the early history of mankind. However, I leave it to the writer of the article to believe in Romulus and the Lady Wolf, and, if he please, in Jack the Giant-killer. I shall continue to doubt their truth. The fact of the mythos is established; and whatever the Editor may think or say of my work in other respects, I hope his learned contributors will render me their very powerful assistance in making out the whole secret of the mythos.³

Whenever I find the serious argument of a sensible man treated with ridicule, I always suspect that the power of an opponent to refute it is weak. The hypothesis of Bailly and some others so much ridiculed, that the origin of man is to be sought far to the North of India, may, perhaps, receive some slight support from a passage of Gibbon's.⁴ It will be accounted for by *ridicule*

¹ P. 374.

² Niebuhr, p. 171.

³ Niebuhr has been ably vindicated by the Foreign Quarterly Review.

⁴ Hist. Ch. xlii.

and *accident*. I confess neither of these modes of refuting is satisfactory to me. “ In the midst of these obscure calamities, Europe felt the shock of a revolution, which first revealed to the world the name and nation of the Turks. Like Romulus, the founder of that martial people, was suckled by a she-wolf, who afterward made him the father of a numerous progeny : and the representation of that animal in the banners of the Turks preserved the memory, or rather suggested the idea, of a fable, which was invented, without any mutual intercourse, by the shepherds of Latium and those of Scythia.” When I think of Cristna exposed, of Cyrus exposed, of Moses exposed, of Romulus exposed, and of the Turk exposed, and all, like Jesus, saved from the tyrants’ power, I cannot attribute this similarity to accident ; and the proofs which I have given of the identity of the Latin and Sanscrit languages, and the identity of places in India and Italy, &c., &c., preclude the hasty conclusion of Gibbon, that there has been no intercourse between Italy and India. The country of Janus, of Saturnia, and Itala or the Bull, must have had a close intercourse in *very early time* with the country of Genesa, Satrun-ja, and the country where Taurus opened the Vernal Year with his horn. I leave these things to the reflection of my reader, quite certain of the result, if he will only employ his reflection upon them. To account for them I can find no way consistent with present Christianity, except by adopting the argument of Parkhurst, that, like Hercules, Romulus, &c., they are emblems of a future Saviour. To this, at present, I shall make no objection, whatever my private opinion may be, provided its proposers will only have candour enough not to insult my understanding, by stories of accidents, and will admit the facts which cannot be disputed.

Supposing the theory which I have developed, that is, in fact, the theory of Virgil, to be correct, the fragments ought to be found in occasional duplicates, as we *do* find them, some in one country, some in another. For example, the part of the story consisting of Cristna’s escape and preservation by a cowherd from a tyrant, is the same story as Cyrus’s, the same as Moses’s, the same as Romulus’s, and as several others. There has, no doubt, been originally one history of them all, and that history a mythos or a doctrine : and the doctrine of a divine incarnation in each age, which the priests of each country persuaded the people must belong to them, as proved by their history. Though I fear there is little hope of making out the story completely, I do not consider it entirely hopeless. The Christian will say, that the Pentateuch is the original mythos ; then I say in reply, by hopeless I mean, if that be the case, that by the discovery of a more full and particular account the whole meaning of Genesis may be discovered. For I assume, that no person can now believe, that the real meaning of the Tree of Life, &c., is known. How monstrous is the absurdity of taking a part of this mythos, the tree of knowledge, and making out of it such a doctrine as that of the atonement, a doctrine not only contrary to the moral attributes of God, but subversive of all morality !

The ancient spirit of mysticism is well exemplified in the names of Rome. Among others we are told, that it was called *Ερως* or Love, because its name, of Roma, spelt anagrammatically, made Amor. In the same way, probably, its legislator, Numa, was called from Menu or Amun. ¹ It is very extraordinary, that when it must be known to the learned, that all the writers on mystical subjects concealed them as much as possible by anagrams, and acrostics, and ænigmas, of every kind, they should be so unwise as to cast these things away, and pay no attention to them. The Jews and Gentiles were equally addicted to these practices. They almost all gave themselves false names, even down to the modern John Calvin. Lycophron called *Πτολεμεις*, Ptolemy, *απο μελιτος* from Honey : *Αρσινοη ιον ηρας*, the Arrow of Venus. ² Under these circumstances,

¹ Vide Creuzer, Vol. II. p. 521.

² Basn. Hist. Jews, Bk. iii. Ch. xxiii. Sect. ii.

how is any one who does not attend to them to be expected to find out the meaning of such works as the Cassandra?

In 1 Pet. v. 13, Rome is alluded to under the name of *Babylon*. This very much perplexed the Luthers and Calvins, who were not initiated in the Roman religion. But this was the mystic name of Rome, as is proved from a passage in the Sibylline Oracle, Lib. iii., where Rome is most clearly designated by the word *Babylon*. Very truly has Nimrod said,¹ that the Sibylline Oracles are Gnostic performances.

Urus is a name for the male or female beeve. *Ur* is the root. *Ur*, then, means *beeve*. *Ur-ia* or *Ur-iana* a district of India, then, means Country of Beeve, or Bull. Italy was called *Vitala* or *Itala*, which meant *bull*. It was called *Saturnia regnum*; then, *regnum Saturnia* meant the same as *regnum Urus*. *Saman* was the God of Italy. *Saman-Nath* of that part of India called *Saturnja*, in which God was also called *Sum-naut*, is evidently the same. The Indian *Saturnja* is found in a country of *Pallitana*, and the Italian *Regnum Saturnia* on Mount *Pallatine*. *Palli* occurs in both; while there is a God *Jain* in the one, and a God *Janus* in the other. God was also called *Sam*; and *Meru* meant *mere* or *mount*; then, *Someru* or *Sameru* was *Mount Sam*, or *mount of the sun*.

It is a striking circumstance that Rome should be called *Urum*; but it is not so surprising when we find Italy called *Italus* or *Vitulus*.² Littleton says, *Quondam dicta fuit hæc urbs Valentia, Saturnia, Flora, CΕΡΗΑΛΟΝ,*³ *επταλοφος* sive *septicollis urbs, Urbs Augusta, Sacra, Æterna; TUSCIS URUM, et Christianis plerisque, hodie Babylon.*⁴

Thus we have Rome called *Babylon*, and *Babylon* called *Rome*. We have a city of *Rama* and an island of *Rama* in India: and a point *Romania*.⁵ We have in *Phrygia* *Mount Ararat* noticed by the *Sibyl*, and a *Roma*, &c., and a country of *Roum*; and, to complete all, we have in each, for rulers, *Cæsars* or *Kesari*. Can any one doubt a common mythos? And it may have been any of these *Romes* to which the *Erythræan Sibyl* in her prophecy alluded. *Rome* was *Babylon*, and *Babylon* was the city of the *Dove*, and *Lanca* or *Ye-lanka*⁶ or *Ceylon* was the island of *Rama*, (in which were *Ararat* and *Adam's foot-mark*,) the capital of which was *Columbo*. Was there a city of *Rama* or *Roma* in *Ceylon*, or in the island of *Rama*?

Creuzer shews that *Rome* was called an *Olympus*,⁷ and in their ceremonies they chaunted *Tri-omphe, Triomphe*—that is, the triple *Omphe*.

12. *Apollo* had a daughter called *Chryses*; he married her to *Dar-dan-us* of the opposite coast to *Thrace* or *Troy*, and with her gave, as a marriage portion, the *Palladium*, or icon of *Pallas*, the Goddess of wisdom.⁸ It was carried by *Æneas* from *Troy* to *Alba Longa*, on the conquest of which, along with *Cæsar's* family, it was removed to *Rome*, and placed in the temple of *Vesta*. *Cæsar's* family was spared, as *Æneas's* had been, at *Troy*. History and not poetry, says that *Æneas* treacherously delivered up the *Palladium*, by which he purchased his safety and sacrificed his country. Was it the same with the ancestor of *Cæsar*? There is a parallel for this in Holy

¹ Vol. I. pp. 228, 388.

² M. *Creuzer*, Vol. II. Liv. v. Ch. v. p. 518, shews how the word *Itala* comes from the word *vitulus*.

³ Is this a translation of *Ras* or *Αρχη*?

⁴ *Tarquin* the ancient is said to have built the *Cloacæ Maximæ*, but it is forgotten, when this is said, that the famous statue of *Venus Cloacina* was found in them by *Romulus*; (see *Nimrod*, Vol. I. p. 320;) so that one part of the tradition nullifies the other.

⁵ *Hamilton's Gaz.* p. 184.

⁶ Called *Yelanki* by *Wilson's*

⁷ Liv. v. Ch. v. p. 524.

⁸ *Sandy's Travels*, p. 23.

Writ. The case is suspicious. As long as a city possessed this Palladium or icon of WISDOM it was impregnable. It was carried from Rome to Constantinople the new capital of Thrace, by Constantine the First. I much suspect that it was placed by him in the church of Sancta Sophia, and that for this reason it was called Sophia. Constantine is said to have given the name of Nova Roma to Byzantium, and to the district, the name of Romelia: but I imagine from its propinquity to Antiquissima Roma, as it might be called, or Troy, that he only restored the ancient names, if he did give them those names. I rather conclude, it was like the Roum of Phrygia and the Rama of Ceylon, and that he found the old names when he found the seven hills. The country of Ilium was called Mysia, (ia-מסתר *mstr*, μυσσηριου,) like the part of Thrace called Romelia. This strengthens the ground for suspicion. Ptolemy knew nothing of the name of Romelia. He only knew the Greek names; and Romelia, if I be right, would be the name which preceded that of the Greeks. It was the country of Rama.

Let us cast our eyes on ancient Thrace, and what do we find?—the district first called *Thrace* and then *Macedonia*, restored to its ancient name, a little corrupted, Rome-lia; that is, the country of Rama, with the L inserted from a natural tendency to improve the Euphony of the word. Thus we have Rome in the country of Saturn-ja and Pallitana, and in the country of Rama where the Trimurti reigned and the widows were sacrificed. It was probably when it first bore the name of Rama, that the gold mines were worked, the vestiges of which were observed by the Greeks. When the Turks, ignorant of Greek, conquered the country, they naturally gave places the names used by the country people—the old names.

In Phrygia, with the Turks, a district has recovered its ancient name of Roum (Wilkinson's Atlas). There may be seen also a *Djanik-IILI*, that is *Iuli*; and a *Kaisarieh*; a town of Sivas; a Gulf of Samson; a river Euphrates, &c., &c. From this country the Romans got their Pessinnucian stone. We must remember that Troy was in Phrygia, and that Roma was Nova Troia. In Lat. $39\frac{1}{3}$, Long. $45\frac{1}{3}$,¹ we have Hadrianotheræ; and in Lat. $39\frac{3}{4}$, Long. 47, we have Hadriani ad Olympum, now called *Edrenos* by the Turks. Here I think no one can deny the Udrinos, or the Ὑδρινης. Is this the old name, or the Roman one?

13. Niebuhr says, "It appears that, in clearing away the ruins of the Colossæum, below the former pavement which they had dug, they discovered remains of a Cyclopæan wall. Unfortunately their direction has not been stated. It will probably appear that they belonged to *Roma Quadrata*. It is rather singular that they should have carried it through this deep valley. This mode of building vouches for an age of the city far beyond our chronology, and for a nation of early inhabitants which had utterly disappeared."² It is an extraordinary thing, that Mr. Niebuhr should content himself with this observation, without making the slightest attempt to follow it up, by inquiring what this nation was which had disappeared, or whence it came. The history of Rome and Italy, previous to about three hundred and fifty years before Christ, may be given in very few words—as far as with any certainty it is known. It was probably at first occupied by Nomade tribes from the North of India, who gradually settled themselves in its delightful climate and soil; and, under a patriarchal or priestly government,³ it increased to great population and enjoyed a state of peace for many generations, till the law of change operated and destroyed this golden age, this Pandæan state, this empire of Pandæa.⁴ Quarrels and separate states arose

¹ D'Anville.

² Vol. II. p. 530.

³ Treated of hereafter.

⁴ This was the time when the city of Sybaris flourished, which had a population so great, that it could send an army of three hundred thousand men into the field. Posidonia or Pæstum, whose temples and walls yet remain to prove its Indian origin and its magnificence, was one of the towns of this state. The time when it enjoyed the advantages of the peaceable, patriarchal government, before the Cyclopæan walls were necessary, was probably that in which its beautiful temples of Neptune and Ceres were built, which yet remain.

by degrees, and their towns became surrounded with Cyclopæan walls. It remained in this situation, sometimes one state preponderating, sometimes another, till the famous tribe of Gauls, under Brennus, arrived, who overran the country, pillaging the open towns, but not equal to contend with hill fortresses like the Roman Capitolium, the Cyclopæan walls of Pæstum, Cortona, and other cities, or the natural defences of Civita Castellana or Veii, if it were Veii. After a short course of victory and success, a great part of the Gauls were probably destroyed by the perpetual irruptions of the natives from their walled towns, and from their fastnesses in the Apenines upon their rear; aided by a most powerful ally, the Autumn Malaria; and, the remaining part weakened and dispirited, like a late retreating army from Moscow, were expelled. When this hurricane had blown over, favourable circumstances of which we are ignorant gave a preponderance to the Roman state, and, after a series of wars for a considerable number of years, united the population of Italy under her command. The fortunate circumstance of having a Napoleon arise in her state, in the person of a Camillus, was quite enough to account for Rome acquiring the supremacy. Perhaps some superstition, respecting the ancient Cyclopæan city just alluded to, might lend its aid. How this might be, we know not, but probably the population of Italy, from the previous state of warfare in which it had been, might be much more warlike than that of the Eastern and civilized states, or the trading Carthaginian; and thus Italy might be qualified to achieve the conquest of the world. I think this is nearly all that can safely be said of Rome previous to its destruction by Brennus, in the fourth century before Christ. The histories of Livy, Polybius, Appian, &c., &c., are scarcely worthy a moment's consideration. Niebuhr has sufficiently exposed their falsities and contradictions.

We have formerly made an observation on the forged Vedah of Robert de Nobilibus. The case may have been simply this. As Ammonius Saccas, in former times, had found the Christian and Gentile religions to be radically the same, so Robertus found the Brahmin and Christian in the times of the moderns; and he endeavoured so to contrive a Vedah, that, by leaving out part of the nonsense of each religion, he might bring them to an agreement, under his master, the Grand Lama of the Western Roum or city of Rama. He may have found, what was real fact, that the mythos of modern and Western Rome was at the bottom precisely the same as that of ancient and Eastern Rome. The Rama of Ceylon proves the possibility of this theory. I shall return again to the name of the Eternal city.

Infinite almost in number are the places in the writings of the ancients, and in their ceremonies, where the sacred Argha or Ark is noticed or alluded to. Every mythos of antiquity is represented or disguised in the form of a history. We have the Trojan war, the adventures of Bacchus, Hercules, Theseus, Osiris, Cristna. The early history of Rome is like all the others; and of the same character is the history of Noah—an allegory concealed under the garb of history—Buddha, Jain, or Menu, floating on the ocean in a boat; that is, the principle of generation or the generative power reduced to its simplest elements: the Linga, in the form of Menu floating in the Yoni, in the form of a boat. In Genesis it is Noah and his three sons. These great incarnations always affected a similitude to those which had preceded, the nature of which is best described in the prophecy of Virgil, and examples of which may be seen in all the Indian Avatars, particularly in those of Buddha and Cristna. They are visible also in the accounts which we have seen of the repetitions of the ten years' sieges, of towns, &c., &c., of the Western nations. All these histories were probably repetitions of mythoses, on the same principle as the Indian Avatars. Precisely like all the others was the Mosaic history. There are Adam and his three sons, from whom all mankind descended in the first yug, age, or world. These are succeeded by Noah and his three sons, at the second yug, age, or world. Though they be not the same any more than the histories of Buddha and Cristna, they do not differ from one another more than the two latter

differ. The theory was, that a renewal of every thing should take place in every mundane revolution—new Argonauts, new sieges of Troy, &c. This nature prevented, but the priests carried the practice as near to the theory as they were able. Similar adventures were attributed to every new incarnation. This is not a theory, it is a fact; and if my method of accounting for it be not satisfactory, I beg that one more probable may be proposed. My theory has this peculiar recommendation, that it requires no miracles or admissions of incredible facts, but only what is probable and consistent with the course of nature, which we learn from experience.

14. As I have just now said, it was at the end of a MUNDANE revolution that a renewal of nature was to take place; but we may reasonably ask, what was meant by the word *mundane*? In our dictionaries we are told, that Mundus means world; but it also means a Cycle, which implies the same as the Greek word *Κοσμος*. It should always be recollected that I am describing a system which would, by being constantly at variance with nature and circumstances, oblige the priest to have recourse to such expedients as chance afforded him, whether entirely satisfactory or not.

Plutarch says, that it was Pythagoras who first named all the parts of the universe *Κοσμος*, on account of its order. *Πυθαγορας πρωτος ανομασε την των όλων περιοχην, κοσμον, εκ της εν αυτω ταξεως*.¹ Pliny² says also, *Quem κοσμον Græci nomine ornamenti appellavere, eum nos a perfecta absolutaque elegantia, MUNDUM*.

15. Cristna is called Can-ya. This, when all other circumstances are considered, is evidently the epithet of the Apollo of Athens, Cun-ni-us,³ and Ya the IE on the Delphic temple. Each of the nine wives of Can-ya is called Radha, and answers to one of the nine Muses of Apollo; and Radha is the Latin Radius or English Ray. Each Radha or Muse or *משה mse* or *משה msh* or female Saviour or Messiah, was an emanation from the Solar Deity, incarnate in the presiding genius of each age or cycle. Each was a Ray, and thus each king-priest was a Ray-jah or Ra-ya or Ra-ja, and the Rajah was an emanation, or the Ray Jah⁴ emanating from the solar power in the form of air and fire. It was, I suspect, an incarnation of wisdom, of the *Raj* or *Ras*. This Ras generally, when visible, appeared in the form of Air and Fire.⁵ Thus came the Ray of light, the Ras, and the Rajah or Jah *the Wise*. All kings or Rajahs were priests, thus all inspired, all incarnations of the Ray-Jah. From these came the Rex, Regis, the Roi of France, and the females of these were the Reine of France, and the Rana of North India.

Parkhurst⁶ says, "The personality in Jehovah is in Scripture represented by the *material Trinity of Nature*: which also, like their divine antitype, are of one substance; that the primary scriptural type of the *Father is fire*: of the *Word light*: and of the *Holy Ghost, Spirit, or Air in motion*." This material Trinity as a type is similar to the material trinity of Plato—as a type to conceal the secret Trinity.

And the LORD God breathed into him the breath of life; and man became a living soul. That

¹ Lib. viii.; De Placit. Phil. Lib. ii. Cap. i.

² Lib. ii. Cap. iv.

³ Cuno-Belinus, the admitted Apollo of Britain, was of both genders. There are coins yet existing where he is so described. But many learned medalists have thought, that these were not pieces of money, but medals struck by the astrologers.

⁴ Col. Briggs says, Ray and Raja are found to be synonymous. Vol. I. p. 7. May not the word Raj be the same as the Greek *Ρεω to flow*, and the Hebrew *יאר יאר or rai, to flow*?

⁵ When the Holy Spirit descended upon the apostles, on the day of Pentecost, it was in the form of a tongue of fire, accompanied by a rushing wind.

⁶ In voce *כרב krb*, II.

is, he instilled into him the רוּחַ *ruh*, as Parkhurst calls it, *air*, breath, without which a person cannot exist.

When God has appeared to man, he is often described as having assumed the appearance of fire. Thus he appeared to Moses in the bush, and thus on the mercy-seat in the Temple at Jerusalem. But when he appeared as the *third* person to the apostles, at the feast of Pentecost, he assumed not the appearance only but the reality of cloven tongues of fire, and the reality seems clearly to be meant, by the accompanying rushing wind. That the fire was a real, material substance, is proved by the sound of the rushing wind evidently caused by the fire displacing the air, the usual way a rushing noise is caused. This seems fully to justify Parkhurst, in his explanation of the קָדִישׁ רוּחַ *qdis ruh* of the first book of Genesis, by the words *air in motion*. In this he was supported by all the early fathers, who held God the Creator to consist of a subtile fire. Here we come to the true theory of the solar worship, and as usual we find the ancient Philosophers and the Fathers, their imitators or pupils, to be much nearer the truth than we have imagined. If the subtile fire were not the solar fire, I beg to be told what fire it was? We know but of one fire or genus of fire, however varied may be its appearance, under different circumstances. In the tongues of fire we have unquestionably a portion of the Holy Ghost becoming visible and incarnate in the twelve apostles. How can any one make of these *twelve* tongues *one* Comforter or *Resoul*? There were twelve comforters or there were none. If I endeavoured to make explanations in such a manner, I know what would be said of me. When all these things are considered, I think much of the vituperation against *fire-worshippers* might have been spared. All the holy Christian fathers believed God to be a subtile fire.

I suppose the Shepherd Kings who conquered Egypt were Rajpouts or Buddhists, of the country of the Rajahi Bedouens, from Rajah-stan. The Israelites as well as the Royal Shepherds, were both, in fact, Arab tribes—tribes also from Arab-ia on the Indus. From Rajah, and Pout or Buddha, came the name of the country of the Raja Pouts, or the Royal Buddhists, for Pout was a name of Buddha. The inhabitants of that country were Palli or Shepherds. They were Royal Shepherds or Raja-Pout Shepherds. They came from a country called Arabia; and as they crossed the Western Arabia in their route to the Abyssinian Ethiopia, when forced forwards by succeeding tribes, they left behind them, to the peninsula, the name of Arabia, which it still possesses. מִשֶׁה *mse*¹ or Muse was supposed to be inspired with the solar divinity, and this is the reason why we see Cristna, Apollo, and Jesus, surrounded with the solar halo or rays. In very early times every king was a priest, or in other words the priest possessed the power of the sword, and he was also an inspired person; whence it came, that each was a Rai or Ra-jah. No one could offer the most sacred (sacred is only *secret*) sacrifice but a king; whence in the republics of Athens and of Rome, they had the Rex Sacrificulus, and whence also came our sacred herald, the king at arms. The king in the ceremonies was both king and priest, like Melchizedek. He was sacred, Χρῆς. The God Apollo was Χρῆς, that is, *benignus*, and his priest Χρησεος. He was the חַרְשׁ *hrs* commonly rendered *Chrs* or *Ceres*, and the mother of the family of the Cæsars of Rome was Creusa; and she came from the Ter-ia (or Troy country) and the city of Ili-on, or Ili-vratta,² cities of the seven hills, with the trimurti or trinity in each. Creusa caused, by her descendants, the founding of the sacred city of Roma or Flora or Ἐρωσ or Amor, read in the Hebrew and Etruscan fashion *Roma*, with its seven hills, and its capital with its three Dii consortes or συγκαληροί. From the belief that persons were incarnations of the solar ethereal fire, came the glories, as they

¹ See Parkhurst, in voce, II., where I DREW, ought to be I SAVED, him from the waters.

² I suspect that Il-avratta is a corruption of אֵלֶּה *ale*—בְּרַאֲתָא *brat*.

are called, (or, as the learned priest Taylor has called them, clarys,) round the heads, and sometimes round the bodies, of incarnated persons. We are so used to see this solar glory in pictures, that we think it of no consequence; but a careful examination of the meaning of the word Glory will shew that it is correctly what I have described. The sycophants of Augustus Cæsar said, that his glory dazzled them when they looked upon him. I suspect the Raj ראה *rae* has not only an intimate connexion with the רה *rh*, spirit, but with the ראש *ras*, wisdom.¹ Generally, when Divine Wisdom or the Logos made itself visible to man, it was in the form of fire or a ray of light.

The nine Muses or Messiahs were the same as the nine Curetes of Crete.² The word Curetes is only a translation of Messiah from *Kupw* to *take care* or *preserve* or *save*. This shews the utility of treating all the languages but as dialects of one original. I believe that, in both the East and West, the names of the Gods were either names from other countries, or translations of the names out of one dialect into another, as the nine Curetes are evidently a translation of the nine Messiahs or Muses, or names formed from numbers, in a way which I shall presently explain.

“The people of Delphi had told us that there were only *five Muses*, and that the opinion of “there being nine in number was a heresy. Such disputes about the number of the Muses “existed in ancient times, and the *Arracovian Greeks* reduced their number to *three*.”³ I think that a Muse has been in the Hebrew משה *msh*. Will not this account for a doubt in the times of the Greeks, or a little after the birth of Christ, as to whether they were eight or nine? There was one for each cycle, like the Salivahanas of India—of whom more presently.

In India there were eight Vasus. These were Jesuses or incarnations of the Holy Spirit, one for each cycle. In the early part of the Jewish Gospel they fade away, and are not visible: but Osee, the son of Nun, was *one*, preceded by Moses, or M-Oseh, as Cristna was by Ram. Elisha was *one*, preceded by Elijah. The Vasus, the Muses, and the Jesuses, were all, or had all, so far the same signification as to mean one of the persons of the Trinity,—Triune God—three in one, and one in three; and they all meant *Saviours*.

The title Pharaoh is probably a compound of the word *Phre*, and *roh*—Raj, Rói, Rex.⁴ In Hebrew רעה *roe* means *shepherd*. The shepherds of Egypt, I have shewn, were Rajahpoutans. They also bore the name of Palli and רעה *roe*. From an union of all these circumstances they became Royal Shepherds.

The style of Nimrod is such as to render it altogether impossible to make out when he is uttering his own opinions, or merely describing the doctrines of Mythology—when he is the dupe of superstition, or when he is only describing it: but I think he has clearly proved that Babylon was a second Meru, Ilion a second Babylon, and Rome a second Ilion; and I think we may venture to add, that Constantine, initiated into the same Gnostic and Cabalistic doctrine, meant Constantinople, with its seven hills, to be one more exemplar of the ancient Mythos of Meru and its seven mounts and Dwipas. He meant himself, the son of Helena, to be a second Cæsar. If he were really the dupe of such an hallucination, he will not have been the only lunatic sovereign who has ruled in the world. What are called his vacillations between Heathenism and Christianity cannot be satisfactorily accounted for by the usual resources either of fraud, or of the common superstition.

16. I think there can be no doubt that the word פלא *pla* rendered, when applied to Cyrus, by the word *wonderful*, was the root of the epithet of Minerva—Pallas—and as such meant also *wise*: but it probably came to have the epithet of *wisdom* from the use of the regimine. In Chaldean

¹ Vide Parkhurst.

² Vide Diod. Sic. Cap. iv.

³ Clarke's Travels, Vol. IV. p. 203.

⁴ Drummond, Pun. Ins. p. 51.

פלי *pli* is *dijudicare*, *disquirere*, פלאה *plae*, *interpretatio*.¹ פלל *pll* is by Parkhurst rendered *to judge*, *to mediate*, or *to intercede*. I believe the ancient Philiahs or Fileahs of Ireland, were persons whose duty it was to preserve and expound the ancient law, which was handed down by tradition, before the art of writing became known; and after it became known, they *filed* or handed down judgments. They were the Phileati of the Scythians and Indians.² They were the expounders or mediators of wisdom; thus they came to be used as expounders or mediator-wisdom. Thus the Goddess Minerva came to be called Pallas.

In Isaiah, Cyrus is called פלא *pla*, in our *book* translated *wonderful*. This is the holy Pala, or Palladium, of the Greeks, which the Romans got from Troy or Ter-ia. It is Pallas or Minerva; it was an idol which descended from heaven; it was, I believe, a black stone, a Cornu Ammonis, like that in Westminster Abbey, on which our kings are crowned. It was the emblem of Minerva or Wisdom. It was the King's-bench on which he sat. It was the origin of the Polis or gate, in which the judge or king sat to administer justice. Mordecai sat in the king's gate. From this came the seat of the king, or his residence, to be called Pala-ce. It was the same with the Sopha or the Divan of the Eastern nations. Divan is Div-ania *place of the Divus*. Sopha is Σοφ-ια, *place of Wisdom*. Divan is also divustania, Divus-stan-ia, *place of the holy stone*, softened, like Casmillus into Camillus, Pelasgus into Pelagus, &c., &c. The seat of justice was probably in the outer court of the palace, where the king came to administer justice, whence all porches were called gates or polises. The mention of the Sofa brings me to an inquiry, why our highest law officer, the Chancellor, is seated on a large sofa of wool. The word Σοφια is wisdom. But *soph* also means wool, and from this double meaning came the sofa of wool. The Pallas of the Greeks is the פלא *pla* of Isaiah ix. 6, mistranslated, as already noticed, *wonderful*, to conceal the Gnosticism; for it is evident from the Greek Pallas, that it ought to be *wisdom*. Here I have no hesitation in saying, we discover the lost meaning of a Hebrew word from its Greek descendant.³ As פלה *ple*, it means intercessor between God and man. The Palladium shews that the *sigma* is only the Greek termination.

If the Pall or Pal of the Oriental Palli or Shepherds, had the same meaning as the Pallas of the Greeks, we need not be surprised that Minerva or Pallas should be worshiped in Italy, Thrace, &c., where we find settlements of the Palli or Palestini. Then the Palli will only be another form of the name for Raj-pouts. I shall be told, I have no authority for giving the meaning of *wise* to פלא. Indeed, this is true. Poor Mr. Parkhurst has had great difficulty in avoiding to give the meaning of *wisdom* to this root of the Greek Pallas or Minerva, and has been obliged to translate it *extraordinary*, *wonderful*.

17. After all the most careful researches, I have not been able to satisfy myself respecting the mythological, or rather I should, perhaps, say etymological, origin of Hellen or Ellen. But I suspect that Il-avratta, Il-ion, אל *al*, *el*, Ἡλιος, were all closely connected; that the Logos or Divine Wisdom was incarnate in man, and that the Palladium, the image of Minerva, deposited in the Perg-amus, or Pyrg, or fire tower of Troy, was allusive to this same mythos. Palladium was Pallas dius, holy Pallas, and Pallas was Wisdom, the Hebrew פלא *pla*. The possessors of Pallas were possessors of divine wisdom, and the possessors of divine wisdom were possessors of salvation. Thus the city possessing the talismanic *diu-Palla* was safe. All the hero Gods Theseus, Bacchus, Æsculapius, &c., were saviours and *black* saviours too. These black icons were made when man himself was black. He made his God after himself, and then said that man was made after the image of God.

³ Jurieu.

Respecting the Hellenes the learned Nimrod says, “Hesychius intimates to us, that his countrymen were Hellenes in respect to certain *Wisdom* (that is, certain doctrines) which they possessed. Ἑλληγες, οἱ ἀπο τε Διου, τε Ἑλληγος ἡ φρονιμοι, ητοι σοφοι. In like manner we hear nothing of the exploits of Hellen, but only of his profound and remotely ancient Cabalism. ‘Hellen, the founder of the Greeks, says Cassiodorus, delivered many excellent things concerning the alphabet, describing its composition and virtues, in an exceedingly subtile narration: insomuch that the great importance of letters may be traced to the very beginning of things.’” Again Nimrod continues, “Now, Helena is merely the feminine form of the name Helen, and they both serve to denote the bisexual, but, of preference, feminine deity:

ἀρρήτων ανασσαν
αρσενα και θηλυν, διφυη, λυσειον Ιακχον.¹

“If Helen were Divine Wisdom, Constantine was the son or incarnation of Divine Wisdom.”²

I suppose I need scarcely to remind my reader that Jupiter was Iao, ἰη' *ieu*. But Hesychius says, the Hellenes were named after Jupiter, who was Hellen.³ He afterward says, that his countrymen were Hellenes, in respect of certain *Wisdom*, as just now noticed. We all know how Constantine was connected with Helena. He understood the secret doctrine of *Wisdom* or Hellenism: for this reason, as I have intimated, he probably called his metropolitan church *St. Sophia*. And from this we see that Hellenism was the doctrine of *Wisdom*. Eusebius has formerly told us, that Hellenismus came in with Serug, which shews its great antiquity. Constantine was a Hellenist and a Gnostic, or follower of *Wisdom*, and also of *Χρης*. Cæsar, the descendant of Venus, was the same, with his liber or book, the emblem of *Wisdom*, in his hand. I have no doubt that the use of letters was for many generations secret, sacred, and cabalistic, and used only in the mythos and the temple.

18. Gengis Khan was considered a prophet; the Turkish emperors called Khans, are also considered to be prophets. This is the Tibetan superstition; hence the Khans of Tartary.⁴ Guichart derives Khan from קח *ken*, in Greek κοης.⁵ From this he derives Diaconus.

If Constantine were an incarnation of Divine Wisdom in the fourth century, Attila, the Scythian and the Hun, and a Khan of Tartary, was the same in the fifth. He professed to be the owner of the sword God Acinaces, a kind of Palladium, which entitled him to the sovereignty of the universe. He pretended to have been reared or educated at Engaddi, an enchanted spot in Palestine upon the shores of the sea of Sodom; but whether this might not be a Palestine and Sodom in the Scythian or Eastern Syria I know not. He called his capital in the West the city of Buda, Buddha, Babylonia, and Susa.⁶ He had an invincible horse called Giana, which Nimrod thinks was closely connected with the phrase γεραμιος ἰπποτα Νεσωρ. Attila died in his 124th year, almost the age of a Nestor. It is probable that he was held out to be a renewed incarnation of Odin. The Buddhist doctrines cannot be denied. By means of the Homeridæ or Bards, such as Damascius, patronized by him, I feel little doubt that the ancient Scandinavian mythology was in fact renovated, and probably embellished, and thus handed down to us, which would otherwise

¹ Nimrod, Vol. I. p. 469.

² The name of Delos is δλη *dhl*, and in the plural δλην *dhlñ*. See Book VII. Ch. VI. Sect. 4. I have a great suspicion that we have here the origin of Helen—Di-Al-in. No sufficient objection will arise from the letter H, when the common convertibility of the two letters is considered.

³ Nimrod, Vol. I. p. 468.

⁴ Sandy's Travels, p. 37.

⁵ Parkhurst, in voce קח *ken*.

⁶ Wilkina Saga, Cap. ccclxxiv. p. 505, *ib.* Cap. lxxiii. p. 134, Cap. ccclxxvii. p. 494; Nimrod, Vol. I. p. 475.

have been all lost. I think it not at all unlikely that this hardy old warrior should have been induced, by the flatteries of his bards, really to believe himself the promised one, the desire of all nations; and I think it not unlikely also, that some superstitious fear prevented him from seizing the holy and eternal city, when it was really in his power. This seems to be the opinion of Nimrod. The renewal of the ancient superstition by Attila and afterward by Theodoric, may satisfactorily account for many parts of the otherwise fading mythoses of antiquity being found in colours at first sight unaccountably brilliant in the Northern climes. Our historians erroneously suppose all these mythoses to have been invented by learned monks in the middle ages, and thus dismiss them without examination.

One of the most curious of all assemblies was the council of the Amphictyons, which consisted of deputies from TWELVE tribes. Its date or origin is totally unknown. And although it did sometimes act in politics, as most bodies will encroach on other powers if they can, yet I think it was solely religious in its object. It was unaffected by the Persian conquest, and lasted till the time of the Antonines. It met at Delphi. It was called Κοινον των Ἑλληνων συνεδριον. It was said to have been founded by a king of Argos, called Acrisius. In that country they had a Minerva Acrisus. When I observe the Hellenes, that it assembled not far from the temple of Ceres at Eleusis, at the temple of EI or Jah, where we have found the Χρησος and several other particulars, I cannot help suspecting that the Acria must have been a corruption of the שררה *ehrs* the Ceres or Cres. But it might be Ακριος or the Ram, which would be nearly the same, for the Ram was the emblem of the Χρησ, and might then be called *Acrios*. We have here the twelve tribes meeting in the Sanhedrim or Συεδριον: and, I suspect originally sending *seventy-two* deputies, however they varied afterward. One of the Gospels states Jesus to have been the son of a Potter, not of a Carpenter; all this I think comes from the Hebrew name שרר *hrs*, which means both Machinator in general, and Potter in particular.¹ This is also the Greek Ερωσ, or plastic formative power. Ερωσ is but שרר *hrs*, and, in fact, is the same as שרר *hrs*,² which means Ceres. From this word comes the word *grass*. This brings to my recollection the most ancient of the sacrifices of Egypt, still continued in India, of *Grass—Cufa Grass*. The *Hellenian* Athenians particularly affected the worship of Ceres. They had her at Eleusis as Ceres, and at Delphi as Χρησ, and again in both as Bacchus, for *he* was both Χρησ and Ceres.

19. As I promised in a former page, I now return for one moment to the subject of hieroglyphics. We recollect that M. Champollion found what seemed to vitiate his whole system, the names of Ptolemies and Roman Emperors upon the old monuments of Egypt. We know that the word *Augustus* as well as *Cæsar* was sacred: no one can doubt that such was the case also with the word *Heliogabalus*: no one can doubt the mythic or religious nature of the adoption of the number 12, by the Romans, as the peculiar Cæsars. Might not the names of the Egyptian kings be of the same nature? Some of them, Ptolemy *Soter* and *Epiphanes*, certainly were so. Then, I ask, might not the words which M. Champollion takes for the names of the sovereigns of Egypt and of Rome be merely the names of the Gods adopted by the sovereigns of both, as the Roman dictators adopted the names of Julius Cæsar and Augustus, the latter of which is well known to be an Egyptian sacred title? Whatever we may fancy to the contrary, we cannot be certain that the names of the Antonines and the others of the *twelve* may not be like the words Cæsar and Heliogabalus, that is, mystic words, foreign Latinized words. The names of the Roman emperors are found in the Sibyls, and I do not think it any more improbable that the emperors

¹ Vide Parkhurst in voce:

² Vide Ibid. in voce.

should have adopted them for that reason, than that Cæsar should adopt the name of Augustus, from the Egyptians, or Hadrian his name from the Adriatic, or from that superstition which gave its name to the Adriatic, the etymology of which we do not understand. I have no doubt that up to about the time of the Cæsars, Egypt held a much *higher rank* in the world than either Greece or Italy. And I see nothing improbable in the idea, that, along with the ceremonies of Isis and Mithra, the *conquerors* of Egypt should have adopted *Latinized names* of Egyptian Gods, of a nature similar to the name of Augustus. We must not decide that it was not so, merely because we cannot shew how the words had the meaning, or how they were derived from the Egyptian. Though we cannot say that it certainly was so, we cannot say that it certainly was not so.

All this I propose in perfect friendship to the Hieroglyphists, and with a sincere wish to remove a great stumbling-block in their way—for truth is my object. In an early page I suggested, that if the letters were leaves of trees, a hieroglyphical system might be formed by adding other articles between the leaves. Several writers have asserted that the Hebrew letters had the meaning of things—for instance, Beth *a house*, Gimel *a camel*. The Marquis Spineto says, that he thinks the Egyptian language had originally only sixteen letters; then, these matters considered, I ask, may not certain things have stood for the sixteen letters, and the other pictures of things have been only inserted among them to render them unintelligible to the uninitiated? As I have formerly said, this would render them more easy to persons in the secret. Then the three languages may be first, the epistolary or common Coptic; secondly, the system formed from the first letters, as M. Champollion supposes; and, thirdly, a system formed by the symbols themselves: and, that some inscriptions may be in one system, some in another; but not in the absurd way of mixing the three in each inscription. That is a practice which is not credible. The figures for the *I* in M. Champollion's alphabet, have a great resemblance to our *I* and the *Jod*.

Upon a careful search among the ruins of antiquity, we find a large part of a Mosaic mythos in North India; another, a thousand miles distant in South India; another, a thousand miles to the West in Palestine; and minor parts of the same system in other places, as proved in the numbers of the temples of Solomon, &c. Thus, as we find the Judæan mythos scattered all over the globe, it would be a little surprising if it were not found in Egypt. On this account persons must not infer that I consider the symptoms of the Jews having been in Egypt, as throwing a doubt on the hieroglyphics. I am quite certain that if the secret be ever discovered, marks of the tribe of Abraham, or the Iudi, will be found in great numbers in Egypt. I suspect that when the tribe of wandering Arabs settled (squatted, as an American would say) in Goshen, the whole Delta, particularly the upper part, was an extensive pasture country, lately emerged from the ocean—the lower part, perhaps, only beginning to emerge. I take this emerging to have been, as Cuvier would say, somewhere about 2000 years before Christ. Why are there no Pyramids in the Delta? I wish the Marquis had told us why there are no hieroglyphics on the large Pyramids in Nubia or Egypt. Did he overlook the Pyramids, or were they unworthy of his notice? The shepherd kings of Egypt were Palli, of Raja-poutana, who first conquered, and afterward were driven out of Egypt—and partly settled in Palestine, and might build Jerusalem, as the history tells us. The shepherds, who came as friends and were driven out, were the Jews; both like the present Arab tribes—like the present shepherd Mohamedans. As they passed the end of the Red Sea, their pursuers might have been partly drowned. How very extraordinary a thing it is, that the destruction of the hosts of Pharaoh should not have been known to Berosus, Strabo, Diodorus, or Herodotus; that they should not have heard of these stupendous events, either from the Egyptians, or from the Syrians, Arabians, or Jews! The same thing happened in India. The

Afghans or Rajapoutans, shepherd tribes as at this day, invaded South India and conquered Ceylon, and were driven out, over Adam's bridge; and the same kind of accident is said to have happened to their pursuers as happened in the West. This accounts for the mythos being substantially the same in this instance in both, *in generals*—but in *particulars* varied; and, as there was no loss by drowning in Upper India, we have the Noah, Moses, David, Solomon, &c., the same mythos of the same people, but no history of a drowning. Because the histories are made subservient to the mythoses, as the early history of Rome was, we can no more infer that in one case there were no Jews, Moses, Daniel, or Solomon, than that, in the other, there was no Rome, senate, kings, or peoples. No doubt, in this case, the two drownings throw suspicions on both. These Afghans, or Eastern Scythians, or Celtæ, came to Italy and Greece at one time or other. They were all Pallatini or Palli, that is, followers of Pallas or Wisdom, and Shepherds. Thus we have Pallatini on the Po of Italy, on the Po of India, and on the Don of Syria, and Don-ube, near the Dardanelles.

Nimrod¹ has undertaken to prove, that the Theogony of Lucian is precisely the same as that of Moses; this exactly harmonizes with all the other circumstances pointed out by me; but to his work I must refer my reader.

The violent way in which *the Mosaic system* is attempted to be supported by Champollion, and his connexion with Blacas, Lewis, Charles, and the Jesuits, justify suspicion. Why did not the Marquis Spineto give a lecture upon the difficulty with which he is perfectly acquainted, arising from the three accounts, or defective accounts, of Diodorus, Strabo, and Clemens? Was he afraid that the boys and learned men of Cambridge should know too much? His Chapter XI., to support the Mosaic chronology, may be said to be a mistake; and his tirade against philosophers at the end of the last chapter, only proves, what numerous passages had before proved, that although the Marquis may be a good scholar, and a very honourable and good man, and no way connected with the fraud, if it be a fraud, yet he must be placed with the saints, the devotees, and not with the Socrateses, Pythagorases, or philosophers.

CHAPTER IV.

FISH AVATAR.—FISH ACROSTIC.—FISHES IN ITALY.—DAGON. JONAS.—VISHNU.—NAME OF VISHNU.—SACRED FISHES.—OANNES.—CYCLOPES.—BISHOP BERKELEY.—ÆSCHYLUS.—EURIPIDES.—PETER THE FISHERMAN.—JOHN.—BALA RAMA.—ZOROASTER.—JANUS.—POLIS MASONS.—IDOLS MODERN.—JOHN.—MUNDAITES.—EXPLANATION OF WORDS.—JASUS.

1. IN a former part of this book I observed, that if my theory were right, the Avatar of the incarnation of Aries—of the Lamb—ought in course to be succeeded by an incarnation of Pisces or the Fishes. I shall now shew that it did succeed, and that it was foretold in the Sibylline Oracles.

A question very naturally arises how, when the books of the Sibyls were locked up with such

¹ Vol. I. p. 420.

great care, their contents came to be known to both Gentiles and Christians. They seem to have been equally well known to Cicero and to Justin. This offers at first a difficulty; but, for some reason not known to us, it could not in their day have been a difficulty; because if it had, we may be very sure that when Cicero was arguing against them, in opposition to the followers of Cæsar, he would not have failed to have urged it: and when Celsus was, in like manner, attacking them in opposition to Origen, it would not have been overlooked. It has been said that though they were deposited in the temple, yet none of them were concealed except the Cumæan prophecy relating to the fortunes of Rome, and this does not seem to have been very secret, when Cicero knew enough about it to argue the question whether the acrostic did foretell a king to his country or not—for that certainly related to its fortunes. In favour of the genuineness of these books there seems a regular train or chain of evidence. Cicero, by not denying, admits that the books of which he spoke were actually those which were quoted by the followers of Sylla. Justin, in quoting them, gives the same description of them in substance as Cicero had done. Then comes Celsus who, in argument with Origen, endeavours to impugn them, but fails; after that comes Constantine, exhibiting, or pretending to exhibit, the originals from the temple, as they had been deposited by Augustus. All this took place in an age nearly as literary as our own: when all the questions relating to these oracles were contested with the greatest keenness, and yet in no instance does any one of the parties deny the genuineness of them. They none of them go farther than to affirm that they were corrupted, and when this is alleged by Celsus, he is successfully refuted by Origen. And when what I have said respecting the names $\text{I}\text{H}\Sigma\text{-}\text{o}\text{u}\text{s}$ and $\text{X}\rho\eta\text{s-}\text{o}\text{s}$ is considered, with all the collateral circumstances relating to them, impartial persons will be obliged to admit that a probability exists of the highest order, that the acrostic alluded to by Justin was the same as that alluded to by Cicero; and, in short, that the two works, however corrupted since, were at that time substantially the same.

I now request my reader to recollect that we have had Avatars of Taurus and of Aries, and if my theory be correct, at the time of Christ, we ought to have had an Avatar of Pisces. The $\text{X}\rho\eta\text{s}\text{o}\text{s}$ was adored under the form of Taurus, and of Aries; and if the acrostic of the Sibyl foretold the $\text{X}\rho\eta\text{s}\text{o}\text{s}$ of the Zodiac *in its proper course*, it ought to have foretold the Pisces or Fishes to succeed to the Lamb, as an object of adoration; and so in fact it did—though it has been kept out of the sight of the vulgar as much as possible. The worshipers of the Bull or Calf of gold, we have seen, in ancient times did not like to yield to the Ram or Lamb. In the same manner the followers of the Lamb did not like to yield to the Fishes. Besides, the adoration of *two Fishes*, absurd as man is on these subjects, does appear to have been rather too absurd to overcome the old prejudices of the people for the Lamb.¹ The fishes were indeed very unseemly Gods, so that the attempt to introduce them, except as a secret system, failed. But nevertheless the attempt was made, as I will now prove. The acrostic of the Sibyl, which was a mode of concealing the secret meaning of the $\text{X}\rho\eta\text{s}$ —of the Lamb—had also another secret meaning. $\text{I}\text{H}\Sigma\text{OY}\Sigma \text{X}\text{P}\text{E}\text{I}\Sigma\text{T}\text{O}\Sigma \text{Θ}\text{E}\text{OY T}\text{I}\text{O}\Sigma \Sigma\text{ΩT}\text{H}\text{P}$.

2. The Acrostic itself forms an Acrostic, as the learned Beausobre has shewn.² The first letters of the five words of the Acrostic mean $\text{I}\text{X}\text{ΘY}\Sigma$, a Fish, which was a name given to Jesus Christ. This identification of the fish with the $\text{I}\text{H}\Sigma \text{X}\text{P}\text{H}\Sigma\text{T}\text{O}\Sigma$ and Jesus Christ, and its suc-

¹ In former times the Lamb was eaten at the Passover. This is still done by many Christian devotees, but it is not ordered as part of the religion. But the *fishes* have succeeded, and they are now ordered (that is, a fast-day in which meat is forbidden, but fish is ordered). This is the origin of *fish days*.

² Basnage, Hist. Jews, Bk. III. Ch. xxiv.

cession, or, I should rather say, its attempted succession, must surely appear very extraordinary, and at first incredible. But I ask, what has Jesus Christ to do with a FISH? Why was he called a *Fish*? Why was the Saviour IHΣ, which is the monogram of the Saviour Bacchus, called IXΘΥΣ? Here are the Saviour, the Cycle, and the Fish, all identified. The answer is, because they were all emblems of the sun, or of that higher power spoken of by Martianus Capella, of which the sun is himself the emblem; or, as Mr. Parkhurst would say, they were types of the Saviour. From this it was, that the Christians called themselves, *in their sacred mysteries*, by the name IIXΘΥΣ meaning I the IXΘΥΣ, and Pisciculi. The I was prefixed for a mysterious reason, which I shall explain hereafter.

I	χθυς	. . .	Piscis
I	ησθς	. . .	Jesus
X	ρησθς	. . .	Chrestus
Θ	εθ	. . .	Dei
Υ	ιθς	. . .	Filius
Σ	ωθηρ	. . .	Salvator.

Jesus is called a fish by Augustin, who says he found the purity of Jesus Christ in the word fish: “for *he is a fish* that lives in the midst of waters.” This was Augustin’s mode of concealing the mystery.

The doctrine was probably alluded to in some way or other in the miracle of the *five loaves* and *two fishes*, because “Paulinus saw Jesus Christ in the miracle of the five loaves and two fishes, “*who is the fish of the living water.*” Prosper finds in it the sufferings of Jesus Christ: “*for he is the fish dressed at his death.*” Tertullian finds the Christian Church in it. All the faithful were with him. *So many fishes bred in the water and saved BY ONE GREAT FISH.* Baptism is this water, out of which there is neither life nor immortality. St. Jerom commending a man that desired baptism, tells him, that like the *son of a Fish*, *he desires to be cast into the water.* Here we come to the true, secret origin of baptism. I beg my reader to look back to Bk. IX. Ch. VII. Sect. 6, and see what I have said respecting the sacredness of water. St. Jerom no doubt understood the esoteric religion. The Lamb kept its ground against the Fishes. They never greatly prevailed, and soon, at least among the rabble, went out of fashion.¹ Yet, for a particular reason which I will now give, I have a strong suspicion, that they are known in the Adyta of St. Peter’s even to this day.

In several places in Italy I have seen very expensive sepulchral monuments, not of great age, at the top of which, in the place of the D. M., *i. e.* Dis. Man., grown into the Deo Maximo, is inscribed the word Ιχθυς. They are very expensive monuments of persons of consequence, to whose relations the esoteric religion may be supposed to have been known.

Mackey,² in his curious work, so creditable to the shoe-making caste, called *Mythological Astronomy*, says, that ancient Christian monuments had two fishes on them, fastened, like those in the Zodiac, together by the tails, to shew that they were those of Christians. Where he got his information I do not know, as he gives no reference. But he is confirmed by Calmet, who says, “Among the primitive Christians the figure of a fish was adopted as a sign of Christianity: “and it is sculptured among the inscriptions on their tombstones, as a *private* indication that the “persons there interred were Christians. This hint was understood by brother Christians, while “it was an enigma to the Heathen. We find also engraved on gems and other stones an anchor,

¹ Basn. Bk. iii. Ch. xxiv.

² A very profound-thinking shoemaker, of Norwich.

“and on each side of it a fish, with the letters which compose the name of Jesus, inscribed “around them.”¹ This emblem is found in the orthodox cathedral of Ravenna, which shews that it cannot be merely an emblem of the Heretics.² Besides, it is chiefly in monasteries where I have seen it. And I suppose the letters which compose the name of Jesus compose the word Saviour, and thus they are the same as Jesus. The idea that the fish should inform Christians that a Christian was buried, and not inform Heathens, is nonsensical enough. But allowing this, pray why was a fish, or two fishes, selected instead of some other animal?

It must not be supposed that I mean to deny that the Sibylline Oracles have been greatly corrupted by the Christians. This is a fact which no critic can deny: but I only contend that the probability is, that this famous Acrostic is not one of the corruptions, judging from the circumstances of there having actually been an acrostic, as proved by Cicero, and combined with the ancient style, the $\iota\chi\theta\upsilon\varsigma$, and the 4th Eclogue of Virgil, &c. I think from this very acrostic the Christians became pisciculi, and not that the $\iota\chi\theta\upsilon\varsigma$ was contrived from the Christian character, by Christian interpolation. Why should Christians make the allusion to the Zodiacal fishes?—and such the fishes on the monuments no doubt are.

3. The adoration of the fishes may be found, as we might expect, in ancient Italy. Janus married his sister *Camisé*, and had a son and daughter called Camasenes, a word which in Greek means *the fishes*, les poissons. *Cam-isé* is Cama the Saviour, or Isis of India, $\text{E}\rho\omega\varsigma$ or divine love incarnate in the fishes. Brahma seated on the Lotus swimming on the waters was called *Camasenes*.³ One of the Muses, or the persons called msh or the Saviour, was called by this name, a little corrupted.⁴ As I have lately said, I suspect the number of these muses (for the number was not fixed) depended on the number of cycles, a muse for each cycle—that Apollo, or the Sun, had a MSH or Saviour for each Soli-Lunar cycle. Of this more presently.

Persons in England will scarcely be brought to admit that it is possible for believers in such nonsense now to be found. But great learning and fine garments do not always produce strength of mind. Johnson believed in *second sight*. Erskine would not sit down at table with twelve others, making the unlucky number *thirteen*. How many readers of Moore's Almanack have we! Sir Isaac Newton believed in *dæmons*, and wrote some very surprising essays on the Revelations. Judge Hales hanged old women and children for being witches; and Tycho Brahe was a great *astrologer* as well as astronomer. What shall we say of Transubstantiation believed by many very learned and talented men? When I *closely observe* the goings on among the old ladies in red stockings at St. Peter's, I can believe any thing. If they have a secret religion it probably does not go out of the Conclave, or *St. Jovanni Laterano*. Besides, I do not accuse them of worshiping the fishes, in any other way than as emblems of the Supreme Being—as the prayers of the Persians to the God Bull were used, which I have before given from Mr. Faber and Mr. Bryant. They probably only pay them the honour called *Douleia*.

It is chiefly on account of the acrostic, that the Sibyls have been determined by the moderns to be spurious. But again, I ask, what Christians had to do with fishes, and why they were called *little fishes*? In these fishes we have the Syrian Dagon, which was an attempt by devotees, who, in their secret lodges, understood the real doctrine, to introduce the Avatar of the fishes, but failed. Although the sign of the Zodiac is called *Pisces*, it is remarkable that the *two* are joined into *one* by a ligature, which justifies the Chrestus, or $\text{X}\rho\eta\varsigma\tau\omicron\varsigma$, or benignant incarnation of that Avatar being called $\text{I}\text{X}\Theta\text{Y}\Sigma$ in the singular number: it probably alluded to the male and

¹ Fragments, No. CXLV. p. 105.

³ Creuzer, Vol. II. Liv. v. Ch. iii. p. 440.

⁴ Ibid. pp. 441, 442.

female, or androgynous, Deity. As we might expect from what we have already seen, the origin of this will be found in India. In the entrance of most Romish churches, is a vase full of water. This is called *Piscina*. It is true that the word may merely mean a vessel for water. But few persons will doubt that it has here a more mystical meaning. This *Piscina* was the *Bowli* found in the ruins of *Mundore*, by Col. *Tod*.

As the Lamb was eaten by the Egyptians, the Hindoos, and the Jews, and is yet eaten by many Christians in honour of the Saviour Lamb, so in later times the fish is eaten by the Romish Christians. I beg of those who think this very absurd, as, because it is *new*, many will do, to give me a more probable origin of the pious eating *fish* on sacred days.

4. In the history of *Jonas*, we have a second notice of the Gentile *Hercules*, probably in a second incarnation. The story of *Jonas* swallowed up by a whale, near *Joppa*, is nothing but part of the fiction of *Hercules*, of the sun in its passage through the signs of the *Zodiac*, described in the *Heracleid* or the *Labours of Hercules*, of whom the same story was told, and who was swallowed up at the very same place, *Joppa*, and for the same period of time, three days.¹ *Lycophron* says that *Hercules* was three nights in the belly of a fish.² The sun was called *Jona*, as appears from *Gruter's* inscriptions.³

The Syrian God is called *Dag-on*. Now, the fish in which *Jonah* was preserved, was called in the Hebrew, sometimes in the masculine דג *dg*; sometimes in the feminine, according to the Rabbies, דגה *dge*. *Calmet* has observed that this word *Dag* means *preserver*, which I suppose is the same as Saviour, a word which *Calmet* or his translator did not like to use. Here is *Jonas* buried three days in the ocean, and cast up again by this preserver—raised again to-day. *Jonas* means *Dove*, the emblem of one of the persons of the *Trinity*, and the same as *Oannes* and as *John*. *Dagon* has been likened to the ship of *Noah*, by Mr. *Taylor*, the Editor of *Calmet's* *Fragments*. In several particulars the likeness between *Jonah*, and *Noah*, and the ship or ark, and *Dagon*, are pointed out. But the modern date of the time when this *Dagon* saved *Jonah*, about 600 or 700 years before Christ, at first sight appears to make it impossible that it should be *Noah*, except as a renewed incarnation, and the ancient date of it seems equally to militate against its being an emblem of the sun's entrance into the sign *Pisces*. But I shall partly remove this objection by shewing, in a future book of this work, that a very extraordinary mistake took place among mythologists, and indeed among astronomers, both in the East and the West, of more than 500 years, in their chronology or calculations of time. Indeed the ancients, before the time of *Herodotus*, in the Western part of the world, had no more knowledge of chronology than they had of history. Their whole system was made up after his time, from tradition and a few observations of the planetary bodies made for the purpose of *Astrology* and *Astronomy*, not of *History*.

Besides, there is another way of accounting for this. We must recollect that the *Neros* cycle was passing in about its middle state—about half of it had passed, when the cycle of the *Zodiac* *Taurus* ended, and the cycle of 2160, of *Aries* began. In the same manner when the sun entered *Pisces* at the vernal equinox, about half of the *Neros* cycle had passed; thus the incarnation of that cycle was both *Aries* and *Pisces*, as in the former case he was both *Taurus* and *Aries*. This is the reason why the word *Ram* means both *Beeve* and *Sheep*. As this *Avatar-Jonas* ended with Christ, he would be born about six hundred years before Christ.

5. In *Taylor's* *Calmet* there is a print given of the Indian *Avatar* of *Vish-nu* coming forth from the Fish, which looks very much like *Jonah* coming from the Fish's belly. (Fig. 32.) He also

¹ See Dupuis, *Hist. de tous les Cultes*, Vol. I. pp. 335, 541.

² *Nimrod*, Vol. I. p. 211, Sup. Ed.

³ *V. Atlantic II.* pp. 149, 150.

notices Jonah's likeness to the Oannes of Sanchoniathon. The whole of his very long treatise on this subject, in which he has collected and repeated a most surprising mass of nonsense, is itself a most extraordinary mass of confusion. This arises from his seeing marks of similarity between several persons, without knowing how to account for them. But he has made a sort of table, unconscious of what he was doing, which will shew the reader that this Jonah or Dagon was a renewed incarnation. It is as follows :

NOAH	JONAS	JESUS
In the water, is preserved by Divine power in his Ark, in which he was 1, part of a year, 2, the whole of a second year, 3, the beginning of a third year.	In the water, is preserved by Divine power in his Dag, in which he was 1, part of a day, 2, the whole of a second day, 3, the beginning of a third day.	In the earth, is preserved by Divine power in his tomb, in which he was 1, part of a first day, 2, the whole of a second day, 3, the beginning of a third day.

He also shews that this Dagon was the Buddha Nar'ayana, or Buddha dwelling in the waters of the Hindoos.¹ *Nara* means *waters*. In Hebrew נהר *ner* means *river*.² *Ay-ana* is the Hebrew אלהים or God, with the termination *ana* making *Nara-ayana*—God floating on the waters. But the most decisive proof that this Dagon was an incarnation of Pisces, is found in fig. 31 of my plates of Dagon, *male* and *female*, copied from Calmet, where the reader will see the double fishes in one—Male and Female. The renewed incarnation removes all the difficulties.

We are informed by Mr. Finlayson, that the temples in Siam are called Pra-cha-di, and by the Buddhists of Ceylon Dagoba; the meaning of which, he says, is *roof of the Lord*. The God is generally represented *asleep*. I think this proves what I have before stated, that this God is the Dagon of Western Syria. The Dag-oba, or roof of the Lord, I suspect is *Dag-o-bit*—דג בית *dg e bit*—*house of the Dag*. Mr. Finlayson, probably from fear of being laughed at, calls the old capital of Siam *Yuthia* instead of *Judia*, as it is called by La Loubère and others.³ It is from this country that the Lascars come, some of whom were found by Mr. Salome to speak Hebrew. See Book VIII. Ch. VIII. Sect. 3.

Two temples are described by Hamilton, in his account of the East Indies,⁴ near a town called SYRIAN, in Pegu. One was the temple of Kiakiack or the *God of Gods*.⁵ The image of the Deity is sixty feet long, in a sleeping posture; it was supposed to have lain there 6000 years. This is evidently Buddha or Bacchus, as we see him in several exemplars in the India-house. The other temple is of the God Dagon. They would not let this God be seen, but they said he was *not of a human form*. I think he must be very blind who does not see here the Syrian God Dagon—the Syria and Dagon of the West in the Syrian of Pegu.⁶

Among his epithets, in the 18th Orphic Hymn, Bacchus is called first-born, double-natured, thrice-born or third-born, the King Bacheius, the two-horned, the double-shaped, the ἄγνος and the Ὠμαδιον. The ἀγνος may mean *chaste*, but I rather suppose it to be the object of the famous Indian sacrifice, and to mean both the Lamb and Fire; and the Ὠμαδιον, I take, again, to be a Hindoo word, and to mean the *holy Om*. The word is certainly not Greek: Om-a-dios is the same as Om-nu-al. In the orgies of Dyonusus the Greeks sung out the words Ὦης Ἀττης.⁷

² Asiat. Res. Vol. V. p. VI.

³ Mission to Siam, pp. 156, 220, 244.

⁴ Vol. II. p. 57.

⁵ I refer my reader to Book VI. Ch. III. Sect. 2, for the proof, that this Kiakiack is the ΙΗΣ or Bacchus.

⁶ Vide Bryant's Anal. Vol. III. 558.

⁷ Bryant, Vol. II. p. 339.

The Υγς was the sacred nomen, cognomen, et omen. Αττης, Αττης, was an invocation of the female principle of Generation—the Great Mother. Bishop Walton¹ says, “Chaldaicè, *mulier* אַתָּא *ata* vel אַתָּא *atta* dicitur.” Thus we find Bacchus called Vesta, as we have before found him called Ceres; for the word Vesta, in Chaldaic, is אַשְׁתָּא *asta*: this word in Persian is At-esh, both having the same meaning—that of Fire. Here we have the Anagram.²

In the Vishnu of India, (Fig. 32,) my reader will perceive that, as usual, the renewed incarnate person or Avatar *is treading on the head of the serpent*. Here also we see him with his four emblems: the *book* and the *sword*, to shew that, like Cæsar, he ruled both in right of the sword and of the book; the *circle*, emblem of eternal renewal, and the *shell* with its eight convolutions, to shew the place in the number of the cycles which he occupied. His Triple Crown or Mitre, or three Tufts, shew him to be an emblem of the triple God. The shell, also, is peculiarly appropriate to the *fish* God. His foot on the Serpent's head connects him with the Jewish seed of the woman, in a manner which cannot be disputed.

6. When I consider the surprising similarity of some oriental words to words having the same meaning in the West, I cannot help suspecting that Vish-nu, is the *Fish* Nu. The Fish God, treading on the head of the serpent, is very striking.

We have said enough, perhaps, of the Trinity—the Trimurti—the Creator, Preserver, and Destroyer; but we have never inquired into the meaning of the name of this triple Hypostasis. We find the second person called Buddha, and, in succession, Caniya or Cristna, and the Brahmins now call the *three* Brahma, Vishnu, and Seva. I cannot help suspecting that, in former times, and with Buddhists, the name has been Brahma, Buddha, and Seva, and, in succession, Brahma, Cristna or Caniya, and Seva;³ and that it is only since the equinox fell in Pisces, that the second person has been called Vishnu or Fishnu. It is not very absurd to suppose the modern Brahmins may have made a mistake in a case which they acknowledge they do not understand. If this be admitted, all the parts of the Mythos are in harmony. I know this will be called a very bold speculation: but I recollect that *God*, in Sanscrit, is Chod or Choder, the English *same* is Sam in Sanscrit, and Bowl the Piscina is Bowli. Van Kennedy has found many other Sanscrit words in English, and I see no reason why the word Fish or Vish may not add one more to the number. It is not denied that the God Vishnu was incarnate in a Fish.

As might be expected, the same prophecy which we have found in the West, is found in the East. Vishnu in the sacred books of the Hindoos is prophesied of, as to appear in his NINTH incarnation in the form of Buddha, son of Jina. This number exactly agrees with all my calculations and theories.⁴ This is the *ninth* Avatar of the Buddhists or Jains.

Col. Tod says, “The Bull was offered to Mithras by the Persians, and opposed as it now “appears to the Hindu faith, he formerly bled on the altars of the sun God (BAL-ISWARA), on “which the Buld-dan (*offering of the bull*) was made.”⁵ This was the predecessor to the Yajni or Agni sacrifice of the Lamb; which, notwithstanding the objections of the Brahmins to the shedding of blood, yet bleeds on the altars of Caniya. And, I have no doubt, if we could come at the truth, that the sacrifice of the Lamb would be found to be yet followed, or to have been followed by the sacrifice of the *Fishes*, taken from the sacred finny tribe preserved in the tanks near some of the large temples, particularly at Matura.

I think I recollect that when I have talked with Indian gentlemen respecting the tanks and the

² Hagar, p. 10; see Vallancey, Coll. Hib. Vol. V. p. 223, n.

³ Seva, I suspect, is Seba and Saba, the reason for which I shall shew hereafter.

⁴ Asiat. Res. Vol. III. p. 413.

⁵ Trans. Asiat. Soc. Vol. II. p. 279.

sacred fishes, they have always called them Vishnu's fishes. And we must recollect that the Brahmins are just as ignorant (and indeed in many respects more ignorant) of the meaning of their mythology as we are. The *Bul-dan* means the *donum of the Bull*. Our English word *bull*, in Hebrew written בֶּעַל *bol*, is constantly translated, according to the idioms, *bol*, *bul*, *bal*, and *bel*; making a case similar to that of the *Vish-nu* or *Fish-nu* just noticed. The *dan* is the Latin *donum*. But all this is nonsense, to those who do not understand something of the Hebrew, and also to those whose minds have been poisoned by the Mazoretic nonsense of modern Jews—to those who will render the simple Hebrew word בֶּעַל *bol* by the letters *bngl* or perhaps *bengel*, because they find modern Jews pronounce it through the nose. This example is very apposite to shew the necessity of returning to the sixteen-letter system, *to the system of the Synagogue*, if the science of the ancients is ever to be recovered.

7. In the island of Ceylon or Lanca, tanks are constructed in the Cyclopæan style of building, and of a size to be really almost incredible. These enormous basins, or *Bowli*,¹ or *Piscinæ*, were not for a *few* hundred priests to wash in, but for the enjoyment of the sacred finny tribe, successors of the Lamb.

At the temples of India, before the priest officiates, ablution always takes place in the sacred river, or tank in which the holy fishes are kept. In India every temple has a tank for the fishes of Vishnu. In humble imitation of this, we have the *Piscina* in every Romish church. It is not merely a *vas* or *cisterna*, it is a *piscina*. The ablution in the European climate would not always be agreeable even in Rome. Each of the Grecian temples had, at its entrance, the *piscina*, for the holy water of the fishes. See *Potter's Antiquities*, and *Miss Starke's Travels*.

If my memory do not deceive me, when I was at Naples I was told, that under the palace of Nero, on the bank of the gulf of *Baiæ*, was a very wonderful reservoir, a *piscina*, in which he kept the fish for his table. Now I imagine, that this was for a collection of holy fishes. Surely the Gulf of *Baia* and the Bay of *Naples* were the finest *piscinæ* in the world, abounding in every kind of delicious fish. It is impossible to imagine any thing more unnecessary to a Roman Emperor than an immense fishpond under his palace, close to the Bay of *Naples*. I cannot help suspecting that this fiddling brute, called *Nero-s*, was very pious, like *David*, or *Solomon*, the son of *David* by the wife of *Uriah*, who usurped the throne of his murdered elder brother, and like *Constantine*, called by Christians of all sects, *the Great*, the *not-bad man* of *Lardner*, and whose equestrian statue stands, as I have before stated, in the porch of *St. Peter's Church* at *Rome*, a disgrace to the civilized Christian world.

*Mr. Maurice*² has proved the identity of the *Syrian Dagon* and the *Indian Avatar*. He says, "From the foregoing and a variety of parallel circumstances, I am inclined to think that the *Chaldaic Oannes*, the *Phœnician and Philistian Dagon*, and the *Pisces of the Syrian and Egyptian Zodiac*, were the same Deity with the *Indian Vishnu*." This I think will not now be disputed.

8. With respect to the *Oannes*, several persons make two of them, and *Berosus* says that there were other animals similar to *Oannes*, of whom he promises to give an account in his second book. These would most likely have been shewn to be renewed incarnations, but the book does not now exist. Has it been purposely destroyed? I suspect the *Johns*, or *Oanneses*, are like the *Merus*, the *Buddhas*, the *Manwantaras*, the *Soleimans*, &c. They were renewed incarnations, and the name was given after death, and sometimes during life, to any person whom the priests thought proper to designate as the guardian genius of the age.

¹ N. B. *Bowli* a bowl! Accident as usual.

² *Hist. Hind. Vol. I. p. 566.*

In the Pentateuch, which is the sacred book of the Israelites, we meet with no Dagon Fish or God. But we do meet with it in the book of Judges, written nobody knows when or where or by whom, and which was always held to be spurious by ten out of the twelve tribes of the Ioudi. I believe this Dagon to be the *fish* Avatar of India—the Dagon of Syrian in Pegu; in fact, the emblem of the entrance of the sun into Pisces. The order of situation in which the *fish* Avatar is now placed among the Avatars, by the ignorant Brahmins, is of no consequence, and cannot militate against the fish Avatar being Dagon; as Mr. Maurice has shewn that their exact order, that is, which is the *second* or *third*, &c., after the first Buddha, is uncertain.¹ At first, no doubt, my reader will be very much surprised at, and perhaps treat with great contempt, the idea of the devotees having converted Jesus into the *fish* Avatar: but why was he called the Lamb? And why were his followers called his flock, and his sheep, and his lambs? It does not appear to me to be more extraordinary that his followers, *as it is admitted that they did*, should call him a *fish*, and the believers in him *pisciculi*, than that they should call him a lamb, and his followers lambs. And I beg to inform my reader that he was originally represented as a lamb until one of the Popes changed his effigy to that of a man on a cross, of which I shall treat at large by and by. Applying the astronomical emblem of Pisces to Jesus, does not seem more absurd than applying the astronomical emblem of the Lamb. They applied to him the monogram of Bacchus, IHΣ; the astrological and alchymical mark or sign of Aries, or the Ram Ϟ; and, in short, what was there that was Heathenish that they have not applied to him? They have actually loaded the simple and sublime religion of the priest of Melchizedek, with every absurdity of Gentilism. And this I will amply prove, if I have not already done it, before I conclude this volume: for I know not one absurdity that can be excepted.

9. In the earliest time, perhaps, of which we have any history, God the Creator was adored under the form or emblem of a Bull. After that, we read of him under the form of a calf or two calves, afterward in the form of the Ram and the Lamb, and the devotees were called lambs: then came the fish or two fishes. It is a fact, not a theory, that he was called a fish, and that the devotees were called Pisciculi or little fishes. Are these circumstances accidental; or, is a secret system of religion or superstition here to be seen? I suppose few persons will attribute these appearances of system to accident. As we have *lambs* and *little fishes* in the followers of the Ram, Aries, and the constellation Pisces, it is only in character to have the followers of the Bull (though now almost lost sight of from great lapse of time) called *calves*, and I am by no means certain that we have not them in the Cyclops.

One of the most difficult etymons which I have known, and yet to myself one of the most satisfactory, is that of the Cyclopes, which I shall now conclude from Bk. IX. Ch. V. Sect. 4, 5. We must not forget the Cyclopean buildings, and, under this term, I include all those very ancient structures which are so ancient, that even tradition does not pretend to assign owners to them—and those called Druidical, which are so wonderfully marked with the numbers of the ancient cycles, marked in this manner, I have no doubt, before the art of literal syllabic writing was discovered, or at least before it was made public.

The Hebrew word עגלות *oglut* meant both young beeves and revolvers or circulators of the ethereal fluid.² גל *gl* means a circle and also a young beeve, and I *suspect* the word עגל *ogl* means, Syriacè, THE circle or THE young beeve—the Hebrew emphatic article ה *e* being, in the usual Syriac dialect, the *yo*. Now *Cycle*, the C pronounced hard, is very near the גל *gl*, both in sound and sense; and the Greek κυκλος,³ if the Greek termination be taken off; the words are very

¹ Hist. Hind. Vol. I. p. 440, 4to.

² Vide Parkhurst in voce עגל *ogl*, VI. VII.

³ גמל *gm*l became Camel or Kamel.

nearly the same. This theory must be considered in conjunction with what I have said respecting the Cyclopes and Mundore in Bk. IX. Ch. V. Sect. 4, 5.

It can hardly be denied as a *singular* coincidence, that this word should have the same meaning as the Greek *κυκλ-ος*, and as a young beeve, and roundness or a circle or cycle, and that all these circumstances should dovetail so curiously with what we are told of the cycles in the buildings or temples of the earliest races of people, and the mystical numbers of the cycles and the Tauric worship. All this seems to agree very well, as it does also with respect to the Greek *οφεις*. We have seen how the serpentine worship is every where closely interwoven with the Buddhist or earliest worship. Might it not be עגלאוב *oglaub* ?

In old Irish Chuig or Jog means a cycle or period. In Chaldee חוג *hug* means a cycle. This is evidently the Hindoo Yug. An ancient Hebrew word (not in Parkhurst but in Frey) for the Asp or Serpent is עכשוב *oksub*. In the *oks* I suspect we have the Greek *οφεις*; and, in the *וב* *ub*, the *אוב* *aub* or *עב* *ob*, the familiar or evil spirit, or spirit of divination—the West Indian Oub or Aubi or Obi. But when I recollect the close connexion between the serpentine worship and the cycles as exhibited in the temples, I strongly suspect that this word is *γ ο* the emphatic article, *כש* *ks* or *כס* *ks* the numeration or numbering, *וב* *ub* or *עב* *ob* serpent. I think the original word has been *עב* *ob*; the reason for this I shall give hereafter. Thus, then, in the Cyclopes, we have the followers of the Tauric and Serpentine worship, and the inventors of the ancient cycles.

10. I think no person will doubt the sleeping God Kiakiak above spoken of to be Bacchus; and we have seen also, a few pages ago, that Bacchus was called *ωμαδιος*, and was said in the hymn of Orpheus to have slept three years. Although the period during which the God Kiakiak slept, viz. 6000 years is very different from the three years of the Grecian mythos of Bacchus, yet, under all the circumstances, there is enough to excite a belief, that the same principle or mythos is at the bottom of them both. An opinion has been entertained by some metaphysicians, that the world is a mere idea, a dream of the Supreme Being, if I may use such an anthropomorphitcal expression—that we are all like the figures in the magic lantern, *illusion*—that all at last resolves itself into God—the great Pan. This seems to me to be the Hindoo doctrine of illusion carried to its first principles.

This I apprehend differs not greatly from the theory of Bishop Berkeley, and is perhaps the most profound and recondite of all doctrines. It is in perfect keeping with the Hermaphroditic Trinity—the Creator, Preserver, and Destroyer. It is the fashion to turn this theory into ridicule, but I observe that it is only ridiculed by persons of weak understandings, chiefly the priests and persons who have never read what Berkeley has said respecting it: persons of understanding who refuse it, do not ridicule it. I have two very learned friends who believe in this doctrine. They are both excellent classical scholars, and, besides, they are men whose minds have escaped the enfeebling influence of the education which has, until very lately, prevailed in our universities.¹ I think in the sleeping Kiakiak, sixty feet long, of Mount Sian, of Judia, in Pegu, we have the icon of this *great Pan*. He is to sleep 6000 years: when he awakes the dream ends, and all resolves itself into illusion—all is absorbed into God—the scene in the magic lantern ends.

¹ I have much pleasure in giving an opinion, that at the present moment a great improvement is taking place in both our universities, particularly at Cambridge. I trust that, in a very little time, no one will be able to say, that their members are only remarkable for great scholarship and meanness of understanding. Although a most learned writer, under the name of Nimrod, I believe a Cantab, often quoted by me, has shewn us how ghosts move through the air, demonstrated by the Rev. Mr. Riddle who saw one of them—I am satisfied there is not now any member of Trinity College, Cambridge, who is afraid of them, unless it be Nimrod himself.

This sleeping God is also the *Om* : in the Greek epithets of Bacchus, *ωμαδιος*—the Dios-OM—the *Om* of the *Judia*, and the *Sian* of Pegu, and the OM of Isaiah.

My opinion respecting the metaphysical doctrine of the Hindoos receives a strong confirmation from the laws of Menu : “ This universe existed only in the first *divine idea* yet unexpanded, as “ if involved in darkness, imperceptible, undefinable, undiscoverable by reason, and undiscovered “ by revelation, as if it were wholly IMMERSed IN SLEEP.”¹ All this is mere idle attempt to describe *that* of which man can form no idea, and therefore best described by the Hindoo term illusion.

11. I think there can be no doubt that the series of the tragedies of Æschylus contained a sacred mythos. But so many of them being lost, and those we have, being misunderstood and corrupted, it is not probable that it should be ever made out clearly. But yet, if the foundation of the mythos should be discovered by me or by any one else, the ruins of the edifice, which this fine poet has erected, may perhaps be sufficiently united to shew that the real foundation has been discovered. The theory may be found to fit to the mythos, and the mythos to the theory, and thus they may mutually support each other.

What is said in the play of Æschylus respecting the crucifixion of Prometheus, on Mount Caucasus, finds a parallel in the *Alcestis* of Euripides, which is proved by a gentleman of the name of H. S. Boyd, in the *Classical Journal*,² like the *Prometheus bound*, to be a sacred drama : and he shews that there may be found in it the whole of the Christian Atonement. No doubt all these doctrines came from India, and are founded on Genesis. The Trinity, the Atonement, the Crucifixion, are all from the same quarter, where they were the foundations of the universal, secret religion, long before Jesus of Nazareth was born.

Mr. Boyd observes, that *Alcestis* offered herself as a substitute for her husband, and yet the preposition *ὕπερ* is employed as often as *ἀντι*, and that the wife of Admetus is not designated by so strong an expression as *ἀντιλυτρον*, which is applied to Christ by Paul.

I know what I am going to say will be thought fanciful, and be turned into ridicule for its excessive mysticism, but when all attempts at explanation have hitherto failed, surely great latitude may be allowed. In the *Prometheus bound* we have seen a crucified God. It is said, that one shall come at last who shall hurl Jove from his throne. What can all this mean ? Can any one believe that it had no meaning ? Io, the *female Taurus*, is told, that this shall be done by the “ Third of thy race, the first numbering ten descents,” that is, by the third of her kind or race, the incarnation of the Zodiacal signs, distinguished from the incarnations of the Neroses ; and after ten descents, the ten ages of Virgil, or cycles of the Neros. In a note in Potter’s *Æschylus* it is observed, that *THETIS, the daughter of OCEANUS*, should bring forth a son, who should perform the act of deposing Jove. This is the fish Avatar, or the male and female, androgynous Pisces, daughter of Oceanus, when the famous 6000 years should end and the millenium begin—when Jove, the creator, should, with all things else, resolve himself into the Brahme-Maia, or Illusion of India. I shall explain this hereafter.³

12. The head of the religion in which we have found the fishes in Italy, the Pope, received all his authority from a fisherman, called Peter. We must now make a little inquiry into the history of this Peter, whom we shall find a very mysterious person.

Matt. xvi. 17—19: *And Jesus said unto him, Blessed art thou, Simon Bar-Jona.*

Again. *I say unto thee, that thou art Peter : and upon this rock I will build my church.*

¹ Chap. i. 5. Advertisement to Vol. V. *Asiat. Res.* p. v.

² Vol. XXXVII. p. 10.

³ The tragedies of the ancients were originally all of a sacred character, and were imitated by our plays called *mysteries*, in the time of Elizabeth.

Again. *I will give unto thee the keys of the kingdom of heaven.*

What can be the meaning of this Peter or Rock, called Simon, the son of Janus or Jonas, or the son of Jain, or the son of the Dove, or the son of the Ioni—the generative principle? Does it mean, that on the union of the two principles of generation the church shall be founded? What say the opponents of *allegory* in the Scriptures to this? Dare they deny that this is figurative language? Will they tell me its literal meaning? Will they dare to say there is not a concealed meaning in these texts?

On this *stone*, which was the emblem of the male generative principle, the Linga, Jesus founded his church. This sacred stone is found throughout all the world. In India at every temple. The Jews had it in the stone of Jacob, which he anointed with oil. The Greeks, at Delphi, like Jacob, anointed it with oil. The black stone was in the Caaba, at Mecca, long before the time of Mohamed, and was preserved by him when he destroyed the Dove and the Images. He not only preserved it, but he caused it to be *built into the corner* of the sacred Caaba, where it is now kissed and adored by all Mohamedans who make the pilgrimage to Mecca. Is it the corner-stone on which the Temple or Church is built? The Romans got possession of the sacred Pessinuncian stone. When Cambyses destroyed the temples in Egypt, he left the obelisks or single stones—the Lingams untouched, and in like manner they are now left untouched by the Mohamedans. The modern Romans have one in front of almost every church in Rome, and there are few churchyards in England without one, on the top of which is fixed a dial, or formerly a cross. We have it yet in the fire towers of Ireland, and in the single stone found near every Gilgal or Druidical circle; we have it as a boundary, a terminus, at the division of all our parishes, and on our Mote hills, and in Rudstone churchyard, in Yorkshire;¹ and, to complete all, we have it in Westminster Abbey, on which our kings sit at their coronations. When I examined this stone, I greatly shocked the religious feeling of the keeper, by proposing to apply a chisel to see what was its nature: but it appeared to be a shell limestone. I thought I perceived the Cornu Ammonis or Argo Argonauta upon it. Whether the allusion in the Gospel is to this species of stone, I will not be positive, but the circumstances are surely suspicious.

I believe I am not the only person, by many thousands, who has thought that expression of Jesus's very extraordinary in which he says to *Peter, Bar-Jona—thou art Peter; and upon this rock I will build my church.* Peter was not the common name of this apostle, but a cognomen or surname given to him by Christ. His name appears to have been Simon. Mr. Bryant² says, "When the worship of the sun was almost universal, this was one name of that deity, even among the Greeks. They called him Petor, and Petros, and his temple was styled Petra." Where the temples had this name, he shews that there was generally a sacred stone which was supposed to have descended from heaven. Peter is also called Cephass, which, in Hebrew, means a stone.

In the oriental languages, without vowels, Petor, Petra, Patera, are all the same. In the Western languages *Peter* has three significations: *Paoter*, a pastor; Peter (Be-tir), a fisherman of a *Peter* boat; and *Petra*, a Rock.³

Saxa vocant Itali mediis quæ in fluctibus Aras.⁴

The French Peter or Pierre is Pi-ara, and our Pier-glass comes from this. Ar in Celtic means stone; this is the Hebrew הר *er* or Har, stone mount, rock, as Har-gerizim. This stone was the emblem of wisdom or the generative power, and I suspect from this, a stone came to be called *Sax-um*. Why *sax* I shall explain hereafter. Mithra or the sun copulated with a stone, whence came a son called Di-orphos or Light.⁵ This is the Holy Orpheus. And from the fire proceed-

¹ See Celtic Druids, plates.

³ Cleland's Specimen, p. 62.

⁴ Virgil.

⁵ Maurice Ind. Ant. Vol. II. p. 207.

ing from the Flint stone, came Allegories respecting the Petros or stone, in endless variety. Sir W. Ouseley¹ has shewn *Mithra* to mean cycle.

The priests of the oracles of the Greeks who were called Omphi, or Delphi, or the Os Minxæ, or the Matrix, or the Umbilicus, were called Pateræ.² Bochart says, “Pateræ, Sacerdotes Apollinis, oraculorum interpretes:” on which Mr. Bryant³ observes, “Pator or Petor, was an Egyptian word; and Moses, speaking of Joseph and the dreams of Pharaoh, more than once makes use of it in the sense above. It occurs Genesis xli. 8, 13, and manifestly alludes to an interpretation of that divine intercourse which the Egyptians styled Omphi. This was communicated to Pharaoh by a dream. These Omphæan visions were explained by Joseph: he interpreted the dreams of Pharaoh: wherefore the title of Pator is reckoned by the Rabbins among the names of Joseph. There is thought to be the same allusion to divine interpretation in the name of the Apostle Peter: Πέτρος, ὁ ἐπιλυων, ὁ ἐπιγινωσκων. Hesych. Petrus, Hebræo sermone, agnoscens notat Arator.”⁴

In a former part of this work I have shewn that the golden Pateræ which were hung round the large Umbilicus or Omphalos, when it was carried in procession at Delphi, and in Egypt in their voyages of salvation, argonautic expeditions, were the same as the vessel called Argha in India. They were votive offerings, emblematical of the generative powers of nature. It was from attachment, or alleged attachment, to this superstition, in some way or other, that the Manichæans were called Paterini, by their adversaries, as a term of reproach. It often happens that sects are called by a name allusive to some doctrine or person to which they have an utter aversion, by their adversaries, as a term of insult, and from this, without much care, great mistakes may arise; and this observation is peculiarly applicable to such sects as the Manichæans, of whom we know scarcely any thing, except from their most bitter enemies. An example of this we have in the Unitarians. Half the people of England, who believe whatever their priests tell them, suppose them Socinians, and call them so. They may as well call them Chinese.

13. The Baptist and the author of the Apocalypse were called John, or Joannes or *Ἰωάννης*. Bryant says,⁵ “This name, which we render John, I have shewn to be no other than Iōna. It signifies *a dove*; but means likewise an oracular person: by whom the voice of the Most High is made known and his will explained.” That is, a *resoul* or *prophet*. This was the Ionas sent to the Ninevites as noticed before.

In Berossus and other authors the being, half man, half fish, called Oannes, is said to have come out of the ERYTHRÆAN Sea, and to have taught the Babylonians all kinds of useful knowledge. This is clearly the fish Avatar of India; whether or not it be the Ioannes or Jonas I leave to the reader. I apprehend it is the same as the Dagon of Pegu and the fish sign of the Zodiac. Very little is known about it, but it exactly answers the description of an Avatar. The extraordinary number of extraordinary circumstances detailed above will compel my reader, I think, to believe, that the incarnation of the fishes was once, if it be not yet, among the secret doctrines of the Vatican. I beg those who doubt, to tell me why the fishes tied by the tails are to be seen on the Italian monuments, of the meaning of which none of the priests could or would give me any information.

Jonah “a Dove” was an appellation deemed applicable to one sent on a divine mission; and hence, among others, John the Baptist had his name.⁶

Anna, or the year, was the mother of Maria or Mæra or Maia, all of whom (as I have shewn or shall shew hereafter) were the same, and Maia was the first month of the year, on which, in very

⁴ Ibid.

⁵ Vol. II. p. 293.

⁶ Class. Jour. Vol. VI. p. 329.

ancient times, began both the year and the Cycle of $\text{IH}\Sigma\text{-05}$, or 608. There was also a certain Anna who was supernaturally pregnant (like the wife of Abraham, who was sometimes called Maria¹ and Isha, but commonly Sarah or Sarai or Sara-iswati) in her old age; and she was delivered of a son whose name was John, Joanes, or Johna, or Jana, or Oanes. He was born at the Midsummer solstice, exactly six months before the son of Maria. Thus he might be said, astrologically, as Matthew makes him say, to be decreasing when the son of Maria was increasing. He prepared the way for the son of Maria,—as the prophet said, he was the voice of one crying in the wilderness. Was he a previous Avatar, as the learned divine Parkhurst would say, sent as a type or symbol?

Jesus came to his exaltation or glory on the 25th of March, the Vernal equinox. At that moment his cousin John was at the Autumnal equinox: as Jesus ascended John descended. The equinoxes and solstices equally marked the births and deaths of John the Baptist, and of Jesus. John makes the Baptist say, chapter iii. ver. 30, *He must increase, but I must decrease*. As Michaelis has justly observed, this is sufficiently mystical. How can any one doubt, that what was admitted by the fathers was true—that the Christians had an *esoteric* and an *exoteric* religion?² I have nothing to do here with their pretended explanations, but only with the fact which they admitted—that there was an *esoteric* religion. It cannot be doubted that all the explanations pretended to be made of the *esoteric* religion by Jerome and the early fathers, are mere fables to deceive the vulgar. How absurd to suppose, that when these men, who were at the head of the religion, were admitting that there was a *SECRET* religion for the initiated only, they should explain it to all the world! Their explanations to the vulgar are suitable to the vulgar, and were meant merely to stop their inquiries.

At the time of which I now speak, the mysteries of the Gentiles were not entirely abolished, and mankind, educated in a respect for them, felt no objection to the principle of secrets or mysteries in religion; but now, since it has become the interest of the priests, or at least since they think it has become their interest, to disallow them, persons can see the absurdity of them. But I do not doubt that a secret system is yet in the conclave, guarded with as much or more care, or at least with more power, than the secrets of masonry. The priests know that one of the best modes of secreting them is to deny that they exist. Indeed, the heads of the church must now see very clearly, if they were to confess *what cannot be denied*, that (if the most learned and respectable of the early fathers of the church are to be believed) Christianity contained a secret religion, that the populace would not consent to be kept in the dark. But whether the secret doctrine be lost or not, *IT IS A FACT* that it was the faith of the first Christian fathers, admitted by themselves, that there was such a secret doctrine, and before I have done, I will prove it clearly enough.

On the mystical nature of the name *John* I am not singular in my opinion. Mr. Bryant, in another place, says,³ “The ancient and true name of the dove was, as I have shewn, Iönah, and Iönas. It was a very sacred emblem, and seems to have been at one time almost universally received. For, not only the Mitzraim, and the rest of the line of Ham, esteemed it in this light: but it was admitted as an hieroglyphic among the Hebrews: and the mystic dove was regarded as a symbol from the days of Noah, by all those who were of the Church of God. The prophet who was sent upon an embassy to the Ninevites, is styled Iönas: a title probably be-

¹ Nimrod, Vol. III.

² See Basnage's History of the Jews, Book iii. Ch. xxiv., for St. Jerome's account of it.

³ Anal. Anc. Myth. Vol. II. pp. 291, 293.

“ stowed upon him as a messenger of the Deity. The great Patriarch who preached righteousness to the Antediluvians, is, by Berosus and Abydenus, styled OAN and OANNES, which is the same as Jonah. The author of the Apocalypse is denominated in the like manner: whom the Greeks style *Ἰωάννης*, Joannes. And when the great forerunner of our Saviour was to be named, his father industriously called him *Ἰωάννης*, for the same reason. (The name was imposed antecedent to his birth.) The circumstances, with which the imposition of this name was attended, are remarkable; and the whole process, as described by the Evangelist, well worth our notice. Luke i. 59, &c., ‘ And it came to pass that on the eighth day,’ &c.”

Indeed, Mr. Bryant, you say very truly—the circumstances are well worth our notice: but why have you not endeavoured to explain them? It is perfectly clear, that the Ionas or Oanneses were types, as Mr. Parkhurst would maintain, of the John of the gospel histories, or the gospel histories were copied after them. On this subject every one must judge for himself. I only state the circumstances as impartially as I am able; my private judgment or opinion I retain, till I come to my next volume.

When Jesus was baptized by that very mysterious character *Ἰωάννης* in the Jordanus, the Holy Spirit descended on to him in the form of a dove, and a fire was lighted in the river. Now I cannot help suspecting that a mystic union was meant to be represented here between the two principles—in fact the reunion of the sects of the Linga and the Ioni or Dove—which we yet find in Jesus and his mother in the Romish religion. Justin says, when Christ was baptized a fire was lighted in Jordan. The same thing is said in the Gospel of the Nazarenes and the preaching of Paul.¹

14. In the Indian account of Bala Rama and Cristna, a difficulty occurs. Bala Rama is evidently the same, and is said to be the same, as Cristna, and this is true upon the principle, as I have formerly said, that they are both incarnations of the Sun. But they are the same on another principle. As Bala Rama, this person is an incarnation of the sun in his cycle of the Neros, as Cristna, of the sun in his character of the Zodiacal sign Aries. This is the Janus of the West, the Bifrons, the origin of the Jains, who were Buddhists and also followers of Cristna, as far as he existed in his character of Taurus or Aries, but had nothing to do with the separation from it of the female power. He was Brahma with his four faces. Bala Rama was the precursor of Cristna, and aided him in the destruction of monsters, and in the regeneration of the world and its preparation for the day of judgment; but still the persons who thus describe him also say, that he was the same as Cristna. The word Ram means both Bull and male Sheep—Ram. This, as I have before stated, is because he was an incarnation in both Taurus and Aries.

Mr. Bentley thinks he has proved that Rama was born about 1200 years before Christ. It has been often observed that Rama was to Cristna what St. John was to Christ; particularly in assisting him in clearing the world of monsters and in preparing it for a day of judgment, and that he was an inhabitant of the desert. The identity of the mythoses cannot be disputed; and no doubt, with Cristna, Rama was renewed every six hundred years. But the exact meaning of the parable I have not been able to discover.

Mr. Payne Knight, speaking of Rameses, who is probably the Egyptian Rama, says, “ The age of Rameses is uncertain; but the generality of chronologers suppose that he was the same person as Sesostris, and reigned at Thebes about 1500 years before Christ. The Egyptian priests had a tradition, which they pretended to confirm by their monuments, that he had conquered all Asia.”² This Rameses is evidently Rama—Isi. But, as Mr. Payne Knight observes,

¹ Just ag. Tryph., Sect. lxxxviii. p. 60, note.

² Payne Knight, Evors. Pr. p. 89.

it is pretty clear that Homer knew nothing of this king. But who was Sesostris? Now I think Sesostris was a Zoroaster, who was Zur or *Sur astra*. Hyde¹ says “Supradictus Zerdusht apud orientales (ut dictum) decoratur titulo Δ, Rad, i. c. Sapiens.” Now here I suppose that the Δ, Rad should be ζ, Ras. Here is a confirmation of what I have said of the Ras, the Hakim, and the Sapiens. Dr. Hyde has evidently mistaken or found the Δ mistaken for the ζ. In the life of Zoroaster the common mythos is apparent. *He was born in innocence of an immaculate conception, of a ray of the Divine Reason. As soon as he was born, the glory arising from his body enlightened the room, and he laughed at his mother.* He was called a splendid light from the tree of knowledge, and, in fine, he or his soul was *suspensus a ligno* hung upon a tree, and this was the tree of knowledge.² Let it be remembered, that I formerly, in Book X. Ch. II. Sect. 7, pointed out the fact, that there were probably as many Zoroasters as Cycles. Here we have the universal mythos, the immaculate conception and the crucifixion; and we find this crucifixion connected with letters and the tree of knowledge.

Among the Jews and among the Indians, Rama was also known by the name of Menu and Noah. The striking similarity of Noah to Janus has been remarked, and their identity, in fact, admitted by every person who has written upon these subjects. The proofs of it to any person of observation have been exhibited a thousand times in the course of this work. I apprehend that Bala-Rama is said to be the same as Cristna, because his cycle ran, in part, along with that of Cristna. It was probably partly before the flood or entrance of the sun into Aries, and partly after, as Shem, founder of one of the cycles, lived partly before and partly after it. Thus his cycle was on the decline when that of Cristna began. If he were the fourth Avatar, he would begin in the year of the sign Taurus 1801; and when Cristna began, in the year 2161, he would have passed the best part of his time of 600 years, viz. 360, and would be declining. We must not forget that the Brahmins say, Rama and Cristna were the same. Similar to this might be the meaning of the increase of Jesus and decrease of John, just now pointed out. He answers closely to John. He stands, as lately remarked, in the same relation to Cristna that John does to Jesus. He is now to be seen, as the reader has been informed, in a temple a few miles from Muttra in the very dress of Hercules, as described by Arrian; and yet pious people persuade themselves that John and Jesus are the originals from which Cristna and Bala-Rama are copied.³

When we come to the next Zodiacal incarnation, we have it in the fish Avatar of India, and the Dagon of the Syrians; and as the Romish Jesus was an Avatar in the same intermediate state, partaking of the two cycles, we ought to find him, as we have found him, mixed with the Zodiacal symbols of Pisces.

In reference to the double cycles, namely the cycles of 600 and of 2160 years, we may observe how constantly the double mythoses of the Avatars, of the Neros, and of the Zodiacal signs, keep shewing themselves. They support each other. A close attention to history and circumstance will convince any one, that, in the West at least, the knowledge of the system was becoming obscure in many countries, and doubtful in all. The conquests of the Scythians, of Cambyses, of Alexander, and many other casualties, operated against the regular transmission of the system; but still it may be found.

In addition to all the other odd circumstances relating to the Ioannes and St. Peter, I have to

¹ De Rel. Vet. Pers. p. 312.

² Vide Malcolm's Hist. Pers. Vol. I. Ap. p. 494; Nimrod, Vol. II. p. 31.

³ Eusebius mentions an idol dedicated to the sun—*κεφαλὴν κριβ κερτημονον και βασιλειον κερατα τραγυ εχον*, viz. having the lordly and regal head of a Ram with Goat's horns. Sharpe on Cherubim, p. 149.

inform my reader that, in the Gospel of the Nazarenes, Peter is called *Simon filius Joannæ*.¹ This shews that Jonas and Johannes were the same.

The apostles of Jesus, I believe, were most of them fishermen. There are many stories of miraculous draughts of fish, and other matters connected with fishes, in the Gospel histories; and Peter, the son of John, Ioannes or Oannes, the great fisherman, inherited the power of ruling the church from the Lamb of God. The fisherman succeeded to the shepherd. The Pope calls himself the great Fisherman, and boasts of the contents of his Poitrine.

Vallancey dit que *Ionn* étoit le même que Baal. En Gallois *Jôn*, le Seigneur, Dieu, la cause première. En Basque *Janna*, *Jon*, *Jona*, *Jain*, *Jaincoa*, *Jaunqoicoa*, Dieu, et Seigneur, Maître. Les Scandinaves appeloient le soleil *John*, pour indiquer qu'il étoit le père de l'année, ainsi que du ciel et de la terre. Une des inscriptions de Gruter montre que les Troyens adoroient le même astre sous le nom de *Jona*.² En Persan le soleil est appelé *Jawnah*. Tous ces noms ont un rapport evident avec le Janus des Etrusques, qui étoit considéré comme le Dieu suprême, et que les poëms saliens appeloient *Deorum Deus*.³ On pourroit encore rapprocher ces dénominations de l'Arabe *Janab*, *Majesté*, *pouvoir*, et du Persan *Jauan*, un chef.⁴

15. Although it cannot be shewn exactly how it was effected, yet I think no person who considers all the circumstances can doubt that there was anciently some connexion between the Roman God Janus and St. Peter—that one is the prototype of the other. Jesus is called *the Prince of Peace*, the same as Janus, and his religion *the religion of the God of Peace*. Peter was the chief of his apostles. His name was originally only Simon, but he was surnamed Peter and Cephas by Jesus, because on him Jesus said he meant to found his church. As successor of Janus he held the keys of heaven. Matthew, as briefly quoted already, in his sixteenth chapter says, ver. 17, *And Jesus answered und said unto him, Blessed art thou, Simon Bar-Jona; for flesh and blood hath not revealed it unto thee, but my Father which is in heaven.*

Ver. 18, *And I say unto thee, that thou art Peter; and upon this rock I will build my church, and the gates of hell shall not prevail against it.*

Ver. 19, *And I will give unto thee the keys of the kingdom of heaven; and whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven.*—John says, chap. i. ver. 42,

And when Jesus beheld him, he said, Thou art Simon, the son of Jona; thou shalt be called Cephas, which is, by interpretation, a stone.

There can, I think, be no doubt, that out of some tradition not understood by us now concerning Janus, Peter has been made the chief of the twelve apostles, endowed with the keys, and made keeper of the gates of heaven. In this case the process by which the effect was produced is lost, but the effect itself cannot be doubted; and surely in all this, a parable, a figurative meaning, must be allowed.⁵

³ Creuz. *Symb.* p. 507, in *Ausz.*

⁴ Pictet, *Du Culte des Cabiri*, p. 104.

⁵ Many years ago a statue of the God Janus, in bronze, being found in Rome, he was perched up in St. Peter's with his keys in his hand: the very identical God—not the bronze merely melted and recast—but the identical God himself, in all his native ugliness, as is proved by his duplicate in stone, which I found in the vaults below. This the Roman priests cannot say has been *recast* from the old bronze, as they say of the Peter above-stairs. This statue sits *as St. Peter*, under the cupola of the Church of St. Peter. It is looked upon with the most profound veneration: the toes are nearly kissed away by devotees. The priests, when charged with its being a *Heathen* God, deny it; they, however, allow that the bronze anciently formed the statue of a *Heathen* God, but they say it was recast into a Peter,

On the Janus—I have some very curious observations from Mackenzie Beverley, Esq., LL. D.:

“ Many reasons have been proposed for the position of Janus at the gates of cities, but the true meaning is to be found only in the Ling-yoni doctrine—than which none is more ancient. The arch or gate of Janus was a symbol of that mysterious gate through which all men and animals enter into the world, and over which the two or four-faced Janus presided, representing the sun rising in the East and setting in the West, or the power of the Sun in the four quarters. The Sun, Lord of Procreation, was in his *most ancient human* figure the quadrifront Janus or Brahma. The quadrifront Brahma is to be seen occasionally sitting before the Lingam-Yoni, presiding over *the great mystery*; and the key of Janus is but another form of the crux-ansata of Egypt, the key that opens the ARCH through which we all pass. The crux-ansata is the lingam, and is the monogram of the planet Venus, the key that opens the great door of mystery over which the veil of Isis was drawn. This key is in the hand of Janus-Sol, because it opens the gate of the mysterious arch. But as the sun was always triplified in his power, and as the TRIANGLE is another form of the great gate of mystery, they were fond of erecting triple gates in the East, as in the triple portal or Tripolia of the Rajas of India,¹ from which root also comes the word Tripoli. From the Sanscrit Pola, we have the Greek *πύλη* a gate; and, as I suspect, the pole and phallus always inseparably connected with the mysterious gate. Pylos signifies also a pass, and in Sanscrit these natural barriers are called Palas, which I consider a near approach to the Greek Phallus.

“ Ganesa, the Indian Janus, was expressly formed by Oomia (the Indian Juno, and the Goddess OUM) to guard the entrance of her caverned retreat in Caucasus. Ganesa is four-armed and carries a dirk, a club, a lotus, and a shell: the two last are emblems of the female mystery. One of the gates of every Hindu city is called Ganesa-pol; clearly pointing to Janus or Ganes, Lord of the Pole, May-Pole, or Phallus, and therefore most appropriately made to guard the GREAT ARCH of mystery,² through which all must enter.” In the cross we here see the emblem of generation, and as the instrument of death of destruction—of destruction and reproduction, regeneration,—of the Cycle of the Sun and Moon, of 600.

Jesus Christ was an incarnation of divine Wisdom. He taught that he was the *door*, or that through him was the *entrance* to the kingdom of heaven. *He that entereth not by the door is a thief and a robber.* Again, *I am the door of the sheep.* Again, *I am the door; by me if any man enter in he shall be saved.*³ This door or gate is the *πύλη*—the *פֶּלַל* *pll*, the *intercessor*. This is

(i. e.) Bar-Jonas. Unluckily for the veracity of these priests, the ancient stone statue, exactly the same, found¹ in the vault under the church, shews that this is not Bar Jonas, but Jonas or Janus himself. It will be objected, that the Peter in the Vatican Church has not two faces. True: but one may have been removed or disguised; (there is no getting at it to examine it;) or the Romans, in later times, may have so far improved in taste, as to drop the Hindoo custom of making monsters of their Gods, and have returned to the good taste of their Etruscan ancestors. I believe the present statue was a Janus, and not a Jupiter. Probably on this very spot the rites of Janus had been formerly celebrated in a temple, and this very statue found underneath, with the relics of the God, &c., &c. In this way, and from such ridiculous mistakes of the ignorant priests of the middle ages, few of whom could either write or read, and all of whom considered Heathen learning as wicked, most of the legends of the Christians had their origin. Very likely they had never heard of Janus, and as for the histories of the early popes, as given by Eusebius, or other writers after him, they are evidently unworthy of the slightest regard. Almost the whole is a manifest forgery of Eusebius's. There may, perhaps, have been such persons as many of those he describes, a set of obscure persons, but not any thing like what he makes them out to have been. They may have been something like our present Methodists, with a similar organization.

¹ Tod, Hist. Raj. p. 589.

² Royal-Arch—verbum sapienti.

³ John x 1, 9.

also $\aleph\text{-}\lambda\text{-}\sigma$ *pl-a*, *wisdom*, *Pallas*. This is the Ganesa Pol¹ of India, the *Gate of Wisdom*. From this, Pol comes to mean *head*. Here we have *ænigma* within *ænigma*, parable upon parable. When Jesus declares himself the door of life, surely no one will deny the allegory or figure of speech, and it is in perfect keeping with the declaration that he taught in parables—that the uninitiated might *hear* and *not understand*.

Amphipolis is Polis-om ; Am or Om-bra-sius is a town of Om-creator, $\aleph\text{-}\beta$ *bra* ; Om-phi, *voice* or *Oracle of Om* ; Om-phi-arius, *place of the oracle of Om* : Om-aiarius is Om-aria, *country* or *place of Om*. Om-phale is Om-phallus ; and what is *phallus* but a formation from $\aleph\text{-}\lambda\text{-}\sigma$ *pla*, *divine wisdom*, the former or creator ? This in the Greek is $\phi\lambda\lambda=600$. Am-pulla (of Rheims) is the same. All the superstitions about the $\pi\upsilon\lambda\iota\varsigma$, the pole, and the gate, arise from the same source. $\Pi\rho\omicron\pi\omicron\lambda\omicron\varsigma$ signifies either a male or female attendant ; $\alpha\mu\phi\iota\pi\omicron\lambda\omicron\varsigma$ only a female attendant.² This seems to confirm what has been said of the amphi.

There are people who will call this obscene and filthy ; people whose minds are depraved by the education of monks or monachism. To *me* they are most beautiful allegories. Persons who take their ideas from monks are incapable of raising their minds above the debasing ideas entertained by the generality of persons of that description. To *them* these beautiful allegories are invisible, but they can clearly see the abuses introduced into them by filthy priests. My reader will see here, as justly observed by Col. Tod, the counterpart of the Scripture Gate, in which Haman and Mordecai sat to administer justice, and he will refer to what I have said in Bk. VII. Ch. VI. Sect. 7 and 10, respecting the various Tripolis, and will find a more probable origin for their name than I was acquainted with when I wrote those observations. But I will not alter them : it will be no inconvenience to my reader to permit the way in which, by degrees, my discoveries ripened into system, to shew itself.

Here, as Col. Tod has observed, and it is very worthy of observation, we have the origin of the Ottoman PORTE. Did the Ottomans bring this with them from North-eastern Tartary ? Or, did they find it among the Arabians ? The Porte, that is, the Latin or Etruscan word Portus, for the Greek $\pi\upsilon\lambda\eta$ or $\pi\upsilon\lambda\iota\varsigma$. Hence the origin of our *ports* ; and from the gate of Oudipoor, called Ganesa-dwara, comes our word *door*. The Tripolis of antiquity are generally, but not always, sea-ports. But still a *polis* always meant a *city* ; for instance, the Decapolis of Syria. This was an imitation of the Decan of India, which lay beyond the river Buddha, as the Decapolis of Syria lay beyond the sacred Jordan. But there is another Pole which the Colonel has forgotten to notice—the Pole of the globe. Why does the axis of the earth bear this name, but because it is the mundane emblem of the generative power—the sacred Meru—with the beautiful diamond at the end of it—the *Pole-star*, called by the Arabians the star of Iudè or Juda ?

I have no doubt, and I think my reader will now have no doubt, of the quarter whence came the Latin or Etruscan *Janus*—a God older than any of the Gods of Greece. He will not fail to be struck with the recollection of the way in which Janus is connected with several other matters—his connexion with Peter, with Ioannes, and with the Juno Argiva or Lucina—the two latter both *male* and *female*. The Janesa holds in his hand a shell—sometimes the Cornu Ammonis, sometimes the beautiful Argo-Argonautæ—at one time setting or supposed to set its pretty sail, and scud before the wind ; but at all times safe from the stormy billows ; at another time brooding on the surface of the deep. Who can doubt that these have their names from India ?

Here also we have the mystic triangle, (Freemasons understand this,) and the triangle triplicated, as noticed in my CELTIC DRUIDS. When I wrote that work I was not a Mason. It is no

¹ Ganesa, *God of Wisdom*.

² Monk, in *Class. Jour.* Vol. XXXVII. p. 126.

secret, but it is a Masonic emblem ; and, as Col. Tod has observed, is found with other Masonic emblems on probably the oldest building in the world, the Cyclopæan walls of MUND-ore. Did Masonry arise during the building of these walls ? What do Masons know of the Temple of Solomon ? Have we not seen that parts, at least, of this temple were built of the sacred wood אֲלִמֹג *almg* of Rajahpoutana ? Have these matters any thing to do with the lodge in China ;¹ with the probably much-calumniated man of the mountain, and the Saracenic Lodges, or Lodges of the Knights Templars ? Why do the priest-led monarchs of the continent persecute Masonry ? Is it because they are not entrusted with its secrets ; or, because their priests cannot make it subservient to their base purposes ? All these are questions I may ask, gentle reader ; but *all* I may not answer. If you be not satisfied, ask his Royal Highness the Duke of Sussex : he can answer you IF HE CHOOSES. But this I may say, it is not every apprentice or fellow-craft who knows all the secrets of Masonry.

Masonry is not inimical to priests, or kings, or religions ; but though it is not an *active* enemy, it is no friend to bad priests, or bad kings, or bad morals. Masonry is patronized by the Royal family, and by many priests in Britain. The reason of this is no Masonic secret. It is because the princes of Britain are not, and desire not, to be the tyrants of their country, and because among the priests of Britain are to be found many who are neither fanatical nor base ; but, on the contrary, men possessed of every virtue, and whose misfortune it may be, but not whose fault, to belong to their pernicious order.

16. When I reflect upon the many evident proofs, already so often noticed, that the philosophers of Greece and Rome, the Herodotuses, the Ciceros, the Cornutuses, &c., were completely ignorant of the meaning of their mythologies, and yet that they had certain great mysteries in which they were all initiated, I am induced to devise some scheme or theory to account for this seeming contradiction—and I have come to an opinion that, in a late day, these mysteries consisted in part in a knowledge of the system of sacred numbers and cycles, and in the first principles of Gnosticism. These I have partially unfolded, and they were so closely connected together, that there is every reason to believe Pythagoras adopted or invented this expedient to conceal his doctrines. What else was there, in fact, of which their secret mysteries could consist ? I have shewn by historical evidence, that all their Deities resolved themselves into the sun : and that every where almost within the reach of history, the nations—the Latins, the Greeks, the Egyptians,² the Indians, the Buddhists—had no images, and gave no names to their Gods.³ And if the mysteries did not descend from or were not the learning of the earliest times, which must have been the times when no image nor names of Gods existed, of what could they consist ? There seems to have been scarcely any other thing for them to have consisted of. However, of this I feel pretty confident, that I have shewn the principle upon which all the ancient mythology was founded, and how it arose. When the Gods had no names or images, how was it possible for them to have existed at all ? How was it possible to have been any other than the Deistical Buddhism which I have developed, and, at first, in its extremest simplicity, even without the icon ? This I suppose to have been about the time when the earliest Druidical or Cyclopæan buildings were erected, and it accounts for their existence—and their existence in cycles, is *fact*, not *theory*, and connects them most closely with the Cyclic system of renewed incarnations, which we have traced up to the first Indians. When I find the numbers 144, 600, 608, 650, in circles

¹ Vide Trans. Asiat. Soc.

² Larcher's note on Herodotus, Vol. I. p. 193 ; Beloe ; Ouseley's Coll.

³ Huet has observed that there was originally no image in the temple of Jupiter Ammon. Georg. Alph. Tib. p. 116.

of stones in Britain, I cannot doubt that they alluded to the cycles of the same numbers in India and Greece.

The affectation, indeed, of concealing their doctrines or discoveries, was among the ancients carried to an extreme that is scarcely credible; and this practice was continued down to a much later time than persons who have not inquired into these matters would suspect. Leibnitz published, in the *Acta Eruditorum* of Leipsic, his scheme of Differential Calculation, so as to disclose neither the method nor the object. Leibnitz, it is true, was detected by the consummate mathematical science of the brothers James and John Bernouilli. Newton, in like manner, explained his invention of Infinite Series, and yet concealed it by a transposition of the letters that make up the two fundamental propositions into an alphabetical order. So also Algebra, as far as the Arabians knew it, extending to quadratic equations, was in the hands of some Italians, and was preserved nearly 300 years as a secret.¹ With respect to Algebra I suspect it was known in the East thousands of years ago.

In the mysteries, the initiated swore by the sacred cycles of the sun, moon, and planets. "Omnes qui inciderint, adjuro per sacrum solis *circulum*, inæquales lunæ cursus, reliquorumque siderum vires et signiferum circulum, ut in reconditis hæc haberent, nec indoctis aut profanis communicent, sed præceptoris memores sint, eique honorem retribuunt."² This surely tends strongly to confirm my hypothesis, that the knowledge of the cycles constituted a part at least of the sacred mysteries.

17. I will here shortly notice another personage, called John, who is very problematical, and has been the object of much inquiry, and of whom we shall say more presently.

"Dr. Hakewill,³ in his ingenious 'Apologie for the Power and Providence of God,' cites good authorities to shew, what cannot but seem passing strange, that the wandering Jew was in the thirteenth century entitled *Johannes Butta Deus*, which I doubt not to be a piece of crusading erudition brought from the country of the Drusian and Assassin Curds."

Again, "The fable of the wandering Jew is, that Jesus said to the man who reviled him when on the cross, Thou shalt remain till I come."⁴

Again, "I may farther observe, in conclusion of this topic, that the title *Johannes Butta* means the same as Presbyter *Johannes Asiaticus*, a sort of hierarch, who was looked up to with singular awe in the 12th and 13th centuries, and who was probably the same personage as the *Senex de Montanis*, whose Lieutenant was found in Phœnicia by the leaders of the third crusade, and who was a⁵ Curd or Cordivian.⁶ When the Portuguese had visited the dominions of the king or Negus of the Abyssines in Meroetic Æthiopia, they pronounced that he was Presbyter *Johannes*, but they, as well as Mr. Bruce, assure us that the Abyssinian kings give themselves out for an Hybrid race of Jews, and display a long pedigree of their lineal descent from Solomon and the Queen of Sheba: which explains the reason why the Portuguese thought the Abyssinian kingdom was that of Prestre John or the wandering Jew. The prophecies above-cited would naturally lead the inquisitive to seek for two Prestre Johns, the one beyond the rivers of Egypt, and the other beyond the rivers of Assyria."⁷

Again, "The Ionian expulsion was the same as the Iacchic egression: and even now, when the causes of their connexion have been long forgotten, the name Iacch is identified with John

¹ Southern North American Review, February, 1829, p. 179.

⁶ Galf Vinisauf. Lib. vi. Cap. xxi.

⁷ Nimrod, Vol. III. p. 401.

“ or Johan, and is said to be a diminutive thereof, though it be of exactly the same length.”¹ Here we find the name John connected with, or the same as, Bacchus; the reason of this we shall discover in a future book, when we return to the word Johannes.

“ But what strikes me most forcibly is, the story put about by the Portuguese, that Presbyter “ John’s dominions were governed by a queen named HELENA.”² “ This fatal name speaks volumes. The whole of Illion, the nurse of Romulus, the Goddess concubine of Simon the “ Magian, and the mother of that baleful catechumen Constantine the Great.”³

I have inserted the above observation to call my reader’s attention to it, as I am quite certain some curious meaning lies hid under the mystical character of the Prester John. I confess I am not sure that I understand Nimrod, though the name of Helena may *speak volumes*. I wish he had been a little more explicit. Johannes or John was called $\chi\rho\eta\sigma\omicron\varsigma$ $\iota\omega\acute{\alpha}\nu\nu\epsilon\varsigma$ by Julian. This $\chi\rho\eta\sigma\omicron\varsigma$ I believe always means the good genius of a cycle. This $\iota\omega\acute{\alpha}\nu\nu\epsilon\varsigma$ $\chi\rho\eta\sigma\omicron\varsigma$ decreased, as the $\text{IH}\Sigma$ $\chi\rho\eta\sigma\omicron\varsigma$ increased.

This Joannes, whom Mr. Bryant identifies with the Oannes of the Assyrians, whom the Portuguese call Presbyter, and John, who was descended from Solomon and the Queen of Sheba in Abyssinia, and whom Mr. Maurice has declared to be the fish Avatar of India, and the God Dagon, and who, Nimrod observes, was Johannes-Butta Deus, was in reality a renewed incarnation of Buddha; or, perhaps, rather a superstition which took its rise from the half-understood doctrine of the renewal of the Indian incarnations. Jesus is made to declare that Joannes should remain till he came; that is, that, as the fish incarnation, he would remain until the end of the six millenaries, which, as the Equinoctial incarnation, he would do; for the fish would remain the equinoctial incarnation, or the emblem of it, till the ten less avatars were all finished. This suggests a doubt whether all the Equinoctial Avatars were not Buddhas. Of this Oannes or John Mr. Bryant says, “ Oannes appeared $\epsilon\nu$ $\tau\omega$ $\pi\rho\omega\tau\omega$ $\epsilon\nu\iota\alpha\upsilon\tau\omega$,⁴ for time commenced from his appearance.”⁵

We are now in the centre of the land of mysticism. Every thing is a parable, an ænigma, a mystery. What can be more mystical than Matthew’s expression, that Jesus should increase and John decrease? What can be more mystical than what we have seen respecting the Joannes, and Butta, and Deus? What more mystical than the expression, that John should stop till Jesus came again in his glory? What more mystical than that the Baptist was Elias, that is, in plain Greek, the sun— Ἡλίου ?

Jonas, the amphibious, was swallowed, and returned again in three days from the fish. He was the same person as Hercules or as Heri-clo, the saviour 608, swallowed at the same time and place with Jonas, who (vide Bk. V. Ch. VI. Sect. 6) prophesied the destruction of Nineveh about the year 600 B. C. This was the time of the famous central eclipse of Thales,⁶ or conjunction of

¹ Nimrod, Vol. I. p. 170, Sup. Ed.

³ Nimrod, Vol. I. p. 280, Sup. Ed.

⁴ Alexand. Polyhist. apud Eus. Chron. p. 6.

⁵ Anal. Vol. II. p. 357.

⁶ The eclipse of Thales is said to have happened in the year 610 B. C. See Herodotus, and an Essay on it, by M. Bailly, in the Phil. Trans. for 1811; Pritchard, p. 442. There are some learned dissertations on this eclipse, in the first four volumes of the Edinburgh Philosophical Transactions; but the last dissertation which I have seen upon it, is by Sir William Drummond. In his Origines, he makes it to fall in the year 603 before Christ. Vol. IV. p. 264. See also Hales’s Chronology, Vol. I. I beg my reader particularly to attend to the circumstances that this central eclipse or conjunction of the sun and moon, was the birthday of Cyrus the Messiah, whose adventures, we have before seen, were partly the same as those of Cristna of India, and whose name Cyrus is a solar title: and that this was exactly the beginning of the cycle of 600 years before Christ. Is there any man living so stupid as to attribute this coincidence to accident?

the Sun and Moon, the time when the oriental Messiah, *Cyrus*, was born, he having the solar title,¹ and who having established the Persian monarchy at Babylon, restored the Jews and abolished idolatry. He is still worshiped, under the name of Jonas, on Mount Libanus,² by the Curds or Culdees formerly named. He has the same appellation, according to Mr. Bryant, (vide Bk. VII. Ch. V., Bk. VIII. Ch. II.,) as the half-man, half-fish, or amphibious being called Oannes, who appeared for the instruction of mankind, &c., according to Sanchoniathon; the same as Dagon, which was the name of the fish which harboured Jonas, or SAVED him, and the meaning of which is *saviour*. This Oannes or Ioannes we find again after about 600 years, born of an aged woman, called Anna, the name of the mother of the Italian Janus, miraculously foretold by the prophet Zacharias, to whom his birth was announced by an angel. He was the forerunner of Jesus Christ, and called, as above-mentioned, by the celebrated Julian, *Χρησος Ιωαννης*. He was by profession a saviour of men by means of baptism or immersion, like Jonas in the water. Jonas was immersed three days in the ocean for the salvation of the Ninevites, as Jesus afterward was buried three days for the salvation of the Jews and of mankind. After this we find another person called Ioannes, a fisherman, beloved by Jesus, of whom Jesus declared from the cross that he should *not die* till his return. And after this, another Ioannes, who had revelations from God; and, at last, we have that Ioannes ordered by Jesus to remain till his return, as *Ioannes, Butta, and Deus*, or the fish, or Oannes God Buddha. It is impossible to conceive any thing altogether more mystical than the character of I-oannes, whom, it will be recollected, Mr. Bryant declared to be the same as Oannes. Now John the Baptist or the Prophet, Regenerator by means of water, who was also a revived Elias, was the immediate forerunner of Jesus—in almost every respect an exact copy of Bala-rama, the forerunner of Cristna. And John the Baptist, or Saviour of men by means of water, was the Oannes or Avatar of Pisces, as Buddha was of Taurus, and Cristna of Aries; or, according to Mr. Parkhurst's doctrine, Oannes was the type of the Baptist, if ever he appeared; and, if he did not, then, according to Mr. Parkhurst, the history must have been a figurative representation of an avatar, foretelling the Baptist.

John the Baptist was born on the 25th of June, the day of the solstice, so that he began to decline immediately. St. John the Evangelist, or the enlightener, or teacher of glad-tidings, was born at the same time of the year; (but, as it is said, two days after Jesus;) and as Osiris, and Bacchus, and Cristna, and Mithra, and Horus, and many others. This winter solstice, the 25th of December, was a favourite birth-day. The English prayer on this Saint's day is, "Merciful Lord, we beseech thee to cast *thy bright beams of light* upon thy church, that, it being enlightened by "the doctrine of thy blessed apostle, may so walk *in the light* of thy truth," &c. This is, I presume, from the Romish church, and it is unquestionably from the Gentile Gnostics, of whom I shall presently treat.

Lightfoot³ observes of the births of John and Jesus, "So the conceptions and births of the Baptist and our Saviour, ennobled the four famous Tekuppas (Revolutions) of the year: one being conceived at the summer solstice, the other at the winter: one born at the vernal equinox, the other at the autumnal."

18. In the Eastern countries, chiefly now in the neighbourhood of Bussora, there exists a sect called Mandaites, Hemerobaptists, Nazoreans, Nazareans, Nazireans, and, among the Musselmans, Nousaïriens. They are evidently all the same sect, only with some slight shades of difference, which must necessarily arise between the parts of a sect, scattered into distant coun-

¹ Vide Univers. Hist. Vol. XXI. p. 59.

² See Clarke's Travels, Vol. II. Ch. xiii.

³ Exer. on Matt. Ch. iii. Vol. II. p. 113.

tries, and unconnected for long periods, and divided by difference of language. No doubt they may be subdivided into sects, as our Protestants of the Church of England may be divided into Evangelicals and Non-evangelicals: but my spectacles do not magnify so much as to enable me to treat on those minute differences. They are noticed by the learned Matter.¹

This is a sect named by St. Epiphanius, and said by him *to have been in existence before the time of Christ, and not to have known the Saviour*. These people have a book called the book of Adam, in which, Mons. Matter says, is the mythos of Noë and most of Genesis, but he says *they equally detest the Jews and Christians*, and put their founder, the Hemero-baptist John, in the place of the Saviour: that is, in other words, that their founder was a Saviour or incarnate person. This is very important—these people having, as Epiphanius informs us, existed as a sect before the time of Christ. They have in their mythos a person, the *Principe de Vie, Abatour*, אבאתור *abatour, pater taurus*, which answers to the Kaiomorts of the Zendavesta, translated Taurus. This *Abatour* had a son, the creator, called Feta-Hil or El-Phtha (noticed by Matter, Vol. II. p. 203); but El-Phtha is the God Phtha, or $\phi-\theta-\alpha-\varsigma = \phi = 500, \theta = 9, \alpha = 1, \varsigma = 90, = 600$, before named.

If an impartial person will consider the history of John the Baptist, he will at once perceive, that, as an adjunct or a precursor of Jesus, he is totally unnecessary to the system. The pretended prophecies of him are actually ridiculous, and his *baptizing* nothing peculiar to him, but a common Mithraitic rite, practised in his time by multitudes of wandering devotees of the latter religion. That there was such a man can hardly be doubted; and, like Jesus, he had his apostles and disciples; of the former, twelve in number; of the latter, *thirty*, instead of *seventy*. His sect existed before the date ascribed to Jesus, and were called Hemero-baptists, and, as above shewn, they yet continue. A short account of them may be found in Mosheim's Commentaries.² There seems to be no reason why John may not have been a relation of Jesus Christ's, or why he may not have baptized him. He may have admitted him by the ceremony of baptism into his sect: this ceremony may have been then, as it still continues, a badge of his religion. And from this, all we read respecting him in the gospel histories may have had its origin.

These people hold the doctrine of the eternal renewal of worlds; they abhor all bloody sacrifices; and they do not use the rite of circumcision. Hence I think we may conclude that they are descendants of the ancestors of Melchizedek. From the Jews they cannot have come; for, if they had, they would have had the rite of circumcision: and from the Christians they cannot have come, because they existed before Christianity. My reader will please to observe, that these Mandaites or *Nazareens* or DISCIPLES OF ST. JOHN, are found in central India, and that they are certainly not disciples of the Western Jesus of Nazareth. He will also recollect what has been said respecting Joannes Butta Deus or Prester John, or the old man of the mountain, as he was often called. In Lardner's Cabinet Cyclopædia,³ it is said, by a missionary called Carpini, that the Mongol army marched into *Greater India*, and fought the king of that country, called Prester John.

M. Matter has given the meaning of *Manda*, the origin of Mandaim in the word *Gnosis*.⁴ This suits very well with my belief, that all Gnosticism came originally from India, and perhaps from Mundore. Mundus in Latin, *κοσμος* in Greek, we know means *cycle* or *circle*. *Αἰων* we know also means *a period of time* or *cycle*. And I think Matter very correctly says, “*Les עלשים* *olsim, αιωνες* sont à la fois les mondes, les periodes de temps, et les intelligences, qui vivent

¹ Hist. Gnostiques, Vol. II. Ch. iv. Sect. iii. p. 394.

² Int. Ch. ii.

³ Vol. I. p. 258.

⁴ Hist. Gnost. Vol. II. pp. 400, 407.

“ dans ces périodes et dans ces mondes.”¹ Again, he says, “ Le nom de *Mandai* offre une certaine analogie avec celui de Gnostiques. Manda, מנדע *mndo*, en Chaldéen, signifie science—*γῶσις*: le *Manda di hai*, la science de la vie, est un des génies célestes, comme la *Γῶσις* “ des Barbelonites.”² From this it is clear that Mand—or Mundore, the last syllable meaning town or place, will be *city of wisdom*.³ And the Mandaites or Nazareens are no other than the sect of Gnostics, and the extreme East the place of their birth. We must not forget that the word מנדע *mndo* correctly means *γῶσις*—Mundul-ooe, Mundul-eeh, that is, Mundul-aia (Greek) *circle or tract of country*—Mando meaning *wisdom*:⁴ it is probable, I think, that these Mandaites may have been Chaldæans or followers of Cali, under another name—the word Cali having the meaning of callidus, *wise* as well as *beautiful*. Vide Book X. Chap. II. Sect. 7.

I quite agree with M. Matter, that their numerous sacred books deserve a much more careful examination than they have hitherto received, and I think the sect comes from Mundore in India.

19. In the Tibetan language John is called Argiun.⁵ This is Arjoon, (*Ar-John*), the coadjutor of Cristna.

Near the small temple at Malvalipuram, or *the City of the Great Bali*, hollowed out of a single mass of Granite about 26 feet long and 14 feet broad, is a figure of Cristna and Arjoon, with some inscriptions in a very ancient character and now totally unknown.⁶ The size of the stones used in the Druidical temples is equalled by that of those in the temples of India. Some of these, as at Seringham, on the river Caveri, being 30 feet in length. On these stones are inscriptions in characters now totally unknown.⁷

As Jesus was IXΘΥΣ with the mystic monogram I, prefixed, I-IXΘΥΣ, and the Deity of Egypt was Omtha with the mystic monogram M, prefixed, M-omtha, so may Ixion, *divine love crucified*, have been X-ion with the mystic X prefixed; and again, Cæsar X-æsar: and Iohn may have been the Ione or Spiritus Mundi, the Dove, the crucified Semiramis, who flew away in the form of a Dove. What does the X-Iον look like? Ion Ionæus or Di-Ion-eus. It is possible that the Xρης, mitis, benignus, may have obtained this meaning as well as the prophetic connexion evident in the χρη, from the X and P and Σ=600; and XPHΣ=608.

The remarkable use of the M, puzzled Vallancey as well as Young. He says, M, in many words, is only the sign of a noun denominating the instrument of the action, as in the Oriental languages.⁸ All nonsense. It would have been better to have said he knew nothing about it. The word *Magicus* was originally written by Cicero *Majicus*. He also wrote *Ajio* and *Majia*. Is it possible that the Mage may have been *age* or *aje* with the monogram prefixed?

It has been repeatedly observed, that the M is often prefixed to words in a way that is quite unaccountable. I will try to explain it.⁹ Every one knows that the vine was sacred to Bacchus. The final letter M stands for 600, *now* the length of the Neros; but I have shewn in Book V. Ch. II. Sect. 5, that the length of this cycle was at first supposed to be 666. This was made up of M its figure or monogram and VIN its name. *Vin* was the name of the letter M, when the letters had the names of trees in Irish and Hebrew, and jointly they made 666, the number in that very early day sacred to Buddha, Bacchus, and Sol in Taurus,¹⁰ thus:

¹ Hist. Gnost. Vol. II. p. 408.

² Codex Nazar., I. p. 62.

³ See Parkhurst in voce מנד *mnd*, מנדע *mndo*, and ינדע *ido*, V. and VII.

⁴ Parkhurst, p. 274.

⁵ Georg. Alp. Tib. xciv.

⁶ Ibid. Vol. II. p. 92.

⁷ Crauford's Res. Vol. II. p. 85.

⁸ Coll. Hib. Vol. IV. Part ii. p. 228.

⁹ Refer to Book V. Ch. II. Sect. 4.

¹⁰ Carmel was *vineyard of God*.

$$\begin{array}{r}
 M = 600 \\
 u = 6 \\
 i = 10 \\
 n = 50 \\
 \hline
 666
 \end{array}$$

Muin the name of the letter M in the old Irish.¹ After the error of the 666 was discovered,² and after the equinoctial sun got into Aries; when Cristna arose and Buddha became a heretic, for the double reason, 666 became the mark of the beast, of the dead cycle, and X was then substituted. But still in the arithmetic the *M* in some nations would continue to keep its power. The Irish and the Hebrews kept it, the Greeks changed it, as may be seen in the table above cited, to the X for 600.

Neilos, or the river sacred to the Sun, was thus described in my Celtic Druids :

$$\begin{array}{r}
 N = 50 \\
 E = 5 \\
 I = 10 \\
 \Lambda = 30 \\
 O = 70 \\
 \Sigma = 200 \\
 \hline
 365
 \end{array}$$

But it was more anciently thus, for the Egyptians at first supposed the year to consist only of 360 days :

$$\begin{array}{r}
 N = 50 \\
 I = 10 \\
 \Lambda = 30 \\
 O = 70 \\
 \Sigma = 200 \\
 \hline
 360
 \end{array}$$

But the Nile was called *Sir* or *Sur*, or, in Hebrew, *Sr*. It has been before observed that the Eastern people often changed the T for the S, and vice versâ, and wrote *Cutites* for *Cusites*, *Turia* for *Suria*, and vice versâ. Now ט T in Hebrew is 400, and ר R is 200, this makes TR stand for 600.

The Rev. Dr. Hales distinctly admits that a tradition of six millenary ages of the world prevailed throughout the East, and was propagated to the West, by the Sibyls and others;³ and he expressly founds an argument upon the fact that Christ, to use his words, the star of Jacob, the star of our salvation, the true Apollo or sun of righteousness, the prince of peace, was actually born in the sixth millenary age.

Whatever offence I may give by the assertion, it is impossible to deny that what the Rev. Robert Taylor has said, respecting the epithets of Christ being applicable to the sun, is true. They meet us at every step we take in forms innumerable, and would be seen by every one if not prevented by early prejudice. Of these assertions I need not produce a stronger proof than the glory or rays of light round the head of Christ. They mark the solar incarnation in a way which devotees may disguise to themselves, but which the prejudices of education only prevent them

¹ See Table, Prel. Obs. Chap. I. Sect. 47.

² See Book V. Ch. II. Sect. 5.

³ Chron. Vol. I. p. 44.

from seeing. But have we not seen that the second person of the Trinity was the Sun, or that higher principle of which the sun is the emblem; that higher principle which was addressed by all the higher classes of the nations of antiquity, when they addressed the Sun; precisely as Jesus Christ is addressed by an enlightened Catholic when he addresses a crucifix; and as the Persian addressed the Sun—Oh THOU from whom THOU receivest thy splendour, &c.

20. We will now inquire into the history of a person called Jasius.

Mr. Bryant says, “Justin places him (Jason) in the same light as Hercules and Dionusus, and says, that, by most of the people in the East, he was looked up to as the founder of their nations, and had divine honours paid to him. Itaque Jasoni totus ferme oriens ut conditori, divinos honores, templaque constituit. I suspect, that Æson, Jason, Jasion, and Jasius, were originally the same title; though at this time of day we cannot perhaps arrive at the purport.” On this Mr. Bryant has the following note: “It may be worth while to see the history which the mythologists give of these personages. Jasus was the son of Argus.¹ Jasius, Janigena, tempore Deucalionis, cujus nuptiis interfecit Io. Hoffman from Berosus. *Ιασιων Δημητρος ερασθεις*. See Servius in Æneid.² *Ιω Ιασω θυγατηρ*.³ *Ιασε Βαμος*.⁴ Æson was restored to second youth.”⁵ I think few persons who consider this will doubt that Ias-on was only the person who had the sacrum nomen, cognomen, et omen, ΙΗΣ-ος, with the Greek termination, and IHS-us the same person with the Latin termination—the Hesus of Gaul and Cæsar.

Quand les Juifs furent soumis aux rois Grecs de la Syrie, le Grand prêtre Jésus, se fit appeler parmi les Grecs Jason.⁶

D’Anville, in lat. 37, long. 45, has a gulf of Issius. Pliny⁷ calls this the gulf of Iasius. As both words come from the Hebrew word *ישו* *iso*, to save, it may have had both names. Does this prove that Isis and Jesus were the same names? Isis was both Ceres and Bacchus, and was thus both male and female. Close to the Gulf Issius stands the town of Iassus.

There is a very singular expression in Virgil, Iasiusque pater, genus à quo principe nostrum: “And father Jasius, from which prince our race is descended:”⁸ *i. e.* Cæsar descended.

I take Jasius or Iasion son of Abas (father) and Jupiter, to be the same as Jasus, son of Triopas: see Lempriere in voce. Iasius had a daughter called Iāsis. This was Isis. Nimrod⁹ shews that this Iasius was the Babylonian Jove; and, probably, that the titles of Yazeedis, Yassidis, Yezidis, or Jezidis, were corruptions of the Assyrian Iasides. Here is evidently the Yedan of the Desatir, the name of the sun. Nimrod observes, that Yezd, in Persian, means either *Dieu tout-puissant*, or the evil principle. Here is the destroyer and regenerator. But Yezd is only ΥΗΣ-di, dis, divus.

As applicable to all these cases I beg my reader to recollect what was said before, and in the *Celtic Druids*, of this ΥΗΣ meaning Υ=400, Σ=200, Η=8, =608, the sacred nomen, cognomen, et omen.

It is very much the fashion with certain learned men to turn into ridicule, to treat with contempt, the exposition of names by numbers, and Sir W. Drummond has called it buffoonery. But buffoonery or not, is not the question. The question is not whether it be or it be not foolish, but whether almost all those whom we have been accustomed to call the great men of antiquity were not the contrivers and practisers of this buffoonery, and whether they did not conceal their knowledge beneath it. If it be answered in the affirmative, then where can we look

¹ Apollod. Lib. i. pp. 59, 60.

with so much probability of success for ancient learning as under this fool's dress, if it be foolish? I promise my reader that by its means I shall by and by make a discovery which will satisfy him, that it was originally any thing but buffoonery. But before I conclude this chapter, I must give him one more example of it. Mons. Matter, speaking of the ancient Cabbala and the Adam, Kadmon, says, "Tout est lie dans l'antique Asia, et à chaque pas de plus que nous faisons dans l'histoire de ses monuments, nous decouvrons une nouvelle preuve de ce grand fait. Il y a même, dans l'exemple special qui nous occupe, une analogie de nom qui est frappante : l'image de *Seir Anpin* se compose de 243 members, nombre exprimé par les letters אברם *Abrm* Abram, Bramah."¹ A=1, B=2, R=200, M=40, total = 243. *Abrm*, *Bram*, *Brma*. This is to me convincing evidence of what was meant by the *Seir Anpin*. And it is also a curious proof of what I have formerly taught, that Abraham was a Brahmin.

Again, Matter says,² "that there is one who watches the march of the sun, and that he has under his command 296 armies, and is called in Hebrew *harez*, that is, *arez* : " א=1, ר=200, ה=5, ז (tzdi) =90, total=296. I cannot conceive proofs of a practice, although it may be buffoonery, more striking or convincing than these. It is surprising to me that while these gentlemen admit that all these Gnostic doctrines, found at Alexandria and in Syria, came from the East, they scarcely ever go to the East of these places to seek their origin, but seek them in the West. I call every place West which is West of the Indus. Now that we have access to all the learning of the East, this neglect is inexcusable.

Critias makes Solon say, that neither he nor any other of the Greeks had any knowledge of remote antiquity.³ He afterward makes the Egyptian priest declare to Solon, that there have been many deluges of the earth, and that a most illustrious and excellent race of men once inhabited Greece, of whom the Grecians are perfectly ignorant, their ancestors having lost the use of letters, in consequence, he seems to mean, of the last flood.⁴ Again, Plato says, For the cause of this is as follows :—Solon intending to insert this narration into his verses, investigated for this purpose the power of names, and found that those first Egyptians who committed these particulars to writing, transferred these names into their own tongue. He, therefore, again receiving the meaning of every name, introduced that meaning into our language.⁵ All this tends to prove a once great people in Greece, who must have been the persons who erected the Cyclopæan buildings. Was this really the nation ruled by Pandeia, like an Alexander? We know how he succeeded. What happened to him may have happened before. There is nothing new under the sun. A little time ago I noticed, from the Cambridge Key, the identity of Grecian and Eastern mythoses. The passage of Plato shews that we ought to look to the East for the meaning of proper names.

I shall now assume that the Sibylline Oracles are genuine, and that they foretell the Chrestos or the ninth Avatar, in whom also is blended the *fish* Avatar. This is exactly what took place with Cristna. In his person he was mingled both with Taurus or Buddha and with Bala Rama. And here we have mingled together Buddha, Dagon, Pisces, Jonah, and Jesus or the Lamb, and we have Cristna and Arjoon, (*Ar-John*), Jesus and Iohn, I-Oannes. In every case I suspect Buddha will be found to be a name of the Zodiacal incarnation—perhaps of every incarnation. No doubt all this will surprise my reader very much, but it will not surprise him more than it has done me. But the facts cannot be denied.

CHAPTER V.

SALIVAHANA.—THOMAS.—SHARON TURNER.—CHALDEE TONGUE.—TAMAS.—JESUITS.—VICRAMADITYA.—RAMA.—DANIEL.—CRUSADES.—MOHAMED.—SUBJECT CONTINUED.—M—OM—OMD.

1. WHETHER it were originally a part of the system, that there should be only one Avatar or Saviour or genius of each cycle for the whole world, or that there should be a number for each cycle, dispersed into different countries, that is, one for each country, in each cycle—it was almost a necessary consequence that the latter supposition should have prevailed as the world became divided into nations. We will now inquire into the latter Avatars of the Eastern countries.

Some time after the history of Cristna had found its way into Europe, the learned Orientalists were surprised with what appeared to be another version of the same story, from the Southern part of the Peninsula of India. In the Asiatic Researches,¹ there is an account of a person called Salivahana, near Cape Comorin. He was a divine child, born of a virgin, and was the son of Taishaca,² a carpenter. He was attempted to be destroyed in infancy by a tyrant who was afterward killed by him: most of the other circumstances, with slight variations, are the same as those told of Cristna. Mr. Maurice³ says, “The manuscripts from which the above is taken have been carefully examined and ascertained to be genuine.” Again, “Sir W. Jones has examined the age of these manuscripts, and he undertakes to prove their date COEVAL with the birth of Christ.”

Col. Wilford, in the tenth volume of the Asiatic Researches, has given a long account of this Salivahana, who is clearly identical and synchronical with Christianity, and evidently answers to the incarnation of the ninth age, alluded to before the birth of Christ by the Sibyls, and, as most Christians, but not all, have thought, by Isaiah. There is, most clearly, the origin or the produce of Manichæism in this person, and perhaps of the sect called *the Christians of St. Thomas*. Salivahana's crucifixion is a very striking circumstance; but this, we have seen, was not the first crucifixion. Balii and Semiramis, or Εἰως, (Divine Love,) and Buddha, and Cristna, had before suffered in like manner.

The Brahmins maintain that Salivahana, or the Carpenter, was the ninth avatar: they say he was also (i. e. by the Buddhists) called Buddha, or divine wisdom. They affirm that another, the tenth, avatar will come or has come in the shape of a *horse*. The Japanese say,⁴ that in the reign of Syn-mu, Budo (or Buddha) otherwise called Cobotus, came over from the Indies into Japan, and brought with him, upon a white horse, his religion and doctrine. This is the tenth avatar of the Buddhists.

Thus several *ninth* avatars may be perceived, without having recourse to the necessity of supposing that they copied from one another. There was Salivahana, with the Brahmins, and what *they* called the *second* Buddha with the Peguese and Buddhists, and the Teve-tat⁵ who, they told La Loubère, was Jesus Christ; and among the Western nations Cæsar and Jesus Christ. *Each sect* said that the ninth avatar had appeared to it, or among its ancestors; and when they say

⁵ Divus TAT.

that he had been among other sects, they only mean to admit, that he was claimed by other sects as having been among them, but that the person thus claimed was not the Avatar in reality, but an impostor. The Brahmins will say that there have been nine avatars with the Buddhists, one for each cycle, but that they were all impostors. The Buddhists will say the same thing of the avatars of the Brahmins.

Justin says, that the Erythræan Sibyl tells all things which will happen to Jesus Christ. We find an island of Erythræa, Ceylon probably, unknown to Justin: and in the neighbouring country, a person, in many respects similar in character to Jesus Christ, is found, to whom almost all the things ascribed to Jesus Christ are ascribed, long before the time of Christ, viz. Cristna or Crysen—and again, in the time of Christ, to Salivahana.¹ I think my reader will now understand the nature of this mythos, which has hitherto puzzled our orientalists. I beg him to recollect, that it was held by Ammonius Saccas one of the most early and respectable of the Christian fathers, that the religion of Jesus, and that of the Gentiles, were the *same*, if cleared of the corruptions of priests: and the Brahmins constantly tell our missionaries that our religion is only corrupted Brahmanism. I must now suspend my history of Salivahana, to introduce to my reader a very celebrated person—St. Thomas of India.

When the Portuguese arrived at a place on the coast of Coromandel, called Malliapour, which was called by Ptolemy Malliarpha, they found the natives professing a religion with names, doctrines, and rites, so like those of Christians, that without much, perhaps without any, inquiry, they determined that they were Christians; but judging from several points wherein these natives differed from themselves, they considered that they were heretics. They supposed that the ancestors of these people had been converted by the Apostle St. Thomas. It is clear that they paid their adoration to a *Thomas*, who was slain in their country, and whose tomb they shewed in the church of a monastery. The same kind of people were found by the Portuguese on the coast of Malabar, called Mandaites or Nazareans. When the Portuguese examined them they found them to acknowledge for their spiritual chief a Syrian. Of course, in their superficial and prejudiced way of examining, they concluded that he must have come from Syria of the West, not from one of the Syrias of the East, either that of Siam or Sion, (La Loubère,) or that of Syrastrene: of these Syrias, in fact, they knew nothing. The mistake, if it were one, was a very natural one for them to make. But still they ought to have examined how these people came to worship the *apostle* instead of his *master*. These Christians are said to have had for their Bishop, a Mar-Thomé, a successor of the Apostle St. Thomas, whom, to complete the story, they make to have suffered martyrdom at the place formerly called Betuma or Beit-Thoma and Calamina, and by Ptolemy Maliar-pha; in Sanscrit, Meyur-pura or the city of Peacocks.² St. Thomé is near to Jay-pour, that is, I should say, town of Jah, on the Coromandel coast, where the tomb of St. Thomas is shewn. The Bithuma, Bituma, near the promontory of Tamuz, we have formerly found in the peninsula of Syrastrene, as the birthplace of Cristna and Buddha. The Portuguese state these Christians to have been *Nestorians* when they found them, and that they were originally converts made by the Apostle, but afterward corrupted, by a colony of Nestorians fleeing from the persecution of Theodosius the Second. The Papists state this to support their doctrine of the universal establishment of the Papal church, in the earliest time, and the fleeing Nestorians account for their not being of the Romish religion. Most Protestants turn into ridicule the idea

¹ There was also noticed by ancient authors an island of Erythræa, not in Egypt: where this was is unknown: it was thought to be near to Cades: but I believe the *island* of Erythræa was Ceylon, the place in which the Samaritan Pentateuch places Mount Ararat.

² Asiat. Res. Vol. X. p. 77.

of the conversion of these natives by St. Thomas, but suppose them to have been Hindoos converted by Nestorian preachers. But the story of Christians in India was known to St. Jerom (ad Marcellam Epist.) before the Nestorian heresy arose, therefore they cannot have been originally Nestorians.¹ This is not surprising, if they were people of the religion of that person concerning whom the Erythræan Sibyl had foretold all the things which should happen to Jesus Christ. They are said by their priests to have sent to Babylon for Patriarchs, and to have obtained them from there so lately as the reign of the Portuguese Queen Donna Catharina, not knowing that at that time Babylon must have been for almost a thousand years before a desert, capable of supplying nothing but a tiger or a lion. This falsity proves that no dependance can be placed on any thing which they say. In short, the whole story is full of absurdities and inconsistencies, and the truth is completely disguised. Indeed it is evident that our Indian travellers tell us respecting the religions and languages of South India a number of strange stories, which I do not doubt they believe to be true, although apparently inconsistent with one another. I think, however, they are all capable of being explained, though certainly the explanation will upset some very favourite theories.

2. In Mr. Sharon Turner's History of the Anglo Saxons, there is a very particular account of an embassy from Alfred to the Tomb of St. Thomas in India. Mr. Turner has displayed the talent of a skilful lawyer, and has collected all the evidence on the subject which later times afford; but I think he has overlooked some of the earlier; perhaps he was afraid of proving too much. No doubt the evidence for the fact is very strong, and in any common case where religion was not concerned, I think it would be conclusive to prove, that the Christians had a settlement in India. But in this case, where habitual fraud, added to the greatest prejudice in witnesses, has rendered all evidence doubtful, I cannot help thinking that even if the truth be told by them, they have alluded to the Tamuz of Western Syria and Egypt, noticed in the Bible, and of the promontory of Tamuz, which was the Thomas of the Manichæans: and that every thing in fact relating to the Thomas, was to that person of whom the history is given in the Erythræan Sibyl. I have very little doubt that the whole promontory of India was once called the promontory of Tamas or Thomas.

The Indians say that their God Narayana, (which means *moving on the waters*,) in the beginning, was wholly surrounded by Tamas, which means *darkness*: Col. Wilford says, perhaps the Thamas or Thaumaz of the ancient Egyptians. Parkhurst gives one of the meanings of תאם *tam dark*.² This I shall refer to and explain presently. He also gives the meaning of twin, or Dydimus to the word Tam. In the Hebrew תאם *tam* or תום *tum* means *twins*. See Parkhurst, also *ib.* in voce תמז *tmz*, also pp. 19, 789.

It cannot be doubted, I think, that the Tamuz of the Bible or Adonis was Buddha under a different name, that is, under the name of the *Zodiacal twins* or one of them, or was in some way closely connected with them. And it is worthy of observation, that this is the account which the native Vishnuvites of Malabar give of their Thomas—calling the Christians *Baudhenmar* or *sons of Baudhen*.³ And the Christians of the present day always call their bishops by the name of Mar-Thomé, that is, son of Thomé, Thomé-mar. Manes, whose existence I much doubt, is said to have had for his ancestors or predecessors a Budwas and a Thomas, and he may have come from Malabar, or from the Matura of Upper India or Syrastra, from the Bituma, where there is

¹ This fact at once renders incredible all the other histories of Nestorian conversions East of the Indus. *Asiat. Res.* Vol. VII. p. 366, n.

² *Asiat. Res.* Vol. III. p. 358.

³ *Bartol. System.* p. 161.

the same mythos. Bithuma is evidently בית-תעמח *bit-tomé, house of Tomé*. This Bithoma is not far from the promontory of Tamus and the island of Chryse.

3. The Portuguese state, that the St. Thomé Christians had all their sacred books in the old Chaldee tongue, but what they contained we can never know, as Menezes and the Portuguese inquisition, after having held a Synod at Odiemper, sought them out with the greatest care and destroyed them all, substituting in their places books of their own, *but yet in the Chaldee language*. This I think proves that the common vernacular language of the people of this country was the Chaldee. The sailors in the service of the India Company, whom Mr. Salome found in Wapping speaking Hebrew, must have come from the country in the neighbourhood of Calamina. It seems that the Roman Catholics in this instance broke the rule of their church, to have the service in Latin, in order to indulge these Indians with the Chaldee. Nothing can be more absurd than to suppose they should have broken their rule with respect to the Latin to have given the Indians books in a language not their own. Therefore it is pretty clear that Chaldee must have been the vernacular language of these people. Now if we grant that they were converted by St. Thomas, we cannot suppose that he who (we must allow) was endowed with the gift of tongues, would change their language, although he changed their religion. It follows, therefore, that their language must have been at that time the Chaldee. Now I think the natural inference from this is, that *one* at least of the *broken* dialects of India, as they are called, must have been the Chaldee or Hebrew. It must be observed that I am speaking both of the Chaldee letter and language.

I apprehend the Nestorians did not arise till the Chaldee was a dead language: at all events it was not their *peculiar* language. Nestorius was a native of Germany.

For various reasons which I shall give by and by, I am satisfied that the Chaldee paraphrases or Targums were not written till after the time of Origen; how long after I will not undertake to say; and at the same time I shall shew, that there is a very strong probability that the Chaldee letter never was in common use in Babylon. Nestorius lived in the fifth century, and I apprehend it is not credible that this German should have established a sect in that day, which would carry along with it, as it extended itself, the peculiar Chaldæan language—this language not being that of its founder—instead of extending itself in the vernacular languages of the country into which it penetrated. There is no instance known of a sect extending itself into any country, and changing the vernacular dialect of it, unless it was attended by a conquering army. I believe we have no reason to suppose that the Nestorians of the West, as a sect, ever used the Chaldee tongue.

The Christians of St. Thomas are said to have had only three sacraments, Baptism, the Eucharist, and Orders. These were all Jewish rites, for the rite of orders is nothing but the samach¹ or investment with office, or communication of the holy spirit by anointment and the imposition of hands. The two former I shall treat on at large by and by.² In their use of the Chaldee they are the same as the remains of the Ioudi of Rajapoutana and Afghanistan, if Sir William Jones can be credited, for he has stated them to have a language, to use his words, *very like the Chaldaic*.³ The laws of the Chaldee-speaking Malabar Christians have a near affinity to those of the Jewish-looking, Jewish-named, Chaldee-speaking Afghans of North India and to those of the Western Jews. This affinity is far too close to be the effect of accident. Their laws of inherit-

¹ See CELTIC DRUIDS, Chap. IV. Sect. IX.

² I think there can be little doubt that copies of the rituals of the Christians of Malabar must have been sent by Menezes to Rome, and that they are preserved there. If a philosopher could get hold of them before our priests, they might yet see the light, and they would be very important indeed.

³ I observe on the Malabar coast the district of Chercull. This is of Hercul.

ance may be specified for one instance, out of great numbers, under which the land goes to the next male cousin or uncle, instead of the daughter. Our ill-informed and prejudiced writers assert, that these Christians *have not yet lost* all their old habits, but that they still follow the Brahmin custom of abstaining from the flesh of animals : in defiance of all Portuguese persecutions, these people abstain, who were Christians before the Portuguese came among them ! The fact is, it is evident that they are Brahmin *Χρησισταίτοι*, having nothing to do either with Nestorius or the Pope. They were of the same religion as that of the Youth of Larissa, the SINDI, whose widows were burnt on the death of their husbands. They are of the same religion as the people referred to by the Erythræan Sibyl. They are of the religion of the *Χρησ* at Delphi. Their churches or temples were mostly destroyed by Tippoo Saib. But some of them were very handsome, and each must have cost as much as a lack of rupees. I cannot help entertaining a suspicion that they were a tribe of the Ioudi, from Upper India, and that the town of Odiamper ought to be Ioudi-pore.

4. The town of Malliapour was never called the town or port of St. Thomas, till the Portuguese, under Vasquez de Gama, arrived there.¹ It is quite clear that, judging from the legend which they learnt from the natives that a holy Thomas had been put to death there, they instantly concluded that it must have been the place to which Alfred sent his embassy. And they distorted every tradition and circumstance to make it fit this theory.

If my reader have not a very short memory he will recollect that, in Ch. II. Sect. 9, we found the island of Erythræa in Ceylon or Diu, and that, on the coast of Malabar, we also found the Erythræan Sea, and a country of Erythræa between the Indus and Ganges. We have also found a Cristna in the island and country washed by this sea, of whom the same things are told as are told of Jesus Christ. We have also found that, according to Justin Martyr, *the Erythræan Sibyl foretold all things which should happen to Jesus Christ*. Now we have likewise seen that Adonis is the Tamuz of the Bible, and that on the coast of Malabar was a promontory of Tamus, as reported by the ancient Greek geographers, and in this country there is a town or district called Adoni. Now a Thomas is said to have been found in India, and to have been put to death, and a body of Christians are found who, it is said, were followers of this Thomas. Is there not great room for suspicion, that this Thomas was the Tamus for whom the women of Judea wept, and that his followers were not Christians, but *Χρησ*-tians, followers of him of whom the Erythræan Sibyl prophesied ? It is a very important fact, that the city of Adoni should not be far from the place where Thomas was put to death, and that a large TEMPLE should be placed on the highest mount of the country called SALEM, of course *ἱερος-Salem*²

The Portuguese finding these Christians worshipping and bewailing a Thomas or Tamuz—put to death at the vernal equinox, and after three days rising again to life, as I shall shew in a future book—to whom were attributed all things which were attributed to Jesus Christ, settled it instantly, that there was a mistake ignorantly made between St. Thomas (who must have gone to India as they believed) and Jesus Christ—a mistake before made by Jerom : they then proceeded to destroy their sacred books in the Hebrew or Chaldee tongue, the language in which we have the account of the women weeping for Tamus, and gave them their own gospels : these they properly gave them in the Chaldee or Hebrew, that being the language which the natives of this country, the Lascars, speak at this day, and that of the Mandaites or Nazarenes, Christians of St.

¹ Chatfield's Hist. Rev. Hist. of Hind. p. 331, n.

² In the name of Thamas Kouli-Khan we have an example of the adoption of a sacred name after the Hindoo fashion.

John. From this quarter the Manichæans had before come to the West, bringing with them also their Apostle Thomas.

5. Now let us look at Madura on the Jumna, where we have found our Cristna, and afterward towards the South, near Cape Comorin and the island of Ceylon or Erythræa, where the Sibyl came from, and we shall find another Pandion, a Madura, a Tanjore, a Tricala, a Salem, an Adoni, a COLIDA now Cochin, and a district or place called Aur, URR, or Orissa, and a Trichinopoly. At Madura is a most magnificent temple, probably the largest in India, occupying about a square mile of ground.

The Jesuit Bouchet, in a letter to the Bishop of Avranches, about the year 1710, has given an account of the religion of the Brahmins at this temple, where the Mohamedans never had any power or influence whatever. This immense temple was the property of the government of the country, not of a sect. According to their doctrine, from the Supreme emanated the Trimurti, one of whom formed our world and man, and placed him in a garden of delight, where were two trees of Good and Evil. This story was accompanied with that of the temptation, &c., &c. There is also an account of Abraham and Sarasvedi, the attempt to sacrifice Isaac, the son, and the prevention of it. Then we have a *relation* of Crishen (Moses) exposed on a river, and saved by a princess: after that Crishen exposed on a river and the river opening to save him from a tyrant who pursued him, and which closed on the tyrant and drowned him and his followers. After this, the Jesuit goes on to describe the Veda, given from a mountain, like the law at Sinai, and many of the rites and laws of the country respecting both religion and property, as being a close copy of those of the Jews. He describes the paschal sacrifice of the Lamb; and, what is very extraordinary, the head chiefs of the nation, but no others, have the right of circumcision. The substance of this is repeated by Bartolomeus, Tab. XIX., who, in addition to what the Jesuit has shewn, has proved, by quotations from Arrian, Pliny, &c., that this country was anciently known by the name of Pandion, which it bears to this day. Altogether this is a most curious history of this Jesuit's, though evidently full of mistakes, and well worthy of further inquiry. All the Mosaic history, and much of the Romish Christian, is here interwoven with the oldest Indian customs, names of places, laws of property, as existing in the times before Christ, as proved by the Greek and Latin authors. I have before observed, that some of these people called Christians in India abstained from animal food, which seems to shew them to be Brahmins. This they could not be, unless they took water in the Eucharist, nor could they be Jews and Brahmins also if they ate the Passover, except on the grand occasion of the Yajni or Y-agni sacrifice.¹ At a little distance from Madura in Cochin or COLIDA, and the place called Aur, is the Ur of the Chaldees called now Uri-ya and Orissa. It is perfectly clear from the whole text and context of the letters, that these people were neither Jews nor Christians in our sense of these words, but Brahmins—but still not Sanscrit-speaking Brahmins—as I believe they used the language now called Tamul. The fact is, they were Christians, of the sect of the Youth of Larissa in Thrace.

In the centre of this country, in lat. 13° 46', long. 79° 24', stands the famous temple of Tripetty or Terputty or Tripati, before noticed in Bk. IV. Ch. II. Sect. 3, where is the crucified Wittoba or Bal-iji, or Rama or Tripati. Pilgrims, in great numbers, come hither from the Batties or Bat tenians of North India. No European has ever penetrated into the sanctum sanctorum of this temple.²

¹ See Travels of Jesuits, in English, 1714, Lond.

² Beyond the sacred river Don, or the *River of Wisdom*, was a country called Decapolis. Beyond the River Ner-buddha or the River of Buddha or *Wisdom* was a country called Decan. The topographical similarity of the holy land of India, and of that of Western Asia, is very striking. Hamilton's East-India Gaz. 2 Vols. 1828.

Upon the account of the Jesuit Goguet it may be expedient to observe, that it is evidence which cannot be impeached: and here we see very clearly that the people whom he describes as possessing the doctrines of Moses and Jesus Christ, or Cristna, are Brahmins, and neither Jews nor Christians in the usual sense of these words. These people were the governors or head class of a *great state* called Madura; therefore, if a body of refugee Jews did arrive, as a gentleman of the name of Baber, from a paper read to the Asiatic Society, in March, 1830, would have us believe, in the year of Christ 56, and *purchase the sovereignty of a country*, (the only instance of the kind in the history of the old world,) this must have been a totally separate affair. Mr. Baber produces a grant to Jews, and tells us that the Jews of the present day admit that the Christians were in the country before them. All this is easily seen through. The Christians were Crestians of Colida. The Jews were Crestians of an earlier incarnation or of Moses. The child deserted and saved, and taken by the Jesuit for Moses alone, is nothing but the story which we have before seen of Moses, Cyrus, Cristna, Romulus, part of the mythos of Virgil's new Argonauts and new Troys. Thus when the Portuguese, under Gama, arrived at Melliapour, they found a story of Tamuz, &c.; all the rest followed of course. The people of the tribe of Ioudi, and the *Xρησ*-tians, the same as the Chreestians of Delphi, are found here by Western Jews and Christians: but, like all ancient tribes, they know little or nothing of their very early history. The new comers proceed to correct what they call the mistakes of the old inhabitants, giving them Pentateuchs and Gospels; thus sects of each are raised. The Brahmins, at the immense temple at Madura, keep the old history of Moses and Crishen, the sects take the books of the new-comers from the West. The story told to Mr. Baber, of the Jews having bought the country, is an evident lie, to account for what was to them an unaccountable fact, the Brahmins' government being Jewish. The grant of seventy-two houses to exactly seventy-two families arriving from the West, as Jacob and his seventy-two souls arrived in Egypt, proves the whole to be a mythos. So decidedly Brahmin was the country, which had in its religion all the facts stated above respecting Moses and Cristna, that the Jesuit Robertus de Nobilibus and his associates, it has been said, and as I have formerly noticed, were obliged to turn, to all appearance, Brahmins and Saniasses, which they certainly did, in order to procure attention—and that they, with a fraudulent design, pretended that they were of the same religion, only from a distant Brahmin nation, called Roum. It has been said, I believe by Voltaire, who pretended to prove it against them, that they had gone the length of forging a Veda, which actually passed for many years as genuine IN THE COUNTRY: but I have a suspicion that this Veda was not forged. He only judged it to be so from its contents, consisting of doctrines strikingly similar to those of the Christians. It seems to be as absurd to suppose that the learned Brahmins, the only readers of the Vedas, should not know their own Vedas, as it would be to assert that our priests did not know their own Pentateuch or Gospels. The Jesuit Bouchet complains that he cannot get sight of the secret books, though he learns the contents, as detailed above, from the Brahmins. The Veda afterward produced by Robertus, was probably the book containing this history, and for that very reason supposed by Voltaire to be a forgery, and for that reason alone. Mr. Baber thinks he has proved the Christians to have been in this country at Madura, in the year of Christ 56. I do not dispute his proof, as I think he might have gone back to some year of a cycle a thousand years sooner. It seems almost certain that the Brahmins of Madura, in their sacred books, must have had a history of a Moses, and an Exod, and also a history similar to that told by the Sibyl. Had they a Pentateuch? Had they any other Jewish books? Had they any books about Tobit, or Saul, David, or Daud-potri, or Solumannee, or Solomon? I do not mean the Solomon, *whose magnificent empire was invisible to Herodotus*, when searching for kingdoms in Judæa, but the Solomon who gave names to the mountains in Rajah-poutana, and who built the temple in Cashmere, near

which Moses was buried, and where his tomb remains, and the other Tect-Solomons in India. I will now suspend for a little time what I have farther to say concerning St. Thomas, leaving these observations respecting him to my reader's reflections, and return to Salivahana.

6. The ninth Avatar in India, was known by the name of Vicramaditya, as well as by that of Salivahana, the carpenter. As may be reasonably expected, many events of his life bear a close resemblance to those of Cristna and other incarnations, which we have seen bore, in many respects, a close resemblance to one another.¹ Salivahana bears date the identical year of Jesus Christ: yet it is acknowledged that there were found, as Col. Wilford says, on close examination, nine persons of his name, having nearly the same history.² This is precisely as it ought to be. There is one for each of the nine cycles. This is confirmed by the fact, that the Buddhists, as well as the Brahmins,³ claim Salivahana as belonging to them. Salivahana and Vicramaditya are only descriptive terms or epithets, mistaken for proper names.

We read in Hindoo books of nine Gems, in the court of the monarch Vicrama. This is an allegory. The Gems, like the Muses of Greece, varied.⁴ They increased as the cycles increased. In the time of Christ there were nine of them. They were the same as the wise men or sages, seven of whom we read of in the writings of the old Greek authors: seven only had then passed: the Messiahs were Muses, and also Curetes—in like manner varying—the first from *γῠ iso, to save*, the other from *curo*.

Salivahana, Sali-vahan, Saliban, or Salban, is formed of the word *Salib* or *Salb*, which has the meaning of the Greek *σταυρος*, *furca*, or cross, or crucified, and *vahana*, *carried*, from the Sanscrit verb *vah*, Latin *veho, to carry*.⁵ Then Salivahana will have the meaning of *cross-borne*. Thus there were nine *cross-borne* Avatars, let them be who they may, and live where they may. And now, if we look back to the Bk. IX. Ch. III. Sect. 6, on Semiramis, we shall find that her Indian conqueror was called *Staurobotates*, which is a literal translation of the word *Salivahana* into the Greek language—as if we should find a person called *Lucus* in Latin, and should call him *Grove*: or *Lignum* and should call him *Wood*.

I suspect that our *Salva-tion* comes from the cross-borne Sali-vahana; and that all the following words have a close connexion either by derivation or translation:

Sali-vahana—*salus-veho, I bring health or salvation.*

Sally—the name of the wife of Abraham, Sarah, Saraiswati, called *יזח" isē* or *Iscah* or *Eve* or *Isis*.

Salus—*health. Salutis, of health or Salvation.*

Salus-bury or Sarum or Saresburie, *i. e.* Sares-pore.

Solym—the Hebrew *שֶׁלֶם slm*, Salem, *peace* or *salvation.*

Suli-Minerva, the *Bath Goddess of health.*

Sol—the Saviour or Healer, whence the spring at Bath was *Fons Solis* or *Fons Suli-Minervæ*. The early Christian Monks were called *Therapeutæ* or *physicians of the soul.*

The words *Deo-Soli* are to be seen on numerous pictures of the black mother and child in Italy—the *black* child having *a glory*. These words I shall explain by and by, when I return to the origin of letters.

The following extract from Banier's Travels contains some striking particulars, and will confirm what has been said above.

¹ Asiat. Res. Vol. IX. p. 211.

² Ibid. p. 117.

³ Ibid. p. 211.

⁴ Another example of a Greek translation may be found in the name of the city Palaigonos which is now called Paliputra and Palibothra, (Asiat. Res. Vol. III. p. 369,) both words meaning *children of Puli* or *Bali*.

⁵ Asiat. Res. Vol. X. p. 120.

“ Moreover, I have seen the Rev. father Roa, a German Jesuit and Missionary at Agra, who “ being well versed in their Hanscrit, maintained that their books did not only import there was “ one God in three persons, but even the second person of their Trinity was incarnated NINE “ TIMES. And that I may not be thought to ascribe to myself the writings of others, I shall “ relate unto you word for word what a certain Carmelite of Chiras hath lighted on, which he “ related when the above-mentioned father Roa passed that way to come back to Rome. The “ Gentiles (saith he) do hold that the second person of the Trinity WAS INCARNATED NINE TIMES, “ and that because of divers necessities of the world, from which he hath delivered it: but the “ eighth incarnation is the most notable; for they hold, that the world being enslaved under the “ power of giants, it was redeemed by the second person, incarnated and born of a Virgin at mid- “ night, the angels singing in the air, and the heavens pouring down a shower of flowers all that “ night.” He then goes on to say, that the incarnate God was wounded in the side by a giant, in consequence of which he is called *the wounded in the side*; and that A TENTH incarnation is yet to come. He after this relates a story that the third person of the Trinity appeared in the form of fire.¹

The observation that the *eighth* avatar or incarnation is the most notable, is indeed very truly so; because it proves that the mythos or history of the *eighth* was precisely the same as the *ninth*, precisely as it ought to be, according to my theory, and according to Virgil. The words *nine times* which I have put in capital letters prove that he clearly distinguished between the eighth and ninth time, thus giving us a proof, which we have no where else, so clear, that, in several respects, the avatars were the same.

Few things have conduced more to the confusion of history, than the mistaking of descriptive terms for proper names. Along with this may be classed the addition of the emphatic article to names, by which, in many cases, a name becomes completely disguised. The Koran and the Alkoran furnish a pretty good example. Mitzraim is probably only Osiris or Isiris in the plural, as Bishop Cumberland has observed, when the letter M (the mystical M, which he did not pretend to understand) is left out.²

Col. Wilford confesses, that Salivahana and Vicramaditya, whom he shews to be one and the same person, (though he afterward contradicts this, and makes Salivahana kill Vicramaditya,) *are involved in impenetrable darkness*. He was too well read in Indian history to believe that Salivahana was a copy from Jesus of the West. It was against his faith to believe that Jesus was copied from Salivahana. Thus it was very natural that Wilford should be in a state of great perplexity.

About the beginning of the æra of Salivahana, the Romans became possessed of a large part of Asia, and penetrated into India, with which they carried on a great trade; and devotees will tell us, that they carried the doctrines of Jesus Christ to India, from which the history of Salivahana was copied. Of course this will be very satisfactory to persons of this description. But philosophers will doubt, and ask, how came there to be nine Vicramadityas or Salivahanas, or cross-borne Avatars? Every one must judge for himself. It is only necessary for my argument, to point out the well-marked Avatar or Cycle correctly in its proper place, and that, in other respects, it resembles those which preceded it. I shall therefore dwell upon it no longer. For more particulars my reader may consult the ninth and tenth volumes of the Asiatic Researches. If these histories of Col. Wilford's be credited, all the accounts of Cristna will have been taken from *Modern Rome*. Perhaps I may be told, that there would be no difficulty in getting BLACK Gods—Christ—Christ—from Italy, on my own shewing, so many of them being yet left.

¹ Tavernier's and Bernier's Travels, Vol. II. p. 106, Ed. fol.

² Orig. Gen. p. 100.

The city on the coast of Asia Minor opposite to Chios called Erythræa, is supposed to have been that to which Augustus sent for the Erythræan Sibyl, but there was at a very great distance from this an Erythræan sea, now called by the Greeks Oman or Om, which extended as far as Taprobane, Serindive, Lanca, or Ceylon, or the island of Rama, the sacred Island, where the Samaritan Pentateuch says the ark rested, where there is the mark of the foot of both Adam and Buddha, where there is also a town called Columbo, the same as is found in the sacred island of Iona, in the West, all which, with various other matters, I have before shewn. In this island the worship of Salivahana prevailed. Now I ask the question, Is it not probable that the adventures of the carpenter of Syria, which we find repeated or duplicated by the Erythræan Sibyl, may be from the carpenter the cross-borne Saliva-hana of India? And if so, the Erythræan Sibyl, who, we have seen, existed before Christ, may have come from Serindive or the holy island. In a former Section of this book, we found that the Sibyl, as Lardner truly states, is represented by Justin Martyr to have foretold not only the coming of Jesus, BUT ALL THINGS THAT SHOULD BE DONE BY HIM. Now it is evident, that the Sibyl may have copied from the gospel histories, or the gospel histories may have been copied from the Sibyl: and it is absolutely incumbent on us to enter upon a close and very careful examination into the genuineness of the gospel histories. Except the gospel histories be earlier, there is no genuine Christian author entire now existing, earlier than Justin's first Apology: (all the Apostolic fathers, Constitutions, &c., are forgeries :) and we see from the quotation from Lardner, that the events relating to Jesus must have been interpolated in the Sibyls, if they were interpolated before Justin's time. Justin's observation, that all the things which were done to Jesus were to be found in the Sibyl, almost proves that it cannot have been interpolated after his time; because, if these things were put into the Sibyl, they must rather have been copies from the old copies of the Sibyl than interpolations. People could not interpolate what was there already. It is truly very surprising that the Sibyl from the Erythræan sea before the time of Christ, should contain the history both of Jesus and of Salivahana. The observation of Justin Martyr that almost the whole history of Jesus Christ was to be found in the Sibyl, must not be forgotten, as hereafter I shall return to it, and it will be found to involve a consequence of the very first importance.

7. It is allowed that Rama preceded Cristna, and yet they are both said to be the same. In Hebrew ראם *ram* means *Bull*; but it is easy to see from Parkhurst, (in voce,) that it also means *Ram* or *male Lamb*. Thus as Rama is the same as Cristna, and Cristna is the same as the sun in Aries, Rama is also the same as Adonis, which was the sun in Aries. Adonis is the same as Tamuz, killed and bewailed in Western Syria. Tamuz is found to have died, or to have been killed and bewailed, on the coast of *Coromandel*. Κρ-ιως and כר *kr* mean a Lamb Ram.¹ Mandalam means *a circle* or *cycle*:² then, coast of *Cr-mandal* will mean *coast of cycle* of the *Ram Lamb*. In the language of the West, this is the meaning of Coromandal. The language of the West being found in an Eastern country, will radically still retain its Western meaning. The locality will make no difference.³ The Rama, Adonis, Tamuz, was the Egyptian *Am-on* or Indian *Om*, worshiped in the form of a Lamb or Saviour at Sais and Thebes.⁴

Serindive means, in the Sanscrit, Srē-rama-dive, the Island of the holy Rama. When I consider that in Hebrew the word Ram means both *strong* and a Ram, and that Rome was considered and called by the Heathens a *sacred city*, I cannot help suspecting that it was the city of the holy Rama.

¹ And also a circle. Parkhurst, in voce כר *kr*, II. pp. 337, 667.

² Trans. Royal Soc. Ed. Vol. II. p. 141.

³ It is just the same with Nerbuddha.

⁴ Parkhurst, in voce כר *kr*, II.

When I recollect the farce of the Pessinuncian stone, brought from Pessinus, in Phrygia, to Rome, to ensure its safety, by Scipio, *the best man* in that city, and I contemplate the places called Roma, and the country of Asia Minor called *Roum*, I cannot doubt that there was a mythos common to the two countries. Long before the time of Christ, or the conquest of Asia Minor by the Romans, Creuzer says,¹ the Phrygians claimed to be the most ancient people of the world, and to have been civilized by the Great Mother called Ma, or Cybele. In the *Classical Journal*² it is said, "Nor do any remains of this language appear in the Northern countries of Asia, nor in *ROUM* (that is to say, in Asia Minor)." I much suspect that the Rama of India ought to be Roma, or the Roma, or *Ρωμη* of Greece—Rama or *Ραμη*. When I find the Saturnias, Pallis, Viterbos, Ladies of Loretto, &c., &c., &c., in Italy, it is not absurd to expect to discover the Ramas.

A Dynasty of Egyptian priests once reigned, called Piromis, which the ancient historian expounds *a good or virtuous man*. But it is evidently the emphatic article Pi and Roma or Rama.³

One of the Gates of Antioch was called the Romanesian by Seleucas Nicator, to whom Western Rome could be known only by distant rumour.⁴

I now request my reader to recollect what has been said before, in different parts of this work, of Roma, or Rama, or Ram. In the Indian accounts of the Salivahanas or Vicramadityas frequent mention is made of a place whence they came, called by our authors, Roum, or Rom, or Ram. That the Salivahana of India, in the time of Christ, should have copied from the Papal church, not established till three hundred years afterward, seemed impossible, but how to account for this I could not tell. At last I accidentally learnt, from an Indian scholar, that the celebrated Lanca, Serindive, Palisimunda, Ceylon, called also Taprobane, was the sacred island of Ram, which I doubt not was corrupted to Rom or Roum: this removes all the difficulties. We must remember in what a singular way the God Rama or Hercules was said to be the same with Cristna; and here we find him connected, in a striking manner, with Salivahana; for both Ram and Salivahana were favourite objects of adoration with the Cingalese. I beg my reader to attend to the close connexion which Mr. Parkhurst shews existed, in words and in sense, between the names of *Ρωμη*, Rome, Valencia, Rama of Syria, the Hebrew word *רַמ* *ram*, (meaning, like the Greek *Ρωμη*, *strength*,) the English Ram, the male Sheep, and the Lamb Ram, both in the Romish religion and in ours, and that it also had the meaning of Bull—both Bull and Sheep. We must also recollect the double Avatar of Rama and Cristna: and here is the double Avatar of Rama and Salivahana or Cristna, for Salivahana was an incarnation of Cristna or Vishnu. Rama preceded Cristna when the sun entered Aries. Did Rama, in like manner, precede Tamus or the twins, when the sun entered Gemini? for Tamus means *twins*, the Didymus or Thomas. Of this more presently.

8. I must now return to the cycles and the prophecies of Daniel.

Daniel is said to have lived at the court of the king of Babylon, to have been at the head of the Astrologers, Magi, and Chaldeans, and to have flourished both before and after the taking of that city by the Persians. Who and what he was seems doubtful. Several books of prophecy are extant under his name. They are patronized by the Christians, but their authority, I believe, is denied by the Jews. Few subjects have exercised the pens and wits of polemics and devotees more than

¹ Tome II. p. 57.

² 1828, p. 290.

³ Univers. Anc. Hist. Vol. XVIII. Chap. xx. p. 312.

⁴ Nimrod, Vol. III. p. 302.

these prophecies. I think Daniel understood the doctrine of the renewal of Cycles, as Virgil did in a later day, and I shall now endeavour to shew, that his prophecies had a reference to them, as, in fact, the Christians say.¹ Before I proceed I must observe, that in all the prophecies of Daniel and the Apocalypse, a day means a year, and a week seven years. In keeping with this, in the Oriental cyclical mythoses, 12,000 years are called a day of Brahm, and $12,000 \times 360 = 4,320,000$ are called a year.

I think the greater part of Daniel's prophecy may be explained. I suppose it will be allowed, that the Messiah was to appear and be cut off about the end of 69 weeks or $69 \times 7 = 483$ years, after the prediction of Daniel. The 70 weeks make 490 years. He was to be cut off in the midst of the last week, that is, about three and a half years after he had begun his ministry. So that we must find 486 years from the twentieth year of Artaxerxes (as stated by the mystics) to the death of Christ. The Heathen chronologers reckon 354 years from the death of Alexander to the nineteenth year of the reign of Tiberius; and if to this be added 132 years, the time from the twentieth year of Artaxerxes to Alexander, we have 486—the number required. I suppose that Daniel calculated the cycle, from the birth of Cyrus to the birth of Christ, at 600 years, and calculated the Messiah's life at 33 or 34 years. This might be the reason why the Christians fixed his life at 33 years. If the Messiah were to be cut off about 483 years after the prediction of Daniel, then if 483 years—33 years the duration of his life—be calculated back from the conjunction of the Sun and Moon in the third or fourth year before Christ, we shall have the year in which Daniel made his prophecy, which every astrologer in the world could have made as well as Daniel; and if we calculate back to the eclipse of Thales, it ought to make up the 600.

The Astrologers and the Chaldeans were prophets, or rather the prophets were astrologers. Daniel was at the head of them at Babylon, as is most clearly proved by the Bible. Isaiah foretold the Messiah Cyrus—Om-nual, Om-our-God. Daniel foretold Jesus, Ham-Messiah, or Om—the Saviour, and Jesus was believed, as I shall presently shew, by the Gnostics and Templars, to have foretold Mo-hamed or Om-ahmed, Om *the desire of all nations*. Hence it was, as I shall shew, that these two sects or orders of persons were both of the Christian and Mohamedan religions. I have often wondered why the word *Mo* was prefixed to the Ahmed, but here we have the reason. The reason is the same as that which causes the mysterious, inexplicable M—600—to be prefixed to so many mystic words, such as M-Omptha, M-uin, &c., &c.

It is allowed in the Dialogues on Prophecy,² that we are now in the *seventh* millenary of the world. This is exactly my theory. When Daniel prophesied to Nebuchadnezzar of the golden head *about* the year before Christ 603,³ he clearly speaks of four kingdoms, (ch. ii. 39, 40,) including that then going, for he calls Nebuchadnezzar the golden head. *After thee* (he says) *shall another rise*, (the cycle of Cyrus,) and then a third of brass (the cycle of Jesus): and a fourth strong as iron (the cycle of Mohamed). And then (verse 44) shall a kingdom be set up which shall last for ever—the Millenium. These kingdoms are cycles of 600 years, and bring the commencement of the Millenium to about the year 1200, according to what I have proved, that the æra of the birth of Christ was the beginning of the ninth age of the Romans and Sibyls, and the ninth Avatar of India.

If the learned Ninrod be right, that the beast of John, with ten horns, is the fourth kingdom of Daniel, which I have suggested to be the tenth Neros,⁴ then the beast may be the consummation of the ten Cycles. The beast with seven heads and ten horns will be the six thousands, and the seventh will be the Millenium, and the ten Cycles will be the ten horns. The beast that was

¹ Vide Daniel ix. 24—27.

² Part iv. p. 338.

³ Univers. Hist. Vol. XXI. p. 59.

⁴ Nimrod, Vol III. p. 595.

to be resuscitated under one of the heads—the beast that was, and is not, and goes into perdition, that is, goes to destruction, revolves and passes away as the former had done. It has been observed that five heads were passed at the time of the vision, and that the sixth was going; this is as it ought to be—the sixth millenary running. This answers to the beast with seven heads and ten horns.

In chap. viii. ver. 14, it is said, *Unto two thousand and three hundred days; then shall the sanctuary be cleansed.* The present fashionable mystics, Messrs. Irving and Frere agree in opinion that the 2300 years ought to be 2400. They are justified in this by the wording of the LXX. where it is written τετρακοσιαι. The way in which these mystics and calculators accidentally and unconsciously support my system is very striking, and more convincing than any calculations which I could make; for here it is evident that Daniel¹ alluded to the cycle then running, and to the next, viz. that of Cyrus; then to the two after Christ; in all, four cycles or 2400 years; and to the six which had preceded them; that is, to $6 \times 600 = 3600 + 2400 = 6000$.

His famous time, times, and half a time, or 1260, arose as follows: $2160 + 2160 + 420 + 1260 = 6000$. The 420 years we must observe are equal to better than 5 degrees, but not to six. Thus:

30 degrees.....	2160
30 degrees.....	2160
5 degrees before Christ....	360
And a fraction, viz. 60 years	60
	4740
	1260
	6000

It is necessary that there should be a fraction of a degree, in consequence of the two cycles of the Neros and the ten Zodiacal signs not running *pari passu*, and of course not coinciding till the end of the great cycle of 21,600 and 43,200 years.

The 490 years are to the destruction of Jerusalem; then take off *seventy*, the space to it, from the birth of Christ, and we have $360 + 60 = 420$. One mode of calculation proves the other, which, if it were true, of course it would do. It must be observed that these are loose calculations (not pretending to accuracy) in whole numbers. I shall refer to this by and by, when it will be more clearly understood.

Daniel says, xii. 12, Blessed is he that cometh to the 1335 days.

Volney remarks, “According to these principles, which are those of all astronomers, we see “that the annual precession being 50” and a fraction of about a fourth or a fifth, the consequence “is that an entire degree is lost or displaced in seventy-one years, eight or nine months, and an “entire sign in about 2152 or 2153 years.” See Bk. V. Ch. II. Sect. 5, precisely in one year $50'' 9''' \frac{3}{4}$.

2153	30 : 2153 :: 5 : $358\frac{2}{3} = \frac{5}{6}$.
2153	
359	
4665	
1335	
6000	

¹ If the number 2400 were not the original, it must have been corrected in the LXX. by the popes, to make it suit a certain mythos which I shall explain presently.

The Messiah is said to precede the final end of all things, a time, times, and a half time, or, as generally admitted, 1260 years.

If we allow for the mistake of Usher and throw back the birth of Christ to the fifth year, making the interval between his birth and the destruction of the Temple 75 years or to the 75th year, and add the 1260 to the 75, we shall have 1335 which, + 4665=6000. If Daniel knew the time of Jesus Christ, and when the temple would be destroyed, and therefore when the Millenium would commence, counting from the first of Taurus, he would fix the sums of 1260 and 1335 without any difficulty.

If 1260 (Dan. xii. 7) be added to 70, and the 4 years of Usher allowed for, it will all but one make up the 1335. The destruction of Jerusalem ought, according to Calmet, to be 74, not 70: then, $1260+74=1334$.

In the eleventh verse there seems to be a corruption, or something alluded to in the Jewish history which has not come to us, for it says, or seems to mean that, at the end of 1290 years, but before the end of the 1335 days alluded to in the next verse, the sacrifice and oblation should cease. In Calmet's Chronology the sacrifice is said not to have ceased till the year of the destruction of the temple, which was 74 years after the birth of Christ, whereas the 1290 would bring it to about 45 years after his birth, when nothing particular appears to have happened, at least the daily sacrifice does not appear to have then ceased. As we have formerly seen a various reading or corruption of the text in the 2300 and 2400 years, it is not unfair, under all the circumstances, to suspect one here also. If it be not a corruption, I do not understand it. But as it contains, in language, a contradiction to the context, I am justified in suspecting another mistake.

The number 666 is called Pseudoprophetical, or would-be prophetic. It is also called the *mark* of the beast, the *name* of the beast, and the *number* of his name,¹ and the knowledge of it wisdom. If I had used those words I should have been said to accommodate the language unfairly to my theory of the first letters being figures; of this I shall treat in a future book.

Almost all the divines now fix upon some year between 600 and 615 for the beginning of Daniel's period of 1260 years. In former times this period was supposed, and rightly supposed, to begin with Christ, which makes it end and the Millenium commence just about the times of the Crusades: a little before which, all mankind ran to Palestine to be ready for the Lord's coming. We hear nothing of this now, because the time is past and new artifices are devised to conceal the truth; but the Crusaders were right: this was the end of the tenth Neros and sixth Millenary, and we are now in the seventh Millenary. The way in which most of the modern mystics fix upon some year about 608 for the period is very striking. Superstitious persons in the beginning of Christianity first thought the Millenium would commence about the year 600, then it was adjourned to 1200, and then it came to 1800, and it will shortly be adjourned to 2400. Long before that time, like the Israel Redux, all the mystics of this day will be forgotten, and this book be burnt by the priests.

The Rev. Dr. Buchanan² says, "In the year 1667, Mr. Samuel Lee, a scholar of enlarged views, who had studied the prophetic writings with great attention, published a small volume, entitled, 'Israel Redux, or the Restoration of Israel.' He calculates the event from the Prophecies of Daniel and of St. John, and commences the great period of 1260 years, not from A. D. 608, but from A. D. 476, which brings it to 1736." He then adds, "After the great conflicts with the papal powers in the West, will begin the stirs and commotions about the Jews and Israel in the East. If then to 1736 we add 30 more, they reach to 1766: but the

¹ Vide Mede's Works, 792; Rev. xiii. 17, 18.

² Christ. Res. Ed. 1819, p. 245.

“times of perplexity are determined (by Daniel) to last 45 years longer. If then we conjoin “those 45 years more to 1766, it produces 1811, for those times of happiness to Israel.”¹ I do not understand this, but it is evident from what Dr. Buchanan says, that the number 608 was the end of one of the periods to which the mystics, in their exposition of Daniel, had come. But how they had arrived at this I cannot find out. I have not been able to get the book. I beg to refer my reader to the third volume of Mons. Dupuis’ work on *all religions*—to the essay on the Apocalypse, where he will find a great number of most interesting observations, and where he will also find the doctrines of Daniel, Ezekiel, and John, proved to be identical, and all to be drawn from the school of the oriental Magi. I am convinced that, by the theory which I have suggested, if the numbers in these books be free from corruption, I have explained the meaning of them all but one; and with respect to it, we must not forget the various reading shewn in the numbers 2300 and 2400; and if there be *one* corruption in the versions, a fact indisputable, it is not improbable that this may be another.

A deep reflection on the origin of nations and religions has induced me to come to a conclusion, that all religions have been the children of circumstances, and those circumstances arising almost entirely out of judicial astrology. The first object, in all prophecy, was to foretell a future Saviour, or the commencement of a future cycle, when a new or young Saviour was to bring an age of happiness. Of course the astrologers would have no difficulty in nearly fixing the time, and from this arises the degree of plausibility which we find the ancient prophecies to possess. To a certain degree they fitted to every cycle. Hence has arisen the specious contrivance of a double meaning; for the prophecy which would apply to Cyrus, would equally apply to Jesus. The sectaries of religion, in each cycle, claimed the verification of the prophecy as the cycle came round, and the sectaries of each sect of the cyclar religion also claimed it, that is, there were several *eighth* and several *ninth* avatars. These were Antichrists to each other. From this, along with the belief that the planets ruled the affairs of men, arose magic or astrology in its bad sense, and for these reasons we find prophets patronised by the Jewish law, and astrology prohibited.

9. We now come to the famous Crusades, the real origin or cause of which, in modern times, has never been understood. They will be found to occupy a prominent place in the complete development of my system, and particularly of the tenth Avatar, and will lead to a variety of matters which will greatly surprise my reader.

In the time of Richard the First, about A. D. 1189, a general belief prevailed that the end of the world drew near, a belief which, in a great measure, caused the crusades to Palestine, where the devotees expected the Saviour to appear. This is attested by St. Bernard, of Clairvaux, and was foretold by Joachim, Abbot of Curacio in Calabria,² a most renowned interpreter of prophecy in those days. Antichrist was to appear at ANTIOCH, and the crusade was *the gathering together of the kings of the earth to the battle of the great day of God Almighty*.³ It seems from the accounts that the possession of Antioch was made a great point, almost as much so, indeed, as that of Jerusalem. It was among the first cities taken by the crusaders.

Various reasons have been given to account for the crusades, but these were the true ones. In Mosheim, a detail of the reasons generally assigned may be seen, but they are admitted by him to be insufficient to account for these wars. Indeed, every cause is assigned but the true one,⁴ which seems never to have been suspected by Mosheim or his translator. I think there will be no doubt in future upon this subject.

⁴ Cent. xi. Part i. pp. 446, &c.

In Baronius¹ may be seen an account that both Saint Bernard and an eminent man called Norbert, preached the speedy end of the world.

The celebrated Roger Bacon was born in the year 1216, and died, aged 78, in the year 1294. He was a most extraordinary man for the time he lived. I have no doubt that he was conversant with all the secret knowledge of the ancients, which remained in his day. Gunpowder, telescopes, the art of perspective, and many other branches of philosophy and science supposed to be then unknown, he was well acquainted with. I have little doubt that he perfectly understood the prophecies of Daniel and the Revelation; but, in consequence of the millenium not coming at the time predicted and calculated on, he was induced to believe, like most others of his time, that he was mistaken. The learned Nimrod affords him no quarter, but the following account which he gives is enough for my purpose. He says,

“ When Roger Bacon tells us,² that one *Artificius* was then living, who had already been kept “ alive 1250 years by the *occult powers of nature*, and who had seen Tantalus on his golden throne, “ and received homage from him, it is only another way for that man to say that Antichrist was “ about to return in ten years from that time. Creditur, he says, *ab omnibus sapientibus*³ *quod* “ *non sumus multum remoti à temporibus Antichristi*; and in another place he says, that the “ time of Antichrist might⁴ be fixed *with certainty* by comparing scripture with the prophecies of “ Sibylla, of Merlin,⁵ and of Joachim, of Calabria, with history, with the books of philosophy, and “ the courses of the stars.”⁶

If we knew when the observation respecting the 1250 years was written, we might pretty nearly tell on what year he supposed the calculations made out the millenium as about to happen. By *Artificius* he probably means the Ioannes who was to wait till Jesus returned, and who, from having seen Tantalus on his throne, was evidently a renewed incarnation, or perhaps he meant Salhivahana the *carpenter* or *artificer*, or it may be a MASON.

The persons who were initiated into the Esoteric religion of the Vatican, after being disappointed in the year of Christ 600, imagined, that the famous 6000 years would end at or about the year 1200 of Christ, when the millenium would commence, and it was this which caused the crusade against the Mohamedan Antichrist, who had arisen against the new, the tenth, and the last Messiah or Avatar, patronised by the Pope of Rome, whom I shall draw from his obscurity. If the ninth age began with Christ, then the tenth would begin with the year 600, and finish with the year 1200; and then would be the manifestation of the Lord at Jerusalem, which the devotees wished to prepare for his reception.

These circumstances premised, we now, at last, come to the *tenth* Avatar, and the facts respecting it are not less remarkable than the others. My reader will recollect that, in the Gospel of the mysterious Ioannes, Jesus, the Avatar of the Sibillyne oracles, is made to declare that he would send another person to complete his mission, called in our translation *a comforter*, and also *the spirit of truth*. The words *spirit of truth* would well justify the expectation, that this person would be an incarnation of Divine Wisdom if he appeared in human form. In consequence, we

⁶ Nimrod, Vol. II. p. 178.

find that various teachers of doctrines were believed, by their followers, to be this person. For instance, Simon Magus, Montanus, Marcion, Manes, were all so considered, and in consequence have been grievously abused by the Romish writers for the unparalleled wickedness of giving themselves out as being *the Holy Ghost*—these writers never attempting, perhaps not being able, to explain the nature of the case. The most remarkable of these Teachers was the person called Simon Magus, called by the Romists *Magus*, probably as a term of reproach.

From the immense mass of lies and nonsense which have been written respecting him, I think we may select enough to shew the probability of his followers having believed him to be the person foretold by Jesus; and the Helene or Selene, by whom he was said to be accompanied, and with whom he was enamoured, was what Mons. Beausobre¹ calls *La Sagesse, génératrix de toutes choses*.² After Simon Magus, Montanus was held to be the person promised; and, after him, Mani: and this brings us to a *tenth* and *last* Avatar, the celebrated prophet of Arabia—Mohamed.

10. Mr. Faber,³ who is the most sensible of all the mystics, makes one very striking observation; which I shall give in his own words: “Now it is an undoubted *historical fact*, whatever application we may make of the fact itself, that in the year 608 or 609, Mohamed, dexterously availing himself of the unscriptural demonolatry which had infested the Christian church, set on foot an imposture, which soon overspread the whole Macedonian empire, and which performed *the very actions* that are ascribed to the second predicted power, both in *the same geographical region* and *during the same chronological period*.” This forms, to my mind, the finest example ever known of a prophecy causing its own verification or completion. In the Gospels, Christ is made to prophesy that one should come after him to complete his mission. This was nothing but the repetition of all the Gentile prophecies of a *tenth* and *last* Avatar. Mohamed was believed by his followers to be this person, whose name they said, in the original, uncorrupted gospel, was given by Jesus, as that of Cyrus was by Isaiah. I am quite certain that the context and the concomitant circumstances are such as to induce any unprejudiced person to think, that the assertion of the Mohamedans respecting this prophecy is true. In the context, a person who was to come, is repeatedly referred to.

Then what was the fact? Jesus Christ was believed, by the followers of Mohamed, to be a divine incarnation, or a person divinely inspired, and to have foretold the next and the last Avatar, *Mohamed*, to complete the *ten* periods, and the *six* millenaries, previous to the grand Millenium,

¹ Liv. vii. Ch. vi. p. 511.

² I learn from Beausobre, that it appears, from a passage of Plato and another of Sextus Empyricus, that, according to ancient authors, the war between the Greeks and Trojans was about a statue of Selene or the Moon, (I suppose the Palladium or image of Minerva, which probably was believed to have come from heaven,) and that Simon maintained, it was for the love of the Selena or Helena, the Moon, that the Greeks and Trojans had gone to war, and that the Helene he had with him was the Trojan Helen. In all this I think it easy to see the mistake constantly made, as I have noticed, between the Moon and the Maia or Magna Mater, the female generative principle. It appears that the Queen, the Mother, of all things, the Divine Wisdom (*La Sagesse*) which produced all things, was equally called Luna, Selena, and Helena. (Beausobre, *ib.*)

By the ancient Egyptian mystics, Osiris was the male generative principle—Isis the female, his wife. In judicial astrology or magic, the Sun was sacred to Osiris, the Moon to Isis; thus it was that the mistake continually arose, and the emblems and names of the female generative principle were attributed to the Moon. This perhaps might not be from mere mistake, but from a spirit of mysticism. Thus, on the 17th of the month, the Sun or Osiris is said to enter into the Moon and impregnate her. But this notion respecting the Moon was not the original doctrine, but a corruption of it, for the Moon was often masculine.

³ Sacred Cal. of Prop. Vol. I. p. 73.

or the reign of the *Χρησος*, or Christ, on earth, for the last and seventh period, of one thousand years. Irenæus and the first Christian fathers said, that, during this period, the *lion* was to lie down with the *lamb*, and the grapes were to cry out to the faithful *to come and eat them!*

I think, in the expression alluded to in the Koran,¹ if I mistake not, there is a proof that my doctrine of the renewal of the cycle was held by Mohamed, or was thought to be applicable to him; and it seems that the writer of that book held up Mohamed as a new incarnation. Divine Love, coming in the tenth sæculum, as foretold by the Sibyls, by Jesus, and also by the Prophet Haggai, (ii. 7,) “*And the desire of all nations shall come:*” “*המך HMD, From this root,*” (says Parkhurst,) “*the pretended prophet Mohammed, or Mahomet, had his name.*”² Here Mohamed is expressly foretold by Haggai, and by name; there is no interpolation here. There is no evading this clear text and its meaning, as it appeared to the mind of the most unwilling of witnesses, Parkhurst, and a competent judge too when he happened not to be warped by prejudice. He does not suppress his opinion here, as he did in the case of the *Wisdom* of the Jerusalem Targum, because he had no object to serve; he did not see to what this truth would lead. I beg to refer to what I have said in the last section; there my reader will see that the end of the tenth cycle was foretold by Christian astrologers, which caused the fanatical crusaders, almost by millions, to flock to Jerusalem about the year 1200, the end of Mohamed’s cycle. The observation of Mr. Faber, that Mohamed’s mission began at the year 608, is important. This is the very period when the tenth Avatar ought to commence, according to one of my two Neros’ systems. If this be accident, it is surely a very extraordinary accident, that, among all the numbers, the identical number of the great Neros should be fallen on; and that number the very number required to support my system—nay, to prove the truth of it, if the system be true.

The expression which the Mohamedans say has been expunged from the Romish Gospels, is as follows: “*And when Jesus, the son of Mary, said, O children of Israel, verily I am the apostle of God sent unto you, confirming the law which was delivered before me, and bringing good tidings of an apostle who shall come after me, and whose name shall be AHMED.*” Chap. lxi. This is correctly as foretold by Haggai.

On this *Sale* says, “*Whose name shall be Ahmed. For Mohammed also bore the name of Ahmed: both names being derived from the same root, and nearly of the same signification. The Persian paraphrast, to support what is here alleged, quotes the following words of Christ: ‘I go to my Father, and the Paraclete shall come:’ the Mohamedan doctors unanimously teaching, that by the Paraclete (or, as they choose to read it, the Pericyte or Illustrious), their prophet is intended, and no other.*”⁴ Mr. Sale, in page 98 of his Preliminary Discourse, distinctly admits, that Pericyte, in Arabic, means *illustrious*, the meaning of the name of Mohamed.

Bishop Marsh has observed that this word Paraclete must have been the Syriac or Arabic⁵ word פרקליט *prqlit* translated into Greek. I apprehend the whole argument between the Mohamedans and Christians will turn upon the question, whether the word פרקליט *prqlit* ought to be, when translated into Greek, rendered by the word παρακλητος or περικλυτος. Now I maintain, that if Bishop Marsh says the word *prqlit* was the word used by Jesus, and that it means *illustrious*, it is a gross mistranslation to render it by παρακλητος, which means *comforter*.

The passages in John, ch. xiv. 16, 26, xv. 26, xvi. 7, and in Luke xxiv. 49, are those which we

¹ Vide Sale’s preface, p. 98.

² See Parkhurst in voce, המך *hmd*.

³ John xvi. 7, &c.

⁴ Koran, Vol. II. p. 423, note.

⁵ Marsh’s Michaelis, Chap. iv. Sect. xiv.

translate from the Greek *παρακλητος* *comforter*, and which the Mohamedans say ought to be *περικλυτος* *illustrious*. This Comforter is said by Christians to have come, as described in the book called the Acts of the Apostles, on the day of Pentecost, in a tongue of fire settling on each apostle. The Mohamedans say this is ridiculous as the sending of a Comforter; and it could not have been necessary to enable them to work *miracles*, because, if the Gospel histories can be believed, Jesus had given them this power before, as appears from the first verse of the tenth chapter of Matthew; and that with respect to the mere endowment with the Holy Ghost, it could be as little needful, since it appears from the twenty-second verse of the twentieth chapter of John, that he had endowed them with this gift prior to his ascension, not two months before.

The Mohamedans further allege, that the book of the Acts nowhere says that these fiery tongues were the promised Comforter, which it would have done if they had been so; and further, that the object of the miracle of the tongues of fire is evident, and admits of no dispute, namely, the endowment of the apostles, as the text clearly expresses, with the power of speaking all languages.¹ Besides, the Mohamedans may fairly ask, how came Jesus not to say he would send them the *רוח קדש* *qds-ruh*, the *Ἅγιον Πνευμα* or Sanctus Spiritus? If he had the gift of prescience he must have known that his equivocal expression would cause infinite mischief in the world.

In reply to the demand of Christians, Why did not Mohamed perform a miracle? the answer has been, The victory of the Crescent over the Cross is the miracle. If the cause be of God, it will succeed without other miracle. But on the victory of the Russian Cross over the Crescent, it will shortly fall.

The Mohamedans, in the defence of their doctrine of the wilful corruption of the manuscripts of the Gospel histories, call upon the Christians to produce the autographs, or very old manuscripts. But to neither of these calls can a satisfactory answer be given. There are no autographs and no manuscripts older than the sixth century. The Mohamedans say, your churches in Rome, being Roman temples, are many of them much older than this period, where the MSS. might have been preserved, along with the relics which abound of Peter, Paul, and other saints, if you had thought proper. But some Christians say, these relics are forgeries; to which the Mohamedan replies, that this is a mere subterfuge to evade his unanswerable argument. And this is fair in the mouth of a Mohamedan, who cannot be expected to make distinctions between the Protestant and Papist sects of Christians. But independently of this argumentum ad hominem, there can be assigned no good reason why the manuscripts were not preserved in the old churches. The Goths and other conquerors of Rome intentionally destroyed neither the temples, churches, nor books. The temples are there, yet existing as churches. The church in which are deposited the most sacred things of the religion, the bodies of Peter and Paul, was never destroyed.

But though the Christians cannot produce the autographs or very old manuscripts, they say, that the quotations of certain very old authors, called *Fathers*, will prove that the word was written Paracletos and not Periclytos, long before the time of Mohamed, and therefore that they cannot have been corrupted in order to oppose the Mohamedans. To this it is replied, that the word was not corrupted to counteract the Mohamedan Paraclete, but the Paraclete generally—the various Paracletes, as they called themselves, long before the time of Mohamed—Simon Magus, Manes, Montanus, and Marcion, who were all set up as paracletes by their followers, and who

¹ In allusion to the idea of fire and language being connected in some way or other, we have the proverb, the fire kindled and he spake.

would all have been called the *illustrious prophets* if their heresies had prevailed instead of dying away; and, that it is the peculiar object of the *corruption* to bolster up the Trinity, in opposition to the Unitarian doctrine, by making the *person to be sent*, into the *Holy Ghost*.¹

Bishop Marsh, Michaelis, and divers other learned men, have alleged, with much plausibility, the difficulty and almost impossibility of corrupting the gospels after the first few centuries. But the following passages from the pens of unwilling witnesses to the facts of which they inform us, will shew how little dependence can be placed on this kind of specious reasoning.

In the eleventh and twelfth centuries, the Bibles were corrected by Lanfranc, Archbishop of Canterbury, and by Nicolas, Cardinal and Librarian of the Romish Church, *secundum orthodoxam fidem*.² The learned Beausobre has the following passage: “Il se peut faire, dit M. Simon,³ “que cette histoire ait été prise de quelque ancien livre Apocryphe, ou elle étoit commune dans “les premiers siècles du Christianisme, et peut-être croyoit-on, qu’elle venoit des Apôtres, ou de “leurs disciples. C’est pourquoi ceux qui ont osé retoucher en tant d’endroits les premiers exemplaires du Nouveau Testament, dans la seule vue de le rendre intelligible à tout le monde, “n’auront fait aucune difficulté d’y ajouter ces sortes d’histoires, qu’ils croyoient être véritables. “Je mets au bas de la page le jugement d’un autre savant moderne, me contentant de remarquer, “que si les Hérétiques ôtent un mot du texte Sacré, ou s’ils en ajoutent un, ce sont de *sacrilegés violateurs* de la sainteté des écritures. Mais, si les Catholiques le font, cela s’appelle *RETOUCHER* les premiers exemplaires, les *réformer pour les rendre plus intelligibles*. M. Simon fait “l’honneur aux Bénédictins d’avoir réformé de même *les ouvrages des Pères*, afin de les accommoder à la foi de l’église. Mettons le passage de M. Simon, Dissert. p. 51. Nous lisons dans “la vie de Lanfranc, Moine Bénédictin, et ensuite Archevêque de Cantorbéri, qui a été publiée “par les Bénédictins de la congrégation de *St. Maur*, avec les ouvrages de cet archevêque, “qu’ayant trouvé *les livres de l’écriture beaucoup* corrompus par ceux qui les avoient copiez, il “s’étoit appliqué à les CORRIGER, AUSSI-BIEN QUE LES LIVRES DES SAINTS PÈRES SELON LA FOI “ORTHODOXE—SECUNDUM FIDEM ORTHODOXAM.”⁴

It is impossible to deny that the Benedictine Monks of St. Maur, as far as the Latin and Greek languages went, were a very learned and talented, as well as numerous body of men. In Cleland’s life of Lanfranc, Archbishop of Canterbury, is the following passage: “Lanfranc, a Benedictine

¹ Soon after my Apology for the Life of Mohamed came out, my former friend, Mr. Beverley, published an answer to it, part of which (as he told me himself when writing it) was written in my breakfast room. I will not deny that it caused me some uneasiness, for I felt that my friend had not written of me, as I should have written of him. In his whole argument the *Prosopopœia*, which I use in my argument, is put out of sight, and he treats me as giving my own opinion, instead of giving the arguments of the Mohamedans. I requested him, at my expense, to add a short appendix, as a letter from me, to the remainder of his work which was not sold, and to give it to those of his friends to whom he had given his book, but this he declined. I considered his conduct to proceed from a little Calvinistic zeal which had got the better of his kind feelings, and which I lamented, but I took care that my feeling should not cause, nor did it cause, any suspension of the intercourse between us. But since he has announced himself to the world as a Calvinistic preacher, he has sent home the books which he had of mine, has not answered my last letter, and has dropped my acquaintance. Some time after Mr. Beverley’s book was printed, I opened a volume in my bookseller’s shop, and, on reading the first sentence my eye met, I found it was an answer to my Mohamed, by a learned friend, *who had not sent me a copy*. From the sentence which I read, I instantly perceived that he had taken the same line of argument with Mr. Beverley, having overlooked the *Prosopopœia*, and that, because I honestly gave the arguments of the Mohamedans, he concluded I adopted them for my own. I bought the book, but I read no more of it. I had before determined to read no more of the answers of my friends, and I adhere to the same determination. Polemical controversy, *with a friend*, is not to my taste.

² Wetstein, Prologom. pp. 84, 85; Gibbon, Chap. xxxvii. N. 118.

³ Ap. Sim. Dissert. p. 20.

⁴ Beausobre, Hist. Manich. Liv. ii. Ch. i. p. 343.

“ Monk, Archbishop of Canterbury, having found the Scriptures much corrupted by copyists, applied himself to correct them, as *also the writings of the fathers*, agreeably to the orthodox faith, “ *secundum fidem orthodoxam.*” The same very learned Protestant divine has this remarkable passage: “ Impartiality exacts from me the confession, that the orthodox have in some places “ altered the Gospels.”¹ Lanfranc was head of the Monks of St. Maur about A. D. 1050, and it appears that this society not only corrected the Gospel histories, but they also corrected the fathers, in order that their gospel corrections might not be discovered: and this was probably the reason for the publication by them of their version of the whole of the fathers. To the observation that they would not correct all the copies, that some must escape them, it may be replied, that they thought otherwise, and there can be no doubt that if the Pope and the Monks thought it worth their while to correct the Gospels, they would spare no pains to make the correction universal.

Thus we see the fact proved, not only that the Holy Scriptures have been corrupted by the united exertions of the Monks and the Papal see, but that the works of the fathers have also been corrupted to be in unison with them, and this not by one man, but by a very great and powerful society in league with the Pope. Surely after the proof of such a fact as this, it is only fair if a passage be found which compromises the moral attributes of God (which a passage would do if it established *the atonement*) to suppose that it is a passage which has been *retouché*. I may be an obstinate heretic for entertaining such belief, but I can sooner believe that a passage is one of those *RETOUCHÉ* than that God is unjust or cruel. From the observation of Mr. Gibbon, from Wetstein, that the retouching was done by consentaneous movement at Rome, St. Maur, and Canterbury, we may form a pretty fair judgment that an universal movement of the Monks of the world then took place to effect the desired object. There can be no doubt, I think, that the very fine edition of the fathers which was published by the Benedictins of St. Maur was done to remove any passages which the old books might contain opposed to the *RETOUCHÉS* Gospels.

But this is not the only correction the Gospels are said to have undergone. Lardner² says, “ Victor Tununensis, an African Bishop, who flourished about the sixth century and wrote a “ Chronicle, ending at the year 566, says, When Messala was Consul (that is, in the year of “ Christ 506) at Constantinople, by order of the Emperor Anastasius, the holy Gospels being “ written by illiterate Evangelists are censured and corrected.” As may be expected, great pains have been taken to run down and depreciate this piece of evidence to a dry fact, the truth or falsity of which the narrator must have known. *Victor was a Christian Orthodox Bishop.* It is not credible that he would in his Chronicle record a fact like this if it were false. His evidence is rendered more probable by the casual way in which it is given; and he must be considered the most unwilling of witnesses. If evidence *like this*, to such a simple fact, is to be refused, there is indeed an end of all history, ancient and modern. The charge against the ruling power of corrupting the Gospels is not that of one individual only: the same charge we see was made against it by the Mohamedans, and it was done before by the Manichæans. It is worthy of observation, that there is not a manuscript of the Gospels in existence earlier than the sixth century. A strong probability arises that the ancient Gospels were destroyed at this time.

To the arguments of Bishop Marsh, Michaelis, &c., to which I alluded a little time ago, I reply, that in the times both of Anastasius and Lanfranc the whole world was in a very considerable degree, as far as concerned religion, in the power of the Emperor of Constantinople and the Pope.

¹ Cleland's Specimens, &c., p. 62.

² Cred. Gosp. Hist. Ch. clv.

I have no doubt that there was a monastery, or priest of some sort, in every small district of Northern Africa, Egypt, Western Asia, and Europe. I cannot believe it possible that there should have been a hundred copies of the orthodox Gospels in existence which were not within the reach of the Monks and priests, and I have no doubt that in either time, an order to correct the gospels given out at Constantinople, Rome, and Canterbury, would be competent to cause every copy, probably altogether not two thousand, to be rewritten. This rationally accounts for the extraordinary fact of the destruction of all manuscripts before this period. Every inquirer knows that St. Augustine is looked up to by both Papists and Protestants as one of the first luminaries of the Christian Church; and he not only professed to teach that there were secret doctrines in the religion, but he went a step farther—for he affirmed, *Multa esse vera quæ vulgo scire non sit utile, et quædam quæ tametsi falsa sunt, aliter existimare populum expedit*:¹ that there were many things true in religion, which it was not convenient for the vulgar to know; and again, some things which, *though false*, yet it was expedient should be believed by them. It is not unfair to suppose that in these withheld truths we have part of the modern Christian mysteries, and I think it will hardly be denied, that the church, whose highest authorities held such doctrines, would not scruple to *retouch* the sacred writings.

11. As I have formerly said, in the early ages of Christianity the doctrine of the Millenium was the universal faith. As it did not come when expected, the consideration of the *Ultima Cumæ carminis ætas*, of Virgil, and the ninth age of Juvenal, and circumstances which the Romish esoteric policy and universal power have concealed from us, (but which Roger Bacon in a later age partly let out,²) taught the College of Cardinals, that the tenth age would not come till about the year 600, and would, of course, not end till about the time which we have seen fixed by Bernard of Clairvaux and Joachim, viz. the year 1200. How far this knowledge might extend, or may extend, it is not possible to say, but the *Linga* in their temple, with its *Zeus Soter*, &c., seems to shew that the whole is understood.

From the Mohamedans we can learn little; we are at too much enmity with them; and it is probable that the Turks may really possess nothing of the Arabian knowledge upon these subjects. But it is a most important fact, that the Brahmins maintain that Mohamed either was or pretended to be a *Vicramaditya* and *Avatar*. This will lead us to some very important consequences.

The fact cannot be denied, and a very important fact it is, that when the Mohamedans overran India they did not destroy the images of the Buddhists. The reason was because, in the simple, unadorned, uncorrupted icon of Buddha, they found their own *Om*, and I have no doubt that they were in reality Buddhists, and Mohamed was believed by himself, (for what is too absurd for human folly not to believe? How much or how far is prosperity capable of corrupting even the strongest minds!³) or by his followers, to be the tenth and last *Avatar*—incarnation of the sacred *Om*—the *Amed* or *desire of all nations*. On this account it was, that the Afghans and the mountaineers of Mewar and Malwa came to be among the first of Mohamed's followers.

If we reconsider what I have said in Bk. VIII. Chap. V., respecting a tribe proceeding from India, as the Mohamedans say, and their having carried back the religion of Mohamed, the tenth

¹ Civ. Dei. Lib. iv. Cap. xxxi.

² Roger Bacon spent the greater portion of his life in prison. This was not for *knowing* too much, but for betraying the secrets of initiation, for telling the secrets out of the conclave.

³ When I consider that Alexander was born exactly when the Sun entered Aries, and that Mohamed's name meant *Great*, in connexion with other circumstances, I am induced to suspect that they were both, as well as Constantine, called *Great*, because they were thought to be *Avatars*. I think this superstition might probably make them conquerors.

avatar, we may observe, that there was no great man in their own country to answer to *the tenth* whom they daily expected; and when they saw this Om-amed, *the desire of all nations*, conquering all Asia, and declaring that his success was the proof of his mission, it was very natural for them to receive him: it was no change, but only a necessary completion of their religion, arriving, as they would learn, to the very year in which, according to their doctrines, he ought to arrive.

In the province of Oude or Judæa, in North India, the people still flatter themselves with the hopes of a Saviour, of whom they know nothing, except that he is to be a tenth Outar or Ontar. He is to be called the "spotless," because he is to be born of a pure virgin. He is expected to appear in the province of Oude, *i. e.* Youdia. He will destroy all distinctions, and establish happiness on the earth.¹ As these people did not accept Mohamed for their last Avatar or incarnation, and all their seminaries of sacred learning were destroyed, they still, like the Jews, continue in expectation of they know not what.

Col. Tod says,² "The libraries of Jessulmer, in the desert of Anhulwara, the cradle of their (*meaning the Buddhist and Jain*) faith, of Cambay and other places of minor importance, consist of thousands of volumes. These are under the controul not of the priests alone, but of communities of the most wealthy and respectable amongst the laity, and are preserved in the crypts of their temples, which precaution ensured their preservation, as well as that of their deified teachers, when the temples themselves were destroyed by the Mohamedan invaders, who paid more deference to the images of Buddha than to those of Siva or Vishnu." Here we have a part of the secret religion of Mohamed. Among his followers, as among the Christians, when, in the thirteenth century, the stars did not fall from heaven or the sun cease to give its light, the doctrine became forgotten. But in this passage the Colonel does not display his usual acuteness of understanding. If he will reflect, he will see that the idea of large libraries or teachers being preserved in crypts unknown to conquerors is not credible. They were preserved, because the Arabians were the patrons of literature of every kind. They no more destroyed libraries in India than *they did in Egypt*.

I have before observed, that the term Vicramaditya is merely a descriptive term. This is confirmed by the mode in which the Hindoos apply it to Mohamed, whom they count a Vicramaditya, and whom they state to have made his appearance A. D. 621—and whose æra began from that year; but he began to preach, or he appeared, as Mr. Faber has observed, in A. D. 608.³

The name Vicramaditya consists of these words: Vicra, which means *Vicar*, the same as Vicarius; the word Om, and Ditya: the whole meaning *the holy Vicar of the God Om, or the Vicar of the holy Om*. Mohamed was also called *Resoul*: that is, the Ras of Al, or the *wisdom of God*. The Hebrew רַס *amd* is formed of the word OM and *di*, *the holy OM*. The Mohamedan sect of the Shiah, in the language of Siam and of Malabar, is called Rafzi. This is evidently from the Hebrew *Ras*—Rashees.

The prejudices of modern Christians entirely blind them to the undeniable fact, that every Mohamedan is as really a Christian as themselves. If this be the case, it is in perfect keeping with their possession of the magnificent church or mosque of St. John, at Damascus, where his head is preserved, and so much venerated, that the Turks will not permit even one of their own religion to look at it, and never permit a Christian to go into the church or mosque.⁴

¹ Col. Broughton's Popular Poetry, notes, p. 152.

² P. 520.

³ Asiat. Res. Vol. IX. p. 160.

⁴ Maundrel's Journey, p. 170.

Vicentius Belovacensis notices the custom of two Indian nations making Carns in honour of their Gods, at the equinoxes.¹ This is still continued in Tibet, and what is very remarkable, he says the custom passed from the Indians to the Arabians, and was ordered to be continued by Mohamed. This seems to support what I have said of the Arabians' first coming from India, and to have been connected with the Mohamedans' protection of the Buddhist images in India.² Buddha was spared, because he was the male generative principle, as the Lingas were spared by Cambyses. Late travellers have found, as we might expect, Carns in Western Syria.

The fact is, Mohamedism was no *new* religion; it was only a continuation of Buddhism. Mecca, the sacred city of Mohamed, was well known to the ancients by a name which had the meaning of the name of Mohamed. It was called *Maco* or *Moca Raba* by Ptolemy, or *Moca the great* or *illustrious*,³ or in other words, the city of *Mo-hamed*. Guy Patin mentions a medal of *Antoninus Pius* with this legend MOK. IEP. AXY. AYTQ. which he very properly translates Moca, sacra, inviolabilis, suis utens legibus: *Moca the holy, the inviolable, and using her own laws*. This, Wilford says, can only be applicable to the place now called by us Mecca, and in the Brahmin books *Mócsha-st'han*, and considered a most holy place, to which the Indians formerly made pilgrimages, and not to the little place called Mocha.⁴ The medal of Antoninus serves to shew the universal nature of the Gentile religion. Col. Wilford informs us, that the Arabian writers unanimously support the doctrine, that the present Mecca is the Moca of Ptolemy. The sea-port of this Moca is the town or port of Bad-deo, regia, or the city of the holy and royal Buddha.

Mocsha means *eternal bliss*; then the name will be *place of eternal happiness*. The indubitable fact that Mecca was a place sacred to the Amed or *desire of all nations* before Mohamed, the camel-driver, was born, opens to our view a new ænigma, which cannot be solved without supposing an esoteric religion in Mohamedism, as well as in all other religions, as held by the celebrated Avicenna and many others, and into which I shall inquire by and by. The whole history of Mohamed furnishes a most curious example of a prophecy causing its own verification.

12. The Jews well know that there is a very peculiar mystery concealed under the letter M, as M. Cassini has shewn. The Jews have the same twenty-eight letter figures as the Arabians, with the single exception that they want the *last* for the number 1000. This is contrived for the purpose of making their mystical letter M the central letter of their alphabet. They have only twenty-two letters, but they add five finals for this purpose. And similar to this they form a sacred cabalistic word אמת *amt* or אמת *amt*, which has the meaning of *truth*. It comes from the root אמן *amn*, which is the *Amen* and *Omen* of Christians; the Om-man and Amun of Egypt corrupted, as is allowed, to *Ammon* by the moderns, and it is the OM of India. It is the first, and middle, and last—similar to the Alpha and Omega, with the sign for 600 in the middle; as, in the Crismon Sancti Ambrogii, we have the Alpha Α, and Omega Ω, with the Ϙ in the middle, the emblem of 600. The figure at the top of the cross is the Samaritan Resh, which means 200, and the cross, which on Samaritan coins is put for the Tau, stands for 400. The letter Resh is

¹ Parkhurst in voce, רמה *rme*.

² The Christians accuse the Jews of blindness in believing that the promised Messiah or Saviour was to be a temporal prince. In this case, it is necessary, in justice to the Jews, to ask in what sense the word was used in their sacred writings. It had always one sense, and I believe *only* one sense, and that sense is at once seen when we look to Isaiah, where Cyrus is expressly called a Messiah.

³ *Asiat. Res.* Vol. IV. p. 369.

⁴ *Ibid.*

read from left to right. This may be because it is used by modern Greeks, or it may be from its extreme antiquity; for it is the staff of Osiris. If letters were taken from figures, as they were always read from left to right, of course here used as a figure, it would read from left to right. It is, as just noticed, the Crismon Sancti Ambrogii, in the church of Milan—A Ϙ Ω. I have already said, it is the same as the sacred word of the Jews for *truth* אמת *amt*, but I suspect it meant both *truth* and WISDOM—for *Truth* is Wisdom—*Wisdom* is Truth. The Resh as here used might come from African Ethiopia, where the language read from left to right, and it is notoriously the staff of Osiris, the Monogram of Jupiter Ammon, and the Labarum of Constantine.

In the Syrian copy of the Apocalypse, for our Greek *Apha* and *Omega*, there are *Alpha* and *Tau*. Here we have אמת *amt*.

I believe no one disputes that the Greeks had their sixteen letters from the Phœnicians or Hebrews. Now, it cannot be supposed that they would receive the letters and not the letter numbers, though, for various reasons, they might not come into common use; in fact, their other system was more convenient, or the Hebrew might be a secret and mystical system. If this were the case, the Rho must have been the same as the Samaritan and Chaldee, and have stood for 200. It is very possible that the Greeks abandoned the use of the Hebrew Quoth or Koph, from its great similarity to the Kappa; and that this by degrees, made their Resh or Rho stand for 100, instead of 200, which it must have originally done. This may have arisen when a change in the language took place, which I shall explain in my book upon the origin of letters. The letter M, the MIDDLE letter, was adopted as a sacred mystery. It was the Omphalos or Δελφους. It was the Monogram of Maia, Maria, Mary, the Regina Cœli.

The Greeks appear to have copied the Hebrews, for they have (see the first table of letters) the same Cadmean alphabet of sixteen letters, but they have twenty-seven letter figures for numbers, and the middle one has I think formerly been the M. If my reader look to the Table in the *Celtic Druids* he will observe that the Digamma expelled the Vau, which took up its place after the Tau, making a seventeenth letter, and not being one of the letters added by Palamedes or Simonides. Now when I consider the close connexion which must have once existed between the Sanscrit and the Greek, I cannot help *suspecting* that the A, U, M, has been the A, M, Ω—Alpha and Omega—taken from the Greek, when the M has been in some way, which I confess I cannot satisfactorily explain, the central letter as it was among the Hebrews. We find all the Indian nations admitting their ignorance of the etymology or meaning of their sacred AUM. We find them constantly using it as Om, which they acknowledge to be a corruption, but they know not how. Then may it not as easily have been AMΩ as AUM? If they knew that it was the three letters corrupted into two, OM, it was natural to take the AΩM for the original, and not AMΩ. All this respecting the OM I give as a mere suspicion. It does not affect the theory that both the Greek and Hebrew have had the central M. We may observe upon this, that it connects well with the mystic Amo, I love—divine love—and Mo-ahmed; in short, with the Om in a hundred senses and mystical relations.

But if in the end it should prove that my suspicion be well founded, have the Indians copied from the Greeks, or the Greeks from the Indians? Neither. The Greeks copied from the Hebrew, and the Hebrew was the language of South India, and Coromandal, and the Lascars, before the Sanscrit was formed: but not before their mythology was formed. The Sanscrit language must have been perfected since the sun entered Aries, as the Buddhists have it not; and great ingenuity was exerted to make it as different as possible from its parent, in order to keep it from the Buddhist heretics, as the Brahmins called them. In considering the question of the probability of my

suspicion relative to the M, all the mystical particulars which we have before seen respecting this letter, and the cycle of 600, must be taken into consideration.

In the word מֵט *amt* the Jews find various mysteries. They strike off the ciphers from the numbers which these letters denote, viz. 400 and 40, and they have 4, 4, 1, which make 9, which always multiplied, and then added, always make 9. Thus $9+9=81$, and $8+1=9$, and the *ד*, the middle letter is the fourteenth letter, and denotes the fourteen attributes of God, which they find somewhere in Exodus. We see in the earliest of the monuments of the Buddhists of India the number *nine* recur continually as a sacred number. This shews that my suspicion is in perfect keeping with the apparently trifling *nonsense* of figures giving names, but from which I imagine I shall in a future book evolve something very far from nonsensical.

It is very wonderful how prejudice may blind the understandings of men upon the subject of religion, though they reason well upon every other subject. M. Beausobre says, "Besides the fulfilling of the ancient prophecies, the Messiah shines so *conspicuously* in the writings of the New Testament, and all these so exactly centre in Jesus Christ, that it is absolutely impossible a mind free from prejudice should not be affected with these marks of truth and sincerity."¹ The case is simply this, in the sacred books of the Jews written from time to time, a person is predicted by the name of Messiah. The meaning of this word is over and over again explained to mean a person to deliver them from bondage. If there could be any doubt of its meaning, the examples where it is applied to persons would remove it. Cyrus, for instance, is expressly called the Messiah of God. He was a temporal prince and a conqueror. How surprising that Dr. A. Clarke should not be able to see these *conspicuous* prophecies!

According to the doctrines of the Jewish Pharisees and the Christians, the works of the prophets are full of prophecies of a Messiah; but in no case whatever can any passage be pointed out where it is expressly stated that the Messiah alluded to was to be a *spiritual* not a *temporal* king. The meaning of the word Messiah was never doubted: the prophets whom God had sent had fixed its meaning by repeatedly declaring different persons to be Messiahs, such for instance as Cyrus. These prophets, it is said, were continued at different times even to the presentation of Jesus in the temple by his father and mother. How can it be reconciled to the goodness of God that even unto the very time when the last prophets, Zacharias, Simeon, and Anna, Luke i. 67, ii. 25, 38, prophesied of a Messiah, he should never have inspired one of them to explain to the Jews that a new Messiah was to come totally different in character from all the Messiahs they had had before, and that the visible child was to be a spirit! This, it has been said, was to blind the Jews, lest they should see and repent, and be saved; that is, should not be damned. Did any one ever before hear such shocking impiety? In reply to this last observation I shall be told that the passage is in the sacred book; to which I rejoin—Indeed it is, and is, like many others in the sacred books, a corruption of the gospel of Jesus, as in my next volume I will endeavour to shew. I can more readily believe that it was put into the book, by Anastasius or Lanfranc, from hatred to the Jews, than that it was put there by divine inspiration.

The difficulties which have arisen in the construction of these prophecies between a temporal and a spiritual Messiah, are all removed by the fact which I have pointed out, that the Messiah who was to deliver the Jewish nation from bondage was to be an incarnation of the Supreme Wisdom, in the flesh, like Cyrus. Thus he was both spiritual and temporal, though not exactly in the sense contended for by our divines; but in such a sense as justifies, in a great measure, many

¹ Int. New Test. Pt. ii. pp. 2, 3.

of the constructions put upon great numbers of the passages by the friends of both opinions. In fact, it shews that when the two parties have been opposing each other with the greatest bitterness, the real meaning of the texts justifies both of them. It is curious to see how persons permit their passions to mislead their reason, as well in India as in Europe. The followers of Cristna, never thinking that they can honour their favourite too much, maintain that he is not an incarnation, but Vishnu himself. This is exactly followed by our devotees, who contend that Jesus Christ is not an incarnation or a person divinely inspired, but that he is God himself.

Among some sects of the Jews, about the time of Christ, an opinion prevailed that there were to be two Messiahs, one of the tribe of Ephraim,¹ the other of the tribe of Judah. This opinion referred to the two cycles to come, of which these people had obtained some information—in fact, to the cycles of Jesus and Mohamed.

One of these Messiahs was to be a *suffering*, the other a *triumphant* Messiah. How curiously this dovetails into the history of Jesus and Mohamed! How curiously exhibiting, in the case of Mohamed, an example of a prophecy causing its own fulfilment! I suspect that this superstition has caused many great men to arise, and also, as I conjecture, it caused Napoleon to fall. Nimrod thinks that Brothers and Southcote were instructed by persons wiser than themselves: the time they appeared is very remarkable and suspicious. It is not impossible that vanity or priestly knavery may have whispered to Napoleon that a great one was yet to come, and vanity arising from unexpected success may have re-echoed the whisper, that *he* was the man.

1. In the dark and mystical learning of the middle ages we meet with many very odd circumstances which have never yet been accounted for, but which have in vain attracted the curiosity of the philosophers: until at last the inquiry seems to have been given up as hopeless. The circumstances to which I allude seem to connect the learning called Gnosticism with the Christian and Mohamedan systems: but though a connexion evidently existed, yet it was in an obscure, mystical and incomprehensible way, of which no one could make any sense. All this learning was closely connected with judicial astrology—with a famous prophetic magical demagorgon or brazen

¹ The Editor of Mr. Bruce's Travels has observed, that the word PHRE, which he says means the sun, occurs commonly in the composition of Egyptian names. For instance, Mephres, Uebphres, in Greek Ουεφρης, in Hebrew Hophra, priest of the sun. Vide Marshami Can. Chron. pass.; Bruce's Travels, Vol. II. p. 466.

head, and various idolatrous and Gnostic emblems—with the well-known mysterious man of the mountain or Syrian Assassins, and with the person called Johannes, Butta, and Deus, of whom we have lately treated. On charges intimately related to secrets of this kind the famous Knights Templars were destroyed. The accusations brought against them, as well as their defences, were involved in mystery. This was closely connected with the Millenium, and the Crusades in the eleventh and the twelfth centuries were the effects of that doctrine. The foundation of this was laid in the Virgilian doctrine of the renewed cycles—the expected commencement of the Millenium at the end of 1200 years, or at most in the thirteenth century, and the belief that Mohamed was either the tenth Avatar or Beast of the Revelations, or Antichrist, or the person foretold by Jesus, by Daniel and the prophets, and referred to by the Magician Virgil.¹ And thus came to be united the doctrines of Magic, Heathenism, Christianity, and Mohamedism, an union at first sight totally incomprehensible, of things to all appearance absolutely in diametrical opposition. The expectation of the Millenium was clearly entertained by the Papal See, which, on this account, encouraged the Crusades, and though the Cardinals of course could not believe that Mohamed was the hero of the tenth age or cycle, yet they believed that the seventh millenary or the Millenium was about to come, till the thirteenth century had considerably advanced, probably till after the year 1260, and till its non-arrival had proved to them, as well as to the others, their mistake. Then this dogma, from its evident falsity, was despised, and by degrees almost forgotten. Then and from this cause arose a reaction in the college of Cardinals. From this disappointed superstition, in the time of Leo X., it became Deistical or Atheistical, and how long it thus continued, or if it do yet so continue, may be matter of curious speculation. I have no doubt whatever, that the Romish secret religion was essentially magical or astrological, till about the end of the thirteenth century, when the prophecies of the Millenium failed, and proved its falsity.² Perhaps it might exist in a doubtful kind of way, till after the year 1260 had passed over; then, if not before, astrology became heresy.

In the prosecutions of the Knights Templars, which are known to every body, a certain mystification and secrecy may be observed, as if the whole of the charges against them were not brought publicly out. This arose from various causes. The persecuted were really very religious, and were bound by the most solemn Masonic oaths (and Masonry was intimately connected with these matters) not to divulge the secrets of the order. This caused them to recant at the stake, when all hope had fled, what they had confessed when on the wheel; and by this means they endeavoured to make amends for the secrets betrayed, and the oaths involuntarily broken on the rack. But yet it is charged upon them that although at the last they declared themselves innocent of the charges brought against them, yet they acknowledged themselves guilty and deserving of punishment; but the wickedness which they are said to have confessed is concealed from us. I have no doubt it consisted in part, at least, in having, when under the torture, accused, and thereby having brought on the ruin of, the order. The Papal See having first come at the secrets by means of confession, of persons who had gone over to the Heretics, and afterward repented

¹ I believe a life of Virgil is yet extant describing him as a great magician. And he is said to have been consulted by Octavius on astrology.

² Mr. Gibbon has some very curious and striking passages in Chap. XV. N. 64, 65; Chap. XX. N. 59; Chap. XXI. N. 19, 24, &c., on the Millenium, and on its universal reception in the early ages of the church. (See Burnet's Sacred Theory, Ch. V. p. iii., Justin ag. Trypho, pp. 177, 178, Edit. Bened.; Lact. Lib. vii.; Daillé de Usu Patrum, Lib. ii. Cap. iv.) The Trinitarian doctrines of Philo are shewn to have preceded the death, or probably the birth, of Christ, Ch. xxi. N. 17. It will be of importance to remember this.

and confessed, proceeded with the grèatest certainty; but at the same time in a way which appeared very cruel, and also very mysterious: for it knew the truth, but it would not divulge the mode by which it obtained it, namely, that it acquired it by confession.

Protestants say, these persecutions were undertaken for the sake of the wealth of the order. This I think is a mistake. The ignorant devotees of that day were much more likely *to give* to holy mother church than *to rob* her, and the idea that the Pope would authorize the robbery, by the kings, merely for the sake of giving them the wealth, of the well-trained and disciplined light troops of the church, is out of all probability. That the kings might be tempted to take some of it I do not deny, but most of it was bestowed on other orders, with whom the Templars who were not murdered, after making every required confession, were incorporated. For I do not believe that the Popes put more of them to death than they thought necessary to eradicate the heresy, and to satisfy the bigoted kings. In truth, the bitterness against the Templars was with the kings more than the Pope, and this arose from the knowledge which the conclave possessed that the doctrines of the Templars were only a remnant of those doctrines which itself had professed a very few years before, as we shall soon see. But this it could not explain to the kings.

When in humble life a cobbler confesses to his priest that he has stolen a fallen apple or poisoned his parents, the secret is kept; but not so when a person of high degree confesses such a fact, as, that an extremely rich and powerful body entertain opinions dangerous to the Roman See and to the holy father: then the case becomes very different. For the priest must confess, and from various causes he begins to entertain a doubt how far he is justified in keeping such dangerous, such sinful, knowledge from his superior, to whom at last he states the doubt which presses upon his conscience, or his superior has a scruple how far he is justified in keeping such a secret. The case goes to Rome, by a confidential messenger or by the priest himself. An order to confess in full returns or is given, and along with it a plenary absolution for betraying the secret of confession. In this way it arises, that there are very few things done, or proposed to be done, by courts professing the Romish religion, if they affect the interest of the Papacy, which are not as well known to the Pope, as if they were inserted in the *Diaria di Roma*. In this manner every government of the Romish religion is prostrate before the Pope and his cabinet or conclave of Cardinals, who are all bound to each other by the most solemn oaths, and these oaths strengthened by the knowledge that a breach of them would be followed by the cells of the inquisition, (still retained in Rome for the use of the priesthood,) the poisoned chalice, or the poniard.¹

The doctrines to which I have alluded above, are visible every where in the curious mystical figures always seen upon the monuments of the Templars, in the fishes bound together by the tails, on the tombs of Italy—in the astrological emblems on many churches, such as the Zodiacs on the floor of the church of St. Irenæus at Lyons, and on a church at York, and Notre Dame at Paris, and Bacchus or the God IHS filling the wine-cask, formerly on the floor of the church of St. Denis. Again, in the round churches of the Templars, in imitation of the round church at Jerusalem, probably built by them in the Circlar or Cyclar or Gilgal form in allusion to various recondite subjects which I flatter myself I need not now point out to my reader, and in the monograms IHS and XH in thousands of places. In these mysteries, not only the Cardinals, but the heads and chapters of all the orders of knighthood, and of all the old orders of Monks, were more or

¹ If my memory do not deceive me, the records of Florence testify that the Eucharist, even the *sacred Eucharist*, has been made subservient to the destruction of the enemies of God and the Papacy.

less implicated; and from that part of them more intimately connected with the ancient doctrines of Ionism, arose the profound devotion of all orders of knighthood to the fair sex and the mother of God. That the Gnostic doctrines named above, that is, that Christianity was only a species, or an uncorrupted or reformed kind, of Paganism, were secretly held by the Cardinals in the Vatican, I can scarcely doubt, and I think I shall prove it by and by; and their refusal to believe Mohamed to be the Paraclete is easily accounted for.

In none of the modern histories of the church which have been written, has any attempt been made to penetrate into the secret mysteries of the religion; although every age exhibits avowals or admissions of the heads or chief persons of it, that there were such secrets, the truth of which admissions or avowals is proved by circumstances which can in no other way be accounted for. In the earlier periods we have histories of what different eminent persons have stated them to be; these our writers have handed to us, credulously believing them, and never adverting to this glaring fact, that if such men as Origen had really explained them, they would have been guilty of the blackest perfidy and perjury, and would soon have been murdered: whence it follows, that the explanations which they gave could only have been intended to mislead, or were not meant to apply to the *secret mysteries properly so called*. And with respect to the secrets themselves, they are probably like those of the Freemasons. If they were told by any traitor, so many other false stories were told along with the true ones, that their secrecy is by this means most effectually secured. It is also pretty certain, I think, that this esoteric religion must be of such a nature as to leave room for heresies and philosophical varieties of opinion to take place to a considerable extent, without much affecting it. Now I think in the Millenium and its collateral doctrines of astrology and some parts of Gnosticism these requisites may be found, and most assuredly in almost every age evident proofs of these matters shew themselves, when the history is carefully looked into. These are the causes why so many inconsistencies may be observed in all the accounts of the church, which the writers of them have been unable satisfactorily to explain. When a person reads Mosheim or other ecclesiastical writers, nothing is more easy and flowing than the history: there seem to be no difficulties. But when he examines into the documents on which it is founded, nothing is more difficult.

2. At every turn we meet with some remnants of Paganism, any one of which taken by itself would be of no consequence, but which becomes of consequence when united to many others. Some of these are ridiculous enough. The Pope boasts of being descended from St. Peter, Bar-Jonas, or Janus, *i. e.* son of Janus, and as *he* held the keys of heaven, so the Romanists maintain that their Pope holds them, and, by virtue of this, possesses the power of granting or refusing absolution for sins—opening or shutting the gates of heaven. This is evidently a grand step to universal empire, and it is not surprising that great exertions should have been made to establish it. Various miracles are recorded of St. Peter, at Rome; and, to support the credit of the chief of the apostles, the actual chair on which this Bar-Jonas sat was formerly exhibited. As Bar-Jonas was holy, it followed that the chair on which he sat must also be holy; therefore, a festival was instituted on the 18th of January to the holy chair, which on that day was annually exposed to the adoration of the people. This continued till the year 1662, when upon cleaning it, in order to set it up in some conspicuous place of the Vatican, the *twelve labours* of Hercules unluckily appeared engraved on it. “Our worship, however,” says Giacomo Bartolini, who was present at this discovery, and relates it, “was not misplaced, since it was not to the wood we paid it, but to “the prince of the apostles, St. Peter. An author of no mean character, unwilling to give up the “holy chair, even after this discovery, as having a place, and a peculiar solemnity among the “other saints, has attempted to explain the labours of Hercules in a mystical sense, as emblems “representing the future exploits of the Popes. But the ridiculous and distorted conceits of

“ that writer are not worthy our notice, though by Clement X. they were judged not unworthy of “ a reward.”¹

When the wicked French got possession of Rome, they did not fail to examine this celebrated relic, and lo ! in addition to the labours of Hercules, they discovered engraved upon it, in Arabic letters, the Mohamedan confession of faith.² In these two facts there is a beautiful exemplification of the doctrine held by me and Ammonius Saccas, that all the varieties of religions are at the bottom the same—but including, in the collection known to Ammonius, the modern Mohamedan religion, which will be accounted for presently. I can scarcely conceive a more marked proof of the nature of the secret doctrine of the Conclave. The story goes, that this chair was brought from Constantinople by a Pilgrim, who, of course, could neither see the Zodiac, nor read, nor know, when he saw Arabic letters, that they were the letters of the country where he had been travelling. And it is also clear that the Pope and all the Cardinals who adopted this chair were equally *blind*, and could not see the Zodiacal signs, and equally *ignorant* of the Arabic letters. Besides, it is also manifest, if they did see them, that there was not at that time a carpenter in the Roman dominions by whom these offensive emblems might have been removed from the chair, or who might have simplified the matter by substituting a new one, if one must be had, and if the emblems proved the falsity of the story of its being St. Peter's.

Irony aside, the fact is, there is no doubt that, under these mysterious circumstances, something lies hid. These emblems and letters did not come there by accident : nor are they to be ascribed to the ignorance of the Pope and the whole college of Cardinals, and the priests and the Propaganda employed in educating youth in *Arabic* and other languages for the foreign missions. All these circumstances are full of interest, but I think the time is come when they may be explained. The whole tenure of this work goes to explain the labours of Hercules, the symbols, as Mr. Parkhurst calls them, of what the real Saviour was to do and suffer. For the other I will propose a theory founded on a conditional fact, which, of course, if the fact be not true, falls to the ground.

I have read, but where I cannot now recollect, and which at the time I thought of no consequence, of several missions having been sent by the Popes to convert the Caliph of the Mohamedans to Christianity. This was the ostensible reason given to the Christian world for the missions. But I am of opinion that these missions had also the secret object, if conversion were not possible, of effecting accommodation ; and this was in a great measure caused by the expectation of a Millenium, a doubt whether Mohamed might not really be the person foretold by Jesus ; and a fear, whether he were so or not, that the warlike Saracen, his successor, should overrun Italy and subvert the Papal power. We must not forget that attempts at accommodation would be kept in the most profound secrecy, and if suspected or discovered most strenuously denied—perhaps never committed to writing.

In the history to which I allude, one of the Popes is said to have sent a most arrogant message to the Caliph to require him to turn Christian. This story does very well to blind ignorant people, and for Protestants to laugh at, but I believe that the truth was, that a negociation was attempted with the Caliph by the Pope, which failed, and the story of the Pope's *arrogance* was told, as we have it, to conceal the truth. I know that the idea of an inclination of the Roman Sec to an union with Mohamedism will be treated with ridicule. However, let the Arabic inscription be accounted for ; not by a pretended accident, the *great* resource of *little* minds, but by some rational theory.

¹ Bower, Hist. Popes, p. 7.

² Lady Morgan's Italy.

If the Pope had any inclination to admit Mohamed as the person to be sent, as foretold by Jesus Christ, the Arabic inscription might be placed upon the chair as a preparation for a pretended miracle to establish the fact. Or if the Pope feared the arrival of the Caliph at Rome, he might be preparing for a march out to meet him with the keys of the Holy City and of Heaven in his hand, with a pretence that he was at last convinced by the miraculous inscription on the chair (an imitation of the inscription on the wall at Babylon) that Mohamed was the Apostle of God. The march to meet the conqueror would find an exact precedent in the conduct of the Jewish High Priest (as described in the lying account of Rollin) proceeding, *in Pontificalibus*, in compliance with a dream, (to betray the former race of Messiahs which had restored the temple,) and to deliver the keys of Jerusalem to Alexander the Great, the *new incarnation*.

We shall presently see, notwithstanding the boasted immutability of the Holy See, that at the time of which I am now speaking, it was not so determined against all change as its followers pretend, and that it had not any very great objection to a new incarnation. I think when the reader has perused the remainder of this chapter, he will not consider my theory so improbable as he may do at present. The Arabic inscription must have a meaning.

3. About the time of which I am speaking, there seems to have been something strangely unsettled in the Roman See. This is proved by the fact, now almost concealed by the priests, *that a new Gospel was preached* with its permission, and actively and energetically supported by it, as Mosheim says, for above thirty years. For various reasons, which will be detailed, it was at last suppressed, the zodiac¹ and inscription on the chair were forgotten, and the Templars were burnt.

When the Grand Lama of Tibet made advances to the Emperor of the East—the Emperor of China—informing this wise and politic prince that he would receive him as the eldest son of the church, the cunning monarch accepted the offer, acknowledged the Lama for his father, and thus he became the sovereign and protector of the sacred and holy incarnation of Divine Wisdom at Lassa. When the Grand Lama of Rome made advances, if he did make them, to the Emperor of the West—the Caliph—this prince being less politic than the Chinese, the Western Lama was less successful than his brother Lama had been in the East. Had the negociation succeeded, and a new Gospel taken place of the old ones, how different might have been the state of the world! That the world was ready for a new Gospel I will now prove.

The new Gospel of which I have spoken above was called the *Evangelium Eternum*, and, after being some time preached in the 12th century, was first published in a written book by one Joachim, Abbot of Sora or Flora, in Calabria, of whom I spoke in Chap. V. Sect. 9, from which it was called the BOOK OF JOACHIM.² This Gospel was called the *covenant of peace*. It was intended to supersede all the old Gospels, and by it an union was expected to take place with the Mohamedans and all the other sects, which caused it to have this last name. It had the name of EVANGELIUM ETERNUM, or the EVERLASTING GOSPEL, evidently to insinuate or intimate to those capable of understanding it, that all other gospels were only of a temporary nature. This exactly agrees with the Mohamedan doctrine of the Paraclete. This gospel, known and preached in the end of the twelfth century, was received by nearly all the monks, but particularly by the Domini-

¹ This Zodiac is in good keeping with the Zodiac in the church of St. Irenæus, at Lyons, with the wine cask at St. Denis, with the Zodiac on the church at York, and with many other similar matters.

² This was the same man spoken of before as Abbot of Curacio. Here we see that this Io-akim, that is, Io *the wise*, was also Abbot of *Flora*, the mystic, perhaps secret, name of Rome. These mystic names betray the mystic nature of the system.

cans and Franciscans, and they were most warmly supported by the Popes, who censured their opponents, and particularly one St. Amour, and caused their books to be burnt.¹

The *Everlasting Gospel* was also called the *Gospel of the Holy Ghost*. It had its name of *Evangelium Eternum* from the fourteenth chapter and sixth verse of the Revelation of Ioannes or John, of which it was the completion, and in which, as the *tenth* Avatar, or CYCLE, or Age, which would come or be completed about the end of the twelfth century, it was of course found; for the Apocalypse is a very ancient astrological work on the Zodiacal Lamb, and the doctrine of the ten Cycles and the Millenium. Its other name, given above, of the *Holy Ghost*, or the Peri-clyte, or Para-clete, is evidently in accordance with the Mohamedan doctrine. The Roman See supported the *Evangelium Eternum* by all the means in its power. This gospel announces that there have been two *imperfect ages*, the one of the Father, the age of the Old Testament, and one of the New Testament, under the administration of the Son, and that the third or the perfect one, of the Holy Ghost, which was to be preached to all nations, was at hand. Here, most clearly, we have a doctrine which assimilates again to Mohamedism, and to the expectation of the Millenium.

The *Evangelium Eternum* consisted of three books. *The Liber Concordiæ Veritatis*, i. e. the Book of the *Harmony of Truth*, the *Apocalypsis Nova* or *New Revelation*, and the *Psalterium decem Chordarum*, *Psaltery of the ten chords*, or the *TEN-stringed Harp*. The reader will please to observe that this being a new Apocalypse² will, like the old one, be intelligible only to those initiated in the mysteries; and, this understood, I think I need not explain to him the meaning of the Harp with TEN strings. I think if he will now look over the old Apocalypse again, he will see that its doctrines all refer to the revolution of the different cycles.³ And if he look to the Grecian history he will find that the Lyre of Apollo at first had only *three* strings, but they increased till they amounted to *seven*. The Muses and the Curetes also increased as time advanced, till they got to nine, when the Greek temples were destroyed. They increased as the cycles increased in number.

I believe that throughout all the Roman Christian world, the Gospel of St. Joachim was received. Various circumstances convince me of this. In the latter end of the 13th century when the end of the world was daily expected, the Monks increased in number beyond all credibility, and the most violent commotions arose among them; but, however they might hate one another,

¹ Mosheim, Hist. Cent. xiii. Sect. xxviii.

² Erasmus, Luther, and Calvin, had little esteem for the Apocalypse. St. Jerom saith, (Ep. cxxix. ad Dardanum,) that some churches of the Greeks would not accept it. Gregory Nazianzen has omitted it in his poem about authentic Scripture. The Council of Laodicea, (Can. 59,) held about 364, giving a list of canonical books, hath left it out. Amphilocus, contemporary with St. Basil, saith, that though some inserted it in the legitimate writings, yet the majority did slight it as a spurious piece. Vide Euseb. Eccl. Hist. Lib. iii. Cap. xxviii., also Eccl. Hist. Lib. vii. Cap. xxv. Dorotheus, Bishop of Tyre and a Martyr, owns that St. John writ his gospel at Patmos, but not a word of this book, though the first chapter lets us know that he was in that isle when he had his visions.—Discourse on the Lord's-day, by Rev. Thomas Morer, 1701.

³ The candlestick in the temple had seven branches. The Lamb of the Apocalypse had seven horns and seven eyes, which are the seven spirits of God, and twenty-four elders. When the six seals are opened the stars will fall; that is, at the end of the six millenaries the Millenium will come. 144,000 persons were sealed, 12,000 of each tribe. The mystery will be finished when the seventh angel begins to sound. The number of the Beast is 666. The city is 12,000 furlongs square; the wall 144 cubits. (Rev. xxi. 16, 17.) In chap. xiv. 1, 144,000 is again named. There is a river on each side, a tree of life bearing twelve fruits, one each month, and the most remarkable thing of all is, that the Lord is said, ch. ii. ver. 8, to have been *also crucified in Egypt*. I must now request my reader to look back to Book V., and he will not then be surprised that the chronology of the tribe of Abraham or Judah should coincide with that of the Hindoos; as it is very evident the secret histories of the two nations are the same.

they all joined in supporting the *evangelium eternum*. An instance of this may be found in the works of St. Amour which I have not been able to see, for though he attacked the Mendicant orders with the greatest bitterness, he founded his proofs against them on the *everlasting gospel*; he attacked them with their own weapons.¹ The reason why we have very little left respecting this gospel is to be found in the fact of its universal reception, for all parties being equally exposed to ridicule when the failure of the Millenium took place, all were equally interested in letting the subject die and be forgotten. But I think such as retained any of the doctrines were persecuted as Manichæans.²

4. After the devotees and followers of the new Gospel, in the 13th century, had in vain expected the *holy one* who was to come, they at last pitched upon St. Francis as having been the expected one, and, of course, the most surprising and absurd miracles were said to have been performed by him. Some of the fanatics having an indistinct idea of the secret doctrine of renewed incarnations, or letting their knowledge of the principle of renewed incarnations escape in the heat of controversy, maintained that St. Francis was "*wholly and entirely transformed*³ into the person of "*Christ—Totum Christo configuratum.*"⁴ Mosheim says, by some of them the Gospel of Joachim was expressly preferred to the Gospel of Christ.⁵

The Gospel of the Holy Ghost, or the *Evangelium Eternum* of the book of Joachim, was never censured or in any way suppressed by any act of the Pope, but only the introduction to it, which deduced from it the downfall of the Holy See. John of Parma, General of the Franciscans, who was one of the most violent of its supporters, has a place among the saints in the *acta sanctorum*.⁶ He preferred the Gospel of Joachim to that of Christ. Nothing can be more erroneous than the representation of Dr. Maclaine, that it was only supported by a few Franciscans, called spirituals, when it was at least for more than half a century supported by the whole Romish Church; how much longer I do not know. It is necessary carefully to avoid falling into the mistake of supposing, that those who wrote against the Mendicant orders wrote against the *Evangelium Eternum*, which was received by them, for they had many adversaries who received the gospel as eagerly as they did.

All these matters shew, with the Popes, policy, with the *common* Monks, fanaticism. As might be expected, among the monastic fanatics, who were not entrusted with the High Secrets of the Conclave, different opinions and the most violent controversies arose, each claiming for his own order the chief merits of the new gospel. After a certain time this placed the Holy See in a most awkward dilemma. It could not condemn the gospel which it had supported, and on which it had so far relied as to believe that, at the commencement of, or some time in, the thirteenth century, the millenium and the completion of the ten cycles, or the completion of the famous 1260 years, would arrive. But after the failure of its prophecies, the Holy See could no longer support it. It could not explain to the intemperate monks the real secret, and it did not like to persecute; perhaps did not *dare* to persecute the light troops of the church—the united Dominican, Franciscan, and Augustinian Monks, all of whom supported the new gospel.

¹ Mosheim, Hist. Cent. xiii. p. ii. Sect. xxviii.

² Ibid. Sect. xxxviii.

³ The word transformed is used here to conceal the metempsychosis and renewed incarnation. It has the same meaning as the word transfigured in the gospels.

For particulars relating to St. Francis see the works of Bartholomew Albizi or de Albizis, particularly that called *Liber conformitatum Sancti Francisci cum Christo*, Venice, fol.; or *Antiquitates Franciscanæ sive Speculum Vitæ beati Francisci et Sociorum*, &c., Cologne, 1623; also the work of Peter of Alva and Astorga, entitled *Naturæ prodigium, Gratiæ portentum*, &c., Maduti, 1651, fol.

⁵ Ibid. Sect. xxxiv. note.

⁶ Tom. III. Martii, p. 157.

The Rev. Dr. Maclaine says, that the *Evangelium Eternum* consists, *as productions of that nature generally do* (how true an observation!) of ambiguous predictions and intricate riddles. This is what we might expect. After it had been published some time, and had received the greatest support possible from the Popes and all orders of Monks, the Franciscan fanatic *Gerhard* published the work called an introduction to this Gospel, in which he censured the vices of the Church of Rome, and in set terms prophesied or deduced from the *Evangelium Eternum* the destruction of the Roman See. This appeared in the year 1250, close upon the last period to which the Millenium could be delayed, viz. 1260 years. As this dreaded moment approached, the passions of the different orders of Monks were excited to the greatest height. *Gerhard's* book was burnt and its author was persecuted, though his followers, among the Franciscans, claim for him the gift of prophecy, and place him among the saints. The followers of St. Francis generally—the great supporters of the new gospel—and *Gerhard* maintained, *that he, St. Francis, who was the angel mentioned in the Revelations, ch. xiv. 6, had promulgated to the world the true and Everlasting Gospel of God: that the Gospel of Christ was to be abrogated in the year 1260, and to give place to this new and everlasting gospel, which was to be substituted in its room: and that the ministers of this great reformation were to be humble and barefooted friars, destitute of all worldly emoluments.*¹ This was stripping off the veil and shewing the meaning of the eternal gospel without disguise. It excited the most lively feelings of surprise, of hope, or of indignation, according as it suited or opposed the opinions of the different fanatics. The Pope did not according to the usual plan burn the author, the book only was burnt, and its author mildly censured *and banished to his house in the country*. This took place in the year 1255, when the parties, expectants of the Millenium, must have been in the highest state of fear and anxiety.

The year 1260 arrived and passed away; but, wonderful! the sun did not cease to give its light; the moon and the stars did not fall from heaven; nothing particular happened; the pious fools stared one at another, and the impious rogues laughed. The Pope and Cardinals at Rome, half rogues half fools, and the fools every where else, finding themselves all in the wrong, soon began to charge the folly upon one another, and as they had quarrelled before who should display the most zeal for the *new* glad-tidings, they now began to quarrel about who should bear the blame—each shuffling the odium on to some other. Dr. Maclaine, feeling the extreme degree of ridicule in which the whole thing involves the church, and not understanding the truth in the slightest degree, or not suspecting that it had any connexion with the Millenium, in endeavouring to throw the whole blame on an obscure small sect of Franciscans, only exposes his unavailing wishes and contradictions. He and Mosheim have clearly proved the *great* and, indeed, I may almost say, the *universal* reception of the Everlasting Gospel. After some time, the fanatics having, by degrees, ceased to preach, and the Popes to support, the new gospel, the old gospels recovered their credit, and the friends of the new one died away, or were burnt as they came to be considered heretics. We must not forget that the exact period when the 1260 years of Daniel were to commence was always, as it yet is, a matter of great doubt with devotees: and it seems pretty clear, that in the encouragement of St. Francis or of the Gospel of Joachim, the Pope went upon the idea that the tenth avatar was to commence at the end of 1260 years, not to end at that time. At all events, uncertainty is in the very nature of the case, and it appears very probable that the court of Rome endeavoured to guard against whatever might happen. This was exactly in character with the Arabic inscription on the chair.

It is very curious to observe, that this gospel is now so completely forgotten or concealed, that

¹ And, I have little doubt, along with this, the Spencean doctrine of *equality of property* among all its votaries.

there is not throughout Europe one in a thousand, of commonly well-educated persons, who knows that there ever was such a gospel; though it is very certain that if, with our present mystics, the 1260 years had been foretold to end in 1860, instead of 1260 years after Christ, the whole religion of the Christian world might have been completely changed, and a new gospel would have been received, and, in St. Joachim or St. Francis, we should have had a rival of Paul, *another apostle born out of due season*. If we look back to the history of the world in the fifth and sixth centuries, we shall find that the Monks in that day swarmed almost beyond credibility. This, like their increase in the eleventh and twelfth centuries, arose from the expectation of the Millennium about the year 600, and I have no doubt that thousands of the order, a little later, joined the armies of the prophet of Arabia. After the time fixed for the Millennium to commence had passed away, it appears that various writings, called *the Gospel of Joachim*, were handed about Italy, but each of them denied, by the Papists or Monks, to be the *real gospel*. This was done in order to enable them to parry the ridicule to which it and they were exposed, by saying, in each case, that it was not the real book. On this account it would be impossible to make out the real gospel if it were worth any person's trouble to attempt it, which I think it can hardly be.

A little time ago I observed that Mr. Mosheim had said, that the *Evangelium Eternum* was in fashion or was received for more than thirty years. No doubt this gospel history is as disagreeable to Mosheim as to the priests of most other sects, but he had too much principle or too much regard to his own fame to suppress the history: yet he softens and disguises where it is in his power. It is true, as he says, that it was received for more than thirty years, for it was preached (I do not speak here of its being written) before the end of the twelfth century (how long before I do not know), and the introduction to it; and the explanation of Gerhard, though grossly libellous on the Roman See, was not burnt till the year 1256, which shews it to have been preached for more than fifty years at least; so that before the Church consented to burn Gerhard's book and inflict the dreadful punishment on him, (how different from its general treatment of heretics!) *of sending him to his family residence from Paris*, it probably made itself certain that the great expected event would not happen according to their reckoning in the year 1260.

After the expectation of the Millennium had entirely passed away, and the power of the Saracens seemed to increase, the Popes became more than ever embittered against the Mohamedans, and equally furious against all who supported any thing relating to the now become obsolete Gnostic or Cyclic doctrines, or the expectation of a Millennium. This accounts, in a very satisfactory manner, for the zeal of the Popes up to a certain time for the new gospel, and their bitterness afterward towards the Templars and the Albigenses, among whom some remnants of these superstitions remained. The peculiar circumstance that a great part of these doctrines was necessarily involved in the greatest obscurity, and kept secret with the greatest possible care, being, in fact, the esoteric doctrine, accounts for many of the apparently inconsistent circumstances which we every where meet with. It easily accounts for them all.

There can be no doubt that the adoration of the Maria, the Regina Cœli, the mother of God, existed before Christianity. But it was brought forward into more notice after a certain time in opposition to Mohamed, and I cannot much doubt that it was on this account adopted peculiarly by the orders of knighthood: for the religion of Mohamed was utterly opposed to every thing which had the least tendency to the adoration of the *female principle* or Ionism. This has given countenance to the assertion of Protestants that it did not come into the Romish Church till about the eighth century, comparatively speaking a recent period. But they have fallen into this mistake, from their zeal to make it out to be a modern corruption, fearing that if they admitted its antiquity, they would prove it to be an integral part of Christianity. The black virgins and Bambinos of Italy are far older than Christianity. For these reasons the Carmelites, the great

friends of the Virgin Mary, the female generative power in opposition to the male, were brought forward in a peculiar manner by the Popes, and became their favourites to so absurd a length, that those Popes countenanced the doctrine, that every person who died with the scapulary of the order on his shoulders was certain of eternal salvation.¹

As we have seen, the grand reason which caused the Crusades was the expectation of the Millennium; the desire to be present at Jerusalem, at the grand day when the Son of Man should come in his glory—the great day of God Almighty. Here we have the real reason of the Crusades. The wish to protect a few pilgrims, was but a very small part of the cause which moved the millions to the Holy Land.

There is a book referred to by Dr. Maclaine called the *ALCORAN DES CORDELIERS*, which shews, I think,² that St. Francis was set up by his followers as the *tenth Avatar* in opposition to Mohamed. At all events it certainly is designed to shew, that he was intended to supersede Jesus Christ. Every sect of religionists receiving the millenary system believed themselves to be the favourites of God, therefore, of course, they believed that the tenth avatar would appear among them; they were therefore ready to catch at any extraordinary person as he whom they expected—as he who was the desire of all nations. Thus we have several ninth avatars, and several tenth avatars running at the same time in different places.

In former parts of this work we have seen that the Jewish patriarchs were said to have had their images in the temple at Mecca before the time of Mohamed, along with an effigy of a Dove, which Mohamed himself destroyed. This seems very singular. We have seen also what has been said of the Ishmaelites having brought the language, at that time the same as the Jewish or Chaldean, from the mountains of Upper India. We have also seen that the Brahmins count Mohamed among the incarnations, admit him to have been a Vicramaditya or a holy energy, (as Col. Tod would say,) and that they formerly frequented and made pilgrimages to the temple at Mecca. May not Mohamed have been merely a Deistical reformer of a mythos, the same as that of the Afghans of Upper India, corrupted by his successors? The Koran, forged twenty years after his death, offers no impediment to this. Or may not Mohamed have been announced by himself as the tenth avatar, and the Koran a made-up article, partly invented and partly formed from the memories of his followers, of such speeches as he delivered at different times and they remembered, merely to deceive the vulgar, to whom the secret mythos was never trusted in any country, and which was never known till it got out by degrees.³ This will be found to be in perfect keeping with the secret doctrine of his religion, which I shall explain by and by. The above theory respecting the Koran is very nearly accordant with the history which we have. That it should be forgotten since the failure of the Millennium is no way surprising.

5. In the Western part of Asia in the beginning of the twelfth century, the sect or religious tribe called Ishmaelians or Battenians or Assassins began to be noticed. Many persons have attempted, and some are now attempting, their history, which is in a high degree difficult and mysterious; but the number of these historians shews, that they have none of them yet given satisfaction. As usual in cases of this kind, the reports of the enemies of these people, almost without discrimination, have been received as historical evidence by those who have undertaken

¹ See the work of Benedict XIV. *De Festis B. Mariæ Virg.* Lib. ii. Cap. vi. p. 472, Tom. X. opp. edit. Rom. Moshem, Cent. XIII. Part ii.

² Tom. I. pp. 256, 266, 278, &c.; Luc. Waddingi *Annales Minor.* Tom. III. p. 380; Mosh. *Hist. Cent. XIII.* Part ii. Ch. xxx.

³ It is a very singular circumstance that not one of the four great teachers of the doctrine of Wisdom in the Western world, Socrates, Pythagoras, Jesus, or Mohamed, left any memorial of his existence or of his doctrines in writing.

to give us an account of them. This renders all these histories doubtful to a philosopher who understands the value of evidence and chooses to attend to it. The case is very difficult, for we have scarcely any other documents than those reports to resort to. I flatter myself that it will be in my power to cast a ray of light on this obscure subject. But the severity of my rule in cases connected with religion of scarcely ever taking the testimony of an opponent, without it have some other support, as conclusive, will reduce our knowledge of them, as the same rule reduces the history of Mohamed, to a very small compass. I believe there is not a single written document of the Ishmaelites in existence. They were equally at war with the Mohamedan Caliphs, the Christians, and the Jews. They are now nearly extinct. I think I can shew how this all arose. They seem at one time to have been considered in Syria with the same kind of horror with which the imaginary vampires were considered in Germany formerly, and probably a horror not much better founded. If we may believe the Arabian historians the murders which they committed were innumerable. But every fire or robbery seems, without discrimination, to have been attributed to them. Of some of the crimes with which they have been charged they have been proved innocent, and it seems not improbable, that their name has been used as a very convenient cover under which the governors of the Arabian towns might revenge themselves with impunity on their enemies.

M. Quatermere, from an anonymous Persian author, says, that they called themselves *Partisans de la secte qui conduit dans le droit chemin*, and Mirkond calls them *Les Sectateurs de Babon*.

About the same time, at least in the same Cycle, when St. Francis was set up by the Cordeliers for the last manifestation of God on earth, previous to the Millenium, these Assassins were first noticed in the Western world with their chief Hakem¹ Bemrillah or Hakem-biamr-allah, who was held up in Syria for the same person. He was said BY HIS FOLLOWERS to be THE TENTH AVATAR, or, as I suppose, incarnation, and, as I have said, the founder of what his enemies called the Assassins. His ideas of God were very refined. The first of the creatures of God, the only production *immediate* of his power, was the *intelligence universelle*, which shewed itself at each of the manifestations of the Divinity on earth; that by means of this minister all creatures were made, and he was the Mediator between God and man. They called themselves *Unitarians*. This *intelligence universelle* is evidently the Logos, Rasit, or Ἀρχη or Buddha or Μητις of which we have seen so much. In the doctrine of the ten incarnations, and that Hakem was the tenth, and in the *intelligence universelle*, we have the complete proof of the reality of the system which I have been developing and tracing through the six thousand years from the first of them. It completes my proofs if any were wanted. It was not discovered by me till more than half this volume was printed.

I think it seems probable that the followers of Bemrillah were originally adorers of Taurus or the Calf or Calves, which they continued to mix with the other doctrines of Buddha, and that after Hakem's death they returned to the superstition of their ancestors, a very likely effect to follow among an ignorant people, when the disappointment of the expected Millenium happened. I have little doubt that the Templars were followers of this Bemrillah. Much curious matter respecting these people, under the name of Druses, may be found in the 3rd Vol. of the Transactions of the Academy of Inscriptions, An. 1818, and in my Celtic Druids.

¹ The word Hakem is nothing but the word חכם *hkm* which means *wise*. All physicians in the East are called Hakem. This man was believed to be the tenth incarnation of Divine Wisdom; another Solomon, who I am persuaded was an incarnation of the Rasit. If this Ishmaelite had not claimed to be something more than common, the word Hakem might have been considered merely a title of honour. It is curious to observe how constantly the incarnation of the Wisdom occurs.

The reason why we have such a horrible idea of the man of the mountain and of the Assassins is, as I have said before, because our informants, as usual in religious matters, take their accounts from the enemies of the persons of whom they write, from persons blinded by bigotry and hatred to their enemies to such an excess, as to think it meritorious to practise any fraud to injure them.

Of the old man of the mountain and his sect or society of Assassins, a history has lately been written by Mr. Von Hammer, of Vienna, who has from his command of books and knowledge of languages every requisite qualification, *one excepted*, to unravel the mystery which surrounds them, but unfortunately the wanting qualification is indispensable—*an enlarged and unprejudiced mind*. He was the author some years ago of a treatise, in the Mines de l'Orient, called *Mysterium Baphematis revelatum*, but which was in reality a treatise on the Knights Templars, in which the same illiberal and narrow mind is displayed as in this history. Besides, there is some reason to believe that he is merely playing a game to please his enlightened master the leaden-headed Emperor of Austria. But certain facts may be gleaned from his work which are of importance. It is very certain that the Ishmaelians or society of Assassins is a Mohamedan sect; that it was at once both a military and religious association, like the Templars and Teutonic Knights; and that, like the Jesuits, it had its members scattered over extensive countries. It was a link which connected ancient and modern Free-masonry.

A man called Hassan Sabah is said to have first founded the dynasty of Assassins, which continued for seven or eight generations, in 1090, at Almawt or the Eagles' nest, between Cazvin and Gilan. He was called Sheikh al Jebal or chief or elder of the mountains.¹ Saba means *wisdom*, as I shall presently shew. Thus we have Hassan *the wise* and Bemrillah *the wise*.²

The Assassins seem to have shewn themselves to the Western writers about the same time in two places; one party consisted of the Ishmaelians from the North-east, under Hakem Bemr-illah, and the other under Hassan Saba, Caliph of Egypt; and I think, if there was any separation between the leaders, it is probable that their followers united. And if this were the case we should have two Mohamedan tenth avatars; but this is not quite clear. According to the Ishmaelites of the East the incarnation descended in the same manner as it does in the Lama of Tibet. But Hassan Saba, it is expressly stated, claimed to be *the tenth* incarnation. The principal was called Sheikh-el-JEBEL, of which Mr. Hammer says, the Latin *Vetus de Monte* is a fair translation. Now this is a very curious corruption or example of a devised double meaning. The word Jebel translated *mount* is the Hebrew word גבל *gbl*, and means *Cabala* or *tradition of Wisdom*, and was the name given to a mount in Palestine, which was thus the mount of the tradition or Cabala, whence the word Gibel came to have the meaning or to be translated a mount. It is often called Giblim—*verbum sapienti*. Thus he was not the old man or the father of the mount only, but of the *tradition of Wisdom* or doctrines handed down by tradition.

גבלים *Gblim*, Drummond says, "*were master Masons, who put the finishing hand to the Temple of Solomon.*"³ In 1 Kings v. 18, the word in our translation rendered stone squarers, is גבלים *Gblim*. This the LXX. render Βυβλιῶται. This is said to mean men of Byblos. This is named Ezek. xxvii. 9.⁴ Byblos was the city of the Bible or the Book; which contained in the language of parable the Cabala, or גבל *gbl* or *cbl*. These were the Masons who lived at this town, and I dare say might be the operatives who finished the temple, of whom I have treated in Bk. VIII.

¹ Ouseley, Sir W., Trans. Soc. Lit. Vol. II. p. 22.

² See Dulaure's Hist. of Paris, Tome VIII. pp. 87, 90, &c.

³ Orig. Vol. III. p. 192.

⁴ Maundrel's Travels, p. 45.

Chap. IV. Sect. I. We must also observe that of whatever age the principal of the Assassins might be, he always bore the name of *old man*, which was a title given to Buddha, in India and Scotland. In fact, it was only a Saga, Sagax or Sage. The true character of this name Christian writers disguise by the designation *old man*.

Thus we have here a tenth avatar descending, like the Lama of Tibet, from the East, and a tenth avatar in like manner in Egypt, in Hassan, *from whom the Illuminati are descended*. The Ishmaelians seem to claim to be the same as the Imaums of Persia, and Mr. Hammer, I think, gives us reason to believe that the Koran was held to contain a secret doctrine, and that Mohamedism was, in this respect, like Christianity, (*“which was in its origin a secret society;”*¹) a fact, as I have before observed, which was maintained by the Mohamedan writer Avicenna—a fact of which I have no doubt, and a doctrine which I shall presently explain.

I have no doubt whatever that Mohamed was considered, in his day, as the tenth avatar: and again in the time of Saladin and Hakem Bemrillah, that they were each so considered² by their followers, and as such were considered by Christians either as Antichrists, or, as Joachim of Calabria informed Richard the first, the last head of the beast, the immediate forerunner of Antichrist—and of course, as Joachim would tell him, a head to be cut off by him.³ We will now endeavour to find the meaning of the word Assassins.

6. Duret says, Chascheddim, qui est à dire le nom de Chaldees, sous l'appellation duquel sont comprises tant en général que special toutes les sects des sages de Babylonne, signifie proprement, et particulièrement dans iceluy Daniel au dire de S. Hierosme un genre d'hommes, que le vulgaire des Latins appelle en langue Latin Mathematicos, et Genethliacos, Mathématiciens et Genethliques. He presently adds, Philon Juif au liv. d'Abraham en parle en ces mots.⁴ We have found these Chasdim or Casideans in the country of Calida. I believe they were followers of the holy Lamb that taketh away the sins of the world, of the college of כשב *ksb* or שה *se* a lamb. Here we see, Duret says, the Chaldeans were called *Mathematici*, an observation which will presently be found of much consequence. Duret says, Chascheddim is כשדום *csdum*, with vowels *csedim*.⁵ The Chas-chisdim were the Chaldeans or Assaceni, or Assacani named by Rennell.⁶ The כש *ks* or כסדי *ksdi*, the Chasdim or די כס *di ks* were holy numerators or calculators. Cicero says, that Chaldean implies Sabæan.⁷ But I shall presently shew that the word Saba means *wisdom*.

The word Chaldeans is said to be a corruption of the word Chasdim, and this is most clearly the same as the Colida, and Colchida, and Colchis, of Asia, and as the Colidei, and Culdees of Scotland. Now all this, and the circumstances relating to the Chaldees, often called Mathematici, to the Assassins, the Templars, Manichæans, &c., being considered, the name of the Assassins or Hassessins or Assanites or Chasiens⁸ or *Alchaschischin* will not be thought unlikely to be a corruption of Chasdim, and to mean Chaldees or Culdees—Culdees at York, a certain class noticed in my *Celtic Druids*—and that they were connected with the Templars. When the Arabic emphatic article AL is taken from this hard word Al-chaschischin it is Chas-chis-chin. The Assassins were also called Druses or Druiseans: in my *Celtic Druids* I have *proved* these Druses to be both Druids and Culdees. In all accounts of the Assassins they are said also to have existed in the East in considerable numbers. They are also stated to have been found numerous by B. De Tudela,⁹ not very far from Samarcand or Balk—where he also describes many great tribes of

⁹ Ch. xv.

what he calls *Jews* to live, *speaking the Chaldee language*, occupying the country, and possessing the government of it. He says that among these Jews are disciples of *the wise men*. He says they occupy the mountains of *Haphton*. Here are, I think, the Afghans too clearly to be disputed. Under the word Haphton lies hid the word Afghan, and the disciples of the *wise man Hakem* frequented the temples of Solomon in Cashmere, &c., and were called Hkem-ites, Ishmaelians, and Batteniens, that is, Buddhans, of whom I shall say more presently.

In the students of the College of Cashi or Casi, who spoke Chaldee, I think it probable that we have the Kasideans or Asideans, the word only aspirated, who make a figure in the history of the Temple of Solomon, and of the Jews in the time of the Maccabees, and whose origin has never been satisfactorily accounted for. These Casideans, speaking Chaldee, were the Chaldeans called Chasdim, and it does not seem very unlikely that they may have been a branch more particularly devoted to operative architecture than others of the Chaldeans or Cali-dei. A learned writer in the Edinburgh Encyclopædia says, “The Kasideans were a religious fraternity, or an order of the *Knights of the Temple of Jerusalem*, who bound themselves to adorn the porches of that magnificent structure, and to preserve it from injury and decay. This association was composed of the greatest men of Israel, who were distinguished for their charitable and peaceable dispositions, and by their ardent zeal for the purity and preservation of the temple.”¹

The Cambridge Key² says, “He obliged Mahadeva the son of the first created to retire from the city of Casi or the splendid, and to reside on the Mandara Hill, or Holy Mount. With this body of evidence before us, we must either reject the Hebrew, or admit the Hindu and Chaldean account of the Antediluvian world. For this coincidence of dates may be considered mathematical demonstration.” Here, I think, in this city of Casi, I have Gaza, or Gazamera or Ajmere, and here I have for the sacred city, the Cyclopæan Mundore of Mewar-Rajahpoutana. There were several Casies, as we have several towns called Universities, as we have others called Colleges.³ The word college was probably derived from its being the place where the Colidei resided.

It is a very extraordinary thing that the Christian Templars should call themselves Templars in honour of the Temple, the destruction of which all Christians boasted of as a miraculous example of Divine wrath in their favour, as Christians. This goes to prove the Templars much older than the Crusades, and that the pretended origin of these people is totally false. I can entertain little doubt that their origin is to be sought in the College of Cashi, and the Temple of Solomon in Cashmere, or the lake or mere of Cashi. I do not think the Calidei had their name from the Chasdim, but the Chasi-dim were Calidei. The Gymnosophists, the Kasideans, the Essenes, the Therapeutæ, the Dionesians, the Eleusinians, the Pythagoreans, the Chaldeans, were in reality all an order of religionists, including among them, and consisting in great part of, an order of Monks, who were, in fact, the heads of the society.

The Teutonic Knights seem to have been the first instituted, but I think it appears that they were grafted upon a class of persons—charitable devotees—who had settled themselves, as the historians say, near the temple at Jerusalem, to assist poor Christian pilgrims who visited it; although the real temple had disappeared, even to the last stone, for a thousand years. This shews how little use these historians make of their understandings. They are said to have come from Germany, from the Teutonic tribes. The word Teut is Tat, and Tat is Buddha. The name of

³ Cali-age-aji-ai.

Buddha with some of the German nations was Tuisto, and from this came the Teutones, *Teutisci*, and the Teutonic Knights, and the name of Mercury *Teuisco*.¹

The Knights of St. John are first noticed, as a society, existing near the ancient temple of Jerusalem, when a person called Raymond Dupuis distinguished himself among them. Our superficial historians, who seldom have any taste for deep researches, suppose they arose then, but it requires but little penetration to see that there is no proof whatever that they then arose. At first they were attached to no one of the orders, but were probably (without having the name of Carmelites) of the Essenean or Therapeutic ascetics of Carmel in the West, or Tibet in the East. It is probable that they existed in Jerusalem in the time of its capture by the Saracens. They would be *Χρησianoι* or *Sophitæ*, as were, I do not doubt, the ancient Carmelites.

All temples were surrounded with pillars recording the numbers of the constellations, the signs of the zodiac, or the cycles of the planets, and each templum was supposed in some way to be a microcosm or symbol of the temple of the universe, or of the starry vault called *Templum*.² It was this *Templum* of the universe from which the Knights Templars took their name, and not from the individual temple at Jerusalem, built probably by their predecessors, and destroyed many years before the time allotted for their rise, but which rise, I suspect, was only a revivification from a state of depression, into which they had fallen. I shall return to the explanation of the word templum in a future book.

All the temples were imitative—were microcosms of the celestial *Templum*—and on this account they were surrounded with pillars recording astronomical subjects, and intended both to do honour to these subjects, and to keep them in perpetual remembrance. We have records of every cycle except of that of the beast 666. We have in Abury the cycles of 650—608—600—60—40—30—19—12, &c. We have the *forty* pillars around the temple of Chilminar, in Persia;³ the temple at Balbec, with *forty* pillars;⁴ the Tucte Solomou, on the frontiers of China, in Tartary, called also the Temple of the *forty pillars*. There is the same number in each, and probably for the same reason.⁵ In the Temples at Pæstum, on each side of the Temple *fourteen* pillars record the Egyptian cycle of the dark and light sides of the moon, as described by Plutarch, and the whole thirty-eight, which surround them, record the two Metonic cycles so often found in the Druidical Temples. All temples were originally open at the top; so that twelve pillars curiously described the belt of the zodiac, and the vault of heaven the roof.

Theatres were originally Temples, where the mythos was scenically represented; and, until they were abused, they were intended for nothing else: but it is evident that for this purpose a peculiar construction of the temple was necessary. When Scæurus built a Theatre in Greece he surrounded it with 360 pillars. The Temple at Mecca was surrounded with 360 stones, and in like manner with the same number the *Templum* at Iona in Scotland was surrounded. The Templars were nothing but one branch of Masons; perhaps a branch to which the care of some peculiar part of Temples was entrusted, and, I think, that the name of Templars was only another name for Casideans.

¹ Pownal on Antiquities, p. 29, says, Now *Θετταλια* *Θατταλια* and *Θεσσαλια* are the same: but T'uat' dale in the Celtic means, relatively speaking, northern district. Will any one deny that *Θατταλια* and T'uat'alia are the same? This Tuatalia, which is Thessaly, is *Tiwastu* the name of Buddha; and, with the *ia* added to it, Thessalia, the country where we have found the Indian mythos described so clearly. See Book V. Ch. I. Sect. 2, and Book X. Ch. II. Sect. 11.

² *Templum* is shewn by Cleland to be a Celtic word.

³ Chardin.

⁴ Maundrell.

⁵ Forty is one of the most common numbers in the Druidical temples.

In many striking particulars Mr. Von Hammer has shewn the similarity of the Assassins to the Templars, so that they might be mistaken for branches of the same order. It seems very certain too, that they had each a secret doctrine or mystery, which was guarded with the most anxious care, and with the most sacred oaths; and we shall see from circumstances, that this secret was probably the same in the two societies. We must not forget that the Templars were an order which was said to have arisen about the twelfth century,¹ when the Millenium, as we have seen, was daily expected, and that it arose in the country which was a part of that in which the old man of the mountain resided, viz. in the lofty and inaccessible forests of Lebanon, where his followers are now known by the name of Curds, or Culdees, or Druses, treated on in my Celtic Druids. There it is shewn that these Druses still retain the adoration of the golden calf, and have some other religious practices (common to the Israelites in the desert of Sinai) which they are said, in a very unaccountable manner, to mix with both the Mohamedan and Christian doctrines—an extraordinary circumstance, which our travellers, not knowing how to account for, attribute to ignorance, and thus endeavour, with such flimsy pretences, to satisfy their own minds. But though these residents of Mount Carmel (the residence of the Carmelites) may be ignorant now, their religious rites are not the produce of ignorance, but of ancient learning.

7. I will now point out a circumstance certainly true and most extraordinary. The Christian Knights Templars, the enemies of all Mohamedans to the extreme length of being sworn never to make peace with them on any conditions, entered into a conspiracy with these Mohamedan sectaries, Ishmaelites, Battaneans, or Assassins, by which they agreed to betray to them the rich city of Damascus, in return for which the city of Tyre was to have been given up to them. The attempt miscarried, but it proves the connexion between the two bands of fanatics, and fanatics do not often unite except there is something in common in their fanaticism. However, there can be no doubt that there were certain points of religion common to the Ishmaelites, or these Mohamedan sectaries, and to the Templar Christians. These I think could be no other than those for which the Templars were persecuted and destroyed. And if the doctrine of the Gnosis, the Millenium, or of the renewal of cycles, were the foundation of them, as I believe it was, we see at once why they should be of all the three religions. In the time of the illustrious Saladin,² the head of the Assassins was called Sinan, and claimed to be, or was said by his followers to be, an incarnation of the Deity. Here we come to the old story. As we have seen, the society, like most others of its kind, had its secret mysteries, guarded by its most solemn oaths; and Mr. Von Hammer, like all other historians of societies of this kind, gives them to us with as much precision as if they were daily proclaimed from the top of the mosque by the crier. I suppose I need not follow him. What they were we can never know: but, from the circumstances or facts which I have described above, I think we have reason to believe, they were all of the same kind as the mysteries of the Millenium, Gnosticism, &c., &c., which I have traced over such a large part of the world, and from such a remote antiquity. And I think my reader now will not be surprised to find this old man of the mountain called by the then singular names, among others, of Ioannes, Butta, and Deus. It was of the first importance to the Templars to possess Tyre instead of Damascus. They would have been separated in Damascus from all their immense estates in Europe; but in Tyre, by means of fleets, they could extend their arms every where.

¹ Jerusalem was taken by the Christians in 1099, and retaken by Saladin in 1188. The Knights of St. John are said to have been instituted in 1099, the Templars in 1118, the Teutones in 1164.

² In Reynaud's History of the Crusades, p. 320, an account is given of a negociation between Saladin and Richard, when the former demanded the surety of the Templars for the performance of the treaty, which the latter refraining to give, the treaty went off. They would trust the people who were of their own religion.

The Templars had no where possession of a city as a sovèrign power, though they had armies. If they had obtained Tyre, they would then have been a sovèrign power, with an army of devotees, and fanatical traitors, and immense wealth, in every country of Europe, which the governments dared not to touch. It is quite clear to me that if they had gone on till they got one of their order elected Pope, they would instantly have been sovèrigns of Europe, and all the kings their vassals. The Templars possessed 9000 manors in Europe, the Knights of St. John 19,000. ¹

Just now I observed, that the old man of the mountain was called Ioannes, Butta, and Deus, and that one of the names of his people was Battenians; this, of course, is the same as Buddæans. It is very clear that a close connexion existed between them and the Templars, and we find the Templars adopt for their emblem or distinctive badge, or coat of arms, a very peculiar cross, which is that worn by the Manichæans who were followers, as we are told, of one Buddæus, and also of Thomas of India. The doctrines of the Manichæans are also, in many respects, the same as those of the Assassins and the Templars. This cross is also found to be the emblem of the Buddhists of India. It is of a very peculiar and striking kind; it is red, and is mounted on a Calvary. It is an emblem of the tree of life; it is the tree *Taranis* of the Druids.

I much doubt the existence of Manes. At all events, if there were such a person, he was an Indian follower of Buddha, or of the *Xρης*-ism, of the Tamuz, of India, a follower of the God Crisen of the Tam-uls. His sect had a book called the TREASURE or the book of perfection. This was probably an imitation of the Sophi Ibrahim of Persia.

I am not a Masonic Templar, but I have ascertained that one at least of the symbols of the Masonic Templars is the eight-pointed red cross of the Buddhists and the Manichæans. See my figures 12 and 13. This completes the proof that they are a remnant of the same sects or orders of men. When I inquired into the history of the Templars, I said to a brother of the order, If you be a remnant of the ancient oriental philosophers of India, you will have the eight-pointed red cross for your symbol; and I found they had it. I am of opinion that the Templars or Casidæans were resident in the city of Jerusalem when it was taken by the Christians. Perhaps in former times, after the destruction of the temple and the rebuilding of it, or of the present building which stands in its place, they applied their services to the new temple as they had done to the old one, and if they professed the Cabalistic doctrines which I attribute to them, and the doctrines of Sophism which I shall presently explain, there is no inconsistency in their doing so.

If the Knights Templars were converts to the belief that the leader of the Ishmaelites was the tenth Avatar, this accounts for their supporting him against the Caliphs, as well as for their treachery to the Christian cause, of which most certainly they were convicted. They are accused of Manichæism. What did the Manichæan eight-pointed red cross look like? It is an emblem which has no antitype but itself. I consider this eight-pointed red cross as decisive evidence, that Buddhism, Manichæism, and Templism, were identical: that is, Manichæism as far as Manichæism consisted of Gnosticism, for the *principles* of both were the same, though in later times, in some instances, they diverged as from a common centre, as they became corrupted.

8. Faustus is made, by Augustine, most clearly² to admit the Triune God in the following words, and thus he connects the Manichæans with the Hindoos: "We therefore worship one and the same Deity, under a triple appellation of the Father, the God Almighty, and of Christ his Son, and of the Holy Ghost. *Igitur nos Patris quidem Dei omnipotentis, et Christi Filii ejus, et Spiritûs Sancti, unum idemque sub triplici appellatione colimus numen.*" When it is

¹ Hallam, p. 38.

² In Chap. xx. of Oper. Aug. Ben.

considered that Augustine esteemed a belief in the Trinity to be meritorious, and that he never ceased vilifying the Manichæans, his evidence in this case is unimpeachable. The Manichæans being Trinitarians the only *important* point of heresy which they held, and a most important one it was, consisted in denying the supremacy of the holy see. Had they given up this point, there would have been an instant coalition.

I must now make a few observations, but they will be very few, upon the celebrated doctrine of the good and evil principles, Osiris and Typhon, Oromasdes and Arhimanius. This, I have no doubt, was a doctrine taken up in the countries West of the Indus, when the fine philosophy of the sages of India was beginning to be forgotten; very probably after the time of Cambyses. On this doctrine Mr. Knight says,¹ “The Ægyptians held that there were two opposite powers in the world, perpetually acting against each other: the one generating and the other destroying: the former of whom they called Osiris, and the latter Typhon. By the contention of these two, that mixture of good and evil, of procreation and dissolution, which was thought to constitute the harmony of the world, was supposed to be produced.” According to this, which was in fact a new system of the Egyptian and Persian doctrine or mythos, there was an original evil principle in nature, co-eternal with the good, and acting in perpetual opposition to it. I think this system did not take its rise earlier than about the time of Cyrus or Cambyses. On this Mr. Knight says,² “This opinion owes its origin to a false notion which we are apt to form of good and evil, by considering them as self-existing, inherent properties, instead of relative modifications dependent upon circumstances, causes and events: but though patronized by very learned and distinguished individuals, it does not appear to have formed a part of the religious system of any people or established sect.” Upon the modern date (comparatively speaking) of this doctrine I think Mr. Knight is unquestionably correct; but it may be doubtful if he do not go too far in saying that it never was a part of any religious system. I think he would have been quite correct if he had said, it was never a part of the system of any people until the fine system of the Indians and of Orpheus began to be misunderstood and forgotten.³ I am of opinion that the system of Orpheus came from or originated in Persia, if it really came from there, *before* the rise of the two principles. This subject opens a most extensive field of discussion, but I shall at the present decline it, resting upon the firm support and authority of Mr. Knight.

It clearly appears that the Manichæans did not, as Christians have asserted, hold the doctrine of two equal and co-eternal Gods. Faustus says, “Is there one God or two? Plainly one. How then do you (Manichæans) assert two? Never was the name of two Gods heard in our assertions. But I wish to know whence you suspect this? Because you teach the two principles of good and evil. It is indeed true that we confess two principles, but one of these we call God, the other Hyle; or to speak in the common and usual way, the Dæmon. But if you think that this means two Gods, you might also think that there are two sorts of health when a physician disputes about health and sickness: and when any one names *good* and *evil* you might think that there are two goods: and hearing of plenty and want, you will suppose there are two plenties. But if when I am disputing about black and white, hot and cold, sweet and bitter, you should say that I shew that there are two whites, and two hots, and two sweets, will you not appear to be devoid of reason and of unsound head? And thus when I teach two principles, God and Hyle, I ought not therefore to appear to shew two Gods.”⁴ It is of no consequence whether the argument put into the mouth of Faustus be absurd or not; the fact

¹ Inq. into Anc. Sym. Lan., Sect. 105.

² Ib. 106.

³ Orpheus, Hymn lxxii. ed. Gesner.

Oper. Aug. Bened. ed. Vol. VIII. Chap. xxi. p. 349.

clearly comes out, that the Manichæans did not receive two equal and opposing principles as the orthodox Christians have calumniously stated them to have done.

With respect to the Pantheism of which we have heard so much, I consider that the doctrine of Emanation and Reabsorption into the Supreme, of which I shall have much to say hereafter, is so nearly connected with the Pantheistic doctrine of God in all, and all in God, in their first and most remote principles; that it is almost impossible, perhaps quite impossible, to separate them, and to shew exactly wherein they differ. When they diverge from the common centre, no doubt the difference becomes perceptible enough. But the peculiarity of the nature of the difference in many instances shews the close affinity of their origin. The existence of the early Cabalistic, Gnostic, Mandaistic, and most sublime doctrine, which I shall presently unfold, can be attributed to nothing but a divine revelation, or to a society in a state of refinement, vastly superior to the state of the generality of mankind even at this day, however vain we may be of ourselves; and unless we adopt the doctrine of revelation, in this instance unphilosophical, because unnecessary, to account for an effect, we must admit a long course of generations to have brought this doctrine to its perfection.

In the ancient collections we often meet with a person in the prime of life, sometimes male, sometimes female, killing a young bull. He is generally accompanied with a number of astrological emblems. This Bull was the mediatorial Mithra, slain to make atonement for, and to take away, the sins of the world. This was the God Bull, to whom the prayers are addressed which we find in Bryant and Faber, and in which he is expressly called the Mediator. This is the Bull of Persia, which Sir William Jones and Mr. Faber identify with Buddha or Mahabad. The sacrifice of the Bull, which taketh away the sins of the world, was succeeded by the sacrifice of the Lamb, called by the Brahmins the Yajna, or Agni, or Om-an, sacrifice, or the sacrifice of the Agni or of Fire, by our Indians. This doctrine arose among the Indians in, comparatively speaking, modern times: it was closely connected with the two principles spoken of above. While the Sun was in Taurus, the Bull was slain as the vicarious sacrifice; when it got into Aries, the Ram or Lamb was substituted. The Indian histories say that Zeradust came into India and brought his doctrines thither; but this must have been from North-eastern Persia. I know nothing which he can have brought but this; and if he existed any thing near the date usually assigned to him, though they might have the sacrifice of the Bull as well as the Ram in Persia, he would, for obvious reasons, only bring that of the former into India. Gemshid and the Ram succeeded Aboudab and the Bull. The modern Brahmins, the Cristnavites, are well known to maintain the doctrine of the Atonement. From them and from the Persians the Christians have copied it. If this heresy cannot be found here, I know not where to look for it. I say *heresy* because I believe it is no part of the doctrine of the Romish or Greek religion. They fortunately know nothing of this *pernicious, demoralizing* dogma—a dogma than which it would be very difficult to devise one more injurious to the morality of a state,—an assertion proved by the examples of the overflowing prisons of Britain, where of late years it has prevailed more than in any former time, or in any other place.

9. The very remarkable circumstance, that Hakem Bemrillah was supposed to be the *tenth* incarnation, tends strongly to confirm my hypothesis; for why should he be the *tenth*; and who and what were the other nine, according to his system? for there must have been other nine, or he could not have been the tenth.¹ I cannot help believing that the whole doctrine was well

¹ Vide D'Herbelot in Hakem Bemrillah and in Dararioun, Dict. Biog. Vol. XIX. p. 321, Paris, 1817; Nimrod, Vol. III. p. 493.

known to the persons who held this of the tenth avatar or incarnation. All this is but the mythos of the ראשית *rasit*, the Μητις, or, in a word, divine wisdom, l'Intelligence universelle.¹

A little time ago I observed that the sacred book of the Manichæans was called the book of Perfection. Thus it appears to be the same, as the חכמה *hkme* or Ααμη, or PERFECTION, or Wisdom of the Jews and Greeks. On this word חכמה *hkme* or *Chokme* as, according to the vicious habit of the moderns, it is often written, I must make another observation, which I think very important. We every where find the words Αρχη and ראשית *rasit* written to represent each other in the two languages; and they both mean *head* and both mean *wisdom*. The word חכמה *hkme* means *wisdom*, that is, the same as the two former words: but the word חכמה *hkme*, *Akme*, in the English language, means head, or upper end, or point, or top, of any thing. In a figurative sense it also has the meaning of perfection. Hence we see that the word חכמה *hkme*, which means wisdom, has the same meaning as the words in the Greek and Hebrew which mean *first* or *beginning*. This *Rasit* or חכמה *hkme* is the בקמאטה *bqmaute* of the Samaritan Genesis, the *Ras* of the Ethiopians, the *Sophia* of the Gnostics, the *Metis* of the Greeks, the *Logos* of Plato, the *Sofi* of Persia, in the book of the Persians called *Sofi Ibrahim*, the *Buddha* of the Hindoos, the *Saga* of the Scandinavians, and the *Sagax* of the Latins, whence come our *Sages*, and the *Sagas* of India, alluded to by Mr. Schegel.²

Perhaps it may not be irrelevant, in reference to the plurality of the God in the first verse of Genesis, to observe, that the Gnostics are said to have worshiped a being called *Achamoth*. This is evidently nothing but the Hebrew word חכמה *Hkme* wisdom, sapientia, in the plural number, and it is feminine. This is the first word in Genesis, as we have seen, and as recorded by the Jerusalem Targum, and the Samaritan version; and here I conceive these learned Orientalists, the Gnostics, worshiped the plural of the *Logos* for the *whole three*. If this be not the meaning, why is not the word in the singular? For this *Achomoth* the Valentinians had a great respect. Of this *Beausobre* says, "Leur *Achamoth* est la *Cochmah* des Hebreux, ou la *Sagesse*."³ It proves that the Valentinians explained Genesis *by wisdom*, &c., like all other early Christians, and as the Israelites formerly did. Gnostici enim ipsam *Achamoth* spiritum sanctum arbitrabantur, et sub specie columbæ repræsentabant.

The unlearned reader must be informed that the most common word in Hebrew for wisdom is חכמה *hkme*, and for wisdoms in the feminine gender plural חכמות *hkmot*. The following are the two first words in the Samaritan first verse of Genesis: אאזאזאזא. *B—kmaute*. Though I have no Samaritan Lexicon, I think I can see that *B* is the sign of the ablative case, the same as in the Hebrew language, and the last *e* the emphatic article, and *kmaut* the same as the Hebrew

¹ Besides this *Bemrillah*, in the eleventh and twelfth centuries, and indeed since that time several persons have arisen, pretending to be the *tenth* incarnation; a curious account of whom may be found in the very learned and honest, however often mistaken, *Nimrod*. *Eudes* of Bretagne was one; *Joan D'Arc* was another; and *Brothers* and *Southcote* were others; intended for the year 1800, or the year 1824, or the third cycle from Christ. In Ireland, in the year 1771, a Romish Priest, Vicar Apostolic of the Roman See in the midland district of England, of the name of *Walmesley*, under the feigned name of *Pastorini*, published an Exposition of the Apocalypse, in which he made out, by some mode of calculation which I have never been able to see, that the millenium would take place at the end of the year 1824. Here we have exactly three great *Neroses* to a year, from the birth of Christ. Some time after the year 1824 had passed, his followers found out that it was a typographical mistake, and that it ought to be 1829, and, to save the credit of the Roman bishop, they say, it or he only alluded to the peace which was to be given to the Irish Romish Church by the Duke of Wellington's famous Emancipation Bill in 1829. Thus priests deceive, and dupes are deceived. See *Times* newspaper, for a letter from Dublin, dated April 24th, 1829.

² Quoted by Dr. Pritchard.

³ *Hist. Manich. Liv. iv. Ch. i.*

word for *wisdom* in the plural feminine : then it will be *by the wisdoms* God created. Thus then the old Samaritan justifies my rendering of Rasit.

Philo calls the Logos *Αρχη*.¹ The Logos being proved to be *wisdom*, *Αρχη* must consequently mean wisdom.² Onkelos translates the word by *אמר* *amr* verbum,³ whence comes the word *אמר* *mimra*, a *word* or *voice*, which I suppose is the same as the Bathkol *בתתל* *bet-ql*, *daughter of voice*. As the Hebrew name for God, AL, is said to have the meaning of *curse*, so QL has the meaning of *vile*. These arise from the misunderstood idea of the destroyer. The Amar,⁴ Mimra, and Bathkol, have all the meaning of Logos and Ras. From this word QL *voice*, comes the Greek *καλεω* and English *call*, which Mr. Cleland has shewn has the meaning of *wisdom* in the Celtic language : whence comes our word calling or vocation, both evidently connected with the idea of voice, word, and wisdom.⁵ The Nestorians have their service in the Chaldean tongue.⁶ Nestorius was a German in the time of Theodosius. This brings to my recollection the assertion of Dr. Geddes, that he would some day prove, that the language of the Saxons (that is, the Sacæ, Buddha was Saca) was nearly pure Hebrew. Here a reason presents itself why we have so many Hebrew words in English. When the Saxons arrived in Britain they must have spoken almost the same language as the natives. I recollect nothing in history against this conclusion. I shall have much to say on this subject hereafter. QL has also, I think, the meaning of *womb* *κοιλια*, and thus of the female generative power, the daughter of the Logos or of Wisdom, and also of the Greek *καλος*, *good* or *beautiful*. *Jehovah by wisdom hath founded the earth, by (Binah) understanding hath he established the heavens.* Prov. iii. 19. The Targum also uses the word *קדם* *qdm* for the Logos or Ras, which means *first*, and Binah for the following word, which means *second*, from *bis*, *binus*, *διδυμος*.

Proclus, on the Timæus, says, that after the well-known sentence on the temple of Isis were added the words *ὃν ἐγὼ καρπὸν ἐτεκον, ἡλίου ἐγένετο*—*The fruit which I have brought forth is the sun.* This at once proves that Isis was Divine Wisdom, and that the sun was not adored as the Creator, but only as an emblem.

Athenæ is only Neithe or Neitha, written anagrammatically, or Hebraically a very little corrupted. Isis was called Neith or wisdom : she was the Goddess of Sais, which probably means Saviour, from *ישׁו* *iso* and *צא*, and also wisdom from *scio* to *know* or *be wise*. Wisdom was the Saviour ; thus they all dovetail into one another.

The term *Sofi*,⁷ says Knolles, signifies among these people *a wise man*, or the interpreter of the Gods. This word is the same as the Greek *Σοφία*.⁸ Forster afterward says, “ Some classes “ of the Shiahs believe that Ali was an incarnation of the Deity, who perceiving, they say, the “ mission which had been delegated on Mohamed to be *incomplete*, assumed the person of this “ Caliph, for the purpose of fixing the Moslem faith and power on a firmer basis.”⁹ Here, again, the doctrines of the tenth incarnation, the regeneration, and metempsychosis, shew themselves ;

⁹ Ibid, p. 130.

but the time of the tenth incarnation being passed, the perpetual renewal or regeneration, like those of Tibet and Rome, is beginning to arise; and I think it very probable that the perpetual renewal of Tibet arose only since about A. D. 1200.

The mission of Mohamed was not complete, because it would not be completed till the end of his cycle, when the Millenium commenced. In the Indian books we read accounts of princes being extremely desirous of establishing æras by their names. This has been mistaken, I think. They wished to establish themselves as incarnations of the cycle in which they lived, as Cæsar and several others did. The sixty year or Vrihaspati cycle was only a decimal of the 600 year or Neros cycle, and it made no difference in calculation whether one or the other was used—ten Vrihaspatis being equal to one Neros.

Of the different dreams which have terrified the imaginations of the weaker class of mankind, there is, perhaps, no one which has played a greater game than that of the fear of Antichrist, a person whom I believe to have been pretty generally misunderstood. The word *Ἀντιχρηστος* I believe does not mean a person opposed to Christ, but a substitute for Christ—another Christ, a Christ in succession. In our sacred books the disciples are constantly warned against false Christs, but no where is it said that there shall not be another Christ. This is all in unison with the prophecy in John, that Jesus would send a person to them in some capacity or other. Mohamed was believed to be this Antichrist, and so was both Hakim Bemrillah and St. Francis. It is, as I have said before, nothing but the Hindoo system, each party believing that the tenth incarnation was with them. The circumstance that an Antichrist or another Christ should be foretold is very curious, and certainly Floyer and several other Christians have shewn a striking similarity between the prophecies of the Christians and Mohamed: but they never discover that this arises, in a great measure, from Mohamedan devotees doing every thing in their power to aid the Christians, as they hold that Mohamed was the real Antichrist—the person foretold by John.

10. The Templars were accused of worshiping a being called Bahúmíd, and Bafomet, or Kharuf. Mr. Hammer¹ says that this word written in Arabic has the meaning of Calf, and is what Kircher calls *Anima Mundi*. It is difficult not to believe that this Kharuf is our Calf. Bahúmíd must be Pi the Egyptian emphatic article, and *רצא* *amid* the *desire of all nations*, that is Mohamed. The Assassins, we must recollect, are said to have worshiped a calf, but our travellers who tell us this story, do not tell us that they saw the calf, and it is easy to perceive that they take the account, as well as the custom of the Assassins *of rising up to play*,² as our Bible would call it, from their Mohamedan enemies. If they have a calf in use as an emblem, I should consider it a proof that they are a tribe of extreme antiquity, which though holding the doctrines of the ten incarnations, yet still clings to the ancient worship of Taurus. It is of the same nature as the picture in Russia of the holy family in which the calf is found instead of the Ram.

They often name a rite or doctrine called the Baptism of Wisdom. This has been said to be the meaning of the second word Bafomet, and is from the Greek *Βαφη Μητρος*.

The story of the Gnostics and Templars worshiping an IDOL called Bafomet and Bahúmíd in the sense in which we commonly use the word *worship*, I look upon as totally incredible. But Protestants always forget or shut their eyes to the distinction between the *Δεληια* and *Λατρεια*. If they had a figure as an effigy of the *Βαφη Μητρος*, baptism of wisdom, they probably paid it the same kind of adoration as Protestants pay to the bread and wine in the Eucharist, and as our king pays to the black stone on which he sits to be crowned. It is very clear that this Bafomet is the Logos, to which they gave this name—the second person of the Trinity. However, the

¹ On Anc. Alp. Præf. p. xiii.

² Exod. xxxii. 6.

circumstances altogether raise a strong probability, that the doctrines of the Assassins and the Templars were the same.

In the fourth number of the *Foreign Quarterly Review*, published by Treutel and Wurtz, may be found a very interesting account of the Templars, though I think not a correct one; for, upon their innocence of Gnosticism, there are several things totally unaccountable. But of their crimes, to the extent charged, I do not believe a single word. Their βαφη μητεος, or baptism of wisdom, I do believe, and that out of it was probably formed, by their enemies, their Bafomet, the name of the image they were calumniously said to have worshiped, and which is alleged to be a corruption of Mohamed, or meant for Mohamed, which, if true, as I allege, must have been meant for the last incarnation of divine wisdom, until the failure of the Millenium proved that he might have been an impostor or fanatic, but no incarnation of divine wisdom—of the Deity.

The truth creeps from under the veil, in the instance of the symbol of the Red-cross Knights Templars. Their badge, the red cross with EIGHT POINTS, the monogram of the Buddhists of Tibet and of the Manichæans¹ connect beautifully. This badge was a real Talisman. In peace it commanded the rights of hospitality. In battle one red cross would, of course, never strike another; though they might, as in the case of the Ishmaelians and the Templars, from circumstances be obliged to oppose each other.

The revenues of the Templars in the twelfth century are said to have amounted to six million pounds sterling a year. Notwithstanding this immense wealth, it is very certain that *their chiefs* were repeatedly guilty of betraying the Christian cause to the Assassins, and to account for this, in one instance, a very miserable pittance of money is stated to have been the reward, 3000 pieces of gold. This I cannot believe of a man of such immense wealth as their chief. On taking the vows they took the most solemn oaths of fidelity to the Christian cause, but they took them as administered to one another, and in the sense which they alone might understand. How is all this apparent contradiction to be reconciled? I believe they took their oaths to the cause of the Χρησος, the Chreestian cause, and that if a small body of the Knights separated from the Hospitallers to form the order of Templars of the Temple, of the ancient *circular* or *cyclar* temples, not of the church, (their churches differing from all other churches in the world in being of the circular form,) they had become proselytes to or were of an opinion in its nature Manichæan, that Hakem Bemrillah was, as he was claimed by his followers to be, the tenth avatar—they were believers in some sense in the Evangelium Eternum, and thus they continued to be till the passing years proved the falsity of their system, as well as that of the Franciscans. Then, though they probably abandoned the Millenium, they retained part of their Manichæan or Gnostic doctrines. Thus with the Assassins they were enemies of the Caliphs, though in some sense Mohamedan; and, though friends to the Mohamedan Ishmaelites, they were still Christians, but it was the Gnostic Christianity, which was in fact the oriental Buddhism of the ancient Gymnosophistæ or Samaneans, of which we shall presently see more.

The Templars were divided into orders exactly after the system of the Assassins: Knights, Esquires, and lay brethren, answering to the Refeck, Fedavee, and Laseek, of the Assassins; as the *Prior*, *Grand Prior*, and *Grand Master*, of the former, correspond with the *Dai*, *Dai-al-kebir*, and *Sheik* of the mountain, of the latter. As the Ishmaelite Refeck was *clad in white*, with a *red mark of distinction*, so the Knight of the Temple wore a white mantle adorned with a red mark of distinction—the red cross. It is probable that the red cross was worn by both,² though for *some reason* it is kept back. The author says, “As the Ishmaelite Refeck was clad in white, with a

¹ Vol. X. Asiatic Researches.

² *Foreign Quarterly Review*, No. II. p. 464.

“*red mark of distinction*, so the Knight of the Temple wore a white mantle adorned with the red “cross.” It is remarkable that they were called illuminators;¹ and I suspect *the red mark of distinction* not described was a red eight-point cross, or a red rose on a cross. Why has not the Reviewer told us what it was?

In the very highest orders of Freemasons, viz. the Templars and Rossicrucians, as I imagine them to be, there is no emblem more sacred than the cross. Here I stop. Verbum Sapienti.

Mr. Hammer has observed, that the identity of the symbols of the Templars and of the Architectonici, by whom he means the Freemasons, are demonstrated. But he does not doubt that the Architectonici existed before the Templars: he says, *Doctrinæ Architectonicæ symbola, figuræ nimirum mathematicæ et instrumenta ædificatoria, quæ in picturis ecclesiæ Templariorum et in sculpturis Baphometorum invenimus, eadem etiam in ædificiis antiquioribus, præcipue Scoticis, et in monumentis Gnosticis ut in sigillis et Abraxis conspiciuntur (vide Icones ex Macario desumptas, et in ornatum frontispicii libri sui à Nicolaio adhibitas); sed eadem jam in monumentis vetustioris adhuc ævi, nimirum Romanis deprehenduntur (vide tabula IV. fig. 9, in my figures, No. 33) ex quorum inscriptionibus nihil arguere licet, hæc monumenta ab architectis aut fabris murariis posita fuisse.*² Again he says, *Senatus consulto (irrito) urbe pulsos, et ex his ad orientalem Philosophiam, Chaldaicam, Syriacam, et Egyptiacam, referre licebit.* Here Mr. Hammer refers the Mathematicians to a CHALDAIC original. In the former part of the sentence he had identified the Mathematicians and the Architecti or Freemasons. In this I think he is perfectly correct. The Chaldeans and the Mathematicians of whom we read in the Augustin age as being the fortune-tellers, or the magicians, or judicial astrologers of the great men of the day in Rome, were in fact Freemasons, and of this the emblems, above copied from his work, in plate IV., are a sufficient proof. I need not tell any one, *whether Mason or not*, how large a space the history of the building of the temple of Solomon occupies in the ceremonies of Masonry. And I think I need not remind my reader that the temple of Solomon, with its Jakim and Boaz, displays evident marks of Astrology and Astronomy in every part. All the sacred numbers, and these astronomical symbols, relate directly to the building of *the temple of the universe*. The whole temple is a microcosm or an emblem of the universe, and the history of the building of it is a Genesis: and under the allegory, a beautiful and refined cosmogony is concealed.

In the building of the temple of Solomon the most profound silence prevailed; not a nail was driven, not a blow was struck. As the Creator built up the edifice of the world from matter previously prepared, so in like manner was every thing prepared in the temple. Wisdom, the Logos, was the Megalhistor or Grand Architect of the Universe. Solomon THE WISE was the Grand Architect of the Microcosm of the temple. The architect or builder of the universe was the Logos, the Prince of Peace. The architect or builder of the temple, was Solomon, the prince of Iero-Salem or *the holy peace*. By his Logos, word, or command, God formed the world. By his word, without a blow of hammer, Solomon formed the temple. *Dominus in Sapientiâ fundavit terram; disposuit cœlos in Intelligentiâ.* Prov. iii. 19.

In the Wisdom of Solomon and Ecclesiasticus the secret doctrine of the Ras, or Wisdom, or Logos, that is, of the Cabala and the Gnosis, is continually shewing itself:³ though there can be no doubt that the intention of the *translators* is to conceal it as much as possible. Perhaps they did not understand the Cabalistic doctrine. I think I cannot well wish for a more decisive proof of the truth of my system than that Solomon should be a ten-month child like Hercules, Alexander, Cæsar, &c., &c., as is proved by Wisd. vii. 2. The knowledge of the doctrine of the cycles and of the aberrations of the planets is shewn ch. vii. vers. 18, 19.

¹ Foreign Quarterly Review, No. II. p. 464.

² P. 43.

³ Wisdom i. 6, iv. 9, 10, &c.

In every quarter of the globe we have met with a curious repetition of names. We have numerous river Dons, Jordans, mounts Olympus, Argo, &c.; and if we consider them attentively, I think we shall see reason to believe, that this was in consequence of each tribe, when it became fixed, having established around it its own little mythos which it had brought from the East: its sacred mount, its Argo, its Don, its Labyrinth perhaps, &c. Thus when the Mandaites or the Nousaïreans, in comparatively-speaking modern times, arrived in Syria, they found the mount Carmel, the mount of the garden of God, the sacred Ir-don, the city of Nazareth, &c. I strongly suspect that those persons were only descendants, or a succession of the first Mandaites or Nousaïreans or Nazareans, driven out from the city of the Cyclopæan Mundore when it was destroyed, and of which there still are the immense ruins. The Ishmaelians were a succession of the same people. An attentive observer cannot fail to see the same mythos under a succession of leaders, perhaps all having the similar doctrine of incarnations, but under different names, and necessarily with some variations. When I consider all the circumstances relating to Elias—his great miracles when he overcame the priests of Baal—the numerous circumstances which tend to prove Nazareth a sacred place, and the laws respecting Nazarites, the rose of Sharon being called Nazir, the schools of the prophets which were on the mount of Carmel or the vineyard of God, I cannot help suspecting that these Nazareans were the same with the Mandaites, who were called Nousaïreans.¹ The Arabic Nuzur means *prophet*.

I had long sought in vain for the meaning of the word Don, which, from its universality, is evidently a word of great importance in my system, when I found it in Persia. Dr. Hagar says that the Persian name for *science* or *knowledge*, which I call *wisdom*, is Danush.² Whence comes the Persian word Behar-danush, or the garden of knowledge. This garden of Danush is the garden of Adonis.³ The river Araxes, we have formerly seen, was called Don. This river was anciently called by the Arabians, Rosh. This is Ras or Wisdom. A translation of the word Dan.⁴ *Arax* is probably only *Ras* with the emphatic article. The ancient name of the Persian Ispahan *As-padana* exhibits the same mythos, as that of the Padus of India and Italy. I am satisfied that *Pad* and *Bud* were the same words, and as *Don* in ancient Persian meant *wisdom*, this seems confirmed. I have little doubt that the Druidical colleges in groves were gardens of Adonis, like our universities, intended to educate young persons in science as well as religion, and therefore represented *by other sects* as receptacles of vice. But they might be, like our universities, *not too good*. Dr. Hagar also says, “Dana in Persian signifies a “wise or learned man.”⁵ This, he adds, is derived; that is, it is the same as the Chaldaic תנא *tana*, a learned man. From this comes the word Titans. They were Tat-tans. Tat-tan is the wisdom of Buddha; and from this word *tana*, *wise*, came the name of the laws which the Irish boast of so much for their wisdom, and which they call the laws of Tanistry. The Persians also have the word *Danish-MEND* which has the same meaning (this, I think, is *learned mind* or *man*). The Hindoos of Bengal and Bombay use the word *Danish-MEND* in the same sense.

A little consideration will serve to shew that in every case *Menu* has a reference to mind, to understanding, to wisdom. Here we at last come to the origin of the word *Man* and *Homo*, *hominis* and *Nemo*, *neminis*, i. e. *ne-homo*. *Man* is the *Mn* of *Om* *homan*, or *human*. *Inhuman* is the negative of *human*. The *Mend* of Persia is *Mn-di* holy *Mn Om-mannus*, *mind of Om*. In

¹ Matter, Vol. II. p. 394.

² Diss. on Bab. Bricks, p. 7.

³ In Western Syria is a river of Adonis; this is now called the river of Abraham or of Brahma. This seems to me a striking circumstance, when I recollect that there is a city of Adonis in Collida, in South India.

⁴ Paxton, Illust. of Scrip. Vol. I. p. 73.

⁵ P. 22.

Irish Om means *man*, Omona *human*.¹ Vossius, Scaliger, and others, derive the Amanus or Omanos of the Persians from חום *hum* Chom, Calor; unde חמה *hme*, Sol et Ignis.² There can be no doubt that they are the same words. If we look back to Bk. V. Chap. V. Sect. 2, we shall find that Noah is called יַחְמִי *inhmni*. I have never been satisfied with the etymon which I have there given. In the first word י *in* or *ini* we have the Greek word for a son. A prophet in India is called a Muni or wise man. This seems to be the same as Menu. And hence I think has come our Nh *mind*, the son of the Muni. Noah was an Avatar or renewed incarnation. Mannus a man, name of Noah.³ Mind and Man were, in fact, the same. Man was an incarnation of the holy mind, Mn-di=Mn=650. The root, *Man*, think, remember, makes in the preterite Mamana corresponding with *Meminit*. From this root comes Mana, mens, mind. The name of the first human being Manu is obviously derived from this root, and signifies *endowed with reason*. Mankind are hence named Manava—a man, son of Manu; this word being the regular patronymic of Manu. From this word the Gothic word Manu is manifestly derived, but the Germans appear to have retained some tradition of Manu himself. Tacitus says of the Germans, celebrant carminibus antiquis Tuistonem deum terra editum et filium Mannum originem gentis conditoresque.⁴

The Mandaites taught that from the throne of God flowed a *Jourdain primitif*, of the pure water of life, from which again flowed 360,000 Jourdains. When we consider the proof which I have given that the Jordan only meant the river of wisdom or of Adonis or of the sun, the meaning of this will be sufficiently clear. The observation above induces Mons. Matter to make the following curious observation, which shews that without my theory the facts upon which I have founded it forced themselves upon him: “Le nom de Manes, Mani ou Manitho, reçoit peut-être ici son explication. Il s'appellait Mano, intelligence de lumière, comme Simon le magicien se disait “δυναμις ὑψίστου. Peut-être un jour nous parviendrons à savoir si Manes a fait des emprunts aux Mandaites, ou si ces derniers furent en quelque chose ses disciples? Il est vrai que les Mandaites, sont les ennemis des Manichéens; mais ils sont également ceux des Chrétiens et des Juifs, et ils profitent néanmoins des doctrines des uns et des autres.”⁵

Carcham, so celebrated in the history of Mani, is called Syria and Mesopotamia by the Tartars. Kar means *habitable country*. Then I think this would be Kar חכמ *hkm*, country of wisdom, country of Mani or Mens, *Mind*. Georgius says of this Carcham, Hoc est Regio μεση των ποταμων inter-amnia.⁶ He afterward⁷ shews that this is the same as Cataia (now Cuthay), and says, Quidam autem Kathaiam SOPHITIS regionem, qui unus fuit ex nomarchis in hâc Mesopotamiâ collocarunt. This was the Doab between the Indus and Ganges, which he calls Soph-itis or the country of Wisdom. It was the Ioud-ia or Youdya or Oude.

The Mogul was the Irish Mog or Mogh; and the Mogh was the head priest—chief priest. Zoroaster or Zeradust was an incarnation, a genius of a cycle. He was called Hakem,⁸ and also Mog or Mogh, which meant Sapiencia. He predicted the Messiah⁹ by the name Iosa, in Irish Eesa, in Arabic Issa. He came from the city of Bochara or of wisdom or of learning or of the Boc or Book. But whence comes the word Mogh? The word *ogh* in Irish means circle, pure, holy, a hero, and *eag* wisdom; ¹⁰ the same in the Sanscrit, and the Sanscrit Yug or Yog. Now I think Mogh is the wisdom or cycle of *M*: then, by the regimine, it became Mogh. The highest noble

and prime minister of the Mogul was made by him an Omrah, *Om-ray*.¹ The Eesa named above is the Etruscan Esar Æsar and Cæsar, the Brahmin Eeswar.² Among the Irish³ and Persians⁴ Mogh was equally the name of a priest, and hence Mogul-al-mogh, *the priest κατ' ἐξοχην*. Here we have the origin of the wood, with which the sacred part of the temple of Jerusalem was built, Almug. It was the wood of לֵבָנִי al mg, the tree of wisdom, the tree of the Magus or wise man. The Chaldæans have the word מִג mg, whence the Greeks made Μαγος.⁵

The Ishmaelites are the same, I believe, as the Nasareens or Nasourians, or Nesseenes or Nesaries, and the Yezeedis or Yezidis or Yesdes. Mr. Buckingham has observed their similarity to one another and to the Hindoo castes.⁶ The Yezdes or in fact Yes-des, that is, the followers of the holy Yes or IHS = 608, are said to worship Satan or Sheitan. Mr. Buckingham gives an account of them from one Père Garzoni, who says of them, Ils n'ont ni jeûnes, ni prières; et disent, pour justifier l'omission de ces œuvres de religion, que le scheikh Yérid a satisfait pour tous ceux qui feront profession de sa doctrine jusqu'à la fin du monde.⁷ The judgment of the father and the dependance to be placed on him, may be estimated from the following passage, which he gives a little previously: Le matin, à peine le soleil commence-t-il à paroître, qu'ils se jettent à genoux les pieds nus, et que tournes vers cet astre, ils se mettent in adoration, le front contre terre. These people are found at present in the Mesopotamia of the Euphrates, near a place called RAS-EL-AIN, (the fountain of *wisdom*,) at the foot of what Mr. Buckingham calls Mount Sinjar, and Ptolemy Mount Masius, in about lat. 37½, on the river Khaboor or Chaboras. Garzoni says, they hold that the devil whom they worship *has resided* in Moses, Jesus, and Mohamed; that the devil has no name in their language, but "Ils se servent tout au plus pour le désigner de cette périphrase, *scheikh mazen*, le grand chef."⁸ I have a strong suspicion that these dwellers at the RAS-EL-AIN, call their chief Scheikh *Raz-en*, not *Maz-en*; and that the latter is a mistake; or M-Raz-en has become Mazen. They are a very large and powerful tribe. In their country a Chalchos, an Houran, or Urriana are found, and in short the evident remains of the Chaldean mythos. In their doctrine the renewed incarnation in Moses, Jesus, and Mohamed, is obvious; and the creative and destructive power confounded by them or by Garzoni. In lat. about 35½ is a Sulimania, and near it is a Jebel Judee.⁹

In the language of the Yezeedis *Yesdan* means *God*, and it makes *Yesdam* in the plural.¹⁰ This is evidently a Hebrew termination. The author of the *Desatir* calls God *Yesdan*. This raises a presumption that he was of this tribe—Yes-dan, Wisdom, of YES, or ὙΗΣ.

11. Cleland states the adherents of Druidism to have had various names, *Guydelians*, *Paulicians*, *Manichæans*, *Leogrians*, *Oughers*,¹¹ May's-ons, besides others. But as the word May's-on is here the particular object of inquiry, I shall confine myself principally to it; and even upon that, without pushing the analysis lower, I shall only observe that, in the sense of the bough, or

¹¹ The word Paganus derives from Payen: this answers to our old word Paynim; which meant a worshiper of the May; a Payinhom, or as the labials P and M frequently convert, a *Maymhom*, *May's-hom*, or *Mason*, words not more essentially different than Henriques Kenrick, Henry Harry, which are at bottom all the same name. The festival Maime, in Syria, near Gaza, abolished by Arcadius, and said to have taken its name from a country village, was more likely a *May-festival*, or *Mai-chomme* instituted there by some of the Northern military in the service of Constantine. This, however, is only a slight conjecture. Cleland's Attempt to restore Celtic Lit. p. 121.

office of justice, (the thyrsus or the wand of the Magician or Druid which Cleland shews to have been identical,) the word May is primitive to the month of May, to Maia the Goddess of Justice, to Majestas, and to the proper name among the Romans, of *Maius*, *Magus* or *Majius*. Considering too, that the May (May Pole) was eminently the great sign of Druidism, as the Cross was of Christianity, is there any thing forced or far-fetched in the conjecture, that the adherents of Druidism should take the name of *Men of the May*, or May's-ons? Here the *on* stands for *homme*, as it does in the very politest French to this day, *on dit* for *homme dit*; or, as anciently, *Preudon* for Preud-homme, as may be seen on the tomb of one of the high constables of France.¹

Free Mason is PH-RE—PH the Coptic emphatic article and *re* the sun, Mason of the sun. *Re* is *roi*, *rex*, *rai*, *ray*, whence Ph-aroah. Cleland observes² that the Druids taught the doctrines of an overruling providence, and the immortality of the soul: that they had also their Lent, their Purgatory, their Paradise, their Hell, their Sanctuaries, and the similitude of the May Pole IN FORM TO THE CROSS,³ &c., &c.

From Cleland I learn that in Celtic *Sab* means *wise*, whence *Saba* and *Sabadius*, no doubt wise in the stars. From this comes the Sab-bath or day dedicated to Wisdom, and the Sabbath, a species of French Masonry,⁴ an account of which may be seen in Dulaure's History of Paris.⁵ Sunday was the day of instruction of the Druids, whence it was called Sabs, from the preachment of the Sabs or Sages or Wise, *Sagart sacerdos*.⁶

The discovery of this meaning in the word *Sab*, supplies a link which seemed wanting in the chain. And I now beg my reader, by means of the index, to review and to reconsider the different passages where the word *Sabæan* or *Saba* is used, and he will instantly see how it supports my system in several cases. A practice in the French schools supplies a good commentary upon this. They had Theses performed for the exercise of the wisdom or understanding of the pupils, called *Sabbatines*: but they had nothing to do with the Sunday, they were not performed on the Sabbath, but on *any* day. The day sacred to *divine wisdom* was the day of *Sab*, and as it was a day of rest the word *Sab* came to mean *rest*. And as the planetary bodies were endowed with wisdom, the disposers of the affairs of men, they were *Sab*, in the plural *Sabaoth*, our *Sabaoth*.

Mr. Hammer, to a certain extent, does not err very much in his explanation of Gnosticism: *Tota gnoseos doctrina, ut vidimus circa duo præcipue puncta versatur, Cosmogoniam nempe et Genesin, ut, quod mortalibus scire haud datum esse videtur, quomodo mundus hic genitus sit, et quomodo per Genesin continuam conservetur, indagaretur.*

Of the earliest well-recorded Lodge of Freemasons which I have met with, Mr. Hammer gives the following very interesting account: *Majorem merentur fidem, quæ de prima ædis architectonica seu domus salomonicæ institutione ex historicis arabicis referimus, et cum nullum testimonium historicum nobis innotuerit, quod melius instituto architectonico congruat, ædem illam sapientiæ (Darol-hikmet) quam Hakemus in fine sæculi undecimi Cahiræ fundavit, reveram primam εταίρειαν (Lodge) architectonicam fuisse credimus, quam historiæ testentur. Erat autem hæc ædes sapientiæ (ut ex Macrisio discimus) academia quædam, in qua ad ostentum omnes Philosophiæ et Mathesios præcepta tradebantur regalibus divitiis aucta, et frequens studiosorum omnis*

¹ Cleland's Attempt to revive Celtic Lit. p. 122.

² Ibid. p. 102.

L'Escalopier suggests a curious etymological conjecture. His words are these: *Pro Heso, quidem Hëum, nonnulli Esum sine aspiratione substituunt, vel Jesum sub Hesi nomine cultum volunt futili commento.* Cap. v. Cleland, ib p. 103. He observes that *Kruys* means a cross in the Celtic tongue.

⁶ Clel. Spec. p. 95.

generis, et sexus catervis. Præter hanc autem publicam doctrinam arcana etiam ibidem disciplina vigeat, cujus varii erant gradus, per quos candidatus deductus, in ultimo *nihil credere et omnia facere licere* docebatur.¹ Now I beg my reader to observe, that this Lodge of Freemasons was called the Lodge of SOLOMON or of *wisdom*, and that it was founded by the Battanean (query Buddæan, Ishmaelian Hakem, *i. e.* חכמ *Hkm* or the wise, and that it taught the mathematics, and besides this that *certain secret doctrines* were taught there, and, among other things, it was taught *nihil credere*. Now, Mr. Hammer's object being to run down the Masons and Carbonari in every possible way, I consider a little before I construe these words, and I go to the authority of Faustus, of the Manichæan, for an explanation, as I find it was also their doctrine, according to the account of their enemies; but I find they say it was *nihil credere, except after careful examination*, and unless it was consistent with the moral attributes of God, and the moral fitness of things; and they severely censured the Papists for believing without inquiring or using their understandings. The next words *omnia facere licere*, must in a similar manner be qualified. As they are given without qualification, they are most clearly nothing but a repetition of one of the old calumnies propagated against the Gnostics 1500 years ago, and repeated by the Rev. Mr. Reeves in the last century,—such as that ALL heretics eat children.²

In the school of Hakem, at Cairo, (what does the word *Cairo* mean, and how ought it to be spelt?) we readily recognise the school of Pythagoras, with its secret numbers and its mathesios, which in a later day was succeeded by the Esseniens.

The striking similarity between Masonry and Pythagoreanism has been well pointed out by Mr. Clinch in his *Essays on Masonry*.³ The best account of Masonry which I have seen is in the *Encyclopædia Londinensis* in voce *Masonry*: though, as every Mason must see, it is not correct, and particularly respecting the York Masons.

I think it may be discerned that there were formerly several lodges of Freemasons in Britain, whose origin cannot be traced: but perfectly independent of each other, though now united under one head, the Duke of Sussex—the old Lodge at York, now extinct, being clearly the oldest, as far as can be traced.

The Chaldeans are found in Scotland, under the name of Culdees or Chaldees,⁴ and the last notice I have of them is about the year 900, in the Church of St. Peter's at York.⁵ My reader will not fail to observe the notice in one of the above passages of Mr. Hammer's of the emblems, &c., found *in Scoticis*; and if he know any thing of the history of Masonry he will know that popular prejudice has supposed Freemasonry to have been invented in Scotland, and to have travelled thence to France with the Stewart refugees. That the Scotch refugee Masons might establish lodges in France I think very probable; but they were not then *new*; though perhaps they might not be numerous or much known.

¹ Mines de l'Orient, Tome VI. p. 46.—Those accounts “are entitled to greater credit concerning the first Masonic institution of a temple or house of Solomon, which we obtain from Arabic historians—since there is no historic testimony known to us which better answers to a Masonic institution than that House of Wisdom (Dar-likmet) which Hakem, in the end of the eleventh century built at Cairo, esteemed, we believe, to have been the first Masonic brotherhood (Lodge) which histories attest. But there was a House of Wisdom, (as we learn from Macrisius,) a certain academy adorned with regal riches, full of the studious of every extraction, and of multitudes of the sex, in which all the precepts of philosophy and of the mathematics were taught. But besides this public instruction there prevailed in the same place a *secret* doctrine, of which there were various grades, through which the pupil being led, he was ultimately taught *to believe nothing*, and that it was lawful *to do all things*.”

² The Templars have been vindicated from the calumnies of Mr. Hammer, by Mons. Raynoard, in the *Journal des Savans*, for March, 1819.

³ Vide *Anthologia Hibernica*, for 1794.

⁴ See *Celtic Druids*.

⁵ *Notitia Mon.*

I have no doubt that the Masons were Druids, Culidei, or Chaldei, and Casidæans. The Chaldæans are traced downward to Scotland and York, and the Masons backwards from this day to meet the Culidei at York. It has been observed that the Masons, and particularly the Templars, always held their lodges or chapters under the crypts of the Cathedrals: of this I entertain no doubt. FROM A MASONIC DOCUMENT NOW IN MY POSSESSION, I can prove that no very long time ago the Chaldees at York were Freemasons, that they constituted the *Grand Lodge* of England, and that they held their meetings in the crypt, under the grand Cathedral of that city. The *circular* chapter house did very well for ordinary business, but the secret mysteries were carried on in the crypts. I think it is very probable that the Gnostic doctrines were held among the select heads of all orders of monks.

Though it be very true, as Mr. Hammer says, that the Templars held their Lodges or Chapters in the crypts of the churches, it by no means follows that all the churches in which Gnostic effigies are found belonged to the Templars. These Gnostic emblems are found in numbers of churches, of which the records are quite perfect, and shew that with them the Templars never had any concern, and which were built long before the Templars are said to have existed with us. These effigies prove the identity of Papism and Gnosticism, for I cannot for a moment credit the assertion, that they were placed on these buildings by Gnostic Freemasons *without the consent* of their employers.

12. The Chaldees or Masons having come to Britain before the establishment of the Papal power here, of course it happened that when the Romish Church obtained the command, it found them (the monks, *Χρηστιανοί*, *Chreestians* probably) in possession of monasteries, but in some respects differing from itself. But it did not burn them as heretics, it only seized the monasteries, leaving them a corner or retired place in the church, where they continued to perform their own ceremonies and religious rites. And they continued thus to *perpetuate their order* and religious service, for many hundred years, *along with the Romish monks*. They had only the three *Jewish* and old *Mithraitic*, and perhaps *Buddhic* sacraments—the eucharist or sacrifice of bread and wine, the *ordination of priests*, and baptism. They kept their vernal or paschal festival according to the Eastern or Jewish time; and, notwithstanding all the efforts of the respectable Presbyterian Jamieson to prove to the contrary, I think that these monks, like their monkish ancestors in Tibet, had a hierarchy. I have no doubt of it; they were nothing but Druids. They continued to enjoy their Druidical College of Iona or Columkil, along with the Romish monks, from the most remote antiquity, till they, their monastery, and their ancient library, were destroyed, as far as it was in the power of the disciples of John Knox, at the Reformation.

The Eucharist spoken of above was the sacrifice or feast of bread and wine; and I apprehend the reason why the *wine* instead of *water* was taken at this sacrifice, by those who never took wine on any other occasion, was the same as that which causes the Brahmins, (who never eat flesh at any other time,) in the Paschal festival or the Yajna sacrifice, to eat the flesh of the lamb. It was to be a feast, that is, an indulgence in something more than usual—or it would not have been a feast. All sacrifices were feasts.

“The Dionysiacs of Asia Minor were undoubtedly an association of architects and engineers, who had the exclusive privilege of building temples, stadia, and theatres, under the mysterious tutelage of Bacchus, and distinguished from the uninitiated or profane inhabitants by the science which they possessed, and by many private signs and tokens, by which they recognized each other. This association came into Ionia from Syria, into which country it had come from Persia, along with that style of architecture which we call Grecian.”¹ The style here spoken of, I

¹ Robison's History of a Conspiracy against Government, &c., Chap. i. p. 21, 1798.

apprehend, is that of the temples at Pæstum, the Parthenon, and the temples, which may be seen in Col. Tod's History of Rajahpoutana. These Masons were the builders of Solomon's temple, and they procured the wood Almug from India, whence they and their art came. As Robison says, they came into Syria from Persia. They were the ancestors of our Freemasons. The temple at Jerusalem, we know from Josephus, was of the Corinthian order. This had the capitals of its columns ornamented with the Ram's horn and the eternal Phoinix tree.

Speaking of the initiation of Moses by the Egyptian priests, Schiller says,

“These ceremonies were connected with the mysterious images and hieroglyphics. And the hidden truths so carefully concealed under them, and used in their rites, were all comprised under the name mysteries, such as had been used in the temples of Isis and Serapis, which were the models of the mysteries of Eleusis and Samothrace, and in more modern times gave rise to the order of *Freemasonry*.”

I doubt not that what Mr. Schiller says is true, with one exception: the mysteries were not the origin of Masonry; they were Masonry itself: for Masonry was a part of them, and every part, except that which my Masonic engagements prevent, I will explain before I finish this work.

We know very well that there were no arches in the temple of Jerusalem, that is, radiated arches; but we also know that there were vaults in which there were great treasuries, (which were said to have been concealed by Solomon and his successors,) and from which, whoever placed them there, the subsidies to neighbouring States, much too large for the temporary means of Judea to have supplied, were drawn in later times. These arches, I apprehend, were of the nature of that of the treasury of Atreus at Messina, and of the Cupola of Komilmar, described by Col. Tod. If a person wanted to open such an arch, he would use a rope, putting it round the cap, and pulling it aside; if he wanted to open a key-stoned arch, he would not use a rope, but a hammer. When the key-stoned arch was discovered it superseded the ancient one. This is one of the parts of my subject on which I do not choose to say all I know.

The form of the church of the holy Sepulchre at Jerusalem is round. Vide Adamnus de locis sanctis apud Acta Sanctorum.¹ In that work there is a cut of the old church at Jerusalem. The old part of the round church at Cambridge is of Saxon architecture—therefore of a style older than the Templars; in fact, a corrupted Grecian or Roman style. There was a *domus templi* at Cambridge, and it was probably St. John's College. This Saxon round church, and the adjoining College of St. John's, called in old books the house of the Templars, are exactly similar to the house of Solomon and the College of Education of Hakem at Cairo. The church at Maplestead, in Essex, and in the Temple in London, are round. In the latter there have formerly been, as is evident, only twelve arches, each containing six Stalla, or Stalls, or Cells, making seventy-two in all, and six smaller and inner arches, under each of which probably sat two knights, twelve in all, at the round table. I entertain little doubt that St. John's College is a college of the Culidei, in short of the ancient Druids, and perhaps the only one which has descended to us, in any thing like integrity.

There is something about the circular churches of the Templars, which seems to me to be very remarkable. We have only four in England I believe; and they are all round. This form, we are told, was adopted in imitation of the round church at Jerusalem. But how came the church at Jerusalem to be round; and how came these Christian knights to be called by the name of the detested Jewish temple?

¹ Ord. St. Bened. Sect. iii. Part ii. præf. p. 505.

The intimate connexion between the Knights of St. John of Jerusalem and the Templars is well known, and it is worthy of observation, that they are both dedicated to St. John the Baptist. Their churches are mostly round, and the baptisteries the same. The followers of St. John the Baptist are called Nazareens, Mandaites, and Iohnites. We must not forget the Iohannes, Butta, and Deus. Mr. Britton has collected every thing which is known respecting our circular churches, but still he is obliged to leave them involved in very great difficulties. I have a strong suspicion that the Templars took their name from the Gnostic doctrine, that the temple at Jerusalem was the emblem of the universe, as I have before suggested, which had a close alliance with the Jewish Cabala. Each chapter consisted of *twelve* elect, perfect, or initiated, past masters, after the twelve signs—and seventy-two initiated, after the Dodecans, the symbols of the universe.

The Templars had no objection to the Jewish temple, for the same reason that the Mohamedan, the Jew, and the Christian, all sit down together, as I have, with great pleasure experienced, at a lodge or chapter of Freemasons. And I take the liberty of telling the Rossicrucians and Templars, that if there be any thing in their ceremonies to prevent this, it is a heresy, and contrary to the spirit of their orders. Let them remember this: without Jew, that is, Judaite, there is no Christian, without both Jew and Christian there is no Mohamedan. The Christians, that is, *Xpῆστῖανοι* of Malabar and Coromandel, are founded on the Ioudi of Trichinopoly.

I now beg my reader to recollect some curious circumstances attending the number ten. It is described in Latin by the X, which X in Greek stands for 600, and is one of the monograms of Christ. It is also one of the monograms of Buddha of India. Its name in Greek is Iota, in Hebrew Iod, and in old Irish Iodha, and gives name to the sacred tree called with us Yew, evidently the *Iaw* of Diodorus Siculus. The tenth letter of the Hebrew which stands for ten is *i*od, and this is commonly written for the name of God by the Hebrews. The name of the polestar was, with the Chaldeans, *iuta*, and with the Arabians it is called the star of *judé* ^{جدي}¹. With the Tibetians the word for *ten* was Lamb, and was described by an X; and in the West the person called Christ and described by the monogram X was also called a Lamb, the Lamb of God—and was described by a Lamb carrying a cross in his paw, and by the head of the sun or a solar glory. I beg my reader to look back to several parts of this work, and to reconsider what is said respecting the Arga, and the Nabli or navel of the earth, of the Ie of Delphi and Moses, and respecting Jason or Ies, or in Greek *Ἰησ-ου* or Jesus in Latin, and the Hellenic worship; to recollect how Moses was educated by the Helleniens, both in Egypt and at Sinai, and that the church of the holy sepulchre, of the God *Ies-εσ*, who was slain and after three days rose again, was built by Hellen the daughter of COLLUS. Then let him recollect that at this church, to this day, the death of the God is lamented with the same cries, and his resurrection celebrated with precisely the same ceremonies as those of TAMUZ or Adonis, as I shall shew in my next book. All this considered, he will no longer be surprised to find the church of the holy sepulchre built in a circular form, nor that, in the centre of it, to this day, is the Nabli or navel of the earth, as is described by Dr. Clarke.² Here we have the union of the worship of the Linga and Yoni, and the reason why the Templars built all their churches round, and why they became the defenders of unfortunate females.

I consider the fact of the superstition of the Nabli, the Navel, the Omphale, the Umbilicus, still being continued at the church of the holy sepulchre, with all its attendant circumstances, as decisive a proof as can be imagined of the continuance of the ancient superstition, and of the re-

¹ Vall. Col. Vol. V. p. 196.

² Travels, Ch. vi. p. 228. Ed. 8vo.

union of the worship of the Linga and Yoni. I beg my reader's attention to the Tamuz in the last page, to recollect the exclamation in the Yajna sacrifice of the Lamb, *when will it be that the Saviour will appear!* in both India and Western Syria, and the same adoration of the Lamb, the Saviour, which I shall shew was practised among the Carnutes of Gaul.

When all this mysticism has been well considered, and also the singular way in which the Templars and red-cross Knights honoured the fair sex, my reader will not be surprised, perhaps, to find, that the prophecy in Haggai of Christ and Mohamed, was delivered by a word in the feminine gender, חמדת *hmdt*, as Mr. Parkhurst¹ has observed. Surely this is mystical enough. But I consider it as allusive to the double worship, and particularly to that of the Ishmaelites.

We have seen the surprising affinity between the religions of the Indians, Jews, and Western nations. Every one has remarked in the character of Constantine the son of Helena, an extraordinary mixture of Christianity and Heathenism—a mixture hitherto quite inexplicable. One little circumstance I think lets us into the secret. His Christianity was in substance, though perhaps in secret, the ancient Gnosticism. I think the fact that he dedicated his magnificent new cathedral at Byzantium or Nova Roma built on seven hills, neither to God, nor to Christ, nor to the Trinity, but to the Sancta Sophia the *holy wisdom*, lets us into the secret. It was to the Logos, Rasit, Wisdom—the creative power, by the name of Σοφία *Sophia*.

13. Col. Wilford notices a tribe of Battenians, that is Buddhæans, a tribe named by Ptolemy long before the Hegira, and whom we have proved to be the Ishmaelians who emigrated to the West. The people of this tribe, the Colonel says, were followers of Salivahana before they turned Musselmans.² If my theory be well-founded, this accounts for Hakem being the tenth Avatar or Salivahana, and we may see why they would be among the first Mohamedans, as he was believed to be a Vicramaditya or the tenth incarnation. This, perhaps, accounts for the early conversion of the Afghans to Mohamedism. Col. Wilford says, “Bhats or Bhatties, who live between “Dillí (I suppose Delhi) and the Panjab, insist that they are descended from a certain king, “called Salivahana, who had three sons, Bhat, Maha, or Moye, and *Thamaz* or *Thomas*. Moye “settled at Pattyah, and either was a *Thanovi* or *Thawovi*, or had a son so called. When “Amir-Timur invaded India, he found at Togloppoor, to the N. W. of Dillí, a tribe called *Soloun* “or *Salivan*,³ who were Thonovis or Manichæans.”⁴ After this the Colonel goes on to shew that on the rocks of *Gualior* is a group of thirteen figures called, by Christians, Christ and his apostles, now very much defaced. He then states that the Hindoos consider Manes to be a Salivahana, and he observes that Manes had twelve apostles and THREE DISCIPLES, EXALTED ABOVE THE REST, CALLED BUDDHA OR ADDAS, HERMAS OR HERMIAS, AND THOMAS, whom he supposes to be the same with the sons of Salivahana, called Bhat, Maha, and Thamaz. He then goes on to say, that there was a Christian monastery at Sirhind, and monks who brought silkworms to Constantinople in the time of Justinian, in the seventh century. But the most important part of Wilford's information consists in his observation, that the Bhats existed as a tribe long before the time of Manes or probably the Christian æra, since they are noticed as a tribe by Ptolemy. When I look on the map and consider what I have written respecting the Jews, the tribe of Youde, &c., &c., I can entertain no doubt that the origin of the Manichæans is found here as well as the Battenians or Ishmaelians and Templars of Syria.⁵ The Jewish Sanhedrim consisted of seventy-two

¹ In voce חמדת *hmd*, II.

² *Asiat. Res.* Vol. IX. p. 221.

³ I have no doubt in Soloun we have another Solomon.

⁴ *Asiat. Res.* Vol. IX. p. 212.

⁵ We have the same mythos as this which we have seen in the kingdom of Oude, in part repeated in the Carnatic at Trichinopoly.

persons. IT HAD THREE PRESIDENTS, but whether they were included in the seventy-two is not known. The first President was called נשי *nsi*, the second סגן *sgn*, or דין *din* בית *bit* אב *ab* or *Ab-bitdin*, that is Abbot, Father of the house of wisdom, *din* or *don*, and the third חכם *hkm*, the wise. Calmet's Dict. in voce San, and in voce Sagan. Moses was a Sagan to Aaron. This is the Latin Sagax and Scandinavian Saga.

The three first disciples of Manes were *Thomas*, *Addas* or *Buddhas*, as Cyril writes the word *Addas*, and *Hermes*. The three shew the nature of the mythos very clearly, and the explanation of *Addas*, by Cyril, shews what was meant by the God and King, of Western Syria, and also of Rajah-poutan or Eastern Syria, being called Ad, and Adad, as Ben-adad, &c. He is said to have sent *Thomas* into Egypt, and *Addas* into Scythia to preach.

The word Manes has been derived by Usher from the name of a king of Israel called Menahem,¹ and by the LXX. *Μανανημ*, which has the meaning, as he says, of Paraclete or Comforter, or rather, I should say, *Saviour*. This at once lets us into the secret—a new incarnation of Buddha, the general mythos—born from the side of his mother, and put to a violent death—crucified by a king of Persia. The teacher with his twelve apostles on the rocks of Gualior at once shews that he was not a copyist of the Jesus of Western Syria.²

The mistakes of the fathers respecting Manes, or, more correctly, the Manichæan doctrine, are wonderful. One says that the doctrine was first preached by a man called Scythian in the country of the Saracens in Arabia, another says he was of the race of the Brahmins and finds him at a castle called Arabion, on a river called Stranga, in Mesopotamia. These are nothing but Indian Scythia or Indian Arabia, the Doab, the Ganges; and the Saracens are the Suraceni. Another makes him to have come from Judea. This is the Indian Judia. Another says his doctrine was first preached in Egypt by one P-apis. This is nothing but Apis with the Egyptian emphatic article Pi-apis. The work called the acts of Archelaus is generally supposed to be a gross forgery. If my reader will consult the first three chapters of Beausobre's history, bearing in mind the explanation which I have given of the mythos of Manes, the whole will unravel itself and the difficulties will explain themselves.

When a Manichæan came over to the orthodox he was required to curse his former friends in the following terms: "I curse Zarades³ who, Manes said, had appeared as a God before his time among the Indians and Persians, and whom he calls the sun. I curse those who say Christ is the sun, and who make prayers to the sun, and to the moon, and to the stars, and pay attention to them as if they were really Gods, and who give them titles of most lucid Gods, and who do not pray to the true God, only towards the East, but who turn themselves round, following the motions of the sun with their innumerable supplications. I curse those persons who say that Zarades and Budas and Christ and Manichæus and the sun are all one and the same." By Zarades is evidently meant Zoroaster, and the whole shews us that the orthodox believed Mani to be both the sun, and, as I have said I believed him to be, Buddha of India—the tenth incarnation of Buddha, whose followers arose on the North of India, and became very numerous, but were not able to overcome the Brahmins, the followers of Salivahana.

Col. Wilford, in p. 218, gives us another account of Manes; that he was called Terebinthus and his father Scythianus, and that Manes propagated his doctrines in Tartary. We must recollect that Manes is said, by Christian authors, to have fled from the West to India; and, Col. Wilford tells us, the name of the tree called Terebinthus is not to be found any where except beyond the Indus. It is the tree sacred to Buddha, on which the Manichæans held Christ to have

¹ Usher's Annal. Vol. I. An. 3032, p. m. 82; 2 Kings xv. 14, 16.

² Beausob. Hist. Manich. Tome I. p. 71.

³ Cotelerii, Pat. Ap. I. p. 543.

been crucified.¹ See my figures, Nos. 12, 13, 14. This story of a Terebinthus going to India, as told by Epiphanius, is like all the remainder of these stories, and can deceive none but those who are determined to be deceived. How absurd is it to suppose that a sect of Christian heretics should have fled to the East, and have returned, bearing Indian names, like those above! The fact was, the fathers found them coming from the East, and fraudulently or credulously assumed, that they must have first gone from the West. Perhaps they never suspected it possible for them to have arisen in the East.

Free-masonry is known to be founded on principles of *universal* benevolence, and not to be confined to one class or to one religion. I think I may venture to say it is so constituted, that although it would not refuse to receive a simple Deist, no test being required, yet all its forms, ceremonies, and doctrines, are so constituted, as, in a very peculiar manner, to be applicable at the same time to the doctrines of Judaism, Christianity, and Mohamedism. Christianity is founded on Judaism: Mohamedism on Christianity. Mohamedism cannot for a moment exist independent of Christianity, nor Christianity independent of Judaism. We have seen the Rosy cross with eight points of the Templars, the Cross of Christ, and of Manes, and of Buddha, and the *rose of Sharon*, symbols of the Templars and of the Rossi-(Rosy)-crucians. I am not of the two latter orders; I have abstained from becoming a member of them, that I might not have my tongue tied or my pen restrained by the engagements I must have made on entering the chapter or encampment. But I have reason to believe that they are now become in a very particular manner what is called exclusively Christian orders, and on this account are thought, by many persons, to be only a bastard kind of masons. But here are two mistakes. They are real masons, and they ought to be of that Christianity which is found in India, at Delhi and at Trichinopoly, of that universal Christianity or Creestianity, which included Jews, Buddhists, Brahmins, Mohamedans, and which, before I conclude this work, I shall shew, was a sublime and beautiful system—the secret system of the religion often alluded to by the Christian fathers. I am now only speaking of the Rossicrucians and Templars. This at once, and very naturally, accounts for the Knights Templars being Christians, and uniting with the Battanians or Ishmaelians or As-chas-dim or Assassins. These were the Chaldæi of Daniel, of the Romans, in the time of the early euperors, called Chaldæi, Mathematici, Architectonici, and who were banished and persecuted by them. They were a species of Sodalitates or a secret order, of which the government became jealous. They are the Culdees of Iona and of the Crypt of York Minster, where the grand Masonic Lodge of England was held; they are the Gnostic Manichæans, who possessed the round churches at the Temple in London, Maplestead in Essex, at Northampton and Cambridge, and who in time became the Templars. In what other way the Templars could become possessed of these churches I do not know. Perhaps they might be built or more probably rebuilt by them; but the Saxon order of architecture in the church at Cambridge shews a date before the usually supposed existence of the Order of Templars in England. The Templars in other countries did not build their churches round, but perhaps they found them here in the hands of their brethren the Culdees, and they coalesced with their brethren whom they found here, when they brought their doctrines from the crusades. Thus they are found in the crypt of the Cathedral at York. All our old establishments of collegiate churches, deans and chapters, were Culdee establishments, which accounts for the Culdees in them not being destroyed by the Romish church. The church of St. Martin, at York, was built for them or by them, and this accounts for an extraordinary pulpit cloth there to be seen, which I shall notice presently. All the round *chapter houses* of our Cathedrals were built round for the

¹ Asiat. Res. pp. 216—218.

same reason that the four above-named churches were round. In these chapters and the crypts, till the thirteenth century, the secret religion was celebrated far away from the profane vulgar. From this came the bridge of Ham or Om corrupted into Cambridge, and Isis and Ox or Bull of Oxford. These buildings are, I think, the successors of the Caves of India, and afterward of the cupola-formed buildings there, which we see in Col. Tod's book,—of the Cyclopæan treasury of Atreus at Messena, and of the Labyrinths of which we read in Egypt, Crete, Italy, &c. These labyrinths could be only for the purposes of religion, and I doubt not of that religion of the Cyclopes which universally prevailed. The underground crypts of our cathedrals with their forests of pillars were labyrinths in miniature.

The round church of Jerusalem, built by Helena, the Mystic Helena, (daughter of COLLUS,) Mother of Constantine, who was born at York; and the chapter-houses at York and at other cathedrals were children, grand or great-grand children, of the circular Stonehenge and Abury; and the choirs of many of the cathedrals in France and England are built crooked of the nave of the church, for the same reason, whatever that might be, that the Druidical temple is so built at Classerniss, in Scotland. Vide *Celtic Druids*, plate 28.

I think I have stated enough to raise or justify what the Jesuits would call a *probable opinion*, that the masonic ceremonies or secrets are descendants of the Eleusenian Mysteries. Every body knows the now ridiculous traditionary fancy that a mason is, in some way, marked or branded or mutilated before he can be admitted into the order. I believe this, like most other traditions, had not its origin from nothing. I believe the higher classes of Masons were originally persons who were admitted into the mysteries of Eleusis and Egypt, and that they were Chaldæans and Mathematici, and I believe that what the above tradition of the branding alluded to, was Circumcision, and that they were circumcised. Origen and Clemens Alexandrinus both affirm, that the secret learning of the Egyptians was only taught to such persons as had undergone the operation of circumcision, for which reason it was submitted to by Pythagoras.¹ *The same word in Hebrew means both initiated and circumcised.* As infants are admitted into Christianity by baptism, so they were admitted among the initiated by circumcision. If my memory do not deceive me the priests only of the Egyptians were circumcised; and the Tamul, Chaldee, or Pushto-speaking priests of Cristna, in South India, are circumcised; and we shall find the rite, by and by, in a place where we little expect it. Abraham, the Chaldean, is called an astronomer and a mathematician by Philo.² In the twelfth volume of the Asiatic Researches, p. 461, may be seen an account, given by a Mr. Moorcroft, of a society in Tibet which can be no other than Free-masons.

In the beginning of the celebration of the Gentile mysteries a herald proclaimed,

. Procul! hinc procul este, profani!

Saint Chrysostom³ says, when we celebrate the mysteries, we send away those who are not initiated, and shut the doors, a deacon exclaiming, "Far from hence, ye profane! close the doors, the mysteries are about to begin. Things holy for the saints; hence all dogs." (From something allusive to this has probably been derived the custom among the Mohamedans of calling Christians *dogs*.) M. Dulaure, in his history of Paris,⁴ has observed, that the explanation of the doctrines of the Trinity and the Eucharist constituted probably the Christian mysteries, and, *in part*, he is certainly right. But he might have added the Gentile mysteries also, for the Gentile

³ Homelia 23, in Matt.

⁴ Vol. VIII. p. 80.

Trimurti, I need not describe again, and the Charistia of the Romans was the Eucharist of the $\chi\rho\eta\varsigma$, or Latin Christus—the sacrifice of Pythagoras, of which I shall say more by and by.

In M. Dulaure's 8th volume of the history of Paris may be found, a very interesting account of the union of the pagan mysteries or crafts of the ancients with those of the Christians in the seventh and eighth centuries. Any person who has read this work with attention must see that the mystery or craft of modern trades is but the Raz of India, all continuing until they became no longer mysteries. All our guilds and corporations have come from this source. Hence all their mysterious numbers—*twelve* aldermen, twenty-four common councilmen, &c., &c. It has been said¹ that the Templars, fleeing from the persecution of Philip le Bel, took refuge in Scotland, and that some apostates, at the instigation of Robert Bruce, founded the order of Templars in that country. All this may be very true, with the single exception, that it is absurd to call them *apostates*. They were evidently emigrés because they would not be apostates, and there was no apostacy in opening a lodge, and initiating Robert Bruce and others into the mysteries, and thus continuing the order in defiance of Philip.

The word Raz, in India, signified masonry or mystery or secret learning or wisdom, or a ray emanating from the sun, as I have formerly shewn. It also had the signification of King, whence came the Raj-ah, and the Rajah-pout-ans, who, when they came from the East to the West—to Syria and Egypt, were, for this reason, ROYAL-palli or Shepherds. From this came the Ras of Abyssinia; and more to the West, the Rex, à Rege, of Rome, and the Roi of France, and the person, in the Roman and the Eleusinian mysteries, called a king, or Rex; but who, in the most early times, was a Ras or person in whom was incarnate a certain portion of Divine Wisdom or the Logos. Melchizedek was a Ras, and an Archè, and priest, as I have little doubt that all kings were originally. It was the wisdom (or perhaps more properly *cunning*) that made them kings. They were supposed to be incarnations of wisdom or Sons of God. This was the case with Alexander the Great.

It is certainly worthy of observation that in the Hindostanee, the language of the country in which I believe masonry had its rise, a mason is called a *raz*, and has the meaning of *mystery*. This word has the same meaning as the $\rho\alpha\varsigma$, *ras* of Genesis, the Αρχη of St. John. The persons called Royal-Arch Masons were the Archi-tect-onici, before the invention of key-stoned or radiated Arches, the Cyclopæan builders of the only *stone* edifices, at that time, in the world, which were temples. It was not till comparatively modern times that private persons had *stone* houses. In the immense cities of Benares, Delhi, &c., they are still chiefly built of mud or sun-dried bricks and wood. Dwelling-houses were also framed of oak timber, filled in with brick or mud, and were, as we may yet see from a few poor ones which are left in England, in a few old towns, capable of great magnificence. Hence the reason why, in the countries where the ruins of temples are common, and where we know that high civilization once prevailed, there are no ruins of houses. The Architectonici, the Chaldæi, the Gothici, the Mathematici, the Dionisiaci, constituted a *MYSTERY*, and erected Gothic buildings, the ruins of which now remain in India, thousands of years before they existed in Europe.² In, I believe, the remains of Mandore, and in all very ancient towns, we find only the ruins of the temple and perhaps of the palace. We know the size of the town only from the ruins of the walls. Thus in England and Ireland we have Stonehenge and Abury, and tumuli, with *glass beads* and *gold ornaments* in plenty, but not the least appearance of a dwelling-house. Can any one suppose that the people who raised the stone liulels upon the jambæ at Stonehenge, did not know how to place beams of timber, one over the other, so as to

¹ In 1791.

² Vid. Hist. Dion. Artif. by De Costa.

form roofs for houses? It is the deficiency of the remains of houses which induces persons to think, that there can have been no high civilization in these northern countries. I desire such persons to examine the Mosaic floors, three or four feet under ground, at Aldborough in Yorkshire, the ancient Iseur or Isurium, the capital of Brigantia, from which Boadicea led forth her 80,000 men against the Romans who defeated her, and destroyed her capital, removing it to Evora or York.

The Masons were the first priests, or a branch from them, and as they were the persons employed to provide every thing requisite for honouring the Gods, the building of temples naturally fell into their hands, and thus priests and masons were identified. This was the first practical attempt at Masonry. Thus the Masons were an order of priests, that is, of initiated. Every initiated person was a priest, though he might not exercise the functions of a priest. Thus they became identified with the most powerful and influential body of society, and though all priests were not Masons, I think that all Masons were priests in one sense, being initiated. I think they were priests originally; and, as was to be expected, they provided good houses for themselves, and, when many of them consisted of Monks, Monasteria. In many instances, from superiority of intellect, the consequence of the constant use of their faculties, they acquired the sovereign power.

14. Having shewn how the Mohamedan and various sects were connected together, it is now time to unveil the secret doctrine of Mohamed, which will be in a great measure that of them all, and will, I think, easily account for the rapid diffusion of Mohamedism, and for its adoption when first promulgated by the most learned and talented of the Arabian philosophers—a secret doctrine yet found in a state of persecution among the followers of Ali in Persia. What my reader has seen I had principally written before I made the discovery of the secret doctrine, and I think it expedient to leave what I had written, as it is, to shew how the whole, by degrees, unravelled itself—to shew that there was no preconceived system at the bottom to which every thing was to be made to bend, and the literal meaning of which I had determined nothing should ever persuade me to disbelieve. We must never forget that in every thing respecting Mohamedism we labour under the greatest difficulties. The truth is, that its real doctrine is now confined to a persecuted sect, which considers that to unveil its mysteries would be to be guilty of the greatest moral turpitude; and the pretended history, as we have it, has been received from the meanest-minded of devotees, or from zealots of another sect, the Christians, whose malice and hatred have blinded their understandings—zealots so mean in mind too, that if they had been willing to exercise any thing like criticism they were incapable of it. What are we to expect from even such men as the very great scholar, but mean-minded Prideaux!

It is well known that almost immediately on the death of Mohamed his followers divided into two sects, that of Abubeker, and that of Ali, the latter of whom had the twelve Imaums—his successors—the same in number as the apostles of Christ and as the twelve Cæsars. The faith of the latter of these sects became and still continues the religion of Persia. This I have no doubt *was* the original or rather, perhaps, *contained* the original esoteric religion of Mohamed, which is yet to be found in the sect of the Sofees as they are called by Sir John Malcolm, in his History of Persia. These are followers of the ancient Σοφοι, one of whom was Mo-amed, that is, Mo or Om, *the illustrious* or *desire of all nations*. The Sophoi or Sofees are allowed by the vulgar or present orthodox Persian writers¹ to have descended from the ancient Sabæans and to have been contemporaneous with the prophet, that is to say, they find them and their doctrines to have

¹ Sir John Malcolm's History of Persia, Ch. xx.

co-existed with him from his first appearance or from the beginning of his empire, but they know not how or why. Sir John judiciously observes, that “their rapturous zeal, perhaps, aided, in “no slight degree, its first establishment.”¹ I have no doubt that it did. But this acknowledgment conveys along with it the *admission* of the fact, that Mohamed was a Sofee, and his secret religion Sopheism. Sir John then adds, that they have been since considered as its most dangerous enemies. There can be no doubt that they are thus considered by all the vulgar rabble—by such persons as believe that Mohamed did really ride a horse called Borak from Mecca to Jerusalem in a minute; that is, by the followers of the literal meaning of the forged Koran. By these *enlightened persons* in modern times the Sophees have been persecuted. Whether in Persia the sect of Sofees possessed the power without intermission from the time of the twelve Imaums to the time of Nadir Shah, it may now be difficult to determine; but certainly they ruled Persia from A. D. 1500 to 1736, when the kingdom was conquered by Nadir Shah, who was himself originally a Sophee, but who, after the conquest of Persia, is said to have abandoned the Sophee doctrines, and to have compelled his followers and his new subjects to change their religion along with him. The reason of this is very perceptible. The Persians were no longer capable of appreciating the refined doctrines of *Sopheism*, of *Wisdom*, of Gnosticism. Whatever he and his twelve Imaums, if he had such a cabinet, might believe, the trash of the Koran was more suitable to the vulgar populace. Sopheism, the secret doctrine, might have become too common; it was necessary to put it down—to keep the people in ignorance. This was what the Popes did with Gnosticism—prohibit it publicly, hold it secretly. This was, perhaps, the original reason of the composition of the Koran, at all events I cannot doubt that it was the reason which caused the Caliph *Othman* to redact the Koran. For any thing we know, the first copy of it may have been an exposé of the doctrines of Sopheism or Wisdom as taught by the Great Mohamed, and if we judge of it from his high character, we may readily believe that it may have been very fine and worthy of its author; but we really can know nothing about it, nor is it likely that we ever shall know any thing unless some copy of it may remain among the Sophees of the East.

I can entertain little doubt that all the Caliphs of the Saracens were secretly or openly Sophees; and that Sopheism continued the Esoteric religion of the state till the Turkish barbarians overran their empire, and came over to the religion of the vulgar Koran from their own, whatever it might be. Whether the Sultans and the upper classes of the Turks are at this day in any respect superior to their followers upon these subjects, I have not the means of acquiring information. It is probable that, like the Christians and the Jews, they are all victims of the policy which formed or retained, when formed by accidental circumstances, a refined religion for the cabinet, the conclave—a base one for the people. Alas! what misery has this brought upon the world! But its day is nearly past.

The word *Soph*, in Persian, has the meaning of wool, and therefore some persons have thought the doctrines of Sopheism were named from it—overlooking what I should have thought could not well be missed, the word $\Sigma\phi\iota\alpha$ *wisdom*, from which no doubt it took its name. We are also told by Sir John Malcolm that these people had a very remarkable name, that of *Philosaufs*, that is, philosophers.

The sovereigns of Persia have the titles of *Sophi* and *Shah*. The first explains itself; the second means, protector, preserver, saviour, from the Hebrew word $\gamma\psi$ *iso*, to save. From *Eli-sha*, successor of *Elijah*, of the *God Jah*, has come the title of all the Shas of Persia and other countries. The *Pa-sha* is the same; the word *Pa* is either *Ba* or *Ab* *father* or the Egyptian and Coptic em-

¹ Sir John Malcolm's History of Persia, Ch. xx. p. 266.

phatic article Pi. As we call our king *majesty*; and as the Romans called their emperor *Divus*, so the Asiatics call their kings *Shas*.

Om-rahs are Om-rays, judges, possessors of wisdom, rays or emanations of Om. In Tait's Edinburgh Magazine,¹ an account is given of some young Mohamedan devotees chaunting in chorus, in praise of the prophet, the word *Amber-ee*. I cannot help suspecting that he is here invoked by the title of Om, and that the name of the famous palace in Spain, Alambra, has been the house of Al-am-bra, *the holy Am—the bra* used like the Latin *Divus*.

I think the word for *wise* may be found in the Hebrew *שפ* *spe*, *religious sentiment*. See Parkhurst in voce, IV, and in *שפט* *spt*, *judgment*, whence came the Sufetes or judges of the Tyrians. But *שפ* *sp* will be the root, the *ן* mutable or omissable. Hence Sapio and Sapientia.

Sir John Malcolm takes his accounts of these persons from their enemies, therefore in every part of it an evident bias against them may be perceived; but he admits that they have had among them great numbers of the wisest and ablest men and finest poets and literary characters of Persia and the East. He says,² "The Mahomedan Soofees have endeavoured to connect their mystic faith with the doctrine of their prophet, who, they assert, *was himself an accomplished Sofee*. The Persian followers of this sect deem Ali, his sons, and all the twelve Imaums, teachers of Sofeeism;"³ *and they claim as followers of their sect almost all the great men of the world.*⁴ Here, if I do not greatly mistake, we find the Esoteric religion of Mohamed, however much persecuted and endeavoured to be suppressed by his vulgar followers the present Turks.

Sopheism, we are told, is divided into four stages. In the first, a man is required to observe the rites and ceremonies of religion for the sake of the vulgar, who are incapable of looking to higher matters. In the second stage, a man is said to obtain power or force, and may leave his teacher to study by himself; he is said to enter the pale of Sopheism, and he may quit forms and ceremonies, which he exchanges for spiritual worship. This stage cannot be obtained without great piety, virtue, and fortitude: for the mind cannot be trusted in the neglect of usages and rites necessary to restrain it when weak, till it hath acquired strength from habits of mental devotion, grounded on a proper knowledge of its own dignity, and of the Divine nature. The third stage is that of knowledge, i. e. *Wisdom*, and the disciple who arrives at it is deemed to have attained supernatural knowledge; in other words, to be inspired; and when he arrives at this state, he is supposed to be equal to the angels. The fourth and last stage denotes his arrival at *truth*, which implies his complete union with the Divinity.⁵

It appears that by their teachers they "*are invited to embark on the sea of doubt*;"⁶ unquestionably this must be heresy in every religion. They hold doctrines respecting the existence of matter similar to the refined doctrines of the illusion of India, and I have no doubt, from what drops from the gallant knight,⁷ also similar to the doctrines of the emanation from the *το ον* of Plato and of Orpheus, and of the Indians, with the latter of whom he says that these delusive and visionary doctrines have most flourished.⁸ He further states that their doctrines may be "*traced in some shape or other in every region of the world.*"⁹ I dare say they may. Again, he says, "The Sofees represent themselves as devoted to the search of truth, and incessantly occupied in adoring the Almighty, an union with whom they desire with all the fervour of divine love. The Creator, according to their belief, is diffused over all his creation. He exists every where and in every thing."¹⁰ They compare the emanations of his essence or spirit to the rays of the sun,

¹ No. I. p. 32.² P. 279.³ P. 276.⁴ P. 278.⁵ P. 270.⁶ P. 268.⁷ P. 269, *n*.⁸ P. 268.⁹ P. 267.¹⁰ *Ibid.* p. 269.

“ which, they conceive, are continually darted forth and reabsorbed, and they believe that the “ soul of man, and the principle of life which exists throughout all nature, *are not from God, but “ of God.”*¹ Here is certainly the Gnostic doctrine of emanations which I have in part explained, and of which I shall have much to say hereafter.

The Sofees are divided at this day into many sects, and, in their four stages, they have a species of Masonic or Eleusinian initiation from lower to higher degrees. As we have just now seen, Sir John says, the third stage is that of *knowledge*, the fourth of *truth*. I suspect that it ought to be, the *third of truth*, the *fourth of knowledge*, i. e. WISDOM, Σοφία. The Sofees of Persia are enthusiastically attached to poetry and music, both of which I have no doubt owe their origin to religion, and that recitative and chaunting are not modern Italian inventions, but that they have existed from the most remote antiquity. Sir John, after stating the chief part of what the reader has seen, admits that they involve their tenets in mystery,² and that they have secrets and mysteries of every stage, which are never revealed to the profane, and to reveal which would be a crime of the deepest turpitude.³ One of their most learned works, called the *Musnavi*, which teaches, in the sweetest strains, that all nature abounds with divine love, was written by a person called the *Moollah of Room*. I have no doubt under this mystic name more is meant than meets the eye.⁴ Sir John says Hasan Sabah and his descendants were (as I think might be expected) a race of Sofees,⁵ and that they were of the sect of Bâtteneâh, that is Buddha. They were Templars, or Casi-deans or Chas-di-im, or followers of Ras, or Masons.

The use of the Pallium or sacred cloak to convey the character of inspiration was practised by the Imaums of Persia, the same as practised by Elias and Elishah, Eli-Shah; and it is continued by their followers to this day. When a person is admitted to the highest degree, he will receive the investiture with the Pallium and the Samach, which is the Χειροτονια. When the Grand Seigneur means to honour a person he gives him a Pellise, a Pall, a *كسوة pla*, a sacred cloak, a remnant of the old superstition, the meaning probably being forgotten.

From this comes the word palls at our funerals. One of the names of the chief of the Assassins was Old man of the mountain—Senex de montibus. The Buddwa of Scotland was called old man, and Buddha, in India, means *old man*. My opinion that the Assassins were Buddhists receives confirmation in part from this. He was the ancient of days, whose hair was wool, of a white colour; but in Persian the word Sofee means both *wisdom* and *wool*.⁶ Long white hair was the peculiar emblem of wisdom.

A careful consideration of what I have said will enable my reader to account for many circumstances which he has seen stated respecting Hassan Sabah and the Saracen chiefs, in the time of the Crusades, though the subject is still not entirely without difficulty: and will furnish a satisfactory reason why, about the year of Christ 1200, when the expected completion of the period of cycles arrived, and brought nothing with it but the usual phenomena of nature, the expectants of the secret system lost their hopes, and gradually sunk into the vulgar mass.

The true character of the Sofees and of the Esoteric faith of pure Mohamedism may be clearly discerned from the following concluding passage of Sir John Malcolm's respecting them: “ I have “ abstained from any description of the various extraordinary shapes which this mystical faith has “ taken in India, where it has always flourished, and where it has at times been beneficial in “ uniting the opposite elements of the Hindu and Mohamedan faith:”⁷ nor have I ventured to

⁷ Shewn in the case of the Sikhs.

“ offer any remarks on the similarity between many usages and opinions of the Soofees and those
 “ of the Gnostics and other Christian sects, as well as of some of the ancient Greek philosophers.
 “ The principal Soofee writers are familiar with the wisdom of Aristotle and Plato : their most
 “ celebrated works abound with quotations *from the latter*. An account of Pythagoras, if trans-
 “ lated into Persian, would be read as that of a Soofee saint. His initiation into the mysteries of
 “ the Divine nature, his deep contemplation and abstraction, his miracles, his passionate love of
 “ music, his mode of teaching his disciples, the persecution he suffered, and the manner of his
 “ death, present us with a close parallel to what is related of many eminent Soofee teachers, and
 “ may lead to a supposition *that there must be something similar in the state of knowledge and of*
 “ *society, where the same causes produce the same effects.*”¹ Indeed, Sir John, there is something
 similar, for they are all identical, with a few trifling alterations, produced by time and change of
 country. Here, in the Soofees of Persia, we have the Esoterici of Buddha, of Moses, of Jesus,
 and of Mohamed, however disgraced at this time by numerous sectarian divisions and mischievous
 absurdities of every kind. In short, Sopheism is Gnosticism; and, if we can discover the one,
 we shall discover the other.

On the Sofees Sir William Jones says, “ I will only detain you with a few remarks on that me-
 “ taphysical theology which has been professed immemorially by a numerous sect of Persians and
 “ Hindus, was carried in part into Greece, and prevails even now among the learned Musselmans,
 “ who sometimes avow it without reserve. The modern philosophers of this persuasion are called
 “ *Sufis*, either from the Greek word for a sage, or from the woollen mantle which they used to
 “ wear in some provinces of Persia : their fundamental tenets are, that nothing exists absolutely
 “ but God ; that the human soul is an emanation from his essence, and though divided for a time
 “ from its heavenly source, will be finally reunited with it : that the highest possible happiness
 “ will arise from its reunion : and that the chief good of mankind in this transitory world, consists
 “ in as perfect an union with the Eternal Spirit as the incumbrances of a mortal frame will allow :
 “ that for this purpose they should break all *connexion* (or *taalluk*, as they call it ²) with ex-
 “ trinsic objects, and pass through life without attachments, as a swimmer in the ocean strikes
 “ freely without the impediment of clothes, that they should be straight and free as the cypress,
 “ whose fruit is hardly perceptible, and not sunk under a load, like fruit-trees attached to a trellis :
 “ that if mere earthly charms have power to influence the soul, the idea of celestial beauty must
 “ overwhelm it in ecstatic delight : that for want of apt words to express the Divine perfections
 “ and the ardour of devotion, we must borrow such expressions as approach the nearest to our
 “ ideas, and speak of beauty and love in a transcendent and mystical sense : that, like a reed torn
 “ from its native bank, like wax separated from its delicious honey, the son of man bewails its
 “ disunion with melancholy music, and sheds burning tears, like the lighted taper waiting passion-
 “ ately for the moment of its extinction, as a disengagement from earthly trammels, and the
 “ means of returning to its only beloved. Such in part (for I omit the minuter and more subtil
 “ metaphysics of the Sufis which are mentioned in the Dabistan) is the wild and enthusiastic re-
 “ ligious of the modern Persian poets, especially of the sweet Hafiz and the great Maulavi : such
 “ is the system of the Vedanti philosophers and best Lyric poets of India—a system of the highest
 “ antiquity both in Persia and India.”³ We must not forget that the above is the figurative de-
 scription of the poets, the real doctrines of the Sofees are a profound secret, untold by Hafiz or
 Maulavi, and only very partially known, by guesses or inference, by Jones. But enough trans-
 pires to shew the nature of the real uncorrupted system.

¹ Shewn in the case of the Sikhs, p. 300.

² That is, hold no conversation, no talk. G. H.

³ Asiat. Res. Vol. II. pp. 62, 63.

If the reader consider what has been said respecting the character of the Caliph, the sacred head of the Musselman religion, and respecting the religion of the Sophees, evidently the secret religion of Mohamed, and of the doctrine of Wisdom every where apparent, then carefully examine my table of alphabets and observe the way in which the Gamma or Gimel became C, and how again the C and the Σ became confounded, and that the C came to be written in very many cases by K,¹ I shall not be thought guilty of a great paradox in maintaining, that there is a strong probability that the word Khalif was formed of the word Al-soph; that the Sphahees or Sipahis had their name from the same root; that they were the cavalry of Wisdom, of the Suph. Many words might be pointed out which have undergone much greater changes. The circumstances in favour of this are peculiarly strong. But it may also come from Soph-Cali, taking Cali in the sense either of Wisdom or Logos, or Kosmos in the sense of *beauty* arising from *order*.

In addition to the Sophees, who are the same as the Persian Sophis, we have, among the Indians, the WISE men called Ras-ees or Rish-ees: these are evidently taken from the Hebrew Ras, or Rasi. The Pleiades were believed to be different from all other stars in having a motion within themselves. Perhaps it might be for some reason connected with this, that they were called Rasces or Rashees, but their epithet or quality of *wisdom* shews what they were. Arrian notices these Rashees or Sophees by the latter name: he calls them *Sophists* or *wise men*, who, he says, are few in number, but rank first in the country.² These Sophists are found in the neighbourhood of the temple of Solomon in Cashmere, called *Rashees*. The identity of the two cannot be doubted. They are described as follows in the Ayeen Akberry: "The most respectable people in this country are the Reyshees, who, although they do not suffer themselves to be fettered by traditions, are doubtless true worshipers of God. They revile not any other sect, and ask nothing of any one: they plant the roads with fruit-trees to furnish the traveller with refreshment: they abstain from flesh; and have no intercourse with the other sex. There are near 2000 of this sect in Cashmeer."³ Cashmere is all Holy land: its capital Sirrynagur. It has a river called Latchmehkul;⁴ that is, a corrupt way of writing la, or el, or al, חכמה *hkme*. These Rishees are the same as Sofees, and are the Carmelites, Nazarites, or Essenians, belonging to the temple of Solomon in this country. Cashi-college can be nothing but Cashimere, or the mere or island of Cashi, where stood the temple of Solomon, which the Mohamedans destroyed, and the tomb of Moses. We have formerly seen that at the College of Cashi the Chaldee language was spoken, which was studied by all the physicians at Delhi. Abul Fazel says, in the words just quoted, "The most respectable people of this country are the Reyshees, who, although they do not suffer themselves to be fettered by traditions, are doubtless true worshipers of God."⁵ These Reyshees I apprehend are Ras-shees or wise men, whom Diodorus calls Sophites,⁶ and places at a little distance between Cashmere and the Hyphasis. The Greek word Sophites, is but a translation of Ras-shees.

In the Yogeas or Fakeers of India we have dervises of Mohamedism, and the Hermits and Friars of Christianity. The dervises of Mohamedism are copies either from the Christians or Hindoos, and, in fact, corruptions of Mohamedism. Mohamed declared that he would have no monks in his religion, and it had none for the first two hundred years. It is evident from Arrian and Porphyry that these orders of men were well known in their time; and that they were found in India in the time of Alexander. They existed in different orders before the times of Jesus in Egypt, Syria, &c., as Essenes, Cœnobites, &c.; and those on Carmel, described by Pliny, became Carmelites.

¹ The first part of Payne Knight's treatise on the Greek alphabet may be consulted on these changes.

⁴ Ibid. p. 156.

⁵ Rennel, Mem. p. 106.

⁶ Ibid. p. 94.

We may find in the schools of the prophets צופים *zupim*¹ in 1 Sam. i. 1, the city of the Sophim or learned, and again 1 Sam. x. 10, 11, and xix. 18—24. Samuel and David dwelt in the city of נויט *nuit* Naioth, that is, the city of Neith or of *wisdom*, and in the country of Rama רמה *rme*. The Raz of India is the Ras of Genesis, and means *secret wisdom*, or *knowledge*. It is the mistur of the Hebrews. The head or chief was a *ras* or RAISED person; the first emanation or Raj was wisdom, therefore wisdom was the first or head or αρχη. He was the first existence or hypostasis in time. The head, the seat of wisdom, was *ras*: the head ruler was the same: so the seat of the *ras* was the sofa or divan, sop-aia, place of wisdom. The Hebrew word for a sophia or oriental divan, is נטה *nthe*, as often written *nthe*, the neith. The sophia is the divan in eastern countries, used solely by the Ras or prince or divine incarnation of wisdom. Divan is Div-ana, place of the holy one. Our word *raise* comes from the word Ras, in the sense of head, as head or chief of the clan. The way in which we have found the words Ras and Sophia used as a title of honour for the kings of Persia and Abyssinia is very curious, and I think it will not be thought surprising if the same system be found carried a little farther. Adonis, as I have shewn, has the meaning of Wisdom. It is אדון *a-dun* THE wisdom. From this come the title of the Dons of Spain and Portugal, of the Welsh Adon for *Lord*, and the title of O'Conner Don of Ireland. The Rossi, or Rosy-crucians,² with their emblematic red *cross* and red *rose*, probably came from the fable of Adonis (who was the Sun, whom we have seen so often crucified) being changed into a red *rose* by Venus.³ *Rus* in Irish signifies a *tree*, *knowledge*, *science*: this is the Hebrew *Ras*. Hence the Persian *Rustan*.⁴

We have before seen, that when we pursued the word Don to the utmost point to which we could carry our researches, we found it to end in Wisdom. This is what was natural, if my system be true. It could scarcely be expected that in some one of the dialects the meaning would not be found. We have seen that Maia was considered the mother of Buddha or the Logos or the same as the Logos and divine wisdom. We have a sea called Mæotis or Maietis or Maria. It is also called the sea of A-soph or of *the wisdom*. Into it runs the river Tan-ais or Don, also called river of Asopus, the Soph, on which is a town called Asoph (or Asow in Russian) and Tanais, and it is in the district called B-achmut, or of בחכמות *b-hkmut*, or of Wisdom.⁵

The Red Sea is called the sea of סוף *sup*. This name I take to be the same as the name of the Palus Mæotis or Sea of *Asoph*, and to have been אשא *asp* in the singular, אשפים *asphim* in the plural, which is the word used in Daniel for Astrologers or *wise men*, or Magi.⁶ They were the same as the Chasdim or Chaldeans. The root of this was the same as the Greek Σοφος or wise man, and this sea of Suph was the sea of wisdom, *Sophia*, the same as the Mæotis, and came from the same root. I think it may also be found in Frey, with the meaning of vertex, in סוף *soip*, and סופים *sopim*, thoughts, cogitationes, from the root סוף *sop*.

Dr. Stanley says,⁷ "Ashaphim were rather the same as Souphoun in Arabick, wise, religious person." Again he says,⁸ "perhaps from the Hebrew root *Ashaph* comes the Greek σοφος." When I consider the propinquity of the district of Bachmut, and the town of Don, and the Sea of

¹ Called by Pagninus *Sophim*.

² The Jewel of the Rossicrucians is formed of a transparent red stone, with a red *cross* on one side, and a red *rose* on the other. Thus it is a crucified rose.

³ See Drummond's Orig. Vol. III. p. 121.

⁴ Vall. Coll. Hib. Vol. IV. Pt. I. p. 84. The ancient Sardica, in Lat. 40 deg. 50 min., is now called *Sophia*; the ancient Aquincum Buda or Buddha. These were, I believe, old names restored. Vide D'Anville's Atlas.

⁵ Enc. Brit. in voce, Asow.

⁶ Duret, p. 329.

⁷ Hist. Chald. Phil. p. 764, 4to.

⁸ Ibid.

Asoph to Cholcos, and Sindica and the Chaldei,¹ and other circumstances, I cannot feel any doubt, that in the words Don, Asoph, Bachmut, we have the ancient mythos. When we consider that the empire of the Ras is on one side of the Red Sea, and Mecca, the capital of the Mohamedan Sophees, on the other, we cannot be surprised that it should be called the sea of wisdom.

Zoroaster had with the Parses the surname of *Sapet-man*. When I recollect that with the Northern nations *Mannus* meant *man*, I cannot help believing that Sapet-man meant *wise man*. Anquital derives it from Sapetmé, *excellent*.² The אשפִּים *aspim*, in Chaldee, mean *conjurers* or wise men;³ אֲשָׁפִּי *asp*, Asophim, שֹׁפֵט *spt*, *judgment*; שׁוֹפְטִים *suptim*, *judges*. These were the Carthaginian Suffetes or Judges.

In Book IX. Chap. I. Sect. 9, I have derived the name of the sea of Arabia or the Red Sea, the sea of סֹפֵר *sup*, from צֹפֵר *zup*, which means correctly, *the most secret place*, and *the Holy of Holies*. I believe it is the same as סֹפֵר *sup*, from being the peculiar place of Wisdom, which is said to shroud itself in darkness. But it is of little consequence; it may be considered an erratum, and that it comes from אֲשָׁפִּי *asp*, the *wise man* or Magus; but it is evidently the same thing. No one can doubt that the real root is שֹׁפֵר *sp*. From the Serpent being the emblem of wisdom in Egypt it was called *Asp*, which has passed to us. It was commonly believed in Egypt, that it never died.⁴

The famous well, *Zem Zem*, at Mecca, is the well of wisdom, צֶמֶם *zmm*.⁵ In the refined doctrines of Sopheism, that is, of Gnosticism, and in the doctrines of the eternal renewal of cycles, we may find the reason why the greatest men of the oriental world turned Mohamedans. No one can deny that those doctrines, chastened down to their primitive simplicity, are refined and beautiful, although capable of being carried to an excess pernicious to its professors. But if it have made self-tormentors for the love of God, it seems never to have excited its votaries to the cutting of the throats of those who did not profess its doctrines. I think when, in the latter part of this book, my reader shall have seen the whole development of the ancient doctrine of Wisdom, he will no longer be at a loss for a reason why Mohamedism prevailed in the seventh century over the base Christianity which was then taught to the vulgar by its priests.

15. When we look around us, innumerable detached circumstances prove that a former very fine and enlightened race existed, and that its theology, however false it might be, was not only not foolish, but very refined and beautiful; and this I shall prove at large presently. But look at the works given to us by Mr. Upham and others, as the Indian theology of this day, and how can any thing be meaner? It is not unlikely that the priests have corrupted even the Vedas, the oldest of their books, in the different ages through which they have passed, to make them fit to, or to raise upon them, superstitions suitable to the degraded taste of the time. But there is one fine work come down to us, extremely beautiful, the simplicity of which is in perfect keeping with the contemplative icon of divine wisdom, called Buddha (Plates, Fig. 34); with the simplicity of the circular temples of Stonehenge, Dipaldenha, and the Pyramids; with the simplicity of the doctrines of the Trimurti, and the renewal of Cycles, &c., &c., &c.; and that is the work called the Fables of Æsop or Lockman.⁶

⁴ The Arabians call a Serpent, Supphon. Parkhurst in voce שֹׁפֵר *spe*, שֹׁפֵר *spp*. p. 760.

⁵ Vall. Coll. Hib. Vol. V. p. 42.

⁶ See Univ. Hist. Vol. XVIII. p. 401; see also D'Herbelot, in the article Lokman; Nimrod, II. p. 660.

He is said to have lived in the time of Heber, of David, and of Solomon: and to have been a Jew, that is, of the tribe of Ioudi or Judah. He is claimed by the Greeks, the Jews, the Arabians, the Persians, the Ethiopians, and the Indians. Much has been written about him. I believe the fables of Æsop are the fables of the *Σοφία* and of Lockman, of L'hkm, לחכם *lhkm*, the wise. His residence, if he ever lived, probably was in Oudia. The nations are all right, because they are the fables of Wisdom, and they all had the doctrine of Wisdom. In Arabia there was a tribe of *Lochmians* whose general name was *Mondar*.¹ They were descended from *Lakhm*, the son of *Am-ru*, the son of *Saba*. *Their kingdom lasted 600 years*. The words *Lochman*, *Mondar*, *Lakhm*, *Am-ru*, *Saba*, and their 600-year kingdom, can want no explanation for any person who has read this book. They evidently bespeak the universal mythos.

Hottinger says, "Lokman, vel Lukman est hic plane *παρειακτος*," (this is most clearly the *Parasacti* of India, which Hottenger has got hold of and misunderstood,) "quem tamen integrâ *Suratâ* commendat Muhamed quæ numero est XXX. Quis vero fuerit, à Muhamedanis Arabibus difficulter obtinebis. Muhamed eum facit Davidi coætaneum. *Beidavi* in comment. p. 651, refert illum fuisse filium Naora, ex filiis Azed, filii Sororis (nepotis ex sorore) Jobi, aut Materteræ ejus; vivisse autem ad tempora Davidis, à quo ille scientiam didiceret. Ex Christianis *Lokmani* hujus meminit Elmacinus diebus ejus (Josia, Regis Judæ) fuit *Lokman sapiens*. Author translationis Alkorani veteris, eum Aluchmen appellat." Georgius, p. 97, says, *Parasacti*, prima lux sive flamma à Deo invisibili manans. But *Parasacti* is *Lachmi*, and *Lachmi* is *Al Acham*, חכם *hkm*, אל *al*—חכמה *hkme* אל *al*, *Lochman* idem.

Thus *Lochman* was *the wise man*, a corruption of חכם *hkm* and *mannus*. He was known to be Æsop the author of the fables. The latter name is the same as the former in substance, it is the emphatic article, and שפ *sp*, which is the Hebrew root of the Greek word *Σοφία*, and means wisdom or the wise man. Thus *Lochman* לחכם *lhkm* and *Luchme* לחכמה *lhkme*, the same word in the feminine form. The *Parasacti* one of the names of *Lachmi* found by Hottinger in the Greek is very curious. It means *to insinuate* the same as *παρειαγα*. The *σαγα* is the *Sagax*. The Scandinavian Mercury or God of cunning, that is, in other words, wisdom, was called *Loke*. No one can doubt whence this comes.² *Lughman* (*Lochman*) is a district of the *Afghans*, between *Peshawer* and *Cabul*. It contains the mount *Suffaid* (*i. e.* *Suf-ai-di*). The language is unknown, but it has many *Pushto* words.³

CHAPTER VII.

AFGHANS.—TAMUL LANGUAGE.—SUBJECT CONTINUED.—OBSERVATIONS ON LANGUAGE.—BOEES, BAIEUX.—THOMAS, SHARON TURNER.—TWINNS, TAMAS.—CRETE, CRES.—MALABAR, MEANING OF.—CAMA, CAMA-SENE.—TWO TOMBS OF THOMAS.—JAGGERNAUT.—VEDA.

1. WE will now return to the tribe of Afghans, of whom we noticed many circumstances in the 4th, 5th, and 6th chapters of the Eighth Book, and in which pretty good proof was given that they were the ancestors of the Jews. The author of the Cambridge Key, whose authority cannot be disputed for such a fact as this, says expressly, that the Vedas, in the Sanscrit, are now believed, both by Persians and Hindoos, to have been originally written in a CELESTIAL language, long since extinct.¹ By this celestial language the Pali is not meant, for reasons which it is unnecessary to explain, and also because it is not extinct or lost. Then what language was it so likely to be, as the old Hebrew language of the tribe of Ioudi or Yud or Western Oude, whose Samaritan nail-headed characters Dr. Hagar traced from India, and from which the Sanscrit letters descended? What language was it so likely to be, as that which we find among the low-land tribes who, in South India, mix not with the Brahmin tribes, and whom we find also among the mountaineers of North India, whose retired situations have prevented their intermixture with the higher classes of lowlanders, the followers of the Tamul Woden? What language can it have been but that of the tribe whose names of God we find in the Brahmin service—Ie-peti, Iaya—names of rivers explainable in their language, NER-Buddha, NER-ma-da, River of Buddha, River of Maha-deva—whose towns and kings are called after the tribe, Ioudi-pore, Tuct-Soliman—whose mountains have the same names, Montes Ioudi, Montes Solumi? And the very oldest temples in the country and in the world, the temple of Solomon in Cashmere? Whose language can it have been but that of the people described by the Jesuit to have all the Jewish ceremonies, at Madura, in the Carnatic, near the tomb of St. Thomas and the temple of Bal-ii or Tripetty? which we shall now find to have been a language of learned men. But we have the express authority of the sacred writ for another equally important fact. The Geta opens with informing us, that “this immutable system of devotion was revealed to Vaivaswat, who declared it to his son Menu, who explained it to Ishwacu. Thus the chief Reshees knew this divine doctrine delivered from one to another.”² From this we see that it was held that the doctrines were handed down for several generations by tradition, unwritten.

The translation of a history of the Afghans, made by Dr. Dorn, has been published by the Oriental Translation Society. It is like most oriental histories, a collection of nonsensical stories. On the similarity of the names to the Hebrew the learned Doctor says, “The fact, that the Afghans make frequent use of Hebrew names, as Esau, Yacoob, Musa, &c., and that their tribes bear Hebrew names, as Davudze, &c., is as little a proof of their Hebrew origin as the circumstance that their nobles bear the title Melik, which title, even according to their own assertion, was not introduced before Mohamed’s time, and is undoubtedly the Arabic for a ruler, a king.”³

¹ Vol. I. p. 261, Vol. II. pp. 128, 129.

² Camb. Key, Vol. II. p. 121.

³ Dorn, Hist. Afghans, Pref. p. viii.

Upon the assertion that the word *Melik* stands for *nothing*, I must observe, that I do not attempt to prove that the Afghans were descended from the Jews, therefore that style of argument does not apply to me. But the admission that their tribes bear *Hebrew names* is most important; they cannot have come from the Mohamedans. The ancient temple of Solomon in Cashmere was destroyed by the Mohamedans. It is surprising to me that the learned Doctor has not attempted to account for the identity of names, which he admits. Without going further, the names, which he admits to be Hebrew, are alone, under all the circumstances, quite enough to prove the original identity of the languages. In Dr. Dorn's work it is stated that the *eldest* son of Jacob or Yacoob was Juda. Now this clearly proves that though the mythoses are evidently the same, they are not merely copies of one another, and that the Asiatic author was, in fact, not giving an account of the Jews in Western Syria; for if he had, he would not have made Judah the eldest son of Jacob.¹

The first attack of the Mohamedans on India was made by Mohamed of Ghezni, A. D. 1000. It does, indeed, seem surprising that any one can believe the names of mountains, tribes, cities—such as temple of Solomon in Cashmere, mountains of Solumi, tribe of the sons of David, city of Oude or Iudi in the North, and Judia and the Mosaic Mythos in Siam, Ceylon, Comorin, and Malabar, a thousand miles to the South—should have been brought by the Saracens to these countries, some of which they never possessed.²

Jamblicus has observed that the *real ancient* names of places are still to be found among the inhabitants. This is confirmed by the Marquess Spineto.³ He says he could prove it of Egyptian places, but he does *not think fit to do it*. But this I very much regret. I am quite sure more true history is to be learnt from the names of places than from all other sources. They are historians which cannot deceive us. The observation of Jamblicus is most important.

Dr. Babington says, that the Sanscrit of South India is written in characters derived from the Tamul.⁴ It must be extremely difficult and perhaps impossible to determine which form of letter is derived from any other, but the important fact comes out that they are all in system really the same. In a future part of this work I shall shew why the forms of the letters have varied so much, although the systems were identical.

Mr. Wilson, I suppose a very competent judge, says, the Tamul language may be considered as the most classical of the languages of the Peninsula. It was the language of the kingdom of Pandya, Madura, Regio Pandionis,⁵ now comprehending South Arcot, SALEM, Coimbatour, Kumbakonam, Tanjore, Trichinopoli, MADURA, Dindigal, Tinnivelli, and great part of Mysur,⁶ containing five millions of people. According to Dr. Babington and the late Mr. Ellis, it is a language not derived from the Sanscrit, but of independent origin. Wilson says, "It is not derived from any language at present in existence, and is itself either the parent of the Teluga, MALAYALAM, and Canarese languages, or what is more probable, has its origin in common with these in some ancient tongue, which is now lost or only partially preserved in its offspring." Again,

¹ The same kind of observation may be made on the book of Enoch; it makes Jacob the son of Abraham, passing over Isaac. The work translated Dr. Dorn was evidently written by a modern Persian, who, not knowing how to reconcile the circumstance of two Judeas, has mixed together the traditions which he met with respecting the two.

² For proof that the mountains of Solomon in India were so called before the Mohamedans went thither, see Elphinston, p. 245. In the Hindoo books we read of a great war carried on between the followers of Gautam or Buddha and Wiswa-Mitra, in the country called Yudha Bhumi. Is it possible to be blind here to the Latin *Humus* and the tribe of *Judah*? Nimrod, Vol. I. p. 219.

³ Lect. on Hier p. 369.

⁴ Trans. Asiat. Soc. Vol. II. Part i. p. 264.

⁵ Ptol. Geog.

⁶ Maha-sura, *Buchanan*.

in another place, he makes an observation of the very first importance to all my theories, as follows: "The higher dialect of the Tamul, on the contrary, is almost entirely free from Sanscrit words and idioms, and the language retains an alphabet which tradition affirms to have heretofore consisted of but sixteen letters, and which so far from resembling the very perfect alphabet of the Sanscrit, wants nearly half its characters, and has several letters of peculiar powers." He then goes on to shew, that there is a very close affinity between the *Maharashtra* and *Oddyia*¹ and the Tamul; and he observes, it is extraordinary that the uncivilized races of the North of India should bear any resemblance to the Hindus of the South. He says, "it is nevertheless the fact that, if not of the same radical derivation, the language of the mountaineers of Rajamahal abounds in terms common to the Tamul and Telugu." Rajah-mahal was Aja-mahal, in lat. 25, long. 87, near the towns of Daoud Nagur and Danapore Afghan. But I say it is not at all extraordinary, if the Tamul be either the sixteen-letter Hebrew or its first descendant, one of which I have no doubt that it is. I beg my reader to recollect the various examples which I have given of the Hebrew language in South India, and of the Hebrew-speaking Malays. Mr. Wilson then goes on to shew that the Tamul had a number of fine writers and a regal college at Madura, and I believe he might have added another at Muttra on the Jumna, and another at Maturea on the Nile, in Egypt, all speaking or writing the language of Brahma and Saraiswati.² Mr. Ellis states that a contest took place between the Brahmins and inferior castes in the Tamul countries for pre-eminence in literature and knowledge.³ No doubt it did, both in North and South India, and Abraham, the follower of Brahma and Buddha, was driven out by the Brahmins and obliged to emigrate to the West, probably bringing the book of Genesis with him.

To prove the learning of the Tamulese I beg to refer my reader to the Asiatic Researches,⁴ where he may find a translation of some of their sacred poetry which will bear a comparison with, and also strongly remind him of, the books of Solomon as they are called, and perhaps properly so called. These writings are admitted by the Tamulese not to be in the old language, and therefore, of course, a translation. They recognize a divine Son⁵ or Logos, and direct the adoration of Sarasbadie (or Sara-iswati, wife of Abraham). In the flower of Konnie is the Kanya of North India and the rose of Sharon. The wisdom is found in almost every line. In the adoration of Sarasbadie, I think the adoration of the female principle shews itself, which may have been the reason for Abraham's emigration.

It is a very striking circumstance that the verses in one of the poems translated by Dr. John begin with the letters of the alphabet acrostically, as is the practice with some of the Hebrew psalms: the Doctor admits that the language is very ænigmatical and difficult to understand, even in the opinion of the natives, who say that each sentence or verse may be translated five different ways. I cannot help suspecting that the Kalwioluckam, one of the Tamulese sacred works, is the wisdom of Solomon, each probably much corrupted and changed from the original.⁶

The observation that every text of the Kalwioluckam would bear several senses is a fact strikingly similar to the Pentateuch, which scarcely contains a passage of which this may not truly be said. The double sense of the word wisdom is very apparent. Nor need this be a matter of surprise, for the practice is strictly in harmony with its system of having one religion for the people, and another for the learned or initiated.

¹ Qy. Ioudia?² For Tamul language, see Transactions Orient. Soc. Vol. I. Pt. i. p. 264.³ P. xxxii.⁴ Vol. VII. p. 350.⁵ P. 355.⁶ Asiat. Res. Vol. VII. p. 354.

If at a future time a person should read in an author of the present day, that the English language was spoken in Australia, although at that time the language of Australia should vary greatly from the then spoken English, I think he would have no difficulty. Then why should there be any difficulty in the Pushto of Afghanistan or Eastern Syria and the Pushto of Western Syria? It cannot be forgotten that both languages must have been diverging as from a common centre. It seems extremely probable that the old Hebrew was the common centre from which the Tamul, the Afghan, and the Western Syriac diverged. It must also be remembered, that neither the Synagogue Hebrew nor the Samaritan is the original language, because it is written in twenty-two—not in sixteen letters. This forms another reason for a divergence from the Pushto or the Tamul. The two latter must have been diverging, each in one way, from the common centre, while the Hebrew was diverging in another. Sir W. Jones says, the Pushto or Pukhto language, of which I have seen a dictionary, has a *manifest resemblance* to the Chaldaic.¹ This, if correct, comes as near as can be expected. The Syriac has been thought the oldest language by some learned men.² From all these circumstances I am induced to believe that the Tamul language with its sixteen letters was originally the Pushto, the language in which the common people of Tamul who are Christians have their Gospels and Bible, given by the Portuguese. In not one of the books treating of the Christians of Malabar is there a single word to induce any one to suppose, that they had a language different from the other people of the country, and *that* we certainly know was what is called Pushto, Syriac, and Chaldee, which are in fact all the same; differing in nothing of consequence, but in the forms of their letters, and perhaps in the direction in which they are written.

Mr. Wilson, if I understand him aright, says, that the Tamul language was known to Arrian.³ And now we will ask what was the meaning of Tamul? Was it *Tam* the first word of *Tamuz*, of Adoni, a place near to or the same as Tripetty in the Tamul country? I believe that the *old* Tamul is what Buchanan and others call the Syro-Chaldee, the language of the Jews and Christians of South India and St. Thomé. It is the language of the physicians of Ayoudya noticed as being spoken at Cashi, and of the physicians of Madura.⁴ There is a dialect in this country called Shen Tamizh.⁵ This speaks for itself.

The word Tam-ul itself is nothing but the Hebrew L-tam, or the Syriac Ol-tam, the language of the, or the country of the, Twins; of which I shall say more presently.

In forming a judgment upon this subject, let us look at the languages of the nations of America, South of the United States, and I am informed by a very learned friend, whose attention has been in a very particular manner turned to them, that though upwards of a hundred of them are found, yet it is really impossible to discover the slightest affinity or relationship between any two of them, and that it is precisely the same in the languages of Australia and the Polynesian islands. All this arises from these languages not being written. We must also recollect that all our Asiatic writers, endeavour by every means in their power to disguise the fact of the Hebrew or Chaldee language being in these countries; and they do this not from a wish to do any thing wrong, but from a rooted persuasion that it is absolutely incredible, the very acme of absurdity, to suppose it possible that the Hebrew language should be spoken in these remote countries, in districts of India. Thus, in a similar manner, in the account of the Lama of Tibet given by a missionary in the Oriental Repertory, he calls the Mitre worn by the Grand Lama *a cap of ceremony*,

¹ Asiat. Res. Vol. II. p. 76.

² Vide Univ. Hist. Vol. I. p. 347, and Astle, p. 37. For Syriac letters, see Univers. Hist. Vol. II. p. 293.

³ P. xxxii.

⁴ P. xxxiv.

⁵ P. xlvi

and in a note he acknowledges this circumstance, but assigns no reason for it. ¹ The writer seems to have had no ill intention, but he could not bring himself to use the Christian term *mitre* though the cap of ceremony was evidently nothing else. This feeling has operated in thousands of instances in the same manner, particularly in the names of places, which has done more than can be easily conceived to keep us in the dark.

2. Nimrod has observed, that the question, What national or local language is the least altered from the language which was spoken before the confusion, (by which I suppose is meant, what is the least changed from the primeval language,) is a question to which the greatest linguists will find it difficult to give an answer; and, he adds, "So deceitful and slippery are the paths of philology, that perhaps historical and traditional arguments, if any could be brought to bear upon it, would enlighten the question more than those of grammar or those of etymology."² The observation appears to me to be excellent and deserving of the most serious consideration. In this work it will be seen that the plan has been almost invariably adopted, and that traditional and historical arguments almost supersede all others. Grammar is entirely omitted. Upon this kind of foundation it is that I contend for the very great antiquity of the Chaldee or Hebrew. In the copy locked up in the temple of the Jews we have an example of an old language in its *old state* much prior to any other, unless the Sanscrit be excepted; and if we give the Hebrew in the Temple an age 1500 years before Christ, and the Sanscrit 2000 or 2500, yet we can never know how long before the 1500 the Buddhist Genesis may have been preserved as a sacred work; and it is presumed that numerous facts are visible to shew that the names of Chaldee gods, places, and persons, are found in the Sanscrit, so as to prove it to have arisen since the writing of the Hebrew books: this, of course, will throw back the writing of the first book, or Buddhist book of Genesis, to a very remote period, long before Moses adopted it into his compilation, as it ought to be thrown if it be really a Buddhist work.

It is impossible to say what would be the first step which would be adopted by man in the formation of language, but a probable near approximation to the truth I think may be contemplated, merely by the application of a little common sense. His first words would consist of simple sounds, which, by our present letter system, might be represented by such words as *ba bal*; or by our vowels, *a* or *ah*. They would be nouns or the signs of things. They would have only one number, one case, one gender. After some time, probably by very slow degrees, the words which we describe by the other parts of speech would arise. But the noun would have no inflections. The different cases would be formed by adding words in the most simple manner; as, *bit*, house; *le bit*, to house; *be-bit*, by house. It is evident that this would be regulated, in a great measure, by caprice or accident. I can have no doubt whatever that the written language which comes the nearest to this simplicity has the greatest probability of being nearest to the first language—and this is the Hebrew of the Synagogue. Its cases are made, like the English, by words, and its use of the rude form instead of a genitive case, called being in regimine, is a peculiarity which marks almost primeval simplicity.³ The words which denote the past and future times may be used one for the other, and which is to be adopted, in any case, can only be known from the context. They have been attempted to be subjected to rule by what is called the *vau conversa*, but I think in vain. Many other marks of rudeness might be pointed out.

¹ Vide Orient. Repertory, Vol. II. p. 277.

² Vol. II. p. 493.

³ This has been before named in Book V. Chap. V. Sect. 2, but it ought to have been more fully explained. My reader will observe the words ביתאל *bit-al*. They mean correctly *house God*, and when in regimine, that is, when the second is in the genitive case, they mean *house of God*, the words remaining exactly similar. This shews how men and places came to have the names of gods. The priest of Jove came to be *priest Jove*.

Maimonides says, Scito, multas egregias scientias, quæ in gente nostra olim fuerunt de veritate istarum rerum, partim longitudine temporis, partim infidelium et stultorum populorum in nos dominatione, partim etiam quod non cuivis concessa erant, (sicut exposuimus,) periisse et in oblivionem devenisse (nihil enim permissum erat, nisi ea, quæ in libros sacros digesta et relata erant).¹ I know of no written language which exhibits such marks of rudeness and simplicity as the Synagogue Hebrew or Chaldee, and on this account has such a claim to antiquity. Probably the first language and letter of the Culdees or Chaldei or Chaldeans, when they came from India, was the Samaritan. In the *thousand years* which passed between the time of Abraham and the return of the tribe from Babylon, the Chaldees of the East had improved the present Chaldee letter, which Ezra adopted. The discovery of the Chaldee or Syro-Chaldee language yet in India, is, when well considered, almost a proof of the truth of my theory. Whenever the natives of Malabar became Christians, whatever the nature of their Christianity may have been or may be, they must then have used the Syro-Chaldee language and letter. I have a strong suspicion, arising from various circumstances, that Buchanan, who was unacquainted with Hebrew, found the people speaking that language, which was what he took for the Tamul. I think it possible that Wilson and Mackenzie may have supposed that Buchanan was writing about the language of a few separate Jews and Christians, when, in fact, they were all writing about the same language. That this naturally arose from none of them having the least suspicion of the real state of the case, and that the now corrupted Tamul, is the Syro-Chaldee or the parent of the Syro-Chaldee, and that it is the circumstance of the *sacred* books being written in the Chaldee that has preserved the Tamul or spoken Chaldee or Pushto language, from changing so much as to be entirely lost, though the form of its letter be entirely changed, as might be expected. This is what has taken place with the Arabic in other countries since Mohamed's time.² Sir W. Drummond says, "The Chaldaic, the ancient Syriac, and the Phœnician, appear to have been very nearly the same; that the two first were so will not probably be disputed: *Chaldaicæ* linguæ ita affinis est Syriaca, says Walton, ut a plerisque pro una eademque habeantur, sola enim dialecto differunt: in Scripturis dicitur Aramæa ab Aram, ut Syriaca a Syriâ."³

The natives of Cashmere as well as those of Afghanistan, pretending to be descended from the Jews, give pedigrees of their kings reigning in their present country up to the sun and moon: and along with this, they shew you Temples still standing, built by Solomon, statues of Noah, and other Jewish patriarchs. Concerning these matters, when our travellers are told of the descent from the Jews they make no inquiry; at the same time they are occasionally obliged to allow, that the descent from the Jews is, for many reasons, totally incredible. Then how is this to be explained? Simply by the fact, that the traditions of the Afghans tell them, that they are descended from the tribe of Ioudi or Yuda: and in this they are right; for it is the tribe of Joudi noticed by Eusebius to have existed before the Son of Jacob in Western Syria was born, the Joudi of Oude, and from which tribe the Western Jews with the Brahmin (Abraham) descended and migrated. The same or some of the same people who came to Thrace burning the widows—the Orpheans who brought the Trimurti to Plato; and, to Syria and Egypt, the people of the country of Tam, *i. e.* Tamuz, of whom Ezekiel speaks. "The Afghans call Saul, *Melic Talut*. They are called Solaimani, either because they were formerly the subjects of Solomon, king of the Jews, or because they inhabit the mountain of Solomon."⁴ I quote this for the fact, the reason for it

¹ In More Nev. Cap. lxxi.

² The Afghan language is called both Pukhto and Pushto. *Asiat. Res.* Vol. II. p. 63.

³ *Punic. Ins.* p. 11.

⁴ *Asiat. Res.* Vol. II. p. 73.

is very unsatisfactory. How extraordinary that it should never occur to this writer to inquire, how these subjects of Solomon and Saul should live near the temple of Solomon in Cashmere, or the mountains of Solomon in Mewar or Malwa !¹ In the fragments xxxiv. xxxv., Calmet's editor shews, that a great part of the Jewish history of Samuel, Saul, David, and Solomon, is to be found in the history of the Afghans. From this I have been led to a suspicion, that the reason for the monstrous numbers of soldiers, chariots, horses, &c., of which we read in the Bible, applied not to Western, but to Eastern, Judea ; and the same of the gold used in the temple. All this, as applied to *Western* Syria, is ridiculous ; but not so as applied to the state and the enormous city of Oudia of India.

It is quite impossible for any unprejudiced person not to see, that the Jewish history, in matters unconnected with miracle, is full of absolute impossibilities. The use of 6,900,000,000 pounds sterling² in the temple, is one out of many examples. Then what are we to say, unless we choose to charge the whole as priestcraft, except that the object of the book was neither history nor chronology, but *as was the case in all other nations*, the concealment of a mythos under apparent history, as noticed before, by me, in Book VIII. Chap. VIII. Sect. 5.

So completely is the tribe of Afghans Judaite, that in the time of Mahmud of Ghaznah, the family of Saul was still remaining in the mountains, and eight of his descendants were taken into pay by Mahmud, and treated with high respect.³ How is it possible on any principle to make the descendants of Saul, of Western Syria, all killed by the Gibeonites, to pass through the reigns of David, Solomon, &c., and the captivity, and survive to the time of Mahmud, here in India ?

In Dr. Dorn's History of the Afghans⁴ is an account of an embassy sent by one of the first Caliphs to the Afghans, to inform them that the last of the prophets had come, and to solicit them to turn Mohamedans. If we consider that the originals of the Jews were found in their country, and that it was called Arabia, there seems nothing improbable in this, or that this should be the reason why these mountaineers should have been among Mohamed's first proselytes. If we suppose that the Arabians in the time of Mohamed were acquainted with their descent from the Afghans, and that the latter were expecting a new incarnation to arrive, this does not seem very unlikely to have happened.

It is also worthy of recollection, that Saul in India is called by a different name, i. e. *Talut*, from that which he bears in the Bible, but it is the same name as that which he bears in Arabia. This has a strong tendency to confirm what I have said of the Arabians coming from India, and also to confirm what the Mohamedans say, that the Afghans sent Abdul Raschid to acknowledge Mohamed as the Resoul or prophet, among the first of his followers.⁵ They, in short, acknowledged him for the *tenth* Avatar. This was the Talisman (from us concealed by such of our priests as knew it, with the greatest care) which gave to Mohamed the conquest of this world. It had done the same thing before for Alexander and Cæsar.⁶

Respecting the word *Talut*, there is something very curious and worthy of observation. In the first book of Samuel, chapter nine, and the second verse, it is said, that Saul was HIGHER than any of the people of Israel. It is evident that the word *Talut* is a formation of the Hebrew word ללל *tl*, which means a *tall* man. Here we have an Afghan, an Arabian, a Hebrew, and an English word all representing the same idea.

¹ For Solomon's temple in Cashmere see Forster's Travels, Vol. II. p. 11, also p. 17. For more respecting *Talut*, refer to what I have said in the chapter on Freemasons

² Villapandus has proved, that Solomon's temple cost, according to the text, six thousand nine hundred millions of pounds sterling. Oliver, p. 349.

³ See *Asiat. Res.* Vol. II. p. 71.

⁴ P. 37.

⁵ *Asiat. Res.* Vol. II. p. 71.

⁶ *Saul vocatur Taluth in Alkorano Hotting, de Geneal. Moham.* p. 112.

The Arabians call the people of the Afghanistan Cashmere and Kandahar, *Soleymanyé*, and there is a district near Mecca called by this name also, the inhabitants of which have a tradition that they came from these Eastern countries.¹

We find at three of the temples of Solomon—that in Upper India, that which I suppose to have been at Salem, in the Carnatic, and that in Western Syria, the same mythos of a Moses or Saviour (for the word Moses means *Saviour*). From this I think it probable that it was the same or nearly the same in the secret writings in every one of the fourteen temples of Solumi of which we have read, for fragments of this mythos are to be found every where.

3. If we reflect deeply upon the Sindi, the sacrificing of wives, and other marks of the most ancient Indian polity in Thrace, we cannot help seeing that they must have gone thither long before the march of Alexander to India. The sacrificing of their widows by these Thracian Sindi puts their Hindoo character out of all doubt. Let us reflect a little on the consequences which would arise among mankind, if, as I suppose, one original language pervaded the whole world. It seems the natural course that when colonies went out to different countries, if their language were in comparatively-speaking a rude and unimproved state, they should take their language poor and rude, and that after they were settled, and began to get rich, and to become civilized, they should improve it. And in this manner cases, genders, numbers, would come to be formed in all languages, but the means by which they would be formed would vary. For instance, in the cases of nouns: some nations would form them by changes of the terminations, like the Greeks and Latins; some by the substitution of what we call prepositions. Thus different languages would vary, but yet the principles of nature being the same in all nations, a certain general character of similarity would remain; for all nations would want different numbers, tenses, cases, &c. Though the variations are considerable, yet the similarity among most nations is so great, that it can in no other way be accounted for than by supposing that the use of the same system of letters prevailed among them all in very early times. It is very clear that at the time when a barbarous people first received the *sixteen* letters would be the first beginning of their grammatical speculations, though no doubt they would previously, perhaps unconsciously but PRACTICALLY, have formed what we call in grammar numbers, cases, &c.; for they could not have done without them: but they probably would have given them no names. I think when they received the sixteen-letter system, they must have received some information respecting the nature of the grammar of the country from which they received it: and casualties of this kind no doubt would operate in various ways. The intermixture of nations for purposes of commerce would also have considerable influence in many cases, which may be more easily supposed than described. But what would have taken place if the art of writing were at first secret and confined to one order, which extended over all the world, and that it became known by degrees as all secrets of this kind of such great importance to mankind in long periods will certainly do? This is the theory which seems to me to be the most rational and probable, which I have been able to devise, to account for many anomalies. This fact and the supposal of a constant wish to conceal doctrines against their natural tendency to obtain publicity or to become public, will, I think,

¹ Burchardt's Travels in Arabia, 4to. pp, 127, 128. He calls the Palm-tree the Dom-tree. Here we have the old name restored, the tree of *the holy Om*. Rosetta is Raschid. This is *town of di-ras*, holy wisdom. About lat. 27, in Arabia, is a mount Salma. This is probably a Soluma. Drummond's Origines, Vol. III. p. 243, map. One of the rivers which runs into the Ganges is called Solomatis. Arrian, Ind. Hist. Cap. iv. For the Solumi or Mylæans, see Creuzer, Liv. Quat. Ch. iv. p. 110; Tome II. The river called by Rennell, Selima, in the same country with the mountains of Juda and Solumi, I believe was a river of Solomon. This was anciently in the country of Oude or Ioudia. Mem. p. 74. Is not the Turris Lapidea of Ptolemy in 42½ North lat. the temple of Solomon? The Sacæ or Saxons are just below it. The Afghans are called Rohillas. This has come from the Hebrew *Regimen*. They are followers of the Rohilla, i. e. Ray-al, or ale.

remove every difficulty with which the subject has been encumbered. I believe the art of writing was at first strictly magical and masonic, and many of the anomalies which we meet with may be accounted for by the unskilful or awkward attempts of its possessors to keep it so, or to restore it to secrecy after it had become partly known. In India, to divide themselves from the Tamulose and Buddhists, the Sanscrit was probably invented by the Brahmins. Every one knows that this language was solely confined to their order for many generations. From this view of the subject we see why we have, in great numbers of instances, the same *words* for the same *things*, in countries the most remote. I know no instance in which one language can be *properly* said to be derived from another. I know many where a language may be said to be compounded of two or three others. Our own is a compound of Hebrew, Greek, Latin, several German dialects, and French. I have not named the Celtic, because at the very early period when Britain must have been first inhabited by its Druids, there must have been little or no difference between it and the Hebrew. The rays diverging from the centre cannot at that time have had much length. I think this theory will remove all difficulties, and that my reader must see it is supported by almost innumerable facts, and by circumstances without end, which are otherwise unaccountable. The universal prevalency of the sixteen-letter system almost of itself shews, that all the written languages ought to be considered but merely as dialects of one original.

In the history of languages there is a circumstance which is well known, but which has not received the attention which it merits, and this is the universal diffusion of that of the Arabians. This language (of course with some dialectic variations) is found to be in use by the nomade tribes throughout all Africa and a very great part of Asia. We know that this is actually traceable back to Job and thus to the Hebrew. My reader cannot, I think, have forgotten the great number of cases in which different authors have stated that some dialect of the old Hebrew was found. This old Hebrew is but, in other words, Arabic; and this accounts for traces of this language where Mohamedan Saracens never had any power. It is found, I believe, in the Polynesian islands among people never conquered by the Saracens and not professing the Mohamedan faith, and among the idolaters of the interior part of Africa. The length of time which the Hebrew and Arabic, really the same language, have lasted, is easily accounted for. The sacred books, first the Jewish canon, preserved it to the time of Christ: then the Targums preserved it to the time of Mohamed: then the Koran continued its preservation. Each in its turn served as a standard of reference. The fine works of Greece and Rome operated in the same manner with their languages after *they* became *dead* ones. After the flood, probably, language was every where the same. As it deviated from the first original, nations became separated. Of course this separation would be aided by other causes. But the separation again tended to confound the languages. So far the allegory of Genesis is very clear. The confusion of language caused the separation of all mankind. Man endeavoured to build a tower to reach to heaven. Was this an observatory accompanied with an attempt in part successful to discover the secrets of the privileged caste? Did the soldiers rebel against the priests? This suspicion is strengthened by what the book of Enoch declares, that one of the greatest of the sins of the Antediluvians was the searching into and the discovering of hidden secrets. Was the story of the dispersion and confusion of tongues a local mythos? I think I have not heard of it in India. That there is an allegory cannot be doubted. That a true discovery of the whole of its meaning will ever be made, is, perhaps, not even probable. If the history of the dispersion, tower of Babel, &c., be not found in the Vedas or Puranas, I shall believe that I am correct. I have formerly given very powerful reasons for believing that hieroglyphics were comparatively speaking a modern invention. I think they must have been invented after this mythos came to the West. If they had not, we should have found traces of them somewhere. Had they been previously invented, it is impos-

sible that the mythos should be found every where, and the hieroglyphics no where except in one country.

The more I examine ancient geography the more I become convinced that in the countries of the old world, a certain number of places in each country were called after the same names, or by names having the same meanings. For instance, mounts Olympus, Parnassus, Ida. Again towns, Argo or Argos; again rivers, Don, &c., &c., &c.; that certain mounts or towns or rivers, in each district, as I might say each parish or deanery or bishopric, had all the sacred places which the universally-spread mythos required; and that the names of these places must have been at first merely religious, the places for common use having other names. After some time the sacred names in different places would come into common use by historians; they being at first the only written names, all early writings being mythical and not historical. I believe most of the early accounts or traditions, what we call histories, such as that of Rome, were not intended for a real account of transactions of states, but were a mode of concealing under the garb of history (real facts being mostly used) the mythos which every person initiated understood, but which passed with the populace for history. The mythos was Eleusinian or Masonic. I have no doubt that for many generations the art of writing was part of it.

In the Romish church the whole history of Jesus Christ from his birth to his crucifixion was formerly and is now, I believe, annually represented or acted in their ceremonies: and it was for a similar purpose that all the places in the different countries had certain similar sacred names: and it is also in many cases because we have only the sacred stories which we take for histories, (real history not being then invented,) that we have no other names of the places than the sacred ones. If a person will pass his eye carefully and slowly over D'Anville's maps of ancient geography, I think he will be obliged to confess, that the names of towns, as we have them there, cannot have been in use for the common purposes of life. How should we do if in every parish or deanery or district the principal town or river or mountain had the same name and no other? We do very well with a Don in Scotland, and one in Yorkshire, but how should we do if the chief river of each small district was called Don or its town Argos, and no other name? It is evident that if all the chief towns or rivers of each district of Greece or Britain had the same name one day, they would not have it the next. Thus we have great numbers of Argoses, of Troys, of Heracleas, of Romes, or (which is the same) Ramas, of Olympuses. In the same way we have many Homers—singers of the mythos¹—many Jupiters, many Bacchuses. In the same way we have many Sibyls, prophesying in each larger or smaller district.

An attentive person must instantly see that all countries were divided, as our country is at this day, into districts within one another, with their boundaries often crossing one another—the religious district independent of the civil or the military, or local jurisdictions, seignories or shires.² We have plenty of cathedral towns, we have plenty of parishes, but we have no difficulty, because these are only sacred names, and these districts have one name in England, another in Germany, another in France, besides other local names. The sacred places are called, sometimes and in

¹ The poems of Homer were collected by Lycurgus and Pisistratus from the different parts of Greece, when they had become dispersed and nearly lost. And this operation was again performed by Aristotle and his coadjutors for the use of Alexander. This accounts for the state in which those poems are found. It is quite enough to account satisfactorily for all the pretended interpolations, and for the difficulties with which they have been attended. In the search, part was found in one district, part in another, and thus nearly the whole was recovered when almost lost. And thus we have it exhibiting the marks of the Lacunæ supplied by Aristotle and his friends, which our critical Grecists call interpolations.

² Plin. Nat. Hist. Lib. v. Cap. xxix.

some places, cathedrals—in others, minsters. Thus the sacred mount was Olympus, in some places, Parnassus in others. We now all have our Christian names. I believe the ancients had their Christian, *χρηστιαν*, names precisely in the same manner, and that the towns, &c., had Christian names also. In such of the histories as are evidently mythical, it can scarcely be doubted that there are a great number of facts stated which have really taken place. The early history of Rome, for instance. If we consider the matter, we shall see that this is a necessary consequence if it were desired to describe the mythos under the disguise of a history, and that it was the very best contrivance which could be adopted to get it received by the people among whom it was to be propagated. And if, among the highest or initiated classes, it was really considered only as a fable, intended to lead the people into a belief in the renewal of worlds, of new Troys, new Argonauts, &c., the very best plan they could adopt (and it was a necessary plan) was, to make all their ancient histories, as we find them in certain respects, mere copies of one another. These histories, till within a very few centuries of the Christian æra, were, I believe, all confined to certain initiated persons, no doubt very numerous, but having different grades of initiation, precisely like the orders of Masonry—the highest grade or order, being, in fact, very few in number, and consisting of the governors of the countries.

I cannot have a doubt that a real Hierarchy, like that in Rome and in Tibet, at one time extended over the whole world. But whether I am to place its origin in Oude, or Tibet, or Babylon, or Thebes of Egypt, or Ilium in Troy, or in Rome when it consisted of the Cyclopæan buildings found beneath the Flavian Amphitheatre, I know not. Perhaps Cashimere, with its temple of Solomon or Wisdom, has no mean claim. But at all events the *שֵׁרָר* *Ras* or Wisdom and the Trimurti were the foundations of it. Every new cycle, a renewed incarnation of divine wisdom took place,—one of the Trimurti became incarnate, was born *sans souillure*, after ten months,—was attempted to be killed, but miraculously escaped,—spent a life in doing good to mankind,—was ultimately put to death, and the third day rose again to life and immortality: of all which, I shall say much more by and by.

4. I will now point out a circumstance not a little curious. I need not repeat, but I beg my reader to recollect, what has lately been stated respecting the Manichæans having come from India, their connexion with the Christians of St. Thomas on the coast of Malabar, who are found every where about Goa, and also respecting the *Χρηστιανοί* and Chryson, &c., in that country: and then, if he will look into my *CELTIC DRUIDS*, in Chap. III. Sect. V., he will find that the Manichæans were connected, by means of their name of Pattarini, with the people of Baieux or Baiocassæ, in Gaul, and the worship of Bel or Bal.

On the coast of Malabar, about Goa, there exists a race of people called by the natives *Bhooes*. They are Hindoos and refuse to eat the flesh of the Beeve, &c., &c.; but still they are called Christians. I learnt from a medical gentleman, who has dwelt long on the coast of Malabar, that they are divided into two classes by the natives; one class, consisting of modern Portuguese converts, are called Christians; the other, those who resided there before the Portuguese came, are called Crestons or Cræstons. As this gentleman had no theory and did not know mine, and had not the least suspicion that the fact was of any consequence, I pay much attention to his information; it tends strongly to confirm my theory. The Creston is exactly the same name as the Creston of Italy or Crotona. In the country called Belgaum, in which these people chiefly reside, there are remains of some very beautiful and curious Buddhist or Jain Temples, which, if not destroyed by the Brahmins, must have been destroyed by the Portuguese. The distinction made by the natives clearly marks and distinguishes the *old* Christianity from the *new*, in spite of all the unceasing, though not ill-intentioned, attempts of the missionaries, both Portuguese and

English, to confound them. The Crestons were the Christians of the three sacraments, the Culdees or Chaldees of Scotland and Ireland in fact, as distinguished from the Christians of the seven, introduced by the Portuguese. Here we have really the ancient Brahmin (flesh-refusing) followers of the $\chi\epsilon\eta\varsigma$ —of the secret, unwritten religion of all nations; and, after all, what was this religion called? not *Christian* as a proper name, but as an appellative; it was the mitis, benignus religion, the particulars of which, in process of time had escaped from the mysteries—the Cabala by degrees becoming public. It was the religion of the Bloodless Apollo of Delos, at whose altar, called *the altar of the pious* because no blood was shed there, Pythagoras offered the sacrifice of bread and wine or water. It was the religion of the $\chi\epsilon\eta\varsigma$ of Delphi, of the Sindi, in Thrace where the widows were burned, and of the Youth of Larissa.

In these Bhoes, Boicassæ, and Pettyeyah or Pattarini, I think we have the origin, or a colony, of the Manichæans, followers of Menu in Gaul.¹ The Jews found by the Jesuit at Madura, in the Carnatic, are far removed from Samaritan refugees, and the country never was conquered by the Saracens; so that they can have come neither from the Samaritans nor the Arabians.

In Wilson's catalogue is an account² of a *Salivahana*, who was a favourer of the *Bauddhas*, being obliged to return from Trichinopoly, at that time his residence, to his own former capital of *Bhoja Rayapur* in *Ayodhya* or *Oude*, by the king of Pandya, who restored the temples of *Ekâmeswara* and *Kamakshi*. Wilson says, "These transactions are placed in the Kali year 1443, or 1659 B. C., and 1737 before Salivahana reigned, agreeably to the æra, which dates from his reign or A. D. 78." Here is a proof of all I have said respecting the nature of the æras, i. e. that they are cycles, each æra a cycle, and of the Salivahanas. Thus, upon the evidence of the records or histories one Salivan lived long before Christ; therefore, his story cannot have been copied from the latter, but *vice versa*, if either be a copy.

Mr. Wilson places the æra of Yudhishtira at the end of the Dwapar and beginning of the Cali age, 3000 years before Christ.³ He also shews that Bhoja (that is, I suppose, the Baieux tribe) is said to have existed before the æras of Vicrama and Salivan, who must, if ever they existed, have lived before him. The case is very plain. Their æras are all 600-year cycles, of different tribes, crossing each other—recurring over and over again, till modern times, when the millenium not coming as had been expected, the system of 600-year cycles fell into disuse. Calculations were then made from the Salivan or Vicrama who was the last in vogue about the time of Christ; and it became a fixed æra. This seems to me to be a reasonable way of accounting for the difficulty. We are told that now they calculate by cycles of *sixty* years: this is the same as the 600. It forms a cycle as well as 600, with the 21,600.

Here we cannot fail to observe, that the Bhoiæ who came to Gaul, Baieux of the Manichæans, are in Ayodhya or Juda, as I am quite certain I have proved it to be. These Baieux or Bhoiæ we find on the sea-coast, and it is very remarkable that these persons or this caste, among whom we find the Manichæans and the St. Thomé Christians, *are a tribe of fishermen*. It is impossible to forget that the first Christians were most of them *fishermen*; and the Pope calls himself a *fisherman*. In the above we may observe the temple of the Eswara-Ekam—or, in Hebrew, *Eswara the wise*. It would have been remarkable if we had no where found an לכמ *lkm* in that country where there are a district and a town of Salem, or temple of Sophia or Wisdom, among the other Chaldee words. The temple of Buddha, the other temple of Kama-kshi, is Cama, *Divine Love*,

¹ The father of Cristna or Kanyia, *Yadu*, had a son called *Druhya*, from whom descended a tribe. I cannot help suspecting that in this tribe we may have the origin of the Druids. Cambridge Key, Vol. I. p. 145.

² Vol. I. p. 184.

³ Pref. to Cat. of Mack. MS. p. cxxiii.

and *Isi* or *Issi* or *Ischa* the name of Eve. It is probably a different name for the same God *Ischa*. The king of Cochin, as before remarked, is called *Hakim*.

After I had finished the above, (March 19, 1830,) I was introduced to a gentleman, who, when resident at Madras, had frequently visited the mount of St. Thomé at Jaypour.¹ He told me that the church or temple on mount St. Thomé was built chiefly of very large stones, without any cement, in the Cyclopæan style of architecture: it has an arched roof formed not by wedge-shaped stones, but by stones projecting by battering over each other with a flat stone at the top, in the manner of the stones in the dome at Komulmar.² This church or temple covers an ancient *CARN* or heap of stones, on which, he said, in modern times, it was supposed that chunam had been thrown to make them fast, to support a flat stone which is the altar of the modern monks. This, he supposed, had probably been placed there by the Portuguese. Here we have evidently a *Carn* and *CROMLEH*, of the same kind as those described by Miss Graham in her book, which she found in this part of India, and which I am told are very common. Vide my figure, No. 18.

But this gentleman told me an extremely important fact—that though the Christians have got possession since the arrival of the Portuguese of the tomb, temple, or whatever it is, yet that it is considered by the natives as an ancient Buddhist temple, and that great numbers of Buddhists come to it yet in pilgrimage from all parts of India. The Brahmins hold the place in detestation as they consider *this Thomas to be a form of Buddha*. The Chaldee language is commonly spoken in the country. In consequence of the above information, I was induced to examine Mr. Sharon Turner a little more closely,³ and I will now communicate the result of that examination.

5. Mr. Sharon Turner, in his account noticed in Chap. V. Section 2, has given all the later authorities for the history of St. Thomas in India, and passed slightly over the early ones—in this respect shewing himself a skilful advocate. He well knew how to humour the weakness of his case. There are two accounts of a mission of one Pantænus, in some degree contradictory: one by Eusebius, the other by Jerom. The latter says that, in consequence of missionaries having arrived from the East requesting instruction, Pantænus was *sent*; the former says, he went of his own accord. Nothing can be more likely than that missionaries should have arrived in Egypt, as they had often done before; and the fact of the pilgrimages to the tomb of St. Thomas being made by Buddhists, points out to us who these pilgrims were, viz. *Samaneans*, who, we know from Clemens and others, had before repeatedly arrived in Egypt. This I think reconciles all the different histories, both of the missions from India and the mission of St. Bartholomew, who was said to have gone to India; but who, as Valesius, Holstenius, and others have shewn, went to the Indians, though not to the East Indians, but to the Indians of Upper Egypt—Indians as they were always called; and who, as I have formerly shewn, spoke the Hebrew language. Mosheim says, it is perfectly clear also, that he went into Arabia. These accounts are consistent with one another. But it is very remarkable, that the East-Indian people who were Christians, were converted, according to the accounts of these early writers, not by St. Thomas but by St. Bartholomew. St. Thomas is never named by either Eusebius or Jerom, (as the Christian Protestant authors well know,) and this is the reason why Mr. Sharon Turner never names Eusebius, and only barely notices Jerom—the two authors on whose authority the whole fable rests. This at once restores the entire story to the Tamuz, of whom I have before spoken, and of whom I shall again treat presently. *En passant*, I must observe, that Pantænus is a very suspicious name of the person to be sent to the kingdom of Pandæa. We all know how medical persons affect the God Mercury or Buddha and the Caduceus and the Serpent. The Essenians were called physicians of the soul or Therapeutæ: being resident both in Judæa and Egypt, they probably spoke or had their sacred

¹ Printed January 1833.

² Vide Col. Tod, p. 671.

³ See *Asiat. Res.* Vol. X. pp. 74—92.

books in Chaldee. They were Pythagoreans, as is proved by all their forms, ceremonies, and doctrines, and they called themselves sons of Jesse, that is, of *ישׁוֹ יִשׂי*.¹ If the Pythagoreans or Cœnositæ, as they are called by Jamblicus, were Buddhists, the Essenians were Buddhists. The Essenians, called *Koinobii*, lived in Egypt on the lake of Parembolè or Maria, in *monasteries*. These are the very places in which we formerly found the Gymnosophists or *Samaneans* or Buddhist priests to have lived, which Gymnosophistæ are placed also by Ptolemy in North-eastern India.

Mr. Sharon Turner says, 'It is not of great importance to our subject to ascertain whether St. Thomas really taught in India: we know of the circumstance only from tradition, and tradition "is a capricious sylph, which can seldom be allowed to accompany the dignified march of authentic history."' ² St. Jerom never names St. Thomas, but says expressly that Bartholomæus had preached the gospel there; however, he does not specify any place. ³ Eusebius, ⁴ in his Ecclesiastical History, says, that Bartholomew was said to have gone to India, and that Pantænus went thither also, but not a word, that I can find, does he say of St. Thomas. ⁵

In the edition of 1823, Mr. Turner wisely leaves out nearly all he had said about St. Thomas, and apologizes for leaving it to Buchanan and others: but he is too wise to say that he had proved that St. Thomas was ever in India: he contents himself merely with saying and shewing it was believed in the middle ages. But why has not the really very learned Mr. Sharon Turner told us, that Eusebius and Jerom never name St. Thomas? Can any one suppose *him* ignorant? Sharon Turner ignorant! Impossible. Alas! Alas! Well might Roger Bacon say, *Omnia ad Religionem in suspicione habenda*. If St. Thomas had gone to India, Eusebius and St. Jerom must infallibly have known it, and, under the circumstances, must as infallibly have named it. But the fact of Eusebius and Jerom having attributed the conversion of the Indians to St. Bartholomew, and not to St. Thomas, at once proves that the whole history is a part of what had come to the West, probably with the prophecy of the Erythræan Sibyl. It is not unlikely that there may have been some place in Upper Egypt, to which Alfred may have supposed his ambassador went, and who probably never went farther than Rome, where plenty of precious stones, which he is said to have carried back, would be supplied to him. And Mosheim ⁶ has proved that Pantenus never went to the East Indies at all.

It may not be useless to recall attention to the fact noticed a little time ago, that we have most clearly three distinct exemplars of the same mythos, consisting of *Noe and his sons, Abraham, the Mosaic history, Saul, David, and Solomon, &c.*: first in Syria of the West, brought thither by the Brahmin Abraham and his successors; secondly in the North-eastern Syria, the kingdom of Pandæa and Mutra, or Madura, the land of Ur or Uria, of Colida or of the Chaldees, with Noe, Ararat, Saul, David, Solomon, substantially the same as in the West; and thirdly in the kingdom of Madura or Pandæon, in Mysore or Maha-Sura, i. e. *great Syria*,⁷ as described by the Jesuit in Southern India. In these two parts of the East these mythoses are the foundation of the religion of the Brahmins: but it is a most important part of the story, that with the mythos of Moses, in India, is intimately blended, so as to form an integral part of it, the history of a person of the

¹ Jesus Christ, as I have before stated, is called by the Arabians *Issa*. This is nothing but a form of Isis, *ישׁוֹ יִשׂי*, *to save* Vall. Coll. Hib. Vol. IV. Pt. i. p. 199.

⁷ Buchanan, Index Mysore.

same name, *Cristna*, and containing the same facts, in substance, as are related of Jesus Christ. All this is ridiculously attempted to be accounted for by the lost tribes of Samaria, who, to the last known of them, spoke a language though a dialect of the old first language, yet not intelligible to the Chaldee-speaking people of the three settlements at Youdia, Madura, and Jerusalem, who all spoke the Syriac Chaldee. Yet, on every principle of sound Biblical criticism, there is no reason to believe that these tribes were ever lost at all; but that, till the time of John Hyrcanus, they continued in possession of their country and temple, when the latter was destroyed—the Cuthite idolaters and the Lions being only a story of their enemies, and therefore, independent of its innate absurdity, not admissible as evidence.

From the Western colony having left India to avoid the idolatry which was introduced with the adoration of the Lamb or Crishen, about the time of the Maha-bharat, we have little or none of the latter part of the mythos, or of Crishen in the Western tribe, i. e. in the tribe of the Jews. This is as it ought to be if my theory be correct.

On the Christianity of the Southern part of the Peninsula, beyond all doubt the most important and interesting subject which could be imagined to an Englishman and Christian, or a philosophic inquirer, Col. Mackenzie, in his collection, is perfectly silent. On this most extraordinary silence Mr. Wilson, the Editor of the Catalogue of Col. Mackenzie's papers, has the following passage: "The collection is also silent on the subject of the native Christians of the Peninsula, and throws no light on their ancient or modern history. These omissions resulted from the character of Col. Mackenzie's agents, who, as Hindus and Brahmins, were not likely to feel any interest in these subjects, nor to communicate freely with the persons from whom alone information could be obtained."¹ The unsatisfactory nature of this excuse, and indeed its absolute absurdity, I scarcely need point out. A more probable reason I will now suggest. Perhaps Col. Mackenzie was too honest to misrepresent what he knew of the native Christians. He had no absolute tie to publish the truth, or indeed any thing respecting them. He knew it was probable, that if he did, he would thereby mar all chance of preferment and be worried to death by a pack more fierce than the hounds of Acteon. But to me it is incredible that his immense collection should not have contained, though he might not have published it, something relating to the Christians and Jews. The truth is evident—it has been suppressed by somebody. The excuse of Mr. Wilson shews that he felt that an excuse was wanting. But I have not the least suspicion of Mr. Wilson.

Page cv. of the Catalogue of Col. Mackenzie's collection contains the following passage: "The collections of Col. Mackenzie do not present any satisfactory materials for tracing the ancient history of the countries North of the Krishna, on the Western part of the Peninsula; and the fabulous stories of Vikramaditya, Salivahana, and Bhoja,² which relate to them, differ in no respect from those common in other parts of Hindostan, and reflect little light upon the real history of the country or its princes." Here is evidently another suppression of all notices relating to these persons—by whom made I know not, neither do I care. Whoever made it, knew well that the story of these histories being copied from the Western gospel histories is really untenable for a moment, and, however skilfully or artfully disguised, is absolutely ridiculous in the eyes of every unprejudiced Indian European: and therefore, the same policy which induced the suppression of the meaning of the word *Rasit*, by Parkhurst, and of the word *Χρησος*, by Lardner, operated here. Now we see why our slave-trading, church-building government, which cares as little for religion, except as an engine of state, as it does for the man in the moon, sends bishops

¹ Mackenzie's Collection, p. lxviii.

² Boiæ, shewn by me to be the probable originals of the Manichæans.

to India. They are sent to superintend the Asiatic Society and the press at Calcutta, to prevent them from falling into mistakes in what they publish. The truth of these illiberal reflections, as they will be called, is brought to an absolute demonstration by the fact that, in the whole book, no account is to be found of the rites and ceremonies at the famous temple at Tripetty or Tripeti, of the temple of Bal-ii, of the crucified Wittoba,¹ within sixty miles of Madras, being in the very centre of Col. Mackenzie's survey and his most particular inquiries, as the book proves, a temple paying the immense sum of £15,000 a year, as Dr. Buchanan says, for the privilege of being *exempt from examination*, and in consequence of which no European has ever penetrated into its *sanctum sanctorum*. Did this payment excite no curiosity in Col. Mackenzie?²

One fact escapes from Dr. Buchanan of a most important nature, and it is this, that at a TEMPLE OF JAGGERNAUT, I suppose with his car, &c., at Aughoor, between Trichinopoly and Madura, the rites of the Roman Christian church were celebrated in the Syro-Chaldaic language (that is, I suppose, the Pushto) by a priest called Joseph.³ Surely this speaks for itself, in spite of Buchanan's disguise, and confirms every thing which was said by the Jesuit Goguet. (Jaggernaut means *Great Creator*.) Here we have the worship of the tribe of Yudi, the father of Cristna. Here is true Yuda-ism united to $\chi\rho\eta\varsigma$ -ism. This shews why the Jesuits turned Brahmins, and it accounts for the Brahmins' telling our missionaries that they were of their religion, only in a corrupted state.

In the well-established fact that the service was done in the temple or church (or whatever it was) of Jaggernaut in the Syro-Chaldee language, and in the delivery of Gospels to the people in Chaldee by the Portuguese, we have a circumstance deserving of the most serious consideration. We have the Chaldee or Hebrew language continuing as a vernacular tongue, at least a thousand years after it had ceased to be so everywhere else. For, though certain Jews speak it in most nations, as in most nations certain people read and speak Latin, it is their vernacular tongue nowhere, and in no country, except this, do they commonly speak it among themselves. Now I cannot help suspecting that this must have been a corrupted Chaldee, more of the nature of the Aramean Syriac—the Pushto, than the Chaldee of Daniel. This will readily account for our travellers, not well skilled in the Hebrew, calling it Chaldee, without any intention of deceiving us. In the *Asiat. Res.*,⁴ Sir W. Jones, who examined the Pushto, says, it had a manifest

¹ The crucified God Wittoba is also called Bali, and in Sanscrit Vinkatyesh, in the Telinga country, Vinceratramna-Govinda. In Guzerat, and to the Westward Ta'khur or Thakhur, and generally the same among the Maharattas. He is worshiped in a marked manner at Pander-poor or Bunderpoor, near Poonah. In the inside of the palms of the hands of almost all Indian Gods a round mark or a lotus-flower is to be seen. Learned Indians, to whom I have spoken on this subject, say, it is the *discus* which has grown by degrees into this figure. Unfortunately for this hypothesis, the mark is on the feet as well as the hands. All the Gods, it is admitted, melt into one—the Sun. Of course Salivahana, Wittoba, and Buddha, are all one, and consequently cross-borne. I believe this is nothing but the nail mark, ornamented like a lotus. If the marks on the hands and the soles of the feet of the Wittobas, and many other icons of the Hindoo Gods, were meant for ornamental Lotuses, they would *always* have the form of that flower; but it is very common to see them with the appearance of a nail-head, but not the least appearance of the flower. This shews they are not meant for Lotuses. Any ornament on the soles of the feet must infallibly have prevented the God walking. It is as absurd to fix a figure on the soles of the feet of the *otherwise naked* God as an ornament, as it would be to tie his hands behind him for this purpose. The nails were honoured in India as they are in Europe. The nails, the hammer, pincers, &c., are constantly seen on crucifixes, as objects of adoration. On this principle the iron crown of Lombardy has within it a nail of the true cross. For Bal-ii see my Fig. 7.

² The India Company gave ten thousand pounds for Col. Mackenzie's manuscripts. The few which are come from India are in a most disgraceful state of confusion. *It is probable the Bishop of Calcutta has some use for the remainder.* I have no hesitation in saying, if they were all together, and had a good catalogue referring to each article, they would be the most valuable collection in existence. The liberality of the Company has been shamefully abused.

³ Pp. 151, 155.

⁴ Vol. II. p. 76.

resemblance to the Chaldean. Here we have the *fact* with Sir William, the *exaggeration* with the priest. The manifest resemblance is as near identity as can be expected. The Palli (that is Philistines) were of the Tamul nation.¹

I have formerly observed that I learnt from Mr. Salome, that the Lascars spoke Hebrew. Another Jewish friend met with two of the black Lascars from the Malabar Cochin in London, who were both Jews, and spoke the Hebrew or Chaldee language. They were quite black, and had, in every respect, the Lascar character, not at all like the Jews of the West, from whom they are easily distinguishable. They accompanied my friend, the English Jew, to his synagogue. If the black Jews were a colony from the West like the white ones, they would have been white like the white ones. It is out of the question to pretend that difference of climate can have made them black, because they are black in the country above the peninsula, where there is little or no difference between the latitude and that of Western Syria. They cannot be supposed to be *blacks* converted to Judaism, because the Jews never made proselytes: in this, as in some other matters, retaining their Brahmin habits.² They cannot have come from the *ten* tribes as nonsensically pretended, because they are Jews, having the Jewish or Chaldee language, and not the Samaritan. The Jews of Western Syria, in the time of Jesus Christ, were not black, but there are great numbers of *black* infant Christs and *black* crucifixes in Italy, and Christ was a Jew. Was he of a *black* tribe? Indeed I believe that the Christ, whose black icon I saw in Italy, was; and I believe that he came to Italy when his black mother arrived at Loretto,³ from Syra-strene, from Satrun-ja or Regna Saturnia or Pallitana, even before the foundation of the Rome of Romulus.⁴ That a colony of white Jews, fleeing from the Romans, should take refuge among their ancient countrymen seems not improbable, nor does it seem improbable that the black Jews in some instances should have acquired pentateuchs from their white neighbours; for though, perhaps, nothing would induce them to change their religion, yet they would easily be led to suppose themselves of the same religion as the Western Jews, (which, fundamentally, they were,) in the same manner and for similar reasons as those which induced the Western Christians to believe the Creestians of Malabar to be of theirs. But yet I think another cause will be found for it presently.

Christ is called יהוה *ieue* דבר *db*r the word of the Lord,⁵ and the Targums frequently substitute מִמְרָא דִּי *mimra dii*, the word of Jehovah, for the Hebrew יהוה *ieue*.⁶ Parkhurst's proof that the Jews had the *Logos* in their doctrines is quite complete; and this I think pretty well carries with it the other persons in the Trinity, or the Trimurti of India.

6. It appears to me that soon after the entrance of the sun into Aries, according to Brahmin time, a calculation backwards to the entrance of the sun into the equinoctial Taurus must have taken place, to settle the calculation of the cycles, which gave them three cycles and the 360 years or life of Enoch before the flood, in all the 2160 years, as I have formerly shewn. I never suspected that it was possible to carry this back any farther, and I thought that the equinoctial Taurus was the beginning of the mythos. But the circumstances which my reader has lately

¹ Buchanan, Vol. I. p. 260; Vol. II. p. 272.

² Yet see Matt. xxiii. 15; Acts ii. 10.

³ Near the Fossiones Tartarum, or Italian TARTARY.

⁴ The Jews were not black when the following passage was written, which we find in the Song of Solomon, i. 5, 6: "I am *black*, but *comely*, O ye daughters of Jerusalem, as the tents of Kedar, as the curtains of Solomon. Look not upon me, because I am black, because the sun hath looked upon me," &c. Had the Jews been *black* when this was written, the colour would not have been noticed as uncommon.

⁵ Inter al. Gen. xv. 1, 4; 1 Sam. iii. 7, 21, xv. 10; Parkhurst's Gr. Lex. in voce ΛΟΓ, &c.

⁶ See also Gen. xlix. 18, Jerus. Targ., מִמְרָךְ *mimrk*, thy word (i. e. of the Lord) is evidently meant.

seen, and some others which I will now point out, have induced me to believe, that I can perceive a glimmering of light a little more remote in the back ground. M. Dupuis thought he could shew *astronomically* that the mythos of the equinoctial sun could be proved backward, till the bull was in the autumnal equinox. But I must refer my reader to Dupuis for his remarks on this matter.

We all know that the retrogradation of the sun through the Twins or Gemini, if the signs in the Zodiac were then invented, must have preceded the Bull, Taurus, and that all the common visible appearances of the heavens, must have taken place while it was passing through the sign of Gemini as those which followed under Taurus; it will not, therefore, be any matter of surprise if some remnants of this superstition be found.¹

We have seen that Adonis was the Sun. We have seen that he was Thamus, or Tamus, or Tamas. This is in Hebrew תאם *tam*, which means *to connect*, to cohere, to embrace, as twins in the womb: as a noun תאומים *taumim*, *twins*—and sometimes תומים *tumim* without the letter א *a*, which makes of it *tumim*. Parkhurst² says, “Hence the proper name *Thomas* which is interpreted *Δίδυμος*, or the twin, by St. John, ch. xi. 16, et al.” But it may be said, that the word twins equally applies to the Pisces tied by the tails, as to Gemini, and this I do not deny.

The Tamulic language, I learn from Sir S. Raffles and Mr. Chalmers, in a particular manner affects the termination of its words in *En*. From this the Pood, or Wood, became *Poden* and the *Woden* of the Goths. The Chaldee makes its plural in *n*, and the Greeks use the *n* in the termination of their words; but never the *m*. From this practice of the Tamulese the Cres became *Cresen*, their name of *Cristna*.³ Thus it appears that *Woden*, the Northern God, is simply the Tamulic method of pronouncing *Buddha*. That *Woden* came from the North, not the South, of India cannot be doubted. But this serves to shew us that the Tamul language formerly prevailed in North India.

By the ancients, the whole promontory of India, from the Ganges and Guzerat to Comorin, must have been called the promontory of *Tamus*.⁴ We find various places called *Sura* or *Syria*, as *Mysore*, *Maha-Sura*.⁵ *Coromandel* is but the *Manda* or circle of *Sur*, as I have formerly shewn, often written *Tur*—meaning both *Taurus* and *Sol*: for *Tur* was *Sur*, and *Sur* was *Tur*. Now the sign *Gemini* preceded *Taurus*. The *Twins* were the produce of two eggs, and *Taurus* broke the vernal egg of *Siam*, well known to *Virgil*, with his horn. The twins were brought up at *Palli-ni*. They were in the *Argonautic* expedition to *Colchos*, or the bay of *Argo* and *Colida* in *India*. Here we may see *Virgil's* theory, a new *Argonautic* story for every cycle.

As we have a *Staurobates* along with *Salivahana* and *Semiramis* in the North of *India*, and as

¹ Eorum *Osiris*, alio nomine vocatus est à *Bacchus*, à בכּי fletu sic dictus: ut bene demonstrat clariss. *Golius*, ex *Abulpharagio* indicans apud *Sabæos* (*Phœniciæ* religionis homines) in medio mensis *Tammuz* celebrari. (Festum בוכיות *Bochioth* seu mulierum ejaculentiam) vel ut ipse *Abulpharagius* ex *Arabibus* exponit. . . . Festum *Boucat*, erat *fœminarum flentium*, quod celebrabatur in gratiam *Dei Tammuz*. Illum vero mulieres deflent, quomodo interfecerit eum dominus suus, et ossa ejus in mola comminuerit, et ea comminuta postea disperserit. Nempe nomine *Tammuz* intelligunt *Solem*: quamvis, referente *Maimonide*, *Sabaitæ* nugatores (sui ritus usum et originem obliti) putent se lugere aliquem prophetam suum dictum *Tammuz*, ab aliquo injusto rege occisum, &c. Dictæ autem institutionis meminit propheta *Ezechiel*, Cap. viii., de fœminis plangentibus pro *Tammuz*, (seu sole,) cui *Julius* mensis erat sacer et ab eo denominatus *Tammuz* *Syro Phœnicibus*, utpote mensis ferventissimus et sole saturatus. *Solis* vero discessum, quia tum postea declinare incipit, deflebant, fingentes eum a domino suo interfici et in partes dissipari. ⁴ Vide *Lempriere*, *Ed. Barker*, in voce *Tamos*.

⁵ *Buchanan*.

we have found most of the same mythos in the South, we need not be surprised at finding also a Semiramis. To the Rev. Mr. Faber we are indebted for the observation, that the Zamorin or Samarin is nothing but a Semiramis, which name was applied to many princes. The terminations in IN and IM are clearly the Tamul, Chaldee, and Hebrew terminations: and the rulers of Cochin, Cholcos, or Colida, where he or she ruled, were called $\text{HAKIM}=\text{חכם}$ *hkm*, wisdom.

It is not to be expected that we should any where find the whole mythos of these remote times; but we find all that could be expected—scraps of traditions, little bits of the mythos, for each obsolete cycle—sufficient to prove one universal system to have prevailed. We cannot expect these detached scraps to be the same in different and far distant countries. Two or three thousand years having elapsed, we cannot expect to find the story of the Argonautæ of Greece in every respect the same as that of India; but it is enough if we see the same mythos to be substantially at the bottom.

From a careful examination of the most ancient Greek, Hebrew, and Tamul sixteen-letter alphabets, and from a comparison of them, together with the inscription exhibited in Stirling's History of Orissa, that is, Urisa or Uria, I am satisfied that they have all originally been one; but they may all be more properly said to have descended from one alphabet, because there is not one of them which has not necessarily changed in the form of its letters, not excepting even the Hebrew before it was shut up in the temple, from what it probably was about the beginning of the Cali Yug—therefore not one of them can be called correctly the original. I have little or no doubt that the ancient sixteen-letter Tamul was once the Pushto of Upper India, or the Uddya or Juddia letter. But considering the long time since it first took the name of TAM or language of the Twins, there must be expected to have arisen much variation; indeed, quite as much as we find. But the names of Pushto, Uddya, &c., are the fading shadows of the nearly-gone truth. The country of Orissa or Or-desa or Oresa is called the Uria nation by Stirling.¹ This must be an Ur of the Chaldees.

I think it is very evident that the terms Syrian and Chaldee have been confounded when speaking of the Malabar Christians,² by several authors. And when the close similarity of the two languages is considered, this is not surprising. I think also there can scarcely be a doubt that the Chaldee, the Pushto of North India, the Pushto of Western Syria, the Syrian and Chaldee of South India, and the higher Tamul, which consisted of sixteen letters only, have all been the same; and with a reasonable allowance to be made for the change which length of time and other circumstances rendered inevitable, are yet nothing but close dialects of the same language,—perhaps, if written in the same letter, not varying more than the dialects of Greece. The matter for surprise with me is, not that the three languages should vary so much, but that they should vary so *little* as to be mistaken for each other if such be the fact.³

If I be right, the mythos must be expected to be found in the adjoining island of Ceylon, or Candy, of which I have so often treated. Candy is the name of the central kingdom of Ceylon. It seems pretty clear that the island formerly had this name among its others. It is said to have been conquered by Rama, king of Oude.⁴ The central district consists of what are called the Corles of *Ouda-noor*,⁵ and *Tuta-noor*.⁶ Now here we see a wonderful assimilation to the British Saxon language, for the *Corles* are nothing but German *circles* and have the same meaning, whether accidental or not: and the two *Corles* form what is called the *Conde Udda*. This is

¹ Asiat. Res. Vol. XV.

² Vide Last Days of Bishop Heber, by Robinson, p. 311, n. G., &c.

³ Dr. Babington says, Sanscrit founded on Tamul; see Trans. Asiat. Soc. Vol. I. p. 2; and I doubt not both were founded on Hebrew, or this earlier language, whatever it might be called. To this I shall return.

⁴ Ham. Disc. Ind.

⁵ i. e. *Jouda*.

⁶ i. e. *Buddhu*.

nothing but *County of Juda*.¹ A person might mistake it for English.² In the island is a river *Maha-vali Gunga*, and the race which inhabits the inmost mountain are called Vaddahs and Bedahs, i. e. Buddhas. Are the Vaddahs *Yuddas*? And there is a place called *Batti-calo*; this is *Buddha-clo*,³ and their language is the *Tam-ul*. There is a town called Pala-bina or Palatina near the mount called Adam's Peak, where we formerly found the foot of Adam and of Buddha, and Mount Ararat. The principal town is called Columbo, the name of the sacred island of Scotland.⁴ As we find Tam on the coast of Coromandel, so, on the opposite coast, we find a Tam, in the kingdom of Tamala.⁵

7. Ceylon or Lanca or Serendive or Palisimunda or CANDY, was a sacred island;⁶ we will try if we cannot discover it, with its corles or circles in the West. Ceres⁷ is but another name for Venus Aphrodite, and the Urania of Persia. Ur-ania, of the country of Ur or Urie. Her residence was on the top of Mount Ida, in the island of Creta or Candia.⁸ This is the $\gamma\tau$ *ido* which Parkhurst renders very correctly Idea or $\gamma\omega\sigma\iota\varsigma$, or Maia of India, perhaps. There was an Ida above Ilium, as well as this of Creta or Kriti or CANDIA.⁹ It was thus the mountain of Knowledge, or of Manda or Mundo, of which I shall say more hereafter. In this island, as we might expect, is all *the oriental mythos*. It is called Candia, and we have places called Creta or Kriti, Ida, Erythræa, Dium, Sulia, Phœnix, Hermæum, Cnossus, $\Gamma\omega\sigma\iota\varsigma$, Omphalium, DIDYMUS or TAMUZ or THOMAS, Chersonesus, Dyonysiades, Ampelos. The Island CHRYSE is adjoining to it. But Ceres had a very remarkable name, allusive, I believe, to this mythos: she was called TAM-eios, and from her and this name a plain in Crete¹⁰ was called TAMESA: and from this I suspect, paradoxical as it may appear, that the Tamarus, near Plymouth, and the Thames, had their names— $\gamma\psi$ *iso* $\square\aleph\tau$ *tam*.

¹ In India the shrines or recesses in which the God is placed are called Stalla—i. e. in English language Stalls. This Sanscrit word comes from the Hebrew לְתַב *stl*, a settlement.

² These English words are here because they are, I doubt not, obsolete SYNAGOGUE, not Mazoretic, Hebrew words—the *old English* or *Saxon* being Hebrew. Refer to Book IX. Ch. I. Sect. 6, note.

³ Similar to the *Heri-clo*.

⁴ Discussed at large hereafter.

⁵ Vide Ptolemy, Geog. Lib. i. Cap. xiii. and Map.

⁶ Ceylon is called by Bochart Insula Iaba-diu, id est, insulam Iaba, vel Iava, probatur ex Ptolemæo, Iabadiu pro Iabaddiu. Here, I think, we have the *Diu-Ieue* or *Diu-Iava*. Ammiano *Serindivi*.

⁷ This Ceres or Venus was Creusa, the mother of Ascanius, who was thus the son and grandson of God, as one of the Gospel Histories makes *Mary* the daughter of God: thus Jesus was son and grandson of God.

⁸ Candia—Can-di-ia may be holy priest of IE, or place of the holy Kan, or Kanya, or Cohen.

⁹ In the Zend Khret-osh is understanding, $\kappa\rho\alpha\tau\omicron\varsigma$ nom. $\kappa\rho\alpha\varsigma$. *Asiat. Journ.* June, 1830. Here we come at another very important meaning of the word Cret or Κρητ , whence, I take it or in like manner I take it, that the word Crete came. For the word there represented *understanding* is probably *wisdom*. These words are commonly used for one another in the Bible. Χρησις and Χρησος have the same meaning. Vide Dr. Jones's *Lexicon*. And Nestus is written Nesus. See Wilkinson's *Atlas*. This completely justifies me in considering the city of Cressa in Creston-ia as the same as Creston. Lempriere calls it Creston. Crestonia was the country of Cres, Cryssa the town of Cres. Littleton says, Cres, Cretis, Cressa *fœm. one of Crete*. Again, the Crestones he represents as a people among whom the widow who had been the most favoured of his wives, was sacrificed on the death of the husband. Homer's mother was called Crithis, and one of the rivers of Troy or Ter-ia was called Cryssa. Among the French, where are to be found a surprising number of close coincidences with the doctrines of the ancients, in the word Crétiens, we have exhibited the true name of the people of Crete. My view of the origin of the island of Crète is confirmed by Hesselius, who says, *In ea Cres Arionis filius, Demagorgonis nepos, regnâsse fertur, eamque de suo nomine Cretam appellavisse*. This Cres was the eldest son of Nimrod. *Nimrod*, Vol. I. p. 15.

¹⁰ The Cretans are well known and are mostly named along with the Philistines or Pallitini in the Bible: 2 Sam. viii. 18, xv. 18, xx. 23.

Plato tells us,¹ that Thammuz was king of Egypt, before Thoth, who taught him letters. Here are the twins preceding Buddha or Mercury² or the Bull. And the inhabitants of Egypt are said to have descended from Thammuz. Euty chius says, that the first city was built by Noah, who called it Thamanim.³ This is most important; I shall return to it hereafter. Indeed, in every part of the world, the remains of the worship of Tam may be found.

Tahmuras taught letters to the Persians.⁴

The Egyptians had certain secret books, called those of Ammon. The author of the Concordia⁵ says, “Quicquid vero sit de Ammoneorum libris, illud certum, Platonem in Phædro commemorare libros, artes quasdam continentes, quos ipse Tautus Regi THAMO obtulit, Egyptiis distribuendos aut describendos.” Here we have Taut or Buddha receiving his learning from Thamo. These books were called ἀποκρυφα Ἀμμωνεων γραμματα. Here we have the Apocrypha of Ammon and Thebes. I ask my reader to look into our Apocryphal books and doubt if he can, that the doctrine of Wisdom, which I have been unfolding, is the Wisdom so often treated of by them.

The Jewish Bible contains several very fine works called Apocryphal or doubtful, and of no authority, by Paulite Christians, who fancy themselves reformed. This is because they, in a very peculiar manner, teach the doctrines of Wisdom or the Cabala, which was *heresy* to the vulgar Jews and Paulites. It is very extraordinary to see all our scholars admitting, without thought, that Apocrypha means *spurious* or *doubtful*, overlooking the real meaning, which is, *secret doctrine*. I am quite certain that no person can look into the Apocrypha, after having read this work, and not see that most of the books are ænigmatical depositories of the secret doctrine of wisdom. The Athenians had a prophetic and mysterious book called *the Testament*, which they did not permit to be seen, nor even to be named or written about; but it is alluded to in the speech of Dinarchus against Demosthenes.⁶ The Romans, I believe, and, in fact, every nation had its Apocrypha.

Stanley has observed, that the Sabæans, as well as the Jews, had the custom of weeping for Tammuz. This took place in June, the month called by them *Tammuz*, and of which, in the Zodiac, the Twins are the sign.⁷ Narayana⁸ moving on the waters, the first male or principle of all things, was wholly surrounded by what they call Tamas or Thamas, by which they mean darkness. This is correctly one of the meanings of this word in Hebrew.⁹ The system was not established till the sun got into Aries; their knowledge extended no farther back than the beginning of Taurus, when the Mythos was made to commence. Before that there were Tamas *the twins*; but here all was darkness. Hence Tam came to mean darkness. In Arabia was a nation called Thamydeni or Thamuditæ, followers of Tamus.¹⁰ The Chinese equally adore Tamo or Thomas, from whom Buddha is said to have descended.¹¹

If Mr. Ritter's observation be right, Dodona ought to be Bod- or Bud-ona, the Bud meaning wisdom. And if I be right, every incarnation of a sign of the Zodiac would be an incarnation of wisdom, as it comes to be the equinoctial sign: thus it would once have been with the incarnation of the twins. From Potter I find the inhabitants of Dodona were called Tomuri, the prophetesses Tomuræ, as Potter says, from an adjoining mount called Tomurus; but why had the mount this name? This was unknown to the Greeks who were perfectly ignorant of the origin of Dodona,

¹⁰ Drummond's Origines, Vol. III. p. 243, Map.

¹¹ Georg. Alph. Tib. p. 20.

except that it was founded by two *black doves*. I think in the Tamuri we have the twins. From Potter¹ I also learn an important fact, that Dodona was placed on a river called Don by Stephanus. We have before shewn that Don, in one of the languages, meant wisdom. In the neighbourhood of Dodona are several places connected with the name of John, for instance, Joannina. Almost all the mythos shews itself in the country around Dodona. As we have the Twins in the Tamuri, so we have the Arca or Arga in Arca-dia, and in Apia, the Bull Apis, or the Bees, the Melissæ or Muses. Strabo says, the Oracle of Dodona went to Epirus from Thessaly. From its evident Indian character it might be expected to have come from the side of the country where we found the Sindi, *Thrace*.

Calmet, on the word *Tho*, thus writes: "It is said, that the first Christians of the Indies, converted by St. Thomas, relapsed into their former infidelity, and so far forgot the instructions they had received from this apostle, that they did not so much as remember there had ever been any Christians in their country; so that a certain holy man, called Mar-Thomé, or Lord Thomas, a Syrian by nation, went to carry the light of the Gospel into these parts." I think we have good grounds from this to suspect, that what I have said respecting the mode in which the Portuguese mistook the followers of the ancient superstition for Christians is correct.

Mons. Creuzer cites the words of Ezekiel viii. 14,² and observes, that the most and the best of interpreters have construed *Tammuz* to mean Adonis,³ whose feast the Jewish women solemnized after the manner of the Phœnicians, sitting all night weeping and looking towards the north, and afterward rejoicing and calling it the death and resurrection of Tammuz. But he observes, that the festival fell in June, the month called Tammuz, and that therefore it was solstitial. The festival, however, did not fall in June, because the solstice fell, in the time of Ezekiel, or now falls in June, but because June was the month of Tammuz, or the Twins. No doubt the festival was *equinoctial* at one time; but by the precession of the equinoxes it had become *solstitial*, as calculation shews. Creuzer observes, that the worship of Tammuz had all the characteristics of that of Adonis and Osiris, and, he might have added, of the Lamb and of Jesus; the weeping on Good-Friday and the rejoicing on Easter-Sunday.³

I believe the island of Candia had its name of Crete from the word *Κρης*, a *Cretan*, all the oriental mythos being here evident from the names of places. The *Κρης* was Ceres and the bearded Venus, the Kanya or Apollo Cunnius. The Ram or Aries was called *Κριος*. Whence comes this name *Κριος*? I suspect it had relation to the same mythos. The Lunar mansion of the Lamb in India was called Kriti-ka. But the Crit-i-ka of India was also the Bull, and we have shewn that the Cres was the Lamb. In its turn the Bull Taurus was the emblem of the *Χρης* or the Christ; then the Lamb; and, lastly, the Fishes; and the followers of the fishes were Chrestiani or Pisciculi. But before the Bull, the emblem was the Tamas, which became Adonis, and in each case it was the emblem of the Cres or benignant Deity. The Golden fleece was called Crios-le mouton ou Crysomalle, la toison d'or. The word Candia is divus or dis, Can or Kan. Now we must observe in Crete a Tomas or Dydimus. On the coast of Coromandal there were Male-pour or town of Male, and Salem, and Adoni, and Wittoba,⁵ &c., &c. This in Greek would be town of *the fleece* or of *the apple*. We must not forget that in the Peninsula, where this town of the fleece is, we had a Colchis and Sinus Argo-ricus and an Argari, &c., &c., whither the twins, or Castor and Pollux, went for the fleece or Male. I suspect the island of Creta was nothing but Cresta a

⁵ Wittagemote—Witto-abba!!

little changed, like Casmillus into Camillus.¹ —a practice very common; for *Xρης* was the Lamb of God, which taketh away the sins of the world. The change of such words as Pelasgus into Pelagos, the dropping of the S arose from the habit which all nations acquire of dropping the rough-sounding letters for the sake of euphony, as civilization advances.

It is also extremely curious to find constantly in the temples, as objects of adoration, Gods, of whom it is said, that no one knew the history, or who or what they were. Were they *really* unknown, or were they known to the initiated, and their history kept from the vulgar? The rites of the Aruspices were brought into Cyprus, and the shrine at Paphos founded by a certain Cilician, called Tam-iras; but it was unknown who he was.² The priests of the isle of Cyprus were called Tamarides. After my attention was turned by examination into the evidence of St. Thomas to the question of the twins, I was surprised to find remains of them in every part of the old world.

I believe the word *Carn* is the Hebrew קרן *karn*, which Lowth construes *hill* or *single mount*.³ Pausanias⁴ says, that Apollo Carnus had his surname from Carnus, who came from Acarnania; but the word Acarnania is *country of the Carn*. He says this Carnus Apollo was worshiped in the house of the prophet *Crius*. He also says, that not far from the temple of Carnus Apollo (in Lacedemon) was the place where the *Crotani* disputed. All this was in the kingdom of Argo, in Greece. I know not what others may do, but I cannot help seeing here the same mythos in Carnate and Lacedemon.

In an old French map I find the whole of the lower end of the Peninsula of India called Carnate. When I reflect upon the absolute identity of the Druidical circles of India and Europe, as exhibited in the drawings of Col. Mackenzie, and on the identity of the carns and of the cromlehs, as exhibited in the example copied from a plate given by Miss Graham, in her *Travels*, and the single stone pillars, as given by the same lady, I cannot help believing that the country had its name of Carnate from the Carns of the Twin Gods or of St. Thomas; this, then, would be the country of the sacred Carns—and that the superstition of Carnac, in Morbihan, France, came with the Bhoix to Baieux.

I consider the Carnac of Normandy (see plates in the *Celtic Druids*) to be the same as the Carnac of Egypt, and as the temple of the Sun at Kanarak,⁵ or the ancient pagoda near Jagger-naut, in India. In Miss Graham's *Journal of a Journey in India*,⁶ may be seen examples of correct cromlehs and carns near Mahabalipoor. They are identical in every respect with those of Ireland and Britain. See my plates, fig. 18, and Book V. Chap. IV. Sect. 10; also the account of the very extraordinary cromleh described by Sir A. Carlisle, Book V. Chap. VI. Sect. 6, note.

I have formerly observed it is said by my informant, that the Catholics have placed their altar on a flat slab at the top of the heap of stones. The fact, I do not doubt, is, that the altar is not only a carn but a cromleh. It is like the altar over the body of St. Peter at Rome, which is placed under the cupola, the templum—the microcosm of the world, as every temple was supposed to be, which I shall discuss much at large by and by.

In the Preliminary Observations, Sect. 28, I have stated, that the ancient method of dividing the day, was into sixty hours. It appears that this was the ancient Tamul practice, thus tending to shew an identity betwixt the East and West.⁷ This subject I shall resume.

¹ In a note in Book V. Chap. II. Sect. 7, I have shewn that the Golden Age was called *Crita*, in Sanscrit: this was *Xρης*, age of pious, age of gold, age of Taurus.

⁷ Vide Vedala Cadai, *Miss. Trans., Oriental Translation Society.*

In Argolis there was a temple of the Kresian Bacchus. This is the $\text{X}\rho\eta\varsigma, \text{I}\text{H}\Sigma$ —the 608, the nomen, cognomen, et omen—Bacchus *mitis, benignus*.

Creuzer says,¹ Sous ce point de vue Axieros devient Déméter ou Cérès, *Axiokersa* Perséphoné ou Proserpine, *Axiokersos* Hades ou Pluton; Casmillus reste Hermès, mais il se rapproche aussi d'Iacchus, c'est-à-dire de Bacchus comme génie attaché à Cérès. Under all the circumstances shall I be very blameable for entertaining a strong suspicion that Axieros is a Greek corruption of the Ceres—the *a* the ancient emphatic article, and the *xieros* the *ceres*? We have seen the $\text{I}\text{H}\Sigma$ the monogram of Bacchus; and the $\text{I}\text{H}\Sigma$ born at the temple of Ceres, or Bethlehem. In a few lines after the above, Creuzer says, D'abord se présente à nous un nouveau couple de frères, *Jasion* et *Dardanus*. How can *Jasion* be any thing but the $\text{I}\text{H}\Sigma$ — $\text{ιο}\varsigma$, or the Latin *Iasus*? In old Irish the Sun is called *Creas*. There yet exists a hymn to him in that name.² He is called in Irish *Creasan, Creasna, Crusin, Crusna, and Crios*. The word *Cyrus* meant the Sun, but yet I think we cannot doubt that there was once such a person. *Ctesias* in *Persicis* says, $\text{Και τιθεται το ονομα αυτη απο τω 'Ηλιω}$.³ *Plutarch* says that *Cyrus* was named from *Cores* the Sun.⁴ For the way in which the Hebrew כורש *curs* became the $\text{X}\rho\eta\varsigma$, and Κυρος , and *Cyrus*, see *Whiter*.⁵ Every thing tends to confirm my suspicion, that *Crishna* or *Cristna*, called in Sanscrit *Sri*, has been the same as *Cyrus*, and as the Goddess *Ceres* or *Venus* worshiped at the temple of Bethlehem, the *house of Ceres*, and that *Cyrus* is the male *Ceres*, and *Ceres* the $\text{X}\rho\eta\varsigma$ of Bethlehem. The God adored at *Tripeti*, the temple of the crucified God *Bal-ii*, is called *Rama*, or *Om Sri Ramáya Nama*.⁶ Here is the *Om* of *Isaiah*, and his *Cyrus* and *Rama*. When the way in which the *S*, the *C*, the *CH*, and the *H*, have become changed for one another is considered, this will not be thought improbable. In addition to all this, *Crete* was a holy island, celebrated for its *Mina-taur*, or *Bull Mina*, or *Menu*, who was the famous legislator equally of *India*, *Egypt*, and *Europe*. We have his laws, the laws of *Menu*, translated by the learned *Professor Haughton*, for the *East India Company*.

חרס *hrs* is the solar orb. חַרְשׁ *hrs*, which, in fact, must have been the same word in the sixteen-letter alphabet, means *deep thought, secret contrivance*; I should say also *secret wisdom*. It also means *machinator, megalistor, artificer*, particularly in *pottery*.⁷ It also means a *plough*. From this word the *Greeks* had their $\text{Ερω}\varsigma$ or Ερος , the *plastic* or *formative power*—the *material light*. From this come the *Latin ars* the *English artificer*.⁸ Who can doubt that this was *Ceres* and *Cyrus*? We have the word $\text{X}\rho\eta\varsigma\text{-ος}$, *Mitis*, in *Greek*; but I think a careful examination will prove it *not to be Greek*, or at least very unusual or obsolete *Greek*. It is the *Crit-i-ka* of *India*. *Ceres* was the same as *Isis*, and if we consider *Isis* only as the female form of the *Saviour*, this will bring us again to an identity of *Cres* and *Ceres*. I am quite satisfied that we very seldom sufficiently bear in mind, in these inquiries, that in ALL the *Gods* the male and female are united, and that almost all that may be reasonably predicated of the one may be predicated of the other.

As might be expected in *Candy* or *Ceylon*, in ancient time, we have the centre mountain called *MALE-a*, the rivers *Phases*, the *Soane*, and the *Padacus* or *Po*, and an oppidum *Dionysii seu Bacchi*. *Salem*, lately alluded to, the capital of *Salem*, is disguised into *Chelam* by *Hamilton*,⁹ and

placed in lat. $11^{\circ} 37'$ long. $78^{\circ} 13'$. Here is the highest mountain in this part of India—Adoni disguised from its old name into Adavani by Hamilton, situated in $15^{\circ} 35'$ N. lat. $77^{\circ} 45'$ E. long. In this district runs the river Vada Vati. Has Vada-vati been Pada-vati?

Bethel is Bit-al, *house of* or *temple of Al*. In the same manner Beth-lehem is Bit-lehem, *house*, or *temple of Ceres*. But it was also the temple of Adonis; thus Adonis is the masculine Ceres or Cres: and it was here where the magi came to offer gifts to the new-born Cres, or, if spelt with the Sigma-tau Crest. Ceres is Cyrus and Crisna. Ceres is the feminine of Cyrus, as Juno is of Jupiter, Jana of Janus, &c. I have, I believe, before observed, that the Sigma and the Sigma-tau were constantly substituted for one another, in the early times of Greece. Take off the terminating formatives from the words, and make a just allowance for the corruption of the π H into the CH, and for the Sigma-tau, commonly used instead of the Sigma,—and the Crys-en of India, the Cyrus of Isaiah, re-incarnated at Bethlehem, and the $\chi\rho\eta\varsigma$ at Delphi, the temple of Jah, are all one word or name, and designate Cyrus, Cristna, and Apollo.

8. The name of the coast which we find washed by the Erythræan sea with its Diu, Chryse, Argo, and Colchis, must now be explained. It is in Greek Μαλον Βαρις , the Hebrew בִּירָה *bire*, (Parkhurst in בֵּר *br*)—the place or palace of the fleece or apple—Mala-bar. It has probably been a translated term from the native language, by the Greeks, from whom it has come to us. I know I shall have much difficulty in persuading my Indian friends that the word Male-bar means any thing but *mountain coast*. I shall be told that Male means *mountain* in Upper India. I am not surprised at this, since I find two Colidas, two Urias, &c., one of each in North, and one of each in South India. But it means *mountain coast*, because the coast of the Male is mountainous, in the case of Male-bar. But what is it in the case of Male-pour, on the opposite coast, the flat or level coast? I should not insist on this, if, on this coast, I did not find the Argo, the Chersonesus, Colchis, &c.,—in fact, the complete mythos. But suppose that the word Male should mean alike mountain, fleece, and apple. This is not more extraordinary than that the Latin word Hostis should mean both *friend* and *enemy*, and Argo, in Greek, twenty different things. If I do not find the meaning of the word fleece *now* given to the word Male in the Sanscrit dictionary, I maintain it is for the same reason that I do not there find the meaning of *lamb* attached to the word Agni. Dr. Babington says, Maha-bali-poor is also called Maha-malai-pour, or *the city of the great mountain*, although there is no *great* mountain near it.¹ The learned Doctor seems to forget that there are very few places which have not several names. Malabar; in Sanscrit, is *Kerala*, i. e. *chora*; in the old language *Mala*.² When I recollect that we have on this coast the Hericulas, the Agniculas, the Cres, and Crys, &c., I cannot help suspecting that this KE has originally been the same as the C, the CH, in Cyrus, &c. The Tower in Jerusalem was called *Baris*: this shews the word to be Hebrew as well as Greek. We have found Ararat and Il-avratta, and a Baris, and a mount of Naubanda, in India, and a mount Ararat, called Baris or mount of the ship, in Armenia, from which the Euphrates was supposed to flow. I suspect that the river called Euphrates, is the Eu-phrat.

The natives of Western Colchos were described to be black, with curled hair, and to be circumcised. In Madura the head class are circumcised, but not the lower orders. This seems to raise a fair presumption that the rite arose here, and travelled to the Egyptians, among whom Mr. Parkhurst has shewn that it existed before the time of Abraham, *but among the priests or higher class only*.³ Is it possible that the search after the Golden fleece, the Ram, or the Golden

¹ Trans. Asiat. Soc. Vol. II. Pt. i. p. 265.

² Asiat. Res. Vol. VII. p. 380.

³ Parkhurst in voce, בֵּר *ml* III.

apples of the Hesperides, by the Argonauts, may have been nothing but one of the common mistakes of the Greeks, which arose from their ignorance of the meaning of the word Malabar in the old language. In Hebrew בר *br* means place, or residence, or house, and מל *ml* circumcision or the circumcised. Then this would be *country of the circumcised*, or *initiated*. But in Greek Μαλ means either *yellow* or *golden fleece*, or *yellow* or *golden apple*. It is not a more ridiculous mistake than their Meru for *thigh*. That the Argonautic mythos, with its golden fleece and apples is here, no one can deny: and he must be credulous indeed who believes that the South Indians copied an astronomical mythos, adapted to their own astronomy, from Greece, to whose astronomy it had no relation. If any person choose to object to my explanation of Male-bar, let him consider the Sinus Argoricus, the Colchis, &c.

9. In many Roman temples in Italy there were figures of two young men seated, armed with pikes, said to be Penates and Dioscuri; but, in fact, they were totally unknown: they were probably Dii Obscuri, Tamuses.¹ They were said to have come from Troy, whence every thing *unknown* was said to have come. I think they must have been either Gemini or Pisces.

Creuzer says, a king of Italy, called Camises, Comeses, and Camasenus, married his sister; and adds, that Camaséné was une déesse ou femme poisson comme Atergatis. In fact, Camaséné signifies, in old Greek, *the Fishes*.² I think it is impossible to doubt that we have here in Italy and Greece the Indian Cama; and, if in this I am right, as the Sun entered Piscis 350 years before Christ, it is quite clear that the communication between the countries must have been very intimate, even up to that very late date; so that after this time the Sanscrit may have gone from one to the other. In India we have Comari, and the Cape of Comari or Comarin, near to the tomb of Tamas; but Kumari means *the Virgin*, and the Cama-deva is *the God of love*. As divine love, Cama would belong to every incarnation: thus the Twins in India were Cama, and the Fishes in Italy were the same. Camasenus came at length to mean fishes from its being an epithet of the constellation. It was probably Cama-isi, with the Latin termination. Cama is Cupid, Cama-deva God-Cupid or divine love; then Camaséné will mean the sign Pisces, the emblem of divine love, the Saviour. In the sphere, the Virgin and Child constitute one sign, and form together Cama Deva. I suspect the forgotten mythos of Tam or the Di-oscuroi, was made applicable to Pisces.

La Loubère says,³ the promontary *Cory* (Κορυ of *Ptolemy*) could be no other than that now called *Comori* or *Comorin*. On this promontory is a large nunnery, and here, in a very marked manner, prevails the worship of the Goddess Cali. Now I take Cory to be the Greek Κορη, the name of Proserpine, and the Marin is *Marina*, the Sea Goddess. Cora-Mandel is *Coramanda*, circle of Core. The coast is called the country of Calidi, that is, of Dei Cali or Holy Cali.⁴ The learned Oxford Professor of Sanscrit, Mr. Wilson, generally calls the coast of Coromandel, Chola. This is the Manda or Circle of Cali. But in p. 181, it is said that Chola is also called *Chora-manda-l*, and was anciently called Regio *Soræ*, and Soretanum. The Sura or circle (as the Germans would say) of Sura, has thus come down to us. I find that the country of Sora or Chola was ruled by a king raised to the throne, not by the neighing of a horse, like Cyrus, but by an elephant, and that his name was *Kerik'ala Chola*,⁵ as written by Mr. Wilson, but which ought to be, I suspect, *Hericlo Sura*, the Syrian Hercules. In the Javanese the word Cama becomes Como and Sama Somo.⁶ Thus Comorinus, the end of the promontary of India, is Cama-marina; and Cama is but Aua with the aspirate. Thus Cama-marina is the Sea Goddess Venus, who is also Cupid or Dipuc. As we find in the very oldest language S and T indiscrimi-

minately used in Asia and Greece, as Tur and Sur, and Nessus and Nestus, Cryssus and Crestus; so we find a similar practice prevailed in Italy: their first Camasenus is constantly written Camarenius.¹

We find the Comarin in Italy, in the plain of Camera, in Calabria—and Camerinum in Umbria—and Camarina in both Italy and Sicily.² Mr. Bentley says, “The constellation Gemini, may, I think, have arisen from the story of the Aswini Kumāras.”³ The close connexion between the Twins and Comari or Kumari is important. The name of Comarin, in Sanscrit is Canyamuri, *Cape Virgin*, said to be contracted into Comari.⁴ But the Kumari was the Virgin, and her images were the Kumarim. It is said that Josiah *put away the comarin which the kings of Judah had set up*; that is, the images of the female generative power, in opposition to the male.⁵ Cama was the name of the priestess of Diana, and as the priestesses bore the names of their Deities, of course Di-ana or Di-Jana, was Cama. This is the Cama-deva of India.⁶ Eusebius⁷ says, that the Uria or Ur of the Chaldees is called by Eupolemus *Καμαρινη*, and the priests of that country *Καμαριμ* *kmrim*.⁸ Here we have my theory of the Ur of the Chaldees confirmed. This Kmrin is evidently Comarin. In none of the cases of etymology here noticed, should I consider my explanation sufficient if unaccompanied by the circumstances which I have pointed out. It is on the circumstances I depend, not on either the sound or the similarity of letters. We have the Argonautic mythos in the languages both of India and Greece. Did the Greeks invent a mythos which is *not* the least applicable to themselves, or the Indians invent one which in every thing (as we have before shewn) is applicable to them?

I now beg to recall to my reader's recollection, that we found Culdees both in Ireland and Scotland, and, as appears in the fifth Chapter of the *CELTIC DRUIDS*, a great number of the Gods of India. These are so marked, that they leave no room for doubt as to the identity of the two. Now, when this is considered, it will not be thought surprising that the doctrines of the inhabitants or the Culdees, of the Colida of Comorin, should be identical with those of the Culdees of Scotland. The fact is, the three sacraments, of what are called the Christians of St. Thomas, and of the Scottish Culdees, and of the Jews, viz. Orders, Baptism, and the Eucharist, are identical. When Christianity first came to Britain is not pretended to be known; it is only admitted that it was found here by the Romish missionaries. I suspect the Christianity of the Culdees of Ireland and of Scotland was the *Χρησεν* of Malabar: and was brought from the city of Columbo, in Ceylon or its neighbourhood, to the Columba of Scotland; in the same way the Hindoo Gods were brought to Ireland, where they are now found—a fact which cannot be disputed.

A very learned author says, *Quid obstat, quo minus hoc inventum* (he is speaking of the Zodiac) *Chaldæis tribuamus, populo antiquo, et a primis, post reparationem humani generis, in terra Sinear colonis, oriundo? Sane Sextus Empiricus,⁹ famosus ille Scepticus, qui totum hoc quod scire vocamus, disputationibus suis evertit, contra astrologiam disputaturus, hoc tanquam certum et indubium assumit, Chaldæos antiquos eandem Zodiacum, quem habent Græci, cum omnibus animalibus habuisse. Chaldæi, inquit, Zodiacum circum, ut edocti sumus, dividunt in duodecem animalia, &c.*¹⁰

The Ioudi were Alchymists as well as Magicians. This I take them to have been in the

character of Chaldæans. We see the same character of Chaldæans continue with them from beginning to end. The Egyptian kings gave permission to the Jews alone to exercise the art of making gold.¹ I have little doubt that the word Callidus for *cunning*, i. e. *wisdom*, and Callidus *hot*, and *καλος beautiful*, *το καλον*, are all, in their root, the same, and all arise from the same original idea: and, I have no doubt, in the numeral or arithmic letters, which I shall explain by and by, it has been XL=650 or Kala=72. Call, in Welsh, means wise, knowing, learned. This is Cali. That which a man is learned in, is denominated his vocation or calling. Country of Ur of the Chaldees is Cali or Cali-deva or dei; Ur-ia is country of Ur or Urus or the Beeve, of the holy or Goddess Cali, or the benignant or beautiful Goddess Cali—*Καλος*. We have Orissa, Uriana, Uria, Ur. Mahakalee, the great Cali, is the same as Mahanya, the great Maia.²

Chola and Chora were two names of the same thing. Cora was Cory, the name of the Indian promontory in Ptolemy; but Cory was the Goddess Kumari and Komari, and on the promontory stands a convent of Nuns, just where it ought to be. Coro-manda was the circle of Cory, and Cola-manda was the circle of Cola, which was, I believe, nothing but the Goddess Cali, another name for Cory and Komari—*Καλη* or *Καλος*, in Greek, *mitis*, *benignus*, having precisely the same meaning as *Χρης*. Colida was the country of Calie or Cali, who was peculiarly the object of worship in that country, and Abraham or the Brahmin left Ur of the Cali-dei, or Cali-deva, or Cali-da. Abraham did not leave the *country of Ur* of the Chaldees, but *Ur* of the Chaldees. Ur is also ure or yore, and means *country*. Choro-mandel became Soro-mandel;³ one the circle of Sur, the other of Cali. Koru⁴ is also written Kolis.⁵ That is, the Virgin was Cali, the origin of Cali-da. Vincent says, “Koil, Kolis, and Kolkhi, and Kalli-gicum are related, I have no doubt.”⁶ The Koil is Coil or Coel, meaning the same as Cun-ya, the father or mother of Helena, the mother of Constantine—the same as the A-pol-lo or A-bal-lo Cunnus, of Thrace or Athens. Calida may also be Cali-tana.⁷ From Kalli-gicum came Chalcos.

10. I would now draw the attention of my readers to what is noticed by our Indian inquirers, but, in their usual style, passed without reflection. There are near Madras *two Tombs of St. Thomas*, or *Tamus*, or *the Twins*, with a CARN, a monastery, &c., at each. How came these? As might be expected the Christians are permitting one of them to go to ruin, and it is almost deserted: but it is there with its CARN. This is a fact. I wonder whether the monasteries were tied together by the tails, like the fishes of Italy. Here are two Tombs or Carns for the Twins or Gemini: one for Castor, and one for Pollux, who were both in the Argonautic expedition to Male-pour or *town of the fleece or apples*. I beg my reader to think upon this. Were the Twins slain, as the Bull was slain, and as the Ram or Lamb was slain? Did they constitute the holy Thomas or Dydimus martyred on that occasion? The Thomas of the Gospel was never in India. But might it not be Thomas, the son of Budwas, the father of MANES?

The sovereigns of Orissa, or Uriana, or Uria, or Ur of Calida, on the coast where the tomb of Thomas stands, were called Kesari or Cæsars, the successors of Salivahana or Salivan, the cross-borne, or crucified, or Vicram, who was born on the same day with the Roman Cæsar. A family of Kesari or Cæsars reigned in Orissa in the fifth century.⁸ All these various circumstances, and the agreement in the pretended dates of the Salivahana of India and the Cæsar of Italy, prove the truth of the cyclic part of my theory beyond a doubt. Can any one believe the princes of these distant countries copied the title of Cæsars from one another?

⁸ Vide Hamilton.

I have formerly pointed out the circumstance, of which Col. Wilford informs us,—that Salivahana and Vicramaditya are the same, and afterward that Salivahana killed Vicramaditya. The æra of the later began when that of the former ended—56 years B. C. It has also formerly been observed, that Mohamed was considered by the Brahmins to be a Vicramaditya: then here, in the æra of the Hegira, we have another æra of a Vicramaditya succeeding that of Salivahana. From this it is clear that an æra of Vicramaditya means an *æra of the 600 years*: and that when it was originally said the tenth or twentieth year of the æra of Vicramaditya, any of the nine æras may have been meant. This, indeed, is the way in which Hindoos constantly express themselves: for instance, the tenth year of the sixth or seventh cycle. The same language applies equally to the sixth or seventh 600 of the ten six hundreds, as to the sixth or seventh 60 of the 600. What a door this opens to mistakes I need not point out. The same thing takes place with the Chinese. After the time when the Brahmin power was overturned, and their seminaries destroyed, they lost all knowledge of the nature of their cycles, along with their astronomy; and the æra of Vicramaditya now, I believe, is calculated forwards from the birth of Cæsar. Some of them have learnt the meaning of their astronomy from the English, and are beginning to pretend it was never lost, but the truth, I imagine, is too well known for them to deceive any body but their own devotees. From a consideration of these facts, I am led to a suspicion that when the Jews or tribe of Ioudi, at Cochin and Madura, whom I have lately noticed, are said to have come down from the West, bringing seventy-two families, and establishing a Sanhedrim of seventy-two persons,¹ in some year of the æra of Vicrama or of the Cycle, allusion may be made to an æra long preceding both our time, and that of the Χρησ-ian æra of the Thomé Chrestians. It follows that the Cres and Colida of Tam, or the Twin, should have preceded that of the tribe of Ioudi, for Yuda was the son of Cristna.

I read in Professor Wilson, that there was in Southern Pandæa a dynasty of seventy-two Pandæan kings, ending with Guna Pandya. Were these the seventy-two tribes of Jews? In the same page (lvi) Wilson says, these Pandæan kings came from Ayodhya. I believe, in spite of rules of etymology, that *Guna Pandya* is nothing but the Pandion of Athens, of Delphi, and the Apollo Cunnius: and that Guna is Kanya and the Cunnius. What is Γωνη in Greek? Kan-ya is the name of the Indian Venus, as well as of Cristna or Apollo.

And now I think we may see that there are yet some real surviving remains of the mythos of Gemini or the Twins, as well as of the three posterior constellations in the precessional cycle. We have Gemini or Tamus, Taurus, Aries, and Pisces. When I consider the drawings of the Gemini and the Pisces tied together by the tails, and the construction put on the passage of Genesis, that Adam and Eve were one, I have been induced to suspect that the Gemini were like the Siamese boys: the drawings are exactly like them. About a year before these boys were heard of, I was induced to make a visit to Newport Pagnel, to inquire into an *incredible* story which I had heard, noticed before in Book IX. Chap. IV. Sect. 1, namely, that formerly a woman had lived there with two bodies. I only got laughed at for my folly in supposing such a thing possible, BUT I found the monument of the Lady or Ladies in the church, and what the corporation considers of much greater consequence, I found that it holds large possessions under the will of this Lady or Ladies, the daughter of Fulk de Paganel.

When I meet with evidence from learned men who do not the least understand my system I value it most highly, because the probability of its truth is greatly increased, as any person who understands the value of evidence must very well know. Of this nature is the following extract,

¹ Buch. Christ. Res. p. 222.

from the work of my learned friend, Eusèbe de Salverte : Apres avoir célébré la naissance du Kioro, de l'enfant céleste qu'il regarde comme la tige de la dynastie manchéone, le poète empereur Khian Lung peint cet enfant animant de son esprit tous ses descendans, et agissant lui même dans la personne de la plupart d'entre eux.¹ C'est une véritable Métempsychose, presque aussi nettement établie que celle du pontiffe de Buddha, et qui n'a pas du révolter davantage la crédulité de Tatars.² He must be blind who does not see here the regeneration of the wisdom of Cyrus. Here we have most undoubtedly the mythos which I have developed, existing at this day among the Chinese. M. De Salverte correctly observes, the same principle may be seen to prevail in many sovereigns who always took the same name—for example, the Syrian kings the names of Adad; the Egyptian kings the name of Pharaoh; and many others who probably do not understand the reason of the custom.³ Very justly indeed has M. De Salverte observed, that there is a strong probability, that the long reigns of Djemchid, Feridoun, &c., are only dynasties of the nature of Lamas,—i. e. re-incarnations. In the same way Mohamed was a renewed incarnation of Jesus, and of Buddha; and this was the reason why the images of Buddha were spared in the East by the Saracens. The Caliphs and the Sultans all professed and still profess to be the same, like the Lama of Tibet, as I shall prove.

II. It may now be useful to inquire into the meaning of the far-famed Jaggernaut, in one of whose temples we lately found the priest named Joseph celebrating what Dr. Buchanan called the rites of the Roman Catholic church. We have found, in the district particularly known for its attachment to the superstition of Jaggernaut, a crucified Bal-ii or Lord ii; also a crucified Salivahana; also a Crysen and a Cristna, who was a crucified God. In Upper India, Cristna is called Can-ya and Nat-ii.⁴ The Targum of the Jews calls *Jehovah* ii, and Apollo, the God of the people of Delphi, where the *Χρησος* was found by Dr. Clarke, was called IE, and the Bible of the Jews calls Jehovah IE. The first word of Ja-gernaut is evidently IA, our Jah, and the Jewish יה ie. The third is the Nat of Upper India, and the Irish,⁵ and Egyptian Neiths, both of which were the Deities of Wisdom, and the Chinese Tien, as before stated in Book VIII. Chap. VI. Sect. 5. The second word is the Hebrew גר *gr*, and means *circle* or *cycle*; and *Iager* has the same meaning as the title of Cyrus יגל-אל *al-olium*, αἰων των αιωνων, *Pater* or *Deus futuri sæculi*—the wisdom of the cyclar Ia, or the self-existent cyclar or revolving incarnation of wisdom. The Brahmins call him the *Great Creator*; but the Creator was Wisdom or Logos.

In Travancore, not far from Madura, a very peculiar festival is celebrated to the honour of the Trimurti, called by Mr. Colebrooke Three Persons and one God, or of the Jewish Aleim, where all distinctions of caste are laid aside, and it is in these Southern countries that the worship of the crucified Wittoba chiefly prevails. I apprehend this was the God Jaggernaut. Colida, to the South of Tanjore,⁶ where this God is often found, has become Kolram and Coleroon. I must repeat, this God is found in a country called Uria of Colida (Ur of the Chaldees). Ur-ia is אור-אר *aur-ia*, country of fire, or the sun, because it was also called Sur-ia or Syr-ia. Persæ Συρη Deum vocant. Colida was the country of the Chaldees, or Coli-dei, or Culi-dei, or Culdees of Abraham, and of the Irish and Scotch nations. It has the same names as the country of North India, described by Col. Tod, and referred to by me in Book VIII. Chapter VI. Section 5. It is the Καλ-ος of the Greeks, mitis, benignus, and has the same meaning as the

⁶ Wilson's Cat. Vol. I. p. 194.

Greek *Xρης*. It is the Goddess Cali who has become the most cruel of deities, though the beneficent Creator, for the same reason that the city of On or the generative power, or Heliopolis the city of the Sun, was called *the city of destruction*. The country of this God was also called Carnate. This is, Carnneith, Carn-naut, and the tomb of Tamas was a carn, and was the carn of the Zodiacal Twins, the emblem of Wisdom, or of Neith, or the Logos, or the Creator. How curiously all these things dove-tail into one another! We have Kali often in the West—in Ireland,¹ and in Caly-don-ia; in Cally-polis, in the Thracian Chersonesus, where were the Sindi, and the wives who sacrificed themselves, and near which are numbers of tumuli, yet said by tradition to be the sepulchres of the ancient kings of Thrace.²

Jagan-nath temple is called Mandala Panji³ and Sri Krishna.⁴ The first name means the universal cyclar ii, or IE, or JAH. Col. Broughton says,⁵ Bodh, under which form he is now worshiped by the title Jugurnath. Not far from the old temple of Jaggernaut is an immense fire tower, now in ruins: its roof was supported by two wrought-iron bearers, 21 feet long, 8 inches square.⁶ They lie under blocks of stone 16 feet long, 6 feet deep, and 2 or 3 feet thick. I think we have never seen a beam of *wrought-iron* of these dimensions in Europe.

The Brahmins of India were believed by Mons. Bailly to have been Chaldeans. In the minutes of the Society of Antiquaries, dated 19th February, 1767, is a letter from a gentleman, at Benares, to Mr. Hollis, in which he describes an university called Cashi. In this he states that the physicians study the Chaldaic language, in which their books on that science are written. This was the Chaldaic astrology, with which we know that medicine anciently was closely connected.⁷ Father Georgius, the missionary, states, that the people of Tibet, or *the Indian Scythians*, have among them the Chaldean divinities.⁸ Thus we have the Chaldee language both in North and South Colida of India. Mr. Wilson, in his preface, says, the Uriya or Urissa language is spoken in Cuttack. Here we have admitted the UR in Colida, (which Mr. Wilson little suspected,) in South India.⁹ Wilson says, the Hindi varies every hundred miles, and presents wide discrepancies; but I feel little doubt, that the Chaldee or Hebrew is at the bottom of all the dialects.

12. In Book III. Chapter II. Section 9, we find the Brahmins talking of the Saman Vedas. These are the Buddhas of the Smin or disposers of our system. These contain the wisdom of our system, not of the universe. In the Sanscrit the B is continually changed into the V, particularly in the dialect of Bengal;¹⁰ thus the Vedahs become Bedas.¹¹ Van Kennedy (p. 247) says, in the Sanscrit the B and V are perpetually interchanged, and the change is optional. Thus, *Ved, Bed, Bud*. In some of the earlier authors the Vedas¹² are called *Beds, Bedahs, Baid*s. I have a great suspicion that Dud or David ought to be or arose from the Bud of India. In Mr. Whiter's Etymologicon Universale¹³ may be seen how the forms D, w-D, v-D, b-D, or BD "pass into each other." This never occurred to me till I was told that the learned Ritter had shewn Dodona to have been originally Bod-dona; nor should I have thought of it, if I had not found the sons of David or Dud in the country of Buddha.

Hyde, in his eighth chapter, informs us, "that the Persians had a book which is yet extant,

¹² The Vedas have been mentioned before in Book III. Chap. I. Sect 8, and Chap. II. Sect. 9.

¹³ Vol. I. p. 865.

“entitled Gjâvidân Chrad, i. e. the *eternal Wisdom*, which is older than all the writings of “Zoroaster, and ascribed to one of their kings called *Hushang*. This book proves evidently that “the people of those times worshiped the only true God.”¹ I think the Gja, or perhaps Ja-Vedan is *the Wisdom of Ja*, or Je, or Jah. The Buddhists are said to have Vedahs as well as the Brahmins. The sacred books of most nations seem to have been called the books of wisdom. The Persians called their sacred book the *Sophi Ibrahim*, that is, the book of the *Wisdom of Abraham*. The Jews call their book, not as we do *Genesis*, but the *ראשית rasisit*, that is, the book of Wisdom. The Scandinavians called their sacred book the *Saga*, (*Saga* is the same as the Latin *Sagax*, sagacious, wise,) that is, again, the book of Wisdom; and the Brahmins and Buddhists call their sacred book the *Veda*, the word *Veda* being only a corruption of the word *Buddha*, and, like all the others, it means Wisdom, and I have little doubt that the *Edda* of the Northern nations is the same, being *V-edda*, and the *Kali-ol-ukham* of the Tamuls the same.

“The third order of the British Druids, was named *Vates*, by the Greeks *Ouateis* (Borlase). “The origin of this name is preserved in the Irish *Baidh* and *Faith*, but stronger in *Faithoir* or “*Phaithoir*. The first was written *Vaedh* by the Arabs, whence the Greek *Ouateis*; hence “*Vaedh*, signifying a prophet, became a common name to many authors of Arabia (D’Herbelot). “*Baid* is the Chaldæan *בדא bda*, prædicavit. Nihil apud alias Gentes (Hebræas antiquiores, “Arabes, Ægyptios, Græcos, omnes) usitatius quam ut sacerdotes, prophetæ, divinatores, “oraculorum interpretes essent, et responsa Deorum eorum ministerio redderentur. Id moris “apud Hebræos, lege Mosis antiquiores obtinuisse probabile habeatur, quod *Jobus* et *Prophetæ* “vocem *בדים (bdim)* *Badim* ad divinatores et oracula notanda usurpaverint.² Ch. *בדא bda* “*Bada*, Arab *Bede* prædicavit cum Hebr. *בתא bta* congruat. The Irish *Faith* and *Faithoir* is “the Hebrew *פתר ptr*, interpretus est. Solvit ænigma, Genes. Cap. xl. *פותר putr* conector, “unde *Joseph Poter* dicitur; et *Pateræ*, Sacerdotes *Apollinis* oraculorum interpretes.³ Hence “the Irish *Bro-faith*, i. e. the ancient prophets. The Scythians or Hyperboreans, says *Pausanias*, “gave the first *Προφήται* to the temple of *Delphi*, and they came from beyond the seas to “settle at *Parnassus*.⁴ Finally it is the Phœnician *אפתא apta*.⁵ Again,⁶ *Vallancey* says, “From *Feadh* or *Feodh*, a tree, proceeds *Foedh*, *Fodh*, knowledge, art, science, which in the “*Sanscrit* language is written *Ved*; and from *Hercules* being the inventor of this *Feadh* or *Feodh* “he was called *Fidius*. In the *Bhagvat-Geeta*, translated by Mr. *Wilkins*, we also find the origin “of this *Ved* is from a *tree*.”

In *Col. Tod’s* work, we have a description of a class of persons who are kept in the houses of the great men in *India*, to make out their pedigrees, and to write or record the transactions of their reigns. It is not possible to conceive any thing more like the bards of *Ireland* and *Wales*. But what is the most remarkable is, that they are in *Sanscrit* actually called by the word *Bat*, the *T* being marked in a peculiar manner to make it sound like the *RT*, and the word *Bard*. I cannot attribute this identity of the two to accident, and this leads me towards the opinion which will be thought very bold, but of the truth of which I every day become more convinced, that most of what we call histories are nothing but effusions of this order of men: and that the early poets of *Greece* were, in fact, nothing but the bards of *India* in that country. What was the *Olen*, named in my *Celtic Druids*, said to have been the first composer of verses?

Somewhere in Mr. Whiter's great work which, though printed at the Cambridge press, has neither table of contents nor index, I have found it said, that almost universally the two letters B, D, meant *to form* or *to produce*. This is confirmed by Parkhurst, who says, that in the Arabic ברא *bda* means *to begin, to produce*. The *Bda* is the *Vda*, which means both self-producer, our Genesis, and Wisdom, the personification of the first production. ברי'ם *bdim* are conjurers or wise men, whence, says Parkhurst, *perhaps the Latin word VATES*. Of this I have no doubt.

CHAPTER VIII.

FREEMASONS OF YORK AND INDIA.—SOLOMONS. KINGDOM OF SOLOMON UNKNOWN.—CHALDEANS IN BABYLON, THEIR LANGUAGE AND SANSKRIT.—SACRED NUMBERS.—SEPHIROTH, CHERUBIM, SERAPHIM.—FIRST VERSE OF GENESIS.—MANI.—FREEMASONS OF YORK, METEMPSYCHOSES.

I. I SHALL not trouble my reader at present with any more observations respecting St. Thomas. I think I have shewn pretty clearly how his history arose. It furnishes a beautiful example of the way in which religions are raised by an union of weakness and roguery.

After I had, from various sources and by various means, added to reasoning, nearly arrived at a conviction, that the ancient order of Freemasons arose in India, and was established there, as a mystery, in the earliest periods, my conviction acquired wonderful strength from a knowledge of the fact which I shall now mention. I shall be censured for stating facts in this way; but I write truly and for the truth, and for this purpose alone. The style or order in such a work as this is not worth naming. At the time that I learned from Captain —, the gentleman who was named in my last Chapter, the particulars respecting the tomb of St. Thomas, I was also told by him that he was in the strictest intimacy with the late — Ellis, Esq., of the Madras establishment; that Mr. Ellis told him, that the pass-word and forms used by the Master Masons in their lodge, would pass a person into the sanctum sanctorum of an Indian temple; that he, Mr. Ellis, had, by means of his knowledge as a Master Mason, actually passed himself into the sacred part or adytum of one of them. Soon after Mr. Ellis told this to my informant he was taken suddenly ill, and died, and my informant stated, that he had no doubt, notwithstanding the mistake which his friends call it in giving some medicine, that he was poisoned by his servants for having done this very act, or for being known to possess this knowledge. Now, when this is coupled with the fact of the Masonic emblems found on the Cyclopean ruins of Agra and Mundore, I think, without fear of contradiction, I may venture to assume, that the oriental origin of Free-masonry cannot be disputed—and that I may reason upon it accordingly. Every person, at all conversant with inquiries of this kind, knows that our ancient and beautiful cathedrals were built by societies or fraternities of men supposed to be monks from Spain, to which country they are said to have come, along with the Saracens, from the East. These people were monks, but probably all monks were not masons. But the two societies, if separated in some things, were very closely connected in others. They were Culdee or Calidei monks, from Calida. They were Saracens from Surasena, on the Jumna in India.

After I had been led to suspect, from various causes, that the Culdees, noticed in the *Notitia Monastica* and in the last chapter, and there stated to have been found in the Cathedral at York, were Masons, I searched the Masonic records in London, and I found a document which upon the face of it seemed to shew that that Lodge, which was the Grand Lodge of all England, had been held under the Cathedral in the crypt, at York. In consequence of this I went to York, and applied to the only survivor of the Lodge, who shewed me, from the documents which he possessed, that the Druidical Lodge, or Chapter of Royal-Arch Masons, or Templar Encampment, all of which it calls itself, was held for the last time in the crypt, on Sunday, May 27, 1778. At that time the Chapter was evidently on the decline, and it is since dead. From the books it appears to have claimed to have been founded by Edwin in the year 926. From a curious parchment document, formerly belonging to the Lodge, and restored to it by Francis Drake, author of the *Eboracum*, as appears by an endorsement on the back of it signed by him, stating that it came from the Castle at Pontefract, it seems probable that, according to the tradition to that effect, the ancient records of the Lodge had been sent to that place for safety in the Civil Wars, as it is well known that many of the title-deeds of Yorkshire families at that time were, and on its destruction were, like them, destroyed or dispersed.

Formerly a contest arose among the Masons of England for the supremacy,—the Lodge of Antiquity in London claiming it, and the York Lodge refusing to admit it. This was at last terminated by an *Union* of the two parties, under the authority of the present Grand Master, his Royal Highness the Duke of Sussex. The Bishops of York, in their great and similar contest for precedency with the Bishops of Canterbury, maintained their See to have been founded by Scotch Monks, (*Culidei* probably,) entirely independent of St. Augustine.

The documents from which I have extracted the above information respecting the York Masons, were given to me by — Blanchard, Esq., and transferred by me to the person who now possesses them, and with whom they ought most properly to be placed, His Royal Highness the Duke of Sussex. It appears from the documents above-named, that Queen Elizabeth became jealous of the York Masons, and sent an armed force to York to put them down.

I have formerly shewn, that the Masons, or Chaldei, or Culdees, were the judicial astrologers at Rome in the time of the emperors. They could be of no small consequence when they were employed by Julius Cæsar to correct the Calendar. This I shall shew hereafter.

I do not pretend *absolutely to prove* that this Druidical Royal Arch, Chapter, Lodge, or Encampment of the Temple of St. John at Jerusalem, or of the tabernacle of the temple of the HOLY WISDOM, as it calls itself, of Jerusalem, was actually the same as that of the Culdees of the *Monastica*, but I think the presumption is pretty strong. What more the books contain may be only known to Masons, of high degree. But if I do not by mathematical demonstration connect the Calidei, or Chaldæans, and Masons at York—I do it in the *Mathematici* and *Chaldæi* at Rome. I will repeat here, that the Christians of St. Thomas had the three rites (according to Buchanan) of Baptism, Orders, and the Eucharist. These the Jews had; and these, according to Jamieson, the Culdees of York and Iona had. The use of the word Wisdom here for the name of the Lodge, has probably come from a very remote period. In modern times no person could have known of the doctrines of the Rasit, so as to have caused him to adopt it.

However far back I search into history I always find traces of the Chaldei, and this, not in one country only, but all over the old world. I cannot help suspecting that they were correctly Freemasons from India. What I have said in my *CELTIC DRUIDS*, respecting them, that they were not a people but an order of priests, is confirmed by Diodorus Siculus,¹ who says, that the

¹ In Lib. ii. Cap. iii.

Chaldeans held the same rank in Babylon, that the Egyptian priests did in Egypt; that they transmitted their learning from father to son; that they were exempt from all public offices and burdens; that by their constant study of the stars, they learnt to foretell future events; and that they called the planets *counselling Gods* or *Interpreters*. Here we come back to my explanation of the first verse of Genesis, of the סִמִּים *smim*, or *the disposers* or *placers in order* of Parkhurst.

In another place Diodorus speaks, as of a matter of course, of the Chaldeans as a college: Περὶ δὲ τῆς πληθῆος τῶν ἐτῶν ἐν οἷς φασὶ τὴν θεωρίαν τῶν κατὰ τὸν κόσμον πεποιησθαι τὸ σύστημα τῶν Χαλδαιῶν, ἐκ ἀντιστάσεως ἰσχυροῦς: “What the Chaldeans (literally the “college of the Chaldeans) say concerning the multitude of years, which they employed in the “contemplation of the universe, no one will believe.”¹ I have little doubt that they were the inventors of figures and letters, and, of course, of astrology; and that this, in many cases at least, conducted them to the possession of sovereign power.

The Rajahpoutans, or a tribe of them, have the name of Rattores; this I much suspect has originally been Rastores or Rashtores or Ratsores. May the word *Rashtra*, in *Sur-ashtrene* or *Zor-aster*, have any relation to the *Ras*? I suspect the *Zor* is *Sur*—and *aster-ana*—and that *Zo-radust* is a corruption of *Sur* and *Ras-di*, the rough letter *S* changed or dropped as usual. We must not forget that the planets were all believed to be intelligent beings, to possess wisdom. They were all *Rashees* or *Rishees*. *Sidus* is the proper Latin for star, and *aster* for planet, and *aster* is, perhaps, formed by the common practice of the anagram from the word *rast* or *rasit*. The probability of this, like all other instances of conjectural etymology, must be left for the consideration of the reader—each case, without any general rule, depending on its own circumstances. *Zoroaster* in the Irish books is called *Zerdust* and surnamed *Hakim*, and he is the son of *Doghdu*. Porphyry says, he dwelt in Babylon with other *Chaldees*; and Suidas calls him a *Chaldean*.² Vallancey shews, from Strabo and other authorities,³ that the Chaldeans were the first astrologers.

To myself the truth of my theories has several times been proved in a manner the relation of which to such persons only as know me, and have a dependance on my integrity, will be of any weight. After I have, from a union of theory and reasoning and doubtful records, concluded, that certain events must have taken place, I have afterward found proofs of another kind, that such events really did happen. The discovery of the Masons at York is an example of what I mean. I concluded that the *Culdees* of York must have been Masons, and must have held their meetings in the crypt under the Cathedral. I examined the office in London, and I found a document which not only proved what I have said, but shewed that, as might from all circumstances be expected, it was the Grand Lodge of all England which was held there. Naming this to one of the oldest and most learned Masons in England, he told me he knew the fact very well, and that if I went to the Cathedral at York, and examined certain parts which he named, I should find proof of the truth of what I conjectured. From the circumstances, this evidence becomes to me very strong.

I request my reader to think upon the *Culidei* or *Culdees* in the crypt of the Cathedral at York and at Ripon, and in Scotland, and in Ireland,—that these *Culdees* or *Chaldeans* were Masons, *Mathematici*, builders of the temple of Abraham's tribe, the temple of Solomon; and, that the country where Mr. Ellis found access to the temple in South India was called *Colida* and *Uria*; that the religion of Abraham's descendants was that of *Ras*; that Masonry in that country is called *Raj* or *Mystery*; that we have also found the *Colida*, and most other of these matters on the *Jumna* a thousand miles distant in North India,—and when he has considered all these

¹ Lib. i.² Vall. Coll. Hib. IV. Pt. i. p. 197.³ Ib. p. 221.

matters, as it is clear that one must have borrowed from the other, let him determine the question. Did York and Scotland borrow from the Jumna and Carnatic, or the Jumna and Carnatic from them? In India, there were two kingdoms of Pandæa, one in North India and one in the Carnatic, in each of which all these matters, *in both nearly the same*, are found.

I think I may venture to assume, that I have connected the Masons, the Templars, and the Ishmaelians, and I beg leave to observe that, by means of the red eight-point cross, I connect the Templars also with the Manichæans and the Buddhists of India.

The extraordinary similitude, indeed the actual identity, of the religions of Rome and Tibet, have been constant subjects of wonder and admiration to all inquirers, and have defied all attempts at explanation. But I think my reader must now see that they were actually the same religions, only with such variation as length of time and distance might well be expected to have produced. They had the same trinity, the same incarnation of the divine wisdom, the same crucifixion and resurrection, and nearly all the same rites and ceremonies—the same monks, the same vows, the same tonsure, the same monasteries. And in my next book, if I do not shew that EVERY ONE of the remaining doctrines, rites, and ceremonies of the Romish Christians were identical with those of Tibet, I shall shew that they were identical with those of the Gentiles, I believe without one exception. The truth is, that the religion of the *Ras*, of *Buddha*, of *Metis*, of *Sophia*, of the *Xp̄istos*, of *Bafomet*, of *Acamoth* or the *Intelligence Universelle*, extended over the whole world, and was the universal esoteric, ancient and modern religion;—the religion of Tibet, of Sion or Siam, of the Monks of the lake of Paremboli, (Embolima of India,) of Dodona or Bodona, of Eleusis, of Ephesus, of Delphi, of Virgil, of the Gnostics, of the Manichæans, and of the Pope—for which reason he very properly calls himself a CATHOLIC, and his religion Catholic or Pantheistic, and his followers Catholics or Pandeas, or Saints of Pan-ism or Catholicism.

I beg to repeat to such of my readers as are Royal-Arch Masons, that Solomon was a Ras or wise man, and that a Mason in Rajapoutana is called a Raz, which also means mystery; and now I take the liberty of observing to my brethren, that they are called ROYAL-ARCH MASONs, not because they have any thing to do with kings, but because they are *Raja-pout-an* Masons, as the persons who conquered Egypt were *Royal* Shepherds or Shepherd Kings, or *Raja-pout-an* Shepherds, from *Pallitana*. Pout is Buddha, who is Αρχη , who is Ras.

2. If my reader recollect that the Queen of Sheba came from Ethiopia, and that the African Ethiopians, the Royal Family at least, pretend to be the descendants of Solomon and this Queen, whose name was Helena, he will not be surprised to find the King of the Ethiopians taking the name of that virtue for which this prince was in a particular manner celebrated—*Wisdom*. Thus he is called, not the *king* but the RAS of Abyssinia. Why was Solomon so celebrated for this virtue? It was no doubt from being the protector, or perhaps the renovator, of the doctrine of the emanation of the *Rasit*. He removed the seat of the Western doctrine of Wisdom, from the stone circle on Gerizim to Moriah or the Western Sion, for which he has been cursed by the Samaritans, and blessed by his followers, who in consequence assumed the name of the whole tribe exclusively to themselves, that is, Juda-ites, or Yadu-ites, or Jews, sinking the other ten tribes into Schismatics. It will be said, perhaps, that the monarch of Abyssinia was called Ras, because he was the head or the first of the country. This would be fair reasoning if we had not the word explained by the other names of this personage—Johannes, and Butta, and Deus—all which we have seen, or shall presently see, mean *wise*.

Speaking of the Abyssinian Christians Scaliger¹ says, “Ipsi vocant se Chaldæos, neque

¹ De Emend. Temp. p. 333.

“frustra : lingua Chaldaica etiam temporibus Justiniani eos usos fuisse.”¹ Of course, if all the people spoke the Chaldee the Christians would do so likewise, as they do in Tamul.

Sir William Drummond, in his essay on a Punic Inscription,² has proved the Geez to be nothing but Hebrew. Sheba's son by Solomon was called *Ibn Hakim*. This clearly is nothing but *הבן חכם* *e-bn-hkm*, *the son of Wisdom*. And it gives us a probable meaning for the word Solomon. Zeradusht was called Hakim.³ Mr. Hammer says,⁴ “Videntur illic pro lapidibus “angularibus ac clavibus concamerationis figuræ obscenissimæ, omnes ad Genesim seu Gnosim “ophiticam pertinentes :” and in a note he adds, “Hæc est sapientia divina, de quâ in scripturis “toties mentio occurrit et quam Eusebius, secundum Hebræorum, principium nominat.⁵ *Ego* “*sapientia* habitans in consilio.⁶ Quid autem *sapientia* et quomodo genita est ?⁷ Unde autem “*sententia* inventa est ?”⁸ Again, he adds, “Hanc sapientiam, quam Hebræi Deo in creando “ac ordinando mundo, ut principium adsociaverant, Gnostici in systema suum adoptaverunt. Sic “Theodotus.”

In the valley of Cashmere, on a hill close to the lake, are the ruins of a temple of Solomon. The history states that Solomon finding the valley all covered with water except this hill, which was an island, opened the passage in the mountains and let most of it out, thus giving to Cashmere its beautiful plains.⁹ The temple which is built on the hill is called Tucht Suliman. Afterward Forster¹⁰ says, “Previously to the Mahometan conquest of India, Kashmere was celebrated for “the learning of its Brahmins and the magnificent construction of its temple.” Now what am I to make of this ? Were these Brahmins Jews, or the Jews Brahmins ? The inadvertent way in which Forster states the fact precludes all idea of deceit.

Mr. Wilson says, it is probable that the Tartars or Scythians once governed Cashmir, and that they first gave the sanction of authority to their national religion, or that of Buddha, in India.¹¹

The Tuct Soliman of Cashmere in the time of Bernier,¹² was described by him to be in ruins, and to have been a temple of the idolaters and not of the Mohamedans. The Mohamedans reported that it was built by Solomon, in very ancient times. All this at once does away with any pretence that it was a building of the modern Mohamedans ; and is a strong confirmation of the Jewish nature of the other names of towns—Yude-poor, Jod-pore, &c., &c. Bernier goes on to say,¹³ that the natives of Cashmere had the appearance of Jews so strongly as to be remarked by every one who saw them ; that the name of Mousa or Moses is common among the natives ; that Moses died at Cashmere, and they yet shew the ruins of his tomb near the town. This is curious when connected with the fact, that the Jews of Western Syria say, no one ever knew where he was buried.

On the frontiers of China is a place greatly resorted to by pilgrims, called the *Stone Tower*, but of what religion does not appear. It is in a narrow pass called *Belur-tag*, not far from where the Gihon and Yerghien approach each other. The pass is ascended from the North West : and on the left side of the road, the face of the mountain, a massy rock is hewn into a regular form, with two rows of twenty columns each ; hence it is called the tower of the forty columns or *Chasotun*,¹⁴

and is said to be a work of the Jews. But it is more generally called the *Tuct Soliman* or Throne of Solomon.¹ Here we carry this religion over the Cashmerian mountains to Tartary.² Many persons will have no doubt that all the Tuct Solimans were copied from the building in Western Syria. I cannot content myself with this supposition, though others may.

I suppose my reader will have observed that, besides what I call our temple of Solomon, there were many others. One for instance in Mewar, one in Cashmere, one on the frontiers of China, and one in Asia Minor, at Telmessus. And it would be no difficult matter to shew, from circumstances, that there must have been several others, for a Tuct-Solomon could be no other than a temple or house of Solomon. I suspect that the great kingdom of Solomon in Western Syria, whose monarch filled the whole world with the fame of his glory and wisdom, was only a part of the Judean mythos. I do not mean that there was no temple, but that the history was accommodated to the mythos, as was the early part of the history of Rome to its mythos, and indeed to the same mythos. I apprehend that the temple was a type of the universe, and that all the temples were the same; all parts of the one universal mythos which extended, as is evident, from the same sacred names of places being found every where, to the farthest points of the globe.

I have a strong suspicion, but I name it as a suspicion only, that the fourteen Maha-bads of Persia, on which Sir W. Jones founds his Mahabadian dynasty, merely meant towns of the great Buddha; that the fourteen Solumi, said to have existed before the flood, were the same fourteen Buddhas or incarnations of Wisdom; that the same towns are meant; that there was a temple of Solomon at each of them, and that they are fourteen certain places where we find the local mythos visible from their names. I entertain a persuasion that the Solomonian mythos, which we have found in China, in Cashmere, in Oude, in Persia, in Asia Minor, and in Matura of the Carnatic, as described by Bouchet, in the temple of the Brahmins, with its passage of the sea, &c., &c., were all the same with that in Western Syria; that they all had at the bottom the same recorded transactions; and that this was part of the secret Jewish religion. Look back to Book X. Chap. V. Sect. 5, to what Bouchet has said of the Moses, &c., at Madura, in the Carnatic.

If I can prove only one of the Indian towns or temples having Jewish names to have existed before the time of Mohamed, it is enough, under all the peculiar circumstances, to prove my case, viz. that it is probable that the Jewish names of the other places *may* have been given before his time. It opens the door to an inquiry into the probability of each particular case; and I am quite certain in nine cases out of ten the probability will amount to certainty. The temple in ruins in Cashmere is a most complete example of what I allude to: and, in fact, the city of Oude, or Ayodia, or Iuda, is another: for no one will contend that Oude has been either built or named since the time of Mohamed.

3. I know the following question, previously alluded to, will not be answered, but will be treated with contempt and ridicule; but nevertheless I must propose it—Where is the empire of Solomon the Magnificent first read of in the works of the Gentiles? It is not noticed by Herodotus, Plato, or Diodorus Siculus. It is a most extraordinary fact, that the Jewish nation, over whom but a few years before the mighty Solomon had reigned in all his glory, with a magnificence scarcely equalled by the greatest monarchs, spending eight thousand millions on a temple, was overlooked by the historian Herodotus, writing of Egypt on one side, and of Babylon on the other,—visiting both places, and of course almost necessarily passing within a few miles of the splendid capital of the nation, Jerusalem. How can this be accounted for? A few generations after the reign of the mighty Solomon, the nation was conquered by the Babylonians, and its

¹ Cab. Cyclop. Vol. I. p. 118.

² The sovereign of which was called *Prestre John*.

chief persons carried into captivity. Before this time we have books which purport to be a history, but it is remarkable that they are found to contain incidents belonging to a very old nation spread over all India, over immense countries, and accompanied with temples, statues, towns, and mountains, with the Jewish names, and evidently of the same mythos. The dates of the statues, towns, names of mountains, &c., here noticed, are so remote that they are totally unknown to the present inhabitants, and even to their history or traditions, though they pretend to have regular histories to times long anterior to the time of the Western Solomon. The towns, names of mountains, temples, colossal statues, &c., clearly prove, that whenever they were fabricated the people who erected them must have been masters of the country. Can any one believe that all these things can have arisen from a few captive Jews or Samaritans from the country and state, so small as to be overlooked by Herodotus, and that they, so late as less than 1200 years before Christ, can have possessed those places in India unknown to the native historians of the countries who wrote perfect, regular histories of them, supported and confirmed by astronomical observations?

In reply to this, I am asked, Why Homer or Moses never names the Pyramids? The cases are totally dissimilar. But I suppose they did not name them for the same reasons that the Roman historians never named Stonehenge, Abury, or Carnac—each of the two latter equal to the greatest Pyramid,—and for the same reasons that our early English historians never named Abury. If these monuments had possessed inscriptions, which conveyed historical information, they would probably have been named. If the historians had been in search of antiquarian curiosities, the case would have been different; but they were in search both of ancient and modern empires, and it is totally incredible that the nation of Solomon could have been overlooked, if its history, as told in the Bible, be true. Herodotus might overlook an obscure little mountain, or vassal tribe of Babylon, though possessing even a large temple, but this is all which can be admitted; and this proves that the object of a chief part of the Bible was not *history* but a *mythos*, as the Bishop and Romish Apostolic Vicar Dr. Geddes properly called it, like the early history of Rome and Troy.

Almost as unaccountable as the ignorance of the inquisitive Herodotus, is the slight knowledge or comparative ignorance of Alexander the Great. So unsatisfactory to Josephus was Alexander's neglect of this formidable fortress and sumptuous temple,—by far the richest which ever existed in the world, that he felt it expedient to forge a story to fill up the chasm or blank, and in his work it may be found. I shall not enter into the subject: the falsity of Josephus has been satisfactorily proved by Mr. J. Moyle, of Southampton, in his correspondence with Dean Prideaux, and I have no need to add to the proof. Mr. Moyle has shewn that Alexander was never at Jerusalem. I have seen the ignorance of the Grecian historians of the Jewish nation accounted for by the pretence, that they despised the Jews too much to notice them. The reason is ridiculous and childish, not worthy of a moment's consideration. If the Greeks knew any thing of them, it is probable that they knew no more of them than the name, or than they knew of any other obscure mountain tribe. If I were to write a history of Britain it is probable that I should never name the town and church of Bangor: and yet I should not despise them. For a similar reason Herodotus never named the temple or empire of Solomon.

All these circumstances combined give the lie to the glories of David and Solomon, and reduce the whole to the history of a petty mountain tribe possessing a rich temple, similar to those which were to be seen at Heliopolis, that is, Tadmor, and many other places. The whole thing amounts to this; that there was in the mountains of Syria a tribe divided, like the Ionians of Asia Minor, into twelve municipalities; that they quarrelled about their superstition, and in consequence separated; that it was a tribe which came in very early times from India; that it

was, until it settled and conquered Judea, exactly like the present Afghan tribes ; indeed, there is the greatest reason in the world to believe, that it was one of them, probably a strong tribe ; that its sacred books are a mere mythos, exactly like the Mahabarat or other sacred books of the Brahmins,—the foundation of it being the same mythos as theirs, accommodated by its priests to its own peculiar history and local circumstances. And this was most likely the case of the secret books of every great temple or cathedral as it might be called,—which was, in fact, the archiepiscopal see of each arrondissement. The Jews, of whom we read at Alexandria and other places, were probably partly from Judæa and partly from the other settlements of the tribe of Yudi, wherever they might happen to be—Telmessus, Upper Egypt, Heliopolis, or other places where the Tecte Solumi prove that they were settled. No doubt the Christian sectaries of the Judæan mythos, have done all they could to destroy written evidence of the truth ; but the temples of Solomon, the names of places in North India, in South India, in Siam, Ceylon, China, &c., prove the existence and the great dissemination of the mythos, which was, in fact, the basis on which was erected the Pandæan kingdom, and *that* was a Sacerdotal kingdom. That the tribe of Juda did exist almost all over the world cannot possibly be denied : the city of Judia in Siam, the mythos at Cape Comorin, the temple of Solomon in Cashmere, the Montes Solumi in Mewar, the great city of Oude or Juda, are facts which prove it, and admit of no dispute.

4. I must now call my reader's attention to another fact of very great importance. We have heard much about Daniel and the Chaldeans of Babylon, and about the rendering of the law of Moses by Ezra or Esdras into the Chaldee language, at the gate of the temple, after the captivity. But there is another book extant, said to be written by Esdras, which declares that the book of the law was burnt, and that it was rewritten by him under the influence of divine inspiration. This, for very obvious reasons, is now denied to be of divine authority, by the united sect of Jews and Christians—for in this case they must be considered one. But it seems to stand upon as good ground as the other books, and in some respects upon better. But this observation is rather from my argument, though it strikes a blow at the credibility of the fact of the explanation of the law at the gate of the temple : for how could Ezra explain the law, if it were burnt ? unless, indeed, it were the *new* law revealed to Esdras.

The fact to which I have to draw my reader's attention, and from which I have digressed, is this, that though we are told that the Jews brought the Chaldee language and letters back with them from Babylon, yet that among *the great numbers of inscriptions* of different kinds found in the ruins of that city, one in the Chaldee letter and language has never been found. This seems clearly to prove, that if the Chaldean language and letter were the language and letter of Daniel and the magi or astrologers with whom he is classed in the Bible, they were not the letter and language of the Assyrians. The letter must have been a secret of the Jewish priests, and their language, their sacred language at least, probably different from that of Assyria. This all tends to prove the tribe of Abraham a distinct tribe from India, of comparatively-speaking recent date.

On the most mature consideration I have come to the opinion, and it is very important, that the similarity between the Chaldaic, or Hebrew, and the other languages noticed by Sir W. Jones, is the nearest approximation to identity which can be expected, and indeed more than could be expected, or would have been found, if the copy of the Pentateuch in the Jewish temple had not arrested the Hebrew Chaldee in its progress of change. Under these circumstances it is evidently incredible, that the *original* from which all these languages sprung can now exist. It is pretty clear that the mythos of Moses has existed from very old time. This, I think, the numbers of temples, houses, or mounts, (all the same,) of Solymi prove. And this is confirmed by the Sibyls, each of whom refers to this mythos, though the variation among them is so great as to shew that they cannot have copied from one another. If we go to the African Ethiopians we

find, in the descent from Solomon, in the Ioannes, Butta, Deus, and the use of the Chaldee language, remains of the same mythos. We find the same both in North and South India. When I consider the little, obscure, mountain tribe of Jews in Western Syria, and I again contemplate the Judæa in the mighty cities of Agra, Oude, Mundore, &c., I cannot doubt that North India must have been the birth-place of the mythos; and the mistake of all these people in supposing themselves descended from the Jews of the little tribe of Western Syria, is easily accounted for; it is the natural effect of the loss by them of their real history, and of the stories told them by proselyting Christians, that they must have come from Western Syria. To these causes of mistake may be added the account of these people retailed and misrepresented to us by the same Christians, who, from prejudice, overlook important facts, (such, for instance, as that of the existence of an old temple of Solomon in Cashmere,) and who misrepresent others to make them suitable to their own superstitions and creeds. Thus, to believe them, all the Jews or Youdi, scattered in ancient times over the world, and forming great nations, were part of the mountain tribe of Western Syria, which Herodotus did not observe, or, in his search for nations, discover; the capital of which, with its temple, would not now have been in existence, had it not been preserved by Helena and the Christians.

To return to the assertion I have so often made, that the Hebrew is the first language. This assertion I must now qualify, in order to answer a question which will be asked, viz. What I mean by the first language. It is very clear that the Hebrew, when a spoken language, must have changed like all other languages, and must have undergone this change when it advanced from *sixteen* to *twenty-two* letters, and this change must have been very considerable. We have formerly seen, from the works of various learned men, that the Afghan language, called Pushto, is very similar to the Chaldee. We have seen the same Pushto very similar to the Tamul. We have seen that the Tamul is very similar to or identical with the Aramean Syriac or Pushto of Western Syria, and that this, which is the dialect of the time of Jesus Christ, is but a dialect of the Chaldee or Hebrew in which the Synagogue Pentateuch is written. All these similarities are as near identities as can be expected, and the fact of the same original sixteen letters in all, proves their original identity. Supposing them all in the sixteen-letter state, they must necessarily all have diverged from it, and the similarity discovered by different learned men is as much as can be expected, and more than would have been ever discovered, had not the common mythos operated in a direction contrary to the tendency to change—the natural effect of time—united to the circumstance of the recluse Pentateuch in the Jewish temple having been fortuitously preserved. In fact, all the written languages are but dialects of a sixteen-letter language, as Mr. Gilchrist has judiciously observed. The language which Sir William Jones and others call Chaldee can be nothing, in fact, but the Arabic, before the change in the letter and the addition to it of points, by one of the Caliphs, took place. It is, in reality, the language of the book of Job.

After much consideration I am induced to believe, that the Sanscrit has been a language artificially formed, by the caste of priests, upon the old language of the country, and, at first, as found in the earliest Veda, in a more rude state than it afterwards arrived at; and that, as long as the Brahmins were in power and prosperity, it kept improving, till it arrived at its present perfection. As they kept copying their Vedas they kept improving the language of them, exactly as we do with our Bibles. We all along keep correcting the antiquated mode of spelling and expression, though keeping to the sense.

I think, judging from all history and from all circumstances, there can be no doubt that the farther back we go, the more nearly all the ancient languages, which had the Cadmean system of letters, will be found to assimilate; on the contrary, the more we advance to our own times, the more they will diverge from their original root. In our endeavours to discover the meanings of

the old languages, this consideration will be found of the greatest importance. It accounts very satisfactorily for the great number of old Hebrew words which we find in almost all the Western languages. But how are we to account for the Sanscrit, which we also find in them? I can suggest no rational theory except that which I have before stated,—that the Sanscrit must have come to the West before it increased its sixteen to fifty-two letters, and that, in fact, it was also Hebrew or Saxon, or a dialect of Hebrew, before it was improved. I still feel that this is scarcely sufficient to account for the closeness or the similarity of the Sanscrit to the improved forms of the Latin and Greek.

I confess that sometimes I cannot help suspecting, that the opinions of Dugald Stewart and Professor Dunbar are well founded, and that the Sanscrit was formed on the Greek and Latin, after the irruption of Alexander into India. It seems to me that our Sanscrit scholars are opposed to this, chiefly, because it seems to compromise the antiquity of the Indian learning: but this is, I think, a hasty conclusion; for their learning both in astronomy and in every other branch may have existed in the Tamul or other language long before the time of Alexander, and all their works may have been very readily translated into the Sanscrit. In the sixteen-letter Tamul we have a refined language of learning and of learned men, and in the Kaliwakam¹ we have a work which will not disgrace any learned Brahmin.

The following is an extract from the Kaliwakam.

THE KALIWAKIM OF AYVAR.

The zealous study of sciences brings increasing happiness and honour.
 From the fifth year of age learning must begin.
 The more we learn the more understanding we get.
 Spare no expense to learn reading and writing.
 Of all treasures reading and writing are the most valuable.
 Learning is really the most durable treasure.
 An ignorant man ought to remain dumb.
 He who is ignorant of reading and writing is indeed very poor.
 Though thou shouldst be very poor learn at least something.
 Of each matter endeavour to get a clear knowledge.
 The true end of knowledge is to distinguish good and bad.
 He who has learned nothing is a confused prattler.
 The five syllables Na-ma-si-va-yah² contain a great mystery.
 He who is without knowledge is like a blind man.
 Cyphering must be learned in youth.
 Be not the cause of shame to thy relations.
 Fly from all that is low.
 One accomplished philosopher is hardly to be met with among thousands.
 A wise man will never cease to learn.
 If all should be lost, what we have learned will not be lost.
 He who loves instruction will never perish.
 A wise man is like a supporting hand.
 He who has attained learning by free self-application excels other philosophers.
 Continue always in learning, though thou should do it at a great expense.
 Enjoy always the company of wise men.
 He who has learned most is most worthy of honour.
 What we have learned in youth is like a writing cut in stone.

¹ Kali-Hakim, Kali-akim, Kali-ow-akim; evidently the *wisdom of Cali* or *Kali*.

² This is the Roman Nama Sebadia, often found on the Mithraic monuments in Italy. I think this cannot be doubted; and it connects the Italian and Indian mythoses together beautifully.

False speaking causes infinite quarrels.
 He who studies sophistry and deceit, turns out a wicked man.
 Science is an ornament wherever we come.
 He who converses with the wicked perishes with them.
 Honour a moral master.
 He who knoweth himself, is the wisest.
 What thou hast learned teach also to others.
 If one knows what sin is, he becomes wise.
 Well-principled wise men approach the perfection of the Divinity.
 Begin thy learning in the name of the DIVINE SON. (Pulleyar.)
 Endeavour to be respected among men of learning.
 All perishes except learning.
 Though one is of low birth, learning will make him respected.
 Religious wise men enjoy great happiness.
 Wisdom is firm-grounded, even on the great ocean.
 Without wisdom there is no ground to stand on.
 Learning becomes old age.
 Wise men will never offend any by speaking.
 Behave politely to men of learning.
 The unwise only flatter others.
 Wisdom is the greatest treasure on earth.
 The wiser, the more respected.
 Learning gives great fame.
 Wise men are as good as kings.
 Do not deceive even thine own enemy.
 In whom is much science, in him is great value.
 He that knows the sciences of the ancients, is the greatest philosopher.
 Truth is in learning the best.
 Wise men are exalted above all others.
 In proportion as one increases in learning he ought to increase in virtue.
 The most prosperous good is the increase in learning.
 Wisdom is a treasure valued everywhere.
 The Veda teaches wisdom.
 Speak and write for the public good.
 If knowledge has a proper influence on the mind it makes us virtuous.¹

The very important circumstances, noticed in Chap. VII. Sect. 9, that the same mythos of Pisces is found in the same names, Camasenes in South India, the Tamul country, and in South Italy, PROVES, I repeat PROVES, a very intimate connexion between the two countries of which we have not a hint in any Greek or Roman historian, (and the Nama Sebadia confirms it,) even later than the time of Alexander, because it must have been after the sun entered Pisces at the vernal equinox, which took place 360 years before Christ. This connexion can have been no slight or casual acquaintance of the two countries which could establish the same new system (as to the populace it would appear to be) of religion in one of them. It may be observed also, that this system was not established by Sanscrit speakers, but by the Tamul or one of the broken, that is, the old dialects of India. The names Comarin, Coromandel, &c., are all common names used by the people, and if they be found in the Sanscrit this is what might be expected. It is absurd to suppose the Brahmins would not write the old names in the Sanscrit letter. Whoever they were that brought the Indian names of the Fishes to Italy, they at the same time probably brought the art of building, and the beautiful designs of the temples at Pæstum—which are, in fact, almost copies of some of those in Col. Tod's book—and which are proved to be the same as the Indian

¹ Asiat. Transactions, Vol. VII. p. 357.

also, by the Ling Ioni's, found in the ruins by Col. Tod, and particularly in the hand of Ceres, the Goddess of the temple.

Once more I repeat, that I know I shall have great difficulty in convincing Sanscrit scholars that their language is comparatively modern : but its close analogy to the Greek and Latin cannot be denied, and I feel quite satisfied that they can never refute the argument drawn from the smallness of the number of the Greek and Latin letters. If the Greek and Latin had come from the Sanscrit in its present form, they must have had *fifty-two* letters instead of *sixteen*. I have PROVED in my Celtic Druids, that at the time when the colonies came from the Indus, they each had sixteen letters only, and the same sixteen. In this alphabet the names of the Indian Gods are found, and the names of places and Gods in Greece and Italy,—Saturnia, Pallatini, &c., &c., and, in the names of the Indian Gods, the names of the God of the Hebrews, and of Syria—Jah, Adoni, Taurus, &c.

When the Chaldean tribe of Yuda, or tribe of Crestons, with its Kan-ya, or $\chi\rho\eta\sigma\epsilon\nu$, or IE, or Cristna, came, under its Brahmin, from Uri-ana of Colida or Chaldea to Creston and Sindus of Thrace, (bringing its custom of sacrificing widows,) and Creston or Corton of Italy, and mount Meru, or Sion, or Solyma of Syria, and the other Solymas, about 2500 or 3000 years before Christ, it brought the sixteen letters of Cadmus or the East with it; perhaps the sixteen letters of the Tamul. Its mythos of Meru, and its Arga, and its cycles of returning Saviours, Buddhas, or Cristnas, put to death and raised from the dead, &c., &c., were renewed and located under every distinct, independently-formed government. Thus we find traces of these things with the cyclar temples of Stonehenge, &c., &c., every where. Every nation had its Meru, Moriah, &c., &c. And the tribe of Jews, where it differs from the others, differs in consequence of having had a great iconoclastic leader to legislate for it, in a particular manner, different from the others.

A very learned oriental friend maintains, that the languages of the Chinese and other Eastern countries, and of the Polynesian islands, have all the most complicated and artificial forms that we meet with in the Sanscrit and Western languages; and thence he would infer, that they are primeval or anterior to the latter, and that the Hebrew, on account of its rudeness, is what he calls a broken-down language from the others. The contrary, I contend, is the fact in the case of the Hebrew, because in its case we take it in the temple copy, from which it may be said not to have deviated for thousands of years. We catch it in its infancy, and in consequence of the curses denounced against any alteration of the law written in its dialect, it has been kept in its infant state all the days of its life. Many passages may formerly have been corrupted to serve the purposes of priests, but generally the language would not be changed. In corrupting passages the old style would be studiously affected. The younger a written language is, the more simple it will be, and it will acquire complication and refinement as it acquires age. What can be more rude than the synagogue Hebrew? What more refined and artificial than the pointed modern Hebrew of the Mazorites? The language of the barbarians of the Polynesian islands is complicated, because its possessors have arisen from the overflowings of the civilized states, and they took with them, when they migrated, all the complicated forms in use in the country which they left.

The important fact which I gleaned from the learned and ingenious Mr. Landseer, almost the whole of whose life has been spent in the study of Assyrian antiquities, that among all the numerous inscriptions of Babylon nothing like a Chaldaic inscription was ever found, is decisive proof that the Chaldee was not the dialect of the Assyrians, nor is it the dialect of the present natives of that country; but it is the dialect of several tribes in the country of the Brahmin Uria of Colida, both of that near Ayoudya or Oude, and that at Salem, Adoni, St. Thomé, Uria (in Orissa) in Colida, near Cochin. Sir William Jones found Chaldean inscriptions in Persia, as we

should expect. See his Sixth Discourse. The conveyance of the Chaldee language to the Afghans and the Brahmins of Madura by Nestorians of Germany is absurd enough.

Dr. Hagar believes he has traced the nail-headed characters to the Indian. Now if this be true, the Samaritan must have come from India to Melchizedek before the time of Abraham; and when Ezra changed this character into the Chaldee letter of Daniel, or of the then Chaldees, a great change must have taken place in the letter between the time of Abraham and that of Daniel, a space of a thousand years. Daniel appears to have been not a Western Syrian Jew, but a Persian Chaldean of the Jewish religion. We may be certain that the Chaldei of Persia, (i. e. Cyrus,) of Assyria, and of Judea, were all the same. In Book IX. Chap. I. Sect. 11, I have given an observation of Dr. Murray's, that ocular inspection proves the identity of the Chaldean and Sanscrit letters; then the Samaritan must have been the first letter of the Chaldeans, brought by Abraham before the Sanscrit was perfected, and the Chaldean letter, the letter of Daniel, after it.

It will be difficult to persuade many persons to agree with me that the Chaldee of Daniel was not the letter or language of Babylon; (except merely as the *sacred* and probably *secret letters* of the Chaldee order of Daniel;) but they must answer the questions, Why are there no Chaldean inscriptions in the ruins of Babylon, whilst there are such numbers of inscriptions in the arrow-headed characters? I think Dr. O'Connor says very truly,¹ that the Chaldee had a common original with the Phœnician, and that the Chaldee was the letter and language of Abraham. I think the Chaldee was the peculiar and probably secret letter of the Chaldeans till the time of Ezra. The Jewish tribe were correctly Chaldeans till changed to a new system by Moses. Abraham brought it to Egypt, the Egyptians taught it and its mysteries to Moses. Mr. Bosworth and Dr. O'Connor both prove the Gothic and Northern letters and language to be, in fact, the same as the Phœnician or Hebrew. Then, if the Saxon came from the Hebrew, of course when it came to Britain it would bring an increase of Hebrew words, and justify the derivation of many modern English words either from the Hebrew or the Saxon, or the Sacæ of India. (Buddha was called Saca-sa, that is, Saca-isa, the Saviour or Isis Buddha—the DIVINE SON just named in the Kaliwakim—the NAMA SEBADIA of Italy.) Every thing tends to draw us to North India, the country of the Pushto.

I entertain a strong suspicion that the Chaldee language and the letter of the Chaldees were the higher dialect of the Tamul, and that the Syro-Chaldee of Western Syria, called Pushto, and before noticed as a language both in Western Syria and Tibet or North India, was the lower Tamul language, and the spoken language of the tribe of Judæi both in Eastern and Western Syria.

5. I shall now proceed to make some observations on the *sacred numbers* of the ancients, which will not only confirm what has been said in several instances, but be of service in our future researches.

Before I make any observations on the sacred numbers of the *Jews*, I must observe, that *generally* where *seventy* are named, *seventy-two* are meant. This is most important—for, without it, we shall lose half the proofs of the mythos. The truth of this observation will presently be sufficiently clear. This is no new discovery of mine. Mr. Astle² says, “The ancients frequently expressed sums by even numbers, adding what was deficient to complete them, or omitting whatever might be redundant. This mode of reckoning is often used in sacred writings, and was thence introduced into other monuments.”

Bishop Walton, in his treatise on Hebraisms,³ says, “The Hebrews are accustomed to use round numbers, and neglect the two or three units which exceed them in certain cases. They say, for example, the Seventy Interpreters, and the Council of Seventy, although the number in

¹ Bosworth's Saxon Grammar.

² On Writing, p. 185.

³ Sect. xiii.

“ each case was seventy-two ; and in the book of Judges we read, that Abimelech killed seventy
“ of the children of Jerobaal, although he had but sixty-eight.”

Every one has heard of the famous Septuagint, usually written LXX ; but the story is, that the translation was made by seventy-two men, six out of each tribe, though it is called *the Seventy* ; that to these men seventy-two questions were put, and they finished their work in seventy-two days.

Peter Comestor, and Vincent of Beauvais, make seventy-two generations or nations from the three sons of Noah. According to the recognitions of Clemens¹ the earth was divided into seventy-two² parts, the number of countries specified in Genesis. This required no small ingenuity ; and mankind was divided into seventy-two families : but the same author, in the Homilies, calls them seventy tongues and seventy nations. Here is an example of seventy put for seventy-two.³ The number of nations was generally stated to be seventy-two by the Greek fathers.⁴ On the confusion of tongues, Shuckford says, “ From all these considerations, “ therefore, I cannot but imagine the common opinion about the dispersion of mankind to be a “ very wrong one. The confusion of tongues arose at first from small beginnings, increased “ gradually, and in time grew to such a height as to scatter mankind over the face of the earth.”⁵ Again he says, “ but the text does not oblige us to think it so sudden a production.”⁶ By a long train of argument he endeavours to support his opinion. The fathers make the languages seventy-two, by adding Cainan and Elishah, according to the LXX, who are not mentioned in the Hebrew. This is thought to be supported by Deut. xxxii. 8. The text says, the Most High set the bounds of the people according to the number of the tribes of Israel—that is, seventy-two, the number which went down into Egypt. This is confirmed by the Targum of Ben-Uzziel. Horapollo teaches that the world was divided into seventy-two regions.⁷ Clemens Alexandrinus and Epiphanius both say, that there were seventy-two tongues at the dispersion.⁸ Josephus and the fathers of the church fix the languages at the confusion to seventy-two.⁹

Enfield¹⁰ says, “ The Jews had seventy-two names of God.”

The Rabbis maintain that the angels who ascended and descended Jacob’s ladder were seventy-two in number.¹¹

Lightfoot, on the Temple Service,¹² states the dress of Aaron to have had upon it seventy-two bells.¹³ This conveys with it the consequence that it must have had seventy-two pomegranates.

If Bishop Wilkins can be depended on, there were seventy-two kinds of animals in the Ark.¹⁴

In Numbers xi. 16, it is said, that Moses was ordered to take seventy men of the elders of Israel. But the number was seventy-two, six out of each tribe.

The Cabalists find seventy-two names of God in three verses—the 19, 20, and 21, of the fourteenth chapter of Exodus.¹⁵

In Numbers xxiii. 9, Exod. xv. 27, we read of seventy palm trees. Of course the number ought to be seventy-two.

In the book of Enoch is an allegory, in which seventy shepherds are said to superintend the

¹ Lib. ii. Cap. xlii.

² If we count the countries we shall find seventy-two.

flock, and the seventy are divided into three classes, 37, 23, and 12; but these make seventy-two. Here is an example of the common Jewish expression of seventy for seventy-two, which cannot be disputed, except the reader be disposed, with Bishop Laurence, to throw out *two* of the kings, because they reigned only short periods; and, in addition, to have recourse to confounding the number of the shepherds with the periods of time;¹ in short, to corrupting the text in two different ways. From the account which the Jews of Cochin gave to Dr. Buchanan,² he infers that they were governed by a council of seventy-two persons. This is evidently meant for an imitation of the Sanhedrim of the Jews of Judea: and strongly confirms what I have said that by *seventy*, almost always *seventy-two* are meant.

Jesus is said to have sent out seventy disciples or teachers. Now it has been universally allowed that Manes, in fixing the number of his apostles, and of his disciples or bishops, intended exactly to imitate Jesus Christ; and living so near the time of Jesus, the tradition could not very well be mistaken, and there could be no reason whatever for any misrepresentation, and he fixed upon the numbers *twelve* and *seventy-two*, not *seventy*. This shews that probably the expression in Matthew must be considered the same as *the Septuagint*—seventy for seventy-two. If Manes had had any reason for doubt he would certainly have taken the seventy and not seventy-two.

These sacred numbers, every where the same, clearly prove an esoteric religion—an oriental allegory. The fact cannot be doubted. Jesus, the God of Peace, sent out his twelve apostles to preach his gospel. The God *Iao*, the Sun, had the year divided into twelve months, into twelve signs, through which, in his annual course, he passed. The year was divided by the ancient Magi into two hemispheres of light and darkness, of six months each; during one period, the genius of good or of light prevailed, during the other, the genius of darkness or evil. Each month or part was divided into twelve parts, and this multiplied by six, gives seventy-two, the number of disciples sent out by Jesus. This number is the root of almost all the ancient cycles or periods of the Chinese, Hindoos, Egyptians, Magi, &c.; multiplied by six, it gives 432, &c. See Drummond. This relates to the microcosm to be discussed in the next volume.

The Mohamedans hold that the world was divided into seventy-two nations and seventy-two languages, and that there were seventy-two sects in their religion. I believe this related to their esoteric religion, in which they considered Mohamed as the tenth Avatar of the whole world, and I have no doubt that what is above called a *sect* ought to be *divisions*, into which the Pantheistic or Mohamedan Catholic faith was divided.

Nimrod says, “We have shewn who Georgos, God of war, was, and that he died at the royal city of Diospolis in Iran, where a king reigned over seventy kings; this is the number of nations who constituted the universal empire of Cush.” Again, “Then did Isis go forth wandering. One Aso, Queen of the Cushim, was his accomplice, *συνεργος*, in this business; but besides her, there were seventy-two confederates, leagued by oath, *συνωμοται*.”³

The mystical numbers used in the religions of the sun, are constantly found in the religion of Jesus. The number of the twelve apostles, which formed the retinue of Jesus during his mission, is that of the signs, and of the secondary genii, the tutelar gods of the Zodiacal signs which the sun passes through in his annual revolution. It is that of the twelve gods of the Romans, each of whom presided over a month. The Greeks, the Egyptians, the Persians, each had their *twelve* gods, as the Christian followers of Mithra had their *twelve* apostles. The chief of the twelve Genii of the annual revolution had the barque and the keys of time, the same as the chief of the secondary

¹ See Laurence's Enoch, Pref. and Ch. lxxxix. vers. 1, 7, 25.

² Christ. Res. p. 222.

³ Plut. de Isid. et Osir. p. 356; Nimrod, Vol. I. p. 644, Suppressed Ed., Vol. II. pp. 448, 452.

gods of the Romans or Janus, after whom St. Peter, Bar-Jona, with his barque and keys, is modelled. At the foot of the statue of Janus were placed twelve altars, dedicated to the twelve months. As Janus was the chief of the twelve lesser gods, Peter was the chief of the apostles; and, as I have said in Book X. Chap. IV.; as Janus held the keys of heaven, so does Peter. The Valentinians supposed that Christ commenced his mission at thirty years of age, because it was the number of degrees in a sign of the Zodiac, and that he was crucified in the twelfth month; so that his career had one year, like that of the sun in the Twelve Labours of Hercules. It is very evident that the Valentinians considered Jesus as a Ray or Emanation from the Sun, and that he formed a microcosm of the Solar orb, each being a microcosm of a superior being. The Romists evidently do the same in their annual scenic representation of the acts of the Saviour's life.

It is said that Christ fixed the number of his apostles at twelve, because there were twelve months in the year; and that John the Baptist fixed his at thirty, because the months have thirty days.¹ Clemens Alexandrinus, on the oriental doctrine, says, that the Valentinian Theodotus maintained that the twelve apostles held, in the church, the same place that the signs of the Zodiac held in nature; because, as the twelve constellations govern the world of generation, the twelve apostles govern the world of regeneration. In Dupuis many other striking circumstances relating to the number *twelve* may be seen.

Why did Jesus choose *twelve* apostles and *seventy-two* disciples? Why did seventy-two men come from Medina to Mohamed; and why did he retain with him *twelve* as his apostles? Why does the college of Cardinals consist of seventy-two persons? Why did Ptolemy take seventy-two men to translate the Pentateuch? All accident, as usual?

The Persians had twelve angels who presided over the twelve months. He who presided over the *first* month was called the treasurer of Paradise.² Probably, like Peter and Janus, he carried the keys.

The Gentiles had precisely the same astrological mythos as the Jews and Christians. The commanders of the Greeks against Troy, including Philoctetes, who, though absent, was one of them in the league—one of the confederates—were seventy-two.³ Osiris was killed by seventy-two conspirators.⁴ According to Keating, the Irish divided the languages into seventy-two. Proofs, which cannot be impeached, of the astrological character of the temple and its sacred numbers, may be seen in Josephus.⁵

The Greek mina or pound was raised by Solon, as we learn from Plutarch,⁶ from seventy-two drachmæ to a *hundred*.⁷

The number *seven* is equally a sacred number in the Gentile religion as in the Christian. The number of the planets has been copied in the Christian religion in the seven sacraments, seven deadly sins, seven gifts of the holy spirit.⁸

From the number of the days of the least of the cycles, seven, being identical with the number of the planetary bodies, it can never be known with a certainty when one is alluded to separately from the other. But the constant recurrence of the numbers connected intimately with the decans, dodecans, &c., 7, 12, 72, 360 not 365, 432, &c., into which the sphere was divided, sufficiently prove their intimate connexion. They are all closely bound together, and on their union was

⁸ Dupuis, Vol. III. p. 47.

founded all judicial astrology and all ancient mythology. The peculiar circumstance, *accidental* I will call it, of the number of the days of the week coinciding exactly with the number of the planetary bodies, probably procured for it its character of sanctity.

In Ireland, at Wicklow, we meet with seven churches; and again, near Athlone, with seven more. Seven churches are described in the Apocalypse to have existed in Asia Minor, to whom angels or messengers were sent; but the church at Thyatira is said to have existed only in name: and in the Peninsula of India, about thirty-eight miles south of Madras, at a place called Mahabalipoorum or the city of the great Bali, is a collection of ruins, usually called the seven Pagodas. An account, but a very defective one, is given of them in the fifth volume of the Transactions of the Asiatic Society, by a gentleman named Goldingham. It seems to me that they are the work of the Buddhists. The Bull-headed Bali is conspicuous.

There are seven sephiroths, of rank inferior to the first three, answering to the seven planets. There are seven gates of the soul; there are seven gates employed in the creation; there are seven sabbaths from the Passover to the Pentecost; and seven times seven sabbaths for the year of Jubilee; lastly, the seventh Millennium will be the grand sabbath.¹

In the Persian mythology every thing appears to have been closely connected with the numbers described in my *Celtic Druids*, that is, with judicial astrology. M. Creuzer, on the number of the planetary bodies, has observed,² that the nation was distributed by its founder, Djemchid, into four classes, and into seven castes. The four *classes* I take to be allusive to the four divisions of the month, and the seven *castes* to the seven days of the week. The seven Amshaspands, the seven Euceintes of Ecbatana, with their seven colours, are all in like manner closely allied both to the planets and the sacred numbers. The body of Osiris was supposed to have been buried at Elephanta, in the Isle of Philoe, in Upper Egypt. Every day the priests offered here 360 bowls of milk at his shrine, and sung suitable litanies. An usage exactly similar obtained at the city of Acanthus.³ The great oath of the Egyptians was, by the remains of Osiris buried at Philoe.⁴ Typhon made an alliance with the Queen of Ethiopia, who supplied him with seventy-two companions.⁵ Every where the sacred numbers, that is, judicial astrology, is to be found. The seven gates of Thebes were erected, as stated by Nonnus, according to the number and order of the seven planets.⁶ Respecting the identity of sacred numbers among Jews, Gentiles, and Christians, enough has been said; but many additional examples might be adduced if it were necessary.

6. I think on careful inspection of the exoteric religion of each of the tribes which appears to have arrived from the East, we may see in all of them occasional proofs escaping from their mysterious adyta, sufficient to furnish ground for a rational belief that what I have asserted is correct,—that the same system pervaded them all. We must not forget to make a large allowance for the circumstance that they are the *secret* doctrines to which I allude. We cannot expect to hear them explained from the top of the Mosque, by the Muizzim; nor by the Pope, from the chair of St. Peter. In almost all nations the system of which the Millenarian is a part, prevailed; and if I be asked why we have not clearer proofs of it, I assign the same cause, since the thirteenth century, as for the Gospel of Joachim or the Holy Ghost being forgotten,—it was every person's interest to conceal it.

The reputed books of Solomon, such as Wisdom and Ecclesiasticus, are full of allusions to the doctrines of wisdom. A person who has read the preceding part of this work will perceive,

¹ Basnage, Hist. Jud. Liv. iii. Ch. xi. p. 190.

⁵ Cruizer, *ibid.* p. 397.

⁶ Dionys. Lib. v.; Clarke's Travels, Vol. IV. p. 66, 4to.

in a moment, that they use the word wisdom as referring to an unexplained or mystical doctrine in almost every page. This was, to the doctrine of the Cabala, to the doctrine of the Emanation, of the Sephiroth, which the *present* Jews call the *ten emanations*, which are evidently, on the slightest inspection, *nonsense*—*NONSENSE* designed originally to mislead; but, perhaps, latterly believed by the ignorant. Sephiroth is ספרות *sprut*, and may mean ten attributes or qualities, but it also means the doctrine of the ten sacred numbers or cycles of India, or of Virgil. ספר *spr* is to cipher, or count, or calculate; and ספרות *sprut* is the feminine plural of ספר *spr*, and means the calculations or calculated periods. It also means a symbolical or hieroglyphical or emblematical writing.¹ This actually conveys the meaning of the ten mythic or emblematical names. The Psalmist says, lxxi. 15, he shall praise the justice of God, and depend upon it for his salvation, for he has not known the ספרות *sprut* or Sephiroth; that is, the calculations of the cycles; as Pagninus says, *numeros*. The text is rather confused; but this, though not a translation, I think is its meaning. But the Sephiroth are correctly rendered *numbers*. They are the same as the feminine forms of the Seraphim, סרפיים *srpim*, alluded to in Isaiah vi. 2. The six wings of each seraph alluded to the six periods just gone, in the time of Solomon. In verse nine, the *TENTH* of something mystical—not *understood* and not *named*, but which, it is said, in verse thirteen, has been before, and shall return—means the *tenth* sæculum or cycle. I suspect the Seraphim and the Sepharim have been used promiscuously. The text of Isaiah, if correctly translated, means, that above the throne stood winged *serpents*; for seraph, translated, is serpent. It is only written, in our translation, in the Hebrew word *seraph* to disguise the word serpent, which our priests did not like. I need not remind my reader that the serpent is an emblem of a cycle or circle. Serpents are constantly seen on the Egyptian monuments, as described by Isaiah;² but with wings, and, in India, overshadowing the icons of Cristna or Buddha, in number three, four, five, six, seven, eight, or nine, according to the number of cycles, of which the being he was protecting, was the genius. One of these winged serpents may be seen in the hand of the Moses, found in St. Mary's Abbey, at York. The wings are manifest in the original icon, but in the plate published by the Society of Antiquaries *they cannot be distinguished!!!* Moses is there described as the Messiah, משה *msh* or genius of a Zodiacal sign, and that of the first sign, as is evident from the *horns of Taurus which he has upon his head*. When he had finished all his labours, *the book* tells us, he delivered up his power to the saviour Joshua, and went to the top of Pisgah to die.

The word Cherub originally meant, and yet sometimes means, serpent, but this is only because its general meaning is *emblem* or *emblematical figure*. It is a compound word, formed of כר *kr*, *circle*, and אוב *aub*, *serpent*: in short, a circled or circular serpent or serpent with its tail in its mouth—כרוב *krub*. It was probably the first sacred emblem ever used, whence all such emblematical figures came to be called Cherubs; and this accounts for learned men having made them out to be of many different figures. Hutchinson explains the word Cherubims by *similitudes*, which confirms what I have said above.³

The ten Jewish Sephiroth were the ten cycles, and, in honour of the Trinity, the first was called כתר *ktr* Corona, the second חכמה *hkme* Sapientia, and the third בינה *bine* Intelligentia—Father, Son, and Holy Ghost. The first *three* were also the Trinitarian Sol—the Creator, Preserver, and

¹ Parkhurst in voce, ספר *spr*, IV.

² *Ib.* ver. 2.

³ General Vallancey has observed, that the Hebrew word יום *ium*, translated in our Bibles *a day*, appears to be an original word, signifying a revolution. He adds, like בר *br*, *bar*, *var*, *war*. This being admitted, here is one of the difficulties of Genesis removed at once. But this will not be liked, because it is the observation of a swordsman, not of a gownsman.

Destroyer—and the other *seven* might be the earth, moon, and planets, the host of Heaven, forming altogether the Ever-happy Octoade of the Gnostics: the whole forming the Παν, or system of the Pan-deva, holy Pan; not the το Παν, the Παν of the universe,—but the Παν of our system only. The first of the Sephiroth called כתר *ktr*, Corona, Circulus, is also called Arich-Anpin. This was a name given (as I have formerly shewn) to Brahma or the Brahmin Abraham. Arich is Αρχη. It is also called ENSOPH, *fountain* of wisdom, fountain whence wisdom flowed. Now I suspect that both these terms ought correctly to have been applicable only to a power which I shall describe in another book. The author of the *Cabala denudata* observes, that the antiquity of the Cabala cannot be disputed, as it was known to Parmenides very near 460 years before Christ.

The second of the Sephiroth is חכמה *hkme*, Sapientia, Νεσς, Σοφία, and Λογος, by Philo called τον πρωτογονον Θεσ υιον, *primogenitum Dei*. This is also Ερωσ or divine love—Cama and Dipuc, of India, Cupid, of Greece, the Puck and Robin good-fellow of Shakespeare.

The third of the Sephiroth is בינה *bine*, Prudentia. This is the Anima Mundi or Psyche or την θειαν ψυχην of Plato. I believe that בינה *bine* is a feminine form of בן *bn*, *son*, and means daughter, and was thus the daughter of כתר *ktr*, and sister of חכמה *hkme*, or Wisdom, or Logos, or Ερωσ. Thus, with the Greeks, we had Jupiter, son of Saturn, married to his sister Juno, and Cupid married to his sister Psyche. The Targums often treat of a מימרא ד" daughter of voice, that is, daughter of the Logos: this, I think, was the בינה *bine*, not the Logos.

There was also a *Dseir Anpin*. This was the same, viz. שר *sr*, in the Hebrew, as the Arich-Anpin in the Greek. Much confusion has arisen from mistaking translations of words out of one language into another, for separate words. The fourth verse of the Revelation or Apocalypse of John, which speaks of him that *was*, that *is*, and that *is to come*, alludes to the Solar triune God, and to the seven cycles, as the author of the *Cabala Denudata* says; but it also alludes to the same Trinity, and to the seven planets or spirits which stand before the Sun, the throne of God. The same author, in *libri Druschim Tractatus*,¹ says, Hic tantum inculco decem sephiroth esse; ex se nihil aliud nisi decem aridas Numerationes, non Emanationes divinas, vacuas capsulas, non aurum margaritasve illic reponendas.

7. I must now make an observation of importance respecting the word ברא *bra*, of the first verse of Genesis. We have hitherto adopted the common reading *created* or *formed*; but I apprehend the word ברא *bra* or בר *br* has the meaning exclusively neither of creating from nothing, nor of first forming, or giving the first or the then new form to matter, but a renewal of a form; that it means renovare,² regenerare. This is exactly what it ought to be, if I be right, that the first book of Genesis is a Buddhist work. It will then mean, *By Wisdom Aleim renovated, regenerated, or renewed the planetary bodies, and the earth. And the earth was ungerminated—not impregnated, unprolific—and without any beautiful (animal or vegetable) form.* That is, it was the Ιλυσ or Mud of Sanchoniathon.

After this will come the arrangement and peopling or stocking of the world in six periods of time, as described by Moses and the Etruscans, and as Cuvier has shewn most correctly, and as I have shewn in my *Celtic Druids*, Ch. IV. Sect. XVI. All this harmonizes with the fact hitherto unexplained, of the Pentateuch containing no intimation of a Future State, with the renewal of cycles, the millenium, the prophecies of Saviours from time to time, and with the actual natural history of the earth, as laid down by Cuvier,—and proves that, whoever selected or composed

¹ Vol. I. p. 55.

² Parkhurst in voce ברא *bra*, IV.

Genesis was a person really possessing a profound knowledge of nature : a much more rational ground for claiming for him divine inspiration, than the vulgar anthropomorphism with which Moses has been charged by the priests, and which perhaps has been intentional, as alike suitable (as no doubt it is) to the capacity of the vulgar, and to conceal the real meaning.

I now beg to refer my reader once more to what I have said in Book II. Chap. III. Sect. 3, respecting the word ראשית *rasit* or wisdom of Genesis. He will there find that in the meaning which I have given to it, I have said, that I was supported by the opinions of Clemens, Origen, &c. What I have said was true, but I find, on reconsideration of the subject, that I have not stated the whole truth. I have no doubt that by the rendering of that word by *wisdom*, which meant the Logos, the first of the Æons or Αἰωνες of the Valentinians and Manichæans was meant. An Æon was an Αἰων. A great or eminent Æon was an Αἰων των αιωνων. Every Æon was the genius of a cycle. Thus every period in the nature of a cycle had its Æon, with its small or great portion of the Divine Spirit or Holy Ghost, in proportion to its little or great importance. The Persians had 365 Æons, one for every day. The Valentinians had the same. The Romish Church has also its 365 saints, or persons divinely inspired in a low degree, one in a peculiar manner for each day in the year, besides many others.

Wisdom was one of the persons of the first triple Æon, and the translation of the word ראשית *rasit*, by the phrase *wisdom*, was *universally* recognized by the early Christians, not, as my expression would induce a person to believe, by a few only ; but it was, with one trifling exception, the undisputed meaning attached to it, both by Jews and Christians, in the early times of Christianity, and, indeed, until a change, which I shall hereafter treat of, took place in the Romish Church, when it fell into the Paulite heresy. We have seen that by the Logos God formed the world. But the Logos was Christ, and Christ was the Χρησος. And this Χρησος was the first Emanation, the benignant Genius or Spirit—THE Χρησος, κατ' εξοχην.

Faustus is made, by Augustin, to say, *Christ is the wisdom of God.*¹ Now this we might infer, from what we have before observed respecting Gnosticism and Manichæism. (But the *Christ* ought to be the Chreest.) As the Χρησ was the Logos, and the Logos was Wisdom, it follows that the Χρησ must be Wisdom. Here, in either case, we arrive at *Rasit* again, and thus Jesus, or the Logos, is the Creator. Here we have a key to much of the recondite and misunderstood doctrines of the Gnostic, that is, the initiated Christians—the initiated Christians, or Gnostici, against whom St. Paul preached, of which I shall say *much* more hereafter. Here we see that the Χρησος on the monument, on the tomb, of the youth of Larissa, and all the other inscriptions, in Spon, from that country, connect the doctrine with the mythology of Plato and Greece. (What would Ammonius Saccas say to this ?) They connect the doctrine also with the Larissa and the other circumstances of Syra-strene and of its Diu, and with Ceylon and its Iava Diu, &c., and the Golden Chersonesus of Siam, with its mount Sion, its Judia, &c., &c. ; and bind the whole together. The links of the chain are not only there, but they are connected. Need I repeat any thing of Abraham or the Brahmin, from the land of *Maturea* or the land of the solar *fire* or *aur*—the land of Urii or Uria—Ur of Colchis or Colida—or of the Cal or Culdees, going to Maturea, or Heliopolis, in Egypt—of the promontory of Tamus and St. Thomas, of Bituma, of Malabar, Coromandel, &c., &c., &c. ? No ! I need say no more : if my reader be blind, I have not the power of working miracles ; I cannot restore his sight.

No doubt the assertion that the translation of the most important word ראשית *rasit* by *wisdom*,

¹ Faust. ap Aug. Lib. xx. 2.

was *the admitted and undisputed construction of the word*, will be denied. And it will be denied for the same reason which operated with Parkhurst to make him suppress the knowledge that it was so translated by the early Christians and Jews. It will be denied for the same reason that Lardner suppressed his knowledge that the early Christians were called *Χρηστιανοι* not *Χριστιανοι*.

A learned Jew, who will shortly publish an English and Hebrew Lexicon, informs me, that the word *רָסָה* *ras* has the meaning of *wisdom* in the Talmud.

Many readers will think it quite impossible, that all the modern Lexicographers should have wilfully concealed the meaning of the word *rasit*. This is a question of fact, not of opinion. Have they or have they not given the meaning as stated by all the eminent persons whose names I have exhibited? I affirm that, with the exception of one slight notice of Parkhurst's in his *GREEK NOT HEBREW LEXICON*, in order to misrepresent it, they have all suppressed it. No one surely will say, that all the learned authorities cited by me are unworthy of NOTICE!

My reader, I imagine, will not have forgotten that a place supposed to be Cortona, in Italy, was called Creston. This was the place where Pythagoras, who was the son of an *Apolloniacal Spectre*, Holy Ghost, had what was called his school of WISDOM—that Pythagoras who sacrificed at the shrine of the bloodless Apollo at Delos. No doubt the school of this great philosopher from the East—India, Carmel, Egypt, Delphi, Delos, was closely connected with the schools of the Samaneans, Essenians, Carmelites, Gnostic Christians, or *Χρηστιανοι*, or CRESTON-ians. The Pythagoreans were Essenians, and the Rev. R. Taylor, A. M., the Deist, now in gaol, infamously persecuted by the Whigs for his religious opinions, in his learned defence of Deism, called *the Diegesis*, has clearly proved all the hierarchical institutions of the Christians to be a close copy of those of the Essenians of Egypt.

If the Christians be called by any author before Origen by the term *Χριστιανοι*, and not *Χρηστιανοι*, except as a term of reproach, as at Antioch; and if there be no other way of accounting for it; considering that they are so called in the teeth of the authority of Clemens, Justin, all the Gnostics and the Gentiles, and considering also the evident policy of concealment in modern divines, I say that I am justified in maintaining it or them, to be one or more examples of the innumerable corruptions of manuscripts by Christians in a later day. They possessed the means of making the corruptions when they copied the manuscripts; all of which are descended to us from them; and their numerous forgeries prove they had the inclination, and they were not prevented by principle: for, so far from thinking it wrong to corrupt the manuscripts, they avowed that they thought it meritorious to do it. The *end* has sanctified the *means* with priests, from Bishop Vyasa in India, down to Bishop Laurence, in Ireland.¹

I now beg my reader to look back to Book X. Chap. I. Sect. 18, and consider the circumstances attendant upon the monument of the youth of Larissa—the sacred name of *Χρηστος* at the top, and the sacred word *Ερωσ* or the first-begotten, divine love, at the bottom of it: let him observe that this was in Creston-ia, at Delphi, whose God was called by the name of the God of the Jews, *יהוה* IE. Then let him remember the doctrines of the Trimurti or Trinity of Orpheus, whose country this was. Next let him observe, that it was here where we found the females sacrificing themselves on the death of their husbands, and that most of the places of this country have the same names as places in India, where Cristna or Kan-iyā came from, and that the country itself is called Sindi. All this being duly considered, I think my reader will conclude with me, that the Cristna of India had the name of Crist, for at least one reason, the same as that

¹ Vide false translation in preface to Enoch.

which caused the sacred being at Larissa to be called $\chi\rho\eta\varsigma$ —that is, *mitis, benignus*, and not solely because he was *black*, the colour of his countrymen.

We have seen that Buddha was the Logos, and the $\epsilon\rho\omega\varsigma$, and the son of Maia. But *Camdeo* was also the son of Maia. This was the Cupid of the Romans; and Southey¹ has shewn, that *Dipuc* and Cupid are the same when read Hebraicè. His history is clearly an incarnation of Buddha, his exploits or adventures in the fields of *Muttra* succeeded in a following age the adventures of *Cristna*, celebrated, with almost the same circumstances, in the same places, after the expulsion of the Buddhists. This *Cama*, who followed *Cristna*, is the *Cama-sene* of Italy, noticed in Book X. Chap. VII. Sect. 9, the incarnation of *the fishes*.

We have seen it held that Christ or *Cristna* had his name from being *black*; secondly, from being *crucified*; and, thirdly, from being *mitis, benignus*. All this is true, and I do not doubt it had its origin from the word, in ancient language, having had the *three* meanings, either all in one, or in several nations. We all know the way in which the letter \aleph of the Hebrews has been corrupted into *ch*, in both ancient and modern times. \aleph *hrs* was the *solar fire*, and like the sun it meant also *machinator*. And, as I have before shewn, from this word Parkhurst says, in voce, V., the Greeks had their $\epsilon\rho\omega\varsigma$, meaning *the material light or plastic formative power*—the word which we found placed under the $\chi\rho\eta\varsigma$ of the youth of Larissa. It does not seem surprising that this *chrs* or $\chi\rho\varsigma$ should thus become $\chi\rho\eta\varsigma$, *benignus*. But this benignant being, divine love, we have seen crucified several times; and Christ was said to be crucified in the heavens.

This crucifixion of divine love is often found among the Greeks. *Iönah* or *Juno* was bound with fetters, and suspended between heaven and earth.² *Ixion*, *Prometheus*, *Apollo* of *Miletus*, all were crucified. When the sun crossed the equator the last time in *Taurus*, was he crucified in the heavens; and did he rise again as *Aries*? and was he crucified again when he crossed, in like manner, from *Aries*, and rose again in *Pisces*?

Was the sun born at the winter solstice and crucified when he crossed the line at the vernal equinox? From this crucifixion did he rise, triumphing over the powers of darkness, to life and immortality? Was he thus, as *Justin Martyr* said, described on the universe in the form of the letter X? The word \aleph *hrs*, which means *Sun*, also means the *East wind*, by which, *Virgil* says, the mares of *Thrace* were impregnated. What does this mean? The *Targum* of *Onkelos* says by \aleph *qdm* or \aleph *qdm*, the *Aleim* formed the world. But this word means also *East wind*. Then this *Chaldee* word is only a translation of the word \aleph *hrs*, or the solar fire, or the generative power, or the machinator. This is all very mystical. But can any thing be more mystical than the crucified *Semiramis* flying away as a *dove*; than the crucified *Prometheus*, *Ixion*, *Staurobates*, *Cristna*, *Salivahana*; than the impregnation of the mares of *Thrace*, or than the crucifixion of *Christ in the heavens*? A learned devotee once said in reply to this, “I care nothing for your Christ crucified *in the heavens*; it is not in our canon.” And I reply, “I care nothing for the canon of a sect contemptible enough, till it had power given by the sword of *Constantine*. I only look for the truth in all quarters; and I know the heretical Gospel must have had a meaning, and a mystical meaning. The whole is evidently a system of the most profound mysticism, and profound mysticism will never be explained, or its meaning discovered, except by means of the most profound inquiries.” The extraordinary word \aleph *qdm* was adopted, no doubt, because, it had, in some degree, both the meaning of $\alpha\rho\chi\eta$ and $\lambda\omicron\gamma\omicron\varsigma$,

¹ Notes on *Curse of Kehama*, p. 333, 4to.

² *Iliad*, O, ver. 20, ib. ©, ver. 25; *Bryant's Anal.* Vol. II. p. 372.

or could be applied in some way to the second person of the Trinity, in imitation of the word *rasit* of the Hebrew, which had, as we have seen, a double meaning.

When I reflect upon the numerous proofs which have transpired from time to time, that the polar regions were once much warmer than they are at present, and the fact, known even to both the Greeks and Romans, that the angle of the equator and ecliptic has been constantly decreasing from the earliest time,¹ I cannot help suspecting that Justin Martyr alluded to this angle, when he declared that, according to Plato, the Son of God, or Jesus Christ, was expressed or decussated upon the universe in the form of the letter X, and, that the doctrine of Jesus Christ being crucified in the clouds, alluded to the same thing. For the cross may easily have been thought to allude to the Soli-Lunar precessional Christian cycle, which immediately depended upon this Cross or Angle.

8. It is an admitted fact, that the language of Mani and the first Manichæans was Chaldaic. After the observation that the language of Babylon was not the Chaldee, it will not surprise my reader that I should consider this fact, (of this Persian, as he is called,) as strengthening my opinion that he came from India. He had twelve disciples or followers who were called *perfect* and *elect*, himself making the *thirteenth*. This continued after his death to be the system of his followers. To these twelve only the high secrets of the order were entrusted. They ate no flesh, drank no wine. He had, besides these, seventy-two followers, disciples of a lower class, to whom all the mysteries were not entrusted. Like the Roman Cardinals some of them married, but I think it probable that, from the unmarried only, the twelve elect or perfect were taken. Of course these elect will be said to have been taken in imitation of Jesus Christ. I believe they were neither of them copies of the other: and that Mani's were taken from the system that caused the twelve figures and their president to be carved on the rocks at Oujein, in India—in the Northern India—in the country of Calida—in Ur of the Chaldees—or very near to it.

In the circular part of the church of the Templars in London, the Manichæan heresy is beautifully displayed. It has originally had twelve arches; one on the East, for the president, a little larger than any of the others, excepting that on the West, for the door; and they have six seats in each arch, making seventy-two in all, and within are six smaller arches, which might hold the twelve *perfecti* or the Knights of the Round Table.

Among the Chinese the same sacred numbers are found, as those among the Jews. This can be no accident. Confucius had among his thousands of disciples only seventy-two initiated:² the exact number of the Cardinals of Rome, of the Manwantaras of India, of the chosen or distinguished disciples of Jesus Christ, of the Jewish Sanhedrim, and of Manes. Here is the universal mythos—remains of the kingdom of Pandæa.

Between the decalogue of Moses and the rule of morality of the Buddhists of Tibet, as given by Georgius,³ there is a wonderful similarity.

Thou shalt not kill any human being or animal.

Thou shalt not commit adultery.

Thou shalt not steal.

Thou shalt not speak ill of others.

Thou shalt not lie.

Thou shalt honour thy father and mother.

The law of Moses, which we translate, "Thou shalt do no murder," ought to be rendered, if rendered literally, *Thou shalt not kill*. It would thus be identical with the Buddhist rule or commandment.

¹ Parkhurst, pp. 730, 731.

² Matter on the Gnostics, Vol. II. p. 83.

³ Alp. Tib.

Along with the God Kan-ia, or Iao, or Jah, came the oriental system of masonry or mystery; and through all ages, I have little doubt, the Gnostic doctrine has prevailed with its Masons, or Μεσσηρανεον, or *Maceonry*, as it is called in the York documents, or Monachism. The Monks of Tibet, at Eleusis, in Egypt, at Jerusalem or Carmel, in our circular chapters, were the preservers of the secret Pythagorean doctrines of numbers, of the Ras, or Mystery, or Masonry, or perhaps more properly, the doctrines of the IE, the Jah,—the mesos or μεσσον-ry, or the Saviour, or cross-borne—renewed in every cycle, as described in Virgil. I need scarcely remind my Masonic reader that all the secrets of Masonry are concealed in the Hebrew or Chaldee language; that is, in the language of the Brahmin of Ur and Colida, where Mr. Ellis was poisoned for being known to possess them. Solomon, the Hakem or wise, who built the temple, succeeded the Brahmin Abraham, who came from Ur of Colida.

In my Celtic Druids, Ch. V. Sect. 33, the existence of the Culdees, or, as they were then called, Colidei at Armagh, in Ireland, was shewn, as venerators of *the sacred fire*. They are known to have had a monastery in Wales; and in both cases it seems the priesthood was hereditary, descending from father to son, and they were Christians, because this hereditary custom of passing the priesthood was complained of as disgracing Christianity. There is reason to believe that they were the same in Scotland; and their continuing to possess the use of the cathedrals, along with the Romish priests, is a most curious circumstance. It is also a most striking fact, that the Christians found in the country of Colida, in India, should possess exactly the same *three* rites as the Colidei of Iona, in Scotland—Baptism, the Eucharist, and Orders—and these, the three rites of the Jews.

9. The very essence of Freemasonry is *equality*. All, let their rank in life be what it may, when in the lodge, are brothers—brethren with the Father at their head. No person can read the Evangelists and not see that this is correctly Gospel Christianity. It is the Christianity of the Chaldees, of the Patriarchs, of Abraham, and of Melchizedek. Every part of Christianity refers back to Abraham, and it is all Freemasonry. Jesus Christ at table, at the head of the twelve, offering the sacrifice of Bread and Wine, is Abraham and Melchizedek over again; such, in fact, it is acknowledged to be by the Romish Church; such is its esoteric religion; and such was the custom not only of the Chaldean Abraham and Melchizedek, but also of the Calidei and Masons at York; and, I have no doubt, of the Templars in their secret round chapter-house in London.

In all the ancient systems there prevailed one universal doctrine, now despised, the metempsychosis, or what is called in old Irish the *Nua Breithe*. This became corrupted into a transmigration of souls from man to man, and from man to beast; but its original meaning was, *a new birth* in another cycle or world. This is correctly the doctrine of Moses,¹ of Philo, of Plato, of the interpretatio Novi Sæculi or the *Æneid* of Virgil, and of the secret doctrines of the fathers of the church. It is in many places to be seen in the Gospels, in our Liturgy, and particularly in our baptismal service.

Many attempts have been made to account for the well-ascertained fact, that, in the Pentateuch, there is not the least trace of a state of future reward or punishment: for though we have the evil spirit in the serpent we have no hell. This arises from the doctrine of the renewal of worlds having been the esoteric religion of the tribe.

If a person would think deeply upon the character of the *destroyer* or the third person of the

¹ Vallancey, Hib. Coll. This is really the English *new birth*, both in word and meaning.

² Exhibited in the word ברא *bra*, *renovated*.

Hindoo Trinity, he would at once see that it is very different from that of the later Arimanius of the Persians, as placed in opposition to the Oromasdes. I consider that the evil principle *per se* of the Persians, was a corruption of the fine Trinity of the Hindoos.¹ It betrays a degradation of the mind. It is only heard of along with the *good* principle, in opposition, in the later ages, when the Mithra or middle principle had become almost lost among the Persians. The devil or future state is never found among the Jews till their return from Babylon, and this has furnished a difficulty to our divines which they have never surmounted. It stands a glaring fact in the face of all their theories and forced explanations, that the chosen people of God were not taught in their sacred Pentateuch a single word respecting the immortality of the soul and a state of reward or punishment after death. This is a glaring, an indisputable fact, clearly proved, among others, by Bishop Warburton. My theory of revolving cycles and renewal of worlds has satisfactorily accounted for this, which has never been satisfactorily accounted for before. The proper translation, or at least the translation according to the esoteric doctrine of Genesis, explains this: *By wisdom the Trimurti renovated or regenerated the planetary bodies and the earth.* But not the stars; for, though, no doubt, they were subject to renewals, yet they were not subject to the renewals in the *same* periods as the planetary system, and Genesis only applies to our system. Consider with attention the sixteenth verse of the first chapter, where the stars are named, and an interpolation must be admitted. This all harmonizes beautifully with my system. The way in which the stars are here interpolated shews that the interpolator admitted the meaning of *planets*, which Parkhurst has correctly given to the word סִמִּים *smim*.

In Genesis there are no fallen angels. All these came into the Mosaic religion on the return from Babylon. The Destroyer or Serpent of Genesis is correctly the *renovator* or *preserver*. In Genesis there is a tree of knowledge and a tree of life. This tree of life evidently proves the meaning of the Mythos to be, that Adam would die at some time—that he would wear out, unless he ate of the fruit of that tree. The serpent, by persuading Eve to taste of the fruit of the tree of knowledge, &c., taught her what is meant by being naked, and thus, by inducing procreation, was the preserver of the species: the very literal meaning of the words shews, that this is one of its meanings. Here we have the origin of the Ophites, or oriental emblematical-serpent worshipers, to account for whom our antiquarians have been so much perplexed. They worshiped the saviour regenerator, but not the devil, in our vulgar meaning of the word. I have formerly given an extract from a work of Mr. Payne Knight's in which he avows his belief that the *double* principle was never the religious belief of any nation.

In figure 35, taken from Spence's Polymetis, we see the Mosaic Mythos in Greece, if the gem whence it was drawn be Grecian. Here is the serpent called Heva tempting Adam. Spence calls it a drawing of Hercules, after he has killed the serpent; but why is the serpent up in the tree, instead of lying dead on the ground? Where are the club, the lion's head and feet? The serpent is evidently whispering in Adam's ear, while he is taking an apple. This quite satisfies me, that after all the labour bestowed on the Mythos of the Ophites, we are not yet quite at the bottom of it. In its general principle we are right, but not in the detail. Parkhurst has given a passage from Clemens which proves, that the Greek Bacchanals were well acquainted with the Mythos of Eve, since they constantly invoked her, or a person under her name, in their ceremonies.²

I recommend my reader to peruse and think upon several observations too long for insertion

¹ If ever they really held this doctrine. Hyde does not allow that they did. We have seen how it was held by the Manichæans. The Persians probably held it in the same manner, that is to say, they did not hold it at all.

² Spence refers to Lucan, ix. 367, Polymetis, plate XVIII. and p. 120, Ed. fol.

made by Spence, on the similarity in the characters or labours of Hercules, and the character or works of Jesus Christ; the ascension; the killing of the serpent; the observation of Bacon respecting the Christian mysteries and the cup of salvation. Had the cup any thing to do with the celebrated Sangreal, so much the object of search in the middle ages? Has the refusal of the cup in the Romish sacrament, so much sought after or desired by devotees, any thing to do with this? Mr. Spence might have given us some more of the labours, not a little deserving of attention; such, for instance, as his being swallowed by a fish.

One of the Targums says, that חיה *huia*, a serpent, tempted Adam or the first man, and not חיה *hue*, *Eve* his wife. Parkhurst renders this, not a serpent, but a beast, an animal. No person will doubt what animal this was, except he who will not see. It was the serpent, and here we have it, in the drawing, speaking to Adam, not lying dead at the feet of Hercules. Here we have *Eva* tempting Adam, and we see what *Eva* was, viz. the female חיה *huia*, serpent. Here we have the object of adoration of the Ophites—the female generative power—the destroying, regenerating power. As the secret doctrine of the Creator, Preserver, and Destroyer, began to be known in the middle and Western parts of Asia, at the same time it began to be corrupted, and the absurd idea of a fallen angel to creep in, at first among the ignorant vulgar only, but at last among a higher class, like what we have in Europe; who ought to be ashamed of harbouring nonsense so unworthy of the Supreme Being. The adoration is paid to Sumnaut,¹ *Seva*, or *Cali*, as the severe and impartial judge, ruling, it is true, with a rod of iron, but also with a rod of justice. The followers of *Seva* and *Cali*, of India, answer to our Calvinistic dealers in damnation of Europe. The same causes produce the same effect.

I consider that the way in which my theory of the renovation of worlds (that is, the theory of all the ancients) agrees with the Mosaic doctrine and removes its difficulty, is a very strong part of my case; for I request those who will not admit its truth to account on any probable grounds for the fact stated above, and admitted by the first divines, such as Bishop Warburton, Mr. Belsham, &c., that there is nothing about Hell or Devils in the Pentateuch.

There being nothing in Genesis or the Pentateuch of the nature of a Devil in our common acception of the term, we are naturally induced to inquire, What was the nature of the being which tempted *Eve*? This being is described in our translation as a serpent, and *properly* so described, notwithstanding the attempt of the learned and Rev. Dr. Adam Clarke, in his translation, to make it *a monkey*. The serpent is the only one of all the animals of the creation which possesses the peculiar property of renovating itself. To *all appearance*, when not destroyed by violence, it possesses eternal life. Throwing off with its skin its old character, it seems to become young again every spring. These are the peculiar reasons why the Cobra, the most deadly of the genus, with its tail in its mouth, was selected as the emblem of renovating life—of the eternal destroying regenerator. It has been said, that it was the vulgar belief in Egypt that the serpent really never died. I think nothing is more likely than that, in very early times, it was thought never to die. I dare say my reader never heard of one, in a state of nature, being ascertained to have suffered a natural death, and the annual change of skin added plausibility to the doctrine of its perpetual existence.

Among the Ophites, and indeed the Gnostics generally, the serpent was called the Megalistor or Great Builder of the Universe. Here we have, under another name, Ophites, the Cyclopes or the builders of the circular temples at Stonehenge and every where else. With the tail in the mouth, Serpents were the emblems of the eternal creator or renovator of the universe. Shrouding the *Linga*

¹ This was the evil principle or Pluto, in Ireland, Italy, and India. I shall explain its meaning hereafter.

and the Yoni it was the emblem of the preserver and destroying regenerator. He was the Megalistor or *Δημιουργος*, because he was the emblem of the Logos, the creator or renewer of cycles, or worlds in cyclic periods.

In the Church of St. Martyn's, Coney Street, York, is a very ancient and richly golden embroidered pulpit-cloth, in the centre of which is a figure of God Almighty—a very old man with a dove in a glory on his breast, and supporting in one hand a crucified Saviour, and holding the other as the Lama and the Pope hold their hand and fingers when they give their benediction to the people. A golden sun covers the head of the old man, and lifts up and shews the human head *underneath*. I can scarcely imagine any device, except writing, better calculated to tell the *initiated*, that the Sun and the Creator were identical. I was induced to go to see this by a passage in Mr. Allen's History of Yorkshire.¹ There never were Gnostics as a sect at York, but it was the place celebrated by the mystic mother of Constantine, Helena. One of the churches in York has a Zodiac upon it. In St. Mary's Abbey there is the image, before noticed, of Moses horned, with a winged serpent in his hand. All this is evidently Romish Christianity, but without doubt it is also Gnostic. St. Mary's Abbey and the parish churches could not have been built by Gnostics, exclusive of the Romanists. This lets us into the Romish secrets.

It is impossible not to see that, at the time the Romish Church was every where declaiming against Gnosticism, it was every where privately professing it. How can any thing be more conclusive than the sun on the pulpit-cloth? How can any thing be clearer than the Lamb that taketh away the sins of the world? How, than the prayers to the Sun, Son, in Saxon and Sanscrit Sunu, both yet retained by the Protestants? The great fault of the Templars seems to have been in believing that Hakem Bemrillah was the Paraclete, instead of St. Francis. For the Cordeliers certainly believed, though perhaps secretly, that St. Francis had been, by some means, *entirely converted*, to use their own words, into Jesus Christ, and had suffered all his five wounds, called the stigmas of St. Francis. This is an exact repetition of the nine Salivahanas of India, one renewed every cycle, having the wounds, like St. Francis, and called *the wounded in the side*. He was thought to be the incarnation of the *tenth* cycle. Protestants will deny that the Lamb is Gnosticism. But it is Christianity—and Gnosticism is Christianity. They cannot separate the Lamb of the Hindoos, of Moses, of the Egyptians, of the Carnutes of Gaul, of the Zodiac, from their Lamb to which they pray, to enlighten the world. How is it possible to doubt that the stigmas of St. Francis cover the same mythos as the wounds of the side-pierced Bali, of the Staurobates, the nine Salivahanas, the Cristnas, and the Buddhas of India? The same mythological history is renewed for every cyclic incarnation. Every sect or country claims the Saviour as having favoured its sect or country with his appearance—all others of that day being impostors. Thus, in the West, St. Francis was the preacher of the true Gospel in his day, which, of course, would supersede the old ones of the preceding incarnation, and Mohamed or Hakem was an impostor.²

¹ Mr. Allen says, many similar things were destroyed at the Reformation, and regrets that this pulpit cloth was not among the number. I rejoice that it is yet safe. After this notice, probably some *pious Mr. Allen* will remove it.

² In these superstitions there is always apparent an attempt at a repetition, or an attempt in the latter to imitate preceding Avatars. This is in strict unison with the doctrine of renewed incarnations. All Avatars came to an untimely death. The last, who was Mohamed, was poisoned. In compliance with this superstition, some years ago several nuns at Paris submitted to be crucified; and near Berne, in the winter of 1823, 1824, several persons were crucified, and one was dead before the police interfered. The perpetrators of this horrid murder were tried and condemned; an *official account of it*, which I once possessed, *was published*. The house where it took place was razed, and a monument was (I believe) erected on its place to record the fact. I was at Geneva a few months after it happened.

CHAPTER IX.

RASIT, Αργη—ARGONAUTS.—NAMA AMIDA BUTH.—GNOSTICS.—GNOSTICS CONTINUED.—GNOSTICS CONTINUED.—VALENTINIANS.—ST. JOHN, ST. THOMAS.—YES-DAN.—MYTHOS IN ASIA MINOR.—SAMARITAN GENESIS.—ADAM CADMON.—WISDOM IN GREECE AND EGYPT.—TIME.—Τὸ Ου.—Τὸ Ου CONTINUED.—CHRISTIAN MYSTERIES.

1. I must now request my reader to reflect deeply upon several parts of what he has read in the preceding books. The ראשית *rasit* is the first word to which I would wish to recall his attention. It cannot be doubted that in the word *rasit*, the meaning of which has been so studiously concealed, we have in uninterrupted succession the Logos by which the world was created. It is the Buddha of India. It is the Logos of the Orpheans, and of Zoroaster, and of Plato. It is the Minerva of the Etruscans and Greeks, issuing or emanating from the head of Jove;¹ and Jove himself is IEUE. It is their Μητις or divine wisdom, and the Sophia of the Cabalists. It is, as Μητις or divine wisdom, the object of the mystic adoration of the Gnostics, of the middle ages; and one of the very few things which we know of these sectaries for a certainty is, that this was, in a peculiar manner, the name under which they represented the Creator: for we know very little else of them, the orthodox having left us nothing of all their works which we can be certain has come to us unadulterated. But all the circumstances which we know relating to them give us reason to believe that they were a race of persons much superior to the *Papiases*, *Irenæuses*, and *Justins*, the founders of the modern Roman religion. All we know of them we have from the Christian fathers, whose accounts are evidently intended to depreciate them in every way; and these fathers thought it meritorious either to defame them, or to propagate falsities respecting them. Besides, if the fathers had been sincere, their hatred to the Gnostics and their bigotry were such, that it is very unlikely even that they could have understood the refined and abstruse doctrines of such philosophers, as we may collect from circumstances and the admissions of enemies, that Basilides was. What can we believe on the testimony of those who asserted that *all* these philosophers ate children in the sacrament? It is most surprising to me that such men as Lardner and Beausobre should receive, as credible, the histories of the fathers: very certain I am that no judge in England, France, Germany, or America, would convict an accused person of the lowest crime on such evidence.

It is admitted by the orthodox, that these philosophers were men in the highest grade of society. From this and a careful consideration of all the circumstances, I think we may conclude that they held the doctrines of the orientals respecting the renewal of cycles and incarnations, and that the millenium would take place. I think the fact of their designating the Saviour by the term Χρησος pretty well proves this. They held him to be the first of the emanations, the logos, the mind. These people became divided into a number of minor sects; and it is almost certain that in such times as they lived, a great number of absurdities must have been held by one or other of them. They were not free from the common weaknesses of

¹ See Figures, No. 22.

humanity : as the remainder of the species retrograded, they retrograded also. I feel confident that this is a fair and impartial view of the subject ; and that very little more than this can we ever certainly know, though the nonsensical stories told of them by their enemies may continue for ever to be retailed. But should some of the charges alleged against them be true, yet as we have no means of ascertaining their truth, they cannot reasonably be admitted : and so far are we from possessing proofs in justification of those charges, that we find them made by persons convicted of systematic fraud. The natural inference, therefore, is, that their charges are as false as their other allegations, proved to be falsehoods. But, under all these difficulties, when I find their opponents stating facts which combine with and dovetail into the system which I have shewn to have come from the East, the acknowledged birth-place of the Gnostics, I think, I am justified in assuming that there is a *high probability* that they are true, and in thus treating them in my reasoning. In all subjects of this kind, *demonstration* of the truth is very seldom to be had.

The ancient Jews had a collection of tracts called the Apocrypha, concerning which, in fact, very little is known. Of course they will tell you every thing is known. But, if St. Jerom may be believed, their Scriptures, both what are now called Canon and the Apocrypha, were for many years after the destruction of their temple by the Romans nearly lost, scattered in divers places, and at last were collected and preserved by the Christian fathers. What may have been the number of the tracts of the Apocrypha is doubtful ; but it is easy to see that some of those now in the list have nothing to do with it. The name shews that these were the books in which the secret Cabalistic or Gnostic learning was concealed ; the word Apocrypha, not meaning *doubtful*, but *concealed*. The meaning given to the word of *doubtful* was contrived for the sake of concealing from the vulgar that there was a *secret* existing. The contrivance has succeeded very well, for I do not suppose that one in a thousand, even of modern priests, ever suspected the truth. The meaning of *doubtful* or *uncertain* is not conveyed by the Greek word *Apocrypha*.

In the word *Ἀποκρυφος* the *απο* seems unnecessary to the meaning of *secret*. I have somewhere seen it explained to be a corruption of Abba *father*, and the whole word to mean *the secret of the father*, or אביכפרות *abikprut*.¹

The Gospel history of John is said, by modern priests, to have been written against the Gnostics. How this can be I do not understand. Its beginning breathes the oriental doctrines in every word. Its Logos, i. e. Sophia, or Buddha, or Rasit, or Trimurti made flesh, or becoming incarnate, is strict Buddhism, Persianism, Platonism, and Philoism or Cabalism. Very justly has Mr. Matter said, “Cependant S. Jean l’apôtre jouisse d’un credit non moins éminent auprès de plusieurs écoles Gnostiques, qui découvraient dans son évangile et dans son Apocalypse tous les éléments, la termonologie et la symbolique de leurs croyances.”² What can be more striking than the first fourteen verses of the first chapter, or than the promise, of the *tenth incarnation*, of a person to come afterward, *even the spirit of truth*, in several passages of the fourteenth and fifteenth chapters ? The supposition that this promise was fulfilled, that this person was meant, by the twelve tongues of fire which are said, in the Acts, to have settled on the apostles, to give them the power of speaking all languages, does not deserve a serious consideration.

¹ There is something very curious in the word אב *ab* or אבה *abe*. The root is said to be אבה *abe* with a mutable or omissable ה *e* ; that is, it may either be אב *ab* or אבה *abe* : it may have either a masculine or feminine termination. This seems odd enough, for the word *father* ; but it is still more odd, that it *always* adopts a *feminine* termination for its plural—always אבות *abut* or אבה *abt*, but never ים *im*. Here the secret doctrine shews itself. It was feminine because the Father was feminine as well as masculine—androgynous—Jupiter Genetrix.

² Matter, Ch. iv. p. 305.

The object for which the book means to represent that the tongues were sent is clear, viz. to give the apostles the power of speaking languages, to them *new*. This is the plain literal meaning of the *text and context*, and on principles of common sense none *other* can be admitted.¹ The person to come, endowed with the spirit of truth, is promised by Jesus. I know not a single passage in our canon which can justify the construction, that twelve tongues of fire was this person. The prophecy of another person to come connects the whole with the system of the cycles of India, of Virgil, and of Juvenal; it completes the system, and shews that the millenary cycles were an integral part of Gnosticism, and that Gnosticism *uncorrupted* was Christianity.

Once more I repeat, if the word Αρχη of John had merely meant *first*, πρωτος would have been used; but it was necessary to use some word which would convey the additional meaning which the word ראשית *rasit* conveyed, and therefore the word Αρχη was used, which, like ראשית *rasit*, means head, chief. Being used here as a substitute for *wisdom*, ראשית *rasit* is an authority sufficient to fix one of its meanings, and so it would be taken in any common case, by every Lexicographer in the world. Αρχη της κτισεως the beginning, head, or *efficient cause of the creation*.² Κτισεως means regeneration and renovation.³ This meaning of the word κτισεως completely justifies the rendering by the LXX of the word ברא *bra* by εποιησεν, *fecit*. Parkhurst derives Αρχη from the Hebrew word ערך *ord*, to set in *order*. Here we have in the Hebrew our word *to order*. If I had an English and Hebrew dictionary, as full as Parkhurst's Hebrew and English Lexicon, I think I could make, out of the two languages, a language in which conversation might very well be carried on by a Hebrew and an Englishman, respecting all the common concerns of life.

Parkhurst, in his Greek Lexicon, (though he has entirely omitted it in the Hebrew, where it ought to be found,) says, Αρχη⁴ in this application answers to the Hebrew ראשית *rasit*, by which name, Wisdom, i. e. the Messiah, is called. Again he says,⁵ *authority, rule, power*. Αρχη most usually answers in the LXX to the Hebrew ראש *ras* or ראשות *rasut* or ראשית *rasit*.

The observations of a learned friend of mine respecting the word Αρχη are very just; but yet the mode in which it is used by the Gnostics seems to shew that it had a meaning something more than merely *beginning*. We have seen it used by the LXX as the substitute for the ראשית *rasit*. It is also used by John in the same manner, and from the argument of the Gnostics it seems to require *wisdom* and not *beginning*, at least more properly *wisdom* than *beginning*. The connexion of the Eastern and Western philosophy cannot be doubted, and the application of the word *wisdom* to Αρχη is wanted to complete the links of a chain which seems deficient in a link, and which, being of the same manufactory as all the remainder of the chain, it seems very well to supply. In all this speculation we must remember, that a secret, refined system is to be accounted for or unveiled, which could only have existed under a vulgar disguise, such a disguise as would direct common, every-day searchers after the secret in a wrong road, and, if possible, prevent them from suspecting even that there was a secret. If the Bud and the Rasit were only

¹ I do not speak here of the ridiculous Paulites named in the Epistle to the Corinthians, chap. xiv., who have been most *correctly* imitated by the followers of the Rev. Mr. Irving, and of whom our newspapers have been lately filled. Feb. 1833.

² Parkhurst, Lex. Gr. in voce Αρχη.

³ Ib. in voce κτιζω.

⁴ Until the greatest part of this volume was printed, I did not discover the meaning given to *rasit* by Parkhurst. It never occurred to me to look for the meaning of a Hebrew word in his Greek, which was not in his Hebrew Lexicon. Parkhurst's object was clear, viz. to suppress the information, and to avoid the charge of pious fraud.

⁵ On the word Αρχη, V.

contained in an oriental secret language; in order to perpetuate them among the Western initiated, a word which would convey a meaning that would not be commonly understood, and different from such a word as *πρωτος*, which would convey a different meaning, but not the secret meaning, ought to be used: and what word could be so proper as that which was in the language of the Western world unknown, but which had the meaning of the emblem of the female generative power—the Arg or Arc—in which the germ of all nature was supposed to float or brood on the great abyss during the interval which took place after every mundane cycle?—the vessel in which the Linga and Yoni also floated; in short, it was the vessel which we find every where in the sacred mysteries, under different names, in Greece, Egypt, India, Judea, &c.—it was the Arc in which the Pola, Palladium, of every city is found, the emblem or imitation of Meru—the Arc of the Nautæ—the Acropolis or *Arca* of Jerusalem; indeed, of every ancient city, where, from religious motives, as well as the circumstance of its natural strength, the palladium of the state or of the religion was kept. In Rome it was the Caput-ol or Capitol. This answers to the Arabic Rasis, which means *head, chief, top*. From Pola may come a British name for head, seldom used except in connexion with a tax, a poll-tax. Thus all these things connect together in a very peculiar manner when searched to the bottom.

In mount Libanus, Venus was called Architis; and under this epithet the ceremonies which are stated to have been practised by the Israelites near mount Sinai, Exod. xxxii. 6, are said to be continued in her honour.¹ Here is the *Αρχη* or Arga, which, I think, can allude neither to a ship nor a citadel.² The Greeks had what they called the *Μην Αρχαιος* and *Αρχαιος*. This was the crescent-formed Arga, which was on the side of the Theban heifer.³ Eusebius calls the first Menes a Thebinite: “*Πρωτος εβασιλευσεν Μηνης Θηβινίτης, Θηβαιος· ος ερμηνευεται Διονιος*: The first, who reigned, was Menes the Thebinite, the Arkæan; which “is, by interpretation, the Iōnian.⁴ This Thebinite and Arkæan, was, we find, the same person “of whom the Iōna, or Dove, was an emblem.” That the Theba was the same as Iōna cannot be doubted; and the salacious Dove was the emblem of both, of the male and female generative power. Mr. Bryant says, that Arca and Argus signified the Ark; but as the Ark and Deluge were of the highest antiquity, and every thing was deduced from that period, Archaia hence came to signify any thing very ancient, and Archa, *a beginning*.⁵ Thus, if I understand this learned gentleman right, he admits, that the meaning of FIRST for *αρχα* or Archa, is only a secondary meaning.

If we consider the word *Αρχη*, it is in every respect the same as *רשית rasis*. It is the chief, the head; therefore, if we commence at the top and proceed downwards, it is the first. Here we see the reason why the highest place of every town was called the Acra of the city. It was the head, the peculiar seat of wisdom, whence Minerva sprung. As Arga, the generative power or organ, whence all things descended, it was also the first, and I think the word Arga is probably the origin of *Αρχα*. The *χ* is a new letter, and I think must have been substituted for the *Γ*, as *Γερανος* became *Χρανος*.⁶ Col. Tod says, “The expedition of the Argonauts in search of the “Golden fleece is a version of the Arkite worship of Osiris, the Dolayatra of the Hindoos: and “Sanskrit etymology, applied to the vessel of the Argonauts, will give the Sun (*argha*) god’s “(nat’ha) entrance into the sign of the Ram. The Tauric and Hydra foes, with which Jason

³ Ib. 358.

⁴ Bryant’s Anal. Vol. I. p. 321.

⁵ Ib. Anal. Vol. II. p. 382.

⁶ See Parkhurst’s Greek Lexicon, in voce *Αρχη*.

“ had to contend before he obtained the fleece of *Aries*, are the symbols of the sun-god, both of
 “ the Ganges and of the Nile; and this fable, which has occupied almost every pen of antiquity,
 “ is clearly astronomical, as the names alone of the Argha-Nat’h, sons of *Apollo*, *Mars*, *Mercury*,
 “ *Sol*, *Arcus* or *Argus*,¹ *Jupiter*, *Bacchus*, &c., sufficiently testify, whose voyage is entirely
 “ celestial.”²

But *Αργυς* is the same as the Argha of India. The Argha was not only the Yoni, but the surrounding ether in which the Yoni and Linga floated. It was also the boat in which the male and female generative principles, when reduced to their simplest form, floated during the sleep of Brahma. It was the Ark of Noe, or of Mind, or *Νεϋς*, or Intelligence, in which the germ of animated nature or the principles of generation were preserved. But it was in one sense as the Arga, the Preserver or Saviour, viz. as the Ark. But the Saviour was Logos, or Rasit, or *Αρχη*, or Wisdom, by whom the Trimurti renovated the world. It was the same as the תיבה *tibe* or *Ark* in which the Messiah Moses was saved. It was the vessel in which the covenant of God was carried. But the most important point is, that, as the ship of Noe, it was the Saviour.

Every one has heard of the celebrated boat of Isis among the Egyptians, Greeks, and Romans. But the Northern nations also worshiped her in the form of a ship. This ship was placed in the constellations and called Argo. In Egypt this was called Sothis or the Star of Isis.³ This very well connects the Arga and Isis the Saviour—the ship in which the seed of nature was preserved. The Egyptians, Greeks, and Romans, all had festivals in the spring season to the ship of Isis.⁴ Ausonius thus speaks of it :

Adjiciam cultus peregrinaque sacra
 Natalem Herculeum, vel ratis Isiacæ.

2. I have not succeeded to my mind, in unravelling the allegory of the Argonautic expedition. I think it probable that we must look for a translation of some Eastern words into Greek: such, for example, as Salivahan into Staurobates, or Meru into the thigh of Jupiter. Now, the ship Argo is clearly the Arga of India, or Omphalos, in which *voyages of salvation* were made. Jas-on the Captain is *IHΣ-on* or the Saviour, Sun, Bacchus—and Hercules one of its passengers, (who took the command after the death of *IHΣ-on* or Bacchus,) is Heri-clo. Minerva or Divine Wisdom invented the ship, the Argo, or *Αρχη*, or *Αρχα*, and supplied its pole, or mast, or Linga. The Nautæ or sailors went to the Golden or Holy Chersonesus, to seek a golden or holy apple, or golden fleece of a Ram, or, perhaps, fleece of a Golden Ram; for the Greek equally means *apple* and *fleece*. I can have no doubt that the allegory relates to the Lamb, the knowledge of which was necessary to salvation, or to the apples of Genesis, which were desirable to make one wise unto salvation. I do not consider it of very great antiquity, and perhaps Newton may be right as to its date. It is the remains of a history of sacred character, like the *Iliad* and *Gesta Romanorum* or *Æneid*. “ All the religious institutes of the highest antiquity, of which we have
 “ any account, were delivered in poetry, and under the shape of history, real or fictitious.”⁵
IHΣ-on or Bacchus, the Sun in Taurus, was killed by the Linga falling upon him; but Heri-clo, or the Sun in Aries, survived the voyage and obtained the fleece. In all this there are evidently the links of a chain—but, to complete it, some are still wanting. The plays of *Æschylus* and *Euripides* are mystic representations connected with this history or mythos, and I much fear our

¹ Argha the Sun, in Sanscrit.

⁴ Vide Apuleius.

⁵ Mason Good's Job, Pref. p. lxxxvi.

learned Greek scholars are every day making the mystery more impenetrable, by endeavouring to make the plays speak the language of common life, and by not attending to their mysterious or hidden meaning. It is not to be supposed that our learned men can safely make any emendations, without understanding the meaning of the mythos, which is what they never attempt. They merely suppose that the heroes, for instance Prometheus, are men deified—or, the *seven* against Thebes, the story of a war. Not a single word ought to be changed from the old manuscripts; all corrections ought to be in the notes, but not one in the text. I have no doubt whatever that the first books of Genesis, the Maha-bharat, the Argonautic expedition, the Iliad, the plays of Æschylus, and the Æneid, are all different ways of telling the same story.—Substantially the same mythos was at the bottom of all, and of that mythos the constantly-revolving cycles are a most important part. It is a drama, in which there were to be a new siege of Troy, new Argonauts, &c., as described by Virgil: but whether these renewals were to take place every 6000, or 1000, or 600 years, cannot be known with certainty—the book does not tell us. It seems probable, I think, that it was every 1000 years, yet this is attended with great difficulty; and even if it were every 6000 years, and exactly the same things were to recur, morality would be destroyed,—such a degree of fatalism would follow as would destroy all freedom of will and moral responsibility; therefore, I think, human actions must have been left to a certain degree of discretion. But perhaps in reply to this observation it may be said, and I fear said with too much truth, that morality is not always the first object considered by the projectors of religious systems. The Mohamedan predestinarians reconcile fatalism and morality.

It is possible, I think, that these astronomical religious systems arose like all others from accident and circumstance. The astronomical basis is quite clear, and probably the astronomers or astrologers were the first priests. Every circumstance tends to confirm this. The more early we begin our investigation the more clearly we find the astrological taint in every religion. The Mosaic system forms no exception; for, if magic were forbidden to the people, like the casting out of devils among Christians, it was reserved to the priests, as the Joachin and Boaz, and the recurrence of the sacred numbers proves. This readily accounts for any little incongruities or inconsistencies; indeed, I think these inconsistencies render my account or theory the more probable; for we have certainly never yet seen or heard of any system whose origin *was*, or whose present form *is*, unaccompanied by inconsistencies. Every one knows that our favourite Protestantism was only a covenant of peace; and if I were a zealous supporter of *things as they are*, I would recommend the King, as we no longer persecute the Papists, to send to the Romish Archbishop of Dublin, and request him to place his hands on the head of his brother of Canterbury. These two Reverend Fathers in God will know what I mean; if they do not, they may examine the once famous or infamous Lambeth papers.

3. In Japan, Buddha is adored with the words NAMU AMIDA BUTH, which means *Adoration to Amida Buddha*, the word *Namu* is a corruption of *Nama*, meaning *adoration*, in the Japan and Sanscrit languages.¹ This Indian word, I think, will exhibit to us a very remarkable proof of the identity of the Indian and Italian religions. The learned Bartolomæus says, *Nama Sebesio Deo Soli invicto Mitræ*, adoratio Sebesio (Shibæ vel Shivæ) Deo soli invicto Mitræ, et apud Muratorum inscriptionem repertam in Villa Tiburtina Hadriani, quam mihi clarissimus vir G. Zoeta communicavit, et quæ ita se habet: *Soli invicto Mithræ, sicut ipse se in visu jussit refici, Victorinus Caes. N. verna dispensator numeni præsentis suis impendiis reficiendum curavit, dedicavitque NAMA cunctis..... Nama adoratio unde sensus inscriptionis est: dedicavitque adorationem cunctis,*

¹ Barthol. System. Brach. p. 308.

seu ut cuncti eum adorent. Hæc inscriptio ac vocabulum *Nama* non solum inter Brahmanes vulgarissimum est, sed et ipsa adorationis formula, quam semper in ore habent. Sic Gannavadye nama adoratio Deo Gannavadi. Shiva Shivāya nāma Deo *Shivæ seu Sebesio adoratio*, dimanat enim vocabulum *Nama* a verbo—namadi *adorat*, namasi *adoras*, namami *adoro*, &c., &c.¹ The explanation of this word confirms what I have said in my *CELTIC DRUIDS* respecting the Sanscrit language in Italy. It probably came along with the God Ganesa or Janus, and the Saturn-ja and the Pallistini, or Palæstrina, or Sacrum Preneste, and the name of Itala or Bull. Great numbers of *VERY* ancient pictures of the Bambino are to be seen in Italy with the inscription *Deo Soli invicto*, and also numbers of inscriptions with the words *Nama Mitræ invicto*.

I must now request my reader to look back to Chapter VII. Section 8, page 758, and he will there see that the name of the God worshiped at the temple of Bal-ii or Tripetti, the crucified God, called the wounded in the side, is called *Om Sri Ramāya Nama*, the word *Sri* being one of the names of Cristna, and *Om* of both Buddha and Cristna; then to look to section 4, and consider the five sacred and mysterious syllables of Avyar in the Kaliwakam, which is, in the Tamul language, *Na-ma-si-va-yah*, and he will instantly see, that they are the same as the Italian Sebadia, a most extraordinary and decisive *proof* of identity, in the Mithraic Christian mythoses of India and Italy. The root of Sabasio is Sab, the plural of which means the Planetary bodies possessing wisdom,—the disposers. The word Sab, (see Chap. VI. Sect. 11, p. 716,) Cleland has told us, means *wisdom*.

4. Many of the Gnostics maintained that Christ only *appeared* to be crucified: in this they also varied from most, but not from all, of the Romists. But whether the faith of the Gnostics or that of the orthodox, from whom they varied, were the original faith of the Eastern Cristnas and Salivahanas I cannot discover—the *pious* or the *prudent* Orientalists of Calcutta have kept from us, or have not been able to give us, the Pouranas of Salivahana or Wittoba, from which we might have known it.

Several of the texts of the Gospel histories were quoted with great plausibility by the Gnostics in support of their doctrine. The story of Jesus passing through the midst of the Jews when they were about to cast him headlong from the brow of a hill, (Luke iv. 29, 30,) and when they were going to *stone* him, (John viii. 59, x. 31, 39,) were examples not easily refuted. These were fair argumenta ad homines of the Gnostics, even though they did not receive the four Gospel histories of the orthodox. But though they did not admit the genuineness of these histories, they did not deny the authenticity of many parts of them: in this, being exactly like the Manichæans and the Mohamedans.

It is necessary that I should notice another doctrine of the Γνωσις, which like the doctrines developed in my first book respecting the Trinity, &c., arose from the application of common sense to the objects of surrounding nature. The philosophers observed that all animals were the same in respect to animal life as man, but of the possession of reason they appeared to be void. From this they were induced to believe in two souls or animæ—one the living principle dying with the body; the other, the superior one, which first emanated from and then passed by metempsychosis through several gradations before it was finally absorbed into the essence of the Creator. That this should be found in the Bible is what we might reasonably expect, and, accordingly, it may be found in great numbers of places, under the terms ψυχη and πνευμα. This has been very satisfactorily proved by Mr. Ed. King, in the fourteenth note of Vol. III. of his *Morsels of Criticism*. This gave rise to a very refined part of the doctrines of some of the

¹ Barthol. System. Brach. p. 195.

later Gnostics—that the *Xρησος* of Jesus, or the superior anima, descended into him in the form of the Dove, when he was baptized in Jordan, and left him before his crucifixion, and that only the human part remained. From this, I think, arose a very recondite species of mysticism. He was *Xρησος*, the being *κατ' ἐξοχην benignus*, the Logos, the *Σοφια*, the *חכמה hkme*. He was also *Xρισος the crucified*. He was also *Κηρυξ the Herald, the Sent of God*. He was also *Cris, black*, his native colour, as we find him both in India and Europe; and, when identified with the Sun, he is, as Apollo, &c., &c., always *black*. It is for this reason that the busts of the twelve Roman Cæsars, are often black, though the drapery is white—persons having the same divine character as the twelve successors of Jacob,¹ the twelve apostles of Jesus Christ, the twelve Imaums of Persia, the twelve apostles of Hakem Bemrillah, the twelve apostles of Mani; but above all the twelve Lucumones of Etruria or of the country of RAZENA, who are shewn by Mons. Creuzer to have been *Prêtres de la Lumière possédés, inspirés*.² Here the *Raz-ena* or *Ras-ena*³ is very remarkable. All these were supposed to have a certain portion of the divine spirit, or the superior anima, incarnate in them, more than other men; or, in other words, to be divinely inspired.

Nothing can be more certain than that Julius Cæsar, born at the same time as one of the Vicramadityas of India, was thought to be a divine incarnation, and that when he was assassinated, the belief in an incarnation was transferred to Octavius. These were not copies, but the results of astrological calculations respecting the renewed cycles, noticed by Virgil, which taught the professors when the new cycle would come—and then superstition taught its votaries to look out for some person—the Ahmed Om, the Desire of all Nations. And the times of the Indians and Romans agreed, because Cæsar had adopted the Chaldean Calendar and Calculations; that is, the Calendar of North and South Colida of India, which is really the *true* Calendar, as is at once apparent by calculating backwards from the equinox, as now placed in the last degree of Aquarius, $25 \times 72 = 1800$. The circumstance of identity in the period of the Jews of Sion, or the Judaites of the Siones, as proved by Cassini, of the Chaldeans or Colidei of Cochin, of the Romans and Julius Cæsar, and of the Christians,—the 25th of December, for the solstice and birth of the God, is no bad proof of the universality of the mythos. If this be not proof, what would constitute proof? The subject of the Chaldean correction of the Calendar I shall discuss hereafter.

The Gnostics held that, “To deliver the soul, a captive in darkness, the Principle of Light, “the Genius of the Sun, charged with the redemption (*λυτρωσις*) of the intellectual world, of “which the Sun is the type, manifested itself among men; that the light appeared in the dark- “ness, but the darkness comprehended it not; that, in fact, light could not unite with darkness; “it put on only the appearance of the human body: that at the crucifixion Jesus Christ only “appeared to suffer. His person having disappeared, the by-standers saw in his place a cross of “light, over which a celestial voice proclaimed these words: ‘The Cross of Light is called “‘Logos, Christos, the Gate, the Joy.’” I consider that the book of John contains clear and abundant proofs, that the original doctrine, though perhaps the secret doctrine of the Romish Church, was uncorrupted Gnosticism,—the Pandæan religion of the Golden age, when no icons were used, and when the Gods had no names. How they then were supposed to exist will be clearly explained in a future book.

¹ Ishmael, from whom the Arabians descended, had twelve sons, who formed twelve tribes, like Abraham, Isaac, and Jacob, and the twelve tribes.

² Liv. iv. p. 220, Liv. v. p. 394.

³ I construe Raz-ena, *country of wisdom*.

The doctrine of emanations was undoubtedly the universal, though, perhaps, in very early times, the *secret* doctrine. The passage which I have given in Book II. Chapter III. Section 5, from Deuteronomy, clearly and unquestionably proves that it was equally prevalent among the Jews as among all others of the oriental nations; and, as a proof of this, and strongly confirmatory of my whole system, the passage is of the greatest importance.

The Cabalistic doctrine of the later Jews is exactly consentaneous to the construction which I have put upon Genesis. It accounts for the origin of things, by making them emanations from a First Cause, and, therefore, pre-existent. They suppose all things to be at last withdrawn into the First Being, by a revolution or restitution to their first state; as if they believed their $\eta\sigma\phi$ *oin sup*, $\epsilon\upsilon$ Soph,¹ Fountain of Wisdom, or First Being, to contain all things. This *En Soph* may also be the same as the Greek Ου and $\Sigma\omicron\phi\iota\alpha$, Wisdom of the generative power, Ου . From this Being all things are supposed to proceed by effluxes or emanations, like rays, and when the rays are redrawn the external world perishes, and all things again become absorbed in God. *He hideth his face; and they are troubled; he taketh away their breath, they die, and return to their dust. He sendeth forth his spirit, and they are created; and he reneweth the face of the earth.*² All this harmonizes perfectly with my translation of the first verse of Genesis.

The expressions in several places are decisive in my favour. *Who can find out the Wisdom of God? Wisdom hath been created before all things, and the understanding of prudence from evermore.* Ecclus. i. 4. Here is most clearly the $\eta\kappa\mu\epsilon$ *hkme* and $\beta\iota\eta$ *bine*, the first two Sephiroths. Again, *The word of God most high is the fountain of Wisdom*—Ecclus. i. 5—the *En Soph* is here most clearly. Again, *I was set up from everlasting, from the beginning, or ever the earth was.* Prov. viii. 23. Here the word *everlasting* is clearly a mistranslation: the Hebrew word only means *a long time*, but not *for ever*, without commencement. This is an admitted fact.

I do not flatter myself that I can unveil all the secret mysteries of the Cabala of the ancient Israelites, long since buried amidst the ruins of their temples. But yet I think we may be justified in believing that such men as Moses, Zoroaster, Pythagoras, and Plato, had a religion in its fundamental principles, consistent at least with common sense, and altogether different, as they themselves always asserted, from the mythoses which they tolerated among the vulgar. If we take this view of the subject, we shall find in the *triune* doctrine nothing inconsistent with reason and sense.

The following is the form of adjuration, which Cyril and Justin Martyr give to Orpheus, but which John Malela and the author of the Paschal Chronicle ascribe to Thoth or Hermes-Trismegistus. The difference, however, is immaterial: for the Orphic and Tautic systems were fundamentally the same. In the Paschal Chronicle, the oath is exhibited in the following terms: “I adjure thee, the Heaven,³ the wise work of the great God: be propitious. I adjure thee, “the voice⁴ of the Father, which he first spake, when he established the whole world by his “*counsel*;⁵ the voice of the Father, *which he first uttered, HIS ONLY-BEGOTTEN WORD.*”⁶ I think this completely proves the truth of my theory. The doctrine of Hermes-Trismegistus was

¹ Matter, Ch. iv. p. 403.

² Psalm civ. 29, 30; Universal History, Vol. I.

³ These are the Samin of Genesis, *the disposers* endowed with understanding or wisdom. G. H.

⁴ Logos. The Targums constantly use the word ממרא *mmra* for יהוה *ieue*, for which Philo uses Λογος . I believe this *m-mra* is nothing but the *Maria*, with the Monogram preceding it. The books of the real Apocrypha are full of these doctrines of Wisdom and of Masonry. G. H.

⁵ i. e. *wisdom*. G. H.

⁶ Logos. G. H.; Faber, Pag. Idol. Vol. I. p. 229.

precisely the same as that of the Hindoos respecting the destruction and renovation of the world—that nothing is destroyed, but only changed in form.¹

5. In the Christian religion, as in all others, the tangible or worldly sign of the Holy Spirit or Ghost was supposed to be wind, or air in motion; the Dove its emblem. Thus it is said in John xx. 22, *When BREATHING ON THEM, he said to them, Receive ye the Holy Ghost.* As air in motion was the tangible or sensible sign of the *third* person, so the solar, ethereal or spiritual fire was the sign of the *second* person of the Trinity—*Wisdom, Buddha, Protogonos.* By *Wisdom* Aleim formed the planetary system. By *Ruh, קריש רוּחַ qdis ruh,* the Holy Ghost brooding on the waters, he communicated the generative and prolific faculty, which, without moisture, can in no case exist. And, in all cases, by the Holy Ghost or Spirit, or air in motion, regeneration was supposed to take place.

The brooding of the spirit on the face of the deep; the brooding first explained by Bishop Patrick, has a clear and direct allusion to the Orphic Egg which the Bull opened with his horn:

Taurus cum cornibus aperit annum.

In a similar manner the Logos or Word had its rise. How did God proceed when he made the world? (Let it not be forgotten that man has his image.) Did he use his hands? No: he spake the *word* and it was made. He gave the *word* and the effect followed. By his *word* he made it. The *word* existed before the creation. The *word* was *first*, the world instantly followed. Thus John says, “In the beginning was the word, and the word was with God, and “the word was God.” Here we have the Trinity of the Oriental, the Platonic, and the Christian mystics. The ancient mystics thought that God gave the word and formed the world from previously-existing matter; the modern ones thought he created it from nothing. Hence the anxiety shewn in their creeds to seek for terms sufficiently clear to express this idea. Hence they have run into the nonsense of *begotten before all worlds.* What jargon! WORD BEGOTTEN! Let us suppose a second person of the Godhead. What should cause him to be called Word? Why not any other arbitrary name? That which I have described was the origin of it. When God gave the *word* it was *wisely* given. It was *wisdom* itself. Hence again, *wisdom* was the first emanation from the divine power. It was identified with the *word.* It was not a creation. It was an emanation. And what was an emanation? No one knows. Here man gets out of his depth: and whatever he might do before, he now begins to talk nonsense, unless he avail himself of a simile, and speak of *an emanation* as a ray of the Sun.

In a former section I have said, that the doctrine of the Creator, Preserver, and Destroyer, arose from the creating, preserving, and destroying powers of the solar ray. This was, I believe, the origin of the doctrine: but when the mind of man improved, and he discovered that the sun was a *creature*, not a *creator*, he was, by a very natural process, carried up to another being, from whom all blessings flowed, the Creator of the Sun itself, and of whom he could form no idea; and he called him, perhaps not improperly, ILLUSION; for the moment he began to form an idea of the Creator, like a phantom, like the baseless fabric of a vision, it vanished away. It was *Maia, illusion.*² But to this unknown Being man gave the attributes, which, in the first instance, he had given to the solar ray, and he gave them with every appearance of truth and justice—for we all know that our Creator is our Preserver, and that destruction is creation throughout this our world, in every case to which our knowledge extends. From this sublime doctrine came

¹ Cudworth, *Intell. Syst.* p. 326.

² Porphyry says, a ring-dove was sacred to *Maia*, who is the same as *Proserpine*, and the Goddess *Night*, and is at the summit of the intelligible and intellectual order. *De Abstin. Lib. iv. Sect. xvi.*

first the Father; *secondly*, the first-begotten Son, the Logos, Divine Wisdom, the Saviour; and *thirdly*, the *Ἐρως*, the Divine Love, the Spirit of God, under the emblem of the mild and affectionate Dove, the type of the most interesting of all passions. The passion itself is closely allied and assimilates to the character of the Creator—the spirit of God though destroying, yet destroying only to regenerate and restore to existence.¹ Here at last open upon us views of our Creator most beneficent and profound: hitherto hidden under mythoses and incarnations, and every species of base and degrading anthropomorphism. And now I think we may perceive two creators, preservers, and destroyers, unceasingly confounded: *first*, the immaterial Trinity, a *Trinity of abstractions or attributes*. The second, the Sun, the material Trinity. First, the Father, the Logos, and the Holy Ghost; the second, Brahma, Vishnu, and Seva—the *second*, nothing but incarnations of the *first*; the second, the Sun with his corporeal properties being the object of *vulgar* adoration—the first, the Father, Logos, and Holy Ghost, only known and adored by *philosophers*, in the adyta of the temples.

With most of the ancient philosophers an opinion prevailed, that the soul of man was a portion of the universal mind; that from it the mind of man emanated, and that to it, ultimately, it would return. From this very refined doctrine arose all the incarnations, however degrading. A portion of the universal mind, of divine wisdom, of the protogonos, became instilled into a human being. Thus it is evident that every human being endowed with more than usual wisdom, talent, or excellence, might not inappropriately be said to exhibit an example of an incarnation of the Divine Mind, or of a portion of the Divine Mind. Thus he was of two natures—the divine and human; as the first, as Divine Wisdom, he was *πρωτογονος*, the first-born Son of the Father, into whom, at his death, he would return. In these refined doctrines, held by such men as Plato, I think we may discover a Trinity, neither inconsistent with reason, nor incomprehensible, like that stated by Athanasius and others.

In Book V. it was observed, that there were thousands of incarnations. This was because every soul or mind was an emanation from what Plato called the *Το Ου*; thus it was the incarnation of a part of the *Το Ου*—an emanation from the *Το Ου*, incarnate. It was there observed, that Cristna was thought to be something more than a common incarnation. This opinion was merely sectarian. Every sect thought so of its favourite Avatar; though it did not deny other sects to have had Avatars,—as in the case of Mohamed.

Thus every person who possessed any striking superiority of mind or talent, would be said to be inspired, or to have a portion of the Divine Mind incarnated in him; and this accounts for the great number of incarnations both among the Hindoos and Jews; for some of the Hindoos say that the Supreme has been incarnated vast numbers of times. This is well matched by the worthies of the Jews, who have either been born miraculously, or translated to heaven, or in some way have been preternaturally endowed. Either their history or their names among the Jews shew them; thus Enoch, Elijah, Elisha, &c. And it was, perhaps, in this way, that Buddha and Cristna, who were merely the Sun, were confounded with the minor incarnations. Then, to what do all the incarnations of Buddha at last amount? Evidently to a refined Metaphysis—

¹ Jesus Christ says, John xii. 24, "Except a corn of wheat fall into the ground and die, it abideth alone: but if it die it bringeth forth much fruit." And Paul in allusion to the esoteric religion says, "That which thou sowest is not quickened except it die; so also is the resurrection of the dead. It is sown in corruption, it is raised in incorruption." 1 Cor. xv. 36, 42. Here is the Metempsychosis. Elias was thought to have returned again in the person of Jesus. The esoteric doctrine may be perceived constantly, but, as might be expected, it requires close attention to discover what was hidden with the greatest care. The Hindoo doctrine of the Metempsychosis was thought by ancient Rabbis of the Jews to be described in Genesis. *Dust thou art, and to dust thou shalt return.* (Maur. Hind. Ant. Vol. IV. p. 275.) Here again displaying the Hindoo origin of Genesis.

to a figure of speech, an allegory—but an allegory in its foundation true, and in its superstructure beautiful—the Barasit of the Cabala, which will be explained hereafter.

Plutarch, in the treatise, in which he shews that pleasure is not attainable, according to Epicurus, has this passage: “When, through inspiration, we appear to approach very near to a “divine nature.”¹ The incarnation of the Holy Spirit was not unknown to the ancient Romans, as, by the description of it, it may be found attributed to them and the ancient Egyptians, by Plutarch, in his life of Numa. The following is the answer stated by Manetho,² to be given by the Oracle to Sesostris; and whether there ever was a Sesostris or not, it proves that the doctrine existed: “On his return through Africa he entered the sanctuary of the Oracle, *εν ὑπερηφανια*, “saying, Tell me, O thou strong in fire, who before me could subjugate all things? and who shall “after me? But the Oracle rebuked him, saying, *First, God*; then, *the Word*; and with them, “*the Spirit*.”³ Here we have distinctly enumerated God, the Logos, and the Spirit or Holy Ghost, in a very early period, long previous to the Christian æra.

I expect the spirit of bigotry will excite some of the priests to represent the Trinity here displayed as horribly wicked, because it does not come from St. Giovanni Laterano or from Lambeth. And no doubt they will put on their spectacles to discover some minute differences between it and their Trinity of Incomprehensibles.⁴ But I would fain hope that the liberal part of Trinitarian Christians will pay no attention to them, as the two systems are evidently at the bottom the same. And I should have much pleasure if I could entertain hopes that it would (abandoning the modern doctrine of the Atonement) be acceded to by the Unitarians; who are in fact a society of philosophers, endeavouring to receive as much of the orthodox Christianity as their enlightened understandings will permit them. I hope these philosophers will not, with the fanatics, endeavour to narrow the door of the mansion of eternal life, but will endeavour to throw it open as wide as possible. The mansion is large and has room for all. This is a *wish*, but I confess, I must admit, that it amounts not to an *expectation*.

6. After a very careful consideration I feel quite satisfied, that the doctrine of Plato, of Philo, and of Moses, or the first chapter of Genesis, is fundamentally identical with the doctrine of the Trimurti of India; but, as might be expected, indeed, as it must necessarily have happened under the circumstances of the case, in some particulars and its minor details, corrupted or changed. But to point out the exact particulars in which they differed, in their minute details from the real original, I conceive to be absolutely impossible, because we have not the means of examining both sides of the arguments used in the disputes which arose about these doctrines. All our writers, and the authorities from whom they draw their materials, are partisans; so that our *miscalled* histories, (*miscalled* if by a history be meant an impartial account,) are not to be relied on. I know no better example of this than Enfield's History of Philosophy. The partisan is visible in almost every page.

Mons. Matter has given an account of the Gnosticism of Philo. Though in some places rather confused, I think no one can deny its identity with the Eastern doctrines which I have unfolded, and with the first chapter of John.

L'Être Suprême est, d'après Philon, la lumière primitive, la source de toute autre lumière, l'archétype de la lumière, d'où émanent des rayons innombrables qui éclairent les ames. Il est l'ame du monde, et, comme telle, il agit dans toutes ses parties.

¹ Taylor's Max. Tyr. p. 271.

² Ap. Malal. Lib: i. Cap. lv.

³ Nimrod, Vol. I. p. 119.

⁴ The word used in the Athanasian Creed.

Il remplit et limite lui-même tout son être : ses puissances et sa vertu (*αρεται*) remplissent et pénètrent tout. Il est sans commencement, *αγεννητος* ; il vit dans le prototype du temps, *αιων*.

Son image est le *Λογος*, forme plus brillante que le feu, ce dernier n'étant pas la lumière pure. Ce *Logos* demeure en Dieu ; car c'est dans son intelligence que l'Être Suprême se fait les *types* ou les *idées* de tout ce que doit s'exécuter dans le monde. Le *Logos* est donc le véhicule par lequel Dieu agit sur l'univers. On peut le comparer à la parole de l'homme.

Le *Logos* étant le monde des idées, le *κοσμος νοητος*, au moyen duquel Dieu a créé les choses visibles, il est le *Θεος πρεσβυτερος* en comparaison du monde, qui est aussi Dieu, mais un Dieu de création, *Θεος νεοτερος*. Le *Logos*, comme chef des intelligences, dont il est le représentant général, est nommé archange : et comme type et représentant de tous les esprits, même de ceux des mortels, il est appelé l'homme type et l'homme primitif.

Dieu est seul sage : toute sagesse émane de lui, comme de sa source : *la sagesse humaine* n'est que le reflet, l'image de la sienne : on peut appeler *sa sagesse* la mère de la création, dont Dieu est le père. Il s'est uni avec la *σοφία* ou la science ; mais non pas à la manière des hommes : il lui a communiqué le germe de la création, et elle a enfanté le monde matériel.¹

Here, in the last paragraph is very clear the Wisdom of Genesis, the Buddha of India, and the *Αρχη* and *Logos* of Plato, Orpheus, Zoroaster, and John.

After this, in page 66, Matter adds, Dieu créa le monde idéal. Ensuite il fit réaliser, d'après ce type, le monde matériel par son *Logos*, qui est sa parole—that is, by the agency of the *Logos*. Again, Le *Logos* est non-seulement créateur, il est encore le lieutenant de l'Être Suprême, c'est par lui qu'agissent toutes les puissances ou tous les attributs de Dieu.

My reader, I think, will have no difficulty in perceiving why Plato, whose doctrine was the same as that of Philo, was called by the early fathers the *divine* Plato. Of the monde idéal named above, I shall presently treat.

7. The following observations, unwilling observations of the learned Beausobre, support me in my opinion, that a secret and mystical meaning was intended in the use of the word *αρχη* instead of the word *πρωτος*, by the LXX and by JOHN, on many occasions. On this point I think we may safely conclude, that the whole of the Gnostics coincided in opinion with the Valentinians, and may thus be added to the very weighty authorities which I have before given, that the word *Rasit* of Genesis meant *Wisdom*. Les Valentiniens n'entendoient pas comme nous les premières paroles de St. Jean : selon eux l'Apôtre n'a pas dit, (*Το εν αρχη ην ο λογος . . . οι απο Ουαλεντινις ετως εκδεχονται. αρχην γαρ τον μονογενη λεγουσιν . . . τον δε λογον τον εν τη αρχη τβτον τον εν τω μονογενει.* Eclog. Theodot. ap. Clem. Al. No. VI.) que *la parole étoit au commencement*, mais que *la parole étoit dans le Principe*. Cette explication paroît bizarre, absurde, et elle m'a paru telle à moi-même, avant que j'eusse reconnu l'origine. Je ne doute point, qu'elle ne soit fausse, mais on ne peut la traiter d'absurde, sans condamner celle que les pères ont donnée aux premières paroles de la Genésis. Car si Moïse a voulu dire, que *Dieu a fait le Monde par le Principe*, qui est son Fils, pourquoi S. Jean n'auroit-il pas dit aussi, que *le Verbe étoit dans le principe*, qui est son Fils unique ? Il est évident que S. Jean imite Moïse. Si donc le *Rasit* de Moïse n'est point le *commencement*, mais le *Principe* actif de toutes choses,

¹ Matter sur les Gnostiques, Vol. I. p. 63.

pourquoi l'arché de S. Jean, qui a la même signification, ne seroit-il pas aussi le *Principe* et non le commencement ? Voilà, si je ne me trompe, l'origine de l'opinion Valentinienne.¹

Again, in another place M. Beausobre confirms my observation that *Αρχη* meant more than *beginning* : “ La contradiction ne vient peut-être que de l'équivoque du mot *Αρχη* ou *Principe*, “ que les uns ont pris dans un sens que je nommerai Philosophique, et les autres dans un sens “ *Politique*. Dans le sens Philosophique *Αρχη*, *Principe*,² signifie un être éternel, qui a eu “ lui-même la cause de son existence, et qui est cause que d'autres existent : mais dans le sens “ *Politique*, *Principe* veut dire un être qui a du pouvoir et de l'autorité sur des sujets qu'il com- “ mande.”³ Between the two meanings of *Αρχη* here is a fine distinction.

A very learned and excellent friend, one of the priesthood, in Yorkshire, once warned me against drawing any consequences from the word *Αρχη*, a word, which, he said, is “ quite clear “ and perspicuous.” But he will not deny that this word was the Greek fountain-head, from which all the streams of the Gnostics flowed—the foundation on which all their learned, abstruse, and ingenious systems were built.

The Maia of India is correctly the Maia of Greece, and means *grandmother* or *first mother*, Maia *Αρχη*, the first mother, head mother, the fountain head—and thus it became the chief or head, Acro-polis, of the city—the seat or residence of the sacreds—the place where the Palladium and Sibylline oracles were deposited. *Εν αρχη ην ' λογος, και ' λογος ην προς τον Θεον, και ο Θεος ην ο λογος. Ουτος ην εν αρχη προς τον Θεον.* Had the word *first* or *beginning* been meant, *πρωτος*, as I have before observed, would have been used : but this would at once have negated and overthrown all the magnificent and beautiful (however defaced in later times) superstructure erected on this word, as meaning *divine wisdom*. Very properly was the book containing the exposition of this word called *Γενεσις*, from the word *Γινομαι*, *gignor*, *nascor*. When I use the terms beautiful and magnificent as applied to the doctrines of the Gnostics, I beg my reader to observe, that I do not include in these terms the nonsense given us by the Greek and Latin fathers for their doctrines. Very little which they say can be received. We know very little of the Gnostics ; but the little we REALLY do KNOW is beautiful.

When I find learned men believing Genesis literally, which the ancients, with all their failings, had too much sense to receive except allegorically, I am tempted to doubt the reality of the improvement of the human mind. What says the celebrated St. Augustin ? “ That there is no “ way of preserving the literal sense of the first chapters of Genesis, without impiety, and attri- “ buting things to God unworthy of him.”⁴ But St. Augustin has only followed the learned Origen, who has maintained that the literal sense of the history of the creation in Genesis is *absurd and contradictory*, and in this opinion M. Beausobre has shewn he was probably supported by St. Basil and Gregory of Nyssa.⁵

8. Long had I despaired of finding the meaning of the mysterious John, Joannes, Jonas three

¹ Beausobre, Hist. Manich. Liv. vi. Chap. i. p. 291. *Αρχη* scribitur aut pro *Αρχης* : aut Hesychio corruptum. Siracides, Cap. xi. 3, exemplar imposuit. Perger. Lex. Hesychii.

² *Αρχας δε λεγομεν δια τωτο, οτι ουκ εστι τι πρωτερον, εξ ε γεννεται.* Plut. de Plac. Phil. Cap. ii. p. 875.

³ Beaus. Hist. Manich. Liv. iv. Ch. vi. p. 89. In the above-cited passage, Beausobre is speaking of Marcion, who, I have no doubt whatever, maintained the same doctrine of the Maia *Αρχη*—the Trinity and Emanations of the other Gnostics. The disputes of their opponents prove it.

⁴ De Genes. cont. Manich. Lib. ii. 2, ap. Beausobre, Hist. Manich. Vol. I. p. 285.

⁵ Philocal. p. 12, *ibid.*

days buried in a fish, the fish Avatar Vishnu, or Oannes treading on the head of the serpent—bruising the serpent's head, see Fig. 32, Janus or Jana, Iona or Columba having the same name as Jehovah, Ii, and of Jove, the Yoni, the opposite of the Linga—the sect of the Jains the successors of Buddha, John the Baptist, John who should live till Jesus came again, Joannes, Butta, Deus, the Prestre Johannes,—persons seemingly so difficult to reconcile or account for—when I discovered that the old Sanscrit word for Wisdom or Γνωσις was Jnana. This at once lets in a flood of light upon us,—gives us a clue to all the mysterious Johns. It is no difficult matter now, to see what was meant by John, thought to be a second Elias, by Baptism communicating the יונה *iune* or *dove* or *divine wisdom* (when the fire was kindled in the water) to Jesus, who was also thought to be a second Elias,—to Jesus the successor or (as believed by the Jews the) reincarnation of Elias, and also of the משה *mse* or Messiah Moses—to Oannes or Vish-nu treading on the serpent's head. Hence we may see why the Ras of Abyssinia was called not only Joannes, but also Butta and Deus; he was at once the God, Buddha, and Wisdom. Like the *Lama*, or *Lamb of Tibet*, he was a renewed incarnation of Divine Wisdom. John was the precursor or pre-possessor of Divine Wisdom; the holy inspiration was incarnate in him, and he transmitted it to Jesus. It was that inspiration which Moses transmitted to the Saviour Joshua or Jesus, the son of Nave, and which Elias transmitted to Elisha by delivery or investiture of the Pallium, and which Mohamed left with his cloak to Ali. John was an announcer of the Saviour, a preparer of the way, a fore-seer or fore-knower; hence he was endowed with wisdom, and called John.

Georgius mainstains that the Tibetan word, which he renders *Gnios* in Latin, and which means *Sapientia*, is the same as the Γνωσις of Greece, and *Agnitio* in Latin. If the Gn be written as the Hebrew letter was corrupted in Tibet, it will be *γ o*, the next letter will be *' i* or yod, and both read from right to left OI *the Deity of Wisdom*. In the same way the Jnana for Wisdom in the Sanscrit, is Oana. Here we have the Oanes. We must not forget that the Pushto or Syriac is the dialect of Tibet, where IE is spelt IO. The Gan-esa, God of Wisdom, of India, is Jan-esa, Jan—the Saviour. The Indian Gnia is the object of Wisdom; *Gnia* in Irish is Wisdom. *Gnia* is also a tree, synonymous to *Feadh* or *Ved* also a tree.¹ The *Gnia* is evidently *Gnosis*. *Feadh*, or *Fiodh*, *Foedh*, *Fodh*, *knowledge, a tree*, in Sanscrit *Ved*.²

It is a very striking and curious circumstance that in the time of Banier the Christians of St. Thomas, of whom I have so largely treated, were so clearly known to be the descendants of the Apostle St. Thomas, that they were called the Christians of ST. JOHN!³ Thus we have those good people converted by Bartholomew, Thomas, and John. Now I believe the two last are true. They are the followers of the Χρησος or Jnana incarnate, first in the Twins or Tamuz, then in the Bull, then in the Lamb, then in the Pisces or Comasene. They are the Mandaites or Nazou-reans of St. John of the East—of the coast of Cali or Core-manda-la. They were the Nazarenes or Nasoureans of Carmel of the Western Syria, and the Christians of St. John.

Nimrod, amidst an immense mass of nonsense,⁴ in which he calls those *silly* fellows who have not all his advantages, (such, for instance, as knowing how the ghosts of the dead, at this day, move from place to place by *passing* instead of *walking*,) delivers a very striking opinion, which shews that truth will sometimes make its way to the understandings of the most devoted of devotees: “The fanatical votaries of king Attila the Hun, the Christians of St. Thomas in India, “the Stylite Simeons, the apostate Nestorians, and the personage called Presbyter Johannes,

¹ Vall. Coll. Hib. Vol. IV. Part i. pp. 81, 82.

² *Ib.* p. 80.

³ Tavernier's Travels, Vol. II. p. 74, ed. fol.

⁴ Volume II. p. 502.

“ appear to have been Manichæan Buddhists. The worship of the cross was coupled with that of the sword and of fire; the fiery sword being cruciform.” I do not doubt that this sword was the cross. It was the Labarum. It might be a sword for the soldiers; it was a cross, probably a crucifix, for the initiated. That the sects above named were Manichæan Buddhists I have little doubt: but they were also Templars and Rossicrucians, or followers of the eight-point Red Cross, or Naazir, or Natzir-eans, or followers of the United Red Cross and Rose of Sharon, all the same under different names.

What could induce the learned Nimrod to suppose the Buddhists Nestorians, I do not know; but he would scarcely have made the assertion without reason, and it agrees very well with the Buddhist missions to the tomb of St. Thomas, &c., &c. I have no doubt that he was right.

The Jains, often called Jins, are admitted to be a sect of Buddhists. I suppose they took their name from the Sanscrit word Jnana, *knowledge* or *wisdom*, or from the word Gin or Jin, which signifies *creating spirit*, and is evidently the same as the other—the Buddha or Logos. Thus they are followers of Jin or Jinistes as we should say.

The Jains have the same system of time as the Brahmins. They divide it into periods, which have been succeeding each other without interruption, as Dubois¹ says, for the sake of making them Atheists, from eternity. The periods are divided like those of the Brahmins in the proportion of 4, 3, 2, 1; and, as usual, disguised under millions of years. They hold the existence of one supreme, invisible Deity. His first attribute is *Ananta Gnanam*, or *wisdom infinite*. This Gnana speaks for itself, and shews us that, at the bottom, the Jains are precisely the same as all the other sects.²

We must never lose sight of the admitted fact, that the Indians have as many sects as the Western nations, and are as much in the dark respecting the origin of their religions. But no person can observe their fine astronomy and the occasional scraps of ancient learning which are every where met with, and doubt that they have had an ancient system, beautiful and refined, before their present gross idolatry existed. *That* was at the time when the Abbé Dubois admits that they had no images.³ If, indeed, it were not for the hope of discovering their ancient lore, their present nonsense, such, for instance, as that lately given to the world by Mr. Akerman, on the Buddhists of Ceylon, would not be worthy the attention of any man of common sense for a single moment. Few persons, in making an estimate of the present corrupt state of religion in India, allow enough for the circumstance of the country having been for thousands of years a prey to civil war and foreign conquest.

In the Ayeen Akbery, it is said, that the first *fire temple* was built by a man very famous for the austerity of his manners, called Ma-hakmah. Here I think no one can help seeing the חכמה *hkme*, or wisdom of the Hebrews in the Sanscrit.⁴ There is a country of Prester John in Indian Tartary. This is nothing but the Prestre Jnana or John.⁵ The real Prestre John is probably the Grand Lama,⁶ and, κατ' ἐξοχην, THE prestre—THE incarnation of Jnana or Wisdom.

I shall again be told that this is very mystical. Indeed, it is very mystical, just as much so as the whole character of John the Baptist; as much so as the descent of the Dove upon Jesus, and the fire in the river; the transfiguration; the declaration, that while John decreased Jesus increased; and many other passages in the Gospel histories,—secret doctrines kept by the priests from the people, and for the honest explanation of which to them, the people will be in a fury with me.

¹ P. 557.² Dubois, p. 552.³ Part iii. Chap. i.⁴ Vide Vallancey's Coll. Hib. Vol. VI. p. 135.⁵ Marsden's Marco Paulo, Ch. liv. n. 455.⁶ Ib. p. 450.

9. In the Desatir, which, though perhaps in some places corrupted, is a very ancient book of the Persians, the Creator is called *Yesdan*. Here we have the $\Upsilon\text{H}\Sigma$, 608, of Martianus Capella, and the word *Dan* or *dana* or *dani*, in the plural *Yesdanis*. In Book IX. Chap. VIII. I have shewn that all the sacred rivers had the name of *Don* or *Adonis*. This *Adonis* is the Hebrew *Adonai*. But how came Adonis to be called *Don*? The *Don* is the Persian *Dan* of the word *Yesdan*, and means *Wisdom* or *Wise*. Thus *Adonai* is used for the *Logos*, by the Jews, instead of יהוה *ieue*. It is curious to observe that, generally, when the names of God in the different languages are sifted to the bottom, the Sun or the idea for *Wise-dom* is found. In *Yesdan* we have *Dan* the Sun *Wisdom*, and the solar Cycle *Yēs*, 608.

From the meaning of the word *Jnana*, which is evidently the same as *John*, we see why the chief of Abyssinia was called by the words *Johannes*, *Butta*, *Deus*, and *Ras*. They serve admirably to explain one another. In Persia, as it has been observed, the chief of the state is called *Sophi*. This is evidently the Greek $\Sigma\phi\iota\alpha$, and is the same word as the name given by the Simonians to their object of worship, which they called by the two words *Sophia* and *Achamoth*. These are nothing but the same word for *wisdom* in Greek and Hebrew, and the Samaritan בְּקִמְאוּתָה *bqmaute*, the first word of Genesis.¹

Stanley² says, the Chaldæans were called *Ashaphim*. I can see in this nothing but the plural of the *Sophi* of Persia preceded by the emphatic article. It is the Arabic *Shaphoun*. It is an example of a Hebrew or Chaldee word to us lost. It is the plural, perhaps of the word סִפ *sup*, (the name of the Red Sea, which is called *SUP* or *weedy*, because, as I have said before, it grows no weeds,³ and red or *Erythræan* because it is green!) Then *Ashaphim* will mean *the wise men*.

10. If my reader look back to Book IX. Chap. X., he will find a prophecy by Apollo, of Miletus, of a divine incarnation crucified by Chaldæan judges. They were the Chaldæans of Colida. The mythos is that described in this country by the Jesuits. It was the crucifixion of Crisen and Salivahana and St. Thomas, of the Christians of Crisen. There is opposite to Rhodes, near to Miletus, a Λιμνη Χρησα , *Portus Cresso*: this shews the Christian mythos. After this we can scarcely doubt the meaning of the name of the town of *Jasus*, which is not far from Miletus. There is also a place called *Calinda*, which I suppose is a *Colida*. Not far from one of the places called *Ephesus*, in Asia Minor, there is a river called *Indus*, near a port called *Cressa*. Here there were a *Telmessus*, and a *Termissus*, at the foot of which was a *Solyma*, in a district called *CABALLA*,⁴ and a *Carmylessus*, also a place called *Callidua*.⁵ This is *Callida*. Not far distant is a *Calymna* or *Calmina*. This is clearly *Calamina*, the name of the Indian St. Thomé. On the same coast there are *Panionium*, and a mount *Chalcis*, and the island *Chalcia*; also, a little inland, a *Tripolis*, and *Thyatira*, called *Ak-Hisar*—that may be, *Akn-Æsar*, *wisdom of Cæsar*. There are also the island of *Argiæ*, and *Erythræa*, *Nyssa*, *Phoenix*, *Larissa*, *Malea*, and, in the island of *Chios*, a *Delphin*. In short, here is all the mythos both of Thrace and Cape Comorin. And the whole of it is in the country known to the Indians by the name *Roum*—the country where *Troy* stood, and from which the Romans obtained their *Pessinuncian* stone. The *Erythræa*, the *Solyma* under *Termissus*, in *PAN-IONIA* of Asia Minor, its *Ararat* in *Phrygia*, the source of its river, with its twelve provinces, whose inhabitants all came to worship at one temple—(probably *Di-jana*, *Di-Iana* at *Ephesus*—*Qu. Div-Ioni*, *Div of Ionia*?) the *Pandæa* of Athens, with its twelve kings, &c., which I consider as a part of Thrace, where we found the widows sacrificed, &c., and the *Pandæa* of North India, with its *Solyma* in *Cashmere*, &c., and

¹ Matter, Vol. II. p. 407.

² Chal. Phil. Ch. iv.

³ Vide Shaw's Travels.

⁴ D'Anville.

⁵ Plin. Nat. Hist. Lib. v. Cap. xxvii. xxviii.

the Pandæa, and Salem, and Tripoly, &c., of Cape Comorin, I consider of nearly the same date. There are also a lake of Sinda and river Indus, and a Myndus and a Palæmyndus. I can make of these nothing but the Mundus and the Palæ-si-mundus of South India. Also, a town and district called *Alabanda*, (like the Nau-banda of India,) and a river Chrysorrhœa.¹ In Asia Minor, not far from Soluma and Cabala, there are a promontory of Cholidonia and Insulæ Cholidoniæ, and, at some distance, on the same coast a Chalcis; when I reflect upon the Cullidei or Chaldei, and the island of Columbo or Iona, &c., in Scotland, I cannot doubt whence its name of Caledonia was derived. Caledonia was the sacred name of the country of the Callidei, their common names Scots and Picts.² This was the country of Miletus, whence General Vallancey found from the Irish records that they and the Scots came, for stating which he only got laughed at. How can any thing be more striking than the two Caledonias? I am surprised the General overlooked this.

11. The first word in Genesis of the Samaritans is אֵלֶּיךָ אֵלֶּיךָ
בְּקִמְאוֹתָהּ
ETUAMQB

as given in Drummond and Walton. In the *בְּקִמְאוֹתָהּ* *b-qmaut-e* of the Samaritans we have most clearly the *בְּחִכְמוֹתָהּ* *b-hkmut* or *by wisdoms* of the Jews, or the *חִכְמוֹהָ* *hkme*, wisdom, in the plural number, only a little corrupted, and with the definite or emphatic article placed, as is very common in the oriental languages, at the *end* instead of the *beginning* of the word; and herein is an additional proof, if it were wanting, of the truth of my theory of the first word of Genesis. In defiance of any quibbling about the Koph in the Samaritan instead of the Heth and Caph, I must say I cannot conceive how any candid Hebrew scholar can deny this. But this most ancient of the Versions removes all doubt, as to which of the meanings *Wisdom* or *Beginning* ought to be adopted. Simon Magus was a Samaritan, and it cannot be denied that the Gnostic doctrines are more apparent among the Samaritan heretics than among those of the Jews, which is what we might well expect, from the first word of their Genesis.

The rendering of this word by the Chaldee Targum of Onkelos is very peculiar, and deserving of a little more consideration. The word is *בְּקִרְמִין* *b-qdmin*; the root is *קִרְמִין* *qdm*; and it is a noun in the plural number. I believe it may mean *by the solar powers*, as we should scarcely like to say *by the suns*, *קִרְמִין* *qdm*, meaning *East* or *Sun*. And we cannot render the term *by firsts*, if we would wish to go to the sense of *first*. Besides, if it had meant the adverb *FORMERLY*, it would have been *קִרְמִין* *qdm*, not the noun plural, *בְּקִרְמִין* *qdmin*. But why has not Parkhurst noticed this rendering of the Targum? I answer, for the same reason that he has not noticed the meaning given to the word *Rus*, of the Jewish Genesis, by the authorities I have quoted for the consideration of the reader. Though *קִרְמִין* *qdm* has not the meaning of *Sun* given to it by Parkhurst, yet I think several examples might be shewn where it must mean *sun* and not *eastern*. At all events, we may be very certain that, if the rendering of *Beginning* could have been supported, Parkhurst would have given it.

12. The Jews have in their Cabala a being called Adam Cadmon. The word Cadmon they do not understand, but they make him a secondary being, formed by the Supreme Being to make the world. It is evidently the *בְּקִרְמִין* *qdmin* of the Targums just treated of, which, in the singular number, is *קִרְמִין* *qdm*. The Jews know as little of the meaning of the word Adam—making it to mean *red*; but in the Sanscrit I am told that its meaning is *first*; Adam Cadmon, then, will be

¹ Plin. Nat. Hist. Lib. v. Cap. xxix.

² Consult Lingard's History of England, Vol. I. p. 54.

the *first* FIRST, which is nonsense ; therefore we must go, I think, to my explanation for the Cadmon just now given. As the words *rasit* and *arche* had several meanings, so had the word Adam : it meant *man* and in the Sanscrit it meant *first*, and in the Ethiopic it meant *beautiful*—all applied to the Adam of Genesis—differences naturally arising from distance of place and lapse of time.

We constantly read in the Gospel histories of denunciations by Jesus Christ against the traditions of the Pharisees, by which they made the word of God of no avail. The real traditions to which he is meant by the text to have alluded, were those which were afterwards collected and made into what was called the Mishna and Gemara, and collectively the Talmud—chiefly a collection like our Term reports of adjudged cases—by which decisions and forced explanations of almost every point of their law were made, I doubt not, as Jesus Christ said, to its utter subversion. But this our *learned* divines know very well was not what was meant by the Jewish Cabala, or at least (I care not about the term) by the esoteric religion, which was, in its first principles, common both to Jews and Samaritans. The latter, however, had, of course, nothing to do with the Mishna or Gemara. But the word חכמה *hkme* of the Jerusalem Targum, and the *qmut* used in the Samaritan first verse of Genesis, serve as a key to all the esoteric religions of the world. The Samaritans, as we have seen, and as might be expected, utterly rejected what were commonly called the Traditions ; that is, the judgments in Jewish law-suits : but they did not reject the secret meaning of the first verse of Genesis, which carries with it the Hindoo, Gnostic, and Manichæan doctrines of emanations. It was to conceal this fact, that the Lexicographers have concealed the most important of the meanings of the word Ras. This is not of little importance, because it completes the proof of the ancient nature of the Triune God, which was in reality the foundation on which all the mythoses of the world were built.

13. Perhaps my reader may think that I have introduced him to a science sufficiently recondite ; but, nevertheless, I must carry him a little higher—to a mystery still more profound. When we reflect upon the identity of the Trinitarian doctrines of Plato, of Orpheus, or the Indian or Sindi Orpheans of Thrace, and on the Trimurti of the Indians, and on the Trinitarian explanation which I have given of the word Aleim, of the first verse of Genesis, we cannot deny the justness of the observation of Numenius, the Platonician, that *Plato was but Moses speaking Greek*, which will be greatly strengthened by what I shall now develop.

Although we have found in Egypt the Goddess *Neith*, or their *Minerva*, the *Nat* of North India ; yet we have not found the Ras or Wisdom so marked as in most other countries : but, nevertheless, it was really there, as we might expect. Plutarch says, that *Isis* means *Wisdom* ;¹ that her temple is called *Iseion* : alluding to that knowledge of the Eternal and Self-existent Being which may be there obtained. Again, in Section 3, she is said to be no other than *Wisdom*, the Σοφία and the Μητις of Greece, which is repeated in Section 60. She is also called *Athena*,² which we have formerly seen was the same as *Helena*, and meant *Wisdom* ;—in fact, *Athena* is only the reverse way of reading the word *Neithe* a little transposed. Plutarch adds that Plato asserts, that *knowledge, wisdom, understanding*, had their names in the Greek language originally from a word having the same signification as *Isis*. But if *Isis* were *Wisdom*, *Wisdom* was the *Logos* or *Saviour*, and then my derivation of *Isis* from *γω iso, to save*, is very appropriate. Again³ he observes, that *Isis* is frequently called by the Egyptians *Athena*, signifying, in their language, *I proceeded from myself*. In the same section he says, that *Typho* is called *Seth*. In

¹ Squire's Trans. de Is. et Osir., Sect. 2.

² Sect. 62.

³ Ib.

section 9 he says, that Isis is called Minerva.¹ We must also observe that, if Plutarch be right, the word *Σοφία* was not Greek. As we have found this word in use among the Chaldeans, the Persians, and the Arabians, we need not be surprised at this remark of Plutarch's. There can be no doubt that the names Isis of Egypt and Isi of India, were derived from the word of the ancient language *ישו* *iso*, to save, and meant Saviour, and consequently Logos as the Saviour: yet, as the Logos, according to my system, it ought to mean Wisdom, as we have every where seen the Logos to mean Wisdom, and this it did, as I have just shewn.

14. The Brahmins maintain that time does not exist with God.² Then what we call *time* must be created, or called, or produced into a new existence. And as it is certainly a thing, an existence, or ens, of the very first importance, why have we not heard of it before? The ancients cannot have overlooked it. This will never be believed: then where is it in their histories? I ask, is it not hidden under the *רוח* *ruh*, the third person of the Trinity,—the destroyer,—with its emblem, the Cobra, having its tail in its mouth? Every thing which can be predicated of the destroyer, both as destroyer and regenerator, can be predicated of time, past and future. Of this, deep reflection will satisfy any one who will use it. Then I see no other way of accounting for the absence of all notice of Time, than by supposing it a part of the secret doctrine. Euripides says,

Πολλα γαρ τικτει
Μοιρα τελεσσιδωτειρ'
Αιων τε Κρονε παις.³

“Fate that bringeth the end of things, and Æon (or an age) the son of Saturn produce many “strange events.” Saturn was the father of Jupiter as Time.⁴ Seva, of India, the destroyer, was clearly Saturn or Time. In the early periods of the world, man was believed to have been in a state of innocence and simplicity, and consequently of happiness. This was the reason why those times were called Saturnian, as Saturn meant *time past* as well as *time future*: and as we have found the same mythos in Guzerat, Syrastrene, and Pallitani, as we have found in Italy, we find in each the same Satrun-ja or Saturn-ia.

From the intimate union, perhaps I might say identification, of cycles with the first igneous hydrogenous emanation, visible to us in the Sun, I think Time was not supposed to exist previous to the Sun's existence—they were supposed to be contemporaneous—and it was thought that the *past*, the *present*, and the *future*, had no existence with reference to the *Το Ου*. I believe that Time and Space were considered but as properties or qualities of the first emanation,—that with it they existed, and, with their absorption into the *Το Ου*, they would cease to exist. This doctrine is of all others the most refined. From the narrow limits of our faculties we can form no idea of the non-existence of time or space. I believe we can form no idea of the state of the Supreme Being except it be in a state of actual rest, or of moving to form or reform. In like manner, in our present weakness of understanding, we can have no idea of happiness, except as compared with its correlative, misery. God may, in some other world, cause beings to exist in some other way; but if he cause man, he must cause him as he is, or he will not be man, and happiness and unhappiness, like substance and shadow, must go together, and go along with him. When Mr. Schegel says that nothing can be more opposed to each other than Pantheism and Emanation, I

¹ For Isis, see Drummond on Punic Inscription.

² Asiat. Res. Vol. II. p. 115.

³ Heraclid. 900.

⁴ Cudworth, Book i. Ch. iv. p. 485.

quite disagree with him.¹ When we get to the foundation of the two, nothing can be more easy than to reconcile them. No doubt, among the theorising philosophers of India, doctrines of Pantheism and Emanations, like those described by Mr. Schegel, will be found; for what is there that is *absurd* or *wise* in nature, which is not to be found among them? But if the fundamental and refined principle have been lost or corrupted in the debasement which took place in later times in the human intellect in India,—if the real, secret, refined doctrine along with all the sciences, have been lost, this does not change its nature or prove that it did not exist.

15. We will now try to penetrate into the Sanctum Sanctorum of the ancient philosophers of India, Egypt, Syria, and Greece; the highest and the most important part of whose philosophy was a knowledge of the Πατηρ αγνωστος, called by Plato Το Ον, WHOM NO PERSON HAS SEEN EXCEPT THE SON² —the παν into which at last all nature was to be resolved. The knowledge of this Being, (so clearly marked in the words of Jesus,) which I now proceed to exhibit to my reader, is named or mystically alluded to in almost every page of the Gospel histories; which might, not improperly, be called histories of the parables of Jesus Christ.

In all the histories of the early Christians, called by the Paulites of Rome or Papists heretics, we read that they held the doctrine, that the God of the Jews was not the Great God, but only a Dæmon or Angel. We shall now see the origin of this doctrine, which has always been mentioned by Lardner and others in such a manner as completely to deceive their readers—themselves, probably, not seeing the nature of it: and in the explanation will be evident the secret doctrine of the Aleim and Rasit, as I have expounded them in Book II. Chap. III. And the injustice will be apparent which has been done to the sages of antiquity, in supposing that they could entertain a belief only fit for minds enfeebled by a modern education, that the book of Genesis was to be understood literally.

The first and most profound secret of the Cabala or Gnosis was the knowledge of the real Cosmogomy of the universe, as held by these philosophers. At the head of all beings and their works, the ancient Gnostics or Sophees placed a certain person called Μια Αρχη; also called Πατηρ όλων, Πατηρ αγνωστος, Ακατονομαστος. This name, *mia arche*, Mons. Matter³ justly says, “Nous rencontrons dans tous les systèmes Gnostiques, et en général dans toutes les doctrines “*de l'ancien monde, dans l'Inde comme en Perse. Tout est émané de cet être, tout doit rentrer “ un jour dans son sein.*”

This πατηρ αγνωστος has been said to dwell *en profunditate*, in the *Bythos*, or *Βυθος*, or *Βαθυς*, in profound *darkness*. This was because the sun and light itself, as well as all other matter, was supposed to emanate from him. Supposing that he was thought to be light itself, yet still the light was thought to dwell in darkness. If I be asked to explain how this could be, I answer, It is *illusion*, or, in other words, it is above the human understanding—it is the Illusion of India.

But before I proceed, I must make an observation upon the ancient Pantheism. Every person, who has reflected upon this subject, knows very well the impossibility of forming an idea of the mode in which mind or spirit brings matter into existence, if ever it bring it into existence at all. The term generation is but a figurative expression, used to describe an idea which a person does not really possess, whatever he may fancy—of the destruction of matter man is equally ignorant. The result of deep and profound reflection upon these points produced the doctrine of Pantheistic emanation. Men supposed that matter emanated or flowed from the Deity, like rays from the

¹ Pritchard.

² Gospel History.

³ Hist. Gnost. Vol. II. p. 266.

sun, eternally flowing from a never-failing spring, and perhaps that all matter consisted of rays of light or fire in different combinations, or under different circumstances.

When the ancient philosopher reflected deeply upon what he saw constantly going on around him in the great laboratory of nature, he could not help perceiving, that by one process or other every substance was capable of being resolved, and was in fact constantly resolving, into an invisible, impalpable fluid. As this fluid was too refined to be subject to any of his senses, of course he could form no idea of it; but yet, reasoning from analogy, he was induced to believe in its existence. The fluid here spoken of was called an ethereal or a spiritual fire,¹ and I suppose more nearly answers to the Galvanic, or Electric, or Magnetic fluid than to any thing with which I am acquainted. When matter was reduced back again by igneous purification, or, in other words, when matter was resolved into this invisible fire as it had originally flowed or emanated from the first $\text{To O}\nu$ it approximated to, perhaps arrived at, a state to be ready for re-absorption into the first $\text{To O}\nu$ again. Thus when re-absorbed, all nature was God, as God had been all nature previous to the emanation. And what was the $\text{To O}\nu$? *A Point*, the centre of a circle whose circumference is no where, and its centre every where; Illusion of which our senses cannot lay hold.

We have here the Pantheism, *the grossness* of which, more or less misrepresented, serves to horrify those priests who teach literally what the words *literally* express, that the $\text{To O}\nu$ walked in the garden, or strove to kill Moses at an inn, but failed. This is the Indian doctrine, which its professors call *illusion*—an expression which appears to me to be beautifully characteristic: for when, step by step, we arrive at last at this point, every thing appears to slip from under us, or to pass away into nothing—because the subject is beyond the reach of our senses. And now we may see what these ancient philosophers meant by their doctrine of the eternity of matter; for when it was absorbed into the $\text{To O}\nu$, how could it be any thing but eternal? By being absorbed, it was not supposed to be destroyed. I need not point out how admirably this elucidates the doctrines of Ammonius, that *all the sects of philosophy, including the Christian*, were at the bottom the same, and originated from one and the same source.

I think much of the objection to the doctrine that *ex nihilo nihil fit* has arisen from the meaning of the word *nihil* or *nothing* being misunderstood. According to the doctrine of emanation, I think it is not absurd. If I possess an idea of emanation, and do not deceive myself, it *follows* from that doctrine, because all existences emanate from the $\text{To O}\nu$ and re-immerge into it, and it always exists; therefore, matter or existences will always exist, and without the $\text{To O}\nu$ cannot exist.² As the $\text{To O}\nu$ cannot *but exist*, matter cannot *but exist*; for it will always exist, either as an emanation, or in the $\text{To O}\nu$.

As every being was an emanation, and would ultimately be re-absorbed into the $\text{To O}\nu$, so every being was a part of the $\text{To O}\nu$; and on this principle the adoration of animals was attempted to be excused. On this principle, also, we find the inferior emanations, the Trinity, or its Persons, receiving epithets, in strictness applicable only to the $\text{To O}\nu$. For instance, I am Alpha and Omega. And under the belief in the existence of the $\text{\Pi\alpha\tau\eta\rho\ \alpha\gamma\omega\sigma\tau\omicron\varsigma}$, concealed

¹ Unmeaning words as here applied, because applied to no idea, man having, in fact, no idea of this fire—too refined to be cognizable by his senses.

² This has been well explained by Thomas Burnet, in his Arch. Phil. Ch. vii., and shewn to be the doctrine of the Orientals, and of the Cabala or tradition of the Jews, and of the Essenes, who, he observes, according to Philo, had their knowledge from the Brahmins.

every where, a studied mysticism is observable, which can in no other way be accounted for. This was an effect which must necessarily have followed the concealment of the First Cause from inquiring but uninitiated philosophers, if the secret of initiation were to be preserved.

Mr. Mosheim has judiciously observed, that in Philo passages in direct contradiction to each other may be found, for the evident purpose of concealment.¹ As he was confessedly of the school of Plato, which used this practice, as I have shewn in my first Book, it is what might be expected, and serves to account for various difficulties, otherwise unintelligible. It was for the purpose of concealing his system that Plato adopted the practice of maintaining doctrines in direct contradiction to each other; and thus he furnished plausible grounds for misrepresentations by his enemies, as the initiated only could understand him. It is to a want of knowledge of this principle or practice of Plato's that many of the difficulties in his works are to be attributed. Let this be kept in remembrance by his reader, and they will instantly disappear. But the practice is admitted by his commentators. So completely confused is his *Timæus*, that the learned translator, Mr. Taylor, of the work upon it by Proclus, in order to make sense of it, is obliged to propose 1200 emendations of the text. Without meaning any reflection on my learned and excellent friend Mr. Taylor, I must observe, that, as we know he had a system to support, and that he is not exempt from human frailty, we cannot safely admit, as a matter of course, that his translation and amended version is not in some degree coloured by his system and his 1200 emendations. And I must further observe, that if Plato intended to write enigmatically or in parables, if the 1200 emendations have for their object the rendering of the text *clear*, I much fear that, instead of *emendations*, many of them must be classed as *corruptions*.

Plato does not profess to have been the inventor of his own doctrines, but in his epistles he says that he has taken them from ancient and sacred discourses—*παλαιοι και ιεροι λογοι*. Mr. Colebrooke says, that many of the tenets of the Hindoos are the same as those of the Platonists and Pythagoreans, and admits that the latter appear to be the learners, rather than the teachers of them.² It is, indeed, very notorious that those two men went to the East to learn, not to teach.

To return to my subject. It must not be expected that the grand secret, the knowledge of the highest and last secret of the initiated, of the illuminati, will be found clearly described in any work written by one of the initiated.

I have no doubt that the Cabalistic œconomy was similar to that of a lodge of Freemasons, and proceeded to the top by gradation,³ and that masonry, which was a part of it, existed long

¹ Comm. Cent. ii. note Vidal, p. 170.

² Asiat. Trans. Vol. I. p. 579.

³ No Royal-Arch Mason will find a difficulty in seeing that part of his refined secret mysteries have been in ancient times closely connected with the profound doctrines exposed to public view in this book. Whether at this time they be the same as those described in this book, whether they be changed, and if changed, how much changed, and when changed, are points of which, for very obvious reasons, I do not inform my reader; and I now warn him, that from any thing here said he will not be justified in drawing a conclusion. But he must recollect that nothing but a miracle could preserve Masonry from change in so great a number of years. If he be, however, as I hope he is, an honourable, upright, and benevolent man, and wish to know the truth by working himself up to the Royal Arch, he then will know it. More I add not here: the uninitiated have no business to know. To the initiated I need not tell it. But every one may rest assured, from the great number of benefited and respectable priests, both of the Roman and Protestant Church, who are admitted to the highest degrees of Masonry, that there is nothing in it at this day which can militate in the slightest degree against the Christian religion as held either at Rome or at Lambeth.

About the middle of the last century, the Masonic societies shewed themselves in Germany in a more prominent way than they had done for many generations, and, under the guidance of several able and philanthropic men, both Catholic and Protestant priests and laymen, it is probable gave encouragement to resistance to the united despotism of

before the time of the Exod from Egypt. In the time of Moses, the three elders of what might be called the chapter, were Moses, Aholiab, and Bezaleel, the son of URI, the son of Hur,¹ and to them only was the highest secret confided. When Jesus Christ was (what is called) transfigured or metamorphosed, (is not this mysterious and esoteric enough?) there were present *Jesus, Moses, and Elias*, the three *teachers*, and the three apostles, *Peter, James, and John*, the three *learners*, of the Gnosis or secret knowledge, which was transmitted by them to posterity with the greatest care.

The knowledge of the High Secret could only be obtained by the uninitiated by implication; but still from unprincipled high-priests, or high-priests afflicted with insanity, against which accident nothing can for an absolute certainty guard a secret society, it may have transpired in the course of thousands of years. The close similarity of the Jewish and Indian systems, and a comparison of them with the mysterious expressions of Philo and Plato justifies what I state to be the high mystery, and of which I shall presently finish the explanation. This ignorance of the grand secret accounts very well for the attributes of the *πατηρ αγνωστος* being often given by writers to the second and third emanations—accounts for the lines of distinction not being well drawn, between the different orders. A confusion of terms is clearly perceptible, though the principle is equally clear to a person understanding the secret doctrine. This confusion arose, I do not doubt, partly from ignorance, partly from design.

The ancient Jews maintained, that their Cabala was revealed by God to Moses, and was transmitted verbally; it being too sacred to be written. (This is very like Freemasonry.) This has been unmercifully ridiculed by Christians, but though often discussed, no *cool, philosophical, and unprejudiced* inquiry into the meaning of the tradition, has, to my knowledge, been attempted. This has arisen, in a great measure, from the mistake in the meaning of the words respecting traditions attributed to Jesus Christ in the Gospel histories: his justly-merited anathemas against the traditions of the elders, as just now described, being confounded with the traditionary Cabala. It is evident that the Cabala had not any tendency, in any way whatever, either to make the law

the Roman Pontiffs and the Royal tyrants of Europe, which, in France and Germany, had risen to such a pitch as to be no longer tolerable. The activity of the Masons being discovered, it produced the persecution of their order all over the continent; and it was much increased in consequence of several publications of three persons called Zimmerman, Baruel, and Robison. The first was decidedly insane, and the other two were operated on by groundless fears, in such a manner as to be in a state very little better, and which rendered them totally incapable of distinguishing between the destruction of religion, and the destruction of the base system to which the professors of religion had made it subservient. They all admit that the British Masons had nothing to do with these hydra-headed conspiracies, and endeavour to draw a line between them and their Continental Brethren, being unable to see that the difference was not in the societies, which were the same, but in the countries—Britain being comparatively free and happy, the other countries enslaved and miserable. Although the object of Masons is not politics, I flatter myself that if our King were to disperse the Parliament by means of a body of Swiss soldiers, the Freemasons would not be the only people in England who would not lend ALL the assistance in their power to effect his overthrow.

Some years ago a treatise was written on Masonry by a gentleman of the name of Preston. It contains much useful information; but as he had not the least suspicion of the real origin of Masonry, and as his book is merely a party performance to claim for the London Grand Lodge a priority over the Lodges of Scotland and York, to which it had originally no pretension whatever, except the possession of power, I need take no more notice of it than to observe, that it is very well done, and is very creditable to its author, who, probably, was sincere in what he wrote. The Masons of Southern England, *until amalgamated with those of York*, were, in fact, only a modern offset of some other Lodge. A few Masons of other lodges associating formed a lodge. The reason was this—the Druids of Stonehenge, Abury, &c., &c., were all killed or banished to the Northern countries or Wales by the Romans. Thus we have no Culdees in the South. For though companies of masons came to build the cathedrals, they had no hereditary settlements after the time of the Romans, like the others. The Masons or Culdees of York might have returned from Scotland after their persecution was over, probably in the time of Constantine the Pagan Christian.

¹ Exod. xxxi. 2—6, xxxv. 30—34. The Jewish Sanhedrim had three presidents.

of no avail or not, and therefore could not have been what was meant by him. Indeed, I maintain that there is not in the Gospel histories a single expression of Jesus Christ's recorded against the Cabala. But there are many which pretend to shew that he was perfectly acquainted with the existence of the Father, who dwelt in the darkness, whom NO PERSON HAS SEEN EXCEPT THE SON, and that he considered himself as an incarnation of one of the persons of the Trinity.

The Jewish Cabala, that is, the Cabala of the tribe of Ioudi—the Cabala of the numerous temples of Solomon which have been mentioned, was divided into two parts—the one consisting of the natural philosophy, called Mercavah; the other of the moral, called Barasith. We will first explain the natural philosophy of the system; and first, the *creation*. There were various creations. The first creation was effected by way of emanation; and this was the idea or plan of the *universe*, not the little globe only which we inhabit. From this proceeded the second, which was the Trimurti or Trinity which formed the $\Sigma\mu\mu\mu$ *smim*, our world and system, (but not herein including the *stars*)¹ by the agency of one of its own persons, who was the $\Lambda\omicron\gamma\omicron\varsigma$, or Sophia, or Metis, or Buddha. The doctrine of the divine idea is distinctly expressed in the laws of Menu.² It was also clearly the doctrine of Plato and Philo, i. e. of the Cabala. But of course it was not expressed in the book of Genesis, which professed to be only a book or description of the generations or cosmogony of our globe and of the planetary system with which it is connected—viz. the regeneration of the planetary system and the earth. It would clearly have been inconsistent with the object of Moses to have revealed to the vulgar Jews the sublime knowledge of the Μία Αρχή or the cosmogony of the universe,³ the knowledge of the Πατήρ Αγνωστος , the Brahme-Maia, or, as the Hindoo philosopher called it, Illusion.

The Cabalistic secret of the πατήρ αγνωστος of the Jews and the Samaritans was identical with the first principle of Buddhism. The institutes of Menu⁴ say, “This universe existed “only in the first divine idea, yet unexpanded, as if involved in darkness, imperceptible, undefinable, undiscoverable by reason, and undiscovered by revelation, as if it were wholly immersed in sleep: then the sole self-existing power, himself undiscerned, appeared with undiminished glory, expanding his idea, or dispelling the gloom.” From these two beings jointly emanated the Trimurti, one of whose persons was the Sanscrit Jnana or Dschnana, which is Wisdom or the Buddha, and answers to the $\Gamma\nu\omega\sigma\iota\varsigma$ or $\Lambda\omicron\gamma\omicron\varsigma$ of the Greeks. Thus the Trimurti was not the Supreme Being, but an emanation.

At the top of all existences we find the Brahme-Maya. Here I think, generally speaking, is a mistake. Maya is likened to the wife of Brahme, but still she is admitted to be what is called *illusion*. Now, I apprehend Brahme (not Brahm) is the Το Ον , the Monad, and Maya is the idea or plan of the universe, which was the first emanation from the πατήρ αγνωστος or το ον , and which answers very well to the idea of *illusion*, into which all inferior existences are supposed to resolve, and which at last resolves itself into the το ον .⁵

¹ I beg my reader to recollect what I have said of the interpolation of the words *the stars also* in the 16th verse of the first chapter of Genesis.

² Asiat. Res. Advertisement to Vol. V. p. v.; Inst. of Menu, by G. C. Haughton.

³ And it was on this account that the stars are not named, but were, in consequence, interpolated by persons who did not understand the system.

⁴ By the learned Professor Haughton.

⁵ This is no doubt very abstruse, and will appear very ridiculous to such wise people as believe that the Το Ον “walked in a garden in the cool of the evening.” I shall be sorry if they take the trouble to read it, for it is very unfit for them. It is food which is certain to disagree with their stomachs.

But it will be said, that the first emanation from the Trimurti was Buddha, or Rasis, or Logos. True. But Buddha or Logos was Tri-Vicramaditya or the triple energy, was the Trimurti itself, which Mr. Colebrooke, and all other oriental writers, tell us the Indians held to be three persons and one God, *three in one* and *one in three*—though *three*, yet *one*; though *one*, yet *three*; Buddha in India, Logos in Greece, Ras in Syria, each being the name in the respective countries, of the Creator or person of the three employed by the three or Aleim itself to form anew or reform the world. Thus Genesis says, by Ras, or Wisdom, or the Logos, the Aleim or Trinity regenerated¹ the world; but it does not name the Supreme Being by the word Aleim. The doctrine of the *πατηρ αγνωστος*, the *μια αρχη*, the *πατηρ όλων*, the *ακατονομασος*,² the Brahme-Maia of India was never written; it was only entrusted to the Cabala—to tradition—to the *גבל* *gbl*, in the plural *גבלימ* *giblim*. It was not necessary in order to explain so much as was intended to be described to the readers of Genesis, (secret as, I am certain, Genesis was kept,) or the Persian book of Ibrahim or Sophia, to name it. This was divulged only in the highest and most secret chapter of the high or chief priests, the three past principals of the cabinet of twelve, formed from the Seventy-two, the Sanhedrim, seventy-two in number, the predecessors of the *seventy-two* (when complete) in the Romish College of Cardinals. The name of this God was like the sacred M or OM of India,—the sacred Om to be meditated on, but not to be named—M=600.

These doctrines constituted the grand article of the Cabala, and are strictly in accordance with the dark allusions or mystic expressions which we find in Philo, Plato,³ and the Gospel histories. As no religion remains unchanged, the complication, which is found in the present Cabala, was most of it probably added afterward.

All, as far as stated above, we may, I think, safely take as the *Γνωσις*: whether we can take any part of what is further stated as the doctrines of the different sects of Gnostics,⁴ by their enemies, at once ignorant, prejudiced, and malicious, may be greatly doubted. It is certain that numbers of subordinate sects among the Gnostics had arisen in the first centuries of the Christian æra, and, in fact, the pure oriental *Γνωσις* had then become complicated, corrupted, and degraded. This was a natural effect. All religions as they advance in time have this tendency. What were the opinions of the different subordinate sects is scarcely worth an inquiry, except it could be made conducive to a more perfect discovery of the ancient foundation on which the whole was built. The same corruption had crept into the Jewish Cabala. They were, indeed, the same.

Philo, in his book *de Sacrificiis Abelis et Caini*, lays down the doctrine of the Triune nature of the Deity; at the same time he states it to be a secret or mystery not, in ALL its parts, to be revealed to the vulgar. The passage is discussed at length in Mosheim's Commentaries, Cent. ii. Sect. xxxv., and it is there shewn, that the same is taught as part of the esoteric doctrine by Philo, in many other parts of his works. How strongly, and, indeed, I may say, decisively, this supports my explanation of the Aleim and the whole of the first verse of Genesis, I need not point out.

In his book upon the creation, Philo every where supposes the prior existence of Plato's *ideal* world, and represents the Deity as constructing visible nature *after a model* which he had first

¹ This is what we call begotten in our creeds. This degrading word is used to conceal the secret meaning of regenerated, which, if used, would have endangered the discovery of the secret doctrine of emanations.

² Qui nominari non potest.

³ Matter, Vol. II. p. 267.

⁴ The Jews named their books after the first word: thus Genesis was called Barasit. The Persians at their Tuct Soleiman, I have no doubt, called the same book *Sophia* or *Εν Σοφ*, perhaps meaning by *Wisdom*.

formed. He attributes to Moses all the metaphysical subtleties of Plato upon this subject, and maintains that the philosopher received them from the followers of the holy prophet,¹ and when we recollect that Plato studied on Mount Carmel this seems probable enough: but he might also get his doctrine from the Ægyptians. Philo maintains, that God first formed an intelligible and incorporeal model, after which he framed, *by his Logos*, the corporeal world. He supposes the order of the visible world to have been adapted to the Pythagorean system of numbers; but how this was done is not explained, being probably considered sacred and secret; but will be explained by me in a future book. But I think my reader will have no difficulty in believing it to be connected with the system of cycles found in the capitals of the Pillars Jachin and Boaz, the priest's garment of Pomegranates and Bells, $72 \times 5 = 360$, and $72 \times 6 = 432$. The language of Philo is accused of being obscure. This must necessarily be the case, where a person is describing part of a secret system, which he must not betray. This consideration also accounts, as I have formerly said, for the studied obscurity of Plato.

On EVERY account there is no philosopher, of antiquity, who deserves to rank higher than Philo. If any man could be supposed to understand the Cabala or secret doctrine, it was Philo. He was in the first rank of society, and of unimpeachable moral character. How foolish is it to permit the priests to run him down by their ridiculous, idle assertions, that he attempted to Platonise Moses,—that he was tainted with the Platonic philosophy, &c., &c.! No doubt he was tainted with his own philosophy, with that philosophy which he had learnt in the adytum of his temple, and which we have found with the Buddhists, with the Zoroastrians or Orpheans, with the followers of Hermes, Pythagoras, and Plato, and which was the same as the secret doctrine of Moses, a fact which was never doubted, (though not publicly known,) till modern priests, whose minds were of too mean a class to understand so sublime a system, denied it, though at the same time they were obliged to allow that the Jews had really FROM THE MOST REMOTE PERIOD, *secret doctrines*.² Their only reason for misrepresenting the doctrines and learning of Philo is this, that his doctrines place their vulgar nonsense, only fit for such minds as their own, in the shade.

But Mr. Basnage³ has examined this question, and has shewn, that there is very good reason to believe that Philo did not copy from Plato, but that he got his Trinity and Hypostases from Egypt and the East, as might be expected. Philosophers very seldom went from the East to Greece *to learn*, but they sometimes went *to teach*.

If we now look back to Book III. Chap. I., and carefully read what is there said respecting the Trinities of Zoroaster, Orpheus or Plato, and Philo, and what is extracted from Maurice, Michaelis, Marsh, &c., we shall see that it is evident, either that the whole doctrine was not exposed to the public, or was not understood by them. There is apparently some confusion in the accounts of these esoteric doctrines as might be expected: but they all fall short in the Brahme-Maia, the *μια αρχη*, the *πατηρ αγνωστος*, the *ακατονομαστος*, from which the *πρωτογονος*, the *λογος*, the *ψυχη κοσμου* or Triune God, proceeded. They do not go so far as this grand secret person, the Father whom no person hath known or shall know except the Son, and those to whom the Son shall reveal him.⁴ An attentive reader will not fail to perceive that the whole of this abstruse doctrine is a cosmogony, that is, a formation of the *universe*, a building of it up by the Grand Megalistor, the greatest and first of Masons. *Verbum sapienti*.

I think no person will deny that the system of emanation which I have unfolded is, whether

¹ Enfield, Phil. Ch. i.

² Enfield, Hist. Phil. Book iv. Ch. iii.

³ Book iv. Ch. xxiv.

⁴ Matt. xi. 27; Luke x. 22.

true or false, very refined and beautiful: it is much to be regretted that the later Cabalists and Gnostics should, by only half understanding it, have drawn it out into a tissue of the greatest and most childish nonsense, a very fair account of which may be seen in Basnage.¹

The Conclaves, in which the Cabalistic doctrines here treated of were held, were, I do not doubt, of the nature of Masonic societies, and were the origins of, or the same as, the Caldæi, Colidei, Culdees, Architectonici, Mathematici, Dionysionici, Freemasons, Templars, and Rosicrucians. In these societies the most refined doctrines were known only to a few of the select or *perfecti* at the head of the others: to this elevation they rose by regular gradation, and to this small chapter only the *πατηρ αγνωστος* was known. To these Masons it was known that the temple of Solomon with its Pillars and Pomegranates,² was only a type of the universe, a microcosm; and the Masons themselves were only workmen and servants of the great fabricator,—of the Jupiter Megalistor of the Universe. Masons were all servants toiling in their respective vocations, and rising by degrees to the knowledge of the  . And, in imitation and as types of the world, all their temples of Solumi were built. These Masons were the Cyclopes, the men who first fabricated temples, and thence became Masons. Look but at their circles of stones in twelves, sevens, nineteens, six hundreds, six hundred and eights, six hundred and fifties, their emblems on the Cyclopean ruins of Mundore, Agra, &c. The inferior Masons were the builders of the stone circles or temples, the superior ones were Megalisters, Cosmogonists—builders of worlds—or planners of temples in imitation of them. Nothing can well be devised more Masonic than the name given to the Trinitarian *Creator Δημιουργος*, of which Jesus Christ was the second person, and, therefore, the great Megalistor, or fabricator, or *Δημιουργος*.

16. If a person reflect deeply upon the circumstances in which the first priests must have been placed when the earliest attempt at building a temple was made, he will perceive that it was quite natural for them to become Masons. In order to place their structures according to the cardinal points, and their large stones according to the exact number of their cycles, they must have been possessed of all the learning of the world. I have a strong suspicion that at the first the Monastic and Masonic orders were identical. Monks were priests³ REGULARLY initiati or regulars: seculars were priests or officers of religion, *not regularly* initiati, as their name shews.

I cannot conceive how it is possible to read the Gospel histories with attention, and not to see that a secret doctrine is taught. There is scarcely a chapter without a parable. “In parables spake he unto them, that while seeing they might not perceive, and hearing they might not understand.”⁴ What can be clearer than the following passages? “He answered and said unto them, Unto you it is given to know the *mystery* of the kingdom of God: but unto them that are *without*, all

¹ Book iii.

² The pillars Jachin and Boaz had around each of their capitals one hundred pomegranates. (1 Kings vii. 20; 2 Chron. iii. 16, 17.) This fruit was selected *on account of the star-like flower, with six leaves or rays at the top of the fruit.* Parkhurst, in voce, *רמב* *rme* VII. Thus $6 \times 100 = 600$. The same fruits were hung round the priest's garment, 72 in number. Thus, $72 \times 6 = 432$. Can it be accident that these two numbers are brought out? They arise from Parkhurst's observations, but that is a consequence of which he had not the most distant suspicion; for he understood the nature neither of the 600 nor of the 432. The pomegranate was as sacred among the Gentiles as among the Jews. Achilles Tatius says, that at Pelusium Zeus Casius held this MYSTERIOUS fruit in his hand: *Προβέβληται δε την χειρα, και εχει 'ΡΟΙΑΝ επ' αυτη. Της δε 'Ροιας ο λογος μυσικος.* Ach. Tat. Lib. iii. p. 167.

³ If Eustychius can be credited, the persons who took the lead in the building of Babylon with its tower, &c., were seventy-two in number. Eutyech. Annal, p. 51, Oxon. 1658, apud Nimrod, Vol. II. p. 492.

⁴ For a complete proof that there was a secret religion, both Mosaic and Christian, concealed under vulgar allegorical histories, the last chapter of Burnet's Archæologia may be consulted.

“these things are done in parables: that seeing they may see, and not perceive; and hearing, they may hear, and *not understand; lest at any time they should be converted, and their sins should be forgiven them.*” Mark iv. 11, 12; Matt. xiii. 13—15. I notice this passage, ascribed to the essence of benevolence and charity, by our books, no further at present than to point out the doctrine of an esoteric religion or the absolute, direct authority for the opinion, that Jesus taught the existence of an esoteric religion. On other accounts I shall have much, very much, to say in my next volume respecting these words ascribed to Jesus. The part which I have marked by italics is evidently an interpolation, of ignorant, uninitiated persons, Paulites, to account for or explain what they did not understand. Mosheim¹ being obliged to allow that the Christian religion had its mysteries like all other religions, disguises it very ingeniously. When, perhaps, from the miseries of the times they became lost, their previous existence would be denied, and this was much aided by the degraded state of the human mind, at that time very fit for devil driving and exorcising, and for such pernicious nonsense as the passage in italics, but very unfit for such refined theories as those of Plato, Philo, or Porphyry.

Indeed no one can deny, that a certain mysticism reigns in every part of the Gospel histories, as well as through the Pentateuch. Every thing is taught in parables, that the vulgar seeing, might not perceive; and hearing, might not understand. No one, I think, who can read, can deny this.²

17. The transfiguration or metamorphosis, as the Greek word means, of Jesus Christ has puzzled all modern divines, as might well be expected. I will now shew what it means. Surely our divines *will* not see! Do none of them read the early fathers?

The Christian religion was divided by the early fathers, in its secret and mysterious character, into three degrees, the same as was that of Eleusis,³ viz. *Purification, Initiation, and Perfection.*⁴ This is a dry matter of fact, and this we have on the authority of, and openly declared, among others, by Clemens Alexandrinus, who it cannot be believed would have stated this if it were false,—it being a falsity without any object, and the falsity of which must have been known to all the world.

When Jesus was transfigured, an operation sufficiently mystical and esoteric I should think, he had with him only three of his disciples—James, John, and Peter. At the time of this transfiguration the secret *γνωσις*, which was, at least in part, the knowledge of the *μια αρχη*, and *πατηρ αγνωστος*, WAS BELIEVED to have been conferred on the three. And this we have again *on the indisputable authority of Clemens Alexandrinus.*⁵ From these three I have little or no doubt, that the Popes yet believe that they have the above-described secret doctrine or Gnosis, handed down in the

¹ Com. Sect. xiii. xiv.

² The word mystery, *Μυστηριον*, Mr. Cleland says, comes from the Celtic word *wist* or *wise*; which, in the sense of knowing or knowledge, which it has, he seems to think, is rather opposed to the definition of secrecy. But in this I cannot agree with him. He says it is the radical of History; but I think of *secret* history; for, originally, there was no other kind of history. It is *istory* with the mystic monogram M prefixed, and means the *istory* of Om. He says it answers to *Gheib*, which means, in Arabic, *Fable*. This is *גב* *gb*, and is the root of the word Cabala, secret or sacred tradition or history, and of Giblym. Parable is par-habul. Habul is Cabul, Cabala. This is also the same as the Faba, a fable; whence the Pythagorean precept, Abtain from Fabæ—idle stories. Clel. et voce, p. 1. Parabl *to talk*, confabulari *to talk together*. Apologue, Habul-laigh *a fable in verse*. Ib.

³ Fabric. Bibl. Gr. Vol. VII. p. 101. The systems were the same.

⁴ The Perfection applies to the expression of Jesus in Matthew: *If thou wilt be perfect*, &c., and alludes to dividing his substance with the poor, as the perfecti, or monks, always did—that is, to the order, who no doubt did distribute, after supplying their own necessities, the rents to the poor, keeping the capital or estate. Nimrod, Vol. III. p. 419.

⁵ Mosheim, Com. Cent. ii. Sect. xxxv. pp. 165, 167; Matt. xvii. 1, 2; Luke ix. 28, 29.

conclave. Peter was the first Pope or Principal of the sacred chapter of *twelve*, and of the lodge or conclave of seventy-two or Sanhedrim.

The Jews have among them the very interesting ceremony, (of the extreme antiquity of which I have no doubt, as traces of it may be found among the followers of Mithra, and of Pythagoras, at Delphi, and as the Roman Church so far very properly holds, it existed among the Judi in the time of Melchizedek,) of the sacrifice of Bread and Wine. When a master of a Jewish family has finished the Paschal supper, he breaks the bread, and along with the crater or cup, (or perhaps holy Sangreal refused to the laity, but much sought after and desired,) hands it round to the whole of his family, servants and all, in token of brotherly love. This is purely a Masonic institution, and was practised by Jesus Christ, at his last Paschal festival or supper, when he handed it round to the *close chapter* of *twelve*, of which he was Principal. Each chapter ought to consist of *twelve* companions, past masters of Lodges, and each Lodge of *seventy-two* Brethren.¹ Perhaps the piety of some Christians may take alarm at what is here said; but they will not readily persuade me that this is solely a Christian ceremony—as I find it in India, in Persia, at Gerizim, at Delphi, in Italy, and yet existing in its original and native beauty and simplicity among the Jews all over the world.

We will now explain the second part of the Cabala called *Barasit*; but it is very difficult entirely to separate the two parts. The second is what Clemens Alexandrinus,² as head of the sacred college or catechetical school of Alexandria, professed to have had delivered to him, by his predecessors; the secret doctrines which he declares were delivered by Jesus Christ himself to James, John, and Peter. Mr. Mosheim says, “What those maxims and principles were which Clement conceived himself to be precluded from communicating to the world at large, cannot long remain a secret to any diligent and attentive reader of his works. There cannot be the smallest question but that they were philosophical explications of the Christian tenets respecting the Trinity, the soul, the world, the future resurrection, Christ, the life to come, and other things of a like abstruse nature, which had in them somewhat that admitted of their being expounded upon philosophical principles. They also, no doubt, consisted of certain mystical and allegorical interpretations of the divine oracles, calculated to support those philosophical expositions of the Christian principles and tenets. For since, as we have above seen, he expressly intimates that he would in his *Stromata* unfold a part of that secret wisdom which was designed only for the few, but that in doing this he would not so far throw off all reserve as to render himself universally intelligible, and since we find him, in the course of the above-mentioned work, continually giving to the more excellent and important truths contained in the sacred volume, such an interpretation as tends to open a wide field for conjecture, and also comparing not openly, but in a concise and half obscure way, the Christian tenets with the maxims of the philosophers, I am willing to resign every pretension to penetration if it be not clearly to be perceived of what nature that sublime knowledge respecting divine matters must have been, of which he makes such a mystery.”³ No doubt Mr. Mosheim is right as far as he

¹ On the opening of the Jubilee year, the Pope, who holds many secret things, not suspected, in his *fisherman's poitrine*, acting as Grand Master of the Masons as well as of the Fishermen, striking seven blows, with a silver hammer, knocks down the sacred door. This I saw him do; and this he did as Grand Master-Mason of the world. This he did as the head of the Ras or Mysteries of the world, as Vicar of the Grand Megalistor. If an enemy of Masonry should say that the Masons are only moderns, copying in modern times from the Christian doctrines here developed, I reply, that is impossible; for these doctrines have been unknown for the last thousand years, therefore the imitation must have taken place before that date.

² Mosheim, *Com. Cent. II.* p. 164.

³ *Ibid.* p. 166.

goes; but he has overlooked or concealed the most important point of the *γνωσις*, and that which serves as a key to all the remainder, the knowledge of the *πατηρ αγνωστος*,¹ in this respect exhibiting the sagacity of Clemens and his own want of it, or his own disingenuousness.

Eusebius says, that "Our Lord had preferred Peter, James, and John, before the rest." Again, "The Lord, after his resurrection, conferred the gift of knowledge (this should be wisdom) upon James the Just, John, and Peter, which they delivered to the *REST* of the Apostles, and those to the seventy disciples, one of whom was Barnabas."² On this subject Mosheim says, "Why James, and John, and Peter should have been, in particular, fixed upon as the Apostles whom Christ selected as the most worthy of having this recondite wisdom communicated to them by word of mouth is very easily perceived. For these were the three disciples whom our blessed Saviour took apart with him up into the mountain, when he was about to be transfigured."³ But for what was this parable of the transfiguration adopted? Surely if the uncontradicted evidence of Ammonius, Clemens, and Eusebius, on the fact of the meaning of the transfiguration and the nature of the secret doctrine is not to be taken, nothing can be believed. The whole forms a rational explanation of the meaning of the transfiguration which has never even been attempted before.

The doctrine that the Christian religion contained a secret or allegorical meaning is so clearly acknowledged, laid down, and treated on as an admitted fact, by Justin, Clemens Alexandrinus, Origen, and indeed by all the very early fathers, that to attempt to give quotations from their works would be wilfully to weaken the evidence of the fact, unless I were to fill fifty pages with them: indeed, I must copy their works. I shall, therefore, say no more on the subject, for it is a point which cannot be disputed; and so the Christian religion continued till the time of Origen, when the doctrines of Paul prevailed, and Origen was declared by the Paulites a heretic for professing it.

The following passage shews the character of Mosheim. It is given in reprobation of Ammonius, while, in the mind of every philanthropic person, it carries a panegyric on him. But the doctrine of Ammonius would bring *peace*, not a *sword*. This would, indeed, be unpriestly. "But Ammonius, conceiving that not only the philosophers of Greece, but also all those of the different barbarous nations, were perfectly in unison with each other with regard to every *essential point*, made it his business so to temper and expound the tenets of all these various sects, as to make it appear that they had all of them *originated* from one and the same source, and all tended to one and the same end."⁴ The fact is, Christianity was no other than the eclectic philosophy which professed to contain that portion of truth possessed by every sect of religion or system of philosophy. How is it possible, in a few words, to make of it a finer panegyric?—a panegyric which, alas! it did not long deserve, at least in its practical operation. In another place Mosheim says, "The favourite object with Ammonius, as appears from the disputations and writings of his disciples, was that of not only bringing about a *reconciliation between all the different philosophical sects*, Greeks as well as Barbarians, but also of producing a *harmony of all religions*, even of Christianity and Heathenism, and prevailing on all *the wise and good men of every nation to lay aside their contentions and quarrels*, and unite together as one large family, *the children of one common mother*. With a view to the accomplishment of

¹ Mosheim, Com. Cent. II. p. 166.

² Euseb. Eccl. Hist. Lib. ii. Cap. i. There are some words in Mark iv. 11, which might justify a suspicion that there were three besides the twelve, but the words of Eusebius above, shew that in his time the three were believed to be a part of the twelve. Had they been an addition, the word *rest* would not have been used.

³ Matt. xvii. 1, 2; Luke ix. 28, 29.

⁴ Com. Cent. II. p. 138, N.

“ this end, therefore, he maintained, that divine WISDOM had been first brought to light and
 “ *nurtured among the people of the East by Hermes Trismegistus, Zoroaster, and other great and*
 “ *sacred characters* : that it was warmly espoused and cherished by Pythagoras and Plato among
 “ the Greeks : from whom, although the other Grecian sages might appear to have dissented,
 “ yet that, with nothing more than the exercise of an ordinary degree of judgment and attention,
 “ it was very possible to make this discordance entirely vanish, and shew that the only points on
 “ which these eminent characters disagreed were but of trifling moment, and that it was chiefly
 “ in their manner of expressing their sentiments that they varied.”¹ In this, which is a part of
 a gross attempt to vilify Ammonius, are admissions enough (which I have marked with italics) to
 the truth and beauty of his system, and to the truth of mine.

Again Mosheim says, that Ammonius taught that “ the religion of the multitude went hand in
 “ hand with philosophy, and with her had shared the fate of being by degrees corrupted and
 “ obscured with mere human conceits, superstition, and lies : that it ought, therefore, to be
 “ brought back to its original purity by purging it of this dross, and expounding it upon philoso-
 “ phical principles : *and that the whole which Christ had in view by coming into the world, was to*
 “ *reinstate, and restore to its primitive integrity, the wisdom of the ancients*—to reduce within
 “ bounds the universally prevailing dominion of superstition—and in part to correct, and in part
 “ to exterminate, the various errors that had found their way into the different popular religions.”
 Had the advice of Ammonius been followed, the prophecy of Christ would have been falsified, for
 he would not have brought a *sword* but *peace*.

I now beg my reader to recall to his recollection what I have said respecting the *Χρησος*,
 and I think he will have no difficulty in agreeing with me that originally the religion of Jesus was
Χρησ-ianity, and that it was not, in fact, until the Paulites got possession of the Papal chair,
 by a compromise, that Paul’s pernicious doctrines² were admitted into it,—by which its whole
 character was changed, and it became Christianity, such as it was for a thousand years,—quar-
 relling, persecuting, and devil-driving : and very different indeed from the Chrestianity of the
 first fathers, and from the secret doctrines of the temples of Eleusis and Jerusalem, of the Gentiles,
 and of Jesus of Nazareth, all of which were the same.

In Mosheim’s Commentaries,³ the secret doctrines of Plato and Moses are compared, and it is
 shewn *that by Clemens Alexandrinus and Philo* they were held to be the same in every respect ;
 and that it is also held, that they both are the same as the esoteric doctrines of the Christians, which
 is indeed true, if the early fathers of the Christian Church and the plain words of the Gospels can
 be admitted as evidence of what was the nature of the esoteric doctrines of Christianity. Who
 can deny the *πατηρ αγνωσως*, the Father whom *no person hath seen except the Son*,⁴ to allude to
 the Gnosis as above explained ?

There was no man in the first two centuries of the Christian æra to be preferred to Clemens
 as an authority on this dry matter of fact, that there was a *secret* doctrine and of what nature
 that secret doctrine was. He was followed by Origen, who confirmed his assertion, and was the
 most learned of all the early Christians ; and he and Clemens were at the very top—they
 were in fact the Patriarchs of the Christian community. Mosheim endeavours to disguise the
 doctrine, but the actual existence of the *Γνωσις* is evident enough.

¹ Com. Cent. II. Sec. xxviii.

² Paul was really, as is evident from his letters, a well meaning but insane fanatic, in no respect superior, and very little differing from, Brothers, Southcote, and Irving.

³ Cent. II. Sect. xxxv. p. 167.

⁴ On this passage I shall treat hereafter.

And now, if the reader reconsider what has been stated, and compare it carefully with the Gospel histories, I shall be greatly surprised if he do not find many passages in them which have a direct reference to parts or to the whole of the system which I have developed. And I think there can be no doubt, however varied the respective sects of Gnostics might be in the detailed or minor parts of their systems, that the Trimurti, the *μια αρχη* or unknown God, was the foundation of them all. The discovery of the Triune God with the Manichæans, in so clear and marked a manner, perfectly satisfies me that this was the doctrine of all the almost innumerable classes of mankind comprehended under the term Gnostics. The Manichæans were but a succession of Gnostics; and, in believing that their founder, Mani, was a Messiah or an Incarnation of the Divine Power, that is, in other and in their words, a person imbued with more than an usual portion of the Divine Mind, from which the minds of all men emanated, they believed nothing very inconsistent with Christianity. As far as the endowment with the Divine Mind goes, they were succeeded in later times by John Wesley and his followers, whose Christianity no one, I suppose, disputes. Perhaps it may be difficult to shew in clear and distinct terms, from the work of Faustus, that the Manichæans acknowledged the *Μια Αρχη*; but as they were evidently nothing more than a succession of Gnostics, and as this secret doctrine, at least to my knowledge, never came into discussion or was expressly denied by them, it is perfectly fair to suppose that, like the other Gnostic doctrines, it was held by them: holding one part of the system—the Triune God—they must be believed to have held the other part—the *Μια Αρχη*.

The whole, I repeat, formed a sublime and beautiful system. At the head of it was the *Πατηρ Αγνωστος*, from whom emanated the *first* created being or hypostasis, the idea or plan of the universe.

The *second* emanation was the Triune God, the Creator, Preserver, and Destroyer, three persons and ONE God, the whole proceeding from the *Πατηρ αγνωστος*—Brahme-Maia or *Illusion*.

From this ILLUSION, in some way or other, all the innumerable host of suns and worlds were supposed to have proceeded, by a gradation of emanations, and into this it was supposed that they would all ultimately return.

Thus we have a double Trinity—*first*, the *Μια Αρχη*, the Divine Idea, and the Trimurti; and *secondly*, the Trimurti, consisting of Brahma, Vishnu, and Seva—the Creator, the Preserver, and the Destroyer—Father, Son, and Holy Ghost. We have the *Μια Αρχη*, with its two additional hypostases, one of which was the Trimurti; and the Trimurti with its two additional hypostases; the *last* of the *first* constituting the *first* of the *last*; thus forming a chain, and in this manner all nature was a microcosmic chain.

As it was believed to be with worlds, so it was with man. He was supposed to pass from cycle to cycle, from world to world, till his period was complete, the temporary evil of one cycle remedied by the abundance of good in another, till the universal absorption was to take place. This is the reason why we have no hell in the Pentateuch, and yet that the moral character and justice of God are supposed to be vindicated. Thus through millions of ages and worlds existences were supposed to keep arising and passing away, and being renewed, until the final absorption into the Divine Essence. And the Divine Essence itself was supposed to keep on its endless course, creating new existences for ultimate happiness.

Now I think we have found the fountain from which flowed the almost innumerable sects in their minor details, as we might well expect, of an infinite variety,—each sect, wherever established, bearing a relation or being in proportion not to any principles of truth, but to the state of refinement or degradation of the human mind. As the minds of men were philosophical, or vulgar, or of inferior grade, they formed sects, or united to sects assimilating to themselves. It is

just the same at this day, as every philosopher sees and knows. But I do not expect this to be admitted by a Calvinist or a Ranter. But all this proves the great importance of education to the middle class of mankind, who influence public opinion. Our priests see this clearly, and are now exerting themselves, as they cannot suppress education, to give it such a turn, that the people may not be led to doubt the necessity of bishops, priests, and tithes, in order to ensure their salvation.

In the beautiful system which I have developed, I have opened, I doubt not, the secret system of the Conclave: and we may be well assured, that when the Popes were persecuting Gnostics, it was the holders of the pernicious dogmas which in their time had arisen, as they are described by Epiphanius and others, and not the sublime and original doctrines of the oriental Djnana or ראשית *Rasit*, or Αεχνη, as described in the book called, and properly called, the Gospel according to Djnana or John, the doctrine of the wisdom of India,—the ancient doctrines taught by Menu of India, Menes of Egypt, Minos of Crete, Numa of Rome.¹

I think it seems evident that the current of Gnosticism has flowed from India at various times, and in various distinct streams. We have it first, I think, in the Cyclopean builders of our Druidical temples, or in the Hellenians or Ionians. We have it again in the Exod, αποικια, of Abraham and his tribe of Yudi.² We have it again in the Samaneans, Essenians, or Gnostics, about the time of Jesus Christ. We have it again in the Manichæans. We have it again in the Sophees of the Mohamedans; and, lastly, we have it in the Chaldæi, Ishmaelians, the As-chas-din, the Assassins, of the eleventh century. The last were our Chaldæi or Freemasons and Templars.

If my reader will look back to what I said in my first chapter respecting the origin of the Triune God, he will now be able to form an opinion respecting the mode in which, from principles of common sense, it had its origin.

Of the various streams from this fountain, the system of the Trimurti, the eternal generation of cycles and worlds, the Androgynous nature of the Deity, and the final absorption of all into the substance of the first principle, seems to have been the most general, indeed the subdivisions seem to have been so far almost unanimous in admitting an uniform system. The system of dualism seems to have been the first grand subdivision; and I must now make one more observation upon it. If it be carefully considered or reduced to its first principle, it will be found to arise almost necessarily from the nature of the creating and regenerating or destroying power, as described by me in the first book. For creation, in the sense applicable to the Trimurti, must always be accompanied with destruction; the Creator and Destroyer must always be in opposition and simultaneous. And though the *first* person is always successful by the agency of the *second* person in preserving the world which he has formed, the destroyer is always equally successful in effecting its destruction—which destruction is still only a renovation, or new formation. Thus we may go on in a circle for ever, or till we really arrive at the Hindoo *Illusion*. Hence arose the dualists of whom we have heard so much from Christian divines, but who, I think, never really existed, except in the modified sense in which we have seen that the doctrine was held by the Manichæans. Thus, gentle reader, I flatter myself I have laid before you the grand outlines of the history of moral man—the foundation upon which all his systems have been built; the

¹ It is rather remarkable that no *Christian* persecution of the Gnostics took place till the fourth century was far advanced. The existence of the Sicilian councils are more than doubtful.

² Called in the Desatir, p. 188, Jehudi, Yehudi.

minutiæ of the different subdivisions I leave to the minute philosophers. No doubt a good PHILOSOPHICAL AND CRITICAL HISTORY of them would be very desirable. But it is, though really a desideratum, not very likely to be supplied.

As we might well expect from the holders of so refined a theogony, as that which I have explained, we may discover, through the mist with which they have been enveloped, that they held a *morale* the most beautiful and refined, well described by Mr. Matter, in the conclusion of his Treatise on Gnosticism, in the following manner, in which, taken in its uncorrupted form, I quite agree with him: “*La morale* que la Gnose prescrivait à l’homme répond parfaitement à cette “ destinée. Fournir au corps ce qu’il lui faut, lui retrancher tout ce qui est superflu: nourrir “ l’esprit de tout ce qui peut l’éclairer, le fortifier, le rendre semblable à Dieu, dont il est “ l’image; l’unir avec Dieu, dont il est une emanation, telle est cette morale. C’est celle du “ Platonisme,¹ c’est celle du Christianisme. Sans doute le Gnosticisme offre² quelques dévia- “ tions scandaleuses de cette sublime introduction à l’immortalité: mais le soleil aussi a des “ taches: il n’en est pas moins un foyer de lumière.”³

Such was the system of moral doctrines of the Gnostics, and such was the moral doctrine of Jesus of Nazareth; and, in my next volume, I shall endeavour to expand it in its native beauty and simplicity, and to rescue it from the filth with which it has been loaded by the meanest-minded of human beings, who, in the dark ages succeeded, by force of their numbers, in obtaining the victory over the enlightened part of mankind, to the subversion of religion, and the exclusion from it of every thing like reason or philosophy. But Priestcraft in its worst form flourished, and the performing of miracles, and the driving out of devils, occupied the attention, and debased the understandings, of mankind for fifteen hundred years together. *In the next volume I propose to inquire into the truth of the system which I have explained.*

Gentle reader, as you have gone with me thus far, do you not think that you can travel with me one stage more? Come, try one stage more; and on this part of my subject I have done. You have seen the planetary cycles of the sages of India extending to millions of years. What think you of THE BEING, the Πατηρ αγνωστος, placed in the centre of countless millions of stars, suns, and worlds, circulating around it with inconceivable rapidity in boundless space and in cycles of incomprehensible duration? Now, at last, you come to the Illusion of the sages of India, to their Illusion, but it is a true Illusion. If you doubt, raise your eyes to the stars, and think upon the Wisdom of your Creator! I have done.

¹ This, of course, includes Philo-ism or the esoteric doctrines of the Israelites.

² He should have added, *in its corruptions.*

³ Matter, Hist. Gnos. Vol. II. p. 489.

APPENDIX.

IN a note to Section 8, Chapter III. Book. V., I have made an observation respecting the foot of Buddha. This foot was called Phrabat. In volume III. of the Transactions of the Asiatic Society, page 57, are some curious observations on the Phrabat or foot-mark of Buddha of the Siamese. Here we have, I apprehend, two words—Phra and Bat. The last is Buddha. The first is the Pra, noticed by La Loubère as being the same as Bra—the meaning of which, I have formerly shewn, was Creator or Former, from the Hebrew word ברא *bra*. Then the meaning of foot of Bhra-bat is, foot of the creator Bud. This is φρη=608, whence came the title of the Pharaohs of the Copts. The Phrabat, as the sacred signum or impression of Buddha, proves the truth of his having been in India. The *probat* is the deed marked with the sacred impression of the Bishop's seal, or of the seal of the Christian religion. The Bishop grants probate, when he is satisfied with the proof of the truth of a deed. Phra-bat is the impress of Buddha. This *bat* is Bad, and Pad, the name of the rivers Po and Ganges, and from being the place where his foot rested, it came to mean foot; and from this comes our *pad* for *foot*: when a man walks a journey he *pads* it. The word PRA is the foundation, the root of all the words above-cited; and it is from this that the Siamese say, the French are the same as themselves, having the same name, of which I shall say more hereafter. From the same root come the Latin *probo*, and the English *approve*.

In Book VI. Chapter I. Sect. 10, I have stated a remarkable circumstance respecting the Caspian Sea, namely, that there is a great whirlpool near the Southern end of it, by which, probably, its waters are discharged. The following account of the Père Averil, in Harris's Voyages and Travels, Vol. II. p. 248, will explain this: “But what has puzzled the most refined naturalists is, that, notwithstanding the continual access of the waters of so many rivers, this sea is not considerably augmented, or ever transgresses its bounds: some have been of opinion, that the Black Sea draws a great share of those waters into its bosom: but that ridge of mountains placed betwixt these two seas by nature, seems to separate them so far as not to admit of any probability for that assertion. On the other hand, there are two reasons that rather incline me to believe that this lake, (the Caspian Sea,) how far remote soever from the Persian Gulf, discharges a great part of its waters there: the first is, that on the South side of the *Persian Gulf*,¹ opposite to the province of Kilan, are dangerous whirlpools, the noise of which, as the water is thrown into the Gulf, is so great, occasioned by the rapidity of the waters, that in calm weather it may be heard at a great distance, and consequently these abysses are avoided by marines. The second is, that by the constant experience of those inhabiting near the Persian Gulf, it is confirmed, that at the end of every autumn they observe a vast quantity of willow leaves thereabouts; and it being beyond contradiction, that this sort of tree is not so much as known in those Southern parts of Persia, whereas the Northern part, bordering on the Caspian Lake, and especially the province of Kilan, are stored with them near the sea-shore, it is more than probable that those leaves are not carried by the winds from one extremity of the empire to the other, but rather with the waters that carry them through the subterraneous channels and caverns to the before-mentioned Gulf.” It will not be denied that we are here made acquainted with a circumstance in a high degree confirmatory of what I have said respecting the Caspian Sea, which is again confirmed by the following passage from Muller's Universal History.

It was the opinion of Pallas that the Euxine and Caspian Seas, as well as the Lake Aral, are the remains of an extensive sea, which covered a great part of the North of Asia.² This conjecture of Pallas's, which was drawn from his observations in Siberia, has been confirmed by Klaproth's Survey of the Country to the Northward of the Caucasus. Lastly, M. de Choiseul Gouffier adds, that a great part of Moldavia, Walachia, and Bessarabia, bears evident traces of having formed part of the same sea.

It has been often conjectured that the opening of the Bosphorus was the occasion of the draining of this ocean in

¹ This is a misprint, or rather most careless mistranslation: *Caspian Sea* must be meant.

² See Pallas Reise durch Siberian, Book v.

the midst of Europe and Asia. The memory of this disruption of the two continents was preserved in the traditions of Greece. Strabo,¹ Pliny,² and Diodorus,³ have collected the ancient memorials which existed of so striking a catastrophe. The truth of the story has, however, been placed on more secure grounds by physical observations on the districts in the vicinity of the Bosphorus. See Dr. Clarke's Travels, and particularly a Memoir by M. de Choiseul Gouffier in the Mems. de l'Institut. Royal de France, 1815. The above observations of the translator of Muller's Universal History very strikingly support what I have said.

I think a careful inspection of the district of Troy must convince any unprejudiced person, either that Homer is the most incorrect of topographers, (which is directly against his general character, in other respects so remarkable for accuracy,) or that its face has been considerably changed since he made it the subject of his poem. Mr. Payne Knight attributes this to earthquakes.⁴ This may be true; but I think I am justified in attributing it to the devastation caused by the breaking down of the head of the Euxine, and the opening of the passage. The breaking down of the head may have been caused by a convulsion of the earth. If my memory do not fail me, there is no *undisputed* passage in the Poem of Homer from which it can be inferred, that the Dardanelles was open either in the supposed time of the war, or in the time *when the Homeric songs were first composed*.⁵ Now, when I consider the very fine field which the Euxine and its shores offer to the poet, the fact of his not having availed himself of it, raises a strong presumption that from being closed, it was not in his power.

In Book VI. Chapter II. Section 8, a black Multimammia is alluded to, and described in Figure 19. A very beautiful exemplar of this black lady may be seen in Sir John Soan's Cabinet of Antiquities, in Lincoln's Inn Fields.

In Book X. Chapter VI. Section 6, I have made some observations on the peculiarity of the circumstance that the Christian Templars should take their name from the Jewish Temple at Jerusalem, and also on the fact which Mr. Hammer has pointed out, that they have a close resemblance to the Assassins and Casideans—חסידים *hsidim*. I believe that Mohamed (as well as Hassan Sabah) was considered by his followers to be the tenth Avatar, and a renewed incarnation of Jesus Christ, or at least of the ninth Avatar; and that he was to be continued by renewed incarnation till the time when he was to come in his glory to reign at Jerusalem, which is an event which the Mohamedans expect to arrive, as Maundrell says, at the day of judgment;⁷ but which I suspect meant, on the arrival of the Millenium. This doctrine of the renewed Avatar we see most clearly in the followers of Ali in Persia; and it was for this reason that the temple in the *holy city* (as all Turks call Jerusalem) was rebuilt with the greatest magnificence in their power at the time, and is considered most sacred. For this reason it is probable that the rival temple of Solomon, (as it would appear to the Western Arabians, or Suraseni, or Saracens,) in Cashmere, was destroyed by them when they conquered the country. Here we see the reason why the Casideans, that is, Templars or Chaldeans, came from the ruined temples of Solomon in the East, about the time of the Crusades, to the temple in the West, viz. because the temple in the West by its resurrection from its ashes, shewed that it was the true one; while the temples in the East were proved not to be the true temples in consequence of their destruction by the Mohamedans. It is probable that the persons who were the originals of our Templars were a part of the Sophitæ or Sophees of Cashmere, who were persuaded to leave their country, and to separate from their countrymen, whom we found (vide Book X. Chap. VI. Section 14, p. 731) in Cashmere or Casimere and its neighbourhood, and who could not be converted to Mohamedism, but who now remain in the East like the people of Oude or Ayoudia, (vide Book X. Chap. V. Section 12, p. 684,) expecting their promised Saviour. The reason why the Saracen and Turkish chiefs constantly take the names of Abraham, Solomon, &c., is, because they consider themselves renewed incarnations of these Patriarchs. Thus at last, I believe, I have discovered what I in vain took very great pains for a long time to discover, viz. the reason for the rebuilding of the temple of Jerusalem by the Mohamedans. Here, I think, we may see that the Ishmaelians or Ishmaelites, or Assassins from Almawt, or the eagle's nest, or Almond, as Mr. Klaproth calls it, between Cazvin and Ghilan, were a sect of the Sophees of the East, probably Cashmere, claiming to possess by right the holy city of Jerusalem, from the usurping Calif; for they were at constant war with both Christians and Saracens, though they are said to have united in their religion the religion of both. Besides, I am not quite certain that Hassan Sabah did not claim to be a descendant of Ali, and as such entitled to the Kalifat; however, it is admitted that he claimed to be a *tenth Avatar*.

These Sophitæ or Sophees belonging to the Temple of Solomon in Casimere or Cashmere, must have been the Jews, or a sect of the people called by Benjamin of Tudela, Jews, not Samaritans, as their Temple of Solomon proves, whom he found in very great numbers in the countries in the neighbourhood of Cashmere. Belonging to the worship of the temple of Solomon, and speaking the Chaldee language, they might be correctly called Jews. But they were also Samaneans

⁷ Travels, p. 170.

or Sophees. I have no doubt that the Jews or Ioudi of the Temple of Solomon in Western Syria, were the same as the Jews or Ioudi of the Temple of Solomon in Eastern Syria or Cashmere, and as the Ioudi of Adoni and Salem of South India, with only some trifling differences. These differences, probably, arose from the difference of country, to which the Western Ioudi were obliged to accommodate themselves, and to other adventitious circumstances arising out of the different fortunes of the two, after their separation in Ayoudia.

After Abraham's tribe came from the East, we know in general, from the accident of having their sacred books preserved to us, sufficient of their history to account for their peculiarities. We know how great was the care of their Iconoclastic leader to preserve them from idolatry; therefore, till their destruction about the time of Christ, they did not publicly adopt the worship of any other or new Avatar or Messiah; but certain passages, which I shall point out in their Apocrypha in a future Book, and the Papal Fisherman, and the Fishes tied by the tails, &c., &c., shew that they, in part, did it privately. On the contrary, in India, or the Eastern Judæa or Ayoudia, the Avatars followed publicly in succession. Cristna or the Ram followed Taurus or the Bull, and the use of images, for which Abraham left India, kept increasing, till, by degrees, every kind of ridiculous emblematic idol was admitted; until at last, as in Greece and Italy, the original meaning of the religion was lost. I have no doubt that at every temple of Solomon—at that in China,—that in the Carnatic,—that in Mewar,—that at Telmessus,—that at Eleusis,—and the five in Egypt, as I shall shew in a very remarkable manner, there must originally have been a system, in its foundation and great leading features, the same as at Jerusalem. I speak not now of the minor rites and ceremonies. In all these places we find some remnants of the system, which must all have been imitations of the great parent in the mighty kingdom of Oude, or Ayoudia, or of Pandæa, for it was all the same. Jesus Christ was set up as the ninth incarnation by those who understood the principle of the mythos. Mohamed patronised, and his followers restored, the temple at Jerusalem, in preference to that at Telmessus or that in Casi-mere, because he, in fact, belonged to the sect of that at Jerusalem.

Dr. Clarke says,¹ that the Mosque at Jerusalem is the most magnificent piece of architecture in the Turkish dominions; much more magnificent than that of St. Sophia at Constantinople.

We may be very certain that when the present magnificent Temple at Jerusalem was erected, splendid as it is, more was originally intended to be done by its builder, than what we find. I think there can be very little doubt that its builder intended to restore the glories of Solomon, in the former existence of which, of course, he believed, and place the seat of his empire there, or at least he thought that in rebuilding the temple he was preparing Jerusalem for that event. This intention was probably suspended by the divisions of the Califat into three or four states, and finally prevented by the occupation of Jerusalem by the Christians, about which time the failure of the Millenium was obvious to its expectants. Then were blown into air the chimeras of Christians, Ishmaelites, Sonnites, and Shiites, or followers of Ali. Among the whole of them the doctrine of the millenium and the renewed incarnation may be most clearly seen. This doctrine, for the last six hundred years, they have all endeavoured to secrete or deny, for the same reason that the Christians of the West have endeavoured to secrete the Gospel of Joachim. Here we begin to perceive the reason for the mission of Abdul Raschid, of which the Mohamedan historians treat,² who was sent by the Afghans, or Arabians, or Suraceni, or whatever they might be, from the countries on the North of India, to Western Arabia, in the time of Mohamed, to inquire into the circumstances of the new Amid or *Desire of all Nations*, who, they were told, had appeared in the West;³ and who, they might, perhaps, have heard from their Tartarian or Chinese neighbours, was foretold to appear in Ayoudia or Oude, which was West to them. Here we begin to perceive the reason for the devotees of the Eastern temple of Solomon, the Afghans, becoming the earliest converts to Islamism. The word Islam I shall explain hereafter.

I think it not unlikely that the Casideans, found by the Christian conquerors of Jerusalem, (and who afterward became their Knights Hospitallers and Knights Templars,) were the remains of persons brought from the Eastern temple of Solomon, from Casi-mere, for the express purpose of rebuilding the Western Temple, according to the mystic plan of the Eastern one, and that this is the reason why they were found by the Christians as an appendage to the new temple.

The mosque or temple on Mount Moriah was built by the Calif Omar, the son of Caleb, about the year 16 of the Hegira, A.D. 637. Chateaubriand says,⁴ La Mosquée prit le nom de cette roche Gameat-el-Sakhra. It has a large dome, under the centre of which is a cave, and at the top of it the sacred stone which, in all these religions, is generally found in or close to the temple or church.

This building is called by our travellers a Mosque, but whether it be considered in any other light than a common mosque by the Musselmans I know not. But the blindness of all our travellers in not seeing that Mohamedism is nothing but a branch of Christianity, as Peter Martyr long before me proved, forbids any rational dependance on any

¹ Trav. in the Holy Land. Chap. xvii. p. 601, ed. 4to.

³ Vide Chap. VII. Sect. II. p. 741.

⁴ Travels, Vol. II. p. 115.

thing which they say. Surely, if any thing like critical acumen had existed among them, they would have inquired into the reason for the profound veneration paid at Damascus to the head of John the Baptist. This single fact proves the truth of almost all I have said respecting the Christianity of Mohamed. But people seem to me never either to think or reason. However, I am rather disposed to believe that as the Millenarian system of the Christians changed after the thirteenth century, so, in like manner, the Mohamedan changed, and the building which was begun as a temple for the whole world, has dwindled down into a mere mosque; and neither Jesus nor Mohamed is expected now to come to reign in it at the end of the 6000 years.

The followers of Ali, however, still cling to this superstition, and have various fancies about it; some saying, that the last Imaum continues, but in secret. The idea of the Imaum being somewhere in secret, furnishes food for ridicule to our travellers; who generally laugh at things they do not understand, instead of inquiring into them. I apprehend this means merely, that the lineal descendant of the last Imaum of the house of Ali is living in obscurity; that the line continues; and that the lineal descendant will some day resume the government. This I shall shew is the opinion of the Sonnites as well as of the Shiites.

In the description of the Temple given by Mons. Chateaubriand is an account of the sacred stone to which I have alluded. In this Mohamedan Temple, there are in the stone Pillar and the Cave both the Nabhi or Navel of the earth, and the Yoni and the Linga, though they may not now be understood. This and other circumstances induce me to believe, that though the Mohamedans might object to the single worship of the Dove, they had not the same objection to the double one. Here, if I understand M. Chateaubriand, the stone is placed *over* the cave. Now I do not doubt that, in the ancient temple of Solomon, there were the cave and the mysterious stone pillar, pedestal or whatever it might be, the same as at Delphi and other places; but in it the pillar or pedestal was probably not *over* the cave but *in* it, as described by Nicephorus Callistus, Lib. x. Cap. xxxiii. in the following words: “ὅπῃρ ἐγὼ ἐν ἀπορρήτης ἐκρῶν “διηγήσομαι· ἐχει δὲ οὕτω. κ.τ.λ. “At the time when the foundation was laid, one of the stones, to which the lowest “part of the foundation was attached, was removed from its place, and discovered the mouth of a cavern which had “been hollowed out of the rock. Now since they could not see to the bottom on account of its depth, the overseers “of the work, wishing to be perfectly acquainted with the place, let down one of the workmen by means of a long “rope into the cavern. When he came to the bottom he found himself in water as high as his ancles, and examining “every part of the cavern, he found it to be square as far as he could ascertain by feeling. He afterward searched “nearer the mouth of the cavern, and on examination discovered a low pillar very little higher than the water, and “having placed his hand upon it, he found lying there a book carefully folded in a piece of thin and clean linen. “This book he secured, and signified by the rope his wish to be drawn up. On being drawn up he produced the “book, which struck the beholders with astonishment, particularly as it appeared perfectly fresh and untouched, “though it had been brought out of so dark and dismal a place. When the book was unfolded, not only the Jews “but the Greeks also were amazed, as it declared in large letters, even at its commencement, In the beginning, &c. “To speak clearly, the writing here discovered, did most evidently contain all that Gospel which was uttered by the “divine tongue of the virgin disciple.”¹ What credit my reader may give to the whole or any part of the history of Nicephorus Callistus, I do *not* know; but I *do* know, that I never saw any book in which the higher part of the ancient Jewish Cabala is more distinctly marked, than in the first chapter of the Gospel according to John. Knowing, as the person who has read this book must know, the doctrine of wisdom as a key, he cannot fail to see that it is contained in every line of the first part of this Gospel. If a book were to be concealed in the Temple, from a period *long anterior to the Christian æra*, I know of no one so likely as the Gospel of John, or at least as the first part of it. My reason for this, which my reader will justly think very paradoxical, I shall give in a future book.

Jesus Christ was said by some of his followers to be a renewal of Adam. He said, *before Abraham was I am*, that is, *I was*, the old language having no present tense. From this peculiarity of the Hebrew language, in the past and future tenses being convertible, the equivoque in our translation arose, but it ought to be, *before Abraham was I was*. This I have no doubt the Popes would quote to establish a claim to universal dominion, which I shall explain in my next volume. It was held that Jesus would come to rule at Jerusalem, but I suspect the Mohamedans would say as a renewed incarnation, and I think they held Mohamed to be a renewed incarnation of Jesus, and *Ali* a renewed incarnation of Mohamed. If it be objected that Ali and Mohamed lived at the same time, a devotee will quote the example of Elias and Elisha, and say, the divine spirit did not enter Ali till after Mohamed's death. It is a common expression, that when Mohamed put off his cloak he gave it to Ali. The holy spirit did not enter Jesus till it appeared as a dove at his baptism, and till the fire was lighted in the river.² This looks as if the author of that book meant to describe Jesus as not a divine person till the descent of the Dove. I believe the words *totum Christo configuratum* applied to St. Francis, in Chapter VI. Sect. 4, were meant to describe a renewed incarnation, but were, perhaps, not wholly understood by the persons using them. In the possession by the Turks of the head, or the pretended head of

¹ I have some particular reasons for inserting this here.

² Justin Martyr.

John the Baptist, before noticed by me in Chap. V. Sect. 12, and again just now, there is a proof that we are in general quite ignorant of the principles of their religion.¹

To deny that Mohamed, who admitted the existence of Jesus Christ—his *divine mission*, and that he really had the power of performing miracles, and that the doctrines which he taught were true—was a Christian, is absurd, and only worthy of the devotees who deny it; and it does not deserve to have a moment's time wasted upon it.²

In Book X. Chapter VI. Sections 3 and 13, I have said, it was *probable* that St. John's College, at Cambridge, was the *domus Templi* of the round church of the Templars there; but since that was printed, I have inquired more into the church, &c., at Cambridge, and I find that the present St. John's is only of modern foundation. There is, however, annexed to, or connected with, this church, an almshouse, called Bedes-house, the name of which has puzzled all the antiquarians. This I have little doubt was the original *Domus Templi*—the house of Buddha corrupted into *Bede*, and meaning *wisdom*, i. e. seminary of sound learning and religious education; and to support this religious principle, I think St. John's College was built, and the ancient *Domus Templi* converted into an almshouse. The Saxon style of architecture of the round church at Cambridge, and the pillars upon which the pointed arches of that at Northampton are built, prove them to be far older than the tenth or eleventh century. The College of St. John at Cambridge, close to the Temple, is a similar institution to that of Hassan Sabah at Cairo. All schools and colleges in ancient times were considered to be pious foundations for the education of the priesthood; and I have no doubt that, originally, the laity was considered as encroaching on the priesthood, by learning the arts of reading and writing.

The case of St. John's College, Cambridge, I take to be like that of the Inner Temple Church in London. When you ask for the foundation of that church and institution, your inquiries are instantly stopped by being shewn the inscription, which declares it to have been built in the year 1185; but, on close examination, it appears that it was rebuilt—brought from another place, somewhere near Holborn. This serves to shew how an inquirer is liable, unless he use great caution, to be deceived by his informants, (without any thing wrong on their part being intended,) and the real age of an institution concealed. I suspect, like the removed Temple Church, that St. John's College (which, as just noticed, was of the same character as the house of Hassan Sabah at Cairo) was *rebuilt* in the place of the house of Bede or Bedes near to it, which house acquired its title when the Buddha Trigeranon in Wales, and the Buddha of Scotland, took their names in those countries, and when one university and river were called Isis and Oxford, and the other the bridge of Cam or the aspirated Om. When the improved new house of Buddha or Wisdom, the present St. John's, was built, the old one, the Bedes house, was given to the poor. I shall return in a future page to the word *Templum*: I know no word more curious.

Since I printed the observations respecting St. Thomas, in Book X. Chapter VII. I have re-perused the work of the Jesuit, Faria y Sousa, on the Portuguese history of India, and I find he states, that St. Thomas built churches in China as well as India: thus proving that what Bergeron Des Guines and Mons. Paravey said was true—that the mythos was to be found there. The Jesuits found it there when they arrived.

In Book X. Chapter VII. Section 7, I have expressed a doubt, whether some remains of a period earlier than the entrance of the sun into Taurus might not be found in the *Twins*, alluded to on the coast of Coromandel. This arose from a mistake which I made in the meaning of the word $\tau\alpha\mu$ *tam*. I hastily ran away with the idea, that it had reference only to *two human beings*, while it really has no such exclusive meaning, but may apply to the *two fishes* of the Zodiac, or even to a pair or double of any article whatever. This removes a difficulty which, if it meant Gemini, it raised in my system, as every one must see, who has attended to it closely. The allusion is evidently to the Buddhist incarnation of *the fishes*; for the votaries at the shrine of St. Thomas are Buddhists. The Buddhists had all the Zodiacal incarnations.

Faria y Sousa says³ that the Portuguese, when they arrived at Malliapour or St. Thomé, found near the Tomb of the saint, the burying-place of a Sibylla, whom he calls Indica. But we must not forget that in the part of Italy where we found the traces of the Camasene,⁴ there lived the Sibyl of Cuma. Now the country where the Indian lady lived was the country of Cuma or Cama as well as of Cali. If we refer as above, we shall see that the same mythos of Cuma or Cama, is most clearly in both countries. The Sibyl of Italy was said to have come from Chaldea, that is Calida. I also request attention to the fact named in Book X. Chapter I. Section 20, that all the things related of Jesus Christ were related by the Cumæan Sibyl, as well as by the Sibyl of Erythræa. From these circumstances I cannot help believing, notwithstanding what I have said respecting the Gemini, that the Didymus, the Tam, meant twin *fishes*, not twin *children*. Jonas was swallowed by a whale. This fish was chosen because it brings forth only two young ones at a time, and suckles them like most animals. It seems like a connecting link between the animal and the fish creation. Cama was the male and female deity of love. Cama might be Ama aspirated, and Tam might be only Ama

¹ The Turks have bodies of soldiers called Segmen as well as Sphahis. These are men of Saga, those men of Sophia. They still give to the Mosque at Constantiuople the name given by Coustantine, St. Sophia. Maundrell, p. 171.

² His sect of Christians seems to have absorbed nearly all the other sects, except that of the Paulites.

³ Vol. I. p. 272.

⁴ Vide pp. 760, 777, 788, 808.

or Amor preceded by the emphatic article, T' Ama. In this way I find a rational meaning for the word Tam, in perfect keeping with the other parts of the system.

But, upon the whole, I incline to the opinion that the Camarinus is the same as Tam-marinus, and the Cam-masenus the same as Tam-masenus.¹ In order to judge of this, my reader must refer, by means of the Index, to the places where these words are treated of. If this be admitted, a high probability will be raised, that wherever St. Thomas is found, the adoration of the Fishes or of Aries may be looked for.

Ceylon is called Lanca or Langa, or Ilam or Salabhham, and by Ptolemy, Salica. The coast opposite to Ceylon, to which you pass over Adam's bridge, is called Pescaria—evidently *the fisherman's coast*.² Bartolomeus³ says, near Comorin stands the temple of Ramanacoil in which the younger Bacchus and the Lingham or Phallus of Seva is preserved. The Indians believe Ceylon to be a part of Paradise. The King of Ceylon is called a *Rachia* by Pliny.⁴ Here as usual we find the *Ras*.

I suspect the fishery, which is so marked here, was the fishery of pearls; and, paradoxical as I may be thought, that the *Pearl fishing town* of Colchester (not Maldon) was called Cama-lodunum for the same reason. In the province of *Picenum*, on the shore of the Adriatic, was a town called *Camarino*. Both these names I think arose from the same superstition.

Mr. Cleland says, that the pearl was the peculiar emblem of peace.⁵ The Indian Cama is crowned with pearls. They took the name of beads, from the Vedda, which meant Wisdom, and on this account the Celtic Judge's coronet was surrounded with pearls. I think the fact that the town of the Roman pearl fishery in England was called Cama, when joined to the other circumstances, raises a high probability, that the word Cama meant pearl; and that Cama-lodunum was town of *the fishery of the pearl*. But Cama or Kama Deva has for one of his epithets Makara-Ketu, or, *he who bears the Makara on his banner*. The word Makara means a *sea monster*, and Ketu is the Greek *Κητος* and the Latin *Cetus*, *the whale*. This completes the proof of identity between the Cama of India and Italy.

It is perfectly clear that the Hebrew text is dislocated, interpolated, and has multitudes of lacunæ in it; and it is an admitted fact, that the celebrated Urim and Thummim were lost after the captivity. From the union of these circumstances I am led to believe, that part of the text respecting these words is omitted; and when I recollect that we have found the Judæan mythos in Urim of Calida, along with the Tam-nim, I cannot help suspecting that Urim, the plural of Ur of the Chaldees, and Tammim, the plural of the Tam of the country of Ur, had a reference to some superstition of the Tanul country. I suspect that originally two of the words Tam, Cam, and Sam, were corruptions of the other of the three.

Orion was the son of Mercury, Jupiter, and Neptune. I think we have here in the three, *first*, Buddha or the Bull; *secondly*, Cristna, or the Ram; and *thirdly*, Neptune, or the sign Pisces. He was born from the salt water of these three Gods, *ab Urinâ*. He was called Aquosus. *He was carried on the back of Dolphins*. Was he Jonas swallowed by a whale, by the fish with two Mammæ, which brings forth only *two* young at a time?

In Book X. Chapter VII. Section 7, I have suggested that the different *carns* there mentioned might take their names from the *sepulchral monuments* called *carns*. To a certain extent this may be true; but, on more reflection, I think we may go a little farther, particularly as the cause does not seem proportionate to the effect. Every *carn* which I have seen, has, or has had, at least one circle of stones around it, several near Inverness two or three, and those in the favourite cycles, of twelve or twenty-four. Now I find from Mr. Cleland, that the Celtic (i. e. Hebrew, as I have proved Hebrew and Celtic the same) for a *circle* or *cycle* was *Kern* or *Caern*. He says this word also meant a church—that would be a temple. Here, in the *circle*, (or *Temple*, which I shall explain hereafter to mean circle,) we have a rational explanation of the origin of the word. From this we may have the Carnutes of Gaul, and all the mystic words which we have seen occur so often, not excepting even the circular horn of the Apollo Carneus, taking its name from the circular form, of whom the horned Aries was an emblem. He was *κριοπροσωπος*.

Here we may have the origin of the mystic shell in the hand of almost every God, having as many circles as cycles had run. Cleland says, "The Druids, above all figures, affected the circular. Their *Cir*, *Hirs*, *Shires*, *Churches*, "all took their appellation and form from the radical *Hir* or *Cir* for a circle."⁶ But this *Cir* is nothing but the Hebrew *גִּר* *gr*, a circle, our Kirk and *to gird*.

But besides these, and closely connected with them, is another word before unknown to me, namely, the Greek *καρ* or *καρπος*, which signifies *a sheep*.⁷ This word in Celtic is *Cuora*, in Hebrew *כֶּר* *kr*. The Philistines had a temple called *בית-כר* *bit-kr*. (1 Sam. vii. 11.) Jupiter was called *Καρραιος* by the Bœotians. From this Caria had its name. All these words were evidently closely connected—in fact, in root the same. We have formerly seen Apollo called

¹ Cape Comorin is called both Comari and Canyamuri. Forster's translation of Bartholomeus, p. 425.

² From this coast came the Boies or Bohces, the tribe of Fishermen whom we have traced to Baieux, the originals of the Manichæans. See the Index.

⁷ Drum. Origen. Vol. IV. Book vii. Chap. vi. p. 131; also Hesychius.

Xϩης. Sir W. Drummond says, that some held that from the city of *Chrysaoris* the whole of *Curia* had been called. I believe that all these names came from the Greek numeral symbols X or TPΣ and the Hebrew כר *kr*, when the Hebrew Resh (as I shall by and by shew) denoted both one hundred and two hundred. Though it is difficult to say, yet I think it is not difficult to understand, why all the countries came to be called Carn; nor why a sacred heap of stones, with a circle of stones in the number of a sacred cycle in it, or round it, was called by the same name.

But this word also we have just seen meant a horn: but what horn? The horn of the Ram, which was also the shell-horn of a *fish*, which we call by a proper mythologic name Cornu-Ammonis. Here the mixture of *Aries* and *Pisces* shews itself: both emblems of Apollo or the Sun. Callimachus describes a temple of Apollo as having been built and paved with horns.¹ These were the kind of stones containing petrifications of the large Cornu-Ammonis, of which we have plenty in Yorkshire, near Whitby, to build thousands of temples, which if built of these stones would be *correctly said* to be built of horns. We may now understand what is meant when we read of altars to Apollo built of horns, which at first seems so foolish. But we may be certain, that these kinds of mysteries are very seldom foolish at the bottom. They all arose from the rational wish to perpetuate doctrines, before the invention of writing. This serves as a key to almost every thing. From the songs at the *Karn* to celebrate the death of the God, plaintive songs came to be called *Karan* in Celtic, and *Garan* in Persian.² These songs were in like manner invented to perpetuate the mythos. Coronach, in Scotland, is a lamentation for a deceased person.

It has been observed by Mr. Logan, author of the Scottish Gael, that Crean or Creosan was a Celtic term for Sun, and that Carnac was said to have been built by Creans. This Crean is the Irish Grian. Now I cannot help suspecting that Crean is the Xϩης softened and corrupted. This is strengthened by the term Cill Chriosde being rendered by Mr. Logan, Christ's Church.³ The word Crios is a common term for the sun in Ireland. The ancient word Crios might grow into Christ, as Elios in Greece grew into Elias. The second person in the Trinity or Trimurti is designated in the very Gnostic work called the Gospel of John, by the word *Caro* (genitive) *Carnis*, and described thereby to have become incarnate in the flesh. I am disposed to ascribe all these names to the divine incarnation. Apollo was unquestionably an incarnation, and as he (and Ammon, Bacchus, &c., &c.) wore the horns of the Ram, or was the horned Apollo, and was incarnate; the word carn might from this come to mean *a horn*, among the uninitiated, who knew nothing of the doctrine of divine incarnation. From being the monument of the incarnate God, the monuments sacred to the Gods might come to be called Carns. I think it probable that the curled weapon of offence on the head of the animal had its name of Car or Carn, and the animal was called *carned* or *horned* from the carn or horn being a distinctive badge of the incarnate God; that the God was not called from the Carn, but the Carn from the God; and that the God's name of Carn or Carneus came from his being *in carne*—incarnated. I think it is very certain that the doctrine of divine incarnation was kept a secret as long as possible. We find it, now that we understand it, every where distinctly marked, but no where publicly declared. We find it in Greece, in Syria, in India; but it will not be found in the Vedas. Perhaps it may be in the Pouranas, written after the secret became public. All these explanations of the word Carn are in better keeping with the other circumstances attending the word, than that which I formerly gave. It is not more recondite than many explanations of words which are known. It may be, like so many other words which we know, Latin-Sanscrit. And if it be not in the Sanscrit Lexicons, it may be *like other old words* omitted, probably because its meaning was not understood.

In Book X. Chapter VIII. Section 4, and in Chapter IX. Section 3, I have noticed the words Nama Amido Buth, and Nama-si-va-yah. The first, I think, will mean adoration to Buddha, (or the wisdom of) the holy OM. The second, adoration to the Veda or Wisdom. The Deity being adored, under perhaps the finest of all his attributes, WISDOM, in a pandæan or universal or Catholic religion or system, we must expect it to be found, as we do find it, in great numbers of examples in every country of the world.

I believe the Xϩης-tianity on the coast of Malabar, was originally the Xϩης-tianity of Delphi and of the Erythræan Sibyl of Justin, who foretold every thing that should be done by Jesus Christ, which the Portuguese Romish Christians a little moulded, and which, perhaps, some Syrian Christians might previously have a little moulded to their own tastes or superstitions. This inference will be much strengthened by the proofs which I shall give in my next Book, that every rite, ceremony, and DOCTRINE, of the Romish Church, was taken from Gentilism, without a single exception,—that, in fact, the present fashionable Christianity is nothing but reformed Gentilism,—Gentilism stripped of its grosser corruptions.

But although every part of the fashionable Christianity is Gentilism, every part of Gentilism is not Christianity—the disgusting bloody sacrifices for example. But the result of the whole draws us towards the doctrines of Ammonius Saccas,⁴ or the Philalethean philosophical Christians of the first century.

¹ Drum. Origin. Vol. IV. Book vii. Chap. vi.

² Ib. p. 165.

³ Scottish Gael, Vol. II. p. 284.

⁴ I consider that the name of Ammonius Saccas, must have been adopted by this philosopher from mystic motives, and not, as it is said, because he carried *sacks*. It is a sacred or Xϩης-ian name. The Saka or Saca and Ammon, I think, shew this.

In my next volume I shall shew that the same Jewish and Χρησ-ian mythos amalgamated, which was found in India and China, foretold by the Erythræan Sibyl, and supposed by Virgil to recur every six hundred years, existed in even greater perfection in South America, when the Spaniards arrived there, than even in India, carried thither, as the pious monks say they suppose, by the devil. I shall shew that it must have gone to America before the fabrication of any written document now in existence.

For a very long time I inquired, and the more I inquired the more proofs I found, of the universal dissemination of the Judæan mythos in India; that is, of that mythic doctrine which we find among the Jews and their sects, for the Christian religion is that only of a Judaic sect. Then what had become of the sect professing it? For though it was every where, yet it was not found any where in such large numbers as it ought to be, if its system were, as it appeared to have been, that of the great empire of Ayoudia. At last it occurred to me, that the sect must be similar to the Essenes, who, though once common in Syria and Egypt, (and in Greece as Pythagoreans,) are no where now to be found, because they became, by a change of name, the Carmelites of the Christians. In a similar manner, when the Equinoctial Pisces arrived, the Yudaïtes, whatever their name might have been before that time, then became Vishnuvites. We have no sacred, or properly-called canonical, writings either of the Jews or the Brahmins, after the year 360 B. C., the time of the entrance of the equinoctial sun into Pisces. I request my reader to refer to what I have said in Book X. Chapter IV, respecting the Ιχθυς and Pisciculi of the Christians, and also to what I have said respecting the God Dagon and the Vishnu of the Indians in the same chapter. When I consider all the circumstances of the fish Avatar, or Oannes, or Wisdom, or Dagon the Saviour, and the similarity to, or rather identity, both in the letters and sound of other Sanscrit or Indian words with, English; such as *sam* and *same*, *stalls* and *stalla*, *huly* and *holy*, &c., &c., I cannot doubt that the second person of the Trimurti has taken his name of Vishnu, instead of Cristna or some other name, since the Sun entered Pisces at the vernal equinox; and, as he was feigned to have become incarnate in a fish, as we see in Figure 32, where he is treading on the serpent's head, so he took the name of Fish: and that the Vish is really our Fish.¹ And that, according to order, the Lamb or Cristna succeeded to the Bull, and the Fish or Ιχθυς, or Fishes tied together by the tails, the religion of the *Pope the great Fisherman*, succeeded to the Lamb: and that in India, as well as in Europe, the followers of the Lamb or Cristna and of the Fishes, are intimately mixed, or rather are the same—as from the crossing of the two cycles they ought to be: every Neros cycle might bear the name of the Lamb, as well as its own name, whilst the Sun was passing through the Lamb. The example of the Essenes, well known by the Roman Church to have become their Carmelites, is similar to that of the Ayoudaïtes becoming Vishnuvites. Thus the devotees of Cristna, under the name of Yadu the father of Cristna, might become Vishnuvites, and this may be the reason why we have few or none of the people who became Jews in Western Syria, by that name in India. But it is also probable that they never went by the name of Jews, or by any name connected with it, in India. They would be rather Pandæans, which answers to our Roman Catholic, than Jews, as Pandæa seems to have been the sacerdotal name of the government; as Catholic is now of the government of Rome. And from finding the name in Athens, in Asia Minor or Room, in Italy, as Roma, and in North and South India, I cannot doubt the existence of this Roman or Catholic empire. We have it endeavouring to raise itself again in Italy, at this time, and I have no doubt that many of its devotees, in *ALL ranks of society*, really believe that it will in the end succeed, and rise again from its present state of depression. From the account which I have given in Book X. and Chapter V. Section 12, p. 684, and in several other places, it appears that the mass of the people of Oude or Ayoudia hold precisely the same doctrines as those held by the Jews of Western Syria, previous to their destruction by the Romans. These must have been the Jewish people met with by Benjamin of Tudela. If my reader will take the Index and peruse all which has been said before respecting Oude he will find innumerable proofs of the Judæan mythos.

The tribe of Colida or of the Chaldeans was the tribe of Ayoudia or Yadu, the father of Cristna, so that they might by strangers be called Yaduites or Iudaïtes. But, as I have just said, this was not their name of religion. In a similar manner I think we may have had a tribe of the same religion, or nearly so, come to the West under the name of Druids, and to have been that tribe named by me under the name of Druhya, the son of Yadu, in note 1, page 746.

Indeed I suspect every author assumed a sacred or mythical name. We know how common it is yet with us for authors to write under false names.

¹ In the old Irish, *Ischa*, which is the Eastern name of Jesus, means a Fish, and the Welsh V, is our single F; our FF is the Welsh F. *Ischa* with digamma is F—ischa.

In addition to what I have said in Book X. Chapter IV. Section 5, I have to observe, that Buddha was called, not only as we have seen elsewhere Fo or Po, but he was also called Dak or Dag Po—*27 dg*, which was literally the Fish Po, or Fish Buddha—Pisces. See Littleton in voce Piscis. The Pope was not only chief of the Shepherds, but he was chief of the Fishermen, a name which he gives himself, and on this account he carries a *Poitrine*. On this account also, the followers of Jesus were Fishermen. The name *Dag Po* was evidently Buddha in his eighth or ninth incarnation. The Buddhists, we must remember, claim to have the same number of Incarnations as the Brahmins. It is very difficult to discover in what the difference between the two sects consists.

This tribe I think came from the country of the Sacæ, and brought all our Eastern Gods and Mythology to Ireland and Scotland;¹ but I shall discuss this point at large in my next volume.

The Cali-dei or Chaldeans, who had their name from the Deity Cali, and he or she had the same name as the Καλος, Mitis, of the Greeks, which two words, I am persuaded, had the same meaning, might be some of them. Then the Καλι-dei would be the same as the Χρησ-ians.

It is quite clear to me, that those tribes whom we call Jews, and who have had no Pentateuch till modern times, cannot be *Mosaic* Jews. I think most of the Jews, whom we find scattered about the world, are the remains of the Brahmin religion, who did not fall into the adoration of the Fishes. If violent altercations took place among them on the change, I can readily conceive, that the new sect of Vishnuites would detest and abolish most of the old rites and ceremonies of the former superstition, as we have seen Moses did the rites of the Bull, and the Protestants the rites and ceremonies of the Romish Church. Religious devotees always run into extremes, and generally hate the sect they have left, and every thing belonging to it. I consider the discovery which I have made of the Yadu in the followers of the Fishes, as of great consequence.

I suppose the tribe of a person who is called Yadu, father of Cristna, came to Western Syria, and took the name of עברי *obri*, or Jews, or strangers. But their first name, assumed by themselves, was Judah, יהודה *ieude*, (hand of God,)² as we learn from Eusebius, and of Samaritans, or worshipers of the sun under the name of *Sam* or, in Sanscrit, *Syâma*, like the tribe lately named in the West, who, I suppose, might take the name of Druids from the Druhya of India, the son of Yadu. Though it cannot certainly be known, it seems not unlikely that the leaders of the tribes were the sons of princes bearing those mythological names. If the Patriarchs of those early days had hundreds of children, like the Eastern monarchs of the present day, it is not unlikely that they should have sent them off with gifts, as Abraham is described to have sent off his children by Keturah, (instead of leaving them to be murdered by their elder brothers, the fashion of the present day,) and let them take such people as chose to go with them to form new tribes. There are hundreds of tribes of Bedouens in Asia, but I never met with an account of the formation of a tribe, and how it is done I do not know. They all have, or pretend to have, long pedigrees.

I attribute the loss of the tribe of the Iadu in India by us, or its not being perceptible to us, in a considerable degree to the effect of the prejudice which we have in our minds (to which I have alluded in my Preface) to any thing of the nature of the Jewish religion in India; and this has led us both to conceal and misrepresent facts and circumstances out of number, without really having any intention to do so, or to do any thing that is wrong. It has probably only acquired the name of *Jewish* as a religion, because it happened to be the religion of that branch of the tribe of Yadu which, with its Brahmin, emigrated to the West. If it had a name, it called itself Israelite, or perhaps it called itself by the name of the God IE or IEUE, which was the same name by which God was called, and his praises chaunted, in the country which they had left, Yeye,—or as they call him in both Sanscrit and Hebrew *the God of victory*. I beg to refer to Book VIII. Chap. VI. Sect. 6. p. 429, and Book X. Chap. II. Sect. 14, p. 602.

The name which those people gave themselves is very difficult to find, and worthy of much consideration. If we revert to Book VIII. Chap. II. Sect. 2, p. 398, we shall find an account of great numbers of tribes of black Jews in different parts of India,—Buchanan counted upwards of fifty of them. Few of them possess Pentateuchs, except what they acknowledge that they have received from Christians or Jews of the West in modern times. These are nothing more than remains of the Ioudi or Iadu, who are to be met with, as might be expected, in almost every part of India,—and whenever any of them are observed by our travellers, they are honoured with the distinctive epithet of a tribe. It is not unlikely that, if carefully sought after, five hundred such tribes might be found. They are nothing more than remains of the people of the Pandæan kingdom—or of the Yadu, who have not become followers of Vishnu—who have not adopted the later changes of any of the various sects which have arisen from the renewed Avatars, &c., &c. The new sects, as might be expected, have over-ruled them—borne them down. I have no doubt that great numbers of those whom we call Jews, and whom we find in other parts of the world, are the same.

I believe that if Ptolemy had not forced the publication of the Pentateuch in Greek, we never should have heard of the Jews of Jerusalem. Had their books continued *secret*, they, like the sacred and secret books of Athens and all other places or temples, would have been lost. For, though we find the mythos contained in Genesis almost every where, we no where find it in writing. But we have no writings of that early date. I think it not unlikely that it might be found in some of the temples of Jaggernaut or Baljii in South India, perhaps in that in which Dr. Buchanan found the Romish service in the act of being celebrated. Every large tribe coming from the East would bring with it, in substance, the same religious rites as the Brahmin brought to Jerusalem, which have all been lost. But, about the temple or the sacred mount of each tribe, we generally find some traces of the mythos.

In ancient times, we all know, that the Jews placed their sins upon a scape-goat, which they turned into the wilderness. In Tibet the same rite was practised. The goat and the sheep were of the same species, for which

¹ Though they brought the Gods, I think they were iconoclasts.

² The name Youdia means *hand of God*. The native princes of India often carry a hand as their crest, as do the followers of Ali in Persia. Parkhurst in voce. Do our Baronets carry a hand for a similar reason?

reason we constantly find them used for one another. From Lord Kingsborough's *Antiquities of Mexico*, Vol. VI. p. 301, I learn that the Jews at this time, instead of placing their sins on a Goat, place them on a Fish. This is a very striking fact. It induces me to believe that the true system is secretly known among some of the Jews. It dovetails into my system in so extraordinary a manner, and is of so peculiar a nature, that I can attribute it to nothing but the continuance of the mythos, which I have taken so much pains to penetrate, understand, and develop. It renders it highly probable that, as I have just observed, it is yet secreted among the Jews, and, consequently, if this be the fact, it raises the probability that I have discovered the true system to a *proof*. I can entertain no doubt of the veracity of Lord Kingsborough. Whether he has acquired his information from oral or written evidence, I know not; but be it which it may, for several reasons I can rather believe (in this peculiar case) in the truth of the POSITIVE evidence on which he has received this secreted fact, or piece of secret doctrine or ritual, than I can in the NEGATIVE evidence of ten thousand Jews, let them be in what rank of life, or of what country, they may. Their present denial of the Trinitarian doctrine, divulged by the greatest man of their nation who ever lived—Philo—proves that no dependence can be placed on any thing which they say, where their religious prejudice is concerned.

This apparently harsh judgment will, in a great measure, be justified, when, in my next volume, I shall shew that their apocryphal books of Wisdom and Ecclesiasticus contain some secret matters, of a most important and curious kind, of which it is absolutely impossible that their learned men can be ignorant. And it will decisively prove that their conclaves have the same Cabala as the Romish Conclave; and, indeed, the same as the conclave of every temple in the world formerly had.

Chardin, in his *Travels*,¹ states, that the Mingrelian Christians celebrate the paschal supper by eating *fish* instead of *lamb*. He tells a nonsensical story about the change of the *fish* into a *lamb* at Jesus Christ's last supper, in which it is evident that a mistake is made—and that the mythos originally had the story the other way, namely, the Lamb changed into the Fish.

When I find Clemens Alexandrinus, who was initiated into the mysteries of Eleusis, letting escape him, that their rites, or the doctrines taught in them, were copied from the laws of Moses, I cannot help suspecting that what they call a large book, which contains the most holy part of their doctrines, and which was made of two stones, and called *πετραίμα*, was a part of a similar history to that of the two stone tables of Mount Sinai.² This will not be thought so paradoxical, when, in my next volume, I shall produce the learned Abbé Guerin de Rocher undertaking to prove that the whole Mosaic mythos, as well as Jephtha's daughter in Iphigenia, is to be found in the Grecian mythology.

We may observe that there are three great prevailing sects in India, which over-ride all the others, and those are the sects of the three Zodiacal signs—*first*, of Buddha symbolised by the Bull; *secondly*, of Cristna symbolised by the Lamb; and, *thirdly*, of Vishnu symbolised by the Fish. The first, I am persuaded, was originally Tur or Sur; the second, Crios, or *Χρῆς*, or Cristna; the third, the Vish or Fish. All these names, and all this mixture, seem to me to have arisen from the state of man, which we know from experience is natural to him. In the first period I believe they adored the Trimurti or Trinity, *Brahma*, *Turia* or *Suria* or *Buddha*, and *Seva*: in the second, *Brahma*, *Cristna*, and *Seva*: and now they adore *Brahma*, *Vishnu*, and *Seva*. If the Brahmins meet this with denials, then I tell them, it is notorious that they have long lost all knowledge of their mythology; and they have not a single book which can be expected to give the requisite information. The Vedas are not histories, as the part translated by the learned Professor Rosen shews, and are long previous to the period of the entrance of the Sun into Pisces, and perhaps of Aries also.

I am quite certain, that in all my reasonings I have not given sufficient weight to the absolute and complete ignorance of the present race of Indians in their history and mythology. They are really as ignorant of them as we are, and indeed more so. For their pretended genealogies of the line of princes up to the sun and moon, except to a *very little way back*, are all nonsense. Of *real* history, till about the Christian æra, they had none, like the Greeks before Herodotus: and their mythology or secret religion, when written, was all parable. They lost even their astronomy, only retaining the tables which were in daily use to make their calendars with, and to calculate the eclipses. I believe that it is the order of nature,—that it is one of the effects of the dissemination of superficial knowledge, to produce a tendency to the destruction of real and deep knowledge. I believe it is an order of nature not ill described by the oriental doctrine of the Metempsychosical renewal of cycles. Science comes to perfection, and then recedes, then rises again; and I cannot help suspecting that if the common use of the art of printing (a new element in all our calculations, the effect of which we cannot know, having no experience) do not prevent it, we shall run the same course again.

I believe the aspect of Indian affairs presents to our Indian travellers a complete chaos, though they do not like, each in his own case, to confess that it is so. There is nothing like a standard religion any where, so that a person may say *this is the religion*. Each Pundit tells his employer the story of his own theory or sect, which, of course, (as is found among European sectaries,) is always, according to him, the admitted and acknowledged truth, and there are scores of sects. Among the Brahmins there is no head, no individual or body to which a person can look for the locale of their religion. You may as well ask for the seat of the Protestant religion in Europe. Indeed, the Brahmins

¹ Vol. I. Chap. ix.

² Vide Lemp. voc. Eleus.

are as much divided into sects as other parties. When the establishment went to pieces, each Temple or Church kept its own property, and retained its devotees. Sometimes it has continued nearly the same, sometimes it has changed, and become the religion of Jaggernaut, sometimes of Cali; the devotees have generally become Vishnuvites. In some instances they have taken a name jointly from the Lamb and the beneficent character of their God, and have become *Crestons*; and in others, not having fallen in with the new Avatar of Pisces, they have continued practising the old rites of Ayoudia. Our people now persuade them that they are Jews, which, as they have no tradition of their origin, and no sacred writings to guide them, or to contradict the Christians or Western Jews, may easily be done. If I understand Dr. Buchanan, they are a very low and illiterate race of people. In a similar manner, probably, most of the other numerous sects, whose names I do not know, have arisen. In five hundred years the religion of Britain would be precisely similar, if the establishment were abolished, and each church or chapel left as it is, in possession of its property. Some would be Trinitarian, some Arian, some Unitarian, some Southcotian; but still all Christian. In a similar manner all the sects of India are of the Brahmin religion, not Buddhists, as we are all Protestants, and not Papists. On the whole, it comes to this, that when our Indian scholars say, the Brahmins tell us this or tell us that, they only mean that their *Pundit* has told them this or that: and in every case, if they have asked the opinion of another *Pundit*, he has not denied what the other has said, though it may be quite new to him, if it have not made against his sectarian principle—if it be not against the credit of his order or country. And this will take place from a natural cause, without any wrong intention on the part of the *Pundit*. Not knowing any thing against it, he will suppose it true. Besides, there are a great many persons in India who despise the doctrines of all the sects, as there are philosophers in Europe who despise sectarian distinctions.

Before I conclude this volume I request my reader's attention to a peculiar system of Anthropomorphism, and to the general anthropomorphic style of description which may be observed every where in the Jewish sacred writings, and, indeed, in those also of the Gentiles, and which has drawn down the severest censures upon them from modern philosophers, ignorant of their nature. I may instance the walking in the garden in the cool of the evening. If we are to suppose the writers meant those expressions to be taken literally, and that they did really believe that the Supreme First Cause so walked, we must take them for fools, and not, as circumstances would lead us to believe that they were, in many respects, men of the profoundest wisdom. But the case becomes very materially changed, when we find the First Cause here spoken of, to be, though a person of a very high and transcendent character, yet not the Supreme Being, but a person inferior in rank and dignity to the Most High, to the ineffable *To On*. This view of the subject instantly removes much of the absurdity of the expressions alluded to. It is clear to me, that the knowledge, that the meaning of these expressions did not apply to the *To On*, was a part of the *secret* system; and the doctrine that the literal meaning did apply to him was intended merely for the vulgar; and that it was fit and suitable for the understandings of the vulgar, is decisively proved, by its being yet received by hundreds of millions of them, who will be very indignant at me for letting out the secret doctrines, so much above the grasp of their faculties, and for denying that the Supreme Being did walk in the garden. But nothing can be well worse than this double system. It has not only kept the bees of the hive in ignorance, but it has ended at last, as might be expected, in the ignorance also of the drones themselves, and in the debasement of the intellect of both. This observation I consider an extremely important one, and one which might and ought to have been before noticed in my work; but it was not perceived by me till this volume was nearly printed, a blindness which I attribute to the extreme difficulty of unlearning the nonsense taught to me in my youth, of which I have so much complained in my Preface. I shall be told that my observation is not new, and that several writers have observed, that the God Jehovah of the Jews was supposed, or said by some of them, not to be the First Cause. This is true, but it, like many other things, though noticed, has been noticed only by being misrepresented and turned into ridicule; so that, for the cause of truth, it had better not have been noticed at all. As it was known only by having escaped from the mysteries, it probably was not understood by those who named it, to whom it might have appeared in the contemptible light in which they represented it. But this makes no difference as to the fact of the real misrepresentation.

The idea of the Person of whom I now speak, condescending to walk and talk with man, seems degrading in our estimation at first sight; but yet I know not how, in idea, to separate the former or reformer of our globe, and of its small, as well as large parts, from a sensation of littleness, or from anthropomorphism. We can scarcely form an idea how a world, or any matter, was to be formed, or moulded into shape, without organs. From this difficulty, I have no doubt arose the expedient of calling one of the persons of the Trinity by the term *Logos*,—for he spake the word—gave the word—and the world was made. From this the *Logos* and *Lingua* came to be united to the *Linga*—words identical, I have no doubt, in letters, in ancient, though a little varied in modern, times. The connexion between *Linga* and *Logos*, as generators of the globe or system, is evident enough. I can entertain no doubt, that the whole of the refined doctrine of Emanation, of the Trimurti, of the *To On*, and *Πατήρ αγγελος*, was a Cabalistic secret, creeping out of the crypt by degrees. And though we often read of the Cabala about the time of the beginning of the Christian æra, yet I very much suspect, that its real existence was then denied by the initiated, as it has been since, and is *now* at Rome and Moscow. I believe the Protestant priests are perfectly ignorant, and that they are too vain of their little bit of Greek and Latin, to submit to be taught. And, as to their predecessors, Luther and Calvin, I believe they were as much the sufferers from *monomania* as John Wesley, who fancied he had miracles performed upon him almost every day.

March 10, 1833.

ON

THE VOWEL POINTS OF THE HEBREW LANGUAGE.

(FROM THE CLASSICAL JOURNAL, XXXIII. 145—153.)

To the Editor.

SIR,

IN consequence of the present prevailing fashion for the study of the Hebrew language, I am induced to offer some observations respecting its celebrated vowel points. It appears that a new school of divinity is arising, which is chiefly founded on an old exploded notion of the antiquity of these points. The object for which this obsolete doctrine is revived, is, I think, sufficiently evident. However, with your permission, as concisely as is in my power, I propose to submit to your readers a few of the reasons which formerly caused it to be exploded, and which, I flatter myself, will finally consign it to its long home. The Hebrew language, as it is found in the copies of the Pentateuch used in the synagogues, consists of twenty-two letters, but is devoid of the marks which are known by the name of the vowel points. The present Jews, with the followers of the new divinity school, maintain that these points are of very great antiquity; some asserting them to be as old as Ezra, others coeval with the language. On the contrary, it has been the opinion of most learned men in modern times, that they have been not only adopted as authority, but invented, since the time of Christ; that they were invented in the dark ages by the Jews, in order to enable them to give such meaning and pronunciation to the text as they thought proper, and further to enable them, on once having given it that meaning and pronunciation, to keep them from all change in future. The object for which they were invented is evident from the circumstance, that they not only added a system of new vowels to the language, but they contrived to abolish the old ones, and render them silent and useless as vowels, and convert them, when joined to the new letters, into consonants. Had the object of the Jews in inventing the points been merely to fix the pronunciation, they would not have done away with the old vowels, but only added some points to them. But this would not have served their purpose; therefore they were obliged to get quit of the sturdy old vowels, which would not be made to bend to their purposes, and to convert them into consonants.

The simple question at issue betwixt the parties is, whether these points be new or old; and this, I think, it will not be difficult to settle. If what Harris says be true, that a letter is a sign significant, the vowel points and accents or marks, upwards of twenty in number, must be letters, for they are certainly signs significant; and it is pretty evident that the addition of such a number of letters to any language must enable the person adding them, to give to the original text nearly whatever meaning he thinks proper. This is the object for which they were invented by the Jews, and this is now the object for which the new school of Christians support them.

In the beginning of the last and the end of the preceding century, the question of the antiquity of these points was discussed at great length, and with no little warmth and animation, by a great number of very learned men, until the subject appeared to be completely exhausted, and the question settled. To enter into the contest again would be useless, and evidently would occupy too much space in your miscellany: but as Dean Prideaux has summed up the chief arguments against them in a short and compendious form, it may be useful to many of your readers who are misinformed by their Jewish and Christian instructors, to see what has been said by him against them. The following are the principal reasons which he gives against their antiquity:

1. "The sacred books made use of by the Jews in their synagogues, have ever been, and still are, without the vowel points, which would not have happened had they been placed there by Ezra, and consequently been of the same authority with the letters; for, had they been so, they would certainly have been preserved in the synagogues with the same care as the rest of the text. There can scarce any other reason be given why they were not admitted thither, but that, when the Holy Scriptures began first to be publicly read to the people in their synagogues, there were no such vowel points then in being; and that when they afterwards came in use, being known to be of a human invention, they were for that reason never thought fit to be added to those sacred copies, which were looked on as the true representatives of the original; and therefore they have been ever kept with the same care in the ark or sacred chest of the synagogue, as

the original draft of the law of Moses anciently was in the ark or sacred chest of the tabernacle, which was prepared for it; and they are still so kept in the same manner among them to this day.

2. "The ancient *various readings* of the sacred text, called Keri Cetib, are all about the letters, and none about the vowel points; which seem manifestly to prove, that the vowel points were not anciently in being, or else were not looked on as an authentic part of the text; for if they had, the variations of these would certainly have been taken notice of, as well as those of the letters.

3. "The ancient cabalists draw none of their mysteries from the vowel points, but all from the letters: which is an argument either that these vowel points were not in use in their time, or else were not then looked on as an authentic part of the sacred text; for had they then been so, these triflers would certainly have drawn mysteries from the one as well as from the other, as the later cabalists have done.

4. "If we compare with the present pointed Hebrew Bibles the version of the Septuagint, the Chaldee paraphrases, the fragments of Aquila, Symmachus, and Theodotion, or the Latin version of Jerome, we shall in several places find that they did read the text otherwise than according to the present punctuation; which is a certain argument that the pointed copies, if there were any such in their times, were not then held to be of any authority; for otherwise they would certainly have followed them.

5. "Neither the Mistna, nor the Gemara, either that of Jerusalem or that of Babylon, do make any mention of these vowel points, although in several places there are such special occasions and reasons for them so to have done, that it can scarce be thought possible they could have omitted it if they had been in being when these books were written; or, if in being, had been looked on by the Jews of those times to be of any authority amongst them. Neither do we find the least hint of them in Philo-Judæus or Josephus, who are the oldest writers of the Jews, or in any of the ancient Christian writers for several hundred years after Christ. And although among them Origen and Jerome were well skilled in the Hebrew language, yet in none of their writings do they speak the least of them. Origen flourished in the third, and Jerome in the fifth century; and the latter having lived a long time in Judea, and there more especially applied himself to the study of Hebrew learning, and much conversed with the Jewish Rabbies for his improvement therein, it is not likely that he could have missed making some mention of them through all his voluminous works, if they had been either in being among the Jews in his time, or in any credit or authority with them, and that especially, since in his commentaries there were so many necessary occasions for his taking notice of them; and it cannot be denied but that this is a very strong argument against them."—Prid. Con. P. i. B. v.

The Dean has not done justice to his own observations respecting Origen; for he might have added, that numerous examples might be produced from his works, where he has quoted the Hebrew in a manner different from the present masoretic punctuation, particularly in his Heptacla, in writing Hebrew into Greek characters.

This short compendium of the Dean's seems to me to be quite sufficient to decide the question. Indeed, the well-known fact named in his first section, of the text in the synagogue copies being without the points, cannot be got over. The points are not only wanting, but

"The text of the synagogue-rolls of the Pentateuch is not divided into verses, and is also without the points of distinction (:) called Soph-pesuk. Buxtorf, in his Tiberius, Ch. ii. p. 113, quotes the following note from Elias Levitta: 'It is a certain truth, and of which there is no doubt, that this law which Moses set before the Israelites was plain, without points, and without accents, and without any distinction of verses, even as we see it at this day; and according to the opinion of the cabalistic doctors, the whole law was as one verse, yea, and there are that say as one word.' Yeates's Collation, pp. 35, 36."—Townley's Illustration, Vol. I. p. 58.

The great supporters of the antiquity of the points were the two Buxtorfs—no doubt, men of great learning and talent. But the only argument which they produced of any weight which is not answered by the preceding five paragraphs of the Dean's, is this, "that when the Hebrew language ceased to be the mother tongue of the Jews, (as it is agreed on all hands that it did after the Babylonish captivity,) it was scarce possible to teach that language without the vowel points."—Prid. Con.

This argument is completely refuted by the fact, that the Samaritan Pentateuch, as well as the Chaldee paraphrases before the time of Buxtorf, were all without the points, and the former still remains so. It seems quite absurd to suppose that, if the Hebrew had once had them, it should ever have lost them. And the argument that the language must have had them because it could not be read without them, is at once refuted by the fact of the Samaritan being yet without them, as well as several other languages. The reader will find much curious information on the question here discussed in Bishop Marsh's 10th and 12th Lectures.

On this subject Dr. Robertson says,

"For neither the obsolete Arabic characters called the Cuphic, which fell into disuse about A. D. 930, nor the alphabet of the Sanscrit in India, a language that has been dead or not currently spoken these 1200 years, nor the Chaldee, Syriac, or Samaritan, nor any other ancient Eastern language that we know of, ever employed vowel points as the modern Jews and Arabs do. The Arabic vowel points came first into use at the time when the modern Arabic alphabet was adopted by order of the Kalif of the Saracens, Almuktadir, A. D. 390. The new alphabet was invented by his vizir, Ibn Mukla."

Much pains have been taken to shew that without the points the meaning of the language must be doubtful; that

some words will bear as many as even hundreds of different meanings; and thence it has been inferred that the language always must have had them. This argument, the fact stated above, of several languages being still without them, sufficiently refutes. The imperfection of the language may be a subject of regret, but it cannot be admitted as a proof of the antiquity of the system of pointing against such evidence as is produced. With respect to the mode of obviating this imperfection, it is evident that there is no other way to be adopted than to consult and compare similar texts with one another, and with the old versions made when the language was still living. For this purpose, in the case of the Pentateuch, the Samaritan, and the Latin Vulgate (*a version made from the Hebrew*) may be consulted, and, above all, the Septuagint. Persons wishing for more information may consult Walton's Prolegomena, his Considerator Considered, and the works of Dr. Grabbe.

It is said that the Jews in their synagogues, in reading their law, always read first a passage in the Hebrew, and then the passage in the language of the country, that it might be understood. And in order to pronounce it correctly, the reader for the day always on the day preceding practised his lesson by reading it over from a pointed copy. From this it is inferred that the points are ancient. But I do not see how this can prove any thing of the kind; for the practice itself was not ancient nor general, as is proved by a curious passage quoted by Buxtorf in his *Lexicon Talm. Rabbinicum*, from the Talmud of Jerusalem.

“Rabbi Levi ivit Cæsaream, audiensque eos legentes lectionem ‘audi Israel,’ Deut. vi., Hellenisticè, voluit impedire ipsos.” Vide Marsh, Mic.

The fact of the service of the Jews being read in the synagogues in countries foreign to Judea, and after their last dispersion, in the Greek language, cannot be doubted, and may be proved from various passages in Tertullian, Origen, Philo, &c.; but the matter is put out of dispute by a decree of Justinian, A. D. 550, (Novel. 146; Photii Nomocanon, xii. 3; also Gothofredi Corpus Juris Civilis; Novel. 146, II. i. 580,) passed for the express purpose of determining the question; for disputes had arisen amongst the Jews on the question, whether their service was to be read in the Hebrew or the Greek: and the Emperor settled it by giving them permission to read the Hebrew if they pleased, *paying a tax for so doing*.

In the synagogues in Egypt and other places, the service, ever after the time of Onias, was read in the Greek language. When the Jewish captives taken by Titus and Vespasian came to be dispersed over the empire, they were not content with this practice of the Hellenistic Jews, which they considered wrong—heretical; and after some time they endeavoured to change it, and this was the cause of the disputes; similar to what had happened before at Cæsarea, when Rabbi Levi found them reading the law HELLENISTICÈ.

The doctors of the new school, mirabile dictu! are actually in support of their system driven to the necessity of maintaining that the LXX. was burnt in the time of Cæsar (though Tertullian witnesses that it was at Alexandria in his time); and that Origen in his Heptacla, Jerome, Justinian, and all the Jews, were mistaken; and that all these people, quoting, editing, quarrelling, legislating, never once suspected that they had mistaken the version of Aquila for the Septuagint,—Greek being the vernacular tongue of Origen, and Hebrew of the Jews!

It would occupy too much of your Journal, or else many passages might be produced from the New Testament, and the works of Jerome, Origen, &c., to prove that their authors quoted from unpointed copies. But they may be found in Walton's Prolegomena, and in his Considerator Considered. Nothing can well be more striking than this fact; yet perhaps one example may not encroach too much on your space.

In the last verse of the 47th chapter of Genesis, Jacob is said in our Bible to have *bowed himself on the bed's head*. The Vulgate renders this passage, *conversus ad lectuli caput*; the LXX., ἐπὶ τὸ ἄκρον τῆς βᾶβδου αὐτοῦ, *in summitatem virgæ suæ, upon the top of his staff*. Now, the word in Hebrew, מטה *mte*, means both staff and bed, accordingly as it is pointed; and the makers of the LXX. have evidently made a mistake, which if they had had a pointed copy they would not have done. How absurd to suppose that the old man lying on his death-bed should bow his head on his walking-staff! The truth of this rendering of the word מטה *mte* by the word *lectum* and not *virga*, is proved from its repetition in the last verse of the 49th chapter, where it is said *collegit pedes suos super lectulum*, Vulg.; τὸς πόδας αὐτοῦ ἐπὶ τῆν κλίνην, LXX.

This proves that there were no points when the LXX was made. St. Paul, quoting the passage, uses the word *virga*—a proof that he quoted from the LXX, or else that he made a mistake in the Hebrew; and as the latter will not be allowed, it tends to prove against the new school that the version which we have is really the LXX. The Samaritan text and version and the Targum have the same reading as the Vulgate, *lectum*. The Arabic and Syriac versions made from the LXX. of course fall into its mistake. This example also furnishes one proof against the dogma of the new school that *St. Jerome did not understand Hebrew*, that he did understand it, and that he used it profitably too, in his Latin version.

I apprehend that when the Hebrew became a dead language, the points were invented by degrees to enable the masters in the schools better to instruct their pupils, and after some time they began to have authority given to them by the Rabbies. No man appears to have taken more trouble to examine the question than Dean Prideaux. From him we learn that all the Rabbinical authors were unpointed in his time, and that all their other books were originally without them; that in some new editions points were put to them, but that the best editions were without them; that they were added to the Targums by Buxtorf; and that they were only a little before his time added to the Mistna

and Machzor. (Prid. Con. B. v. pp. 422, 429, ed. 8vo. 1815.) I shall not now intrude any further on you than merely to add, that if your readers wish for any more proofs of the modern date of the masoretic points, they may consult the works of the following persons, who all wrote in defence of that doctrine, and by whom the question was considered to be settled :

Capellus, Elias Levitta, Thomas Erpenius, Isaac Casaubon, J. J. Scaliger, Isaac Vossius, J. Drusius, Arnolde Boote, Andrew Rivet, Lewis de Dieu, Grotius, Spanheim, Festus Hommius, Theodore Beza, Selden, Walton, Sennert, Basnage, Burman, Simon, Limborch, Morinus, Vitringa, Le Clerc, Heuman, L'Advocat, Houbigant, Louth, Kennicott, and Marsh, Theol. Lec. P. ii. Lib. x. p. 75 ; also see Todd's Life of Walton, note 1, Vol. II. p. 322.

Perhaps it is unnecessary to observe, that it is not so much my object to discuss the question on which I have slightly touched, as to suggest to your readers who have lately commenced the study of the Hebrew language and its history, where they may find the best authorities on the subject, in order that they may not be misled by the specious and plausible, though unfounded, assertions of the new school.

GODFREY HIGGINS.

Skellow Grange, near Doncaster.

APPENDIX II.

AFTER my First Appendix was printed, I received Mr. Von Hammer's French History of the Assassins, published March 1833. It is exactly what a book on such a subject, written by Mr. Von Hammer under the patronage of the Emperor of Austria, might be expected to be found. It is difficult to say whether religious malice or ignorant prejudice most prevails. I shall only notice one passage which, in a very striking manner, proves the truth of what I have said, in Book X., respecting the College of St. John's, at Cambridge. When all the other circumstances are considered, it cannot for a moment be believed, that the same dresses should be adopted at Cairo and at Cambridge, without some communication or without a common origin. After describing the College, or MAISON DE SAGESSE, as he calls it, at Cairo, in page 55, he says,

“ Souvent les Khalifes y présidaient des thèses savantes, dans lesquelles paroissaient, suivant l'ordre de leur facultés, les professeurs attachés à cette académie, LOGICIENS, MATHÉMATIENS, JURISTES, et MÉDECINS, tous revêtus dans leurs habits de cérémonie (khalaa), ou de leur manteaux de docteurs. Les manteaux des universités Anglaises ont encore aujourd'hui la vieille forme du khalaa ou du kaftan, qui étaient les habits d'honneur des Arabes.” He shews that, to the support of this establishment, the tithes were appropriated; and in p. 58, describing the doctrines of the Assassins, he unwittingly lets the following passage escape him: “ On enseignait que toute législation positivement religieuse, devait être subordonnée à la législation générale philosophique.” “ Les Doctrines de Plato, de Aristote, et de Pythagore, étaient citées comme des preuves logiques et fondamentales.” I cannot refrain from expressing my pleasure at this presumptive proof of the truth of what I have said of the Assassins, Templars, &c., &c., &c. It is only by taking advantage of such, to all appearance, trifling casualties, that the secret truths of the ancients can be wrested from the hand of the destroyers.

The work of Mr. Von Hammer is probably intended to create an alarm against the orders of Carbonari, Masons, Templars, &c. I shall probably return to it.

April 15th, 1833.

ANACALYPSIS,

AN

ATTEMPT TO DRAW ASIDE THE VEIL

OF

The Saitic Isis;

OR,

AN INQUIRY INTO THE ORIGIN

OF

LANGUAGES, NATIONS, AND RELIGIONS.

BY THE LATE

GODFREY HIGGINS, Esq.,

F.S.A., F.R.ASIAT.SOC., F.R.AST.S.,

OF SKELLOW GRANGE, NEAR DONCASTER.

RES VERBIS, ET VERBA ACCENDUNT LUMINA REBUS.

VOL. II.

LONDON:

LONGMAN, REES, ORME, BROWN, GREEN, AND LONGMAN, PATERNOSTER ROW.

1836.

PRINTED BY GEORGE SMALLFIELD, HACKNEY.

HAROLD B. LEE LIBRARY
BRIGHAM YOUNG UNIVERSITY
PROVO, UTAH

PREFACE.

THE *first* volume of this work was finished in June, 1833, although the Title, for the sake of uniformity, bears the date of 1836. The *second* volume was commenced; and it was the Author's intention to have proceeded to its completion. But, having attended *The British Association for the Advancement of Science*, held that year at Cambridge, he wrote thence to his printer, stating, that he was labouring under severe bodily affliction; that he should endeavour to reach home as speedily as possible; and adding, as it were prophetically, that he should *never leave it again, till he was conveyed to his grave*. So deeply interested, however, did Mr. Higgins feel in the completion of his work, that he wrote frequently—alternately expressing hope and doubt of his recovery. Having made what he deemed necessary arrangements for placing the manuscript in the hands of his appointed editor, he continued to devote his attention to it, till a few days previous to his decease. This occurred on the 9th of August, 1833.

After Mr. Higgins's interment, his only Son and Executor wrote to say he was directed to forward the copy, that the printing might be proceeded with, and expressing his desire to carry his Father's wishes fully into effect. Here it may suitably be stated, that, at the sole expense of Godfrey Higgins, his son, this posthumous volume of the Author's is published.

The Friends and the Literary and Scientific Associates of the Author may have felt surprised that this publication has been so long delayed. The delay has been unavoidable: for, although Mr. Higgins had made preparations for the progress of the work, had his life been spared, yet when the manuscript was placed in the hands of another, many parts of it appeared to require curtailment, or omission, to avoid repetitions. The doubts of the Editor might have been removed immediately had he been able to submit them to the Author.—As numerous quotations had been made, it was necessary for the Editor frequently to go to the British Museum to collate them with the originals. His distance from the Museum, the number of books often required for a single sheet, and the time

unavoidably consumed in finding them, sometimes occupied the greater part of a day, without the object being fully accomplished; for it sometimes happened, that quotations had been made from works which could not be found even in that great establishment: and, at certain periods of each month, the Editor's attention was fully occupied by the incidental duties of his profession. During those periods, the work was delayed, as no part of the manuscript was placed in the hands of the compositor till it had been carefully examined, in order to supply references to the *first* volume, or to preceding sheets of the *second*—some of which had not been, and many of which could not be, supplied by the Author. Delays have also occasionally arisen from the Editor's inability to attend to the work in consequence of indisposition. Suffice it to say, that the publication of the volume has not been retarded by Mr. Higgins, who has uniformly evinced an anxiety to see his Father's wishes realized.

In supplying references to the *first* volume, it was sometimes found, that the Index, though copious, was not so specific as was desirable, as subjects alluded to under a given name, could be found only by referring to many pages appended to that name. To obviate this inconvenience, a more detailed Index is given with this volume; and it is hoped, that nearly every subject or opinion contained in it may be found by seeking it under its appropriate head.

The reader may possibly feel somewhat disappointed, if he peruse the entire volume carefully, that the promise made (in p. 145) by the Author, that he would "exhibit, in a future book, the Christianity of Jesus Christ, from his own mouth," has not been fulfilled so amply as he anticipated. The probability is, that had the Author's life been spared, he would have left no pledge unredeemed. He may, however, have thought, that what is contained in the concluding page was sufficient. At all events, neither the Author's Son nor the Editor felt justified in attempting to supply what may, perhaps, be regarded as an omission. They esteemed it their duty to allow the Author alone to speak for himself. His views respecting Jesus Christ and his religion are stated explicitly in various parts of the volume. These views will doubtless excite astonishment in some, and displeasure in those who, while they deny *infallibility* to the Pope, write, and speak, and act, as if they possessed that attribute. To the honest and intelligent inquirer after truth, there can be nothing really offensive in the statement of opinions directly opposed to his own, if those opinions are honestly propounded. If the Author's statements respecting many of the rites and doctrines of the endowed and unendowed sects of Christendom can be shewn to be groundless, numerous advocates of those rites and doctrines will, without doubt, speedily appear in their defence. Truth can lose nothing by fair discussion.

The Author having given, in the Preface to the first volume, what he designates a Portrait of himself, it is deemed unnecessary to enter into any further particulars. The following obituary notice may, however, appropriately be added, as an unbiassed testimony to the Author's worth, and as expressive of the opinion entertained of him by his fellow-countrymen in the neighbourhood of his residence.

“ Friday morning, August 16, 1833, the late Mr. Higgins.—It has been our painful
 “ duty to announce, in our obituary of this week, the death of a much esteemed and re-
 “ spected gentleman, Godfrey Higgins, Esq., of Skellow Grange. As journalists, we
 “ feel that Mr. Higgins has long occupied too large a space in the public eye to be per-
 “ mitted to slide silently into the grave; while we are, at the same time, conscious of
 “ our inability to do justice to the claims of the neighbour we have lost. Mr. Higgins
 “ was, in early life, an assiduous and able magistrate; quick to discover the right, and
 “ firm and fearless to promote and to maintain it; and his indefatigable exertions in the
 “ detection and correction of the great abuses then existing in the management of the
 “ York Lunatic Asylum, and the formation of another and very extensive establishment
 “ for the care and protection of pauper lunatics at Wakefield, will be monuments of his
 “ public spirit, and perseverance, and philanthropy, which many, once visited by the
 “ privation of human reason, (that severest of human afflictions,) will have reason to be
 “ grateful for long after the present generation shall have passed away. Retiring from
 “ a regular attention to magisterial duty, Mr. Higgins, for some years preceding his
 “ death, had devoted a considerable portion of his leisure to antiquarian research—
 “ travelling much in the pursuit and cultivation of his favourite study; and publishing
 “ from time to time, his discoveries and constructions in works interesting to the man
 “ of science, and of value to the public; while, as a moral and political writer, his pro-
 “ ductions were numerous and important; possessing much of originality and inde-
 “ pendent feeling, and always having the increasing happiness and improved condition
 “ of his fellow-creatures for their object. Being accustomed to think for himself—
 “ (taking what he considered reason and good sense, more than the rules of the schools,
 “ for his guide)—and to write and to speak what he thought, his sentiments and opi-
 “ nions have by many been admired and adopted; whilst by others—perhaps less candid
 “ and liberal than he was—they have been impugned and assailed with acrimony. Yet
 “ were their motives never called in question. They were admitted by all to have their
 “ fountain in a manly, honest heart; nor could they fail to be acceptable in the sight of
 “ that Being whose eye expands itself over all the thoughts and transactions of man-
 “ kind; and appreciates, and registers, and will reward them, not according to conse-
 “ quence, but intention. Be the sentiments and opinions we allude to founded in truth
 “ or in error, they at least united in the instance before us, to form the honourable, the
 “ punctual, the hospitable, the cheerful, and kind-hearted gentleman; and it will be
 “ long, very long, ere it can be the province of the *Doncaster Gazette* to report the
 “ decease of a neighbour more deservedly and deeply respected and regretted.”

ADVERTISEMENT.

THE Author lived to revise only the first *four* sheets of this volume. Apprehending that his life was drawing to a close, he wrote to his printer, expressing a wish that he would edit the remainder of the work. From so responsible an office the printer would have shrunk, had not the Author informed him that the manuscript was so far arranged, that, with proper attention, he would be able to complete the volume. Whether Mr. Higgins's confidence was well-founded, must be left to the judgment of the reader.

Two injunctions were laid on the appointed Editor,—that he should *not* send out the proof sheets to any literary friend; and that, in any instance of a difference of opinion, he should append *Editor* to the note. The *first* injunction is respectfully urged on the kind and candid consideration of the reader, in excuse for the *errata*, which, it is lamented, are numerous. On the *second* injunction, the Editor begs to remark, that he has scrupulously endeavoured to leave every opinion of the Author's as he found it; and that, sustaining the twofold office of Printer and Editor, he has reluctantly expressed any dissent from the views of the Author. One note, especially, the Editor wishes he had not inserted—that in p. 122, as it was written in ignorance of the Author's opinion, subsequently expressed (pp. 131, 132), respecting the book of The Acts. It will be obvious from other notes, that the Editor views the character and doctrines of Paul in a different light from that in which the Author regarded them. It will, therefore, it is hoped, not offend or shock the philosophical reader, when he finds it added, that the Editor avows his firm conviction of the divine mission, the death (by crucifixion), the resurrection, and the ascension to a state of immortality, of JESUS of Nazareth.

The respected Author, could he speak from the grave, would not, the Editor is confident, disapprove of this frank and conscientious avowal. Mr. Higgins was, indeed, as he claimed to be considered, a *philalethean*; and he was too liberal and too generous to deny to his Editor the right of expressing his love of that which *he* regards as *the truth*. By the great majority of Christians the Author's opinions will doubtless be considered as very remote from “the truth as it is in *Jesus*,” but when HE shall return to judge the world in righteousness (an event which the Editor gratefully anticipates), HE will determine who most inadequately appreciated his nature and office—those who believed him a *good man*, but not a divinely commissioned prophet; or those who endeavoured to invest him with the attributes, and to place him on the throne, of his eternal and ever-merciful FATHER.

THE EDITOR.

 352, first note, for 'Assiat,' read *Asiat*.
 366, last line, for 'henious,' read *heimous*.
 371, in note 4, for '2 Kings xxiii., &c., &c.,' read *2 Kings xxiii. 6, &c.*
 372, line 6 of note 2, for 'de Saques,' read *des Saques*.
 385, line 7, for 'de saintes' read *des saintes*.
 386, line 4 from the bottom, for 'Egypté,' read *Egypte*.
 391, line 3, for 'passé,' read *passée*.
 400, line 21, for 'three son,' read *three sons*.
 406, line 4, for 'furnish,' read *furnishes*.
 411, line 38, for 'Godyean,' read *Gordyeaan*.
 426, line 26, for 'cords,' read *cordes*.
 437, last line of text, for 'οψε,' read *οψ*.

ANACALYPSIS.

BOOK I.

CHAPTER I.

SACA.—SAXONS.

I SHALL in this Chapter submit to my reader some observations relating to the ancient Sacæ of Tartary or North India. These observations will be of importance in the discussion of the Origin of Letters, which will be contained in a future Book; and also of the first importance in the two following Books, the object of which will be to shew, that a real, not a poetical, age of gold—an age of learning, peace, and civilization—once existed; and that this was under the rule of a sacerdotal caste or order which governed the whole world, and which originated the feudal system. I shall also shew, that all the sacred numbers and cycles were intimately connected with, and indeed partly arose out of, a microcosmic theory, named by Plato in his *Timæus*, which was a part of the secret doctrine of Genesis; and the whole of this I shall also shew was intimately connected with the feudal system. I fear the extracts from *Georgius* will be found by many of my readers tedious; but as proofs of my system, from an unwilling witness, they are of the first importance, and cannot be dispensed with.

We have seen, (Vol. I. p. 153,) that one of the most common names of Buddha was *Sacya* (the name of the Lama of Tibet) and *Saca*, and *Saca-sa*. From this name of Buddha it was that the tribes who inhabited an extensive country east of the Caspian Sea and north of Tibet, were called *Sacæ*. (Vide Ptolemy.) This was the hive whose castes are yet found in the West, called *Saxons*, having, as Dr. Geddes says, the Hebrew language.¹ They were the Belgic *Suessones* of Gaul;

¹ From Dr. Wait I learn that there are an IMMENSE number of Chaldee roots to be found in the Sanscrit lists of Dhatoos. (See *Class. Journal*, Vol. XVI. p. 213.) These Chaldee roots are Hebrew roots also, and are, I have no doubt, in a very considerable degree, the origin or base whereon the Sanscrit was built. We shall see in a future Book that they were of the old Tamul language, or at least the vernacular tongue of great numbers of people occupying the country of the Tamuls at this day, and are called by them *Pushto*, the same as the language of Western Syria: indeed, a close attention to what has been said in Vol. I. Book X. respecting St. Thomas and the Tamuls, must have shewn a high probability of this already. But I shall return to this in my book on the Origin of Letters.

The Sanscrit Dhatoos are *data*—things given or granted or assumed, on which other things are built—the roots of the language. The word is what I call Sanscrit Latin.

one of their capitals was Soissons:¹ they were called Sausen by the Welsh, Sacon by the Scotch, and Sasenach or Saxsenach by the Irish. They are the people said by Herodotus to be the same as the Scythians.²

Dr. Scheller maintains the whole of Europe to have been occupied by the Saxons before the arrival of the Celts.³ But they were, in fact, both tribes of the same people. Scythians, Celts, Saxons, were successive castes or swarms from the same hive. If there were any difference, it was merely in the time of their arrival in the West. But it is probable that they were only different names for the same people; as the Britons are called English, Scotch, Welsh, Albanians, Caledonians, Cambrians, &c. The difference in their dialects is only what would naturally arise in unwritten languages, in the space of four or five hundred years.

They were castes or swarms sent out in succession, from a great and excessively populous hive in Tartary or North India—the country of the thousand cities of Strabo. They were exactly like the tribes sent out from Britain in modern times—at one time to America, at another time to Africa, at another time to Australia. They were the subjects of the only civilized nation on the earth. They took with them every where their manners, government, language, religion, and allegiance to their supreme head, as our colonies all retain their allegiance to the mother country. They at first nowhere found any of their own high caste, none in fact but such persons as we found in America—Aborigines, as we call them. They met with no resistance; but, by degrees, as the world became peopled with the successors of previous tribes of their own countrymen, and land scarce, wars for possession began to arise. This I shall discuss, however, in my next Book.

The word Saca is the same as the Hebrew word שָׂכָה *ske*, imaginari, and scio, *to contemplate*,⁴ and the Greek γινωσκω—in short, *mind*, constantly confounded with wisdom. The Sciakam of Georgius is probably Sa-ca-akim. The root is שָׂכ *sk*, whence came שָׂכָל *skl*, wisdom,⁵ and our skill. Saca is sax; and sakl or skl, or skill or cunning or knowledge or *scientia* or wisdom, in any art, is X or Xaca, KL, which means the cal or wisdom of X; and KL is X=600, L=50,=650: and the KL-di is the origin, in its most remote degree, of the Calidei or Chaldeans. I promised this explanation in Book XI. Chap. I. Sect. 1; Callidè (wisely), cunning, king, incarnation of wisdom or cunning. The origin of the root sk and kl, I shall shew when I treat of the Origin of Letters. I have no doubt that this root is, in fact, the same as the שָׂג *sg*, whence come שָׂגָה *sg/h* and the Latin *sagio*,⁶ and *saga a witch*, and *sagacitas*, *præsagio*—English, *sage*, *sagacious*, *presage*; ⁷ and the Roman officer called *sagart*, who was the sacrificer, and the Hebrew *sagan*, the assistant or adviser of the high priest. From this came the word שָׂלַט *sll*, *Scalit*, the name given to Joseph in Egypt, and the meaning of which, I apprehend, was *wise man*.⁸ Joseph was called a saviour; and this word is the same as *salus*, *salutis*. (Vide Book X. Chap. V. Sect. 6.) The barbarian who marched from the North and plundered Jerusalem, was a Scythian, or Tat-ar or Tartar; he was called Shesach.⁹ This is nothing but Saxon or Sasenach. Tat is a name of Buddha.

Mohamed was called a Saca or Saceswara, as well as a Vicramaditya. These are all merely descriptive epithets. And from the fact named above we find the reason why the Mohamedans spared the statues of Buddha in India. It strongly confirms the doctrine of the secret religion of the Mohamedans. Mohamed was thought to be a renewed incarnation of divine wisdom, and of course of Buddha, in his tenth avatar.

¹ Probably town of the *Saxones*, softened to Soissons.

Abrah. Ortelius en ses *Synonymes et Thrésors Géographiques Scythiæ, a Persis Sagæ, ut Mela habet, vel Acæ ut Plinius, Solinus, et Eustathius scribunt Scythia Saga est in originibus Catonis, que circumferuntur.*¹

In the time of the Pharaohs the Egyptians had a class of persons called Sages or *wise men*.²

Considering that *Saca* means Buddha the God of Wisdom, I cannot much doubt that the Irish *Sagan*, a priest, the Scandanavian *Saga*, the Hebrew סגן *sgn, noble or great man*, are all the same. "The heathen Irish had their *Sagan*, like the Tyrians and Chaldæans. Berosus gives the "epithet of *Sagan Ogygisan* to Noah. The *Sagan Cohenia* was the *Aristides Sacerdotum*, i. e. "primarius Sacerdotum post summum."³ *Sagan Babyloniorum sive Chaldæorum vox, a quibus "ad Hebræos transivit."*⁴ The *Cohenia* is the Hebrew word for a priest—a *Cohen*; and it is not unlikely that the *Chaons*, who are said by the Indians and Persians to have erected the Druidical circles, had their names from this word. I think it probable, also, that the *Cohen* had a near relation to the *Kan*.

Vallancey says, from some author whose name he does not give, but I suspect from *Georgius*, "In Indiis *Xacæ religio* per omnes fere earum regionum populos latissimè funditur: tempus quo "Xaca vixerit, incertum est, plures sunt ex Europæis scriptoribus, qui floruisse velint *Salomone* "in *Judæa* regnante: non idem est et *Xaca novus*, i. e. *Apollonius Tyaneus*, qui floruit A. D. 60. "(T. 161.) *Xacam eundem esse ac Buddum*, *La Crosius* aliique non dubitant *Xacæ nominis* "origo à *Saca* *Babiloniorum* et *Persarum* numine repetendo. *Tibetanorum* litera scribitur "Sachia, quod idem est cum *Sechia Sinensium* (T. 21). Les Japonois se disent originaire du pais, "ou il est adoré sous le nom de *Budhu*, et de *Sommona-cadam*."⁵ *Bailly*, p. 200, says, "Le "Xaca des Japonais, le *Sommona-chutana*, du *Pegu*, le *Sommona-kodam* de *Siam*, le *Butta* des "Indiens, ne sont qu'un seul et même personnage, regardé ici comme un Dieu, là comme un "législateur—si j'ai bien prouvé que *Butta*, *Thoth* et *Mercure* ne sont également que la même "inventeur des sciences et des arts: ils en suivra que toutes les nations de l'Asie, anciennes et "modernes, n'ont eu la philosophie et pour la religion, qu'un seul et même législateur placé à leur "origine. Alors je dirai que ce législateur unique n'a pu aller partout dans l'Asie, ni en même "tems parceque, sans doute, il n'avait pas d'ailles: ni successivement parceque la vie d'un "homme ne souffrirait pas aux voyages. L'existence de ce peuple antérieur est prouvée par le "tableau qui n'offre que des débris, astronomie obliée, philosophie mêlée à des absurdités, "physique dégénérée en fables, religion épurée, mais cachée sous un idolatrie grossière." From what my reader has seen in the tenth Book, I think he can have little or no doubt that the débris here alluded to, refers to the refined and beautiful system of Wisdom there developed.

There is scarcely a corner of the globe where the doctrines of Wisdom may not, as a mythos, be found. My learned friend *Eusèbe de Salverte*⁶ has clearly proved that, by the Sagas of the Scandinavians, the books of Wisdom are meant—the word *Saga* being the same as the French *sagesse* and the Latin *sagax*.

From the same author, p. 395, it appears that the *Razanæ* or *Razanui* can be nothing but children of *Ras* or Wisdom.⁷ Thus it is evident, that to speak of the *Sacæ* or *Saxons* was the same as to speak of the *Buddhists*. It was the general name, as we call many sects of Catholics

⁷ In the list of names given in p. 408, most of them are in reality Hebrew; for instance, *Aretia* for *earth* is *Aretz*, *Arsa*, the Sun, חרש *hrs*, &c.

or Protestants *Christians*. From this their sacred books were called Sacas or Sagas, as we call the books of the Indians Vedas or Bedas, or, in fact, Buddhas or books of wisdom. This all agrees very well with the learned language of Cashi-Mere or Cashmere having been Chaldee; and it accounts for Dr. Geddes' having found their language to be Hebrew. The Norwegian kings were called *Haquin*. This is but Hakim or חכם *hkm*; and the substitute for the Jewish high priest was a Sagan. Closely allied to these is the Hebrew root כשף *ksp* an enchanter.¹ כשף *ksp* is literally two words, and means שפ *sp*, *wise*, and כ *k* as, that is, *as* a wise person. Refer to Vol. I. pp. 733, 734, to my explanation of Lokman.

Anciently all priests were physicians, and were called Hakim: (as physicians are yet called in the East :) but this word always conveyed with it a sacredness of character. This is all in keeping with their Gods—Odin, Woden, Thor; with the Budwas Trigeranos in Wales, and the Old Man Budda in Scotland; all these came with the first or the second tribe of Saxons to the north of Germany and to Britain.

Strabo says,² "ALL the tribes eastward of the Caspian Sea are called Scythic: the Daæ next the sea, and the Sacæ more eastward: but every tribe has a *particular name*; all are nomadic." It is inattention to this which causes all our confusion. We have here the Clans of Scotland, and the Tribes of Bedoween Arabs. The Sacæ, pronounced in Sanscrit like our Sak-hæ,³ have made in Asia irruptions similar to those of the Cimmericians: thus they possessed themselves of Bactria, and the district of Armenia, called after them Sacasena. This word, I believe, is only Sacas-ana, *country of Sacas*. I have no doubt that when nomade tribes were driven out of the lands which they loosely settled, they passed, like the Israelites from Egypt, through countries occupied by other tribes, in search of new habitations, till they could go no farther; then a desperate struggle took place for the possession of the extreme country: thus Saxons arrived in Germany and Britain, from countries the most remote.

It appears from a note of Dr. Geddes's on the word *create* in the first verse of Genesis, to be seen in his Critical Remarks on that passage, that my view of this subject is supported by the book of Wisdom, Justin Martyr, and Origen. He also shews that a passage in the book of Maccabees, which has been supposed to oppose my doctrine, has been wrongly translated. He also shews that in the Scoto-Saxon dialect the word ברא *bra* still retains its original signification; and, in a note, he says, he hopes he shall one day be able to prove that almost all our genuine Saxon words are either Hebrew, Chaldee, Arabic, or Persic. I am very sorry the Doctor did not live to carry his intention into effect, which I am sure he could have done. I shall return to the Saxons again in a future Book, and give their history, which will be found to be of the very first importance.

CHAPTER II.

GEORGIUS.—SCALA.

1. IN the extracts which I shall now give from Georgius will be found much useful information, which I think will not be thought long or unnecessary by those who read for information and not merely for amusement. The following passage justifies what I have said: "Gjam-phel sapiens " mirificus, quasi חכמ (hkm), Syr. Kam, פלאי (plai) Peli, vel Giam פלא (pla) Pele, SAPIENTIE " miraculum, aut etiam Arcanum." ¹ Here we have in the Gjam the Iao, the Wisdom, and the Pala, or the Pallium, or Pallas, or Minerva, all united. A little before he says, "A Syris, Chaldæis ea vox " Gnos derivari potuit. Syris enim Ganes idem est ac ostendit et demonstravit. Hinc Indorum " Ganessa SAPIENTIE Deus. In Sota vero, teste Castello גניסי gnisi, γνωσις, " notitia."² Again he says, "Profecto Gnios cum superaddito nota ω, quæ est indicium magni " alicujus arcani, eadem ipsa est Græca vox γνωσις, gnosis, agnitio."³ IE, in Syriac Io, was the God of Wisdom or Knowledge. In Hebrew letters Io was written יו io; this, as the Hebrew letter o was corrupted into ng, was the origin of the gnios. The God of Wisdom was the spiritual fire. He was Agni. Write this in the Syriac or Pushto dialect, but the Chaldee letter, and we have יוא ioa, the last letter being emphatic, the Io.

Georgius says,⁴ "Pho-tha Sinica voce dictus Budda." (This Pho-tha is evidently the Phtha or Thas of Egypt. ⁵) "Jah, quod additur, JAO interpretor, magnum scilicet, et ineffabile illud Dei " nomen JEHOVA à Gnosticis et Basilidianis corruptum, et in Jao improbo ingenio mutatum. Si " cognita fuissent Tyrboni nomina magica, quæ Budda preceptor Manetis invocare solebat, inter " ea fortasse reperiretur JAO. Nam et apud Paganos nomen hoc Dei sanctissimum erat. Quod " quidem eruditibus omnibus compertum est. Fewardentius et Galassius animadvers. in S. Irenæi " libros factum putant ex Hebr. יא Ja cum addito o, JAO. Samaritani, teste Theodoreto et adno- " tatore Græbio in eundem Irenæum, Jabe (here we have the Jave or Jove) illud appellasse dicun- " tur, Judæi vero Aia Aja, quod est Hebraicè יא ie Jah, Tibeticè pariter Jah. In his igitur voci- " bus PHOTA-JAH, nominatus cernitur XACHA tamquam magnus ille Lhamarum, et Bonsiorum " DEUS BUDDA."⁶ In the Aja here named may be the origin of the Aje-mere treated of in Vol. I. pp. 405, 407, 408, &c., and in the whole passage there is a confirmation of several other sugges- tions of mine in the former part of this work.

Georgius,⁷ without having the slightest suspicion of the nature of my theory, states his opinion that the Kam-deva is derived from, or is the same as, the חכמ hkm or wisdom of the Chaldee. It is very certain that, if my theory be right, every deity resolves into the Sun; each one of their names, either directly or indirectly, ought to have the meaning of wisdom.⁸ Kam פלא pla, sapientia.

Was not Ερωσ often used as the name of Venus as well as Cupid? In like manner Kanyā, the name of Cristna, was also the name of the Zodiacal sign Virgo.⁹ Ερωσ read anagrammatically is

¹ Georgius, Alph. Tib. p. 750.² P. 749.³ P. 748.⁴ P. 745.⁵ Vide p. 747.⁶ Ibid. p. 746.⁷ Ibid. III. p. 728.⁸ See also ibid. 750.⁹ Bentley, p. 202.

nothing but *rose*, from which Jesus was called the Rose—the rose of Sharon—of Is-uren. And from this came the Rossi-crusians.

The Cabalistic Jews often insert the *jod* or prefix it to words, as they say, for the sake of a mystery; but in reality for the same reason that the Irish Bishop writes his name X Doyle. This practice admitted, I believe that C-ama was both Cupid and Venus, Cama and Cama-deva, כמה *kme*, desiderare, amare,¹ and was in fact C or X-ama. See pp. 760, 761, and Appendix to the first volume. Cuma was the same, as was also Kumari or Komari on Cape Comarin, near which ruled the Xamorin or Zamorin, or Semiramis. Was Comarin the Coma-Marina? I believe that Cæsar was X-æsar—Tzar, whence the female Tzarina. I believe that ΙΙΧΘΥΣ, as I have formerly said (Vol. I. p. 636), is Ι-ΙΧΘΥΣ: and that in like manner also Mama is M-ama; that Momptha is M-Omptha; that Mia is M-ia or M-ie. I is the tenth letter of the new alphabet, and M is the tenth letter of the sixteen-letter alphabet. Then 'i in the Hebrew notation answers to the X in the Etruscan, Oscan, or Latin, which we have seen stands both for 10 and 600. This is like the Samech, which is the Mem final. As the Samech it is 60; as Mem final, 600. The Ξ called Xi, is 60, X *Chi*, 600. The Hebrew *שש* *ss* is six—Greek ΕΞ εξ six; the aspirant breathing, as in other cases,² being substituted for the sibillant letter, which, however, is found in the Latin, Saxon, and English, *six*.

Iodia is Ayoudia. I suspect that the Ad of Rajahpoutana and Western Syria, and Hadad, is Iad, or I-hadad; that IE is Io y' *io* of Syria; that God, Chod, is Od, Hod.³ In all the cases above, the I, the X, and the M, are monograms prefixed for the sake of mystery, as we constantly see the X prefixed to sentences when not used as a letter, in our religious books of the middle ages; and as Romish priests still use it.

The Iod is a point, the Centre is a point, every thing tends to the Centre.

The word Sacra. I believe is found in the Hindoo word *Para-sacti*. The Tibetan language has no B. Para is ברא *bra*, creator. *Sach* is, in the Egyptian language, *flamma*, and Ti is Di, sacred, holy. Georgius⁴ says, Para-sacti is “excellētissima virtus, &c., primam emanationem “Dei; Flammam fluentem a Deo.” But I do not doubt that it was also *akme* or *hkm*. In fine, it is *divine wisdom*.⁵

Parasakti, Adisakti, Devaki, and Parakta, have all the same meaning. Para or Ad, and Devaki, mean the Deity, and sakti *a flume*.⁶ These are also the same as Bavani and Mama-ja. Sometimes Parasakti is masculine, sometimes feminine. Sakti is also the same as *verbum* and *sapientia*.⁷ Chati, I am persuaded, is the same as Sacti, and is the Hebrew חטה *hte*, and in English means *heat*. Substituting, as Parkhurst says was very common in the Hebrew, the *ש* *s*, the sibillant letter for the aspirate ח *h*, the word would become sati. I am quite satisfied we have here, or in the word just now named, Sci-akham, the meaning of the Sacra or Xaca, and that it means the Logos, the Sapientia, the Ras.

Parasakti, like Semele, the mother of Bacchus, was combustam in æthereo igne.⁸ She was consumed in the flames of her son. This is the assumption of the blessed virgin, which took place in the autumn, when the constellation of Virgo disappears, and is rendered invisible by the solar rays.⁹ But Para-sacti was Lachmi, and Lachmi was nothing but L'hkm, *the wise*.

“Ex his, quæ mecum inter viam communicarunt laudati PP. Cappucini e Tibetanis Missionibus reduces, protinus intellexi tam arcto et inseparabili vinculo apud eas gentes duo hæc, *litteras*

¹ Georg p. 728.

“et *superstitionem*, inter se cohærescere, ut alterum sine altero nec pertractari, nec cogitari quæat. Ut enim video, quem admodum defluunt radii à natura solis, sic litteras ab ipsa Dei substantia defluxisse concipiunt. Simile quiddam de Vedam Bramhæ, deque *Atzala Isureni* libro, opinantur Indi.”¹ The truth of the observation respecting the close connexion between letters and superstition cannot be denied, and thus this beautiful invention, which ought to have been the greatest blessing to mankind, has been, till lately, its greatest curse. But if at first it forged the chain, it will break it at last.

On the Tibetan alphabet Georgius says, “Aliud quid longe majus atque præstantius de litterarum suarum natura, ac dignitate Tibetani opinantur. Iestas uti prodigiosa quædam munera e cælo demissa venerantur: Deoque *Sapientiæ Giam-Jang* tanquam auctori, et artificii principi referunt acceptas.” When I consider the *Deoque Sapientiæ*, the name of the country Achim, the Pushto in North and South India, the evident Judæan mythos in both, I cannot help suspecting that the Deus Giam-Jang is the God or Iao of Siam or Sion, in the country of Judia, adjoining to the present Nepaul and Tibet. The close connexion between letters and superstition, noticed by Georgius, tends materially to support my opinion, that letters were at first mythical and magical, and we know that they were every where supposed to emanate from the Deity. Georgius explains the word Tangut to mean *Dominus Cæli et Terræ*. If the *T* be a nominal prefix, the $a=\alpha$, $ng=y$, $u=\iota$, thus *Aou*. Tangut is the name of God in Peru. Georgius then goes on to explain that Ti-bet is *Ti-bot*, or *Ti-bout*, or *Ti-Boutta*, or *Di-Buddha*.² He adds, “Hoc vero recta oritur à gentili *Pot-Jid*, quo certo nomine non ante famosi Buttæ tempora insigniri ea natio cœpit.”³ Tibet is called Potyid by Sir W. Jones.⁴ He makes an important observation on the nature of the Tibetan language,⁵ which appears to be in a great measure Monosyllabic, and thus tends to prove its antiquity. He then goes on to state that *Jid* is a cognomen of Buddha, and means Unicus or Unigenitus;⁶ and that it is the “*Jehid* Phœnicium, aut Ihido Syrum.” (It is, in fact, Ii-di.) He confirms almost all which I have before given from Creuzer respecting Buddha. On the name of Xaca, he says it is called, in the Tibetan language, *Sciakham*. That is, I suppose, the *Sci-akham* or *Hakim*, just now treated of.

I suspect that the Phœnician *Jehid* or *Iid*, is nothing but the Chaldee *II* of the Targums, with an abbreviation of the Deus, *Dis*, *Deva*, and means the God *Ii*.

The Deity *Isan* and *Isuren* of India was the *Isis* of Egypt. The name came from the Hebrew yw *iso*, with the Tamul termination in *en*, *Isur-en*. This deity is the same as *Mahdeus* and *Mahadeva*. It has generally four arms, and is often seated on the Lotus. Fire is its peculiar emblem. It has three eyes. It is also often carried on a BULL. One of its epithets is *Hydropism*.⁷ This is the Greek $\psi\delta\omega\rho$ and $\text{I}\sigma\iota\varsigma$, and connects it with the refined doctrine of water, which approaches to something very near to the spiritual fire and the hydrogen of the moderns. It is adored under the form of the *Linga*, or *Priapus*. It is *Pluto*, the Egyptian *Amenti* and the *Giam Indicus*. It is *Brahma* and *Tchiven*. “*Dominus humidæ naturæ et origo sacrorum fluminum*,” the *Giam Indicus*—*judex universorum*. From the word *Giam* comes, I suspect, the *Ganga* or *Janga*. Finally, Georgius says, “*Sol est Isuren, qualis erat Osiris apud Egyptios*.”⁸

It is said of *Mani* that he left a book of paintings. In one of the apocryphal Gospels *Jesus* is said to have been the son of a *Dyer* or a *Painter*, another of a *Potter*, in the *four* of a *Carpenter*, and in all of an *Artificer*. Georgius says, “*Verum non opus est multis, ut ostendam orientales*

¹ Georg. Alph. Tib. præf. p. ix.² Alph. Tib. p. 16.³ Præf. p. 10.⁴ Asiat Res. Vol. III. p. 10.⁵ P. 11.⁶ Ib. p. xi.⁷ Georg. Alph. Tib. p. 156.⁸ P. 155.

“omnes uno eodemque nomine *Pictorem, Tinctoremque* vocare. Vide Castellum in צכע (*zko*).
 “Quum vero *Arteng* dicimus, eoque designamus *Librum* picturarum Mani, (quia, ut inquit
 “Renaudotius, figuris peregrinis, et ignotis refertus erat,) intellegere *debemus Librum* eo sensu,
 “quo intelligunt *Bramhæanes Vedam, et Tibetani Cid sive Cioch*. Nempe, ut *Vedam* est Bramha,
 “et cid Xaca, ita *Arteng* est ipse Mani, *virtus, emanatio Patris luminum, ejusque Filius, et anima*
 “dans et accipiens formas, ac figuras omnes in eo portentoso mysteriorum libro contentas.”¹

Here we find Brahma and Buddha both having the meaning of the word *Book*. Here is confirmed what I have before said that *Veda* is *Beda* or *Buddha*. The book of the Manichæans was called *the treasure*, and being a *Veda* would be *a treasure of Wisdom*. Bacchus is called Liber, בכא *bka* and תות *tut*, which in Chaldee mean *Morus*, the name of the *Morea* of Greece.² The *Morus* or *Mulberry-tree* is a very mystical plant; it is said to be *sapientissima arbor*. It was probably thus designated because it had the same name as the God of Wisdom. Brahma is the same as Brahaspati, who is worshiped the same day as Suarasuoti, (*Sara-iswati*), the *Dea scientiarum*: from this, Georgius says, he thinks the word Brahma came to mean *Scientia*. The truth is, wherever *Scientia* is found, *Sapientia* may be written.³

We have seen, in p. 320, that the natives of Siam call their God Iach Iach, the Greek Iacché. Now, is it not possible that in the Tibetan language this may be the Siakhim, the aspirated חכח *hkm*—and this Siak and Iacch the same? Parkhurst says, the aspirate breathing is constantly substituted for the sibillant letter.⁴ This would make *Saca Iaca*. The festivals of Bacchus in Greece were called *Iacæa*.⁵

“At Typhon ab eodem Plutarcho ex Phrygiis literis dicitur filius Isaacci Ισαακω τε Ηρακλεωσ
 “ὁ Τυφωον, Isaacci, quem genuit Hercules, filius fuit Typhon.”⁶ May Isaac, the son of Hercules, who was *Cristna*, who was *Samson*, have come from ישו *iso*, *to save*, and Xaca, or from I and Xaca, or from ישו *iso* and חכח *hkm*? Either of these etymons is strictly in keeping with the remainder of the myths.

Brahma is said to have been the inventor of Hymns and Verses, and the Brahmins are not permitted to *recite* but only to *sing* the Vedas. To account for this they have a story of Brahma, like Jupiter for the love of Leda, being turned into a swan. When he was about to be killed by Iswara, he sung hymns and verses to her praise, to pacify her. From this came the story of the musical singing of swans when they are about to die.⁷

Brahma carries a book as an emblem. This was because he was the first emanation or divine Wisdom, and the Wisdom contained in the *Veda* or book of Wisdom came from him. Hence, in Greece, Bacchus or Brahme was called Liber.⁸

I think, from a passage in Georgius, the real origin of the meaning of the term Judah or Juda,—the religion or the name of the tribe may be discovered,—of the tribe or religion which Eusebius said existed before the time of Abraham. He observes, that Buddha is called Jid, which is the same as Ieoud, who was the son of Saturn, and that it is merely an epithet, meaning *Unigenitum*. Hebræis est יהיד (*ihid*) Iehid Isaacci epithetum.⁹ Gen. xxii. 2.¹⁰ Now I think this shews that the tribe were followers of the *Unigenitum*, in short, of the *Logos* or Buddha, who was the only-begotten of his Father.

¹ Tib. Alph.² Vall. Coll. Hib. Vol. IV. Part i. p. 265.³ Georg. p. 114.⁴ In voce שש *ss*, II p. 776.⁵ Vide Hermes Scythicus, p. 136.⁶ Georgius Alph. Tib. p. 26.⁷ Vide Georg. Alph. Tib. p. 110.⁸ Ib. p. 114.⁹ Bocharto.¹⁰ Georg. Alph. Tib. Sect. xi.

Again Georgius says,¹ “Brevi, Xaca *Jehid*, *Ihido*, and *Ihid*, (quod est insigne cognomentum et “attributum *Buddæ*, *Butæ*, sive *Boto* in vernaculâ voce *Tibeti Pot-Tit*.) *Poto* scilicet, seu *Boutta* “Unigenitus aut Primogenitus.” He had before shewn that *Jehid* was *Juda*; hence we come to the fact, that the tribe of *Isaac*, *Ihid*, or *Judah*, was a tribe of *Buddhists*.

2. The *Scala* or *ladder*, formerly alluded to in Vol. I. p. 413, I believe signified a chain or ladder of transmigration, by which the soul climbed up to heaven,² and that *Scala* or *Sacala* is *Xaca-clo*, and came to mean a ladder, or the ladder of the Mount of *Solyma*, or *Peace* or *Salvation*, from the ladder of metamorphoses or regenerations. The system of regeneration is exactly that of a ladder. The dream of *Jacob*, with the seventy-two angels ascending and descending, the mysticism of which no one will deny, alludes to this: the *Xaca-clo* is the series of ten regenerations, which the *Brahmins* taught that every human being passed through. In the names of *Sicily* we have, first, *Siculia*, as it is called by *Virgil*, which is *Xaca-clo-ia*; this was *Buddhist*. The next was, *Trina-cria* or *Trina-crios*—the *Triune Aries*; this was *Crestism*.³ In Vol. I. pp. 813—816, I represented the double trinity and the system of emanations to form a chain, the last link of the first forming the first link of the second; and thus the whole system, beginning at the *To Oυ*, formed a chain or a ladder from the highest to the lowest.

Is it possible that the veneration for *Apes* may have taken its rise from a word of the ancient language—the *Chaldean* misunderstood? *Georgius* says,⁴ “*Simia* Arabicè *برام* *bram*, *Boram*, “*Africanis* *برم* *brm*.” It is well known to all *Indian* scholars, that *Cristna* is said to have invaded *Ceylon*, accompanied by an army of *Monkeys*, by whose means he conquered it; and we are told that this is the belief of the country. The simple fact was, that the sectaries of the *Crest*, the *Brahmins*, invaded it, and the whole arises from the identity in the *Indian* language of the words for *Brahmin* and *Ape* or *Monkey*. In this manner numbers of little mythoses have arisen in all parts of the world. In a similar manner arose the mythos of *Bacchus’s grapes*. The word for *grape* in *Greek* is *Βοτρυς*, this is a corruption of *Buddha*, and *Bacchus* was *Buddha*, and *Buddha* was *Wisdom*; whence the *grape* in *Latin* is called *race-mus*—evidently the *Hebrew* *Ras*, *wisdom*, and the *Ῥαξ*, the stone of the grape.

Salivahana is also called *Saca*.⁵ In *Bali* they have a period called the year of *Saca*.⁶

The God in the temple on the mountain of *Lawuh*, in *Java*, is called *Sukuh*.⁷ This is the mountain of *L’Awu* or *THE Ieo*, and his name *Saca*.

The large temples in *Java* are built without cement in the joints, in the *Cyclopæan* order of architecture—all the stones mortised together.⁸

We are constantly told by all travellers, that the *Lama* of *Tibet* is adored as God. But in this I do not doubt that our travellers permit their prejudice and bigotry to blind them. If he be considered to be the Supreme Being, how came the *Tibetians* to have a most magnificent temple to *Buddha*, at *Lassa*, the place of the *Lama’s* residence? of which a ground-plan is given in *Georgius*.⁹ The fact is, the followers of the *Lamb* at *Rome* elect their *Vicramaditya* or *Grand Vicar* from themselves, generally choosing the most imbecile of the college for the God upon earth, as he does call, or used to call, himself. The followers of the *Lamb* in *Tibet* have found it better to select an

¹ Sect. cxxiii.

² Vide *Georgius* Alph. Tib. Ap. iii. p. 678.

³ From this idea the division of any given space into equal parts, and probably from the decimal notation, *ten* parts, was called a *Scala* or *Scale*.

⁸ *Ib*. p. 199.

⁹ Sect. cxliii. p. 406.

infant, whom they educate. The same reason operates in both conclaves. In each, a similar cause produces a similar effect,—an imbecile Lama.

The whole of what we have seen respecting Saca and the Saxons, must be considered as a preparation for an inquiry into a Pontifical government, (to be developed in the future books,) which was brought with the feudal system to England and Europe, long before the time of Cæsar. It will be found useful also in considering the origin of letters.

CHAPTER III.

JUDÆAN MYTHOS IN EGYPT.—MENES. NOAH.—CHERES.—ABRAHAM TULIS.—JOSEPH.—GRECIAN HISTORY
A TRAVESTY.—LANGUAGE OF EGYPT.—DEISUL VOYAGE OF SALVATION.

I now beg my reader to recall to his recollection the multitude of fragments of the Christian and Jewish mythos which, in his reading, he must have found scattered about Upper Egypt. I beg him to look at and read the accounts of my Figures 27 B and 35. These things are all disguised or instantly put out of sight by the assertion, that they are the remains of the Gnostic or Nestorian (that is, as the learned Nimrod says, the Buddhists) Christians. The existence of the mythos, which I shall now exhibit, in Egypt, easily accounts for and explains all these hitherto inexplicable remains of the Jewish and Christian mythos, on the ancient temples in Upper Egypt and in Nubia. As might be expected, the prejudices of education have operated on the learned German Heeren, to blind him to the Jewish and Christian mythos; but yet, in one instance, the truth involuntarily creeps out. He says, "Another field opens itself here for divines, if they would like to compare the religious notions of ancient Thebes with the descriptions given by the Jews of their sanctuaries, the tabernacle, the temple, and the sacred utensils.

"This is not the place for a comparison of this kind: but how many things described in the Scriptures do we find in these engravings! the ark of the covenant (here carried in procession), the cherubim with their extended wings, the holy candlesticks, the shew bread, and many parts of the sacrifices! In the architecture itself a certain similarity is instantly recognised, although among the Jews every thing was on a smaller scale."¹ In his maps the temples of Meroe, in several instances, appear built in the exact cross-form of our churches.

The observation of Heeren, I shall now shew, has been confirmed by a very learned Frenchman, the Abbé Guerin de Rocher. But my reader will be kind enough to observe, that although the similitudes pointed out by Heeren, amount to almost a proof of my theory, they, in a similar manner, amount almost to a proof of the falsity of the Abbé's theory, which will now be explained.

After finding the Judæan mythos, the mythos which Eusebius asserts existed before Abraham, in North and South India, in Syria, and in China, it would have been very singular if it had not been found in Egypt. This singularity has been proved not to exist by the Abbé Guerin de

¹ Heeren, on Egypt, Vol. II. p. 297

Rocher, who has undertaken to shew, in his work called *Histoire des Temps Fabuleux*, that the history of Egypt, detailed by Herodotus, Diodorus, Suidas, Manetho, &c., is not a true history of Egypt, but a mere travesty of the history of the Jews; and however much I may differ from him, both generally and in many particulars, yet I think he has proved his case, so far as to shew, that the two were, in many instances, substantially the same, as they ought to be, if they were nothing but a repetition of the same mythos; but which they could not possibly be, and be at the same time both true histories of countries, as he very justly observes. All this tends strongly to prove that Herodotus was really the father of history, the first real historian: all the works before his, being mere mythoses, founded on the traditionary, unwritten stories of each country, detailed by the priests for the purpose of religion, not of history.

It is necessary to observe, that the Abbé does not pretend to shew merely that parts of the Egyptian history agree with and dovetail into such parts of the history of the Jews as relate to respective periods, but that the Egyptians have taken the Jewish history, and have travestied it (to use his word) to form a new history. Between these two my reader must perceive that there is a mighty difference. Had he shewn the former, he would indeed have greatly strengthened the Jewish history as a history, but the latter is another matter.

The Abbé has exhibited so much skill and ingenuity in discovering the meaning of several parables called parts of the Egyptian history, that I have no doubt whatever, if he had been unfettered by religious prejudice, he would have made out the whole mythos. The discoveries he has made did not arise from his abstract love of truth, but merely from a belief that it would enable him the better to defend his own religion and the interests of his order.

He supposes that the history of Egypt was completely lost by the natives, in the course of the period when the Persians possessed it, after the conquest of it by Cambyses. Nothing but the excess of religious prejudice could have induced any one to believe, that, in the short time during which the Persians possessed Egypt, all knowledge of their ancient history, and of their history at that time not properly ancient to them, should be completely lost by the natives, and also that they should all of them have been so totally devoid of understanding, as that they could not make up a story of their own to pass off as a history of their country, but that they should be obliged to go to the little distant mountain tribe which Herodotus could not discover, said to have been driven out of their country several hundred years before, to borrow their history, by a travesty or transfer of which they made up a history for themselves¹—not using the names of their own kings, but actually names out of the history of the distinct mountain tribe just alluded to? The Abbé has been attacked in no very measured or very fair terms by several of the philosophers, on account of his etymologies and other little matters; but he has been very ably and successfully defended. His opponents do not appear to have touched upon the absurdity of the theory to account for these travesties, or historic parables. As all party writers do, they laid hold of exceptions—they seized on and exposed particular points, but the general whole, which they ought to have attacked, they left untouched. In fact, the Abbé overthrew all their previous doctrines, and not having the least idea of any universal mythos, or other cause, to account for the undeniable effect pointed out by him, they could give him no reasonable answer, though the general absurdity of the cause which he assigned, or the way in which he accounted for the effect, was evident enough. They ought candidly to have admitted the fact of the identity of the histories of Genesis and of Egypt, and have said, “We admit the identity you contend for; we cannot

¹ Why did they not go to their obelisks, which M. Champollion has found covered with their histories? Why? but because M. Champollion has discovered nothing!

“deny it; but the reason which you assign for the identity appears to us absurd, and we cannot admit it: there must be some other reason for it, which is yet unknown.” This would have been candid; but instead of this, as defeated parties usually act, they had recourse to ridicule, misrepresentation, and clamour, and endeavoured to poh-poh him down.

The Abbé says, “Je commence par les temps fabuleux des Egyptiens, depuis Ménès, leur premier roi, suivant tous leurs historiens, jusqu’au temps où l’Egypte soumise aux Perses, devint une province de leur empire. On verra, par un rapprochement soutenu de toute la suite des règnes, et des faits de chaque règne, que cette histoire répond à l’histoire sainte, depuis Noé, le père de tous les hommes d’après le déluge, jusqu’à la fin de la captivité des Juifs à Babylone: et que ce n’est même qu’un extrait suivi, quoique défiguré, de ce que l’Ecriture elle-même nous apprend de l’Egypte dans cet intervalle; en un mot, que tout ce qu’Hérodote, Manéthon, Eratosthène et Diodore de Sicile nous racontent de l’Egypte jusqu’à cette époque, n’est, aux descriptions pres, qu’une traduction, à la vérité, pleine d’erreurs et de fautes grossières, que les Egyptiens s’étoient faite ou procurée des endroits de l’Ecriture qui les regardent, et dont ils s’étoient composé une histoire; c’est le sujet de trois premiers volumes que je présente au public.”¹ This is a very different matter from having taken parts of the Jewish history, to fill up the lacunæ in the corresponding parts of their own history.

The Abbé’s assertion that, in the time of Menes, the first king, whose name was, in fact, the same as that of Noah, Egypt was a marsh, with the exception alone of the district of Thebes, which comprised all Upper Egypt, that is, that it was covered with water, is in exact accordance with what I have said in Vol. I. pp. 291, &c., and 336. He afterward shews that the history of Thebes is a travesty of the history of the flood of Noah and of the Ark. That the same particulars are in both the histories,—that from Thebes the doves went out,—that the name Thebes for that city and the ark are the same,—that at Thebes an immense ship was built, and that the first men and animals of the present world came out from Thebes, &c., &c. But I will now give to my reader, an extract from the work of Mons. Bonnaud,² one of the Abbé’s defenders, in which, abstracted from the Abbé’s book, he places by the side of each other the History of Herodotus and of Genesis, which will serve to give a general idea of the nature of the Abbé’s work better than any description which I can write.

Debutons par l’arche de Noé, laquelle s’appelle en Hébreu *THBE*, que les Egyptiens ont prise pour le ville de *Thèbes*; nous verrons en suite l’histoire de Jacob travestie par eux en celle de Sésostris, roi conquérant. Tenons-nous-en pour le moment à ces deux morceaux que l’auteur de l’*histoire véritable* a dévoilés.

HISTOIRE D’ EGYPTE.

1. Ménès est celui qui regna le premier des hommes.

HISTOIRE SAINTE.

1. Noé, dont le nom en Hébreu est *Né* ou *Mnée*, son dérivé, qui signifie *repos*,³ est le père commun de tous les peuples: c’est dans l’Ecriture le premier homme qui règne dans un sens après le déluge: puis qu’il se trouve le chef et le souverain naturel de tout le genre humain réduit alors à sa famille.

¹ P. xliiii.

² Vol. V. p. 6. Histoire Des Temps Fabuleux, Tome V. Svo. à Paris. Par L’Abbé Guérin de Rocher. Chez Gautier et Frères, et Co. 1824.

³ M, en Hébreu est une lettre servile au commencement du mot. J’ai cru que, pour me mettre plus à portée des lecteurs qui ignorent les langues anciennes, il convenoit d’écrire en lettres ordinaires les mots Hébreux dont il m’a fallu faire un fréquent usage, vu la nature de l’objet que je me propose de discuter. Ceux qui seroient curieux de vérifier ces mots de la langue Hébraïque, peuvent recourir à l’*histoire véritable des temps fabuleux*.

2. Du tems de *Ménès* toute l'Egypte n'étoit qu'un marais à l'exception du seul *nome* ou canton de *Thèbes*, c'est-à-dire, qu'elle étoit tout inondée.

3. Les habitans de *Thèbes* se disoient les plus anciens des hommes.

4. À *Thèbes* fut construit un grand navire de près de trois cents coudées de long.

5. Hérodote dit que deux columbes s'étoient envolées de *Thèbes* en différentes contrées.

6. Les animaux, suivant les Egyptiens, furent formés d'abord dans le pays de *Thèbes*.

7. *Ménès* apprit aux peuples à honorer les Dieux et à leur faire des sacrifices.

8. *Ménès* fut le premier à introduire le luxe de la table.

9. Les habitans de *Thèbes* se vantoient d'avoir été les premiers à connoître la vigne.

2. Du temps de Noé, non seulement l'Egypte, mais la terre entière fut inondée par le déluge, et ce nome de *Thèbes*, qui seul ne l'étoit pas, c'est *l'arche* qui se sauva du déluge. *THBE* ou comme on prononce *THEBAH*, est le mot constamment employé dans le texte Hébreu pour signifier *arche*.

3. *Thbe* ou *Thebah* (l'arche de Noé) renferma en effet dans son sein les pères de tous les hommes, et par conséquent les plus anciens de tous, à dater du déluge qui fut comme un renouvellement du genre humain.

4. La *Thbe* ou la *Thebah*, l'arche de Noé, avoit *trois cents coudées* de longueur.

5. Noé fait envoler une colombe par *deux fois* de sa *Thbe* ou de son *arche*, pour s'assurer, avant que d'en sortir, que la terre a été desséchée.

6. L'écriture dit que *tous les animaux* furent renfermés dans l'arche, et en sortirent, *Thbe* en Hébreu signifiant l'arche, voilà comme tous les animaux sont sortis de *Thèbes*.

7. Mnée autrement Noé au sortir de l'arche *éleva un autel au Seigneur*, dit l'écriture.....et *offrit des holocaustes sur cet autel*, par conséquent, *des sacrifices*.

8. Noé après le déluge eut la permission expresse de se nourrir de la chair des animaux.

9. Noé en sortant de l'arche (*Thbe*) fut le premier qui planta la vigne.

That the two stories are closely connected no one can doubt: but the Abbé's theory, that the Egyptian is a travesty of that of the Jews, to which the Egyptians had recourse in consequence of the destruction, by Cambyses, of all their records, receives a terrible blow from an observation which he makes in the next page—that the same history is told of the Grecian Thebes as is told of the Thebes of Egypt. The consequence of this the Abbé does not perceive, viz. that it is totally incredible that they should both be the same, without a common cause, and this could not be the conquest by Cambyses, because he never conquered the Grecian Thebes. In fact, it overthrows the Abbé's whole system; but it confirms mine beautifully, viz. that the stories are all one common mythos, in all countries disguised in the dress of history. Accident could not possibly be the cause.

The Abbé's observation, that the word used for the name of Thebes is exactly the same word as that used to describe the ark of Noah, again overthrows the whole of his system: for the ancient city of Thebes destroyed by Cambyses, and sung of by Homer, under *the name of Thebes*, could not have had its name given by the priests about the time of Herodotus, which is what the Abbé's system requires. The very great antiquity of the names of the cities of Thebes in Egypt and Greece, as proved by Homer, takes from under the edifice erected by the Abbé every part of its foundation. It is not credible that one or both these cities should have this name given as a substitute for the real history lost in Cambyses' conquest, though there can be no doubt that the history of Genesis and of Herodotus are the same.

3. I have observed, Vol. I. p. 602, that the kings of Egypt, whose names ended in *cheres*, were renewed incarnations of the *Χρης, mitis*. On these kings the Abbé says, "Mycérinus, successeur de Chéphren ou Chabryis, appellé par Diodore, Menchérinus ou Chérinus; par Ératosthène,

Caras ou Ocaras ; par Manéthon, Men-cheres, et de quantité d'autres noms terminés en cerès ou cherès, sans compter ceux qui ne le sont pas ; roi plein de douceur, de religion et d'équité, qui rend au peuple opprimé la liberté de sacrifier, qui le soulage dans ses maux, qui se rend recommandable par son extrême exactitude à rendre la justice : qui va jusqu' à satisfaire à ses dépens, ceux qui se plaignent de ses jugemens : qui est condamné par l'oracle à *mourir avant le temps* ; qui prend le parti d'errer dans des lieux solitaires, où il se fait éclairer la nuit, comme le soleil l'éclaire durant le jour" ¹ I think few persons will fail to see in this early chres or Χρης, the prototype of a later one. The same mythos is here, and this cannot be disputed. We have here in the *mourir avant le temps*, the person crucified in Egypt of the Apocalypse. The Abbé after this proceeds to shew, that the Cheres was Moses, but this only tends to strengthen the proof that Moses was an Avatar, ² a Messiah, a divine incarnation, saving his people, in fact a Χρης. Amidst the blunders and confusion of the different historians of Egypt, it is easy to see here, the *Christian* mythos ; even the name Χρης is found in the word *Chæres*, ³ one name of what is called by Manetho the second dynasty, consisting of three kings, *Ilas*, *Sethenès*, *Chæres*, ⁴ evidently the mistaken Tripety. And we must not forget the infant Orus, and the Virgo paritura.

4. The Abbé finds Abraham in Binotheris, whom he asserts to be *Bn-Thré* בן-תרה *bn tre*, or Ben-Therah, son of Terah. This Binotheris he shews was said by Manetho to be succeeded by a king called Tulis. Binotheris is said to have established the first queen in Egypt, or to have first given to females the honours of Royalty. This queen was Sarah, whose name when changed from *Sarai* meant, instead of a queen or princess, *the* queen. After Binotheris, Manetho puts *Ilas* or Tulis ; but this person the Jews and Arabs make to be the ravisher of Sarah. The different historians, all ignorant of the true state of the case, confound the parties ; but they are all evidently here. The word Tulis means *ravisher* in the Hebrew and Arabic. ⁵ Thus Tulis or *Ilas* was the stealer or ravisher of Sarah, the sister of Abraham. The history of this Tulis, as given by Suidas, is very remarkable. ⁶ He says, "Thulis reigned over all Egypt, and his empire " extended even over the ocean. He gave his name to one of its isles (Ultima Thule). Puffed " up with success, he went to consult the oracle of Serapis ; and, after having offered his sacrifice, " he addressed to him these words : ' Tell me, Oh, master of Fire, the true, the happy par excel- " lence, who rulest the course of the stars,—tell me if ever there was before one greater than I, " 'or will ever be one greater after me.' The oracle answered him in these words : ' First God, " 'afterward the Word, and with them the Holy Spirit : ⁷ all three are of the same nature, and " 'make but one whole, of which the power is eternal ; go away quickly, mortal, thou who hast " 'but an uncertain life.' Going out from the temple he was put to death by his own countrymen " in the country of the Africans." (Αφρων.) ⁸ But the most remarkable part of this story is, that the word Tulis means *crucified*, תלה *tle*, suspendit : תלוי *thui*, suspensus, crucifixus. Here in the country of the Africans—in Egypt we have again *the crucified* of the Apocalypse. Thlui is the name given by the Jews to Jesus Christ, ⁹ meaning *the crucified*. Serapis, the God consulted, was regarded as the Saviour of Egypt. ¹⁰ I have little doubt that Serapis was put to death as well as Osiris, but that he was crucified. It was under his temple at Alexandria that the cross

¹⁰ Ib. p. 309.

was found when it was destroyed by one of the Roman Emperors. We cannot forget that Serapis was considered by Hadrian and the Gentiles to be the peculiar God of the Christians.

The Egyptian history is evidently a garbled, and, in many respects, a confused misrepresentation of the same history or mythos as that of the Jews; the Abbé attributes this misrepresentation to the ignorance of the Egyptians in the Jewish language, but who, on the contrary, must have been well acquainted with it, as appears from their names of men and places, which are almost all Hebrew. It is much more probably attributable to the ignorance of the four Greek authors, who evidently betray their ignorance in a variety of ways, and indeed confess it. But the fact that they are, at the bottom, the same mythoses or histories cannot be doubted. Here, then, we find the reason why the Jewish prophet, Isaiah xix. 18, says, that the true God *should* be adored, or *was*¹ adored at five temples in the land of Egypt; and here we find the reason of the pictures of the Judæan mythos in Egypt in several of my groups of figures, and of the Judæan names of towns, mountains, and districts, which I have before pointed out, and here we find the meaning of the expression in the Apocalypse, the *Lord crucified in Egypt*.²

But it is a very important observation which I have to make in addition to this, viz. that the text (Isa. xix. 18) does not only say, as our Bible renders it, that one shall be called the city of destruction; but it also says, that one shall be called the city of the ERS, הָרִם יִשְׂרָאֵל לְאַחַת *e-ers*, or THE SUN,³ or the Saviour—according to the Arabic حَرَّ to *save*. Here we have proof of several of my theories. Here we have the *Xρης*, the Chres, the Ceres, the *Eπος*, the Eri, and Heri, and Hari of Arabia, all identified with the Sun, and with the Preserver and Destroyer. And here we have the Hebrew הָרִם *ers*, the origin of the Sanscrit, Eri or Heri, *Saviour*.

Of late I have never closely examined a text of the Bible which has not brought to my mind an assertion of the Tamuls, that their ancient sixteen-letter sacred book had five meanings. I am quite certain that I shall be able to shew—to prove—that every letter of the Hebrew had four, and I think probably five, meanings. I request my reader to consider well the different meanings of this word, הָרִם *ers*, as an example. I have lately begun to have some suspicion, that it was with a reference to this mystery, that several of the Hebrew letters were what we call similars, but that they were originally identicals. This will be scouted,—poh-pohed down, by every Christian and Jewish Hebraist with whom I am acquainted, for I do not know one who is not afraid of too much being discovered. I never speak to any one of them upon these subjects, without finding all their eloquence instantly in requisition, either to shew that I have made no discovery, or to shew that it is quite out of the question that any should be made; but never do I find them take the other side, and endeavour to clear up doubts or remove difficulties.

To return to my subject: although there are many things in which I cannot agree with the learned Abbé Guerin de Rocher, I maintain that he has made out his case, that the history of Genesis, from Noah to the captivity, is to be found substantially in the history of Egypt, which he calls travestied, or, as he says, one taken from the other. Then here we have to all appearance a history in the time of Herodotus, which is, in fact, no history at all; for if it is merely a copy or travesty of the history of the people of Syria, it cannot be a history of the people of Egypt. Here, then, we have a most striking fact to support my doctrine, that we have really nothing of the nature of a true history before the time of Herodotus. And here we have Herodotus searching for history in Egypt, deceived by a mythos, the same as a mythos in Syria: and, if it were not a

¹ Here is a double reading יהיו *ieiu* and יהי *iei*, so it may be either, There shall be, or There have been. See Pagninus.

² See Vol. I., p. 694, note 3, where, for Rev. ii. 8, read Rev. xi. 8.

³ Vide Gessenius in voce.

mythos, what could induce the priests of Egypt to have given Herodotus a story in which Abraham, Sarah, and the other persons, in the Syrian history, were actors, as Egyptian history? Why did they not give the history, or the greatest part of it, correctly, as we have it in Genesis, instead of travestying it? Of course, the Abbé takes as much of the histories as is enough for his purpose, omitting all the remainder; but we can have no difficulty in finding the remainder of the mythos of North and South India, in the death and resurrection of Orus and Osiris. The Abbé observes,¹ that the different histories are confused, but that certain of the kings are but repetitions of Moses; that is, incarnations of the Saviour. They are merely renewed incarnations—of course as we have found them in India—all having a family likeness.²

I have often suspected that our LXX is not the work which Ptolemy caused to be made from the Hebrew or the Samaritan, but is a translation from the sacred books of the five temples of Egypt referred to by Isaiah. Now if we suppose the sacred books of the Jews to refer, and to have been admitted by them to refer, to an *Eastern Ayoudia* in their secret doctrines, they would not permit this to be publicly known. Of course, when the writings became public, they would be believed, generally, to refer to no other place or places than those in Western Syria; and immediately all persons answering to the description of the Jews, of any of the temples scattered about the world, would be believed to belong to the religion of Western Syria. I am now calculating upon these secret books being kept secret at all the other temples of Solymi. (At Telmessus, for example.) Of course, if they had sacred books containing this mythos, I suppose in every case they would be accommodated to the respective localities, as we have found them in India, near Cape Comorin, and as they were in Western Judæa, and as by and by we shall find the *Xp̄γ̄s*-ian mythos was in vast numbers of places, all over the world.

The reason why I have suspected our LXX, is to be found in the excessively great variation which may be perceived between it and the Hebrew—much too great, I think, to be accounted for, by the unintentional corruptions of Origen, with his obelisks and asteriks. May not the sole difference at last, between the Jews at the respective temples of Solomon and other Gentiles, be found in the Jews being a sect of iconoclasts, and keeping to this dogma or doctrine, when it was lost sight of by other nations; in consequence of which their religion ran into all kinds of absurdities, from which that of these temples continued free? I think this is worthy of consideration. Since I wrote the above I have been told by a learned Jew, that my suspicion respecting the LXX has been proved to be well founded, by an author of the name of De Rossi, who is noticed in Louth's Preface to his Translation of Isaiah.

5. The Abbé de Rocher shews that several kings are copies of Abraham, several of Joseph, several of Moses, &c., and that Joseph was the Proteus of the Egyptians and Greeks. He observes that Joseph was called a saviour, and this, from the peculiarity of his story, would be of no consequence; but the Abbé artlessly observes, which is indeed of great consequence, that St. Jerom calls Joseph *Redemptor Mundi*—here evidently letting the secret of the mythos escape him. The Abbé was not aware of the consequence of shewing that Moses and Joseph are repeatedly described, by different persons, particularly the latter, as a saviour. He had no knowledge of the new incarnations. Both Moses and Joseph are appellative terms, made into proper names. This raises a probability that the same history was told to the people every 600 years; and if the art of writing were not known by them, it is not surprising that they should have believed it.

¹ P. 138.

² In Egypt there was a Cashmouric district, that is, District of Cashmere.—Spineto's Lectures on Hieroglyphics, p. 87.

Eutychius says,¹ that the first city built by Noah was Thebes, which he called Thamanim. This is strongly confirmatory of the theory of the Abbé de Rocher, and of my system, that the whole mythic history has been in Egypt; but, as we might expect, accommodated to its local and other circumstances.

I beg my reader to look back into our own history for six hundred years, and consider what we should know of it, if we had not possessed the art of writing.

There have been a hundred and seventeen different theories, to account for the difficulties in the Egyptian history.²

Speaking of the Egyptians, it is said by another learned Abbé, the Abbé Bazin,³ that the words *I am that I am*, were on the front of the temple of Isis at Sais, and that the name esteemed the most sacred by the Egyptians was that which the Hebrews adopted, Y-HA-HO. He says, it is variously pronounced: but Clement, of Alexandria, assures us, in his *Stromatis*, that all those who entered into the temple of Serapis, were obliged to wear on their persons, in a conspicuous situation, the name of *I-ha-ho*, or *I-ha-hou*, which signifies *the God eternal*. From this, I think, we may fairly infer, that the Egyptians were of the same religion, in its fundamentals, as the Jews. An attentive consideration of the passage of the book of Esther, where the Persian idolaters are described as being put to death, will, I think, justify me in saying, that it affords grounds for the opinion, that they were the same. The book of Esther appears to have been part of the chronicles of the kings of Persia, adopted by the Jews into their canon, evidently to account for their feast of Purim.

Herodotus was in Egypt about four hundred and fifty years before Christ, and Alexander conquered it about three hundred and fifty years before Christ, which was the time when the Greeks first began to have any influence there. After their conquest of it nearly the same thing happened to it which happened to Carthage, after it was conquered by the Romans. Its history was lost, except the tradition that it had been previously conquered by the Persians: the reason of this was, because there was no history, the art of writing history had not been invented. But there was this difference between Carthage and Egypt,—the latter continued a nation, the former did not. These circumstances account for the loss of the particulars of the Egyptian history, but not for the loss of general great events, easily transmissible by memory.

My reader must recollect, that the example which I have given him of Thebes and Noah, constitutes but a very small part of the *rapprochements* (as the Abbé calls them) which, in fact, relating to Egypt alone, fill three volumes. It is selected as an example, not because it is the most striking, but because it happens to be the first, and one of the shortest.

6. But the Abbé Guerin de Rocher is not content with shewing that the Egyptian only travestied the Holy Scripture; he goes much further. He says,⁴ “Je crois pouvoir, en effet, montrer assez clairement, et par la signification des noms, et par les principaux traits des caractères, et par la suite des faits, quoique souvent altérés, que ces premiers personnages de l’histoire sainte sont devenus autant de rois ou de héros, dans les temps fabuleux de l’histoire profane, et surtout dans les poètes de la Grèce, et de là vient que les héros d’Homère, malgré les altérations du paganisme, conservent encore une si grande simplicité.”

Again, speaking of the comparison between the history of the Architect of Rhamsinites and the testament of Jacob, he says,⁵ “On ne me croiroit pas sans doute, vu le peu de ressemblance, si je

¹ See Vol. I. p. 755.

² Guerin de Rocher, Vol. I. p. 167.

³ Translation from his MS. by Henry Wood Gandell, printed for North, Paternoster Row, 1829, p. 130.

⁴ Vol. II. p. 15.

⁵ Vol. II. p. 379.

ne faisais un rapprochement assez sensible pour opérer la conviction. Je ne ferois pas ce dévoilement, si je ne le regardois comme une preuve décisive, que les Egyptiens, pour composer leur histoire, ont réellement traduit, et très-mal traduit, les endroits de l'Écriture qui ont quelque rapport à l'Égypte : cela servira du moins à constater de plus en plus sa véritable antiquité : ce sera en même temps un exemple frappant de la manière pitoyable dont l'ignorance et l'aveuglement des païens, et du peuple même réputé le plus sage parmi les païens, ont altéré ce qu'il y a de plus respectable et de plus sacré, car c'est un des chapitres les plus intéressants qui se trouvent dans l'histoire sainte.

“ Ce travestissement une fois constaté, nous servira encore à en rendre d'autres moins incroyables : car les mêmes personnages dont il s'agit dans ce chapitre, se trouvent aussi travestis dans l'histoire fabuleuse de la Grèce, où ils sont devenus les principaux héros de la guerre de Troie, sous les mêmes noms traduits en Grec, avec les mêmes traits distinctifs de leurs caractères, et le même fond des principaux faits, comme je le ferai voir dans la mythologie Greque, ou je montrerai en même temps quelle est la guerre de l'histoire sainte, entreprise pour une femme, qui est devenue pour les Grecs la guerre de Troie : et quel est le morceau poétique de l'Écriture qui a servi de germe à l'Iliade d'Homère, comme les Grecs eux-mêmes l'ont équivalement reconnu avant moi, sous des noms traduits dans leur langue.”

Speaking of the Greeks he observes, that the meaning of the word Noé נח *nuh* in Hebrew is *quies* and *requies*, (vide Gen. v. 29,) and that “ Le nom de Deucalion se forme naturellement en Grec du mot Δευκος, suavitas, dulcedo, qui signifie douceur : comme le nom de Sigalion, Dieu du Silence, se forme de Σιγη, silentium, que signifie silence. Δευκος *Deucos* a pu avoir ses dérivés comme Σιγη a les siens — Σιγηλος, Σιγαλεος, &c. Voilà donc Deucalion qui, par son nom même, se retrouve être Noé.”¹ He shews that the story of the stones, by which Deucalion and Pyrrha repopled the earth, is only a mistake arising from the Hebrew word בנים *bnim*, filii, having been confounded with the word אבנים *abnim*, lapides.² He then shews, that Noé is found in a similar manner in the Nannacus of the Phrygians, who is said, by Suidas, to have *foreseen* the flood, and in consequence to have collected and saved his people in a sacred asylum. This reminds me that one of the Sibyls placed Ararat in Phrygia : that is, placed a mount of il-avarata, of God the Creator, in Phrygia. All this tends to shew the mythos to be universally spread over the world. Nannacus foreseeing the flood, reminds me also that Enoch says, that Noé foresaw it — learnt from the moons or planets, that the earth would become inclined, and that destruction would take place. But this I shall discuss hereafter.

Again, Mons. Bonnaud says, “ Mais si chaque trait de ses dévoilemens aura de quoi surprendre, que sera-ce, quand l'auteur de l'histoire véritable entreprendra d'expliquer comment les Grecs ayant imaginé leurs temps héroïques d'après nos livres saints, en ont emprunté ces noms illustres par les deux plus grands poètes qui aient jamais existé, les noms d'Ajax, d'Enée, de Diomède, d'Agamemnon, de Ménélas ? L'on verra que ces noms ne sont tous que les traductions de ceux des enfans de Jacob, Ruben, Siméon, Lévi, Juda, Dan, Issacar, Zabulon, &c., que les Grecs ont rendus dans leur langue, tantôt avec une exactitude littéraire, et tantôt avec des altérations grossières, découverte assurément très-heureuse et si singulière, quelle paroîtra un paradoxe incroyable : découverte féconde, elle nous révélera un mystère que jusqu'ici l'esprit humain n'avoit pas même soupçonné. En effet, quelle sera la surprise de toutes les nations cultivées par le goût de la belle littérature, quand, par une suite de dévoilemens des héros de la Grèce, copiés sur les noms

¹ Vol. I. p. 174.

² Ib. p. 175. The Abbé says, that Jameson, in his *Spicelegia*, has proved all the Egyptian proper names Hebrew.

des chefs des douze tribus d'Israël, M. l'Abbé de Rocher fera voir que la guerre de Troie, cette guerre, dont le fracas a retenti jusqu'au bout de l'univers: cette guerre, dont la célébrité propagée d'âge en âge, et perpétuée de bouche en bouche depuis tant de siècles, a fait placer cet évènement mémorable au rang des grands époques de l'histoire: cette guerre de Troie, chantée par un Homère et un Virgile, n'est dans le fond que la guerre des onze tribus d'Israël, contre celle de Benjamin, pour venger la femme d'un Léviste, victime de l'incontinence des habitans de la ville de Gabaa;¹ qui fut prise par les autres tribus confédérées, à l'aide d'une ruse de guerre, et qui fut à la fin livrée aux flammes par les vainqueurs."²

I confess I should have liked very much to see the Abbé attempt the Grecian history, as he has done that of Egypt. The striking marks of resemblance between parts of the Iliad, and of the names in it, and the fabulous history of Greece, to names and to parts of the Sacred Writings, has been observed thousands of times, and for this no reason has yet been assigned, having even the slightest degree of probability—unless the doctrine of a common and universal mythos in an universal language, as proposed to be proved in this work, be considered to possess such probability.

I think it expedient here to add some observations from another learned Abbé respecting the Grecian Bacchus. In Bacchus we evidently have Moses. Herodotus says he was an Egyptian, brought up in Arabia Felix. The Orphic verses relate that he was preserved from the waters, in a little box or chest, that he was called *Misem* in commemoration of this event; that he was instructed in all the secrets of the Gods; and that he had a rod, which he changed into a serpent at his pleasure; that he passed through the Red Sea dry-shod, as *Hercules subsequently did*, in his goblet, through the Straits of Abila and Calpe; and that when he went into India, he and his army enjoyed the light of the Sun during the night: moreover, it is said, that he touched with his magic rod the waters of the great rivers Orontes and Hydaspes; upon which those waters flowed back and left him a free passage. It is even said that he arrested the course of the sun and moon. He wrote his laws on two tables of stone. He was anciently represented with horns or rays on his head.³

We see Bacchus, who in so many other particulars is the same as Moses, is called *Misem*, in commemoration of his being saved from the water. Gessenius, in his explanation of the word Moses, says it is formed of $\mu\omega$ water and $\sigma\sigma\eta\varsigma$ delivered. I can find no Greek $\mu\omega$ for water in my Lexicons. But *Misem* may be the Saviour— $\gamma\omega$ iso, the Saviour *is m*. And when I recollect all that I have said in Vol. I. pp. 530, 531, respecting the sacredness of water, and what Mr. Payne Knight has said of the derivation of the word Ice, and that Bacchus was Isis and Omadios, I cannot help suspecting that there is another mystery under this name, which I cannot fully explain.

We have found the Mosaic mythos in China, in North India, and it was found in South India by the Jesuits: then, according to the Abbé, Genesis must have been travestied in all these places, as well as in Egypt and Greece. This circumstance raises another insurmountable objection to the Abbé's theory, but it supports mine.

¹ "Il est remarquable, en effet, qu'en Hébreu le mot Gabaa, qui veut dire un lieu élevé, a le même sens que Pergama, en Grec, qui est aussi le nom qu'on donne à Troie."

² "Mons. l'Abbé dit, que la guerre de Troie est prise de la guerre des Tribus, racontée à la fin du Livre des Juges. Ce morceau de l'Écriture est le dix-neuvième et le vingtième chapitre du Livre des Juges."

³ Abbé Bazin, by Wood Gandell, p. 158. This ought to have come in another part of the work, but like many other passages it was not copied till the other parts were printed.

My reader will probably recollect that I have formerly shewn that the Rev. Dr. Joshua Barnes published a work to prove that Solomon was the author of the Iliad.¹

The idle pretence that because the Egyptians had lost their own history they had recourse to that of the Jews, is at once done away with by the Abbé's observation respecting Thebes, and that all the same history is to be found among the Greeks as among the Egyptians. I feel little doubt that it was the discovery by the priests that this fact overthrew the Abbé's theory, and led to consequences of a very different nature, which prevented him from keeping his promise, to shew, in a future work, that the Greek and Latin history was the same as the Egyptian, and not the dispersion of his papers in the Revolution: but this I most exceedingly regret. His success in the case of Deucalion and Nannacus makes it probable that he could have performed his promise if he had thought proper.

7. The learned writer, in the Edinburgh Encyclopædia, whom I have several times before quoted, says,² "By the description above translated, (the passage of Clemens relating to hieroglyphics,) it plainly appears that the sacred character of the Egyptians was entirely different from the hieroglyphic: and by this consideration we are in a good measure justified in supposing, as we have done all along, that the sacred letters of the Egyptians were actually the Chaldaic. The inscriptions on the obelisks, mentioned by Cassiodorus, so often quoted, were certainly engraved in the sacred character; and the character in which they were drawn was that above-mentioned. If the sacred letters were Chaldaic, the sacred language was probably the same."

It is a very remarkable circumstance that we should here find the old Hebrew or Chaldee language, for they were both the same, to be the oldest used in Egypt. Did the Egyptians change their language, out of compliment to those pastors or shepherds whom they permitted to reside in a corner of their country, and at last expelled? The fact was, I have no doubt, that the language was the ancient Coptic, which was Hebrew or Chaldee. I do not speak of the forms of the letters used, because these were changed by caprice every day; nor, indeed, of the written language; for it must have been a Masonic secret. I cannot doubt that 1000 years before the captivity, the Chaldee, the Hebrew, the Syriac, and the Coptic, were all the same languages.

The case of the five dialects of the Celtic, namely, the Scotch, the Manks, the Irish, the Welsh, and the Cornish, is exactly similar to that of the Egyptians named above. The natives of these places do not now *generally* understand one another, but yet no one can doubt that they did all understand one another a thousand or twelve hundred years ago, and that they are merely dialects of the same Celtic language.

In the epithet *cheres*, borne by many of the kings, we have clearly the $\chi\rho\eta\sigma\eta\rho\iota\omicron\nu$ or $\chi-\rho\sigma\tau=600$; T or X=300 $\sigma=200$ $\rho=100=600$. In the later Ptolemies the Crestologia is shewn in their names—Soter, Philadelphus, &c. $X\epsilon\eta\varsigma$ was but an epithet, *mitis*, *benignus*, applied to the divine incarnation—to the person inspired by the Holy Ghost, and possessing the crown by divine right.

8. I beg that my reader would now reconsider the circumstances, that we have found a repetition of the same mythos of Moses, &c., &c., in several countries; *secondly*, that the voyages of salvation or processions about the country, or Deisuls, as they were called in Britain, are found in most countries; and, *thirdly*, that it appears probable, from the practice of the Roman Church in scenically representing all the acts of the Saviour in the course of every year, that these pro-

¹ See Vol. I. p. 364.

² Art. Phil. S. 73.

cessions or relations of the Mosaic history in the different countries, were originally nothing more than the scenical representation of the first mythos, which probably arose originally in Ayoudia, and in process of time come to be believed by the people who performed them. This scenical representation arose before the knowledge of letters, and was invented in order to keep the scheme from being lost; and I think it not at all unlikely, that the whole vulgar mythos of an incarnated person was a parable, invented by the philosophers for the purpose of keeping their refined and beautiful doctrines, and their cycles and astronomy, from being lost. I can imagine nothing so likely to answer this intended end, before letters were invented.

It seems probable that there was the same multiplication of the mythos in Egypt in the different districts, which we have found in Greece and other countries; and, that the reiteration of the different Moseses, Josephs, Chereses, in dynasties, was nothing but the repetition of the different incarnated Saviours for the same sæculum in different parts of the country. They have often been thought to have been contemporaneous sovereigns, by different authors. This exactly suits my theory. We know they had the voyages of salvation the same as in Greece. When Egypt was divided into small states, each would have its Saviour, its voyage of Salvation, or Dei-sul, or holy procession, its Olympus, Meru, &c., and its mythos of an immaculate conception, crucifixion, resurrection, &c., &c.: but when it became united under one head, it would have, as we read, one for the whole country, which annually made a procession the whole length of the Nile.

I now request my reader, before we proceed to any other subject, to reflect well upon what we have found in the Abbé's work. Let him think upon the two cities of Thebes, or the ark from which pigeons were sent out, and from which all animals and men descended, &c. Let him remember Hercules three days in the Dag, and Jonas three days in the Fish. Let him remember Samson's likeness to Hercules. Let him remember Iphigenia and Jephthah's daughter, &c., &c., &c., and then let him account, if he can, for these things, in any other way than that which I have pointed out.

CHAPTER IV.

LORD KINGSBOROUGH ON MEXICO.—MALCOLME.—MEXICAN MYTHOS THE SAME AS THAT OF THE OLD WORLD.—HUMBOLDT AND SPINETO.—CHRONOLOGY AND CYCLIC PERIODS.—TOWERS OF MEXICO AND BABEL.—JEWISH LANGUAGE AND MEXICAN RITES.—CROSS AND CRUCIFIXES.—IMMACULATE CONCEPTION. FEMALE PRINCIPLE.—HUMBOLDT.—BOCHICA, PERUVIAN RITES, &c.—THE ASS AND HORSE. RACES OF MEN.—CHINA. TIBET. SPANISH POLICY.—LAWS OF THE MEXICANS.—EASTER ISLAND.—LAST AVATAR EXPECTED.—TOD ON TIBET. ISLAND SUNK. JEWISH MYTHOS.—GENERAL OBSERVATIONS.

1. I MUST now draw my reader's attention to perhaps the most curious of all the subjects hitherto discussed, and that is, the history of Mexico and Peru. It might be supposed that these, of all nations, were the least likely to afford any useful information respecting the system or mythos which I have been unveiling; but they are, in fact, rich in interesting circumstances, that have

hitherto been totally inexplicable, but which are easily explained on the hypothesis, that there was, in very early times, an universal empire governed by a learned priesthood.

Many months after the Anacalypsis had been in the press, Lord Kingsborough's magnificent work on Mexico made its appearance. This will account for the manner in which I have spoken of Mexican hieroglyphics in the first volume. My reader will readily believe me when I say it was with great pleasure I discovered in every part of that work circumstances which can only be accounted for on the theory laid down by me, and which therefore confirm it in a very remarkable manner. His Lordship's difficulties are very striking: the language of the Jews, their mythos, laws, customs, are every where apparent. This his Lordship accounts for by supposing that in ancient times colonies of Jews went to America from Alexandria. But this by no means accounts for the difficulty, because the Trinity, the Crucifixion, and other doctrines of Christianity, are intermixed with every part of the Jewish rites, which must be accounted for; therefore, to remove this new difficulty, he is obliged to suppose that Christian missionaries, in the early times of the gospel, found their way to America. Now admitting this to have taken place, its insufficiency to account for the various incomprehensible circumstances, if not already, will very shortly be clearly proved. The South Americans had not the knowledge of letters when the Spaniards arrived among them, nor did they know the use of iron. These facts are of themselves almost enough to prove, and really do prove, when combined with other circumstances, that the Jewish customs and doctrines could not have been carried to them from Alexandria, as above suggested, or by modern Christians, who would have instantly set them to digging their mountains;¹ but, on the contrary, these facts prove that the colonization must have taken place previously to the discovery of iron by the natives of the old world, long before Alexandria was built;² and this agrees very well with their ignorance of the use of an alphabet. The two facts exhibit the mythos in existence at a period extremely remote indeed. For, the identity of rites, such as circumcision, &c., found in India, Syria, Egypt, and South America, puts the great antiquity and identity of the mythoses out of all doubt.

2. David Malcolme, in his book called Antiquities of Britain, (which is so ingeniously contrived that it cannot be referred to by chapter, number, page, or in any other way,) gives the following passage as an extract from Salmon's Modern History:³ "St. Austin, speaking of the notion some entertained of another continent, he says, 'It is not agreeable to reason or good sense to affirm, that men may pass over so great an ocean as the Atlantic from this continent to a new-found world, or that there are inhabitants there, all men being descended from the first man Adam.'" Now this shews that, from the time of Christ to the fourth century, when this African bishop lived, but then resided at Rome, there had been no colonization. It was impossible to have taken place without his knowledge, and this absolutely proves the truth of the existence of the $\chi\rho\eta\varsigma$ -ian mythos before the time of Christ.

The jealousy of the Pope and the court of Spain, in keeping all strangers away from South America, even to the extreme length, for many years, of excluding their own bishops and secular clergy, and permitting no priests but Dominicans and Franciscans to go thither, is accounted for. The clear and unquestionable doctrines of Judaism and Christianity, which must have existed before the time of Christ, evidently overthrew all their *vulgar exoteric* doctrines, whatever they

¹ Mexico is one of the few places where native iron is found, (see Vallancey's Coll. Hib. Vol. VI. p. 422,) and it lies in masses on the sides of their mountains in the greatest abundance.

² According to the Arundelian marbles, iron was not found out till 188 years before the war of Troy. Ibid.

³ Vol. 28th, but the first concerning America, Introd. Part 4th and 5th.

might do with the *esoteric* or those in the conclave. Lord Kingsborough says,¹ "But one solution offers itself from all the difficulties and mysteries which seem to be inseparable from the study of the ancient monuments, paintings, and mythology, of the Mexicans; and that is, the presence of the Jews in the new world." Had his Lordship said the *Judaic mythos*, he would have been right; for nothing can be more clear than that it is all substantially there, and most intimately mixed, actually amalgamated, he might have added, with the Christian.

3. The similarity between the Jews, Christians, and South Americans, is sufficiently striking; but there is yet something to me still more so, which is, that several of the doctrines which I have advocated in this work, unknown to the vulgar Jews and Christians of this day, are to be found in Mexico. Their Triune God, their Creator, is called by the names Yao and Hom. Lord Kingsborough says,² "Hom-eyoca, which signifies the place in which exists the Creator of the universe, or the First Cause, to whom they gave the name of Hom-eteuli, which means the God of three-fold dignity, or three Gods, the same as Ol-om-ris; and by another name, Hom-eican, that is to say, the place of the Holy Trinity, who, according to the opinion of many of their old men, begot, by their word, CIPATENAL, and a woman called X-UMIO."

In the Hom-eyo-ca, when joined with the other circumstances, I cannot but recognize the Om and Ai— \aleph ω *om-ia*, place of Om. And again, in Hom-ei-can the Aom-iao-ania, the place or country of the Self-existent ($\tau\upsilon$ *ie*) Hom, who is called the Trinity. And what are we to make of the Hom, the Father of the WORD, by the Logos?

The Father of the American Trinity is called Om-equeturiqui, ou bien Urago-Zoriso; le nom du Fils est Urus-ana, et l'Esprit se nomme Urupo.³ Here the Om of North India, the Urus or Beeve, and the *pi-ruh*, that is, *the ruh*, are very distinct. These have evidently not come from modern Christianity, but from the ancient system in the most ancient of times. Teutle is repeatedly said to mean $\Theta\epsilon\omicron\varsigma$ or God. Sahagun says the Mexicans had a God, the same as Bacchus, called Ometeuchtli. Here is clearly Bacchus by his name of Ομᾶδιος ,⁴ who was called $\Upsilon\text{Η}\Sigma$ =608, which was the name of Jesus Christ, called *the desire of all nations*—the Om-nu-al of Isaiah. Here, in the Teut, we have not only the $\theta\epsilon\omicron\varsigma$ of the Greeks, but we have the Teut-ates of the British Druids, and the Thoth of Egypt, and the Buddha of India under his name Tat. But it is expressly said, in several other places, that the God was called Yao. How can any one doubt that here are the remains of an ancient system? How can any one believe that the Jews would carry all these recondite matters to Mexico, even if they did go at any time, and that they would amalgamate them all together as we have them here?

The Mexican history gives a long account of their arrival in Mexico, from a distant country, far to the West. The stations where the colony rested, from time to time, during its long migration, which took many years, are particularly described, and it is said that ruins of the towns which they occupied are to be seen in several places along the coast. I think it is evident that this migration from the West is merely a mythos; the circumstances are such as to render it totally incredible. In principle it is the same as that of the Jews, but accommodated to the circumstances of the new world.

It really seems impossible to read Lord Kingsborough's notes, in pp. 241 et seq., and not to see, that the mythos of a chosen people, and a God conducting them after long migrations to a promised land, (attributed by the Spanish monks to the contrivance of the Devil,) was common to Jews, Christians, and Mexicans. I think it seems clear, from p. 186, that Mexico or Mesi-co was the Hebrew משיח *msih*; then it would be *the country of the Messiah*: or it might equally be the

¹ P. 82.² Pp. 153, 156, 158.³ Ibid. p. 410.⁴ Ibid. Vol. VI. p. 197.

country of the leader, whom we call Moses, of the people whom we have found in Western Syria, in South India, and *Cashmere*. His Lordship shews, that the word Mesitli or Mexico is "precisely the same as the Hebrew word מִשִּׁיחַ *msih* or מִשָּׁח *mse* or anointed," and that one of these Gods should sit on the right hand of the other, p. 82. In the next page he says, "the full accomplishment of the prophecy of a saviour in the person of Quecalcoatle has been acknowledged by the Jews in America." He says, p. 100, "The temptation of Quecalcoatle, the fast of forty days ordained by the Mexican ritual, the cup with which he was presented to drink, the reed which was his sign, the morning star, which he is designated, the *teapatl*, or stone which was laid on his altar, and called *teotepatl*, or divine stone, which was likewise an object of adoration; all these circumstances, connected with many others relating to Quecalcoatle, which are here omitted, are very curious and mysterious!" *But why are they omitted* by his Lordship? The pious monks accounted for all these things by the agency of the Devil, and burned all the hieroglyphic books containing them, whenever it was in their power.

This migration of the Mexicans from the West,¹ is evidently exactly similar to the *Exodus* of the Israelites from Egypt. The going out with great noise and clamour is a part of the mythos. Nimrod has shewn that it is to be found among the Greeks in their Bacchic festivals, and also among the Romans: see his second volume, article *Populi Fugia*.² The meaning of the mythos I cannot even suspect, and the nonsense of Nimrod about Babel and the horrors of Gynæcocracy give no assistance. But the fact of the similarity of the histories proves that it really is a part of the mythos, that is, that a *Regifugia* and *Populifugia* is a part of the mythos.³

On the religion of the Hindoos the Cambridge Key says,⁴ "The pristine religion of the Hindus was, I think, that of the most pure and ancient *Catholic faith*, and the religion of the enlightened few still continues such. They have worshiped a saviour, as the Redeemer of the world, for more than 4800 years. The religion of their forefathers they brought with them from the old world and established it *in the new one*. They believe implicitly in a Redeemer, whom they consider as the spirit that moved on the waters at the creation, the God that existed before all worlds." We shall find this the Mexican faith.

The God who led the Mexicans in their migration, was called *Yao-teotle*, *God of Armies*—*Yao* being said to mean army or victory—the very meaning given to it by the Jews; and, Sanscrit scholars tell me, also by the Indians.⁵ *Teo* is said to be Θεο or Deo, and *tle* a mere termination; but, as I have stated in Vol. I. p. 221, the TTL is T=300, T=300, L=50; and TT is, in fact, the Tat or Buddha of India. *Teotle* is the same as תלת *tlt*, and means 650, which, as emblem of the Trinitarian God, came to mean *three*. I believe also that this has a connexion, in some way, with the תלך *tlđ*, probably originally תלת תולאד *tlđ* or תולאד *tulad*, the male organ of generation. I believe that from this comes our word *Lad*. *Teotl* is the Supreme and Invisible Being.⁶ The *Tat* is the name of the Tartars, who are as often called *Tatars*, and I am persuaded that the famous *Titans* were properly *Tat-ans*. Many reasons for these matters will be added hereafter.

Gen. Vallancey says, the earliest Irish history begins with *Kartuelta*,⁷ which is the same as the Indo-Scythian *Cear-tiutli*, that is, *Kaesar* or *Cæsar*, grandson of Noah, on the banks of the Cas-

⁶ Miss Williams' Humboldt, p. 83.

⁷ Coll. Hib. Vol. VI. p. 21.

pian, 300 years after the flood. Here I suspect that we have the Cæsar of Indo-Scythia, or of the Caspian, joined to the Mexican Tiutli or Teotli.¹

4. In p. 216, Mr. Humboldt treats of a nation called Xochimileks. This must be Xaca-melech, or, I should rather say, (considering all the other circumstances which we have seen relating to the Rajahpoutans and Royal Shepherds,) *Royal Saxons*, for I much suspect they were all the same people. The Marquess Spineto, in his Lectures,² has quoted a person called Carli as having deeply studied the origin of nations and languages, and who, he says, has asserted that the Egyptians peopled America. He particularly notices a word as being held sacred among the Egyptians and in the Pacific ocean,—it is *Tabou*. But this is nothing but Bou-ta read anagrammatically, or, in fact, in the old Hebrew fashion. The High Priest of the North American Indians was called Schem. I think we have here both the Saga and the Akme,³ and also the Sciakam, which we have before noticed in Tibet. The dignity of sacrificer was supreme and hereditary, like a feudal title. His title was Papa, his dress scarlet, with fringes as a border.⁴ This exactly answers to the Sagart and Rex Sacrificulus of the ancients. The fringes of the Mexicans were fixed to the four quarters of their garments, as a sacred ordinance, precisely like those of the Jews;⁵ and it is only fair to suppose, as they were similar in one respect they should be so in another, and have been descriptive of the number 600.

5. Boturini says, “No Pagan nation refers primitive events to fixed dates like the Indians,” meaning the Americans. “They recount to us the history of the creation of the world, of the deluge, of the confusion of tongues at the time of the tower of Babel, of the other epochs and ages of the world, of their ancestors’ long travels in Asia, with the years precisely distinguished by their corresponding characters. They record, in the year of Seven Rabbits, the great eclipse which happened at the crucifixion of Christ our Lord; and the first Indians who were converted to Christianity, who, at that time, were perfectly well acquainted with their own chronology, and applied themselves with the utmost diligence to ours, have transmitted to us the information, that from the creation of the world to the happy nativity of Christ, five thousand, one hundred and ninety-nine years had elapsed, which is the opinion or computation of the “LXX.”⁶

One of their periods is 4008 years B. C.,⁷ another 4801.⁸ Their fourth age, the editor says, according to the Mexican symbols, lasted 5206 years, and the early Christian converts made it out 5199 years.⁹ This was evidently the computation of 5200 years of Eusebius. The period of 4801 is the sum of the eight ages of the correct Neros, $8 \times 600 = 4800$. The Mexicans are said to be great astrologers.

The Mexicans believed that the millenium would commence at the end of some cycle of 52 years— $4 \times 13 = 52$; and they concluded each of these periods with deep lamentations and terrors, and hailed with corresponding joy the moment when the new cycle had commenced, which shewed that they had a new 52 years’ lease. This was exactly the case with the lamentations for the death of Osiris, Adonis, &c., and his resurrection from the tomb. The new cycle having commenced, the danger had past. At first, I doubt not, this was only every 600 years; afterward, with the increasing uncertainty of the ends of those periods, and also with the increase of superstition, the festivals of Osiris, &c., came, for the sake of security, to be celebrated every year.

Lord Kingsborough says,¹⁰ “Christians might have feared the return of every period of fifty-

“two years as being nearly the anniversary of the age which Christ had attained when he was crucified, and of the great eclipse which sacred history records, and which (since profane history is silent respecting it) it is very remarkable how the Mexicans should have become acquainted with.”

The first pair were called Huehue.¹ Quecalcoatlé disappeared at the end of fifty-two years, at the great festival in Cholula.² Here is the Aphanasia.

Mr. Humboldt gives nearly the same account. He says, “At the end of the fifty-two years they had a grand festival, when all lights were extinguished, and after crucifying a man, they kindled a fire by the friction of the wood of the Ivy on his breast, from which they were all relighted. It was their belief that the world would be destroyed at the end of one of these cycles, and as soon as this fire was kindled and the critical moment past, which assured them that a new cycle was to run, they indulged in the greatest joy.” He shews that they new-cleaned and furnished all their houses and temples, precisely as was done by the ancient Egyptians, and, he might have added, as is also done by the Romish church at every jubilee.³ He shews that the Mexicans had convents of Monks precisely like the Tibetians and the Romish church. After this, Humboldt states, that M. La Place, from a careful examination, had come to the conclusion, that the Mexicans knew the length of the Tropical Year more correctly than Hipparchus, and almost as correctly as Almanon;⁴ and he shews, from various astronomical circumstances, that they must have had a close connexion with Eastern Asia and its cycles.

Humboldt says, “This predilection for periodical series, and the existence of a cycle of sixty years, appear to reveal the Tartarian origin of the nations of the new continent.”⁵ He then states, that the cycle of sixty years was divided into four parts. “These small cycles represented the four seasons of the great year. Each of them contained 185 moons, which corresponded with fifteen Chinese and Tibetan years, and consequently with the real *indictions* observed in the time of Constantine.”⁶ Here we see the identity accounted for of the chronological periods stated above by Lord Kingsborough, with those of the old world, as corrected by the two Cæsars with the assistance of the Chaldæans of the East. On this I shall have something very curious in a future book.

Mr. Niebuhr says, “What we call Roman numerals are Etruscan, and frequently seen on their monuments. But these signs are of the hieroglyphic kind, and belong to an earlier mode of symbolical writing, *in use before the introduction of alphabetical characters.*”⁷ They resemble the Aztekan in this, that they represent objects individually. They were of native origin, at the time when the West, with all its primitive peculiarities, was utterly unknown to the East,⁸ at the same period when the Turdetani framed their written characters and literature.”⁹

“Here also a phenomenon presents itself, which fills us moderns with astonishment, viz. an exceedingly accurate measurement of time, and even in the cyclical year, *quite, quite in the spirit in which the early Mexican legislators conducted the chronology*; portions of time measured off from periods of very long duration, determined with astronomical precision, and without regard to the lunar changes. Besides these, the Etruscans had a civil lunar year, which the cyclical only served to correct. But there is something remarkable, and not to be lightly disre-

⁶ *Ib.* p. 133.

⁷ How extraordinary that this author should stop here and not make the least attempt to ascertain what this symbolical writing was! It will be my object, in a future book, to supply the deficiency; but I beg my reader to recollect the admission of this learned man.

⁸ What a mistake!

⁹ Strabo, III. Cap. ii. p. 371, Ed. Sylb.

“garded, in the affinity between the wisdom of the ancient West and the science, at one time perhaps more widely diffused over that hemisphere, *and of which the Mexicans still preserved the hereditary, though probably useless possession, at the time when their country was destroyed.* This deserves more attentive consideration, since the discovery of an analogy between the Basque and American languages, by a celebrated scholar, Professor Vater.”¹ In these observations we surely have a very extraordinary confirmation of my theory. If the Romans calculated by a period or *sæculum* of 120 years, they would come to the same conclusions as if they took the 60 or 600, and in this we see why the Mexican and Roman periods agreed in the time of Constantine and Eusebius. They would not have agreed before the time when the solstice was corrected by Sosigenes the CHALDÆAN. They would have varied more than 500 years. This we shall refer to in a future book, when it will be understood, and something exceedingly striking will be unfolded.

Humboldt says, the Mexicans hold that, before the flood, which took place 4800 years after the creation² of the world, the earth was inhabited by giants. One of them after the flood, called Xelhua or the architect, built an immense pyramidal tower which was to reach to heaven—but the Gods offended destroyed it with lightning. Here is a complete jumble of the ancient mythology: the 4800 are the eight cycles before Christ. The architect is the Megalistor or the name of God made into the giant, and is X-al-hua, *the self-existent X*. The tower is the exact model of the tower of Babel, as given in our old histories. After its destruction it was dedicated to Quetzalcoatl, *the God of the Air*. This is Saca, or Indra, whom we found crucified in Nepal. (See Vol. I. p. 230.)³ The Mexicans chaunted the word Hululæz, *which belonged to no Mexican dialect*, to the honour of their Gods.⁴ This is evidently the Allelujah of the Greeks and Hebrews, and the Ullaloo of the Irish.⁵

6. It is said that after the deluge sacrificing commenced. The person who answers to Noah entered an Ark with six others, and that soon after the deluge his descendants built the tower of *Tulan* Cholula, partly to see what was going on in heaven, and partly for fear of another deluge, but it was destroyed by thunder and lightning. The story of sending birds out of the ark, the confusion and dispersion of tribes, is the same in general character with that of the Bible. His Lordship says, “In attempting to explain how the Indians could have become acquainted with events of such remote antiquity, coeval with the foundation of the earliest monarchies, it would be absurd to suppose that their annals and native traditions extended backwards to a period unknown to Egyptian, Persian, Greek, or Sanscrit history.”⁶ Absurd as it may be to suppose this, their hieroglyphic annals evidently do thus extend backwards.

His Lordship says,⁷ “The difficulty of comprehending the plan of the tower of Belus, given by Herodotus, vanishes on inspecting the plans of the Mexican temples. The turrets in the great temple, described in p. 380, were 360 in number.” Up to the temple Cholula were *ciento y veinte gradas*. The brick base of the tower of Chululan, which remains, and was built

¹ Niebuhr, Hist. Rome, Vol. I. p. 92, Ed. Walter.

² I think when my reader has seen a few of the following pages he will be convinced that there must here be a mistake of the translator, and that the words *after the creation of the world* ought to be *before the Christian æra*. The space 4800 is about the time of the eight cycles from the entrance of the Sun into Taurus, and when (as I shall shew in a future book) a flood probably took place.

³ Williams, Vol. I. p. 96.

⁴ *Ibid*.

⁵ I have no doubt that the Ullaloo of the Irish, with which they *wake* their dead friends, was originally an invocation to the Deity to be merciful to their souls.

⁶ Vol. VI. p. 117.

⁷ *Ib.* p. 279.

in order to escape another flood if it should come, is eighteen hundred feet in circumference. It is said to have been destroyed by a stone from heaven.¹ It is pyramidal. Humbolt says it is hollow.² I have little doubt that the word *Chol* has been XL=650—a monogram, which it may be remembered is found in the oldest catacombs at Rome.

Teocalli is the name of the temple of Cholula; this is said to be the house of Teocalli. This is evidently *teo* or God *Cali*. *House of God* is precisely the Hebrew style.

The word Cholula is thought by Lord Kingsborough to be a corruption of the word Jeru-salem. He thinks the same of a place called Churula;³ but I suspect that they were identical. At Cholula is the very large temple, with the very celebrated pyramid, which is said to be a very close imitation of the temple of Belus or tower of Babel.⁴ A room in one of the pyramids of Cholula had its ceiling formed like the temple at Komilmar, of over-hanging stones.⁵

In Volume XXI.⁶ of the Classical Journal will be found some interesting remarks of Mr. Faber's on the close similarity between the pyramid on the mountain Cholula of the Mexicans, and the tower of Belus. That one is a copy of the other, or that they are both taken from some common mythos, cannot possibly be doubted. This being premised, I would ask my reader whether he can doubt a moment, that the well-known deity *Omorca* of the Chaldæans⁷ is the Hom-eyo-ca of the Mexicans? Thus we have not only the mythos of the Greeks in Bacchus, of Christianity, of Judaism, of Tartary, and of North and South India in Mexico, but we have the very oldest mythos of Babylon. How came this mythos of Babylon in Mexico? Did it go by China? I think my reader, when he considers all these circumstances, must see that my theory of one universal empire and mythos will explain all the difficulties, and that it alone can explain them.

Mr. Humboldt, after shewing that the tower at Cholula was in every respect a *close imitation* of that described by Diodorus and Herodotus at Babylon, both in its form and in the astronomical uses to which it was applied, states, as if it was not doubted, but a settled fact, that it was built after the time of Mohamed.⁸ At this time the tower of Belus had for many centuries been in ruins, and its country a perfect desert. This at once shews that no dependence can be placed in Mr. Humboldt's speculation on this subject,—for surely no one will credit the recent date of this work, supposing even that it were built by emigrants from Egypt or from Chinese Tartary. In that age, after the time of Mohamed, what should induce either Jews or Christians to expend an immense sum in money or labour to build a tower of Babel, in Mexico or any where else? After the description of the Mexican pyramidal towers, Mr. Humboldt goes on to state, that there are similar pyramidal towers in Virginia and Canada, containing galleries lined with stone. He states the temple of Xochicalco accurately to face the four cardinal points,¹⁰ to be built of stone beautifully wrought, but without cement—each stone in form of a parallelopiped.

The Mexicans' large temple, placed on a conical hill, called Xochicalco, meant, as they say, *house of flowers*. This is Xaca and Calx, Calyx, which meant Rose.¹¹ The hill was excavated into large caves,¹² wonderful to behold, when it is considered (as it is there observed), that the Mexicans had no iron. An observation is made by M. Dupaix, that the Mexicans are now quite ignorant of the meaning of their proper names.¹³ In p. 71, it appears that the temple at Mexico

is, in substance and fact, called the temple of Cihnathe, C being pronounced like S, and thus making *the temple of Sin* or *Sion*, which will be explained in the book on letters. Lord Kingsborough calls it Sinai or Sina.

I feel little doubt that one of the first names of God, in the first written language, for reasons which I shall give when I explain the Origin of Letters, in all nations, languages, and times, would be γ *di*, *divus*, with its variety of forms: the next, perhaps, would be descriptive of 360. This might be described in various ways, as TLI—T=300 L=50 I=10=360. The meaning of these three numbers would be the glorious orb we daily behold, the Sun and God. For reasons which I shall assign, I suppose *Di* was the *first* and the prevailing name of God during many generations. Afterward, when astronomy so much improved that the knowledge of the Neros of 650 was acquired, the name TTL=650 was adopted as his name, and we have it in Mexico, (where figures were known, but not *syllabic letters*,) in the name of the Deity *Teotle*. The periods shew how far, at the time in which they branched off from Asia, the knowledge of the system had extended. Their period from the creation to Christ, of 5200 years, embraces the eight ages of their cycle: their TTL, TEOTLE=650 \times 8=5200, corresponding with the period of Eusebius. In India, the name 360 fell into disuse and was lost, and was probably superseded by the words Titlu=666, TTL=650+IU or *i* U=16=666, and, at last, by the number now used, TT=600. I know not how I could have invented any thing more in accordance with my theory than that this Mexican God should have this peculiar, appropriate name, had I set my wits to work for the purpose of invention. “Teotl signifies, in the Mexican language, both the Sun and an Age; and ‘the image of the sun, surrounded with rays, was the symbol of the latter.’”¹

Mr. Fred. Schlegel has observed,² that the word *atl* or *atel* is found in the languages of the East of Europe; that it means *water*, and that its symbol has found its way into the Greek alphabet in the letter Mem, in the undulating shape by which water is meant— μ ; that it is also in the Phœnician and most western nations. It is in the *Estoteland* of Greenland, which is, I suspect, di-ania-estotel; and I also suspect that it is the symbol of the centre letter and of water, because it is the symbol of fluid of any kind. I think this leads to the meaning of our word Land, L'-ania-di—the holy country.

7 Almost all persons who have written respecting the Mexicans, have observed the similarity of their language to that of the Hebrews. This and many other strange things the monks admit most unwillingly, and attribute to the devil. Las Casas said that the language of Saint Domingo was “corrupt Hebrew.”³ The Caribbees have the word *Neketali*, meaning *dead*; in Hebrew שָׁק *qtl*: *Hilaali*, *he is dead*; in Hebrew הָלַל *hll*: *Kaniche*, *a cane*; (sugar;) in Hebrew קָנָה *qne*: *Eneka*, *a collar*; in Hebrew קָנָה *onk*.⁴

Las Casas wrote an account of the Mexicans, in which (we are told) he states his belief that they are descended from the Jews.⁵ This account, by his desire, was never published. But why should he object to its being known that the Mexicans descended from the Jews? The reason is very evident: it was because he saw it was ridiculous, and he did not believe it himself. This book is in the Academy of History at Madrid. It was examined a few years ago by the Government, but it was not thought proper to publish it.⁶

Lord Kingsborough gives the following passage:⁷ “Las Casas’ persuasion that the Indians were ‘descended from the Jews is elsewhere mentioned: but as the words, ‘Loquela tua manifestum

“te facit, were discovered, with some other reasons tending towards the same conclusion, by Torquemada, in some private papers containing the will of Las Casas, at the same time that great weight must be attached to so solemnly recorded an opinion, it cannot be said that that learned prelate was guilty of any indiscretion in promulgating it: but the contrary is proved, by the proviso which he made respecting the publication of his history,—that it should not be printed till fifty years after his death, and then only if it appeared good to the superior of his order, and for the benefit of religion; but that in the intermediate time no layman or young ecclesiastic was to be permitted to read it. The work has never been published: and Don Martin Fernandez de Navarrete says, that when it was referred some years ago to the Academy of History at Madrid, to take their decision respecting its publication, they did not think it convenient.” I now learn that permission has been given to Lord Kingsborough to copy it. The secreting practice is found to answer no longer. The old proverb applies, “Omne ignotum pro magnifico est.” I shall be surprised if any thing important be found in it, as much as I should have been to have heard, that the French found many diamonds at Loretto when they got there, or secret learning in the Vatican Library when they got to Rome.

David Malcolme, in his Essay on Ant. of Brit., says, “Take it in the sense of Wytfleet, thus, p. m. 12, which in substance amounts to this, &c., when the Spaniards were in the magna insula Indice Hayti: When the bell rung for evening prayers, the Spaniards, according to custom, bowed their knees, and signed themselves with the cross. The Indians did imitate them with great reverence, falling down on their knees, and joining their hands together, (rather, as I think, for imitation than for any other reason,) though there are several who think, that the Indians had the cross in veneration long before the arrival of Columbus. Gomara, Book iii. Chap. xxxii. tells, That St. Andrew’s Cross, which is the same with that of Burgundy, was in very great veneration among the Cumans, and that they fortified themselves with the cross against the incursions of evil spirits, and were in use to put them upon new-born infants; which thing very justly deserves admiration. Neither can it be conceived how such a rite should prevail among savages, unless they have learned this adoration of the cross from mariners or strangers, who, being carried thither by the violence of tempests, have died or been buried there, which without all doubt would have also happened to that Andalusian pilot who died in the house of Columbus, unless he had been very skilful in sea affairs, and so had observed his course, when he was hurried away with the force of the storms: it is very credible that many of those who are generally reckoned to have been foundered at sea, did really meet with accidents of this kind. But the *Accusamilienses* bring another reason of adoring the cross, and which seems nearer truth, to wit, That they had received by tradition from their forefathers, that formerly a man more glorious than the sun had passed through these countries and suffered on a cross.” Here we have the mythos clear enough in Hispaniola.

The Rev. Dr. Hyde, speaking of the priests of Peru, takes occasion to say, “*Nam populi simplicitas et sacerdotum astutia omni ævo omnique regione semper notabilis.*”¹ No wonder the University of Oxford refused to print any more of his manuscripts. He was speaking of a virgin of Peru, who was pregnant by the sun. The Reverend Doctors of Oxford did right not to publish his works while he lived, and to destroy his manuscripts when he died.² He ought to have been burnt himself—*Omnique regione*, indeed!!!

Acosta says, that the Americans adored the sea, under the name Mammacocha. I believe this was the Marine Venus Mamma כעכאב *cochab*.³

¹ Cap. iv. p. 123.

² Vide Toland’s Nazarenus, Chap. iv., and Bibliog. Brit.

³ Lord Herbert, p. 149.

The Mexicans baptized their children, and the water which they used they called the *water of regeneration*.¹

The Mexican king danced before the God, and was consecrated and anointed by the high priest with holy unction. On one day of the year all the fires were put out, and lighted again from one sacred fire in the temple; ²—the practice of the Druids. Lord Kingsborough³ shews, that the Messiah of the Jews is foretold to have an ugly or a marred countenance, and that the Mexican Quecalcoatle is said to have had the same. At the end of October they had a festival exactly answering to our *All Saints* and *All Souls*.⁴ They call it *the festival of advocates*, because each human being had an advocate to plead for him. Thus we have this festival throughout modern Europe, in Tibet, and in the ancient festival of the Druids' Saman in Ireland, and in Mexico. There is the story of the rebellious angels and the war in heaven.⁵ This is not from our Pentateuch.

9. The Peruvians had a festival called *the festival of Capacreyme*, in the first month of their year, called Rayme.⁶ *Acosta* supposes this was contrived by the Devil in imitation of the *Passover*. It may be observed, that all the acts of worship are directed avowedly to the Sun. The Mexicans sacrificed human victims, which Lord Kingsborough⁷ has shewn was practised by the Jews, who were, according to his Lordship's account, horrible cannibals.

Georgius shews that the God Xaca was constantly called Cio;—this was the Xiuh-tecutli or God of Fire, or God of Years, or the Everlasting One, of the Mexicans.⁸ Volney⁹ says, the Teleuteans are a Tartar nation.

Buddha was Hermes, and Hermes was Mercury, and Mercury was the God of Merchants, and Buddha was Xaca, and Saca and the Mexican God of Merchants was Yaca-tecutli.

In the history of the Aztecks of Mexico, we find much respecting one Coxcox saved on a raft, in a great flood. Now when I consider that the Mexicans are so closely connected with North India, and that their accounts are all preserved by a mixture of hieroglyphics and unwritten tradition, I cannot help suspecting that this Coxcox ought to be Sasax or Saxas.

Nagualism is a doctrine known in America, (Naga is נָחָשׁ *nhs*, softened or corrupted, and the Hag of England,) where the serpent is called *Culebra*; this is Colubra; and the followers of it are called Chivim; these are the Evites, or Hivites, or Ophites. Eve is חַוְוָה *hvia* or חַוְוָה *hiua*.¹⁰

The Mexicans had a forty-days' fast in memory of one of their sacred persons who was tempted *forty* days on a mountain. He drinks through a reed. He is called the Morning Star, &c., &c. This must be the same person noticed before (p. 24) to have had a reed for an emblem. As Lord Kingsborough says, "These are things which are very curious and mysterious."¹¹

The inhabitants of Florida chaunt the word Hosanna in their religious service, and their priests were named Jouanas.¹²

Sina is the ancient name of China. I suspect Sina, and Sian or Siam, are the same word. The God of Hayti was called Jocanna, the c is evidently instead of the aspirate in Johanna.¹³

One of the temples has the name of Çihniteocalli—that is, I suppose, temple of Cali, the God of Sina or Sian.¹⁴

Lord Kingsborough says,¹⁵ the Mexicans honour the cross. "They knew them (the Chiribians,

¹ Mex.Ant. Vol. VI. p. 114.² Ib. p. 144.³ Ib. p. 167, *note*.⁴ Ib. p. 101.⁵ Ib. p. 401.⁶ Ib. p. 305.⁷ Ib. p. 328.⁸ Ib. p. 392.⁹ Ruins, Notes, p. 198, and *Asiat. Res.* Vol. III. p. 358.¹⁰ See Vol. I. p. 523.¹¹ Mex. Ant. Vol. VI. p. 100.¹² Ib. p. 71.¹³ Ib. p. 98.¹⁴ Ib. p. 71.¹⁵ Ib. p. 4.

“or Chiribichenses, which name differs from that of Chibirias, the mother of Bacab,) honour the “cross.”

The Incas had a cross of very fine marble, or beautiful jasper, highly polished, of one piece, three-fourths of an ell in length, and three fingers in width and thickness. It was kept in a sacred chamber of a palace, and held in great veneration. The Spaniards enriched this cross with gold and jewels, and placed it in the cathedral of Cusco.¹ Mexican temples are in the form of a cross, and face the four cardinal points.

Quecalcoatl is represented in the paintings of the Codex Borgianus nailed to the cross.² Sometimes even the two thieves are there crucified with him.³

In Vol. II. plate 75, the God is crucified in the Heavens, in a circle of nineteen figures, the number of the Metonic cycle. A serpent is depriving him of the organs of generation. In the Codex Borgianus, (pp. 4, 72, 73, 75,) the Mexican God is represented crucified and nailed to the cross, and in another place hanging to it, with a cross in his hands. And in one instance, where the figure is not merely outlined, the cross is red, the clothes are coloured, and the face and hands quite black. If this was the Christianity of the German Nestorius, how came he to teach that the crucified Saviour was black? The name of the God who was crucified was Quecalcoatl. I suspect this was Saca, or Xaca, or Kaca—the Coatl (or God).⁴ The mother of Quecalcoatl is called Sochi-quetzal; may this be mother of Xaca?⁵ Sochi, or Suchi-quecal is both *male* and *female*.⁶

In pp. 71, 73, of the Codex Borgianus, the burial, descent into hell, and the resurrection, are represented.⁷

In one of the plates the God is crucified on a mountain. I suspect that this is Prometheus.

10. The Immaculate Conception is described.⁸ This is also described in Torquemada's Indian Monarchy. The Mexican word *Dios* meant God, and he was called *ineffable*.⁹

The Immaculate Conception is described in the Codex Vaticanus.¹⁰ The Virgin Chimalman, also called Sochiquetzal or Suchiquecal,¹¹ was the mother of Quecalcoatl. Sochiquetzal means *the lifting up of Roses*.

Eve is called Ysnextli, and it is said she sinned by plucking *roses*. But in another place these roses are called *Fruta del Arbor*.¹² The Mexicans called the Father Yzona, the Son Bacab, and the Holy Ghost Echvah. This, they say, they received from their ancestors.¹³ The Lakchmi of India is called *Chri*. (Lakchmi is L' Achm; Chri is X ϵ η s.) These are the same as the Mexican Centeotl, i. e. *Cen-teotl*;¹⁴ and Centeotl, is Can or Cun-teotl,—the Cunti, the name of the female generative principle in India.

The Mexican Eve is called Suchiquecal. A messenger from heaven announced to her that she should bear a son, who should bruise the serpent's head. He presents her with a rose. This was the commencement of an Age, which was called the *Age of Roses*. In India this is called the *Age of the Lotus*, the water rose. Upon this it may be observed, that if this had been a

N. B. This was the *last* sheet revised by the Author—a short time before he died.

Papist forgery, the *woman* and not the *seed of the woman* would have bruised the head. It may also be observed, that if this had come from the Western part of the old world, since the time of Constantine, it would certainly have had the woman and not the seed of the woman. All this history the Monkish writer is perfectly certain is the invention of the Devil.¹ Torquemada's Indian History was mutilated at Madrid before it was published.² Suchiqueal is called the Queen of Heaven. She conceived a son, without connexion with man, who is the God of Air. This is the immaculate conception, and the God Indra, whom we found crucified and raised from the dead in Nepaul. The Mohamedans have a tradition that Christ was conceived by the smelling of a rose.³ The temples of Quetzalcoatl were round. He was the inventor of temples in this form.

In the thirty-sixth chapter of Marco Paulo, an account is given of the sacrifice, in the province of Tanguth, a little North of Nepaul, of a Ram of a year old, which is said to be offered as a ransom for the Child. The same is practised among the Chinese.⁴ Torquemada says,⁵ "Two things are very remarkable: the first is, that the parents of the children should have sold them, and given them voluntarily for sacrifice: the second, that the sale itself should have taken place on the second day of this month, (February,) at the very time that we, who are Christians, celebrate the festival of the presentation of the Virgin without spot, in the temple of Jerusalem, holding in her arms her most blessed child, the Son of God, whose life was sold for the sin of the first woman who existed in the world, carrying him to present and make an offering of him, manifesting, as it were to God, the sacrifice which was afterwards to be accomplished on the tree of the cross."⁶

11. Mr. Humboldt has written much respecting the Americans. It is a remarkable circumstance that it should never have occurred to him, that the ignorance in the South Americans of the use of letters and iron, were decisive circumstantial proofs of their very great antiquity, and their very early separation from the stock of the old world; but this great antiquity he considers proved from a variety of other circumstances. He says, "It cannot be doubted, that the greater part of the nations of America belong to a race of men, who, isolated ever since the infancy of the world from the rest of mankind, exhibit in the nature and diversity of language, in their features and the conformation of their skull, incontestable proofs of an early and complete separation."⁷ Except in the article language he is quite right.

Malcolme shews that Tautah in the American language means Father; in Irish, Dad; Welsh, Tad or Taduys; Armoric, Tat; Cornish, Tad and Tas; Scotch, Dad; St. Kelda, Tat; and in Guatimala, Tat; in Old Italy, Tata; in Egypt, Dade; in Greek, Tetta; in Old English, Daddy.⁸ The American Taut-ah is the Indian Tat.

After shewing at great length that the Mexicans must have had their mythology from Asia, East of the Indus, Mr. Humboldt⁹ observes, that he finds among them neither the Linga nor any of those figures with several heads and hands which characterize the paintings and figures of the Hindoos. But he distinctly admits that he finds the doctrine of repeated regenerations in cycles.

⁸ Dr. Malcolme's Letters.

⁹ Humboldt's Res. Vol. II. p. 36, ed. Miss Williams.

Now this again seems to confirm my hypothesis, that they migrated from the old world so early as to be before these corruptions, early as the Linga was. And it has induced me to review the early history of Buddhism, and to make me *suspect* that, in its early works, the Linga is not to be found, and that it only came into use when the division between the followers of the Linga and Ioni began to arise, which caused the horrible civil and religious wars, noticed in my former volume, pp. 332, &c.

12. The founder of the Peruvian nation was called *Bochica*, the son and emblem of the Sun. He was high priest of Soga-Mozo (here we have the Saga).¹ His wife was called *Chia*, (*Chia* is nothing but *Eva* corrupted,) Isis, or the Moon: he was described with three heads. Here, I think, are the Buddha and Trimurti of India. His priests were called *Xeques* and *Zaques*.² (These are *Xacas*, or *Sagas*, or priests of Wisdom.) Humboldt says, "The form of Government given by Bochica to the inhabitants of Bogota is very remarkable, from its analogy with those of Japan and Thibet. The Incas of Peru united in their person the temporal and spiritual powers. The children of the sun were both priests and kings. . . . The Pontiffs or Lamas, the successors of Bochica, were considered as heirs of his virtue and sanctity. The people flocked in crowds to offer presents to the high priests, visiting those places which were consecrated by the miracles of Bochica."³ In a very particular and pointed manner this Bochica is said to be white or albus. This reminds me that the Sibyl pronounces the *white* sow of Alba to be *black*. Alba means white: was Bochica Alb or LB=L=50, B=2=52? He had a peculiar cycle of 13 years, and another of four thirteens or 52. This looks as if there was some reference to our astrological instrument, called playing cards, which certainly came from North India. This does not seem so wonderful when we consider that we have just found their cycles the same as the indictions of Constantine. What is the Romish Alb?

The Peruvians believed in one Supreme Being, the Creator of Heaven and Earth, called *Virachocha* and *Pachacamack*,⁴ who had *revealed to them his religion*.⁵ The Mexicans called their great God *Yao INEFFABLE*; ⁶ and represented him by an Eye in a Triangle. The cross was every where adored.⁷ The Mexicans expected a Messiah.⁸ Their history of the flood is almost a close copy of that of Moses.⁹ Their baptism¹⁰ in the presence of witnesses is almost the same as that of the Jews and Persians, and in the same manner they named their children and offered them in the temple. They had the custom of sacrificing the first-born, the same as the Jews, till it was done away by Abraham or Moses. They had also the right of circumcision. (Refer to Vol. I. Book X. Chap. VI. Sect. 13, p. 724.)¹¹ Their temples were in the form of a cross, and faced the four cardinal points.¹² Their language has many Greek and Hebrew words in it.¹³ They practised auricular confession.¹⁴ They have a sacred and select word like the Indian *Om*, which is never spoken; but what it is, I do not find mentioned.

13. The union of the Jewish and the Christian mythos in one system, instead of their division into two systems, at once proves that they cannot have been brought to Mexico at different and distant periods. Had this been the case, there would have been two religions, as in all other cases, in opposition to one another. It is a wonderful circumstance, that the Jews coming from the city of Egypt built by Alexander, should have forgot to bring with them the knowledge of

letters and iron; and still more wonderful, that the Christian monks coming in a later day should have had equally bad memories. All that was necessary was, for those Jews to have told these skilful smelters of metals, that by melting the lumps of their native iron in a wood fire they would get iron and steel.

The identity of the Mexican and Chinese or North Indian mythoses being unquestionable, attempts have been made, in several periodical publications, to account for their similarity by supposing, that the Mexicans were colonies fleeing from the arms of Mohamedan or Tartarian conquerors. But the writers do not tell us how the Jewish and Christian doctrines came to be found in America, mixed most intimately together, and also with the idolatry of North India and Greece. Other writers contend, that these colonists were Mongol or Tartar conquerors, who, not contented with the conquest of China, conquered America also. But this leaves all the great difficulties I have stated above unremoved. It is a most wonderful thing that these Tartarian heroes did not take with them the knowledge of iron or letters: and that they, being Mohamedans, should convey the Christian religion to the Mexicans instead of that of Mohamed!

It is also wonderful that they should take with them the knowledge of the Horse and the Ass, though they did not take these animals themselves—pictures of them being seen every where mixed with their other hieroglyphics; and, what is still more, as the reader will instantly see, mixed most intimately with the Judæan mythos,—a hero mounted on an ass or a horse, sometimes carrying a *sword*, sometimes a *cross*. It is impossible, on viewing them, not to recollect the procession of Jesus Christ on the ass, into Jerusalem. The mythoses are evidently identical, but their variations shew that they are not copies. Though they have plenty of pictures of the horse, the animal, be it observed, noticed in the Revelation, they have no knowledge of the elephant or camel. But these were not in the Revelation; were no part of the mythos. They have no sheep, but they have an animal like it, which they call Llama or Lamb.¹

No part of the Mexican hieroglyphics is more striking than the exhibition of the *horse* or *ass*,² (for some are doubtful,) animals totally unknown in a state of nature to the Americans. I refer to the plates' figures. Faria y Sousa, the Jesuit, says, that when the Portuguese arrived in the Azores they found the statue, cut on the side of a mountain, of a man on horseback wearing a cloak, his left hand on the horse's main, his right pointing to the West, with an inscription on the lower rock but not understood.³

It is necessary to observe here, that tribes, both of Negroes and bearded men, were found in South America.⁴

The Codex Vaticanus, Volume II., is marked 3738. The plates in it are numbered to 146, but the explanation goes only to plate 92, in either English or Spanish. The explanation purports to be in Volume VI. p. 155, of Lord Kingsborough's work. My reader has only to look to the figures of the crucifixes which I have given, Fig. 12—14; and to reflect for one moment upon the admitted anxiety of the Spaniards and the Popes to keep the knowledge of these things from the European world, to see why the explanation of the Codex Vaticanus ends with plate 92. The remainder has, no doubt, been suppressed to avoid the necessity of giving an explanation of the crucifixes.

We every where meet with the Mexican divine names ending in *tle*, as Teotle, that is, Deo or God *tle*. It has been observed by Lord Kingsborough, *as well as by almost all the Spanish authors*, that the Mexican language is so full of Hebrew words as to be almost Hebrew. We have

¹ Antiq. of Mexico, Vol. VI. p. 361.

² [Is this indisputable? Do not the accompaniments of the *rider* bespeak a Spanish origin? Yet, is not the Author's opinion supported by the testimony of Faria y Sousa? *Editor.*]

³ Vol. I. p. 19, Eng. Ed.

⁴ Antiq. of Mexico, Vol. VI. pp. 290, 291.

seen the God every where crucified and suspended from the Cross. We have found the sacred animal the Llama¹ or sheep. We have found the mythos of the crucified Saviour. We have found every thing at last to centre in the Sun. The word *tle* is confessed not to be understood by the Mexicans, nor by the Spaniards, who call it, for that reason, merely a termination. All these matters considered, I think it may be the same as the word *טלה* *tle* or *טלא* *tla*, the Hebrew name of the sign of the Zodiac, *Agnus* or *Aries*.² In Hebrew it means, when spelt with the tau, *טלה* *tle*, *hanged* or *suspended*. See Fig. 14. I believe it meant *crucified* by *hanging on a cross*. It was originally Buddha, as noticed before in Sect. 3, p. 24. For the same reason that the word meaning 650 was applied to him, it was in succession applied to the God of wisdom, to the Lamb—his second emblem, and to the crucified God Cristna.

14. All the Mosaic history is to be found in China according to Mons. Paravey, in which he only repeats what was before pointed out by Bergeron, De Guines, &c. The Chinese historians relate that one of their ancient despots endeavoured to destroy their old records, but that a copy of their history, called the Chou-king, escaped. That book treats of the terrestrial paradise, its rivers, waters of immortality, its admirable trees, fall of the angels and of man, and the *appearance at that moment of mercy*; also of the sabbath, confusion of tongues, the manna in the Wilderness, the Trinity; and of the Holy One in the West, who was incomprehensible and one with the TIEN. It states that the world cannot know the Tien except by the Holy One, who only can offer a sacrifice acceptable to the CHANG-TI.³ The nations are waiting for him like plants for a refreshing shower. The Tien is the Holy One invisible, and the Holy One is the Tien made visible and teaching men. All this was taught by Confucius five hundred and fifty years before Christ. Ancient inscriptions state the Jews to have come into China about the time of Confucius. This is probably the arrival of a colony or doctrine of a new incarnation going to them from the Western Ayoudia. The secret doctrine of the renewed incarnations seems, by being misunderstood, to have operated with them precisely as it did with their Indian and Tibetan neighbours, for they are of the Tibetan or Buddhist faith, into which all these doctrines dovetail perfectly. These facts and many more are detailed from different authors by the learned Nimrod, Vol. III. p. 510. All these things good people, like Nimrod, suppose were taught to the Tartars and Chinese by the lost tribes of Samaria. Those tribes are most useful people; they account for every difficulty. In the East, in the West, in the North, in the South, they are always ready at hand. Here is all the Jewish and the *Christian mythos* amalgamated precisely as it is in Mexico, in Tibet, North India, and South India, all carrying with it proofs of its almost universal prevalence or dissemination. But notwithstanding that we find remnants of this mythos every where, the actual character of which cannot be doubted, yet in the respective countries where they are found, the system is obsolete; they are remnants of an almost forgotten system. They every where carry traits of the system of regeneration or of the cycles recorded in the old Druidical circles or Cyclopæan monuments, found along with them, the origin of which is acknowledged to be totally unknown. There cannot be any doubt that they have all flowed from the same fountain; have the same origin; and the only question will be, whether they flowed from the kingdom of the West, which Herodotus could not find, and Alexander thought it not worth his while to notice, or from the kingdom of Ayoudia of India, with its capital probably, as appears from its ruins, once the largest in the world—a city larger than London, the capital of an empire more extensive than Europe. (See Vol. I. p. 438.)

There is scarcely a page of Lord Kingsborough's work which does not exhibit proofs of the

¹ Le Lama.

² Barret on the Zodiacs, p. 10.

³ In the Chang-ti, *Ch* is the I aspirated; *ang* is a, o, *ɣɪ* *co*; *Ti* is Di, the whole, *Di* Iao.

anxiety of the Spanish government to suppress the information which I have just now detailed, and which does not also shew that it comes to us through the medium of the most unwilling of witnesses.¹ Every contrivance which was possible was resorted to in order to prevent its arrival in Europe; and this accounts for the extraordinary and systematic opposition to the admission of strangers into New Spain. All people likely to be intelligent, such as physicians, persons suspected of heresy, &c., were prohibited from going thither. The reason assigned by the Spanish government was,² that they were prevented going that they might not create disputes and prevent conversions. The author of the notes to Lord Kingsborough's book³ says, that he believes that the Jews colonized America, and held it for one thousand years, and that they introduced (as it must have been along with their own) the Christian rites into the religion of the Mexicans, *who had never heard of Christianity, to shew their hatred of Christianity, and to turn it into ridicule*; and, that it was for this reason that they established the Christian doctrines along with those of the Jews,—such as the resurrection, ascension, &c. The passage is so extraordinary, that I think the writer must have meant it for a joke.

The close connexion between the Americans and the old world was long ago seen, notwithstanding all the exertions of the Spaniards to keep mankind in the dark, and fruitless endeavours were made by Grotius and others to find a cause for it. An account of them may be seen in Basnage.⁴ It is there observed, that one of the districts has a German name—Estoteland; that the name of a young sheep is Lam; that one of their Gods is called Theut, and one of their kings Theuch, evidently the same name; that their great Creative Principle is called Pachacama; (Pikm-cama, that is, Pi-Acham, *the wisdom of divine Love*;) that they baptize their children in the form of the cross, and have a notion of the Trinity; that they adorn their idols with the cross and mitre; that they have a kind of Eucharist; that virgins, consecrated to the God, make effigies of paste and honey, which they consecrate with much ceremony, and afterward distribute to the people, who believe they eat the body of their God. The people of North America were thought by Penn to have an unaccountable likeness to the Jews, and the Massagetæ were thought to be found in Massachusetts.

Tibet is called Tangutia. This is evidently *ia tangut*, the country of Tangut. The close similarity of the Trinitarian and other doctrines of the Tibetians to those of the Romish Christians we have seen. It is surely a very extraordinary thing to find the Peruvian triune God called *Tanga-Tanga*—evidently the same as the God of Tibet, both in name and character.⁵

15. In Vol. VI. p. 79, the Mexican courts are shewn to have had exactly the same number of judges as those of the Jews; that their sacred numbers were exactly the same; and that both nations kept fasts for exactly the same number of days. Lord Kingsborough says, “the common law of every state in Europe has been confessedly modelled after the Mosaic law.”⁶ This is a very important observation, and I think its truth will not be disputed; but I think there is no other way of accounting for it than to go to my primeval nation. The common law in most states is evidently older than Christianity. We are told that St. Augustin brought Christianity into this island in the year 596; but was there no Christianity in the time of Constantine or before? Lord Kingsborough says, “the affinity between the Mexican and the Hebrew laws is greater than between the latter and those of any nation with which we are acquainted.”⁷ They circumcised with a stone knife, the use of which was expressly ordered.⁸ It is remarkable that the circumcision of

the Jews should have been performed with a knife made of stone, which is emphatically noticed in the Bible.¹

16. Easter Island is situated in N. L. 27° 5' W. L. 109° 46' : it may be considered to be a part of America. The most remarkable curiosity in this island is a number of colossal statues. On the East side of the island were seen the ruins of three platforms of stone-work, on each of which had stood four of these large statues ; but they were all fallen down from two of them, and one from the third : they were broken or defaced by the fall. One was fifteen feet long and six feet broad over the shoulders : each statue had on its head a large cylindric stone of a red colour, wrought perfectly round. Others measured nearly twenty-seven feet, and upwards of eight feet over the shoulders : and a still larger one was seen standing, the shade of which was sufficient to shelter all the party of Captain Cook, who reports this, from the sun. The workmanship is rude, but not bad, nor are the features of the face ill formed : the ears are long, according to the distortion practised in that island, and the bodies have hardly any thing of a human figure about them. How these islanders, wholly unacquainted with any mechanical power, could raise such stupendous figures, and afterwards place the large cylindric stones upon their heads, is truly wonderful ! It is observed that the most probable conjecture is, that the stone is factitious. The island is about ten or twelve leagues in circumference,² and must be in the Gulf of California. But see Cook and Forster's *Voyage*, March, 1774. The *Encyclopædia Londinensis* says, the names of the two statues left standing are Dago and Taurico. Here we have Dagon and Taurus.—Surely nothing can be more curious than these statues. Who placed them here ; and when were they set up ?

17. Every one must remember the accounts of the perfect horror with which the unhappy Mexicans viewed the first horses, which the Spaniards took over to their country. This I will now account for. It appears from Lord Kingsborough's book, &c., that they had all the mythos which has been so fully explained, of the old world,—the immaculate conception, the crucifixion, the resurrection after three days, the expectation of the return of their crucified Saviour, &c., &c. Every Indian inquirer knows that the last Avatar was always expected by the people of Java to come mounted on a white horse. Now, in several of the Mexican hieroglyphic pictures, though their owners knew nothing of the horse, an animal, which might be either a horse or an ass, is painted. In these same pictures, the other parts of the mythos, the crucifixion, &c., are described. From this it is evident, that although they were not able to convey the horse over the sea, yet they could convey every part of the mythos ; the result of this was, that when the Spaniards arrived in flying machines, or machines propelled by the winds,—on the wings of the wind,—across the boundless ocean, or from heaven,—their commander mounted on the unknown animal, described in their ancient pictures to be that on which the promised God was to come ;³ and, carrying in his hand thunder and lightning, with which he destroyed his enemies at miles distant from him, he was believed to be the last Avatar. Lord Kingsborough gives a very interesting account of the effect which this superstition or belief had upon their conduct—taking away from most of them, from devotion, all wish to resist their God, mounted on his horse and surrounded by thunder and lightning—and from others, through fear, all power : thus giving to their cruel enemies an easy victory. I cannot conceive it possible to devise any thing more conclusive of the truth of my whole system than this. All this accounts for numbers of circumstances relating

¹ See Exod. iv 25 ; Josh. v. 3 ; and Ant. of Mex. Vol. VI. p. 187.

² *Encyclopædia Brit.* art. Easter Island.

³ The effect which the death of the first horse had on the Mexicans has been thought very extraordinary and unaccountable. It is now easily explained : by the destruction of the immortal, celestial animal they were in part undeceived.

to the conduct of Montezuma and his people, which have hitherto been utterly unintelligible. And I think it seems evident, that if the miscreants from Spain had really understood their own case, they would have had nothing to do but to have quietly taken possession of the whole empire as its last Avatar and newly-arrived God.

Well, indeed, might Peter Martyr, Las Casas, and Torquemada, be puzzled with the horse, the actual horse of the Revelation, in a country where the people had not the knowledge of the animal, or indeed of any animal of the old world. Instead of accepting the possession of the empire peaceably offered to them, by a most absurd and extraordinary mistake, the Spaniards determined to terrify the people by ill usage, the account of which is given in the Antiquities of Mexico.¹

18. Col. Tod² states the mountains above Tibet, the highest ridge of Asia, to be called Andes—these must have been in the countries of Tungusians. It is impossible on reading this not to recollect the Andes and the Tanga-Tanga of Peru; and it is equally impossible to attribute this paranomasia and the other circumstances already described to accident. To account for this I look into ancient histories, and I adopt the first rational and philosophical cause which is recorded, and without difficulty I find it in the communication formed by the island of Atlantis of Plato; for the subsequent submerging of such an island or continent is neither improbable nor irrational,—but, when the attendant circumstances are considered, a dry historical fact, carrying probability on the face of it. It is no more improbable than the effects we see produced by volcanoes every day. It is neither impossible nor improbable that when the Atlantis sunk, something of the same kind should have happened in the Northern Pacific Ocean.

The legend of the sinking of a very large island is now well known in China and Japan, and in both places an annual festival is kept to celebrate the escape of an excellent prince called *Peiruun*.³ I cannot help suspecting an identity of mythos or an identity of fact. I apprehend, if the whole or a great part of the Polynesian Islands constituted the highest grounds of a large continent which sunk, the effect would be, when the sinking took place, to raise up the waters so as to drown all the inhabitants, and after a short time to subside, and leave the points of the mountains dry as islands. After all, a great difficulty must be allowed to exist, in all speculations on this subject, arising from the fact, that there are none of the animals of one continent found in the other. See Vol. I. pp. 293, 294, for M. Cuvier's opinion on this part of the subject.

The Mexicans, in their histories, as already stated, say they arrived in their present country from the West. They always persist most strenuously that it was from the West they came; and they describe towns on the coast where they remained, for many years, in their progress to their present situation, the ruins of which, they assert, are yet to be seen. They say they came across the sea from another country. Now, was this Atlantis or not? It is very desirable that the remains of the towns should be sought for.

Lord Kingsborough has gone to an enormous length in proving that the Mexican rites, ceremonies, &c., &c., were almost precisely the same as those of the Jews, and that they must consequently have been brought by the Jews to Mexico. But one most important observation offers itself on this: *We* possess what we believe to be the knowledge of all the Jewish rites, history, &c., &c., in Syria; but this is not the way all these things are known by the Americans. All the things said to have taken place in Western Syria, both with Jews and Christians, are said to have been acted in America, and the case, in a great measure, is the same in India and China. There is the same standing still of the sun, the same populifugia, the same deluge and persons saved in a ship, the same immaculate conception, the same crucifixion and resurrection; but they were all in the American country, not in Syria. Now, it is very improbable that if the Jews of Western

¹ Vol. VI. p. 343.

² Annals and Antiq. of Rajast'han, Vol. I. p. 44.

³ Kämpfer's Japan, Vol. II. Append. p. 13; Fab. Orig. Pag. Idol, Vol. II. p. 180.

Judæa or of Moses had gone in a body from their old country, they would ever wish or permit their history to be located in the new one, towers of Babel to be built, waters to be passed, or places to be shewn where the sun stood still. Nothing can account for all this except that, in all countries, including among them Western Judæa, it was the figurative description of the renewed Avatars.

It seems to me that the mythos which I have shewn to have universally prevailed, accounts in a satisfactory manner, with one exception, for all the difficulties. Parts of it we have seen every where; a small part of it in one place, and a small part in another, but all, including the Jewish, the same mythos. The discovery of the same system in America, as that in South India, in North India, in Tibet, in Western Syria, &c., proves that at some extremely remote æra the same mythos must have prevailed; and the variations which we find, whilst at the same time the general character is preserved, are what we may naturally expect would arise as time advanced. What we have now are the débris of the system.

19. We must recollect that the neglect to teach the Mexicans the arts of writing and making iron, cannot be attributed merely to a few stray mariners and fishermen blown across the ocean. The knowledge of the Americans, if carried to them at all in later times, must have been carried by regular colonies from Greece, who taught them the rites and name of Bacchus; of colonies from Syria, who taught them all the minute parts of the Judæan mythos; of colonies from Tartary and China, who taught them the knowledge of the mythoses of those countries; of colonies from Europe, who taught them modern but not Papist Christianity.¹ Is there a human being so credulous as to believe that all these colonies or parties of migrators, following one another time after time, should have omitted to convey the knowledge of iron and letters? I am sure no person will be found to believe this: then what are we to believe, but that one great and learned race held all these doctrines, as taught by me, in a period of the world when the intercourse between the old and new worlds was easy compared with what it is at at this time?

The one exception alluded to above is the difficulty of accounting for means by which the system reached America. To meet this, may we not have recourse to the formerly-named island of Atlantis, of the submersion of which we are informed by Plato, and which, I suppose, almost connected the two worlds? It was probably so near both, that, in the frail boats of those days, colonies could pass, but in which the large animals could not be conveyed. Of course this submersion must have taken place, and cut off the communication between the two worlds before the knowledge of letters and the use of iron.

It cannot be believed that if ever the Mexicans had been told of the existence and use of iron, *excellent refiners and smelters of metals as they were*, that they would not instantly have obtained it from their mountains, where it is found in its native state. I shall be asked, How they could pass in any great numbers, without the means of conveying the Horse, the Cow, the Sheep? For, if the two worlds were nearly connected by an intermediate island or islands, the passage of the animals would have taken place. I admit the force of the argument in its fullest extent; as I do the difficulty of accounting for the extraordinary fact, that there were none of the animals of the old world in America. However, at last, an intimate connexion between the two worlds must be admitted to have existed, and to have existed before the knowledge of iron or letters, in the countries the Mexicans came from.

Some persons have thought that the Americans were colonies who passed by the North, where the continents join, or nearly join; and, to the question, why they had not the horse?—it may be replied, that if the natives of Tartary or China emigrated by the North, in the neighbourhood of

¹ The seed bruising the head, not the woman.

the Arctic circle, as it must have been by that route, there is reason to believe that the horse could not have been conveyed through this cold climate, perhaps could not have lived there. It is said that the North-east of Tartary is too cold for this animal; and that there are none there. If we admit this, then we may suppose that the migration took place from China, where the Hebrew language was spoken, and where the Hebrew and Christian system flourished, as it has before been shewn to have done in a very early period. ¹ And if the emigrants went from China, we may thus account for their going without taking with them the knowledge of syllabic writing. If we suppose a body of Japanese or Chinese, amounting only to a few thousands on their arrival in Mexico, after journeying for forty or fifty years, we may readily suppose that they would increase to two or three hundred millions in five or six hundred years, in that fine soil and climate. But suppose we account for their ignorance of letters, and the want of horses, cows, &c., in this manner; this will not account for the ignorance of iron, and at the same time for the knowledge of the mythoses of all the nations which I have just now enumerated: and, satisfactorily to account for this, I am convinced we must ultimately go to my hypothesis, which naturally and easily explains the difficulties.

Lord Kingsborough's work is unquestionably the most magnificent ever undertaken by an individual. It is, indeed, an honour to his order and to his country. The bringing together into one view, by means of Lithographic copies, the different manuscripts, from different and distant countries, will prove, indeed has already proved, of the greatest importance to science, and must greatly aid the philosopher in his inquiries.

¹ Sect. 14, p. 36.

BOOK II.

CHAPTER I.

CHRISTIAN RELIGION NOT NEW.—THE CARMELITES PYTHAGOREANS.—PONTIFEX MAXIMUS.—SEVEN SACRAMENTS. EUCHARIST.—BAPTISM.—CHRISTENING.—CONFIRMATION.—BAPTISM OF BELLS.—ORDINATION.—MARRIAGE.—EXTREME UNCTION.—PURGATORY.—AURICULAR CONFESSION.

I. I SHALL now proceed to complete the proof of the truth of the doctrine of Ammonius Saccas, by shewing that every part of the VULGAR Christian religion is the same as that of the vulgar religion of the Gentiles ; that there is nothing new in the Roman Catholic religion ; that, in short, it is Reformed or Protestant Gentilism.

The reader has now seen that several of the MOST important doctrinal parts of corrupt modern Christianity are nothing more than scraps of the Heathen mythologies of various kinds taught by different nations, long previous to the Christian æra. He has seen the immaculate conception, the incarnation, the trinity, with its various hypostases, and the crucifixion and resurrection, on all of which I have yet much, which is very important, to produce. But, *first*, I think it expedient to shew where a great number of the forms and ceremonies of minor importance came from. It is more than probable that every part has been copied from some former religion ; that no part of what has been really the system of the Christian priests was invented originally for their use. To tradition it is indebted for every doctrine and rite which it possesses, though to fraudulent and dishonest practices it is chiefly indebted for their establishment. This will be said to be a severe and unjust sentence against the priests ; but I am supported in my charge against them of systematic falsity and fraud, by some of our first divines—Burnet, Mosheim, &c. In the very early ages they not only practised it, but they reduced it to system ; (I allude to Origen's *Œconomia*;) they avowed it ; and they justified it, by declaring it to be meritorious if in a good cause. I repeat, it was justified by the highest divines in the church—openly practised—I believe was never disavowed by any Pope, Council, or authorized body ; and, as I have proved in this work, is continued by Archbishops to this day, who just practise as much fraud, as the improved state of the human mind will tolerate.

I must say of Christian priests and their histories what Nimrod¹ has said on another class of persons : “ It is difficult to estimate facts delivered under circumstances which deprive the testimony of all moral value ; where falsehood is not an accident but a property of the speaker's character, and is not the error of a moment or the crime of an individual, but an organic system.” The system of fraud is yet continued in the Protestant Church of England : for one instance of which, I produce what is called the Apostles' Creed, which purports to be the composition of the Apostles, (as the Nicene Creed purports to be the composition of the Council of Nice, and the Athanasian Creed, the composition of St. Athanasius,) when it is well known to every

¹ Vol. II. p. 494.

Bishop on the Bench, that however true it may be, it was not composed or written till long after the death of all the Apostles: by whom, or when, or where, it was written no one knows; but the people are deluded into a belief, that it is not the work of a council or individual, like those of Nice or St. Athanasius, but of the collective body of the elect companions of Jesus Christ.

Now if we reflect upon the contents of the last book, and consider that all the esoteric doctrines of the Orientals and of the tribe of Ioudi or Jews, and of Plato and the Heathens generally, were at the bottom the same; we shall not be surprised at finding the Lama of Rome adopting such of the forms and ceremonies of his Heathen predecessors as he thought consistent with its restoration to what was, in his opinion, its primeval purity—what he considered its corruptions being left out.

The Rev. Robert Taylor, in his *Diegesis*, has undertaken to shew that what Protestants have maintained to be the corruptions of Christianity were the origination of it: and that the early Christians were nothing but Egyptian Essenes or Monks, and that the Gospel histories were extracts or compilations from the secret writings of these persons. To support this assertion, he has given a translation of the sixteenth chapter of the second book of Eusebius's *Ecclesiastical History*, in which the early Christians are most clearly proved to have been the Monks called Essenes. That the Gospel histories are not originals, has been admitted by all divines I believe, who have, or who wish to have, any character for learning. Reasoning after the manner of the German divines—Semler, Lessing, Niemeyer, Halfeld, Eichhorn, Michaelis, &c.,—the learned Bishop Marsh has put this out of all doubt. In his *Notes on Michaelis*, he has discussed it at great length. Whether the Gospel histories were copied from the Essenean Scriptures may yet admit of doubt, but certainly Mr. Taylor has shewn that all the ecclesiastical polity of the Christian is a close copy from that of the Esseneans, or I should say, Carmelites, according to the account in Eusebius, when honestly translated. Their parishes, churches, bishops, priests, deacons, festivals, are all identically the same. They had Apostolic founders; the manners which distinguished the immediate apostles of Christ; Scriptures divinely inspired; the same allegorical mode of interpreting them, which has since obtained among Christians, and the same order of performing public worship. They had missionary stations or colonies of their community established in Rome, Corinth, Galatia, Ephesus, Philippi, Colosse, and Thessalonica, precisely such, and in the same circumstances, as were those to whom St. Paul addressed his letters in those places. Long before Mr. Taylor wrote, I had written my opinion that the Essenes were not Christians, but that the Christians of the Pope were Essenes.¹ All the fine moral doctrines which are attributed to the Samaritan Nazarite, and I doubt not justly attributed to him, are to be found among the doctrines of these ascetics; but they are found unalloyed with the pernicious, demoralising nonsense,² which St. Paul and some of the fathers of the Romish Church obtruded into their religion, and into what they were pleased to call, though to miscal *his* religion: and a great part, and the worst part of which, has been retained by Protestants. If the opinion be well founded, that their Scriptures were the originals of the Gospel histories, then it will follow almost certainly, that they must have been the same as the Samaneans or Gymnosophists of Porphyry and Clemens Alexandrinus, and their books, which they were bound by such solemn oaths to keep secret, must have been the Vedas of India; or some Indian books containing the mythoses of Moses and Jesus Christ: and this opinion, the striking similarity between the

¹ See Vol. I. pp. 81—84.

² May not this harsh opinion have originated in a too vivid recollection of the *doctrines* deduced from the writings of St. Paul, by both ancient and modern polemics? *Editor.*

histories of Buddha, Cristina, and Jesus, seems strongly to support. The Gymnosophists, it may be remembered, we have found in great power in the isle of Meroe, in Upper Egypt, giving laws to the kings.¹ This is the most reasonable scheme which I have been able to devise to account for the identity of the history of Jesus and Cristina: and this seems to be confirmed by Mr. Taylor.

Benj. Constant says,² “En général, on n’a pas, à ce qu’il nous paraît, assez considéré la ressemblance du clergé Chrétien avec les institutions hiérarchiques des peuples du Nord. Cette ressemblance est si frappante, même dans les détails, que les ordres religieux en ont tiré la conséquence qu’ils descendaient des Druides. Un historien de la communauté des Carmes appelle les Druides *sanctos druides*, *Eliæ filios*, *fratres nostros* et *prædecessores* (Hist. Carmel, Ordin. 1. 1, 4). Si vivendi genus et observantias regulares seriò discussieris, dit un autre écrivain, *reperies veros fuisse* (Druidas) *Carmelitas*.”

In the course of my studies I have turned my attention, in a very particular manner, to the Essenes, and it was my intention to have had a much longer chapter than I have given relating to them in this work, but the learned and ingenious Deist, the Rev. Robert Taylor, has superseded me. It is of no use merely to rewrite the substance of what he has written respecting them in his Diegesis, and written better than I could do it. The Romish Church, I believe, maintains that the Essenes and the Carmelites were the same order of men. Of the truth of this I have no doubt. Pythagoras is allowed to have been an Essenean, and he dwelt or was initiated into the order on Carmel. Pope Gregory the Great invited the Carmelites from Syria and Egypt to Rome, and founded two most splendid and beautiful monasteries of the barefoot and the calceated orders; and at that time he abolished their old rule, and gave them a new one. With the assistance of a most respectable friend, an Augustinian monk of the name of Rice, at both the times when I visited Rome, I applied to the librarians at the monasteries, and endeavoured to obtain a sight of their old rule, by which they lived before the time of Gregory, which they acknowledged that they possessed, but of which, after having first promised it, they would not permit me to have the inspection. Within the cupola of St. Peter’s is a colossal statue of the prophet Elias, under which is the inscription, *Universus Carmelitarum Ordo Fundatori suo S. Eliæ Prophetæ erexit A. MDCCXXVII*. I believe if he were not the founder he regulated the order. But its first regulation, I think, may be found in the sixth chapter of Numbers.³ A slight attention will satisfy any reader that Moses was then regulating an order brought from Egypt, not instituting a new one. They were called Nazarites. Jesus Christ was called a Nazarite, not a Nazarene. It is odd enough that our learned Grecians should not see, that *Ναζωραιος* does not mean Nazarene, but Nazarite: had it meant Nazarene it would have been *Ναζαρηνος*. He was a Nazarite of the city of Nazareth or of the city of the Nazarites.⁴ At that place was the monastery of Nazarites or Carmelites, where Pythagoras and Elias both dwelt, *under* Carmel the vineyard or Garden of God.

2. But the Romish Christ was something more than this. He was a renewed incarnation of Divine Wisdom. He was the son of Maia or Maria. He was the Rose of Sharon and the Lily of the Valley, which bloweth in the month of his mother Maia. Thus, when the angel Gabriel gives the salutation to the Virgin, (see hundreds of very old pictures in Italy,) he always presents her with the Lotus or Lily. Mr. Parkhurst says of the lily,⁵ “Its six-leaved flower contains “within it *seven* apices or chives, i. e. six single-headed ones and one triple-headed one, in the “midst—emblems of the five primary planets and of the moon, and the triple-headed chive or

⁴ See Vol. I. pp. 540, 656, 657.

⁵ In voce *ww ss*, V.

“ style in the midst, of the sun in the centre of this system.” Here, I think, in this Lily we have a very pretty emblem of the trinitarian sun, the Creator, Preserver, and Destroyer, in the centre of his system. And where did this Lily grow? It was in Carmel, the Garden or Vineyard of God, that this Nazir was found at Nazareth. But Nazir or Natzir means a flower, and that flower the Lotus or Lily; and it grew in the Valley of the Garden of God. My reader may think this very mystical, but let him turn to the Bible and read the account of the Lilies and Pomegranates in the temple of Solomon, on the high-priest’s dress, and in the Canticles and works of Solomon, where may be found the loves of Christ and his church, as our Bibles, in the heads of their chapters, call them. I request him also to refer to what I have said in Vol. I. pp. 339, 340, respecting the Lotus or Lily.

The Carmelites are in a *very peculiar manner* attached to the worship of the Virgin Maria, more particularly than any of the other monastic orders. In Egypt they dwelt, as Eusebius says, on the borders of the lake of *Maria*, and in Upper Egypt the Gynnosophists, that is, the Indian philosophers, were found in the island of Meroe. This, in the old language without points, would be the same as Maria. It was near this place that Dr. Wilson found the temple with the history of the flight of Joseph and Mary in it, *depicted with the greatest truth and precision*, noticed before in Vol. I. p. 272. Now this being considered, I think it raises a presumption that there was some foundation for the story of Jesus, or some other person for whom he has been substituted, fleeing from a tyrant who wished to kill him, and who may have been dedicated, as Samuel was by his parents, and who may, therefore, have become an object of jealousy to the tyrant, and of attention to Eastern astrologers, who might know that the period was ending, as Virgil knew it at Rome, and that a new protecting Genius would come to preside over the new age; and in consequence these astrologers, kings, might come to offer him their gifts—kings of the Mithraic order of the Magi, (vide Tertullian,) like our kings at arms of the order of heralds, not kings of nations. In the book of the office of the Carmelites, which I bought at Clarendon Street monastery and chapel in Dublin, Mary is called *Maris Stella, Mother of our Maker*, and the *glorious Virgin of Mount Carmel*. She has forty-three names, the exact number which I counted under her statue at Loretto. The Gospel of the Egyptians in the office is expressly acknowledged in the following words, the heading of a prayer: *The falling down of the Egyptian idols at the approach of the Son of God*. And the Sibyls are quoted. Dr. Walsh, in his lately published Travels, says, that the Greeks call her *Dei-para* and *Panayia*. This last word is worthy of observation; it is not unlike the *Pandæa*, the daughter of *Cristna*.

Thus far I had written when the fact of the island of Meroe having its name from mount Meru, and also from the name of the Virgin, occurred to me as something singular, and I was for the first time induced to apply to my Hebrew Bible for the mode of spelling Mount Moriah; and there, behold! I find it is *Maria*—מריה *Mrie*. When formerly I discussed the meaning of the Meru of India, (Vol. I. pp. 355, 356,) I observed, that its meaning was not known; but now I think we have found it, in the name which we found in Siam—*Maria*—and it is the Mount of *Maria*, or of *Maia*—called also, in Western Syria as in Pegu, Zian, and, as Josephus says, converted¹ into Jerusalem, which, he also says, was built by Melchizedek, and that it was before called Salem. All this probably happened after Abraham sanctified it by the Yajua sacrifice of the Lamb.

Mr. Taylor goes so far as to suppose that our Gospel histories are the very Scriptures of the Therapeutæ or Essenes much corrupted: but I think in this he must be mistaken, and that they are what the learned Christians of the Manichæan sect said of them, and what they have every

¹ Lib. vi. Cap. x.

appearance of being, viz., a collection of traditions or histories, made by such men as Papias, Hegisippus, &c., in their travels, taken from the Essenean school, which they found among the devotees at the Essenean settlements above named, and to which St. Paul addressed his letters. They were probably part of their Scriptures. Strangers would probably not succeed in obtaining the whole, but only detached parts, which had become known out of the monasteria—out of the crypts. And it seems almost certain from their titles—Gospel according to Matthew, &c., and other circumstances, that they were never originally intended to be the actual writings of the Apostles, but only on account of what it was believed that they had taught respecting Jesus. Thus they are rescued from the charge, otherwise plausibly brought against them, of being forgeries. They are, in fact, what their titles call them, accounts of the doctrines which Matthew or Luke was supposed to have taught respecting Jesus; but anonymously of course. But of this I shall have much to say hereafter. This scheme seems to me to dovetail into all the other historical accounts. We know Pythagoras was one of the Essenes or Therapeutæ, that he got his learning and morality, identically that of Jesus, either in Egypt or on Mount Carmel, where he long resided,¹ or in Babylon, or still more to the East. Indeed, it seems to supply the only connecting link wanting, between the East and the West.

Certainly the fact noticed by Mr. R. Taylor, that Philo described the Essenes before Christ was born, and that Eusebius has shewn that those very Essenes, so described, were Christians, at once proves that the Christians of his sect were not the followers of the man who lived and preached in the time of Tiberius. I do not see how the evidence of Eusebius is to be disputed: besides, his evidence is confirmed by the work of Philo, which we have and can refer to, in its general character and account of the Essenes, and which completely bears out Eusebius.² Between the accounts of Philo and Josephus,³ I think there will not be found a greater variation, than under the circumstances may be expected. The order may have considerably changed between the time of Philo and Eusebius, and as it was his object to shew that they were Christians, we may safely give a man, who had no regard for truth on other occasions, credit for a little freedom of expression, to say the least, on this.

The early Protestants, having taken a dislike to monastic institutions, have exerted all their ingenuity to persuade their followers, that the monastic order did not arise until about the year 300, when they pretend it was instituted by one Antonius. Their object in fixing on so late a date is, by this means, to strengthen their argument that, from the lateness of its origin, it cannot be an uncorrupted Christian institution, but that it was one of the numerous corruptions of the *scarlet whore of Babylon*, as they courteously call the Romish Church.⁴ The falsity of this is at once proved by the fact, that Origen, who was born about the year 180, emasculated himself, which shews in what estimation celibacy was held in his time. In order to be a monk, it was not necessary, in his day, to attach himself to any order of monks, because there was then only one order. But the account given of him by the learned Gale is quite enough to shew what he was.

¹ Taylor's Translation of Jamblicus, Chap. iii.

² These Essenean Christians were probably Χρηστιανοί.

³ In the works of Philo not a word is said about Jesus Christ, nor about his works. (Bryant on the Logos, p. 17.) But he treats at large on the Logos. Philo appears often to have visited Jerusalem. It has been proved, against Mangey and others, that he lived at the time of Christ. When Philo speaks of being old, though he refers to himself at the time of writing, he is describing the embassy to Caligula many years before.

⁴ For they never hesitate to employ the weapons of abuse and sarcastic ridicule against their opponents, which if any person retorts upon them he is instantly sent to Newgate or some other prison for three or four years.

“ He gave the first lines to all mystic theology, by turning all scriptures, even the most plain, into allegories, according to the Platonic mode.—He was the first founder of *monastic life*, *abstinences*, and *austerities*. He emasculated himself, that is, extinguished virility, thereby to preserve chastity. He understood those precepts of our Lord, against having two coats, shoes, and making provision for the morrow, in a literal sense, as belonging to all Christians: and thence affected voluntary poverty, as the monks of Egypt, his successors. He abstained from necessary food, as the Pythagoreans and Popish monks: whereby he endangered his health. He affected superstitious sanctity and severities, abstaining from necessary sleep, lying on the ground, &c., as monks.” In addition to the above list of errors, Mr. Gale, as descriptive of another error, adds the following sentence, a lamentable proof of the pernicious effects of what is called religion, even upon the greatest learning and talent: “ *He held human merits, and justification by works, placing man’s satisfactions, tears, contrition, and other good works, as the causes of remission of sins.*”¹ It is quite shocking to think into what pernicious absurdities the corrupt or doubtful passages in those books have drawn even both good and learned men, as the examples of both Origen and Gale prove.

Bochart against *Veron*,² says, “ That the law or canon of celibacy is the doctrine of devils, 1 Tim. iv. 1, 3, which was well nigh established throughout Paganism, when Christ came into the world. There were some priests who castrated or gelded themselves, as those of Cybele, or of Phrygia, who were called Galli and Archigalli: and the Megabyzes or Megalobyzes, priests of Diana at Ephesus, and the Therophantes at Athens. In brief, the celibacy of priests was in such esteem among the Pagans, that *Æneas*, in *Virgil*, (*Æn. Lib. vi.*) passing through the *Elysian fields*, which they made to be paradise, saw no other priests there, but such as had passed their life in celibacy. There has been also a number of philosophers who have contributed to this error. This was one of the superstitions which Pythagoras brought out of Egypt, whence returning unto Greece, he forbade marriage to those of his sect, and constituted a cloister of nuns, over which he placed his daughter. Plato held the same opinion, as also Heraclitus, and Democritus, and Zeno, the prince of the Stoics, who never approached to a woman. By which,” says Gale, “ It is apparent that Antichrist’s prohibition of marriage and monastic constitutions or canons are but *αποκρισις*, an imitation of the Pagan celibacy and monastic rules: that the Popish nuns are but imitations or apes of the Pythagorean nuns.”³

The Pythagoreans were divided in their colleges into *novices* and *perfect*. They affected a superstitious silence; they enjoyed all things in common; they called their college *Κοινοβιον*, a community, as the monks and nuns call theirs *Cœnobium*. They had their fasts the same as the Egyptian priests, and the Carthusians and Præmonstrants. They had the same white garments. They had the same severities or discipline, mortifications, and purifications. They were divided into contemplative and active, the same as the Egyptian priests and the monks.⁴

The great and striking similarity between the doctrines of the Essenes, of Jesus, and of Pythagoras, amounts almost to proof of the identity of the systems.

Pythagoras maintained the existence of one Supreme God, the immortality of the soul, and a state of future rewards and punishments. These sentiments were common to him and almost all the ancient philosophers. He probably believed in the existence of a great number of created

¹ Gale’s Court of Gent. Vol. III. Book ii. Chap. i. pp. 134, 135.

beings, superior to man in their natures and attributes, but in every way inferior to God their Creator. Under different names they answer exactly to the angels of the Brahmins, the Magi, the Jews, the Essenes, and the Christians. The morality which he taught was in a very high degree refined and good. In it is to be found, I believe, every doctrine for which the Christian religion has been so much celebrated by its admirers. The truth of this assertion may be seen in almost every page of Jamblicus's *Life of Pythagoras*. The examples are far too numerous to recite here.

Pythagoras taught, and his followers maintained, the absolute equality of property, all their worldly possessions being brought into a common store. They separated themselves from the rest of mankind, and lived in buildings called *monasteria* or *monasteries*, and were themselves called *Κοινοβίται* or *Cœnobites*. By this name of *Cœnobites* they are said to have been known at Crotona in Italy, which might induce a suspicion that monasteries were founded in Italy much earlier than has been generally supposed.¹ Before proselytes were admitted into the society they were obliged to keep a long silence, and to serve a tedious novitiate; and they took the three celebrated vows, *tria vota substantialia*, taken by all monks, of chastity, poverty, and obedience. His followers ate no flesh meat, nor drank wine, and though he sacrificed to Apollo or the Sun at Delos, it was at the altar where no blood was shed, and with thanksgivings only. He held the doctrine of the *Metempsychosis*, the same, or nearly the same, as it was held by the Brahmins, the Persians, many of the Greeks, the Manichees, and many of the early orthodox Christian fathers.

His followers were divided into two classes, one called *Pythagoreans*, the other *Pythagorists*. The former only had their possessions in common, and are what answer to those amongst the Christians called *elect* or *perfect*—who were, in short, the monks and nuns. They rose before daylight, and though strictly worshipers of one God, they always paid a certain adoration to the sun at his rising. Pythagoras, as well as his disciple Plato, considered the soul to be confined in the body as a certain kind of punishment, and that old age was not to be considered with reference to an egress from the present life, but to the beginning of a blessed life in future.²

Of all the Greeks, I apprehend Pythagoras was the most learned. It cannot be supposed that he would spend so many years in Egypt, Phœnicia, and Babylon, in study, without knowing the languages of these nations. He is said to have been the person who discovered the demonstration of the forty-seventh proposition of the first book of Euclid, which, if true, was of itself sufficient to immortalize him. But I am rather inclined to think that he discovered it not by meditation, but by travel amongst the nations of the East, who understood and who taught him the true theory of the motions of the earth and planetary bodies, and who, I believe, understood the qualities of the loadstone,¹ the art of making gun-powder, telescopes, &c., &c., and who were far more learned than the Greeks were at any time. I believe the Greeks were as inferior to the oriental nations in real learning, as they were superior to them in poetry and the fine arts.

I beg the reader to look back to what has been said (Vol. I. pp. 150, &c.) respecting the circumstances related of Pythagoras in the early part of his life, to the same also in the life of Cristna, &c., (ibid. pp. 129, et seq.) and, coolly divesting his mind, as far as possible, from prejudice, and from all angry feeling, caused by his early opinions being rudely assailed, consider whether it be possible that such similarity in two histories could take place by accident. I beg

¹ Jamblicus's *Life of Pythag.* by Taylor, Chap. v. p. 18.

² Vide *ibid. passim*.

³ See Parkhurst's *Lexicon*, Cooke on *Stonehenge*, Stukeley's *Stonehenge*, and *Palæographia*, and Drummond in the *Classical Journal*.

him to ask, whether it be possible that the effect could be produced by any cause except that of one copying after the other—that of the later copying after the earlier. Thomas Burnet says,¹ “Refert Alexander de Symbolis Pythagoricis, Γαλατῶν και Βραχμανων ακηκοειναι τον Πυθαγοραν.² Hos igitur Galatarum Philosophos, Druidas, audivit, non docuit, Pythagoras.” That Pythagoras was a Carmelite see Mosheim.³

Mr. Maurice seems to consider it of great consequence that the immaculate conception of Jesus by his mother, a virgin, is very different from the birth of Cristna, who had seven or eight elder brothers. But he overlooks the fact that Jesus is said to have had almost as many.⁴ Now this seems to me of very little consequence. I do not suppose that one story was exactly copied from the other—that at any time a copyist or transcriber went to the Hindoo books and systematically extracted what he thought necessary to form a new religion. No, indeed! I consider the account of the Manichæans to be the truth—that these books were formed from scraps of traditions collected by the early fathers, some here, some there, as they happened to find them in their journeys, which it is well known that they took into the Eastern countries, in search of the true Gospel. Thus some parts would be as we find them—Indian, some Persian, some Egyptian, &c., &c., jumbled together, forming, after undergoing the corrections which I have before described, the mass which we now possess—after all their corrections in a considerable degree confused and irreconcilable. Thus we find that from India came the murder of the innocents, &c., &c.; from all quarters of the Heathen world came the Trinity, the execution of the Saviour, the Lord Sol, the Iao, born at the winter solstice, triumphing over the powers of hell and darkness, and rising to light and immortality at the vernal equinox; from the Egyptian, and perhaps Eleusinian, mysteries, the worship of the Virgin and Child; and, from the history of the Pythagoras, the immaculate conception, and the several particulars which the reader has seen, are common both to him and Jesus, in the early parts of their lives.

That the Christian Hellenistic Jewish fathers should have searched for the origin of their religion in the East, will not surprise any one who observes that the Greeks found in the same quarter all their astronomy and their mythological fables, as may be seen well developed every where in the Hist. Hind. by Mr. Maurice.

On the subject of the Essenes, who were nothing but Pythagoreans, Thomas Burnet says, “Huic dissertationi de Judæis finem imposuero, venit mihi in mentem Essenorum sive Essæorum, pervetustæ, celebrisque olim sectæ, apud Judæos: qui priscorum Philosophorum speciem præ se ferebant, ipsosque Brachmanas institutis et vitæ ratione imitari videbantur.⁵ Horum meminerunt authores varii. Plinius, subridens, ex pœnitentibus et pertæsis humanæ vitæ cœtum illum compositum ait, neque unquam defecisse per aliquot annorum millia, licet *αγυρον και ασυρθεσιαζον*. ‘Gens sola, *inquit*, Esseni, et in toto orbe, præter cæteras, mira. Sine ullâ fœminâ, omni venere abdicata, sine pecuniâ, sociâ Palmarum. In diem ex æquo convenerunt turba renascitur, frequentantibus, quos vitâ fessos, ad mores eorum fortunæ fluctus agitât. Ita per sæculorum millia (incredibile dictu) gens æterna est, in quâ nemo nascitur. ‘Tam fœcunda illis aliorum vitæ pœnitentia est.’ Argutè dictum si minùs verè. Horum philosophorum vivam imaginem depinxit Philo Judæus: vitamque eorum exhibuit, illi simillimanam quam duxerunt olim in Paradiso innocui parentes: et nos iterum ducturi sumus, Deo volente, in novâ terrâ futurâ. Onerosum esset totum Philonis de hâc re sermonem adducere: sed, quod

This passage of Burnet’s suggests several very important observations. I was not a little gratified to find that the close relation between the Hindoos and the most respectable of all the Jewish sects, of which I have not the slightest doubt that Jesus Christ was a member, that of the Essenes, had been observed by this very learned man almost a hundred years ago, before the late blaze of light from the East had shone upon us. What would he have said had he lived till now? I think from the *tria vota substantialia* being common both to the Essenes and the Samaneans of Porphyry, there can be no doubt that the latter were correctly oriental Essenes.—Their history must have been well known in the time of Pliny: and his observation of their continuance *per millia sæculorum* decidedly proves their existence, if proof were wanting, long before the time of Christ; therefore they could not be merely Christian monks. They could be no other than Sophees.

I cannot help entertaining a suspicion that the Samaneans of Porphyry and Clemens Alexandrinus, the Buddhists or Brachmans, as they were called, the Chaldæans, confessed by Burnet to be only a sect,⁴ the Essenes, and the Druides, were, in fact, all orders of monks. Perhaps they were originally one order, but in long periods of time split it into separate communities, as we have them in Europe—but all having the same vows of chastity, poverty, and obedience—vows which, in fact, reduce all monks to one order or genus.

“ Constat autem apud has gentes (*Celtas*) viguisse ab omni ævo philosophos, sive hominum
 “ ‘ ordinem, nomine, studiis, et vitæ instituto, à vulgo, aliisque distinctum. Dicti sunt ab omnibus
 “ ‘ Druidæ vel Druides: Semnothei etiam; aliisque nominibus, quæ nil faciunt ad rem nostram,
 “ ‘ distingui solent.’⁵”

Epiphanius says that there were TWENTY heresies before Christ. It is curious, and there can be no doubt that there is much truth in the observation, for most of the rites and doctrines of the Christians of all sects existed before the time of Jesus of Nazareth.⁶

It is the policy of the present Christians to reduce the number of heresies as much as possible. But the fact cannot be disputed, that what were called Christian heresies existed in great numbers before the birth of Jesus of Nazareth, as asserted by Epiphanius and Philaster, and quoted generally with approbation by Eusebius: although he differs from them in some points, particularly as to which of the sects preceded Christianity. It seems singular enough, however, that these good people do not perceive that it proves the actual existence of two Christianities.

⁶ See Lardner’s Hist. Her. Book i. Sect. 5.

But I think my reader who recollects what has been said of the youth of Larissa in the first volume,¹ will not be much surprised at this.

The conduct of the first Christian Emperor Constantine, was very singular. He was both Christian and Pagan. He affected to be descended from Helen the female generative principle, he kept the Heathen festivals after he turned Christian, and when he built his new city he placed it on seven hills, making it as near as possible a second Ilium or new Rome, and dedicated its church to the holy Sophia. I have little doubt that if we could get to the bottom of the subject, we should find proof that he affected to be a renewed incarnation, the Paraclete promised by Jesus, the tenth Avatar, and the renewer of the empire of ancient Rome, in the last cycle. But it must be recollected that we are here in the very centre of the æra of frauds, of every kind, and that he, that is, his church, was able to destroy, and did destroy, every thing which it did not approve. It could corrupt what it pleased, and we scarcely possess a single writing which it ordered to be destroyed, which is a sufficient proof of its power to effect its wicked designs. Constantine was, in fact, both Pagan and Christian; and his church, as I will now prove, was more an union of the two, than a substitution of one for the other.

3. I shall now proceed to shew, that the remainder of what, in modern times, are called the rites of the church of Jesus of Nazareth have nothing to do with him, and are only figments of the old Gentile religion, and I shall begin at the head, the Pontifex Maximus.

The Roman Pontifex Maximus was called *King of the Age*.² This was the same as Cyrus, *Αἰων των αιωνων*. As endowed with a portion of the *holy spirit* he was God. Thus in him resided a portion of the divinity on earth. It was from these mysticisms that the power of both the ancient and modern chief priests was derived. How this Pontifex arose I shall shew in a future page, along with the origin of feudal tenures, and I conceive it will not be the least interesting part of my work.

Tertullian calls the Pontifex Maximus KING OF THE AGE. This is *Βασιλευς αιων των αιωνων*—King of the Cycles. Dionysius of Halicarnassus assures us, that the Pontifices Maximi had a sovereign authority in the most important affairs, for to them was referred the judgment of all causes which concerned sacred things, as well those in which individuals were concerned, as those of the public. They made new laws on their own authority, as new occasions called for them. They had the care of all sacrifices, and generally of all the ceremonials of religion. They had also the jurisdiction of all the officers employed in the affairs of religion. They were the interpreters of the prophecies, concerning which the people were used to consult them. They had power to punish at their discretion those who failed to execute their commands, according to the exigency of the case; but were themselves subject to no other person, and were not obliged to render an account either to the senate or to the people. When the high priest died his place was filled by the choice of the college, and not by the senate or people.³ All this is strictly papistical.

Alexander ab Alexandro says,⁴ That the sovereign Pontiff was elevated in honour above all others. The people had as much veneration for his dignity as for that of the king's. He had his lictors and guards, his peculiar chair and litter, the same as the consuls: he alone had the power of ascending to the capitol in a chariot. He presided and ruled in the sacred college over all the other pontiffs: the augurs, the priests, and the vestal virgins, all obeyed him: he had the power of chastising them at his pleasure. He governed according to his pleasure all sacred things.

³ Dion. Halicar. Ant. Rom. Lib. ii.; also Livy in his Life of Numa, Lib. i.

⁴ Genial. Dierum, Lib. ii.

He ordered on what altars, to what Gods, by what hostiæ, victims, on what days and in what temples the sacrifices should be made: he fixed the feasts and the fasts, when it was permitted to the people to work and when it was forbidden. If this be compared with the Papal powers it will be found in every thing to agree. The Canonists maintain that the Pope is not subject to any human law; that he cannot be judged either by the emperor or by the clergy collectively, neither by the kings nor by the people; that it is necessary to salvation to believe, that all creatures are subject to him; that as the Sun is said to be lord of the planets, so the Pope is the father of all dignities.¹

Innocent the Third called himself Vicarius Jesu Christi, successor Petri Christus domini, Deus Pharaonis, citra Deum, ultra hominem, minor Deo, major homine.² Platina, in his Life of Paul the Second, says, "I and others being cited before the Pope appealed to the judges, when regarding me with furious eyes, he said, 'How dare you speak to me of judges? Ne sais-tu pas que j'ay tout le droit dans le coffret de ma poitrine? I speak the word and each quits his place according to my will. I am Pope: it is permitted to me to chastise or to approve of all others according to my will.'" This is confirmed by Baronius in his remonstrance to the city of Venice.³ "Whence comes it," he says, "that you dare to judge the Judge of all, whom no council legitimately assembled has dared to judge; him from whom the universal counsels take their authority, and without whose fiat they cannot be general councils or be legally convoked, nor the canons which they ordain have any authority?" In short, Baronius shews that the conformity of the modern to the ancient Pontiffs, called kings of the sacred affairs, is as close as possible, even to the most trifling things, such as not being expected to salute any person or to uncover his head, but that he was used to wear the same purple robes as kings, and a crown of gold on his head.

As I have shewn, the Pontiffs had the power of regulating all festivals, and, in short, the whole calendar. Thus Julius Cæsar, in quality of Pontifex Maximus, reformed the calendar, and in the same manner it was reformed again by the Pontifex Maximus—Pope Gregory the Thirteenth.

Cicero, concerning the Pagan Augurs, says, "No order of true religion passes over the law concerning the description of priests.

"For some have been instituted for the business of pacifying the Gods."

"To preside at sacred ceremonies.

"Others to interpret the predictions of the prophet.

"Not of the many, lest they should be infinite.

"But that none beside the College should understand those predictions which had been publicly recognized.

"For augury, or the power of foretelling future events, is the greatest and most excellent thing in the republic, and naturally allied to authority.

"Nor do thus I think, because I am an augur myself; but because it is absolutely necessary for us to think so.

"For, if the question be of legal right, what is greater than the power to *put away* from the highest governments *their right of holding counsels*[councils?] *and issuing decrees; or to abolish them when holden?* What more awful, than for any thing undertaken, to be done away, if but one augur hath said otherwise?

"What more magnificent than to be able to decree, that the supreme governors should resign

³ Judicum Universorum.

“their magistracy? What more religious than to give or not to give the right of treating or transacting business with the people? *What than to annul a law* if it hath not been duly passed,—and for nothing that hath been done by the government, either at home or abroad, to be approved by any one, without their authority?”¹

The present Roman hierarchy is an exact copy of the hierarchy of the Gentiles, as it is also given by Plutarch, and I have no doubt it originally came to the Etruscans from the Ombri and the Eastern nations. Gale says, that “The Romans made Romulus a Flamen; which was a sort of priesthood so excelling in the Roman sacred things, (witness the Apex,) that they had only three Flamens instituted to the three Gods: the Diale to Jupiter: the Martiale to Mars: the Quirinale to Romulus. Ludovicus Vives on this place, explaining what this Flamen dedicated to Romulus was, tells us, ‘That among the orders of priests, Numa Pompilius made some, which he called Flamens: whose chief ensign was a HAT, as the bishops now, wherein there was a thread of white wool: whence they were called Filamines, from *fila lanæ*.’—This Apex, the Romans gave to none but their chiefest priests, as now the Mitres. So Lucan, *Et tollens Apicem generoso vertice flamen.*” Here, as Gale says,² very truly, is the bishop, the proto-flamen, and the mitre is the *apex*; and to complete the parallel, there is the Pontifex Maximus in each case—the Pope assuming to himself that epithet of dignity in his public titles. The hat of the flamen is the hat of the cardinal in his scarlet robes: but I shall say more on this hereafter.

The Pontifex Maximus had under him a regular gradation of priestly officers, precisely like those of the Pontifex Maximus of the moderns—the Pope. He had, in the first place, his college of high-priests, of whom his council was composed, with whom he deliberated concerning important affairs. To answer to this, the Pope has his cardinals. The Pontifex Maximus had also persons called highnesses,³ who answered to the Primates, the Archbishops, and the Bishops: he had also lesser ones, who answered to the Parsons and Curates of the Pope, and were called *Curiones*, whence comes our word *Curate*. He had also a number of Flamens, that is to say, (Prestres,) priests, who assisted in the offices of the church as at this day.⁴ The Abbé Marolles confesses the conformity, including the Vestals, who are the Nuns.

The ancients had an order of priests called Parasiti or Parasites. These answered correctly to our modern chaplains.

At first the Pontifex Maximus did not interfere with secular affairs; this was, I suppose, after the expulsion of the kings who were priests; but, by degrees, he encroached on the secular authority, till, in the time of Cæsar, he had become so formidable that the Dictator found it necessary to take the office himself, and thus he acquired possession, by the union of the secular and ecclesiastical authority, of absolute and legal power; and the emperors, as may be seen from coins, after Cæsar, were both Pontifices Maximi and Emperors.⁵ The popes followed most closely the footsteps of their predecessors. At first, they did not meddle with secular concerns, but acknowledged the supremacy of the Emperors, and themselves as vassals; but after the death of Constantine the First, pleading a gift from him of the kingdom of Italy, they assumed the

⁵ The early kings of Rome were both kings and priests, and when they were abolished a chief priest was retained with reduced power, but which he was constantly endeavouring by all means to increase. This will be explained in a future page.

crown, which they yet affect to wear, never yielding up their pretension to it; for they hold the same doctrine as the Protestant Church of England—that *Nullum Tempus occurrit Ecclesiæ*.

The alleged gift of Italy by Constantine, is said by Protestants to be false. I am inclined to believe it true: for nothing could be too bad for such an unprincipled devotee to execute, at the point of death, that he fancied would save his soul from damnation, which he was conscious he deserved. On the Papal authority Innocent III. said, "*Ecclesia sponsa non nupsit vacua, sed dotem mihi tribuit absque precio preciosam, spiritualium plenitudinem et latitudinem temporali-um. In signum spiritualium contulit mihi Mitram. In signum temporalium dedit mihi Coronam. Mitram pro sacerdotio, Coronam pro regno, illius me constituens vicarium qui habet in vestimento et fœmore suo scriptum, Rex Regum et Dominus Dominantium.*"¹

The Roman Pontiff had the name of Papa, which is the same as the natives of central Asia gave to their principal God Jupiter, as may be seen in the fourth book of Herodotus. He was also called the SOVEREIGN Pontiff, which was the title that the Pagans gave to their chief priest.

The Popes on ascending the throne always assume a sacred name. This is an exact imitation of antiquity. All kings were anointed, to render them sacred; and on this occasion I believe they always assumed a sacred name, which had generally, perhaps always, an astrological allusion. The high-priests were anointed for the same reason both among the Jews and Heathens. This is the Etruscan baptism with the Holy Ghost. It is expressly declared to be so in the case of priests. Though Octavius dared not to assume the title of king, he, as high-priest, assumed the sacred title of Augustus—an Egyptian title given to the Nile—as his predecessor, Julius, had assumed the title of Cæsar, the name of the God Mars. This is an exact imitation of the practice of the Hindoo kings, and, indeed, of that of all opulent persons in India who take a sacred name from one of their Gods. This is the custom which has destroyed all ancient history by rendering it impossible to know where history ends and where religious fable begins.

Sextus V., in his bull of excommunication of Henry of Navarre, in 1585,² claims to possess power as successor of St. Peter from the Eternal, above all the princes of the earth, and to have power to punish them for their breaches of the laws.

The Emperors, as Roman Pagan pontiffs, claimed the same power and exercised it, as delegates of the person described by the $\Upsilon\text{H}\Sigma$ 608—until the last age should arrive. They established the claim attempted to be set up by Antiochus, by Sylla, and by Scipio Africanus. At last, Nero claimed to be the Tenth Avatar. Infinite have been the pains of the priests to conceal these things, but I flatter myself they have failed.

It is unnecessary to point out to the reader how very near, in the middle ages, the Popes were in succeeding in their claim to the disposal of all kingdoms. This is a fact. We shall see in a future page the foundation on which this claim rested. By skillfully interfering between the Royal brutes and their oppressed subjects, they had very nearly succeeded, with the acclamations of the people, in establishing their power. Then Europe would have been precisely in the situation of Tibet at this moment.

The Roman Emperors and the Pontifices drew imposts from all the nations of the world. The Pope, in like manner, had his Peter's pence, under which name all Europe paid him tribute. It was the policy of the Roman Emperors to make the Latin tongue the common language of all nations; the Popes desired the same thing—which was the secret reason for their wishing the service always to be in Latin, the language of the See.

It was permitted by the Emperors for any one to kill those who were devoted to the infernal

¹ De Coronat. Pot. Serm. III.

² M. Mezeray reports this bull in the Life of Henry III. p. 367.

Gods ; this was exactly imitated by the Popes who granted leave to any person to kill those who were excommunicated. The Emperors and Pagan Pontiffs had habits and shoes of purple ; their senators were clothed in the same colour, which they call *trabea*. The Pope has the same habit and the same shoes, as may be seen in the book of sacred ceremonies.¹ The Cardinals, who compose his Senate, and whom Pius II. called Senators of the city of Rome, are also clothed with purple.²

When a Pope is crowned, a triumphal procession takes place from the Vatican to the Church of the Lateran, during which the new Pope throws money to the people, precisely as the Emperors of old were accustomed to do in the processions on their coronation. As the Emperors and Pontiffs were accustomed to send to their allies, as an acknowledgment of their good offices, a baton of ivory, a painted robe, or similar trifling presents ; so the Popes send to kings and princes sometimes a rose, sometimes gloves, and sometimes a sacred sword, or an Agnus Dei.

The Emperors had the title of God, Deus or Divus. Virgil, in his first Eclogue, so calls Octavius, and Suetonius, in his Life of Domitian, says,³ he wished when his commands were sent to his lieutenants, that the words, *The Lord our God commands it* should be used. The same, nearly, was attributed to the Pope.⁴ “As there is only one God,” says he, “in the heavens, “so there ought to be one God only on earth.”⁵ Du Perron, in his letter of thanks to Pope Clement VIII. for his promotion to the rank of Cardinal says, “*I have always revered your beatitude as God on earth.*”

Aurelius Victor tells us, speaking of Diocletian, that the Roman Emperors and Pontiffs were adored by the people.

The last excess of baseness required by the Emperors Caligula and Heliogabalus was, the kissing of the foot. This every one knows is done continually to the Pope. Their modern followers say, that they do not kiss the *foot* but the *cross*, which is embroidered on the shoe. A mere idle subterfuge. Why is not the cross placed in some more honourable situation ? The same reason would excuse them for kissing a place of still less reverence, which might be named ; but it would hardly be thought respectful to place the cross there.

But the kissing of the toe was of much older date than the times of Caligula and Heliogabalus ; Julius Cæsar, in quality of Pontifex Maximus, held out his foot to Pompeius Pænus to kiss, in a a slipper embroidered with gold, *socculo aurato*.⁶ This was the practice of the Arch Druid in Gaul.⁷

As many of the Emperors were models of every virtue, so it cannot be denied that many of the Popes were most excellent men : but that the parallel might be complete, as many of the Emperors were the most detestable of characters, so it cannot be denied that they were fully equalled by some of the Popes in profligacy of every kind.

The title of Pontifex Maximus is strictly *Heathen*. When the Pope is elected, he is borne in great state to the high altar in St. Peter's, on which he is placed, and where he receives the adoration of all the Cardinals.⁸ This is a close copy of the same practice of the Heathen to their high-priest.⁹ And it appears that Martin IV. was addressed, “*O lamb of God, who takest away the sins of the world, grant us thy peace.*”¹⁰ The very words used in their service by the Carnutes of Gaul, as we shall soon see.

In the ceremonies of initiation into the mysteries of Samothrace and Eleusis, the novice was

placed on a throne, and the initiated formed a circle and danced round him to a sacred hymn which they sung.¹ In one of the spurious Gospels, as they are called, Jesus and his apostles, are said to have performed a similar ceremony after his last supper. When the Cardinals advance *in a circle* to the adoration of the Pope, placed on the chair of St. Peter, and when again every Sunday they *draw up in a circle* round him, and go down on their knees to him, they do but repeat this ceremony. And, I think, that although the novice, after the performance of this ceremony, was not in reality the Pope, or head of the fraternity, yet for the sake of admitting him to the highest of the mysteries, he was supposed to have filled the office; he was admitted to have filled it for a few minutes—performing some act of authority whilst so elevated. I have reasons for this which I shall not give. In the ancient mysteries this was called *θρονωσις* or *θρονισμος*. In imitation of this our bishops are enthroned—the rite is called the enthroning. One of the hymns of Orpheus is called *θρονισμοι*.

We are in the habit of abusing Octavius and his people for calling him Divus, Augustus, &c. He was not called *father* of his country until late in life. I believe this title of father of his country, or of *Αἰων τῶν αἰωνῶν*, was given to him because he was really thought to be the father of the future age, the Genius of the Ninth Sæculum—the Cyrus of his day. And if we consider the happy state of the world during his long reign, no man ever lived to whom the title could be more plausibly given.

I suppose no person can have paid much attention to the European history of the middle ages without having observed many circumstances relating to its Popes which have not been satisfactorily accounted for. Among them stands pre-eminent the Papal claim of supremacy over the temporal and Germanic imperial authority. The Emperors claimed to be successors of the Roman Emperors, calling themselves kings of the Romans and Cæsars; and if the house of Hapsburg should ever breed a Napoleon, (a thing not much to be feared,) I have no doubt that the claim would be instantly renewed to all the dominion ruled by Augustus. To their claims as Emperor or Embratur,² the Roman Pontiff acceded, but to nothing more—only as Emperor or Dictator. To the authority of the Pontifex Maximus of the ancient Romans, the Pope had succeeded; and that power, in the time of Augustus, had obtained, in fact, the sovereign sway. The triple mitre or crown of the Pontiff had, to all intents and purposes, risen above the single crown of the king. Jesus of Bethlehem, who was foretold by all the Prophets, had come, as Buddha and as Cristina had come, and had, through the medium of St. Peter, transmitted his authority to the head of the Catholic or universal church, which was received with dutiful submission by the Great Constantine, its eldest son. In the person of Octavius Cæsar the offices of Pontifex Maximus and Emperor or Dictator were united, therefore he legally possessed all power. In the person of Constantine,³ by his surrender of part to the Pope, they became divided, and he surrendered that power, which he only held as delegate, into the hand of its rightful owner, the successor of St. Peter, the head fisherman (as the Pope called himself) of Galilee. But he claimed to be Pontifex Maximus, not Pontifex Magnus, which brought the whole world under his sway. The grounds and nature of this claim, and the general character of the mighty empire which flourished beneath it in a former time, will be described at large in a future book. The claim of the Popes to supernatural knowledge, is not in reality so monstrously absurd, as at first it seems to be, if every thing were supposed (as I have no doubt it was) to occur in each cycle, as it had done before. As the Supreme Pontiff knew the

¹ Creuzer, Liv. v. Ch. ii. p. 320.

² Niebuhr, ed. Walter, Vol. I. p. 64.

³ Whose grand equestrian statue stands, as it ought to do, in the portico of St. Peter's, guarding the entrance to the temple, but not in the temple—the first servant of the living God within.

history of the cycle, he could tell what would happen in any part of it. This was the theory, and he might easily account for his own ignorance or his knowledge not being equal to that of his predecessors, as saints account for want of power to perform miracles,—his own want of faith or his own or the general decay of piety. Excuses of this kind are never wanting to devotees. The Pontifex Maximus carried the crosier, as may be seen on the medals of the high-priest Julius Cæsar, and by law his person was sacred, and his life could be forfeited by no crime. The assassin's dagger was the only resource.¹ It is perfectly clear that the mitre in ancient Rome had obtained the supreme power. Fortunately the power of the sword saved the Western world from the fate of Tibet. It was before observed (Vol. I. pp. 691, 692), that when the French possessed Italy, they examined the chair of St. Peter, and found upon it signs of the Zodiac. There is also a published account, written by a Roman of eminence before the time of the French invasion, which states, that the same thing was observed, and much discussed, on the chair being formerly taken down to be cleaned. The Zodiac had been forgotten, or the chair would not have been again taken down. This is the chair of St. Peter with its Zodiacal chain, on which the Pope is supposed to sit to rule the empire of his *first* crown, of the planets, which I named in my last book. It must not be forgotten that his triple crown is emblematical of his *three kingdoms*. The illustrious Spaniard did not err far when he said, that the life of Jesus was written in the stars.

Irenæus was Bishop of Lyons. He was one of the first fathers of the church who suffered martyrdom, and generally accounted one of its most eminent and illustrious early writers. He was an Asiatic, but was sent as bishop to Gaul. He founded or built a church in that country. This church is yet remaining at Lyons, though in the course of almost 2000 years no doubt it has undergone many alterations. On the floor, in front of the altar, may be seen a Mosaic pavement of the Zodiac, though a considerable part of it is worn away. This, like the chair of St. Peter, I have partly discussed before—Vol. I. pp. 19, 20, and 690. Persons who do not look deeply into these matters are easily blinded by being told, that it is the remains of an old temple. But Irenæus had no power to get possession of Roman pagan temples. The pretence is totally void of foundation. The style of building, its records, &c., all shew that what its priests say is true, viz. that it was built by Irenæus. On many other churches, which never were Roman temples, both in Britain and elsewhere, similar marks of the esoteric religion, which I have partly unfolded, may be seen. Nothing of this kind is more striking than the Pagan Sibyls seen in many places, particularly surrounding the Casa Santa at Loretto, the most sacred of all the shrines of the *black* God—where, in the affected poverty of a cottage, and amidst gold and diamonds without measure or number, I saw him sitting enthroned.²

I entertain a strong suspicion that if we could fairly get at the secret of the Vatican, we should find it held, that, in ancient times, there were several high-priests or vicars of God upon the earth, but that they were all united in the person of Jesus of Bethlehem, who passed down his power by St. Peter to the Popes, who inherited his undivided power over the whole world. From their adoption of the rites of the Roman Pontiff, and of Jesus, of Cyrus and Cristna, and of the Trojan priests, who, in fact, were the predecessors of those of Rome, I think they were disposed to admit several branches, all centering in Jesus, or perhaps in the last and *tenth*, the Popes. This is correctly the doctrine of the Lama of Tibet. Though the human body of the Lama dies, he is be-

¹ R. Taylor's *Dieg.* pp. 141, 142, *note*.

² The riches of this temple were carried away and dissipated by the priests to prevent the French from getting possession of them, when they overran Italy in the great revolution war. But since the restoration, *in this age of light*, in proportion to the time, they have increased faster than ever they did in the age of darkness.

lieved to remove to some new body, not to die. It is with a view to this part of the mythos that the pedigrees are so carefully given in the Old and New Testaments, which are called *testaments*, because they are witnesses to the legality of this claim. But all this will be explained in a future book.

4. Having shewn the identity of the *ancient* and *modern* Roman Pontifex, I shall proceed to the celebrated Seven Sacraments of the Romish church, and first to that of the Eucharist.

The first information we have respecting the sacrifice or offering of *bread* and *wine* is in Genesis xiv. 18, 19, "*And Melchizedek, king of Salem, brought forth bread and wine: and he was the priest of the most high God. And he blessed him, and said, Blessed be Abram of [by] the most high God, possessor of heaven and earth.*" There seems no doubt that this king and priest was of the religion of the Persians, of Brahma, of Mithra, and of Abram, as professed at that time. The Mithraic sacrifice and the payment of tithes are strong circumstances in favour of this opinion. It is not improbable, if Abram left his country to avoid the abuses and idolatry then beginning to prevail, that he should have come to dwell where his religion was not yet corrupted. We know that the religion of the Magi did become corrupted; and it was reformed before the time of Cyrus and Daniel by a man called Zoroaster, or Abraham Zoradust. The Rev. Dr. Milner, Bishop and Apostolic Vicar, says, "It was then in offering up a sacrifice of bread and wine, instead of slaughtered animals, that Melchizedek's sacrifice differed from the generality of those in the old law, and that he prefigured the sacrifice which Christ was to institute in the new law from the same elements. No other sense than this can be elicited from the Scripture as to this matter; and accordingly the holy fathers¹ unanimously adhere to this meaning."²

St. Jerom says, "*Melchizedek in typo Christi panem et vinum obtulit: et mysterium Christianum in Salvatoris sanguine et corpore dedicavit.*"³

It is no little confirmation of this opinion, that we find Jesus Christ in the New Testament represented as a priest after the order of Melchizedek.⁴ To account for this, divines have been much puzzled. If it be admitted, (and I think it will be difficult to be denied,) that the religions of Melchizedek, of Abram, Mithra, and Jesus, were all the same, there will be no difficulty in explaining the passages in the Epistle to the Hebrews respecting Melchizedek. Jesus was correctly a preacher or priest of this order or religion. The early Christians found the ancient legends, traditions, and circumstances; but probably their connexion was as little known to them as to their successors, the Cyprians, Augustinus, &c. However, I cannot well be told that this connexion between the bread and wine of Melchizedek and the Christian eucharist is merely the produce of a fertile imagination, as I am supported, according to Dr. Milner, by the ancient fathers of the church *unanimously*.

The temple of Jupiter, without statue, on Mount Carmel, where Pythagoras⁵ studied philosophy, was the temple of Melchizedek, as Eupolemus witnesses.⁶

For a long time violent and even bloody feuds took place among the Christians respecting the celebration of what we call Easter,—the festival, in fact, of the goddess Eostre or the Saxon or Sidonian Asteroth or Astarte.⁷ In fact, two separate and distinct things as they were then become, even if they were identical in their origin, were confounded together. These were the

⁷ Bower, Hist. Popes, pp. 27—37.

Jewish Passover and the sacrifice of bread and wine of Melchizedek ; and, in the early ages of Christianity, they were still observed by the Persians or the followers of Mithra. The ignorant devotees found a tradition of Jesus keeping the Passover on the *fourteenth* day of the moon, of the first month ; they also found traditions of Jesus being declared to be a priest of the order of Melchizedek. They also found among them, or at least among such of them as derived their descent from the Gentiles of Mithra, the sacrifice of Bread and Wine or Water. The mystical and figurative expressions attributed to Jesus they construed literally, and thus came the *real presence*. But their hatred of the Jews would not permit them to acknowledge it to be the Jewish Passover, and therefore they changed it from the day on which it ought to have been celebrated—the *fourteenth*—to the day on which, by no possibility, it could have taken place, viz. the Sunday afterward—the supposed day of the resurrection of Jesus. After many centuries, when the Protestants arose, they seem to have been most exceedingly puzzled to know what to do with this rite ; but at last they settled it as we have it now, excluding the sacrifice, and construing the words attributed to Jesus litera-figuratively, but keeping it still on the Sunday, the hatred towards the Jews having at that time suffered no abatement. I have used the compound word litera-figuratively to endeavour to express the nonsense of the Protestants, who say, that the words *flesh* and *blood* are figurative, but still that, as flesh and blood, they are *verily and indeed* taken. The straightforward doctrine of the Romish church may be false and shocking, but it is not, like that of the Protestants, mere contradictory nonsense. I beg that I may not be accused of speaking irreverently of the rite itself, for it is, in my opinion, in its primitive simplicity as used by Jesus Christ, without exception the most beautiful religious ceremony ever established in the world.

The whole of the ancient Gentile and Druidical ceremonies of Easter or the Saxon Goddess עשתרת *Ostrt*, or Eostre of the Germans, is yet continued over all the Christian world.¹ This festival began with a week's indulgence in all kinds of sports, called the carne-vale, or the taking *a farewell to animal food*, because it was followed by a fast of forty days. An account of this, of Shrovetide, of Ash Wednesday, &c., &c., may be found in Cleland's Specimens ;² but his explanation is not very satisfactory, and he is in several instances mistaken. But I suspect in those countries where the God was feigned to be cut in pieces, as Bacchus on Mont Martre, and Osiris in Egypt, and the limbs scattered about, the forty days were the days passed by Isis or the Mænades in mourning for them and in searching after them.³ Amidst the great mass of other matters in which the identity of the rites and ceremonies of the Gentiles and of the Christians are shewn, the explanation of the origin of this rite is not very material, and I have not taken much pains about it. But its existence over all the North of Europe long before the time of Christ cannot be disputed.

The celebration of the Eucharist by the followers of Mani, and by some other of the early sects, affords a striking trait of identity between the religion or gospel of the Persians or the Magi, and that of Jesus. Certainly, the nonsense which devotees will talk, or which devotees will believe, is almost incredible. But yet it is quite incomprehensible to me how any set of persons or sect (if they were immediate, or in a direct line, descendants from Jesus Christ, and if the account in the gospel histories be true) can admit the institution of the Lord's Supper, and take the cup with water, instead of wine, the nature of the liquid being considered not a trifle or of little consequence,

¹ See Bochart, Vol. I. p. 676 ; Anc. Univers. Hist., Vol. XIX. p. 177 ; Parkhurst, in voce.

² P. 89.

³ I suspect the first part only of Lent was devoted to mourning, the last three days only being spent in the search, when long processions took place, and ended with finding the whole God on Easter Sunday, or on the fourteenth day. In all the churches in Italy, during these forty days, the icons of the Virgin are covered with a black crape veil.

but a matter of the first importance. How is it possible for any sophistry about abstemiousness to persuade a person above the rank of an idiot, that after Jesus had taken the cup with wine as described in our gospel histories, the rite ought to be celebrated by his followers, not with *wine*, but with *water*, as was the case with the Manichæans, the Eneerates, Nestorians, and others? ¹

The real state of the case I apprehend to be this: Christians in different countries found various accounts and practices with respect to this matter. The Judaizing Christians considering it a species of passover (Christ is called the Passover of the Christians ²) or paschal supper, naturally described the cup to contain *wine*, after the manner of the Jews in their passover; and we, who adopt their gospels, take it with wine. On the contrary, the Manichæans and many of the other Eastern sects, who, in fact, had their gospel directly and immediately from the Persian Magi, took this rite with water instead of wine. The eucharist of the Lord and Saviour, as the Magi called the Sun, the second person in their Trinity, or their eucharistic sacrifice, was always made exactly and in every respect the same as that of the orthodox Christians, except that the latter use wine instead of water. This bread-and-water sacrifice was offered by the Magi of Persia, by the Essenes or Therapeutæ, by the Gnostics, and, indeed, by almost if not quite all the Eastern Christians, and by Pythagoras in Greece and Numa at Rome.

The Ebionites or Nazarenes were unquestionably the most immediate and direct followers of Jesus. They were resident in Judea; they are acknowledged to have been among the very earliest of the sects of Christians. As uncertain as tradition is, it is difficult to believe that, in less than one hundred years after the death of Christ, they should not have retained a correct tradition of this rite, if they had really received it from him, and if there had been any certainty on the subject. They are described as a very low, poor, ignorant race of people. They are said to have had a written gospel. Some persons have supposed the gospel of Matthew to have been theirs. But I think the very circumstance of their having used *water* instead of *wine* is sufficient to prove that this cannot be true.—All these circumstances afford traces of the existence of this rite among the Persians long before the man Jesus of Judea is said to have lived.—The moderns have not known what to make of the rite. In the service of our Edward the Sixth, water is directed to be mixed with the wine. This is an union of the two; not a half measure, but a double one. If it be correct to take it with *wine*, then they were right; if with *water*, they still were right; as they took both, they could not be wrong. ³

The Persians had a rite called the festival of Saka, Sakea, or Sakia, which M. Beausobre has shewn was probably the Manichæan Eucharist or Love Feast. He observes, ⁴ that Cyril in calling it *Ischas* has probably meant to travesty the work Saka. *Ischas* or *Ischa* was the name of both Sarah the wife of Abraham and of Jesus. ⁵ Most likely it merely means *the Saviour*; but it pretty nearly identifies the name of Jesus with that of Buddha. To the word Saka and its origin or corruptions, I shall return by and by.

According to Justin's account, the devils busied themselves much with the Eucharist. After describing in several places that bread and wine and *water* were used in the Christian rite, he says, "And this very solemnity too the evil spirits have introduced into the mysteries of Mithra; for you do or may know, that when any one is initiated into this religion, bread and a cup of water, with a certain form of words, are made use of in the sacrifice." ⁶

⁶ See Reeves's Justin, and notes on Sect. lxxxvi. The followers of Tatian used no wine, only water, in the Eucharist. Mosh. Hist., Cent. 2, Ch. v. S. ix.; see also Cent. 2, Ch. iv. S. xii.

Hyde says, “ De Tinctione, de oblatione panis, et de imagine resurrectionis, videatur doctiss. de la Cerda ad ea Tertulliani loca ubi de hisce rebus agitur. Gentiles citra Christum, talia celebrabant Mithriaca quæ videbantur cum doctrinâ *eucharistiæ* et *resurrectionis* et aliis ritibus Christianis convenire, quæ fecerunt ex industriâ ad imitationem Christianismi: unde Tert. et Patres aiunt eos talia fecisse, duce diabolo, quo vult esse simia Christi, &c. Volunt itaque eos res suas ita comparâsse, ut *Mithræ mysteria essent eucharistiæ Christianæ imago*. Sic Just. Martyr, p. 98, et Tertullianus et Chrysostomus. In suis etiam sacris habebant Mithriaci lavacra (quasi regenerationis) in quibus tingit et ipse (sc. sacerdos) quosdam utique credentes et fideles suos, et expiatoria delictorum de lavacro repromittit, et sic adhuc iniciat Mithræ.”¹ From a quotation of Gorius, it seems the *modern* as well as the *ancient* fathers have recourse to the very satisfactory agency of the devil, to account for these things.

Our catechism says, that the sacrament of the Lord’s Supper was ordained for the continual remembrance of the SACRIFICE of the death of Christ; and, that the outward part or sign of the Lord’s Supper is bread and wine. It then goes on to say, that the inward part or thing signified is *the body and blood* of Christ (thing signified!), which are *verily* and *indeed* taken, and received by the faithful in the Lord’s Supper. It then concludes by saying, that the souls of those who partake of this sacrament are to be refreshed by the body and blood of Christ, as their bodies are by the bread and wine.

A very learned and ingenious clergyman of the Church of England, Mr. Glover,² has said, “ In “ the sacrament of the altar is the natural body and blood of Christ verè et realiter, verily and “ indeed, if you take these terms for spiritually by grace and efficacy; but if you mean really and “ indeed, so that thereby you would include a lively and moveable body under the form of bread “ and wine, then in that sense is not Christ’s body in the sacrament really and indeed.” And thus he sophistically explains away the two plain words *verè* and *realiter*. How is it possible, without the grossest abuse of language, to make the words *verily* and *indeed* mean spiritually by grace and efficacy? However, his ingenious sophistry does not affect my argument, as all I undertake is, to shew that this rite is more ancient than Christianity—and this cannot be disputed.

When the reader has duly considered all the other circumstances which I have brought together respecting the religions or doctrines of Mithra, the Esseneans, Pythagoreans, Jesus, &c., he will not deny the strong probability that the sacrifice of the Mass, or of *bread and wine*, as is asserted by the Romish Apostolic Vicar,³ Dr. Milner, has descended even from the remote time of Abraham.

The Mass of the Romish Church is of the very first importance in their religion. The word Mass, it has been said, is taken from the ceremonies of Isis, in which, after the ceremonies and the other mysteries were ended, the people were dismissed, by the Greeks, with the words *Λαοις ἀφ᾽εσις*, which mean, *the people may retire*; that the Romans, in the same ceremonies, used the words *Ite, Missio est*; (see Apuleius de Missio;) and, that the Missio, by corruption, has become Messe or Mass.⁴ This is very unsatisfactory. I believe the meaning of the Mess or Mass is nothing but the Latin name for corn or bread, and that to the expression *Ite, Missio est*, a word for *finished* was originally added or is understood, or has been by degrees dropped.⁵ Of

¹ De Rel. Vet. Pers. Cap. iv. p. 113.

² Remarks on Marsh’s Comp. View, p. 102.

³ The Vicars Apostolic, I understand, receive episcopal ordination, but have more power than ordinary bishops. Dr. Alexander Geddes, whom I have often quoted, sustained the same rank.

⁴ Apul. Lib. xv., de Asino aureo; Pol. Virg. Cap. xii.

⁵ In Yorkshire, on the festival of St. Thomas, wheat is given to the poor, and it is eaten not *ground*, but boiled whole, called *frumenty*. This is the sacrifice of the Messis or Mass.

the descent of the Mass, or the sacrifice of bread and wine, from Melchizedek, I have had frequent opportunities of speaking.¹ And I have shewn that this sacrifice was common to many ancient nations. M. Marolles, in his Memoirs,² quotes Tibullus, in the fourth elegy of his third book, where he says that the Pagans appease the Divinity with *holy bread*—*Farre pio placant*; that Virgil, in the fifth book of the *Æneid*, says, they rendered honours to Vesta, with *holy bread*.

Vestæ

Farre pio et plenâ supplex veneratur acerrâ.—Lines 744, 745.

He adds, that the words of Horace, *Farre pio et saliente micâ*, relate to the same thing, and that Tibullus, in the panegyric to Messala, wrote that a little cake or a little morsel of bread appeased the Divinities. *Parvaque cælestes pacavit mica*. As I have before repeatedly observed, the sacrifice without blood was ordered by Numa Pompilius, and practised by Pythagoras. It may be remarked, in passing, that the term to *immolate*, which is used for sacrifice, may come from the Latin word *mola*, which was the name that the Pagans gave to the little round bits of bread which they offered to their Gods in this sacrifice. The Mass is also called the Host. This word means a host, a giver of hospitality, and also an enemy, and the host of heaven, and is the name of the harbour of the city of Saturn-ja or Valencia or Roma, Ostia.

The Romans celebrated, on the 22nd of February, the feast of Charisties or Caristies or Charistia. From the character of this festival, I have a strong suspicion that the name was a corruption of the ancient Chrest, *Χρηστ* and *Ερωστ*. Creuzer³ says, “This was a family or domestic feast, “which the Roman religion exhibits in its aspect most moral and amiable. It followed several “days of mourning for departed friends. The oldest of the family, he who first in the order of “nature would go to increase the number of those who were already gone, reunited all its mem- “bers at a feast of love and harmony; when the object was to reconcile all differences among the “members of it.” As M. Creuzer observes, “it shews beautifully that the ancients did not “separate the contemplation of the future from present joys. The day was sacred to Concord “and the Lares, and finished the old and began the new year.” And it must be acknowledged that nothing more beautiful could well be imagined.—From this Charisties comes our Charity and Caritas, not exclusively in the sense of giving to the poor, but in that of brotherly love as used by Paul. And here we have among the oldest of the ceremonies of Italy, the Eucharist or *ευχαριστια* of the Christians.

Valerius Maximus⁴ says, “Convivium etiam solenne *majores* instituerant: idque *Charistia* appel- “laverunt, cui præter cognatos et affines, nemo interponebatur: *ut si qua inter necessarios querela* “*esset orta, apud sacra mensæ, et inter hilaritatem animorum, favoribus concordix adhibitis, tolle-* “*retur.*”⁵ Cleland shews that this festival was in use, as we might expect, among the Celts and Druids.⁶

This festival in Hebrew was called *קִּיּוּם qum*, a feast, communion.⁷ From this comes our communion.

Similar to the Italian Charistia was the beautiful and simple rite of the Jews, of breaking bread and drinking with one another at their great festivals, in fact of celebrating the sacrifice of bread

¹ See Vol. I. pp. 718, 725, 823.

² P. 215.

³ Livre cinquième, Ch. iii. p. 456.

⁴ Lib. ii. Cap. i. Sect. 8.

⁵ That *bloody* sacrifices were not used in the earliest times is an opinion supported by Sophocles; Pausanias, de Cerere Phrygialeusi; by Plato, de Legibus, Lib. vi.; and by Empedocles, Lib. de Antiq. Temp.

⁶ Spec. Etymol. Vocab. p. 111.

⁷ Vall. Coll. Hib. Vol. V. p. 224.

and wine so appropriate to Jesus, the priest of the order of Melchizedek, which was converted in a later day into a horrible mystery. When a Jew has broken the bread and partaken of the cup with his fellow, it is considered that a peculiar and brotherly affection is to subsist between them for the next year; and, if there had been any previous enmity, this ceremony is considered the outward sign (of an inward, spiritual grace), that it no longer exists. In all Jewish families, after their paschal supper, the bread is always broken, and the grace-cup is tasted and sent round by the master of the house. It is described as one of the last actions of Jesus, when he had reason to believe that his enemies would proceed to violence against him, and is in strict keeping with what I am convinced was the beautiful simplicity of every part of his character and life. The reader will please to observe that when I speak thus of Jesus Christ, I give no credit to the improper conduct ascribed to him, or to the fact of his having taught the immoral doctrines ascribed to him in the gospel histories¹ of the different sects of his followers, so inconsistent with his general character.

Jesus is made to say, "This is my flesh," "This is my blood." If we take these words to the letter, they were evidently not true. The articles spoken of were neither his flesh nor his blood. Then it is surely only consistent with candour to inquire what meaning could be given to *them*, agreeable to common sense and the meaning of this, at that time, *ancient* ceremony. This, I think, will be found in the fact which we all know, that he abolished among his followers the shocking and disgusting practice, at that time common, of offering sacrifices of flesh and blood, so well described by the Rev. Mr. Faber, and at that time still practised upon grand occasions among the Druids or Chaldees, and Romans, even to the length of offering human victims.—It seems not unlikely that we have only part of the speech of Jesus, that its object was the abolition of that disgusting and atrocious practice, and that his speech had reference to it. *Speaking as he did*, or is said to have done, *always in parables*, he might readily use the figurative expression in reference to something which had passed before against bloody sacrifices: and at that time he might use the words, *This is my body, and this is my blood, which I offer*; i. e. This is *my* offering of body (or flesh) and blood, and no other. It was the offering of Melchizedek and of Pythagoras, his predecessors, and, probably, originally of all nations. The bread was always broken, and is yet broken, in the ceremony, and given as a token of remembrance, precisely as he used it. *Eat this in remembrance of me*. How could any words be more natural? This agrees very well with what he is made to say in the Gospel of the Nazarenes: "I came to abolish sacrifices, and unless ye "cease to offer sacrifices, the wrath of God shall not cease from you."²

The whole paschal supper was a festival of joy and gladness, to celebrate the passage of the sun; and, after the family had eaten, the remainder was given to the poor, along with such other matters as the elect or chapter could spare; for I apprehend the *κοινωνιοι*, or *community of goods*, was confined at first to the lodge, to the seventy-two; and perhaps the Eucharist was at first taken by only the twelve *elect* or *perfect* in the mysteries. The probability of these matters must be left to the reader. The evidence is not very clear, though the probability is strong. This seems to me to be a rational explanation of the words, and is consistent with the general character of Jesus—the character of the priest after the order of Melchizedek. It dovetails well into the historical fact of no sacrifice of animals having ever taken place in his religion, and with the Gentile histories. And when he was founding his religion on the Mosaic system, there does seem

¹ Probably some of the *spurious* gospels; for, happily, on the testimony of the *canonical* Gospels—uncontradicted by respectable profane history—even *unbelievers* have concurred with the Author in paying a tribute of respect to "the beautiful simplicity of every part of the character and life" of JESUS CHRIST. *Editor*.

² J. Jones on Canon, Pt. II. Chap. xxv. Art. 12, p. 275.

to require an explanation of the reason why the *ordained* sacrifices were abolished. Here we see the reason why the Melchizedekian sacrifice was restored, or declared to be enough, without holocausts or even partial *burnt-offerings*.

Besides the Charistia of the Romans, as above described, there must have been some other ceremony very similar, or some sectaries must have held opinions from which the modern Romish priests have copied their Transubstantiation, as we find the doctrine alluded to by Cicero. The Rev. R. Taylor, in his answer to Dr. Pye Smith,¹ says, "There is a passage in Cicero, written forty years before the birth of Christ, in which he ridicules the doctrine of transubstantiation, and asks, how a man can be so stupid as to imagine that which he eats to be a God? Ut illud quo vescatur Deum esse putet?"

The ancients always washed before they sacrificed, says Eustache upon Homer;² and Hesiod forbids any wine to be offered to Jupiter with unwashed hands.³ And Virgil tells us, that Æneas, even though the city was on fire, durst not touch the Gods to save them, till he had first washed his hands. In the ritual of the Romish church it is said, *Sacerdos sanctam eucharistiam ministraturus procedat ad altare lotis prius manibus*.

It was the custom of the Pagan priests to confess before they sacrificed, demanding pardon of the Gods and Goddesses. Numa ordered this to be observed by the Romans, not esteeming the sacrifice *good*, unless the priest had first cleared his conscience *by confession*. The Romish priests are expected to do this before they celebrate the Mass.⁴

Numa ordained that the priest who made the sacrifice should be clothed in white, in the habit called an *alba*.⁵ This is the alb which *he* carries who celebrates the Mass. Above the alb, Numa ordered the sacrificer to carry a coloured robe, with a pectoral or breast-plate of brass, which is now often changed into gold or silver. This is what is called *chasuble*. The priests use also a veil, with which they cover the head, called *amict*. All these ornaments were introduced by Numa. They are also most of them found among the Jews.

The turnings and genuflexions of the priests, and their circular processions, were all ordered by Numa.⁶ The last were also the Deisuls of the Druids. Du Choul has shewn,⁷ that the custom of having the Mass in the morning was taken from the Egyptians, who divided the time, like the Romish church, into prime, tierce, and sexte.

The Pagans had music in their temples, as the Romish devotees have in their churches. Galien says, they have no sacrifice without music.⁸ I shall add no more on this subject here, but I shall resume it in a future Book. I shall then try to penetrate to the bottom of this, which I am persuaded is one of the most profaned of the mysteries.

5. The next rite which I shall notice is that of Baptism.

That the ceremony of baptism is older than the time of Jesus is evident from the Gospels;⁹ but

⁹ The Author makes no reference in proof of this assertion; and, whatever may have been the practice of the followers of Zoroaster or others, there is no satisfactory evidence deducible from either the Old Testament or the Gospels, that Baptism was practised by the Jews prior to the ministry of *the Baptist*. The Author, however, like many other writers, both Advocates and Opponents of *baptism*, probably overlooked the difference between βαπτισμοι (washings, *auto* or *self*-cleansings) and βαπτισμα, which is never used in the N. T. in the *plural*; or, perhaps, he recollected the question of the Priests and Levites to John, "Why baptizest thou then, if;" &c.? (John i. 25.) On which it may be remarked, that the pronoun *thou*, which is often regarded as emphatically contrasting John with others who had previously baptized, is not *emphatically* expressed in the original. It is simply, Τὸ ἐν βαπτίζεις; not Τὸ ἐν βαπτίζεις Σὺ; *Editor*.

how much older it may be, it is impossible to ascertain. It was a practice of the followers of Zoroaster.¹ Hyde says, “Pro infantibus non utuntur circumcissione, sed tantum baptismo seu lotionem ad animæ purificationem internam. Infantem ad sacerdotem in ecclesiam adductum sistunt coram sole et igne, quâ factâ ceremoniâ, eundem sanctiorem existimant. D. Lord dicit quod aquam ad hoc afferunt in cortice arboris Holm: ea autem arbor revera est Haum Magorum, cujus mentionem aliâ occasione supra fecimus. Alias, aliquando fit immergendo in magnum vas aquæ, ut dicit Tavernier. Post talem lotionem seu baptismum, sacerdos imponit nomen à parentibus inditum.” After this Hyde goes on to state, that when he comes to be fifteen years of age he is confirmed by receiving the girdle, and the sudra or cassock.

The Holm or Haum here spoken of by Hyde, is the Phœnix or Phoinix or Palm-tree, called by Burckhardt and Buckingham, in their Travels in Asia, the Dom-tree—the tree of the sacred OM.²

“De-là vint, que pour devenir capable d’entendre les secrets de la création, révélés dans ces mêmes mystères, il fallut se faire régénérer par l’initiation. Cette cérémonie, par laquelle, on apprenoit les vrais principes de la vie, s’opéroit par le moyen de l’eau qui avoit été celui de la régénération du monde. On conduisoit sur les bords de l’Ilissus le candidat qui devoit être initié; après l’avoir purifié avec le sel et l’eau de la mer, on répandoit de l’orge sur lui, ou le couronoit de fleurs, et l’Hydranos ou le Baptiseur le plongeoit dans le fleuve. L’usage de ce Baptême par immersion, qui subsista dans l’Occident jusqu’ au 8^e siècle, se maintient encore dans l’Eglise Greque: c’est celui que Jean le Précurseur administra, dans le Jourdain, à Jesus-Christ même. Il fut pratiqué chez les Juifs,³ chez les Grecs, et chez presque tous les peuples, bien des siècles avant l’existence de la religion Chrétienne: c’est encore une de ces anciennes cérémonies que Dieu sanctifia pour le bien des hommes. On vient de voir qu’elle en fut l’origine, dans les tems qui précédèrent celui où le Baptême devint un Sacrement. Les Indiens continuent à se purifier dans les eaux du Gange, qu’ils regardent comme sacres.”⁴

M. Beausobre has clearly proved that the Manichæans had the rite of Baptism, both for infants and adults, in the name of the Father, Son, and Holy Ghost. He has satisfactorily proved the falsity of St. Augustine upon this point; but, indeed, nothing which Augustine says against the sect whom he deserted and betrayed, is worthy of any credit whatever. M. Beausobre⁵ says, “Mani had more than one reason for administering baptism to infants. This custom not only served to confirm his opinion, that corruption is in nature, and comes to man by nature, but in this he conformed to the custom of the Magi, from which he deviated as little as he possibly could. This was the way to give them a taste for his religion. The ancient Persians carried their infants to the temple a few days after they were born, and presented them to the priest before the sun, and before the fire, which was his symbol. Then the priest took the child and baptized it for the purification of the soul. Sometimes he plunged it into a great vase full of water: it was in the same ceremony that the father gave a name to the child. When the child had arrived at fifteen years of age, he was presented again to the priest, who confirmed him by giving him the robe called the Sudra and the Girdle. These were the symbols or the sacraments of the promises that he made to God to serve him according to the religion of the Persians.” The reader sees that Mani is said to have deviated as little as possible from the rites of the Magi. This is true enough. In fact, the Evangelion of Zoroaster, of the Romish Jesus, and of Mani, were all precisely the same in principle, and very nearly the same in all their ceremonies. The

⁴ D’Anc. Res. Vol. I. p. 292.

⁵ Liv. ix. Ch. vi. Sect. xvi.

variation was not more than might be expected to arise, from distance in situation, in time, and from difference of languages and nations.

Dr. Hyde says,¹ “ Et postea anno ætatis xvº, quando incipit induere tunicam, sudra, et cingulum, ut religionem ingrediatur, et ille in articulis fidei versatur, à sacerdote ei datur confirmatio, ut, ab eo tempore, inter numerum fidelium admittatur, et fidelis esse reputetur.” If this account of Dr. Hyde’s be correct, which I believe no one ever doubted, it is impossible for any person to be so blind as not to see, that these three extremely important and vital ceremonies of the Christian religion—Baptism, Christening, and Confirmation—were nothing but rites of the religion of the Magi, of Mithra, or of the sun.

Upon this subject Justin says,² in Section lxxxi., “ The devils no sooner heard of this baptism spoken of by the prophet, but they too set up their baptisms, and made such as go to their temples and officiate in their libations and meat offerings, first sprinkle themselves with water by way of lustration; and they have brought it to such a pass, that the worshipers are washed from head to foot before they approach the sacred place where their images are kept.” On the above the Rev. Mr. Reeves makes the following note: “ That such mock baptisms were set up by the contrivance of the Devil in the Gentile world, we find not only asserted by Justin, but all the primitive writers, and particularly by Tertullian, *de baptismo*. Certe ludis Apollinaribus et Eleusiniis tinguntur, idque se in regenerationem et impunitatem perjuriorum suorum agere præsumunt. Thus were men initiated into the mysteries of Eleusis, and he who initiated them was called Ὑδρανος, *the waterer*, Ὑδρανος ὁ ἀγνισης των Ελευσινιων.³ Thus again we learn from Tertullian, that they initiated men into the rites of Isis and Mithra, Nam et sacris quibusdam per lavacrum initiantur Isidis alicujus aut Mithræ,⁴ the chief priest of that Goddess, (as Apuleius describes his own initiation,)⁵ leading the party to be initiated to the next bath; where, having first delivered him to the usual washing, and asked pardon of the Goddess, he sprinkled him all about, and bringing him back to the temple, after two parts of the day were spent, placed him before the feet of the Goddess.”

Mosheim shews, by many sound and ingenious arguments, that the rite of baptism was an old ceremony of the Israelites long before the time of Christ.⁶

After baptism they received the sign of the cross, were anointed, and fed with milk and honey.⁷ Dr. Enfield asserts, that baptism was not used by the Jews, but only by the Samaritans.⁸ If this be true, (but I know no authority for it,) it instantly makes a Samaritan of Jesus Christ. I do not think the Doctor would have liked this.

John the Baptist was nothing but one of the followers of Mithra, with whom the deserts of Syria and the Thebais of Egypt, abounded, under the name of Essenes. He was a Nazarite; and it is a curious and striking circumstance that the fountain of Ænon, where he baptized,⁹ was sacred to the sun. Though he be said to have baptized Jesus, yet it is very remarkable that he established a religion of his own, as is evident from the men who came to Ephesus, and were there converted from his religion to Christianity by St. Paul.¹⁰ This religion is not extinct, but continues in some parts of Asia, as we have formerly noticed, under the names of Mundaites, Nazoreens, Nazoureens, or Christians of St. John.¹¹

⁹ John iii. 23.

¹⁰ Acts xix. 1—7.

¹¹ Vol. I. pp. 540, 657, 808.

Michaelis¹ states it to be his opinion, that these men, Iohnists as they are now called, were Essenes. In my article on the Essenes this is proved clearly enough. I have no doubt that John was an Essene, as well as Jesus.

Matthew (iii. 11) makes John say, "I, indeed, baptize you with water; he shall baptize you with the Holy Ghost, and with fire."

"I, indeed, have baptized you with water; but he shall baptize you with the Holy Ghost."—Mark i. 8.

"John answered, saying, I, indeed, baptize you with water; but, he shall baptize you with the *Holy Ghost*, and *with fire*."—Luke iii. 16.

In some parts of Scotland it is a custom at the baptism of children to swing them in their clothes over a fire three times, saying, *Now, fire, burn this child or never*. Here is evidently the baptism by *fire*. When the priest blowed upon the child in baptizing it, in my presence, in the baptistery at Florence, was this to blow away the devils according to the vulgar opinion, or was it the baptism by air—*Spiritus Sanctus*? Priests profess to communicate the *spiritus sanctus*.² The baptism by *fire* and *water* was in use by the Romans. It was performed by jumping three times through the flame of a sacred fire, and being sprinkled with water from a branch of laurel. Ovid says,³

Certe ego transilui positas ter in ordine flammas,
Virgaque rotatas laurea misit aquas.

This is still practised in India.⁴ "From old Grecian authorities we learn, that the Massagetæ "worshiped the sun; and the narrative of an embassy from Justin to the Khakan, or Emperor, "who then resided in a fine vale near the source of the Irtish, mentions the Tartarian ceremony "of purifying the Roman ambassadors by conducting them between two fires." Jones on the Language of the Tartars.⁵

The Etruscans baptized with *air*, with *fire*, and with *water*; this is what is alluded to many times in the Gospels.⁶ If the words Ghost, *spiritus* in Latin, πνευμα in Greek, and רוּחַ *ruh*, in Hebrew, be examined, they will all at last be found to resolve themselves into the idea of *air* or *breath*—which gave the first idea of the soul of man. Thus we say, the breath departed from a man, or his soul left him—he gave up the ghost, *spiritus*. This may give a low or mean idea of the state of science; but I have no doubt that in its infancy the breath of man was supposed to be his soul. When it was the breath of God, of course it was the holy ghost or spirit. This is perfectly in keeping with the materialism, the anthropomorphism of the letter of Genesis, of Moses, and of all other nations. When Jesus communicated the Holy Ghost, he breathed on his disciples.

In plates 172, 173, 174, &c., Gorius gives examples of the baptism of the ancient Etruscans, in the rites of Mithra or Isis, by water, air, fire, and blood. The ancient Etruscans were thought by many to be a colony which escaped from Egypt when the shepherd kings conquered that country. The identity of the worship of ancient Etruria and Egypt makes this not unlikely.

6. In Tab. clxxii. Gorius gives two pictures of ancient Etruscan baptisms by water. In the first,

⁶ See the references ut supra.

the youth is held in the arms of one priest and another is pouring water upon his head. In the second, the young person is going through the same ceremony, kneeling on a kind of altar. Gorius says, "Solemne apud Etruscos baptismatis traditionem per manus sacerdotis, aliis sacris ministris adstantibus, additis modulationibus, precibus et carminibus, ceterisque ceremoniis, quas mox indicabo, nemo alius certe, quam diabolus, nequissimus humani generis hostis, excogitavit docuitque: qui, ut insanas gentes, divinæ lucis expertes, in sui servitium et obedientiam miserandum in modum captivaret, lustrandi complura genera, aëre, aquâ, igne, sanguine, aliisque februationes monstravit, ut Deum divinæ legis conditorem sapientissimum æmularetur. Callidissimas ejus artes ita aperit Tertullianus.¹ *Diabolus ipsas quoque res sacramentorum, in idolorum mysteriis æmulatur, tinguūt et ipse quosdam, utique credentes et fideles suos, expiationem de LAVACRO repromittit, et sic adhuc initiat Mithræ: signat ille in frontibus milites suos: celebrat et panis oblationem,*² *et imaginem resurrectionis inducit, et sub gladio redimit coronam. Quid? quod et summum pontificem in unis nuptiis statuit? habet et virgines, habet continentes. Ceterum si Numæ Pompilii superstitiones revolvamus, si sacerdotii officia et privilegia, si sacrificalia ministeria et instrumenta et vasa illa sacrificiorum et piaculorum, et votorum curiositates consideremus nonne manifeste Diabolus morositatem legis Mosaicæ imitatus est? Addo etiam, Etruscos, compluribus seculis ante Numam Pompilium, non solum in usu habuisse BAPTISMA, verum etiam sacram χειροτονίαν, nam Etruscæ Antistitæ manus imponunt iis, quos initiant, ut alibi ostendam, adlato Etruscæ vrnæ anaglypho opere. Constat enim, initiatos complura probationum genera experiri debuisse, antequam sacris Deorum, ac præsertim ΜΙΘΡÆ, admitterentur quæ mox considerabimus."*

The following are copies of the two Etruscan inscriptions on the monuments above alluded to :

In the middle of the second, a letter seems to be wanting.

These Etruscan monuments would have been ascribed to the ancient Christians if the Etruscan inscriptions had not rendered this impossible. In this manner I have no doubt whatever, that great numbers of Gentile monuments of antiquity have been adopted by modern Christians.

From these ancient Etruscan monuments it is evident, that the practice of baptism was common long before the birth of John or Jesus, in the ceremonies of Isis, of Mithra, and of the Eleusinian mysteries; and from the passage in Tertullian,³ it is evident, that it was not merely a similar ceremony of washing. The words regenerationem et impunitatem perjuratorum suorum (the actual word *regeneratio* used in our order of baptism) prove, that the doctrines as well as the outward forms were identically the same. It appears also from the former part of the quotation, that the practice of sprinkling with holy water, both by the Greek and Romish churches, was used by the Etruscans, and was only a continuation of their ceremony. On the festival of All Souls, at Florence, the monks went round their cloisters and monasteries, in the presence of the author, sprinkling

¹ De Præscript. adv. Hæret. Cap. xl.

² The ceremony of baptism was mostly accompanied with the sacrifice of *bread* and *wine*.

³ De Bapt. Cap. v. quoted in p. 66.

the walls, &c., &c., with holy water, as described by Tertullian to be the practice of the ancient followers of Mithra.

Apuleius also shews, as above stated, that baptism was used in the mysteries of Isis. He says, “Sacerdos, stipatum me religiosa cohorte, deducit ad proximas balneas: et prius SUETO LAVACRO traditum, præfatus deûm veniam, purissimè CIRCUMRORANS abluit.”

Mr. Maurice shews that purgations or lustrations by water, and holy water, were equally used by the Jews, Persians, Hindoos, and Druids of Britain.¹ Potter, in his *Antiquities*, proves that every ancient temple had a vase, filled with holy water. This was called a *Piscina*, and was probably the *Bowli* of India, noticed in my first volume.²

The child is taken to the priest, and is named by him and blessed, &c., before the sacred fire, being sprinkled with holy water, which is put into the bark of a sacred tree called *Holme*.³

7. The giving of a name to the child (as indicated by the parents to the priest), the marking of him with the *cross* as a *sign of his being a soldier of Christ*, followed at fifteen years of age by his admission into the mysteries by the ceremony of confirmation, or the sacred *χειροτονια*, or imposition of hands, the same as in our ceremonies, prove that the two institutions are identical. But the most striking circumstance of all is the regeneration—and consequent forgiveness of sins—the being born again. This shews that our baptism in *doctrine* as well as in *outward ceremony*, was precisely that of the ancient Etruscans. The *χειροτονια* is evidently the same ceremony as the admission of our priests into orders, as well as the ceremony of confirmation or admission to church membership. In each case, by the *χειροτονια*, a portion of the Holy Spirit is supposed to be transferred from the priest to the candidate. I beg my reader carefully to read our baptismal service. This *χειροτονια* is the baptism by the Holy Ghost. Christian Baptism was called *Λετρον παλιγγιννεσιας*, the laver of regeneration,⁴ and *Φωτισμου*, illumination.

It is a curious circumstance that not one word can be produced from the New Testament in support of *infant baptism*; every thing adduced in its favour from that authority being a violent and forced implication. Bellarmine is obliged to admit, that *infant baptism* is contained in Scripture “*in universal*” though not “*in particulari*.”⁵ This is an excellent example of a modern tradition—that is, of a tradition set up since the writing of the gospel histories—a doctrine, a sacrament, forgotten by the Evangelists and the authors of the Epistles, but discovered since, by their more enlightened followers!

8. I must now notice a branch of the Christian baptism of exquisite beauty. I must confess that my *favourite Pagans*, as they will be called, can produce nothing equal to it. And this is the baptism of BELLS. It is peculiar to the *Western* part of the world, though somewhere or other, but where I cannot recollect, I have read, that there is a similar ceremony in China.

We are told by Mr. Maurice that bells were sacred utensils of very ancient use in Asia. The dress of the high-priest of the Jews on the most sacred and solemn occasions was trimmed with bells and pomegranates. Calmet⁶ tells us, that the kings of Persia, who were both priests and kings, had their robes trimmed with pomegranates and bells. This almost identifies the Jews and Persians. Mr. Maurice states that bells are used in the ceremonials of the pagodas of India to frighten away the evil spirits or *dæmons*, who are supposed to molest the devotee in his religious exercises, by assuming frightful forms, to distract his mind from the performance of his

⁶ Dict. word *bell*.

duty. He says, "The vibration of the sacred bell, however, was ever heard with horror by the
 "malign demons, who fled at the sound, while the air being put in motion by it, became purified
 "of the infection which their presence imparted. From Asia, it is probable that the bell, with a
 "thousand concomitant superstitions, was imported into Europe, and mingled with the rites of a
 "purer religion. Every body knows its importance in the catholic worship; the ceremony of
 "anathematizing with bell, book, and burning taper: and the thrilling sound of the dreadful
 "passing bell, which not only warns the devout Christian to pray for the departing soul of his
 "brother, and to prepare to meet his own doom, but drives away, said the good Catholics of old
 "time, those evil spirits that hover round the bed of the dying man, eager to seize their prey, or,
 "at least, to molest and terrify the soul in its passage into eternal rest."¹

The bell probably not being known to the Lacedemonians, they used instead of it a kettle-drum. This is stated to be used at the death of their king to assist in the emancipation of his soul at the dissolution of his body;² evidently our passing bell.

"Pope John XIV., about the year 970, issued a bull for the baptizing of Bells, 'to cleanse the
 "air of devils.' The baptizing of Bells was only permitted to the Bishops suffragan, because it
 "was of a more principal kind than that of *infants*: priests and deacons could baptize them.

"The tongue of the baptized Bell made the ears of the affrighted demons ring with 'Raphael
 "'Sancta Margereta, ora pro nobis'—these prayers are on bells at St. Margaret's Mount in
 "Cornwall.

"In Luther's time the princes of Germany complained to the Legate, 'that, at the time of
 "baptism, godfathers of the richer sort, after the Suffragan, take hold of the rope, sing together,
 "name the bell, dress it in new clothes, and then have a sumptuous feast."³

During the French Revolution, four of the bells of the cathedral of St. Louis, Versailles, were destroyed. On the 6th of January, 1824, four new ones were baptized. The "King and the
 "Duchess D'Angoulême were sponsors. The inscription varying the name and number on each
 "is—'Je suis la première de quatre sœurs, qui ont été offertes à Dieu, &c. J'ai été bénite, &c.,
 "'et nommé Marie par sa Majesté Louis XVIII., Roi de France et de Navarre, et par S. A. R.
 "'Madame, Fille de Louis XVI., Duchesse d'Angoulême,'" &c.

"The four sisters were suspended in the centre of a platform, under a square canopy of crimson
 "silk, with broad gold fringe, and surmounted with plumes of ostrich feathers. The eldest wore
 "a superb petticoat of embroidered gold brocade, over another of silver tissue, festooned at the
 "bottom, and fastened with white satin rosettes, so as to exhibit the end of the clapper, peeping
 "out beneath. The others were arrayed in plain gold brocade over a silver tissue. During the
 "ceremony no splendours in the grand ceremonials of the church were omitted. A white satin
 "ribbon being passed from the iron tongue of each bell to the hand of the sponsors, they gave a
 "smart pull for each response, and the sisters each time answered, 'Amen.'⁴ *Ah, happy
 France, which possesses a family so alive to the comforts of our blessed religion!!! AND STILL
 HAPPIER BRITAIN, THE SWORD OF WHOSE ENEMY IS WIELDED BY SUCH A FAMILY!!! A. D. 1830.*

9. It cannot be shewn, perhaps, that the Persians had the same forms for the ordination of their priests as those now used by the Christians; but they had all the remainder of the hierarchical system, as Dr. Hyde has shewn; whence it is fair to conclude, that they had also the forms of orders, the *χειροτονια*, though, from the lapse of ages, &c., it cannot be satisfactorily

¹ Maur. Ind. Ant. Vol. V. p. 904.

⁴ Hog's Hist. Cornwall, p. 470.

proved. Had it not been for the casual mention of some other of the Persian customs by the early fathers, we should have known nothing about them. Therefore, it must be left to the reader to judge for himself, when he has considered what Dr. Hyde has said, whether there may not transpire enough to justify him in inferring from the large part of the system which has come down to us, that the remaining small part existed formerly, though the evidence of it be now lost. This must not be considered as a solitary instance taken by itself, for in that case it would certainly amount to nothing; but it must be considered conjointly with all the other circumstances of striking similarity, indeed of absolute identity, of the two religions. The practice of the *Χειροτονία*, in the case of Confirmation, raises a strong suspicion, that it would not be wanting in the more important matter of Ordination.

Hyde¹ says, “Et quidem eorum sacerdotium ferè coincidebat cum eo Judæorum, in quo erat unus summus sacerdos, et deinde plurimi sacerdotes atque Levitæ. Hoc autem excedebat hierarchica Persica, (quamvis Christum præcesserat, magis cum Christianâ coincidens,) in quâ præter sacristanos,² erant sacerdotes, et præsules et archipræsules, qui hodiernis Christianorum presbyteris, et episcopis, et archiepiscopis correspondent. Adeò ut ecclesiæ Christianæ amicis pariter et inimicis fortè novum et inopinatum videbitur in Persiâ reperisse constitutionem ecclesiasticam prope 3000 abhinc annis fundatam, quæ tam pulchrè coinciderit cum subsequente hierarchiâ Christianâ. Hocque non sine numine factum, sc. Persas olim ordinâsse idem quod postea Christus et Apostoli ejus, in plenitudine temporis, tandem novâ sanctione instituerunt et confirmarunt. Ecclesiæ itaque eorum regimen in primâ ejusdem constitutione fuit benè fundatum. Eorum synagogæ minores seu indotatæ ecclesiæ parochiales alunt in singulis unum sacerdotem, eumque ex decimis ac spontaneis contributionibus: nec ignis perpetui expensas in eis faciunt, nisi per lampades, exceptis magnis quibusdam diebus. At Pyrea, seu templa cathedralia, ubi sedes episcoporum, amplis terris et redditibus dotata erant, ad parandum sacrificia, et ligna coëmendum, et ad alendum sacerdotium amplissimum.”³

As with the Jews, the sacred fire was fed with sacred wood, from which the bark was taken. And as now, in Romish countries, “in propriis ædibus plerique habent perpetuo ardentem lampadem ab igno sacro accensas.”⁴ On the great festivals they sent their victuals to a common table, and ate together with the poor, as described by Pliny to be the case with the early Christians of Bithynia.

From the passages here cited it is evident, that the hierarchy of the Christians is a close copy of that of the Persians, and that where the Christian differs from the Jewish it agrees with the Persian, a proof that it is taken from the latter and not from the former. It has been before observed, that Mr. R. Taylor, in his *Diegesis*, has clearly proved the Christian hierarchy to be the same as that of the Essenes, even to the most minute parts. The similar customs of keeping candles and lamps always burning in their temples is very striking. The larger endowments for the cathedrals bear a marked resemblance to those of ours in this country, many of which were, I have no doubt, the renovated establishments of the ancient Druids.

10. The rite of *marriage* was, with the ancient Persians, a religious service; and, for its solemnization, they had a long liturgy or form,⁵ after the manner of the Greek, the Romish, and the Protestant Christians, and not according to the custom of the Scotch, among whom it is only

¹ De Rel. Vet. Pers. Cap. xxviii. p. 349, ed. 1700.

⁵ Ibid. Cap. xxxiv.

a civil contract.¹ The contents of the liturgy are lost, but we know that the use of the ring, on the second finger from the last on the left hand, was practised by almost all the ancients.²

11. Every one knows in what high estimation oil was held among the Eastern nations, and *he* has not read the Old Testament with attention who is not acquainted with the very frequent use of anointing among the Jews. "The practice of anointing was not confined to kings, but was extended to prophets and others. It was especially practised on a medicinal account, and administered publicly in the synagogues by the elders on the Sabbath; where the applying of this remedy to poor sick people, was accompanied by the prayers of the faithful for their recovery, and the pardon of their sins; or if the persons were in a very weak condition, the elders came home to them. Lightfoot observes, out of the Jerusalem Talmud,³ that Rabbi Simeon, the son of Eleazar, permitted Rabbi Meir to mingle wine with the oil, when he anointed the sick on the Sabbath: and quotes as a tradition from them, that anointing on the Sabbath was permitted."⁴ The Apostle James therefore, writing to the Jewish Christians, whose synagogues and rites were precisely the same with those of the other Jews, says "Is any sick among you? let him send for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save the sick, and the Lord shall raise him up; and, if he have committed sins, they shall be forgiven him."⁵

Whether the Persians had the rite of *extreme unction* I do not know; but if they had it not, then the Christians must have borrowed it from the Jews. When all other circumstances are considered, few unprejudiced persons will be found to doubt, that this practice was probably common to the Jews and the Persians.

There is scarcely any doctrine of the Romish Church which has afforded more matter for the use of the weapon of ridicule than that of *purgatory*—that weapon declared by the Protestants to be so unfair, abominable, and blasphemous, when applied against themselves; but considered to be so fair, honourable, and legitimate, when used by them against their Romish enemies.

The doctrines of *Penance* and *Purgatory*, taught by the Catholics and so much calumniated by the Protestants, are exactly the same in principle as the penances and metempsychosis of the Pythagoreans, Platonists, and Indians. The Romish doctrine of penance is precisely that of the Hindoos, and I have no doubt that from the modified *principle* of the metempsychosis the doctrine of purgatory took its rise. After man, reasoning upon the beauty, order, and sublimity, of the creation, arrived at the knowledge of the First Great Cause and ITS⁶ attributes of benevolence &c., the belief in man's immortality followed as a necessary consequence. For, if there were not a future state of existence, where the good would be rewarded and the bad punished, how could the Creator be just or benevolent? And again, how could he be either just or benevolent if the existence of man in a future state was not happy or miserable in proportion to his good or bad conduct here? And as man has been created fallible in his nature, and inevitably subject to fall

¹ It was the same in England from 1653 to 1660, and is considered to be a civil contract in the United States of North America. *Editor.*

³ Harm. N. Test. Works, Vol. I. p. 333.

⁴ Toland's Naz. p. 54.

⁵ James v. 14, 15; see also Mark vi. 13, xvi. 18.

⁶ I say *its*; for how absurd is it to give a *masculine* or *feminine* gender to the Creator! The *only-begotten* Son of God!! What nonsense! The only excuse which can be made for the use of the word *begotten*, is, that those who adopt it apply to it no idea whatever, or some idea which the word does not mean. [The Evangelist *John* alone uses the expression, (ch. i. 14, 18, iii. 16, 18; 1 Epis. iv. 9,) and as he wrote neither his Gospel nor his Epistle till long after the resurrection and ascension of his revered Lord, the sense in which he used the term may probably be gathered from Rev. i. 5—"Jesus Christ the *first-begotten* of the dead." *Editor.*]

into some degree of guilt, it was also thought to follow that his future state of existence could not be eternally miserable. This was the inevitable consequence if the Creator were just; hence arose the doctrine of purgatory—a state of existence in which the soul of man or that part of him that exists after death, and which though invisible must exist, will in future receive the reward of his good or bad conduct.

This was the simple, unadulterated doctrine of the sages of India, Persia, Greece, and Rome: it remained for the brilliant imagination of John Calvin to discover that it was consistent with the attributes of benevolence in an omnipotent Creator to cause a being to exist, who, from *his very nature*, is obliged to sin, and then, for such sin, to condemn him to endless misery. But these doctrines are deduced by learned men of narrow minds from corrupt passages in the Gospels, and still more from the fanatical nonsense of Paul.¹

The doctrine of *purgatory* or of a future state, in which man was to receive the greater or less reward of his misconduct in this life, like every thing in which priests have any concern, was soon corrupted and converted into an engine to aggrandize their pernicious order, and to enable them to wallow in luxury and sloth upon the hard earnings of their fellow-creatures. Hence they taught their blind and credulous devotees, that by their superior sanctity they could prevail upon God to alleviate or shorten the term of their future punishment, and by aggravating the faults of the miserable and repentant sinner, in the last stage of weakness and disease, and working upon his terrified imagination, they extorted from him his wealth. Hence arose voluntary acts of supererogation and penances, by suffering which in this life the punishment in another was to be mitigated. Hence masses or services for the dead. Hence extreme unction and all the other figments of Papistical foolery among the devotees of Greek, Catholic, or sectarian Christianity.

Protestants may exclaim against these superstitions, as they call them, but they are real *orthodox* Christianity and cannot be got rid of. It is no argument to say, they are absurd or pernicious. They are not more absurd than the doctrine of demoniacs, nor more pernicious than the doctrine of the efficacy of *faith* without *works*. We have already quoted the opinion of the Apostle James on the subject of anointing the sick, p. 72. He adds, (ch. v. 16,) *Confess your faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much.*

The doctrine of Purgatory, so offensive to the gloomy fanatics among the Protestants, because it does away with the doctrine of eternal damnation, is, when not abused, one of the most sensible of the miscalled Christian doctrines, because it is not contrary to the moral attributes of God. It was a close copy of the doctrine of the Heathens and of Plato, who, in his *Phædon*,² divides the dead into three sorts—the *good* in a state of bliss; the *very bad* in Tartarus;³ and the *curable* in an intermediate state, from which, after they have been in it a suitable time, they are released. For these last, the Gentiles were in the habit of offering sacrifices, called *τελεται*. In his *Republic*, II., Plato says, “That these *τελεται* belong only to the dead, and are named from “*τελευτησασι*, being sacrifices appointed to deliver us from the infernal sufferings; they were “offered chiefly in the night, and called *μυσήρια*, *mysteries*.” The doctrine of Purgatory is found

¹ Rather from passages in the Gospels and in Paul's Epistles misunderstood and misrepresented? *Editor*.

² P. 113.

³ I believe Paradise or Tartarus to be in Tartary, the farther side of Meru, the mount on the side of the North, where the Gods assembled in judgment. Though the Europeans made it hot, I have little doubt that the natives of a country under a tropical sun made their hell *cold*. The same reason in part caused the Hindoos to place the mount Meru in a temperate climate, *on the sides of the North*.

in Tertullian.¹ This early date shews them to be coeval or nearly so with Christianity.² The prayers for the dead are evidently the Gentile *τελεται*, purchased with gifts.

The Jews had the rite of *Confession*.³

On several of the ancient monuments in the Campidolia at Rome are bas reliefs of the ancient Sibyls, or of females performing penance, which leave no room to doubt that this sacrament was in use by the Romans. They may be seen by any one who will take the trouble to go to look at them. This fact requires no further proof. The Flagellants were exact copiers of the priests of Bellona, and of the priests of Baal.⁴

The hermits of Italy are humble imitators of the Fakirs of India, who were well known in ancient times. St. Austin says,⁵ "They abstain from women, and philosophize naked in the solitudes of the Indies. From the rising to the setting of the sun they remain with their eyes steadfastly fixed upon it. Others stand perpetually on one leg. They expose themselves without complaint to the extremes of cold and hunger."

The doctrine of purgatory and the efficacy of the prayers of the living to relieve the deceased from their sufferings is a correct copy of the doctrine and practice of the Pagans. Ovid says that Æneas was the first person who introduced the doctrine into Italy. In his *Fasti* he says,

Hunc morem Æneas, pietatis idoneus auctor,
Attulit in terras, juste Latine, tuas.
Ille patris Genio solennia dona ferebat;
Hinc populi ritus edidicere novos [pios?].—Lib. ii. 543—546.

It was the general belief of the Pagans, that the souls of the dead would return, to demand of the living that they should offer sacrifices for the purpose of relieving them from the pains which they endured. The Pagans differ from the Romish priests in this, that they offered up their prayers for the dead on the ninth day, the Romish on the seventh.⁶ This is confirmed by Polydore Virgil.⁷

Lord Kingsborough⁸ states, that the Jews, of later day I suppose he means, were believers in *purgatory*.

The tombs of the pretended Gods were not set up by merely an ignorant populace, but they were encouraged and protected by law. Ludovicus Vives says, "The religion of sepulchres is most ancient: whereby it was prohibited to any to violate, throw down, or break them: which law was not only in the twelve tables, and among Solon's, but also in the most ancient laws of Numa, and of both Latins and Greeks: which seem to belong not so much to the civil law as to the sacred: because sepulchres were esteemed as temples of their Manes or Demons: whence there was inscribed on them D. M. S. i. e. *Diis Manibus Sacrum*: and the sacreds which were performed to them were called *Necia*."⁹ Over the tombs of Heathen Gods rose many a church dedicated to the same God, but denominated a Christian saint. Thus the tomb of Bacchus became a church of St. Baccus. Thus again the pretended tomb of the deified Romulus in Rome became the church of St. Theodorus.

over fools, nothing has ever yet been found so efficacious and powerful as *Auricular Confession*. "Confess your faults one to another," says St. James, and this put the most secret affairs and counsels of all the states of Christendom into the hands of the Pope and his priests. This powerful engine was itself alone sufficient, in the skilful hands of the priests, to lay all the riches and good things of this world at the feet of holy mother church—to enable its bloated, pampered hierarchy to ride triumphant over the liberties of mankind, and to reduce the rest of their fellow-creatures to the lowest state of mental debasement and misery. By means of the priests the kings tyrannized over the people, and by means of the slavery of the kings, the priests had at their command the wealth of the whole world.

The observation is as *true* as it is *trite*, that a small drop will wear a hole in a large stone: thus causes apparently small by long continued and unceasing action produce effects which to superficial observation seem out of proportion to their power. Of this nature is the practice of auricular confession in the papal church. To this, in a great measure, may be attributed the victory which it gained over all its competitors. It is almost inconceivable what a vast variety of opportunities of acquiring power and wealth this must have thrown into its hands. It must have been almost equally useful in enabling it to avoid dangers. The church possessed by this means a species of omniscience. It is evident that by means of its corresponding societies of monks it would be timely warned of the approach of every danger. Knowledge has been said to be power; this is very true, and this knowledge, for a space of almost a thousand years, enabled the Papal See to dictate laws to the whole European world; and, if the art of printing had not been discovered, would have reduced it to the situation in which Tibet now is, under its grand Lama. The God in Tibet and the God (as he was actually called) at Rome would have been in every respect similar. Indeed, I should be glad to learn wherein the difference consists between the adoration¹ paid to the Lama, and that paid by the cardinals to the Pope on his first exaltation on the altar after his instalment. Modern sophistry may talk of civil adoration: the understandings of mankind having become too enlightened, the daring violation of religion and decency must be explained away. But the practice is continued: it awaits a restoration, by the holy allies, of the darkness of the tenth century. The papal policy is sometimes suspended—it never dies. In more senses than one, *nullum tempus occurrit ecclesiæ*.

It would be giving the Christian priests too much credit to allow them the merit of inventing these engines of despotism and priestcraft; they were merely imitators, though they may have improved upon the originals which they copied. They removed some absurdities, they added some stimuli; but all the doctrines to which I have just now drawn the attention of the reader, are to be found with very little deviation in the faith of the oriental nations, and from them they passed to the Christians through the medium of the sects of Gnostics and Essenes, both of which existed among the natives of Asia and Africa long before the time allotted for the birth of Christ. Thus I think the *seven* celebrated sacraments of the Romish Christians, in which the two held by the Protestants are included, are proved to be nothing but renewed Gentile ceremonies, that is, integral parts of the usually called pestilent and idolatrous superstition of the Pagans.

CHAPTER II.

REVENUES.—MONKS AND NUNS.—MITRE.—ZONE.—CASSOCK.—PRAYING STANDING.—WHITE SURPLICE. TITHES PAID. TONSURE PRACTISED. CROSIER, &c.—CANDLES, INCENSE.—PROCESSIONS. IMAGES. ST. ABRAHAM.—FESTIVALS.—EPIPHANY. ST. DENIS, &c.—BAMBINO AT ROME. DEDICATING CHURCHES, &c., &c.—BULLA. AGNUS DEI. ANGELS. DÆMONS.—SUNDAY, DIES SOLIS. VARIOUS CUSTOMS.

1. THE revenues of the Romish priests came from the same sources as those of the sacrificers of the Pagans. They had first the tithes, then offerings, which the devotees presented to the Gods, which they took and applied to their own use. But as the offerings were casual, and not always to be depended on, a provision was made from the public revenue for the different orders, and in general for all those who were employed about the offices of religion. Besides this, many private individuals consecrated their property to the same purpose; so that rich benefices became founded: and these benefices were, as they are with us, some in the presentation of the prince or the college of pontifices, others in that of individuals who had the right of patronage. And as at this day, complaints against pluralities were made.¹ The Pontifex Maximus, also, had the right to the annates, or fruits of the first year, which he might sell or give away. Another source of wealth was found in the legacies left by those who wished prayers to be said for their souls after their deaths, which is proved by the monuments of the ancient idolaters still remaining. Here is the origin of the Romish prayers for the dead.² Another source of wealth arose from confiscations of the property of condemned persons. The houses and property of Cicero were confiscated to the sacred college when he was banished, and the revenue ordered to be expended in sacrifices to the Goddess of liberty. By these means the priests, in ancient and modern times, have equally amassed great wealth.

2. The Pagans, besides their pontiffs, their priests, and their curiones, had different convents or orders of religious men and women, who took the epithet of *holy* or *divi*: some called themselves Quirini from Romulus, others Diales from Jupiter, *απο τῆ Διοῦς*, others Martiales from Mars. They called themselves brothers, because they were bound to one another by reciprocal charity and alliance,³ and were all on an equal footing. Thus, at this day, we have Jesuits, Augustinians, Benedictines, &c. The Monks among the Pagans were proprietors of land. T. Livy says,⁴ that Numa instituted the Quirinales and the Vestals, and established for them a revenue. Others were Mendicants, as the religious of the Great Mother of the Gods,⁵ who answered exactly to the Christian Mendicants begging for the Virgin, the Mother of God. Apuleius, in his Golden Ass, has ridiculed them for their hypocrisy, by which they, under the pretence of poverty, acquired riches. No beggars were allowed in Rome except these. The Romish Mendicants, like those of the Pagans, were the great dealers in saints, in relics, in apostolic letters, indulgences, and other trumpery. They in both cases had particular habits, and long beards. If they had not been

⁵ Augustin, de Civit. Dei, Lib. vii. Cap. vi.

particularly dressed they would not have been known from other people, says Bellarmine.¹ Their silence was an exact copy of the silence of Pythagoras; and their vow of poverty was an imitation of that of some of the ancient philosophers, who distributed all their substance to the poor.

The Hierophantes, at Athens, drank of the *Hemlock* to render themselves impotent, that when they came to the Pontificate they might cease to be men. The priests of Egypt never mixed with women, and to extinguish the passion for the female sex they never ate flesh or drank wine.² The priests of the Great Mother drank of a certain river of Phrygia, which putting them in a fury they castrated themselves, and thence were called *Semi-viri*. The priests of Egypt had their fast days, when they abstained from flesh and wine. The priests of Eleusis kept strictly the three commandments given by Triptolemus—to honour their father and mother; the second, to reverence the Gods; and the third, to eat no flesh. Numa established fasts, particularly one in honour of Ceres, when the people offered up their prayers for a good harvest.³ The Pagan fasts were to appease the Gods; thus Horace says, *Mane die quo tu indicis jejunia*. From these examples we see the origin of the Romish fasts.

3. The father Ange de S. Joseph speaks of the ruins of Persepolis in the following terms: “There are many inscriptions on the marble of the ruins, but in characters unknown to all the universe, which shews their great antiquity. Many bas reliefs represent the divinities, the sacrifices, the funeral pomps, processions of men with large vests, long hair, *with bonnets in form of a mitre*.”⁴ From this it is evident that the mitre which we see worn by the priests in the Mithraic mysteries, and which is still worn on grand occasions by the bishops of the Romish and Greek churches, is of very ancient establishment.

4. When young Persians came to be from twelve to fifteen years of age, prayer and ceremonies took place, and they were invested with the girdle.⁵ They were then supposed to be capable of understanding the doctrines of the religion. It was, in fact, the ceremony of confirmation.

In the Sadder, the sacred book of Zoroaster, it is written, that God has commanded the girdle as a sign of the obedience which is due to him.⁶ It was believed that it rendered the wearer safe from dæmons. All the Christians of the Levant, whether Syrians, Arabians, Egyptians, or Coptes, believe that they commit a sin if they go into a church without their girdle.⁷ They found this practice upon Luke xii. 35. The monks use a girdle with twelve knots to shew that they are followers of the twelve apostles: and when one of them is excommunicated they pull off his girdle. When the Mohamedans receive into their communion a proselyte, either from the sect of the Magi or Christians, they cut off his girdle, which he in future disuses. Thus we here see whence the girdle of the monks is taken.⁸

5. From the same place with the girdle came the use of the Cassock or Sudra. From Hyde we learn that Zoroaster is reported to have said that he received it from heaven along with the girdle: Hyde describes it to be the same with that used by our English clergy, and shews that it was from the girdle that we derived the old English proverb—*ungirt unblest*.⁹

Concerning the Origin of the Zone and Cassock Hyde¹⁰ says, “In ejus imperio venit Zerdusht ‘propheta, coram Gushtasp prophetiam præterdendens, eique dicens: Ego sum propheta quem Deus

“ excelsus ad te misit: et istum librum Zend-avestâ è Paradiso attuli: et hanc Sudram et Cingulum mihi dedit, inquit, istam Sudram indue,¹ et istud Cingulum in medium tuum cinge, ut anima tua à Gehennâ liberetur et salvationem inveniat; Religionem quoque Dei in mundo propagato.” “ In primo infantum baptismate imponitur nomen: et postea anno septimo ut quidem aiunt, vel potius anno decimo quinto (quando censetur intrare in religionem,) tum adhibitis precibus à sacerdote datur confirmatio solennis. Et eo anno decimo quinto (ut religionis tessera) eis traditur sudra, seu tunica, et cingulum, quibus nunquam, ne per unum momentum (nisi in lecto sint) destitui debent.”² “ Pueri et Puellæ post quindecim annorum ætatem (ut supra) cingulum, religionis tesseram, induere incipiunt, et divina præcepta ejus instillantur.”³ “ Tunica cingitur cingulo, secundum sacerdotalem habitum in Angliâ, excepto colore.”⁴ Hyde states that the stole was used in the rites of Mithra. “ Mithra ibi est in figurâ regis Persici, uti constat ex Tiarâ directâ et Stolâ, quæ solis regibus competunt.”⁵

6. It often happens that trifling circumstances are more striking than those of more consequence. The identity of the two religions being evident, they are less likely to be the produce of accident. And what I am going to describe are of so out-of-the-way, unexpected a kind, that there must be some cause for the similarity.

From Hyde we learn that the ancient Persians set apart four days in each month answering to the Sabbath days of the Jews and to our Sundays, which were festivals. On these days they met in their churches, and had more solemn service than on other days, reading portions of their sacred book, and preaching and inculcating morality and purity. “ Habent enim suo modo liturgiam publicam, quam certo quodam tono, seu *plano cantu*, modulantur et cantillant, sc. certam atque præscriptam precum et aliorum rituum formam.” He also says, “ Ubi post peractam prostrationem (ut fiebat in templo Hierosolymitano) STANTES ORANT.”⁶ It is impossible here not to be struck with the identity of the Persian and Christian services. The four days of the month, the reading of portions of the sacred books, the preaching, the liturgia publica, the præscripta forma rituum et precum, the *tono seu plano cantu* of the Romish, and chaunting of the Protestant cathedrals. But perhaps among these different traits of resemblance there is no one more striking than that of the praying standing on the four festival days of the month.⁷ The early Christians always prayed on a Sunday *standing*. Tertullian says, Die dominicâ jejunare nefas ducimus vel *de geniculis adorare*.⁸ In Canon sixteen,⁹ worshiping on the knees on Sunday is forbidden. It says, “ Porro in sanctis dominicis diebus sacrisque aliis solennitatibus nullæ fiant genuflexiones, quia tota sancta ecclesia in hisce lætatur et exultat diebus.”

7. Silius, speaking of the strange rites used in the Gaditan temple of Hercules, says, the priests officiated there barefooted, practised chastity, had no statues, used white linen surplices; and it was a notorious custom with the ancient Phœnicians to pay tithe. The *shaving* of the head and *surplices* were borrowed from the Egyptian priests, and the *crozier* or pastoral staff was the *lituus* of the Roman augurs.¹⁰ The tonsure of the priests and monks is an exact imitation of that of the priests of Isis;¹¹ and St. Epiphanius witnesses also,¹² that the priests of Serapis at Athens

¹² Hær. 64.

had the head shaved. This custom is forbidden in Lev. xxi. 5, and the prohibition is afterwards repeated, in Ezek. xlv. 20; for this is the meaning of the word קרתה *qrte*, as Rabbi Solomon on the report of Buxtorf has noticed.

The habit and the ornaments of the ecclesiastics at this day have been copied from those of the ancient Pagans. The cross of the bishops I need not name again. The Lituus or Crosier was the Hierałpha of the Hindoos, taken from the cave of Bala-rama near Muttra, and seen in a variety of fantastic forms on the ancient Egyptian monuments. It is often united to the cross

thus  It was the origin of the jawbone of Samson. It was the first rude, ill-formed

plough, thus 

The Amicts and Dominos of the bishops came from the same place; for the Pagans never made any sacrifice without having the head covered with an Amict, which they called Orarium, and a Superhumeral. They wore also an Aube, as the priest does when he goes to say mass.¹ And the Flamens were clothed with a robe made with copes, like those which the Romish priests wear in the churches.² The Stole is an imitation of that which they put on the back of the victims which they offer on the altar. The Cardinal Baronius³ has remarked, under the year 44 of our Lord, that the ancient Pagans had the surplice: that they carried the pastoral staff called the lituus or crosier; that they used the episcopal ring and mitre; that the flamen or priest who sacrificed was clothed in a garment of fine linen, called by the Latins Alba Vestis: and Juvenal, in his 6th Satire, says, that the high priest of Anubis, environed with a crowd of other priests clothed in fine linen, with his head shaved, deserves the first rank and supreme honour.

8. The use of *lamps* and *candles*, in the day-time, in the churches, was copied from the Egyptians, who, according to Clemens Alexandrinus, first invented them.⁴ No person can look into the ancient temples of India and Egypt and not see that candles, either by day or night, could not be dispensed with. All their ceremonies must have been by candle-light, as the most sacred parts of their temples had no windows or openings to admit light. During the delivery of sermons I have sometimes met with churches, in Italy, from which the sun was entirely excluded.

The use of *incense* was common both to Jews and Gentiles.

Sæpe Jovem vidi cum jam sua mittere vellet
Fulmina, thure dato sustinuisse manum.⁵

Alex. ab Alexandro says,⁶ that the Egyptians appeased their Gods with *prayers* and *incense*.

9. The *processions* around the streets and towns, in Catholic countries, are exact imitations of those of the Pagans. When the priests of the Mother of the Gods made their processions through the streets, they carried the image of Jupiter, which they placed for a short time in small bowers dressed out for him, precisely as is done in Paris at the Fête Dieu. Virgil, in the first book of his *Georgics*,⁷ recommends the peasants to carry the statue of Ceres round their fields:

“ ——— Annua magnæ
“ Sacra refer Cereri,” &c.
“ Terque novas circum felix eat hostia fruges.”

Further accounts of the Heathen processions may be seen in Apuleius.⁸

As the Roman Church has its processions for rain or fair weather, or to avert tempests or famine, &c., so the Pagans had theirs exactly in the same manner; they are copies of one another.

Though it may be unnecessary to point out the identity of the practices of the modern and ancient Romans in the use of images, yet it may not be unnecessary to observe, that precisely the same reasons were given in excuse for the use of them. Gregory I., against Serenus, bishop of Marseilles, says, that what books are to those who can read, pictures and statues are to those who are ignorant of the art. Porphyry, in Eusebius, justifies images on the same ground. He says they are the books of the ignorant. Theodoret on this subject says, that the demon invented images for the use of the ignorant, that by this means he might establish his superstition. There is no person, says Celsus,¹ so foolish and absurd as to believe that these things are really Gods, and not the symbols which we adore in honour of the deity. And in Arnobius,² the Pagan says to the Christian, "You deceive yourselves; for we believe not the brass, the gold, and the silver, which compose the statues, are God: but we serve God in them, and we venerate the Gods as dwelling in them, by virtue of consecration." Constantine, bishop of Constance, in the second Council of Nice, declared, "For myself I render to images the same worship of honour which is due to the Holy Trinity: and let him be anathematized as a Marcionite and Manichæan who shall refuse to do the same."³

The Christians have not only copied the practices of bowing down to the idols of their great men deified or elevated to the rank of inferior Gods or heavenly personages, but they have in many cases adopted the very persons adored by the Heathens. They have not only adopted the same practices of the apotheosis, but they have done it with the same rites and ceremonies, and given the same attributes to their deceased great men. The ancients raised such of their great men or kings to the rank of inferior Gods as had been benefactors to mankind, or as they chose to flatter, calling them by the title of *divus*. The souls of their emperors, if deified, were seen to fly away to heaven, in the form of a bird, from the body, when placed on the funeral pile: thus, in a similar manner the soul of St. Polycarp, when he was burnt, was seen in the form of a dove to wing its way to the mansions of the blessed, and he became *divus* Polycarp. Thus like *divus* Augustus, the apostles all became *divi*; as *Divus* Paulus, *Divus* Petrus, &c.

The Roman *Divi* were considered only as created *inferiores divi*, and intercessors with the Supreme God, but residents of the heavenly mansions. This is exactly the case with the Christian *Divi*; they are considered only as intercessors, but residents of the heavenly mansions; while the remainder of mankind are excluded from these abodes till the day of judgment. The relics of the *Divi* of each also received adoration, and, at times, worked miraculous cures. They both had altars erected to them, with lights constantly burning before them. Their festivals were kept on set days peculiarly dedicated to them, and the images themselves were in many cases considered to be animated, and to possess and exercise a supernatural power. I had in my possession a book, which I have given to the British Museum, published by the authority of Pope Pius the Sixth, in which the miracles performed by a great number of images are described: they opened their eyes, they wept, they spoke, they performed cures. Some of them are considered more powerful than others, and in consequence acquire more votive offerings, which are given to them in some cases, as at Loretto, to an immense amount both in number and value. It cannot be said that these are merely the idle superstitions of the vulgar. The book alluded to was published by the authority of

¹ Orig. cont. Cels. Lib. vii. pp. 387 and 285, 292.

² Lib. vi. p. 229, ex edit. Frol.; see also Lact. Lib. ii. Cap. ii.

³ Act 4, a little from the end.

the Pope and Roman Church, the miracles were all proved before a commission of cardinals, at the head of which was Cardinal Somaglia, and the genuineness of the book itself is actually ascertained beyond dispute by the WRITTEN attestation and signature of the register of the Papal chancery.

Enlightened men, both Greeks and Romists, will be offended at hearing the term idolatry applied to the believers in their religions. But there is in reality no difference between the icon worship of the ancients and that of the moderns. The enlightened men of this day are not idolaters, nor were the Ciceros nor Plinys of ancient times, but the rabble, genteel and ungentle, who believe in the miracles of the images, and honour them with their votive offerings, most certainly are. It is childish to dispute about the mere word or name given to the practice. Whatever the ancients did to their images, the moderns do to theirs; and in whatever light the ancients considered them, and with whatever attributes they endowed them—precisely in the same light and with the same attributes the moderns view and endow them. The demigods of the ancients are correctly the saints of the moderns, and both bear the name of *Divi*.

The *ἀγιολατρεία* of the Greek and Roman, as well indeed as that of the Protestant Church, is nothing more than a servile imitation of the *Δαιμονολατρεία* or *Δεισιδαιμονία* of the Gentiles; the proof of this may be seen at great length in Gale's Court of the Gentiles.¹

On the adoration of saints Bochart says, "They have transferred to their saints all the equipage of the Pagan Gods: to St. Wolfgang the hatchet, or hook of Saturn: to Moses the horns of Jupiter Hammon: to St. Peter the keys of Janus. In brief, they have chased away all the Gods out of the Pantheon at Rome, to place in their room all the Saints; whose images they worship with like devotion as those of the Pagan Gods sometimes were. They dress them up in apparel, they crown them with garlands of flowers, they carry them in procession, they bow before them, they address their prayers to them, they make them descend from heaven, they attribute to them miraculous virtues."² Bochart then, in support of his assertion that the Romish adoration of *saints* is nothing but a renewal of the adoration of the Pagan *dæmons*, observes, that the Canonization of Saints is correctly the *Apotheosis* of the Pagans, and that *Cajetan's Gods by participation* are the very same as Plato's *Θεοὶ γεννητοί*, *made Gods*, which is the title he gives to his *dæmons*. All these saints, when they were determined to be fit objects of canonization, were deemed to have been possessed of divine inspiration or the *afflatus*, in a fuller degree than common priests, all of whom have a portion of the Holy Ghost or the *afflatus numinis* instilled into them at their ordination by the imposition of the bishops' hands. These inspirations or entrances into the flesh of portions of the *divine spirit* are correctly the minor Incarnations or Avatars of the Hindoos, who say, there have been thousands of incarnations or avatars of the Supreme Being.

Among the saints of the Roman church we have Saint Abraham and Mary his niece. He came from a place called Edessa in Mesopotamia. He was considered as a saint in the Latin, Greek, and Coptic churches.³ His holiday is the 15th of March. If we make allowance for the *old style*, this brings him to the 25th of March, the Vernal Equinox. We need not repeat what has been proved respecting Maria, the queen of heaven, being the generative power. We here have her identified with Sarah, the wife of the Brahmin, which serves to prove the mythological character of Abraham and Sarah, who are evident enough in these two saints.⁴

10. The Pagans had their *festival days* in honour of their country or local Gods; these were

exactly imitated by the Christians in their wakes and revels, which were kept in honour of pretended martyrs, the names of many of whom, being the exact names of the heathen Gods, sufficiently explain what they were.

The Goddess Februa, or the Februata Juno, became the Purificata Virgo Maria. The old Romans celebrated this festival in precisely the same way as the moderns—by processions with wax lights, &c., and on the same day, the 2d of February. The author of the Perennial Calendar observes, that it is a remarkable coincidence that the festival of the miraculous conception of Juno Jugalis, the blessed Virgin, the Queen of Heaven, should fall on the very day the modern Romans have fixed the festival of the conception of the blessed Virgin Mary. Being merely a continuation of an ancient festival, there is nothing remarkable in it.

In the autumn a very peculiar festival was celebrated by almost all nations in honour of the dead.

On the 2d of November the *festum Dei Mortis* is annually celebrated. The priest makes a procession round the burial-ground, with his censer and aspersorio, sprinkling holy water and singing a *miserere* as he goes along. This, again, is nothing more than a heathen ceremony.

This festival is yet annually celebrated by the Buddhists of Tibet, by the Papists at Rome, and has yet its service and day in the calendar of the Protestant church of England.¹ Mr. Turner² informs us, that on the last days of October and first of November an annual festival is kept, which is sacred to the souls of the dead. All the monasteries are lighted up and great ceremonies take place among the monks. It appears that this festival is kept at the same time in Bengal and Hindostan. It is remarkable that this festival was anciently kept by the Druids in Ireland, and is yet continued there. In Ireland it was called the festival of Samhan, lasted two days, and was begun to be celebrated on the evening preceding the first of November, which evening is yet called *Oidhche Samhna*, or *the night of Samhan*. This solemnity was consecrated by the Druids to the intercession of the living for the souls of those who had died the year preceding that day; for, according to their doctrine, Samhan called before him these souls, and passed them to the mansions of the blessed, or returned them to a re-existence here as a punishment for their crimes.³ This Samhan was also called *Bal-Sab* or Lord of Death. This is the Beelzebub of the Christians. On this festival all the fires, except the sacred fires of the Druids, were extinguished, and every one was prohibited, under the most terrible penalties, from procuring this indispensable article in any way except from them, for which a stipulated price was paid.⁴ This festival is even yet partly continued by the Irish, who light great fires on the tops of their mountains, and pass their children and flocks through them to Beal or Samhan, as described in the Old Testament to Bel or Baal.⁵ The Irish call this festival Bealtine, or the feast of the fires of Baal. This solemnity is what we call All-Souls' Day. Gen. Vallancey says,⁶ “it was called La Samhna or Hallowmas-Day. “The Druids taught the Pythagorean system of the transmigration of souls, and that Samhan or “Baal Samhan, at this season called the souls to judgment, which according to their merits or “demerits in the life past, were assigned to re-enter the bodies of the human or brute species, “and to be happy or miserable during their next abode on this sublunary globe: hence Samhan

¹ All-Saints' Day—united with All Souls'. This festival was also kept by the Mexicans. See p. 31. *Editor*.

“ was named [by the Irish] Balsab or Dominus Mortis, for *Bal* is Lord, and *Sab* death. But the punishment of the wicked they thought might be alleviated by charms and magic art, and by sacrifices made by their friends to Bal, and presents to the Druids for their intercession.”

“ It has been the opinion of some learned men, that the Baal-Zebub of the idolatrous Jews was the God of flies or locusts, as the LXX. have translated it Deum Μούσαν, muscam, or Μουαγγου muscarum averruncum. Basnage is singular in supposing this deity to be Mars, or the God of Battles and of Arms, because, says he, the Phœnicians might readily convert צבאת *tsabath* into זבוב *Zebub*. The Irish or Ibero-Celtic retains both; for *sab* is death, and also strong, potent, valiant; so in Hebrew צבא *tsaba* militia; in Arabic, *zab*, repelling by force; *zabin*, a life guard-man, and *zaaf*, death; but our Hiberno Druids retaining Balsab synonymous to Samhan, it is evident, Baal-Zebub is Dominus Mortis.”¹ The day following is the festival of Samhan, to whom *black sheep* were offered in sacrifice.² This festival lasted till the beginning of December, which was named MI NOLAGH, or the month of the *new born*, from the Hebrew word נוּלָה *nule Nolah*, i. e. parire, to bring forth young; whence the French word NOËL, and the Irish NOLAGH, Christmas-day. This was a month of great rejoicing, as the former was of mourning.³ The Persians light fires in their temples, &c., on the day answering to the 2d of November, precisely as the Irish did, and yet do.⁴

Dr. Hyde⁵ states, that this custom is continued among the fire worshipers or Guebres of Persia at this day: and he observes, that he learns from the Talmud, that this practice was adopted by the Israelites when they were in captivity in that country among the Medes, who are called Persæ. It continues two days, because it begins on the eve, as the Buddhist book of Genesis reckons time, “and the evening and the morning were the first day;” not the morning and the evening. The identity of the religious rites in the East and West, I am justified in here reasserting, cannot be doubted. Among the Druids of Ireland, the same doctrines of a Creator, Preserver, and Destroyer, are found, and many of the Gods have the same names:⁶ for instance—Samhan, Bud, Chandra, Om, Eswara, Cali, &c.

The Mohamedans have this festival as well as the Hindoos and Christians; but this is not surprising, as they are merely a sect of the latter.

Now I beg my reader to recollect what he has read in the Preliminary Observations respecting the festival of the Vernal Equinox, when the sun was in Taurus.⁷ This was evidently the counterpart of it—the festival of the Autumnal Equinox—exactly six months from the former. At the Vernal Equinox began the empire of glory, of happiness, of the good principle, of Oromasdes; at the Autumnal Equinox began the empire of the evil principle, of Arhiman, and Bal-Sab. No one can for a moment doubt the meaning of the festival; and its universal celebration and reception would fully confirm what is said from Mr. Maurice respecting the Tauric festival, in the Preliminary Observations, if confirmation were wanting. The identity of the religious rite, in both East

⁷ Vol. I. pp. 24—26.

and West, is striking, and proves the wide extent of the Buddhist religion; but it is chiefly important in fixing the chronology. It must have taken place by the true Zodiac about 4680 years before Christ.

The priests disguise to their votaries, and perhaps to themselves, the identity of the Christian and Gentile festivals, by pretending that one of the Popes ordered the missionaries to fix the birthdays of the saints to the heathen festivals, to humour the prejudice of the Heathen, and thus, by degrees, to draw them into Christianity. But here is the doctrine of *prayers for the dead* as well as the ceremony on the same day. Besides, the very fact of the Pope ordering it on a certain specified occasion, goes very far to prove that it was not the general practice. So far were the early Christians from adopting Heathen ceremonies, that they would not intentionally even call the months of the year or the days of the week by their usual names, for fear they should pollute their mouths by those names, particularly that of Venus, which is a practice still continued by the society of Quakers. Gregory Thaumaturgus, who lived in the third century, is commended by Gregory Nyssenus, for thus changing the Pagan festivals into Christian holidays.¹

11. We Protestants keep *The Epiphany*, pretending that it is the manifestation of Christ to the Gentiles. Isaac Casauban shall tell us what it is.² “Baronius errs, in that he judgeth, that the Epiphany was instituted, in the primitive time, in commemoration of the Magi, their apparition. This opinion is refuted, first by the very appellation of Epiphanies, and thence by the use of authors and history. The appellation *επιφανειων*, of Epiphanies, was brought into ecclesiastic observation from Pagan rites, on a pious account. Greek writers call *επιφανειαν*, Epiphany, the apparition of a deity, whatever the manner were by which such a deity was supposed to have given some sign of his presence.” Diodorus says, “That Isis was wont to appear by night: and Dionysius Halicarnassus greatly reprehended such as derided the epiphanies of the Gods by which they manifest themselves to men. In commemoration of these apparitions the Greeks instituted certain festivals which they called Epiphanies. The Greek church has its Epiphany on the sixth of January.”³

At St. Denis, near Paris, the God Bacchus or *Διονυσος* is worshiped under the name of St. Denis. At Ancona, on the top of the promontory, Bacchus is worshiped under the name of Liber and Liberius.⁴

¹ Priestley's Hist. Cor. Vol. I. p. 336. Speaking of the two classes into which society is divided in Tibet, Mr. Turner (Travels, p. 257) says, “Both, united in one common bond of union, the one part to labour, the other to pray, enjoy in peace and harmony the fruits of their industry; and find it unnecessary to support a single man in arms, either to defend their territory or maintain their rights.” This is as it should be—the Drones and the Bees; idle priests and industrious slaves. Here every one moves in his proper sphere!

² Exercit. 2, An. 1, Num. 36.

³ Gale's Court of Gent. Vol. III. Bk. ii. Ch. ii. Sect. iii. pp. 192, 193.

⁴ Several temples have probably stood together which are now all formed into one church of Gothic architecture. In a crypt, on the left side as a person enters, is a magnificent sarcophagus of brass, of modern workmanship, with the words upon it *CORPUS SANCTI LIBERY CONF.* In the front of it, under the Roman arches, stands an altar, at which a priest was officiating when I was there. On the wall opposite is a MODERN Latin inscription, which informs its reader that St. Liberius was an Armenian: *Liberius ex Armen. Regum stirpe ortus Sæc. VI.* In the word LIBERY the last letter in one place being Y and in another U, the lower part wanting, proves, notwithstanding the care to prevent mistakes displayed by the monks in the modern inscription, that this S. Liberius was no other than Bacchus-Liber. In the crypt on the right side as you enter the church is a very ancient sarcophagus of stone. This, I suspect, in former times, has held the body of the God. It has had two inscriptions, one in the stone now erased with a chisel, the other in metal, which has been removed, the marks of the rivets remaining. I suppose the temples under the decrees of Theodosius, &c., were all thrown down, and from their ruins the present church was built; and amongst the ruins were found the fine columns of marble and the sarcophagus with the inscription *Corpus S. Libery*: and, if it had any where upon it, as it probably had, or if there was found any where near it, the cross or the monogram of Bacchus, this would be thought to prove the deceased a Christian confessor. For, as the Christians adopted the

I must draw my reader's attention to the fact, that the ancients had their miracles performed at the shrines of their saints, *Divi*, just as commonly as the Christians at the shrines of *their* saints.

The identity of some of the Romish Saints and the Heathen Gods, is in no instance more ridiculously exhibited than in that of St. Denis or Dionysus, the ancient Bacchus; even Mr. Faber is obliged to allow it. He says,¹

“Dionysus is cut in pieces by the Mænades on the top of Mount Parnassus: Denis is put to death in the same manner on the summit of Montmartre. Dionysus is placed on a tomb, and his death is bewailed by women: the mangled limbs of Denis are collected by holy females, who weeping consign him to a tomb, over which is built the abbey church that bears his name. Dionysus experiences a wonderful restoration to life, and quits the coffin within which he had been confined: Denis rises again from the dead, replaces his severed head to the amazement of the spectators, and then deliberately walks away. On the southern gateway of the abbey, the whole history of this surprising martyrdom is represented. A sculptured sprig of the vine, laden with grapes, is placed at the feet of the holy man: and in all parts may be seen the same tree blended with tigers and associated with a hunting match. Such numerous and close coincidences prevent the possibility of doubting the identity of the God Dionysus and the monkish saint Dionysius. Were I more conversant in the hagiographa of the Latin church I might perhaps be able to produce many other similar instances.”

There is no doubt that at the town of St. Denis, the Romans had some kind of a temple to the *Divus Dionysus* or Bacchus, whence the ignorance and roguery of the priests made a saint, a *Divus Denis*, with all his traditionary adventures.

Near Naples the *universe* is worshiped under the name of St. Cosmo—*Κοσμος*.²

The custom of putting D. M., for the words *Dīs Manibus*, on monuments and grave-stones, is continued all over Italy. In the church of St. Clement, at Rome, I observed the actual words *Dīs Manibus* upon a grave-stone; the letters had not long been filled up with a hard cement, to disguise them; but they were sufficiently evident. No doubt at every Jubilee, when the churches are repaired, some remnant of Heathenism is erased.

The way in which the Christians have *made their saints* is perfectly laughable. An explanation of them may be seen in Dupuis.³ He shews how they have made their St. Bacchus and Liber, Dionysius—Eleutherius, Rusticus—marked in the calendar, 7th Oct, fest. S. Bacchi, 8th festum S. Demetri, and the 9th fest. S. S. Dionysii, Eleutherii et Rustici.

In the Dyonysiacs, of Nonnus, the God Bacchus is feigned to have fallen in love with the soft, genial breeze, under the name of *Aura Placida*. Out of this they have made the saints *Aura* and *Placida*. This festival is on the fifth of October, close to the festival of St. Bacchus, and of St. Denis the Areopagite.

monogram of Bacchus for their monogram, wherever it was found, the ignorant monks, thousands of whom in ancient times could neither read nor write, immediately determined that it denoted a martyr or confessor of their religion. The monks were not necessarily in the modern Romish orders, and in the early ages of Christianity very few of them were Romish priests. As they found it increased their influence they gradually got into the way of receiving the Romish ordination; and, as the Popes found them a formidable body, after much quarrelling they formed an union with them, if indeed the monks did not actually conquer the Popes, and get possession of the Papacy.

¹ Pag. Idol. Bk. v. Ch. viii.

² The particulars of this Saint may be found in a letter published in the Preface to Mr. Payne Knight's book on the Phallic worship. He was adored with the ancient Phallic rites. In the mean time, when Sir W. Hamilton was at Naples, great numbers of ex votos of the parts of generation adorned his shrine, which was much frequented by modern Neapolitan females to procure fecundity, precisely as it had been by the females of antiquity.

³ Vol. III. p. 151.

The ancients had a form of wishing happiness to others, in which were used the words *perpetuam felicitatem*. Out of these words were made St. Perpetua and St. Felicita. In the same way, from the words Rogare et Donare, they have made St. Rogatien and St. Donatien. These examples of their saints exhibit a very striking proof of what I have said respecting the nature of the Romish tradition—all these histories are traditions. From such traditions the whole fabric was raised. It could not be expected to be otherwise than as we find it. The President Fauchet, in his *Life of Clovis*,¹ declares ingenuously, that the feasts of the Romish Church were copied from those of the Pagans : and Polydore Virgil regrets that the feasts are more Pagan than Christian.²

The festival of Martinmas was an exact imitation of the feast of the Romans and the Greeks called *Pitegie* which signifies the opening of the wine barrels, which at this time is practised by the Christians. Thomas Neagorus³ calls it the *second bacchanalia*.

Herodotus⁴ says, that the Egyptians had a feast in which the ceremony consisted in lighting numbers of candles in their houses during the whole night, called *the feast of lights*. This solemnity, says Baronius,⁵ is also observed by us, having been transferred to the ascension.

I suppose I need not point out the absolute identity of the ancient Saturnalia and the modern Carnival; no one who has paid the least attention to these subjects can entertain any doubt respecting them.

As the Christians have a particular saint to whom each day in the year is dedicated, and who has his particular service for that day; so the Persians had an angel for each day, and a particular service containing a compliment to the angel of that day.⁶

12. As I stated before, to account for the Heathen superstitions in Christian churches, it has been said, that Gregory the Great directed, in order that the prejudices of the vulgar might be as little offended as possible by the change, that the missionaries to Britain, &c., should leave the people in the possession and enjoyment of their festivals, provided they did not actually adore the idols. How can this be reconciled with the actual adoration of the *waxen infant*, with the most magnificent ceremonies, in the churches in Rome, on the first hour after midnight, on the morning of the 25th of December? This I have myself witnessed. The priests pass the image in grand procession, each stopping before it, muttering his prayer, going down on his knees, and kissing the toe of the figure. What was this but the ancient worship continued?

When the Pagans proceeded to build a temple they performed on the ground a variety of ceremonies. The head priest presided at the ceremony, and laid the first stone, after a grand procession.⁷ Pieces of gold and silver were laid in the foundation, and the Vestal Virgins or Nuns sprinkled the place with holy water. All this is closely imitated by the Romish and Protestant churches, holy water by the latter excepted.

The long pilgrimages of the Christians are exact imitations of those of the Pagans, who were accustomed to frequent the temples of Delphi, Dodona, Diana at Ephesus, Ceres in Sicily,⁸ according to vows made by them on emergencies.

It is the custom with Christians to make vows on various occasions to build churches. So Romulus, to arrest the flight of his soldiers, vowed a temple to Jupiter Stator. In like manner Appius vowed a temple to Bellona.⁹

Every one is acquainted with the votive offerings of the ancients :

⁷ Cicero and Tacitus, Lib. iv. on rebuilding the capitol.

⁸ Vide Cic. Acti. 6, in Verrem.

⁹ T. Livy, Lib. x.

— Me tabulâ sacer
 Motivâ paries indicat humida
 Suspendisse potenti
 Vestimenta maris Deo.¹

Again,

Nunc Dea, nunc succurre mihi, nam posse mederi
 Picta docet templis multa tabella tuis.²

This is exactly imitated in the Romish churches of Italy. Some of the churches in Florence and Rome are actually covered with votive offerings. Sometimes jewels are given, sometimes pictures of the mode in which some favourite saint has effected a cure, or saved the devotee from the effect of an accident; or a model in wax of some limb cured is hung up; and some very curious limbs may occasionally be seen.

Our long prayers and litanies are exact imitations of those of the Pagans, and are directly in defiance of the command of Jesus Christ. "When ye pray," says he, "use not vain repetitions, as the Heathen do; for they think that they shall be heard for their much speaking." (Matt. vi. 7.) How directly this is against the Romish "Kyrie, Eleeson; Christe, Eleeson; ora pro nobis; Domine, exaudi nos;" and our "Lord have mercy upon us," in our litany and repetition of creeds, &c.! All this is an exact imitation of the prayers to Baal, described in 1 Kings xviii. 26, *Baal, exaudi nos*, which they cried from morning to noon. Thus the Romish devotees count their *Paters* and the repetition of their *Credo*, and *Ave, Maria, &c.*, exactly like what Tertullian says of the Pagans—that they think to force heaven with their crowd of prayers. Thus again, in the Protestant Litany, the repetition of the prayer to the *Lamb of God* is taken from the service of the ancient Carnutes of Gaul.

13. The ancient Roman children carried around their necks a small ornament in form of a heart, called *Bulla*. This was imitated by the early Christians. Upon their ancient monuments, in the Vatican, the heart is very common, and it may be seen in numbers of old pictures. After some time it was succeeded by the *Agnus Dei*, which, like the ancient *Bulla*, was supposed to avert dangers from the children and the wearers of them. Pope Urban V. sent one to the Emperor of the Greeks with the following *beautiful* verses:

Balsamus et munda cera cum chrisomatis undâ
 Conficiunt agnum quod munus do tibi magnum.
 Fulgura desursum depellit, omne malignum
 Peccatum frangit, ut Christi sanguis et angit.
 Prægnam servatur, simul et partus liberatur.
 Dona defert dignis, virtutem destruet ignis.
 Portatus mundè de fluctibus eripit undæ.

Cardinal Baronius³ says, that those who have been baptized carry pendant from their neck an *Agnus Dei*, in imitation of a devotion of the Pagans, who hang to the neck of their children little bottles in form of a heart, which serve as preservatives against charms and enchantments. And as these bottles were made in form of a heart to shew that man could not exist without a heart; so the Christians carry the image of the lamb, to learn from its example to be humble of heart.

This is the heart which the reader has seen in the figures of India, of Greece, and of Rome, noticed in Vol. I. pp. 146, 572. It seems to me, however, that the origins of both the *heart* and the *agnus* were equally unknown to the Cardinal. But he was probably right in supposing them talismans.

¹ Horace, Lib. i. Ode v.

² Tibull. Lib. i. Eleg. iii.

³ Ann. Eccles. en l'ann. 58.

For the manufacture or blessing of these Agni Dei a long ceremony is usually performed by the Pope on the day called the Sunday in Albis.¹

As the supreme God Bramha was surrounded with good and bad angels, or, as they are called in the Brahminical religion, *Dewtahs*, with some of the latter of whom Cristna the saviour made a war; so with the Persians the Supreme God had his good and bad angels, the latter constantly aided by the destroyer Arhiman, at war with the Supreme Being. Here we see the prototype of the Christian doctrine of the devil and his fallen angels at war with God, and working in every way in their power for the destruction of man. The book of Enoch gives the fullest account of the doctrine of angels. As the genuineness of the book is not doubted, that is to say, as it is not doubted to be the real book referred to by St. Jude, and as he was inspired, I do not clearly see how his authority can be denied by Christians. In the Hindoo work called the Mahabarat, a very long account is given of the wars of Cristna with the rebellious Dewtahs and Assoors. The Hindoo and Persian doctrine of angels and devils, is alluded to in the Epistle of Jude, to which I have just referred.

Stanley also shews that the existence of angels, and of good and bad dæmons, was admitted. He shews that dæmons were held to be of many kinds, and to be corporeal: "Those dæmons are of many kinds, and various sorts, both as to their figures and bodies, insomuch that the air is full of them, as well that which is above us, as that which is round about us. The earth likewise is full, and the sea, and the most retired cavities and depths."

Mr. Colebrook says, that the Vedas throughout teem with prayers and incantations to avert and repel the molestation of aerial spirits, mischievous imps, who crowd about the sacrifice and impede the religious rite.² This was precisely the doctrine and belief of the early fathers of the Romish Church.

In the first Liturgy of Edward VI. Anno 2, the following form of Exorcism was ordered in baptism: "Then let the priest, looking upon the children, say, I command thee, unclean spirit, in the name of the Father, of the Son, and of the Holy Ghost, that thou come out and depart from these infants, whom our Lord Jesus Christ has vouchsafed to call to his holy baptism, to be made members of his body and of his holy congregation. Therefore remember, thou cursed spirit, remember thy sentence, remember thy judgment, remember the day to be at hand wherein thou shalt burn in fire everlasting, prepared for thee and thy angels. And presume not hereafter to exercise any tyranny towards these infants, whom Christ hath bought with his precious blood, and by this holy baptism called to be of his flock." This, on the remonstrance of Bucer, was afterwards omitted.³

The sign of the cross, though made by a Jew, Infidel, or Pagan, was of force to drive the devil from one.⁴ Pope Alexander ordained that holy water should be tempered with salt, and used ad fugandos dæmones, *to drive away devils*. (Platina in vitâ Alexand.)⁵

But the Persians not only had angels and wars of angels against God, similar to those of the Christians, but they actually had the same names, (as I have somewhere read, though at this moment I cannot recollect where,) such as Gabriel, Michael, Uriel, &c.

¹ Vide Cerem. Rom. i. Sect. 7; also Hospinian Festa Christianorum, p. 76, A. D. 1612.

² Astron. Vol. I. p. 578.

³ The seventy-second canon of the Church of England thus expresses itself on Exorcism: "No minister shall, without the licence of the bishop of the diocese, first obtained and had under his hand and seal, attempt, upon any pretence whatsoever, either of obsession or possession, by fasting and prayer, to cast out any devil or devils, under pain of the imputation of imposture or cozenage and deposition from the ministry."—Beverley's Book, xxv.

⁴ Bellarmin de Imaginibus Sanet, Cap. xxx.; Hog's Hist. of Cornwall, p. 468.

⁵ Hog's Hist. ut supra.

The followers of Mithra always turned towards the East, when they worshiped: the same is done by the Brahmins¹ of the East and the Christians of the West. In the ceremony of baptism, the catechumen² was placed with his face to the West, the symbolical representation of the prince of darkness, in opposition to the East, and made to spit towards it at the evil one, and renounce his works.³

Tertullian⁴ says, that Christians were taken for worshipers of the Sun because they prayed towards the East after the manner of those who adored the Sun. He says the same in his book, *Ad Nat. Lib. i. Cap. xiii.*⁵ Mr. Reeves says, the Christians worshiped towards the East because the altar was there: but why was the altar there, but because the East was the symbol of the good Deity—in opposition to the West, the symbol of the Evil One?

To this day, in most English Churches, at particular parts of the service, for instance in the repetition of the Creed, those persons who do not happen to have their faces turned towards the altar or the East, always turn to it; of the reason of this they are probably ignorant.⁶ The Essenes always turned to the East to pray. Prideaux, in his *Life of Mahomet*, says, the Jews always turned to Jerusalem to pray⁷ wherever they might be.⁸

“*Quod attinet supradictos Christianos Armenos ad Solem se flectentes, de ejusmodi Christianis etiam suo tempore conquerebatur Leo Papa (Serm. VII. de Nativitate Christi) Priscillianistas arguens de cultu Solis. Ut sol exurgens—à quibusdam insipientibus de locis eminentioribus adoretur. Quod nonnulli etiam Christiani adeò se religiosè facere putant, ut priusquam ad D. Petri Basilicam perveniant, superatis gradibus,—converso corpore, ad nascentem se Solem reflectant, et curvatis cervicibus, in honorem se splendentis orbis inclinent.*”⁹ This proves the mixed worship of Jesus and the Sun, which Leo was striving to abolish. Hyde, in the preceding page, shews, that the Armenian Christians were also in the habit, while turning to the Sun to offer their prayers, of constantly crossing themselves.

14. It appears that the Christians were accused by the Heathens of being worshipers of the Sun. Tertullian, in reply to an accusation of this kind, tells us, that the Sunday was celebrated by them in opposition to the Jewish Sabbath, and not because it was consecrated to the Sun. This was evidently a contrivance to evade the charge. The reason assigned by Justin Martyr¹⁰ that Sunday was celebrated because it was the day of Christ's resurrection, would not have been deemed satisfactory; for the Heathens would have replied, “Certainly it was on the Sunday, the day of the Dominus Sol, the Lord's-day, as you call it, because on that day the resurrection of the Dominus Sol—the Saviour—was always celebrated in the Mithraic caves.”

This contrariety seems to shew that neither Justin nor Tertullian knew any thing about the matter, any more than they did about the statue of Sangus, which they took for a statue of Simon Magus.

In Sect. 9, the day of meeting of the Essenes is stated to be Saturday; but this feast lasted till sun-rising. In Sect. 17 it is also stated, that they worshiped toward the Sun at its rising. It seems the night was spent in singing hymns, &c. As soon as dawn appeared, they retired to their

cells, after saluting one another. From the account in Pliny it appears the Christians of Bithynia met before it was light, and sung hymns to Christ as to a God. But the words imply, that they met very early in the morning. Surely the circumstances of the two classes of people meeting before day-light is a very remarkable coincidence. It appears that after their service they saluted one another. This custom is continued in our churches to this day. Every person salutes his nearest neighbours, though it would probably be difficult to get a reason from any one for doing it. It is the remnant of the old custom; so is bowing at the name of Christ,¹ and turning the face to the East at particular parts of the service.

Justin nowhere calls the Sunday the Sabbath-day, but *ἡμερα το ἡλίου*, *the day of the sun*. And it is very curious that Constantine, after he pretended to be converted to Christianity, ordered the day *Domini invicti Solis*, to be set apart for the celebration of peculiar mysteries to the honour of the God Sol.

A very long and terrible schism took place in the Christian Church upon the *important* question, as I have remarked in page 59, whether Easter, the day of the resurrection, was to be celebrated on the 14th day of the first month after the Jewish custom, or on the Lord's-day afterward; and it was at last decided in favour of the Lord's-day. But terrible wars took place before this *most important* affair could be settled.

Besides the above almost an infinite number of small coincidences might be pointed out, each trifling and of little or no moment when taken by itself, but which, in the aggregate, is of very considerable importance. The multitude of the inferior Gods of the Heathens are well matched by the Saints of the Christians: they were thought to be endowed with the same limited powers, and to act as mediators between man and the Supreme Deity, and were equally honoured with the epithet *divus*. The Gods of the Heathens were fond of high places, and equally so are the Saints of the Christians; to some one of whom almost every mount and every fountain was dedicated. Each town had its patron and protecting tutelar God, it has now its patron and protecting Saint—to whom, in a peculiar manner, in all moments of distress, of plague, pestilence, or famine, the inhabitants address their prayers. Scarcely a church exists in Italy in which the numerous votive tablets do not bear witness to the active and miraculous interference of the tutelar saint.

The Viales or Compitales fixed at the corners of the streets, to whom the games called *Compitalicii* were celebrated, yet remain under the name of a Madonna or some favourite saint—as the Madonna Dolorosa, or *Divus Petronius*, &c.; generally ornamented like the ancient *compitales* with flowers. In Sicily the Madonna Vialis is seen with a bunch of ears of corn in her hand. By a decree of Augustus the *Compitales* were ordered to be honoured with garlands of flowers. These are part of the *Lares* or household Gods, and are to be met with in every house in Italy: and to them, as was customary in ancient times, the Calabrian shepherds come into Rome a few weeks before the winter solstice to play on the pipes.

Ante Deum matrem cornu tibicen adunco
Cum canit, exiguæ quis stipis aera neget?²

¹ The Christians of Bithynia met, it appears, before it was light, because they were afraid to hold their religious assemblies in open day, lest their enemies should assault or seize them. Their salutation at parting was probably that which Paul (Rom. xvi. 16) recommended—their mutual danger increasing their mutual attachment. Salutations were frequently, as they still are, expressed by writing or orally. Such are those to our neighbours and friends—expressive of courtesy or of regard. “Bowling at the name of *Jesus*” appears to have been introduced from a belief in his Deity, and from its being supposed to be required, by what St. Paul says to the Philippians, (ii. 10,) where *εὐ* would, perhaps, be more correctly rendered by *in* than by *at*.—*Editor*.

² Ovid's *Epist.* i. l. 11.

When to the mighty Mother pipes the swain,
Grudge not a trifle for his pious strain.

No person can have spent a winter in Rome without having been often awakened before day-break, by the beautiful and plaintive airs of these simple shepherds on their bagpipes.¹

A remnant of the Eleusinian mysteries of Ceres is still retained in the festival of St. Agatha in Sicily. The same horse-races are continued, the same processions made by friendly societies, (the sodalitates of antiquity,) in which the image of the saint, on a triumphal car, and the sacred relics, are borne about with wax lights of an enormous size, precisely as was usual in the processions in honour of Ceres. The procession takes place on the fourth day of the festival of the saint, as it did on the fourth day of the festival of Ceres. At the conclusion of the festival in each case, the sacred relics, which were only shewn on those occasions, were offered to the people to kiss; and, finally, as the Eleusinian mysteries were celebrated twice a year, in spring and in autumn, so are the festivals of St. Agatha.

The numerous names of the Gods of the Heathens are closely copied by the Christians. The ancient Romans had the Jupiter Tonans, Jupiter Sponsor, Jupiter Capitolinus, &c., &c.; then Venus Calva, Venus Verticordia, Venus Capitolina, &c., &c. The modern Romans have their St. Pietro in Vaticano; St. Pietro in Vinculo; St. Pietro in Carcere, &c., &c.; Sa. Maria degli Angeli; Sa. Maria della Consolazione; Sa. Maria dell' Anima, &c., &c., to the number, as stated under her image at Loretto, of upwards of forty names: and in the same manner as the temples were sometimes dedicated to several ancient Divi or Gods, so the churches are sometimes dedicated to several modern Divi or Saints. The temple of *Vesta* is now the church of the *Madonna of the Sun*, fire being the prevailing idea in both appellations. That of Romulus and Remus is now the church of Cosmo and Damien—twin brothers. The temple of Bacchus or the St. Liber, on the promontory of Ancona, is now the church of the Holy Liberius descended ex stirpe regum Armeniorum. The church of St. Denis, near Paris, has succeeded to the temple of Dionusos. The Romans had a tradition, that Anna Perenna, the sister of Dido, was cast ashore near the Numicus, in which she ultimately drowned herself, and of which she became the protecting nymph. She is succeeded by Sa. Anna, the sister of the Virgin, to whose name the epithet Petronilla is added, for some unknown reason.

The Heathens constantly erected temples as votive offerings to their Gods, as was the case with the temple of Jupiter Tonans, erected by Augustus, out of gratitude for his escape from lightning which killed several of his attendants; and so are Christian churches: for instance, the church Della Salute, erected in memory of the deliverance of Venice from plague in 1586. The ancient temples and modern churches are equally built to record certain events or to receive certain sacred deposits. Their walls, in ancient as in modern times, were ornamented with pictures.² The images in each case were equally loaded with finery, jewels, paint, &c., and kept in sacred recesses with curtains before them. The temples in ancient, like the churches in modern times, were open from morning to night, with a small intermission at noon. The ancient sacrifice is succeeded by the sacrifice of the mass: the attending boys in white tunics are continued as in ancient times. The *Mozzetta* and *Sottana* of the priests, from the latter of which our cassock is taken, are both dresses of the priests of antiquity. The subject of the ancient sacrifice was called *Hostia*; the modern mass, *Ostia*.

The custom of using the *aspersorio* to sprinkle the people with holy water before the mass begins, the *chaunting* of the service, the ringing of little bells during the ceremony, are all Pagan

¹ The real Scotch bagpipe.

² See Pausanias passim.

usages. The ceremony of putting ashes on the head, on Ash-Wednesday, is a continuation of the festival of the *Fordicidia*, which was celebrated at Rome on the 15th and 21st of April. The Catholic modern processions are exact imitations of those of the ancients, which were attended with music, tapers, successions of images, companies of attendants, streets hung with tapestry, &c., &c. The mendicant monks are merely a continuation of the priests of Isis, who, like them, lived by begging, and were great dealers in relics of the Gods, and who often pretended to possess the bodies of the Gods. The priests of Isis had their dresses made precisely of the same fashion as those of the Franciscan Monks: the sandals are the same. The tonsure of the priests of Isis and Serapis, or the practice of shaving the crown of the head, so as to leave only a ring of hair, is exactly continued by the modern monks. In short, the Franciscan Monks are evidently the priests of Isis.

The ceremony at Rome on Good-Friday, called the "Agonie," is nothing more than the Pagan ceremony alluded to in Scripture,¹ called the women weeping for Tammuz. The charms or amulets of the ancients are still strictly continued in Italy by all classes of people. The funerals are also in many respects the same as those of the ancients. The Protestant practice in England of throwing three handfuls of earth on the coffin, and saying, *earth to earth, ashes to ashes, dust to dust*, is a copy from the ancient Egyptians,² and the continuation of a Pagan ceremony, to satisfy the Gods below, in which the priest threw earth *three* times upon the body—"infecto ter pulvere curras."³ The ancient offerings made at the sepulchres of friends are now succeeded by the sacrifice of the mass, for which payment is made to the priest. It is a sacrifice of prayer and incense, and is more or less expensive in proportion to the wealth or poverty of the deceased. In short, the ceremonies of torches, holy water, prayers for the dead, and the other forms used at funerals in many Christian countries, are nothing but imitations of similar customs observed by the Pagans; so that, in fact, there is not a single ordinance of the Christians which they can properly call their own; all is a servile imitation of the much-abused and calumniated, though, like Christians, in many respects blameable, Pagans.

The Jews fasted, and flogged themselves in the temple; the votaries of Isis did the same. In *Trans. Acad. Ins. An. 1746, Tome IV.*, it is shewn, that almost all ancient nations had the practice of fasting.

The Persians used incense after the manner of the Jews, copied by the Christians.⁴

For nearly the whole of this section the Author is indebted to a small treatise on the ancient Customs of Italy and Sicily, by Mr. Blunt, of St. John's, Cambridge. Much more of the same kind might be discovered; but why multiply examples, when the case is proved usque ad nauseam?

In the front of most of the churches in Rome are placed very large obelisks or single pillars. Man is no doubt an imitative animal, and these may have been raised, by the modern Romans, merely out of imitation of their ancestors; but I am inclined to believe, that they were raised for the same reason that all the Pagan ceremonies which I have described were adopted—their Pontifex Maximus, &c. They were a part of the esoteric ancient religion, and, as such, were adopted. Two of these obelisks, covered with hieroglyphics, are ascertained not to have come from Egypt; but the hieroglyphics are said to be forgeries. Then why were they raised; and why were the hieroglyphics placed upon them? Did the modern Romans understand the hieroglyphics? I do not believe that they would be at the expense of engraving them, merely to pass off the obelisks as Egyptian, as, at the time that they were done, every one must have known of the forgery.

¹ Ezek. viii. 14. ² Spineto, p. 148. ³ Horace, *Lib. i. Ode xxviii. l. 36.* ⁴ Hyde, *de Rel. Vet. Pers. Cap. iii. p. 99.*

Then what are we to make of them? I can scarcely believe that the hieroglyphics are known in the conclave; but it is next to impossible to ascertain what is known there. It is very certain, that if the knowledge of these hieroglyphics be a religious secret, a masonic secret, no attempt to discover it would be successful. For, if a Pope or Cardinal were to violate his oath, (without any object of self-gratification as it would be,) he would be rendered infamous; and the strong-nerved arms of millions of monks would be ready with their daggers instantly to give him his reward. If any man were to violate such a secret, I have no doubt that hundreds of priests in Rome would be ready to teach their fanatical devotees, that it would be the highest of all meritorious acts to assassinate or poison such a man. These obelisks were Lingas, adopted for the same reason that all the other rites and ceremonies of Heathenism were adopted.

In reply to what I have said a certain class of persons will exclaim, Oh, but these are nothing but the abuses of the Papists! But I think my reader will soon be convinced, if he be not convinced already, that between the Protestants and Papists there is very little difference. The priests of the latter have been obliged to give up certain absurdities which they found their flocks would no longer tolerate, keeping some as great as any they surrendered, and indeed keeping all as long as they possibly could. The Athanasian Creed and part of the service for the ordination of priests is as bad as any thing which the Papists profess. The truth is, that the Romish religion is nothing but a renovation of the old Pagan or Gentile religion, and the Protestant is only a part of the latter. But neither of them can properly be called the religion of *Jesus of Nazareth*, as I shall shew in a future book.

The fact of the identity of the Christian and Gentile rites and ceremonies has been so evident that the Romish writers have not been able to deny it, but have been obliged to have recourse to explanations. Baronius¹ says, "It is permitted to the Church to use, for the purposes of piety, the ceremonies which the Pagans used for the purposes of impiety in a superstitious religion, after having first expiated them by consecration—to the end, that the devil might receive a greater affront from employing, in honour of Jesus Christ, that which his enemy had destined for his own service." I suppose it is for this reason that the Romish Church has not any dogma, rite, or ceremony, which is not Pagan!!!

Polydore Virgil, who was much praised by Baronius and other learned men of the Roman Church, who call him a celebrated historian, and say that he was well instructed, and drew his information both from the ancients and moderns, says,² that the church has taken many customs from the religion of the Romans and other Pagans, but that it has rendered them better, and employed them to a better purpose.

Fauchet, in his antiquities of Gaul,³ avows, "That the bishops of that kingdom employed every means to gain men to Christ, availing themselves of their ceremonies, as well as of the stones of their temples to build their churches."

Eusebius, in the Life of Constantine, admits that he, for the sake of making the Christian religion more plausible to the Gentiles, transferred to it the exterior ornaments which they employed in their religion. Pope Gregory I., surnamed the Great, who, Platinus says,⁴ was the inventor of all the ecclesiastical service, followed this method, as every one can see, by the instruction which he gave to a priest called Augustin, whom he sent into Britain to convert the English. "It is not necessary," said he, "to destroy the temples⁵ of the idols, but only the idols, and to substitute the holy water, to build altars, and to deposit relics. If their temples

⁴ In Vitâ Greg. I.

⁵ Greg. in Regist. Lib. ix. Epist. 71.

“ have been well built, it is proper to divert them from the service of dæmons to the service of the true God, in order that the Pagans may be more easily induced to come to worship at the places where they have been accustomed.” He added, “ That in the place of sacrificing beasts, they should have festivals to the saints or to the founders of the churches, and thus celebrate religious banquets; that thus having the use of some exterior observances they should be more easily drawn to the interior doctrines.”

But how completely is this in opposition to the doctrine of Paul, that evil should not be done that good might ensue; (Rom. iii. 8;) to his advice to the Corinthian converts to flee from idolatry; (1 Cor. x. 14;) and to that of John, “ Little children keep yourselves from idols”! (1 Ep. v. 21.) And how much at variance is it to the praise given by St. Ambrose to Theodosius, when calling him another Josias for destroying the temples of the infidels!¹ How completely different is all this from the known practice of the first Christians, who would rather submit to be torn to pieces by wild beasts, than place even a sprig of laurel over their doors on a Pagan festival! Besides, how absurd is it to suppose that the single corrupt order of a Gregory should be able to engraft into the Christian religion not only the festivals but the doctrines and the sacraments, and the most obscure and abstruse metaphysical doctrines of the Pagan religion! The cause is not commensurate with the effect, and some other cause must be sought.

It is said that those superstitious practices were not adopted in the earlier times of the church, but were introduced afterward in the middle and dark ages. In order to form a correct judgment upon this point, it may be useful to ascertain at what time the Pagan superstitions actually ceased. It is well known that they had been laid aside in all the great cities as early as the time of Theodosius, and that they were banished to villages in remote situations, whence their followers were designated by the opprobrious name of Pagani. Now as it is improbable, and actually contrary to common sense to suppose, that a considerable interval should have intervened after the cessation of those superstitions of the Pagans, and their renewed adoption by the Christians, in compliance with the vulgar prejudices of the former, it follows that they could not be the produce of the dark ages of monkish superstition and ignorance. To take an example: Romulus was thought by the Heathens to be peculiarly favourable to young children, and it was the custom at Rome to present them at his shrine, to be cured of their complaints; afterward when the temple was converted into a church, it was dedicated to Saint Theodorus, who had been, like Romulus, exposed in his infancy, and therefore was supposed to be particularly fond of young children, who yet continue to be brought to his shrine to be cured of their diseases. When they recover, a miracle is alleged to have been performed; when they do not, the reason assigned may probably be, that the saint is not propitious to the parents. This exhibition is not in a remote place, but in the centre of the Papal city.

Now, as Theodosius destroyed or converted into churches such of the Heathen temples as Constantine had spared, this Christian superstition can hardly be dated later than the time of the former, and therefore it cannot well be attributed to the middle ages. Besides, if the almost solitary act of Gregory may be pleaded for a few of the local customs of Britain, it is perfectly incompetent to account for all the numerous Pagan doctrines and rites which have been pointed out in this work. It is evident that the story of Gregory, though perhaps very true, is a mere subterfuge, and is by no means adequate to account for the well-known facts, of the continuation of the Pagan rites and superstitions.

¹ Theodoret, Hist. Eccles. Lib. v. Cap. xx.

CHAPTER III.

BETHLEHEM, BIRTH OF JESUS CHRIST.—BIRTH, DEATH, AND RESURRECTION OF ALL THE GODS.—PASSOVER.
 —LAMB OF GOD.—GENTILE CRUCIFIXION.—JESUS CHRIST WAS NOT CRUCIFIED.—JEWISH INCARNATION.
 —PYTHAGORAS.—OBSERVATIONS.

1. I SHALL finish this branch of my subject by shewing, that the birth, death, and resurrection of the body of the incarnate God, was common in almost every temple of Paganism, and that he was not only put to death, but also that he suffered on the cross, and rose again from the dead.

It is possible to move a step in the examination of the rites and ceremonies of this religion without meeting with circumstances of greater or less importance connected in some way or other with the religion of Mithra or the Sun. Ænon, where John baptized, was sacred to the sun,¹ and had a temple dedicated to it.² Again, when Christ was born, he was sought for and worshiped by the Magi, who had seen *his* star in the East. Here is an evident allusion to astrology, properly so called, as distinguished from astronomy,—the calculation of nativities by the stars, which in all ages has been closely connected with magic and necromancy. The magi having arrived at Bethlehem, directed not by a star but by *HIS* star,³ made their offerings, and celebrated with pious orgies, along with the angels who appeared at the same time, the nativity of the God, the Saviour, in the stable where he was born: but the stable was a cave, and it is still more remarkable, though it has never been pointed out by priests to their gaping congregations, that at *THAT* very time, the 24th December, at midnight, throughout all the Mithraic caves of Persia, and in the temples throughout all the world, the same orgies were really in the act of being celebrated to the honour of the God *Iaw*—the Saviour. And it appears that these orgies did not cease for very many years after the death of Jesus, according to St. Jerom, in this very cave, and if we may believe Dr. Lightfoot, they may not have ceased to this time. The latter says, “Eusebius reports that “Bethlehem, from the times of Adrian to the times of Constantine, was profaned by the temple “of Adonis: for the asserting of which he cites these words of Paulinus: *Hadrianus, supposing “that he should destroy the Christian faith by offering injury to the place, in the place of the passion, “dedicated the image of Jupiter, and profaned Bethlehem with the temple of Adonis*: as also like “words of Hierome: yet he confesses the contrary seems to be in Origen against Celsus: and “that more true. For Adrian had no quarrel with the Christians and Christianity, but with the “Jews, that cursedly rebelled against him.”⁴

Of Bethlehem Jerom says, “Bethleem nunc nostram, et augustissimum orbis locum de quo “Psalmista canit.⁵ *Veritas de terra orta est, lucus inumbrabat Thamus, id est, Adonidis: et in “specu ubi quondam Christus parvulus vagiit, Veneris Amasius plangebatur.*”⁶ And Clarke⁷ tells us, that the Christian ceremonies in the church of the nativity at Bethlehem are celebrated

⁷ Vol. IV.

to this day in a CAVE, and are undoubtedly nearly the same as they were celebrated in honour of Adonis in the time of Tertullian and Jerom; and as they are yet celebrated at Rome every Christmas-day very early in the morning.

From the fact, seemingly here established, that the temple of Adonis existed at Bethlehem before the time of Adrian, as it is admitted by the learned and Rev. Dr. Lightfoot, it is very probable that it must have existed before the time of Jesus; and the possession of droves of swine by the Gergesenes, and many other circumstances, induce me to suspect, that the religion of the Canaanites and the Phœnicians never was entirely abolished, but tolerated in different parts of the country among the descendants of the original inhabitants. If this should be found to be the case, I can readily believe that Magi, Magicians, Necromancers, came from a distance on a pilgrimage to worship, and to celebrate the rites of, the new-born God and Saviour; and that shepherds from the mountains should also have assembled there, precisely at the same day and hour, as they yet do at Rome for the same purpose, every 24th of December. Indeed, it is probable that something of the kind happened every year, at this season, at the shrine of Adonis.

The reader will recollect what was said before by the well-known oriental Christian, Abulfaragius or Bar Hebræus,¹ that there was a prophecy in the oracles of Zoroaster, "That a sacred personage should issue from the womb of an immaculate Virgin, and that his coming would be preceded by a brilliant star, whose light would guide them to the place of his nativity."² It is pretty clear that this is a copy from the Gospel histories, or that the Gospel histories are copies from it, or both from a common mythos. And it must be observed here, that the story of the Magi is contained in a part of the Gospel history which the Nazareens, Ebionites, Marcionites, Socinians, and most of the modern Unitarians, maintain to be spurious. If one be a copy from the other, which is copied must be left to the reader. After all that he has seen he will probably find little difficulty. This prophecy is evidently alluded to in the Gospel of the Infancy, which says, speaking of the Magi guided by a star, *Quemadmodum prædixerat Zorodustht—* as Zoroaster had predicted. This Gospel was received by the Nestorians, of whom Buchanan says, there are now about 50,000 in Malabar.³ It is a striking circumstance, that the gifts brought by the Magi, gold, frankincense, and myrrh, were what were always offered by the Arabian Magi to the sun.

This prophecy is again noticed by Chalcidius in the third century. Commenting on the *Timæus* of Plato he says, "*Stella quam a Chaldæis observatam fuisse testantur; qui Deum nuper natum muneribus venerati sunt—a star which is attested by Chaldean astronomers, who immediately hastened to adore and present with gifts the new-born Deity.*"⁴ Christians have wished to make a Christian of Chalcidius, but the way in which he speaks of this Chaldean tradition, or whatever it was, shews clearly enough what he was. The observations of Chalcidius were probably made upon the story of the three Magi, who, according to Plato, came from the East to offer gifts to Socrates at his birth, bringing gold, frankincense, and myrrh.⁵ One or both, or the union of the two stories, may have formed a foundation for the story of the three kings coming to Herod; and they have probably both derived their origin from the Hindoo religion. This story of the Magi having been applied to Socrates, by Plato, evidently proves that it was part of the ancient

¹ *Hystoria Dynastarum*, p. 54, ed. Oxon. 1663. Although I have given the substance of what will be found here from Abulfaragius, I think it expedient to repeat it. See Vol. I. p. 561.

⁴ *Maur. Ind. Scep. confuted*, p. 62.

⁵ This story of Plato's I cannot point out in his works, but I was told it by a most respectable clergyman at Cambridge.

mythos of the renewed incarnation now lost. We have seen that it is found in Babylon, in Athens, and in Syria, and very nearly the same in India.

M. D'Hancarville¹ says, "Les Hymnes attribués à Orphée, mais rédigés par Onomacrite plus de 500 ans avant notre ère, sont des espèces d'oraisons, que Scaliger croit avoir été récitées dans les mystères.....Ce livre singulier est reconnu par un docteur en Sorbonne, pour être le plus ancien de tous ceux où il est parlé de l'Immaculée Conception de la Vierge (*Sura*, iii. 88) appelée *Bibi-Mariam*, ou la *Dame Marie*, par les Turcs, comme elle est appelée *Notre-Dame*, par les Chrétiens. Ces derniers, employant à sa louange les prières qu'ils répètent sur le chapelet, en ont sanctifié l'usage apporté de l'orient au tems des Croisades, avec le dogme de la Conception Immaculée. Mohamet le prit des Scythes ou des Tartares; Scythès, le chef de cette nation, étoit fils d'une Vierge, suivant Diodore.² On prétend aussi que le Dieu LA des LAMAS est né d'une Vierge: plusieurs princes de l'Asie, entr' autres l'Empereur *Kien-long*, aujourd'hui regnant à la Chine, et qui est de la race de ces Tartares Mandhuis, qui conquièrent cet empire en 1644, croit, et assure lui-même, être descendu d'une Vierge." I have no doubt that the whole mythos exists in China, and that it formerly existed in the books of the Jews, from which it was taken after the Christian æra, because the Christians applied the passages to their Messiah—a fact which has been very satisfactorily proved by Mr. Whiston.

Benjamin Constant says, "Ce système se rapproche sous quelques rapports de la doctrine Indienne sur les incarnations successives qui ont lieu toutes les fois que Dieu veut faire connaître aux hommes la vérité. Il est assez remarquable qu'on retrouve une idée analogue dans une hypothèse Juive. Les Juifs attribuent la même ame à Adam, à Abraham, et à David, et croyaient que cette ame sera celle du Messie. Ils prétendaient encore qu'il ne fallait point distinguer Élie de Phinès, fils du grand prêtre Eléazar, et que le prophète qui a vécu parmi les hommes, tantôt sous le nom de Phinès, tantôt sous celui d'Élie, n'étoit point un homme, mais un ange toujours le même qui s'incarnait pour donner ses conseils au peuple de Dieu."³

Mr. Faber,⁴ speaking of the prophecy of Zoroaster, which I have formerly noticed, says, "The Magi of Persia had a prophecy handed down to them from Zeradusht, (Zoroaster,) that a Virgin should conceive and bear a child; that a star should appear at noon-day and lead them to it. *You, my sons*, exclaimed the seer, *will perceive its rising before any other nation. As soon therefore as you shall behold the star, follow it whithersoever it shall lead you; and adore that mysterious child, offering him your gifts with profound humility. He is the almighty word, which created the heavens.*"

Now, Mr. Faber truly contends that this prophecy cannot be a Christian forgery, among other reasons, because it is found with the ancient Irish; whose history states, that it was made by a Persian called Zeradusht, and that it was brought to them by a Daru or Druid of Bokhara. The actual identity of the rites and tenets of the Irish with those of the ancients of the East, as well as their existence in Ireland previous to the Christian æra, has been so clearly proved by Borlase, Davies, Vallancey, &c.,⁵ that no more need be said about it. "Therefore," says Mr. Faber, "this cannot be a Christian forgery." The first consequence which seems to follow from this well-founded argument is, that Zeradusht was a prophet, and that his work, the *Zendavesta*, must be admitted into the canon of the church. This not suiting, Mr. Faber supposes that the Persian must have seen the prophecy of Balaam or *some* other of the ancient prophecies, and have adapted it to his system; but he very wisely omits specifying which prophecy, as neither that of Balaam
