(Incorporated in Three States)

110 EAST 41st STREET

NEW YORK, N. Y.

Planning a Vacation...

Nature is mostly woman. That's why Naturists are so slow to learn wisdom—they don't allow for a woman's swift reversal of opinion and lightning change of heart.

Childlikeness is the magic word of admittance to the bounty of Nature—and the largest of a woman. Simplicity, spontaneity, frankness, trust, freedom, realness. And if people were only childlike on their vacations, they wouldn't have such a hard time recovering from recuperation. Is there a sorer-looking spectacle than a Coney Island crowd huddling back at midnight Sunday after a restful day of mad hulla-baloo?

There aren't any "blue Mondays" at our place. Blue Mondays come to match red Sundays. But all our days are as Nature made them—the color of the sky and the hills, the grass and flowers and fruits and radishes and human faces. Our business is painting the dawn and moulding smiles. We have studied a long while and learned to do it pretty well. Rainbows of promise are our specialty—maybe you'd like to examine one. Life is an endless glory of realization when our eyes are opened and our hearts attuned. This is too much poetry.

We want you to come to Butler for your next vacation—and the first relentless item is cost. Here, then, is what we offer you: A camping expedition, a tour of the Alps, a sojourn at a health resort, and a family picnic-party all combined, for the insignificant sum of sixteen dollars a week. This includes everything necessary to wholesome living—food, lodging, amusements, library privileges, bath facilities, advice and instruction on Natural Healing. If you bring your family, the expense would be even further reduced. Most of us live in cottages—with houses for the very aged or infirm. If we haven't any Alps we have the next thing to it—the highest mountain in New Jersey with no grander view in a dozen states. The food here tastes like picnics, but the cooking makes for health—you know picnics usually end in Jamaica ginger and calls for the hot-water bottle. Fruits, vegetables and cereals grow on our own place or surrounding farms, with nuts, extras and goodies from the store make a table that looks like Thanksgiving Day seven times a week. The air is delightfully fragrant with dense balsam and woodland bloom—to make you breathe more of it we've laid out a croquet plat, a tennis court, a bowling alley, and beautiful rambles past romantic nooks of calm retreat. The ground is so high and dry that an April shower runs away almost before you can walk a little barefooted in the wet grass. Yet a lavish brook within a stone's throw lazes in restful pools or leaps through inspiring cascades. There's fishing for the men and boating for the women just far enough off for a good tramp before and a fine appetite after. Diversions of all kinds arranged by the guests and the management. Post office a mile, in the village below. Telephone in the house. Clothes not much thought of—comfort here is second to nothing but modesty. *Freedom to be and express and enjoy one's self as Nature intended*; this is our aim, invitation and achievement. Think it over and write us.

Butler is about an hour's ride from New York, via New York, Susquehanna and Western from Jersey City, Erie Railroad Depot. Twelve trains daily. Ask for schedule and prospectus.

DR. B. LUST'S RECREATION RESORT for NATURE AND LIFE FLORIDA "YUNGBORN"

MOUNT DORA
on Atlantic Coast Line

"QUI-SI-SANA," TANGERINE, FLA.

ZELLWOOD
on Seaboard Air Line

Natural Life and Rational Cure Health Home for Dietetic-Physical-Atmospheric Regeneration Treatment. Fount of Youth, and New Life School for those in need of Cure and Rest, for the physically and spiritually weakened, for those overworked, and for the convalescent.

OPEN ALL THE YEAR

IN the vicinity of the most beautiful lakes in Florida, and country town of Mount Dora, there spreads, in incomparably ideal beauty, surrounded by majestic pine forests, orchards and parks, the Health Resort of YUNGBORN (born young again), "QUISISANA" (place where you get Health). The establishment was called *Yungborn* by reason of the rejuvenating and strength-endowing effects of its Regeneration Cures; and, indeed, these extensively known Yungborn-Regeneration Cures are not only health-restoring, but also Rejuvenating and Strength-giving Cures. Already during, and particularly after the treatments are completed, the strength and vitality, formerly low and broken, rise with astonishing assurance. Vital energy and vital strength return; increased nerve-elasticity and an undreamed-of sensation of powerful health make themselves felt, and with the new creative power, there asserts itself a feeling of spiritual and physical rejuvenation and unlimited efficiency in the human system.

Orange and Palm trees in the Florida "Yungborn"

Yungborn Regeneration Cures—The dietetical Regeneration Cures which are applied in their particular gradations as required for the various diseases and conditions of weakness, are fully adapted to the case in hand and modified correspondingly.

The most peculiar and most intense forms of these Cures are the *Schroth Treatment*, so called after its founder, the genial Johann Schroth, and the combined *Diet, Light-Air and Water Treatments* in which the experiences of *Kuhne, Kneipp, Rickli, Lahmann, Ehret, Just, Engelhardt*, etc., are resorted to individually. Furthermore, *Fruit Cures, Herb Cures, Vegetal and Mixed Diet, Fasting, Diet Cures* in combination with *Fruit Diets*, and so forth, are employed. Diet requires adapted physical treatment, such as *packings, bandaging, baths* and gushes of various descriptions, *barefoot walking, light sun and air baths, steam, electricity, massaging, and Osteopathy, Chiropractic, Mechanotherapy, Neuropathy*, etc. Special attention is given to the development of humid warmth treatment—one of the most important curative factors.

Boating on beautiful Lake Ola

Aid in Obsolete, Inveterate Cases—The Yungborn Regeneration Cures will help even in the most deep-seated superannuated conditions of suffering and weakness, where other cures failed, except in cases of organic new growth and destructions (like cancer and consumption) or marasmus. It need hardly be mentioned that not only those requiring cure, but also those in need of rest—the weakened and convalescing—derive the best possible benefits of lasting effect from a sojourn at the Yungborn—home of health.

FLORIDA
YUNGBORN
ZELLWOOD-TANGERINE.
FLORIDA

A cozy corner in the Library

Baths and charmingly situated **Air Huts** close to the forest, playgrounds and recreation lawns for the children and youth, bring a harmonious note of change into this picture of peaceful retreat. For those inclined to exhilarating walks, the nearby and farther surroundings offer numerous interesting points of excursion and sights of the most varied character.

Stillness of the Forest—In one minute's time, you find yourself in forest's deepest peace. Directly adjoining the orchards and parks, spread the woods with their quiet resting places and panoramic view-points. All around you reigns a wonderful tranquillity. You see the pine-woods stretch out for miles and miles, and you can stroll through them in every direction on dry, convenient trails.

Elevation—350 feet above sea level; the surrounding heights rise up to over 400 feet.

Climate—The climate is extremely mild. The pure, clear air, free from dust and rich in oxygen, acts in a soothing and strengthening manner upon the *nervous system*, furthering the *blood circulation*, and creating, as a result, a vital condition of health.

The Home in Yungborn—A number of houses and villas stand ready to receive the guests arriving from many directions, even from abroad. Very attractive drawing-room and parlor, equipped cosily in the most modern fashion, make a sojourn particularly pleasant. It is a peculiarity of Yungborn that everybody feels himself at home and at ease very quickly, and this is enhanced constantly and extraordinarily by the unconstrained and even intimate tone which quickly develops among all the members of the Yungborn family, thus making life in Yungborn doubly pleasant and greatly beneficial to the general visitor. It may be stated here, though, that Yungborn is not a place of luxury, but a strictly curative resort, with the sole purpose of really improving health and assuring certain success in life, by means of the cures and treatments applied at this Resort.

Yungborn Regeneration Cures Have Stood the Test—The uniqueness of our Regeneration Process and its extremely manifold capability of modification made it possible for us to use it with success for all sicknesses and conditions of weakness.

During the time that the Yungborn has been in existence, patients suffering from the following diseases and conditions have received treatment and have, as a result, been cured:

Diseases of the digestive organs: Inflammation of stomach and intestines, catarrh of mucous membranes, dysentery, ptomain poisoning, typhoid fever, appendicitis, colitis, enteritis, hemorrhoids (piles), ulceration of stomach and intestines.

Diseases of the lungs, respiratory organs, nose and throat: Rhinitis, croup, hayfever, whooping cough, tonsillitis and adenoids (without surgery), bronchitis, pneumonia, asthma and tuberculosis.

Diseases of the heart and circulation: Valvular heart disease, endocarditis, pericarditis, enlargement of heart, dilation and fatty degeneration of heart, dropsy, acites, lymphatic stasis, hardening of arteries (arterio-sclerosis).

Diseases of the Blood: Scrofula, hereditary disease taints, uric acid diathesis, vaccine and serum pollution.

Disorders of metabolism resulting in gout, rheumatism, arthritis, obesity, malnutrition, anemia, diabetes, bright's disease and other conditions.

Skin diseases: Acne, eczema, tetters, boils, carbuncles.

Nervous disorders: Neurasthenia, and other diseases coming from sexual weakness, insomnia, St. Vitus' Dance, epilepsy, failing memory and brain functions, impotence, sterility, palsies, paralysis and locomotor-ataxia, as well as the consequences of poisoning from drugs—mercury, arsenic, lead, iodine, vaccine, serums, etc. In fact, we have treated all ailments of mankind, except those of a contagious or infectious character.

Many a man who had already given up all hope and came to Yungborn as to a last anchor of emergency, regained complete health and strength, and is to-day happy, active and efficient in every respect. Many a husband who for various reasons was lacking his best vital powers, has become a happy father through our regeneration cure. Many a wife, formerly unhappy—if not despairing—is now a happy mother.

Fall, Spring and Winter Cures—We wish to call the reader's attention particularly to the fact that the Yungborn is splendidly suited for a stay in winter time. Not only the Regeneration, but also the Strengthening Cures are immensely successful in winter. In addition, the mild, delightful forest and mountain air, so rich in ozone and oxygen, is of extraordinary vivifying, refreshing and strengthening effect upon the entire organism (which is true of every season of the year).

Yungborn's Forest Charm—A prominent writer likened Yungborn to a legend of the forest with an unspeakably wondrous charm which draws every visitor irresistibly into its embrace. A dreamlike panorama of Lake Ola and the Hill-framed valley and numerous other enchanting views make every visitor's heart rejoice with gladness. *Large Air and Sun*

Light and Air Hut for outdoor sleeping

Side view of Florida "Yungborn" Resort

All those who suffer from any of the above-mentioned illnesses or weaknesses may come to Yungborn with full confidence, not only that they will be treated carefully, conscientiously, and with sure success, but they will find here also a complete understanding and true compassion in the most extreme sense.

Rates—The costs of cure and board are very moderate, and depend on the room and the treatment. Board for guests, with or without general out-door treatment, light and air park use, \$25.00 per week, or \$100.00 per month up; with full individual treatment, \$35.00 per week, or \$125.00 per month up. Reception and first examination, \$5.00 up.

Rates for Sunday guests: Sunday dinner with light-air and swimming baths privilege, \$1.25. Visitors, \$4.00 per day, with room or cottage, board, and light and air bath park privilege. Life with Nature at Tangerine, Fla., has its compensations.

Communication—From New York by *Atlantic Coast Line Railroad*. (New York City ticket office, corner of Twenty-ninth Street and Broadway.) Buy ticket to Mount Dora, Florida, and leave New York, Pennsylvania Station 9:15 A. M.; change at Sanford, Florida, 5:04 P. M. next day for Mount Dora. Due in Mount Dora at 6:33 P. M. Auto can be had at or near depot, or our automobile will meet you, if notification is given us a day or two ahead, by mail. *By Seaboard Air Line Railroad*. (New York City ticket office, 1184 Broadway, near Twenty-eighth Street.) Buy ticket for Zellwood, Florida, and leave on any suitable train for Jacksonville, Florida. Leave Jacksonville 9:30 A. M.; change at Wildwood 2:05 P. M., and arrive at Zellwood 3:54 P. M. Automobile for Tangerine can be had at depot, or our automobile will meet you, if notification is given us a day or two ahead, by letter, or on the same day by telegram from Jacksonville or Ocala, en route. There are many other trains for Mount Dora or Zellwood, but these given above are the only two that are usually on time, and are besides, comfortable for tourists and guests from the North. *By Automobile*—Good Road from Ocala, Tavares, Leesburg, Eustis, St. Augustine, Palatka, Daytona, De Land and Sanford, via Mount Dora. From St. Petersburg, Tampa, Lakeland, Dade City and other places south via Orlando and Zellwood. *By Boat*—via Clyde Line to Sanford; then by Atlantic Coast Line to Mount Dora. Motor and other pleasure boats traveling over the lakes will stop at Tangerine landing on Lake Eau Claire.

Lindlahr Nature Cure Institutes

*Lindlahr Health Resort
Elmhurst, Illinois*

*Lindlahr Health Home,
Chicago, Illinois*

*To the Drugless Physician,
Dear Doctor:*

Minimize Your Percentage of Failures

by placing your chronic cases in a health-giving environment that provides every item necessary to the patient's welfare.

Monotony Breeds Disease

A life time in the same place, with the same associations, eating the same kinds of food day after day, subject to the same habits, spells d-i-s-e-a-s-e.

Change Starts the Cure

Change of habits, change of scene, change of climate, change of food, change of association are absolute essentials to effect a speedy recovery.

The Lindlahr Health Institutes,

one in Chicago and one in the country, provide the ideal environment for the health-seeker. Fresh air, sunlight, regular hours, systematic exercise, pure food, and treatment made up of various combinations of hydrotherapy, massage, Swedish movements, Chiropractic, Osteopathy, Neuropathy, Naprapathy, Spondylotherapy, in fact, every up-to-date method is employed to enhance the Process of Cure.

Co-operation

between the individual practitioners and an institution which adheres strictly to the principles of natural healing will build a stronghold for your profession which none can assail. A profession cannot long exist unless it has behind it the proper representative institution. Count over how many cases you could not hold because the home did not provide the needed facilities and right environment to induce a cure. How many of these patients have drifted away from drugless treatment to end in a medical institute or on the operating table? They would still be your friends and count you their benefactor had you sent them in time to a health resort that provides a curative environment, where your methods of treatment are strictly followed.

The Lindlahr Health Resort and the Health Home are best equipped to handle your difficult chronic cases. The appreciation of this is shown in the fact that Drugless Physicians all over the United States and Canada are patronizing these Institutions.

Our Great Aim is to establish Drugless Healing on a sound basis, to give health to humanity and to help you gain the recognition as a physician which you so rightly deserve.

Write today for our proposition to Drugless Physicians and for our free booklets

LINDLAHR COLLEGE of NATURE CURE

CHICAGO :: ILLINOIS

To Drugless Physicians of All Schools:

HOW WELL ARE YOU PREPARED

to meet the growing demand of the people for Cure rather than treatment? Yesterday's demand was for fads, fancies and illusions. Today the people are clamoring for truth. Yesterday they were chasing phantoms, but the rising intelligence has caused these ghosts to vanish into thin air. Yesterday the cry was for relief from pain and suffering—today the demand is to be made whole and efficient.

IF YOU ARE LIVING

in today, filled with today's hopes, ambitions and desires, ready to meet the demands of a people whose intelligence has been aroused to an understanding of what they have a right to expect of a physician, you must follow the course of progress. THE BUSY PRACTITIONER is too apt to get into a rut, to run in a groove, and so find himself behind the times unless he keeps in touch with the institutions that are active in research and development work.

THE LINDLAHR COLLEGE

maintains a department of research and investigation in which every old idea and method of diagnosis and therapy has been thoroughly investigated, elaborated and improved. Every new idea and method is subjected to the most painstaking analysis and tests and must be passed upon by a group of experts before being adopted into the practice of Natural Therapeutics.

THE COLLEGE offers the results of its research work to Practitioners in

POST GRADUATE COURSES

Four Weeks and Six Weeks Courses in the latest methods of Diagnosis and Therapeutics with clinical practice. Nothing compares with these courses in any college in this country.

Some of the Methods included in Nature Cure Practice:

Diagnosis: *Physical, Spinal, Basic, "From the Iris" and Biodynamic.*

Therapeutics: *Dietetics, Hydrotherapy, Thermotherapy, Phototherapy, Chromotherapy, Mechanotherapy, Osteopathy, Neuro-pathy, Chiropractic, Naprapathy, Spondylotherapy, Massage, Swedish Movements, Curative Gymnastics, Zone-therapy, Pressure Anesthesia, Mental, Psychic and Magnetic Healing, Obstetrics, and Accidental Surgery.*

The LINDLAHR COLLEGE also offers a four months' course in practical nursing, including Dietetics, Hydrotherapy, Swedish Movements and Massage, Lymphatic Treatments, Curative Gymnastics and Physiological Anatomy. The regular College Course is of two years' duration, or three years on the Exchange Plan. Students receive board, room, tuition and salary in exchange for services. An education and practical experience without cost in either nursing or Nature Cure (Drugless Healing).

New York School of Chiropractic

BROADWAY and 39th STREET BUILDING

1416 Broadway

New York City

*The Pre-eminent Chiropractic School
of the Empire State of America*

OUR CRY IS: EXCELSIOR!

The New York School of Chiropractic was founded upon the fundamental principles of educational psychology which places it upon equal standard with the leading professional and scientific institutions of the highest rank.

THE SCHOOL: A RESUMÉ

1. *Location:*

In the Broadway and 39th Street Building, occupying an entire floor area of over 4,000 square feet, facing the world famous Metropolitan Opera House, and within easy access of all surface, elevated and subway transit lines.

2. *Equipment and Classes:*

Large, commodious, airy and well-ventilated class-rooms. All the modern devices essential to every phase of chiropractic, selected with eclectic judgment, are used and illustrated.

3. *Laboratories:*

The school possesses a modern, scientific collection of apparatus for the proper teaching of Physics, Physiological Chemistry, Biology and Osteology.

4. *Faculty:*

The faculty consists among others of the following: Anton Deininger, N. D., D. O., D. C.; S. Gerschaneck, A. B., A. M., D. C.; Benedict Lust, M. D., D. O., N. D.; John R. Schwinzer, L. L. B., D. C.; Ferdinand A. Pinz, M. D., D. C.; Eugene L. Maines, Ph. C., Ph. D.

5. *Curriculum:*

A Two-year course of 9 months each, leading to the Degree of Doctor of Chiropractic is given. The subjects include: 1.) The Art, Science and Philosophy of Chiropractic; 2.) Anatomy, including Dissection; 3.) Physiology and Physiological Chemistry; 4.) Physics; 5.) Biology; 6.) Psychology and Neurology; 7.) Diagnosis and Symptomatology; 8.) Electrotherapy; 9.) Dietetics; 10.) Urinology.

6. *Clinical Practice:*

Ample practice is given daily in our Clinic, wherein innumerable men, women and children are treated.

7. *Sessions:*

Day Session: From 9 A. M. to 3 P. M. Evening Session: From 7 to 10:30 P. M.

Chiropractic Sanatorium of West New York, New Jersey

THE Chiropractic Sanatorium of West New York, New Jersey, was founded by those pioneers of Chiropractic; Drs. Anton Deininger, and Elvira A. Deininger. It was founded on the firm principles of Chiropractic treatment, whereby the ills of mankind may be adjusted to sound Health.

At the junction of two important streets of West New York, New Jersey; Palisade Avenue and 16th Street, there is located a modern, three story building, whose entire structure is admirably adapted to giving best attention and care of patients desiring treatment and to remain away from the multitudes and the annoyances of the home.

In the short period it has been in existence it has already made a marked note in the community. Many of the newspapers of the City praise it highly. In connection with the Sanatorium, the public spirited owners and managers Drs. Deininger have added a free Clinic, and are giving part of their time to eliminate the misfortunes of illness among the poor. By their self-sacrifice they have shown that they are not seeking only the silver dollar but giving both their time and attention, not only to those who have the means, but also to those who do not have them.

For Physiological Therapeutics and Nature Cure

in all branches for the cure of all diseases. Methods followed:

Yungborn Regeneration Cures.

The dietetical Cures which are applied in their particular gradations as required for the various diseases and conditions of weakness, are fully adapted to the case in hand and modified correspondingly. The most peculiar and most intense forms of these cures are the Schroth Treatment, so called after its founder, the genial Johann Schroth, and the combined Diet, Light-Air and Water treatments in which the experiences of Kuhne, Kneipp, Rickli, Lahmann, Ehret, Just, Engelhardt, etc., are resorted to individually. Furthermore, Fruit Cures, Herb Cures, Vegetarian and Milk Diet, Fasting Cures, and so forth. Diet treatment also requires individually adapted physical treatment, such as packings, bandaging, baths, and gushes of various descriptions, light sun and air baths, steam, electricity, massaging and Osteopathy, Chiropractic, Mechanotherapy, Neuropathy, etc. Wonderful results secured in chronic and acute diseases.

A NATUROPATHIC INSTITUTION

using all forms of natural treatment which have proved to be scientific and safe. We have investigated all systems of healing and have taken from each the best and most effective measures for the treatment of acute and chronic diseases. The results have been wonderfully successful and satisfactory in all cases treated, as a long list of benefitted patients can testify.

THE SANITARIUM is located in the country, occupying two buildings situated in the midst of lawn, garden, orchard, and grove. Pure water from a deep well, out-door sleeping facilities, sun-bath, opportunity for games and sports, and a beautiful country for walking.

We serve pure unpasteurized milk direct from a neighboring dairy. Fresh fruits and vegetables in season from our own gardens. All rooms are light and well ventilated, all receiving sunlight at some time of day. We encourage in every way the out-door life. A definite daily regime is followed.

HOW TO GET THERE

Take the Chicago and North Western R. R. at Madison and Canal Sts., Chicago. Trains every hour. Also the Chicago, Aurora and Elgin Electric R. R. at Fifth Avenue near Quincy St., Chicago. Trains every half hour.

La Cura Naturale (Nature Cure) recognizes all the practical and useful systems of rational and drugless healing. It is a combination of the best elements in the Nature and Natural Life, arranged systematically and presented in a comprehensible manner to the public. This is the book for the beginner, as well as for the advanced student or the practitioner in the Nature Cure and Natural Life. Price, postpaid, \$2.20.

La Medicine Naturale. A monthly review for the propagation of natural life and natural cure. This review treats on all the problems concerning diseases and their cure, hygiene, natural nutrition, common sense preventive medicine, and gives new view-points on the new and congenial life for the naturalist. It discusses the vital questions of the day, exposes medical follies and errors, stands for medical freedom, justice, and all popular home treatments for the prevention and cure of disease. Price, \$1.00, payable in advance, per year; 15c per copy. Address La Medicine Naturale, 152 N. Ashland Blvd., Chicago, Ill., or Nature Cure Centre, 110 E. 41st Street, New York, N. Y.

Other publications in the Italian Language.

Return to Nature, by Adolph Just, English, Italian or German. \$3.20

The New Science of Healing, by Louis Kuhne, Italian, English or Spanish 3.20

Natural Methods of Healing, by Biltz, in two volumes, covering any and all systems, a reference work for home treatments as well as for the drugless doctor, price, \$10.00; postpaid. 10.50

The Five Kneipp Books, in Italian, cloth bound, each. 1.75

By Seb. Kneipp: *La Mia Cura Idroterapica.—Così Dovete Vivere.—Il Mio Testamento.—Codicillo al Mio Testamento.—La Cura dei Bambini.*

La Nuova Cura del Sangue, by Dr. C. Criscuolo.—Treatment and prevention for all diseases without Drugs. Italian Edition \$1.50; English 1.10

All mentioned books in Italian, as well as Subscriptions to Italian Nature Cure Magazine, can also be ordered from Nature Cure Centre, Butler, N. J.

GENERAL DIRECTORY

OF

DRUGLESS PHYSICIANS

IN

ALPHABETICAL ORDER

EVERY known method of Drugless Therapeutics has herein received consideration. The names of practitioners have been gathered from all available sources, and, as far as possible, the addresses have been verified. The particular method or methods practiced by each individual is indicated by initials placed after the name, such as N.D., D.O., D.C. A key to these designations is herewith given.

KEY TO ABBREVIATIONS OF PROFESSIONAL DESIGNATIONS

- | | | |
|--|--|---|
| <p>A. = Apyrtropher — Apyrtrophy, Unfired Food. Apyrtrophic Agriculture and Horticulture. Raising and perfecting physiological, natural foods.</p> <p>A.M.A. = Member American Medical Association</p> <p>A.N.A. = Member American Naturopathic Association</p> <p>As. = Astroscopy — Astro-medical Diagnosis</p> <p>B. = Biochemist — Tissue Salts, Spagyretic Therapy.</p> <p>Ch. = Chiropodist — Chiropody — Treating feet by hand</p> <p>Cr. = Christian Science Practitioner</p> <p>D. = Drugless doctor using any single or several naturopathic or drugless methods</p> <p>D.C. = Chiropractor. Chiropractic as defined by its founder and taught and practised by the recognized schools</p> <p>D.D. = Doctor of Divinity</p> <p>D.M.T. = Mechano-Therapist — Mechano-Therapy—Natural Healing. Using all mechanical and manual methods. Dietetic and Physiological Therapy.</p> <p>D.O. = Osteopath — practising Osteopathy as taught by the standard schools of Osteopathy</p> <p>D.P.T. = Physio Therapy</p> <p>D.S.T. = Doctor of Suggestive Therapeutics. Psychotherapy</p> <p>E. = Eclectic — Eclecticism</p> <p>E.H. = Electro - Homeopathist — Electro-Homeopathy</p> <p>El. = Electro-Therapist — Electro-Therapy in all its branches, including X-Ray work and Radio-Therapy</p> <p>F. = Doctor of food science, or Dietician. Natural Alimentation</p> <p>H. = Homeopath — Homeopathy</p> <p>He. = Health Director, Teacher of Natural Life and Prevention of Disease</p> <p>Her. = Herbalist, Botanic System, or Phytotherapy</p> | <p>Hi. = Heliotherapist, sunlight and air cure; Phototherapy, colored light cure, or Chromopathy</p> <p>Hy. = Hydropath — Water and Nature Curist. Hydropathy of all kinds. Water Cure Systems. Balneotherapy and Drugless Physiological Methods</p> <p>Hyg. = Hygiotherapist — Hygiotherapy</p> <p>Hyp. = Hypnotism, Psychotherapy and Suggestive Therapeutics</p> <p>I. = Iridologist — Iridology — Science of the Diagnosis of Diseases from the Eye</p> <p>I.M.F.A. = International Medical Freedom Association</p> <p>L. = Life Conservationist and Physiological Engineer</p> <p>Ma. = Masseur, Masseuse, Swedish Movements, Massotherapy; medical, resistive, corrective and orthopaedic gymnastics. Vibration Therapy. Masteropathy</p> <p>Mag. = Magnetopath — Magnetopathy — Science of Curing Disease by Life Magnetism</p> <p>M.D. = Regular Physician, using natural, drugless methods, and medicines to a limited extent</p> <p>Me. = Mental Science, Mental Healing, and New Thought. Metaphysist. Psychology, Science of God, Freedom and Immortality</p> <p>N. = Neuropath, practising Neuropathy according to the established schools of Neuropathy</p> <p>Nap. = Naprapath, practising Naprapathy as defined by its discoverer and taught by the College of Naprapathy. Connectivology, Chartology</p> <p>N.D. = Naturopath, or Nature Cure Physician, using one, several or all rational, dietetic, physiological, mental and spiritual methods of preventing and curing hu-</p> | <p>man ailments. — Naturopathy: the science of natural healing, and art of natural and efficient living. Life Conservation, Life Extension, Sacredness of Life. Education and Eugenics based on Natural and divine laws</p> <p>Ne. = Neurologist — Neurology is the science which treats of the nervous system. This science is for the analysis of the causes of human ills and provides how to abolish them without drugs or operations</p> <p>Oph. = Ophthalmologist — Ophthalmology is the science of the eyes, their defects and the relation of those defects, as causative factors to human ills. The BIGGS SANITARIUM

ASHEVILLE, NORTH CAROLINA

DR. A. C. BIGGS, DIRECTOR
*Seventeen years' experience in
the practice of naturopathic
methods*

THE BIGGS SANITARIUM is situated in one of the most desirable residential sections in the metropolis of "The Land of the Sky,"—a City famous for its scenic beauty as well as for its healthfulness.

This region is favored with the best all-the-year-round climate to be found in America. Many thousands of residents of the Northern States and Canada spend the fall and winter months in Asheville, because of its healthful climate.

At the Biggs Sanitarium, all the various successful forms of physiological drugless treatment are employed: massage, remedial gymnastics, mechano-therapeutics, spondylotherapy, electricity, hydrotherapy, high frequency, electric light baths, arc light, X-ray, vibration, with special treatment in certain ailments, such as asthma, catarrh, paralysis, etc. Psychological treatment and mental training in indicated cases. Scientific regulation of diet is an important factor in our plan of cure.

Our teachings and practice in all matters of hygiene and correct living are in perfect accord with the advanced principles of THE HERALD OF HEALTH AND NATUROPATH.

Our patrons are almost exclusively from that large class of chronic sufferers which ordinary methods of treatment fail to cure. We treat successfully asthma, bronchitis, catarrh, dyspepsia, rheumatism, neuritis, neurasthenia, nervous debility, insomnia, melancholia, paralysis (including paralysis in children), and special diseases of men and women.

We do not accept cases of tuberculosis, cancer, or insanity; neither do we accept any case that we consider incurable, or for any reason undesirable.

SPECIAL ADVANTAGES: Thoroughly scientific diagnosis. Carefully arranged plan of treatment to meet the requirements of the individual case. Personal care and attention. All the comforts of home: pleasant rooms, electric light, steam heat. Congenial environment. Moderate charges.

Every patient accepted for treatment is allowed one week in which to become acquainted with us and to become familiar with our methods, *with the distinct understanding that if in any way dissatisfied, treatment may be discontinued at the end of the trial week, and there will be no charge.*

Illustrated pamphlet describing our methods, a diagnosis blank, testimonials and case records, and the names of physicians, clergymen, lawyers, editors and others who endorse our methods, will be sent *free* on request.

If you are not satisfied with your physical condition, write us, and learn of these new and better methods of cure.

Two-Year Course in Nursing

BE A NURSE

Follow a vocation that will create for you an income that is above the average.

High School Education desirable, but not necessary.

EARN WHILE YOU LEARN

Our nurses earn *more* than their living expenses and tuition before they graduate.

Free Information

Address Dept. J for Free Booklet

WE NEED NURSES

Graduate and under-graduate, for private cases and hospital positions. Proficient under-graduates are employed at a salary of \$15 to \$20 per week.

AFTER GRADUATING, our nurses earn \$25 to \$35 per week. Our graduates are not required to take a State Board Examination.

TRAINING IS THOROUGH AND EASY. No drudgery is required of our nurses, as is required of the hospital nurses; hence, our course is shorter.

DIVISION OF TWO-YEAR COURSE. Eight months of the two-year course is spent in a hospital, which is sufficient time for the student nurse to learn the hospital routine. Eight months is spent in the lecture room, during which time the nurse receives more technical and practical knowledge than the hospital nurse receives in three years, and has the mornings, Saturdays and Sundays to herself. Eight months is spent on private cases, during which time the student can earn more than enough to pay her tuition and entire expenses while in training, and have several hundred dollars besides.

TIME CREDIT. Any student may receive two months time credit in the lecture room or hospital, if her ability, recitations and examinations entitle her to same. She must, however, complete a two-year course. If a nurse receives two months credit in a hospital, she then receives ten months private case training, which, of course, is an advantage, as she is earning \$15 to \$20 a week during this time. If a student also completes her class work in six months, she then spends twelve months on private cases.

Doctors desiring nurses who are not antagonistic to their form of practice can secure them from our school. Phones, Lincoln 2155, and Diversey 2990.

"THE SHRINE OF DRUGLESS PHYSICIANS"

The New Jersey College of Chiropractic

*Incorporated under the laws of the State of New Jersey
as an Institution of Learning*

122 ROSEVILLE AVE.

NEWARK, NEW JERSEY

If you are sick and have tried everything else with no lasting results, try Chiropractic (spinal) adjustments and get well.

WHAT IS CHIROPRACTIC? (*Ki-ro-prak-tik*)

CHIROPRACTIC is a scientific method of removing the cause of disease (acute or chronic) without the aid of drugs, surgery or appliances. The science of Chiropractic is based upon a correct knowledge of the brain, spine, spinal cord and nerves emanating therefrom. Pressure on a nerve at the opening where it leaves the spine will cause disease in that organ or tissue at which the nerve ends. The Chiropractor, after locating the place of the pressure (by vertebral palpation and the tracing of the tender nerves) adjusts, by hand, the subluxated (displaced) vertebrae which relieves the pressure and enables "Nature" to restore normal conditions—HEALTH.

EDISON'S OPINION

"The doctor of the future will give no medicine, but will interest his patients in the care of the human frame, in diet, and in cause and prevention of disease."

Washington School of Chiropractic, Inc.

THE School That Creates its Record on the Merits of its Works. Its Students are equipped for the best in life; given the Best in Chiropractic and Kindred Spondylotherapy Methods, with fullest courses in Anatomy, Physiology, Pathology, Diagnosis, Dissecting, etc.

Courses lead in two years of six months each to Degree of Doctor of Chiropractic, to which is added Degree of Philosopher of Chiropractic.

Washington, the City Beautiful, with its rapidly growing population, which has already reached the half million mark, has advantages which no other city on earth possesses or can possess; splendidly healthful, wondrously beautiful, inestimably educational.

To name all these advantages would require more space than this page would permit, and we therefore name but a few, such as the Library of Congress, where every old or new book ever published on drugless therapy or any other subject may be found and used; the Smithsonian Institute, with its Manikins, Torsos, Skeletons, and thousands of other Physiological and Anatomical specimens and objects of immense importance to students; other Museums, Libraries, Monuments, Government Buildings, Zoological Gardens, etc., etc.

The School itself, with commodious quarters on Washington's best business street, has the most thorough equipment that could be furnished. Good library, nicely furnished offices, neat and well furnished adjusting parlors, commodious lecture and clinic rooms, static and X-Ray machine, all other desirable apparatus, the best of skeletons, articulated and disarticulated, all charts ever published that we know of, large and small manikins, etc., etc.

We are determined that no advancement in Chiropractic and Kindred Sciences shall escape our notice. Our students must and shall have the best. Whatever advancements naturally come to the sciences taught in this college, our student body shall receive.

Rates of Tuition as Follows:—

Complete Course Leading to Degree of Doctor of Chiropractic.....	\$150.00
Same Course for Husband and Wife, if taken at same time.....	200.00
Other two Members of same Family, if taken at same time.....	250.00
Course Leading to Degree of Philosopher of Chiropractic, Additional..	100.00
Post Graduate Course for Physicians, lasting about two months.....	50.00
Course for Graduate Nurses.....	100.00

For catalog and all further information, call on, or address, the college

RIEDMÜLLER NATUROPATHIC INSTITUTE

Established 1895

Telephone, Lenox 5486

ALL DRUGLESS METHODS USED. BEST NATUROPATHIC EQUIPMENT in New York City. Kneipp's Water Cure, Steam Baths, Electric Light Baths, Packs, Douches, Pine Needle and Herb Baths. Electrotherapy in all branches, Massage, Vibrations, Swedish Movements, Curative Gymnastics, and other Manual Methods. Diet and Physical Culture. Men and Women Departments. Graduated Naturopath Lady in charge of Women's Division. Rates reasonable. Regular Physician for Examination and Diagnosis. Highest experiences from Patrons and the Medical Profession.

J. RIEDMUELLER, N. D., D. C., D. O.

Graduate of Father Kneipp's Hydropathic College 1894, American School of Naturopathy 1898, Osteotherapeutic College 1906

Licensed in New Jersey and New York City

Charter Member of American Naturopathic Association

Member of N. Y. State Society of Naturopaths since 1896

117 East 86th Street

New York, N. Y.

Between Lexington and Park Avenues

and 637 Livingston St., Elizabeth, N. J.

*Naturopathy is the Natural
Way of Treating Disease*

THE 20th Century Method of Regaining LOST HEALTH NATUROPATHY

Naturopathy is to-day restoring vigor and vim to those suffering from run-down, debilitated conditions of the system when drugs fail to have any effect. Our fees are exceedingly reasonable and outside patients may come and take treatment between the hours of 8 to 12 a. m. and 2 to 8 p. m. Treatment consists of

MASSAGE, OSTEOPATHY, CHIROPRACTIC, SPONDYLOTHETAPY, ORTHOPEDIC SURGERY, SUGGESTION, HYDROTHERAPY in all branches, **ELECTRIC LIGHT, HOT AIR, VAPOR, SUN, HERBAL, PINE NEEDLE, NAUHEIM** and all other **MEDICATED BATHS, OUR TREATMENT ROOMS AND ROOMS FOR RESIDENT PATIENTS ARE SUNNY AND STEAM HEATED.**

Naturopathic Institute and Sanitorium

OF CALIFORNIA (Incorporated)

DR. CARL STRUEH'S
**SANATORIUM
AND HEALTH RESORT**
McHENRY, ILL.

Long Distance Phone:
McHenry 92-M.

Only 1 hour's ride from Chicago, on the Chicago-Northwestern Ry. Easy to reach by automobile from all directions.

Located in the beautiful Fox River Valley. Healthful rural surroundings. No city atmosphere. No dust. Very home-like. No conventionalities.

20 acres of Park and Orchard, shrubs, flowers and grapes. Fine bathing beach. Large lawns for barefoot walks. Colony of open air cottages. All out-door games. Delightful motor boat excursions and cross country walks.

Splendid Results by our Regeneration Cure

All various Diets (mixed, vegetarian, grape, raw food diets). Fasting and Milk Cure (Milk supplied from Holstein cows).

Special diets in Gastric and Intestinal afflictions, Diabetes, Obesity, Gouty and Rheumatic conditions.

Complete Water Cure system. Sun and Air Baths in the open. Curative exercises (Gymnastics). Mud Packs. Massage. Rest Cure for physical and nervous breakdowns.

Splendid opportunities for those who wish to spend their vacation for the benefit of their health. Moderate rates. Circular and information upon request. Consultation at Chicago by appointment.

YUNGBORN FIRST NATURE

CURE RESORT IN FLORIDA. Tangerine, Orange County. Station on Seaboard Air Line R. R., ZELLWOOD. Station on Atlantic Coast Line R. R., MOUNT DORA. Located in the highlands of Florida, this beautiful resort offers the best opportunity for those seeking health, rest and recreation. Healthful climate; pure air; free from fogs and dampness. Outdoor sports; swimming, boating and bathing. Every advantage for carrying out the true Natural Life and Natural Healing Methods. Management the same as at the famous Yungborn at Butler, New Jersey. Sun, Light and Air baths; Iothanin baths, clay packs, all branches of Hydro-therapy, Massage, Swedish Movements, Mechano-therapy, Chiropactic etc. Vegetarian and fruitarian diet. Special facilities for fasting. For further information, address, B. LUST, N. D., Nature Cure Resort, BUTLER, N. J.

Naprapathic CHARTOLOGY A new book just written by Dr. Oakley Smith, founder and developer of Naprapathy. A book every Osteopath, Chiropractor and Naturopath will want.

A Book that Sizzles with New Truths
175 Illustrations on 271 pages 6"x9"

CHICAGO COLLEGE OF NAPRAPATHY
1428 W. Jackson Blvd. :: Chicago, Illinois

Hälsöhem by the Sea

The California Yungborn
CORONADO, CAL.

An Out-of-door Health Home and
School of Health

Located on beautiful San Diego Bay, near Coronado Tent City. We use only genuine Naturopathic Methods, such as Natural Diet, Fast and Milk-cure, Open-air Sleeping, Boating and Swimming, Psychotherapy, etc. Our Open-air Gymnasias and Corrective Treatments unexcelled in America.

We have lately started a Physical Culture Colony and Tubercular Preventorium in the mountains near Jacumba Hot Springs—over 3,000 feet elevation—under the same management as Hälsöhem. Write

A Rational Medical School

The Vetus Academia (O. P. M. College), formerly known as the Old Physio Medical College was organized in 1898 by Dr. C. F. Conrad, who later organized the affiliated institutions, the Eclectic Osteopathic Institute and the National Eclectic Institute.

The Vetus Academia (O. P. M. College), was incorporated in 1904 and is registered with the Secretary of State in Pennsylvania and New Jersey. The Director's private office is located at 110 West Ninetieth Street. For many years a New Jersey Branch has been successfully conducted at 120 Palisade Avenue, West Hoboken. The system taught is eclectic, which means the best chosen from every branch of nature-healing, combined with the teachings of Europe's greatest naturopaths. Instruction in English, German and Swedish. The officers of the College for 1917-1918 are H. Morgenbesser, B. S., M. D., President; J. B. Praegr, M. D., Secretary; Dr. F. Pfau, Treasurer; Vice-Presidents are: J. Safian, M. D.; H. Bick, M. D.; E. Carroll, D. O. and C. E. Binck, D. O.

A successful future is expected for all who graduate from this and the affiliated institutions.

THE LA CROSSE NATURO-PATHIC SANITARIUM

402 S. Seventh St. & Cameron Ave., LA CROSSE, Wis.

JOSEPH RIESE, N. D., D. O., D. C., Dir. and Prop.

BIOGRAPHICAL NOTES

ANGER, ARTHUR, D. C., 42-44 Manhattan Building, Fergus Falls, Minn.

Dr. Anger was born in 1863, in Germany, and has been in practice continuously for 13 years. He graduated at the National School of Chiropractors and St. Paul School of Chiropractic in 1903 and 1914 respectively; at the American College of Mechano-Therapy in the year 1910; and at the American School of Naturopathy in 1912. He began the study of Chiropractic and Natural Healing in 1904 at the St. Paul Institute of Chiropractic and Natural Healing, now non-existent. Dr. Anger is a member of the Minnesota Chiropractors Association, the National Association of Drugless Physicians, and the American Naturopathic Association. He has always attended the various Conventions and is a representative practitioner.

ANTIGA, DR. JUAN, San Miguel 130 B, Habana.

Dr. Antiga is a great doctor of renown and a true naturopath. In Cuba he has always been a leader in progressive and rational medicine. He is connected with all branches of reform work, and his contributions to the local newspapers on infantile paralysis, cancer, etc., have been copied in the newspapers of Spanish-speaking countries all over the world. Dr. Antiga's name is known throughout South America and even in Spain. He is a regular contri-

butor to the well-known magazine "La Nueva Ciencia," as also to the publication called "Pro Vida." His practice is very large and he is successful not only as a doctor, but he also takes a great part in constructive politics, as well as in civic matters, being a citizen and leader in the Cuban Republic. He raised a large family of seven children and all are being brought up according to the principles of natural life. At his "Clínica Homeopática," San Miguel No. 130 B, Havana, Dr. Antiga devotes his attention exclusively to the treatment of chronic ailments by homeopathic means, such as: diseases of the skin, syphilis, asthma, ailments of the nervous system, etc.

ANTIGA, DR. JUAN, San Miguel 130 B, Habana.

El Dr. Antiga es un médico de gran renombre y un verdadero naturopata. En Cuba ha sido siempre un "leader" en la práctica de la medicina racional y progresiva. Está relacionado con todas las ramas de las reformas médicas y sus trabajos en los periódicos locales acerca de la parálisis infantil, cáncer, etc., han sido reproducidos en los periódicos científicos y populares de todos los países del mundo de habla castellana. El nombre del Dr. Antiga es muy conocido en los países Sur Americanos, por los cuales ha viajado, y aún en la misma España. Forma parte del cuerpo de redacción de varias publicaciones médicas y trabajos suyos se han publicado en el bien conocido periódico titulado "La Nueva Ciencia," como en "Pro-Vida" que se editan en la Habana.

Su práctica médica es de las más extensas y su popularidad extraordinaria, porque él ha tomado participación interesantísima en los acontecimientos políticos y sociales de su país. Posee una numerosa familia y actualmente tiene siete niños que están educados en los principios de la vida natural.

En su "Clínica Homeopática," San Miguel 130 B, Habana, dedica su atención casi exclusivamente al tratamiento de las enfermedades crónicas, empleando como método terapéutico exclusivo el homeopático y dedicándose con especialidad a las enfermedades de la piel, sífilis, asma, sistema nervioso, etc.

ARNOLD, ALMA C.

Dr. Arnold was born in 1871, in Germany, and came to America while very young.

Dr. Juan Antiga

Dr. A. C. Arnold

As a widow, disappointed with the medical methods as employed by the different schools in her family, she soon looked for something better, and began the study of the different Nature Cure methods, especially the constitutional systems as laid down by our great masters: Louis Kuhne, Father Kneipp, F. E. Bilz, Platen, Lahmann, Ehret and others. She acquired an education in these methods and graduated from the American College of Chiropractic and Nature Cure in 1903, under Dr. Langworthy, who at that time ran one of the foremost colleges for Chiropractic and Nature Cure. In the year 1911 she graduated from the College of Medicine and Surgery of Chicago. She is also a graduate of the Old Physio-Medico College, Department of Osteopathy, of the year 1913. She is a member of the American Naturopathic Association from its inception, and she has always been a willing and liberal supporter, financially and morally, of the work of the A. N. A. Moreover, Dr. Arnold is a member of the International Alliance of Physicians and Surgeons, and of the New York State Society of Osteo-Therapeutics. Her practice as a naturopath and chiropractor has been most successful; she enjoys a national reputation, and her patients are among the highest in the social, business and intellectual class. Dr. Arnold never advertised; all her patients come by recommendation, and the number is always so large that she has to turn down a good many, as she could not take care of them all personally. Her individual accomplishments consist principally of Chiropractic research work, such as the famous Arnold spine treatment for general health and prevention of disease. The fact is, she is one of the few doctors who have among their clientele a large number of healthy people who have intelligence enough to take preventive Naturopathic treatment. This work alone keeps her very busy, and, so far as high fees in drugless work are concerned, she receives the highest of any one in practice in the United States today. Dr. Arnold has been giving lectures and demonstrations at several of the Eastern drugless colleges, such as the Old Physio-Medico College, the American School of Naturopathy, the New York College of Chiropractic, the New Jersey College of Chiropractic. She gave demonstrations at different Conventions, such as the 1915 Convention of the N. A. D. P. at Atlantic City, which was a great revelation and surprise for all present; at three Conventions of the American Naturopathic Association which were held at the Yungborn, Butler, N. J., in the years 1913, 1914 and 1915. At a graduation of the 1914 class of the American School of Naturopathy, she gave a special clinic at the Col-

lege, where some of the foremost practitioners and professors of the drugless methods were present, and all agreed that Dr. Arnold cannot be beat. Her untiring enthusiasm, love and sympathy for the drugless methods, particularly chiropractic, have been the key to her great success. Dr. Arnold was subject to many persecutions. Already, while carrying on her practice in Washington, D. C., she was followed up by the "stool pigeons," sleuths, and dirty emissaries of the still dirtier Society which sent them, and although she was found guilty, she held up her effort, paid her fine, and kept on practicing. In spite of all prosecutions, she never wavered, but kept up her work. One day, she told the Editor of the Herald of Health that she would rather go to jail for life than give up her chosen work of relieving and ministering to suffering mankind. Her reputation is so deeply rooted that there is no combination among her adversaries that can put her out of practice.

BELAIS, MRS. DIANA.

President of the New York Anti-Vivisection Society.

The glory of a nation does not consist in its military or naval prowess, nor in its in-

dustrial progress, but, instead, in the work of its citizens of noble character who give high and unpurchasable examples of self-sacrificing loyalty to great reforms, who, with sweetness and sternness, offer an indomitable pride of service in the cause of justice and humanity. As one of the original, staunchest, and fearless advocates of medical humanity and medical freedom, this book should at least contain a brief account of the work done by Mrs. Diana Belais, who has during the last ten years carried on an uncompromising war against medical tyranny, realizing as she did, even before the formation of the National League for Medical Freedom, that freedom from the dictum of the medical man, with his subtle influence in the family and the individual, was and is the cornerstone of anti-vivisection. Mrs. Belais founded the New York Anti-Vivisection Society in 1908, and has been its president from that time to the present. Previous to that time anti-vivisection activity in New York State had been sporadic and impermanent, no organization being in existence, although there were sincere souls who had interested themselves in the cause. In 1908, began the present energetic campaign, the first gun fired being the incorporation thereof, and the second, a mighty one, being the splendid daily support by the **New York Herald** of the New York Anti-Vivisection Society and the movement in general. The **Herald** carried on a magnificent campaign for many weeks, assisting Mrs. Belais in every way. Also the magazine **Life** has been of untold service to the cause, and to which we must add **The New York American** as an able co-adjustor. In 1910, the unrest and apprehension occasioned by the legislative encroachments of the medical profession, instigated by the American Medical Association, culminated in the formation of the National League for Medical Freedom. Mrs. Belais being among the first to be requested to co-operate with this organization by becoming one of its directors, in which capacity she remained during the entire period of the League's existence, becoming in turn Vice-President and then President. During this time, Mrs. Belais zealously advocated the principles of medical freedom in the pages of her magazine **The Open Door**, the National Anti-Vivisection and Animal Magazine, which she founded in 1911 to fight vivisection, devoting quite as much space to the former propaganda as to the specific object for which the magazine was founded. The continued exposés made in **The Open Door** of the baleful doctrines and deeds of the vivisectors has awakened the wrath of these malefactors and their supporters among the medical fraternity, who do not hesitate to wish that Mrs. Belais and her co-workers should be committed either to jail or the asylum, their only fault being the assertion of their right to spend their treasures of love and

sympathy in the attempt to check, or remove one of the world's foulest wrongs. The most recent development of Mrs. Belais' activities has been the formation in 1917 of a National Anti-Vivisection Federation, which is comprised of the New York Anti-Vivisection Society, the Maryland Anti-Vivisection Society, the California Anti-Vivisection Society and the Pennsylvania Anti-Vivisection Society and the National Anti-Vaccination League, of which the President is Mr. George Arliss, Mrs. Diana Belais, Vice-President, Miss Katharine Nicholson, Corresponding Secretary, Mrs. Jessica L. C. Henderson, Recording Secretary, Mr. Claude M. Spaulding, Treasurer, Miss Nellie C. Williams and Mr. H. D. Lewis are the remaining directors. To this aggregation of Societies, other organizations in sympathy with it will very quickly be added. Its objects are: To call public attention to vivisection and to stimulate public discussion and consideration of measures for the abolition of the same; to disseminate information and literature with respect thereto; to organize Anti-Vivisection Societies in all states where none exists; to organize and hold meetings for the discussion of propositions pertaining to vivisection and kindred subjects; to present arguments with respect to all legislative measures dealing with the subject; to facilitate closer acquaintance and co-operation among those who are opposed to vivisection; to inspire and arouse general public support for measures to abolish vivisection; to advance the principles of Medical Freedom and oppose encroachments upon the same. But in summing up, not the least of her efforts is to expose the machinations of the American Medical Association to crush out those enlightened methods of healing, drugless and other, which are undoubtedly a God-send to the community, and are every day proving themselves to be of the greatest value to humanity. In short, Mrs. Belais has become more and more profoundly impressed with the dangers of medical tyranny from every point of view—that of civic liberty, of constitutional rights, of bodily and mental health, and of the ultimate welfare of the race. For that reason, her magazine is now and always will be devoted largely to the great humanitarian work of Medical Freedom.

**BERHALTER, DR. ANTHONY A., and
DR. KATHERINE BERHALTER.**

Dr. Anthony A. Berhalter was born on October 30th, 1878, at Ellenberg, Kingdom of Württemberg, Germany. Born on the farm, he enjoyed the benefit that comes from frugal and out-of-door living until at the age of fourteen he decided to go to America. This he did, without anyone accompanying him. Being by nature a searcher and investigator, and having read and heard a great deal of that rich and free

country, America, his conscience directed him to leave home and country and go to the great land of the far west, the United States of America. After arriving here, he settled down with relatives in Iowa, on the farm. After four years of all-around farm life, working in summer and going to school

only prescribed medicine, not changing the living habits of the patient, which, of course, as in nearly every case, only made matters worse.

After many sleepless nights and the endurance of innumerable pains under which life was more of a hell than anything

Anthony A. Berhalter, N. D.

Katherine Berhalter, N. D.

in winter and living on the so-called rich food, such as meat, potatoes, pie and cake, five times a day, along with plenty of good strong coffee sweetened with white sugar, the young man Berhalter commenced to experience constipation and from the one-sided diet, severe pains in the stomach made themselves known. Advice was asked from the good farm folks in regard to these troubles, and pills and patent medicines were suggested to relieve all such troubles, which the young man tried at length with illusory results. The removal of the causes of such disorders no one knew anything about and cared less. After four years of farm life in this country, the young man Berhalter decided to go to the City and learn photography. He procured a position in a studio and started in at once. Now came (in-door) life after eighteen years of out-door life. The eating habits, however, were not changed—thinking like most people that the richer the food and the more we eat, the better for us, because that poor body of ours must be well nourished. Following up this indoor method of living, with plenty of so-called good nourishing food, new and more severe disorders presented themselves, and the young man entrusted himself in the care of an old school physician, who, however,

else, the investigating Berhalter spirit commenced to assert itself, and after some reflection he decided that back of every existing thing there must be a cause. He commenced to search for knowledge of the laws of life. Sincerity and diligence in searching led the young man to the right road. Every book that could be obtained on causes and effect of disease and health was sent for, until the young man had a veritable library on health. Among the leading books were the ones published by Dr. Benedict Lust of New York. His magazine was eagerly read and studied every month. After studying and practising out of these health books, all troubles commenced to leave and after a few years vigorous health was enjoyed and permanently maintained. But now, a new problem confronted the young man, and it was this. It is true that he has abundant health now and life is an endless joy, but we cannot fully enjoy things alone. We must pass them along. As he saw that there are hundreds, yea thousands who are daily suffering from the result of wrong living, he reasoned with himself to devise some means of spreading the knowledge of right-full living, in a practical way. After much thought on the subject, he decided that food manufacturers all over the land are

to a great extent responsible for the ill health prevalent. Through his studies, Mr. Berhalter found that some of the most staple foods were also the most abused—the main one being our daily bread and drink. It was found that white bread was the main cause of constipation and that drinks by being fermented and otherwise wrongly prepared, caused drunkenness and ill health and all kinds of other miseries. In his search for health, he found that the wheat berry used in its entire form was the natural way to use it—that unfermented drinks are the natural drinks for man. While dwelling on these things, they brought about a condition of mind which formed the ideal to become a manufacturer of food, especially of bread containing all the natural food principles and without adulteration and to spread these food products broadcast throughout the land. And so, a few years later, after working hard in studying and experimenting, the time arrived when the enthusiastic Berhalter was ready to start his food factory. This was started, and he worked with a friend of his, Mr. Victor Simon, for one year. Then Mr. Berhalter was married to Miss Katherine Novak, who was born in Chicago, on April 4th, 1878, and who, like Mr. Berhalter, had nursed herself back to health by rightful living and also gained much knowledge in regard to preparing proper food. Mrs. Berhalter stepped in and took the place of Mr. Simon and together Mr. and Mrs. Berhalter started in to face the world in introducing new kinds of food and bread which were destined to reform the entire old time menu and be the means of doing away with the disease caused by eating wrong food. After much hard work, long hours and much educating, the little place at 309 North Ave., Chicago, Ill. became crowded with eager buyers of their new kinds of food and bakery goods. Every thing was made of whole wheat, Rye, Oats, Barley, Rice, etc. Along with these foods, they gave away and sold all kinds of Health Literature, and right here is where Dr. Benedict Lust's publications did good work to relieve people of their mental and physical ailments. Their business grew rapidly and after three years they started another Health Food Store at 132 E. 43rd Street, Chicago, and two years later they built a good-sized bakery at 1423 N. Clark Street. Lectures on healthful living were held in these new quarters and their food shop became a great center of education for rightful living, which became known in every state in the Union. Literature was sent all over and it started a new impetus for this new way of living everywhere. Responses came so overwhelmingly that it became necessary to organize a great stock Company and to build a great factory with a capacity sufficient to supply a hundred thousand whole wheat breads a day, and thousands of dozens of whole wheat

cookies, muffins, whole wheat pies and many other good things prepared simply and wholesomely. Their new Health Food plant is located on Diversey Parkway and Lincoln Ave., Chicago, Ill. Thousands and thousands of people will herald the good tidings that they can buy good clean healthful food all over Chicago, and a little later, all over the land, as it is the intention of the Berhalters to have their food sold in every city in the United States before very long, and hope that by so doing, a great evil will be overcome and a possibility of better men and women with cleaner minds and bodies, resulting therefrom.

BERGGREN, TELL, N. D., M. D.

Dr. Tell Berggren, director and proprietor of the Health Home known as "Hälsöhem-by-the-Sea," at Coronado, Cal., is one of the most successful, most enterprising, most learned, and most successful of American Naturopaths. He is a member of the American Physical Education Association, of the Therapeutic Gymnastic Society of America, and is also lecturer and teacher of Swedish gymnastics, orthopedics, gymnastic nomenclature and kinesiology at the Normal School of Physical Education, Battle Creek, Mich. He is the author of several works, explanatory of mechano-therapy and the Swedish system. A graduate of Swedish colleges, he became connected with Battle Creek Sanitarium on his arrival in America, where he studied the merits of the various methods of natural healing adopted at this well-known institution. Later he made several visits to Europe, stopping long enough at the various Natural Cure resorts to learn their varying modes of health culture. Thus, fully equipped for operating as a Naturopath on his own account, he finally settled at Coronado, Cal., where he established his well-known "Hälsöhem-by-the-Sea." Here he employs manual therapeutics with other branches of physical education—massage, hydropathy, heliotherapy, psychopathy, dietetics, etc., as the best way of getting speedy as well as permanent results.

The editor has visited Hälsöhem, which he regards as the only genuine Yungborn on the Pacific Coast. The progressive and undoubtedly curative methods employed combine the virtues of the Swedish and other rational systems of active and passive therapeutics and diet.

Many years ago, Dr. Berggren saw the necessity for a Yungborn for consumptives, and has established a sanitarium in the mountains in the extreme southern part of California, where he is doing a great work for suffering humanity. He treats his patients with rational methods, instead of the irrational methods of the drugging system.

Dr. Berggren is very fortunate in possessing a wife learned in all the methods of Naturopathy, who is at the same time a

Tell Berggren, N. D., M. D.

business woman—a rare combination in a helpmate. The great success of Dr. Berggren is as much the outcome of the ability of his wife as it is to his own merits. The loyalty, enthusiasm, initiative, and supreme faith in natural methods of cure exhibited by Drs. Berggren are in strong contrast to the lukewarmness, sectarianism and fault-finding proclivities of an extensive section of Drugless practitioners.

BIERI, R., N. D.

Dr. Bieri is the proprietor of the Carlsbad Institute, located at 336 Palisade Avenue, West Hoboken, N. J., which he has equipped with every modern appliance for Naturopathic work. He has had a long and successful experience in the treatment of both acute and chronic diseases, and has become the possessor of a rich experience in the Nature Cure method of healing which is

the foundation of his success. Jealous of his work and reputation, the New Jersey Medical Association aided and abetted by his brother Osteopaths, have given Dr. Bieri some professional trouble, but he has surmounted their machinations, and is now freely at work at his congenial task of relieving sick humanity of its ailments.

BIGGS, A. C., N. D., Asheville, N. C.

Born October 4, 1876, at Gambier, Ohio. Son of William and Martha E. Biggs. Two

brothers and many other relatives reside there. He was educated at Ohio Wesleyan University, Buchtel College, Kenyon College and other Ohio schools, taking special work in history, philosophy, psychology in various schools, in addition to the regular classical course. commenced the study of rational therapeutics under Dr. Marmaduke, Nevada, Mo., 1897-

1898, the work including osteopathy, hydrotherapy and electricity. In Nevada Dr. Biggs became associated with the Weltmer Inst., practicing the Weltmer method of psycho-therapeutics. On returning to Ohio in 1898, he purchased an interest in a non-medical institute and sanitarium conducted by Dr. Hunter and Prof. E. H. Anderson. A large and successful practice had already been established. A school was opened and placed under the direction of Dr. Biggs. The course of instruction covered anatomy, physiology, diagnosis, pathology, psychology, mental therapeutics, electricity, massage, osteopathy and medical jurisprudence. In addition to the owners of the institute, several other physicians and teachers were employed, among them R. H. Biggs, M. D., B. F. Martz, L. L. D. and Prof. R. S. Davis. The latter subsequently purchased a half interest in the institute, and he and Dr. Biggs became sole owners and assumed full control. Dr. Biggs and Prof. Davis then purchased the Ohio Institute of Osteopathy with a view to combining it with a larger institution, but found it impracticable, and some time later sold the Ohio Institute of Osteopathy to Dr. Stone, who continued the work for a number of years. A very extensive practice was conducted at the sanitarium, often as many as one hundred patients being treated daily. During several years spent at Columbus, Dr. Biggs continued studies in various branches of the healing art, especially in diagnosis, experimental psychology, osteopathy, various branches of naturopathy and medical electricity. In 1900, Dr. Biggs devoted some time to special study of suggestive therapeutics under J. T.

Hudson, author of *The Law of Psychic Phenomena*. In 1901, Dr. Biggs passed the examination of the American School of Naturopathy and was granted a diploma from that institution. Dr. Biggs has always been a lover of the South and had a desire to live in that section; so in 1903, after disposing of his interests in Columbus, he considered various cities as fields for practice, and decided upon Greensboro, N. C. A new iron-clad medical law had just gone into effect, and after only three days' practice in Greensboro, Dr. Biggs was arrested for the practice of medicine and surgery without permit from the Board of Medical Examiners. He offered to go before the board and take examination in every branch connected with his practice, but this privilege was denied him. So the only recourse was a fight. The final result was a complete victory in the North Carolina Supreme Court for Dr. Biggs and for naturopathic methods. The decision, written by Chief Justice Clark, was a masterpiece in logic and sarcasm directed toward the medical association of the state. The decision in the "Biggs Case" was the first notable victory for rational therapeutics, and has had great influence in securing freedom of practice for non-medical practitioners in other states in the last twelve years. The opposition of the medical association (**not** the profession, for many of the best physicians openly rejoiced at this victory and were the first to tender congratulations) did good rather than harm, and practice grew rapidly. Soon a sanitarium was opened and patients came from nearly every state in the Union. In 1909, the sanitarium in Greensboro was destroyed by fire; and later in that year the sanitarium now conducted in Asheville was opened. The decision to go to Asheville rather than reopen in Greensboro, where so extensive a practice had been established, was made because of the unexcelled advantages of the Asheville climate. Nearly all the patients in the sanitarium at Greensboro at the time of the destruction of the building went to Asheville, and reported for treatment the first day the new institution was opened. Its methods are fully explained in a pamphlet. Special attention to diseases of the nervous system is given.

BINCK, C. E., M. D., D. O., N. D.

Dr. Binck is a practising licensed osteopath of Burlington, N. J., and first saw the daylight, as he expresses it, 50 years ago, in Germany. He has attended school and college both in Germany and the United States. He subscribes to the medical belief that the public does not want to be shepherded by medical tyranny, legalized monopoly, paternalism and compulsory official medicine, but that the science and art of healing should be in harmony with the laws of Nature, the treatment to be given in each case congenial to Nature and in accordance with her unerring instinct for health. This

doctrine absolutely precludes the implanting of foul and morbid matter into the bodies of either healthy or diseased, the very matter which Nature is trying to expel from diseased organisms, as incompatible with her benign care of living beings.

BLUM, HENRY A., Opt.

Dr. Blum was born in 1874 and is a graduate of the Manhattan School of Optometry (1905). He is a member of the New York City and State Optometrical Societies, also of the National Society. Dr. Blum specializes in Scientific Eye Examination without drugs.

BRADSHAW, WILLIAM RICHARD.

Lecturer to the New York Anti-Vivisection Society.

One of the most redoubtable of modern knights errant is the subject of our notice,

William R. Bradshaw

his specialty being a war to the death against that phase of pseudo medical culture, known as vivisection. Mr. Bradshaw has been for the last six years the Lecturer for the New York Anti-Vivisection Society, an organization that has for its propaganda the awakening of the mind and conscience of the body politic to the fact that vivisection is an immoral and unscientific pursuit of knowledge. It seeks to give practical shape to its efforts by promoting a bill at Albany known as The Open Door Bill, which will legalize free entry into the medical laboratories of the State on the part of State-appointed humanitarian inspectors. Mr. Bradshaw has made three humanitarian pilgrimages throughout the State of New York, to expose and combat scientific torture, accompanied by a stereopticon outfit, with which he illustrates laboratory horrors. He is an

eloquent speaker and shows how medical science staggers beneath the intoxication of a monstrous and bloody dream, which has become the dream of the majority of physicians and the greater number of our doped and duped citizens, that by cursing animals, human beings can be blessed with such curses. His arguments are to the last degree a convincing exposition of the truth, that "a corrupt tree cannot bring forth good fruit." He exhibits vivisection as the most merciless exploiter of flesh and blood the world has ever seen. He makes bare the fact that no scruple, no moral consideration, no feeling of humanity can restrain its atrocious destruction of animal life and such human lives as it can surreptitiously make use of, in accordance with its infamous doctrine that might is right. Its frenzied logic asserts that the more barbarous and inhuman it is, the better it will fulfil its aims. He exhibits the undying barbarity of human nature that contends that our civilization can be uplifted and glorified by man's reason trampling on moral law, that the supremacy of violence over justice, immorality over morality, blind impulse over reason, or cruelty over compassion, can lift mankind to higher planes of being. He shows the misrepresentations, the sophistications that characterize all the statistics that seek to prove the value of serums, vaccines and inoculations, prepared for the cure or prevention of disease. He shows the uselessness of these so-called remedies, and the vast array of damaging facts that are carefully hidden from sight and absolutely denied. The effect of his lectures has been to awaken an enthusiasm for the abolition of vivisection, and as proofs of the success of his mission, he possesses over a hundred resolutions unanimously adopted by as many different meetings he has addressed, endorsing the Open Door Bill, which has been presented to the New York State Legislature by the New York Anti-Vivisection Society, and strongly recommended its early adoption as law by the said legislature. Mr. Bradshaw is a strong advocate of drugless healing and believes in Naturopathy as the medicine of the future. He believes that allopathy is being drowned in the blood of its victims.

BRETOW, WM. M., N. D., D. O., D. C.

Dr. William M. Bretow is the foremost Naturopath in the East. His institution in Brooklyn from the very beginning was a great success, and although he never advertised, he had always more patients than he could take care of. The fact that Dr. Bretow has become independent and wealthy, shows that he is one of the few Drugless doctors who have really

financially and professionally succeeded. The reason was that he was broad-minded and liberal; and would not tolerate therapeutic fences around himself, and used the good of all the methods in Drugless healing; but without getting away with any one of them, he put his first attention in every case to constitutional regeneration, using the methods of the great masters, such as Johann Schroth, Louis Kuhne, Sebastian Kneipp, Bilz, Adolph Just, Arnold Ehret and others. The Bretow Institution shows an equipment that is practical and up to date, where hydropathic provisions exist to suit all cases and conditions. The great service that Dr. Bretow has done to the Naturopathic profession is not realized at present, but he was the first influential man who was really active in legislative work. His prestige is so great and so well founded that the medical society dared not attempt to persecute him, and their sleuths left him severely alone. His connection with politics gives him great political influence. He came very near having a bill passed to give Naturopathic practitioners full liberty of exercising their profession in New York State; but, strange so say, the very people who should have aided in this enterprise, the Chiropractors, aided and abetted the enemy so well that the bill was killed.

In face of such opposition to the spread of drugless healing from enemies both within and without the cult, a fearless personality such as Dr. Bretow possesses, is of the highest value to the cause of drugless therapy.

BUTLER, RAYMOND E., N. D., D. C.

Dr. Raymond E. Butler, of Rochester, N. Y., has recently completed a post-graduate course at the Lindlahr College of Nature Cure and Osteopathy. Dr. Butler is a graduate of the two year course of the Eclectic College of Physiological Therapeutics, and for the past eighteen months prior to taking the Lindlahr course, has been associated with Dr. Ellis E. Halbert, at Rochester, New York.

Dr. Butler is also an active and influential spirit in the Mazdaznan Association in his locality, and is now preparing to organize a new class in Mazdaznan Birth Culture which will be free to all who may be interested. Dr. Butler became interested in nature-cure at an early age, because of the dismal failure of drug therapy in his own case. At the age of nine years he was stricken down with poliomyelitis, and after the failure of "medical science" to restore health, a rigorous regimen of physical and health culture was adopted with the result that Dr. Butler is now as robust a specimen of health as could be desired.

CARVER, WILLARD, D. C.

Willard Carver was born at Allen's Grove road, near Davenport, Iowa, July 14, 1866.

In the Spring of 1868, his parents moved to Pleasant Grove township, Mahaska County, Iowa, near where the parents resided until their death. Willard Carver was educated in the district schools, finally attended Oskaloosa College, which was at his county seat and, afterward completed his course at Drake University,

graduating from the law department in June 1891, with the degree of LL. B. In the fall of that year, he became cashier of a bank in Barnes City, Ia., which position he held until 1894, attending incidentally to such law practice as came his way, when he left the bank and went to Northwestern Iowa, where he engaged exclusively in the law business, which business he successfully followed until October of 1905—when he quit the law business to take up the fight for the science of Chiropractic. At seventeen, he became acquainted with Dr. D. D. Palmer, the father of chiropractic. He knew him intimately until his death, in 1913. In December, 1895, Dr. Palmer wrote a letter to Mr. Carver, announcing his discovery of moving vertebrae to release nerves. Mr. Carver had been an invalid practically all his life and was deeply interested in the communication from Dr. Palmer and immediately began studying and developing along the line of the release of nerves to remove interference with stimulus. It will be seen that Willard Carver's study and development began but three months later than that of Dr. D. D. Palmer, and has continued without interruption until the present day. In June 1906, Willard Carver was graduated from Parker School of Chiropractic, Ottumwa, Ia., to which place he had gone previous to that year to be adjusted for a threatened general paralysis. Under the proposition of Dr. Charles Ray Parker, that Willard Carver would teach Dr. Parker the Science of Chiropractic while he taught Willard Carver the Art of Adjusting, as he had learned it from Dr. D. D. Palmer. In August 1906, Dr. Carver located at Oklahoma City, where he has since been and, in October, founded Carver College, which was first chartered as Carver-Denny Chiropractic College, but afterward changed to Carver Chiropractic College, which it still is. Dr. Carver had received the title of "Doctor" while a boy on the farm, not yet fourteen years of age, because of his close attention to animals, and his very persistent effort to ascertain how animals lived and what made them die. At the close of his academic studies, he was recognized as a first class anatomist and took great interest in legal jurisprudence. Because of this fact, he always, since boyhood, has been looked upon by his friends as particularly able in anatomy and physiology. Early in

life, because of his sickness and his consequent desire to be well, he became attached to psychologic questions, and very soon thereafter became recognized as an unusual student of psychology. In 1909, Dr. Carver published Carver's Chiropractic Analysis, which contained an entirely new chiropractic physiology, all of the physics of chiropractic under the subheadings—Principles of Chiropractic—Chiropractic Symptomatology and Diagnosis. This book was revised and re-published in 1915. The revision required the enlargement of the book to almost double its original size and his developments in the meantime required that he re-write the entire book, which he did. In 1914, Dr. Carver published his work on psychology, under the title, "Applied Psychology," which book has received the most flattering complimentary recognition from the most eminent psychologists, jurists, and analysts. The books published by the subject of this sketch do not meet with so rapid a sale as might be expected, because they are profound and unusual, and students, unprepared for that kind of literature, find it very difficult indeed, to understand them. It is but just, however, to say that when the worth of his publications shall have become known, the chiropractic world will very gladly possess itself of them. Dr. Carver is fifty-one years of age, and has entirely overcome the various phases of abnormality of his youth. He is a powerful man, physically and mentally, and is younger to-day in all his aspects, objects and ability than at any period in his career. He is democratic by nature and instinct, living fully in the thought that all men are created equal—giving willingly of his energy and substance that the world at large may become educated. Carver College, under his care and supervision, has grown the most rapidly of any college of chiropractic that was ever founded—is large for its age, and has a far greater reputation than any other college of chiropractic that has been in existence as long. Dr. Carver is the father of independent chiropractic legislation and is the author of the first chiropractic bill ever successfully introduced in a legislature. All of the laws that have been passed, recognizing chiropractic, are substantially copies of his original bill, which was introduced in the legislature of Oklahoma, in 1908, with the exception of the law of Oregon. The law just passed in Connecticut is practically a verbatim copy of the chiropractic bill Dr. Carver had introduced in the last session of the legislature of Oklahoma. Dr. Carver is now, and always has been, very fearless in telling the truth. He believes that no opportunity should be lost to let the world know what the science of chiropractic is and what it will do. Because of these facts and, because of his unmerciful exposures of the ignorance of the medical profession,

he has become an object of the secret enmity of the American Medical Association to such extent, that through its influences during the last session of the Oklahoma Legislature, he was incarcerated for ten days in the Oklahoma County jail and fined \$500.00, because he wrote an article, entitled, "Was the Oklahoma Senate Bought?" There were no charges in the article, but the attention of the public was called to the fact that the American Medical Association had raised a very large sum of money for some purpose and, that the Senate had passed a bill that had for its one purpose the prohibition of chiropractic in Oklahoma. When the article was published, Dr. Carver knew there would be serious results, but published the article to attract the attention of the friends of chiropractic to the fact that unfair advantage was being taken in order that they would come to the rescue, which they did, by the House refusing to attach the "emergency clause"; and, under the constitution, since the adjournment of the legislature, the chiropractors of Oklahoma, under the supervision of Dr. Carver as their legislative counsel, have referred the medical amendment to the votes of the people by a petition of thirty thousand, five hundred and ninety-two, whereas, sixteen thousand was the required number.

Dr. Carver became a public speaker of some reputation when but seventeen years of age. He has continually been a public speaker, has lectured and spoken in many states of the Union, and is always very active in the dissemination of the truth of chiropractic. His time for lectures is now engaged for nearly two years ahead. It is expected that within five years, he will have to entirely abandon his work as a teacher in Carver College, where he now and for the past five years has averaged four hours a day, entirely for the chiropractic lecture field. It is recognized wherever Dr. Carver is known, that he is the leading instructor of the chiropractic world. It is becoming more and more recognized that he should not confine his attention to any one institution, but should let the chiropractic world at large have the benefit of his carefully accumulated and thoroughly demonstrated knowledge.

COLLINS, F. W., M. D., D. O., D. C., Ph. C.

Dr. F. W. Collins began his career in the healing art by taking a course in The First Aid to the Injured, graduating in 1893. In 1897, he graduated from the Philadelphia School of Practical Anatomy and the Philadelphia School of Surgery. For many years he was assistant instructor in First Aid on the Lackawanna Railroad between Scranton and Hoboken. He also instructed in the gymnasium and became interested in Naturopathy, taking a

course under that Master of Teachers, Dr. Benedict Lust, graduating from the American School of Naturopathy in June, 1907. In 1909, he graduated from the New Jersey College of Osteopathy. In 1912, he graduated from the D. D. Palmer School of Chiropractic and was one of Dr. D. D. Palmer's favorite pupils. He has taken Post Graduate work from Dr. J. Stone, of the Stone College of Chiropractic of San Antonio, Texas, also under Dr. A. E. Gregory, of the Palmer-Gregory School of Chiropractic, of Oklahoma, Okla. In 1914, the American College of Neuropathy conferred on Dr. Collins the Honorary degree of Doctor of Neuropathy and the Honorary degree of M. D. (Doctor of Medicine). In 1915, he graduated from the American Academy of Science, receiving the degree of Doctor of Psychology. Dr. Collins has lately taken a special Post Graduate Course in the Philadelphia College and Infirmary of Osteopathy, in advanced Osteopathic practice, medicine, obstetrics and surgery, attending the operations and lectures in the Jefferson and Pennsylvania Hospitals, passing two State Board examinations with high honors. Dr. Collins is the Editor of and has been conducting the Chiropractic Department in the Herald of Health and Naturopath for a number of years, has written many booklets and theses on the cause and cure of disease by drugless methods, and has world-wide reputation as an authority on the healing art. He founded the American Academy of Chiropractic Research, which is destined to become the greatest of its kind in the world for the benefit of suffering humanity, having as a contemporary the Rockefeller Foundation of research for the cause and cure of disease by medicine, toxins, vaccines, serums and vivisection. In 1910, Dr. Collins founded the New Jersey College of Chiropractic. The College was incorporated as an institution of learning, in 1913 by Dr. F. W. Collins, Dr. Andrew Victory and Dr. G. E. Harley, and since its incorporation, it has attracted men and women from all parts of the globe. On account of its strict curriculum and requirements, it has been well nicknamed the "Mecca of Chiropractic," the shrine where all drugless physicians must worship. This College has grown to such a large extent, that a building of thirty-two rooms has lately been purchased at 577 Warren St., Newark, N. J., part of which will be used for College work, and part for the Hospital and Clinics.

CRISCUOLO, TERESA CIMINO, N. D.

Dr. Criscuolo, qualified in Italy and graduated from the American School of Naturopathy, 1909, is a naturopath, as well as a specialist in Magneto Therapy and all kinds of Drugless Methods. Member A. N. A., Section New York State. Her address is: 339 Leonard St., Brooklyn, N. Y.

COOMBS, FRANKLIN R., N. D., D. C.

Dr. Coombs, whose offices are located in the Fox Theatre Building, 88 West Main Street, New Britain, Conn., is thoroughly versed in all phases of naturopathic practice and has all the necessary equipment such as is required for the giving of chiropractic painless adjustments, electric light baths, vapor cabinet baths (and all other hydrophatic applications), mechano-therapy and psychotherapy.

Dr. Coombs has made a thorough and comprehensive study of Bio-chemistry and has accomplished gratifying results by means of this system, having studied the application of the tissue remedies for the past 14 years under Dr. Schaftsbury, of Washington, D. C. He is also a regular graduate of the Blumer College of Naturopathy and the National School of Chiropractic. Dr. Coombs was born in 1873.

CUMMINS, JOSEPH EDWARD, N. D., D. C.

Dr. Cummins, Naturopath, of Cedar Rapids, Ia., was born in Columbus, Ohio, February 13, 1867. He informs us that he is still living. He attended common schools in early life and became a teacher in central Ohio in 1884. He subsequently taught in Iowa and Missouri. He graduated in pedagogy in 1894, and in the scientific course in 1895 in Avalon College, Trenton, Mo. He served for three years as principal of the Decatur, Ia., high school. He was subsequently elected county superintendent of Decatur County, Ia., at the general election of 1895 on the Republican ticket, and was re-elected to the same office in 1897. Was appointed census enumerator of the county seat in 1900, having attained the highest civil service in the Eighth Iowa Congressional District over 600 competitors, and has been in the government service practically ever since. Dr. Cummins is exceptionally well read in Naturopathic literature, having become acquainted with chiropractic in 1902, and graduated in chiropractic July 15, 1912. He also post-graduated in chiropractic (Ph. C.) in 1913. He began teaching the science of drugless healing in 1913, and has continued it ever since. He has tested many of the theories and suggestions of the various Naturopathic authors and has been an original thinker and experimenter himself. Dr. Cummins married Miss Ruby Stedman, one of his county teachers, in 1897, and has a family of three daughters and one son. Young, active and in fine health, he has lived the temperate life and has no personal knowledge with alcohol or tobacco in any form. He also abstains from meat,

tea, coffee and condiments, as becomes a loyal Naturopath. Dr. Cummins is an ornament to his profession.

CZUKOR, DR. EUGENE JACQUES

Professor Czukor was born in Losoncz, Hungary, and, as is usual in the education

Dr. Eugene Jacques Czukor

of youth in his country, he became proficient in gymnastics during his stay in school. When an infant an ailment in his bones was cured by exercises, both active and passive, and this fact became a tradition modifying his after-life. He came to America with his family at the age of 13 and went to school here, and in two years became so far advanced that he skipped High School. He learned French, German and English besides his native Hungarian tongue. He afterwards took a course in Columbia University studying Anatomy and Philosophy. He also studied music and is an expert player of the piano. All his family are musical, an older brother being first violin in the Russian Ballet that toured the United States last winter. Some three years ago he opened a studio in New York for the practice of curative gymnastics in certain forms of disease. His theory is that exercise, both active and passive, controls the circulation of the blood, reduces excitation of the nervous system, strengthens the heart and other internal organs, quiets the

emotions, eliminates waste, and adjusts the body to its environment. In the mental status, he aims to prevent mental confusion, strain and indecision, and create optimism, that sense of mental freedom and power that attracts influences that belong to uplifted states of mind. He invigorates the will, without whose activity success in life is impossible. One of his latest patients was a salesman who had lost his mental grip in his business. After ten treatments he went out and easily quadrupled his orders. His greatest success is with patients whose mental development has gone ahead of the powers of the body to obey the injunctions of the will. He restores the disturbed equilibrium with the resources of breathing, exercise and hygiene. Professor Czukor has treated some of the best known people in New York, restoring semi-invalids and the really prostrated to perfect health, by utilizing the forces of nature. At the present time he is treating his patients at their own homes, pending the establishing of an institute where he will have all the apparatus of curative gymnastics, such as are employed in the best curative gymnasia of Europe. His present address is No. 100 W. 124th St., New York. Dr. Czukor will shortly publish a book on the philosophy and practice of Curative Gymnastics.

DAVID, T. H., D. C., N. D., M. T.

Dr. David, of Williston, N. D., enjoys a great reputation as a Naturopath amongst a clientele of merchants, priests, bankers, judges, court officers, farmers and laboring men, and others. He is a young man of great energy, and is a graduate of the American School of Naturopathy, and several other colleges of Drugless methods. He is one of the prominent members of the Syrian

Colony in his territory, and is secretary of the Syrian Relief Committee of North Dakota, that is directing a relief fund campaign in North Dakota to save the starving non-combatant people in Syria and Lebanon. Dr. David is an adept in mechano-therapeutic methods, as he believes that vibration is the first need of life, and that through carefully applied measures of molecular movements, the sick organism can achieve growth, health and comfort just in proportion as it is deviated from deformity, disease and death. Dr. David does not minimize the importance of proper diet, fresh air, physical and mental culture as powerful adjuncts to his methods, and all taken together certainly promotes and secures normal evolution, long and useful life and happiness by recognizing the normal processes of life and natural laws. Member of the A.N.A., and the North Dakota State Society of Naturopaths.

DE CILLA, A., N. D.

Dr. A. De Cilla, Naturopathic physician of New Haven, Conn., believes in incorporating what is best from the various approved scientific and natural methods of healing and correlating such into one uniform system of cure. This is sound philosophy. To be more exact, Dr. De Cilla has adopted the science and art of mechanotherapeutic adjustments, and at the same time applies mental science to induce a healthy outlook on life, together with dietetics, or the supplying of the organism with its imperatively needed food elements. Dr. De Cilla is a member of the National Society of Naturopaths. He is a wide-awake, progressive practitioner of Italian descent, and enjoys a high reputation, both as a practising physician and an influential citizen.

DEININGER, MRS. ELVIRA A., D. O., D. C., N. D.

Mrs. Elvira A. Deininger, D. O., D. C., N. D., wife of Dr. A. Deininger, is a graduate of the Universal Chiropractic College, Davenport, Iowa, and is a licensed Osteopath of the State of New Jersey. For many years she has been connected with Dr. A. Deininger in all his earnest labors on behalf of Chiropractic, and has been of great assistance in teaching in the New York School of Chiropractic. At present, she is his Associate in conducting the Chiropractic Sanitarium of West New York, N. J., and of the free Clinic attached to it. She also aids in the instruction of the theory and practice of Chiropractic in the New York School of Chiropractic. Her genial nature, her ever-pleasant countenance and her sympathetic interest in each and all the students, have made her popular and beloved by all the graduates and students of the New York School of Chiropractic.

DEININGER, ANTON, D. O., D. C., N. D.

Anton Deininger, D. O., D. C., N. D., Dean of the New York School of Chiropractic, is one of the pioneers of the Chiropractic profession. His name, fame and reputation are known throughout the country. He is a graduate of Father Kneipp's Water Cure Institute, Woerishofen, Bavaria; Rickli Institute, Veldes Krain, Austria; Universal Chiroprac-

tic College, Davenport, Iowa; Old Physio-Medical College, New York; Osteopathic and Naturopathic College, Berlin, Germany. He is also chief of staff of the Chiropractic Sanitarium of West New York, N. J., and holds an Osteopathy license in the State of New Jersey. His personal skill in adjustments of a number of patients affected with infantile paralysis, brought him great fame throughout the State. His classes in Chiropractic are well attended, for no student would care to miss his recitation. His mastery of his subject; the clarity of his lectures; his wonderful technic in practical illustrations and his skill in bringing various phases of Adjustment and Palpation place him upon an elevation that few can reach. Personally, he is regarded not only as a professor but as a personal friend and counsel to each and all the students. By his patients he is regarded with the highest respect both for his personality and his professional skill.

DISNEY, J. LAMBERT, N. D.

Dr. Disney, who is at present located in Scranton, Pa., first studied Natural healing in Bernarr Macfadden's institution, in Helmetta, N. J., in 1902, where he became assistant manager. He was one of the early pioneers of Naturopathy, at a time when students had no facilities to speak of to obtain a good Naturopathic education. As a student, he showed exceptional qualities of courage and steadfastness to what was a proscribed cause, and while studying, became a professor. Those were the days when students learned their profession by teaching one another, and as a professor of this type, he exhibited in a high degree the exceptional qualities of enthusiasm, loyalty and self-sacrifice. The man who won a diploma under such circumstances was a hero. He was a man who faced facts as they were, and was ready to go to jail, if need be, in defense of medical liberty. Dr. Disney has developed a large home-curing method of treatment by mail, and his correspondence institute, in Philadelphia, was the headquarters of this system. The great success that he achieved in this direction was largely due to the able assistance of his wife, Pearl Disney, who was and is an enthusiastic student of Naturopathy. Dr. Disney is now a regular M. D. in Pennsylvania, using Drugless methods exclusively. For several years, Dr. Disney most ably edited a special department for physical culture in the Naturopath and

Herald of Health. He is the author of several books on rational living and Nature Cure, and a member of the A. N. A., and the Pennsylvania State Society of Naturopaths.

DUX, HENRY M., N. D., D. O., M. D.

Dr. Henry M. Dux, of Jacksonville, Fla., a regular licensed physician, was a Naturopath in Germany before locating in Florida. He was president of the Naturopathic Association for Rhineland and Westphalia, was a recognized naturopath and lecturer and was a great fighter for medical freedom. The intelligence of the Florida legislators has not yet risen to the level of granting the members of the most potent cult of healing in the world: Naturopathy—the privilege to practice their profession without persecution from the minions of official medicine. The State presumes to sit as judge and declare one school of medicine as orthodox and regular and another heterodox, or irregular and worthless. If a man or woman know that they can be healed by the use of Nature's forces much more readily and satisfactorily than they can by the poisonous practice of drugging, the State has no right to prevent such healing process by the use of the coarse machinery of the law, a practice that savors of the ignorance and brutality of the Dark Ages, an age in which we really dwell at present as far as things medical are concerned. Dr. Dux is the head of the Dr. H. Dux Co., Inc., manufacturing chemists, and is interested with two brothers in this enterprise. He is a loyal member of the A. N. A., and State representative for Florida.

ERZ, A. A., N. D., D. C.

Dr. Erz, of San Francisco, Cal., is not only a Naturopathic practitioner of great ability and reputation, but he is an author of great prestige in the field of natural healing. His best known work is entitled "The Medical Question, the Truth about Official Medicine," which is a powerful argument for medical freedom. "What is needed most in the medical world," he says, is toleration of the rights of others to live their own lives, think their own thoughts, come to their own conclusions, and give all honest investigators and students of medical matters a fair chance to be of service to suffering humanity. Official medicine needs a lesson in tolerance and justice towards others who dare to differ, because they recognize the necessity of knowing the laws of nature and observing them. And that is what the Natural system stands for, which recognizes the fact that there is one real duty that confronts all students of nature, life and science, which cannot be

ignored, and that is to decide just what means of help are most beneficial, not only to their own advancement, but also those which bring the greatest amount of practical help to suffering humanity." "The Medical Question" covers so many aspects of Drugless Healing that it may be rightfully regarded as the bible of Naturopathy. It consists of 585 pages and sells for \$4.00; cloth, \$5.00. The other works of Dr. Erz are "What Medicine Knows and Does Not Know About Rheumatism," "What Constitutes the True Science and Art of Healing," "A Message to All Drugless Systems." Dr. Erz is a successful practitioner of Chiropractic and Naturopathy, as well as an author, and enjoys an important patronage in the Queen City of the Pacific Coast. He is daily proving that the superstitious faith in the healing power of nauseous, poisonous drugs, is a serious menace to the health and life of mankind, by virtue of the fact that drugs only temporarily stifle the symptoms of disease whereas his natural remedies alleviate pain, stimulate vitality and eliminate the cause of the ailment. He is destroying retrogressive medicine by the greater power of progressive medicine. Retrogressive medicine is simply drug medication which is unscientific and irrational and which violates the laws of life and health since all chemical drugs are more or less poisonous and as such injurious to the human system.

Both Doctors are graduates of Mechanotherapy and The Blumer College of Naturopathy. Dr. L. S. Edwards is Professor of Hydrotherapy and Osteology and Dr. Lillian is Professor of Food Science, First Aid, and Hygiene in The Blumer College

Dr. Lillian Edwards

of Naturopathy, of Hartford, Conn. At the Hydropathic Institute disease is treated by the various successful forms of drugless treatment, such as hydrotherapy, electric light baths, mechano-therapy, spondylo-therapy, massage, remedial gymnastics, food science. Food is an important factor in the treatments. The diagnosis is complete and thorough. Each patient receives treatment according to individual requirements. The Institute is home-like, with pleasant rooms, electric lights, heated with hot water, charges moderate. Particulars sent free upon request.

FISCHER, F. L.; D. O., D. C., Clinton Health Institute, Newark, N. J.

Dr. Fischer is a graduate of the Academy of Arts and Science (1894), Belgium, American School of Naturopathy, American University, Chicago, and College of Osteopathy, Elgin, Ill. He is a member of the American Academy of Chiropractic Research and the Chiropractic Society for Research and Education, as well as honorary member of Academy of Arts and Science, La Louvière, Belgium. Dr. Fischer, who was born in 1867, is also a member of the A. N. A., section New Jersey.

FERGUSON, E. W., D. C.

Slowly, but surely, a great school of Natural Healing is taking shape under our

very eyes by those who will not bow the knee to the Baal of Official Medicine. This school has many different cults, and their co-ordination is as yet somewhat inchoate, as become a new institution in the making, but the future will regard this age with great veneration as having successfully com-

bated a system of therapeutics that fairly reeks with egotism, vainglory, intolerance, ignorance, selfishness and persecution. Dr. Ferguson is one of those apostles of this new Academy of Healing, and his *metier* is that of chiropractor. Born in Bridgeport, Conn., he is a graduate of the public schools, the Park Avenue Institute, and of the Palmer School of Chiropractic of Davenport, Iowa. He attended lectures in several medical colleges, and although regarded as a student, he never graduated from any of them. He had his own views of medical science and kept his mind free to choose its own medical belief. His medical travels and his knowledge of the merits of the different medical schools led him to choose a method of healing that is the very antipodes of the unscientific and fanciful usage of serums and vaccines that poison the blood and subvert the functions of the organism.

As a chiropractor, he is busily engaged in setting the forces of health flowing through the bodies of his patients, instead of exploiting the deranged ideas of the grafting, political drug doctors. The success that has attended his ministrations is the best possible proof of the correctness of his theory of cure and of his skill in applying such theory to the varying phases of human ailments.

FOWLER, J. A., 1358 Broadway, N. Y. C.

Miss Jessie Allen Fowler is a native of New York City, and is the daughter of

Lorenzo Niles and Lydia Folger Fowler. Her father, together with his brother, O. S. Fowler, wrote many books and delivered a multitude of lectures on the subject of Phrenology, neglecting no opportunity to spread a knowledge of the science, especially in the circles of

education and refinement. To him mainly belongs the honor of having re-established the Science of Phrenology in Great Britain, where he resided for many years. Lorenzo N. Fowler was sixth in descent from William Fowler, who came over from England, in 1676, and settled in Guilford.

Connecticut. Her great-grandfather, Eliphalet Fowler, fought in the Revolutionary War. Miss Fowler's mother, who was one of the first American women to receive the M. D. degree in this country, was descended from John Folger, who died in 1666, and on the maternal side was related to Benjamin Franklin, whose mother was a Folger from Nantucket, Mass. In early life Miss Jessie Fowler attended a public school in New Hampshire, and she received a liberal education while abroad with her parents, traveling through France, Italy and the British Isles, finishing her studies in a private academy in Lincoln, England, the home of her ancestors. Inheriting from her parents a leaning toward the exact sciences, she took up the study of Anatomy and Physiology at the Medical College for Women in London, intending to follow her mother's profession—Medicine. But upon her mother's death, in 1879, she changed her plans and became identified with her father's phrenological work in connection with his Phrenological Institute. She took complete charge of the Examination Department in the Summer of 1879 and 1881, upon her father's return to the United States, and examined many persons of note. In 1884 she studied brain dissection at the London Medical College for Women, and in 1887 traveled through Australia where she lectured on Phrenology and Physical Culture in all the principal cities. She also conducted classes in these subjects at the State Schools of Melbourne, and through a special permit of the Victorian Board of Education was allowed to introduce her own system of gymnastics in the State Schools. Returning to London in 1889, she assumed editorial charge of the "Phrenological Magazine," and organized weekly classes for the Fowler Phrenological Institute. She also started a Correspondence Course, and taught Phrenology to citizens of many countries through the mail. In 1896 she returned to the United States, with her father and sisters, for the purpose of uniting the English and American Institutes of Phrenology and the English and American Phrenological Magazines. The death of her father in 1896, Prof. Sizer in 1897, and Mrs. Wells in 1901 threw large responsibilities upon her in the continuation of the dissemination of Phrenology. She has been Vice-President of the American Institute of Phrenology since 1896, and became editor-in-chief of the "Phrenological Journal" in 1897. The American Institute of Phrenology was established in 1866, by special charter, and its students are gathered from all parts of the world. Such a multiplicity of duties and responsibilities would prove a tax on some women, but such is Miss Fowler's enthusiasm that in the midst of all her activities she took up the study of Law, in the Woman's Law Class of the New York University, where she was

graduated in 1900, and followed this with a course in Psychology at Columbia University in the Summer of 1901. As a writer Miss Fowler was associated with her father in the compilation of a "Phrenological Dictionary," in 1895, and is the author of "Handbook on Mental Science," in 1896, which aims to link Phrenology with modern Psychology; "Life of Dr. Francois J. Gall," 1896; "Intuition, or the Organ of Human-Nature," 1897; "Brain Roofs and Porticoes," 1909; "The Natural Language of the Faculties," 1910; and "Personality in Business," 1910; besides contributing a number of important articles to the leading journals and magazines. She has lectured in many of the leading cities of the United States, Canada and Great Britain, on the subjects of Phrenology, Vocational Guidance, Hygiene, etc. In 1898 she invented and introduced a five-part Plaster Bust, showing the brain divided into hemispheres and convolutions numbered according to phrenological designations, and in the following year she introduced to the educational world a new Phrenological Chart. She has been prominently connected in England with the Anthropological Institute, the British Association of Science, the Writers' Club and the British Women's Temperance Union, of which she was Honorary Secretary for nine years; and in America she has been affiliated with the Woman's Press Club, the West End Woman's Republic Club, the Portia Club, the Legislative League, the Mother's Club, the Anti-Vice Association, the Orange Woman's Club, the Woman's Peace Circle of New York, and the New York Woman Suffrage Society, among others.

FLETCHER, W. H. A., N. D., Physical Director of the Athletic Club.

Dr. Fletcher is a splendid example of Naturopathy. His health wrecked as the result of medical and surgical malpractice, he lay at the point of death for many weeks, and was saved by Nature's simple methods at the "Yungborn," Butler, N. J.

From a condition of being an athlete, he lost hearing, seeing, and his skin peeled. He lay on the ground in a state of coma for six weeks, a helpless wreck. But such were the vivifying effects of air-power, sunshine, diet and water applications, that his recovery to health rapidly became complete. He afterward rebuilt his body so splendidly, that he attracted the attention of Bernarr Macfadden and posed for many of the Physical Culture exercises. He is a member of the American Naturopathic Association, Section New York State Society of Naturopaths, and Secretary of the New York State Pedic Society. He saved dozens of lives by his skill at Far Rockaway Beach, where he conducts a Physical Culture Institute during the summer.

Dr. W. H. A. Fletcher

As a professor of physical education, he has adopted a fixed program of principles to ensure the best results. He has his pupils begin by assuming a correct attitude, an absolutely vertical pose. Then follow exercises of the arms, legs, exercises in creeping on hands and toes, exercises of the trunk, walking, climbing, running, balancing exercises, leaping, swimming, climbing ropes, throwing the medicine ball, boxing and wrestling, and jiu jitsu.

The movements that permit the flexibility of the spinal column are the most vital of all exercises, by reason of the freedom they allow of nervous influence in the spinal nerves that perforate the vertebrae to give life to the bodily organs. The forward flexion of the trunk is accompanied by a forward and downward flexion of the head. The lateral flexion of the trunk is accompanied by a lateral flexion of the head in harmony with that of the trunk. The backward bending of the trunk is accompanied with a backward flexion of the head. Finally, the rotation of the trunk is accompanied by a rotation of the head. Not only is nervous energy enhanced by such movements, but the circulation of the blood is more vigorous, and the whole system is more highly energized than by the most elaborate muscular exercises that ignore spinal movements.

FRITZ, WALLACE W., M. D., D. D. S.,
N. D. Dean of the American College of Neuropathy, Philadelphia, Pa. Former Dean of the Philadelphia Dental College. Proprietor and Dean of the Philadelphia College of Anatomy and Surgery. President, National Association of Drugless Physicians.

Dr. Fritz is one of the all too few medical practitioners who recognize the Truths of Drugless Healing. Dr. Fritz has accomplished great things for the advancement of Drugless Healing in Pennsylvania and New Jersey. He has always come to the front with funds and personal effort when required. Dr. Fritz's testimony was a factor in winning the Brinkler case. Dr. Fritz severed his connections with the medical colleges and societies,

Dr. Wallace W. Fritz

and allied himself on the side of Drugless Healing at a critical moment. He assumed the leadership of the Neuropaths and rescued their college at a time when it seemed doomed to fail for lack of an organizer and capable executive head.

FROUDE, CHAS. C., B. Sc., D. C., N. D.
 Author of "Simplified and Practical Dietetics," Y. M. C. A. Bldg., Kingston, N. Y.

Dr. Chas. C. Froude is a graduate of a western college; received his D. C. degree from the Universal Chiropractic College,

N. D. degree from the American School of Naturopathy, and has taken special work in other schools. Dr. Froude is rapidly coming into prominence as a food specialist. His work, "Simplified and Practical Dietetics," already in its third edition

has had an enormous sale in this as well as foreign countries. Doctors, societies, and associations are ordering as many as 500 at a time for distribution, because it handles the subject of diet in a practical manner; is free from technical terms; and presents to the lay and professional reader of the simplicity of food combination. Menus are outlined and foods are classified. Leading food authorities have been loud in their praise of this work, regarding it as one of the very best published. Dr. Froude is a practical man; is enthusiastic in his work; has a charming personality, and inspires confidence at once in those who meet him. He is a member of the firm of Froude & Mac Kinnon.

GERSCHANEK, SINAI, A. B., A. M., D.C.

S. Gerschaneck, A. M., is a graduate of the College of the City of New York with the degree of A. B.; a graduate of Columbia University with the degree of A. M.; in addition, he attended for one year the New York Law School; he was the founder and principal of Harlem Preparatory School from 1902 to 1912. Since 1912 he has been a member of the staff of the New York Public Library,

42nd Street and 5th Avenue. His studies and career have given him a marked reputation in New York City in both the professional and administrative fields. His personal labors embrace a number of fields as indicated in the following: He has been a teacher of modern and classic languages; of psychology, mathematics; and methods of teaching. For a number of years he has been a director of the Political Educational League; and associations of clubs of young men to study the theory and practice of Municipal Government. For a period of time he was chief editor and business advisor of the Highland Film Corporation of Cincinnati, Ohio; for a number of years he has been associated with Dr. Anton Dein-

inger of the New York School of Chiropractic as his general secretary and registrar and as professor of Physiology, Biology, and Physiological Psychology. For years he has guided thousands of people through the Art Collection of the Metropolitan Museum of Art; and the collection of the Museum of Natural History. In the early part of the year 1916 he was elected as the Executive Secretary of the National Chiropractic League. In connection with the said League he has been empowered to carry out all its plans and devise means and methods for the expansion of Chiropractic and the spread of the Gospel of Chiropractic among the laity. He is a member of many social and historical societies of the City of New York.

GRAMBOW, DR. EMIL

Dr. Emil Grambow was born in Schwerin, Mecklenburg, Germany, in 1878. He exhibited symptoms of consumption at the

age of 17, but by strenuous devotion to physical culture, he subdued the ailment. This led him to study the philosophy of health and disease, and he determined to devote his life to the physical upbuilding of the human species. The first radical step in this worthy cause was his

emigrating to America in 1893. He settled in Hempstead, New York, where he first of all founded the Turnverein of the Eastern Department, as a measure of bodily upbuilding. He next founded the Physical Culture Association for the investigation of body and mind-building, and the prevention and cure of disease by natural methods of life and drugless healing. His enthusiasm for physical culture led him further to become a director of St. George's Athletic Club, Hempstead. He also became a member of the Fire Department of Hempstead and Freeport. Having arrived at the belief that the treatment of disease with poisonous drugs was a survival of the Dark Ages, and that it is only by intelligent co-operation with the natural constructive healing forces on the part of both physician and patient that the cure of disease is really effected, he determined to become a Naturopath, and took a special two years' course in the American School of Naturopathy, also two years' practical work in the Chiropractic College of the Empire State Society, and the Palmer-Gregory special course. He is a graduate of the Eclectic and Old Physio-Medical College of New York in Osteopathy. He is an instructor in the American School of Naturopathy on Physical Culture, Medical and Corrective Gymnastics. He is also a Charter member of the American Naturopathic Association, of the New York State

Society of Naturopaths, the Empire State Society of Chiropractics, and the International Alliance of Physicians and Surgeons. Dr. Grambow is a physician of forceful practice, and has been eminently successful in the prevention and cure of disease. He has never had any trouble with the allopaths, for they recognize the great merit of his work, and are conscious of the fact that he is proving his knowledge by his splendid results in healing the sick. As a physical culture expert, he gives many public lectures and demonstrates on the platform his able views on natural therapeutics.

GREENEWALD, PROF. V., M. T.

Professor V. Greenewald, of Jacksonville, Fla., adopted the profession of Natural Healing as the result of being himself cured of nervous prostration, the result of severe business troubles—by that method. Being unable to obtain a cure under the ministrations of several allopaths employed for that purpose, he, after a trial of five years under their care, resolved to visit various sanitariums

to learn the methods of treatment therein employed while endeavoring to obtain for himself a lasting cure. Learning the rationale of the Kneipp hydropathic treatments, he afterwards studied physical and mental health culture as a student of The American School of Mechano-Therapy and other schools of Natural Healing of which he is a graduate. He is conducting a sanitarium of drugless healing which he has established at Jacksonville, Fla., and is giving lessons in Physical and Mental Health Culture to students of the Nature Cure as a special department.

GRESSMAN, HERMAN, N. D., Naturopathic Recreation Home, 20 So. Kentucky Avenue, Atlantic City, N. J.

Emigrated June 1905, practised Naturopathy, chiefly Nature Cure, Hydrotherapy, Heliotherapy, Diet, Mechano-Therapy, Massage, Electrotherapy, Swedish Movements, Magnetotherapy, Physical Culture, Natural Living; when necessary, Osteopathy, Chiropractic. Active 10 years, office practice. His record shows up to date 1667 cases cured, 19 improved, 18 discontinued, 1 died, 1 not yet decided.

These cases include all kinds of diseases and ailments, also the so-called incurable ones and 150 confinements. This Naturopathic Recreation Home at Atlantic City, N. J., is the Mecca of the sick from all parts of the United States.

HARLEY, GEORGE E., A. M., M. D., D. O., D. C., N. D.

Born in Albany, N. Y., 1870. Educated in Albany and Schenectady, N. Y., Pioneer

American Naturopath, 1900. Naturopath Research Camp on the banks of the Picturesque Ballston Lake, near Saratoga, experimenting with Earth, Sun-light, Air, Food, etc., in the natural open air with tents for housing during very bad weather. All patients attending are alive and healthy. Secretary for three

years of the Physical Culture Association of America. Favorite exercises; Wrestling and Swimming, expert at both. Secretary of New Jersey College of Chiropractic. Secretary Special Post-graduate Class 1916-17, Philadelphia College of Osteopathy. Member Versalian Anatomical Society at The Philadelphia College of Osteopathy. Office in Hoboken for past six years, now at 189 Sherman Avenue, Jersey City, N. J.

HOEGEN, JOSEPH A., N. D., 334 Alexander Ave., New York.

Dr. Joseph A. Hoegen was born in Germany in 1871. He has been a practitioner in Massachusetts, Connecticut, New Jersey and New York, for over 23 years. He has been assistant in the Hydropathic Department of the Post Graduate Hospital, New York City, for three years; is at present professor in Masso- and Hydrotherapy in the Vetus Academia, (O. P. M. College) and Eclectic Osteo-

pathic Institute, was for two years instructor in anatomy and physiology in the "Empire School of Chiropractic," Editor of the Hydrotherapy Department of "Herald of Health," and also writes for many other journals. Delivered many lectures, especially in the New England states, where he is connected with several Naturopathic societies. Graduate of the Eclectic Osteopathic Institute, Old Physio-Medico College, the American School of Naturopathy, the Palmer-Gregory Chiropractic College, the Empire School of Chiropractic, and the American College of Mechano-Therapy. Member of the International Alliance of Physicians and Surgeons, Secretary and Treasurer of the National Association of Osteopathic Practitioners, honorary member of the American Naturopathic Association, member of New Jersey and Connecticut Naturopathic Associations.

IRVING, JAMES MONTGOMERY, P. T.

Dr. James Montgomery Irving traces his ancestors back to the old Montgomery and Irving families of early American his-

tory, who came to America from England and Scotland when the greater part of our country was a struggling British Colony. One of his ancestors fell while opposing Wolf at Quebec, and another, General Richard Montgomery, "took San Francisco from the Spaniards." The doctor has had a University education and has written many courses of Physical Education for Colleges and other places of learning both in this country and abroad. Some years ago, in a spirit of adventure, he joined one of the famous British Guards Regiments of London, and while there, went through a strenuous course of Applied Physical Education, at the Royal Military Gymna-

Railways Institute, Y. M. C. A. (Headquarters London, England), Imperial Gymnasium for training Physical Directors, the public schools, Men's Guild of Physical Education, West Indies, Irving Institute of Physical Education, West Indies, Military Staff Officers, Royal Yacht Club, Hospital for Deformities, etc. At present, he occupies the chair of Physiologic Therapeutics in the College of Osteotherapeutics and Vetus Academy (O. P. M. College), N. J., and is Director of the Montgomery Irving Institute of Physical Education, New York, and of our troops now in preparation for their journey, some day, abroad. The doctor has been twice around the world, visited most of the larger cities, and has had ample opportunities of studying the health question of the natives at first hand, and may be relied upon as a tireless student and sincere friend of the Drugless Profession.

Dr. James Montgomery Irving

sium at Aldershot, the most famous school of its kind in Great Britain—if not in the world—and won the first (and only) prize for general efficiency. Later, he was appointed by the Duke of Cambridge, Staff Director of Physical Education to the forces. Thousands of the famous Guards Brigade who were trained to physical perfection by the doctor, were chosen for the "Great Eastern Soudan Campaign" (in which the late Lord Kitchener took part), and were accompanied by their director, who fought by their side from the Red Sea, through the Eastern Soudan Desert, to Africa and, at the conclusion of hostilities, was decorated by Queen Victoria with a silver war medal and clasp, and by the Khedive of Egypt with a bronze star for distinguished service. Doctor Montgomery Irving was formerly Physical Director-in-Chief to the Honorable Artillery Company, Hosts College, Free Masons College, English Gymnastic Society, British

KANTHARIAKER, MAHADEV B., N. D.

The vast empire of India is not wholly inhabited by a race of metaphysicians who are mere transcendentalists, who sit in silent contemplation, or actively speculate on the problems of time and eternity, the why and the wherefore of human life, or who pose in adoration of their ten thousand gods. No, the leaven of western thought is working mightily in the vast population of Hindostan, being injected into the slumbering masses by the printing press, the railway, the steamship and other engines of progress, so that the most progressive ideas, the ideas that are the irresistible monitors of physical and mental well-being, are moulding the thought and lives of the races of that realm as they have never been moulded before. Among its ranks of modern medical science, the young and enormously vital science of Naturopathy, that is, Natural Healing, a school of medicine that is rapidly supplanting the superstitions of the school of pills and poisons, one of its best known and most successful pioneers is Dr. Mahadev B. Kanthariaker, a doctor of Naturopathy of Ahmedabad. He is a professor of hydropathy, electro-therapy, mechano-therapy, massage, photopathy, medical gymnastics, and of physical culture in general. The fact that he has thrown aside the allopathic school that merely treats the symptoms of disease, and has enthusiastically adopted the school of medical practice that removes the cause, that pulls disease out of the system by the roots, proves Dr. Kanthariaker a man of great energy of mind and a conscience that will not let him do otherwise than provide the best means of curing disease for his patients. He makes use of the most modern ideas and appliances to combat the ailments of humanity and his work is

highly successful and widely appreciated. No finer mission could be given to a man than to show to India the supreme value of removing the causes of disease by rational living and congenial treatments that render similarly superfluous the knife of the surgeon and the poison of the apothecary. Dr. Kanthariaker is nobly living up to the requirements of his self-appointed task.

KLAWITTER, WM. C., N. D.

Born in La Crosse, Wis., in 1890, he made La Crosse his home during his whole life.

He took up the study of Naturopathy seven years ago and is a graduate from the American School of Naturopathy. He has been with Dr. Josef Riese from the time he took up Naturopathy. Very often the success of an Institution

is not only due to the proprietor and to the initiative of the head of the Institution, but depends in a large measure on the assistants. Dr. Klawitter, who has been with Dr. Riese for so many years, is certainly a great asset to the La Crosse Naturopathic Institute and Sanitarium, and his congenial cheerfulness, the personal magnetism with which he attracts and holds patients, have in a large measure contributed to the great reputation of that institute. Dr. Klawitter is an able and promising disciple and scholar of Dr. Riese, and no doubt will some day be promoted from the managership of the institute, and become his successor.

KRÜGER, WM. F. H., Ph. G., Ph. D., N. D., D. O.

An ardent advocate and practitioner of

Naturopathy since the year 1895. Some of his best writing for rational progressive medicine was published in "Am. Kneipp-Blaetter," volumes 1896-1902. Member A. N. A. Section, New York State. When a practitioner like Dr. Krüger can unite theory with practice in so

perfect a manner as he does, the most surprising curative results follow as a matter of course.

KURZ, ROBERT F., D. C., 36 High Street, New Haven, Conn.

Dr. Kurz graduated at the Palmer School in 1914 and is a member of the Connecticut Chiropractic Association and the Delta Sigma Chi. He was born in Germany in 1892.

LATSON, DR. W. R. C.

The late Dr. Latson was the editor of *Health Culture*, a well-known journal of

progressive medicine. He was not only an editor, but a Naturopath as well, and the author of several books on Natural healing. He conducted, for several years, an educational institution, teaching people how to live, and articles on this subject, from his pen, have appeared in the *Naturopath and Herald of Health*.

He also conducted a hygienic institution on the West Side of New York City, but many of his big plans were in advance of the age, and his death cut short others that were assuredly practical. His devotion to the cause of progressive medicine will keep his memory green, and his name deserves to be engraved on tablets of granite to awaken the respect and imitation of future generations. The editor and Dr. Latson were personal friends, and the former must confess that from his association with this true apostle of medical light and liberty, he received an uplift that could only radiate from a spirit of health and humanity that is characteristic of all true advocates of physical education.

LOBAN, JOY M., D. C., Ph. C. By Dr. Russell H. Skeels, ex-President, International Chiropractic Association.

Dr. Joy M. Loban was born in 1887, and at the age of 20 was actively identified with Drugless healing, being a student at the Palmer School of Chiropractic. Dr. Palmer, dedicating a Chiropractic text-book, in 1908, writes: "To one small, wiry, sincere and conscientious man, whose whole object is the uplifting of this philosophy, is this volume dedicated. He was more than a student under the author. He is more than an acquaintance or friend—he is a companion such as gives backbone to a philosophy as good as this. It is a case of the philosopher thoroughly absorbing the philosophy which met his ideals. His assistance to my research, his help to the author personally and professionally during the past year is considerably remembered. Appreciation in this substantial way is the least compliment that the author can give to Joy M. Loban, D. C., Ph. C." Dr. Loban's service to Drugless healing is limited strictly to the Chiropractic field. He is a graduate of the Palmer School of Chiropractic, and of the Universal Chiropractic College, in both of which institutions he has been an instructor. In the former, he had charge of palpation and adjusting. He was the first teacher in

the Universal, planned its curriculum, and put it into operation, leaving two years later to practice in Atlanta, Ga. In 1913 he organized another school in Washington, but soon returned to the Universal Chiropractic College as instructor in anatomy, remaining till the present year, when he became dean at the Pittsburgh Chiropractic College. As a teacher, Dr. Loban is especially successful, having the ability to so correlate the work in its logical sequence that the more difficult points are easily grasped by the ordinary student. He possesses a highly analytical mind, and the happy faculty of expressing it logically. This, naturally, has led him into other fields than teaching. He is a lecturer of note, on subjects pertaining to Chiropractic, and his text-book, "Technic and Practice of Chiropractic" (The Loban Publishing Co., Pgh., Pa.), which has reached its third edition, is universally accepted as the only scientific work on the subject, and is used wherever Chiropractic is taught. In the effort to secure legislative recognition of Drugless methods of healing, Dr. Loban has been ever active, using his influence at all times for laws that provide for the licensing of practitioners of each of the various schools of healing, under separate examining boards. In this he is consistent, for he is a staunch advocate of complete separation of the different methods. In his private practice he employs only the purest Chiropractic, and in his classes, Chiropractic alone is taught. The vast majority of the Drugless healers differ from him in that they rarely confine their treatment to any one of the healing methods, but combine the treatment of several schools. Dr. Loban limits his teachings and practice to "pure and undiluted" Chiropractic, and because of his consistent attitude toward "mixing," has won the admiration of the profession. Not only is he the leading technical writer of his profession, but is recognized as a talented writer of fiction. His shore stories are in demand, and have appeared in some of the more prominent monthlies. His style is the style of Irvin S. Cobb and Ring Lardner, and, like both, he is a baseball enthusiast. No one individual in the Chiropractic ranks, probably, has done as much constructive work for the profession and for Drugless healing as has Dr. Loban, although at no time has he permitted himself to be considered as the leader of the school of spinal adjustment. He works because his heart is in the work, and his satisfaction comes from the knowledge that he daily does his part to place Chiropractic on a firmer scientific basis, and not through self-aggrandizement or personal glory. The honors which his profession deem to be his due, come to him earned, but wholly unsought. He is one of the leading lights of the chiropractic profession and a member of the International Chiropractic Association.

LONG, I. W., N. D.

Dr. Long is a manufacturer and dealer in therapeutic appliances, publisher of books and charts relating to Naturopathy. His emporium at 101 North High Street, Columbus, Ohio, is supplied with electric light cabinets (Burdick's) and pandiculators, sinusoidal apparatus, vibrators, therapeutic lamps, hand concussors and abdominal supporters, manufactured by himself. He carries books on every phase of Naturopathy, particularly Hydropathy, Chiropractic, Osteopathy, Naprapathy, Spondylotherapy, Neuropathy, Spinal Adjustment, Diagnostic Therapeutics, Zone Therapy, etc.

LUEPKE, JOHN F. G., M. D., S. D.

John F. G. Luepke, M. D., S. D., native of Germany, was born April 14th, 1863

John F. G. Luepke, M. D., S. D.

The foundation of his classical education was laid at a German gymnasium and high school, and finished at the University of Berlin. In this country, he attended the Eclectic Medical College of New York City and the Creighton University and Medical College at Omaha, Neb., received a license as physician and surgeon from N. Y. University in 1906, and is registered both in New York and New Jersey as such. At different periods, Dr. Luepke was connected with the Vanderbilt Clinic and Roosevelt Hospital Dispensary, N. Y. City, the N. Y. Post Graduate Surgical Department and the Lying-in-Hospital of N. Y. City. During the time of his practice, he was examining physician for a German-American Veteran Soldiers' Society, and different fraternal organizations, as of the I. O. O. F. (Blücher and Wallenstein), the F. O. A. (Courts Humboldt and Sam H. Bailey), the Workingmen's Sick and Death Benefit Association, Branch 31, the Amt Freudenberger Verein, and many others.

He is still an active member of the New York Physicians' Association, the Society of Naturopathic Physicians, and the International Alliance of Physicians and Surgeons, and holds a certificate of membership in the Society of Chiropractic Physicians of New Jersey. He also is Medical Adviser and Food Expert for the Tropon Works, N. Y. City. The Doctor is a strong adherent of Drugless Healing and Rational Dietetics, in which sense he successfully conducted the Naturopathic Sanitarium at Paterson, N. J., and the Therapeutic Institute of Brooklyn, N. Y., where he was cleverly assisted by Mrs. Luepke, who, a former school-teacher, is a graduate of the N. Y. School of Massage and Maternity Hospital. Due to an accident in his laboratory, Dr. Luepke was obliged to lay down his practice for a while and is at present located at Welga, Ill.

LUNTZ, HARRY, D. O., N. D., M. D.

Dr. Harry Luntz, of Brooklyn, N. Y., has perfected a health food combination which he calls Flaxolyn. It is the result of many years of study and experiment.

Dr. Luntz deserves great credit for producing from natural foods a real remedy for stomach, liver and kidney troubles, constipation and gall stones. It is scientifically compounded from fruits, roots, herbs and flaxseed, and contains nothing harmful. It is a good food tonic and promotes tissue building.

Dr. Luntz is a Naturopath with a broad, liberal education and has achieved an enviable reputation as an osteopath in three States. He has been a close student of therapeutics for the past 25 years, having graduated successively from the American College of Osteopathy, Kirksville, Mo., Old Physio Medical College (Osteopathic and Post Graduate Departments), Chicago College of Medicine and Surgery and the Philadelphia College of Osteopathy.

LYTLE, ALFRED Y., N. D.

Dr. Lytle has been actively engaged for the past five years as a Naturopath, in Hartford, Conn. The fact that he is a progressive practitioner is an indication that after serious consideration, he decided to regard Nature and not superstition, as his authority in the noble art of healing sick humanity. He is not ambitious to be known simply as a pain-killer, but rather as a pain eradicator. His inquiring mind seeks to get at the root of things. He early discovered that of the two opposing schools

of medicine, that of the Allopaths was a deteriorating treatment, adding an extra load to the efforts of Nature to cure disease, whereas Naturopathy was a sworn yoke-fellow with Nature, pulling at least an equal load and relieving Nature of half her efforts to restore natural functions to their normal state of well-being. The success that has naturally come to a dispenser of joy, hopefulness and health, by methods wholly at variance with the administration of filthy poisons, has created a deservedly successful business for Dr. Lytle. His reputation stands as high among his fellow practitioners as it does with the general public, and he is a member of the American Naturopathic Association.

MACFADDEN, BERNARR, Author, Editor, and Physical Culturist.

Bernarr Macfadden, who nineteen years ago founded the Physical Culture Magazine,

Bernarr Macfadden

may well be called "Father of Physical Culture" in America. He is especially entitled to this distinction in view of the fact that it has been largely through his work that physical culture principles have become popularly recognized as methods of treatment and cure, as well as of merely building bodily strength. More than thirty years ago, Mr. Macfadden, then a frail and

delicate youth, was threatened with consumption. It was in the family. He had lost one of his parents through this disease. Following the general and approved program of going from doctor to doctor and consuming medicines of all kinds and in large quantities, he found his condition steadily growing worse. The case seemed hopeless. Finally, in desperation, he threw away his medicines, avoided the doctors, and instead, entered a gymnasium, in the hope of building strength like that of the young men whom he saw there. His efforts were not disappointing. He gradually gained strength. With increasing strength came enthusiasm—an enthusiasm which has not left him to this day. He began to study subjects pertaining to food, hygiene, physical training and the needs of the body in general. In the course of a couple of years, he had become a superb example of vigorous, athletic manhood. A little later he took up professional wrestling. For years he was one of the best wrestlers, not only of the Middle West, but of America, winning many championship matches at his weight, 149 pounds, and holding his own successfully with many of the best wrestlers in the heavier classes. Indeed, he was never thrown even by the best heavyweight champions in his own preferred style of wrestling, the Graeco-Roman. Mr. Macfadden's studies were very early devoted to questions pertaining to diet and fasting. Although by no means an originator of the theory of fasting as a cure for disease, Mr. Macfadden has done more than anyone else in the world to bring this form of remedial treatment to the attention of the public, and to establish it with more or less popularity as a curative measure. Not long after the founding of the Physical Culture Magazine, Mr. Macfadden undertook a seven days' fast, and demonstrated his superb physical condition on the seventh day by some severe feats of strength. He used the magazine, "Physical Culture," as a medium through which to teach the many lessons of hydrotherapy, massage, exercise, diet, fasting, fresh air, and other forms of drugless treatment. He wrote many books of a practical, instructive character, aiming at the physical regeneration of his readers, and including the remarkable "Macfadden's Encyclopedia of Physical Culture," in five large, beautiful volumes, now in its fourth edition. More than nine million of his books have been sold. He has established and conducted various "health homes" and sanitariums, in which his methods of treatment have been used with phenomenal and practically unfailling success. Many years ago, he organized a training school for the preparation of physical directors, and established a college for the training of drugless practitioners. After conducting a large sanitarium at Battle Creek some years ago,

he decided that Chicago, which is a more central point in the United States, was a better location. Mr. Macfadden established a large institution at 4200 Grand Boulevard, which he then called "The Healthatorium." Fifteen years ago, Mr. Macfadden established a chain of pure food restaurants for the benefit of those searching for strength-building foods, healthfully and properly prepared. These restaurants are now in successful operation; six being located in New York City, with branch restaurants in Philadelphia, Detroit and Toronto. Aside from his work both in England and America as author, editor, publisher and health director in his sanitariums, Mr. Macfadden has had a remarkable career as a business organizer. He has more recently organized and supervised the work of The Washed Air Cooling, Heating and Ventilating Co., Inc., and The Physical Culture Photo Plays Co., Inc., the latter engaged in the production of motion pictures dealing with physical culture subjects, both in a monthly "screen magazine" and in feature productions of from five to seven reels.

MAC KINNON, JOHN L., D. C.

Dr. John L. Mac Kinnon was graduated from the Palmer School of Chiropractic, with honors. He is a man of exceptional per-

John L. Mac Kinnon, D. C.

sonality, and has proven himself a remarkable genius and expert in the Science of Chiropractic. With Dr. Froude, he is fast coming into prominence as a specialist in stomach and kidney troubles. Their local practice has grown phenomenally, and their special work is attracting many patients from other States. Their office at 260 Fair Street, Kingston, New York, is one of the most splendidly equipped Chiropractic offices to be found.

MATIJACA, ANTHONY, M. D., N. D., D. O.

Author of "Principles of Electro-Medicine, Electro-Surgery and Radiology"; author of "Electro-therapy in the Abstract"; Associate editor of the **Herald of Health and Naturopath**; Member of the Illinois State Society of Naturopaths and the American Naturopathic Association; formerly physician in charge of the Hindhead Nursing Home in Surrey, England, and the Electro-Curative Institute in Nelson, Lanc. England; formerly lecturer of Electro-Medicine at the College of Physiological Therapeutics; Licentiate, Illinois State Board of Health, etc.

Dr. Anthony Matijaca was born September 16th, 1889, in Trappano, Dalmatia (on the Adriatic). In 1900, he entered the Imperial High Gymnasium in Spalato, Dalmatia, where he obtained his high school education. From 1908 to 1915 he studied various branches of the healing art both in America and in Europe, and graduated in Medicine (M. D.), Osteopathy (D. O.), Chiropractic (D. C.), Naturopathy (N. D.), Ophthalmology (O. G.), etc. Having witnessed numerous remarkable results obtained with electro-medication in several London hospitals, in 1912 he devoted himself particularly to the study and practice of electro-medicine and electro-surgery. His first article on this subject appeared in the British Physio-Medical Journal (The Herb Doctor) in October 1913, and during the year 1916 he contributed valuable articles to every issue of the **Herald of Health and Naturopath**. Since November 1915, he is successfully practicing this science at 413 Cass Street, Joliet, Illinois, U. S. A.

MILDENBERGER, CHARLES, D. O., D. C., 68-70 Hudson St., Hoboken, N. J.

As an osteopath and naturopath, doctor Charles Mildeberger, of room 305-7 Terminal Building, Hoboken, N. J., has always had a good name. From his very start in Brooklyn, using principally osteopathic and hydropathic, as well as the so-called bio-chemic methods, he has been very successful. His convictions on progressive therapy were so strong that he did not shirk, but kept up his practice in spite of persecution, which at one time was carried on in Greater New York. The sleuths and spies of the Medical Trust also hunted him up, but he never wavered for a moment. He stuck to the work and finally triumphed in spite of opposition. He opened a branch in Hoboken, where he uses the very latest methods such as osteopathy, chiropractic, electricity, vibration, ultra violet rays, radio thermo-light, pandicator, as well as internal medication by biopathy. He specializes in the following diseases: nervousness, neurasthenia, St. Vitus Dance, female ills of every description; heart, liver,

kidney and bladder troubles, rheumatism, gout, etc. We take pleasure in introducing Dr. Mildeberger as at once a conservative and progressive practitioner. He holds a License as osteopath in New Jersey.

MUCKLEY, FERDINAND, A. N. V., 115 East 59th Street, New York City.

Dr. Muckley is a well-known naturopath, who has for many years specialized in introducing a natural mineral water known as "Aqua Nova Vita." The results obtained by him with this water in cases of cancer and high blood pressure, arterio-sclerosis and syphilis are quite remarkable. His methods are used by many doctors in the drugless field, and the water is also used in a good many institutions. It has the endorsement of some of the best doctors of all schools. Dr. Muckley is a member of the A. N. A. and a staunch supporter of all movements for progressive, rational medicine, its protection and the education of the public in the art of natural living.

MUNRO, W. D., N. D.,

Dr. Munro, of New Haven, Conn., is a successful practitioner of Drugless healing.

Dr. W. D. Munro

When he set out on his career, he weighed the respective powers and advantages of the two opposing schools of medicine, the official school that revels in the guess work of drugs and serums, and the more scientific and congenial school that makes use of simple natural forces; in a word, the claims of the medical reactionaries and those of the progressives, and he wisely adopted the progressive program. This,

indeed, is the proper solution of the medical question. Its practices and precepts, when faithfully observed, make for relief, cure, development, progress, and the attainment of abounding vitality.

NEAGLEY, ASIA L., N. D.

Dr. Neagley is president of the Pittsburgh Health League, which has espoused the cause of natural drugless treatment as the most efficient method of curing the ailments of mankind. The league has discovered that poisonous drugs are no remedies for disease, but only make things worse, and that to really cure disease, the progressive physician must apply the essentials of

life, such as mind, air, light, heat, water, rest, exercise, diet and electricity, all congenial intensifications of the restorative powers of Nature, the only true physician. All this is in obedience to a mighty wave of spiritual impulse that is sweeping over humanity at present, by virtue of which mankind has conceived a loathing for poisonous drugs and filthy, animalized serums, vaccines and inoculations with which retrogressive medicine, sodden with custom and tradition, and smeared with the slime of the Dark Ages, is continually striving, in defiance of hygiene and sanitation, to corrupt and poison the bodies of its victims. But even within the ranks of the true healers are dissentient voices loudly claiming all the virtues of the whole of Naturopathy for a part thereof. As an active organizer of Naturopathic associations, she now and then experiences a setback that is disconcerting. Having obtained 30 charter members for a local branch of the American Naturopathic Association in Pittsburgh, Dr. Neagley learned that the Pittsburgh College of Chiropractic instructed its students that they should not connect themselves with the Naturopaths, but that they should live and talk chiropractic only. "The West View League" and "Rose Health League No. 1 of Allegheny" are Dr. Neagley's recent creations.

NESMITH, L. M., D. C., Ph. C., B. Sc.

The Rev. Dr. L. M. Nesmith, of Custar, Ohio, is a graduate of many schools of Naturopathy, but is not a practising physician. He is a lecturer and entertainer, and his wise counsel and co-operation with drugless practitioners make him a tower of strength in the cause of progressive medicine. He believes with all naturopaths that medical freedom is one

of the greatest needs of the hour. Political freedom, religious freedom and medical freedom are the three most sacred rights of mankind. We have achieved political and religious freedom, but we suffer from deprivation of the right to choose our own physician by men who, unsuccessful in their professional venture, have abandoned us and pronounced us incurable. This seems to be something in the line of slavery that could only belong to the Dark Ages, but, in reality, such slavery exists here and now, and drugless practitioners who have responded to the call of a dying human creature, and have saved the life of such, are arrested and imprisoned, by virtue of laws created by the influence of the Medical Trust, which declares that a man proclaims himself a criminal by saving the life of a fellow creature! Dr. Nesmith, in championing the cause of medical freedom, is acting on strictly humanitarian and democratic American lines. His principles are based on justice and equity. Possessing a high moral character and a conscience both sensitive and strong in its adherence to duty, as well as a humanitarian spirit, he is equipped for his work as a reformer, which is to diagnose our sick civilization and point out where it is ailing, both here and there, and at the same time prescribe the remedy that will cure the disease.

PARKER, PROF. H. N. D., M. D., N. D.

The subject of this sketch was born in Jefferson County, State of New York, in 1840. His father was an early student and practitioner of Thomson's Botanic System of Herbal Medicine, which was the fore-

runner of Eclectic Medicine. During the Civil War, he enlisted in response to President Lincoln's first call for volunteers, and for two years served with his regiment in every engagement. He was honorably discharged in June, 1863. After every engagement he was detailed to assist the surgeons in the care of the wounded and sick. The knowledge he gained then, together with the information acquired while assisting his father, was of much value to him in his college course and later in life. He graduated in Eclectic Medicine in 1864, and began the practice of medicine in December of the same year. In 1867 he became acquainted with the Vacuum-Neuropathic (the nerves) treatment, and combining it with eclectic medical treatment, met with unusual success, which he soon discovered was entirely due to the potency of the Vacuum-Neuropathic treatment, the truth of which he was so convinced, that in 1876 he publicly, in Chicago, announced through the press and to his medical associates, that all diseased conditions, if taken in any reasonable time, could be cured (eliminated) without drugs, by the Vacuum-Neuropathic (treating the nerves) treatment and its accessories, namely, massage, Turkish baths and other means of promoting the circulation of the blood, aided by a liberal diet of appropriate foods that contained all the elements for body building and sustenance, in gestation, childhood, health and disease. While he prescribed a liberal diet, with directions to eat only when hungry, he also paid strict attention to deep breathing and cleansing the intestinal tract. For this purpose, Epsom salts are given in one ounce doses, in one pint of water, taken on an empty stomach and continued daily, or every other day, long enough to clean the system of the toxins, which result from, or are the cause of disease, such as fevers and eruptive ailments. Prof. Parker was the pioneer of Drugless healing in the United States. He was the first (in 1876) to publicly announce and advertise that diseased conditions could be eliminated by rational, natural methods without the use of dangerous and habit-forming drugs of mutilating (and worse than useless) operations. The principal incentive to these is that the victim's physician eventually receives one-half of the fee that is paid the operating surgeon. It is more often than otherwise that it is this one-half of the fee that makes the operation necessary. For corroborative proof, read the editorial in "Medical Council," published at Philadelphia, Pa., for July, 1914. The vacuum treatment restores blood circulation and by its masterly control of the circulation of the blood and essential fluids of the body to the diseased parts, operates effectively as a cure for locomotor ataxia, hardening of the arteries, heart disease, and all forms of paralysis, Bright's disease, epilepsy, rheumatism, asthma, insomnia, hardening

and sclerosis of the spinal column and cord, arterio-sclerosis, vertigo, and the desperate ailments of the digestive, circulatory, respiratory and nervous system; neurasthenia, neuritis, nervous exhaustion and breakdown, curvature of the spine, and the chronic incurable (so-called) diseases for which the medical world has no remedy. The legislature of Illinois, in 1876, passed the Medical Practice Act, which prohibited the practice of medicine (except by licensed physicians), which, in the words of the act, included everything one could do to relieve human suffering. Dr. Parker could have qualified under two of the regulations, namely, diploma and ten years' practice, when threatened with prosecution and with being put out of business unless he registered. He refused to qualify and continued the practice without being molested, until about 1883, when prosecution commenced and continued at intervals until 1894, when they ceased, during which time he was prosecuted thirteen times, and in every instance he admitted that he was guilty of everything charged, but that he had not done wrong. He was charged with treating people in violation of the law, the prosecuting witnesses being former patients (not detectives who will perjure themselves), who testified that they were relieved and cured, after famous medical men of this country and Europe had failed to do so. In defence he stated to the court and jury that his effort to relieve human suffering and restore to health persons who had been denied relief from every other source was not wrong, and that as criminal laws were enacted to punish people who have done wrong, and not right, and when they, the laws, prohibited one from doing right, the law was wrong, and it was the duty of the court, and more especially the jury, to take notice of the wrong, and convict the law by acquitting the defendant, which they did in every case; and prosecution thereafter ceased. He was the first person prosecuted under the law in Illinois and was always acquitted. Here he continued his extensive practice, often employing as many as four assistants, usually medical graduates. Always having a preference for Washington as a place to live, he moved there in 1903 and opened an office, where he practiced his method without molestation until 1913, when he was arrested at the behest of the medical men. After a trial lasting two days, the jury, after being out twenty minutes, brought in a verdict of "Not guilty." The Health Department, under the fraudulent advertising law, passed in May, 1916, attempted to interfere with his practice, but as his advertisements contain truthful statements only, they have so far abandoned their persecutions. Prof. Parker is an active member of various associations of Drugless physicians, and is an able advocate of Drugless therapy. Fourteen prose-

cutions have failed to destroy his usefulness to mankind. Thanks to the intelligence of the various juries before whom he defended himself, he was never found guilty of wrong-doing. His present address is Washington, D. C.

PATTERIOUX, J. ALLEN, N. D.

J. Allen Patteirouex, N. D. (pronounced Pat-re-o), was born at Manchester, England, of English parents.

He was educated at the Manchester Central School and became the winner of a Science and Art Scholarship under the Manchester Board of Education. He is the holder of advanced certificates in the Government Department of Science and Art, London, on Physiology, Hygiene, In-

organic Chemistry (Theoretical and Practical), Mathematics, Light, Heat, Magnetism and Electricity, etc. He is the holder of the Medallion of the St. John Ambulance Association. He has been trained and certificated in various branches of Naturopathy, of Electro-Therapeutics, Osteopathy, Hydrotherapy, Radiant Light and Heat which he studied at the Oldham Hydro- and Electro-Therapeutic Establishment, Oldham, Lanc. He is also a Certificated Licensee of the Dowsing Radiant Heat and Light Company, London. In addition to his private practice, he is now busily engaged in treating wounded soldiers from the Red Cross Hospital, on Naturopathic lines. Dr. Patteirouex is interested in all kinds of Natural Therapy, especially in Food Reform, Dietetics and Chromotherapy. He is a member of the Vegetarian Society, compiler of "First Lessons in Chromoscopy, the New Color Science," and a member and English representative of the Universal Naturopathic Alliance.

PAYNE, A. V., D. C., M. D.

Chiropractor. Free consultation. Lady attendant. Address: Marbridge Building, Broadway and 34th Street, New York. Office hours, 8 A. M. to 8 P. M.

PRILLWITZ, A. VON, N. D.

Dr. Prillwitz began his public life as a lieutenant in the German army, but he resigned this career to settle in South America as a Naturopath. He was impressed with the virtues of such a method of healing, both in the case of himself and his wife, and began to teach the public the healthful theories promulgated by Priessnitz, Kuhne, Kneipp, Just, Bilz and Ehret, who

boldly rejected the pernicious system of poisonous drugs, the only weapons of degenerate medicine. Later he settled in Marlin, Texas, a State in which, unfortunately, the Drugless system of medicine is not yet recognized. But free America is no country for medical feudalism and slavery. The irresistible tendency of absolute power to abuse its authority is so well known that in time democratic authority will assert itself against the tyranny that enslaves progressive medicine, not only in Texas, but in too many other States of this republic. As a nation, America ought to rise above the degraded status of medical autocracy as it exists in most States of the Union, where Medical Trust ferocity flourishes. He has succeeded in building up a fine business by an accurate diagnosis and true appreciation of the cause of disease, and the application of the only remedial treatments that can restore his patients to health.

REILLY, HAROLD JOHN, Naturopath and Physical Culturist.

Dr. Reilly has been a devotee of Physical Culture and Athletics since he was sixteen years of age. He appreciated at

an early age, what the Greeks discovered two thousand years ago, that exercise, rightly indulged in, is the foundation of bodily vigor and supreme vitality. He has a fixed opinion that modern men and women are rapidly degenerating for lack of such exercise, and he was

determined that so far as he himself was concerned, and those of his friends whom he could influence, mankind would enjoy fine bodily development and perfect health. He has competed with zest in many athletic contests and possesses trophies for running, jumping, throwing weights and wrestling. He began the study of Naturopathy two years ago in Dr. Conrad's School, the old Physio-Medical Academy. His studies were interrupted by being called to take part in the military expedition into Mexico, as a member of the New York State Militia. While in Mexico, he won the wrestling championship of this contingent for all comers, and otherwise occupied his time as a professional masseur with great success. On his return from Mexico he again took up the study of Physiological Therapeutics in the National Institute and graduated therefrom in May 1917. Dr. Reilly is at present athletic instructor, track captain and wrestling instructor of the Bronxdale Athletic Club, Bronx, New York. He is also an active member of the National Association of Osteopathic Practitioners. His private office is located at 1804 Mulliner Ave., Bronx, New York. He thinks that

a combination of active massage work, with general physical culture training, is the best possible combination for physical development. He has no use for drug-medication which so far from curing disease is really its disseminator, for it is one of the chief causes of idiocy, imbecility, epilepsy, feeble-mindedness and insanity.

RENCHER, GOTTLIEB JULIUS, N. D., D. C., D. O.

Dr. Rencher, of 68 Greene Ave., Brooklyn, N. Y., has been practising Naturopathic methods for eight years. His methods include hydropathy, Swedish methods in massage and movements, chiropractic, electropathy and mechano-therapy. He is a graduate of the Yungborn School of Naturopathy, in Stockholm, Sweden, in 1906, and of the Naturopathic School of New

York, in 1914. He has taken clinical courses both in Sweden and New York. He holds the degree of Chiropractic from the Palmer-Gregory College of Oklahoma, obtained in 1913. Dr. Rencher is a very intelligent and conscientious practitioner, professor of chiropractic at Dr. Conrad's College for chiropractic and osteo-therapy, and is doing splendid work in his chosen field of operation. He is Professor of Chiropractic at Dr. Conrad's College for Chiropractic Osteopathy. He is a member of the American Naturopathic Association, New York State Society of Naturopaths, Chiropractic League, etc.

RIEDMÜLLER, JACOB, N. D., D. O., D. C.

Dr. Riedmüller is one of the pioneers of Naturopathy in the United States. He was born in Germany, and when he had arrived at the age when he should decide what his life work should be, he was attracted to the medical profession whose aim is to strive to cure our suffering brethren of the ills of the flesh. But the idea of preventing disease seemed to be nobler still, and he resolved not to

associate himself with that branch of the profession that simply waits until disease has overcome its victim, and then try to exorcise the demon with an attack of pills, poisons and inoculations, which may, and often do, kill the patient rather than drive away the ailment, but, instead, to treat the ailing by teaching and practicing according to the natural laws of health. He spent the years 1892 to 1895 at Woerishofen in studying under the great teacher,

Father Kneipp himself, the Kneipp hydropathic cure, and subsequently studied Osteopathy and General Naturopathy, and on coming to the United States located at 117 E. 86th Street, New York. He also maintains an office at 637 Livingston Street, Elizabeth, N. J., since 1906 and holds a license as Osteopathic Physician in that state. In New York State he has a license as a chiropractist and is a member of the Pedic State Society. He is a charter member of the American Naturopathic Association, and is a graduate of class 1899 to 1902 of the American College of Naturopathy, and was a student and is a graduate of the Vetus Academia, Old Physiotherapy, Osteotherapeutics and Eclectic College of New York City, Class 1904 to 1907. A firm believer in the true and congenial remedies supplied by Nature, such as water in its various forms and applications, air, sunshine, diet, exercise, rest, and mental, or psychic forces, which are the very essentials of life, but which agencies are most frequently excluded from drug and serum-therapy, Dr. Riedmüller has transmitted his belief to his many patients with the result that he has built up a most successful practice, whose drug-eliminated treatments have produced some wonderful cures. He is a member of the A. N. A., International Alliance of Physicians and Surgeons, Osteo-Therapeutic Society, and the New York State Society of Naturopaths.

RIESE, JOSEPH, N. D., La Crosse, Wis.

Dr. Joseph Riese was born in Austria, Jan. 26th, 1852, and immigrated to the U. S. in

Dr. and Mrs. Joseph Riese

1864. He made his home in La Crosse. After many years of strenuous concert-work, his health failed him and he was obliged to give up his musical career. After spending a small fortune trying to get well, his thoughts went back to his native country, where at one time he had gathered much information and experience at a Nature-

Cure Sanitarium near his old home. He bethought himself of the various treatments given there and applied these to himself. He was finally restored to health by long and persistent natural treatments, and from this time on became an ardent nature-cure follower. He devoted many years to the study of human ailments and their cure, and later on, graduated from the American School of Naturopathy. His natural ability and love for this work have made him an unusually successful Naturopath, with hundreds of wonderful cures to his credit all over the country. Dr. Joseph Riese is also a member of the American Naturopathic Association from its very inception and has acted as State representative for Wisconsin for the last 12 years. His institution is not only known in La Crosse, but throughout the Central States. He never advertised to any extent, but has always had more to do than he cared for; the patients he cured built up for him his reputation. As a citizen of La Crosse he is beloved and respected by everybody. Our opponents and the local servants of the Medical Trust had several times conspired against him, but his reputation and standing in the community as well as in the county were a little too much for them to come up against. He has triumphed gloriously for a period of many years without any interference, and he enjoys

helpful in the ladies' department. No doubt, a good deal of the success and satisfaction the patients receive at this Institution is due to the home-like and cheerful atmosphere, which is always created by the presence of Mrs. Dr. Riese. The Editor of the Universal Naturopathic Directory considers Dr. Riese a pillar one can always depend on in Wisconsin.

RILEY, JOE SHELBY, M. S., D. M. T., D. P., D. O., D. C., Ph. C.

Lecturer, Teacher, and Developer, Dean of New England and Washington Schools

of Chiropractic, Dr. Riley has been one of the busiest practitioners, teachers, and developers of the science in the country. A student of Medicine, Osteopathy, and all mechanical therapies, he found in Chiropractic the most potent factor to his liking, and while a genuine mixer of all good methods, he makes his great-

est cures particularly in the line of Chiropractic, 1116 F St. N. W., Washington, D. C., she engages actively in the regular more Chiropractic adjustments than any other living man, and while this claim is open to dispute, no one can deny that he is the busiest man ever met from early morning until late at night, a continual stream of patients passing through his adjusting parlors under his care. His memoranda shows he has made or given more than a quarter million courses of treatments, aggregating more than two million actual Chiropractic thrusts. While being the busiest man in this way you could imagine, he has found time to do a great deal of teaching, lecturing, writing, and developing the science. Many of the best methods of spinal adjustment are due to his careful study and trial. Dr. Riley's headquarters are now with the Washington School of Chiropractic, Washington, D. C., 1116 F Street N. W., where every visiting Chiropractor receives a welcome hand.

Dr. Riese's Naturopathic Sanitarium, La Crosse, Wis.

more than a license or protection. He is a man people would be willing to stand up and fight for at any time.

His patients and patrons are among the very best in the city of La Crosse, from the Mayor and officials down to the humblest citizens. They all know Dr. Riese, in fact he is one of the pioneers and early settlers of the city of La Crosse and saw two-thirds of the residents of that city come in. In Mrs. Dr. Riese, he has a very able and practical help. She superintends the household of the Institution and is also

RICKLI, ARNOLD, N. D., Founder of the Light and Air Cures (Atmospheric cure).

Dr. Rickli was one of the foremost exponents of natural living and healing. In 1848, he established at Veldes, Krain, Austria, the first institution for light and air cure or as it was called in Europe the "Atmospheric Cure." In a limited way (rather very late) his ideas have been adopted by the medical profession in America for the cure of consump-

tion. He was an ardent disciple of the vegetarian diet and exemplified the principles of natural living in his own life. This photograph shows him at the age of 97, when he was still active and healthy. He has since passed on but his work still

Dr. Arnold Rickli

lives as a testimonial of his untiring efforts. He was the founder and for over fifty years the President of the National Austrian Vegetarian Association.

ROESSELL, PAUL E., N. D.

Prof. Paul E. Roessell, of Miami, Fla., is a graduate of the American School of Naturopathy, Butler, N. J., and also of the Battle Creek Sanitarium, Battle Creek, Mich. He is a professor of hydropathy, diet, massage, chiropractic and osteopathy. He is in physique alert and muscular—a most intelligent practitioner, and is the very ideal of a mechanotherapist.

Visiting New York in September, 1917, as a member of the 22nd Convention of the American Naturopathic Association, he has widened his knowledge of curative therapeutics to a high degree, and declares that the exchange of Naturopathic ideas with the Naturopathic leaders that he became personally acquainted with, has opened up wider vistas of usefulness in his

profession, and he foresees, in consequence, a great increase of reputation and business connections. As a purveyor of health in Miami, he has for patients some of the finest people in the United States, who visit that genial health climate in the winter months.

RUEGG, PROF. JOHN J.

Professor Ruegg was one of those pioneers in progressive healing whose name deserves lasting remembrance. His theory was that the best way to treat disease was to treat the patient indirectly, by supplying him with vegetable foods that were grown in lava as a fertilizer, and not in the composts discharged by animals. He claims that lava is the best of all fertilizers, for it contains all of the sixteen elements required by the human body to maintain health. His theory is founded on that of Julius Hansel, physicist and agricultural reformer, who has written a book on the chemical virtues of lava. Professor Schuessler, who supports the view of cell satisfaction, advocates lava as a fertilizer also, and, following these, Professor Ruegg lectured to farmers on how to avoid the mistakes and failures of general farming. His motto was: "If you want to cure a patient or animal, treat the soil, and Mother Nature will transform the inorganic shape so the assimilative powers of the system will appropriate such elements. If the organism lacks salts, give it such salts in the form of nuts, vegetables, salads and fruits that possess such salts."

Professor Ruegg wrote two books on this subject. The work styled "Boll Weevil" (The Law of Nature and Mankind) (\$1.00), and "The Secret of Health and Disease" (50c). In these works the author shows that the ravages of the boll weevil insect in the cotton plant are solely due to the acidity of the juices of the plant, for where the juices of the plant are alkaline, there are no boll weevils. The acidity of the cotton plant is due to the use of wrong animal fertilizers. The plant should be fed with lava fertilizer, which renders the plant alkaline, and, therefore, immune to the devastation of the boll weevil.

This story of the boll weevil is used to enforce the necessity of mineral salts in human foodstuffs, which are to be provided by a proper fertilizing of the soil in which they grow. Professor Ruegg established an American health farm at Clifton, N. J., where he carried on experiments on plants with various fertilizers, notably lava, imported direct from volcanoes. He also established a manufacturing plant for crushing rocks and manufacturing fertilizers, using a mixture of lava and swamp mud, saying that the Lord had provided food for the world by means of swamps and volcanoes and rocks. Professor Ruegg experimented at Yungborn, Butler, N. J., on

Prof. John J. Ruegg

the invitation of the editor. Peach and other trees were planted in finely ground lava fertilizer, with the result that the peaches that grew on such trees would keep three or four weeks, and were of a richer flavor than ordinary ones. Cows that were fed on lava fertilized grass gave a milk richer in organic chemical elements, and children fed on such milk were extremely healthy and good-natured. Professor Ruegg is now deceased, but his idea is a vital one, and will bear rich fruit in the future.

SCHAEFER, JOSEPH.

Mr. Joseph Schaefer, publisher and dealer in Catholic and Naturopathic books, of 23 Barclay Street, New York City, was one of

the first friends Dr. Lust made on his arrival in the United States in November, 1892. For pure piety and uprightness, no one in the city of New York is more highly respected. Natural healing, especially Kneipp methods, is a subject that strongly appeals to his generous instincts. He believes that the law should not discriminate in favor of any school of medicine, but permit all schools to stand strictly on their merits. To legislate in favor of official medicine (as the law has done) works to the injury of all other schools and to the official school also. The regular practitioner does not have to rely on his skill for his success, but because he occupies a preferred position. He is coddled by the legislature to an extent that lowers his efficiency. He leans

Practitioners are requested to inform the publisher of probable discrepancies found herein, or of change of address in the course of printing. Rectification will be made in subsequent issues

against the artificial protection he possesses, and is inclined to depend on superstition rather than ability for a livelihood.

Mr. Joseph Schaefer

Mr. Schaefer is a philanthropist. As president of St. Raphael's Society and Leo Haus, a Catholic organization, he has brought comfort, cheer and protection into the lives of Catholic immigrants who need such attentions when first landing in a new world. Mr. Schaefer is also an honorary patron of the Kolping Association (Katholischer Gesellenverein), a society of Catholic mechanics, an organization devoted to the social, educational and spiritual betterment of the lives of its members. In the naturopathic world Mr. Schaefer is the agent of the late Father Kneipp's works on hydropathy, that are published by Joseph Koesel, of Kempten, Bavaria, and importer and manufacturer of Kneipp articles, such as herbs, teas, oils, powders, tinctures, remedies, health foods, malt coffee, whole wheat flour, apparatus, linens, and other Kneipp and Nature cure supplies.

SHEWALTER, CHESTER A., N. D.

Chester Albert Shewalter was born February 12, 1889, at Eureka, Greenwood County, Kansas. When 12 years of age, his parents moved to Galena, Kansas.

There, after finishing public school, he engaged in the drug business, which he gave up after three years, because of the confining conditions. Leaving for California, he became connected with the United States Army Post Hospital Service at Presidio, San Francisco. While there, he received practical training in the art of Naturopathy, or the curative use of diet, manipulation, hydro and electro therapy and scientific exercise, and upon leaving the service, engaged in further study of the subject at Livermore, California. After a short period here, he took up work at the L. C. McLain Sanitarium, St. Louis, Mo., where he was placed in charge of the Mechano-Therapeutic department, and at that time was the youngest member on the staff. Deciding to continue the study of Naturopathy, he took up the course at the American College of Mechano-Therapy, Chicago, Ill., and received his degree in 1912. After practicing in Cleveland, Ohio, for a year he left for Hot Springs, Arkansas, to gain further experience in the wonderful work. Practicing for three years in the Buckstaff bath house, on the government reservation, one of the best equipped bath houses in the world, he gained a wide experience, and then decided to return to Ohio and again take up private practice. Here he established offices in Akron and Cuyahoga Falls, Ohio. He was one of the charter members of the National Association of Drugless Physicians, and their first representative in Arkansas. After returning to Ohio, he resigned from this association and became a member of the stronger organization, the American Naturopathic Association.

At the Chicago convention in 1916, held in Hotel Sherman, he was made electoral committeeman, and suggested the re-election of Dr. Benedict Lust, our most honorable president, and four new honorary presidents. Returning to Ohio, he worked up enthusiasm amongst the Ohio men and held a convention at Hotel Portage, Akron, at which time the Ohio State Society of Naturopaths was formed, Dr. Shewalter being appointed secretary. He was also appointed chairman of the National Photo-Play Department and assistant chairman of the National Lyceum Bureau of the society, through which agencies it is hoped to make great advances in Naturopathic work. In 1914, Dr. Shewalter was appointed editor of the Mechano-Therapy Department of the Herald of Health. He is also contributing editor of the Practice Builder. Being chairman of the proposed Ohio State Yungborn College and Sanitarium, and also chairman of the membership committee of the Ohio State Society of Naturopaths, he hoped to still further enrich the cause of Natural healing. Dr. Shewalter is, by reason of his great intelligence, his initiative and enthusiasm for physiotherapy, one of the foremost pillars of the new school of healing. He is a man with a conscience that is not satisfied until he has explored the ultimate facts of the particular department of Naturopathy that engages his attention. He does not pin his faith or practice to but one phase of the healing art. He believes that diet, exercise and natural therapeutics should go hand in hand, so that the patient may receive the fullest aid that Naturopathy can give. We have reason to know that his work as a healing force has been extraordinarily successful, and from time to time has been made the subject of commendation in the press. A particular achievement lately recorded was the cure of a Mrs. W. S. Hassler, of Cuyahoga Falls, Ohio, the city in which Dr. Shewalter is located. Mrs. Hassler had been confined to bed for four years, by reason of paralyzed limbs, and was a hopeless invalid when Dr. Shewalter took charge of the case. He cured her completely, the cure being regarded by the patient and her friends as nothing short of a miracle. We will allow Mrs. Hassler to tell the story in her own words: "I have been a sufferer from inflammatory rheumatism for years," Mrs. Hassler says. "No medical help would benefit me. I changed doctors and changed medicines, trying everything that offered itself in the way of medicine, in the vain hope of getting on my feet. But my trouble got worse and worse until I was completely crippled and paralyzed from my hips downward. When I had practically given up all hopes of ever getting well again, a friend of ours spoke to me about Dr. C. A. Shewalter, who has a Naturopathic Institute here. I sent for

him, hoping against hope that he might give me some relief. He came to see me and impressed me with his method of healing without any medicines and drugs by those means only that the laws of nature prescribe, such as Hydropathy, spinal massage and similar natural methods. I gave him a chance as he had inspired confidence in me, and I trusted him and his methods. And I shall ever bless his name, as long as I live. It was due to his treatment only that my condition began to improve. I felt new life blood course through my deadened limbs and it was a wonderful sensation when the paralyzed muscles began to move as I wanted. Appetite increased, I grew stronger and finally decided to leave my bed. It did not take long when I began to move about. Now I am getting as strong as ever and feel happier than words can express. I cheerfully refer all sufferers to Dr. Shewalter." Dr. Shewalter is at present engaged, in conjunction with Dr. Allen of Eureka Springs, Arkansas, in producing a movie film representing the cure of a child that has been stricken with infantile paralysis by the energetic agency of Nature Cure treatments. The film shows little Dorothy lying ill, tired, listless, pulse 94, temperature 103 degrees. Dr. Blake, Osteopath, Chiropractor, is called and reduces the temperature by manipulations. He pronounces the case one of infantile paralysis, and advises that she be taken at once to Dr. Allen, a well-known Naturopath of Eureka Springs, Ark., some thirty miles away. Dorothy is put into an auto that flies along the roads to Eureka Springs. A stop is made at a hotel on the way for refreshments, but the owner refuses to allow Dorothy to be brought into the building, fearing contagion. Dorothy arrives at Dr. Allen's, and is put to bed where she cannot move hand or foot. She is fed on whole wheat bread, raw milk, brown rice, rye-krisp, black figs, honey and prunes. An X-ray diagram of her spine is taken, and several subluxations are discovered. Traction on the panderic with manipulations correct these. Exercise, diet and correct postures are pictured. The use of water, electricity, cupping, dry air, manipulation and spinal traction, exhibited. Plaster cast for straightening legs adjusted, proper feeding and constant care makes serum treatment unnecessary. Goats that yield goat milk are shown. Finally Dorothy is shown standing, cured, on the porch of her home amid other children. Her mother is sitting down in a happy mood. The main object of the exhibit is to show the superiority of Naturopathy in curing infantile paralysis.

Dr. Shewalter must be credited with an investigating mind. His absolute faith when throwing his energies into new paths of action, is refreshing, and is invariably justified by the success that attends his efforts.

SCHLATHÖLTER, REV. LOUIS,
Moberly, Mo.

A man of high character and standing, who has taken up the cause of Drugless

Rev. Louis Schlathölter

Healing, Father Schlathölter has written a book entitled "Hypnotism," which has been translated into the German language, and is considered as the real exposition of all that is good and bad in Hypnotism.

SCHULTZ, CARL, N. D., D. O., M. D.,
President and General Manager, Naturopathic Institute and Sanitarium of California.

The story of how a man, single-handed, has fought and won out in converting the world to see the value of a great and humane idea, against tremendous odds, is always an inspiring story, and that is the story of the subject of our sketch, Carl Schultz, M. D., N. D., D. O., D. C., M. E. Bachelor of Law, etc., whose Institute of Healing is located at 1319 S. Grand Ave., Los Angeles, Cal.

Let us consider for a moment the forces that are responsible for the existence of so great a humanitarian

and healer as Dr. Schultz. In Germany, for over half a century, The Nature Cure has enjoyed the greatest vogue. Everywhere in that country men and women are being physically regenerated by scientific treatments in Nature Cure establishments, with natural forces, instead of pills and potions, by water applied externally and internally, by air and sun baths, by breathing exercises, curative gymnastics, spinal manipulations, electricity, massage, mental suggestion, dietetics, etc. Physicians of the regular school are sending their patients, those that they cannot cure, to these sanatoria and they do not disdain, as is often done in the United States, to avail themselves of any curative method even if introduced by a "layman." The names of Kneipp, Just, Bilz, Kuhne, Hahn, Ehret, Ling, Brandt, Rikli, Hensel and Lahmann are household words in Europe. Born in Saxony, Germany, in the year 1850, Dr. Schultz, after leaving High School, occupied various positions of trust, prior to making a study of medicine. He had the good fortune to study under Prof. N. von Ziemsen, the first physician and professor of a University to put Hydropathy on a scientific basis. He also studied chemistry and later Homeopathy, which was at that time in its infancy. Then hearing of the many cures of Schroth, Bilz and Kneipp, he studied Hydrotherapy, Massage and Electricity. These subjects were followed by the study of Chromotherapy, Orthopedic Surgery, and finally all the other branches of Naturopathy. After having had the misfortune of losing his wife and fortune in Germany, Dr. Schultz determined to settle in California and introduce so benign and efficacious a school of healing on the Pacific coast, which at the time of his arrival in 1885, was virgin territory as far as Naturopathy was concerned. He opened an establishment known as the Naturopathic Institute and Sanitarium of California in Los Angeles, a beautiful city situated half way between the coast and the mountains in a latitude known to invalids and convalescents as the paradise of California, and here he met with immediate success. Dr. Schultz was one of the first Naturopaths who studied Osteopathy and Chiropractic, being of a very investigating nature and always hospitable to new ideas. But the representatives of official medicine, the State allopaths in particular, were not inclined to allow a Naturopath to invade their territory with new and strange theories and practices that cured patients, where their own nostrums had failed, and they immediately declared war on Dr. Schultz and such other Naturopaths throughout the State as had followed his example in establishing sanitariums for drugless healing. For over six years, he fought the allopaths almost single-handed at a cost of thousands of dollars. The Medical Trust had the finest attorneys at

its command, and had the authority and aid of the American Medical Association behind it. In order to better help himself and other similar practitioners against medical oppression, Dr. Schultz studied law at night for three years and gained the degree of Bachelor of Law, and is at present acting as Counsel in the Supreme Court of the United States. But he says he is first of all a physician and only practices law when compelled to do so by the oppression of his fellow physicians. The crowning triumph of Dr. Schultz's life as naturopath and lawyer, was the passage of a bill at the instigation of himself and his associates that legalized the standing of Naturopathy in 1907, in the State of California, one of the triumphs of modern civilization. Nearly every Naturopath in California and many in Oregon and the State of Washington, are graduates of his institution. In 1901, he organized the Association of Naturopathic Physicians of California. He was for six years secretary, in which time he did all the legislative work, often working until late at night, after a hard day's work in his practice, treating as many as sixty patients in a day. He then became president, occupying this office for eight years, when he was again elected secretary, after he had positively declined to be a candidate for president. He is a hard and conscientious worker in everything he sets out to do. When asked once by a younger member of his staff how he could stand such hard work and long hours, his answer was, "Young man, make your work a pleasure." He celebrated his sixty-sixth birthday last December, and looks like a man of forty-five, and still does the work of a young man. Honors have fallen thick upon Dr. Schultz. He is an Honorary President and life member of the National Association of Naturopaths of America; a member of the Association of Physicians and Surgeons of America; is a member of the Los Angeles Bar, a member of the Los Angeles Chamber of Commerce and a member of the National Geographical Society (U. S. A.). He has served for three years on the Board of Examiners of the Naturopathic Physicians of California. Dr. Schultz is the uncompromising champion of medical freedom, of the right of the patient to select the physician of his own medical belief, and of the legal recognition of all approved drugless healing methods.

SONNTAG, ALFRED G., N. D.

Dr. Alfred G. Sonntag, who conducts a hospital and sanitarium in Fowler, Kansas, where a fine climate prevails, has gained an enviable reputation as a physician who cures by drugless methods, which alone can abolish disease from the human system. He makes a specialty of employing a combination of the central truths of cura-

Dr. Alfred G. Sonntag

tive psychology, hydropathy (Kneipp methods), packs, herb baths, sun baths, cabinet baths, hot air ovens, electricity, fasting, dietetics, osteopathy and chiropractic, to suit the needs of the individual case. Dr. Sonntag is a progressive, enthusiastic, hopeful physician whose work is crowned with success. He sends us a leaflet containing excerpts from letters received from grateful patients, telling the

View of Dr. Sonntag's Sanitarium in Fowler, Kans.

story of their cures from the most distressing complaints. Cases of stomach and liver trouble, rheumatism, heart trouble, appendicitis, nervous breakdown, consumption, paralysis, night sweats, lumbago, etc., that ordinary physicians could not cure, have been completely cured by Dr. Sonntag's treatments. His cures advertise themselves, and for this reason his business in healing is in a very flourishing condition. We print portraits of Dr. Sonntag and his amiable wife, who is a most valuable assistant to her husband, in conducting the sanitarium, of which we herewith give an illustration.

SUMMERBELL, A. E. P., N. D.

Dr. Summerbell, of North Sydney, New South Wales, Australia, is an active, highly-educated Naturopath—the best that Australia has produced. He is carrying the banner of medical progress along natural methods, as opposed to the medical superstition of the regular school, and is doing a large business with the former victims of the medicos, who, by their irrational drug

treatment, have simply depleted the vital forces of their patients without effecting cures. We look to Australia to inaugurate legislation that will make poisoning the sick with drugs a penal offense. Dr. Summerbell advocates replacing drug-poisons with simple living, suitable diet, plenty of sun, plenty of fresh air and exercise, with such other treatments as simply intensify Nature's processes of cure. As a professor of natural therapeutics, he is an invaluable citizen, worthy of higher prestige in the

healing art than any of his opponents who are devoted to drug therapy. The only reason on earth why sick people go to drugging doctors to get cured, is because the mind of the average man feels it must be supported by something outside itself, by superstition, by custom, by leaning against the corpses of its predecessors, or the fact that a given institution, or method of healing, is sanctified by history, even though it is a curse to humanity. When the average man takes sick, he goes to a drug doctor to be treated because his father and grandfather did the same. He opens his mouth and shuts his eyes at the word of command, and swallows the poisonous stuff, and pays his good money for something that has neither science nor common sense to commend it. The ministry of healing, as far as Dr. Summerbell can command it, is antipodeal in the Antipodes to that which has formerly prevailed, the unspeakable horrors of drug medication.

STADEN, LUDWIG, N. D. -

A pioneer of Naturopathy in America, educated along the lines of Natural Healing in Europe, Dr. Staden came to this country in the early nineties, and established a Nature Cure Institute in Brooklyn. He constructed one of the first electric-light bath cabinets in America. He has done much toward the advancement of naturopathy in New York and has suffered his share of medical persecution. However his Institute is still in operation, and welcomes all the sincere seekers after health. For several years he served as department editor of the Free Adviser Section of the Amerikanische Kneipp-Blätter (1896-1901). Der Naturopath (1902-1914) and Der Hausdokter (1915-

Ludwig Staden, N. D.

1918). He was one of the Charter Members that constituted the first Society for Drugless Physicians in America in 1896.

SIMPSON, ROSALIE M., D. C., Secretary and Treasurer Washington School of Chiropractic.

Dr. Simpson became convinced only a few years ago that Chiropractic was a great means in restoring health in her own case, and she witnessed and gave it to others as well, and while not in the field as long as the older practitioners, she has nevertheless become thoroughly proficient in spinal adjustment. While holding the official position noted above in the Washington School of Chiro-

practic, she engages actively in the regular work and practice of the institution, where many patients pass regularly under her care. She is more inspiring and faithful in the work, and has the rare power of imparting her knowledge and faith to others, and her patients speak of her in terms of highest praise.

TUCKER, FRANK L., D. C.

Frank L. Tucker, D. C., is a prominent member of the faculty of the New York School of Chiropractic with which he has been associated for quite a period. He conducts the special course in First Aid to the Injured, which attracts immense classes to his recitation periods. He is treasurer of the National Chiropractic League, the strongest organization of Chiropractors of the country. He is a well-known

 INGRAHAM, DR. E. H., 1181 Harold Ave., Portland, Ore. (N.D.)
 Elizabeth M., 41 Saragosa St., St. Augustine, Fla. (D.O.)
 INGRAM, A. P., 615 Ivanhoe St., St. Johns, Ore. (D.C.)

Scout Master of the Boy Scouts of West New York, N. J., and conducts a vast number of the boys of West New York in their tours and studies of nature and First Aid to the Injured. He is also a member of the staff of the Chiropractic Sanitarium of West New York, N. J., and in charge of the Clinic attached to it.

TUNISON, EMORY HOWARD, N. D., D. C.

For the past twelve years, Doctor E. Howard Tunison has been a student and investigator of the great truths of Drugless Healing. Starting at first with the study of diet, upon which he is an authority, he has in turn reviewed, one by one, each of the other branches of this healing science, until now he is a thoroughbred Naturopath. Each year that has passed, has served to convince Doctor Tunison of the increasing importance of the principles of Natural Healing, and the utter uselessness of drug and serum remedies. He is of the unalterable opinion that nothing under the sun but Naturopathy can free suffering humanity from its diseases. Doctor Tunison spent two years studying Medicine at Columbia University; studied under Doctor Charles E. Page, of Boston, America's only living pioneer healer; studied at the New York School of Naturopathy and Chiropractic; and is completing a course in Advanced Therapeutics at the New York School of Physiologic Therapeutics. Doctor Tunison is at present lecturing on Dietetics at the New York School of Chiropractic, and at the New York School of Massage and Physiologic Therapeutics.

UEZ, GUSTAV, N. D.

Dr. Gustav Uez was born in 1877, and graduated from the American School of Naturopathy, Class 1903. He first, for two years, was assistant in Dr. Benedict Lust's Naturopathic Hospital, New York City, and afterwards in the "Yungborn," Butler, N. J. Afterwards, he purchased the Kneipp Nature Cure Institute of Dr. Pfau at 596 Clinton Avenue, West Hoboken, N. J., where he

is still located, practicing all branches of Naturopathy, his treatments including steam baths, dry baths, dry hot air baths, loh tanin baths, electric baths, Kneipp water cure, massage, Swedish movements, chiropractic, physical culture, and the diet cure. Dr. Uez is a strong, well-built personality, and is inspiring to his patients. His personality

and work are so well known, that local priests have referred to him in commendatory terms from the pulpit in their churches. Dr. Uez is a member of the National American Naturopathic Association, and also of the New Jersey State Society of Naturopaths.

WAGNER, OTTO, N. D.

A lecturer and organizer, Dr. Wagner has done more than any other individual to establish Natural Healing in Germany,

Dr. Otto Wagner

Austria, Russia, Switzerland, where he organized more than one thousand Nature Cure societies. It might be said that Dr. Wagner is the one reason why Nature Cure has not suffered from medical persecution in Middle Europe. For a number of years, Dr. Wagner conducted the Bilz Institute at Dresden, Radebeul, Oberwaid at St. Gall, Switzerland, and Teutoburgerwald Institute in Westphalia, and is at present operating a large Nature Cure Sanitarium in Chiemsee, Bavaria.

WELTMER, SIDNEY, D. S. T.

Prof. Weltmer is today the foremost apostle of mental healing. He is the founder of the Weltmer Institute of Suggesto-Therapy, at Nevada, Mo., that has an international reputation. Outside of the works by the late Helen Wilms Post, Mental Heal-

Prof. Sidney Weltmer

ing would be unknown except that Dr. Weltmer has kept it alive. Like all men and women with something new, he has been persecuted, because official medicine wants no reform of its disastrous treatments, and fights every attempt to enlighten the public as to the true method of curing disease. Prof. Weltmer and his colleagues, Helen Wilmans Post, Brinkler, and others, all fought nobly against post office interference fomented by the Medical Trust. It is to be regretted that the Post Office Department lends itself to the advocacy of any one system of medicine to the suppression of any other system, that it sits as judge of matters that are beyond its jurisdiction. If the methods of cure adopted by medical tradition and superstition, which it favors, were of paramount importance in the cure of disease, we could understand its action. But it supports the assaults on the body and conscience made by official medicine, and suppresses so far as it can, the illuminating literature sent out by the practitioners of Natural Healing, containing the most progressive knowledge regarding the nature and treatment of disease. The progressive practitioners are curing, and have cured, thousands, who, without ministrations, and having only the ministrations of official medicine to depend upon, would today be resting in their graves.

The Weltmer Institute is the parent school of psychological methods of healing, including Weltmerism, magnetic healing, laying on of hands, mental science, and other drugless methods, known as suggestive therapeutics. Regular physicians are constantly employed in the sanitarium and

school, and nearly all cases are cured without the use of drugs or surgery.

WILBER, C. H., N. D.

Dr. Wilber, of Ansonia, Conn., is one of those reliable practitioners of the natural

method of healing whose first care is to base his treatments on a thoroughly scientific diagnosis. He then arranges a carefully planned program of treatment to meet the requirements of the individual case. His patients are drawn from that large class of sufferers whom ordinary methods of treatment fail to cure. He treats

successfully cases of asthma, catarrh, dyspepsia, rheumatism, neuritis, neurasthenia, insomnia, nervous debility, melancholia, paralysis and cognate ailments. All his treatments and teachings are in harmony with the principles of Naturopathy, and more patients are cured by such a method than by any other known system of cure. He is a member of the National A. N. A., and the Connecticut State Society of Naturopathy.

turopathy such as are produced by chiropractic, osteopathic and mechano-therapeutic treatments. With these, he combines a special dietary as indicated in individual cases, and has had great success by these methods in restoring ailing systems to normal conditions. He fills a place of great responsibility with an honesty of purpose, a fidelity to the principles he advocates and happy results from his manipulations that have won for him a great reputation among his own people as a healer of the highest rank in the Naturopathic profession.

YOUNG, M. G., N. D., Phytotherapist.

The late Professor Young was the pioneer Naturopath of the Pacific Northwest, and

his place of business was in Seattle, Wash. He was a young man of great promise in his profession, for the readers of the Herald of Health and Naturopath will remember his very lucid articles

on the diagnosis and treatment of a cold that appeared in the January, 1916, and February, 1916, issues of that magazine. The remedies he prescribed being herbs, remind us that he made a specialty of Phytotherapy, or the herb cure, for botanical remedies for disease was a cardinal belief with this phytotherapist. Prof. Young built an airy bungalow on the grounds surrounding his home, with a view of teaching by example the benefits of sleeping in fresh air. The house was built of wood with a large porch in front and an outside chimney of concrete. He would range the woods in the vicinity of his home for botanical specimens, which he greatly prized.

Prof. Young's Fresh Air Bungalow

His bungalow was also his herbarium. Shortly before he died, in 1917, he established the Northwestern "Yungborn" on the Pacific Coast.

Address by Elmer Lee,
Editor of HEALTH CULTURE,
Delivered at

21st Annual Convention of A. N. A.

No applause and no guns; no band, no musicians; time is too precious. The world is at war, medically, savagely, mentally, physically and economically.

I am an old doctor of the Old School, in good standing with medical society; an old member of the Medical Society; seven times an officer in the Medical Association. I have more friends among my old sect than I have among your sect; but we are not true to human nature if we restrict our associations to any limited sect. We are only growing in fullness and usefulness in our individual lives as well as helping other lives when we mingle. No group of human beings is too humble, too vicious, too low, that I will not go among them and learn from them as well as try to benefit by teaching them.

I did not learn to be a drugless physician through your society or by commingling with anyone of you. I learned it accidentally a long time ago; more than 25 years ago. I exhausted, as far as I had knowledge and strength to exhaust, the capabilities of the medical world. I would as leave send a patient to a liquor store as to a drug store. I have not used drugs for 20 years. There is no need. It is better not to use them. If you do not wish to practice shams, you have no need then to resort to drugs. We have only need to resort to what is natural; to what is universal, applicable and suitable for human texture and human lives, and if we wisely apply that which Nature has supplied us in abundance, we have all we need in order to cure. Some people will die, some will go to the mad house, some will go to war, but we all have the requirements at first hand if we have the intelligence to realize it.

I walked through Central Park today; I sat on the ground; I stretched out on the ground with my eyes to the sky, and one thought came to my mind which I thought I would repeat to you. If you will go and lay yourself in the right spirit, humbly, sprawled out on the great mother earth, and think, you can devise all the therapeutic schemes that are necessary. You do not have to go to Europe to learn phototherapy, electrotherapy, etc. Lay yourself on the ground, close your eyes, and think, then open them and look at the sky, and if you have any power of origination; if you have not lost your individuality, Nature will teach you. Nature will teach you in her abundance and in her own way the essential treatment of yourself, and when

Elmer Lee, M. D.
Editor of *Health Culture*.

Harold Wells Turner
Publisher of *Health Culture*.

you know how to treat yourself, you will be worth something to others. We know more by our own suffering than by our teachers. We all have plenty of opportunity to learn how to heal because we all have physical ailments in the course of our lives.

I am here also because I am in sympathy with all persons who are trying to benefit themselves physically and mentally, and also those who are trying to benefit others. I am teaching and printing in the magazine, *Health Culture*, of which I am the editor, all that I can get that is constructive. The magazine is not essentially in the interest of any set or any propaganda. It is not a fighting magazine; it is a magazine of construction—not opposition. At the same time, it is a magazine of mild protest against all that is wrong in human society. It is a protest against institutions such as the Rockefeller Institute of Research; it is against all vivisection in the world; it is a protest against all kinds of vaccination. I have not seen any human being, not one person, who was benefited by vivisection or vaccination. I have seen those who were harmed by vaccination.

I was a doctor with the War Department during the Spanish war. There were more doctors than were required. I had opportunities to see the workings of the medical departments of the United States Government. I cannot comment, I cannot praise, I do not even wish to criticize what I saw. It was not very creditable either to intelligence or method.

I do not think we need to boast of our own intelligence. I have long since past the boastful age and period. When you get to that point you will be better doctors yourselves. It is a great comfort to patients to tell them frankly that you are human like themselves, and we must trust to great Nature, and great Nature is our source of strength. The light and sun is the great healing influence, and there is no substitute for it and no medicine.

We must prove ourselves. If we do not

prove ourselves, why should we ask to be justified in the world of endeavor to help others? It takes a long time to prove ourselves. It takes a long time to master the medical system. We are so badly taught; we are so misinformed, and the reason is, we try to teach too much and we try to learn too much. We have too many kinds of systems, and consequently we have too much diversion of opinion. We are not frank and honest and wholesome to each other. We are jealous of each other. All medical men stand aloof from each other. We pretend we are frank, but we are not frank to each other because we are competitors. Can we overcome that and relieve ourselves of being competitors? You want popularity, you want precedence, you want recognition, and you think you are going to get it. If you can produce votes that will induce politicians to give you a fair hearing and a just consideration, you will get it. Dr. Benedict Lust is a practical exhibition of the broad spirit that is among you. He sees the necessity for practical work. A good many of you reside in New York or in the neighborhood of New York. Do you realize that in a short time you will have a new administration? Do you realize that in the present administration you have no hope; your only hope is in a new administration, and your only hope in a new administration is to make friends with the new candidates that are to be elected. I am in favor of voting for a new mayor for this city. You have no chance of being favorably considered by the present Department of Health of New York, because they are determined, as you may be, that they will not allow you to take their places and wield the power over your city, even to a small degree. You will have to be on your guard, because they will not allow you any consideration. I would like to see a change in the methods of our departments of Health in all cities, and you cannot get them unless you become friends of the political leaders. They are

approachable and common like the rest of us; you only have to go with them and associate with them, and become familiar with them to have their influence. You cannot hope to get anywhere by presentation of facts to a disinterested audience of politicians, even if your facts are wholesome or true. It is how much power you have behind you.

I read in the paper about two young surgeons, friends of mine, who had given \$1,500,000 to the State of Minnesota to be used by the State to preserve the Mayo Society of Aggressive Surgery. That is another power that prevents you from getting recognition publicly under our laws, and these conditions of endowment are going on all the time, until there are millions of dollars behind the present medical world; so if you expect to make any progress you must make friends with your politicians. It is not difficult and does not take money, it only takes a friendly attitude to beget a friendly attitude in the politicians; become interested, show yourselves often enough so they will recognize you, and use your influence among those that you know to secure votes for them.

The New York Department of Health spends three million dollars per year. That is a good deal more power than you can ever hope to get, and they are asking every year for more. It goes up about half a million every year. Were I the Health Commissioner of the City of New York, I would be content were the city to allow me three or five hundred thousand dollars, and everyone of you in this audience would have a just and fair and continuously fair hearing—a thing which you have never had. Every citizen is entitled to representation in a government of democracy. We say this is a government of democracy. Your efforts should be recognized in all the city departments. Were I the Health Commissioner of New York, I would grant a hearing to all of you; I would administer the law of the city or State, not of the ruling set; I would not constrict my conduct to any sectarianism.

I think that many of you are overconfident. I think many of you attach more importance to your specialties than they deserve. I think you ride them to death. I do not think that they are such wonderful discoveries; that they are so wonderful as you think they are. I do not think there are many in the audience as old as I am. I do not think that judgment is ripe at 40 or 50 years; I think it takes 30 or 40 years of medical activity and constant application in order to get a clear vista of medical

questions. I think many of you are only in the formative stages.

There are many kinds of wrongs that we practice among our patients. There are very few of us who are out-and-out, morning-until-night, open and frank and sincere with our patients. I hope everyone of you in this room is sincere and frank. I hope there is no imposter in this room, for that brings upon you discredit in the long run. Patients are not asking for the impossible; patients are asking for somebody that is frank and simple and natural and free. They are not asking for extra surgical treatment. You can make all the money that is coming to you, if you follow the plan of utter frankness; abandon every kind of pretense and overconfidence in your society, and just be fair and square and be open with every patient. You can then make all the money you need.

I did not intend to say these things when I stepped on the platform, but I am old enough to feel a little bit like a father to those in the profession. The greatest system of medicine that I know of, whether it is of European or American origin, whether it is old or modern, the greatest that I know of is not phototherapy—it is heliotherapy. It is the sun with the earth as the background. It do not think there is one in this audience who can carry it too far, and it is so powerful, and it is so satisfying, it is so wonderful that we misuse it all the time, and employ inferior methods of treatment. With a simple diet, and almost any diet is appropriate at times, because when people are sick even the most refined diet will be rejected, you will surely get results.

There is hardly the possibility of any danger of offending patients by teaching them the use of sunlight; teaching them the use of sunlight in the open air. Let them lie on the ground; let them sit on the ground; let them walk on the ground, and you will have the most healthful and wholesome system that can be devised, and you will never be questioned by any jury or by any judge, so you can hold up your head and prove you are right.

Were that plan generally followed there would be no need of the Rockefeller Institute or the Mayo Institute, to accumulate \$2,000,000 by doing operations on people instead of employing heliotherapy and diet. We have never fully employed the natural methods. It is only comparatively recently that we are conscious of them. When you use the natural treatment you will get more than from any invented system that you think may have been made by a great discoverer.

JOIN THE

American Naturopathic Association

Established 1896

by BENEDICT LUST, N. D., M.-D.

Incorporated under

Federal and Eighteen State Charters.

The American Naturopathic Association is non-sectarian, comprised of Graduates from Nature Cure, Hydrotherapy, Diet, Chiropractic, Osteopathy, Mechanotherapy, Neuropathy, Electrotherapy, Mental and Suggestive Therapeutics, Phototherapy, Heliotherapy, Phytotherapy and other rational and progressive schools of Natural Healing.

Definition of Naturopathy: Dietetic and Physical Therapy.

Our members are free to think, act and practice as they please.

Oldest, most liberal, active and efficient international society of progressive and rational physicians in America. Is not a Dictator or family affair. Is organized in State Sections. — Each State a Federation of Local Drugless Societies for itself.

Results and benefits obtained: Further Aims and Objects:

Killed 167 noxious, vicious medical bills interfering with Drugless Doctors' rights and the constitutional liberties of the people;

Passed laws for Drugless Doctors in 9 states;

Drove a wedge in for partial recognition in 14 states;

Brought about better standard of education for the Drugless Profession and Schools;

Publishes an official magazine for 20 years on the advantages of drugless therapy, sane, rational prevention of disease and Medical Freedom;

Educated 18 million people through books, magazines, lyceum lectures, moving pictures, etc.;

The only National Practitioners Association that has a membership auxiliary for the Public at Large.

To organize all Drugless Societies, Cults, Schools, Institutions and Practitioners of Natural Healing into one big united front for defence, offence and actual war, if necessary, against Medical Monopoly and discrimination against new Schools of Healing;

To oppose contemplated Class Legislation and abolish all laws of discrimination against Drugless Doctors;

To restore Medical Freedom to the people by wiping from the Statutes of the States, the unconstitutional laws which were made only by the Medical Trust for its members' benefit only, and never for the benefit of the people;

To raise the standard of education of Drugless Practitioners everywhere and maintain an Educational Propaganda for the public;

To facilitate the establishment of Drugless Schools;

To protect the future of Natural Healing;

To keep Drugless Boards and regulation of Drugless Doctors entirely free from Medical Trust interference.

Fill in the attached application coupon and send in with Initiation Fee and First Year's Dues and receive the beautiful membership certificate and card, constitution and by-laws.

Application for membership in the AMERICAN NATUROPATHIC ASSOCIATION

Name..... Address.....

Graduate of

Systems practiced

References

I desire ☐ active ☐ associate membership and enclose Ten Dollars (\$10.00) for Initiation fee and first year's dues.

AMERICAN NATUROPATHIC ASSOCIATION, 110 E. 41st St., NEW YORK, N.Y., U. S. A.

GENERAL DIRECTORY

OF DRUGLESS PHYSICIANS GEOGRAPHICALLY

—ARRANGED—

OWING to the difficulty of communication during the present war, it has been impossible to compile a complete list of the many practitioners in foreign countries, with the exception of the British Isles and possessions. In this geographical arrangement, practitioners are listed according to country, state and town, or city. The method, or system, of therapeutics practiced by the individual is indicated by the initials following the name or address, such as N. D., D. O., D. C., etc., a key to which abbreviations is herewith given.

KEY TO ABBREVIATIONS OF PROFESSIONAL DESIGNATIONS

- | | | |
|---|---|---|
| <p>A. = Apyrtropher — Apyrtrophy, Unfired Food. Apyrtrophic Agriculture and Horticulture. Raising and perfecting physiological, natural foods.</p> <p>A.M.A. = Member American Medical Association</p> <p>A.N.A. = Member American Naturopathic Association</p> <p>As. = Astroscopy — Astro-medical Diagnosis</p> <p>B. = Biochemist — Tissue Salts, Spagyretic Therapy</p> <p>Ch. = Chiropodist — Chironody — Treating feet by hand</p> <p>Cr. = Christian Science Practitioner</p> <p>D. = Drugless doctor using any single or several naturopathic or drugless methods</p> <p>D.C. = Chiropractor. Chiropractic as defined by its founder and taught and practised by the recognized schools</p> <p>D.D. = Doctor of Divinity</p> <p>D.M.T. = Mechano-Therapist — Mechano-Therapy—Natural Healing. Using all mechanical and manual methods. Dietetic and Physiological Therapy.</p> <p>D.O. = Osteopath — practising Osteopathy as taught by the standard schools of Osteopathy</p> <p>D.P.T. = Physio Therapy</p> <p>D.S.T. = Doctor of Suggestive Therapeutics. Psychotherapy</p> <p>E. = Eclectic — Eclecticism</p> <p>E.H. = Electro - Homeopathist — Electro-Homeopathy</p> <p>El. = Electro-Therapist — Electro-Therapy in all its branches, including X-Ray work and Radio-Therapy</p> <p>F. = Doctor of food science, or Dietician. Natural Alimentation</p> <p>H. = Homeopath — Homeopathy</p> <p>He. = Health Director, Teacher of Natural Life and Prevention of Disease</p> <p>Her. = Herbalist, Botanic System, or Phytotherapy</p> | <p>Hi. = Heliotherapist, sunlight and air cure; Photo-therapy, colored light cure, or Chromopathy</p> <p>Hy. = Hydropath — Water and Nature Curist. Hydropathy of all kinds. Water Cure Systems. Balneotherapy and Drugless Physiological Methods</p> <p>Hyg. = Hygiotherapist — Hygiotherapy</p> <p>Hyp. = Hypnotism, Psychotherapy and Suggestive Therapeutics</p> <p>I. = Iridologist — Iridology — Science of the Diagnosis of Diseases from the Eye</p> <p>I.M.F.A. = International Medical Freedom Association</p> <p>L. = Life Conservationist and Physiological Engineer</p> <p>Ma. = Masseur, Masseuse, Swedish Movements, Massotherapy; medical, resistive, corrective and orthopaedic gymnastics. Vibration Therapy. Masteropathy</p> <p>Mag. = Magnetopath — Magnetopathy — Science of Curing Disease by Life Magnetism</p> <p>M.D. = Regular Physician, using natural, drugless methods, and medicines to a limited extent</p> <p>Me. = Mental Science, Mental Healing, and New Thought. Metaphysist. Psychology, Science of God, Freedom and Immortality</p> <p>N. = Neuropath, practising Neuropathy according to the established schools of Neuropathy</p> <p>Nap. = Naprapath, practising Naprapathy as defined by its discoverer and taught by the College of Naprapathy. Connectivology, Chartology</p> <p>N.D. = Naturopath, or Nature Cure Physician, using one, several or all rational, dietetic, physiological, mental and spiritual methods of preventing and curing hu-</p> | <p>man ailments. — Naturopathy: the science of natural healing, and art of natural and efficient living. Life Conservation, Life Extension, Sacredness of Life. Education and Eugenics based on Natural and divine laws</p> <p>Ne. = Neurologist — Neurology is the science which treats of the nervous system. This science is for the analysis of the causes of human ills and provides how to abolish them without drugs or operations</p> <p>Oph. = Ophthalmologist — Ophthalmology is the science of the eyes, their defects and the relation of those defects, as causative factors to human ills. Errors of refraction discovered without "drops." Cross eyes straightened without Operation</p> <p>Opt. = Optometrist. Optics. Optometry, the Drugless System of Eye Cure</p> <p>Or.S. = Orificial Surgery</p> <p>P. = Physical Culture, Physical Training. Physicultopathy, Autology, Autotherapy, Physian-tropy.</p> <p>P.E. = Physiological Engineer.</p> <p>Ph. = Phrenologist. Character Delineation and Vocational Guidance</p> <p>P.M. = Physiomedic</p> <p>Pn. = Pneumotherapist — Pneumotherapy: Science of correct and rhythmic breathing. Yogi: Atmospheric cure</p> <p>R. = Regular Physician and Surgeon. Allopathy</p> <p>S. = Spiritual and Divine Healing</p> <p>Sa. = Sarcognomy</p> <p>So. = Somopathy. Body Suffering. Improvement on Osteopathy</p> <p>Sp. = Spondylotherapy</p> <p>Tal. = Talosophy, the art of making happiness</p> |

YUNGBORN

TANGERINE, FLA.

(Orange County)

Florida Nature Cure Resort and Recreation Home

Station on Seaboard Air Line R. R., ZELLWOOD

Station on Atlantic Coast Line, MOUNT DORA

Carrying out the principles of the genuine Nature Cure as practiced at the famous Yungborn at Butler, N. J., this FLORIDA YUNGBORN offers splendid advantages to those seeking relief and cure by the Natural Methods. Located at an elevation above Lake Ola, in the midst of the most glorious natural scenery. Commands a superb view of the Lake and surrounding country. The dry climate, freedom from fogs, malaria, mosquitoes and the extremes of heat and cold have long made this locality famous as a health resort. Fine bathing and swimming. An ideal place for convalescents. For those seeking health and recreation, the FLORIDA YUNGBORN offers an ideal spot for a holiday playground. The management of the Institution being the same as that of the Yungborn at Butler, N. J., every facility is afforded for carrying out the true Natural Life and Healing Methods. Sun, Light and Air baths, clay packs, lothannin baths, all branches of Hydro-therapy, Massage, Swedish Movements, Mechano-therapy, Chiropractic. Vegetarian and fruitarian diet. Special facilities for fasting. Good roads for auto-mobiling and driving.

Rates for patients, with massage and full treatment, \$35 per week, \$125 per month, and upwards.—Rates for boarders, convalescents and invalids, \$60 per month, \$25 per week. Visitors, \$3.50 per day.

MEN AND WOMEN

Commonly enter upon the marriage partnership ignorant of the most elementary facts concerning the sex relation. What wonder that there are suffering and heart-break in so many homes!

"THE ABUSE OF THE MARRIAGE RELATIONS"

points the way back to the lost Eden of health and happiness. It is written by a physician of standing whose experience in chronic diseases as a consequence of marriage enables him to show how these diseases may be avoided and health regained. An invaluable book to those who are married or contemplate marriage.

The book is sent prepaid on receipt of
25c. IN STAMPS OR COIN.

Throw the Pill Box Away

Consign the medicine chest to the fire where it belongs. Stop taking poisonous drugs. Be reasonable; use natural methods; cure your ills by Nature's own remedies. Read the pamphlet:

A Plea for Physical Therapy

A scholarly treatise on Medicine without Medicine. The vagaries and guess work of medical so-called science are giving away before the more rational and satisfactory methods of Physical Therapy. "Drug" doctors are the descendants of the magicians and fakirs who sought to cure disease by strange concoctions and incantations and the driving out of devils. Physical Therapy, or Nature Cure, is the child of Nature's own ways. It will pay you to find out more of this great question. If you are seeking health and are tired of drugs and poisons, this pamphlet points a true and natural way. Send for it to-day. Price 15 cents postpaid.

1 to 5 p. m.

and by appointment.

WATER CURE AND MASSAGE INSTITUTE

GERTRUDE STARK, N. D., D. O., D. C.

HIGH FREQUENCY, VIOLET RAY
AND STATIC ELECTRICITY, CHIRO-
PRACTIC, HYDROTHERAPY,
OSTEOPATHY

Institute thoroughly equipped for water,
steam, air and light baths.

406 Evergreen Ave., Brooklyn, N. Y.
(near Bleecker St. and Gates Ave.)

Telephone, Bushwick 4318

FLORIDA RESORT

"Natural Life"

Tangerine, Florida

PONCE DE LEON, seeking for the mythical Fountain of Youth in the sands of Florida, did not know that all around him the true fountain of youth existed in the succulent and health-restoring juices of tropical food plants that grow in that sun-kissed clime. Salads for dinner, salads for luncheon, card party salads, salad sandwiches and salad dressings made of the oranges, pineapples, mangoes, bananas, sapodillas, kumquats, loquats, tangerines, palmettoes, grape fruit, and mamme-sapotas of Florida, varied with strawberries, apples, cherries, lettuce, spinach, peanuts, walnuts, pecans and almonds, frozen in lemon and tomato jelly, are not only gustatory delights that rejoice the soul of the gourmet, but are the most healthful of foods that raise the vitality of the body, all of which can be partaken of freely and abundantly at the well-known Health Resort and Nature Cure Establishment of Yungborn, Tangerine, Fla., which is located within four miles of Mount Dora, Fla., on the Atlantic Coast Line and three miles from Zellwood, on the Seaboard Air Line Railroad. This famous Resort of Natural Healing is open all the year. For terms, apply to the proprietor

**Don't Read This Unless
You Are Reasonably
Miserable; because**

JESSIE ALLEN FOWLER

helps the misfits to find their proper place in life

What are your Talents? She tells you.
What should be your Vocation? She
tells you.

Whom should you marry? She tells you.
These things, and much more of vital
concern to you, this expert in Scien-
tific Character Analysis can disclose
to you in an examination of your self
or of your photographs.

Literally, you do not know your self
until you have had Miss Fowler's in-
valuable service.

Don't deny yourself the luxury
of Success; for the only lasting
Success is the product of genuine
Self-Knowledge!

Examinations, and Advice that Fits;
Instruction in this Science, in class or
by mail; Books on Character Analysis.
This service is for you—RIGHT NOW

EAST PALESTINE, OHIO

RATIONAL FASTING AND REGENERATION DIET

"The Truth About Human Nourishment and the Conquerance of Gluttony," by Prof. A. Ehret. Mucusless Diet. The most advanced of all. Live without meat, eggs, starch food, milk and even without bread, not only as a possibility, but as a superior living of enjoyment, strength, economy and a higher degree of health; and last, but not least, as a new and unknown source of efficiency, of mental and physical abilities. 50c. in stamps. New Life, Dep't H. & N., 110 E. 41st Street, New York, N. Y.

THERE IS A CAUSE

Are you run down?
Tired out?
Nerves unsteady?
Do you feel shaky all over?
Are you weak?
Do you lack ambition and energy?
Do you have that "all gone" feeling
when you get up in the morning?
Do you get up depressed, low-spirited,
out of sorts?
Do you get exhausted and "played out"
after very little effort?
Are you troubled with headache,
neuralgia, pains in the joints and muscles?
Do you have dyspepsia, heartburn,
belching, gas in the bowels, sour stomach?
Do you suffer from Rheumatism,
Catarrh, Kidney trouble, Bilious attacks?
Are you subject to colds?
Have you lost hope of regaining
your old time strength and health?
*Do you know that all these ills
come from one CAUSE?*
Do you know that the only way to
permanently rid yourself of these
troubles is to eliminate the *cause*?
Don't take medicine. Medicines and
drugs suppress symptoms, give relief,
effect temporary "cures," but *cannot remove the cause*
of the complaint.
Give Nature a chance, assist her in
the right way, and Nature will surely cure you.
Your case is no worse—cannot be worse—
than hundreds of others that have come to us
and regained Health and Strength by our
Natural Treatment without Drugs or Medicines.
Do you wish to know THE CAUSE of your trouble
and how to eliminate it?

Write today to

**YUNGBORN HEALTH RESORT
BUTLER, N. J. AND TANGERINE, FLA.**

BRITISH SOCIETY OF NATUROPATHS Section of the Universal Naturopathic Alliance

Will all English readers who are interested in the formation of above, please communicate with the officially appointed English representative.

J. ALLEN PATTREIOUX, N. D.

See these Lines

The road to Health is just as straight, just as simple—and just as narrow. There's only one road. It's called "Return to Nature." There are a lot of by-paths, such as Dietetics, Water Cure, Physical Culture, Religion, Mental Healing. Perhaps you're still in the woods. I was for a while. Now I've reached the goal of Perfect Health. I can look back and see where I lost the road—and found it again. I can't help wanting you to come too.

Indeed the whole system of Naturopathy is designed to help you get your bearings—as I got mine. Then proceed triumphantly to the topmost pinnacle of the success you were born to achieve.

Ten cents brings you enough literature to get a glimpse of the road "Return to Nature." It's a beautiful prospect—all the wealth of the world before you. Won't you send now? Because every minute you're groping, you but wander further from the road.

Besides you're losing a lot of enjoyment. For Naturopathy includes foods more delicious—baths more refreshing—thoughts more inspiring—hopes more satisfying—than you ever imagined could lead to Health. So—Send Now.

Efficiency in Drugless Healing

By EDWARD EARLE PURINTON

A new book, just off the press, by EDWARD EARLE PURINTON. Mr. PURINTON is known among Drugless Physicians as an exponent of their cause who is fearless in his criticisms. He has the happy faculty of finding the weak spots in the armor. He shows the profession the exact position it occupies, points out the faults of the individual practitioner, but, unlike the ordinary critic, HE GIVES THE REMEDY. Mr. Purinton in this book opens the way to success. You may not agree with all he says, but, after reading and digesting his book, you will have to acknowledge that he has made you think—and no greater thing can be said of any man. He will not only make you think, but compel you to act. We consider this book the greatest help to the establishment and maintenance of a successful practice. Price, postpaid, \$1.50; cloth, \$2.00.

Nature Cure Publishing Co., 110 E. 41st St., New York.

HEALTH INFORMATION DEPARTMENT

We are prepared to give our readers upon request any desired information regarding preservation of health and beauty, Naturopathy, sanitariums, health resorts, literary works, vegetarianism, physicians, masseurs, masseuses, nurses, societies, etc., as well as every other topic connected with Naturopathy. Upon receipt of twenty-five cents in postage stamps, to cover running expenses, postage, etc., the information will be given by return mail. Naturopathic advice for home treatment regarding cures of maladies will be rendered upon receipt of \$1 in stamps or money order.

NATUROPATHIC EXCHANGE

GENERAL DIRECTORY

OF DRUGLESS PHYSICIANS

—ARRANGED— ACCORDING TO PROFESSIONS

THE pages of history are covered with records of man's efforts to combat disease. Method after method, system upon system has been devised to meet the demands of its age. Some have fallen by the wayside, while others, possessing more merit, have been handed down from generation to generation. In recent years, mechanical systems of treatment have been developed to a high degree of perfection.

Today, with the revival of all the older methods of natural healing and the development of many new ones, a great number of distinctive professions has been created.

In the lists following, all the drugless physicians have been classified, and, accordingly, placed under the headings of their respective systems of practice.
