UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 25 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The "Administration railroad bill" has passed the United States Senate, fifty to twelve. The salient features of the measure are: Court of commerce, created to consider appeals from orders of interstate commerce commission; long and short haul clause provides for higher rates on lower mileage; low rates for destroying water competition are provided against; fines provided for failure of company to furnish statement of rates on written application; commission given authority to investigate propriety of any new rate or classification; authority also granted to fix through rates when carriers neglect to do so; shippers given right to designate through route over which property shall be carried; telegraph and telephone lines are placed under jurisdiction of commerce commission for interstate business; injunctions regulated in certain cases where state laws are suspended.

The political victory for municipal democracy in Denver turns out to have been of exceptional importance and against enormous obstacles. The water company was defeated in its efforts to get a new franchise, though it was supported by both political machines, and a municipal water system was authorized. The initiative, the referendum, and the recall were adopted over the opposition of both machines, and the citizens' ticket was triumphant. All through the campaign, in which Judge Lindsey was active and tireless, one paper declared editorially that if, under all the circumstances, the citizens' ticket were to win, it would mean that the people of Denver endorsed the truth of Judge Lindsey's book, "The Beast and the Jungle."

The Carnegie foundation for the advancement of teaching has issued a significant report on medical education in the United States and Canada. The report censures a number of states for not requiring a higher educational test. The foundation takes the position that the training of physicians is not a business, but a vital social function. It contends that superfluous schools, operated directly or indirectly for profit, should be closed. The report also shows that medical education has declined to a commercial basis in this country and as a result this country has now three or four times as many doctors as it needs, and a large majority of them have been trained in inferior schools.

President Taft has sent a special message to Congress in which he recommends that the clause in the new railroad bill which gives the interstate commerce commission power to investigate and suspend increased rates filed by the railroads, be modified so as to take effect immediately upon the signing of the act. The President bases his request upon the agreement he reached with the railroads, whereby they agreed to withdraw all increased rates until the new law is signed, and the Government withdraws its injunction suit against increase of rates, which were to be operative June 1.

Although it was demonstrated by practical trial on the battle-ship Indiana that what is known as the ship brake will undoubtedly stop a vessel in somewhat less time than where it is not employed, the device has been found unsuitable for naval usage. The naval board which conducted the tests holds that the brake would soon become clogged with barnacles unless constantly employed. It would also increase the danger from torpedo attack, be a grave menace in close evolutions, and retard the speed of the ship.

The old Grand Central station, for many years the only railroad passenger station on Manhattan island, closed its doors at midnight, June 4, forever. The last train to pull out from the famous terminal was the Boston express. The work of razing the great structure preparatory to the erection of the new main station, upon which many millions will be spent, has begun. The station was built in 1871, and since that date probably half a billion people have passed through it.

Congress has taken action to prohibit the excessive fees of claims attorneys, brought about partly by the situation which has arisen over the bill to pay about two hundred and eighty-two thousand dollars for overtime for letter-carriers. It passed the Senate, but the House added an amendment making it a crime for any attorney or other person to receive more than five per cent of the face of the claim for services rendered in presenting the claim to Congress.

A recent decision of the appellate court at Chicago holds that it is unlawful for members of labor unions to cooperate in refusing to work with non-union men, and that injunctions may be granted against threatened strikes on that basis.

Charging that it has been defrauded of about two million dollars on repair work, in a period of four years, the Illinois Central Railroad Company has filed suit in the circuit court for an accounting against four of its former officers.

By a vote of forty to twenty-four the Senate has taken up the Administration bill to authorize the President to withdraw public lands for conservation purposes. Former Forester Gifford Pinchot is opposed to the measure.

Through a decision handed down in the Yampa anthracite lands case by Federal Judge Lewis at Denver, Col., it is thought that the Government may recover land worth twenty million dollars.

An important consolidation of hotel interests and the organization of a ten-million-dollar concern to operate hostleries all over the country, has been announced from Utica, N. Y.

International.

An order-in-Council withdraws from settlement the vast tract of land in the province of Alberta on the eastern slope of the Rocky mountains, in addition to the lands already withdrawn by the orders-in-Council creating Jasper park a forest reserve and the Rocky Mountains park of Canada. The lands included in the tract are mostly elevated and rocky and generally not suited for agriculture, but are to a large extent covered with a forest which is of great value for the supply of wood and lumber to the prairie country lying eastward from the base of the mountains, for the requirements of the coal mines, and for the protection of the sources of the main streams of the central forest, and it is considered necessary to administer them so as to continue these benefits.

The civil list of Emperor William as King of Prussia is soon to be increased, probably to about five million dollars. The Emperor, who receives nothing from the empire, has experienced difficulty during recent years in meeting the demand on his allowances from the Prussian kingdom. These allowances amount at present to $3,925,000. The restoration or repairs upon his majesty's numerous castles are said to be in part responsible for the royal need. He is a generous supporter of the opera and of the royal theaters of Berlin and Wiesbaden Castle, having for some years made up an annual deficit totaling some seven hundred and fifty thousand dollars. He also maintains fifty-two town and country residences, some of which he has not visited since the beginning of his reign.

A complete understanding has been reached by Russia and Japan on the "open door" questions relating to far eastern affairs. While the terms of the present arrangement are not made public, it is not unreasonable to suppose that it relates to a definition of the spheres of influence of the two nations in Manchuria and in connection with the Chinese government.

The gauges in use at present on the railway system of the Australian commonwealth are three in number; of the 3 ft. 6 in. gauge 6,030 miles are open; of the 5 ft. 3 in., 3,066 miles, and of the 4 ft. 8½ in. gauge, 3,623 miles. The preponderance of the 3 ft. 6 in. gauge is cited as a reason for its adoption as the standard gauge for the four states.

The government's Russo-Finnish bill extends the authority of the Duma over the duchy. All laws of imperial importance are made applicable to Finland without the consent of the Diet. It was drawn in accordance with Emperor Nicholas' manifesto, and has aroused resentment in Finland.

The first Parliament under the reign of George V. opened June 8.

Industrial and Commercial.

Conservation and utilization of the water-power in Wisconsin is effectively done through the Wisconsin Valley Improvement Company, which has undertaken to preserve and store up to be used as needed in the seasons of drought all the surplus water flowing from over a large area of northern Wisconsin, thus maintaining a navigable volume of water in the Tomahawk, Eagle, and Wisconsin rivers at all times. Its organization has been carefully planned; its work is hedged about with restrictions; the rights of the public and of the riparian owners are carefully guarded; its privileges are limited, as are also the possibilities of personal profit to its promoters, and it is under control of the state. Its watershed covers an area of nearly seventy-six hundred square miles. Along the Tomahawk and Wisconsin rivers there are twenty-nine available power sites, of which seventeen are operated. Today there are twenty-four industrial plants using water-power. Of these, one is a sawmill, three are flour mills, seven are electric plants (of which three are operating street-car lines and one a paper mill), and thirteen are paper, pulp, or sulphite mills.

The Royal Mail Steam Packet Company has absorbed the Pacific Steam Navigation Company, which was its chief rival. The capital involved is $7,385,000. The deal is the result of the recent completion of the Andes tunnel, which has opened communication between Valparaiso and Buenos Aires.

It is announced that an immense quantity of coal has been discovered by the Australian Agricultural Company in the Great Greta coal bed, Kurri Kurri. A seam of first rate clean coal was struck at a depth of twenty-eight feet.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CHURCH OR CHRIST?

M. G. KAINS, M.S.

WORTHY members of all Christian churches will applaud the ring of loyalty recently expressed by a conscientious church-member in the following words: "Personally, I love my church and her sacraments too much ever to give her up, but I welcome gladly anything within her province that can be of use to any living soul in any way—spiritually, mentally, or physically." In spite, however, of the writer's evident sincerity, the thoughts expressed reveal an attitude that prompts the question: Which comes first, a church or Christ?

Analysis of the above statement would lead to the conclusion that so far as this individual is concerned the church seems to come first, else he would not feel the necessity of casting about to bring new departures "within her province." We are thus led to inquire, Is church-membership prompted by a wish to get as much as possible out of the church sacraments and other ordinances, or is it impelled by the desire to surrender self and through spiritual regeneration to attain to Truth and broaden one's influence for good in the service of mankind? Again, which is the more important, to accept the doctrines of the church of our affiliation, and never to question its teaching, or to think, to seek ever for Truth, to decide for oneself; to walk, however falteringly, in the Master's footsteps, by overcoming one's own sins and aiding others to conquer theirs, and through this spiritual growth to attain that understanding of God which alone enables us to heal the sick?

In the ultimate the question is strictly between man and his Maker, without any taint of mundane affiliation. Those who by healing the sick and reforming the sinner establish the fact that their efforts to live the Christ-life are not without at least some "signs following," who are able thus to give a reason for the faith that is in them, to demonstrate that the Christ is not merely a human being who lived and was said to have died in Judea nineteen hundred years ago, but that the Christ, who was without beginning of years or end of days, is, as Mrs. Eddy says, "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583)—it is these individuals, and these only, who are entitled to be called true followers of the Master, to be members of Christ's church. It therefore follows that loyalty, first of all, to institutions is futile, if these do not present proof of their value by "elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick" (*Ibid.*).

Such being the domain of the church of which Christ is the head, is it not evident that other proofs of church loyalty, such as conformity, subscription to a given creed, etc., are extraneous, and as such may serve to becloud the spiritual sky and thus hide the Christ? The trend of such loyalty is to center thought upon forms rather than upon spiritual realities, and thus to hinder spiritual progress. It may indeed tend to undermine the foundations of true worship, as Mrs. Eddy has declared: "Whatever materializes worship hinders man's spiritual growth and keeps him from demonstrating his power over error" (*Ibid.*, p. 4).

Doubtless there are thousands of just such earnest church-members, who find in their present religious affiliations the means by which they have gained much good and have been enabled to bring good to others. To them creeds and rites naturally mean a great deal; more than to any other class of people. In these they find solace, assurance, and encouragement in their daily living. In this way surely they are prompted to live more wholesomely and thus to become worthy examples to others, in so far as they live up to their professions. Because they are enabled by these means to let their light shine, every one should rejoice, since they certainly tend to make the world not worse but better. Is not the purport and end of all the churches, however, sure to be lost, if spiritual realization and proof is not maintained as the prime consideration? History will vouch for the fact that the danger of forms lies in no other direction so much as in this, that in the observance the form itself rather than the spiritual import is likely to receive undue emphasis; so much emphasis, in fact, that spiritual import is likely to disappear, and this in spite of declarations to the contrary.

While every one should be grateful for every good that has come and is coming to mankind through religious teachings and observances, is it not of far greater consequence to the individual and to mankind in general, to remember that we must worship "in spirit and in truth," because "the Father seeketh such to worship him"? And does not this indicate that the prime purpose of Christianity is the spiritual at-one-ment with the Father which today, as well as nineteen hundred years ago, enables the true follower of Christ Jesus to say, as did the Master, "I knew that thou hearest me always"? If such realization is above and apart from forms as such,—and no believer in Christ will dispute that it is,—is it not the primary and ultimate of the Christian religion, and does it not distinguish the genuine Christian of whom the Founder of Christianity said, "He that believeth on me, the works that I do shall he do also"?

SOME POINTS IN DEMONSTRATION.

EDWARD EVERETT NORWOOD.

PROGRESS in Christian Science is a process of awakening to the truth of being which was always true, because it existed always in divine Mind; and the student soon finds that his spiritual development is according to law, even as the Master said, "First the blade, then the ear, after that the full corn in the ear." His concept of God is continually enlarging, unfolding, from a broader and higher basis, and with it comes a spiritual purification that ultimates in regeneration, a transformation which leaves noth-

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

ing but the consciousness of the divine idea, without a molecule of matter or any phase of mortal sense.

All students of Christian Science are healers; that is, they are channels through which divine Mind becomes operative in expelling error and restoring harmony to the discordant thought. This is the rock of righteousness which bringeth peace, yea, quietness and assurance forever; and it is indeed a labor of love, healing and blessing mankind. Many students have testified that their joy in helping to free some burdened soul was the highest possible earthly reward, far beyond any human concept of happiness. All students naturally desire to be good practitioners. Mrs. Eddy once said to some of her students, "You will heal instantaneously when you believe what you say." It is evident that effective healing must be based upon understanding; and this can come only as one's life is lifted into a spiritual state—an approximate reflection of good. Conversely, he cannot rise into this state until he knows, in some degree, how to annul the various subtle errors of thought that would hinder his spirituality. It is therefore a question of getting understanding and using it, for understanding and demonstration go hand in hand. We are able to demonstrate the First Commandment and the golden rule only as we know God as Mind and man as idea or reflection That state of thought which loves the world and the things that are in the world can never do it, for the love of the Father is not in it.

As the student progresses in the Science of being, certain fundamental points or lines of mental action are unfolded which are found to be practical, because logical and demonstrable. And though by no means laying them down as dicta, these points have uniformly appealed, in a more or less formulated manner, to so many earnest students, that a brief consideration of them may be of value. A basic statement in metaphysics is the great truth that there is but one Mind, and that Mind governs. In fact, when we realize that good is, and is supreme, we know it to be the fundamental truth on which all other statements of truth rest, and from which all proceed. Indeed, two times two are four because God is changeless goodness, the unerring Principle, "with whom is no variableness, neither shadow of turning." This Mind governs according to a definite method of action or law, which Mrs. Eddy has named Christian Science. This law is a law of harmony and health, a law of expulsion to error, of restoration to the sick man, and of regeneration to human consciousness.

If "the foundation of mortal discord is a false sense of man's origin" (Science and Health, p. 262), then this is the original sin, namely, a wrong concept of the nature and essence of divine Mind and His creation or manifestation. Evidently, then, this wrong concept must be replaced by the right one, and we find the remedy in Mrs. Eddy's statement, "Perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (*Ibid.*, p. 259). Even a beginner can readily see the logic of such a position and what it infolds. Instead of a limited God and a fallen man as a basis, we have the exact opposite; and this basis, with the correct understanding and good life that should go with it, heals the sick. From these two points is readily deduced a third; namely, that evil is not real. And what a world of protest this incurs from the thought that is not instructed in the two preceding statements! It enrages the false sense of mind,—the undestroyed human hatred of Truth, and sometimes causes great mental disturbance. Certain forms of belief regard the statement as a premise, instead of a deduction, thereby departing from sound logic and clouding the question. It argues that one cannot destroy that which does not exist, neither can he emerge from a condition he never was in, thus ignoring and not overcoming evil. But this sophistry can never deceive one who sticks to his text, both in letter and spirit.

In "Pulpit and Press" (p. 3) Mrs. Eddy gives us our next point: "Know, then, that you possess sovereign power to think and act rightly." This brave admonition certainly destroys a sense of confusion, limitation, and doubt, and enables one to be led of good, and not by the evil suggestions of personal sense. This power to think rightly and act rightly comes because all that worketh and maketh a lie is being overcome in thought, personal outlining and forecasting are being eliminated, and God's will is being sought. This consciousness, this ability to turn unreservedly to God, to surrender human will to the divine, and leave results to Him, is a glorious consummation of divine grace.

Finally, when we remember the necessity of mental activity, of overcoming mental laziness, we have gained much in the line of progress. To be always alert, guarding and protecting our citadel, knowing that "sin lieth at the door" (of thought), as it is said in Genesis, and that it claims the power of confusing and darkening the mentality,—all this, indeed, is a sovereign defense. To know the truth makes us free from the belief that there is another power separate and apart from God. This Christian Science does, for it shows things as they are, not as they appear to be. To know that the power of God, good, always governs, that Principle and its idea are perfect, and that its opposite is not real; that we can always discern rightly between the two, that we may always be mentally active,—these sum up the salient points of a progressive Christian consciousness.

THE NAZARENE.

EDEN TATEM.

In an obscure corner of the Louvre is a little picture, timid, almost awkward in execution, as though the hand of the artist had faltered under the intolerable burden of his aspiration, tarnished in color, its canvas petty and insignificant, yet so original in conception, so startling in its dramatic intensity that it is numbered among the masterpieces of a man whose absorbing passion was the expression of light. "Christ at Emmaus" would of itself attest the genius of Rembrandt—not Rembrandt the magnificent realist, but Rembrandt the idealist of baffling vision, for the great Dutch painter was both.

It is the memorable moment in which the stranger who breaks bread with Cleopas and the other disciple at Emmaus suddenly reveals himself to their grief-laden hearts as their Master, that Rembrandt has attempted to portray. The room is dim with the shadows of gathering twilight. One of the disciples, overcome with awe and reverent understanding, has clasped his hands; the other, his gaze fixed on the countenance of their guest, has started back from the table, his whole being intensified into an exclamation of inarticulate amazement. Across the rude table, upon the hands of the Nazarene arrested in the act of breaking the bread, and over his uplifted face, where the traces of past torture are still faintly visible, there pours a light inexplicable, unforgettable—a pale, pure radiance, hushed, holy, expectant.

In pilgrim garb, the face wan, but transfigured by the intensity of that look which burns with the fire of a consecrated spirit unshaken by the agony of the flesh, tremulous in its gratitude, childlike in its humility, unassailable in its peace,—the Nazarene of Rembrandt is a living, breathing human being, with the indefinable expression of one who has recently passed through death and rent triumphantly asunder the veil of its giant illusion. Softly blended with the mystery of that look, wrought from within out into the delicate contour of brow and cheek, the light, fugitive as an arrested vision, seems to radiate from the Galilean's thought, burned pure, welded, shaped, made perfect by a power infinitely divine.

Digitized by Google

No figure stands out against the background of consecrated service with such sublime significance as that of the Nazarene. Many have served nobly, given lavishly of their best to humanity staggering under its weight of ignorance and woe, but he alone stands on the top round of the ladder of heroic endeavor, sacrifice, and hallowed achievement. Out of the apparent failure, so utter and disastrous as temporarily to overwhelm the faith of his followers, he wrested a victory so absolute that almost two thousand years later the vitality of its marvelous truth, as understood and presented in Christian Science, is proving a quiet but irresistible force which is healing humanity, molding human thought and action, broadening the spiritual horizon, and bringing glimpses of a perfect loving and living to be sought after here and now. The prophets and teachers of Israel had ascended to heights of grateful remembrance in the hearts of mankind, but none had approached in the magnitude of spiritual service this man, so human in his tenderness, so divine in his understanding —for none had loved like him. Farther than the human thought can flash, higher than its purest impulse soar, he looked down from the height of an immeasurable consecration.

Always we think of him as one whose consciousness was so intimately attuned to the voice of the infinite that there flowed through his speech the superb authority of one divinely inspired. He said little of creed or doctrine; the theme of his whole ministry was life. Life which abounds in joyous activity, optimism, indomitable trust; life that is neither a burden nor a farce, nor always a battle, but more and more, as one grows to know God, a privilege and a benediction; life that works, that serves, that has fearless eyes, clean hands, and a pure heart; life that loves always, that gives hour by hour, counting neither pain nor price,—this is what makes his teaching a vital, perpetual possession for all Christian Scientists.

There is a receptivity so rare that it imbues the individual with a massive power like fortitude. It is this profound sensibility to a cry from the depths of another's woe, no less than the exquisite quality of the Nazarene's keen perceptions and his intellectual grasp upon the problems of human life, which wins and holds humanity's allegiance. Never for an instant did his love fail him, never the flame of his divine insight burn dim, nor his consecrated energy flag; whether he went up into the mountain there to pray alone; or in the wilderness saw the storm of temptation seethe back from the purity of his heart; or with terrifying power cleansed the temple and denounced hypocrisy and vice until, abashed by the scorn of his fearless condemnation, wickedness slunk down from its high places; or amid the throng heard with infinite compassion the cry of the tortured who in his divinely intimate tenderness found healing and peace.

The prophets of old spoke often of God as "a consuming fire," and they thus foreshadowed the coming of one whose thought was ever aglow with selfless fervor, ever renewed by spiritual revelation, and swayed by a master passion for humanity, until his life became splendidly luminous with that inner vision which is the genius for consecrated service. Speaking of this exaltation of his thought, Mrs. Eddy has said, "When the human element in him struggled with the divine, our great Teacher said: 'Not my will, but Thine, be done!'—that is, Let not the flesh, but the Spirit, be represented in me. This is the new understanding of spiritual Love. It gives all for Christ, or Truth" (Science and Health, p. 33). This vision abides only with those who have surrendered all for its sake alone. To love anything more than it is to lose it. Sacrifice, suffering, and solitude are not unknown to it, but the supreme surrender of self it rewards with things shining, unspeakable, immortal. Small wonder, then, that the Man of Galilee, with a life free from all personal idols, naked of every possession, should have seen the vision steadily and seen it whole, where we in our shuttered house are able to catch but flashes.

Of royal origin, though but a carpenter by trade, gifted with eloquence that made him the greatest teacher the world had ever known, with a knowledge of statecraft that fitted him for exalted leadership, he spent those three eventful years of his public career in the then obscure and thankless work of healing. His significant message to John the Baptist bears evidence of the stress which he placed upon the healing work of the effective Christian. None were too wretched, none too abandoned for him to stoop tenderly to succor. Their cry for help never rose unheeded. The very aroma of his thought healed and blessed, purified and saved.

He was a wonderful friend. And while he made all lesser loves serve his work and God, he never advocated asceticism. Through that pure human affection which is often humanity's highest sense of spiritual good, men may grow to understand something of God, the infinite Love who is reflected in all spiritual-mindedness. It is when human affections are placed before our love for God that they offend. He who has once, through a loyal, unselfish devotion for man, or woman, or little child, seen those gates swing wide that open into the vast and shining realm through which the thought passes to utter forgetfulness of self, and the love for one deepens, expands into that mightier love which includes all nature, humanity, and God,—he has climbed one of this life's Sinais. Some one has said, "Lives are enlarged in different ways." The supreme test of human affection, measured by the standard of our Master, is that out of its amplitude shall flow an increased tenderness and sympathy for all, a reverent gratitude, a beautiful helpfulness, an intimate consciousness of ever-present good, and only to the pure in thought, to those of innate nobility and simplicity of heart and life, is such affection known.

"The cross shall lead the generations on." The light which was to lift the awful shadow of the cross, and which glowed for Mary Magdalene when she turned from the empty tomb to behold her risen Lord; the light which illumined the hush of that upper chamber when the Master appeared in the midst of his disciples, and which later transfigured the mortal until, rising above all material sense, he passed beyond the ken of their human vision, kindled anew the ardor of selfless service in the heart of the Founder and Leader of the Christian Science movement, and today through her obedience and devotion it is "enlightening the eyes" and "rejoicing the heart" of unnumbered thousands.

Abiding with inspired simplicity and unswerving confidence in the realization of the eternal presence, Christian Scientists now find in the teaching of the Nazarene the sum of all spiritual truth; in his example an all-powerful incentive to the attainment here and now of the spiritual ideal which his self-sacrifice and overcoming made possible for all. To share in his work of healing humanity is their supremest ambition as they press steadily onward, the song of service in their ears and in their hearts the echo of his prayer: "And now, O Father, glorify thou me with thine own self with the glory which I had with thee before the world was."

"THE TIMES OF REFRESHING."

GUSTAVUS S. PAINE.

SINCE, as Mrs. Eddy says on page 254 of Science and Health, "we have not the power to demonstrate what we do not understand," there are times when mortal existence seems more real than spiritual life, even to those who are trying to be Christian Scientists. At such times, though we realize that we have merely allowed the dark shadows of mortal belief to disturb us, and though we know that the condition in which we find ourselves is only temporary,

Digitized by Google

we may feel ourselves drifting along in the erroneous belief, seemingly unable to rise out of it. The mortal mind, seeing a necessity for evil, psychological or physiological causes for disease, and pleasure in sense experiences, has little inclination and no power to awaken itself from its own illusions. It cannot understand its own nothingness. Yet that mind which Wordsworth speaks of as

beset
With images, and haunted by herself,

in its very impotence manifests its unreality, its unlikeness to the true, harmonious intelligence which unceasingly governs every one of the sons of God.

Sooner or later, however, if we comprehend anything at all of the spirit of Christian Science, we must begin to perceive that by continuing in our mortal dreams of evil we are trying to reconcile man's perfect Principle with imperfection. We must recognize two possibilities before us —complete submission to error or entire obedience to Truth —and gain anew the sincere desire for holiness and the spiritual purification demanded by God's law. Perhaps we have permitted ourselves to be mesmerized by the common beliefs in penalties for the disregarding of so-called hygienic laws, or perhaps we have been persuading ourselves that it is good to enjoy through the senses. In either case we must see the difficulty and then let Truth overcome it. Instead of attempting to turn to God through the exercise of the will, we must realize that it is will-power, stubbornness, which has prevented us from discerning continuous harmony. The humble admission that God is indeed with us can destroy our mortal illusions, purify our thoughts, lift us above temptations, heal our diseases, and free us from all our bondage.

When we have once made this admission in true humility, we have attained a new understanding of Christian Science. The acknowledgment of the immanence of good, and the surrender of self, may come only after a long, futile struggle, or they may come at the moment when the discord enters our consciousness; but whenever they do come, they enable us to see clearly the nothingness of the imperfections, from which we are thus cleansed, and give us strength to vanquish more easily the future errors which we may encounter. We learn with joy that the victories over the seeming inertia of mortal mind are veritably "times of refreshing," and that our conquests through the truth must be simple, since the "times of refreshing" do come solely "from the presence of the Lord," —from the presence of the all-powerful goodness of God, which "endureth continually."

KNOWLEDGE OF GOD THE FIRST AIM.

JULIAN KUNE.

ONLY as we learn to understand God and His relation to man, His idea, His image and likeness, can we intelligently appreciate the manifold blessings which our Leader, Mrs. Eddy, has conferred upon mankind by her discovery and statement of scientific Christianity. While still babes in Christian Science, even after being healed of various ills, we are apt to imagine that physical healing is its chief and only aim; but as we advance in the study of our text-book, "Science and Health with Key to the Scriptures," and other Christian Science literature, we soon realize the fact that physical healing in Christian Science is but the outward manifestation of the progress made in our mental and moral reform. It is, in the language of our Master, the "signs following;" it is the fruitage of our correct understanding of God and His idea.

The spiritual work which eradicates our evil propensities and supplants them with watchful prayer, with right thinking and good deeds, with love to God and His idea, with humility, meekness, and charity, enables us to understand God and to put off the old man with his deeds and put on the new man. Christian Science, if rightly understood and lived up to, reveals to us the correct purport of our Master's words: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The diligent and faithful study of Christian Science further reveals to us that in order to be healed ourselves, or to heal others of discordant mental or physical disorders, we must take up the cross and follow the path our Master took, for only then shall we be able to "cast out devils" (evil thoughts), "speak with new tongues" (possess spiritual discernment), to "take up serpents" (overcome subtle material temptations); and to "lay hands on the sick, and they shall recover." This phase in Christian Science work is the crowning effect and substantial evidence of our correct understanding of God and divine Science, and if we but firmly anchor our faith in this understanding, it will enable us to reform all sinful proclivities and heal the sick as our Master did nineteen centuries ago, for we are taught in Christian Science that "God will heal the sick through man, whenever man is governed by God" (Science and Health, p. 495).

[Written for the *Sentinel*.]

"THAT ROCK WAS CHRIST."

BEN. HAWORTH-BOOTH.

THOUGH the rough surge is thundering on the sand,
And wild white-horses o'er the sullen sea
Race with the raving wind, I take my stand,
Immovable in calm security,
Upon my rock, above the breakers hurled—
The rock of Christ, above a 'whelming world.

A 'whelming world of foul unfaith and folly
Around me high upheaves its threatening foam:
Its hydra-headed tide and tongues unholy
Would hurl destruction on my harmless home:
But, high above the billows' angry shock,
I set my feet unmoved upon the rock.

Upon the rock that doth outstand the storm
I rest in peace: the visions of the deep,
The tears and fears, the monsters multiform
Have spent their spleen or sobbed themselves to sleep:
They move me not: I keep my trustful tryst:
My rock is changeless, and my rock is Christ.

God sent us water in the sultry waste
Of Meribah: the rock gave out His store
Of truth unstained, though Moses' angered haste
Obeyed Him not; and still He doth outpour
With ever gracious heart and open hand
His healing waters on the thirsty land.

And must I sing of Simon, named of Christ
His "rock," who saw the Saviour first of men?
Of Horeb, or of Rimmon that sufficed
For Benjamin a refuge? Mind we then
The rock of Pisgah, whence the prophet saw
Through mist and tears the mountains of Gilboa.

Thou art my rock, my fortress and defense,
Eternal Father, and thy Word shall be
My rock of ages for me ages hence:
And in the heaven of thine eternity,
Mine imperfection purged and sacrificed,
I'll kneel before Thee on the rock of Christ.

SELECTED ARTICLES.

[From an editorial in *Pasadena* (Cal.) *News.*]

One of the most rapidly increasing religious bodies in the world today is based on the belief that all calamity and evil and suffering is to be finally eliminated through an improved and uplifted thought about God and man's relation to Him, and a more perfect understanding and abiding faith in the Principle underlying and operating through that relation.

We hold no brief for these people. Whatever may be thought of their belief or practice, there is more of abiding faith in good and less of enslavement to evil and fear of calamity in the world because of the fact that they are asking men to turn away from fear and worry and evil as unworthy of a place in the creation and household where Love is believed to be omnipotent. If such a belief, in the test of the daily life of its adherents, can and does eliminate fear and suffering, mental and physical, and supplant dread of calamity with mental peace and an ever-abiding faith in the omnipresence and omnipotence of good, it is worthy not only of just treatment but of a fair trial in every individual experience.

Truth is what men have been looking for, and no man is justified in any narrow or bigoted treatment of what is offered as truth, asking to be tried out in the crucible of daily living. The great Founder of Christianity said, "Ye shall know the truth, and the truth shall make you free." Anything short of a realization of this full promise must lack something of being the truth to which he referred. He also said to a suffering humanity, "My peace I give unto you." Ecclesiasticism cannot justly complain at a popular demand for a religion which shall in daily application work out this freedom and this promised peace.

[John H. Wheeler in *St. Louis* (Mo.) *Post-Dispatch.*]

Animal magnetism is but the modern name for that which is as old as Adam. The channel through which it may work in every one's life is only the human will. An illustration of its ignorant working in that of a schoolboy, is the desire he has which impels him to throw a paper wad at a schoolmate during study hours. A more violent form is his desire for revenge upon a mate whom he imagines has injured him, and if he is vindictive enough, it may lead to the attempt to injure greatly the object of his hatred. Every murder, or case of violence, is enacted by the impulsion of animal magnetism; but this form of crime is quickly detected and subject to regulation by law, while that of secret hate, or ill will, is cherished in the minds of many without their reaching the point of displaying physical violence, which alone would subject them to punishment according to our present code of laws. But if the person possessed of this passion attempts to reach the object of his hatred through any means whatever, this mental action, otherwise known as malicious mental malpractice, is rendered of no avail by the understanding of Christian Science.

We are free moral agents, and all mortals, from the present standpoint of human life, embrace the desire to do good or evil according to the degree of nobility and morality in their life-purposes. Evil is never the personality of any one, neither is good personal, but, according to the experience and observation of fellow-mortals, the presence of evil or good in the lives of each other seems manifested as a good or evil personality. It is plain to see how the science of mathematics is not the personality of the one who is well informed in its application to the problems of life; rather is it his understanding of it that produces results, and all may likewise attain to this understanding. So it is with music or any art. The reference in the Bible to the "carnal mind" as being in the state of "enmity against God," clearly defines the presence of animal magnetism, dominating a person's actions, and this is but an evil influence swaying the mind of a misguided mortal. The Bible also says: "Let this mind be in you, which was also in Christ Jesus." In this case we are assured that while one is thus governed by that holy influence of God's law which characterized our Saviour's life continually, he would not be doing or desiring to do any one an injury.

Mrs. Eddy has drawn the line sharply between the nature of God, the universal and infinite God, which she designates divine Mind, and a supposed evil impulsion, so commonly displayed in depraved mortals, and which she has named animal magnetism, its more violent actions being called malicious. The orthodox world calls this the devil. God's law, acting in and controlling the lives of mortals, she has named Christian Science in her religious teaching. It must be plain to every one that, while an individual's mind is absorbed in a righteous effort to follow God's way in his daily life, his mentality is free from the possibility of evil living. The whole problem of Christianity centers right here, and in that of our learning always to have the mind of the Lord. "Blessed are the pure in heart: for they shall see God," said our Saviour. The one common enemy to the individual or collective attainment of all mortals to this spiritual estate is animal magnetism, which, in Bible language, "as a roaring lion walketh about, seeking whom he may devour;" in other words, seeking whom it may cause to embrace its false mental sense, and thereby to violate the great commandment to love our neighbor as ourselves. Mrs. Eddy does not believe that malicious malpractice is a power, but teaches that it is powerless to influence us if we are about our Father's business, which she designates as being pure-minded and ever active in right thinking, even as the Latin axiom taught: "*Beatus esse sine virtute nemo potest*" (No man can be happy without virtue).

So the Christian Science rule of life is best expressed in her own words: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourselves are safe, but all whom your thoughts rest upon are thereby benefited" (Pamphlet, What Our Leader Says). Thus we see that Christian Science, expressed in the lives of mortals, is but the Ten Commandments epitomized, and animal magnetism, the idolatry of evil, is cast out of their minds by this reign of the word of God in their lives.

[Edward W. Dickey in *Long Beach* (Cal.) *Press.*]

Nothing is more foreign to the teaching and practice of Christian Science than the endeavor to use it in the acquirement of any material thing, as such. This Science is a spiritual Science, dealing with spiritual things. The rule of practice in Christian Science is the very same laid down by Jesus the Wayshower, "Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

To act or think "in a certain way" with reference to material possessions is as vague to the Christian Scientist as to others. The statement that a person may "think" himself into the possession of riches is repugnant to Christian Science. The fruits of this Science are health, holiness, peace, and joy, and these are all a "sign" following the seeking of the kingdom of God. Added to

Digitized by Google

this true seeking comes freedom from poverty and the fear and limitations that attend such a condition. This, however, is the polar opposite to anything akin to the teaching or practice to "hold the thought-image of it with the most positive certainty that it is being made." Christian Science declares that God is supreme intelligence, Mind, Spirit, and it compares "spiritual things with spiritual."

[Eugene R. Cox in *New York* (N.Y.) *Herald.*]

The belief in the power of witchcraft, and the belief in the power of malicious animal magnetism, is one and the same belief, and it has its basis solely in the conception of a power or force opposed to God. In this belief Christian Science has no part. Christian Scientists affirm, in the words of Scripture, that "the Lord our God is one Lord;" that He is the only creator; that He and all His creation is good. We affirm that God is omnipotent and omnipresent. Taking as a basis, therefore, the one and only creator, whose creation is good, who is all-power and all-presence, there is left neither space nor opportunity for the operation of evil; and this spiritual fact is now and forever operative in God's universe. Any other teaching is not Christian Science.

Observe two persons in a lone spot "when graveyards yawn." One believes in ghosts and is in a tremor of fear; the other, more intelligent, walks calmly on. It is evident to him that it is the belief in ghosts and the fear of their power that so terrify and distress his companion. Like him, the Christian Scientist, free from superstitious belief, is fearless when malicious animal magnetism is mentioned. That "evil is not power" (Science and Health, p. 192) is an axiom that the whole world would be benefited by adopting, and it is a watchword in Christian Science.

[George Shaw Cook in *Peoria* (Ill.) *Star.*]

It is not supposed by Christian Scientists that the diseases of animals are produced by conscious fear or sin in them, as is the case many times, but not always, with human beings. For instance, the dumb animal may have no knowledge of disease germs and no fear of contagion or infection, but may appear to suffer in consequence thereof. This is because of the fact that the conditions of contagion and infection in dumb animals, as in men, are governed by so-called beliefs of the universal human or mortal mind, which seem to control all that exists by way of material phenomena. These mortal beliefs are not known to the horse or the dog, but they are nevertheless victimized by them. In Christian Science practice these man-made beliefs are set aside or annulled by divine power, and the brute as well as man is thus made free from their pernicious influence.

To say that Christian Scientists leave those having painful maladies to suffer without "lifting a finger" to relieve them, is a serious mistake. Christian Scientists are not at all averse to having their patients made comfortable, nor to the employment of experienced nurses where there is a necessity for their services. The Christian Science practitioner, however, depends upon the power of Truth and divine Love rather than upon drugs and opiates for the relief of human suffering. And it may not be out of place to remark here that in thousands of cases reliance upon divine power has proved itself to be more efficacious and salutary than dependence upon material means.

Where Christian Science treatment fails, the blame is not always, by any means, placed upon the patient's lack of faith. When these failures occur, it may be the fault of the patient or of the practitioner, or of both. On the other hand, it may be due to some circumstance for which neither of them is responsible. The fact is that when Christian Science practitioners fail they are not much inclined to make excuses, but rather to indulge in self-examination and greater consecration.

[Norman E. John in *New Amstel Magazine.*]

Over four decades ago an American woman, by the discernment of the spiritual law, as clearly defined to her as was the law of the falling apple to Newton, resurrected from the grave of human belief the scientific law of the Christ-healing. She unveiled the spiritual sense of the Scriptures and made plain to human understanding the eternal Christ that had never departed. Glorious indeed will be the march of mind when Christian Science is investigated and its spiritual Principle and power understood. Then will the deaf hear, the blind see, and the lame walk. Then will science, theology, and medicine be reconciled, and then will the infidelity of professing Christians to Christ's teachings, promises, and commands, be done away. This American woman, Mary Baker Eddy, in her book, "Science and Health with Key to the Scriptures" (p. 98), tersely states what the assembled investigators are striving to attain: "Beyond the frail premises of human beliefs, above the loosening grasp of creeds, the demonstration of Christian Mind-healing stands a revealed and practical Science. It is imperious throughout all ages as Christ's revelation of Truth, of Life, and of Love, which remains inviolate for every man to understand and to practise."

[William J. Bonnin in *Waterloo and Crosby* (Eng.) *Herald.*]

In examining the report in these columns of the last of several sermons, the point that arrests attention, as perhaps most directly contradictory to the plain teaching of Christian Science, is the assertion that the healing work accomplished in Christian Science is the result of "suggestion." Let me say that it would be no farther from the truth to aver that light is darkness or that good is evil. But the reverend critic would discredit in advance such a denial as I have just given, because he says all the methods Christian Science employs are employed by those who admit they are practising suggestion, and all of its results are to be obtained by suggestion. These are very extraordinary statements. As to the first, the truth is that not one of the methods of the "suggester," or hypnotist, or any other trafficker in the trickeries of the human mind and human will, are ever even thought of by the Christian Science practitioner.

The cardinal truth that Christian Science enforces is that there is only one Mind—the divine—and in that Mind all being is harmonious and eternal. The Christian Scientist brings to his patient some understanding of this truth, some realization of its omnipresent power, gained through long consecration to his highest ideals; in short, some reflection of that divine Mind. He brings a consciousness purified as far as may be from the contamination of materialistic and all other sense-beliefs that would deny the omnipresence of God, and thus opens a channel fit in a measure for the operation of spiritual truth in demonstration of God's perfect law. The hypnotist, or the "suggester," trades on the belief in many minds, the erring so-called minds of mortals, and in the supposed power of one of these minds over another. Such a belief is devoid of principle, and hence its exercise often involves the transgression of the laws of liberty and decency to be seen in the degrading phenomena so often associated with its exhibition. The hypnotist may be, often is, a person of evil character. The very first step toward the successful practice of Christian Science is the casting of moral evils out of one's self.

So much for the alleged similarity of method. As to the similarity in results, Christian Science is healing daily, not any limited class of ailment, but all classes of disease, organic and functional; it is reforming character, softening hard natures, sweetening angry and bitter ones; it is reclaiming the profligate, the drunkard, and the drug maniac; it is succoring those in all kinds of difficulty, misery, and

Digitized by Google

distress. Is "suggestion" doing this? Can any one be "suggested" into the kingdom of heaven?

What is the action of suggestion but the casting out of one false belief to make room for another and stronger false belief? Jesus plainly taught that evil, personified in accord with the manner of the day as Satan, was a lie. What is a lie but a false belief about the truth? And when Jesus spoke of a sick woman as being in bondage to Satan for eighteen years, is not the obvious interpretation of this that she was a slave to a false belief or ignorance of the truth? "Ye shall know the truth, and the truth shall make you free," is the great promise of a practical Christianity, and it is this knowledge of spiritual truth that casts out the evil and frees from the bondage of Satan. This can never be achieved by the mesmeric influence of a disordered human mentality. So that the answer of Christian Scientists today to those who would make this charge against them may well be the answer given by Jesus to those Pharisees who accused him of witchcraft and magic, in other words, of hypnotism: "If Satan cast out Satan, he is divided against himself; how shall then his kingdom stand? . . . But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

[Alfred Farlow in *Fort Worth* (Tex.) *Record.*]

Our critic asks: "Is Science and Health divinely inspired and of equal authority with the Bible?" and "Is the Bible sufficient for our faith and practice without any human book and work added to it?" We desire to say that a sermon or commentary which adds to or takes from the meaning of the Bible would not be a help but a detriment. Moreover, the purpose of "Science and Health with Key to the Scriptures" by Mrs. Eddy, is not as an adjunct to the Scriptures, but, as its name indicates, a key to them. It is an inspired sermon respecting God's Word—the Christian Scientist's commentary on the Bible.

Inspiration, as the term is used in this connection, means, according to Webster, "divine inbreathing." In common parlance it refers to ideas which are divine in contradistinction to human opinion. It refers to teaching which is demonstrably true in contradistinction to a mere belief which one takes for granted and yet has not been able to prove. The teaching of Science and Health—in other words, Christian Science—proves its divine origin; that is, proves itself to be spiritually true by its "works," the results which it produces, by its effects upon mankind—its ability to overpower that which is not true. To illustrate: If one has a dark room he may admit the light and dispel the darkness, but if one has a light room he cannot admit the darkness and dispel the light. It is thus proven that the light is real and the darkness unreal; so, when sin and sickness are destroyed by divine power, both the premises and conclusions of Christian Science are convincingly and conclusively demonstrated.

It is the understanding of Christian Scientists that inspiration is a state of active right consciousness, the apprehension of spiritual truth. Mrs. Eddy became the Discoverer of Christian Science because she was the one who, through earnest seeking, aspiring endeavor, and spiritual growth had attained to the exalted heights requisite to a discernment of the deeper meaning, the healing significance of the Master's teaching. She had been sufficiently attentive in her service to God to acquaint herself with Him.

To the question, "What authority do you claim for Science and Health?" I would say that Science and Health is a record of Mrs. Eddy's interpretation of the Scriptures; her definition of God and the universe; her understanding of the Science of being. Her authority for the contents of Science and Health is the Bible. She starts with the declaration, "God is Spirit." This is the major premise of the Christian Science syllogism. Her minor premise is also Scriptural: "God made every thing after his kind" and "man in his own image" in keeping with the scientific adage, "Like begets like." Our conclusion is that sin, sickness, and death, being unlike God, and no part of the "very good" things which God created, have no divine standing and therefore have only a seeming existence.

[Frederick Dixon in *Christian Commonwealth.*]

If, as you suggest, Christian Science is irrational in its disregard of medical advice and help, it surely follows that to be a Christian it is necessary to be irrational. The Bible distinctly teaches healing by spiritual means. So strongly has this been forced upon Harnack that that great scholar, in his book on Luke the physician, declares: "His medical profession seems to have led him to Christianity, for he embraced that religion in the conviction that by its means, and by quite new methods, he would be enabled to heal disease and drive out evil spirits." Those new methods Harnack clearly did not regard as either drugs or surgery; he described them in two words—"Christian Science."

[Olcott Haskell in *Union*, Sacramento, Cal.]

At a meeting of the California Medical Society, Christian Science was referred to as being one of the forms of "quackery" which today threatens to lessen the physician's opportunity for earning a livelihood. In this connection it should be remembered that Christian Science, like every true religious movement, makes it an object to uplift and bless mankind, but not to injure; and really nothing good and useful could be injured by its teachings, since they are but the logical application of the doctrines of Jesus and his disciples, which must lead to moral and physical well-being wherever they are understood and practised.

Every conscientious physician has as his object the lessening of sickness and suffering, and should rejoice at whatever accomplishes this, whether it comes from his particular school of practice or not. To argue otherwise would be the same as for a clergyman to contend that the practice of goodness and morality were a menace to his profession, because such practice tends to decrease sin, and the fewer sinners there are, the less preaching needed.

Quackery involves deception, and deception is injurious both to the one upon whom it is practised and to the one who practises it; but prayer to God involves no deception, and if it is true prayer, can never prove injurious. Then the Christian Scientist who prays for those who request this service is not a quack, and if his understanding of the law of God enables men to live purer and healthier lives, his work should be commended.

[Written for the *Sentinel.*]

TRUE HOMAGE.

AMY RUTH WENZEL.

THE Christ is guest at many a princely board
Where each one owns himself as lord,
Where none of those with whom he sits at meat
Would deign to kneel and wash his feet.

But some poor Mary, wounded by sin's dart,
The alabaster jar—her heart—
Will break, and lavishly, with tears, will pour
The costly oil of love, its store.

And, as of old, the haughty host will stare,
The guests a smile politely wear;
Discerning not 'tis broken hearts are shriven,—
Who greatly loves is much forgiven.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE EFFICACY OF CHRISTIAN SCIENCE.

In last week's issue of the *Sentinel* there appeared the testimony of a lady at Boulder, Col., which is a typical statement of what Christian Science has been and is doing in the way of healing mankind. It may not, therefore, be out of place to analyze this particular testimony and call attention to some features of it, in order to impress these salient points upon the attention of those who are in search of health.

For twenty years prior to her healing in Christian Science, this lady had been in bondage to pain, the six different physicians who were consulted during this time giving no hope of relief from the intense suffering she endured. Just previous to her seeking help through Christian Science, her family physician, who had made a careful study of the case, gave her a thorough examination, and told her that there was no remedy known to medical science for her ills; also that so long as she lived she would be a great sufferer,—in short, she was incurable. Without going into details of the diseases with which Mrs. Moore was said to be afflicted, it may be noted in passing that at least some of them were such as are usually classed as organic; although we understand that even the question as to which diseases are organic and which are functional is still in abeyance in medical circles, and "who shall decide when doctors disagree, and soundest casuists doubt?" to quote an eighteenth century satirist. Let it suffice that the family physician said, according to a confirmatory statement by Mrs. Moore's husband, that "she had organic trouble, which could not be cured; that cases similar to hers were very rare; that there was no remedy known for the disease; that complications would follow, and the result would be terrible."

At this time a friend advised Mrs. Moore to try Christian Science, and, having exhausted the resources of the physicians, she accepted this advice. She procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the study of this book she was healed, and has since remained well. The recital of these facts in the testimonies referred to above is in no way sensational, but the facts themselves are of the greatest importance, for it is a somewhat popular belief that Christian Science is helpful only for those who have little or nothing the matter with them. Here, however, is a case —and there are hundreds like it—in which a disease diagnosed as organic by one who stands high in his profession as a physician, has been healed in Christian Science; and healed, moreover, by the study of Science and Health.

So much for the published testimony, and the physical healing of which it tells; but there is still another side to the experience of Mrs. Moore, which is disclosed in a recent letter from her which we have had the pleasure of reading in part. In this letter Mrs. Moore writes: "It would be impossible to express my joy in Science. So different is my life to that of former years, that I am reminded in everything I do of all I owe to Science. Not a return of any ache or pain which so filled that awful dream of years, have I had. God is so good: but what is all that to the peace, to the invulnerableness to vexation and sorrow. My cup is constantly overflowing with happiness and gratitude."

What more can any reasonable person ask, in confirmation of the truth and efficacy of Christian Science?

ARCHIBALD MCLELLAN.

THE HEALING OF "ALL MANNER OF DISEASE."

In the 4th chapter of Matthew's Gospel we read that Christ Jesus healed those who were afflicted with "divers diseases and torments," including lunacy and palsy,—"all manner of sickness and all manner of disease." The writer particularizes in his description, probably from the habit acquired when he was a tax-gatherer; and we are grateful for this, as it helps us to see that no phase of human need was unprovided for in the Master's healing ministry. The wonderful works here recorded followed Jesus' forty days' vigil in the wilderness, when he was without any material food, assailed constantly by the suggestions of the carnal mind (otherwise named the devil), and when he proved for all time that man lives not by matter but by Spirit. Well might his contemporaries ponder Isaiah's prophecy, "The people which sat in darkness saw great light; and to them which sat in the region and shadow of death light is sprung up."

At the present day, when these healing works are being repeated, even as Jesus said they should be, we frequently meet the contention that only a limited number of diseases can be reached by spiritual means; such, for instance, as nervous ailments, so called, or functional disorders which are closely related to mental conditions. It is not strange that the materialist should take this position, though to be consistent, he should deny that *any* diseases can be healed apart from material treatment. In taking such a stand he would, however, find that facts are stubborn things, and that thousands who had for long years been wretched sufferers have gained mental and physical freedom through Christian Science. The fair-minded doctor who knows of such cases usually takes Gamaliel's position, and says, "Let these people alone!"

The unfairness generally comes from persons who know little or nothing about disease or its cure, but who assail those that are beginning to find new hope in the promises of Christ Jesus, with the chilling argument that no "organic" affection ever was or can be healed by spiritual means. Their attitude recalls the scornful question of the Pharisees to the parents of the man healed by Jesus, "Is this your son, who ye say was born blind?" They were ready to deny both the blindness and the healing, and yet, like the modern disputer, they stood by the Scriptures (subject, of course, to their own interpretation).

Now Christian Scientists are ready to admit that, if disease were any part of man's being, it might well defy any and all attempts to dislodge it. The same would be true of sinful habits or practices. If, however, man is the image and likeness of God, as the Bible declares, and, as Mrs. Eddy says, "the full representation of Mind" (Science and Health, p. 591), it is self-evident that neither disease nor sin is any part of man's being. When sin and disease are overcome by the action of Truth, not one iota has been taken from that which constitutes manhood. That which has been removed had no entity, no principle, hence no life. Its malignity might inspire with great dread the mortal who believed that there is a power apart from God and opposed to Him; but the one who stands by the Christian Science declaration of "perfect God and perfect man" (*Ibid.*, p. 259), can say with assurance and authority, "Come out of the man, thou unclean spirit" (or belief); and as its false claim to life and intelligence is exposed in Science, it disappears before the light of Truth.

It matters not by what name the ill may be called, nor what organ it may claim as its residence, the Christ-power, as of old, can send it into the abyss of nothingness whence

Digitized by Google

it came. If this is not true, then how vain the great healer's words concerning each faithful follower: "The works that I do shall he do also; and greater works"! Let us then thank God and take courage that each day swells the record of the healing of "all manner of disease" by the power of God and His Christ, as revealed anew in Christian Science.

ANNIE M. KNOTT.

"WHY THIS WASTE?"

"I HAVE all respect for the Christian Science movement, and unhesitatingly accept the fact that it is accomplishing great good, but I cannot understand why you turn down and discard the products of scientific investigation; as for instance when you treat *materia medica* as of no value. Why this waste of knowledge which has been acquired by such faithful and long-continued effort?" The speaker was a representative of that large body of intelligent and earnest Christian people who, as the result of educational bias, are entertaining a point of view that will not bear analysis and that has the effect of indefinitely prolonging their subjection to a false sense. Their position is not only illogical in that it begs the main question, but it involves a thought concerning "waste" which is wholly misleading.

The passing of any product of human effort, whether material or mental, may awaken a sense of loss until it is perceived that progress in any line of human interest necessarily demands the doing away with anything and everything which hinders the acceptance and rule of an improved belief. Every reformatory legislative enactment closes with a paragraph which annuls all previous enactments which may interfere with the enforcement of its provisions. The same requirement obtains in all educational advance, and today the publicist, the physicist, or the philosopher who would refuse to pursue a given line of investigation lest it compel him to give up long-accepted theories, would find it impossible to escape classification as either a fool or a fraud.

Thinking of these things, one cannot fail to see that the most serious and eventful "waste" is that which attends the disposition to cling to the methods and beliefs of the past, a disposition which fathered the saying, "What was good enough for my father is good enough for me." Such people may have many good traits, but they are certainly both unprogressive and wantonly wasteful—wasteful of the most precious possible possessions, namely, of their opportunities for growth and of all the gains that attend alert responsiveness to every call to higher and better things. Speaking of this, Mrs. Eddy has said, "Willingness to become as a little child and to leave the old for the new, renders thought receptive of the advanced idea" (Science and Health, p. 323).

If *materia medica* had proved itself adequate to human need, if it had a scientific and consequently unvarying Principle and rule of procedure, if it had received the endorsement of Christ Jesus and his immediate disciples in their healing work, and if it involved and utilized that realization of omnipresent Spirit which is and must be the basis of any truly remedial ministry to humanity,—if it had fulfilled any one of these requirements, as it certainly has not, its claim to recognition as a part of the divine order, and therefore worthy of everlasting honor, would merit consideration. Coming short, as it does, in all these particulars, it can be regarded only as a passing belief, which should be gladly laid aside for the coming and reign of that Christ-method with which it has no affiliation, and to which, therefore, it must give place; a method which Jesus and his early disciples proved to be able to meet all these demands, and which again today, through the teaching of Christian Science, is being found adequate, in the measure of our spiritual apprehension, to the healing of every disease, the solution of every problem.

When professed Christians are as ready to give up the customary and the conventional in religious belief as are the representatives of physical science to turn away from old theories and methods, then the wondrous gains which have marked the world's advance in the latter field will be duplicated in the progress of Christ's kingdom among men.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CHADRON, NEB.

First Church of Christ, Scientist, of Chadron, Neb., has purchased a lot located in a pleasant part of the city, and is now raising funds for the erection of a church thereon. The edifice will probably be ready for occupancy in the near future.—*Correspondence.*

ARDMORE, OKLA.

On the 25th of last January we organized a Christian Science Society, with fourteen members. About a month later we decided to build a small church, 18 x 25. It was finished by Easter Sunday and on that day we held our services in the church. A more grateful little flock would be hard to find. Five of us are members of The Mother Church. Several years ago we had a church organization, but it did not stand, for we did not then know the meaning of church. While we do not know very much more now, we hope through obedience and faithful work to learn the true meaning of church, as given by our dear Leader in Science and Health (p. 583).—*Correspondence.*

BERLIN, GERMANY.

It is inspiring to see how blessed the work of Truth is and how victorious under all circumstances, even where English has to be learned to gain a knowledge of the letter of Christian Science. The little seedling of Truth always finds its way to unfoldment and beautiful growth is manifested.

The branch church here a little more than four years ago held its services in some small rooms of a private flat which seated about ninety persons. In April, 1906, the Augusta Victoria Saal, which was near the old location, was rented. This hall seated three hundred to three hundred and fifty, but only a short time elapsed before the German services and Wednesday evening meetings were so crowded that many had to stand, and a larger hall was necessary. For the past two years the services have been held in a beautiful organ hall, the Choralion Saal in Bellevuestr., seating nearly five hundred persons. Since last fall it has become necessary to repeat the German services, on account of the large attendance, so that now two German meetings are held on Wednesday and one English, and two German services and one English on Sunday. Lately both the German services have been so crowded that a larger hall is now being looked for.

Trusting the all-sufficiency of divine Love, the members of the church know that the need of a church building of their own will be supplied in due time, and though the cost of a lot in the city of Berlin will be very great, it will be with the church as it is with man, "No good thing will he withhold from them that walk uprightly." In the mean time the church building fund is growing in the degree that thought is directed on inward and upward growth, and when the structure of Truth and Love appears, it will be firmly grounded on the solid rock of divine Love and raised to the heights of true spirituality.

THE LECTURES.

SANTA ANA, CAL.

Frank H. Leonard of Brooklyn, N. Y., was greeted April 25 by a large, attentive, and appreciative audience, to hear his lecture on Christian Science. Dr. Charles O. Fletcher, who introduced the speaker, said in part,—

To me has been assigned the honor and pleasure of introducing the lecturer of the evening. Before doing so, however, I desire to relate briefly a portion of my experience in Christian Science. My first introduction to the subject came at a time when I was actively engaged in the teaching and practice of medicine and surgery, and if the opinions which I formed and entertained at that time had been based on fact, I would have been justified in doing that which I did do, which was to condemn and denounce Christian Science, its advocates and its Founder.

My second introduction to Christian Science occurred when my wife by its ministry was beautifully and instantaneously healed of serious and seemingly hopeless physical conditions, from which she suffered for years, despite the efforts of many earnest and loving medical advisers. Contrary to my expectations and predictions, she remained well, a fact which caused a desire on my part to know what Christian Science is. By investigation I learned that Christian Science is a religion pure and simple. I learned that Christian Science is the truth, the same truth that was taught, lived, and demonstrated by Jesus of Nazareth nineteen hundred years ago.

Santa Ana Blade.

DUBLIN, IRELAND.

A lecture on the subject of Christian Science was delivered in the Antient Concert Rooms yesterday afternoon [April 24] by the Rev. William P. McKenzie. There was a large attendance. Major Robert Standen, Army Service Corps, presided, and, in introducing the lecturer, he said that one of the most dramatic moments in the early history of the Christian church was the encounter between knowledge and understanding, in the high court at Athens, when Paul of Tarsus arrested for the moment the attention of the proud scholars of Greece by declaring to them a God who is Spirit, not dwelling in temples made with hands, and from whom come life and breath, and all things. Today we, like the philosophers on the hill of Ares, and those who thronged the Athenian market-place, are standing at the outset of a new, yet old, religious movement, a ringing reaffirmation of the same insistent note which calls all men to witness that the tabernacle of God is with men in Truth, and that an understanding of Him as all-power, Mind, and presence is demonstrable today as of old. It tells of God, whose creation is for ever, who is of purer eyes than to behold evil, whose universe is spiritual and intact. Since Christian Science had shown to its students how to put into practice what they knew of God, in obedience to the command of Christ Jesus the Way-shower, their Cause was prospering, and many were being lifted out of lives of sin and pain and disquiet, and were being shown something of what was meant by that peace of God which passed mortal understanding.

Dublin Express.

MASSILLON, O.

Prof. Hermann S. Hering lectured on Christian Science before a large audience at the City Hall Monday evening [April 25]. The lecturer was introduced by Dr. A. P. Pease of this city, who said in part,—

When I first heard of Christian Science, which was perhaps twenty-five or thirty years ago, the name produced upon my mind an unpleasant impression, because it seemed to me that the union of science and religion was a mingling of antagonistic or incompatible elements or principles, and the name sounded harsh to the ear and seemed at variance with the understanding. I have no doubt that at first thought it has affected many others in the same manner.

A few years ago I became interested in Christian Science, and considered it worth while to recall a definition of the word science which I had learned in my boyhood at school, and which is perhaps as good a one as can be given. It was to the effect that science is systematized knowledge, *i.e.*, knowledge so classified and arranged that it may be easily acquired, readily referred to, and advantageously applied. I think all will agree with me in assuming that knowledge which can be easily acquired, readily referred to, and advantageously applied, is practical knowledge, and I believe also that they who observe the work accomplished by Christian Science will be convinced that it is preeminently a practical religion.

Independent.

KOKOMO, IND.

There was a good audience at the Sipe Theater Tuesday evening [April 26] to hear the Christian Science lecture by Clarence C. Eaton of Tacoma, Wash. James E. Hillis introduced the speaker, saying in part,—

It is frequently said of Christian Scientists that they are dogmatic, positive, not ready to listen to the logic or argument of others. Doubtless this is true. Every Christian Scientist, worthy of the name, has been redeemed from sin by the merits of the Christ. Probably nine out of ten of all Christian Scientists have been delivered from some form of sickness or disease, many of them having been pronounced incurable by some physician, by the same merits of the same Christ, through the understanding of him as taught in Christian Science.

Is it then to be wondered at if these people persist in occupying the position taken by the young man blind from his birth, whom Jesus healed, and who, in answer to the logic and arguments of the Pharisees, said, "One thing I know, that, whereas I was blind, now I see." So Christian Scientists declare that, whereas they were blind, now they see: instead of their sickness and sadness, they now have health and happiness; instead of doubt and despondency, they now have confidence and hope. They have a better realization of the poet's thought of

> The freer step, the fuller breath,
> The wide horizon's grander view,
> The sense of Life that knows no death,—
> The Life that maketh all things new.

Kokomo Tribune.

NEW LONDON, CONN.

The Lyceum Theater was crowded yesterday afternoon [May 1] to hear a lecture delivered by Mrs. Sue Harper Mims, on "Christian Science: The Christianity of Jesus." She was introduced by George A. Law of New Haven, who said in part,—

The demand and desire for truth has always existed. Pontius Pilate asked Jesus, "What is truth?" and man throughout all ages has been a continuous seeker after truth for this reason, that the truth regarding any subject is the only information of value, and therefore the only information worth having. Unfortunately, however, in human experience, misunderstandings have often arisen because of misinterpretations and misconceptions of that which is fact, thereby inducing a confused state of mentality which would obscure the actual or real in the attempt to present truth. That all may have an opportunity to know the truth about Christian Science, this denomination maintains a board of lectureship, composed of individuals who are well qualified, both through personal experience and active demonstration, to speak authoritatively on this subject. We have with us this afternoon a member of this board.—*New London Telegraph.*

PARIS, FRANCE.

The Rev. William P. McKenzie lectured on the subject of Christian Science for First Church of Christ, Scientist, at Washington Palace, May 26. He was introduced in French by Pastor Charles Wagner, author of "The Simple Life." His introduction, translated into English, was as follows:—

I consider it a great pleasure, as well as an honor, to have been invited to introduce the lecturer of the evening, Mr. McKenzie, who, however, needs no recommendation to this audience. For my part I salute in him a brave soldier of a grand Cause. In England, Germany, and France he has, without the loss of a single day, presented to his hearers those ideas of the truth of which he is absolutely convinced, and which it will be our privilege this evening to hear him explain. Personally I look upon it as a great advantage to listen to a synopsis of Christian Science from so competent a speaker. About fifteen years ago, in the drawing-room of Madame de Morsier, it was my good fortune to meet some of the first Christian Scientists. Their ideas, and the gentleness with which they were expressed, made a deep impression on me; and I expect from this evening's lecture to receive more light on the subject which aroused my sympathy and interest on that occasion.

Unless I am mistaken, the aim of Christian Science, which is eminently practical, is to find that which constitutes true life in its deepest blessings, in order to help each individual to live better and more fully. Christian Science sees above all in the gospel, the omnipotence of God, able to sanctify, strengthen, and regenerate man. In order to find this power in its absolute supremacy, we must return to its very source. In returning to the life-giving source of the gospel, Christian Science is in line with the movement of this century, which is striving in every direction to reach the fountain-head, to place itself in direct contact with nature and her laws, with the origin of beliefs, with manuscripts and primitive documents, and with religious movements in their essence, movements which have often deviated from their first ideal. This is the aim of Christian Science. With wonderful clearness of vision Christian Science places the very center of religious faith in its practical power, in its saving, healing virtue.

The vivifying and true religion is the one which heals, restores, saves, and causes to love and hope. It consists neither in theory nor in doctrine expressed by formula: nor in historical facts, marvelous in themselves but now far removed from us. It is the ever-operative energy, capable of effecting today what it effected yesterday, and of producing, by the saving power of God, the same consoling, liberating results which were its distinguishing features in the beginning. Of all this we are in great need, and in one form or another we all aspire to it. Happy those whose thirsty lips find the cup which contains the refreshing "water of life!"—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Brooklyn, N. Y. (Fourth Church).—Frank H. Leonard, Fort Lowry Hotel, Cropsey avenue and Bay 15th street, 3 p.m., June 26.

Canton, O.—Frank H. Leonard, Auditorium, 8:15 p.m., June 23.

Kingston, N. Y.—Bliss Knapp, Kingston Opera House, 3 p.m., June 26.

Little Rock, Ark. (Second Church).—Clarence C. Eaton, Majestic Theater, June 19.

Milford, N. H.—Mrs. Sue Harper Mims, Unitarian Church, June 27.

Seneca, Kan.—Judge Septimus J. Hanna, June 23.

Sherman, Tex.—Hon. Clarence A. Buskirk, Sherman Opera House, 4 p.m., June 19.

TESTIMONIES OF HEALING.

Five years ago I was spiritually starving, physically sick, and very weary, through trying to come into harmony with the laws of the God whom I dreaded and feared. At this time I was greatly impressed with this verse in the first epistle of John, "Try the spirits whether they are of God;" so I ventured to begin the reading of Science and Health, at the earnest request of a friend, saying that by the fruits of my reading I would judge.

Four experiences stand out in that first reading of our text-book. After reading for some weeks I noticed the absence of a pain of which I had been conscious for months. The pain supposedly came from a chronic intestinal trouble which had not yielded in several years' of material treatment, by various methods and under good physicians. At times I suffered greatly, and always there was the dull pain; but now it had gone entirely. Next came to my attention a mental improvement,—I was learning how to conquer irritation. I had prayed about it, striven daily to conquer it, and again and again had given evidence that the sense of irritation was as great as ever. But in reading Science and Health I could see how right thinking must destroy wrong thinking, and that if God is Love and man is His idea, I could love, not hate, every one and every thing. So I began to drop my false beliefs and learn a little of God, as we are taught in Christian Science.

The next thing was to prove that this truth is demonstrable. I asked my husband if he were willing I should treat him for his eyes, one of which had been injured during boyhood. It came to me quite clearly that sight is spiritual, and being so could not be impaired by accident. I understood very little, but I was in earnest, and teachable. At the end of eleven months my husband took off his glasses, which he had worn for ten years on account of this injury. This was over four years ago. During this same period I desired to prove the availability of Christian Science in a mental condition of inharmony. I had two friends who seemed to be unjust and jealous, toward whom I felt resentment and hatred. I could see that if I desired to grow in the understanding of Truth I must get rid of unloving thoughts, whether I had what seemed a good reason for them or not, so I began to dwell on the thought of God as Love, and to know that the three of us, as His ideas, could only reflect love and be just to each other. I did this daily. It was nearly three years before we met again, when, to my joy, the old state of things had passed away and our relations had become new. There was no sense of hatred, no injustice, no jealousy, and now our frequent meetings give evidence to a true affection each for the other.

For these four things alone I could be grateful forever, but these are only a few of the unnumbered blessings that have come to me and mine through the study of Christian Science; so I ask with the psalmist, "What shall I render unto God for all his benefits?" I owe constant praise and gratitude to Him, and an ever increasing hunger and thirst after righteousness. How can I show my gratitude to our Leader for this wonderful knowledge of how to take definite steps to find God? I will strive to know and to do the will of God and to follow the great Wayshower. I am also grateful for the help received from our publications; and I rejoice over the victories to come, the demonstrations yet to be made,—the progress I am yet to attain.

MRS. LU. R. HOWE, Chicago, Ill.

In his sermon on the mount Christ Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Christian Scientists not only expect to realize this, but they find as well that all his other promises are actually fulfilled, though pos-

Digitized by Google

sibly not as we ourselves would plan. For instance, in my own case, at one time I should not have thought it possible for this promise to be carried out without a material manifestation of wealth, some power, and enough of success in life to satisfy at least a moderate ambition. As I began to grow, however, I discovered that should I receive all these so-called benefits, to a degree even greater than my most extravagant hopes, all that I could possibly realize from them, under the most favorable circumstances, would be contentment, and contentment I gained soon after I came into Christian Science. I first became interested in its teachings through the healing of my wife, of a spinal trouble which, with other complications, had baffled the skill of many physicians. Our monthly bills for doctors and drugs were a considerable item for over fifteen years; but since we experienced the efficacy of Christian Science, about six years ago, we have not spent a cent in this manner. While glad to be relieved of this expense, also of the suffering, the financial part is a small matter compared to the relief of mind brought about by a changed concept of God.

Whereas formerly I had so much to cause me to fear and worry, and a large part of the time I did not consider life worth the living, so that I often wished it were ended, under present conditions I do not have to hope for better things in the future, but am enjoying them now. I am very grateful to Mrs. Eddy that, through Christian Science, this change has taken place; for it not only brought health, but many other blessings and much happiness into our home.—J. N. SANBORN, Fort Worth, Tex.

In listening to a testimonial given by one who, though young in Science, was very desirous to be of help to others, I was reminded that my own experience might also be an encouragement to some one. Soon after becoming interested in Christian Science, I was in a "hold-up," while on a trip into the Yosemite Valley. As we were driving along we saw a group of people a little distance away, and thought it a picnic party, and when we caught a glimpse of a stage, we supposed the people had gotten out for some break to be repaired. It was not until we had rounded a corner and come down to the party that any one had an inkling of what was the real state of affairs, as we could see then that the stages were empty and that the people were standing in line with their hands above their heads.

Just then, the robber approached our stage, and by that time I had begun to realize that God's care and protection were just as available there as if I were in what might seem a safer place, and to repeat the "scientific statement of being," as given in our text-book (Science and Health, p. 468). The robber said, "You need not hold up your hands" (involuntarily we had raised them), and after a few remarks left our party and turned his attention to the fifth stage, which was then coming up, all the occupants being required to dismount and go and stand in line. Although his attention was called to the fact that we were not standing in line, he did not notice the remark or pay any further attention to us, although some of the stages were searched a second time. The heat was intense, and to stand for over an hour with nothing to shield one from the sun and with arms held high in the air, presented quite a contrast to sitting with an umbrella over one's head. When we were allowed to proceed, our stage, as it had the lighter load, was sent ahead in order to get word to the sheriff as soon as possible, and the horses were driven at the top of their speed down the long steep grades and only allowed to walk a little on the up grades. I felt no fear at the time, nor after we reached our destination, and had a restful sleep that night. This demonstration seemed as wonderful as the first, for I had always been afraid to ride in dangerous places and had invariably suffered from a disturbed state of thought for a long time after any experience in which there had been seeming danger.

In all this I learned that God does save us from our fears as well as from all physical danger. I had always been taught that God was omnipotent, but that teaching did not seem to be particularly helpful, because I thought, according to the teaching of the churches, that it might be His good pleasure that we should suffer; so, if one asked for help, there was no certainty of receiving it. Now, through the teaching of Christian Science, I know that God is good, all powerful, and an ever-present help at all times and under all circumstances. It is ours to adore Him for His boundless love, and to be ever grateful to our beloved Leader, Mrs. Eddy, who has brought within reach of all the understanding of the truth as it was taught by Christ Jesus.

MRS. H. SIBYL LUKENS, Pasadena, Cal.

Having received so many blessings from Christian Science, it is with great pleasure that I give this testimony, hoping it may help others. In June, 1908, my little boy, then about four and a half years old, had been ailing slightly for two or three days, so I wrote to a dear friend, who is a practitioner, for her to treat him; but she was absent, and the next morning we sent word to another Christian Scientist, for we had had the truth proven to us once before with the same child. The practitioner called in the afternoon and stayed about an hour. About three hours after she had gone, there was a decided change for the worse, and then the child asked to have Science and Health read to him. His father and I read to him until half past nine, when his father retired and I remained with him all the time, for the child was in a high fever. I was about to leave him for a moment, to call my husband from the next room, when he suddenly became so alarmingly ill that for the moment a sense of fear overcame me; but I declared aloud that God is Life, and God is All.

I called my husband to stay with the child, while I went to the nearest house (I had to call them out of bed, as it was then midnight) and asked if I could use the telephone, as we were strangers there and did not know where the night telephone office was. The practitioner said she would treat the child, but there was very little improvement from that time on until I again called her up at five o'clock. At half past six, the child was looking very much better. He had less fever, and at seven o'clock there was a decided transformation—he asked for something to drink, and an hour later he said he would like to be dressed. I responded gladly, with a heart full of gratitude to God, and to our dear Leader in this age. My earnest desire is that my life may prove what Christian Science is, and that I may be a worthy follower of its teaching.

MRS. ANNIE GUARD, Orange, N. J.

In the book of Revelation we read: "And I saw the dead, small and great, stand before God: and the books were opened: and another book was opened, which is the book of life: and the dead were judged out of those things which were written in the books, according to their works." I was dead before I learned of Christian Science,—dead in Adam," dead "in trespasses and sins;" but through Christian Science treatment I was brought to stand before God, when the books (the sixty-six books of the Bible) were opened, and another book (Science and Health with Key to the Scriptures by Mary Baker Eddy) was opened, which was to me indeed a "book of life;" for, being dead, I was judged out of those things which were written in the books, according to my works, and I commenced to live. I was quickly healed of so-called incurable diseases, but the most important healing was the moral or spiritual.

Digitized by Google

This was nearly twenty years ago, and I am still learning to be charitable regarding others' faults, learning to love, to forgive; and if any injure me, intentionally or otherwise, I sorrow more for them than for myself, for they suffer most. I am more and more able to help others, and I have found that only by so doing can we help ourselves.

JOHN WARNER KEYES, D.M.D., Washington, D. C.

Christian Science has done so much for me that I wish to express my most sincere gratitude to God, and my thanks to Mrs. Eddy for this wonderful understanding of Truth. Through my own slight apprehension, and the help received from others, I have been healed of many ailments. I was able, after four weeks' treatment, to lay aside glasses, which I had worn for fifteen years. I also was healed of a very severe stomach disorder of many years' duration, through the reading of the *Christian Science Sentinel*.

For all these blessings, as well as for the spiritual uplift, I am deeply grateful. My greatest desire is to know more of this truth, and to be worthy of the name of a Christian Scientist.—MARTHA W. GARRISON, Washington, D. C.

I have long felt that it was my duty to send in my testimony of healing through Christian Science. Several years ago, I was healed of asthma, after having suffered for many years from it. I had been treated for the trouble by several doctors, who told me I could never be cured of it. At two different times, I was quickly healed in Christian Science of acute throat trouble, when dangerously ill. I was also healed of catarrh, which I had had from childhood. I had eleven teeth extracted with no pain and no fear at all. For this I had absent treatment in Christian Science.

Though I am not healed of all my ailments, I am truly thankful to our beloved Leader for all that has been done for me and my family. I surely have great cause for rejoicing in the rapid growth of Christian Science.

MRS. NETTIE RANSOM, Solway, N. Y.

For about six years I was a sufferer from severe stomach trouble, and part of the time my diet was limited to such an extent that I often suffered the pangs of hunger. I had treatment from several of the best physicians in Denver, receiving temporary relief, but lapsing into worse conditions each time. One physician recommended, as a last resort, heroic measures, which were continued for about two years, but without any good result. A brother, who was living at that time in Texas, then wrote me that he had become interested in Christian Science, and that it would heal me. He sent me several pamphlets, which I read eagerly. I had just finished reading the New Testament for the first time in my life, and as the healing mentioned in the pamphlets accorded perfectly with that which is related of Jesus and his disciples, I believed at once that Christian Science could heal.

It was about a year, however, before I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and this book I read for three or four months. I gained some of the letter of Science, but not enough of the spirit to enable me to overcome the fear that food would bring distress. Two weeks' treatment, however, did overcome this fear, and I was then able to eat anything, and have continued to eat such food as was set before me ever since—a period of over thirteen years. During this time I have not taken any medicine—all my ills have been healed through the application of Christian Science, with the help on a few occasions of a practitioner. I have also been able to bring relief to others, by following the teachings of Science and Health. How good it is to know and to prove that God's healing power is still on earth, and can be manifested through man. In living away from Christian Scientists upon whom I might lean for help in time of need, it has been my great privilege—many times when no human help was near—to prove the first words of our text-book true: "To those leaning on the sustaining infinite, today is big with blessings."

Class teaching I count as one of my great privileges, and I am truly grateful for the physical healing, as well as for the satisfied understanding of the Bible which has come to me, so that I am no longer puzzled over mere theories. I know that my foundation is sure, and this is still greater reason for thankfulness to God. I am also grateful to Mrs. Eddy, the Discoverer of Christian Science, who has steadfastly stood against the storms of ridicule, prejudice, and persecution; and unswervingly and unerringly followed the ray of light revealed to her, until it is now lighting multitudes in the straight and narrow way.—MRS. EDITH RUSS, Pine, Col.

[Translated from the German.]

Some five years ago a friend told us about Christian Science. My wife, who had been suffering for many years with a skin disease on her face, was healed of this trouble, as well as of a disease of the bone, within a short time, through Christian Science. At the birth of one of our children also she had Christian Science treatment, which proved a great help to her. Our daughter was healed of a disease of the bone; and two of our children who were taken with a fever, were healed within a few days. Two of our younger children were taken with whooping-cough, but were healed in a short time. Later my wife had an attack of illness, also a toothache at the same time, so that her face was badly swollen, but these troubles too disappeared through Christian Science treatment. Our youngest child had a serious condition in his right leg, but was healed in a short time. Our son was bitten by a dog, and the flesh badly torn, but he was healed through the reading of Science and Health in two weeks' time. I have myself been freed from the desire for alcoholic drinks through reading this book.

For these many blessings we are grateful with all our heart to God, and also to our beloved Leader, Mrs. Eddy. May these lines lead some weary wanderer into the haven of peace.—JULIUS SCHULZ, Weimar, Tex.

Nearly twenty years ago divine Love led me to accept Christian Science, and never once in all those years have I had reason to doubt but that it is the Christ-idea made manifest to mortals. I came to love the Discoverer and Founder of Christian Science, and I find myself loving her more and more from day to day and year to year, just in proportion to my growth, knowledge, and demonstration. For years I struggled alone with my problem, but the recollection of the struggles has vanished in the grateful consciousness that I now count all my loved ones as "within the fold." To recount the specific blessings for which I am truly grateful would be an impossible task, but I wish to tell of one experience in particular which may help some other weary pilgrim.

This particular case was one of mental surgery. About the middle of January, 1905, I fell heavily upon the ice and severely injured my shoulder. The injury was so serious that I had no use whatever of my left arm. In Science and Health (p. 401) Mrs. Eddy says, "Until the advancing age admits the efficacy and supremacy of Mind, it is better for Christian Scientists to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon." So I called a physician, who worked on the joint for half an hour, but without the desired result. Again, on the following day and a great many days after, I had the same experience. The matter dragged along

Digitized by Google

until June, when another physician was called to assist the first, and together they tried unsuccessfully on three different occasions to replace the arm. No one could be more considerate or conscientious in the endeavor to relieve me than these two doctors, and I shall always feel a sense of gratitude to them for their efforts.

Without any outside help I was able to overcome all pain, inflammation, and swelling during this period of pulling, twisting, and wrenching. I slept soundly at night, and was affected not at all by the experience except that I was not able to dress myself or to perform the usual household duties. About this time we were told by one of the doctors that the only hope of the operation being successfully performed was for me to go to a hospital, take an anesthetic, and be put in a brace. I decided to do neither, but on July 3, accompanied by my daughter, I went to a Christian Science practitioner in Grand Rapids, Mich. I stated the case to her, and she lovingly told me what I already believed to be true, viz., that "with God all things are possible." Within a few days I was surprised to find that the demonstration had been made, and I am thankful to say that I have never experienced the slightest difficulty with the shoulder since then. These physical benefits seem great, and they are, yet they are the very least of the benefits we may know if we will accept this beautiful truth for our own and abide by its teachings.

It would be hard to say what I feel most grateful for, but possibly one of the greatest blessings that can come to any one is the willingness to "put off the old man with his deeds" and strive to have that Mind "which was also in Christ Jesus,"—to lay down the beliefs and dogmas of former years, to leave the old paths, and willingly and lovingly follow our Leader through the paths of peace which her self-sacrificing life has made possible to us. I feel grateful to God, and to that one who has made our publications possible, and who has furnished an avenue through which we are enabled to help others and proclaim our joy to the world.—Mrs. Margaret E. Lloyd, West Chester, Pa.

Through the spoken word, declaring the power of Truth, in March, 1905, I laid aside an ankle-brace. I had hurt my ankle in childhood so that I had to wear a brace for twenty-one years, all the doctors that I consulted telling me there was no help for me, except cold water applications when the ankle pained me. Believing, however, that nothing is impossible to God, I went to see a Christian Science practitioner, and told her about the difficulty. She asked me if God was not more to me than an ankle-brace, and said, "Can you not trust God and never put it on again?" The words "Can you not trust God," were constantly in my thought after that. I was obedient, took off the brace, and have never put it on again. The first day after leaving it off I did all my housework, walked a mile to the Wednesday evening meeting, and returned home, all without the slightest pain.

Words cannot express my gratitude to God and His Christ, also to Mrs. Eddy for demonstrating the healing truth which has freed me from this bondage. I am especially thankful for the spiritual inspiration which has come through the study of the Bible in connection with "Science and Health with Key to the Scriptures."

Mrs. Elizabeth CaDotte, Sandusky, O.

Being a young student of Christian Science, and desiring to do all I can to further the cause of Truth, the words of our Leader to her students (Miscellaneous Writings, p. 155), came to me as a command: "Methinks, were they to contemplate the universal charge wherewith divine Love has entrusted us, in behalf of a suffering race, they would contribute oftener to the pages of this swift vehicle of scientific thought [*The Christian Science Journal*]; for it reaches a vast number of earnest readers, and seekers after Truth."

Christian Science reached me through the active work of Scientists in the town where I resided. In a wretched state of health, brought on I believe by constant association with those who were very ill, cases in which I saw no relief given either by religion or *materia medica;* looking to the grave as the only hope of rest, weary of material ways and means, I first heard of this healing truth. A little later I was taken to a Christian Science service in London. I bought a copy of Science and Health, and with this key found the Scriptures a well-spring of Life. In a short time I was healed of sleeplessness of twenty years' standing; later, of bowel trouble of still longer duration; also of a nervous and irritable temperament, of selfishness, and the "beam" in the eye. The healing was not instantaneous, but very slow. When I was first helped, the practitioner sent me away with these words from our text-book (p. 242): "Self-love is more opaque than a solid body. In patient obedience to a patient God, let us labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death." This I thought strange and unnecessary. Again, whenever I read the commencement of the chapter on Christian Science practice, which is the starting-point of all healing, I saw nothing in it to do with healing; but the time came when I understood their meaning.

I realized that all my life I had been subject to fear, and I learned in Christian Science that the cure for fear is to "know the truth." I am deeply grateful to our Leader for the Lesson-Sermons, and for all our publications; also to the many who have rebuked and uplifted.

Celia Soden, Bromley, England.

In August, 1906, I spent a few weeks in the country, and there made the acquaintance of some Christian Scientists. I then for the first time heard something positive about this teaching, and felt at once that the way was opening before me for which I had been seeking; for I had of late years taken much interest in religious and philosophical subjects. A copy of *Der Herold* was lent to me, and I was glad to find that there was a Christian Science practitioner in Frankfort a. M. As soon as I came home I went to see this lady and to buy the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had never thought of joining a religious organization or attending services, but I accepted the lady's invitation and went to the next testimonial meeting. This step was decisive, for I was so deeply impressed that since then I have hardly ever missed a service.

Although I did not come to Christian Science for physical healing, I had several occasions to perceive Truth's blessed influence upon the body, and some months ago I had the following experience. One Sunday, during the service, I found that I could not sing as usual. During the reading of the Lesson-Sermon I tried to realize the nothingness of this false condition, but my understanding was not sufficient—indeed, I could not raise my voice at all, and later I found that even to speak caused me some difficulty. This was followed by distress in breathing, and I felt as if the lungs were affected. I began at once to work in Christian Science, to turn my thoughts to the truth of being; and I was relieved somewhat. I, however, asked a practitioner for treatment, and in the course of the same day the difficulty in breathing was nearly removed, and two days later it had wholly disappeared, although I was obliged to be much out of doors and the weather was very bad. The trouble with my voice was more obstinate, for it was about eight weeks before I was all right again.

Digitized by Google

According to material law, so called, there was hereditary predisposition to this ailment, so I am very grateful for this experience and for the help that Christian Science gave me. I thank God that I have gained some understanding of man's real life; and I am grateful to Mrs. Eddy for her pure striving, which enabled her to find the way to God and to make it plain for humanity.

MARIE HELBING, Frankfort-on-the-Main, Germany.

This is a statement of how I first heard of Christian Science and was healed of rheumatism and a serious heart trouble said to result from the rheumatism. For seven years I was a complete wreck, suffering from the above ills and always under the care of doctors, trying different medicines and change of air, but never receiving any benefit. Two and a half years ago, as I was coming home from a "rest-cure," I got to talking with a lady on the train, about a pamphlet she was reading, "The Ministry of Truth." She let me look it over and told me she would send me a copy. I told her how ill I was, and she was so kind that I felt comforted in talking over my troubles. When I asked her what church she attended, she replied, "The Christian Science church." I did not know what she meant, but as she talked with me such a sense of rest and peace came to me that I was sorry when her station was called; but I asked her to write, and she said she would. It was the first time I had felt free from pain in seven years. In a few days I received some *Sentinels*, and a letter. I read the literature, and after some further correspondence she told me that I should by all means get a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read and study it. I did as she advised, and today I have no pain and am cured. I am a surprise to all my friends; they think it wonderful that I am so well and happy.

I cannot thank God enough for leading me into the truth, and the lady for showing such kindness to a stranger. In reading Science and Health I found that the Bible, which before I did not understand, is God's Word, and I love the study of it more every day.

MRS. EMMA STEPHENS, Colbourg, Ont.

I am very grateful for the many blessings which have come to me through the understanding of Christian Science. The words of our beloved Leader, "Step by step will those who trust Him find that 'God is our refuge and strength, a very present help in trouble'" (Science and Health, p. 444), are in line with my experience. I was healed of what physicians call an incurable disease, with two treatments. The practitioner told me to get a copy of Science and Health and read and study it. I did so, and have been gaining an understanding ever since, being able to demonstrate the truth for myself and also for others. The physical healing was much, but the spiritual awakening is far more! The joy of living each day as best I know, and of helping others, is indeed the "pearl of great price."

My gratitude to our dear Leader cannot be set forth in words, but she is graciously pointing us to a method by which we can express our thankfulness in pure thinking and compassionate living.

MRS. MINERVA BOYD, Weeping Water, Neb.

The following Latin inscription, dating back to the year 1598, may still be seen above a drug-store (the "Raths-Apotheke") in Lueneburg, near Hannover, Germany:

"Neque herba neque malagma sanavit eos, sed tuus, Domine, sermo, qui sanat omnia."

Translation: "Neither herbs nor poultices have healed them, but Thy word, O God, which heals everything."

FROM OUR EXCHANGES.

[*Watchman.*]

On this occasion Jesus was in that high spiritual state when walking on the water would be a natural result of his fulness of eternal life. He was indeed at all times filled with the Spirit's grace and power, and was never at a point of weakness like a Samson when the Spirit was departed from him. There was not a moment when he was not ready for the demands of the hour, and his exercise of power was a quick and complete one. But it can be seen that even in his experience there were times when the tide of spiritual power rose to meet emergencies, and seasons when he felt the timeliness of retiring into the divine presence and gaining fresh supplies of faith and power. Walking upon the sea was an act that he could have done at any time, but it appears at a time when he was uplifted himself and charged afresh with the fulness of God. His own intimation to Peter was that he also might have walked if his faith had been sufficient. Peter, however, had had no such spiritual uplift as his Master at this time. The power of Spirit over matter, and its capacity to become superior to natural limitations is illustrated in this incident in the life of our Lord. It can be seen wherein his power wrought its victory. The same Spirit in us may not repeat the same miracle, but it enables us to be superior to the natural conditions and the seemingly impassable barriers of so-called laws, and to show power that also works marvels in the physical condition, social states, and religious life of men. Whoever fills himself with the same Spirit as that of Christ, through communion with God and by the exercise of the grace bestowed upon him, will have a sense of glorious freedom from limitations, a power to mount up like an eagle above the low-lying plane of common effort, and a feeling that nothing for the glory of God or the good of man is impossible.

[*Christian Register.*]

That religion requires us to be well physically as well as morally is a novel proposition to many people. We have hardly got by the habit of attributing ill health to divine interference. We know now that disease in all its forms is attributable to removable causes, and we also know that any broken law of nature abrades our physical condition and interferes with our intellectual and moral operations. Remorse over failures and blunders or repentance over sins will play a much less important part in future religious estimates. Remorse must be looked upon rather as a loss of time than as a duty. The instantaneous demand is for an amended law and a spirit of obedience. What we want to get rid of, in round terms, is disease; and this brings us into very warm sympathy with those who teach that sickness is sin. Of course we do not hold any such extreme doctrines, but we do hold that there is a very close affiliation between wrong-doing of any sort, bad habits, careless indulgence, intemperance, and ill health. What we want is not quarter manhood or half manhood, a feeble, frail semblance of life, but life in its fulness. When we say a man must earn his bread according to God's mandate, by the sweat of his brow, what are we going to do with those whose physical fiber will not let them do a decent day's work, who are possibly children of vicious inheritance, or with those without will-power or steadiness of purpose, the lop-sided victims of weak mothers or weaker fathers?

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The thing Jesus hated most was the negative life, the self-satisfied life, the life that was content to regard its own excellence as the great end to be aimed at. It was this against which Jesus protested most strongly in the

Digitized by Google

religious teaching of his time and would again today. He would accept no meaningless compliments. He would not allow us to call him sinless unless we clearly saw what that term involved, and even then he would require from us a good deal more than lip homage. One thing is certain, and that is, that if Jesus stood again in our midst, and we did not know who he was, his sinlessness would not be self-evident even to the best of men. He would be blamed and criticized for doing this and that or for leaving this and that undone, and the probability is that he would fall foul of some of the accepted notions of righteousness today as surely as in his own day. We should not escape his censure, you may be sure, and how indignant some of us would become! "What language!" we should say when he called us hypocrites and vipers. "How unchristian! How unlike the meek and lowly Jesus in whom *we* believe!"

[Prof. Walter Rauschenbusch, D.D., in *Watchman.*]

If religion, instead of revealing God, obscures His will and love and keeps men from a clear experience of their heavenly Father, what greater condemnation is there? Yet that is the indictment brought by both Jesus and Paul against the religious system in which they were trained. That, too, is the indictment brought by many of the noblest religious minds of all past centuries against systematized religion. It becomes the letter that kills. It does not merely lack the power to give life. It kills. It slays. It paralyzes religious insight. Has not the church for generation after generation assiduously bound the veil around the eyes of men? This should be our second lesson. It should be our heart-searching query if our theological and religious methods and institutions have to any degree slipped into this original sin of the great religious systems of the past, so that they veil the religious vision and become obscurers instead of revealers of God.

[*Congregationalist and Christian World.*]

The highest service of the minister is to call up visions and vivify them. If he does that for you, he is truly a prophet. The preacher who renews the ideals of the worshipers listening to him from week to week takes high rank among the benefactors of mankind. It is natural that men of spiritual vision should seek the churches where prophets speak. No nobler task is calling the churches, nor any of so great importance, as to cherish the conviction that they must have prophets for their ministers, and to raise up prophets who will freshen the visions and renew the ideals of the seeker after God so that he is "renewed in knowledge after the image of him that created him."

[*Universalist Leader.*]

We make our plea for those voices in the wilderness which simply cry, "Prepare ye the way of the Lord." They serve who speak and wait. They toil who travail with their dreams of good. There is a place, a mighty place, in the economy of God in history, for those whose aspirations are so noble and whose prophecies are so cosmic that by them progress must be measured by a thousand years for its yardstick. The world has few enough of those who sing the music of the moral spheres and are not disturbed if only the echo of the heavenly song floats back to them. We must keep faith with God, even though we fail to win the world.

[*Churchman.*]

The present age needs something of the spirit of St. Francis who, when his followers asked him on a certain occasion why he had not taught them to preach, said that their going unostentatiously and informally among the people of the town in which they dwelt was the kind of preaching that he valued most and considered the truest following of Christ's command.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS; each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CHRISTIAN SCIENCE, THE RESTORATION OF PRIMITIVE CHRISTIANITY. By CLARENCE C. EATON.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. By FRANCIS J. FLUNO, M.D.

CHRISTIAN SCIENCE: THE RELIGION OF THE BIBLE. By JUDGE SEPTIMUS J. HANNA.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Also printed in German.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE: By EDWARD A. KIMBALL. Also printed in German.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A KIMBALL. A London lecture. Also printed in French.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A Harvard University lecture. Also printed in French.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. By BLISS KNAPP. Also printed in French.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. By FRANK H. LEONARD.

PRACTICAL RELIGION.
"THE LAST ENEMY THAT SHALL BE DESTROYED."

PRICE, POSTPAID: Ten copies, 10 cents; 100 copies, 50 cents; 200 copies, 75 cents; 500 copies, $1.75; 1000 copies, $3.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $5.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible, (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Picture of The Mother Church only, size, 12 x 15, each, 50 cents; one dozen, $4.50. Souvenir Post Cards of The Mother Church, 25 cents a dozen.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 103 pages. Single copy, $1.50; one dozen, $12; half dozen, $7.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50 Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen, $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state, when ordering any of the last three numbers, whether high or low key is desired.

Our Catalogue for 1910, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $5.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 93 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $5.50 per half dozen; $10.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 25 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $5.00 per half dozen; $9.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 191 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 30 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Charging that the chairman and other members of the committee on the judiciary were "receiving gifts, franks, employment, and compensation of great and pecuniary value" from railroads, to the extent of disqualifying them to pass upon the bill to prohibit congressmen and judges from receiving such gifts from railroads or other corporations, Representative Bardell of Texas brought before the House a privileged resolution to remove the measure referred to from the committee on judiciary and to have it immediately reported back to the House.

Users of the Curtiss and Paulhan aeroplanes may now fly without giving bond covering possible violations of the Wright brothers' patents, at least until after the trial of the injunction suits instituted by the Wrights in the United States courts in New York and in Buffalo several months ago. The United States circuit court of appeals in a unanimous decision vacated the preliminary injunctions granted on behalf of the Wright Company against the Herring-Curtiss Company and Louis Paulhan, pending trial of the suits.

The interstate commerce commission has issued an order requiring the equipment with power brakes of eighty-five per cent of the cars in any train operated in interstate commerce. The order, which will become effective on Sept. 1, 1910, requires that the brakes shall be operated by the engineer of the locomotive drawing the train. It increases the percentage of cars equipped with power brakes from seventy-five per cent to eighty-five per cent.

The Senate committee on claims has reported a bill to pay the Southern Pacific railway $773,647, on account of expenditures made by it in repairing the break in the Colorado river, which threatened to overflow the Great Imperial valley in the fall of 1905. The railroad's claim was $1,663,136. The work was done by the railroad as a result of a request made by former President Roosevelt to the late E. H. Harriman.

As a result of President Taft's insistence that the new railroad bill should include some provision looking to the control of the new issues of stocks and bonds by railroad companies, it was decided at a White House conference recently that a paragraph shall be added to the bill providing for a commission to investigate and report at the next session of Congress the best means of dealing with this situation.

The sentencing of the two men, convicted of conspiracy to defraud the Government by means of sugar underweighing, the secretary of the American Sugar Refining Company and the superintendent of the sugar trust's Williamsburg refinery, has been suspended to Aug. 30, pending an appeal which counsel for the defendants will file.

By a change ordered in the form of the postal money order and the elimination of the mail advice to postmasters of the issuance of money orders, Postmaster-General Hitchcock expects to save to the Government approximately five hundred thousand dollars a year.

That Government ownership of railroads will be the outcome of the trend of congressional legislation, is the opinion expressed by President Daniel Willard of the Baltimore & Ohio railroad at a conference of the company's officials.

When railroad managers plead the necessity for higher freight rates, says *Public*, in order to pay higher wages to their employees, they should be admonished to meet this increased expense by reducing the wages of their watered stock.

A petition will be filed by the department of justice in the United States court at Chicago, through which the Government will attempt to find out whether or not the Hepburn railroad rate law is applicable to stock yards.

Postmaster-General Hitchcock has appointed a special committee to investigate and report upon the feasibility of increasing the limit of weight of packages and reducing the rate of postage of fourth class mail matter.

Action will be taken by Attorney-General Wickersham, as the result of a report from Mayor Gaynor of New York, to put a stop to a practice of extortion in connection with the securing of naturalization papers.

Charles K. Hamilton last week in a Curtiss aeroplane flew from New York to Philadelphia, a distance of eighty-six miles, in one hour and fifty minutes; also making the return trip.

International.

The announcement that the Chinese throne has approved a recommendation decreeing English as the official language for scientific and technical education has aroused great interest in diplomatic and commercial circles at London.

The vice-president of the Canadian Pacific Railway Company has given the board of control the full details of the company's plan to build a million-dollar tunnel through Ottawa, connecting the Union and Central stations.

The Russian Duma has passed the Finnish bill, giving that body authority over the Finnish Diet. The vote on the third reading was 164 to 23. The measure has aroused intense bitterness in the Duchy.

The American consul in Harbin, Manchuria, has been instructed to notify Americans resident there that they must pay municipal taxes the same as do the Russians and the Chinese.

Industrial and Commercial.

Vice-Consul E. T. Heyn of Reichenberg reports that the spinning department of the Kaiser Franz Josef School of Textile Industry in Reichenberg is experimenting with the cleaned fiber of the nettle. By a new Austrian process the gum is extracted from the fiber of the plant, partly by mechanical and partly by chemical means. The experiment station at Brunn has succeeded in completely separating and spinning the fibers furnished, without destroying their tension or firmness. These experiments were made on knitting-yarn machines, and yarns were produced which, it is claimed, owing to their excellent qualities, can be used in various branches of weaving and knitting, in the production of furniture covers, blankets, tapestries, damasks, cloths, ribbons, laces, and underwear.

Efficiency tests are conducted by officials of the Pennsylvania railroad, who, at unusual times and places, set signals of caution or danger, display fusees, or place torpedoes on the track, with a view to keeping all employees constantly on the alert for signals. During the tests for 1909 the following records were made by the men: Block signal rules, 47,584, of which 99.6 per cent showed perfect observance on the part of the employees; 45,887 tests of rules governing flagmen, the use of fusees, torpedoes, and other signals, 97.6 per cent perfect. Altogether, some three hundred thousand efficiency tests showed a practically perfect record for the employees. During 1908 and 1909 only one passenger was killed on this road in an accident.

Development of power and the improvement of navigation of the Connecticut river between Hartford, Conn., and Springfield, Mass., are to be undertaken by the Northern Connecticut Power Company. The estimated cost of carrying out the plan is about four million five hundred thousand dollars. The company offers to meet the expense and to turn over to the United States Government without cost a completed lock to be maintained by the Government and to be always free from tolls. A conservative estimate of the power which could be profitably obtained is twenty-five thousand horse-power.

That a small coke deal recently announced has for its ultimate object control of the coke trade of the great Connellsville region has been revealed. A combination representing about forty million dollars and between six thousand and sixty-five hundred independent ovens is sought. There are fifteen hundred ovens so far in the combination effected.

Thousands of barrels of potatoes will be destroyed in northwestern New Brunswick and in several Maine villages. The low price, lack of demand, and decay of the tubers are some of the reasons why the produce of farmers living at points remote from railroad stations and starch factories will be thrown on the fields, buried, or burned.

The largest Portland cement plant in the world is now being built at Hudson, N. Y., for the Atlas Portland Cement Company. The property consists of 1530 acres. When the entire plant is finished it will have a productive capacity of over twenty thousand barrels daily or seven million barrels yearly.

It is estimated that the southwest Texas watermelon crop will reach the total of two million five hundred thousand. Over one half million of melons have already been shipped from irrigated farms, and it is expected that a million grown on dry lands will enter the market during the present month.

The United Shoe Machinery Company has voted to give its lessees a share in its profits by distributing among them stock purchased with a fund created by setting apart each year a percentage of the amount received from Goodyear royalties.

Thermostats are now installed by progressive fruit-growers in the West and Northwest which give warning when the temperature nears the frost line. Oil burners, of which there are several types, are then lighted and the temperature is raised sufficiently to save the crop.

The New York, New Haven & Hartford railroad has completed the cutting of a tunnel 3,850 feet in length on its line between Waterbury and Bristol, Conn., that cuts off a mile and a half in distance and a heavy grade.

It would require a bin a mile square and one hundred and seventy feet deep to hold the grain produced in the United States in an average year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE SPIRIT OF GIVING.

CLARENCE W. CHADWICK.

CHRISTIAN SCIENTISTS have been so bountifully blessed, physically, mentally, morally, and spiritually, that their gratitude finds spontaneous expression in giving, and, since gratitude is an enduring virtue, their giving does not cease. They no longer give from a stern sense of duty, but rather because it is a pleasure and a privilege to do so. It is no longer a question of giving "grudgingly, or of necessity," but liberally and freely; they give because they love to give. Giving becomes to them a recognized factor in the activity of righteousness, and they have no desire to lose sight of the God-given privilege thus afforded them.

Before the healing Christ-idea has entered individual consciousness it is doubtful whether there can be any true appreciation of the spirit of giving. The true Christ-healing severs the knotted cords of human selfishness and sets thought free to take of the things of God and to give them unto others. The advent of the spirit of giving marks the downfall in individual consciousness of "the love of money," the god of this world. This accounts for the cheerful and liberal giver in Christian Science,—he has lost that love of money which Paul declared to be "the root of all evil." He is learning to love God supremely and to seek first His spiritual kingdom. As the result of this spiritual reversal of the thoughts and ways of mankind, the student of Christian Science emerges from the thraldom of human limitations and finds out that God has indeed given him "richly all things to enjoy." He no longer doubts God's bountiful supply, but he trusts it implicitly to meet every human need.

The idea of the divine sufficiency supplants the illusions of human want and limitation, and the invariable result is an increase of mental, moral, and spiritual income. The greater the activity of right thought, the more abundant the influx of good things. Because human sense would place its own material construction upon the problem of supply and demand, this does not vitiate the divine law or order of the universe. The Christian Scientist has learned that God's arm is not shortened, and that the giver of all good will continue to care for His own throughout time and eternity. Instead of worrying about what may come to pass upon earth, he is content to meditate upon spiritual things, knowing that God and His ideas constitute the substance and reality of being. He strives to keep his consciousness filled with the ideas of a spiritual plenitude, and the activity of these ideas not only keeps him supplied with the acknowledged necessaries of life, but it finds expression in a constant spirit of giving.

Human selfishness is bereft of the metaphysical idea of spiritual reflection,—is ignorant of man's relationship to God,—and this ignorance fosters the human belief in matter, or "God in man," which leads mortals to think that their happiness lies in absorption, in taking in or receiving, rather than in giving forth. In shattering this idolatrous belief Christian Science makes plain to human understanding the true relationship of man to God, whereby man reflects the attributes of God but does not absorb them. Herein lies the metaphysical secret of giving in Christian Science, which enabled our Leader to say in Science and Health (p. 79), "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us."

To the Scientist this is no idle theory; it is demonstrable truth. The more he gives forth of truth and love, the more he receives from the open fount of being. In the words of Milton, "Good, the more communicated, more abundant grows." The more he expresses of truth and love, the more real to human consciousness become the attributes of God; until error or evil is crowded out of thought, and good only holds sway. Making use of one's talents simply means to reflect more and more of the divine nature, and not to attempt to absorb it nor to confine it within bounds. God expresses Himself only in reflection; the substance, essence, and nature of God cannot be absorbed, but they can be and are spiritually reflected. Man's only duty is, therefore, to reflect God. This was patent to the Master when he replied as follows to those who were censuring him for healing on the Sabbath day: "Verily, verily, I say unto you, The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise."

When this idea of spiritual reflection is grasped by the student of truth, he begins to surrender the thought of personal ownership and to look more upon God as the supreme owner of everything that really exists. As he learns more of man's relationship to God, he becomes more conscious of the spiritual fact expressed by Mrs. Eddy in "Miscellaneous Writings" (p. 183): "Whatever is possible to God, is possible to man *as God's reflection.*" It is this discernment of truth that enables him to become a giver in every sense of the word. The more he knows of God, the more inclined is he to share with others the good that he knows is his. Freely he has received, freely he gives. The law of Love being a law of reflection, if he ceases to give he ceases to receive.

Thousands of those who have arisen in our Wednesday evening meetings and recited their testimony of healing, tell of the added peace and joy and success that has come to them as the result of this simple act of obedience in giving forth what has been freely bestowed upon them. But some there are who selfishly withhold and unconsciously stifle the good that has been made manifest to them through healing. In other words, they bury their talent in the ground of selfishness and fear, only to awaken finally to the fact that the evidences of spiritual growth have been very meager in their cases. Another hindrance to normal growth in demonstration is the failure, under the plea of financial inability, to have for one's own use and for generous distribution the Christian Science periodicals, instead of grasping this opportunity of contributing to the cause of Truth. There have been hundreds of demonstrations in proof that the returns are a hundred-

Digitized by Google

fold to those who meet the subtle argument of limitation along these lines, and who act upon the conviction that this is an opportunity of seeking "first the kingdom of God, and his righteousness." Healing has often resulted from taking this step, despite the suggestions of sense testimony. He who gives first and liberally to the cause of Truth will first enter the kingdom of heaven on earth, because he will be the first to obey the law of reflection whereby man gives because, as God's likeness, he cannot help giving forth of God's unlimited goodness, mercy, and truth.

Truly, the habit of giving is a most worthy one to cultivate, but it must be accompanied by discretion, wisdom, and understanding. Christian Scientists have learned from experience that they do not have to respond to every demand that is made upon them for their money and their time. Their work is to do the bidding of divine wisdom. Truth and Love never lead them to give in such a way as to encourage slothfulness, selfishness, dishonesty, or poverty. Every gift received from God demands the giving up on the part of the recipient of some erroneous thought, belief, or habit. The giving that encourages the indulgence of human desires and ambitions will cease when the true meaning of self-denial is grasped and the love of Truth supersedes the love of money. Christian Scientists give liberally and continuously to further the activities of the Christian Science movement, knowing that the hand of God and not human personality is directing "the stately operations" (Science and Health, p. 464) of this Science.

The generosity that is making possible the erection and maintenance of substantial Christian Science churches throughout the civilized world affords a practical illustration of the spirit of intelligent giving on the part of a rapidly increasing body of Christian people, and the blessings which will accrue to the givers, as well as to the countless thousands of hungering mortals who may find refuge in these church homes and be led out of bondage into health and hapiness, cannot be reckoned in dollars and cents. The Christian Scientist who gives to the church does not feel that he is throwing away money, but that he is making an investment that will return to him an hundredfold. Nor does he consider the time or effort wasted which is spent in the preparation of a prayerful and scientific attitude of thought with which to be present at all church services. If he is radiating or reflecting health, holiness, and happiness upon such occasions, he is giving to the church that which the world with all of its wealth cannot give. It is this mental attitude which loosens up the purse-strings and leads so many people to give liberally of their money in support of the Christian Science movement.

"FORGETTING THOSE THINGS WHICH ARE BEHIND."

EDITH C. CARTER.

ST. PAUL'S profound knowledge of human nature is shown in many of his utterances, and, when viewed in the light of Christian Science, the phrase quoted above is one of his most remarkable and inclusive. The words occur in the epistle to the Philippians, in which St. Paul, with the love and humility resulting from persistent striving after good, reveals to the church at Philippi something of his methods of work.

In order to get a glimpse of what the thought here expressed may include for us, we must try to realize what this "forgetting" meant for the apostle himself. "A Pharisee, and the son of a Pharisee," well born, well educated, thoroughly grounded in the teachings of the Hebrew faith and keenly interested in his religion, he had to put behind him all the traditions, pride, aloofness of his race, and to rid himself of that innate reverence for forms and ceremonies which had hitherto seemed to form part of his being. Doubtless his adoption of Christianity also meant the severance of family ties and the sacrifice of position, possessions, and worldly ambition. Every consideration that, up to the time of his journey to Damascus, had seemed of supreme importance in life, had to yield to the spiritual illumination which showed these things in their true light. In addition to this, he had to free himself from the self-reproach which, as we gather from his epistles, frequently intruded itself upon him in connection with his bitter persecution of the Christians previous to his conversion. Recognizing the necessity for the complete obliteration of thoughts such as these, the apostle begins his description of the steps essential to progress with the words, "Forgetting those things which are behind."

Every student of Christian Science must some time awake to the necessity for this forgetting, and attain to a certain understanding of what it means. It means giving up one's former cherished ideals of goodness, happiness, success, etc., and replacing them with ideals which may entail a total change of method and aim. It includes the active desire to understand that there is not in truth, and never has been, a past filled with the belief of fears, sorrows, mistakes, and failures, and requires the individual appropriation of the fact that memory is only the ever-present consciousness of good. It also requires us to free ourselves from the half contemptuous credence we have hitherto given to trivial superstitions, and to offer a determined resistance to the temptation to allow time-honored false beliefs and misconceptions to clog that activity which leads to expansion of thought and spiritual understanding. Only as we are obedient to the above requirements shall we be at liberty to grasp those spiritual realities which will satisfy, with unvarying certainty, every aspiration of our purified sense.

The tendency to rehearse frequently and unnecessarily the record of physical or other troubles overcome through Christian Science, indicates that the belief in their reality in the past has not yet been thoroughly eradicated. A student of Christian Science told the writer that as a beginner, thinking to show her gratitude, she used constantly to relate her experiences, even to people who seemed to take only a cursory interest in Christian Science. She quickly realized, however, that this was unwise; and having seen her mistake, she corrected it. She grew to the understanding that we are not ungrateful, but rather prove the depth and genuineness of our gratitude, when we attain to the spiritual discernment which claims the ever-present harmony of being as the only reality that exists or ever has existed. Jesus said, "Follow me; and let the dead bury their dead," and Mrs. Eddy emphasizes this teaching when she says, "Gladness to leave the false landmarks and joy to see them disappear,—this disposition helps to precipatate the ultimate harmony" (Science and Health, p. 324). The discordant conditions we believed in yesterday were illusions, and as such never were nor could be the cause of the sorrow, sin, sickness, or death of today. Moreover, there is only one cause or creator, God, who creates only good.

In Science and Health, on page 407, the marginal note "Immortal memory" is explained by these words, "Let the perfect model be present in your thoughts instead of its demoralized opposite." When this teaching is followed continually and consistently we shall find that the unrealities of imperfection are truly forgotten. The demands of Love to each individual are measured by his understanding of Truth, therefore when the necessity for this "forgetting" is individually realized, it is because the time has come when obedience is possible. It is an ever increasing source of help and comfort to remember that every divine command carries with it the power of absolute and unfeigned obedience, here and now. As the young

Digitized by Google

sapling in the forest reaches out and upward to the light, and because it does so grows into the stately tree, it leaves behind it the tangle of undergrowth and weeds that would have choked its development. In the same way we must reach up toward the vitalizing light of Love, and leave behind us the clinging tangle of false beliefs of pain and pleasure in matter, so that they may no longer seem to cast their shadows on the joy and perfection of true being.

We need have no fear that this work of forgetting can for one instant cause a sense of loss, for it simply proves the truth of our Leader's words when she says, "It is impossible that man should lose aught that is real, when God is all and eternally his" (*Ibid.*, p. 302).

SOWING "BESIDE ALL WATERS."

F. H. PARDOE.

In humble gratitude for a new understanding of God as only good, and for many personal healings and other blessings, I add this statement of what even a slight understanding of Christian Science has accomplished, in the hope that it may help to establish the reign of peace and harmony in some other home.

About the first of February, 1909, while on a railway train between my home city and a small town where my business takes me every few days, I saw a boy of fourteen years carrying his sister of six years, who was badly deformed and seemed very ill. Their appearance suggested misery and abject poverty, and there were few dry eyes in the car as I made inquiry regarding them and learned that their home was on rented land out from a neighboring town, and the mother a widow with seven children. It seemed that they were in very reduced circumstances, but a relative in Milwaukee had furnished a small amount of money to help the mother to try a certain treatment in my home city for this little girl.

I learned later that this trip was the last they expected to make, as the money had been exhausted, but not knowing it at the time, the next day I sent an employee to their home with clothing, that the child might be more warmly clad. He reported her condition as "very bad;" that the doctor had been there just before him, and had said on leaving that the child had but a short time to live. About a week later, however, learning that she was still living, I went to see her, accompanied by the employee before referred to. We took with us other bodily comforts, remembering Mrs. Eddy's statement on page eight of our text-book, "If we turn away from the poor, we are not ready to receive the reward of Him who blesses the poor." We found the child as she had lain for several days, having had one nervous spasm after another, but she did not have any more for over three months after that visit, and then only infrequently for a day or two.

As I assured this little sufferer that God never made any one sick, that He did not want her to be sick, but that He did want her to be well, it was like a burst of sunshine to her, and her face became illumined with the "radiance of Soul" (Science and Health, p. 247). I had studied Science and Health with the Bible for about four years, but had not received class instruction and was afraid I had not sufficient understanding to go on with the work. In a few days, however, I had an opportunity to talk the experience over with one of Mrs. Eddy's students in an adjoining state, and she pointed so clearly to God and His work that I was willing to trust to Him and continue to help the child.

Each visit to her finds some improvement, but, owing to the eleven-mile drive at each trip, I have not been able to see her more than once every four or five weeks, and it has often been difficult to understand or to be understood, as the mother speaks but little English and the children imperfectly. Together with this help, there has come to the child the perfect healing of an aggravated bowel disorder. Recently I met, for the first time since taking up the work for her, the kind-hearted physician who had despaired of her life and who also was present when she was operated on prior to 1909. He had heard of the help she was receiving, and (unsolicited) informed me of his surprise at her healing, and also told me of the operation which she had undergone. He said that the doctors had found a large abnormal growth back of her brain, but had decided it was not safe to remove it, although they felt sure that this growth would permanently prevent the development of the left side of her body.

When my friends tell me they are opposed to Mrs. Eddy and to Christian Science, my reply is that they are only opposed to that of which they think her work and Christian Science consists; while we who have received the blessing of Christian Science, exclaim with the psalmist, "Who is so great a God as our God!"

[The statement which follows is from Mrs. Augusta Flieht, Edgar, Wis., the mother of the child mentioned above, and is translated from the German.—Editor.]

It is with a grateful heart that I wish to tell in a few words what Christian Science has done for my little daughter. Although she had been under medical treatment for several years, it all was in vain. An operation was performed, but the condition did not improve; it grew worse, the physicians claiming that a growth had formed in the brain. The whole left side was paralyzed, and the left leg was several inches shorter than the other and distorted. The left arm, too, was twisted around. Then she met a Christian Scientist on the train on her way home from the physician's. A few days later this Scientist came to see us, and talked to us about Christian Science; and since that hour my child has been improving. The leg which was shorter and twisted around has got into its natural position, and is now not over half an inch shorter than the other. She has been attending school half a mile away, since September, and although it seemed hard for her to learn at first, she now understands pretty well. She plays with the other children at school, and takes an active interest in all that is going on. In view of the great improvement which has taken place, we believe that she will be restored within a short time, and we are very thankful to God for all the good that has come to us through Christian Science.

UNITY WITH THE READERS.

THEODORE D. WARREN.

In the book of Isaiah there appears a prophecy of the mission and message of the Readers in the Christian Science churches, and of the Scriptural selections, the Lesson-Sermon, and the hymns of devout meditation and scientific declaration, which unite to voice that glorious message to mankind: "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!" This proclamation of the divine supremacy, or "the allness of Soul, Spirit, and the nothingness of matter" (Science and Health, p. 497), breaks the dream and spell of animal magnetism, inspires Christian faith and practice, and is the key-note of scientific understanding and demonstration. When the truth first spoken by Christ Jesus and revoiced in Christian Science possesses the consciousness of the Readers and reaches the thought of the congregation, it cannot fail to

Digitized by Google

instruct, to uplift, to "draw all men;" it must and does feed, heal, and save.

The Christian Scientist away from home on Sunday or Wednesday turns glad footsteps to the local Christian Science church, there to hear again the "good tidings," the message of peace and salvation, "Thy God reigneth!" Often has the heart of the traveling or visiting Scientist been cheered and blessed to find in some quiet, out-of-the-way country village a reverent, tender, appreciative reading of the Bible, of Science and Health, and which came, as one of our hymns expresses it,

> Out from a heart that burned to break
> The fetters of the world.

And if this comforting experience is so frequent, if Readers are so generously qualified for their work by conscientious and industrious spiritual preparation, the congregations are not deprived, even at the Wednesday evening meeting, of the possible privilege of sharing in the motive, the method, and the demonstration of the Reader. We are indeed uninformed in advance what particular aspect of Truth is to be presented in the reading from the pulpit, we do not know which of the ten thousand facets of the "stone most precious" is to furnish for the occasion the illumination in which we shall see light; yet we can know that we shall see "the true Light, which lighteth every man that cometh into the world," and hear Truth's message, which annihilates the false belief in any other power or Mind, and saith unto Zion, "Thy God reigneth!"

If the occupants of the pews are inspired with a large expectancy of God's abounding grace to men, knowing that the "Spirit of truth" is present to "teach you all things," to "guide you into all truth," as St. John says, this understanding will help the pulpit, and the Reader will be found a bringer of good tidings, a publisher of salvation, a herald of the kingdom of God. Then the assembled worshipers may indeed sing with the psalmist, "Arise, O Lord, into thy rest; thou, and the ark of thy strength. Let thy priests be clothed with righteousness; and let thy saints shout for joy." "Blessed be he that cometh in the name of the Lord: we have blessed you out of the house of the Lord."

And what are the mountains that are thus trodden by the messenger of Truth at our Sunday and Wednesday services? A few of them are, Horeb, the mount of revelation of God and of His name I AM, His "memorial unto all generations;" Sinai, where God spake the Ten Commandments; Pisgah, whence Moses viewed the future inheritance of the children of Israel; the unidentified mountain of gospel teaching, where Jesus "opened his mouth, and taught them" the beatitudes, the Lord's Prayer, and all the precepts of that wonderful sermon on the mount; Hermon, the mount of transfiguration, where Jesus recalled Moses and Elijah from beyond the graves that never had held them, and communed with them of the future of his own mission; Calvary, the mount of crucifixion, and Olivet, the mount of ascension, where Jesus demonstrated over death, and finally over matter, and completed his atoning work, "unfolding man's unity with God through Christ Jesus the "Wayshower" (*Ibid.*, p. 497).

Mrs. Eddy, our loved and revered Leader, has scaled these spiritual heights, that by following Christ she might understand God—for herself and for suffering humanity. The Christian Science churches which she has planted in all lands are helping her to publish to mankind the "good tidings" that sin, sickness, death, conflict, limitation, failure, are not a permanent condition or outcome of human experience, nor any part of man's true being, because divine Love, ever present and omnipotent, reigneth. As the official Readers voice this gospel of Love, all may help them by knowing that the message from the mountain-tops is not a production of the human mind, but is the Word of God, creative, life-giving, light-bestowing, the Word which "was made flesh," bringing to all nations the everlasting reign of joy and peace.

"GOD IS LOVE."

SARA FEILCHENFELD.

THE beginner in Christian Science is always deeply impressed by the new sense which he has gained of the apostle's declaration that "God is love;" and even though he does not at once grasp its full import, there is to the one bowed down by trouble great comfort and assurance in these few and simple words. In two instances the writer experienced in a wonderful way the truth expressed by this statement.

A misunderstanding had sprung up between two brothers, which had gradually developed into a condition of enmity, and this continued for several years. The brothers were in different cities, but the time came for the return of one to his home town. The family had been greatly troubled by this discord, and were disturbed about the meeting of the brothers. I, however, knew that "God is love," and that "love thinketh no evil," and man, as God's image and likeness, has no sense of hate or resentment, no thought of evil in him whatsoever. It was then proved that Love is truly "the liberator" (Science and Health, p. 225), for without even an unpleasant word the brothers met, the aggrieved one going to the other's home unasked, and acting as though no discord had ever existed; which was the truth in reality, or it never could have been manifested. The natural way in which it all came about, together with the absence of anxiety on the part of the family, was very beautiful, and after it was all over no one seemed to be even surprised. It was but a repetition of the experience of those who went to roll away the stone at the Master's sepulcher, and found that their fears had been groundless—the "very great" stone having already been removed before their arrival.

The second instance was one of the healing of disease through the realization of the truth of this same statement, "God is love." One evening a friend sent a message, saying that she was suffering from an attack of heart trouble, to which she had been subject for many years. She had just taken up the study of Christian Science, and now asked for help. At first a troubled feeling came over me at the thought of her being alone in that apparently helpless condition. Then it flashed through my mind that God was there, and that God is Love, infinitely more tender, more helpful, more powerful than any human parent, brother, or sister. What the human hand and human love could not do, God, infinite Love, could and would do for His child. As our dear Leader says (Science and Health, p. 6), "'God is Love.' More than this we cannot ask, higher we cannot look, farther we cannot go." My fear at once disappeared, and the next day I received word that this friend was well and about her work.

Surely "God is Love," and "Love never faileth." As our poet and coworker says,—

> For God is the infinite Mother,
> Who hath borne and carried us all;
> Who broods above with a tender love,
> Aware of our faintest call.

[Written for the *Sentinel.*]

MINISTRY.

GERTRUDE RING HOMANS.

MYRIAD dancing drops of diamond dew
Drench the sweet meadow grass at early morn;
But only one, perhaps, sends back to you
The wealth of color in its pure heart born.

Such one may be the lowliest, far away
Seeking in shame of its small worth to hide.
Take courage! From you Love's reflected ray
May shine to him who sees no gleam beside.

SELECTED ARTICLES.

[Frederick Dixon in *Health Record*, London.]

In the very fair notice of Mr. Paget's book in your current issue you say truly that, in spite of his skepticism, Christian Science workers do heal the sick, and that it would be more in accordance with common sense to try to find out how they accomplish these cures than to harp upon their failures. Will you allow me a little space in which to attempt to show that medical science, tested by Mr. Paget's standard, would be in precisely the same position as that to which he tries to relegate Christian Science, and also to explain the unsoundness of the evidence on which he has based his statistics of Christian Science failures.

Mr. Paget has tabulated a considerable number of cases, in some of which he claims that he has shown the insufficiency of the evidence of Christian Science healing, and in others the disastrous effects incidental to it. The value of this evidence is illustrated by the fact that nearly all his examples are given without any corroboration whatever, and with scarcely a single indication which would enable anybody to test the truth of one of them. He might have sat down and written them out of his own head for all the proof he has advanced in their support. In a very few instances in which he has afforded any clue, his information has proved to be valueless and his conclusions incorrect. Let me take a single case as an example. He gives the case of a child who fell from a window, and he goes at some length into the horror of treating this child in Christian Science instead of having it treated by an ordinary doctor. At this point he breaks off the recital, instead of carrying on the story to its natural conclusion, which explains that the child was healed, without any surgical aid, in an incredibly short space of time. In giving these cases Mr. Paget has stated that they have been taken consecutively from the Christian Science publications. It can only be said that Mr. Paget's definition of consecutive is scarcely that of the man in the street. The man in the street would, it is to be suspected, have described them as selected. The difference is considerable, and is itself the strongest proof of the weakness of Mr. Paget's argument. Even, however, if every instance could be substantiated, it would do nothing to make good his argument. He understands, it is to be presumed, the meaning of begging the question, and it is distinctly begging the question to assume that there would have been less pain and less death if, accepting his facts as genuine, the cases he alludes to had been treated in an ordinary way. As a matter of fact, an enormous number of cases treated in Christian Science never come into the hands of Christian Scientists until they have been given up as hopeless by the doctors in charge of them. Mr. Paget knows perfectly well the truth about the physical diagnosis of disease. He knows that thirty-one hundred and eleven cases of mistaken diagnosis were admitted to the isolation hospitals of the metropolitan asylums board in the course of one year, and that this is the merest fraction of the cases of wrong diagnosis in the metropolitan area. Some time ago, when I pointed this out to him, and specifically alluded to the fact that these thirty-one hundred and eleven cases were only those admitted by the asylums board, he replied by saying that, divided up among the metropolitan doctors, this worked out to less than half a mistake per annum each. He has evidently the mildest opinion of the intelligence of his readers. It is to be suspected that if the number of patients sent to the isolation hospitals by every metropolitan doctor was subtracted from the number of cases diagnosed by him in a year, it would not amount to more than half a per cent of his practice.

It would be interesting to know—only, unfortunately, it is impossible—what the total number of wrong diagnoses in the metropolitan area really does amount to. Even if we knew this, innumerable other questions would remain to be asked. Sir Victor Horsley, for instance, has admitted that if there were inquests on all the patients who die after operations there would be ten thousand of these inquests in London in a year. It is not surprising that there is in some quarters a desire to limit the coroner's authority. The existence of these cases is none the less a fact, which may help to account for the statement of Sir Almroth Wright that the method of extirpating microbes by the knife would be finally given up. The same speaker declared that it was useless to look to drugs to kill microbes in the interior of the body—a remark which seems like a belated affirmation of the pronouncement of Dr. Mason Good that the effects of medicine on the human system are in the highest degree uncertain, except, indeed, that it has already destroyed more lives than war, pestilence, and famine, all combined. Considering these things, it is a little unreasonable of the medical opponents of Christian Science to be sure that they are right, and Christian Scientists, at the best, threatened, in Mr. Paget's pleasing phrase, with downright madness.

The fact is that Mr. Paget calmly assumes that treatment of the sick which differs so completely from that which he professes as does Christian Science, must of necessity be wrong. As I have repeatedly pointed out to him, this is the exact attitude which the allopathic school adopted toward homeopathy, and we know the result. It is, indeed, the exact attitude which a great medical paper once adopted, with equal scorn, toward the stethoscope, yet now we have Mr. Paget making it a specific charge against Christian Scientists that they do not listen to people's chests. Christian Science teaches, if I may tell Mr. Paget so once more, that phenomena must be explained on an idealistic instead of on a materialistic basis. It teaches that disease, whether functional or organic, is produced mentally, and to be destroyed must have its mental cause destroyed. To discover that mental cause Christian Scientists certainly do not listen to a patient's chest, or take his temperature, or even look at a piece of him through a microscope. They do not so much as operate on a phenomenon by way of influencing the noumenon. They devote themselves patiently to discovering the mental cause, and then to destroying it mentally. Mr. Paget is so sure that causation is physical that he cannot conceive that anything is being done for a patient unless he is being sounded or having his temperature taken. That is precisely why he has said that prayer cannot reach the cells of the liver. What he imagines he would prove, even if he could show that two hundred thousand people had died under Christian Science treatment, it is impossible to say. Millions are dying every year under orthodox medical treatment. Only a short time ago the papers published a pronouncement of Dr. Paget to the effect that "there is such a mania for the removal of the appendix on the part of all classes, and such desperate anxiety on the part of many surgeons to meet their patients half way, that nothing except the intervention of criminal law will prove effective in reducing the wholesale slaughter." It would be possible to collect such evidence in unlimited quantities if there was anything to be gained by it, and the day may come when there will be something to be gained by it. Christian Scientists, however, prefer to devote their time to attempting to overcome sorrow and sickness and sin, rather than to an attempt to make the lives of their neighbors a "burden" to them, in accordance with the suggestion of Mr. Paget, for doing their best according to their own light.

Mr. Paget objects that Christian Scientists make too much of healing, but Christian Scientists are in little peril of doing this so long as they accept Christ Jesus as the way. He saw the helpless misery of the world, and he strove to lift its burden from it. With gentle patience

he taught the people in the little towns and villages through which he passed, some of the deep spiritual truths which his own purity had made clear to him; but when he saw that their materiality was incapable of grasping his meaning, he gave to them the signs he had withheld from the Pharisees. Jesus is the way; but in order to walk in that way it is necessary to strive to follow him in all that he did, and it is this which makes the healing of Christian Science the sign to this age that the healing power of the Christ is as present today as in the days in which he lived.

[Alfred Farlow in *Boston Post.*]

It has been recently reported in the daily papers that Dr. F. H. Packard in an address before the Harvard Medical College said that "numbers of individuals, probably naturally of somewhat unstable mental make-up," are totally upset mentally through their efforts to understand and practise "Christian Science and other unscientific things." I am glad the gentleman qualified his remarks by the term "and other unscientific things." I have watched the effect of Christian Science for many years, during which time I have come in contact with many persons more or less "unstable" mentally, who have been entirely healed by Christian Science and who are well and happy today; but in all that time I have not known of a single instance where it could be said that the derangement of the individual had been produced or precipitated by Christian Science.

It is not at all unlikely that some persons in weak mental condition, who have turned to Christian Science, as is intimated by Dr. Packard, have not been faithful to Christian Science, but have mixed it up with "other" and with "unscientific" things. Knowing the wholesome influence of Christian Science, and the danger of those mental methods of treatment which are more or less hypnotic and more or less dependent upon human will, I have unbounded confidence in Christian Science as a remedy for insanity, although I would not be willing to vouch for the safety of those who have a mixture of mental theories. I am glad that Dr. Packard qualified his statement concerning the cases which have come under his observation by the phrase "probably naturally of somewhat unstable mental make-up." It is decidedly unfair to credit the growing dementia of persons who have been partially insane for years to Christian Science, simply because in their extremity some of them have turned to Christian Science and in their insane moments have talked about it. It is not unusual for an insane person to talk on the newest or latest thing that possesses his mind.

One might make too hard work of anything, but it is not the problem over which he wrestles, nor is it necessarily the wrestling; it is the needless worry of the student which burdens him. A patient of a Christian Scientist is usually instructed how to keep out of worry, and usually makes rapid recovery from his strained mental condition. I dare say that if Dr. Packard had a patient who grew worse under his treatment, he would be loath to say that his treatment had caused it. There are thousands of insane persons who have grown worse, and many of them "precipitately" worse, under medical treatment. To be consistent Dr. Packard should attribute such insanity to medical treatment, in order to show the comparative value of Christian Science. There is no more evidence to prove that insane folks who have experimented with Christian Science have been made insane thereby than there is to prove that the growing disease of a person under medical care has been precipitated by medicine. One is not justified in drawing such illogical conclusions.

It is quite true that persons worry themselves into insanity over hard problems, but it is also true that the world in general is constantly wrestling with difficult propositions. It is not the proposition which injures them, but the worry which they permit to accompany their strivings. It is quite evident that the understanding that God is Love, which furnishes the basis for every idea of Christian Science, could never worry any one into insanity. Otherwise it would become the duty of Christendom to remove immediately the Bible from the hands of all persons of "unstable mental make-up." In any event, it may be said that there are thousands of persons in this country who bear testimony to the benign influence of this Science as a wholesome mental influence.

[James D. Sherwood in *Eagle Pass* (Tex.) *News-Guide.*]

Mrs. Eddy is the Discoverer of that which always existed, of that which is as old as God, but which had been lost sight of and hence had to be reinstated in order that all might have a demonstrable understanding of God and be enabled to work out their salvation in the way Christ Jesus taught. This divine Science, this Science of spiritual being, is the same that Jesus taught; and the works that he did are being repeated today.

In his day Christ Jesus was not understood by the materialist. His teaching and his works were misinterpreted, and he was misjudged by his opponents. History repeats itself. Certain qualities of mind will in the twentieth century be found repeating the practices of former centuries. As the chief persecutor of the followers of the lowly Jesus became afterward a great light in the realm of Christian ministry, so will many who today misunderstand and misrepresent Christian Science and Christian Scientists, become active workers in the vineyard of Mind, sowing and reaping when the dense clouds roll away and this Science is understood to be the very word of God, coming with healing in its wings.

A proper understanding of God as infinite good reveals the claims of evil as an emanation of the Adam-dream, and he is wisely wise who can and does so magnify his consciousness of omnipresent good as to be able to keep the First Commandment, and thus prove the powerlessness of evil by stripping it of all pretense of attractiveness as sin, or of power as disease. St. Paul says, "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?"

Christian Scientists are endeavoring to follow in the footsteps of the Master, and to furnish the proof of their position by their works of healing, for many of them have learned from sad experience that "faith without works is dead."

[E. M. Ramsay in *Catholic Herald*, Edinburgh, Scot.]

I am myself convinced that when I at last attain to the full consciousness of truth which men call heaven, I shall find there among the men of other lands and other faiths whom I have loved and honored, Socrates and Francis Xavier. Christian Science holds as strongly as does the church to which you belong that there is but one Truth, one Christ, one way of salvation, but it also teaches that the wrong roads of doctrine and practice will eventually be found to be "No thoroughfare," and that even those who try the ninety-nine roads which lead nowhere will at last find the right one, and leaving behind them all that was of this earth, earthy—sorrow, prejudice, sin, and shame—enter the strait gate which leads to eternal life.

Shall we not better promote the interests of truth by leaving other people alone, while we show forth by the beauty and peace of our own lives that we indeed worship the King eternal, immortal, invisible, whose name and nature is Love? Can we not trust that truth will eventually triumph, and God's will be done on earth as in heaven?

[Charles K. Skinner in *Battle Creek* (Mich.) *Enquirer.*]

In its February issue *Good Health* has seen fit to make some very radical statements regarding Christian Science, in connection with an article by an English doctor, taken from a New York magazine. We hope the writer was conscientious in his position. We would like to believe that his misstatements regarding Christian Science sprang from the head and not the heart. We are told that "the grave fault with Christian Science is, that it deceives and misleads men and women as to their ailments, by destroying their faith in rational [material] remedies," etc.

The most superficial observation and inquiry would show that the patient usually comes to the Christian Science practitioner after all his hope has vanished under the care of the doctor. What he does bring is a woebegone countenance and a list of diagnoses, shorter or longer, in accord with the number of doctors who have failed to reach his case. The Christian Scientist by no means ignores the diagnosis of the doctor from the material standpoint, but goes to work to relieve just what the patient believes troubles him, but he does so from the understanding that all discords, functional, organic, and nervous, are primarily mental. He insists on care, comfort, wholesome food, fresh air, cleanliness, and above all, cheerfulness. His main point of difference from the material doctor is that he believes in the omnipotence of God to heal "all our diseases," even as the Scriptures declare, instead of pinning his faith to inert drugs and the operating-table.

The doctor to whom *Good Health* refers, says he sent out a drag-net in England for failures in Christian Science, and seemingly not being satisfied with the results, sent to this country for more; and he tells us that he "got in all a long list of killed and wounded." He forgot to mention, however, that most of the people in his "list" had failed to realize any help under medical treatment before they applied to Christian Science. Another point which he overlooked, in his haste, is that according to statistics fifty millions of people on this sphere die every year, more than one hundred and forty thousand each day, and a very large proportion of them under the very treatment the doctor advocates.

A singular incident in connection with the doctor's drag-net is the fact that a physician in Boston to whom he applied for "failures" gave three cases, but on being asked by a Christian Scientist for the names and addresses of the patients for verification of the statements, he refused pointblank to give them. In no instance does the critic or his contemporaries supply any proofs of their bald assertions against Christian Science treatment. Thousands of mothers stand ready to testify that their children have fared better both in health and sickness under the care of Christian Science, than under drugs, one of the strong points in its favor being the prevention of sickness.

The doctor goes on with a list of mistakes which he charges to Christian Science treatment, but as usual with no proofs. On the contrary, were Christian Scientists to publish a list of mistaken diagnoses and failures in medical treatment, which have come under their direct observation, the statement might prove startling.

[John L. Rendall in *Gate City*, Keokuk, Ia.]

Christian Science is, as its title indicates, the Science of Christianity, and it is both Christian and scientific,—Christian, because it accepts and emphasizes the teachings of Jesus Christ, and scientific because it is "an orderly arrangement of ascertained truths" regarding the Christian religion and with reference to God, to man, and to the universe. There is not one statement contained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, but is consistent with the Bible and with right reason. The attempt upon the part of this critic to prove that Christian Science is pantheistic indicates considerable misconception of the nature and character of both pantheism and Christian Science. The statement as given in Science and Health, "God is All-in-all" (p. 113), is correlative with the statement in Isaiah xlv. 5, "I am the Lord, and there is none else;" and with verse 22, "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else."

The Christian Science teaching is that "God is Spirit." This coincides with Scripture. God's creation is therefore spiritual, perfect, complete, indestructible, and this is also according to the Scriptures. God being Spirit is infinite, for Spirit is infinite, therefore He cannot be "personal" in the anthropomorphic definition of person, but he is the one infinite personality which governs and controls the universe and man. Our critic says, "Mrs. Eddy denies that God is almighty, for she says that He cannot produce matter." This criticism is untenable, even in the light of natural science teachings. Professor Ostwald of the University of Leipsic states: "Matter is a thing of thought which we have constructed for ourselves rather imperfectly to represent what is permanent in the change of phenomena." The difficulty is all in the view-point. Christian Scientists do not deny the reality of God's creation, but they consistently affirm that all reality is spiritual, perfect, complete. This coincides with St. Paul's statement, "The things which are seen are temporal, but the things which are not seen are eternal."

Our critic quotes from the Apochryphal Bible in support of his contention that God created and intended the use of medicines. This is not the accepted canon of Scripture, but following his lead I also will quote from the wisdom of Solomon: "For it was neither herb nor mollifying plaster that restored them; but thy word, O Lord, which healeth all things." The experience of King Asa as recorded in 2 Chronicles is also quite significant: "And Asa in the thirty and ninth year of his reign was diseased in his feet, until his disease was exceeding great: yet in his disease he sought not to the Lord, but to the physicians. And Asa slept with his fathers."

That Christian Science heals is so thoroughly established that it is no longer an open question. It has never been denied that there have been some apparent failures to heal, due to imperfect knowledge of Christian Science, but the vast preponderance is on the side of accomplished results.

[George Shaw Cook in *Waukegan* (Ill.) *Gazette.*]

In a recent issue of your paper an evangelist is reported to have said that "the Christian Science church is not a Christian church." While persons of differing creeds might not agree as to what constitutes a Christian, there is a definition which was given by the Master to be found in the 12th verse of the 14th chapter of John's Gospel: "He that believeth on me, the works that I do shall he do also." When Christ Jesus left this standard by which his followers should be judged, he did not qualify his statements as to time or place; it referred to all his followers in all time. It therefore follows that professed Christians of today must be measured by the Christ-standard, and if they are not doing or trying to do the works which Jesus did, what right have they to call themselves Christian?

Christ Jesus healed sickness, as well as sin, through the power of God and without the use of material remedies. Christian Science teaches that it is possible for the same works to be done in the same way now. This teaching is enabling Christian Scientists to heal sickness through spiritual power without the use of material means, thereby demonstrating their right to be known as Christians. They do not claim yet to have equaled the works of the early Christians, but they are gradually attaining thereto and they believe that with increased spirituality and goodness more success in healing will be acquired.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"THEM THAT BELIEVE."

It is a notable fact that after Jesus had promised his followers that certain signs should "follow them that believe," these same followers "went forth, and preached every where, the Lord working with them, and confirming the word with signs following." Thus was the truth of our Master's teachings immediately made manifest, and the seal of actual demonstration placed upon the works of those who, however timidly they may have undertaken this work, nevertheless believed in the healing power of the truth which had been preached to them and exemplified in their sight.

As has often been pointed out, this promise to "them that believe" was not restricted to those few who then listened to the Master's words, but it was given for all time and for all peoples. That many have interpreted Jesus' words in the limited sense of applying only to those of his immediate following is to be regretted, but fortunately for the early Christians this belief had not gained headway in their time, and it is a matter of historical record that the healing work which accompanied the founding of Christianity was successfully practised by them, even to the raising of the dead. Origen, who lived in the first half of the third century and was one of the fathers of the Alexandrian Greek church, thus writes of the works of the Christians of his time:—

"And the name of Jesus can still remove distractions from the minds of men, and expel demons, and also take away diseases; and produce a marvelous meekness of spirit and complete change of character, and a humanity and goodness and gentleness in those individuals who do not feign themselves to be Christians for the sake of subsistence or the supply of any mortal wants, but who have honestly accepted the doctrine concerning God and Christ, and the judgment to come."

Just how and why professing Christians drifted into the belief that disease is something which can be healed only by material remedies, it is not our purpose to explain at this time, but rather to emphasize by the example of Jesus, of the apostles, and of the early Christians, that primitive Christianity was not established upon such a theory, and that the acts of the apostles and of the Christian fathers were not based upon such a misunderstanding of our Master's teachings and works.

The need of the world today is to know that the only unfailingly efficacious system of healing is the one which Christ Jesus employed and commended to "them that believe," and that this system was not the administration of material remedies, but rather the understanding of God and man's relation to Him. This understanding of God which healed the sick in the early centuries of Christianity, and which was lost to the world through the gross materiality of the people, has been restored to mankind through Christian Science as rediscovered by Mrs. Eddy and set forth in her book Science and Health, wherein she says, speaking of the mission of this teaching: "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (p. 150).

That many are learning through her work that drugs and surgery are not necessary to the health of mankind, and that sickness as well as sin is still amenable to spiritual truth, is encouraging; but the good work of demonstrating the healing power of Christian Science must go on, and Christian Scientists must continue to "'work—work—work—watch and pray'" (Messages to The Mother Church, p. 20), if the race is to be redeemed.

ARCHIBALD MCLELLAN.

AWARENESS OF OUR ENEMY.

The history of nations and of men pictures many a defeat which was directly due to avoidable ignorance regarding the character of the enemy and his point of attack. It may be difficult sometimes to "spy out" the opposing forces, but a wise commander will do his best to accomplish this, and failing in his efforts, he will endeavor to provide for any situation that may possibly present itself.

Seeking to equip his disciples for the struggle before them and their cause, Christ Jesus said much to them of the nature of evil and its assaults, and in a similar way St. Paul sought to save the early Christians from mistakes that might grow out of a failure to apprehend the character and presentment of their enemies. Thus, when writing to the Ephesians, he counseled them that they be fully awake to "the wiles of the devil;" for, said he, "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places."

This matter of alertness to the claims of evil, its true inwardness and outcome in human belief, receives an emphasis in Christian Science which to many seems quite out of harmony with its fundamental teaching respecting the nothingness of evil. These good people would not be tempted to ridicule, however, by the fact that a teacher made himself familiar with the false point of view which was hindering the progress of his pupil, and no more should they criticize Scientists because of their endeavor to be awake to the presence and procedure of false belief, that they may be prepared to checkmate its every move.

Christian Science makes clear the all-important distinction between the fear of evil which expresses itself in nervousness and superstition, and from which the knowing of the truth is to set men free, and that alertness to the claims of evil which enables one to ward off its stroke and resist its appeal. Christ Jesus defines that which is opposed to Truth, to God, as a lie and a liar, unadulterated falsity, and this teaching of the Master at once and forever settles it that every effort to do away with evil by any means that strikes at its material or personal avenue of expression can but fail, and that utterly. The world's redemption is a question of education and spiritual illumination. There must be a righting of thought respecting God and man, through the coming of Christ, Truth, and "there is none other name . . . whereby we must be saved."

The theological teaching of the past, and largely of the present, has identified evil with malicious personality, a devil, and with that "law of nature," so called, which is blindly indifferent to all right and justice. Christian Science identifies it with nothing save false belief, "the darkness of this world" as Paul puts it, and denies it all personality whatsoever. Furthermore, Christian Science centers our thought upon the far-reaching fact that, however multiplied the antagonisms embraced in that generalization known to Scientists as mortal mind, our struggle has to do with just so much of this falsity as we have been born into or have willingly admitted to our mental household, so that the whole problem is narrowed down for each

Digitized by Google

individual to the acquisition and maintenance of spiritual understanding, "a conscience void of offense toward God."

In her "Miscellaneous Writings" (p. 10), Mrs. Eddy says, "Even in belief you have but one [enemy] (that, not in reality), and this one enemy is yourself—your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science." This locates all our warfare within the confines of our own thought. Here the enemies of Truth and Love are entrenched, and here in the spirit of humbleness every true Christian Scientist is fighting "the good fight of faith."

JOHN B. WILLIS.

THE IDEAL CITY.

AN extremely interesting article appeared on the Home Forum page of *The Christian Science Monitor* of June 9, entitled, "The Garden Cities of England." A brief description was given of two of these cities, both of which have sprung up within a few years, from which it would seem that the conditions there existing are practically ideal, so far as outward things can express ideal conditions. What would perhaps most impress the student of Christian Science is the fact that a quarter of a century ago these conditions would have been thought impossible of realization: but, in spite of the wide prevalence of such belief, these cities have been established, and others are springing up under the noble impulse to make each of them better than its predecessors,—in other words, to appropriate what is seen to be best in the experiences of the others and avoid possible mistakes. We are accustomed to think of England as an overcrowded country, and yet we read that in these new cities ample provision is made for gardens, playgrounds, and parks, reminding us that "the earth is the Lord's, and the fulness thereof," and that none of His children's needs are unprovided for.

In reading about these cities, one is reminded of St. John's description of the city which came down from God, "prepared" by divine Love. The apostle hastens to assure us at the start that there will be neither sin nor sorrow, pain nor death in that city which expresses the divine ideal; then he tells us of the beauty and splendor of the city whose light is the radiance of divine Mind. He gives no hint of indolence, but says that those upon whose foreheads the divine character is written shall serve continually, for there shall be "no night there."

Some one may ask how long a time must elapse before this perfect city becomes a universal fact. It may be answered that nearly two thousand years ago John saw it as already complete. Concerning this Mrs. Eddy says (Science and Health, p. 573), "This testimony of Holy Writ sustains the fact in Science, that the heavens and earth to one human consciousness, that consciousness which God bestows, are spiritual, while to another, the unillumined human mind, the vision is material." Since St. John's time, strange to say, the greater number of those who profess to believe in his writings as divinely inspired, have persistently maintained that the heavenly city could only be reached through death, and that the ills which have no place in it must always continue to darken human experience. This opinion has, however, no support in Scripture, which declares plainly that heaven comes down to men when they are willing to receive it; and the ideal city begins to *be* whenever men love righteousness and hate iniquity. Men seldom hate evil until they suffer from it, either because of their own transgressions or through the wrongs which are inflicted by others' disregard of God's laws; then those who love right are impelled to prove step by step that right is really the only power, and that it alone has permanence. The light of the ideal city is too intense and all-pervading to leave any hiding-place for evil. It shines into the depths of each one's consciousness, and casts out whatever would make sick, defile, or make a lie, and in this light men walk beyond the shadows of the mortal dream of fear, of poverty, of pain and death.

Long ago the citizens of the world said to the master Christian, "Get thee out, and depart hence;" but today our cities, one after another, are welcoming his teaching, and saying, as he declared they must, "Blessed is he that cometh in the name of the Lord." Wherever his teaching is accepted and practised in its entirety, that city is being built upon the true foundation, and its walls of salvation shut out both the "curse" and the "plagues," while God has promised to "give every man according as his work shall be."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CALGARY, ALTA.

This morning [May 30] at half past seven the first stake was driven in the ground upon which First Church of Christ, Scientist, will stand. The site is located at the northwest corner of Seventh street west and Fourth avenue, facing the Normal school. The ground is valued at twenty-five hundred dollars. The church now being erected will be but a temporary wooden structure, artistically designed by a member of the church and estimated to cost fifteen hundred dollars. The members of this church at present hold services in the hall of Mackay and Dippie's block, at 218 Eighth avenue west.—*Calgary News.*

CINCINNATI, O.

The corner-stone of the new church edifice which is being erected on Park avenue, Walnut Hills, by First Church of Christ, Scientist, Cincinnati, was laid at six o'clock Monday morning June 6. The occasion was witnessed by the building committee, First and Second Readers, and the president and clerk of the church. The service, conducted by the church Readers, consisted of silent prayer followed by the audible repetition of the Lord's Prayer and its spiritual interpretation as given in "Science and Health with Key to the Scriptures" by Mrs. Eddy; appropriate Bible selections and their correlative passages from the textbook, concluding with the "scientific statement of being" (p. 468). Following the service there was sealed within the stone a copper box containing the Bible and copies of Mrs. Eddy's writings and current issues of all the Christian Science publications, also the church by-laws and a brief history written on parchment of the progress thus far made in carrying out the desire of the members for a new church edifice.—*Correspondence.*

DALLAS, TEX.

The Christian Scientists of Dallas have determined upon the erection of a magnificent church, which is to be located at the southeast corner of Browder and Cadiz streets. Sam P. Cochran, J. J. Eckford, and C. H. Jones of the building committee met at the site of the church Saturday afternoon [June 4] at five o'clock and removed the first dirt preparatory to the beginning of work on the building. Judge L. L. Albright, president of the congregation, was in attendance also. Up to a few weeks ago the Scientists had occupied a frame church on Ervay street near Marilla. This they disposed of, together with the lot, and at present are holding Sunday and Wednesday evening services in Temple Emanu-El, corner St. Louis and Ervay streets. The new building on Browder street is to cost when completed and equipped seventy-five thousand dollars. It is of artistic design and finish, and will have all the latest devices for heating and cooling, as well as for lighting. A fine pipe-organ will be installed also.—*Dallas News.*

THE LECTURES.

CONCORD, N. H.

Bicknell Young lectured on Christian Science at the church edifice on North State street Tuesday evening, June 7. He was introduced by the Governor of New Hampshire, the Hon. Henry B. Quinby, who spoke as follows:—

It is always a pleasure to me to meet New Hampshire people. It is an especial pleasure to me to meet the citizens of Concord, where I have had so many pleasant hours of official life. And while of course I am not familiar with the tenets of your faith, and while of course you do not expect me to be, I cannot fail to have observed the splendid men and women who make up your congregation. It is a matter of common observation that those delegations which used to come to Concord to meet that wonderful woman who is at the head of your church, were delegations of more than ordinary intelligence; and I cannot believe, neither can any other observing person believe, that these intelligent men and women would be so devoted to this faith unless there was something beneath it which compelled their interest and which was ennobling and which was attractive. As for Mrs. Eddy, we know that she is a most wonderful woman. We know that she is broad-minded, progressive, and benevolent; and her works speak for your faith and for her not only in this city, but all over the civilized world.

I know you have come to listen to one who has for many years been an authorized exponent of Christian Science, and I now have the pleasure of introducing to you Mr. Bicknell Young.—*Manchester Union.*

VANCOUVER, B. C.

Prof. Hermann S. Hering delivered a lecture on Christian Science in the Vancouver Opera House on Monday evening, March 14, under the auspices of Second Church of Christ, Scientist. The audience was the largest, most representative, and attentive that has yet listened to a lecture on Christian Science in this city, and already there have been marked evidences of a greatly increased interest in Christian Science among the citizens as a result of the lecture. Colonel West, U. S. consul general, who introduced the lecturer, said in part,—

I feel that some one more familiar than myself with the teachings of Christian Science should have performed the duty which it is my honor to fulfil this evening; but I am pleased to have an opportunity of hearing Professor Hering, as I am sure this large and representative audience also is. I have been greatly impressed with the broadness of view of Christian Science, and the manner in which it has spread, the evidence of which is seen in the large number of churches that are being built and the immense congregations attending the Christian Science meetings. The change for good that is brought about in the lives of those who take up the teachings of Christian Science is remarkable, and it does not do in this age to reject new teachings because they do not conform to our present modes of thought.—*Correspondence.*

EXCELSIOR, MINN.

The Hon. Clarence A. Buskirk of St. Louis lectured on Christian Science to a large and appreciative audience in the Opera House Sunday afternoon, April 24. In introducing the lecturer, Prof. John N. Greer, of the Central High School, Minneapolis, spoke in part as follows:—

Christian Science is misunderstood by many people, and misconceptions of its teachings and practices are general. Only those who have successfully put Christian Science to the test know its power and meaning. As I, personally, have tested Christian Science, three facts are clear to me: First, it has healed physical diseases; second, it has destroyed nameless fears, the fear of loss, the fear of failure, the fear of poverty, the fear of accident or death,—all these are gone, and now I fear not! third, Christian Science has brought to me a great spiritual uplift. My understanding of the Bible and its beautiful truths is more clear and definite. My knowledge of God and His wonderful love is reasonable and demonstrable,—"I know that my redeemer liveth." The conscious knowledge of these three facts—physical diseases healed, mental fears destroyed, and spirit uplifted—is the common experience of all who have comprehended a little of the truth in Christian Science.—*Correspondence.*

HYDE PARK, MASS.

The Rev. Arthur R. Vosburgh lectured on Christian Science in Waverly Hall, April 24. He was introduced by William M. Rose, who said in part,—

Nineteen hundred years ago Christ Jesus founded the religion that afterward bore his name, Christianity. The doctrine which he established differed radically from the doctrines of his time. It was of the fatherhood of God and the brotherhood of man that Jesus taught, and he followed up his teaching by practical proofs,—he healed the sick, cleansed the lepers, gave sight to the blind, hearing to the deaf, feet to the lame, reformed the sinner, and even raised the dead. But Jesus did more than merely perform these miracles; he taught his disciples and followers to do them also, telling them, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." He taught them the great truths of God's unchanging law, which, when understood, enabled them to have dominion over all manner of evil. For about three hundred years after Jesus' earthly mission was finished, those who followed his teachings healed the sick by spiritual means, until their clear sense of Truth became contaminated by error.

A few years ago, a woman, "already within the shadow of the death valley," as she says in her book "Science and Health with Key to the Scriptures" (p. 108), rediscovered the great truths which Jesus taught. With great self-sacrifice and with an all-inclusive love for God and for man, Mrs. Eddy set about learning more of this truth, that she might give it freely to all mankind; and now, only a little over forty years after her discovery, thousands of people all over the world daily humbly acknowledge their gratitude to her for pointing out the way from sickness to health, from sin to Godlikeness.—*Correspondence.*

NYACK, N. Y.

A lecture on the subject of Christian Science was delivered at the Christian Science church May 3 by Mrs. Sue Harper Mims. She was introduced by Eugene R. Cox of New York, who said in part,—

That this is a beautiful world none can bear testimony better than the inhabitants of beautiful Nyack, and at no period is that beauty more manifest or more appealing to us than in May. Bird and beast, foliage and flower all bear testimony to the beauty and goodness of the world in which we live. Mankind alone is unsatisfied and unhappy, and this arises from their wish to have and express more good. This unrest has been their portion for ages. In the present day tons of magazines are issued telling us how bad we are, and thousands of people in the pulpit and out of the pulpit are engaged in laying down laws and rules to make us good, and these processes have been going on through countless generations.

Digitized by Google

Forty years ago, however, a wonderful woman, Mrs. Eddy, made a wonderful discovery,—wonderful because of its simplicity. One phase of this discovery was that if we loved and desired good with our whole heart and soul and mind, we would be so occupied that we would have time neither to tell our neighbor how bad he was nor to attempt to regulate his affairs. The person thus devoting himself to thinking of God and His relation to man, to thinking right thoughts, which means righteousness, finds that these thoughts are manifested in good health and right living, and the teaching which brings this about is known as Christian Science. So plain, rational, and simple are the rules for this kind of living that hundreds of thousands of people throughout this broad land are endeavoring to think such thoughts as will give them a better sense of life, a better sense of themselves and a better knowledge of God, and they find that thereby the dissatisfaction and discord which had formerly prevailed in their lives are very rapidly being dissipated.

Correspondence.

WINONA, MINN.

Miss Mary Brookins lectured on Christian Science at the Winona Opera House, May 6. She was introduced by the Rev. Dr. William McKinley, who said in part,—

One of the good things which Science is teaching is that we do not need to think alike on all subjects in order to be good friends. We are learning to think for ourselves and let other people think for themselves and express their thoughts in their own way, without taking offense because it is not our way.

No one has or can have a monopoly of truth, and all wise men know that there are more things in heaven and earth than are dreamed of in their philosophy. Such men have open minds to all truth, hear all sides of a question before deciding it, and then "prove all things" and "hold fast that which is good." As we cannot know all things, it is wise for us to know the best and greatest things; and the greatest things we can know are ourselves and God. Self-knowledge is the beginning of all knowledge and all virtue. We need it in order to govern ourselves and to live in harmony with the laws of God and the universe. This knowledge is not easy to acquire. We live so much in the sphere of our senses, under the dominion of our physical appetites and propensities, that to many of us our material bodies and environment seem to be the only realities, and we are scarcely conscious of the existence of our souls. Materialistic science, materialistic philosophy, and materialistic religion have so darkened our minds that the soul and God have almost faded out of our vision.

To recover our lost sense of the soul and of God is the great reform needed by modern society, and this reform, as I understand it, is the great aim of Christian Science.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Hampton, Ia.—Francis J. Fluno, M.D., Olympic Opera House, June 30.

Watertown, S. Dak. (Second Church).—Francis J. Fluno, M.D., Church Edifice, Third avenue N., and Oak street, 3 p.m., June 26.

As men attached at sea to an anchor by a tight cable, when they pull at the anchor, draw not the anchor to themselves but themselves to the anchor, even so they who draw God to them (*i.e.*, so it seems to them) have unawares been bringing themselves toward God.

CLEMENT of Alexandria.

TESTIMONIES OF HEALING.

[Translated from the German.]

Christian Science came to me about four and a half years ago, at a time when I was becoming apathetic and indifferent to conditions which seemed ready to overwhelm me. Although I considered myself a good Christian, the concept that I then had of God was rather vague, and especially I could feel no trust in a God whose will it was to send suffering upon men in order to make them better; for how was I to avoid misfortune when God perhaps thought it necessary to send it upon me?

When in this state of mind I heard of Christian Science, just as I was expecting to undergo an operation. The year before, I had spent eight months in the mountains to strengthen my lungs. I returned apparently well, but in a few months the trouble returned and I was advised to make another stay in the mountains. By all this I was so depressed that the message of Christian Science at first seemed incredible to me; but I soon gained confidence, dismissed the physicians, and began treatment. In six months I was healed, and since then have not spent a day in bed. I then began to demonstrate Christian Science, to prove my understanding of the truth, and I can say that I received many proofs of God's omnipotence in my family. For four years we have not had any need of physician or apothecary, although they were formerly our continual guests. The power of Truth over error has been quickly proved, especially for my children, even when the ailments had assumed very threatening forms. Not alone in physical sickness is the power of Truth supreme, but also in cases of mental suffering divine Mind is our only physician, and understanding of this has resolved many discords into harmony.

I have now learned to seek the cause of all error in myself,—to destroy fear and belief in the power of evil in my own consciousness, and no longer to make a person or circumstances responsible, even when according to the old way of thought they might seem to be so. We must sit in inexorable judgment on ourselves and examine our thinking by the light of Truth, and frankly recognize our faults, even if they bear the ugly names of envy, anger, doubt, etc., for only thus are we startled at what dwells in our hearts and ready to cast it out. When we know that Christ, Truth, is spiritually as near to us as to the disciples of old, we place ourselves and all our affairs under divine care, and recognize that all error is already destroyed. We do not need to fear, for we have Christ, Truth, with us, and this makes it clear what Jesus would do in a similar case. In the truth we have harmony now, as with God there is only today. Often the warfare may seem severe, but in standing for the right we grow and become strong in understanding. We even fight joyfully, because the smallest thought of truth bears its fruit and does not return to us void. God has thoughts of peace and not of evil toward us; and no one shall be able to pluck us out of His hand. We cannot be grateful enough to our dear Leader for bringing to us the right understanding of Truth.

FRAU MARTHA SCHICKLER, Stuttgart, Germany.

Every one is in some way hoping for something not realized. It may be that in some cases thought has reached despair through hope deferred; yet the hope is there, waiting, longing, for the promises to be fulfilled. That the unseen reality exists, is proved by our very longings. It is the substance which we unconsciously crave, that which the world can neither give nor take away. Thus it is that Christian Science comes into the lives of so many, causing them to rejoice that they have caught even a glimpse of that hoped-for something which assures them that the day of attaining the fulfilment is near.

Digitized by Google

Twenty-one years ago I was facing conditions which, according to the verdict of physicians, meant insanity or death. All my previous life had been marred by a sense of weakness, disappointment, incapacity to think for myself in a beneficial way. I seemed to be drifting, with no guide, yet dreaming, hoping for something, when I awoke to the fact that I had nothing to prevent the results predicted by *materia medica*. Then I determined that if there was a God I would find Him, and my very soul cried out for the living God, for I needed Him so much! I would spend an hour each morning on my knees in prayer, telling some one who I hoped did exist, my desperate needs and begging for a release from such a fate. One morning my heart seemed nearly breaking, and as I was pouring out words of entreaty there came a rebuke—something prevented further utterance. I was astonished, and wondered what it meant. I knelt the next morning, as usual, but could say nothing, and then an awe too great for expression came over me,—something that Mrs. Eddy terms an intuition, and from that time on I was led, little by little, to understand the invisible God. As this fact gradually unfolded to me, I let go of my old concept, or rather it was tenderly taken from me, and a new realization took its place.

I seemed to be getting weaker physically and losing control of my faculties to think, eat, or talk, only as words were given me to say; but my friends would shake their heads and look their pity for me, when I assured them I should not die. I became very weak and to mortal sense death seemed near, but one morning this invisible power led me to rise and open the Bible, and I saw from what I read that it meant I was to serve, and not be served any longer. I lay down again, not comprehending all its meaning, but presently I was led to the door, and as I opened it and drank in the cold wind as it swept over the Dakota prairie, I seemed to take a new lease of life. I turned toward the bed, but instead was directed to the kitchen. We had been unable to keep help because of the fear of my illness, but when my husband came home I had a dinner prepared. I stood by the table as he opened the door, and as he caught sight of me, he cried out my name and I saw him turn white and sink into a chair, cover his face with his hands, and weep as only a strong man can weep. He afterward told me he thought I had died, and that it was my spirit, till I spoke to him. From that time on I labored for my family, and there was much to do.

No tongue can express what it was to me to live and move and actually have my being in this conscious presence. Later, as I mingled with the world, it seemed gradually to fade from me, and the sense that I was utterly alone in the knowledge of how I was healed made me long for some one who would understand me. As all good comes to us at the proper time, I was led to Christian Scientists. Thus I learned of the text-book, "Science and Health with Key to the Scriptures," where I found corroborated what had been shown me in my dark passage from human beliefs to a glimpse of the reality of being, which I had not the understanding to put into practice. I now knew that I was not alone; that God had revealed Himself to one who was fitted to open the book of life to others, our revered Leader, Mrs. Eddy.

I cannot measure my gratitude that this priceless boon of healing has been made so plain to all mankind, and that it reveals the God whom I learned to trust in my great extremity. I am convinced that my healing was through the scientific thought given out by Mrs. Eddy to those ready to receive it, and it is still going out to those who are ready for His appearing. I used to think that my healing was supernatural. Now I know that it was divinely natural, and that thousands are bearing witness in some manner to Truth's actual presence here and now. I constantly have this assurance, as did Paul, "I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day," the day when all hope is realized as satisfaction in reality.—MRS. ROSE D. HASKELL, Everett, Wash.

I wish to say that the statements of my wife, Mrs. Rose D. Haskell, in regard to her healing, are true. Since her healing we have had many wonderful proofs of the power of Truth. In this connection I wish to tell of a demonstration which I had about two years ago, over the sense of deafness. On examining my watch, which had been to the jeweler's, I was surprised to find that I could not hear at all with the left ear. At that time a terrible fear took hold of me. Error whispered that it was time a man of my age should begin to experience some defects; so I did not meet the enemy right there and then and crush it, but I let it enter and take possession for a time.

Without realizing it, I would often try my ear with the watch, and this went on for about three months, until one morning I went into the office, as is my custom, to read some from our text-book, "Science and Health with Key to the Scriptures," before getting interested in the business of the day. I opened the book, and then it seemed that I had to meet this enemy face to face, and I argued the question whether it was real or unreal. I seemed to realize that there is no defect in God, and that man is a reflection of divine Mind; therefore he cannot be defective in any way. This controversy had lasted about fifteen minutes, when I was called to the store on business. I closed the book and went out, feeling happy and as light as though I was walking on air. I did not think of that ear again for about three weeks; it went entirely out of my mind. When the thought of it did return, I took out my watch, put it to my ear, and heard the tick more distinctly it seemed than I had ever heard it before; and since that time, I have continued to hear perfectly.

I realize that the same power has done this for me, that in a few short hours raised my wife from a sick-bed to health and harmony. I am very thankful for this truth that our beloved Leader, Mrs. Eddy, has been instrumental in giving back to the world, to lead us out of the wilderness of doubt and fear. Each individual must get himself into a right condition to receive the truth; then divine Love will be manifested, and spiritual healing from sin, sickness, and death will follow.—SILAS A. HASKELL, Everett, Wash.

Christian Science has been in our home only a short while, but so much has been done for us all that I am glad to tell of it, hoping thereby to encourage others who may be looking for the truth that makes men free. In April, 1908, a serious accident occurred to me, and though I then understood but little of the teachings of Christian Science, I had seen so much of its wonderful healing power that my faith was unbounded, and I turned to it as a sure haven from all the ills that come to mortals. I was working in a gravel-pit when an embankment of earth caved in, striking me in the back and throwing me about five feet. My entire body, with the exception of my head and hands, was covered with the earth. When I was lifted out I could not move myself from my shoulders down, and there was every evidence of serious injuries. The men who brought me home said I would be a cripple for life, and my suffering was extreme. I had my wife telephone to a Christian Science practitioner, and after the first treatment the pain was gone; in one week I was up, and in three weeks I was back at my work.

I am as stout and strong a man as ever, and my gratitude for this healing, and for many other blessings which have come to me through Christian Science, can never be expressed in words.—H. L. MANN, Dallas, Tex.

Digitized by Google

In the past I have given my testimony to the healing power of Christian Science, but have never told of my first healing, twenty-four years ago. I had passed through two operations, the first of which was considered a sufficient reason for my constant suffering, although it had promised to bring me health; but the injuries resulting from it were so complex that the spine was permanently affected. The physician, who was a member of the same church in which my husband was an elder, was conscientious and most kind. He tried everything to relieve my suffering, but at last said that he knew of nothing that would help me in medicine or surgery; that I must use my Christian fortitude, and do the best I could. As sleep at times was only gained by opiates, he advised a very limited use of them, and also recommended a third operation; but I had had enough of that remedy. We moved upon a farm for my husband's health, as he had lung trouble, and that year was one of constant suffering in mind and body. It seemed so dark at times that I prayed for death, but my teaching had been against self-destruction or I might have been tempted to seek rest in death. I now wonder how Christians can ever believe that God, infinite Life, could be so powerless to help us as it then seemed.

In the fall of 1885 I went to Illinois, where my sister had had class instruction in Christian Science during the summer. God had heard my prayers for help, and during my two-weeks visit I read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read the chapters "Science of Being" and "Footsteps of Truth," and every day my kind sister talked to me of God. As light dawned, my previous Bible study brought the conviction of the truth of Christian Science. With this light, and her loving help, my health was restored. I have overcome many errors of belief, and for twenty-four years I have never been in bed a day, or half a day. Twice a great fear of throat disease was overcome in less than twenty hours, a morbid formation as large as my thumb coming away when I seemed to be choking,—although I had been about my work all day,—and I was well that instant! In telling a lady physician of my permanent healing, she said, "How do you know you were healed?" I answered, "I had the evidence in myself: I needed no examination to tell me. When I left home, hopeless, bent, and sick, I could not lift a teakettle or do anything hard, and it was a great trial to wait till the men came in to lift pails, etc. On my return home there was no pain; I could carry milk-cans, could work all day, read and study half the night, and after three hours' sleep could arise each day and repeat this program with all the buoyancy of youth."

My husband, too, was willing I should treat him. With the knowledge that God, good, knows not evil; and by studying Science and Health, pleading the promises as God's sureness, his healing began. Today my husband has no cough, and he now treats himself, but this is the first winter in forty-one years that he has not been one day in bed. Time and space would fail to tell of our thankfulness to God for His marvelous works in these years, or express our gratitude to our faithful, loving Leader for this Christ-Science, for our Publishing Society, and for the Lesson-Sermons. I can only repeat humbly from our Manual (p. 41), "May Thy word enrich the affections of all mankind, and govern them!"

MRS. ELIZABETH C. BURCHARD, Arcata, Cal.

I feel that I would indeed seem most ungrateful if I failed to acknowledge publicly my healing through Christian Science of severe lung trouble. In February, 1908, I seemed to contract a severe cold, and as several of my relatives had passed on with disease of the lungs, my husband and friends thought that was soon to be my fate also. But, thanks to God (and to a very kind neighbor, to whom I shall ever feel most grateful), I had been led to investigate the teachings of Christian Science in 1905, when it seemed that I was doomed to a life of misery and invalidism. I had suffered from internal trouble for about twelve years, for which I had tried all kinds of medical treatments, and had undergone several operations, receiving at each time only slight relief; and the last operation, performed in the spring of 1905, seemed to leave me in a worse condition than ever. I must say here that my doctors were very kind and did all that was in their power to do for me, but they said they never knew of a case like mine being cured, and that all they could offer me was possible relief.

I grew quite discouraged, and had given up all hope of ever gaining health, but the adage, "Man's extremity is God's opportunity," was proven true in my case, for when I was willing to accept help in God's way I got the first glimpse of the saving power of Spirit and was able to say that God indeed does heal all our diseases. I was instantly healed of the internal trouble from which I had suffered so long, and in a week's time I laid aside my glasses, which I had worn for six years for weak and inflamed eyes. I found that I had no need of the glasses, and I have better sight than I had for many years before. All these ailments were overcome without the help of a practitioner, but during the attack of lung trouble I found it necessary, with surrounding conditions, to ask for help. There being no practitioner near here, I applied to one who lives in Brandon, Man., and I cannot find words to express my thankfulness for the patience with which she labored to lead my wandering thought to the God who is our health and our helper in time of trouble. My healing consumed in all about six months. It seemed slow sometimes, but for this I am now most thankful, for it gave me much time for thoughtful study of the Bible and our text-book, "Science and Health with Key to the Scriptures," which otherwise I would not have had. I soon gained in weight, and now have perfect health. I do all the work for a household of four and drive out in all kinds of weather.

Although my physical healing has been wonderful, what is greater than all is the understanding that God is not responsible for the sickness and misery which seem to hold us in such abject slavery; and that in just the proportion that we seek divine Truth understandingly and turn away from false beliefs about God, and about man's relation to Him, in that proportion are we made free. Christian Science has brought more health and love into my home than I thought it possible to experience on this plane of existence. Whereas the Bible formerly seemed a sealed book, it has become (when studied in connection with the Christian Science text-book and the *Quarterly*) a daily guide and help, and I cannot feel thankful enough to Mrs. Eddy, who has made it possible for us to know this great truth which does indeed make us free. Although I still have much to learn, I have the Scriptural assurance that He who has begun this good work in me is able to perfect it, and my earnest desire is so to live that I may become worthy to be known as a Christian Scientist.

MRS. AGNES WRIGHT, Welwyn, Sask., Can.

Many people come to Christian Science for physical healing, but I came looking for happiness. For nearly twenty years I had had friends who were Scientists, and I knew the peace which the truth had brought into their lives, but failed to reach out my hand to take this blessing for myself. When I seemed to have reached the end of earthly happiness, with ideals shattered and hope gone, Christian Science was again offered to me, and I reached out so gladly to take a firm hold of what I knew meant help for me. It seemed long before I gained even a little understanding of what Christian Science means, but gradually the light crept in, and one by one the old heartaches vanished, lost ideals were restored, but brighter than be-

Digitized by Google

fore, and broken ties were knit again—stronger and more beautiful than I had ever dreamed they could be. I have seen many cases of physical healing, and have also seen false appetites vanish, so that I know the power of God heals in this age as it did in the time of Christ Jesus. But best of all is the joy and the peace that come to us with the understanding of God as the loving Father who gives to us every good and perfect gift, and who never gives us aught but good.

To express gratitude for happiness and joy and peace, as well as for health, is not possible in words, but from the depths of my heart there wells up such thankfulness to God for Mrs. Eddy and for her teaching, and to her for her tireless efforts on behalf of humanity.

MRS. LUCY LOVE SHELDON, New York, N. Y.

[Translated from the German.]

Some time ago I was taken with a severe attack of catarrh, from which I was very quickly freed with one treatment in Christian Science. Formerly such attacks were accompanied with severe headaches and pain in the eyes. This time, however, I had no pain, for I tried to hold to the thought, that God's children can have no pain; but it seemed necessary to have some help, and during the treatment relief came. In the afternoon the trouble which had appeared to be so severe hardly caused me any inconvenience. This is but a small demonstration, nevertheless I felt God's protecting hand resting upon me, and I am deeply grateful to Mrs. Eddy, who shows us the way to Truth through her wonderful life-work.

EMMA DIENSTBACH, Frankfort-on-the-Main, Germany.

I am not a Christian Scientist, yet I would like to express my gratitude for what this truth has done for me. Some time ago I had an accident which resulted in an injured back. It was with great difficulty that I reached home, although it was only a short distance, and the pain grew more severe and fever appeared. Then my sister, who had received great benefit by reading Science and Health, advised me to have a Christian Science practitioner called. I did so, and with one treatment I was completely restored. I therefore feel very grateful to the Founder of Christian Science.—A. G. DARGAN, Ogden, Utah.

While my daughter and I have been in Christian Science for over ten years, and have been healed of many ills of the flesh, this is the first time we have sent in our testimony to the *Sentinel;* but if I should try to tell of all the blessings we have had in our home, I would take up too much space. Before my daughter and I were healed through Christian Science, we traveled a great deal to health resorts, and sought change of climate, but we did not receive benefit. I had been operated upon many times for throat trouble, but got no relief, and we did not know what a good night's sleep was with our little girl until she was seven years old. Then, through a dear friend, Christian Science came to our home, and we accepted the teachings given in "Science and Health with Key to the Scriptures" by Mrs. Eddy. We also took treatment, and were healed in two weeks' time; and then we slept peacefully and enjoyed all our other blessings. I was perfectly healed of the throat trouble and of a bowel disorder of many years' standing, in the two weeks. I was also healed of a sense of dislike for some people, so that now I can see the good in every one and realize that we are all God's children.

After living in Akron for twenty-nine years, and being healed by Christian Science, my many friends, seeing the remarkable change in me, also in my daughter, marvel and say that Christian Science has surely made great change in us. At first there were only three or four interested in Christian Science in Akron, but now they have grown to many in number and have a nice church building in a pleasant part of the town. In the spring of 1909 we moved to Bowman, N. D., to make our home. I did not know any Christian Science people here, but I trusted I should find them if there were; and our first week here we found another who had been healed through Christian Science and was a follower of its teachings.

We as a family are very happy and thankful for the teachings of Christian Science, and find that it explains the Bible very clearly. I am glad to tell of the healing power of Christian Science, and am very grateful to Mrs. Eddy for having given us in Science and Health the truth that makes us free.

MRS. CLARA CHANDLER RAISH, Bowman, N. D.

I hope I may be able to help some one else by telling what Christian Science has done for my husband and for me. My husband had poor health for nine years. He would take a leave of absence and go West, coming back feeling fairly well, only to repeat this same condition of affairs again in a few months. In January, 1908, he gave up a good position on account of his health. He spent four weeks in a hospital, and did not work until the following September. He felt better after this long rest, but not so well as he expected. In the mean time I had taken up Christian Science, and finally persuaded him to try it. Good came at once to us. My husband found a position, which other friends of his, in the same line of business, had failed to do. After taking four weeks' treatment, he was completely healed of the weakness which seemed at all times to overpower him. He said he felt then as he had not felt for years.

About ten years ago I met with an accident which left me with a bad case of hernia, also an internal complaint. I tried several specialists, with no result, and had given up hope of ever being healed. I was in a bad physical and mental condition at the time of my husband's poor health, the mental disquiet being induced by discontent and worry over my husband's illness. In May I began to take treatment in Christian Science, and three weeks later I had an attack of throat trouble and suffered very much. As I was new in Science, I hardly knew which way to turn. I had always taken medicine before, but I turned to God, and He was not found wanting, for after several days I knew that not only the throat trouble had yielded, but for the first time in ten years I could go without a support. My discontent and my worry had faded into nothingness, and my husband and I were in perfect health.

We are both beginning to know, for the first time in our lives, that "God is love." I am trying each day to reflect some of that love, as the only way to show how thankful I am for my freedom. I am grateful to God, and to Mrs. Eddy, who has shown us the way.

MRS. FRANCES R. CLARK, Indianapolis, Ind.

I take pleasure in stating that I was healed of kidney trouble, which caused me considerable pain, through one Christian Science treatment, given me some time ago. I have had no return of the trouble whatever, for which I am extremely thankful. I am now looking into Christian Science, with an earnest desire to understand it and demonstrate its truth for others, as has been done for me. I think the Christian Science teaching is most beautiful, and I am thankful to Mrs. Eddy, who brought this knowledge of God to us all.—MRS. KATE RABY, Port Hope, Ont.

My heart is full to overflowing with love and gratitude to God for the glorious truth, Christian Science, as revealed to the world in "Science and Health with Key to the Scriptures," by our beloved Leader, Mrs. Eddy. For four

Digitized by Google

years I had been a confirmed invalid, and given up to die by the physicians who had charge of my case, as they said that there was no hope for me. I had not been able to follow my business for over a year, but just as I got started in to go to work the plant burned down. I then moved away from Bay City, and went to another place. I commenced work in June, but I had a very bad cough. I started in with another physician, but all to no purpose. I could not eat or sleep, and the doctor could do nothing for me, although I had paid him to the last farthing.

At this time (July, 1908) I went to board with a lady who was a Christian Scientist. Up to that time I did not know that there was such a religion; but the lady got me interested in the literature and I started to study the Lesson-Sermon with the lady and her little girl. She told me what Christian Science had done for her, and assured me that it would do the same for me, and she advised me to try a practitioner. I, however, only went through courtesy to her, but it brought satisfaction to myself. I went to a practitioner in January, 1909, when I seemed to be looking into my grave. I told him of my troubles and tribulations, which were many, and after talking with me a little time, he said I would be all right. I thought that he did not know what he was saying, and I left him very much discouraged. He asked me to write him, and I said I would, but at the same time I thought that the next thing he would hear would be my end. When I got home, which was twenty-three miles by train, I felt very hungry, a thing I had not experienced in two years. I partook of supper, retired, and had such a good night's rest that I felt like a new person in the morning. I said nothing, but went to work, and what a change! I was completely restored, and kept on getting stronger.

But this is not all. Christian Science has not only restored me to health, but it has saved me from sickness, sin, and death, and showed me that God is Truth and Love. In the sermon on the mount Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." The truth has been opened unto me through God, divine Love. May God bless the one who told me of Christian Science.

JAMES LAMBIE, Bay City, Mich.

Several years ago I was a sufferer from extreme nervousness and depression. I had tried various material remedies, when Christian Science was suggested to me. I began treatment in this in rather an indifferent way; I hoped it would benefit me, but had little faith in it. I did not think of God as having anything to do with healing, and it was only after much doubt and many questions that I could accept some of the teachings of Christian Science. My healing was very slow, so that I often became discouraged and several times discontinued the treatment; but my family urged me to take it up again, and I did so, feeling that if anything could help me it was Christian Science. And it has helped me, mentally, physically, and spiritually. The nervousness and depression have been entirely overcome, and I am sincerely grateful for the help I have received. I feel that I owe a debt of gratitude to those who have so patiently helped me to make a beginning in the study of this great truth.

MISS ZERLINA STARR, Louisville, Ky.

Love writes with pen of gold on life's fair page,
Birthdays record our growth in grace, not age.
Months mark our progress through the realm of Truth,
Wherein we realize immortal youth.
Our mile-stones show deliverance from fears—
Thus should we count the swiftly passing years.

MARY ELLA COPPERSMITH.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

It was the official Israel which quarreled with Jesus at every step. It was able to arouse the mob spirit in the end, and in this way accomplish its desire in the crucifixion of the Galilean rebel. It would be a serious mistake, however, to assume that official Israel was the real Israel, or that it was the greater Israel who killed our Master. As we study the story of that epoch as it is recorded in the Gospels, we are reminded of another Israel which comes to the surface constantly. The stories of Elizabeth and Mary are our opening hint. Those women could not have been isolated and alien products of Palestine. They were village women. They grew up and married in little neighborhoods, far from the cosmopolitan life of their times. Such beautiful, tender plants of sentiment and devotion would wither and never blossom in an uncongenial atmosphere. There must have been something in those villages of Palestine which fed such growths of character. We know that the Messianic hopes of the nation floated around in its soul, but not every wind-blown seed takes root and bears such fruitage. There was a fertile soil there among those little communities. It must be that the light had never died in Israel's real soul; that while the priests at Jerusalem quarreled for place, and ground the face of the people with their exactions, away back on the hillsides in a hundred neglected corners, by village street or in the little cottage where the prophetic spirit of motherhood survived, there must have been stirrings of the spirit, the rustle of wings, the silent songs of brooding hearts keeping their night-watches in Israel's long, dark obscurity.

[Rev. Charles Stelzle in *Interior.*]

Dimly the best leaders of the modern social movement realize that theirs is a religious movement. They are sometimes puzzled and ofttimes distressed because they cannot harmonize their terminology with that of the church, but they are conscious that somewhere there must be a nexus. Leaders in the church the world over are convinced that the church must soon become the leader in a new social propaganda. They are unwilling that the church should surrender to the unscrupulous agitator the place which it has made for itself in the social and the economic world, because of its teaching throughout many generations. With deep concern they are searching for the rock foundation upon which they may build a far-reaching social program for the church. Some day the leaders in both the church and the social movement will see their way as clear as the sun. That day will witness the coming of "the times of refreshing"—the long expected revival will be at hand, and the church, in its present form or in another, will enter upon the completion of the task which it so long ago began, and upon which it has long been laboring, even though sometimes it saw only as "through a glass, darkly."

[*Christian World.*]

It has been said that if the courage, the capital, the power of organization and of initiative that hitherto have been exhibited in campaigns and on the battle-field could be turned in another direction, that of fighting against humanity's real evils, we should have, in one generation, something like paradise regained. That is precisely what *is* coming. Translate physical courage into moral courage, the courage of Austerlitz into the courage of Calvary, and the one great victory will have been achieved. This, however, will not be a battle, it will be a long campaign; but the campaign has begun. The thought kings are organizing it. Legislators have already caught the idea of Montes-

Digitized by Google

quieu: "In free communities a good legislator gives himself less to punishing crimes than to preventing them; he applies himself more to securing morals than to inflicting punishments."

[*New-Church Messenger.*]

Among those who truly desire progress in spiritual things, the feeling is sometimes found that though one cannot himself do anything for the furthering of good, others can and will. In such feeling there is danger of individual stagnation and of leaving undone things clearly within one's reach and which are his imperative duty. There is no right-minded and useful person who does not feel his limitations, his smallness, and individual weakness in coping with the mighty forces of indifference, worldliness, and sin. If we catch ourselves feeling that our opportunities are small, that we cannot accomplish, and so leave for others the influence, encouragement, and solid work that is within every one's reach, we should at once recognize the feeling as spiritual stupidity and laziness.

[Rev. Charles A. Riley in *New York Observer.*]

The great thing which Jesus did for the world's conception of righteousness was to push it into the inner life and make it a matter of the heart. So that no man can lay any just pretensions to being righteous if he cherishes in his heart thoughts of revenge, or of hatred, or of impurity, or any other evil. But the absence of evil from the heart is not enough; in the heart there must be love, a love that will overcome all barriers and flow out even toward an enemy. The heart is in a state of righteousness only when it is in a state of love, and that love must flow out toward God as well as toward man. Jesus has shown us that love is the very essence of righteousness. So that to fall short of love is to fall short of righteousness.

[J. Keir Hardie, M.P., in *British Congregationalist.*]

Christ's great work was to teach the oneness of the race, to remove the causes which divided man from man, and to make it impossible for the strong to oppress the weak or the rich to rob the poor; and the work of the labor movement today is to apply those principles of Christ's teaching to modern industrial and economic problems, so as to bring about the time when there shall be no poverty either of body, mind, or spirit; but in a world so beautiful, so richly endowed, there shall be abundance for all. With the coming of abundance and of freedom, the spiritual life of mankind will develop, as it is impossible for it to do so long as circumstances and conditions remain as they are.

[Rev. Frank Oliver Hall, D.D., in *Universalist Leader.*]

The time is ripe for the reorganization of the forces of Christendom and the harnessing of the tremendous energy represented in the churches of the world for the performance of the work that Jesus wanted to have done. For the first time since Jesus died for humanity the whole world is astir with the hope and confident expectation of splendid things that are going to happen soon and happen here. For the first time since the Master said, "The poor have the gospel preached to them," men are beginning to talk about the abolition of the curse of the poor, which is poverty.

[*British Congregationalist.*]

The deeper the depth that we fathom in sympathy and service and sacrifice for this world's good, the higher will be the height that we scale in our conviction and courage and assurance that all sorrow will be turned into joy. If we share the travail of Jesus Christ, we shall share his satisfaction; and we shall share his satisfaction in the measure in which we have shared his travail.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $10.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Among the important measures enacted by the present session of Congress are: The railroad rate bill, which gives the Government control through the interstate commerce commission of railroad rates, their classification and regulation, and of telegraph and telephone companies; a committee to investigate the "watering" of railroad stock and the feasibility of supervision of railroad securities; creation of two new states, Arizona and New Mexico; legislation to conserve natural resources; an appropriation of two hundred and fifty thousand dollars to the tariff commission; a twenty-million-dollar bond issue for completion of irrigation projects; publicity of campaign contributions; further restrictions on immigration; protection of seal fisheries; an appropriation of one hundred and fifty thousand dollars to the geological survey for the study of stream capacities and power sites; two hundred and fifty thousand dollars granted to the department of justice for the prosecution of violations of the Sherman anti-trust law.

The postal bank bill, which has been passed by Congress, designates postoffices as postal savings deposit offices. The opening of such depositaries is left to the discretion of a board of three trustees, consisting of the postmaster-general, the secretary of the treasury, and the attorney-general. In these depositaries any person over ten years of age may deposit funds amounting to one dollar or multiples of that amount. Pass-books will be issued to depositors and interest will be allowed at the rate of two per cent per annum. No person is to be permitted to deposit more than one hundred dollars in any month nor to be allowed to have more than five hundred dollars to his credit at any time. The withdrawal of funds is to be permitted at any time. The postal savings funds, thus accumulated, are to be placed in state and national banks in the communities in which the deposits are made, and the banks are to be required to pay two and one fourth per cent interest.

Governor Hughes of New York, who issued a call for a special session of the Legislature to convene on June 20, on that date sent a message of about seven thousand words. He submitted three distinct propositions. These were: Amendments to the primary law, providing for direct nominations and for other safeguards for both primary and general elections,—legislation which was defeated at the regular session; amendments to the graft investigation resolution adopted at the regular session, providing the proposed committee with more ample powers for the investigation of corrupt and improper practices in the Legislature and the state departments; consideration of the state finances with a view to providing means of additional revenue to meet the growing expenses of the administration.

Secretary of War Dickinson has started from Washington on a trip around the world, similar to the one taken by Mr. Taft when he held the same portfolio. He will inspect Pearl harbor and the fort at Honolulu, will be in Japan from July 15 to July 20, whence he will sail for Manila, where he will spend five weeks. He will leave Manila on Sept. 6, returning via Hongkong, Peking, the trans-Siberian railroad to Moscow, thence to Warsaw and France, and will arrive at New York about the middle of October.

On June 18 ex-President Roosevelt returned to the United States after an absence of more than a year, spent mostly in Africa. On his way home he delivered memorable addresses at Cairo, Paris, Berlin, London, and Oxford. His reception at New York is probably the most remarkable ever accorded any man in point of numbers, spontaneity, and sincerity.

Congress has postponed until the next session the question whether New Orleans or San Francisco shall have the honor of holding the celebration of the opening of the Panama canal in 1915. "Any city," it says, "that can raise seven and a half million dollars for the exposition is entitled to consideration by Congress."

The bill to permit Justice Moody of the United States supreme court to retire on full pay has been passed by the House by unanimous consent. Mr. Moody's resignation is expected during the summer.

Ouster proceedings have been begun against five meat packing companies by filing *quo warranto* informations in the supreme court in Missouri.

The appropriations of the present Congress aggregate one billion seventy-four millions of dollars.

The building of the giant lock of the Panama canal will cost $5,374,474.

International.

Of the twenty-two affiliated countries eighteen were represented by a delegation numbering upward of four hundred at the seventh congress of the international federation of master cotton spinners recently held at Brussels. The president of the international committee said that the cotton industry has suffered during the last ten years from periodical shortage of the raw material. He maintained that the most unsatisfactory results were due to the undue inflation of the price of the raw material, by the operations of combinations which had no interest whatever in either the growing of cotton, its legitimate distribution, or its manufacture. He believed that through combination on the part of the users of cotton this unsatisfactory condition of affairs could be put right. To bring this about it would be necessary to institute an international combination of the users of cotton, and he expressed the opinion that no sacrifice was too great to rid the trade of what had proved to be such a menace to its welfare.

Progress is being recorded in the field of aeronautics. An army experiment airship has made the flight from Aldershot to London and return, flying at night. M. Grahame-White, who attempted the flight, not ingloriously, from London to Manchester, has decided to attempt the flight from London to Paris. Count Zeppelin plans soon to fly in his great dirigible balloon from Friedrichshaven to Vienna. He has already carried passengers from Friedrichshaven to Dusseldorf, a distance of about three hundred and fifteen miles, at an average speed of thirty-three miles per hour. A gold medal has been given C. S. Rolls for his flight from England to the French coast and return without landing. A number of new records and new accomplishments were made at a recent meet at Budapest. Another aerodrome, with a circumference of about three miles and enclosing eight hundred and fifty acres, will shortly be opened near Paris.

By a stroke of the pen a Turkish custom in vogue for centuries though not sanctioned by the Koran, has been annulled by the Sheikh-ul-Islam. For the future a Turkish boy and girl will be as free to marry as if they were Americans or English. No money will have to be paid to the bride's parents, nor will any extravagant presents have to be given to her. Financially, the new arrangement seems distinctively in favor of the husband, but it gives the Turkish woman what she has never had before, freedom of contract in her marriage.

A number of French deputies have drawn up and signed an address to the Russian Duma, appealing to the members of that body to exercise their influence and votes in favor of the rights of Finland. The petition, it is reported, has been organized by Finnish agents in Paris, following somewhat the lines of a similar petition signed by a certain section of the members of Parliament in Germany, England, Holland, and Italy. The action is unprecedented in France and has called forth criticism throughout the country.

Immigration to Canada in the last ten years totals 1,415,288. The fiscal year recently closed eclipsed all others in the volume of immigration, the arrivals numbering 208,704. Of the grand total for the decade about 565,000 came from the British isles, 311,000 from the continent, and 497,000 from the United States.

The Mexican government's project for merging the Tehuantepec National, the Vera Cruz al Istmo, and the Pan-American railways for operation under one general management, promises to expand into the nationalization of all the railroads of Mexico.

The Hamburg-American steamship line has plans for the immediate construction of the largest steamship in the world. It will have a length over all of 876 feet, a beam of 88 feet, and a speed of twenty-two knots.

It has practically been arranged that the coronation of King George shall take place about the middle of May, 1911.

Industrial and Commercial.

It is reported that the United Dry Goods Companies, controlled by J. P. Morgan, has arranged to take over the controlling interest in Lord & Taylor, one of the largest and oldest dry goods houses in New York. This combination, organized in 1901, has already brought together the H. B. Claflin & Co., James McCreary & Co., C. G. Gunther's Sons, O'Neil-Adams & Co. of New York, Stewart & Co. of Baltimore, J. N. Adams & Co., William Hengerer & Co. of Buffalo, Hahne & Co. of Newark, Powers' Mercantile Co. of Minneapolis and the Stewart Dry Goods Company of Louisville.

The commissioner of weights and measures of New York city estimates that the annual loss to the public, as a result of buying meat with the skewers left in, is 587,663 pounds, the value of which amount of meat, at an average of sixteen cents per pound, is about one hundred thousand dollars.

Trade of the United States with France in the fiscal year ending with June will probably aggregate about two hundred and fifty million dollars, the largest total on record.

Trespassing on railroad property in violation of the law has caused the deaths of more than fifty thousand people in the United States in the last eleven years.

The Burlington railroad will spend thirty million dollars during the current year for betterments.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DISCOURAGEMENT AND ENCOURAGEMENT.

HON. CLARENCE A. BUSKIRK.

As the hours in the day which mark a human experience are struck off one after the other, we often find that the encouragements which strengthen and brighten us grow more infrequent, while the discouragements which weaken and shadow us pay more and more numerous visits. Our rockets mount gaily upward in their time, but later we sadly pick them up as burned-out and disfigured sticks. Why do so many men and women find only burnt sticks? Does it need to be so? Yes is the answer, if we accept the view-point of the atheist, the agnostic, the materialist. Yes is the answer of a very great many men and women. Indeed, it may not be extravagant to say that such is the answer of the great majority. Why? Because the many, whatever their supposed religious views, have unwittingly suffered the influences of the prevailing agnostic thought to have dominion over them.

Today there is no mistaking that the most active spiritualizing influences are at work. The signs are on all sides. At the same time there is no denying, that for the masses of our own people, and of all civilized people, this is largely an age of greed, of ostentatious display of wealth, of merciless overreaching and reckless dishonesty, and of the bitterness bred of the failure to acquire riches and worldly power. Gold is the only god the many are worshiping. Men are wearily traversing a desert, finding only dried-up cisterns where they ought to be able to slake their thirst at living waters. Is it any wonder, then, that fears and discouragements abound, and that when the shadows begin to lengthen they are heard crying out that life is a tragedy or at best a dismal failure?

How shall we resist this terrible fear and discouragement? Is there any way to live through all the hours of our lives peacefully, serenely, hopefully, contentedly? Can we find some new way across the desert, where the cisterns are full of refreshing water and where the green oases cheer the footsore pilgrim? Is there now a pillar of fire by night and of cloud by day to guide us and keep us from going astray? Yes, the way is mapped for us, and we can follow it if we are not too unbelieving to accept it.

In Le Sage's history of the adventures of Gil Blas, that gentleman is described as having slipped downward one night into the opening to a cavern, and it is related that, as he was falling, he fortunately grasped in his hands the exposed root of a tree, to which he clung desperately during several very long hours, fearing to let go lest he should be dashed to pieces. When the tardy light of the morning finally came into the cavern, he discovered that his feet had all those painful hours been dangling within a few inches of the ground. We all know that the most of our fears and discouragements have perpetrated similar tricks upon us; a terrified imagination has been active in conjuring up unreal phantoms which have caused far more anguish than the ills which have visited us. Yet the most of us learn little wisdom from such lessons. Often we have even hugged and nursed our phantoms as if they were precious possessions. Why do we not rise in our might as the children of God and assert our freedom, as Christian Science calls upon us to do, thus enabling us to see that we need not yield ourselves to the mesmerism of fear and discouragement. Mrs. Eddy says: "Mortals will some day assert their freedom in the name of Almighty God. . . . Dropping their present belief, they will recognize harmony as the spiritual reality and discord as the material unreality" (Science and Health, p. 228).

Christian Science reveals the eternal fact that our destinies belong to a universe which is not lawless, but which is forever governed by a Supreme Being who is absolutely good in all His ways; where nothing, therefore, can befall us which is not good; where the same government of divine Love is over all the conditions of middle life and old age, so called, which is over youth. It is our fear and false belief which invest advancing years with thoughts of despondency and gloom. Men yield themselves, often unknowingly, to perverse and destructive imaginations and doubts, and very largely so because of the materialistic influences all about them. We all need to see to it that we get away from the shadows, and employ our highest reason and intuition to lead us into the sunshine of an abiding faith that God's universe can by no possibility be a universe which is lawless or governed by chance; that it must be a universe governed by Mind; that such supreme intelligence is wholly good, and that evil is a child of human fear.

When one can rise to this level in his thought, new encouragement and hope assert their rule over his days and nights, and the shadows no longer lengthen in his path. Christian Science has come to lift the desponding out of their shadows, and to establish their goings on the high and sunlit plateaux of abiding trustfulness and good cheer. It has come to make us see that fear and discouragement are born of falsehood, while hope and encouragement are the offspring of Truth.

SPIRITUAL LAW.

FLORA BELLE JOHNSON.

In "Rudimental Divine Science" (p. 1) Mrs. Eddy defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony." Jesus said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." It logically follows that the law of God is the law of Spirit, or spiritual law, and this law understood and applied establishes or maintains the integrity of God's creation, demonstrates or brings to light reality, shows forth the glories of perfection,—the eternal verities, even as it is written: "God saw every thing that he had made, and, behold, it was very good."

Jesus, through what are called miracles, but which were really expressions of the activity of spiritual law, brought

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

to light the "kingdom of heaven" by restoring the sick to a state of harmony and the sinful to a cleansed sense of being. He distinctly declared that he came to fulfil the law; then he immediately proceeded to annul every so-called material law of limitation by walking on the water, feeding the multitude, healing the sick, and raising the dead, showing clearly that the law he fulfilled was the might and supremacy of Spirit. He also commanded his followers to do likewise: but there are many today who do not dare even to attempt to do as he did, and for the reason that the spiritual law of life is not understood.

It must be conceded that human beings are not automatons, and that every act must be preceded by a thinking or willing of the action. To do the works of Jesus one must think as he thought and will as he willed. He plainly said that he came to do the will of his Father, which is "good will to men." His acts were in attestation of his obedience to God's will or the spiritual law: no other inference can be drawn. Christian Science follows in Jesus' steps in demonstration,—the way he did and taught his disciples to do,—and thus brings to light the scientific action of the divine Mind which actuated his every word and deed, for he plainly declared, "I am the way, the truth, and the life: no man cometh unto the Father, but by me."

The basic teaching of Christian Science is that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). God is Spirit, infinite Mind; therefore all manifestation must express the nature and quality of Spirit. Man, the child of God, must of necessity express Godlike qualities; like cause, like effect. Since God is "the same yesterday, and to day, and for ever," His law must be fixed, immutable, eternal, and unchangeable; it cannot be broken. This fact is our highest hope, our surety, our refuge. The presence and power of God's law, its ceaseless and intelligent activity and its beneficent and harmonious results, are available at all times and under all circumstances for the supply of man's needs. The recognition of this fact brings confidence and strength. Simply to rest in this knowledge, however, is not sufficient. Mrs. Eddy tells us in "Miscellaneous Writings" (p. 69) that "the Principle of Christian Science is divine. Its rule is that man shall utilize the divine power," —shall know the divine law and love it at all times and under all circumstances, yielding loving obedience to its government. The penalties which mortal sense incurs are not because of the law, but without it, or apart from it. Mortal mind is lawless, godless, and it is self-punished until it yields to law and government.

The very foundation of law is love, and Love governs all in love. The very highest work of Love is to release the sinner from his sins. He who refuses to separate himself from sin, identifies himself with it, places himself under the sentence pronounced against sin, "Thou shalt surely die." Having suffered sufficiently to learn to loathe sin, the love of Love, of Truth, in his heart begins its redemptive work; then God's law is apprehended and its demonstration begun. When sinning human sense gives up its sin, the consciousness of sinless sonship begins to dawn. Man is not under a law of ignorance, superstition, fear, or lust, the beliefs of material existence, and when we drop these unholy beliefs the glorious revelations of God's law are seen, acknowledged, and utilized. The apostle James says, "Whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed." This brings us into a state of intelligent obedience to law.

The mixture of good and evil in so-called law, the confusing lack of a definite rule of action in the affairs of men, the baffling sense of inability ever to reach anything like fundamental truth in human theories, philosophies, or creeds, is entirely escaped from in Christian Science, for however faintly a student may be able to demonstrate its grand truths, he has found a fixed Principle and rule, and a few practical results assure him that he has discovered something dependable, that he has touched that divine law which is universal, immutable, eternal; and a great joy takes the place of doubt and fear, as he realizes that henceforth and forevermore it rests entirely with him to work out his salvation, for it is God that worketh with him.

Thus to discern spiritual law, its just demands on mankind, and the necessity of conforming to its requirements, is to become a Christian Scientist; for the student sees, although it be "through a glass, darkly," that inestimable good must result therefrom, and his eternal salvation becomes a present possibility. Humility and love take the place of pride and selfishness; while confidence in God, good, is awakened. This assurance once gained, it becomes for him the rock of ages. He has come to know that God's law, understood and applied, removes disease, all sense of separation from God, and destroys sin, ignorance of or indifference to Love. His content, however, is not a dreamy exaltation or mesmeric dependence upon faith in God's law as power. Paul said, "Faith without works is dead;" and this brings us to a most important step for the student, viz., the application of God's law to human affairs. Materialistic beliefs would hinder our progress from sense to Soul did not an intelligent application of the law of Love destroy these false claims to law and power and make manifest the supremacy of Love, thus producing harmony.

It is true that under the deific law, as Mrs. Eddy has pointed out, "supply invariably meets demand" (Miscellaneous Writings, p. 451), but a necessary factor in the fulfilment of the law is that the demand must be made. Jesus said, "Hitherto have ye asked nothing in my name: ask, and ye shall receive, that your joy may be full." "Joy may be full"—think of it! The joy of knowing the full meaning of this law of supply and demand would be priceless, fully to realize that, no matter what the need, it is already met. "Your Father knoweth what things ye have need of, before ye ask him." For one who has learned to trust this law implicitly, the belief in lack or limitation of any kind, be it spiritual, mental, moral, physical, or financial, is forever banished.

In the first Psalm we are shown that prosperity is the result of obedience to God's law; the result of activity, for activity is the first demand of spiritual law. As the unfoldment of divine law goes on in consciousness, the student learns that no spurious laws of limitation can obstruct, obscure, frustrate, or hinder the law of infinite supply which says, "Ask, and ye shall receive." And since the law of like effect from like cause is absolutely without variation, and thought is actively engaged in declaring Truth, the outward condition continues ever to improve.

The special application of the spiritual law which may most interest the student, because of his own and the world's sore need, is its application to the cure of disease, making of none effect the so-called laws of decay and death. The belief that matter is a manifestation of Spirit is a reversal of the truth, and every demonstration of Christian Science Mind-healing proves the falsity of so-called material law. The practitioner gives no heed to the beliefs about a matter body, but, reversing this matter testimony, calls into active realization the qualities of Spirit, or Mind. He knows that belief in the processes of evil, belief in a tortured sense of existence apart from God, cannot hinder the power and effect of God's law; that an error of belief has not the power of Truth, while God's word, the expression of divine law, can and does establish harmony, even as it is said: "He spake and it was done; he commanded, and it stood fast." "He sent his word, and healed them."

So, too, the beliefs of poison, of the sting of the serpent, of the deadly power of germs, bacteria, etc., which has per-

Digitized by Google

meated all human thinking, become null and void through the applied law of Love, which eliminates the effects of false belief, the bitterness of resentment, the canker of hate. Love is indeed the fulfilling of the law,—love for God, and love for man, God's likeness; and as the student apprehends this great truth and becomes more fully alive to his privileges, he joyfully goes forth to help establish the kingdom of God on earth, as it is in heaven.

CHRISTIAN SCIENCE AND JUDAISM.

ALBERT JACOBSON.

THE student of Christian Science who comes from the house of Israel, soon recognizes the removal of a great stumbling-block which for centuries had separated the Jew from his Christian brother. Mrs. Eddy explains that "Jesus Christ is not God, as Jesus himself declared" (Science and Health, p. 361). She says further, "The word *Christ* is not properly a synonym for Jesus, though it is commonly so used. Jesus was a human name, which belonged to him in common with other Hebrew boys and men, for it is identical with the name Joshua, the renowned Hebrew leader. . . . The proper name of our Master in the Greek was Jesus the Christ; but Christ Jesus better signifies the Godlike" (*Ibid.*, p. 333). This statement alone will remove mountains of prejudice that have been accumulating for ages. The word Christian had been detestable in the minds of the Jewish people, because under the name of so-called Christianity much innocent blood has been spilled, and even today there are some countries in which hatred and prejudice against the Hebrew race go hand in hand, and in consequence thereof the gulf between the Jew and Christian had become almost impassable. The different sects and beliefs which have sprung up since the days of Jesus have added still more of confusion to this vexed problem, till at last Mrs. Eddy proclaimed a scientific Christianity to the world and reestablished the religion taught and lived by Jesus of Nazareth.

It is marvelous when one considers that in the short space of a little over forty years a multitude of Jewish people have learned through Christian Science to make practical use of the Bible, or the *Sefer-hachajim* (the book of Life), which our text-book tells us is "a sufficient guide to eternal Life" (p. 497). May it not be said of our Leader that in uniting mankind she is doing some of those "greater works" which Jesus said his followers should do. He also commanded his disciples, "Go not into the way of the Gentiles, and into any city of the Samaritans enter ye not: but go rather to the lost sheep of the house of Israel." It is significant that in the class in which the writer was privileged to take instruction, two of the students were children of a rabbi,—one of them, myself, the son of an orthodox rabbi whose sincerity was unquestionable, and having been a broad-minded man, he would soon have learned the immeasurable value of the Christian Science teaching, had it been presented to him. I rejoice to see a reversal of the record. "He came unto his own, and his own received him not;" and especially am I grateful to see a vast difference between the pure religion which Jesus taught and the prevailing rabbinical Judaism. Paul understood this well when he said, "For he is not a Jew, which is one outwardly; neither is that circumcision which is outward in flesh: but he is a Jew, which is one inwardly; and circumcision is that of the heart, in the spirit, and not in the letter: whose praise is not of men, but of God."

Finally, Christian Science accomplishes something that no other teaching can,—it brings mankind together and unites all in one Mind,—the Mind "which was also in Christ Jesus;" while creeds would keep men estranged by petty religious differences. Christian Science is fulfilling the prophecy of Habakkuk, "For the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

TIMELY ACKNOWLEDGMENT.

FRANK B. HOMANS.

To withhold credit for good deeds done is one of the peculiar characteristics of human nature. One must not only conceive a valuable idea, but he must fight to secure its merited position in the world. The greater the ultimate success, the harder he must struggle to make it secure, and in face of the fact that the very ones who oppose it may be those whom it will most benefit. It is the other man's success which is opposed, not the idea itself. Fear that some other star may dim the brillancy of our own light, and a selfish desire to hold back the success of others, are the stumbling-blocks that stand in the way of every pioneer who starts in any direction which may suggest new or improved ideas. When one's success is attained and secure, then all men bow before it and do homage to him who has succeeded.

It is truly said that "nothing succeeds like success." The recognition of good deeds done, which would be so much appreciated by the toiler, and which he has a reasonable excuse for expecting, is too often withheld until after his departure from this earthly scene. The price of the flowers on the grave of many a man would have saved him from dying of hunger or perhaps paid the debt which caused his death. Had the tears shed and the kind words spoken at the bier found expression during the life of the departed, many an otherwise darkened life would have been brightened and many a sad heart made glad, but too often these generous impulses are withheld until it is too late.

Christ Jesus, the wisest, purest, and best man that ever lived, was scorned, persecuted, and crucified not because of what he said or did, but from fear that he might succeed and establish some church, religion, or government which would interfere with the interests of the rulers. It was not Jesus, it was the pure thoughts which he presented that men hated. It was not Jesus, but the success of Jesus' doctrines they feared. It was not Jesus, but the Christ-power that they wished to crush out. Judged from a material standpoint they accomplished their object, thereby losing their greatest and best friend. While Jesus failed to receive but slight recognition from the Jews of his age, today his greatness, his wisdom, and his teachings are proclaimed far and wide by all nations; and yet Jesus' works and life were as great and grand and noble nineteen hundred years ago as they are now.

Again history is repeating itself. There is one living in this age who presents the word of God in its purity, who lives it in its simplicity, who has revealed and is daily revealing the glories of that grand old book, the Bible. Her one and only aim is to help every man, woman, and child in the world, to better in every way their condition. She has no personal motive in view, no selfish object to gain, only a loving desire to help mankind, to teach them what God is, who God is, and where God is, and show each one what man's relation to God is. While it is true that there are thousands listening, learning, and striving to gain this knowledge she so willingly imparts, yet a vast army of mortals reject it. Later on it will be acknowledged to be true by every church and every nation, even as Jesus' teachings are acknowledged to be true, but the great fact remains and exists now that this life which Mrs. Eddy is now living is just as great, grand, pure, and noble today as it will be two hundred years hence, and her teachings which are admitted and proved by the few are just as absolutely correct and scientific now as they will be then. For the past forty years the efforts of many have been directed to the task of finding imperfections in her fundamental teaching, but the attempts have all failed. This failure is due to the fact which she very wisely states in Science and Health (p. 110), "No human pen nor tongue taught me this Science contained

Digitized by Google

in this book, Science and Health; and neither tongue nor pen can overthrow it."

The love and gratitude which her followers are pleased to manifest for Mrs. Eddy, the great deference and respect they show her, are the result of an awakened spiritual sense which lay dormant until her statement of truth aroused it, —a sense which every man has, but which few appreciate as they should. This sense enables one to recognize what she has done and is doing for the world. The only reason there are not more Christian Scientists is because there are not more who understand what Christian Science is. When this light dawns upon human thought, it is irresistible; it leads and we follow, not satisfied until we reach the birthplace of the divine idea, and there lay down our material offerings in exchange for this spiritual perception. Error, evil, mortal mind, may well tremble as it sees the gathering impetus of this grand march heavenward; the Herod of today, although just as cruel, will meet with even less success than did the Herod in Jesus' time.

THE WEDNESDAY EVENING MEETING.

L. EMOGENE MOORE.

THE privilege of being a member in a large Christian Science church is often emphasized as in contrast to being a member in a small church, but we should never lose sight of the fact that it is a privilege to belong to any Christian Science church, be it large or small. For many of us there is greater chance for development when we are among the workers of a small church, simply because growth comes through and by activity, and in such a field there is a greater demand for individual work.

In no place is this more evident than at the Wednesday evening meetings. All who have applied for and been received into membership, have thereby pledged themselves to the support of that church, not only financially, but by their presence at the meetings and by their contributions of experiences and helpful thoughts, and they should consider this pledge as binding as any other to which they subscribe their name. In any church, however, the interest and success of these meetings to a large extent lie with the congregation, and it sometimes happens that where there are hundreds of members, those who may think they have but one talent, or possibly no talent, do not feel called upon to add their mite, or they may be silenced by the suggestion to keep their talent hid because of a hard and critical audience; whereas, if we belong to churches where week in and week out but a few attend, each one of us finds he has something to do both before and during the service.

These small gatherings of well acquainted people, however, have continually to guard against an error which perhaps does not tempt the larger gatherings; that is, the danger of assuming the nature of social gatherings. We should never be thoughtless in respect to maintaining the dignity and sacredness of these services, remembering that the midweek meeting is but the fruitage of the Sunday service. On Sunday the Word of God is read and explained, and on Wednesday we have the privilege of publicly praising God that His Word has been made of practical value to us through the understanding of Christian Science. Some of us come from busy homes, where up to the last moment demands are made upon us; some come from a strenuous day's work in the business world, and we are often glad for the few quiet moments in the house dedicated to the worship of God—moments wherein we surrender self and consecrate ourselves anew to His Cause, asking that divine Love may use us in the service.

Nearly all Christian Science churches or halls wherein services are held, are provided with vestibules or entrance halls where greetings can be exchanged, but even here we should not linger until the Reader has risen to announce a hymn, thus making the Reader's appearance at the desk the signal for the meeting to come to order; whereas, if we are in our place prior to this, and quietness reigns, we shall not be tempted to finish our talk during the reading of the hymn. The first word of a service should be listened to by us as attentively as the last.

If we should each begin to educate self away from the belief that it is easier to talk about material things than about God and spiritual things, there would be no long pauses at these meetings, but the moments would be occupied in telling "the old, old story, of Jesus and his love." While fear seems to prevail and we listen to the suggestion that we have nothing to tell, etc., we can begin the destruction of this error by previous demonstration and mental preparation. Even if one does this mental work many times before courage seems sufficient to enable him to make it manifest, that labor is not lost. Each effort in the right direction weakens the enemy. It is not wise to fall into the habit of expecting a certain few to keep the meeting from being a silent one.

People come to these services hungry for the truth, and the command is to "feed" them. They come distressed in body or mind, and the command is to "heal" them. Let us each ask ourselves, Am I obedient? If so, the fragments will be gathered up and we shall find our own store even greater than before we gave.

HOW TO PRAY.

EMMELINE HASKELL.

As it sometimes happens that members of other churches comment upon the Christian Scientists' form of using the Lord's Prayer with its spiritual interpretation, as given by our Leader in Science and Health (p. 16), it may prove helpful to any who are querying about this subject to read Mark xi. 24, where Jesus instructs his disciples as to the state of mind they should have during prayer. He says, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them;" or, as the Revised Version of 1885 has it: "believe that ye have received them, and ye shall have them."

If any one will literally follow this admonition, take each petition of the Lord's Prayer, and try to express in his own words the belief that he has received that for which he has been praying, he will find something quite similar to the "spiritual interpretation" given in our textbook. With each petition he will find that our Leader has voiced for us, more discerningly than we could have done, the state of mind in which Jesus bids us pray; and he will thank God for "the Spirit of truth," which is taking of the things of God and showing them unto men.

[Written for the *Sentinel.*]

GOD'S WILL BE DONE.

FANNIE G. HOPKINS.

THERE was a time when on life's way
Intense petitions from my heart of hearts arose
That God should give me this or that today—
My heart's desire I craved ere daylight closed.

But now I've learned, gleaned from the weary years,
God's will is wise and always done,
Regardless of the human fret and tears,
And that His will is best for us, each one.

So now I only wait for Him to show the way,
And follow close in love to His dear call.
'Tis thus the sunshine glorifies each day,
And thus I know God's will is All-in-all.

SELECTED ARTICLES.

[Alfred Farlow in *Fort Worth* (Tex.) *Record*.]

I am wondering if our clerical critic is prepared to accept the answer to his question, and I say this advisedly and out of all kindness, having in mind some experiences I have had in an effort to establish certain healings. While I am entirely in sympathy with the publication of testimonials of Christian Science healing in the Christian Science periodicals, I have despaired of being able to convince any one as to the healing who is religiously, medically, philosophically, or otherwise opposed to the teachings of Christian Science and to the acceptance of the possibility of the Christ-healing today. To illustrate, a woman had been for a considerable length of time treated by a physician who pronounced her case tuberculosis of the lungs. After she had exhausted her faith in medical treatment, she turned to Christian Science as a forlorn hope, and was healed. The doctor was called upon to certify to the fact that he had treated the woman for tuberculosis. He declined, affirming that it was a case of mistaken diagnosis, for the fact that she had been cured by Christian Science was in evidence that she did not have tuberculosis. If she had had tuberculosis she could not have been cured in that manner!

A noted physician, and very efficient diagnostician, made a careful examination of a patient, told him that he had a well advanced case of Bright's disease, and that nothing could be done for him. The man was afterward treated by Christian Science. He went back to the eminent physician in order to determine the result. The doctor was not satisfied with one examination but made another, then very humbly said, "For the first time in my practice I have been mistaken in my diagnosis: You could not have had Bright's disease, for you have none now."

In the pressure of such attitudes of thought, upon what grounds could any Christian Scientist establish a case of healing by testimonies. I find in my own experience that those who are unwilling to accept the teachings of Christian Science are not prepared to believe any testimony respecting it. Those to whom the teaching seems incredible look upon the healing as impossible, and it is usually a waste of time to try to convince a man against his will.

Our critic can but know that thousands of testimonies are given in the Christian Science meetings by intelligent men and women whose affidavit would be accepted as true in any court, and published in the periodicals, of the healing of all manner of disease as diagnosed by physicians who could not cure them. If he denies the credibility of all this testimony, upon what ground can he hope to induce those to whom he ministers to believe the testimony of the Galilean fisherman as recorded in the New Testament?

The Master of Christianity taught that those who believed on him would be able to do the works that he did, and "greater works." Our critic, I understand, claims to be a believer in Christ Jesus. Will he give us "a case of blindness where the eyes were out" that he has restored? It is well to bear in mind that the command to heal the sick is quite as incumbent on him as it is upon Christian Scientists. Christian Scientists, like other Christians, are able to heal only in the degree of their spiritual understanding. According to Jesus, there are a lot of blind folks who think they see; and of these Jesus said, in effect, that there are none so blind as those who will not see.

[Charles K. Skinner in *Bay City* (Mich.) *Tribune*.]

The stumbling-block of our critic is that he is trying to unite spirit and matter in his understanding of God and man, and he might as well attempt to mix oil and water. Unlike all other teaching concerning God and the universe, including man, Mrs. Eddy clings steadfastly to the spiritual creation as given in the first chapter of Genesis, in which man is shown to be created in the image and likeness of God, all reference to material man being designed to show the falsity of the claim that he is a creation of God. Our clerical critic tells us that "it is unadulterated nonsense to say that God is All and that man is His image and likeness." Now to deny the first statement, that God is "all in all," he must take issue with St. Paul, and to deny that man was created in the image and likeness of God, is to deny the Scriptures. Is he ready to do either?

The tangle is easy to unravel when we note that neither the Bible nor Christian Science teaches that mortal man is that image, but is the false counterfeit, which sins and suffers, and with whose creation God has no part. The Scriptures say, "God saw every thing that he had made, and, behold, it was very good;" consequently a sick and sinning mortality is not His creation.

The teaching concerning "matter," which seems to be a favorite target for the clergy, is explained on the same basis as the unreality of sin and disease—that matter is not of God, hence not real in the true sense. It has never been taught that material objects, animate or inanimate, are not real to the corporeal senses, but rather that those senses are in themselves unreal. Even physical scientists, the world over, are testifying to the unreality of matter as an entity. This critic also says that the work of Christian Science is "suggestion." It is related that the scribes and Pharisees charged Jesus with casting out devils by Beelzebub, but his answer, which is quite as applicable now, was not very comforting to his traducers. The work of Christian Science is not suggestion, but the prayer of understanding (not blind faith) that God's power to save is ever present and belongs to every one of His children who truly trust Him. Of what benefit is it to his people for our brother to read the Scripture: "Who forgiveth all thine iniquities; who healeth all thy diseases." "He sent his word, and healed them, and delivered them from their destructions," if he has no faith in God's power to do these things? Is it not mockery to repeat these words, and then say to the people: "God is omnipresent, omnipotent, and omniscient, but He needs a doctor to tell Him what is the matter and how to do the work"? Does he think that the prayers of a "professional person paid to pray," but who realizes the truth of God's promises to heal here and now, are of less value than those of the paid clergy who pray with a doubting heart? James said to such persons, "Let not that man think that he shall receive any thing of the Lord."

The earnest and careful student of Mrs. Eddy's writings can prove for himself their truthfulness by demonstrating the statements. Those who have done this are from every walk of life, many of them were at one time clergymen of this and other churches. It is not probable that they all are impostors, or have been imposed upon, when they are able to prove their faith by their works.

[Gray Montgomery in *Denver* (Col.) *Republican*.]

Belief in a devil possessing "great power" is at variance with belief in one true God of infinite power, and breaks the First Commandment. Christ Jesus, speaking in the figurative language of the Orient, personified evil as the "prince of this world." He taught by metaphors and parables the people "dull of hearing,"—not capable of understanding the absolute statements of Truth. But Jesus understood and taught God to be the only power and of infinite goodness, and by this understanding he healed the sick and cast out devils. To array the devil in the garb of a person savors of the beliefs of Milton and Dante, who for the sake of imagery have given to the world their fanciful creations of Satan or Lucifer as a mighty archangel, a fallen god. Would one of reason and understanding be so attracted by this imagery as to believe in a

Digitized by Google

personal devil, or be led into the by-paths of error by the siren songs of poets, or cling to misconceptions of the true teaching of the Master and thus doubt the omnipotence and infinite goodness of God?

Only a failure to discern the spiritual meaning of the Saviour's teaching would lead one to believe in a personal devil. Were the devil created by God, the devil must be good, and Jesus would not have cast him out. Evil then must be only an illusion, an unreality, which seems real to mortals. Mrs. Eddy says: "Only those, who repent of sin and forsake the unreal, can fully understand the unreality of evil" (Science and Health, p. 330). To those who have forsaken evil, the consciousness of Truth, God's allness, dawns upon their sight until the mirage of evil disappears. Man will finally become wholly free from the bondage to sin, sickness, and death; and God's kingdom be come on earth as it is in heaven.

Thus Christian Science repudiates any belief in pantheism. "God saw every thing that he had made, and, behold, it was very good."

[John L. Rendall in *Telegraph-Herald*, Dubuque, Ia.]

Our critic is guilty of discourtesy to Christian Scientists in referring to them as Eddyites. They are members of an established church known as "Church of Christ, Scientist." This church embraces people of intelligence, refinement, education, and good business and social standing. They are conscious of the fact that the teaching which they have accepted is not an "ism" but demonstrable truth, based upon positive Principle, and that it has accomplished results in the uplifting of humanity that are not excelled by the teachings of any denomination of Christians.

Every effort of every Christian Scientist is for the benefit of humanity in all that this includes and implies. Those who have become acquainted with Christian Scientists know them to be Christian in their individual lives and character, in their business and social affairs, and in their influence with their fellow-men. If this teaching be a "fallacy," then the word is subject to definitions heretofore unheard of; and if this be a correct term to use, then the world needs a great deal more by way of fallacy. It certainly needs that by way of Christlike teaching which can see the good in others and is willing to concede an influence for good, separate and apart from any one particular denomination or teaching.

The "inner light" of which this critic speaks in connection with Mrs. Eddy is not a term used by Christian Scientists. There is, however, a "light" which can be properly defined only as Mrs. Eddy defines it, "the illumination of spiritual sense;" and again, "Christian Science brings to the body the sunlight of Truth, which invigorates and purifies" (Science and Health, pp. 461, 162). In common with other Christians, Christian Scientists recognize Christ as "the light of the world," and their constant effort is to obtain more of this Christ-consciousness, that they may impart good to humanity.

[A. W. Mainland in *Winnipeg* (Man.) *Telegram.*]

It is no doubt true that Christian Science differs in some points from the creeds of the other Christian churches, but this does not make its teachings blasphemous or unscriptural. Christian Science teaches that God is infinite intelligence and Love, that He is the only creator and that His creation is as perfect as He is Himself. It has too much reverence for God to charge Him with the responsibility for all the sin, suffering, and disaster that mars the peace and happiness of mankind. Christian Scientists are taught that they must worship God and God alone, and that they must worship Him as a kind, loving Father who tenderly cares for all His creatures and who is a perfect protection to those who trust Him.

Christian Science recognizes but one Christ, "the only begotten Son of the Father," who is infinitely greater than any man or woman can possibly be, and through whom alone man can be saved from sin and sickness. Most of those who follow its teachings have come from some of the other churches, and they are unanimous in saying that they have more reverence for the Bible and study it with greater interest than in their previous experience. A candid study of Christian Science would reveal the fact that in reality it is very different from the popular conceptions of it.

[Edward W. Dickey in *Anaheim* (Cal.) *Plain Dealer.*]

Critics must pay earnest heed to what Christian Science gives in place of what it takes away. Then, and only then, will they be able to understand the statements regarding evil, sin, disease, and death. We cannot find God by searching from a material standpoint. We must classify the spiritual as the real, because it is like God, Spirit. All else "profiteth nothing;" because it is temporal, finite, unreal. It is on this basis that Christian Science is revealing the Life that is "the light of men."

As understood in Christian Science, man is spiritual because he is the image and likeness of God, Spirit. This man is not a mortal. No endeavor is made to place the false mortal concept of man on the basis with or the level of God. In revealing the real nature of man Christian Science uncovers and destroys the philosophy of the serpent, root and branch. Here again our critic is reasoning from a material standpoint in discussing spiritual things. You cannot mix the two any more than light can commune with darkness or Christ have concord with Belial.

If "Layman" will give earnest heed to the teaching of Christian Science, in the light of the spiritual illumination it is bringing to humanity, he will find that this is a practical, logical, and consistent religion, come to reaffirm the Christ-teaching, leading all unto Truth. He will also find that this Science frees from all forms of disease and reclaims from sin. Furthermore, he will see the way open for all to prove that the "last enemy" will be overcome, in strict accord with the Scriptural promises, "By their fruits ye shall know them" and "Every good tree bringeth forth good fruit."

[Charles W. J. Tennant in *Bath* (Eng.) *Citizen.*]

When our critic has studied "Science and Health with Key to the Scriptures," by Mrs. Eddy, with an unbiased mind; when he has put its teaching into practice, and has produced some of the fruits that thousands of his fellow-beings are producing daily throughout the world, then he will be in a position to speak on the subject intelligently. Moreover, he will thereby have attained a clearer understanding of God, and his relation to Him; he will also have a better understanding of how to love his neighbor as himself.

Christian Science is a return to primitive Christianity, in which the power of God to heal the sick and sinning was not a mere theory, but an every-day practical demonstration. It is proving that Christ, Truth, is just as much available for the needs of suffering humanity today as was the case nineteen hundred years ago, for our Master himself said, "Lo, I am with you alway, even unto the end of the world."

[William J. Bonnin in *Liverpool* (Eng.) *Courier.*]

The Bishop of Carlisle tells his medical congregation that Christian Science ignores the phenomenon of pain, and does not make use of physical means. In regard to the second point, physical means are discarded in Christian Science only as they can be replaced by means that are more effectual. It cannot be argued that wireless telegraphy is unscientific because of the abandonment of the

Digitized by Google

wire. Christian Science does not ignore pain. But it does say that in the divine order of creation pain has no place, that it is a result of a belief in the power of matter over mind, quite contrary to what the bishop called "the great fact of the immeasurable influence of mind over matter," and what Christian Science recognizes as the omnipotence of the one divine Mind.

As to the statement that Christian Science caricatures this great fact, it is a fair question to ask, Which is the caricature, to accord omnipotence all power and might in the healing of disease, or to assert that it needs the assistance of a few grains of vegetable or mineral matter to achieve its task?

[Nellie M. Johnson in *Omaha* (Neb.) *News.*]

Christian Science is not a medical system, but a religion which indisputably heals the sick. It is a powerful prophylactic, for it lays the axe at the root of disease by destroying sin in individual thought. While teaching obedience to the law concerning contagious diseases, Christian Scientists do not diagnose or cure sickness according to a knowledge of disease: they heal by the understanding of health and its cause.

Christian Scientists, like others who labor for the betterment of mankind, receive a reasonable compensation for their time. This is not "commercialism," but justice. They are not forcing their beliefs upon others. Consequently the public needs no protection from "the onward sweep of the healing cult," as is claimed by some of the members of the medical society of the Missouri valley. Neither denunciation nor legislation has the right or power to restrict the function of prayer sanctioned by divine authority.

[Frank M. Scofield in *Rome* (Ga.) *Tribune.*]

The great trouble with most of those who criticize Christian Science is that they not only do not have any understanding of its teaching, but what is even sadder, they do not understand their own Bible. There are hundreds of religious denominations, all claiming to be founded upon the one Bible, and what makes such a condition possible? It is simply because the world persists in taking the Bible from a purely material basis. Now there are about as many material bases as there are material beings, hence the confusion of mortal thinking has given us a greatly confused theology.

What is the remedy? To change the thought, to have the one Mind, as Jesus taught us. John says, "Now are we the sons of God;" not while we are in sinful thoughts and works, but when we attain to the perfect oneness with the Father.

Our critic quotes Mrs. Eddy's words, "This Comforter I understand to be Divine Science." [Science and Health, p. 55.] Let me explain what Christian Scientists understand Divine Science to be. It is the understanding that God is omnipotent (all-power), omniscient (all-knowing), omnipresent (filling all space); that "God is love," as the Scriptures declare Him to be. So that in God we have a loving power that is the "All-in-all," a "very present help in trouble," who heals all our diseases and who wipes away all the tears from our eyes. "He shall teach you all things, and bring all things to your remembrance." That is, all good things, for nothing else can come from eternal goodness.

[Norman E. John in *Wilmington* (Del.) *Star.*]

Christian Science does not overlook sin or its punishment. No teaching is more insistent that all sin is punished, and that the slightest violation of God's law, or the law of good, is sin. To acknowledge that evil has overwhelming power, would be sin to the Christian Scientist, for it would be acknowledging another power or creator besides God, and therefore breaking the First Commandment. Likewise it would be nullifying the possibility of overcoming the world, the flesh, all evil, and therefore departing from the Christ way or Christian way of doing things,—"Be not overcome of evil, but overcome evil with good." Christian Science insists that the wages or reward of sin is its punishment, and that the results of sin would cause every one to cease sinning if this were fully understood. Christian Science has freed many by showing that the so-called pleasures of sin are false and unenticing.

[Herbert M. Beck in *Little Rock* (Ark.) *Gazette.*]

In your issue of the 21st a county judge in Colorado is reported to have held that failure to call a physician for sick children was "neglect." This case is reported to be in opposition to the Christian Scientists.

John Neeley, a well-known citizen of Fayetteville, Ark., and secretary of the board of trustees of the University of Arkansas, and who, by the way, is not a Christian Scientist, is authority for the report of a case in which the life of a man was saved by Christian Science after two doctors had exhausted their skill and had openly announced the case as positively hopeless.

Investigation reveals, in brief, the following facts: John B. Evans, on Feb. 13, 1910, took three grains of strychnine for the purpose of self-destruction. Two doctors, called immediately after the discovery of Evans' act, proceeded to care for him according to the usual methods employed in such cases; but Evans rapidly sank under the treatment, and by the time that his wife, who is a Christian Scientist, could be notified and had arrived from the Christian Science services then being held, the doctors had reached the conclusion that death was inevitable and so expressed themselves to those present, including Mrs. Evans and the Christian Science practitioner, who also had been called. The doctors, who had faithfully done all they could for the case, remained a short time and saw the principal part of the recovery. No further medical treatment of any sort has been administered to Evans, and he is today and has been ever since an entirely well man. By no common understanding of things can it be said that Christian Science did not save this man's life. Should this case be taken as a reason for compelling people to call the Christian Scientists in case of sickness, or be adjudged guilty of "negligence"?

Perhaps not; such contention is not made; but is not any court order or decree, any state or national statute limiting or favoring any established or unestablished method of religious worship or bodily or spiritual healing, utterly wrong, false to our citizenship, false to the better spirit of religion and a destroyer of every form of progress? Let the strong arm of the law intervene when overt criminal acts are committed, the same as in other cases. Otherwise, why not leave people free to choose their doctor, or to choose no doctor and leave their case in the hands of God,—omnipotent, divine, infinite God.

People do not become Christian Scientists simply to support some ism or ology of doctrine, but because they have seen its power, each in his own body or in that of another, to heal and make glad where all other means have failed. They but follow, as honest folk, their reasonable experience and observation.

Renew thine image, Lord, in me,
Lowly and gentle may I be;
No charms but these to Thee are dear.
No anger may'st Thou ever find,
No pride in my unruffled mind,
But faith and heaven-born peace be there.

PAUL GERHARDT.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"BE WATCHFUL, SOBER, AND VIGILANT."*

NOWHERE in her published writings has Mrs. Eddy more clearly and emphatically directed attention to the unreality of evil than in her "Message to The Mother Church, June, 1901" (Library Edition, p. 48), in which she writes: "Evil is neither quality nor quantity: it is not intelligence, a person or a principle, a man or a woman, a place or a thing, and God never made it." Again, in defining the difference between this doctrine and the commonly accepted teaching on evil, she says: "Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness. We regard evil as a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home" (*Ibid.*, p. 50).

Discriminating Christian Scientists do not find in any of Mrs. Eddy's writings that she ignores, in the slightest degree, the false claims of evil; but they do find that she has ever been alert in counseling her followers to "be watchful, sober, and vigilant" in mastering these false beliefs which would tempt them to forget that "evil is not power" (Science and Health, p. 192).

To be consistent Christian Scientists, therefore, we must faithfully demonstrate the falseness of the claims of evil, and thus prove their nothingness. The Master told his followers that they were not to allow themselves to be overcome of evil, but they must themselves "overcome evil with good"; and it is for us to make effective before the world our professions that God, good, is All. Our duty in this regard is very clearly stated in Article VIII., Sect. 6, of the Church Manual, and our Leader has again emphasized both the need and the remedy on page 442 of Science and Health, in the words, "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake."

The old-fashioned theological doctrine that evil is real and always impending, is no part of Christian Science, and to the extent that Christian Scientists are proving the falsity of this doctrine are they helping to free humanity from one of its worst phases of bondage. This cannot be accomplished, however, by ignoring the false belief and claims of evil, but only by destroying them in human consciousness.

ARCHIBALD MCLELLAN.

* Science and Health, p. 324.

UNDERSTANDING AND BELIEF.

IT is often remarked that Christian Science gives a new meaning to words, and this is undoubtedly true. In the first place, students of Christian Science soon discover that they, in common with many others, have held a very inadequate sense of the actual significance of many words in daily use, and especially of words which are frequently employed in the Bible. They begin to see that a tremendous depth of meaning attaches to such words as faith, belief, and understanding, and that those who used them with this deeper sense were able to accomplish wonders which the unenlightened regarded as miracles. But the Bible is a continuous record of wonders, from the divine fiat, "Let there be light," to the Apocalyptic statement of sinless, painless, deathless being; and he who begins to walk with Christ today, in the light of Truth, may, like the disciples of old, have his understanding "opened," and like them "be endued with power from on high."

Almost the first step taken in Christian Science is the giving up of some belief in disease, and the acceptance, on faith, of the truth that disease is no part of man's being. The result which follows is sometimes very startling, as when some ailment which had resisted both medicine and surgery vanishes as darkness at the coming of light. What is even more important, a large amount of fear also vanishes,—fear of sickness, of poverty, of death,—and faith in good begins to take its place. This is well, so far as it goes, but our revered Leader says that "until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine" (Science and Health, p. 297).

In the Bible we read that "understanding is a wellspring of life unto him that hath it,"—a proposition to which the student of Christian Science would yield a ready assent, as he has daily opportunity to prove its correctness. As he reads the Scriptures, he learns how Joseph, after being an unknown captive in Egypt for many years, rose from height to height of greatness, becoming prime minister of that land during its most prosperous period; and this because he understood enough of God and His law to interpret aright the dream of mortal mind. His experience was paralleled by that of Daniel in Babylon, who not only interpreted Nebuchadnezzar's dream, but read the handwriting on the wall, and later was delivered from the den of lions; and this because he sought with fervent prayer and fasting to understand the truth. We read that in response to this the angel Gabriel came to him and said, "O Daniel, I am now come forth to give thee skill and understanding, . . . for thou art greatly beloved." Mrs. Eddy tells us that angels are "God's thoughts passing to man; spiritual intuitions, pure and perfect" (*Ibid.*, p. 581); and if we diligently seek divine guidance, it will not be denied us, and we shall have "quick understanding in the fear of the Lord," to quote Isaiah's words.

It is noticeable that many professing Christians practically ignore the understanding so often mentioned in the Scriptures, and insist that "belief" is all that is required of us; but Christ Jesus constantly demanded faith of his followers, and more than once reproached them for their want of understanding. After his resurrection we read that he "opened" their understanding, and from the experiences which follow it is safe to conclude that they no longer feared death or any other manifestation of evil, because they had come to understand the deathless reality of Life as God. Their faith was of the vital type which is constantly unfolding into understanding,—"a chrysalis state of human thought, in which spiritual evidence . . . begins to appear" (*Ibid.*, p. 297),—and any other sort is the dead faith against which the apostle James warns us. To rest content with mere belief, or even faith, is inexcusable, since John assures us that "the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true." This accepted, it only remains for us to grasp what St. Paul terms "the full assurance of understanding," with its mighty power.

ANNIE M. KNOTT.

[Revised and corrected.]

AWARENESS OF OUR ENEMY.

THE history of nations and of men pictures many a defeat which was directly due to avoidable ignorance regarding the character of the so-called enemy and his point of

Digitized by Google

attack. It may be difficult sometimes to "spy out" the opposing forces, but a wise commander will do his best to accomplish this, and, failing in his efforts, he will endeavor to provide for any situation that may possibly present itself.

Seeking to equip his disciples for the struggle before them and their cause, Christ Jesus said much to them of the supposed nature of evil and its assaults, and in a similar way St. Paul sought to save the early Christians from mistakes that might grow out of a failure to apprehend the character and presentment of this enemy. Thus, when writing to the Ephesians, he counseled them that they be fully awake to "the wiles of the devil;" for, said he, "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places."

This matter of alertness to the false claims of evil, their true inwardness and outcome in human belief, receives an emphasis in Christian Science which to many seems quite out of harmony with its fundamental teaching respecting the nothingness of evil. These good people would not be tempted to ridicule, however, by the fact that a teacher made himself familiar with the false point of view which was hindering the progress of his pupil, and no more should they criticize Scientists because of their endeavor to be awake to the presence and procedure of false belief, that they may be prepared to checkmate its every move.

Christian Science makes clear the all-important distinction between the fear of evil which expresses itself in a belief of nervousness and superstition, and from which the knowing of the truth is to set men free, and that alertness to the claims of evil which enables one to ward off their stroke and resist their appeal. Christ Jesus defines that which is opposed to Truth, to God, as a lie and a liar, unadulterated falsity, and this teaching of the Master at once and forever settles it that every effort to do away with suppositional evil by any means that strikes at its material or personal avenue of expression can but fail, and that utterly.

The world's redemption is a question of education and spiritual illumination. There must be a righting of thought respecting God and man, through the coming of Christ, Truth, and "there is none other name . . . whereby we must be saved."

The theological teaching of the past, and largely of the present, has identified the belief in evil with malicious personality, a devil, and with that "law of nature," so called, which is blindly indifferent to all right and justice. Christian Science identifies it with nothing save false belief, "the darkness of this world" as Paul puts it, and denies it all personality whatsoever. Furthermore, Christian Science centers our thought upon the far-reaching fact that, however multiplied the antagonisms embraced in that generalization known to Scientists as mortal mind, our struggle has to do with just so much of this falsity as we are supposed to have been born into or have unwittingly admitted to our mental household, so that the whole problem is narrowed down for each individual to the acquisition and maintenance of spiritual understanding, "a conscience void of offense toward God."

In her "Miscellaneous Writings" (p. 10), Mrs. Eddy says, "Even in belief you have but one [enemy] (that, not in reality), and this one enemy is yourself—your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science." This locates all our warfare within the confines of our own thought. Here the enemies of Truth and Love are entrenched, and here in the spirit of humbleness every true Christian Scientist is fighting "the good fight of faith."

JOHN B. WILLIS.

A LETTER TO OUR LEADER.

Albuquerque, N. M., June 2, 1910.

Dear Mrs. Eddy:—The articles in *McClure's Magazine*, ignorant as the writer was of your life-work and its Principle, still accomplished for me the great service of causing me to read the text-book, "Science and Health with Key to the Scriptures," written by you, which healed me physically and flooded my life with joy.

My gratitude to you is boundless, for you revealed to me the Principle of thought which, logically applied, results in the perfection of the individual and the race. In the bonds of the truth that you have taught me,

Lovingly yours,

MRS. CORA A. KELLAM.

AMONG THE CHURCHES.

SPOKANE, WASH.

Articles of incorporation of Second Church of Christ, Scientist, of Spokane have been filed at the court house, and the first services will be held in the assembly room of the North Central high school Sunday, July 3. For some time the need of a Christian Science church on the North Side has been apparent, but so long as the South Side church comfortably accommodated the audiences attending the Sunday services and the Wednesday evening meetings it was not thought wise to start services in another part of the city. During the last few months, however, the audiences have been growing steadily larger, and at times the seating capacity of the building at Fourth avenue and Post street has been overtaxed. Numbers have had to stand through the service, and in a few instances some have been turned away because of the overcrowded condition.

In view of the existence of these conditions it is considered that the proper time has arrived for the formation of another church, and with this object in view, a meeting of the members of First Church of Christ, Scientist, was held recently, when upward of fifty of these members, residents of the North Side, expressed their desire to unite in the formation of the new church. By unanimous vote their action was indorsed. Following this meeting steps were taken in the direction of incorporation, and the organization is now perfected and ready to begin services. This movement is not a division of the older church, except for the practical purposes of incorporation, as the two churches will cooperate. Second Church of Christ, Scientist, of Spokane is incorporated as a branch of The First Church of Christ, Scientist, of Boston.

Spokesman Review.

SAN DIEGO, CAL.

The first regular weekly meeting of the congregation was held last night [June 8] in the handsome new edifice of First Church of Christ, Scientist, which has been erected on the southwest corner of Second and Laurel streets at a cost of about fifty thousand dollars. The building is now sufficiently completed for occupancy, but will not be entirely finished for a few months. The first service was held in the church Sunday morning.

The building is one of the handsomest church edifices in the city, and covers almost the entire property, 100 x 150 feet. The seating capacity of the auditorium proper is nine hundred, but there is ample room in the rear of the regular pews for about three hundred chairs, which could be used in case of emergency. The finish and furnishings are plain, severely so, but are rich in effect.

The edifice will not be formally dedicated until it is entirely finished, which probably will not be for some time. The pipe-organ, a handsome instrument costing about eight thousand dollars, will not be installed until August.

San Diego Union.

THE LECTURES.

THE LECTURERS.

APPOINTED FOR THE YEAR, JULY 1, 1910, TO JUNE 30, 1911.

Miss Mary Brookins, C.S.B., 727 Andrus Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 5548 Page Boulevard, St. Louis, Mo.

Clarence C. Eaton, C.S.B., 624 North Third Street, Tacoma, Wash.

Judge William G. Ewing, C.S.B., 541 St. John's Avenue, Highland Park, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Mass.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., Postoffice Box 385, Concord, N. H.

Bliss Knapp, C.S.B., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 305 Temple Bar Building, Brooklyn, N. Y.

William D. McCrackan, A.M., C.S.B., Postoffice Box 2598, Boston, Mass.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Mrs. Sue Harper Mims, C.S.D., 41 Peachtree Circle, Atlanta, Ga.

Rev. Arthur R. Vosburgh, C.S.B., 519 Cutler Building, Rochester, N. Y.

Bicknell Young, C.S.B., Whitehall Court, London, S.W., England.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a specific address is given.

Obedience to the Church Manual (Article XXXII., Section 4) requires that each branch church shall call upon the Board of Lectureship annually for one or more lectures.

Applications for lectures from branch churches or societies advertised in the *Journal*, should be made on the initiative of the church or society, through its clerk, and sent to the lecturer whose services are desired, at the address given above. It is desirable that applications for the coming year should be sent in as soon after July 1 as convenient.

A circular letter has been prepared by the Board of Lectureship, and addressed to church officers, for the purpose of answering any questions that may arise with them concerning the proper handling of their arrangements for a lecture. This circular letter, among other recommendations, indicates that "it is important in all advertisements, notices, and introductions to designate the lecturer as follows: Member of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts," in order that the general public may discriminate between irresponsible lectures and authorized lectures on this subject.

CAMBRIDGE, ENGLAND.

The strong and influential following that Christian Science has obtained in England in general and Cambridge in particular, compels respectful attention for its advocates and unprejudiced consideration for its tenets. An eloquent and authoritative exposition of the Science was delivered in the Victoria Assembly Rooms, Cambridge, last Thursday afternoon [May 5] by the Rev. William P. McKenzie. Lawrence Beesley (Gonville and Caius College), who presided, said,—

It will be our privilege this evening to listen to one of the official lecturers of the Christian Science board of lectureship. The lecturers of this board travel all over the world wherever a Christian Science church is found—in all parts of the United States and Canada, in Africa, Australia, China, in many towns in Great Britain and Ireland, and on the Continent. It is their duty to correct mistakes and misapprehensions regarding Christian Science and the life and work of Mrs. Eddy, the Founder of Christian Science, but these lectures are in no way intended to proselytize or to attempt to persuade any one to believe in Christian Science; however, in the midst of so much ignorance of what Christian Science really is and what it teaches, it is only fair that the public should have an opportunity, in the short time a lecture allows, of learning some few of the fundamentals of Christian Science teaching.

It will give me peculiar pleasure to listen to a lecture on Christian Science in Cambridge, for as one who graduated in the natural science tripos in this university, and in a small way did research work subsequently, I have listened to many lectures on natural science in the lecture theaters near by; but I never found that this teaching led me beyond the regions of material law and material phenomena, never taught me anything of the spiritual facts of man's life, of his relation to a supreme and final cause, the existence of which men are today more and more admitting in every department of thought. I have found that the agnosticism which seems almost inevitable to natural science has been replaced by a practical understanding of the laws of God which Christian Science teaches and which the world has for centuries been blindly groping for and never found.

On the other hand, just as I found that natural science accepts no law or hypothesis without experimental proof, so Christian Science asks no man to accept its teachings without full and sufficient demonstrable evidence to support them. This evidence is accumulating in thousands of Christian Science homes and meetings, and it is evidence which no reasonable man can doubt—the release of mankind from disease and discord of every name and nature.

Cambridge News.

DULUTH, MINN.

A lecture on Christian Science under the auspices of First Church of Christ, Scientist, was given in the Lyceum Theater May 1 by the Rev. Arthur R. Vosburgh. He was introduced by John H. Norton, county attorney, who said in part,—

There is nothing in the doctrine, the teachings, or the tenets of the Christian Science church that is antagonistic to the largest and most liberal culture of man. It is the handmaid of science and the harbinger of health and happiness. A careful study of revealed religion demonstrates the accuracy of the teachings found in its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Again, if we take a wider view and a larger scope, it will be found that the natural law of the universe is in accord with the fundamentals that we espouse, and that the so-called miracles mentioned in the Bible are simply and solely specific manifestations of the omnipotence of God. If the Almighty spoke to Moses in tones of thunder on Mount Sinai, and barred the path of Balaam with a flaming sword, He no less certainly and surely speaks to mankind today in a voice whose tone and timbre is attuned to the supersensitive souls who are struggling in the darkness and groping their way slowly and surely upward toward that refulgence which "shineth more and more unto the perfect day."

Jesus Christ was the ideal man. His influence grows

Digitized by Google

stronger with the years, and he stands today as the most imposing personality this globe has ever known. He set the mark of civic righteousness so high that no man has ever been able to attain it in all the years that have rolled between Calvary's cross and now. The great beating, throbbing heart of the central intelligence of the universe, through him, has radiated its influence around and about us, until we sometimes feel that we are a part and parcel of the formative forces of being. Is it expecting too much for us all to catch something of the spirit and purpose of the Master? And may we not indulge the hope that we shall reflect in some measure his character in our daily lives, as we meet and mingle with our fellows? Perfection can be found only in the realm of the ideal. The nearer we approach the idealism of the Master, the less we shall be attracted by the glitter and glamour of the world. The higher the ideals of the individual, the better citizen he becomes, and the ideals of a nation can never rise above the level of the average of the ideals of the individuals that compose it.—*Correspondence.*

HORNELL, N. Y.

Judge William G. Ewing lectured at the Universalist Church on April 29. He was introduced by the Rev. L. D. Boynton, pastor of the church, who spoke as follows:—

In the beginning of my ministry I shared the conceit common with young theologues, that religious truth lay largely within the narrow boundaries of the sect in which I had been reared and educated; but, as I have grown older and felt the thrill of that touch which "makes the whole world kin," I have come to realize that we have all had our visions, and that we are each in our own way trying to be good and to make this old world of ours better. It is in the spirit of this broader, more rational, and more humane fellowship that I am happy to be here and listen with you to the lecturer of the evening.

Correspondence.

MONTCLAIR, N. J.

Judge Septimus J. Hanna lectured on Christian Science for First Church of Christ, Scientist, Sunday, May 1. He was introduced by William C. Trowbridge, who said in part,—

Some one has aptly said that "the world has shrunk into a neighborhood," so great has been the force of thought and human invention in the last decade. If this be true, then surely mankind is being drawn into a closer bond of brotherhood—into a fuller realization of the law of unity, and of man's sacred duty to man. Christian Science stands for universal brotherhood in its highest sense. We believe that mankind is at its best and that it shines its brightest when it is demonstrating this great Principle the most, and we believe that Jesus Christ the Wayshower meant what he said, and that he meant it for all mankind, when he said, "And I, if I be lifted up from the earth, will draw all men unto me." His life was the essence of service and brotherhood. Christian Science has for you today a sweet message—one tender and true yet strong, and to the human sense perhaps radical, but those of you who will give to this lecture your unbiased consideration and your careful thought, may take away with you today the "pearl of great price" of which the Master spoke and which he promised should be ours. This was his bequest to mankind.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Devils Lake, N. D.—Judge William G. Ewing, Grand Opera House, 8:30 p. m., July 10.

TESTIMONIES OF HEALING.

With a heart overflowing with thankfulness to God, and to our dear Leader, Mrs. Eddy, I write the testimony of my healing in Christian Science. I was a teacher in Sunday School and an ardent worker in the church, but I never was in close communion with God until I came to Christian Science. Five years ago, when I turned to it for help, I had a serious eye difficulty, which had caused me untold suffering for ten years. I had been to the best oculist in Boston, to opticians and physicians, but had found no relief. I then turned to Christian Science, although I knew nothing of its teachings nor of its manner of healing. I questioned the practitioner closely, to see if it was Christian and Biblical and free from hypnotism or mesmerism, and with much patience he explained to me the story of Christ Jesus' healing of the sick, so many centuries ago. In three days my eyes were healed, and at the end of the week many other ailments had likewise disappeared. One week's treatment was all that I had, and I came into man's rightful inheritance.

The Master said, "Ye shall know the truth, and the truth shall make you free." I can thankfully say that I am free, and that the knowledge of Christian Science has given me deep spiritual joy. I know that God is Love. I know He is always present, and my joy and peace are beyond all understanding. Christ is to me a living Christ, here and near, and I can say with the patriarch, "I know that my redeemer liveth." Divine Love has blessed me with class instruction, and I have been able to bring to my fellow-men this healing truth. No joy can compare with the joy that comes to us as we are able to awaken another from the bondage of sickness and sin to the freedom of health and holiness. Christ is indeed the way.

MRS. EDITH NEWTON TORREY, Southbridge, Mass.

In the fall of 1906 my attending physician sent me to central Indiana for my health. He told me that on account of my physical condition I must avoid any violent exercise and all exposure to cold or the heat of the sun. I was suffering from a stomach affection, poor circulation, and extreme nervousness, being in a very weak condition. After over five weeks of the best medical treatment, I found myself in a state of deep melancholy, without hope in the world, yet with a great longing to live. A great cloud of fear hung over me, in fact the fear of death itself was upon me; but, thanks be to God, at this time of great need I turned to Christian Science for help, and from the first treatment I was able to eat what was set before me, with no bad results following.

In one month I was back at home, doing the heaviest kind of labor on the farm. This was followed by the most strenuous year's work of my life, with no loss of time on account of sickness except once in the spring of 1907, when I seemed to be poisoned by wild ivy. By the application of Christian Science this trouble was overcome in two days,—a much shorter time than had been required to effect a cure through the use of medicine before I came to Christian Science. I have also had another proof of the healing to be found in Christian Science, in a case of toothache and severe pains in the head and face. This was met without other aid than that of my wife, who began the study of Christian Science at the time of my healing. Since coming into Christian Science we have been more prosperous than ever before. I have had no bills for medicine or medical treatment to pay, and with good health and strength to work, I have been able to purchase a home.

While I am indeed deeply grateful for the physical healing, I must express yet deeper gratitude for the spiritual quickening and the peace of mind which have come to me; and as I study the Bible and Science and Health, and prayer-

Digitized by Google

fully try to put into practice their teachings, I find that each day brings greater blessings than the one before. I am very grateful to God for all these proofs of His loving care, and I am thankful to Mrs. Eddy for showing us the way to find Him, through the truth which makes us free. This is written in the hope that some reader will be led to turn to the one God, good, the source of all healing.

FRED A. STUCY, Vevay, Ind.

In the winter of 1903, I spent a week with a family who were interested in Christian Science, and although I had heard much said on this subject, I had never read or studied any of the literature. My friends asked me to learn the "scientific statement of being" (Science and Health, p. 468) and the spiritual interpretation of the Lord's Prayer (*Ibid.*, p. 15), and though it took considerable urging at that time before I consented, yet after I had learned this statement, I could not forget it; there was something about it which particularly impressed me.

In the summer of 1905, after having been in boarding-school a year, I found myself face to face with a problem. During the year I had contracted a skin disease, which had spread over my entire body, and as it drew near the time to leave for home, my fear became intensified as to what my family would think when they found out how serious this trouble was. The fact was that I had not told them anything of my condition until I seemed to be growing worse, and even then I spoke of it as lightly as possible. On my last night at school, while I lay wondering what I should do, the thought came very forcibly to me that, if God could heal, as I had often heard He could, surely I had a right to appeal to Him for help; but I knew that it would be necessary first to cast out of my thought all antagonism against the teachings of Christian Science. This done, I began to consider each portion of the "scientific statement of being" very carefully, using this, my only knowledge of Christian Science, in a practical way for the first time.

When morning came, the excitement of leaving for home caused me to forget myself so far as this eruption was concerned; but each of the two nights following (which time it took to reach San Francisco) I worked very hard, as I had done the last night in school. As a consequence, when I got home my body was absolutely clear and all trace of the distressing eruption was eliminated, but as indications still showed on my hands, I was immediately taken to a doctor. Several remedies were prescribed from time to time, but none of these seemed of any avail. Finally the doctor put me through a most rigid examination. This was in October, 1905, and I then declared that I would never enter a doctor's office again—that I was going to be a Christian Scientist; and I stood by this resolution so far as going back to the doctor's office was concerned, but as to being a Christian Scientist—I was far from it. In the first place I was not grateful for the benefit I had already received, and was most unwilling to acknowledge it, although I had looked for healing in that direction; but I may say that in the summer of 1906 I began to be truly interested in Christian Science and to read the literature and to attend services regularly.

One year later came a greater step. At this time (1907) the trouble was still on my hands, although there was some improvement; but the eruption had recently developed on my head. I then began to take treatment in Christian Science, and within two weeks my head and ear showed no signs of the trouble, but my hands were no better. Then for several months I tried to treat myself, declaring as best I could the nothingness of all that is unlike God, good—still no result. One night, while in conversation with a Christian Scientist, I was shown clearly where the fault lay. From the very start I had taken pains to keep my hands concealed as much as possible, and being a stenographer, this was no easy task. I saw immediately that I had been making a reality out of something which I was endeavoring to treat as having no power; hence I began to correct this thought of self-consciousness, which seemed difficult; but I held my ground in the truth, and succeeded in practically forgetting the annoying condition. I did not long need to forget, however, for my complete healing was soon accomplished.

I am truly grateful for this healing—grateful first that I know our heavenly Father to be omnipresent, and that His work is always perfect; and secondly to our dear Leader, Mrs. Eddy, who has shown us that the healing power of Truth, demonstrated by Christ Jesus, but seemingly lost through ages of error, is applicable to and available for each and every one of us; and that it is not well to delay, as St. Paul wrote to the Corinthians, "Now is the accepted time; behold, now is the day of salvation." Are not such proofs of God's power as this which was vouchsafed me, in strict accordance with Jesus' statement, "Ye shall know the truth, and the truth shall make you free"?

AGNES JOSEPHINE HEWITT, San Francisco, Cal.

I am very grateful for the numerous blessings which have come to me through Christian Science, and wish to tell what its healing power has done for me. For a number of years I suffered from liver complaint, and later from gall-stones. I tried everything for relief, and employed a number of physicians, who helped me temporarily but said they could not effect a permanent cure. Through a kind friend I became interested in Christian Science, and was improving when I was taken with an attack more severe than any of the preceding ones. I called for a practitioner, who gave me a treatment, after which I fell asleep. I slept for two hours, and awoke without any pain whatever. This was about four years ago, and I have not had any return of the trouble since.

I know that I was perfectly healed, and I have since then had many proofs of the power of divine Love in the overcoming of discords of all kinds in my own family, and also for others.—MRS. ADDIE GONNERMAN, Auburn, Cal.

I wish to offer the following expression of gratitude, hoping that it may benefit some reader as I have been helped by the testimonies in our periodicals, and knowing that to help others is to help ourselves. I wish to express my gratitude for the great benefit I have received since becoming a member of a Christian Science church. The duties and privileges of membership inspire one to better and broader work.

While I have certainly received physical help in Christian Science, having been healed of an acute attack of illness and throat trouble, this seems the smallest part. My mental outlook has been entirely changed, and I have found the Father, who is indeed a very present help in every time of need. Why should we not also be grateful to our dear Leader, who has labored so steadfastly to reveal to us the God "who forgiveth all thine iniquities; who healeth all thy diseases"!

MABEL C. HAYS, St. Louis, Mo.

It was nearly two years ago that I decided to investigate Christian Science. I had been living for ten months in Denver, Col., where I was to remain three years on account of lung trouble, which I had contracted in New York. Although the physicians pronounced my case apparently cured, I had an intense fear of a relapse, so my separation from a loving mother and sister seemed rather painful, yet unavoidable under the circumstances. When, however, I caught the first glimpse of Christian Science, a wonderful change took place in me, and under the loving guidance of a faithful worker I perceived enough of the truth within two weeks so

Digitized by Google

that my return to New York was decided upon, as the fear of a relapse was entirely destroyed. My greatest efforts to take up my profession as mechanical engineer in Denver had failed, but now my past experience seemed like a dream—I was back in New York and again in my old position.

Since my return, I have not missed one hour from my work, and though I travel three and one half hours every day to my place of business, I demonstrate the truth of the Scriptural verse: "They shall run, and not be weary." I am gaining physically, but what is more than everything else to me, I am gaining spiritually, reaching a clearer understanding of divine Truth.

I had studied the physical sciences in Germany, and the material theory of the universe and man was to me indisputable, so much more so as I could not adhere to the ritual and traditions of Judaism, in which I had been brought up. I was a great sufferer, mentally, all my life; I found myself tossed about by every wind and was yearning for a "principle" to live by. The many proofs and blessings which I have had in the last year have given me an unfaltering conviction that I have indeed found the one Principle in Christian Science, which has not only taught me to love God and my fellow-men, but has brought me health and peace.

I am not yet a member of any Christian Science church, but it is my sincerest desire to attain so much of the Christ-mind that I may be worthy to be called a Christian Scientist, and so show in some measure my deep gratitude to the greatest benefactor of this age, Mrs. Eddy.

VICTOR SCHLEYER, New York, N. Y.

With deep gratitude I desire to express my love and reverence for our beloved Leader, Mrs. Eddy, who through a life consecrated to good prepared herself to receive the wonderful revelation of Christian Science. I also wish to acknowledge the benefits which have come to me through Christian Science. When I took up the study of the textbook, "Science and Health with Key to the Scriptures," it was with no expectation of gaining any direct benefit myself; but during these first few months I was healed of rheumatism, from which I had suffered nearly all my life and had given up all hope of anything more than alleviation of this trouble, which was supposedly hereditary. In Christian Science I learned not only of a new heaven, but of a new earth; I gained a new concept of God as infinite good; I saw Christ as the spiritual idea, revealing man's unity with God, and then the healing was completed. I was also healed of near-sightedness, and delivered to a great extent from the bondage of fear, and I know that perfect freedom will eventually come as I realize more clearly the omnipresence of God.

It is now six years since Christian Science came to me, and in that time I rejoice to see the progress of the Cause and to know that the "still small voice" of Truth is speaking to the whole world the words of peace. I am grateful for all the literature, especially the *Quarterly* with the Lesson-Sermons. Through their spiritual interpretation of the Scriptures a practical application of the Bible teachings is gained which was hitherto unknown.

MARY L. RICHMOND, Glasgow, Scotland.

It is with a grateful heart that I give my experience in Christian Science. I first heard of it about fifteen years ago, but only through those who were prejudiced because of a false apprehension of it. My information being from such a source, I also was greatly prejudiced against it. I did not care to investigate any further, and was still in this frame of mind when the subject was again presented to me, over eight years ago, by my sister and her husband, who had investigated and found it to be the truth which heals every ill. They were anxious that others should learn the truth as they had, but being in this opposing mental state I refused to talk to them and requested that they say no more about it in my house. Matters stood in this way until my mother, who had been staying with this sister, came home, and she brought with her a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," in order to study it herself. I decided to read it for the purpose of criticizing the teachings, and of course from my standpoint I found a great many things which seemed inconsistent and some very absurd. So much for the poor blind man (mentally), who will not see when given an opportunity.

My sister had said, in the mean time, that when I got ready to study Christian Science in earnest she would send me a copy of Science and Health; so, about a year after my perusal of the "little book" for criticism, I again had a desire to read it, but from an altogether different motive. The book came, and I commenced to read it, this time not with prejudice, but with a yearning for the truth; and the truth which had been hidden to the critic, was revealed in all its glory to the penitent child seeking at-one-ment with his Father. It seems to me that I can never forget the light and joy that came to my spiritual vision as I read those immortal words in the Preface: "To those leaning on the sustaining infinite, today is big with blessings." The light came with those very first words, and continued to pour in upon me as I read the book. While I was not reading for the sake of the healing, in fact was not thinking about it at all, I was nevertheless healed of heart trouble and of awful headaches with which I had been troubled daily nearly all my life, and they have never troubled me since.

Myself, wife, and five children are all earnest students of Christian Science, and we have daily proofs that God is "a very present help in trouble." We have had much to overcome, and have still much to meet, but we are learning, as Mrs. Eddy tells us, that "every trial of our faith in God makes us stronger" (Science and Health, p. 410) for the next; and as we endure and overcome we can in a small measure appreciate what our beloved Leader has had to meet in presenting this truth to the world. Verily she will have her reward. I wish to live the life of a Christian Scientist in such a manner that it may stand for a daily testimony to the efficacy of God's word to heal and save people in this twentieth century and in all time.

WILLIAM S. CANAAN, Hattiesburg, Miss.

Words can never express what the understanding of Christian Science means to me. Twelve years ago, myself and two children had been pronounced incurable by the best of physicians. Today we are living witnesses of the healing power of Christian Science, which has been my help in every need. Not only has it bestowed health and happiness, but also prosperity; and each day brings added joys and blessings.

Recently the power of Truth was manifested to me very clearly in the healing of my little granddaughter of a badly injured shoulder. I was asked to treat the child until the doctor could arrive who had been called to put the shoulder in place, as the parents felt that it would be necessary to have a surgeon do this. To their surprise, as well as that of the doctor, Science had done the work, and the child was resting quietly. After a thorough examination the doctor said, "If this is the work of Christian Science, I would like to read the book." I loaned him a copy of Science and Health, which he still has. I thank God for all the blessings that have come to me through the unselfish labor of our Leader. My daily prayer is to walk in the footsteps of Truth.

MRS. JENNIE WISS, Maplewood, Mo.

Digitized by Google

More than a year ago I had a very severe attack of illness. For several days I tried to meet it with what little understanding I had of the truth as taught in Science and Health, but as I seemed to grow worse, I telephoned for a practitioner to help me. When she arrived I was suffering greatly, but after she treated me I was relieved in a very short time. I slept better that night than I had for a week, but the next morning, as I still had some fever and pain, I again asked for help. This was given me, and I was able to be in church by eleven o'clock. On Monday morning I was in my place at the store, a well woman. I attribute my speedy recovery to the understanding of the truth as taught in Science and Health, and I feel grateful indeed for what divine Love has done for me.

MRS. CARRIE E. BECKER, San Jose, Cal.

Words fail me when I try to tell of the help I have received from the study of Mrs. Eddy's writings. I was healed of misery and suffering of long standing, and have since continued in better health than I ever expected to have. I am daily praising God for Christian Science, which is the fulfilment of John's prophecy, "Behold I make all things new." It is the new and nobler life that we covet, and it is indeed from God and of Him. We do well to give up the idea, once and for all, that spiritual progress is under bonds to material sense.

The first benefit I received through Christian Science was from a very serious accident. My wife read to me from Science and Health, which gave me almost instant relief from pain. The next morning I was unable to get up, but my wife went for a Christian Science practitioner, who gave me treatment, and I was able to be up in three days. I was also healed of rheumatism and stomach trouble of many years' standing. Afterward my horse fell with me, and my foot was severely injured. I had a few treatments, and though I was a little lame, I was able to do my work, and in a short time the foot was as perfect as the other. Recently, when my horse slipped on the ice and fell, my wife, daughter, and myself were thrown out; but we all escaped unhurt by declaring the ever-present help of divine Mind.

I am very thankful to God, and to Mrs. Eddy for bringing to us this spiritual understanding.

G. J. SISMAN, Ogden, Utah.

I wish to tell of the many blessings that have come into our home through Christian Science. A dear friend told me about it many years ago, but I did not think it could be for me. I afterward borrowed Science and Health and began to read it, but at first it seemed like an unknown tongue to me. The first benefit I received was the ability to lay off glasses, although I had been told I would always have to use them. The headache from which I had suffered most of my life also disappeared, relief being given me in one treatment. For more than nine years the truth has been our only remedy, and it has never failed us. Many ills have been met and destroyed, also the results of accidents. Our little daughter fell from the barn loft, also down cellar, but was saved from injury by knowing the truth as taught in Science and Health.

I cannot express in words my gratitude to God for giving us our brave Leader, Mrs. Eddy.

MRS. G. J. SISMAN, Ogden, Utah.

I am thankful that I can testify to the healing power of God, demonstrated through Christian Science, for what the truth has done for me in healing me of rheumatism. My ankle and foot were so affected that I could not walk, and the pains would go all through my body. I tried many remedies, but had no relief. I sent for the doctor, who said that I would have to wear a rubber stocking. I took the medicine he prescribed for several days, but had no relief, and one night I awoke with such severe pains all through my body that I again sent for the doctor. When he came he examined me, and then changed the medicine (I was taking three kinds); but still there was no relief.

I had heard of Christian Science, and I asked my daughter if she would get me a practitioner. I was in bed, scarcely able to move, when the practitioner came. She treated me for several days, and one morning when she came I said, "Now we can praise God, for my pains are all gone." I then got out of bed and walked across the room. I found I did not need to wear a rubber stocking, for divine Truth was all sufficient for me. God has said, "Call upon me in the day of trouble: I will deliver thee." I was also healed of a throat trouble I had had for years, and of dizziness; and I have been helped in overcoming worry.

I hope this testimony may be a help to others, and I praise God for this wonderful healing power revealed through Christian Science.

MRS. F. J. RIDENBAUGH, Lexington, Ky.

I came to Christian Science with a sorrowful heart, having had much trouble, which was followed by the death of my baby. My friends tried to comfort me by saying, "God knows best; His will be done;" but their words meant nothing to me. About two months after this experience a friend took me to a Christian Science practitioner. He assured me that "God is Love," and that He is not the author of suffering. This immediately turned my thoughts to life instead of death, and in two weeks' time I was entirely healed, my sorrow being turned into joy. I have been taught in Christian Science how to love my enemies. I have been perfectly healed of a serious eye difficulty which had been pronounced by two eye specialists not only as incurable, but that it would constantly grow worse. I have left off glasses, which I had worn for eight years, and now use my eyes constantly in any way I wish, without any pain or experiencing any of the former difficulty. Neuralgia, from which I had suffered for years, has entirely disappeared.

For all of this I am indeed thankful to God, and to Mrs Eddy for pointing out the way to divine Truth.

MRS. JULIA T. ATWOOD, Watertown, Conn.

I had never been contented in my own church, and when I noticed the glad faces of the many Christian Scientists around me, I began to attend the services at their church. Very soon one of these kind people loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. At this time I was wearing glasses, but before many months I laid them aside, scarcely realizing that the healing had come through the reading of the text-book. Later, hay-fever and catarrh left me. It was not, however, until a serious attack of fever that I awoke to the fact that I must choose for myself, that I must turn to Christian Science as the whole truth, or else, as my family was begging me to do, resort to medical help. A Christian Science practitioner was called. The struggle seemed a long and difficult one, but the victory was on the side of Truth, as it always is, if we cast our net "on the right side."

This experience fully convinced me that Christian Science is the truth, and I have since been daily striving to show my gratitude for this, and for other healings, by mental and moral betterment. I know that only as the Mind of Christ unfolds in me can I rise to greater heights, and to know that all around me can reflect this same Mind has solved the problem of how to love my neighbor as myself. This is my greatest joy, and though my understanding may be small, I can in this way serve our Leader, Mrs. Eddy, who deserves the best we all have to give.—GEORGIA E. MILLER, Chicago, Ill.

Digitized by Google

It is a year and a half since I came into Christian Science, and I feel it is my duty to acknowledge some of the many benefits I have received. My attention was first brought to it through the healing of my mother, who had been constantly under the doctor's care for several years. As material means had failed, she was told by some friends that Christian Science would help her, and we therefore sought it as a last resort. She had absent treatment, and was instantly relieved. The rejoicing was great among us, and as I desired to know how such wonderful demonstrations were brought about, I wrote to the practitioner, to learn more about it. In reply I was told to study the literature and gain the spirit of the teaching, so I endeavored to apply myself to the study of Science and Health, and I also read nearly all of the other works by Mrs. Eddy. The result was what seemed to me wonderful demonstrations of the power of Truth in two instances. I was also relieved of a growth on my eyelid, which the optician said would necessitate an operation, and I have given up the use of glasses.

I am thankful to God, divine Truth, and to Mrs. Eddy, who has so ably brought these wonderful works to the understanding of mankind, so that they can be demonstrated to the world.—SARAH M. HARVEY, Keene, N. H.

When living at West Newton, Mass., during the winter and spring of 1907, our daughter, then seven years of age, became afflicted with serious bowel trouble. Day followed day, week followed week, and month followed month, until finally one hundred and sixteen days measured the time during which there was absolutely no movement. As soon as the seriousness of the case was realized, the child was placed under Christian Science treatment, and until a normal condition was restored she was apparently in good health (excepting for recurrence of high fever each two weeks and lasting about forty-eight hours), playing with zest in the snow or the fields. Inquiry was made of a physician of skill and reputation regarding such a case, who stated emphatically that it was impossible for a child to be alive under such a condition. The treatment was persisted in, and on June 10, the day following Communion service at The Mother Church, which the child attended, the condition began to yield; at the end of a week the child was normal, and has continued normal ever since.

CHRISTIAN SCIENCE.

HARRY T. FEE.

TRUTH'S footprints mark the epochs of the years.
Where is the past, the panoply of pride,
The pomp of power? All, all are scattered wide,
And calm above their dust its light appears—
The primal hope humanity reveres.
Its might above the wastes of time and tide
Doth stand, and in man's heart there doth abide
A faith above the wisdom of the seers.

'Neath Truth's uplifted hand all wrong shall cease,
Oppression's might before its vision die.
And hate shall fade, and faith shall give to peace
The steadfast glow that gilds the future's sky.
The light of hope above our path shall shine,
And Love shall reign, omnipotent, divine.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

Democracy and the modern church require that all men shall be great. The modern social, industrial, economic problem requires thinking masses, as well as leaders. Here is our danger. There is only one remedy. That is to get back to great thoughts and great books and great sermons and great interests again. The ancient poet was right when he said, "I will meditate in thy precepts." It made him great. Meditation on great truths makes corresponding minds and hearts. The Bible is full of this. The great man is he whose delight is in, not newspapers and cheap magazines and sporting news, but in the law of the Lord, "and in his law doth he meditate day and night." "My meditation of him shall be sweet." Now, the men who move across the pages of the Bible are great and commanding figures. These old sentences are the secret of their greatness. They realized they were children of the eternal Father, copartners with the great God in building the new world. So they thought His thoughts, sought His company, found their chief interest in hearing His Word, and their great enthusiasm and delight in the doing of His will.

[*Interior.*]

It is such a common thing to talk about the temptations of the world to wickedness, that people usually forget how many are its temptations to righteousness and respectability—particularly in communities and circles of acquaintanceship which have been long permeated with the influence of Christian personalities. In the midst of a respectable neighborhood and busy at a respectable work, a man has but little idea how much of his goodness is his own and how much of it is borrowed from his neighbors and from his economic and social situation.

Nor need the application be confined to the rather obvious case of those who go to church at home and do not go when on vacation; they betray that their attendance at public worship is a conventional habit rather than a moving of spiritual aspiration. But there is a still more profound revelation of deficient character that appears even in many whom habit holds blamelessly regular in church-going through the whole vacation season. Vacation often reveals the utter hollowness of what passes in many lives for a sense of conscientious responsibility to God.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

How can sickness, any more than lust, remain to one who feels his sins are forever wiped out, and remembered no more against us. How can what we call bodily death be exempt from the great work of God's saving grace, any more than any other imperfection that is to be overcome in the victory alone truly victorious. Let us not be deceived by the traditions of men. Let us not mock God by putting limitations on His mighty redemptive power. The most preposterous thing in all the world is to think that Jesus came for any other purpose than to be "the truth drawn out in living characters." The "unpardonable sin" that any soul can commit is to believe that God's pardon was not intended to be as wide in its reach as sin and sickness and death. Though all the creeds of Christendom have come short of realizing it, this is the great fact that stands out as sure as the eternal God. It is one of those "many things" Christ said he had longed to say to men, but for which they were not yet prepared, as he walked on the earth, and it must be left for the Spirit to bring clearly into the consciousness of men.

[Rev. Wyllys Rede, D.D., in *Churchman.*]

The world does not now exclaim, "Behold how these Christians love one another!" On the contrary, it is shocked by our coldness and lack of charity. The divisions

Digitized by Google

of Christianity betray a woeful lack of love in the church and have broken into fragments that fellowship of the gospel by which we should have been governed and preserved evermore. Here is the weakness of the church in our day. Here is the one thing needful for her well-being. We must cultivate the virtue of Christian love and win it back again. We must strengthen the bonds of Christian fellowship and widen them until they include every soul for which Christ died. The church needs to think less about her organization and more about her inner life. What she needs today is a revival of that splendid sense of loyalty to Christ and love for men which made her such a tremendous power in her earliest and purest days. If we can rekindle the fire of Pentecostal love within her bosom, she will do in our time such works as she did of old; yes, and even greater works.

[*Living Church.*]

He who sincerely desires to possess the grace of humility must be content to live the hidden life; content to be unsought, unheard, and forgotten by the world. His life must be "hid with Christ in God." He becomes indifferent to the world's applause, and desires to be noticed as little as possible. He does not court persecution or notoriety because of his religious life, and his sole desire is to be a saint, not to appear to be one; nor does he ever deem himself to be holy. Self is something he is gradually losing sight of. The virtues that he hopes to acquire are not for his own admiration, or to earn the praise of others, but for his Beloved alone. In the beginning of the spiritual life one often prays for the grace of humility, yet does not dream to what it must lead. The things dearest to the heart of mankind must be given up.

[*Standard.*]

If there is anything in the cry concerning the "arrested progress of the church," of which we hear so much from England, if it is true that in our own land the church does not increase in influence and effectiveness in proportion to the increase of our population, the explanation is to be found, in large part, in the loss by the church of a definite purpose which is of sufficient worth to justify her existence. The early Christians, coming together in associated effort, had a mighty program. They saw a world that needed God as revealed in Jesus Christ, and this need was a challenge to which they responded joyously and with their might. They undertook to bring Jesus Christ to men and men to Jesus Christ. The passing centuries have not changed the program. It is the same for us as for Paul.

[Rev. Edwin C. Sweetser, D.D., in *Universalist Leader.*]

If Jesus Christ was a perfect man, in his alliance with God, in his spiritual qualities, and in his knowledge of the laws of nature and his ability to use its forces, why is it not entirely credible and probable that he was able to do such works as the Bible ascribes to him? Modern science, instead of making it less credible, increases its credibility. From that point of view, his miracles were signs of his perfect humanity; they showed that, as the Bible says, he was the head of every man, the model man, the perfect type toward which the human race is tending. It was natural for such a man to do exactly such things as the Bible ascribes to him, for the purpose of introducing his kingdom on earth and indicating the nature of his God-given mission.

[*Christian Register.*]

What we can endure in ourselves as punishment for sin, even though it be like fire shut in the bones, can be borne as remedial and cleansing, but the evil we have set stalking through the world, to work its will, is a terror that walketh at noonday and in midnight darkness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The House, before adjournment, by a vote of 130 to 111, passed the Appalachian forest bill so that it could go to the Senate and become the unfinished business to be considered immediately after Congress convenes next December. This bill provides for the expenditure of one million dollars the first year and two million dollars each year thereafter until and including 1915, for the acquirement of forest lands, the preservation of existing forests, and the reforestation of denuded portions of the watersheds of the White and Appalachian mountains in those states which maintain forestry bureaus and systems of fire control.

The postmaster-general has returned to the secretary of the treasury another million dollars of the amount set apart from the public funds to assist in defraying expenses of the postal service. This makes a total of five million dollars thus returned since Jan. 1. He is confident that the financial returns covering the operations of the present fiscal year will show a reduction of more than ten million dollars in the total annual deficit, which amounted in 1909 to seventeen million five hundred thousand dollars.

The bureau of engraving and printing now turns out the paper currency of the Government complete, instead of merely printing it and leaving to another branch of the department the work of imprinting the numerals and seals and cutting the big sheets up into notes. The saving in labor by the change is estimated to be one hundred and thirty-eight thousand dollars per annum.

Under the Taft and Roosevelt administrations there have been thirty-five indictments of corporations and individuals for violation of the Sherman anti-trust act. Thirteen of these have been returned since Mr. Taft became President. Most of the cases are pending. The Government has lost a few of them, but in several others it has won notable victories.

The postmaster-general intends to push as rapidly as possible the organization of the postal savings system. The postal administrations of all foreign countries which have postal savings banks have been requested by the department to submit samples of their blank forms and copies of their regulations and instructions.

The select committee of the Senate appointed to investigate the coercive methods of the courts and police departments, known as the "third degree" committee, will be divided into two subcommittees for the investigation of conditions in the East and West respectively.

President Taft refused to give his support to the amendment to the sundry civil appropriations bill exempting labor organizations from prosecution under the Sherman anti-trust law, because he believed the legislation to be radically wrong,—class legislation.

The Cumberland Telephone and Telegraph Company has been found guilty of violating the Mississippi anti-trust laws and the chancery court has imposed a fine of one hundred and seventy-five thousand dollars. The charge was conspiracy to shut off competition.

Adding machines in auditing the postmasters' money order accounts have been introduced into the auditor's office for the postoffice department, a branch of the treasury. By using the machines the time of the audit will be reduced from nine to four months.

It is said to be the intention of the United States to contest, at the very first opportunity, the claim of Canada that Hudson bay is an inland sea to which the Dominion has exclusive rights and over which it has complete jurisdiction and control.

Department stores and others desiring fresh silver coin must hereafter pay the expense of transportation. This will be a saving to the Government of about one hundred thousand dollars annually.

The drydock Dewey has been refloated. A board is now engaged in a careful inspection of the dock to determine the cause of its sinking, which occurred May 24.

An award of one hundred thousand dollars has been made to Richard Parr, who discovered the frauds in the underweighing of sugar at the port of New York.

Boston this year had a total number of graduates from its grammar schools of 6,652 and from its high schools of 1,259.

Oklahoma is somewhat excited over the attempt to remove the capital from Guthrie to Oklahoma City.

International.

With the news that the Mersey Dock and Harbor Board has decided to commence the construction of a huge dock, comes the announcement that the Cunard Company proposes to build liners of sixty thousand tons each. The new dock will be large enough to accommodate these vessels, and the quay berths will be suitable for liners one thousand feet in length. The Lusitania and Mauretania are 32,500-ton vessels and the Titanic and Olympic 45,000 tons.

An imperial decree just issued refuses the popular and insistent demand recently made for the immediate convocation of a national Parliament for China. The regent proposes to adhere to his original program, which provides for a general legislative body to be summoned nine years after the first meeting of the provincial assemblies, which were constituted by a decree of the throne made on May 9 last.

The premier of New Zealand, in a speech foreshadowing the government's anti-trust legislation, said it possessed clear evidence that a powerful American company was exercising a restrictive and prejudicial influence in New Zealand. He added that it had created a monopoly of the worst kind, which must be stopped.

The Chilean government has commissioned a British firm to lay down forthwith the world's record battleship. The vessel will be thirty-two thousand tons and will have a speed equal to or exceeding the fastest warship of her class afloat. The ship will cost fifteen million dollars.

The Kaiser has agreed to sell the historic Royal Opera House to Potsdam for approximately two million dollars. The property has been in the possession of the Hohenzollerns since the days of Frederick the Great.

Industrial and Commercial.

More than one half of all the last blocks to be used by the shoe industry of America the coming year are now stored in two northern Michigan towns, Manton and Cadillac, in which are located two big plants whose capacity is about fifteen thousand blocks a day, the shops being run full time during about eight months of the year. At Manton the factory covers some five acres and there is storage capacity for some fifteen hundred thousand blocks. The Cadillac plant covers seven acres and the storage capacity is upward of two million blocks. In addition to making last blocks, blocks are turned out from which are made tenpins, candlepins, duck pins, dumb-bells, and Indian clubs.

On the Aziscohos Falls, Me., in the Magalloway river, a tributary of the Androscoggin, the Androscoggin Reservoir Company is constructing a great dam, to form one of the largest storage reservoirs for water in the world. This storage basin, when completed, will contain eight billion cubic feet of water and will add nearly fifty per cent to the storage system of this region. A new lake will be formed, which will be about ten and a half square miles in area and twelve miles in length. This is not a power scheme, but one of storage. The money for this development, which will amount to several hundred thousand dollars, is to be furnished by the corporations along the lower waters who are interested in the use of this water storage.

The Steel Corporation has authorized its subsidiary, the Universal Portland Cement Company, to complete at once construction of cement plant No. 6 at Buffington, Ind., to its full capacity of four million barrels of Universal Portland cement per annum. With its completion the company will have, including the present plant at Pittsburg, an annual output of twelve million barrels of cement, all manufactured from blast-furnace slag and limestone.

There are automobile factories in twenty-one of the United States and it is conservatively estimated that the output in 1910 will be two hundred thousand motor cars. The capital involved is nearly one hundred and seventy-five million dollars. There are fifty-two hundred agents for motor cars throughout the country, maintaining garages and salesrooms, the whole employing more than two hundred thousand people.

The United States forest service is formulating its plans for experimenting on the various woods to determine their adaptability in the manufacture of paper. The American Paper and Pulp Association has appointed a committee to cooperate with the forest service in making these experiments. Spruce is now used for making wood pulp and the first subjects of experiment will be hemlock, jack pine, and birch.

An agreement for the construction of a new twenty-five-million-dollar terminal station by the Pennsylvania railroad, between Canal street and the Chicago river, and from Madison street south to Van Buren street, has been reached by the management of the railroad and concurred in by the directors of the Chicago, Milwaukee & St. Paul, Chicago & Alton, Chicago, Burlington & Quincy railroads.

A log raft nine hundred feet long, fifty-four feet wide and drawing thirty-six feet of water, has just been successfully towed from the Columbia river to San Diego. The raft is valued at two hundred thousand dollars.

It is announced that the fee received by John B. Stanchfield for defending F. Augustus Heinze, the Montana copper king, was eight hundred thousand dollars, the largest ever recorded in a criminal case.

The country's annual "smoke" bill is said to be nine hundred and forty million dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OUR HIGH CALLING OF GOD.

SUE H. MIMS.

In Cruden's Concordance one definition of "call" is this, "To appoint and qualify a person for some work and service." To the Philippians Paul wrote, "I press toward the mark for the prize of the high calling of God in Christ Jesus." This word "press" aptly expresses the unflagging zeal of this wonderful apostle. No great financier or worldly conqueror ever pressed for the possession of gold or the conquest of land and nations as did this noble Christian for a "knowledge of Christ," and of "the power of his resurrection," or the "spiritualization of thought," according to Mrs. Eddy's definition of resurrection (Science and Health, p. 593). We cannot wonder at this zeal of the apostle, however, when we perceive how fully he realized the splendor of that high calling of God which reaches humanity through Christ Jesus, who is the "life-link forming the connection through which the real reaches the unreal, Soul rebukes sense, and Truth destroys error" (*Ibid.*, p. 350).

In St. Paul's allusion to his call, stages or steps in the attainment of spiritual apprehension seem to appear. In this same chapter he writes, "For our conversation is in heaven; from whence also we look for the Saviour, the Lord Jesus Christ; who shall change our vile body, that it may be fashioned like unto his glorious body, according to the working whereby he is able even to subdue all things unto himself." He realized the transforming power of the Christ, the spiritual idea, and yet outside of Christian Science his phrasing seems strange, almost inexplicable; so that theology, if it deal with this statement at all, is led to place this transformation beyond the grave, and this despite the fact that the prophet Isaiah declared, "The grave cannot praise thee, death cannot celebrate thee: they that go down into the pit cannot hope for thy truth."

Christian Science both glorifies and simplifies Christianity, and shows how normal and natural is this process of transformation. Since the body is the phenomenon of thought, it would necessarily be changed with the spiritualization of thought; and as sin is overcome in Christian Science, and beliefs of disease are destroyed by the truth of perfect being in which man is revealed as the image of his Maker, it is reasonable and wise to expect this gradual transformation by the renewing power of Spirit, as St. Paul also teaches in other references, notably in his second epistle to the Corinthians, where he says, "But we all with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory." This contemplation of the divine ideal transforms thought, and hence its phenomena. This redemptive process usually begins with the healing of the body through a change of thought. Our Leader says, "To succeed in healing, you must conquer your own fears as well as those of your patients, and rise into higher and holier consciousness;" and again, "Correct material belief by spiritual understanding, and Spirit will form you anew" (*Ibid.*, pp. 419, 425).

In his letter to the Ephesians the apostle again alludes to this call. He says, "My prayer is . . . that your minds may be so enlightened that you may realize the hope given by God's call, the wealth of the glory of his heritage among Christ's people, and the transcendent greatness of the power which he is able to exercise in dealing with us who believe in him. The same mighty power was exerted upon the Christ, when he raised the Christ from the dead, and caused him to sit at his right hand on high" (Twentieth Century New Testament). In these strong words Paul expresses his absolute conviction of the glory and the power to which we are called, as the children of God. This call is really a call to awake in the divine likeness,—out of matter and its illusions into the supersensible splendor of the divine presence and power, the ever same unchanging good. This recognition of the power of God, and of His willingness to exercise this same power through us now even as it was exerted through Christ Jesus, is another most important point which theology seems to ignore, as if the same omnipotent Mind purposely limited its divine activities to time and place.

In his first epistle to Timothy the apostle writes: "Fight the good fight of faith, lay hold on eternal life, whereunto thou art also called." Here we see Paul's grasp of immortality—the call through Christ Jesus, who conquered sin, death, and the grave, to our inheritance with him of immortality, here and now. As mortals rise to a clearer and more spiritual sense of this "high calling of God in Christ Jesus," to a sense also that the eternal now is the only time to omniscience, and that Life is the infinite circle of Mind, without beginning or ending, the "last enemy" will indeed be destroyed, and the sin of limiting the limitless will fade from consciousness, while the clarion call, "Awake thou that sleepest," will reverberate through the corridors of thought, and arouse men to the realization of newness of life in Christ Jesus.

PURE FOOD.

PETER B. BIGGINS.

It is a significant sign of the times that there is at present a very urgent public demand for pure food, and that diligent investigation is being made, with a view to preventing the evils of food adulteration and that a higher standard of purity may be established. It is surely as necessary that we extend our investigations still farther, and learn how we may ensure the purity of that which constitutes our mental nutriment as well. In this connection it is well to observe how much more importance our Master attached to the spiritual food than to the material. He said, "Not that which goeth into the mouth defileth a man: but that which cometh out of the mouth, this defileth a man." We should therefore exercise great care and discrimination in that with which we fill our thoughts, for we read that "out of the abundance of the heart the mouth speaketh."

Christian Science calls a sudden halt to indiscriminate thinking. It shows that every thought must be spiritualized, and so brought into submission to Christ, Truth.

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

Jesus taught that those who hunger and thirst after righteousness shall be filled. The food that nourishes the hungry ones of earth is the truth of being—the great fact that man is the perfect child of God. This thought is the essence of simplicity; so simple, in fact, is it, that those who have been accustomed to the complex reasoning which has matter as its basis, find that it requires patient endeavor to gain this necessary simplicity of thought. Christian Science makes possible the gaining of the true idea of childlikeness, that condition of thought to which the Master referred when he prayed, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes." Again, he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

This truth which we come to know and apply in Christian Science is not new. It has stood unchanging and unchangeable throughout the centuries. All down the ages those who were spiritually endowed have partaken of this food. Jeremiah said, "Thy words were found, and I did eat them; and thy word was unto me the joy and rejoicing of mine heart." David testifies again and again to the healing, saving, and sustaining power of Truth, "which giveth food to the hungry," and giveth it "in due season."

The Discoverer and Founder of Christian Science has discerned anew the living Christ, and in "Science and Health with Key to the Scriptures" has shown how all may obtain from the Bible their spiritual nutriment. True to her heavenly vision, undaunted by the hostile opposition of the world's sin and selfishness, or the bigotry and oppression of material methods, she has broken the mesmeric spell of spiritual lack under which the world has long lain deadened, and has pointed seekers after the truth to the spiritual import of the Scriptures, as to a table laden with rich viands, of which the hungry may eat and be filled.

Students of Christian Science recognize that the best way to assimilate this food is through the careful daily study of the Lesson-Sermon. It is their constant experience that they gain therefrom just what they need for their immediate problems. The beginner in Christian Science may not grasp the full spiritual meaning of the Lesson, because of the conflicting elements in his own mentality which are the enemies of truth. This, however, need not dismay him. Even as the psalmist recognized that through the goodness of God a table had been spread before him in the presence of his enemies, so it is encouraging today to know that, although many wrong thoughts may claim a place in one's consciousness, he is nevertheless provided with sufficient food for his daily needs. As he faithfully studies the Lesson-Sermon he daily increases in mental strength, which enables him, little by little, to cast out of thought all that is unlike God.

Besides providing the much needed spiritual food, Christian Science also gives the understanding whereby we may detect and reject poisonous elements from our thought. Christian Science does not magnify evil, but it shows the necessity of knowing enough of its suppositional activity in order to meet and destroy its effects (also suppositional) with good. Dishonest, impure, hateful, and slanderous thoughts are poisonous in their nature, and when we recognize this, we rebel against this adulteration of our mental food even more vehemently than we do against the adulteration of our material supplies, hence it is very fitting, when the necessity for pure scientific thinking is being so clearly recognized, that a paper like *The Christian Science Monitor* should be presented to the world. It lays particular emphasis on the good that is being made manifest in the world, and gives due prominence to those facts which show the rapid progress human thought is making, and the steady advance of mankind to man's ultimate goal —Godlikeness, and dominion over all the earth.

Mrs. Eddy says (Science and Health, p. 195), "Whatever furnishes the semblance of an idea governed by its Principle, furnishes food for thought." Thus *The Christian Science Monitor*, in presenting to the world the best that is being done in every line, and that which foreshadows fuller development, is providing fitting food for the world's thought at its present stage of development. It is enabling all to approach toward that ideal of right thinking embodied by Paul in his epistle to the Philippians: "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

THE TRUE LOVE.

LOUISE SATTERTHWAITE.

PERHAPS one of the first things a young student in Christian Science is inspired to think about is the difference between the thing called "love" in the worldly sense and that known as "love" in Christian Science. Wandering forlorn along their stumbling way, mortals are taught that love shall make all the rest worth while. Men and women, they have grown up hungry-hearted for that celestial bread which is to satisfy. They weave many dreams about it, put wreaths before the empty altar, and later they place thereon, with tears and smiles, the image which they believe shall henceforth be to them all that their thought has pictured; but, alas! too often

> Love is a golden bubble, full of dreams
> That waking breaks and fills us with extremes.

Not that the thing loved has fallen short, nor that our capacity for affection fails; but we are like Carlyle's "infinite shoeblack," who required for his "permanent satisfaction and saturation simply this allotment, no more and no less,—God's infinite universe altogether to himself." In other words, we have an inborn appetite for the eternal, and nothing short of it satisfies.

Thanks to our wrong education, worldly love is a greedy, grasping thing. Like an ignorant child, it stretches out eager hands for the pretty thing, clasps it, soils and crushes it. Even the love of woman for woman, perhaps the purest of affections, still wishes the loved one to be near; wishes to look in the face, to touch the hands, to peep into and explore, examine and turn inside out all the more secret furnishings of the friend's mind. In the world we desire the thing we love to be ours. The lust of possession is rampant. "I love this friend, I want her thoughts to be all of me—I desire her presence and smiles and words. The nearer she can come to me in that futile grasping attitude, the more I try to delude myself that she is mine." Like the baby and the flower, by the soiling clutch of selfishness we destroy all beauty; and sometimes, by and by, her soul revolts from the bands wherewith we would bind her, and her thoughts roam far afield—for thoughts cannot be fettered.

In Science, on the other hand, we commence the genuine and infinite conjugation of the word "love." God is "infinite individuality" Mrs. Eddy tells us (Science and Health, p. 281), and so, each in our ordained place, we look out serene upon His universe. Eternally free, looking only to God, we stand ineffably aloof from aught else. Learning the constant guardianship of the door of consciousness, we admit nothing unfit. Poised, sure, protected and safe from the slightest floating film which might cloud the crystal clearness of being which is our birthright, like grateful flowers we raise our faces to God who is our sun, trying to offer the constant fragrance of a worthy life as some small measure of gratitude. And love—where does that come in? Are we so self-sufficient, so independent, so cold and isolated from our fellow-beings? So it would

Digitized by Google

seem to the untutored sense; but to tell the truth, now only, when we are freed from material-sense fetters, do we commence really to know something of that love which the Saviour came to teach. We love all, and would, if we might, gather them all to our heart, hushing their sobs, screening them from the world's blows, healing them of the cruel pain, lulling them to rest in God with the song of His everlasting loving-kindness.

But, alas! often they will not; and so we can only, very humbly and timidly, proffer a cup of cold water where we know one is thirsting. Here and there among them we see other children of God, those above whose head gleams the star of Love and Truth, and around whose form is cast the gracious mantle of patience, meekness, and good deeds; and we love them with an ineffable love. It goes out to them night and day, as warmth from a glowing coal off the altar, and the shuttle of sweet thoughts flies ever back and forth between such friends; but we respect the entire freedom of each child of God and so we do not wish this friend for our individual pleasure. We do not make rapacious inroads upon his time or mentality. We do not ask his near presence nor the touch of his hand. We do not strive to grasp even so much as the hem of his garment and press it to our heart. For in loving him we know that he loves us, and in the all-pervasive realm of Mind we know that naught good can be lost; and so we look upon him steadfastly and with constant affection, realizing that, far or near, still in sweet constant thought there is continuous fellowship, which never touches yet never separates.

In Science we learn the meaning of love and of self-respect. We bow to no mortal for fear or favor. On the other hand, we know no flaws in friendship; for we keep that also in the serene realm of Mind, where there is "no lapse from nor return to harmony" (*Ibid.*, p. 471).

SPIRITUAL DISCERNMENT.

CHARLOTTE PAULSEN.

EVERY experience which comes to us gives us an opportunity for self-examination and correction. As was the case with Job, that which we greatly feared may have come upon us, or there may have been other elements of thought in our consciousness which needed correction in order to make us see things in their proper relation. These experiences, if rightly viewed, lift us into a higher state of consciousness and help us to be perfect even as our Father in heaven is perfect. When we recognize this to be true, and appreciate the gain to ourselves, then we awaken to a clearer spiritual perception and are quickened to divine impulses which help us to discern and destroy manifestations of error as soon as they appear.

In our daily experiences no incident occurs but that it is the outward sign of some thought we entertain. If it be good, we may rest in the consciousness that it is of God; but if it is discordant, then we need to rebuke and destroy the error. Too often it is a very tiny seed of error which like the acorn grows into a tall oak, and it is our indifference to a slight error in the premise which enables that error to grow unchecked until it has become a mighty fear. Christian Scientists need to heed the lesson of "a stitch in time saves nine," and so be prepared for a larger demonstration of this truth which makes men free. The following experiences will illustrate how the recognition and destruction of what seemed a trivial error brought an awakened consciousness and destruction of a greater and more serious error of the same type.

At one time in the writer's experience there seemed to be a large problem which required solution. Awakened by past mistakes and their consequences, there came a recognition of the need for more consecrated mental effort, and a disposition to weigh the significance of every little incident which might point the way to some conclusion of the error and a restoration of harmony. A way opened, but human will and pride were unguardedly permitted to assert their false claims and the proposition was negatived without its having received close consideration. Thereupon followed a succession of unpleasant incidents, trivial happenings which nevertheless tended to bring confusion and irritability and censure into an otherwise harmonious household. The error was left undenied the first time it occurred, until, as each occasion grew more serious, a specific denial that God's idea could cause destruction and impatience brought with it the declaration, "I can hold fast that which is good!" Speedily an illumination of the great life-problem appeared, and with the desire to hold fast all that was good, pride and self-will were put under foot, and the way which Love opened was undertaken. That, however, was but a beginning—as Mrs. Eddy tells us, "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22).

Gratitude for this revelation of Truth's direction made the way easy, until conditions arose when the human will argued that this way could not possibly be continued in; but further temptation to leave it appeared in presenting an easier way and one that offered greater inducements for material gain. Again a series of little incidents rightly met in thought pointed to a solution of the larger problem. Mentally there was confusion and uncertainty. The experiences referred to dealt chiefly with icy pavements, undignified movements, and several unexpected and obviously humiliating falls. The last and severest attack called forth the spirited declaration that every one who recognizes and responds to the divine protection is safe at all times. For a second time the whole problem became illumined by the truth uttered on the occasion of the fall, and it was immediately brought nearer to its final solution.

But yet another and a higher step was demanded by Love in the matter of an error in temperament which for years had seemed to hinder any achievement in the line of response to divine inspiration. This time it required an understanding of self and of the power of Truth which only honesty of thought, purity of purpose, and unselfed desire could bring. The attempts of error from without were so swift and so seemingly powerful, while the error to be eliminated from within was so hidden, that nothing but unswerving confidence in Truth's unfailing efficiency could calm the troubled waters and turn a dark and ominous night into Love's radiant dawn. How glorious the truth, how wonderful, how beautiful! As Christian Scientists we may well rejoice and be exceeding glad, for we enter upon our reward in every experience wherein Love has supplied the needed spiritual discernment and the power to overcome self.

THE TESTIMONIAL MEETINGS.

CARL HORTON PIERCE.

IN times past there may have been a temptation to criticize some one whose testimony did not conform to the listener's condition of thought, but as we progress in the understanding of Christian Science, we come more and more to realize that even a word of some testimony may be as "living bread" to a hungry heart. Jesus, despite his masterful display of the power of Mind in multiplying the loaves and fishes, allowed not even the crumbs to go ungathered, but commanded his disciples to gather up the broken bread. Our Leader likewise bids us give earnest attention to these testimonies; and obediently we "gather up the fragments,"—"the crumbs of comfort from Christ's table" (Science and Health, p. 234),—that nothing be lost.

So much for the gathering. Jesus declared for unselfish service; and he evidenced this service coincidently with his

Digitized by Google

hour of highest attainment. He came not to receive from men, but to pour out liberally from his well-filled treasury into "empty or sin-filled human storehouses (*Ibid.*, p. 54). Following his precious precepts, therefore, we must needs come to the Wednesday meetings prepared to give as well as to receive. To many a beginner, the resistance that one seems to meet in getting up to speak seems well-nigh incredible. There are the arguments of "I can't speak well," "I simply can't make the demonstration over fear!" and many others of like nature.

What is the matter? Simply this: self is trying to shut out the pure and unobstructed current of the words of love that are waiting at the lips if one will only open the door. The Master said, "Out of the abundance of the heart the mouth speaketh." Is one's heart filled with an abundance, ready to be poured out for a hungering brother who may have come to this Wednesday evening meeting for the first time? Then pray to Truth, "Open thou my lips; and my mouth shall show forth thy praise." If we pray God to open our lips, then we can surely trust Him to fill the mouth after the lips are open. Many a time the sense of reticence over speaking has been broken when the grateful one simply rose to his feet in the Wednesday evening meeting, declaring, as he did so his new-found trust in God. From then on God gave the rest of the words of the testimony. The individual had done his part.

Like one who says that despite many years spent in reading the literature he does not understand Science, so the regular attendant at the Wednesday evening service who does not voice his gratitude to God is thereby obstructing the perpetual flow of truth and love that is surging to his lips. He is burying his talent, and his delay in voicing gratitude to Truth makes the struggle with error more severe. We therefore need prompt action. We need to know that self cannot debar us from giving those testimonies which may lift another out of gloom into the sunlight; and if we go to church with this purpose, we shall not be wondering all the while as to whether some one will criticize our words or whether we shall give a testimony that will be praised by the multitude.

It not infrequently happens that one who has been most diffident in the past, will, through obedience to the command to gather up the fragments, and having brought a crumb night after night, suddenly find that he is able to aid in the multiplication of the loaves and fishes, and that instead of an insufficient supply there are a dozen baskets to spare. Jesus began his demonstration with thanks, and the Christian Scientist who begins his testimonies with gratitude to God, finds that an acknowledgment of the blessings already received opens wide the channel for greater blessings.

Former tremblers over self now assert man's birthright of freedom from the bondage of fear, trim their lamps, and shine forth resplendent with good works, and as a flood of light pervades the understanding, the Christian Scientist, far from wondering what he is going to say or how he shall say it, becomes a fitting exponent of the words of Truth. God sends His word through every willing avenue, healing the sick, dispelling fear, breaking the sense of limitation in every form; and if each attendant of the Wednesday services does thus give out God's word, clearly, distinctly, so that all may hear, even the stranger that is within our gates; if he give his testimony in intelligible English and in simple terms, knowing that Truth will do its own work, he will find that there is indeed a harvest proportionate to the overcoming of the self that would seem to grasp to hold, instead of assimilate in order to give out.

Let us remember that our testimony, no matter if it has been given before, is fresh to the man who has never heard it. A man who had been rescued from the brink of the grave, once testified that a chance remark of a friend, several years before, stating that he had been healed of a sprain, was what led him to turn to Science. He had come to be healed of a slight ailment, just like his friend. Then came the greater healing,—the regeneration and marvelous spiritual uplifting. How little we know of the word here or there that goes forth to find lodgment in fertile soil,—the soil of a good and honest heart! How little we know, too, of the even more potent testimony,—that of our daily lives,—which bears its own evidence to our fellowmen.

What a living, breathing testimony is the life of the true Christian Scientist, he who speaks no evil, thinks no wrong, contemplates neither sin, sickness, nor death, dispenses only good, harms no one, benefits all! Gradually the atmosphere of that man breathes peace, bestows blessings. Dying daily to error, dispensing with the tatters of material belief, he is a living witness to the healing and regenerating power of Truth and Love, and is thus preparing his testimony for the church triumphant.

TRUTH'S MISSION.

ALICIA C. HUBBARD.

WHEN a so-called new and redemptive truth at first declares its message to the world, it is often classed with the very evils it has come to destroy, and finds its enemies among those whom its mission is to save. This rejection of the blessing is not in evidence that mortals mean to be cruel and unjust, but that false sense has become so established, has so monopolized the thought of men, that they have come to look upon the ideal as but a visionary promise, too fair to be realized, "too good to be true." The message of Truth must, however, sooner or later win its way into the hearts and confidence of those ready to receive it, and those who are honestly looking for higher ideals, and longing for more spiritual conditions upon which to lean, will find their need met in Christian Science, the Christ-message which is misrepresented, as of old, through an entire misapprehension of its meaning and ministry.

Christian Science is provable Christianity. It is manifestly good because it does good, and it is from God for the same simple reason. Better and healthier men and women, better and happier husbands and wives, more dutiful and obedient children, are among the first fruits of its teaching and growth; these are the many witnesses whose improved conditions bear record of its truth. On page 483 of Science and Health we read from the inspired pen of its author: "If any system honors God, it ought to receive aid, not opposition, from all thinking persons. And Christian Science does honor God as no other theory honors Him, and it does this in the way of His appointing, by doing many wonderful works through the divine name and nature."

Christian Scientists recognize that they are followers of the Master, of him who spake as never man spake, only so far as they can in some degree prove their faith by their works, as he did in full by teaching and demonstrating complete salvation from sickness, sin, and death. To those who have accepted it, Christian Science has brought infinite blessings,—a consciousness of God near at hand, a kinder attitude toward all mankind, through the unfolding of the kingdom of heaven within. They have found a simple, practical religion; compassionate and Christ-like; which brings to tired and suffering hearts a message of courage, hope, peace, and good will.

This Comforter came more than nineteen hundred years ago, knocking at the door of reluctant humanity, and today, clothed in the completeness of prophecy and power, it stands again patiently waiting to be admitted, still proffering the same compassionate invitation, still ready to fulfil the ever-loving, never-failing promise: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

SELECTED ARTICLES.

[Frederick Dixon in *Bedford* (Eng.) *Circular.*]

Our critic begins his attack with the declaration that muddle in material affairs is bad enough, but that muddle in religion is a thousand times worse, and he goes on from this to labor the point that Christian Science has created a muddle in religion. The reasoning by which this is arrived at is not remarkably logical, nor can it be said that it would satisfy the ordinary historical thinker. Before Mrs. Eddy founded the Christian Science movement the religious muddle had existed for centuries, and had found expression in innumerable Christian sects. In the attempt to clear it up millions of men had lost their lives on the battle-field and in the various persecutions. As a result of all this bloodshed, not a sect has been convinced of its errors; all that has happened has been that the dogmatic tendencies of the human will have found constant and merciless gratification. Today the Established Church of this country is divided into parties whose theology differs one from the other's as completely as Romanism differs from Nonconformity. Only quite recently the head of one of the theological colleges of these parties deliberately set out what he described as five modern Christian views of the atonement. Yet your contributor talks of the muddle of Christian Science.

Curious as is this critic's first argument, it is intelligible as compared to his second. The muddle caused by Christian Science is, he maintains, inexcusable, since every one can refer directly to the Bible. Now it is absolutely certain that all the sects in Christendom have differed in the past precisely because they drew their dogmas from the Bible, and supported them by a careful selection of texts. The Romanist found the doctrine of transubstantiation in the Bible as clearly as the Reformer found that of consubstantiation. The Bible was the quarry in which the Calvinist discovered predestination and the Anglican free will. In short, it is out of the Bible that one and all of the five theories of the atonement previously mentioned have been justified.

It is precisely for this reason that Christian Science repudiates the system of proof from the text alone, and demands proof by demonstration as well. Christianity based on proof texts is, and must remain, a theory. Christianity based on practical demonstration of the truth contained in the text of the Bible, constitutes the knowledge of the truth which Jesus said would make men free, and is consequently scientific. It seems to be forgotten that the writers of the epistles spoke of the knowledge of God as scientific knowledge (*epignosis tou theou*); just as it seems to be forgotten that Jesus made a man's ability to demonstrate his knowledge of Truth the test of his faith in the teaching of Christianity.

The work of Mrs. Eddy has been to restore the full teaching of Jesus, the seamless garment. The churches of Christendom have been for centuries content to preach the gospel: Christian Science demands that they should also heal the sick. The one is the inseparable complement of the other. Jesus, the Bible says, "was in all points tempted like as we are, yet without sin." Precisely because he was without sin, his knowledge of Truth was so clear that he could demonstrate it by healing "all manner of disease." Just exactly, in consequence, as a man accepts Christ as the way, as he attains, that is to say, the Mind of Christ, will he be able to do the works which Christ Jesus did. Science is only giving practical expression to a man's knowledge of Truth, and to object that the Christian Scientists of today are not walking on the water or healing every case of disease which is brought to them, is only to insist that they are failing as even the disciples failed. When the disciples had failed to heal the demoniac boy, Jesus told them that "this kind goeth not out but by prayer and fasting." The failure of Christian Scientists to heal as Jesus healed is not a proof that truth is less demonstrable today than it was nineteen centuries ago, but only that those who are endeavoring to demonstrate it have not sufficiently taken to heart that wonderful saying of Jesus, "For their sakes I sanctify myself." That is why Mrs. Eddy has written, on page 267 of Science and Health, "Even in this world, therefore, 'let thy garments be always white.'"

The healing of disease is important to Christianity because it has been the means adopted by the great figures in the Bible in general, and by Jesus in particular, as the proof of the efficacy of divine Love to destroy disease, death, and sin, and so to manifest the fact that "the kingdom of God is within you." The human mind, however, is apt to rest content rather on the emotionalism of theory than on the discipline of Science. As a consequence already, before the close of the first century, we have James warning the primitive church that faith without works, theory without demonstration, is dead. Slowly, as the mist of materialism reasserted itself before the human senses, the understanding of the Christ was forgotten in the dream of matter. Even in the dark ages, the dawn of the renascence, or the days of rationalism which followed, there lived some Sebald, some George Fox, or some John Wesley who understood, however indistinctly, the power of the Christ to heal men of sickness not less than of sin.

Then at last there came a woman blessed with a sufficiently clear spiritual vision to perceive that the promises of Christ Jesus were not dependent for consciousness, but on the understanding of divine law, on the knowledge of the truth which makes men free. "I knew," Mrs. Eddy writes, on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." Thus the Christian Scientists are faithful to the teaching of their Leader, and live preaching the gospel with "signs following." The rain of criticism may fall, and the storm of invective may howl, but the Christian Science church will stand, for it is founded upon a rock.

[George A. Law in *Stamford* (Conn.) *Advocate.*]

That omnipotence (God) is available by man to obtain relief from the ills of the flesh, should not be surprising when we consider that but a comparatively few years ago fully as much doubt was expressed over the claims made by those who advocated the use of steam, electricity, etc., and many other things now so common to us. The fundamental facts upon which steam and electricity are made to be of such service to mankind were in existence long before a railroad was built, a telegram written, or a telephone thought of, for these facts always existed. Men simply failed to utilize them.

It is the same with the Principle of Christian Science. Because of a lack of apprehension, men had neglected to avail themselves of that which has always been their right to enjoy, even man's birthright, which is referred to in the 26th verse of the 1st chapter of Genesis: "And God said, Let us make man in our image, after our likeness: and let them have dominion," etc. It must be clear that this dominion can be obtained only by complying with certain rules or conditions; and, since God is the one and only creator, and it is His laws which govern all, it then follows that it is God's law which must be conformed to. Jesus showed us how to live in accord with God's laws. He was the Wayshower, and he lived in strict compliance with God's spiritual laws. In doing this he ignored and nullified all manner of prevailing belief, recognizing nothing

Digitized by Google

as authority to govern him but God. Since it was Jesus' purpose to show by practical demonstration how man should live, if God had intended that man should take medicine to heal sickness Jesus would have surely used drugs in his healing work.

Furthermore, it is an inconceivable proposition that a God of all good, of love, our Father, would create the earth and not provide sufficient and adequate means for men to cope with the problems of life. This is clearly an unthinkable proposition. Jesus' life and works show beyond all question that dominion is given man, as recorded in Genesis, and that this dominion becomes available in so far as men obey God's laws; that is, Jesus taught and demonstrated the practicality of living in obedience to the laws of God, and showed the results of such living to be not only happiness but health.

Without attempting or desiring to cast reflections upon the efforts of any one who is honestly striving to relieve suffering, for the medical profession contains many such, still the history of two thousand years of medicine has not served to lessen sickness, but, on the contrary, diseases have multiplied; and further still, with all the changes of treatment, newly discovered drugs, etc., not one remedy can be offered which is a reliable remedy for any disease. Contrast this record with that of Jesus, who healed "all manner of sickness." The healing of Christian Science is a revival of this healing of Jesus.

Most Christian Scientists, having tried both material and spiritual means, know which has served them best, and therefore prefer to rely upon God for healing. Nevertheless, every Christian Scientist recognizes the right his neighbor has to depend upon drugs if he chooses, and is ready and willing to cooperate by conforming to the law for safeguarding the public and protecting his neighbor in the enjoyment of his right.

[Willis D. McKinstry in *Salina* (Kan.) *Journal.*]

The Scriptures record that Jesus' life-work was one of regeneration; he healed the sick, he redeemed the sinner, he raised the dead; and he said of those who believed on him, "The works that I do shall he do also; and greater works than these shall he do; because I go to my Father." It is a historical fact that for three centuries after the crucifixion of Jesus, Christian people—followers of his precepts and example—did these same works, until through materialism and sensuality the Christ, Truth, was lost to mankind.

Mortals in bondage to sin, sickness, and death, wandered in the darkness of materiality until the Christ-healing was rediscovered by Mrs. Eddy some forty years ago. In speaking of this discovery in her book Science and Health, on page 109 she says: "For three years after my discovery, I sought the solution of this problem of Mind-healing, searched the Scriptures and read little else, kept aloof from society, and devoted time and energies to discovering a positive rule. The search was sweet, calm, and buoyant with hope, not selfish nor depressing. I knew the Principle of all harmonious Mind-action to be God."

Christian Scientists take their stand upon the First Commandment: "Thou shalt have no other gods before me." That God is Spirit—divine Mind—and man is His image and likeness. Thus, to be a genuine Christian Scientist, one must "be a thorough Christian." What would be thought of one who did not understand the principle and rules of mathematics, yet tried to explain to others the application of numbers? It is just as impossible for one who cannot demonstrate the teachings of Christian Science to explain it to others. While Christian Scientists are always ready to speak to those who "hunger and thirst after righteousness" of the blessings which have come to them, they do not proselyte, they do not attempt to interfere with other denominations; they grant unto all others that which they claim for themselves, that is, the right to worship God according to their own conscience.

Christian Science does not teach that sin and disease are not real to the human sense, nor do Christian Scientists say to those who are suffering, "Nothing ails you." Christian Science teaches that these are conditions of the human mind; they are the mistakes of mortals, and they must be recognized as such and corrected through an understanding of the divine Principle of being. If sin, sickness, fear, and all the discords of the flesh are real—if they are true—they cannot be healed or destroyed; if they are of God, it would be a sin to attempt their destruction. While they are not of God, they must be subject to the law of God which governs the universe.

Paul said: "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death. . . . So then they that are in the flesh cannot please God." To be a "thorough Christian" or follower of Christ's precepts and example, means to do the works he did. Through the application of the word of God as given in the Bible, spiritually understood through the interpretation given in "Science and Health with Key to the Scriptures" by Mrs. Eddy, Christian Scientists are able "to preach the kingdom of God, and to heal the sick." "Wherefore by their fruits ye shall know them."

[From *Philadelphia* (Pa.) *Press.*]

"A great many people are under the impression that it takes a long while to read the New Testament," remarked a well known preacher the other day, "but as a matter of fact it only requires sixty hours for the average reader to read the entire book; or, in other words, if a man were to read an hour each day he would finish the book inside of two months. I told this to a business man once, and he said he didn't believe me. Thinking it would be a good plan to get him to read it at any rate, I advised him to try, and the result was that he reported that he had read everything in it within forty hours."

[Charles B. Jamieson in *Granite State News*, Wolfeboro, N. H.]

For the past fifteen years I have observed the effect of Christian Science on those who study and practise it, and I have never known nor heard of a person becoming insane as a result of such study and practice; but I have known of many persons being healed of insanity through Christian Science. That which heals insanity cannot cause it. No person ever contemplated God more or knew more of God than did Christ Jesus. Did such knowledge make him insane? Did not his understanding of God's allness, presence, and power enable him to heal the insane man "whom no man could bind"? Christian Science teaches the omnipotence, omniscience, and omnipresence of God. Can such knowledge and contemplation of God produce different results now from what it did in Jesus' time?

Some persons "naturally of somewhat unstable mental make-up" may have experimented with Christian Science and in their insane moments talked about it, but it would be unfair and hurtful to say that Christian Science caused their insanity. Many insane persons have become "precipitately" worse under medical treatment. Shall it be charged that the medical treatment was the cause of their insanity? There are thousands of insane persons in the asylums who never heard of Christian Science.

It is a rather foul aspersion on the fair name and on the purifying, healing, and redemptive influence of Christian Science to classify it with such material and disease producing causes as immorality and alcohol. The lives of Christian Scientists bear present and invincible witness to the fact that Christian Science produces the highest morality, temperance, health, and sanity.

[J. M. Jackson in *Toronto* (Ont.) *Mail and Empire*.]

If this English medical critic objects to the teaching of Christian Science that "Mind is all and matter is naught" (Science and Health, p. 109), doubtless he would also find fault with the parallel statement of Jesus, accepted by all Christian denominations, "It is the spirit that quickeneth; the flesh [matter] profiteth nothing." It is as well at the outset to know whether we accept the Scriptural teaching or are merely contending for human opinions. Christian Scientists prefer to accept the teachings of Scripture.

This critic flounders around at some length in his endeavor to determine whether disease exists in mortal mind or in animals. Here Christian Science comes to his rescue and explains that disease appears to be manifested in animals as in human beings, because for centuries the world has entertained a false sense of God's creation, conceiving it to be material, when it is in reality spiritual, and this fact can be proved in Christian Science when animals as well as human beings can be relieved by one and the same process, viz., by knowing the truth about them—which is, that they also are subject to divine Mind.

In reply to the statements that Christian Science "never stirs a finger to help" cases of diphtheria, hemorrhage, cancer, etc., that she "refuses to see any real difference between" functional and organic diseases, that "she never examines a patient, takes a temperature, reads a medical book, . . . dissects a specimen," etc., and "sends out her healers absolutely ignorant of the very elements of anatomy, physiology," etc., it may be said that precisely the same fault might be found with Jesus and the disciples, who never diagnosed, dissected, or sawed up those who came to them for help, but simply healed them. Possibly, however, science has made such vast strides since then that we are now in advance of those men! Or can it be possible that "the wisdom of this world" and its material methods of accomplishing ends, is still "foolishness with God"?

Christian Scientists take as their exemplar in the healing of disease, Jesus the Christ; who never classified disease as functional or organic, chronic or acute, curable or incurable. All such classification is man-made. Moreover, Jesus never recommended the employment of any material agent in the alleviation of suffering. He did not say, Ye shall know all about "bromide," "amyl nitrate," and "digitalis," and these shall make you free; but he did say, "Ye shall know the truth, and the truth shall make you free;" and this truth about God, man, and the universe, as revealed in Christian Science, is today, to a remarkable degree, freeing the world of its age-long burden of sin, suffering, and disease of every name. The statement that Christian Science is effective only in cases of neurotic disease is very wide of the mark, for, as all well-informed persons are now aware, diseases of all types have been healed through Christian Science, and a large proportion of those healed had previously been abandoned as incurable by *materia medica*.

In conclusion it is stated that "it is certain that she [Christian Science] heals by suggestion." Nothing could be more incorrect, as may easily be shown. Suggestion, as this critic will doubtless readily admit, is a product of the mortal (or, as it is termed in the Scriptures, the carnal mind), and this "carnal mind," we are told, "is enmity against God." How can that which is enmity to God be the channel through which the healing and saving power and presence of God is manifested to men? The thing is self-evidently impossible. The fact is, Christian Science recognizes but the one divine Mind, all powerful and ever present, which has no consciousness of sin, disease, or death; and this fact when scientifically understood is the exterminator of all discordant conditions, which exist in a so-called realm apart from the real, and have nothing to do with man as God made him.

[From an editorial in *Health*.]

Many diseases, especially those which are termed obscure, may, and doubtless do, have their origin in the mind. Fear has a marked physiological effect upon the vital processes, as shown by the pathological results produced by it. Now by fear we do not necessarily mean that condition of mental disturbance produced by imminent danger, or the appearance of some supposedly supernatural object, but that condition which is even more to be dreaded, namely, morbid apprehension—worry. Fear might, therefore, be classified in the same manner as diseases, acute and chronic; and, even as chronic diseases are the more difficult to deal with, so is chronic fear the hardest to counteract.

It is the generally accepted belief that the wide prevalence of nervous disorders among the American people is the result of their improper dietary habits and their devotion to social functions, but while this may be, and doubtless is, a largely contributing cause, it is more than probable that the chief cause is to be found in what we have termed chronic fear or worry. Men, above the reach of want, torment themselves about business; many women have not sufficient occupation to keep morbid thoughts at a distance, while the great majority are perpetually dwelling upon the problem of how to provide support for their families.

Thus we see that fear, by destroying the equilibrium, inevitably causes that deviation from the normal which constitutes disease, although its destructive possibilities cannot be fully estimated; but having once recognized it as a powerful causative factor, it behooves us to oppose it by its antithesis, faith. Fear represents the metabolic, or destructive process; faith, the katabolic, or building up process. Faith is an essential part of all treatment, but it is not to be regarded as a blind dependence upon some unknown quantity. Faith is the absolute conviction of a truth.

[Alfred Farlow in *Fort Worth* (Tex.) *Record*.]

Proper precaution, reasonable care, pure food, fresh air, are all in keeping with the teachings of Christian Science, since discretion is more nearly right than carelessness, and the purest, the most wholesome in human belief, most nearly approaches the ideal. At this particular stage of their spiritual development Christian Scientists, like other Christians, are in a position where they are oftentimes obliged to choose the lesser of two evils. Inasmuch as they have not acquired a sufficient understanding of divine power to claim absolute immunity from trouble, wisdom demands precaution. Although supreme trust in God would lift one above the necessity of considering evil, our present limited degree of trust demands a cognizance of evil as a serious claim, and the exercise of both faith and discretion in dealing with it as such. It is a lesser evil to be careful and thus avoid the possibility of an accident than to take an unnecessary risk. Precaution is not necessarily based upon fear—it may be prompted by wisdom. Mere precaution does not necessarily depreciate one's faith or confidence in God. One might, as a wise "suffer it to be so now," use care, and at the same time retain his faith. On this subject I do not believe that Christian Scientists disagree with other Christians.

Animal magnetism indicates an attractive force or relation among all phases of animal quality, whereby non-intelligence would classify and coordinate itself after the manner of intelligence. It is the antipode of divine Science and takes the semblance of a law of the carnal mind, whereby it simulates Principle and claims a universal order for its modes.—FRANK P. EBERMAN.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE EFFICACY OF THE CHRIST-WAY.

It was soon after he had raised from the dead the son of the widow of Nain, and the stir which this occasioned, that our great Master was questioned as to the validity of his claim to the Messiahship. Strangely enough, he did not attempt to establish his identity by preaching a doctrinal sermon, he did not expound his theology, but after a brief interval he said to his questioners: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." This method of attestation was an indication of the Master's understanding that his claim must stand or fall by his works rather than by his words; that, though John's disciples might repudiate a claim based upon a mere declaration that he was indeed the Messiah, there could be no disputing its truth when, even as they waited for an answer to their question, they saw that "he cured many of their infirmities and plagues, and of evil spirits; and unto many that were blind he gave sight."

The present-day question as to the truth of Christian Science must be answered in the same way, and the sincere seekers for the truth are looking not to the words of Christian Scientists, but to the works wrought through Christian Science,—through the power of Truth,—for proof that this modern gospel of health and salvation is the same gospel that Jesus taught and practised in far-off Palestine. Such being the case, it is today more than ever incumbent upon Christian Scientists to heed the advice of our Leader to "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495) of Christian Science, to acquire so clear an understanding of its teachings that they can demonstrate its Principle with unerring certainty. When this is done, the truth of Christian Science will not be questioned, and misrepresentation of its teachings will largely cease.

That the works wrought through this understanding of Christian Science, are even now breaking down the barriers of unbelief, is clearly shown in many of the testimonies of healing published in these columns and in the other periodicals of the denomination; but the cry still goes up from our critics that these testimonies are not to be accepted as evidence, because, forsooth, they have not the stamp and authority of a physician to prove either the correctness of the diagnosis or the genuineness of the healing. The fact that many physicians and nurses have become Christian Scientists by reason of their own healing, or because of the healing of members of their family, is largely lost sight of by these critics, as is also the further fact that the case of almost every person who is healed by Christian Science had been previously diagnosed and treated by one or more reputable physicians.

Notwithstanding these things, the Cause of Christian Science has continued to grow by reason of its works,—the "signs following" which attest its truth,—and an instance of this is to be found in the testimony of a regular physician which we publish on page 893 of this issue of the *Sentinel*. It must be assumed that the writer of this testimony was able to diagnose disease, otherwise he would not have been granted the degree which authorized him to practise medicine. His statement indicates that in his case, in addition to the unbelief which is common to those who know nothing of Christian Science, he was greatly prejudiced against the system, and it was only upon the strongest proof that he was willing to concede the efficacy of the Christ-way of healing.

We have published many other testimonies by physicians, but this one, which, without premeditation, appears just when a great effort is being made to legislate in favor of the theory that drugs and surgery are the only healing agencies, is particularly opportune.

ARCHIBALD MCLELLAN.

TO BE RATHER THAN TO SEEM.

No one can read the word spoken by "the faithful and true witness" to the church of Laodicea, as recorded in the 3rd chapter of Revelation, and meditate upon the kindred emphasis which Christ Jesus laid upon that manifestation of Truth which is known as genuineness, without acquiring a keener sense of how great a crime is cant.

Human life is full of varied kinds of imitation which we can enjoy and freely indulge in, since they are both convenient and harmless. They do no ill because they contain no element of deception; they do not tell a lie. The conversion of the otherwise bare walls of our bed-chamber into the vistas of a flower-garden whose blossoms lure a sleepless thought, perchance, into the haunts of a fair and innocent seeming,—this and a hundred other like improvements of belief multiply the appeals of the beautiful without lessening in any degree our recognition of the sovereignty of the true. The artist, the builder, the tale-teller,—all these continually resort to those conceits of expression, those fictions of statement, perspective, or symbolism, which serve to interest without in the least degrading.

The moment, however, one enters the domain of character and conduct, the demand for absolute sincerity is insistently imperative. Here the least unverity becomes deceptive, and, like the false note of the church bells' chime, it constitutes an unpardonable offense. The call of the Christ is to a perfectly honest, unaffected life and thought, and he alone can become superior to both praise and blame who is conscious of this integrity, of his loyalty in all things and in all ways to his highest concept of the demands of Truth.

Sham is as far removed from the Christ-ideal as is darkness from light, and that it found no hiding-place in the life and words of the great Wayshower is seen in the scathing severity of the condemnation which he visited upon hypocrites. We simply cannot think of him as acting a part in any least thing, and he was ever urging those about him to be genuine,—not to pretend: more than this, he said, "Be . . . perfect." And yet it is true that the conduct of his followers in all the years has presented such pitifully noticeable contrasts to the ideal to which they have declared their adherence, that the thought of pretense and uncandor has come to be well-nigh indissolubly associated with religious profession. Against this whited-sepulcher quackery the instinctive repulsion which every manly sense feels toward phariseeism, enters its protest, and the undiscriminating are thus prejudiced not only against the pretender but against all that pertains to him, against religion as a whole. This explains the fact that the intrusive insincerity of its professional exponents is and ever has been one of the greatest hindrances to the progress of Christianity.

Cant not only repels the noble-minded observer, it blights the spiritual bloom of every nature that gives it lodgment. It is the dry rot of human character. As feigning is ex-

Digitized by Google

cluded from the realm of mathematics, so pretense finds no place in Christian Science, and for the simple and sufficient reason that Science is scientific. The demand made of every Christian Scientist, that he shall prove his proposition "before men," is in truth his best friend. It shuts the door against one of his subtlest enemies—the temptation to compromise, to be untrue.

There is no humbuggery in heaven, none in Science, and it was in her insistence upon this fact and her practical proof that Christianity is scientific, that Mrs. Eddy became the world's great benefactor. No one can accept her teaching and fail to apprehend that in so far as he consents to or indulges in any flavor of mendacity, in so far he is not and cannot be a Christian Scientist. Trueness is love for and consecration to Truth. It is the heart of genuine faith, it is the first and the last requisite of Christian Science.

JOHN B. WILLIS.

WORLDLY PLEASURES.

THERE is a wide difference of opinion among professed Christians as to the extent in which they should indulge the desire for the pleasures of the senses, some sects prohibiting certain forms of amusement altogether, and others permitting them, except at specified seasons. It has, however, been noticeable that to the awakened conscience all such indulgence seems hazardous, and so, many have sought safety in asceticism, from the feeling that the temptation to worldly pleasure of any sort can be best avoided by severe self-discipline. It is, nevertheless, the experience of the many who are healed in Christian Science that the things of sense, one after another, cease to allure, as spiritual realities are recognized and begin to take their rightful place in human consciousness. The unreality of evil is soon admitted, and its false manifestations are seen to be but shadows which are pierced by the keen rays of "the Sun of righteousness."

How inspiring it is to hear a man tell of his emancipation in Christian Science from the awful bondage of belief in the pleasure and power of sin in all its forms. Perhaps the drink habit was the first to yield to the action of the truth. This chain had been willingly assumed at the start, through the belief that there was pleasure in it, and later came the belief that it had power to resist the utmost efforts of the human will, even when backed up by drugs and prayers. Our revered Leader says that "the pains of sinful sense are less harmful than its pleasures;" then she adds, "Belief in material suffering causes mortals to retreat from their error, to flee from body to Spirit, and to appeal to divine sources outside of themselves" (Science and Health, p. 405). It is by doing this that freedom is gained, and as the erstwhile bondsman of sense looks up to the heights of Soul, whence cometh his aid, he rejoices to know that

A man's a man for a' that.

The question of indulgence in worldly pleasure is, in its final analysis, a very simple one, and the difficulties in the way of deciding it would be greatly lessened if each one aimed to arrive at the truth for himself, whatever the cost, and left others free to decide for themselves as spiritual illumination came to them. Of old the children of Israel were commanded to abstain from all the practices of the nations who were "cast out" because of their evil ways; "for thou art an holy people unto the Lord thy God," was their leader's word. The Egyptians who had so long held them in cruel bondage were a pleasure-loving people, but we find this significant statement concerning them: "The Lord . . . will put none of the evil diseases of Egypt, which thou knowest, upon thee" (that is, if the Israelites obeyed the law of righteousness). Unhappily, they did fall into many of the evil ways of their predecessors,—the sins of luxury, pride, and worldly pleasure,—with a result that is known to us all.

Their lesson is ours today. We have only to ask ourselves what the pursuit of pleasure has done for its votaries in any land or any age (especially when this has led to the violation of the Sabbath and the neglect of other uplifting influences), and we shall have our answer from the pages of history. Mrs. Eddy tells us that "Truth will at length compel us all to exchange the pleasures and pains of sense for the joys of Soul" (Science and Health, p. 390), and these joys are as eternal as their divine source! Like the living water of which Jesus spoke, they are within man's spiritual consciousness, and spring up perpetually. A glimpse of the blue sky, a glance into the ocean's depths, "the meanest flower that blows" (to quote Wordsworth), the healing of a single case of suffering by divine power,—these may all tell us of the heights and depths of infinite Love and awaken the joy that never grows weary. No one can charge Christian Science with being a religion of gloom, but like the Hebrew lawgiver it says, "Take heed to thyself, and keep thy soul diligently, lest thou forget the things which thine eyes have seen," and so miss the real pleasures which are at God's right hand "for ever more."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

PHILADELPHIA, PA.

A new item is today [June 26] added to Philadelphia's splendid total of handsome churches, when the congregation of First Church of Christ, Scientist, which for some years past has been holding its services in the old Beth-Eden Baptist Church, at Broad and Spruce streets, opens its new building in West Philadelphia. Situated on a large lot, on the south side of Walnut street, just west of Fortieth, it has taken its place in the heart of one of the most attractive residence sections of the city, where the characteristic green of lawns and trees is especially marked, and it has risen there materially to add to the beauty of the locality.

The clear white of its stuccoed walls, with their broad windows and many generous doorways topped with the red-tiled roofs, which rise as if by terraces to the wide, low dome, forms a striking and distinctly pleasing effect. Architecturally speaking, the general style is Italian renaissance in its earlier period, but an observing eye sees everywhere about the building, in the arches of doors and windows, for instance, and in the wall-columns which divide its northern front, lines purely Ionic in their simplicity and dignity. The architects have, as it were, wedded these two elements in bringing together a structure whose great size—the auditorium alone seats twelve hundred—is lost in the propriety of its proportions, and whose somewhat severe beauty, taken in its entirety, is such that one is almost surprised at the subsequent discoveries of its charming elegance in the lesser details.

The building has been fifteen months, to a day, in being brought to completion, ground having been broken on March 25, 1909. In the early stages of the work it was discovered that the lot did not offer proper "footings," or foundation structure for an edifice of this size and weight. To meet this problem, concrete piling was driven all over the surface of such part of the land as would bear the church, the piles being sunk anywhere from a dozen or fourteen feet to more than twenty. It was an expensive and a somewhat tedious process, delaying the work probably six weeks, but today the situation is the best that could be desired. The cost of the church is one hundred and twenty-five thousand dollars.

If the congregation does not enter its building this morning literally and wholly free of debt, it is only because a few thousands of dollars have been advanced for the completion of the work by certain members of the body. This forward

Digitized by Google

step in the cause of Christian Science in this field is directly in line with a progress which is being shown the world over. As a part of the services which will today inaugurate its new home, First Church will this evening stand host to those interested in the subject of Christian Science, inviting them to attend a lecture on that theme, to be delivered by Bicknell Young, of London, England.—*North American.*

We have subsequently learned that the new auditorium was filled to its utmost capacity at both of the opening services, as well as at the lectures on Sunday and Monday evenings, by Mr. Young. Extra chairs were used wherever space permitted, but on Sunday evening several hundred people were unable to gain admission. The *Evening Telegraph* reports that Mr. Price, the First Reader, following the services, said that the Christian Scientists of Philadelphia regarded the opening of the church as most gratifying. He declared that it was a step in advance for the work of Christian Science in this vicinity. "For the past four or five years we have had in mind the construction of another church," said Mr. Price. "The entire city was canvassed to decide upon the most desirable location. The work of Christian Science in this city is growing very rapidly. This is shown by the increased attendance at the Sunday School, which has nearly doubled within the past two years, and now has an average attendance of two hundred."—[EDITOR.]

THE LECTURES.

INDEPENDENCE, KAN.

Frank H. Leonard lectured on Christian Science at the Beldorf Theater March 28. He was introduced as follows by Mrs. Josephine Campbell, Second Reader of the local church:—

From the beginning of human experience mortals have been searching for the one true God, whom to know aright "is life eternal," as our Master said. Failing to find Him, many idols have been built up in mortal thought, all endowed with power according to one's faith in them. We in and of the flesh are all idolators, despite the fact that infinite Truth has always been here and is ever ready to guide and enlighten the human consciousness out of its own darkness. We smile at the ignorance of the heathen worship of idols, whether they be of wood or stone, and thank God we are not as they are; but if we turn our attention from them to our own mortal mentalities, we discover many idols other than wood or stone to which we have been, willingly or unwillingly, obedient slaves. Fear, anger, hatred, malice, envy, jealousy, revenge, sin,—these are the recognized masters of the human race and are the underlying cause of sickness, disease, and death. Any one of these conditions, in proportion to one's belief in it, is sufficient to destroy health, harmony, and success. In the measure of our receptivity of the true knowledge and understanding of God, as revealed to us through Christian Science, we are enabled to dethrone these false idols and to say with the psalmist, "Who is so great a God as our God?" We have with us tonight one who will tell us something of this great truth.—*Correspondence.*

OMAHA, NEB.

On April 22 Clarence C. Eaton of Tacoma, Wash., delivered a lecture on Christian Science under the auspices of First Church of Christ, Scientist, in the new Brandeis Theater. At least three hundred people stood, and about two hundred left the theater unable to get seats. The lecturer was introduced by Major Herbert M. Lord, U. S. A., who said,—

Christian Science appeals to the world today by its splendid hopefulness. To the sick and suffering it holds out the promise of relief, to those in bondage of fear it proclaims emancipation, to the weak and sinning it offers needed help, and to a world in darkness it flashes a message of approaching dawn. Its beneficent, quickening, uplifting influence penetrates the palaces of the rich and the cottages of the poor, and wherever it goes, health, happiness, and harmony are its fruits. It is slowly but surely making its impress upon the other religions of the world, and effecting radical changes in the so-called medical science of the day. It is even changing the language of the people, and has relegated the word "incurable" to the ranks of the obsolete, changed "hopeless" to "hopeful," transformed "discouragement" into "encouragement," annihilated "despair," and given a new and deeper meaning to "charity," "friendliness," "kindliness," and "love." It has brought to the light of day many long-hidden, dust-covered Bibles, and has shed radiant light on sacred pages whose richest truths and treasures had been lost sight of in the foggy atmosphere of contradictory theological systems.

Christian Science does not proselyte, unless, perchance, you give that name to the honest expression of one's heartfelt gratitude for benefits received, and the proffer of its priceless blessings to others in their hour of need. If we who have been healed and helped failed to voice the message of hope to those in the valley of the shadow, we certainly would be recreant, guilty of the basest and grossest ingratitude, and not worthy to march under the banner of Christian Science. Christian Science does not need to proselyte. Christian Science does not need you, and it does not need me, but we need Christian Science, and the world needs Christian Science, and in the providence of God the world is getting it, and this, the religion of hope, health, help, happiness, love, and charity, is finding its way into the uttermost parts of the earth, and the nations are learning of a God who needs no apologist, and who sends good and nothing but good to His children.

The world is eagerly reaching out for this religion of optimism; this religion that one carries with him into his home, his business, and into his pleasures, making of this world of ours a delightful place of sojourn; a religion that enables us to see those about us in a new and more charitable light; a religion that emancipates from fear, sickness, worry, perplexity, and trouble, and helps us really to solve the vexing problems of life. Christian Science does not criticize, but has a "Godspeed" for every good work. It has no quarrel with the doctors or the churches. It appreciates the self-sacrificing endeavor of conscientious members of the medical profession; it simply says: "We have found a better way." It is grateful to the churches which all through the centuries have kept the fires of devotion burning, in troublous times of peril, persecution, and martyrdom; but Christian Science says to the churches: "Come up higher." Christian Scientists do not criticize, and really care little for criticism from others, for they have seen that through the working out of the great law of Truth every attack on Christian Science has served but to strengthen its sinews, and that misrepresentations only widen its borders. Christian Science simply turns the other cheek and builds another church.

Christian Science has no preachers save the Bible and its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it has no sermons only as the lives of its followers are read by those with whom they come in contact—living, breathing expositions of the eternal and infallible efficacy of Truth in the cure of sickness and sin. And so we come here tonight not to proselyte; we are not gathered in this beautiful auditorium to criticize or to quarrel with others; we gather here not to preach or sermonize, but we do come together to listen to the message of Truth from an authoritative source; to hear something of what Christian Science is and what it does—a message that will prove an inspiration to Christian Scientists, and a message of enlightenment and help to those who are only inquirers.—*Correspondence.*

HORNSEA, ENGLAND.

The Rev. William P. McKenzie lectured here on Christian Science May 6. He was introduced by Col. Edgar Lambart, who said,—

It would not be fitting that I, a stranger among you, should offer my personal testimony to the truth of Christian Science, but I am only one of a great company of people, professing and calling themselves Christian Scientists, many of whom through Christian Science have been brought back from the brink of the grave, from the depths of degradation and despair, and from the waste places of weariness and disappointment. Some of them dwell in your midst and can tell you of their healing. But with great respect I venture to say to those of you who are not Christian Scientists, that I think you do well to be here tonight. For, suppose it is true? suppose it is true that Christian Science does hold the key to that kingdom which our Master said it was the good pleasure of his Father to give us? suppose that in Christian Science there really is that truth which he said should set us free—free from the chains that seem to bind us so fast, free from that fear which in its myriad forms seems to haunt our daily lives with its specters of disease, of poverty, of failure? Is it not truly worth your while, for the sake of so large a hope, to come and listen? to lay aside prejudgment and pride—that little wisdom of ours which is such foolishness with God—and to bring to your hearing, if possible, that receptive mind of the little child which the Master said was the condition of understanding the kingdom?

Correspondence.

NEW YORK, N. Y.

Bicknell Young delivered a lecture on Christian Science in Carnegie Hall, Sunday afternoon and evening, May 8, under the auspices of all the Christian Science churches and societies of Greater New York. At the afternoon lecture he was introduced by Eugene R. Cox, who said in part,—

The unrest of this nation has become proverbial, and many causes have been assigned for it, but the real cause is the desire for good. We are dissatisfied and unsatisfied, and this is not to be wondered at. The papers tell us of the badness of individuals. The magazines tell us how bad we are collectively and as citizens, and it may be that something we each carry around with us tells us in no uncertain tones that we ourselves are not all we should be. Nor is there any lack of proposed remedies for all of this. Thousands are ready to tell their neighbors how to be good and to lay down laws and rules for the regulation of the affairs of others, and to write tomes by the ton in elucidation of their plans; but the progress they make is lamentably small.

Forty years ago Mrs. Mary Baker Eddy made a discovery that was marvelous in its simplicity and in its effectiveness. She discovered that if we desired good with our whole heart and might and pursued it, we would have no time to tell others how bad they were, nor to try to make them good to suit our tastes and notions. She reduced this discovery to a system, and in its practical application it is known as Christian Science. We have found that in the path leading to good we are overtaken by good health, and that this and not disease is our heritage; that as we think right thoughts, righteousness and not sin is ours. Faint though the progress has been along the line pointed out by Mrs. Eddy, it has yet been enough to attract the attention of the world, and to cause many to inquire concerning this rapidly growing religion.—*Correspondence.*

Learning is but a part of man's equipment, and a paltry enough part, unless wisdom go along with it.

LUCAS MALET.

TESTIMONIES OF HEALING.

Christian Science came to me a little over two years ago, at a time when I needed help and needed it badly, for everything seemed to go wrong, no matter how hard we tried to do right. I had never been considered very strong, and was recovering from what the doctors called a nervous collapse. I was feeling very bitter, because I thought that if we are given work to do, we should be given the strength with which to do it. Just here, however, I was led to call upon a lady who is a Scientist and to tell her some of my difficulties; also that I wanted to know about Christian Science, if it had anything better to offer than the husks upon which I had been trying to subsist. Only those who have had a similar experience can appreciate the great relief I felt when I understood that God does not make evil, disease, and death, but only good, and that it is not His will that we should suffer or be unhappy.

After that I attended several Wednesday evening meetings and the Sunday morning services quite regularly, my husband going with me, and began to read "Miscellaneous Writings," by Mrs. Eddy. It was while reading this that I suddenly realized all my physical ailments had left me, including a severe cold which I had contracted a short time before, and I was free! I could do any amount of work, household or the teaching of music, and never seemed to feel tired. When I think of all the blessings that have come to me through Christian Science, I exclaim with David, "Many, O Lord my God, are thy wonderful works which thou hast done, . . . they cannot be reckoned up in order unto thee: if I would declare and speak of them, they are more than can be numbered."

My gratitude to God, and to our Leader, can best be expressed by trying to follow the teachings of the Bible as explained in Science and Health, which is indeed the "Key to the Scriptures;" for while I had been taught to read the Bible and had memorized a great deal of it, I did not understand it, or the ministry of Christ Jesus, and only read it because I thought I ought to; but for the last two years I have read little besides the Bible, Science and Health and other works by Mrs. Eddy, also the *Sentinel*, *Journal*, and *Monitor*, which are such a great help to us in our passage from sense to Soul.

MRS. JANE C. KEMP Boulder, Col.

It is with the most profound gratitude that I tell of the blessings that have come to me in my comparatively short experience in Christian Science,—gratitude both to God and to our Leader, Mrs. Eddy. The direct cause of my investigating Christian Science was the complete healing of my wife from many complicated disorders. My father was a practitioner of medicine for over forty years; I was connected with the drug trade for several years, and am a graduate from the medical department of the University of Pennsylvania; I also practised medicine for several years. Having thus had a belief in the power of material remedies instilled in me from childhood, I was naturally enough very antagonistic toward Christian Science, and especially prejudiced against it as a healing agent. The fact is, I knew nothing of it, and did not want to know anything, but I can now readily see that this feeling was caused entirely through ignorance of what Christian Science means.

For several years before coming to California, my wife had been in a very poor state of health. In speaking of her troubles, my reference to them is made from a once material point of view, and not from a Christian Science standpoint, for at that time we knew only the material side. From childhood she had suffered from deafness and impaired eyesight, the sight being practically destroyed in one eye and the sense of hearing lost in one ear. These

Digitized by Google

ailments dated from an attack of fever. The heart action also was very irregular, and she suffered from acute attacks, many times becoming unconscious, so that she was never without a vial of so-called heart stimulant. She experienced periodical attacks of neuralgia, and her digestion was bad. She had to wear the strongest of eye-lenses, and could not leave them off for a moment without severe attacks of headache, which would at times continue for two or three days. Oculist after oculist, aurist after aurist was consulted, but all with the same result—no benefit. She was also a sufferer from other organic troubles, and seemed to be unusually susceptible to climatic changes, it being, as we thought, necessary for her to seek a warmer climate in the winter and a cooler climate in summer. She was also sent to sanitariums for treatment.

She had met and talked with several Christian Scientists, but did not take up the study of this teaching for a year or so after we came to California. A few months before we left the East, a noted surgeon was consulted, and as usual in such cases, an immediate operation was advised. In ten days my wife was in the hospital, and had undergone an operation; but this gave her no great relief, and in many respects she suffered more. Shortly after coming to California, which was soon after she left the hospital, she took up the study of Christian Science, much against my wishes at the time, as I would not allow myself to believe that there was any merit in it. I objected to having our two children brought under its influence, and would not listen to any discussion of it, so intense was my feeling against it. Suffice it to state that after my wife had been studying this wonderful Science of Truth for a short time, and had taken a few treatments, she began to improve, and for over three years she has been perfectly well, as God intends every one to be. She has gained greatly in weight, her hearing is as acute as a child's, and her eye-glasses have been discarded entirely.

Noting that these changes were being gradually but surely effected, I could not help wondering what caused them, as she had given up all medicine; but even then I could not get away from my life-long belief in matter and material remedies. I had been reared under strict orthodox teaching and belief, but was never able to get any direct understanding or benefit, spiritually, from my reading of the Bible, and for many years I had almost refrained from reading it. I had no interest in the church, as I had about lost faith in its doctrines; in short, I had allowed myself to discredit most of the Bible teachings through this lack of faith in the church. I now see that this was because I had not found, or did not try to find, God as Life, Truth, and Love, as taught in that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Over two years ago I was afflicted with a series of boils and carbuncles, and in several instances it was necessary to have a surgeon lance them. My wife had asked me to see a Christian Science practitioner, but still I spurned her advice, until I felt that I could endure the suffering no longer. Finally, in this extremity, I called upon a practitioner. I had two or three treatments and the trouble was completely overcome.

For a long time I had been a sufferer from insomnia, had always been susceptible to take cold, and had suffered from slight attacks of rheumatism. Immediately following the treatments referred to, I began to read Science and Health, and the following Sunday morning attended for the first time a Christian Science service, which to me seemed more beautiful and inspiring than anything I had ever before attended. I then went to the Wednesday evening meeting, and it is needless to say that I have been a regular attendant at all the services ever since,—indeed I at once found myself longing for them, as they seemed to mean so much to me. During this time the sleeplessness has been overcome, I have no further thought of taking cold upon exposure, and the attacks of rheumatism are easily dispelled. The latest demonstration was the healing of a bad cut on the wrist, made by an old tin can. This cut, under the usual surgical treatment, would have required at least three stitches, and when the accident happened I thought an artery had been severed, so severe was the bleeding. I called my wife, who at once declared the truth for me. A bandage was placed around the wrist, the bleeding was immediately checked, and in less than a week the cut was completely healed. I suffered not the slightest inconvenience from the injury, and today there is not even the sign of a scar. It is needless to say that our medicine-cabinets and cases have been emptied,—they are no longer a part of our home requirements or necessities,—and my medical teachings have been cast aside,—they are a closed book to us.

I shall never forget an experience with an attack of throat trouble which we had, and what a beautiful demonstration it was. Our boy, then about ten years old, had been subject to repeated attacks, and this last one occurred before I had begun my study of Christian Science and while I was still depending upon material remedies in all things. The little boy was attacked at night, and I immediately ran to the medicine-cabinet, but the usual remedy was gone. I called to my wife, who immediately declared the truth for the boy, and in less than ten minutes the full membrane with all accompanying mucus was ejected. The child has not had even the slightest return of this dreaded trouble. I am so thankful that we have at last found a religion which not only we can understand, but which our two children can study understandingly, for they get much help out of their study of the Lesson-Sermons. I am realizing that I have found a concept of God that I never dreamed of before, and vastly different from the God that I tried to know under the old teachings.

In Christian Science I am overcoming the sense of self, selfishness, resentment, irritability, etc., all of which had always seemed to be a part of my so-called material being. I fully appreciate that I have many things to overcome, and realize that I have miles, as it were, of travel before me in order to ascend that height of freedom from sin, sickness, and death, to enter the sphere of truth and grace; but I am urged onward by the knowledge that I am on the right path. I am indeed thankful to God for the many blessings, spiritual, physical, and financial, that have come to me and my family, through the truth that surely makes man free, and grateful to our beloved, noble, and self-sacrificing Leader, Mrs. Eddy, for the revelation of ever-present Truth which has come to us through her.

E. B. Goodwin, M.D., Los Angeles, Cal.

If I were to tell all that Christian Science has done for me, it would be a long story. Suffice it to say that I have proven it to be a "pearl of great price,"—a veritable truth, a saving power, strengthening, satisfying, purifying, and uplifting. The physical healing seems wonderful, but the spiritual illumination is more so. Christian Science comes into our lives like sunshine, bidding every shadow flee. If we walk in the light of Truth, as our Leader has taught us in "Science and Health with Key to the Scriptures," we shall fully realize, with the apostle Paul, "that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God."

Eleanor S. Smith, Chicago, Ill.

[Translated from the German.]

When Christian Science was first brought to my attention by a near relative, I was led to accept it at once. Although I did not take it up at first for the physical healing, I was cured of an eruption near the right ear, with which I had been suffering at intervals for thirteen years.

Digitized by Google

This healing was accomplished through the study of Science and Health and other works by Mrs. Eddy, as well as through reading the Christian Science periodicals. I am most grateful for this and various other proofs of divine blessing, and close this testimony with the deep-lying conviction that the truth taught by Jesus has been rediscovered and brought to us again in practical demonstration by Mary Baker Eddy.—Miss Josephine Ziller, Athens, Greece.

[Translated from the German.]

After nearly three years' study of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," as well as the other publications pertaining to Christian Science, I feel that it is my duty to testify to the benefits derived therefrom. I accepted Christian Science simply because I felt that it must be the truth. On many occasions I have had proofs that the truth contained in the teachings of Science and Health does heal the sick.

Last summer I was taken with a fever which lasted several days; one afternoon it grew much worse, and I asked my sister to help me in declaring the truth. I must add that several among our acquaintances and friends had been taken with this fever, and a few had fallen victims to the dread disease. We had been going to see one of these friends regularly at the hospital, and I must have been affected by these cases, as I had not been able to overcome the sense of fear entirely. My sister at once asked me if I was afraid of taking the disease, to which I answered that I had been, but that I was trying to overcome my fear. I asked her to read the 91st Psalm, which she did over and over again, till I felt better and was able to go down for supper. During the evening and the following night we both kept declaring the truth, and the next morning the fever had left me and I felt well and free. In the afternoon we went to the seashore with friends and had a picnic, and came home late at night. During all this time I never missed a meal, nor did my family, my sister excepted, suspect that I was not well.

We study the Lesson-Sermon every morning before we attend to our occupations, and try to live according to the teachings of Christian Science. We are grateful to Mrs. Eddy for discovering the truth and giving it to the world.

Miss Natalie Ziller, Athens, Greece.

So many people have wondered at my recovery from illness of such long standing, that I came to the conclusion my experience with Christian Science might help some other poor sufferer who has exhausted all other means, that such a one might be inspired to search for health in the way I did. I had been subject to nervous disorders nearly all my life, as well as to bronchial and stomach trouble and several other complaints. My most serious difficulties began after the birth of my second child, which was about eight years ago. I suffered greatly for nearly two years, could not do any work, and spent most of my time in bed. The last six months I could not see any one except those who cared for me. I had seven different doctors, who did their best and helped me for a while, but they all said I would never get well unless I underwent a serious operation. This I refused to do, declaring I would die first; and I was thought to be dying when a friend advised Christian Science.

I had treatment, and although my recovery was slow, it was a steady gain from the first treatment. I am now in excellent health and do all my own work. I have never enjoyed such good health, and the truth has been our sole remedy for some time. My two children have been delivered from many ailments. The doctor said the second child would never walk, but in six treatments in Christian Science the little one was entirely healed, and could walk a short time after. I am grateful to God, and to our beloved Leader, Mrs. Eddy.

Mrs. Cora Gibson Berry, Maplewood, Mass.

Over four years ago I came into this new understanding of Truth. I did not take up Christian Science for the healing of disease, but my parents, who were Christian Scientists, asked me to let my children go to the Christian Science Sunday School; which I did. The first healing was that of a case of lung trouble of three months' standing, and my little girls met this through the knowledge which they gained in attending Sunday School. When I found that Christian Science is not only good for healing sickness, but for everything that is discordant in our lives, I began to use the little understanding I had in the home problems, no matter how trivial they seemed to be, for I found that Truth meets every need. Another healing was that of my little son, in an attack of acute lung trouble, which was overcome very quickly indeed.

About two years ago a baby was born to us, all the conditions being very harmonious. I sat up the next morning, and was dressed in two days after. I was perfectly well in every way, and I know this was due to Christian Science, because I had a very different experience before coming into Science. Besides all the blessings of healing, the baby has always been very good, has never had any of the ailments common to babies; and is all love and smiles, for we try to see reflected in him the real child of God. Words cannot express my gratitude for all these and the many more blessings which have come to us through the study of the Bible and our text-book.

I am very thankful to our dear Leader, Mrs. Eddy, for giving to the world "Science and Health with Key to the Scriptures." My greatest desire is to know more of this truth, and be better able to live the Christ-life every day.

Mrs. Grace Swearingen, South Bend, Ind.

It has been my desire for a long time to tell the readers of the *Sentinel* what Christian Science has done for me. I was considered an invalid; had been weak from childhood, and at the time I found Christian Science was suffering from stomach and heart trouble. I could not eat anything without being distressed, and also suffered from other ills. I was advised by a friend to try Christian Science; which I did at once. I went to see a Scientist, and had a helpful talk with her. She loaned me a copy of "Science and Health with Key to the Scriptures," and I began to read it. I soon found that it contained the truth for which I had been wishing. Through the reading of this book I have been healed of those ailments, and I have found that God is the only physician for me. God was my only help on two occasions, at the birth of my two children. The births were natural and almost painless. I cannot express my deep gratitude to God, and to Mrs. Eddy, the Discoverer and Founder of Christian Science.

Mrs. Delia Whitlow, Paducah, Ky.

For the benefit of those who may be seeking after Truth, and from a thankful heart, I wish to give a short summary of what Christian Science has done for me. Since young womanhood I was an almost constant sufferer, and I steadily grew worse, until about two years ago. By the advice of the best physicians I went to a hospital, where I submitted to a dangerous and painful operation, in the hope that my health might be restored; but I received no benefit thereby. In addition to these ills, complications of bronchial and stomach trouble appeared. I was not allowed by physicians to eat anything but the very lightest diet, and even that seemed to distress me.

I took medicine until drugs lost their seeming power, and I was condemned by the doctors (I had five of them) to die, unless I left the town, as they said the very air of this place was poison to me. I had been confined to my room and bed for weeks. As a last resort, by the advice of a friend, I called in a Christian Science practitioner

Digitized by Google

(December, 1907), though at the time I had no confidence in this method. After the first treatment I ate anything I wanted without any bad effect, and in two or three weeks' treatment I was entirely healed.

Since that time my whole family has been greatly benefited by the knowledge of the truth as taught in Christian Science, which has been our only remedy. While we have not reached that perfect sense of love which casteth out all fear, still we are pressing on toward the mark. My heart overflows with gratitude to God,—and to Mrs. Eddy, our dear Leader.—MRS. T. R. GREEN, Memphis, Tenn.

About two years ago I came to Christian Science for help, having had a bad case of stomach trouble from boyhood. In 1902 an abscess formed in my left side, which physicians pronounced incurable. In September, 1905, I had an acute attack of appendicitis, and two weeks later became helpless from my hips down, having no use of my limbs. I remained a hopeless invalid for twenty-eight months, being given up by the physicians as incurable. During this time I had been using an opiate, and at the time Christian Science treatment began I was taking this opiate in very large doses.

My daughter (Mrs. T. R. Green) was lying almost at death's door, having been given up by three physicians. A friend then asked her to try Christian Science. She had a practitioner called, who came in the afternoon and gave my daughter treatment. That evening she ate a hearty supper, and rested well all night. The next morning I asked for Science and Health and in a few days requested treatment. On the fourth day after my first treatment I arose, dressed myself, and walked to an adjoining room. I do thank God that I have not only been enabled to walk, but have also been healed of many diseases. I have made the Bible and Science and Health my daily companions, and by the understanding of Truth which I have thereby gained, I have been enabled to make some wonderful demonstrations for myself and others.

Words cannot express my heartfelt gratitude to God, and to our dear Leader, Mrs. Eddy, for the revelation of Truth and Love that heals the sick and makes the lame to walk, the blind to see, and the deaf to hear. I can say, in the words of the psalmist, "The Lord is my shepherd; I shall not want."—J. D. BURCHAM, Memphis, Tenn.

Christian Science has brought great joy to me in my old age. Twelve years ago I was healed of rheumatism of many years' standing. I have never lived where I could go to church, but I have read Science and Health and all the other Christian Science literature I could get. The *Sentinel* comes to me each week, bringing a message of Truth and Love.

In February, 1909, I was living with my son, who is not a believer in Science, and I was taken ill and was very sick. My son was very much alarmed and sent for a physician. In a few days they called another and then another, until three physicians had said they could do nothing for me. I had seemingly gone down to the brink of the grave, but my husband said there was another chance. He wanted to turn the case over to God through Christian Science, and this was done. A practitioner was called over the long-distance telephone, and I was fully restored to health, so that I am better than I have been for years. My husband also was healed of many ailments. We have been married sixty-eight years. We were both reared in an orthodox belief, but feel that we have been born again in this blessed truth. For all this we give praise to God, and thanks to our dear Leader, who has made this truth practical to the world.

MRS. LOUISA BURKS, Grand Prairie, Tex.

I had suffered for two weeks with an attack of illness, and after this a relapse occurred which, according to *materia medica*, left me with rheumatism and other disorders. I then began to take Christian Science treatment of a practitioner, and in two days I noticed much improvement. In a week I stopped the treatments, for I was able to be about as usual and was quite myself again.

Another manifestation of the power of Christian Science within our family was the healing of one of its members from gall-stones (diagnosed by a physician). It was a very acute case, but under Christian Science treatment within a week the pain had entirely disappeared and since that time has not been felt in the least. We are very grateful for the relief from this disease, because of the severe laws laid upon this belief by *materia medica*.

I am sincerely grateful for Christian Science and for what it has done for me.

MRS. N. MOOK, Roswell, New Mexico.

About four years ago I bought a copy of Science and Health. I read it almost constantly, and prayed that if its teachings were the truth, it might be revealed to me. Soon after this I called on a practitioner, and was healed of a bladder trouble from which I had suffered at times for more than twenty years. I cannot express what I feel of love and gratitude for God, and for our dear Leader, because of the many blessings that have come to me through the understanding of God as Spirit, Life, Truth, Love. My sincere desire is to live in accord with the teachings of Christian Science.

TELULA D. ECTON, Chicago, Ill.

I wish to express my gratitude for the many blessings received through Christian Science. The truth has removed many inharmonious conditions that have presented themselves, and especially with the children, whose ailments have been quickly met. I had suffered for many years from severe headaches, but these have been overcome. I had worn glasses for several years, but can now sew, read, or use my eyes for any kind of work and feel no need of the glasses. The demonstration of the power of Truth at the birth of our youngest child was beautiful and proved to us that Truth is an ever-present help. The child weighed only two and one half pounds at birth, and the physician said he could not live; but the material beliefs concerning such cases were quickly demonstrated over. The baby gained in strength and weight very rapidly and today is a large healthy child.

For these and many other blessings which I have received in Christian Science, I am very grateful.

MRS. MABEL C. SCHWINGEL, Great Falls, Mont.

[Translated from the German.]

In my work I need an acute vision as well as a steady hand, but both of these had greatly diminished. I thought that the trouble was caused through smoking, which bad habit I had not been able to get rid of, despite all my efforts. I then heard of Christian Science, also that many a smoker had been healed through its ministry, and I therefore decided to give it a trial. After I had attended a few Sunday services and Wednesday evening meetings, I became convinced that the physical defects were the minor evils which would disappear in due time, if only I tried to have purer thoughts and be a better man altogether. I then endeavored to think along these lines and to act accordingly, and I also applied to a practitioner for treatment. To my great joy I soon noticed that I had regained both the acute vision and the steady hand, while the tobacco habit disappeared without my becoming aware of it.

I cannot enumerate all the proofs of the power of divine Love which I have had up to this time, but I wish to

Digitized by Google

testify to the fact that through Christian Science I have learned again to love and respect my fellow-beings; that I have also been able to overcome business difficulties easily, and have become prosperous. Peace has returned to my family, and my wife and I are more happy together than ever before; besides, I have made friends of people who formerly were my enemies. For all this I am thankful to God, and also to our beloved Leader.

MAX WAGNER, Dresden-Neugruna, Germany.

I wish to express my gratitude for what Christian Science has done for me. I had suffered for years with severe stomach and bowel trouble, also from an affection of the gall-ducts which caused excruciating pain, and jaundice, these attacks coming on about every three months. My husband being very low and not expected to live, I had turned as a last resort to Christian Science for him, and it was soon after this that I was taken with a very severe attack. I sent for a doctor, who gave me medicine which relieved me, but as soon as its effect was gone, I was just as bad as ever. The Christian Science practitioner came soon afterward to treat my husband, and I asked her to treat me first. She did so, and in a half hour I was very much better, almost entirely free from pain. In three treatments I was completely healed of all my diseases and have been perfectly well and healthy ever since.

I am grateful to God, and to our dear Leader, for all the blessings received.

MRS. CASSIE J. FRASER, Searchlight, Nev.

It is with great thankfulness that I testify to the blessing of complete restoration to health and strength received through Christian Science. During 1908, I was reduced to such a condition that it was supposed by my friends and the doctor attending me that it was only a question of a very short time when I must pass on, as no material remedy was of any avail, even in alleviating the pain. I was too far gone to know anything of my condition, and at this time my wife called in a Christian Science practitioner, with the result that with two treatments natural action of the bowels was restored, after four weeks of obstruction. Although in a very nervous condition, I soon began to get better; my appetite came, and I was able to eat, which I had not done for weeks. My mental condition gradually improved and in two weeks I was able to sit up and read a little while at a time. At the end of four weeks I was able to walk down town, a distance of half a mile, and in two months I could work. From that time on I continued to gain strength, without any return of the disease, and now I am working regularly at my occupation as a miner, in complete health and strength.

There is no way to attribute my recovery to any other cause than the application of the truth as explained by Mrs. Eddy in "Science and Health with Key to the Scriptures," and it is my earnest endeavor to acquire an understanding of her teachings for myself. I am indeed grateful to God for giving to us this truth through Mrs. Eddy.

GEORGE A. FRASER, Searchlight, Nev.

Our lot is greater than ourselves, and gives to our souls a worth they not else have dared to claim. Hence, the humbleness there always is in Christian dignity. The immortal lot infinitely transcends our poor deserts; how we are to grow into the proportions of so high a life, it is wonderful to think. And yet, though it be above us always,—nay, even because it is above us,—there is something in it true and answering to our nature still; so that, having once lived with it, we are only half ourselves—and that the meaner half—without it.—MARTINEAU.

FROM OUR EXCHANGES.

[Rev. T. W. Young as quoted in *Detroit* (Mich.) *Times*.]

Theology is man's idea of religion, not the thing itself. Old theologies should be smelted like ore and the good extracted to be applied to the needs of today. Do not assume from this that I belittle the old theologies—for arrogance that scoffs at the past is merely vanity; but, one cannot fail to see that people nowadays have little interest in dogma and that the authority of the church is no longer respected. As a divine institution it holds its own, but not as a temple of theology or a fount of ecclesiasticism. Men are anxious to make Jesus Christ king, aside from denominationalism. It is often necessary today to overthrow theology in order to save religion—theology changes, religion never. The Christianity of tomorrow will be lacking in dogmatism, for the public is impatient of the man who has only dogma to defend, but listens reverently to the man who has a truth to present. A gospel that is simple and practical will be the only one listened to in the future. The preacher of today must give up his obsolete phraseology and get down to the vernacular of the day if he is to gain and to hold the ear of the people. The Christianity of tomorrow will be scientific in its method, expression, and application.

[Ralph E. Flanders in *Public*.]

It is a great thing to be an insurgent. There is distinction in it. It takes no courage to be numbered among the soldiers of the "god of things as they are." And the worshipers of that god are on the losing side. Maybe not tomorrow, or next week, or next year, or for many years, will we make substantial headway against their dull and stolid phalanx. But we are cheered by the thought that again and again in the world's history have they been thrown into wild rout, while precious ground was gained in the fight for the kingdom of God on the earth. It looks as though another pitched battle were in sight. Insurgency, the union of body and mind and spirit in the service of the world, is to be found elsewhere besides at Washington. The whole earth is stirring with the larger insurgency. In England, Russia, Turkey, Germany, Spain, China,—the whole world over,—a spirit of restlessness, of dissatisfaction with ancient evils, is stirring the souls of men. This thing is of God. He who fights it is allied with the powers of darkness. He who breathes it and lives it, for good or for ill, has for his support the almighty powers of love and truth.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*.]

The very things that men fret, strive, and worry about are things which to Jesus would have been valueless in themselves. He would not have considered the position of a king any more important than that of a peasant; he would have looked at the quality of the soul that occupied the office. And, to go further, though he was glad to be loved, it is impossible to think of him as pretending to anything he was not; he had nothing to hide away; he was utterly simple and sincere. Above all, his solicitude was for mankind and not for himself; he was not thinking about himself; he saw the whole race as though it were himself and himself as though he belonged to the race. In doing all this he felt himself to be the instrument of the good will of the Father, and never for a moment did he make a bargain with life on any other terms. His soul was lifted so high above all considerations of self-interest that any pain he suffered had more to do with his failure to open men's eyes to their true condition than to any other cause. He cared supremely that God should be glorified in all human hearts and in the love of man to man. It was this he lived and died for.

[Rev. W. H. P. Faunce in *Watchman.*]

Americans need to see that the goal of life is not the achievement of what we call "success," but is the achievement of personal and social worth. Our country has been obsessed by the idea of success. We have as a nation made the soulless maxims of Poor Richard an appendix to our Bible, and have worshiped at the shrine of thrift rather than the altar of service. We have too frequently admired results regardless of methods, and have believed that a man is justified in choosing any road he will, provided he "gets there." Success has bulked large in books for children, it has been flaunted in the market-place, and been emblazoned on the walls of the school. Our energetic temperament, our inherited love of adventure, our Puritan individualism, and the boundless opportunities of a new continent, have all combined to make us exalt a crude and heartless success above all earthly dignities. It is time for us to reclaim the finer and higher ideals of personal worth which were once dominant in the life of the Republic, supplementing those earlier ideals with the later truth that personal worth is acquired in and through social service.

[Theodore Roosevelt in a letter to the Edinburgh Missionary Conference.]

Your conference represents the practical effort to apply the teachings of the gospel to what the epistle of Jude calls "the common salvation." An infinite amount of work remains to be done before we can regard ourselves as being even within measurable distance of the desired goal; an infinite amount at home in the dark places which too often closely surround the brightest centers of light, and an infinite amount abroad in those dark places of the earth where blackness is as yet unrelieved by any light. In missionary work, above all other kinds of Christian work, it is imperative to remember that a divided Christendom can only imperfectly bear witness to the essential unity of Christianity. I believe that without compromise of belief, without loss of the positive good contained in the recognition of diversities of gifts and differences of administration, the Christian churches may yet find a way to cordial cooperation and friendship as regards the great underlying essentials upon which, as a foundation, all Christian churches are built.

[*British Congregationalist.*]

The pure in heart see God; and it is the vision of God that determines life for the spiritual. Kindred souls constitute the true church. "Thou whited sepulcher" was our Lord's description of the religious life based only upon accepted standards and tradition, while divorced from soul realities. To confess a creed with the lip, and in the heart to have sympathies with conceptions which destroy that creed, is to be inwardly corrupt. We are bound to take up the cross of the Lord we obey, and follow him, if need be, to Calvary. By no other path shall we reach the throne of enduring influence and the heaven of peace.

[*Christian World.*]

It remains, notwithstanding all the disastrous history of the past, that only in union with the spiritual life can the intellect obtain its freest and fullest play. The old Brahmins were right in making it a condition of the pursuit of philosophy that its aspirants should begin by subduing their passions and rigorously regulating their moral life. There are certain truths, and these the highest, that only open to the pure heart. You cannot see them with the mind till the soul gets there.

[Rev. Walter Walsh of Dundee in a church address.]

I believe that most nations, as well as individuals, want to do right; but in the past it has been difficult to do right and easy to do wrong in international disputes, because we had only the machinery of wrong-doing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Official care of the Charles River Basin, lying mostly between Boston and Cambridge, has passed from the Charles River Basin commission to the Metropolitan Park commission. The dam, which is 1,620 feet long with approaches, providing an 85-foot roadway across its top on the harbor side and more than seven acres of park on the basin side, having a maximum width of 500 feet, with retaining walls of granite with concrete reinforcement on pile foundations, including the lock, which has an interior length of 350 feet and width of 45 feet and a depth at mean low tide of 17 feet, cost $1,041,922.98.

Self-elimination of weak banks is a proposition which Comptroller of the Currency Murray suggests to the national banks of the country through the medium of the recent meeting of national bank examiners. A bank, he says, should go into voluntary liquidation as soon as it is demonstrated to a reasonable certainty that it cannot be continued successfully, or as soon as the examiner ascertains that the officers and directors cannot or will not manage its affairs in accordance with safe banking practices.

The Government will undertake the work of storing water in five reservoirs in Washington at the headwaters of the Yakima and Naches rivers in the Yakima valley, southwest of Spokane. The surface of the reservoirs aggregates 15,500 acres, with a total storage capacity of 927,000 acre feet. This is sufficient for irrigation of 309,000 acres additional to the normal flow of the streams.

The Government cement mill at Roosevelt, Ariz., which was built because of the high cost of transporting cement to the site of the Roosevelt dam, has been dismantled. During its five years of operation the mill has turned out three hundred and thirty thousand barrels of cement, effecting, it is estimated, a net saving of six hundred and fifty thousand dollars.

The special committee on wages and prices of commodities has made a preliminary report to the Senate, after a series of hearings beginning in February. The report comes from the Republican majority only. The Democratic minority have been authorized by the full committee to employ an expert and compile such a report as they may desire to make. They will be given access to all the papers and information on which the report of the majority is based.

The Permanent International Association of Navigation Congresses, which will hold its next meeting in the United States, will mean much for waterway development in this country. Up to 1907 the United States with its vast area had spent only about five hundred and fifty million dollars on all its waterways and harbors, while France alone since 1814 had spent more than seven hundred million dollars.

The United Shoe Machinery Company has filed an equity suit in the Massachusetts supreme court against the Thomas G. Plant Company and Thomas G. Plant individually, returnable Aug. 1, to restrain the Thomas G. Plant Company from using other shoe machines in substitution for the United Company machines during term of the present leases.

The work of compiling information received from the railroads of the country concerning the cost of transporting the mails, has begun. Congress appropriated ten thousand dollars for the purpose of putting this information in such form that it might be used as a basis for fixing the amount of compensation to be allowed the railroads.

Smoking automobiles are now "outlawed" in New York city. The new statute provides that the chauffeur of a smoking automobile may be arrested and taken to the nearest police court, where he will be charged with a misdemeanor and fined or imprisoned, as provided by the code.

The engineers of the war department in New England have had placed to their credit the sum of about two million dollars to be used for making the river and harbor improvements in Maine, New Hampshire, Vermont, and Massachusetts, authorized by the last Congress.

The so-called "banjo" block-signal has been installed at a crossing in South Plainfield, N. J., by the Lehigh Valley road to protect automobilists. This device is in addition to the automatic bell signal, which cannot always be heard above the noise of autos.

The New York Legislature has passed four important bills for the protection of immigrants—regulating private banks, licensing steamship ticket agents, limiting the activities of notaries public, and establishing a bureau of immigration and industries.

The New York Legislature, called in special session by Governor Hughes to enact a direct nominations law, adjourned without passing the desired legislation.

A year ago the treasury deficit was $63,704,031. At the end of the fiscal year, June 30, the deficit was only $2,865,239.

The customs receipts for the fiscal year 1910 amounted to $333,043,500.

International.

The extensive irrigation projects planned by Sir W. Willcocks in the country lying between the Tigris and the Euphrates have now been commenced, and their progress depends chiefly on the readiness and ability of the Turkish government to allocate funds for the work. The Ottoman government has agreed to allot a sum of $2,250,000, but it is estimated that complete provision for all the works which it is hoped to carry out will require a sum of not less than $7,375,000.

The first step was taken in the direction of making Paris a seaport when the report on the development and extension of the canal de l'Ourcq, which is to connect the center of the manufacturing district of Paris with the Seine, was accepted by the municipal council.

Fifteen hundred delegates, representing governmental and private railways of nearly every civilized country, were in attendance at the eighth international congress just held in Berne, Switzerland.

With the exception of the roofing, the reconstruction of the famous Campanile of Venice is complete. The bells have been hung and rung. The ceremony was made the occasion of a great fête.

A bill for the parliamentary enfranchisement of women is before the English House of Commons. An early opportunity for discussion on its second reading is looked for.

It has been definitely decided by the Englishmen interested in the subject, to complete the proposed railway from Baghdad to Beirut.

The French budget for 1910 is estimated at $853,805,150.

Industrial and Commercial.

Over seventy million dollars is invested in the linen industry in Ireland. There are 935,000 spindles and 36,000 power looms; 70,382 people are employed, whose annual wages amount to $16,500,000. The business is in the hands of fifty different companies, of which seventeen are in Belfast, one in Cork, and the rest scattered throughout the island. Today England has only 50,000 spindles and Scotland 160,000, whereas fifty years ago the three countries had about the same number, viz., 350,000 spindles each.

The committee of the Merchants Association of the Chamber of Commerce, the New York Board of Trade and Transportation, and the Produce Exchange, which has been taking up the question of differential rates in the ports of the Atlantic seaboard and the present discrimination against New York, has determined to make a fight before the interstate commerce commission to get the whole system of differentials on the Atlantic seaboard abolished.

The Georgia Fruit Exchange, which markets the bulk of the peach, cantaloup, and watermelon crop of that state, is lodging serious complaints against the retail fruit dealers of New York. The chief feature of the charge is that the producers receive prices ridiculously low in contrast with the prices at which the products are sold there, and that the consumers are compelled to pay prices ridiculously high in contrast with the wholesale prices at which the retailers make their purchases.

Buyers for eastern commission houses traveling in the northwestern and Pacific states estimate that fifteen thousand cars, or from nine million five hundred thousand to ten million boxes of apples will be shipped from commercial orchards in Washington, California, Colorado, Oregon, Idaho, Montana, and Utah this season. The market value of the crop in the several states is placed at from twenty-seven million to twenty-nine million dollars at present prices.

The ministry of public works in Constantinople has invited bids for the construction of an extensive system of electric trolley lines in Carstantinople and vicinity. To the successful bidder are offered the franchises of five lines decided upon by the government, and such lines as the bidder may propose and the government may find desirable to include in the concession.

The world used sixteen million six hundred thousand bags of coffee during the year 1909-1909. Of this amount Brazil produced nearly thirteen million bags, and the single state of San Paulo nine and a half million bags.

A new form of fireless cooker with electric heater attached has recently been put on the market. As there is practically no opportunity for the heat to escape, this method of cooking should prove very economical.

The East Indian cotton crop for the agricultural year 1909-10 will be 4,502,000 bales, an increase of 911,000 bales over last year's yield.

General.

The distance between Boston and San Francisco has been covered in seventy-seven walking days by Jack Eldredge, twenty-six years of age. Edward Payson Weston, seventy years of age, covered it last year in one hundred and five days.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PEACE IN ACTION.

W. D. MC CRACKAN, M.A.

CHRISTIAN SCIENCE promises peace and brings this promise to pass, but not in the way imagined by the world or the carnal mind. "My peace I give unto you," said Jesus; but he added, "Not as the world giveth, give I unto you." Not idleness, not the *dolce far niente*, the do-nothing of languorous ease, but peace in action, the satisfaction proceeding from spiritual activity, the calm of work well done—and being done.

The world of nature is full of pictures of peaceful activity, which poet, painter, and musician have joyfully seized for reproduction. The interior of a great forest, wherein every tree is growing in trunk and branch and leaf; the grassy uplands, where myriad flowers brighten the verdure with their colors; a populated island resting on the horizon, or a vessel sailing over the broad expanse of the ocean; even so humble a sight as the smoke rising straight from the chimney of a cottage,—such pictures symbolize peace in action. Through figure and form the sculptor has expressed the ideal of well-balanced peace and power.

It is not, however, until Christian Science explains true action as mental and spiritual that the full value of peace can be ascertained. Mrs. Eddy, in an article entitled "Love your Enemies" in "Miscellaneous Writings," utters a note of warning against "treacherous peace" as proceeding from a false sense of friendship. On the other hand, in Science and Health, she describes the true peace when she writes, "The highest and sweetest rest, even from a human standpoint, is in holy work" (p. 510). It would seem, therefore, that the enjoyment of spiritual rest and peace is conditional upon action; indeed, humanly speaking, peace involves the overcoming of obstacles.

There is no immediate prospect of peace for any one on the order of do-nothing. Human existence will continue to be an apparent struggle for an indefinite time, a warfare wherein the breastplate of righteousness, or right thinking, must constantly be worn, the sword of Spirit must be wielded without fear or favor, and the shield of faith and the helmet of salvation used for protection against the onslaught of evil. Armaments will continue in the form of spiritual preparations for battles against sin, sickness, and death. The call to arms will resound to rouse the laggard, put heart into the timid, and dissipate the dream of mesmeric superstition. Passages at arms will be of daily occurrence, and battle-cries be heard above the din. Temporary defeats will doubtless be sustained, for the smoke of battle sometimes seems to becloud the issue, and stratagem and treason are designed to deceive the unwary; but glorious victories will always crown honest endeavor.

It is useless to pray for ease or lethargy. Every individual must be tested and tried on the field of battle. So long as materiality obsesses human consciousness, warfare will be conducted with material weapons. So long as matter is supposed to have power, the various attempts to overcome sin, sickness, and death must remain material in concept and execution, and ritualism and drugs continue to appear the proper means for procuring salvation. But, as the light of spiritual understanding pierces the gloom of materiality, it is seen that the true warfare is not material, nor are the weapons carnal. "For the weapons of our warfare," Paul writes to the Corinthians, "are not carnal, but mighty through God to the pulling down of strong holds."

In combating sin and sickness, mixtures and compounds of mind and matter are attempted, strange potions and lotions are concocted, the claims of outworn dogmas and false doctrines are permitted to assert themselves, and this for the reason that when mankind is first forced to recognize that the warfare is not material, they are tempted to turn for help to the carnal mind as a savior or battle leader. Scholastic theology and *materia medica* persist in interfering in the warfare. Thus have arisen at various times so-called semi-metaphysical systems, half-hearted makeshifts which have their day and bring temporary confusion; but in the heat of battle they are each and all found wanting, and so are sent to the rear. Those, however, who rely upon the Scriptures, and their interpretation in Science and Health, can never be deceived. They demand the exact Science of Christianity, which never fails when properly applied, because it is of God. They are satisfied with nothing less than the Mind which is divine, and so they earn their peace in action.

POSITIVENESS IN CHRISTIAN SCIENCE.

THEODORE STANGER.

A SHORT time ago the writer overheard a remark made by a member of one of the older churches, to the effect that Christian Scientists were the most intolerant religionists he had ever met. The only reason he could give for holding this opinion was, that they were so "awfully positive" in their religious convictions.

Now, if there is any time when a Christian Scientist may with some degree of justice deserve to be called intolerant, it is when he is just beginning to be a Christian Scientist. In their new-found freedom from pain and suffering, and when looking toward a bright future, some Scientists display "a zeal . . . not according to knowledge." They are apt to foist their opinions upon those who are not ready for the truth and who do not desire it, to discuss points which they themselves have but faintly grasped, to say things which must sound very foolish to an outsider, and then to feel disappointed or even to lose patience when those whom they are trying to convert do not agree with them. This period may be to some a "period of storm and stress," because of the antagonism they arouse; but they soon emerge from it. The more they learn to understand the true nature of Christian Science, and the more they rise above its letter into its spirit, the more do they see the vastness of the subject before them and their own meager knowledge of it; they become more tolerant, more ready to acknowledge all

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

that is good in the world, in the churches and out of the churches,—all, indeed, that makes for the amelioration of suffering and the elevation of character.

No man was ever more positive in his religious convictions than our Master. "Verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled." "Heaven and earth shall pass away, but my words shall not pass away." These were his words. And yet, how broad he was, how free from religious prejudice and intolerance! Professions of faith had no value in his eyes unless he saw them accompanied by proofs,—by good works. He said that the publicans and harlots would pass into the kingdom of heaven before the hypocritical representatives of the faith of his own people. In one of his parables, it was a despised Samaritan who rescued a man fallen among thieves, while a priest and a Levite passed him by. When the scribes and Pharisees brought unto him a woman accused of violating the moral law, he said to them, "He that is without sin among you, let him first cast a stone at her;" and when they had all slunk out, he said to the woman: "Go, and sin no more." These instances also show that Jesus could appreciate the good the people manifested, without sanctioning their forms of religion or their faults.

When religious positiveness is supported and encouraged by ignorance, greed, lust for power, and lack of understanding of the nature of God, it becomes assertiveness, intolerance, and fanaticism. History affords us many sad illustrations of this fact, in the religious wars and the persecution of those who differed in their views from the representatives of the dominant religious party. Even in our enlightened age there are many who would deny to mankind the right to "prove all things," and to "hold fast that which is good." The most remarkable phase of this question is that those who suffered persecution because of their faith, later on, when they came into power, persecuted those who did not agree with them.

Men have ever patterned themselves after their concept of God. A belief in a cruel and vengeful God has tended to produce cruel and vengeful people. This applies principally to the many forms of heathenism. But even the Jews believed in a God who was subject to many human weaknesses, such as anger, cruelty, and changeableness. Is not this the same concept of God which the Christian churches have been teaching and in which they have believed? and is it a wonder that people became intolerant, fanatical, and cruel, when they had formed such a concept of God and lived in accordance with it? No doubt many Christians have tried to be "perfect," even as their "Father which is in heaven is perfect," but has their standard of perfection been that which their Master held? Now, the God of whom Jesus taught and in whom he believed, is a God of love, He is the author of good only and never of evil. Furthermore, the Master had a clear understanding of God, and this gave him also an understanding of man as God's image and likeness. Mrs. Eddy says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). How could he be intolerant toward this perfect man!

Mrs. Eddy has shown us so clearly what Jesus' mission was. She tells us that "he did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs" (*Ibid.*, p. 18). And what was his life-work? To overcome every material condition and to resist every temptation of evil,—to assimilate himself to God. He had the perfect and unchanging God, the God of love and mercy, always before him, and he conformed himself in thought, word, and deed to this perfect model. How could he manifest anything but tolerance and love? How can a true Christian Scientist manifest the opposite of these qualities, when he realizes clearly that God is unchanging Love, when he sees the necessity of working out his own life-problem as Jesus worked out his?

It should be remembered, however, that positiveness is not intolerance. It would be impossible for a Christian Scientist to be intolerant toward other Christians, simply because they have not risen to his plane of understanding. People versed in the knowledge of this world do not think ill of those who have not reached the same degree of understanding which they themselves possess. To illustrate: A boy ready to enter high school knows that in mathematics to multiply the divisor divides the quotient by the same number, and to divide the divisor multiplies the quotient by the same number. He is absolutely sure of the correctness of this proposition, because he has proved it to be true and understands the underlying principle. He does not, however, dislike the boys in the primary grades who have not yet reached this point. He expects that they will some day gain the same degree of knowledge which he himself has reached. Furthermore, he knows that there remains yet a great deal for him to learn.

Christian Science is scientific religion, having an unchanging Principle. Christian Scientists have many times proven the correctness and unchangeableness of this Principle, in the overcoming of sin, sickness, and other discordant conditions. They have learned that sooner or later they must work out their own salvation by conforming in thought and deed to this Principle. They know that blind belief will not assist them in this work, but see the necessity of continually growing in spiritual understanding, wherewith to overcome the ignorance, the carnal-mindedness, which is the cause of man's seeming material state and of all the ills that flesh is heir to. It is clear to them that only in this way can heaven be attained. They know this to be true with reference to others as well as to themselves; and furthermore, they realize that they have as yet hardly reached the "primary grade" of this Science. Why, then, should they be intolerant toward any one? Such a proceeding would be just as foolish as if the astronomers who were able to calculate the appearance of Halley's comet should scorn those who have no understanding of astronomy.

It is thus seen that one can be very positive without being intolerant. In fact, the world is sorely in need of more positive Christians,—Christians whose convictions are based on an understanding of divine Principle, Love. The apostle James writes: "He that wavereth is like a wave of the sea driven with the wind and tossed. For let not that man think that he shall receive any thing of the Lord. A double-minded man is unstable in all his ways." Is not this a most graphic description of the condition of the Christian church during all these centuries? Does it not explain the existence of the many varying creeds and denominations within the Christian church? Is it not high time for Christians to give up this wavering, this double-mindedness, and to become more positive in their apprehension and grasp of the truth? But how can they do this, if they have no Principle, no definite rule to go by?

Thanks to Mrs. Eddy, Christian Scientists have both Principle and rule to guide them and to make them positive. She herself is a shining example of positiveness. Ever since she received the revelation of Truth which is set forth in our text-book, "Science and Health with Key to the Scriptures," she has stood as firm as a rock, unmoved and unharmed by the waves of misunderstanding and ingratitude which have surged about her. More positive statements were never made than those which abound in all her writings; yet there is no one living today who expresses more of love and compassion than does she, and it is the earnest desire of every true Christian Scientist to follow her inspired leadership,—to become more positive as well as more loving.

GOD LEADETH.

LAURA GERAHTY.

SOME years ago, the manager of a business firm was about to engage an office boy. There was little time to find out particulars as to the lad's character and habits, so the following plan was decided upon. A sixpence was to be placed, as though accidentally dropped, upon the floor of the office the night immediately preceding the morning on which the lad was to commence his duties. If he brought the coin to his employer, all well and good; if not, he was to be classified as a dishonest boy and promptly dismissed.

When that poor lad rose in the morning, he probably asked God to give him his daily bread, to forgive him his sins, and not to lead him into temptation; not to lead him or place him within range of any traps and snares that might be lying in wait for him during that day, which was fraught with so many hopes and fears and upon which, as we know, hung the issues of his immediate future, whether for failure or success. Oh, strange incongruity, that God, who is Love, should be feared and pleaded with as the tempter! Now, we, who have the key which unlocks all these treasures for our freedom, we know that God leads us, not into temptation, but delivers us from all evil, and that just in the proportion that we lean upon His untiring and unerring arm for guidance and support, shall we move, without fear of a false step. Knowing that God is leading, we simultaneously know that "God cannot be tempted with evil, neither tempteth he any man," as the apostle James tells us; that God is good, the strength and substance of all that is pure and just and holy, neither actively nor passively connected with evil in any degree or form; that He is leading, and leading necessarily to good only.

The actual facts which followed the incident cited above, were not precisely known to the writer, though at the time the conclusion was reached and freely voiced that, owing to the cruel temptation put in his way by his employer, the lad had fallen an easy prey and his early business career was blighted. Public sympathy, however, ran very high in favor of the boy, and his employer was looked upon by most people as the one who had sinned. Now, with the spiritual interpretation of that clause in the Lord's Prayer under consideration to help us, we are rendered less liable to such defeats. "And God leadeth us not into temptation, but delivereth us from sin, disease, and death" (Science and Health, p. 17). We learn that God leads us into the path of deliverance from temptation; and in the proportion that our prayer is one of assured affirmation in contradistinction to that of supplication, do we find our strength and support in all such difficulties.

One can picture the boy walking to his work on that eventful morning, perhaps running, fearful of being a little late; trembling as he neared his destination, as one who ventures timidly into the darkness of uncertainty; or perhaps full of youthful enterprise and resolve. Then thought goes to the boy of today, the boy with a Christian Science training. He walks along with head erect and countenance as fearless as the daylight; there is a certain fortitude dominating him which carries him fearlessly through every such experience, and at every attempt of evil (error) to assert itself in the shape of doubt or fear, he mentally denies the reality of any power save the divine, knowing and asserting continually that divine Love is leading, that Love alone has power to guide him, and that the path to be traversed is that which leads to good.

Is much comfort ever derived from asking God not to lead us into temptation while we believe in the power of evil? If there is, is not the comfort tenfold greater when we know for a single moment that God could not, does not, ever lead us into evil? Are we not thrice blessed who know that God is of purer eyes than to behold iniquity, and cannot place us in the direct line of fire? And do not we who are basking in the sunshine of this assurance, who are drinking from the clear fountains of Truth, and refreshing ourselves with the harvest gathered and stored for us in Christian Science,—should not we offer up a prayer of gratitude for this great blessing, for the realization of what has been so beautifully transposed for us from a disconcerting intimation to a supreme comfort? God leadeth us! Whatever be the seeming difficulty to be overcome, "the government shall be upon his shoulder;" and however dark and obscure the path before us, God leadeth; however luring the temptations to go to the right or the left, ah, brightest thought of all, the temptations are not of God!

Mortal mind may indeed set traps and snares for the unwatchful, it may whisper in subtle seductiveness, it may even robe itself in the garb of Truth; but mortal mind can have no power. "Get thee behind me, Satan," said Jesus, when tempted in the wilderness, and "Get thee behind me" must be the judgment pronounced by each one of us when similarly tempted. So, when the clouds of sense gather and the winds of argument blow softly around us, let us not be overcome, but be ever on the watch, vigilant and prayerful. When the tide is tugging violently and our moorings creak and groan with the strain of it, let us remember that God leadeth. Then, as we pronounce sentence on all the murmurings of sense, all the vanity of intellect, all the desires of mortal mind, and humbly assert the divine guidance, the desire which is prayer, "the habitual struggle to be always good" (*Ibid.*, p. 4) will go up to our Father and return to us augmented by the power of divine Love. And lo! Christ, Truth, is seen walking on the water, and his "Peace, be still," restores the calm.

He alone who has known the torture of temptation can recognize fully the blessedness of scientific denial; he alone who has had the cup to his parched lips knows the seeming bitterness of rejection and the actual and unbounded joy and gratitude when both thirst and cup have disappeared. He who has borne the violence of the storm, best sees the full beauty of the calm. Then peace settles down upon us and becomes such part of our existence that we are apt to forget, or at least not fully to realize, how abundantly we are partaking of it and how untiring and patient has been that Love divine on which we are leaning. Let us cast all our care upon Him, in the supreme confidence that He careth for us; and let us guard well our thought, lest we be tempted to believe for a single moment that we are or can be separated from our divine protector. Whether it be in a moment of sin, sorrow, sickness, fear, idolatry, or self-righteousness that the tempter comes to our side, it matters not. At whatever door the watchman is sleeping, there will the thief seek an entrance; but, if every door be fast locked, the effort will be vain.

Three times, St. Matthew tells us, the devil attempted to find a flaw in Jesus' armor, and three times he failed. The only hunger Jesus evinced was for the bread of life, the word of God. The only power he knew or desired was that of the Father. He knew that his safety and protection were the Father's, and he dismissed the evil one with the words, "It is written, Thou shalt not tempt the Lord thy God." As each temptation is put behind us, we are left purer and stronger; angels come and minister to us,—those "upward-soaring beings" which, as Mrs. Eddy tells us (*Ibid.*, p. 299), "never lead toward self, sin, or materiality, but guide to the divine Principle of all good,"—and thither God leadeth.

COMPENSATION IN CHRISTIAN SCIENCE.

GERTRUDE SLOCUM.

WHILE much has been written in explanation and justification of the acceptance of fees by Christian Science practitioners, very little has been said concerning the

Digitized by Google

matter regarded from the standpoint of the patient. As one who became a student of this Science, not through the receipt of physical benefits, but through the perception that here the truth was to be found, my visits to a practitioner have been for other purposes than the relief of pain.

Did I not feel that my small payment would in some measure be compensation for the time I consume, I could not avail myself of the opportunity offered to have my ignorance enlightened, my mistakes corrected, my worries appeased. I should demur long and suffer much before I should feel myself justified in trespassing upon some stranger's time, and in preventing him during the minutes devoted to my cares and trials from attending to his own business. Should he already be possessed of so much of this world's goods as to endure no monetary loss by my intrusion, I should still be in the position of one getting something for nothing, and even they who cavil most bitterly over this wise provision of our Leader will acknowledge that this is more harmful to the recipient than to the giver.

Again, a certain natural hesitancy at intruding one's self upon strangers would prevent many from going for treatment when the first symptoms of disease appear. Upon first emerging from the old beliefs and practices, the young student of Science may not have enough understanding to combat successfully the initial claims of erroneous belief. Mrs. Eddy says (Science and Health, p. 420), "If students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them." Such may avail themselves of treatment at once, when the practitioner's time can be accepted and paid for; but should no payment be accepted, a sense of undischarged obligation would be incurred by the patient, and his appeal for help might be postponed until a more difficult situation would be developed.

Were no stated charge to be made for treatment, each right-minded and honestly-disposed patient would feel it incumbent upon him to repay in some measure the benefits he had received. The practitioner would be overwhelmed with offers of service, with attempts to perform the tasks allotted to the hours devoted to the patient's use, and lastly with gifts of every sort and description. The old system of barter—my time and skill for yours—would tend to be substituted, to the utter discomfort and confusion of all. The custom of a fixed money payment for value received has gradually been evolved for services as well as commodities. It is largely the conservatism of the older theologies that criticizes this newer and better way, although admitting that the clergy should receive their regular stipends quite irrespective of any reformatory results upon their congregations, and of the fact that no attempt is made to do the healing work demanded by Christ Jesus.

"WHO IS MY NEIGHBOR?"

R. E. HEARD.

ONE of the greatest blessings that Christian Science has brought to the world is the spiritual understanding which enables us to get away from the material sense of things and find the spiritual sense. The great help which I have experienced while endeavoring to put into effect our Leader's admonitions in this respect, prompts me to give out a thought or two on the lawyer's question, "Who is my neighbor?" The Master gave him a clear and definite explanation as to what constituted his neighbor, and perhaps this explanation was as much as that age could accept, for we must remember that Jesus said, "I have yet many things to say unto you, but ye cannot bear them now."

In this age Christian Science is teaching us that whatever tends to obscure our spiritual sense of God and His universe is the false material sense of this being, and the denial of the seeming reality of this false sense of God, and man is what Jesus required as one of the chief qualifications for discipleship. Webster defines "neighbor" as that which is near, adjoining, next; and Christian Science, in revealing God to us as the Principle of the universe, reveals also the true man. This necessarily destroys the false sense of the material universe and material man, and as the reality of the spiritual man, the image and likeness of God, is revealed to our consciousness, we find that our neighbor has always been near, though "'hid with Christ in God,'—with Truth in divine Love, where human sense hath not seen man" (Science and Health, p. 325); and this manifestation of the spiritual idea or neighbor we can love as our real self. As the psalmist says, "When I awake [from the false sense of life and sensation in matter], I am still with thee."

To the old thought this reasoning may perhaps seem cold or selfish, but it is not. Speaking for myself, if some few years ago I had loved my neighbor as I loved myself, and had done unto my neighbor as I would have been done by myself, I should have been doing him an incalculable amount of harm. When, however, we have cast out the beam from our own eye, we can go to him whom the world calls our neighbor and help him to realize what man really is, and to love and honor his true self as he should, and so cast the mote out of his eye. Our Leader tells us that "to love one's neighbor as one's self is a divine idea; but this idea can never be seen, felt, nor understood through the physical senses" (Science and Health, p. 88); and on page 118 of "Miscellaneous Writings" she says, "Be of good cheer; the warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory."

Surely our hearts go out in loving gratitude and obedience to God and to our beloved Leader for the joy which this spiritual awakening is bringing us through the glorious teaching of Christian Science, the Comforter which leads us into all truth, and enables one to love his neighbor as himself.

IMMORTALITY.

HARRY FRANKLIN PORTER.

THE evidence of creative energy is on every hand, in the heavens above and on the earth below. The ceaseless activity of wind and wave, the never-failing radiance of sun by day and moon and stars at night, affirm the ever-presence and omnipotence of Mind; the unerring accuracy of the solar aim and unvarying speed of the flight of the solar rays, the regular, rhythmic revolution of celestial spheres,—all these attest the presence and perfection of intelligence.

The ray of light sent forth from the central orb, infinite Mind, hesitates not nor lingers by the way, but goes on and out forever,—direct, sure, unwavering, penetrating the length, breadth, height, and depth of infinite being, illuming all things great and small with a light that is soft and clear. Clouds may hide, opposing beliefs may darken, but at the fount and source there is no interruption to the ceaseless outflow. So, within the heart of mankind an ever-welling voice affirms: Man lives, moves, and has his being in the eternal Life! Come what will, be what may—in the noontide of achievement and in the darkness of defeat, on the highest peak of bliss and in the lowest depth of despair, in childhood and in age, in slumber and in wakefulness, we may know that God and man are sure, and that as the gentle beam of living light is sent forth from its source, so doth our true selfhood manifest and affirm the eternal Principle of being. This is the assurance of Christian Science.

SELECTED ARTICLES.

[Eugene R. Cox in *New York Evening Journal.*]

Agreeing with our critic's premise that in Christian Science there is no room for evil, it logically follows that an evilly disposed person claiming to be a Christian Scientist could find no abiding-place in the Christian Science church. Christian Scientists regard evil in precisely the same manner that Jesus regarded it when he cast out devils and healed the sick. He accorded to evil neither place nor power. He plainly and emphatically denied its reality, and said, "Which of you convinceth me of sin?" When he drove the evil-doers out of the temple, he demonstrated the superiority of spiritual power over the belief in an opposite or evil power.

Christian Science does not teach that the belief of evil does not exist to our human sense, but that in the true sense evil is unreal and always subject to the power of good. The spiritual power generated by right thinking and living tends to annihilate the false claims of evil and proves that we do not have to be overcome by evil, but that we can overcome evil with good. The kind of intelligence that is needed in order to understand Christian Science is gained not so much by intellectual training as by sincerely striving to live in accordance with one's highest understanding of what is right. Referring to a stubborn type of evil, which his disciples had failed to cast out, the Founder of Christianity said, "This kind goeth not out but by prayer and fasting."

The critic argues further as follows: "If, as this new faith claims, there is a healthful power exercised over others by benevolent thought, it logically follows that harmfulness will come as the result of malevolent thought." If it were true that there were two powers, namely, good and evil, then the doctor's logic would be sound. But if, as it happens, there is but one power, and that God, then his argument falls to the ground. To illustrate the doctor's logic, we might say that if light illuminates a dark room, then darkness will darken a light room. Now we know that the latter is not true, because darkness is nothing, and therefore has no power to destroy light. In like manner, good can overcome evil, but evil is powerless to destroy one iota of good.

A Christian Scientist cannot exercise malevolent thought, for his power to be a Christian Scientist depends upon his consistency with the teachings of that faith and renders it impossible for him to become a malpractitioner. On the other hand, a person in endeavoring to exercise hypnotic influence or personal control over others would be trespassing upon the inalienable rights of his fellow-beings, and would proportionately lose his power to demonstrate the fact that good is the only power and governing intelligence of man. The popular mistake, as to the exercise of mental power, is that good and evil thoughts emanate from the human or mortal mind. This, Christian Science teaches, is not the case; for good thoughts are spiritual and are reflections of the divine Mind; while evil thoughts are mortal and are the outgrowth of a mistaken sense of things.

It was once said by a seer of olden time that the wisdom of man is foolishness with God. In our day, Christian Science seems unintelligible to materialistic thinkers; but it is encouraging to note that enough people do understand the teachings of Mrs. Eddy to prove that they can be not only understood, but made practical and demonstrable in meeting the problems of our daily life. If the doctor "would honestly like to understand this thing," as he says he would, let him become as a little child, and remember that "if any man think that he knoweth any thing, he knoweth nothing yet as he ought to know."

[Charles W. J. Tennant in *Bath* (Eng.) *Citizen.*]

The letter in a recent issue referring to Christian Science tends to create doubt respecting the truth of the words of Jesus. Why does it seem so hard for some Christians today to believe that Jesus meant what he said? Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 134): "Denial of the possibility of Christian healing robs Christianity of the very element which gave it divine force and its astonishing and unequaled success in the first century."

Does our critic not believe that Jesus and his disciples healed the sick and raised the dead; that St. Paul did the same, and that for over two hundred years after Jesus left this earth the early Christians had the "signs following" them that our Master said should follow "them that believe"? Let him read the translations of "The Antenicene Fathers," also Gibbon's "Decline and Fall of the Roman Empire;" and having done so, it will be surprising if he does not ask himself the question, "Why does Christianity not produce the same fruits today?" He will perhaps then understand why there is an ever-increasing body of people, known as Christian Scientists, who are striving to let that Mind be in them "which was also in Christ Jesus," and which alone enables them to emulate his works.

It was through spiritually understanding a passage in St. Matthew that Mrs. Eddy was immediately healed and enabled to rise from what the physicians said was her death-bed. Referring to this experience, she says, in Science and Health (p. 109): "For three years after my discovery, I sought the solution of this problem of Mind-healing, searched the Scriptures and read little else, kept aloof from society, and devoted time and energies to discovering a positive rule. . . . I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

Those who understand this Principle and abide by its rules, can, according to their understanding, perform the works of which it is capable. One would not expect a student of mathematics to solve a problem which involved an understanding beyond that which he had attained. So it is in the case of a student of Christian Science; at the same time, one is humbly grateful to God for the results that have already been achieved. The day has come in which Christianity is being judged by what it accomplishes, rather than by what a man says he believes. In St. Mark's Gospel we are told that the disciples "went forth, and preached every where, the Lord working with them, and confirming the word with signs following." This confirmation of the word is being restored through Christian Science.

[C. R. Munro in *Belleville* (Ont.) *Intelligencer.*]

Christian Science is in no way allied to faith-cure or any other method which makes use of the power of the human mind as a healing agency. Christian Science heals through a right understanding of God, Spirit, and of man's relationship to God; the knowledge that man is made in the image and likeness of God, Spirit, and that the real man reflects the perfection of his Maker. In this healing the human or carnal mind has absolutely no part, and the belief that the human mind has power to heal by its influence on other human minds is the very opposite of Christian Science teaching and practice. Speaking of the belief in the human mind or will to heal, Mrs. Eddy says, in the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 446): "The exercise of will brings on a hypnotic state, detrimental to health and integrity of thought. This must therefore be watched and guarded against."

Digitized by Google

The statement that Christian Science leaves Jesus out of its creed is an extraordinary one, in view of the fact that Christian Scientists not only believe in Jesus the Christ, as do other Christians, but they go a great deal farther, for they believe that his teachings are meant for us now quite as much as for the age in which he lived; and in consequence, that his commands to do the works he did, and that he said should be done by all those who believed on—or understood—him, are as binding now as when they were uttered centuries ago. Christian Scientists, therefore, not only rely on God to save from sin, but from sickness as well. The true test of whether a person believes on Jesus is shown in the extent to which he is willing to follow him and to rely upon his teachings in all emergencies; and by this test Christian Scientists are willing to be judged.

The statement that Christian Science teaches that there is no matter does not fully express Mrs. Eddy's position on this subject. Christian Science does not teach that the universe and man do not exist, but that these are not what they seem to our material senses; that in our present imperfect state we do not see things as they actually are. Paul said: "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear." It is not the creation itself, but the false material concept of creation which Christian Science declares is unreal. It teaches that the spiritual and not the material is real and substantial, that man's existence is dependent not upon the material, but upon Spirit, God, in whom "we live, and move, and have our being." Likewise, pain and sickness are declared in Christian Science to be unreal, in the sense that they are not created by God, therefore are not eternal; or, in other words, not real, as the word is understood in Christian Science. Whatever is created by God is real and eternal, and can never be destroyed. Jesus proved the unreality of sickness and sin and all forms of evil by destroying them, and Christian Science is likewise proving daily the unreality of sin and sickness by destroying them.

[John L. Rendall in *Independence* (Ia.) *Conservative*.]

Christian Science recognizes that to the human sense of things, pain, poverty, disease, and death seem very real, but they also recognize clearly that the Christian religion as explained in Christian Science includes the panacea for all these ills, an adequate and satisfactory means by which they may be overcome. The Bible teaches that sickness and sin, poverty and death, imperfection and limitation of every sort, can be and will be at some time and under right conditions abolished. Therefore, it teaches that these things are not part of the ultimate condition of man. From this we must logically conclude that they are simply a phase of the phenomena of human experience, of what St. Paul terms the "carnal mind," and of which he said, "To be carnally minded is death," stating also, "but to be spiritually minded is life and peace." If our critic had anything of an adequate understanding of what Christian Science includes, he would know that the purpose of Christian Science is to implant within individual consciousness that "spiritual-mindedness" which brings man into a clearer recognition of his divine rights as an heir of God and joint heir with Christ.

I have been reliably informed that in the course of his talk this critic took occasion to make slighting and disparaging remarks concerning the character of the revered Christian woman who stands as the recognized Leader of the Christian Science movement. In this he spoke without knowledge of facts. All who really know Mrs. Eddy, regardless of their religious affiliations, love and esteem her for what she really is and for what she has done for humanity. Good deeds know no creed nor dogma, and that which results in good, that which has been of inestimable benefit and value to hundreds of thousands of people by way of a healing and redemptive teaching, certainly cannot or could not emanate from anything other than right desire, motives, and purposes. Mrs. Eddy's life has been characterized by the most earnest conscientious Christian living, and the results of her work are their full justification. Jesus said, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Again he said, "By their fruits ye shall know them." The fruits of Christian Science are very clearly manifested in those conditions of Christian right living which are most desirable and which make the best citizens; therefore, those who are best acquainted with Christian Science and with Mrs. Eddy's life-work are those who can best appreciate its intrinsic value to humanity.

[Charles K. Skinner in *Detroit* (Mich.) *News Tribune*.]

It is a favorite pastime with some of the clergy who think themselves opposed to Christian Science, to make reckless assertions concerning its teaching, taking it for granted that the public will accept them unquestioningly, on account of the source from which they emanate. The assertion that "Christian Science healing is hypnotic suggestion" is absolutely untrue, and the result either of careless reading of the text-book, Science and Health, or of wilful misrepresentation. Hypnotic suggestion is but the operation of one human mind over another, the submission of the weaker to the stronger mentality, and is as far from Christian Science teaching as the east is from the west. If Christian Science had been in any sense connected with suggestion, as our critic asserts, it would have dishonored God, become impotent, and long since ceased to exist.

Christian Science teaching and practice is founded exclusively on the Scriptures and the teachings and works of Jesus Christ, and its followers do their works only as they have that Mind "which was also in Christ Jesus," as St. Paul expresses it. It is the realization, in a measure, of the heritage of "dominion over all," which was given to man (the spiritual man) at the creation, in connection with the Master's promise: "Lo, I [the Christ] am with you alway," which enables Christian Scientists to do in a modest way the works of healing. The demand of Jesus was, "Preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils [evils];" and almost his last words were: "If ye love me, keep my commandments." Neither our critic nor any one else can show any authority for divorcing the command of healing from that of preaching the gospel. If it is incumbent on the church to obey one, the same is required in the case of the other.

The Master's works were no miracles to him, but the working out of divine law. To the materialist of that age and this, they were and are considered with superstitious awe. It was difficult even for the disciples to understand Jesus' words, "I can of mine own self do nothing," wrapt up as they were in his personality. Peter alone was able to fathom the depth of the question. "Whom say ye that I am?" His answer, "Thou art the Christ, the Son of the living God," brought forth Jesus' blessing, "Upon this rock I will build my church." Not upon the personality of Peter, by any means, but upon the understanding of Peter that it was God, working through the man Jesus, which gave him power over all things; and because of this understanding every man and woman who is sufficiently spiritual may do the same works, for God is no respecter of persons.

Contrary to the statement of our critic, Christian Science does not deny, but asserts the divinity of the Christ. It does teach that the fleshly Jesus was not God, as his own words, "I can of mine own self do nothing," clearly indicated; and again, in his reply to one who came to him: "Why callest thou me good? there is none good but one,

Digitized by Google

that is, God." The challenge to "bring forward an authentic case of healing of organic disease" is but idle talk. Christian Science has long since passed the stage of experiment and needs no other endorsement than the thousands of its beneficiaries all over the world. These are sufficient for all who are honest in their search for help.

[William E. Brown in *Fresno* (Cal.) *Republican.*]

As a rule invalids exhaust other methods of treatment before they will even consider Christian Science. Then in their desperation, as a last chance and with no faith, they seek its aid and are healed. As these circumstances surround most of the cases healed in Christian Science, it conclusively proves that it is the most efficacious system of healing on earth. And why not? Christian Science is simply practical Christianity. Is it too much to assume that the healing method of Jesus is superior to any other material system? However, it is the works that count, not theories; and on this point James says: "Shew me thy faith without thy works, and I will shew thee my faith by my works." Justly to compare Christian Science with other systems of healing, results as a whole must be considered. In two principal states statistics show that ninety per cent of those turning to Christian Science were either healed or permanently benefited. When it is considered that a very large percentage of those healed were pronounced hopeless by *materia medica* and other schools, the showing is gratifying. Furthermore, Christian Science is not only a school of physical healing, but heals to the uttermost, redeeming the patient spiritually and morally as well.

When these facts are more widely known, court decisions of the kind referred to will cease. It has been truly said that no one is opposed to Christian Science, but many are opposed to their conception of it. Many thousands die daily under *materia medica* treatment without eliciting newspaper criticisms or adverse court decisions. In fact, as the comparative results now stand, and in order to be logical and consistent, those losing cases under medical care should be censured for neglect in not providing Christian Science treatment. In a letter to the *New York Herald* (Feb. 28, 1910), Joseph D. Harrigan, M.D., in commenting on the failures of many serums, says: "Antitoxin for diphtheria has an incalculable number of deaths to answer for." Many of the leading exponents of *materia medica* agree that it is far from being an exact science, its work being largely experimental. In view of these facts there are no grounds for compelling any one to accept *materia medica.*

[Lloyd B. Coate in *Dayton* (O.) *News.*]

That the embers of religious intolerance have not altogether died out in our midst is evidenced by articles which have appeared in a religious periodical published in Dayton, O., against the Christian Science church and the Unitarian church. In the same denominational paper the management of the Young Men's Christian Association is criticized because they permitted a Unitarian minister to preach in the auditorium.

What is the necessity of throwing stones at one another? Are not all denominations striving to do good? Is not the world made better wherever the Bible may be read, whether by Jewish, Catholic, or Protestant people? Does not each denomination have a right to exist? Has it not a right to hold services, and be unmolested, and not be assailed by other professing Christians? Why the necessity of speaking unkindly and untruthfully of one another? Have not all people the right to worship God according to the light they have? Does not the Constitution of our land grant such privileges? If God is Love, and if we believe it, and if all denominations live love, will we not have respect and esteem for one another?

[Alfred Farlow in *Fall River* (Mass.) *Globe.*]

In a kindly discussion, Dr. Summerbell is reported as having said, "Our Christian Science friends, without doubt, pay too much attention to the health and the freedom from disease of the body, yet do we pay enough attention?" Since much ado has been made along this line, it is natural that our reverend friend should gain this impression; but I assume that he will be pleased to know that the real mission of Christian Science is to improve the spiritual condition of its beneficiaries. Bodily improvement is in consequence of this spiritual regeneration.

It is natural that one who has suffered long from disease should lay great stress upon the physical benefits, and should for a time forget the "better part," but one does not proceed far in the study of Christian Science before discovering that freedom from pain is a very secondary matter. Christian Scientists agree with the opinion of the reverend gentleman that one should be more interested in spiritual advancement than in freedom from physical suffering, and one learns by experience that he must merit immunity from pain before he can hope to have it permanently.

[Edward W. Dickey in *San Diego* (Cal.) *Union.*]

Christian Science and Christianity are one, and the teaching of Christian Science, which is scientific Christianity, is distinctive, and there is no religion or philosophy that can be combined with it, as it presents itself as one complete whole. No possible analogy exists between Christian Science and theosophy, new thought, or spiritualism. Christian Science is without logical antithesis, and a recognition of any of its good points must mean its recognition as a whole. It is not occult, nor in any wise based upon human belief or material phenomena.

Every effort for good is to be commended, but any effort that has to do with the teaching of Christian Science must abide by Christian Science exclusively. It is a Science infinite in its nature and purpose, and something that cannot possibly be explained by anything unlike itself. As stated above, it is impossible to associate Christian Science with other present-day teachings, and as the world at large becomes better acquainted with this Science and the "fruits" thereof, this fact will be universally recognized.

[From an editorial in *Astoria* (Ore.) *Budget.*]

It must be remembered that every citizen has the right to choose the physician or system of healing he desires, and is perfectly justified in objecting to any authority on the part of the state or city to force upon him or his children the attendance or advice of a specified physician or system of medicine. Safeguarding the individual rights of the people is the only excuse for any law, and in our natural anxiety to improve the health of the growing generation by giving attention to the neglected child, we must exercise care and judgment not to overstep the boundaries of state control, nor to intrude upon the liberties of the private citizen.

[Written for the *Sentinel.*]

PRESENT.

W. J. TUCKER.

SOMETIMES, when dwelling in exalted thought,—
Viewing the wonders which Thy word hath wrought,
Reflecting on Thy beauteous works the while,—
Then 'tis I see Thee, then I see Thy smile.

Sometimes, when in untrammeled thought I rise,
Led by Thy hand, and freed from fleshly ties,
When in the silence Truth's still voice doth fall,
Then 'tis I hear Thee, then I hear Love's call.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"DIVINE MIND ALONE HEALS."*

ONE of the most significant signs of the times is the effort, on the part of certain physicians who are recognized by their fellows as leading lights of their profession, to get away from the one-time utter dependence upon drugs and other material remedies which gave their practice the hall-mark of regularity. This tendency is clearly set forth in the following editorial, which we quote from the *Chicago Record-Herald* of recent date:—

Does the profession of medicine enjoy less of public confidence and esteem than formerly? Dr. George F. Butler of Chicago, writing in the New York *Medical Journal*, seems to think so. He believes that doctors have been devoting too much attention to the study of disease and not enough to the suffering individual. He maintains that the present practice of medicine has too little regard for anything beyond men's physical being, whereas mental, moral, and spiritual diseases far outnumber those of the physical body.

These views will enjoy the distinguished backing of Dr. William Osler, who, in the latest issue of the *British Medical Journal*, comes out frankly in favor of the faith-cure. Faith, he says, is an essential factor in the practice of medicine. Mental healing, he declares, may have great value when carefully and scientifically applied in suitable cases. With the proper environment of faith, in an atmosphere of optimism and cheer, the hospital may perform the services of a pilgrimage-shrine, the infirmary may become a Lourdes. Dr. Osler seems even to take a step toward Christian Science. He says that the American people have prepared themselves, by a long orgy of drugging, to accept a "new way of life," a "new epicureanism" whose power lies "in the optimism which discounts the worries of the daily round."

Dr. Butler deplores the physician's frequent lack of sympathy with patients and his proneness to look upon them as merely "cases." If faith is an important element in a cure, few things tend more to promote it than the personal, sympathetic interest of the physician. The consciousness of this interest acts on the patient and helps to establish that necessary nexus on which faith depends. Man is more than a body, and the successful practitioner must recognize the fact.

It is noticeable, however, that the trend of thought which governs these medical men in their leaning toward something less tangible, and to them less material, entirely ignores the Mind which was in Christ Jesus, the divine Mind, and turns only to finite human belief; or, to put it more understandingly, to a belief in a human mind which is supposed to dominate and control matter.

In the same way, great stress is always laid by these advocates of modern medical practice upon the great value of optimism; just as though a mistaken belief, if it but be a cheerful and hopeful one, could be of greater intrinsic value than one of less cheerfulness and hopefulness. No one will deny that optimism is a much better and more comfortable belief than pessimism, but optimism which believes in the reality of evil and simply tries to ignore it, is no more scientific than is the opposite belief.

If optimism is to be of value to the human race, it must be based upon the understanding that evil of every sort and nature is unreal, and therefore without power. The faith which believes that sickness is real, although admitting that God can and will cure it, is not Christian Science: and while this belief signifies that an important step has been taken toward breaking down the theory that drugs in and of themselves possess healing power, it does not in any appreciable degree go to the root of the matter and present a scientific explanation of the cure of disease without the use of material means.

When Mrs. Eddy, some forty-four years ago, discovered the system which she afterward promulgated in her book, "Science and Health with Key to the Scriptures," she departed entirely from the prevalent beliefs in the reality of sickness or any other form of evil, and declared unreservedly that there is but one God, He who is omnipotent, omniscient, and omnipresent; that God is not the creator of both good and evil, but of good alone; also that He is Spirit, and consequently His creation is spiritual. Such a belief is not faith-cure as applied to the cure of disease, nor is it optimism in the common acceptance of that term.

That the demonstration of Christian Science has profoundly impressed both theologian and physician is apparent to all who are watching the efforts they are making toward the elimination of materialism from their professional views; but the one great point that all need to see is that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), also that this Mind is God.

ARCHIBALD MCLELLAN.

* Science and Health, p. 270.

DISCIPLINE VS. SUFFERING.

IN the first epistle of Peter we find this statement: "He that hath suffered in the flesh hath ceased from sin," a passage which is difficult to understand unless it be carefully studied in its relation to the general teaching of this epistle. Experience has shown that people do not always cease from sin because of physical suffering, indeed some are, for a time at least, made hard and bitter thereby; but when it becomes to them a form of discipline by which they are driven to seek peace and rest in spirituality, the body ceases to be the master and thought begins to assert its native freedom.

A great burden is lifted from the consciousness of the individual when he ceases to believe that he is bound by material health laws and that his ailments result from disregard of these asserted laws. In fact mortals often find that the most rigid obedience to these supposed laws but tends to increase their suffering and add to their bondage; but one by one the fetters of false belief are loosed in Christian Science, and the erstwhile sufferer finds "freedom to worship God." Then comes the next step mentioned by the apostle, in the experience of the one who had "suffered in the flesh," namely, "that he no longer should live the rest of his time to the lusts of men, but to the will of God;" or, as he adds, "live according to God in the spirit."

Any bodily or mental discord which may come to the student of Christian Science is a sharp reminder that there is yet much to be overcome. It may be a lingering fear of the old taskmaster, mortal mind, or it may be the disturbance produced by some "evil thoughts" which have not been effectually rooted out. Again, we may have to face the fierce mental onslaughts of those who hate and deny the truth, but in all cases we may find in the process of overcoming error the discipline which gives us renewed energy and dexterity in resisting the attacks of evil and proving its powerlessness.

When the three faithful Hebrews were cast into the furnace at Babylon, the only things which felt the touch of the fire were the cords that bound them. It is noteworthy that these cords were very quickly consumed, although this did not mean the immediate deliverance of the men from the fire; but they nevertheless walked fearlessly and painlessly in the midst of it, recognizing the presence of the Son of God. It is not enough to say that these men came out of the ordeal unharmed. They must have come out of it with an assurance and strength never before realized. He who welcomes the wholesome discipline of human experience, who gladly chooses to "endure hardness, as a good soldier of Jesus Christ," he is safe to escape the bondage of suffering.

Our desire should always be to get rid of all that is unlike God, and to realize more fully at each step of the

Digitized by Google

way man's likeness to God, infinite Mind. With this desire held constantly in thought, we rise above the weakening and depressing sense of suffering and welcome the discipline which purifies character. We should often ponder this clear-cut statement by our revered Leader: "It is error to suffer for aught but your own sins. Christ, as Truth, will destroy all other supposed suffering, and real suffering for your own sins will cease in proportion as the sin ceases" (Science and Health, p. 391). A famous writer caught a glimpse of this truth when he wrote,—

Cease the sin with the sorrow! let morning begin!
Pain must burn itself out if not fuell'd by sin.
There is hope in yon hill-tops and love in yon light,
Let hate and despondency die with the night.

ANNIE M. KNOTT.

"DOTH NOT WISDOM CRY?"

THE average child needs to learn that the careless use of a match may involve the burning of a city; that it is foolish to run a great risk for a little fun, and that those who do not heed wisdom's call, are likely to get their lesson through suffering.

The American people have recently had a good opportunity to note that this need pertains also to adults, that the alert and thoughtful, respecting the most important matters even, are evidently few. We all know that to consent to the indulgence of the bestial impulses of the prize-ring is criminally unwise; that it excites the basest passions, and involves a hazard of possible ills such as no one can estimate. And yet the nation as a whole was utterly indifferent to these things until a bloody encounter had taken place, and the details of the degrading spectacle were rehearsed in the columns of well-nigh every daily paper in the country! Could anything be more discreditable to a professedly Christian people, or give more convincing evidence that we were specifically addressed by the apostle when he cried, "Awake thou that sleepest, and arise from the dead!"

Having thus permitted the foul seed to be sown broadcast in human thought, having listlessly stood by while the torch was applied to the tinder of sensual impulse, we now wake up to the iniquity of the whole proceeding, the utter stupidity of the indifference which permitted these pugilists and their promoters to win a fortune regardless of the injury inflicted on the highest interests of the nation, and to impose the burden of a thousand times the amount of their own gains, perchance, upon the taxpayers of the country in repressing the resulting lawlessness and criminality! Manifestly we all need to learn again that it is folly—yes, a sin—to play with fire.

While abating not one whit of the effort to relieve the human suffering which past mistakes have imposed, wisdom certainly counsels the placing of yet greater emphasis upon the prevention of these ills, and this is the distinctive word and ministry of Christian Science. However beneficent and praiseworthy remedial undertakings may be, at their best they can only lessen somewhat the hurtful harvestings of error. Genuine betterment begins when we cease sinning at seedtime, when we forestall the growth and garnerings of evil by denying it a beginning.

Verily, wisdom doth cry aloud in the streets today, "O foolish people, and without understanding"! and those who "hear in their hearts" will become more alert to that mesmerism of material sense which would shape our course in every activity, determination, and circumstance. No one who is ready to respond to wisdom's call can fail to see the significance of the insistent teaching of Christian Science that the false beliefs which supply the soil and sow the seed of all our suffering and sorrow, must be given up. This is the continuous and heroic concern of Christian Science, and this is its unmeasured value to men.

In recognizing the asserted right and rule of materiality, its claims of legitimacy and law, Christian endeavor has for the most part centered its activities upon the remedying of effects rather than the removal of cause, and it is here that the philosophy as well as the program of Christian Science presents one of its more salient contrasts to the generally accepted Christian plan and procedure for human betterment. Belief in materiality as a part of the divine order has practically interdicted the recognition of the seeds of sin, and hence in a thousand ways the folly so strikingly illustrated of late, runs its course in the conduct of men. In their ignorance of error the best-minded people are continually playing with fire, and though we be somewhat awakened, in so far as any one of us is consenting to the dominion of material impulse or desire, in so far as we even open our thought to the descriptions of evil-doing as they are placarded by camera or pen, in so far are we indulging in the same folly and courting the penalty which it merits.

JOHN B. WILLIS.

AMONG THE CHURCHES.

ST. JOSEPH, MO.

The members of First Church of Christ, Scientist, held a joyful meeting last night [June 23] in the church parlors, to celebrate the lifting of a mortgage on their church property. The transaction involved about $24,000. This leaves the church in a very prosperous condition, and the congregation naturally is jubilant.—*St. Joseph News-Press.*

PORTLAND, ME.

Commencing with the first Sunday in July, the Christian Scientists of Portland will meet in their new church building on Neal street. The Sunday School room has been completed, and all services of the church will be held there for the present. The members are much gratified that they are able to occupy premises they can call their own.

Correspondence.

EDINBURGH, SCOTLAND.

The following remarks were made by the First Reader at the memorial service in honor of King Edward VII., at First Church of Christ, Scientist, on May 20:—

We have met today to hold a memorial service, in unison with other churches throughout the land, for our late beloved sovereign, King Edward VII. We rejoice in, and are grateful for the wonderful sense of peace and good will which he fostered among the nations, and for the genuine love and care he bestowed upon his dominions and peoples. How fitting and right it is, then, that he be remembered as "good King Edward" [Messages to The Mother Church, p. 77] and "Edward the Peacemaker." The good he has done will live on, and will make for righteousness throughout all the world.

We as Christian Scientists are beginning to understand that God is Life, eternal and immortal, and that He is not the author nor the procurer of sin, disease, and death; that it is not His will that any man should die, for, as our textbook says, "death and finiteness are unknown in Life" (Science and Health, p. 469). We rejoice in the fact that the consciousness of Life, Truth, and Love is encircling the earth, to the fulfilment of the prophecies: "They all shall know me [God], from the least of them unto the greatest;" and "The earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

The collection taken at the service was devoted to the relief fund for the sufferers of the Whitehaven mining disaster.

THE LECTURES.

LA GRANGE, ILL.

A very large audience listened to an address on Christian Science by Prof. Hermann S. Hering, at the La Grange Christian Science church Thursday evening [April 28]. The speaker was introduced by Avery Coonley, who said in part,—

It is not the practice of the Christian Scientists to proselyte in any sense, but since most of us first turned to Christian Science in the hope of finding release from sickness, and through our healing gained an interest in the Principle by which it operates, we should certainly be less than grateful if no opportunity were given others to learn from authoritative sources what Christian Science is.

Suburban News.

BOISE, IDAHO.

On the evening of May 1 the Hon. Clarence A. Buskirk delivered an address on Christian Science to an audience which completely filled the Pinney Theater. He was introduced by the Hon. J. H. Richards of this city, formerly district judge in this state and until recently president of the national mining congress, whose introductory remarks were in part as follows:—

Every moment will be a joy when we understand how to live. This being true, then the acquiring of this understanding is worth while. To the careful thinker there comes the conviction that underneath all these changing and disappointing scenes round about us, there rest the everlasting arms of Truth, clad in one united garment of consistency, without seam or rent. It is ours to discover and apply this unchanging truth for our good always. We are but prospectors on the shore of time, seeking to discover and utilize that which always has been, is now, and ever shall be. We originate nothing. We create nothing. We simply seek, discover, and apply. Whenever we discover and faithfully apply the truth which we seek and long for, we are satisfied; but we are continually seeking that which satisfies not, forgetting the injunction of Holy Writ: "I shall be satisfied, when I awake, with thy likeness." I am sure we are justified in understanding this to mean that we shall be satisfied as, or to the extent, we awake in His likeness; and thus step by step we gain and exercise that dominion decreed to us from the beginning,—dominion over every faculty, as well as over every obstacle which would obstruct our progress.

You and I care very little about any system or religion that simply rewards well-doing or brings disaster to evil-doing, with uncertainty. We must have a religion sufficiently scientific, and so true that when lived it will heal not only broken hearts, but broken bodies and broken business ventures. We must have a religion that can be scientifically and therefore successfully applied to every detail of daily need. We have gathered here this evening to learn something of how such a system or religion may be found and used, for Christian Science claims to be a religion that is both scientific and Christian.—*Correspondence.*

GREAT FALLS, MONT.

Frank H. Leonard of Brooklyn, N. Y., addressed a fair-sized audience at the Grand Opera House last evening [May 5]. He was introduced by the Rev. W. L. Beers, minister of the First Unitarian church of Great Falls, who spoke as follows:—

We are approaching "the manifestation of the sons of God." Toward that we are borne forward and upward by the onward surge of moral and religious progress. Meanwhile, to us, citizens of a divine world, revelation comes progressively and cumulatively. Indeed, we are overwhelmed by evidences of new truth, for which we have not yet proven our readiness by appreciating and appropriating it. We need, accordingly, open and receptive minds and hearts; not the openness of that devotee of tradition or institution who receives readily whatever comes to him along the lines of his own peculiar traditional emphasis or from his own institution, refusing all else, as yonder catch-basin takes in all that flows to it from its own street; but that alert and selective receptivity which characterizes the soul who in glad anticipation scans the whole celestial horizon, searching, testing all things, and gripping to his soul all that is true. Such a soul waits for Truth "more than they that watch for the morning."

God, Truth, the good everywhere revealed, awaits our acceptance. All that is, is for all souls, but some receive it not. Blinded by the shadow of error, man's part in the revelation of God is that of quest and acceptance. We are passing through one of the most inspiring epochs of history. Religion, eternal in the experience of man, grows purer; it moves with the tide of progress toward the righteousness of Jesus. Already we hear the call of a divine universe. That call deserves and will receive appreciative and receptive responsiveness and obedience. The spirit of this vital religiousness will encourage us to give an intelligent and kindly hearing to every noble representative of even unfamiliar religious movements. One of the most liberalizing and spiritualizing movements of today is Christian Science.—*Great Falls Leader.*

HARROGATE, ENGLAND.

On Monday evening [May 9] a numerous assembly of those directly and indirectly interested in the welfare of Christian Science in the town, congregated in the Winter Gardens to hear the Rev. William P. McKenzie lecture on Christian Science. Introducing the lecturer, Ben. Haworth-Booth said that at the invitation of First Church of Christ, Scientist, it was his privilege—and it was a privilege—and their privilege to be present to listen to a lecture on Christian Science by a man who was highly qualified in every way to speak to them on that subject. At that moment of national disaster, at the moment when mourning had entered every house in Great Britain and Ireland, and every home beyond the sea, it would be a great blessing if they received, through Christian Science, a message of peace. Christian Science came to them and said that whatsoever was possible to be done in those days when Jesus Christ and his apostles and disciples cast out all manner of sickness, was possible today. It had been thought advisable by Mrs. Eddy, the Founder of the movement, to appoint a board of lectureship to tell the people what Christian Science was, to proclaim the truths about it to those in sorrow. There was hope; they should not fear God. They declared that He was of mercy, and surely He would see, and surely He would bless.—*Harrogate Times.*

SPOKANE, WASH.

Two lectures were delivered in this city on the subject of Christian Science to appreciative audiences on Monday and Tuesday evenings, May 9 and 10, in the Christian Science church, by Bliss Knapp. In presenting the speaker Monday evening, Mrs. Margaret Crane said:—

We are here this evening to hear a lecture on Christian Science, a Science whose basis is as deep and broad as the universe itself. Many earnest people have been studying and demonstrating this Science for ten, twenty, forty years, and yet we know we have scarcely touched the hem of the garment. The great wail that has forever been going forth from the heart of tired humanity, and is so pathetically set forth in the words of Job: "Oh that I knew where I might find him!" is being answered today, and we are learning where and how to find God. Our lecturer this

Digitized by Google

evening comes across the continent to speak to us on this vital question.

In introducing the lecturer Tuesday evening, John M. Henderson said:—

In an interesting article on "The Development of Truth," a well-known writer states that certain ancient and mystical theologians used to divide the history of revelation into three dispensations: the dispensation of the Father, the dispensation of the Son, and the dispensation of the Holy Ghost. In a very real and scientific sense we are living in the dispensation of the Holy Ghost. In "Science and Health with Key to the Scriptures" Mrs. Eddy, the Discoverer and Founder of Christian Science, writes: "The promises will be fulfilled. The time for the reappearing of the divine healing is throughout all time; . . . In the words of St. John: 'He shall give you another Comforter, that he may abide with you *forever*.' This Comforter I understand to be Divine Science" (p. 55).

In our generation, as in the time of our Master's ministry, the unsatisfied pursue their eager search for truth; now, as then, the blind Bartimeus sits at the gates of the city, crying out helplessly from his darkness: "Have mercy, thou Son of David;" the prayer of the tempest-tossed rises above the winds and waves: "Lord, save us: we perish;" the grief-stricken listen for the footsteps of the compassionate Saviour; the multitude faint by the wayside; the sin-laden beseech, in the language of the Samaritan lepers, "Jesus, Master, have mercy on us." And now, as then, the healing Christ passeth by, pausing to open the blind eyes, to calm the troubled sea, to comfort the sorrowing, to satisfy with the bread of life, to uplift, to purify, to heal. To many of us the Comforter is come, even the "Spirit of truth." Others are still groping in the darkness, fearing, doubting, questioning. To such as these, and indeed to all, the lecturer this evening brings a message laden with hope.—*Spokesman-Review.*

AKRON, O.

Judge William G. Ewing delivered a lecture May 22 on Christian Science. He was introduced by Attorney E. C. Housel, who said,—

The Science of Christianity, or doctrine of Christian Science, needs no apology. It is neither sensational nor fanatical. It is the mild, meek, just, and true interpretation and application of the word of God. It is the rediscovery of a very old truth, given to the world ages ago by the great Teacher and Wayshower, Jesus the Christ. The opinion seems to have become somewhat prevalent among the misinformed and uninformed, and I have heard a great many people say that Christian Scientists repudiate the Holy Bible and have adopted and use exclusively a Bible of their own. This is not true; Christian Science is founded wholly and solely upon the Holy Bible from Genesis through Revelation, ably interpreted by that noble woman, Mrs. Mary Baker Eddy, who has benignly said, "Follow your Leader, only so far as she follows Christ" (Messages to The Mother Church, p. 78). The Christian Science movement has from its infancy grown with such remarkable strength and power that it now sheds its brightness and radiance, its goodness and truth, into every portion of the known world, numbering as its adherents and followers hundreds of thousands of intelligent people; and wherever it has been adopted, it has been for its "very works' sake" and with "signs following."—*Correspondence.*

Life is mostly froth and bubble.
Two things stand like stone—
Kindness in another's trouble,
Courage in your own.

—LINDSAY GORDON.

TESTIMONIES OF HEALING.

My attention was first directed toward Christian Science over two years ago, when by a realization of the truth it teaches, and the help of a practitioner, my wife was healed of a trouble which the physician had said that nothing but an operation would benefit. He also said that this would have to be performed at a hospital and was very likely to be followed by a year or more of invalidism and suffering. Her healing was a beautiful demonstration of the power of divine Principle, and ever since we have had no other help than that of Christian Science to overcome all our difficulties. When the surging billows of adversity have run high, we have found that "the Lord's hand is not shortened, that it cannot save;" that every cloud is only mist, and they all have silver linings, because the sun is shining behind them all. And now, instead of sickness there is peace, harmony, and joy unspeakable. My wife has spent all her spare time in study, from the first of her grand experience, and I also for the last six months. We feel that as yet we have only a glimpse of the grandeur of this truth, and we often stand in amazement in our anticipation of the glory to be revealed when the light of divine Science shall shine full-orbed upon the world.

Were I to enumerate all the blessings I have received through Christian Science it would make a book, but I shall speak particularly of one demonstration which proves to me absolutely the efficacy of divine healing. I am a veterinary surgeon, and conduct a veterinary hospital. During the spring season I am frequently called to treat horses affected with fever. Occasionally a case occurs where certain violent symptoms are manifested, which I have never been able to treat successfully; indeed the authorities say that treatment is useless and recovery not to be expected. I have a fine driving horse, one of a team, which was thus affected last winter, and which manifested alarming symptoms. I commenced treatment at once in the usual way, but as the disease runs a typical course my treatment had little or no effect. After three or four days I gave up and telegraphed a Christian Science practitioner for treatment. There was quite a struggle for a few days, and one evening the horse seemed to be suffering intensely and was in a semiconscious condition. I was alarmed, but I went home and commenced to read Science and Health with my wife, and succeeded in overcoming a fear which I had heretofore been unable to master. I went back to the box, and much to my surprise and gratification the horse was resting peacefully with no fever; was breathing naturally and was conscious, though quite weak. She recovered rapidly and I was soon driving her. The first drive it seemed difficult to hold her in.

Now a word of encouragement to those who have always worked hard but who have been unsuccessful in almost every attempt, for such was my own experience until I found God aright in divine Science. I know how happy I am that success is indeed mine, and the way is open to freedom from financial difficulties, which were fast bringing hard lines to a troubled brow and instilling bitterness into my life which has had no place there since I have learned of Christian Science, and I can say, "Be still, O heart of mine, and cease repining; the future ways are beautiful and bright." Our way may bring us to a point the outlook from which shows a path rugged and broken, but over it shines the sunlight of divine Science and we see the obstructions melt into the nothingness from whence they came, for they are only shadows, waking dream-shadows perhaps, under which lies the firm and solid footing of the "straight and narrow way" which leads to life everlasting, on and on, up and up.

All down through the ages there have lived those who have been pure enough to demonstrate in some degree the great facts of spiritual being, and who have told us

Digitized by Google

that God cares for the young ravens when they cry, and that He gave man "dominion over all." At length there came among men, Jesus the Christ, the one "altogther lovely," who demonstrated beyond all cavil the utter illusion of all material laws; the allness of God and the nothingness of error. And now we can thank God with one accord that we are privileged to live in an age with another who has been good enough to bring God's message successfully to humanity, sinsick and disheartened with isms, creeds, and doctrines innumerable, many of which would make of God a cruel tyrant instead of the loving Father which indeed He is; a woman who could apprehend and demonstrate again the Principle of the Christ-healing.

G. L. MEHOLIN, Fairfax, S. D.

I suffered greatly from a stroke of lightning, which caused my leg and foot to be helpless, and was constantly under a physician's care for three months. I was then taken to consult noted physicians, and these specialists said my physician had done all that could be done in *materia medica*. In desperation I then said, "I believe I will try Christian Science." The specialist said enough in favor of Christian Science to lead my husband to be willing to try it. I was practically carried into the practitioner's home, but I walked out without even my cane. About a year after this healing I asked help in Christian Science for a throat trouble of many years' standing, for which I had had treatment by the best throat specialists in the country. One had treated me six months, the other most of the time for a year. In about two weeks' treatment in Christian Science, however, I was greatly relieved.

I am indeed glad to express my gratitude for Christian Science for all this help. No one can know the good that Science has done in this one home, for I had been a great sufferer for years. I was in a hospital over seven months, and away from home for months at a time, taking medical treatment. Since my healing in Christian Science, about five years ago, I have been able to take charge of my home, which has brought more harmony and happiness to it; and my husband and daughters rejoice with me. Upon my return home after the healing, friends recognized the healing power of Christian Science. Even our family physician, who met me on the street, stopped me to ask what I had done to be cured, or to be able to walk. I said that it was Christian Science, and the doctor replied, "Well, well, Christian Science has done one good deed!"

I want to express my gratitude to our Leader for Science and Health, which has brought the light of Truth to the Scriptures. I had always studied the Bible, but never saw the truth until I studied it with the illumination afforded by Science and Health.

MARY F. K. MCLEAN, Menomonie, Wis.

It was my privilege to witness a beautiful proof of the power of Truth through the healing of the dear friend whose testimony is given above. When all had been done that the skill of the physicians in her own city, and that noted specialists in a neighboring city could do, she was told that, owing to the nature of this disorder, there was nothing known in the practice of medicine which could reach her case. Their only advice to her was to seek rest and quiet in a sanitarium. She then decided to turn to Christian Science as a last hope of relief from her intense suffering, and was brought to this city by her husband and the minister of the church of which they were members. I was asked to meet them at the hotel, and realized on seeing my friend that her need was very great. Being unable to walk, she was carried in a chair to a carriage, and from there assisted into the practitioner's house. After receiving the first treatment, she came into the room where her husband and I were seated, her face beaming with joy and gratitude, as the realization came to her that she was healed. She was free from pain for the first time in many months, and could walk alone.

This healing was a most beautiful illustration of the truth of Jesus' words, "Ye shall know the truth, and the truth shall make you free." We who have seen this glorious light revealed, in the healing of all manner of disease, are grateful beyond expression to know that Truth is "the same yesterday, and to day, and for ever."

MRS. ADELE R. MCCRAY, St. Paul, Minn.

I can truthfully say that I was never free from disease until Christian Science was brought to me by a very dear relative in 1903. Since then I have had many beautiful demonstrations of its power to heal through the understanding gained by the study of "Science and Health with Key to the Scriptures," and from the helpful letters of the one who brought the truth to me. Christian Science has enabled me to overcome headaches, stiffness of joints from childhood, earache with partial deafness, also a serious form of female trouble pronounced incurable by the many physicians I had to treat me from time to time. All this healing came through the study of Science and Health.

Once, while traveling in a two-seated buggy with my husband and three small children, I was made to realize more clearly than usual our utter dependence on God and our safety in Him. A horse ran into us from behind, catching one foot in a wheel, while the other was pawing above one child's head. I was impelled to declare the truth aloud, and this gave my husband self-control so that he could manage our team. Soon a passer-by released the horse's foot, and no damage was done to anything. Some two years ago I was strongly impressed to visit my sister about a hundred miles away, though not knowing her needs; and this desire increased until I finally overcame all difficulties —and there were many—and went. I found her infant seemingly at the point of death. She knew nothing of my acceptance of Christian Science, but I began to realize the truth for the babe, without making any explanation. The child was soon relieved, and slept well that night, the first sound sleep in forty-eight hours. The improvement was so rapid that my sister and the anxious friends said it seemed doubtful if the child could have had the illness which they thought; but I told my sister, "The child was ill as a child could be, and God sent me to help you." As I explained Christian Science to her, she cried for very joy; indeed, I never saw any one more thankful. The babe was also healed of a serious kidney trouble, which has never returned. My sister's eyes and general health were much improved after she accepted Christian Science, which she did at once, for it seemed as beautiful and natural to her as it had to me. We had been brought up by devout Christian parents, and our father, who was a minister, had great faith in God.

Words can never express my gratitude for Christian Science, and my wonder grows that Mrs. Eddy was able to find it for us and give it to us so that we could understand it.—MRS. AMANDA G. BOYD, Hesterville, Miss

---

[Translated from the German.]

I wish to tell of a wonderful experience of healing which came to me through Christian Science. I am a pianist and teacher, and had been so ill for five years that I was unable to attend to my profession, to which I was strongly attached. According to the physicians' opinion, it was a case of overexertion, but all that I tried in the way of "cures" or long stays in sanitariums failed to restore me to health, and a long course of treatment in "mental science" had no effect upon my trouble. I had heard of Christian Science many years ago, but, considering it to be faith-cure, I had smiled at it. However, as there was no prospect of my getting better, in the hour

Digitized by Google

of greatest despair I yielded to the entreaties of a friend, and in December, 1908, after having just come from a sanitarium, I went to Hannover and called upon a Christian Science practitioner. I was in a doubting frame of mind, but after the first treatment and talk I knew that this is "the way," and that God had infinitely blessed me through His having guided me to it. After the second treatment I no longer had the pain in the head and neck which had tortured me during all those years, and after the sixth treatment I was able to resume my profession. Since then I have been most active, with a sense of greatest happiness often coming over me.

I have not only been made whole physically, but also feel that Christian Science makes me a better and more harmonious woman; it educates me, and makes me grow to a higher understanding all the time. I hope that through my experience many others may be brought to Christian Science, for which I am infinitely grateful, so that they too may enjoy its great blessings.

FRL. HERMINE LUEDERS, Hamburg, Germany.

As a testimonial of the benefits I have received from Christian Science, I am delighted to say that, after being for years under the care of different physicians and consuming quantities of drugs, I discarded them all, about three years ago, and took up Christian Science. Since then I have gradually improved, until I consider myself again a healthy woman.

One of the greatest demonstrations of the power of Truth, among the many made since I first commenced in Christian Science, was a case of poisoning. Ignoring the advice of friends to call in a doctor, I remained steadfast to Science, and am gratified to say that I was entirely healed in four days' treatment. Feeling duly grateful for the glorious results of Christian Science, I trust I shall always remain a faithful follower.

CLARA B. HENDERSON, Los Angeles, Cal.

I send this testimony with thanks to God, and to dear Mrs. Eddy, our beloved Leader. A little over a year ago a kind friend sent me five copies of the *Sentinel* to read. As I had been suffering for years, my eyes were so weak that I could not read; but when these were given me I thought I would try. I was weary, and in anguish, but I had not read very long before I found that it was the good old gospel of Jesus the Christ, and my eyes began to feel better, and I then gave up the medicine which I had been taking for years.

For three years I had suffered from gall-stones, also stomach and spinal trouble; then I had a fever, and lung trouble, besides other diseases. The doctors could not help me, except with opiates, so they all thought I was gone. After I had been in bed about four months, I began to be a little better, but my head and nerves were still very bad. In the sixth month I went to Montrose, Col., and took one week's treatment from a Christian Science practitioner. I am now well, and am thankful to God for Christian Science and what it has done for me; also for the spiritual uplifting which I have received.

I am studying every day in "Science and Health with Key to the Scriptures," and my desire is to live up to its teachings.—MRS. MARY LINBURG, Montrose, Col.

It is now three years since I was healed in Christian Science. When my baby was one week old, I had what the physicians called a serious illness. I suffered day and night for one week without any relief, until the doctors decided that I would have to be operated on, as the last resource; but instead of this, I decided to have Christian Science treatment, and I asked my mother to telephone at once to a practitioner to treat me. This was about one o'clock in the afternoon, and when at four o'clock the doctors came to prepare me for the operation, they found me sitting up, with no pain whatever. Since then I have never taken any medicine, and I have been a regular attendant at the Christian Science services.

I am very grateful to Mrs. Eddy for bringing to us this truth, and above all am I grateful to God for the many blessings I have received.

MRS. M. E. LEVINS, Paducah, Ky.

One Sunday morning, after having been to church, where I listened to the reading of the Lesson-Sermon entitled "Love," I was startled by an uproar in the back part of the house. On going into the kitchen, I found that my six-year-old niece had been bitten in the face by a bulldog, and that the blood was streaming from the wounds, while her mother was in a state of frenzy from fear and excitement. The neighbors were also greatly excited, and loud in their denunciations of the dog. Nevertheless, so conscious was I of the presence of divine Love, that I was not disturbed by the scene, and in a minute or two from the time I entered the room quiet reigned.

At this juncture a neighbor came running to the kitchen door, offering me a bottle and saying, "This will take the poison out." I stepped to the door of an adjoining room, where the mother, who is not a Scientist, was standing, and asked whether she wanted Christian Science, a physician, or the remedy which the lady offered. She replied: "Oh, I don't know! I will leave it to you!" I said: "Very well," and going back to the kitchen door where the kind-hearted lady was waiting, I said to her, "I thank you very much, but we are Christian Scientists,—that is, I am trying to be,—and I prefer to rely wholly on Science." At this the lady drew back, as though she feared she had given offense; but I reassured her, with thanks for her kindness.

When she had gone back into the yard, I said to the child, "Come on, dear, and uncle will give you a treatment." We went hand in hand into another room, and when we were seated I said to her: "We love Bob [the dog that had bitten her], don't we?" She said, "Why, yes!" At this I began to treat the child, and almost immediately she said, "O uncle, look here! I'm all right now." As I looked, she was opening and closing her mouth to show me that she was all right. Then she said, "Can I go now, uncle?" and I replied, "Yes, you may go now." She went running to her mamma in great glee, exclaiming, "O mamma, I'm all right now!" I went on with the treatment, however, and it took me half an hour to dispel the flood of suggestions which poured in upon me. The child was instantly healed, and a big bruise on her cheek vanished into its native nothingness, in perfect demonstration of these words of our Leader, "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit." A hole made in the child's cheek by one of the dog's teeth did not entirely disappear for four days, during which time I continued the treatments.

This is but one of many proofs of the healing power of divine Love which have been given me as I have tried to follow our beloved Leader as she follows Christ. To say that I am grateful to Mrs. Eddy, as well as to God and to His Christ, is a simple statement of a great and impelling fact.—BRET HARRIS, Denver, Col.

[Translated from the German.]

It is with a grateful heart that I wish to testify to the blessings which I have received through Christian Science. I had suffered for fifteen years with attacks of severe headaches and vomiting, which came on whenever I became excited, and at times I suffered so much that I was obliged to remain in a reclining position. Later on,

Digitized by Google

stomach and bowel trouble was added. I had applied to several physicians for help, but in vain.

One day a dear acquaintance called upon me and told me much good about Christian Science, of which I never had heard before. I read a few copies of *Der Herold* with great interest, and in April, 1909, I went with a lady from here to a service in Dresden, and became acquainted with a Christian Science practitioner, who kindly took up treatment for me. Never in my life shall I forget the impression which I received while attending the services for the first time. With a few treatments all my ailments gradually disappeared, for which I greatly rejoiced, and I feel stronger today than ever before. The sun of divine Love has brought order and peace, and I am able to attend to my duties joyfully and lovingly. I am sincerely grateful for the help which I have received, and especially for the understanding of Christ, Truth, which was revealed through Mrs. Eddy. Praise and thanks be to God, who giveth us the victory.

FRAU HILMA HAENDEL, Eichardt b. Klosterbuch i.S., Germany.

I deem it a great privilege to be afforded the opportunity of telling others what Christian Science has done for us. During the latter part of 1904, in an hour of great need, the teachings of our dear Leader were brought to our attention by a lady in Dallas, Tex., who had been uplifted by Truth. While at first they seemed absurd, this same lady directed us to a conscientious and intelligent practitioner of the same town, through whose kindness, patience, and understanding the light of Life, as shed on earth by Christ Jesus, and reflected anew in Christian Science, broke in upon us and dispelled the darkness, gloom, and illusion of sin, sickness, disease, and death.

For some time prior to this our monthly bills for doctors and drugs had far exceeded any other item of our living expenses, and but very few days ever passed at a time that we did not either have the doctor in our home or have some instructions from him by telephone or otherwise. Our family physician was doing all that his theories would permit to relieve our apparently desperate physical conditions, but he had reached the decision that the only alternative for my wife was to resort to a surgical operation, and he appeared to have concluded that I resisted all the remedial effects of the so-called "gold-cure" and the usual course of medical treatment for general debility. We are, however, now well and hearty, the use of drugs has been entirely dispensed with for over five years, and all thoughts of a surgical operation have been dismissed.

Having come to New Mexico very shortly after we were led to this knowledge of Truth, we have been away from church privileges and the influences of other Scientists; but, notwithstanding this, we have had only occasional help by absent treatment, and have depended upon the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, as our guide and physical and spiritual support for ourselves, our two children, and to give occasionally a helping hand to some wanderer in the wilderness. Through the example and teachings of our Leader we can see and know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

I am deeply grateful to God, also to Mrs. Eddy for this revelation of Christian Science, for through it and by it I have been shown the way to a sober and true life and am supported in my desire to extend a helping hand to all mankind.—J. Y. ROBERTSON, Silver City, New Mexico.

I want to add my testimony in acknowledgment of the benefits I have received from treatment in Christian Science. I was a sufferer for years, and had despaired of ever being well again when this glorious truth was presented to me. Now I am healed, and I realize the one power so clearly that I can readily overcome the illusions of material sense which are no part of me. I was helped physically, but the spiritual healing is what I am most thankful for. I had prayed daily to be a better woman, and longed for a practical religion; but I felt that nothing was accomplished until this revelation came to me, which I know was in answer to my prayers.

I have been interested in Christian Science over five years, for three of which I have had no church privileges nor Christian Science associations; but, with the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, as my daily study, I have been able to meet the inharmonious conditions that have arisen, except in a very few instances, when we called on a practitioner for absent treatment. We feel that we derive great benefit from the Lesson-Sermon, which we study every morning before engaging in other duties for the day. I am much more grateful than I shall ever be able to express to our dear Leader for revealing this truth to us, and for her constant and unceasing work for all mankind. Above all, I am thankful to God for the blessings He has bestowed on me and mine.

MRS. J. Y. ROBERTSON, Silver City, New Mexico.

The short time I have been interested in Christian Science has brought to me so many revelations that I can no longer withhold an expression of my gratitude. Words alone would be inadequate, but, as the psalmist exclaims, "That I may publish with the voice of thanksgiving, and tell of all thy wondrous works."

About two years ago I came to Christian Science a very sick man, my ailment being what is commonly called jaundice; for months previous my stomach had been in a wretched condition, sleep and ambition were entirely gone, and life was not worth living. I considered what was best to do, and at last decided to try Christian Science. This trial was certainly crowned with success, for in two weeks' treatment I was restored to perfect health. I was at the same time healed of several other ills, among them one to which I had been subject so long as I can remember. For twenty years I had done all that I could, but with only temporary relief; I stopped eating things which are said to be difficult to digest, but with no signs following. I had given up all hope of being cured of this tormenting ailment, but by the great power of Truth I am entirely healed. I can now eat what I choose and when I choose without any bad effects. In like manner, I was healed of the smoking habit, in which I had indulged for thirty years. During all this time I was a very heavy smoker, and never dreamed of stopping, as I never could. Now why did I give it up? I can truthfully answer that when my healing took place the desire for smoking was gone, and up to this hour I have not had the least longing for it.

Christian Science has opened to me a new life, and out of the depths of doubt and fear it has gently brought to me the peace of mind "which passeth all understanding." It has united me with God, from whom I had years ago departed, due to the doctrine of my early childhood days. Christian Science found me by the wayside and brought to me the knowledge of the living God, who indeed forgives all our iniquities and heals all our diseases. I am therefore very grateful to Mrs. Eddy, who has revealed this great power of Truth to the world, and for the text-book, "Science and Health with Key to the Scriptures," whereby we all are able to come into the dwelling-place of the most High. This Scriptural passage is to me literally fulfilled: "He that overcometh shall inherit all things; and I will be his God, and he shall be my son."

C. W. LEHMAN, Cleveland, O.

Digitized by Google

For me to express in words my gratitude for Christian Science, would be impossible. When I first heard of this wonderful truth, I was without any hope of ever being well again. I had been treated for four years by eminent physicians of our city, all to no avail, for a spinal affection. I finally submitted to a most painful operation, with the assurance of relief; but alas, no relief came, and about twenty-five ugly scars were left as a reminder. I hoped and suffered on, and at last the relief came, but in a different way.

A Christian Science lady came to my house one evening, and while talking to me she told me I could get well, be happy and contented. I readily consented to try Christian Science, and she saw a practitioner for me. I was treated one week, and what a change! Instead of despair and suffering, everything was peace and harmony. I was full of joy, hope, love, and peace; all was bright and beautiful. I realized that I had so much to live for; I had just been thinking wrong. I could scarcely refrain from telling every one how extremely happy I was, and why. I had been able to eat only a certain diet, and when I was told to eat whatever I wished, and did so with no bad results, it seemed too good to be true. My healing in a sense was slow, but I held firmly to the truth.

There are many things yet for me to overcome, but I know that by constant application of this truth, as given in "Science and Health with Key to the Scriptures" by Mrs. Eddy, they will all be met and destroyed. I have been studying this truth nearly three years, and I can say that it has met my every need, and also my husband's. I feel that I can best express my gratitude to God, and to all who have helped me, by practising Christian Science in my daily life.—ANNIE H. ALLRED, Jacksonville, Fla.

I want to express my gratitude to God, and to our dear Leader, Mrs. Eddy, for what Christian Science has done for me. I came to Science in November, 1908, a wreck both mentally and physically according to mortal sense. Three years previous to this, I was taken very ill. This was thought to be due to a great sense of worry, fear, self-consciousness, and a lack of correct understanding of God, divine Principle. Until I came into Christian Science, I went almost every day to see a doctor, but instead of getting better I became worse, and to sense was gradually losing my mind. It seemed to me as if my future would be an utter failure; but "man's extremity is God's opportunity." Through a kind brother I found Christian Science, and now everything is very different. Instead of looking forward to death, I now look forward to "life eternal," and all discord is giving way to the power of Truth, as it ever must. My business also has improved. I am a musician, and I might say that I am able to play much better, having been told by friends of the marked improvement during the past year.

I am indeed very grateful for all these blessings that I have received,—grateful to God, and to our Leader for her faithful declaration of the truth. I also wish to express my appreciation for the great help that I have received from the testimonies which appear in the *Sentinel* and the *Journal*.—LEONARD ROTHERY, New York, N. Y.

When the day in somber gray is wrapt,
As if for some great sorrow,
And all the world seems waiting
For the sunshine of tomorrow,
With loving trust to Thee we turn,
In gratitude we bow,
Our thoughts with Thine we mingle,
And, lo! the sun shines now!

ELFIE M. MILES.

FROM OUR EXCHANGES.

[*Interior.*]

If Christianity were simply a code of principles, the conduct of its adherents wouldn't make so very much difference. People would look at the principles and say they were all right anyhow. But Christianity appeals to the world as a power. It talks about conversion—which makes men over. If, then, men are not made clean and right, the natural conclusion is that the process alleged to make a change was a fiction—no power in it. This realization ought to bring to a sharp turn a host of men who drift along conscious of being a long way below the Christian ideal, but comforting themselves that nobody can be perfect anyhow, and, after all, a man's faults are nobody's affair but his own. Here's where such carelessness grows serious. The man himself knows—when he stops honestly to look himself over—that his moral standing is subnormal because he does not keep close to Jesus Christ. He knows there would be power enough available to conquer the faults in him if he really sought divine assistance. But the mischief is that the world with no religious experience at all does not know this. The world's explanation of the Christian's failures is that there is no power in Jesus. So the careless Christian is held to be a witness that Christ is impotent. God is good and may perhaps be indulgent, but even God cannot change the fact that when a man consents to be less good than the best he knows, he is breaking down the right in his own life and hindering it in the lives of others.

[*Congregationalist and Christian World.*]

More light is breaking forth from God's Word. The fires of criticism, instead of destroying it, are illuminating it. The things that are lost are not worthy to be compared with the glory that is revealed. It grows ever more wonderful as we see how everything else in that far-away time has become merely the study of the antiquarian, while the truth of the Bible is as fresh as if it were given yesterday. The prophets, with the exception of names and draperies, are our contemporaries, discussing our problems with unequaled energy and moral insight. The epistles, shorn of what is local and temporary, are thoroughly up-to-date; the Gospels are largely an undiscovered country, awaiting our exploration. Every advance, personal and social, only makes more clear the divine wisdom enshrined in the Book in the beginning, but which we have not had the wit to see. To him who has eyes to see, our history, the history of the world in these modern times, gives as clear an evidence of the divine activity as has been furnished by any people in any age. The opening up of the world to Christianity and Christian civilization, the bringing together of the nations in intellectual, commercial, and political relations, the compelling of all the peoples to measure their religions, philosophies, codes, and customs by the standards of the gospel—all these constitute a kind and degree of evidence of God's presence and activity unparalleled in the history of the race.

[Rev. R. Roberts in *Hibbert Journal.*]

The limitations of knowledge and restrictions of outlook through which the Gospel story shows us Jesus, make it clear that, in the warp and woof of his life, he was indeed what he professed to be, a Son of man. That he had lofty inspirations, that he quarreled with conventionalisms, social and religious, that he struck out great thoughts,—all this, and far more, is perfectly and gloriously true. But this does not make Jesus God. It does not even show him "making vague and vast claims to divinity." All prophets, poets, and true artists, all children of the Spirit, have at once obvious limitations and, at the same time, "a dangerous

Digitized by Google

absence of limits." Disciples follow and admire them as inspired souls, opponents often regard them as fanatics and sometimes as maniacs. The narrative shows that Jesus met with just this treatment, and Mr. Chesterton's reasoning is that this proves he was God. I submit it proves that he was man.

[*Standard.*]

We are convinced that something needs to be done which shall make life in our educational institutions simpler, less artificial; by which the things of the spirit shall be emphasized more strongly and the folly as well as the sinfulness of vice shall be clearly shown. This cannot be done by those in charge of our schools if the task is left to them entirely. They may contribute much, and will; but the real reformation must proceed from and be rooted in the home. The real cause of whatever unlovely features are presented in the life of American youth is to be sought in American fathers and mothers. We are losing home life. Americans are increasingly restless. It is well to travel, but we owe something to our children that cannot be paid while we are on the wing. God has made no other such place for training children as the home. We cannot hope to secure the best results by locking up the house and turning the children over to some school while we go scurrying about the world.

[Rev. W. H. P. Faunce in *Watchman.*]

We may not believe in a personal devil—though we remember Goethe's saying: "What is the use of getting rid of the devil, if the devilish still remains?" We may not believe in good and bad angels, though as soon as we have banished them we introduce their modern equivalent in "bacilli" and "psychic suggestion." We may reject the past accoutrements of faith, as we hang up suits of chain armor in our museums. But the faith itself, faith in a spiritual world in which we have citizenship, in which our decision counts, in which eternal values are realized—to conserve that faith is to conserve manhood and womanhood itself.

[Governor Hughes of New York in a recent address.]

Patriotism in democracy is not merely an instinctive affection for one's native or adopted land, or exultation in national power. Patriotism in democracy is devotion to the rule of the people, love of its ideals, and pride in those achievements which realize the common aspirations and illustrate the progress made possible by equality of rights. It is the patriotism whose ardor is kindled by a keen sense of human brotherhood, and which counts as traitors all those who take up against the state the arms of injustice or seek to turn to selfish uses the agencies designed to protect the common interest.

[*Pacific Christian Advocate.*]

It is the soul that tarries with God in secret and who has come out of the closet with triumphant faith and victorious confidence, that will inspire the afflicted with a hope which will be a real comfort to the soul; therefore, when we try to comfort the afflicted and distressed, we would better have our souls in preparation rather than prepare speeches to recite in their ears. Our speeches may reach their ears, but the condition of the soul comes out and is revealed to those who need comfort.

[*Universalist Leader.*]

Jesus was the divine artist of the spiritual life of mankind. Whatever he touched, henceforth shone with the quality of his great soul. He mixed the old colors, and with them produced marvelously beautiful pictures of character, conduct, and faith. His contribution was himself, his genius, his wonderful spiritual insight and power of interpretation. He was originality personified, incarnate.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.60.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A special federal grand jury has been empaneled by Judge K. M. Landis in the United States district court at Chicago, to hear evidence in regard to the alleged violations of the antitrust law by the National Packing Company and subsidiary companies. The jury was cautioned by Judge Landis in his charge to allow their actions to be wholly free from the influence of the often-heard argument that law enforcement will unsettle business. "You may safely assume," said he, "that no legitimate enterprise needs governmental acquiescence in the commission of crime. You will treat the statute to which I have referred as being just as much in force as are the laws against stealing letters and counterfeiting coins. If your investigation discloses the use of an *alias*, do not indict a mere *alias*, but follow the trail, wherever it may lead, until you have located, identified, and pointed out the real offenders."

"The country," says James R. Garfield, Roosevelt's secretary of the interior, "owes a debt of gratitude to the insurgents in Congress who made the fight against the domination of special interests and who placed the common good above party regularity." He would have the party in Ohio pledge itself to enact the following legislation: The recall, with special application to judges; state control of public utilities; a workman's compensation act; the short ballot; a provision permitting cities to adopt the commission form of government; the conservation policy; reorganization of the state department of agriculture to encourage practical instruction in farming; the development of the state canals.

Reports from all over the country indicate that the wide-spread demand for a sane Fourth has reduced the holiday slaughter almost by half, only twenty-eight deaths from fireworks being listed this year against forty-four on July 4, 1909. The whole number injured by fireworks and celebration explosions last year was 2,361, while this year it was but 1,785. The estimate of loss through all fires on the Fourth of July this year in New York city was $3,726, as against $20,000 the year previous, for fires directly attributed to fireworks.

The settlement of the long litigation which has involved the Metropolitan Traction systems for three years was virtually concluded the other day, when Judge Lacombe, in the United States circuit court, directed William W. Ladd, receiver of the New York City Railroad Company, to accept the offer of five million five hundred thousand dollars in settlement of the suits brought against the Metropolitan Securities Company and others.

President Arthur T. Hadley of Yale has been offered by President Taft the chairmanship of the commission authorized by the last session of Congress to investigate the subject of railroad stocks and bonds and to recommend a plan for bringing the issue of these securities under the supervision of the interstate commerce commission.

Other cities, if they wish, besides the national capital may now receive the benefits of the critical judgment of the national art commission, created by the last session of Congress. The commission was originally constituted to pass only upon designs for public buildings and statues intended for the national capital.

During the coming fiscal year the post-office department expects to use about one billion one hundred and twenty-five million yards of binding twine. This is over half a million miles of twine. The contract price for it is about two hundred and twenty-five thousand dollars.

The order of the interstate commerce commission, reducing Pullman car rates on certain lines west from Chicago, which was to become operative July 1, has been suspended by the circuit court of appeals at Chicago. The commission will give a rehearing.

For the benefit of the postal savings bank commission Consul-General John L. Griffiths of London has submitted to this Government reports of the postal savings operations in the United Kingdom, where the deposits amount to nearly a billion dollars.

President Taft will not appoint the five judges of the commerce court authorized by the new railroad law until Congress convenes in December, when the appointees can be confirmed by the Senate.

All trains on the Lehigh Valley railroad are to be equipped with new telephone apparatus by means of which communication can be established with trains at any point on the road.

Spain is to send three yachts this year to compete in the international races of the sonder class of boats, conducted under the auspices of the Eastern Yacht Club.

After a careful study of its terms, the United States has decided to raise no objection to the new Russo-Japanese agreement respecting Manchuria.

The question of the justice in the increase of commutation rates on all lines out of New York city has been laid before the interstate commerce commission.

Total payments on account of the corporation tax amount to $23,811,679. Total assessments were $27,000,000.

International.

The bill for woman suffrage in the House of Commons passed its second reading by a vote of 299 to 190 and was referred to a committee of the whole, which postpones further action until next year. The bill grants the Parliamentary franchise to women who have the property qualification and who already exercise the franchise in municipal elections. It would add the names of a million women to the Parliamentary election registers.

The French Cabinet has decided to submit a bill for the adoption of western European time in France. During the old days of enmity toward England the French steadily refused to accept standard time, maintaining the solar time of Paris, which is nine minutes slower. The confusion resulting, especially in telephone communications with England, as well as the change in Franco-English relations, is responsible for the decision.

The opening of the fourth Pan-American Conference at Buenos Ayres, July 12, was marked by a brilliant assemblage of delegates, representing the United States and Latin-American republics. The American delegates were warmly received on all sides, and reports of the Latin-American coalition against the United States, because of her alleged interference in their state affairs, are the subject of ridicule.

The Mexican railway, which runs between Mexico City and Vera Cruz, has adopted plans for improvements and extensions of branch lines which involve the expenditure of more than two million dollars.

The value of intoxicating liquors consumed in the British realm in 1909 amounted to $720,000,000, a decrease of $54,000,000 from 1908.

The number of people having a telephone in England averages one person in seventy-seven.

Industrial and Commercial.

Terence V. Powderly, chief of the division of information of the department of commerce and labor, says: "There is now a let-up in the demand for men for work on the railroads, on construction and the like but the demand for farm labor is on the increase. When we began this harvest season and one half years ago we heard a great deal of the cry, 'Back to the farm!' But many of the men who were talking about going back to the farm did not go. Today a change has taken place. Men on construction work and other work in the city are registering in the hope of being sent to the farms."

The Massachusetts railroad commission has granted a certificate to the Southern New England railroad corporation, owned by the Grand Trunk, to build a connecting line between the town of Palmer and the Rhode Island state line. Rhode Island has also granted the company a charter to build into Providence. This gives tidewater connection, in addition to New London, to a portion of the New York, New Haven & Hartford railroad for the right to build the same road was dismissed by the board.

During the fiscal year 1910 there were built in the United States 1,502 merchant vessels of 347,025 gross tons, compared with 1,298 of 232,816 gross tons during the fiscal year 1909. On the Great Lakes forty-seven steel steamers of 196,860 tons were built, compared with thirty-six steamers of 88,196 tons. Fifteen steel ocean steamers were launched.

Trade of the United States with its noncontiguous territories aggregated about one hundred and ninety million dollars in value in the fiscal year just ended, against a little more than thirty-five million dollars in 1898.

Work has begun on a million-dollar cement plant within two miles of Vilace Springs, Ala. The plant will be one of the largest in the South and will employ several hundred men.

The combined imports and exports during the eleven months of the current fiscal year for which figures are now available, show a grand total of $3,055,000,000.

Enlargements to the southern cotton industry during April, May, and June added 82,806 spindles and 2,334 looms, an investment of $2,072,400.

During the ten and one half months of the butter season of 1909-10, Australia has exported sixteen thousand two hundred tons of butter.

Massachusetts officials of weights and measures are exacting full measure receptacles for fruits and berries offered for sale by merchants.

A Texan ranch of seventy-three thousand acres has been sold and will be cut up into small farms.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE LIVING WAY OF LIFE."

REV. IRVING C. TOMLINSON, M.A.

MRS. EDDY feelingly concludes her eloquent dedicatory message to First Church of Christ, Scientist, of Atlanta, Ga., with these inspired and inspiring words: "Mortality's thick gloom is pierced—the stone is rolled away—and death hath lost its sting, and the grave its victory. Immortal courage fills the human breast, and lights the living way of Life" (*Christian Science Journal*, May, 1899). This striking paragraph on "the living way of Life," which to many has given wings to hope and faith, was vividly recalled, while studying recently the beautiful portrayal, by an eminent English painter, of Christ restoring to life the only son of the widow of Nain, as recorded in the seventh chapter of Luke.

The artist has caught the dramatic scene at the moment when Jesus, after tenderly saying to the sorrowing mother, "Weep not," touches the bier and gives the command, "Young man, I say unto thee, Arise." Then, in obedience to his words, "he that was dead sat up, and began to speak." The painting impresses one that Nain, which is the Hebrew term for beauty, well deserves its name. In the background is the little town, nestling on the slope of the hill misnamed "Little Hermon," six miles distant from Nazareth. In the foreground is seen the funeral cortège, which has passed through the city's great arched gateway of stone and is journeying to the habitation of the dead. There is good reason why the artist has flooded his painting with an oriental sunshine which bathes the scene with golden light, for he is presenting not a picture of death, but of life. Through the presence and the power of the Christ the one-time avenue of death has been transformed into "the living way of Life."

The portrayal of this historic incident is in perfect keeping with the times and with the scientific understanding of spiritual truth, as revealed in "Science and Health with Key to the Scriptures" by Mrs. Eddy. The work of art is illuminated when we remember that at such an hour it was the custom for the afflicted family to send for two or more *neddabehs*, or public wailing women, each of whom brought a tambourine, and while beating it exclaimed, "Alas for him!" One writer tells us that "even the poorest would feel it a disgrace did they not provide at least two hired mourners and two flute-players to lead the procession." The painter presents only one person on his canvas who is untouched by Christ's wondrous restoration of the dead to life. The foremost of the two hired mourners is so occupied with her paid wailings that she is dead to the miracle which has given back to the widowed mother her only son. This sense-enthralled *neddabeh*, with her back to the Christ, has her face set toward the tomb, while the road she travels is still the highway of death. The joyous mother, the restored son, the happy friends, have their proof that the one-time way of death is now to them the way of Life.

How true to the facts of Science is this portrayal by the faithful limner of the falsity of material sense testimony, represented by the wailing woman, in the presence of the transforming power of Truth. While the Master's miracle is acclaiming the mighty power of God, she is proclaiming the all-power of evil. While the mother rejoices over a loved one restored, she wails over a lost child. While the living son gives evidence of the inviolable law of Spirit, the hired wailer pays homage to the supposed laws of matter. While Christ Jesus is serene in the visible proof that Life is infinite and everlasting, the representative of material sense yields unquestioned allegiance to sin, sickness, and death.

This Nain funeral way is the way of the world, which, with its back to the truth, judges all things by the evidence of the physical senses, and declares that life is transient and death eternal; that life is in the body and must come to an end; that God gives and God takes away life. In the presence of Christ, Truth, the Christian Scientist knows that the way of death has been abolished. With his face toward the Master, and his back turned on material sense, he is one with the glad company who affirm: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

On the Nain highway of death the wailing woman believes that there is every reason why she should sorrow and no reason why she should rejoice. Everything which she knows of history declares that all must die. She thinks that this only son has merely gone the appointed way. To her there is no escape and no remedy for death's visitation. But the testimony of history counts for nothing to the mother who holds her boy in her arms. Through the transforming power of Christ, the highway of death has become for her the highway of life. It may be that this *neddabeh*, with her steps directed toward the distant graveyard, is thinking, too, upon the so-called law of heredity. Full of the gossip of the town, she may believe that the boy was afflicted as was his deceased father; it seems natural to her, therefore, that the child should go in like manner. But the happy mother, with her restored son, knows that Christ has made null and void this false law of heredity. She has learned in part the meaning of the words: "Call no man your father upon the earth: for one is your Father, which is in heaven." She has entered upon the path which leads to the understanding that because God, who is Life, is the Father of all, material heredity is a myth; for, since God is his Father, man inherits good, and the only law of heredity that there can be, must be the law of eternal Life.

The hired mourner, at one with the material philosophy about her, may believe that death is sent of God. Possibly she has heard some one repeat Job's declaration, "The Lord gave, and the Lord hath taken away." Of course, if death were truly the work of God, she and all others should rejoice at its presence; but the living son is witness that death is not sent of God, for Christ Jesus would not and could not undo what God had already done. The restoration of the widow's son is proof that death is contrary to the will and law of God. The Master's words, "Whosoever believeth in me shall never die," is evidence that death is unnatural,

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

abnormal, and unreal, and that God intends that all His children should win, here upon this earth, a complete and final victory over the "last enemy."

The counterfeit crier was fortified for her unhallowed service by the knowledge that existing institutions and customs were on the side of her wailing. No doubt the *materia medica* of her day assumed that the physicians brought all men into the world, kept them here during their span of life, and then, when they were beyond the reach of drugs, demanded that only the orthodox practitioners should oversee the burial rites. The church taught that death was a visitation of God, but that all should repel it. Religion made it honorable to bring children into the world to die, and made dying glorious if the church were permitted to conduct the obsequies. So the teaching and practice of *materia medica*, as well as the prayers and ceremonies of religion, considered death to be natural and inevitable; but the living son was witness that church, state, society, *materia medica*, and wailing women,—all these, in their thought of death, were wholly wrong. Christ destroyed the time-honored, or rather time-dishonored, highway of death and gave to all mankind "the living way of Life."

The marvel of the ages is that the Christian church for so many centuries has been blind to the simple teachings of him who pierced "mortality's thick gloom," and "rolled away the stone." A new era dawns. No longer do religion and philosophy go unrebuked for picturing man's existence as a journey, with the cradle as its starting-point and death as its goal. Christ's messenger to this age proclaims the glad tidings that, now and forever, life and not death is man's heritage, and a mighty host are rejoicing that "death hath lost its sting, and the grave its victory." With hearts filled with gratitude, they chant the glad refrain of her who sings: "Immortal courage fills the human breast, and lights the living way of Life."

The mistaken outcry of some who, like the wailing woman of Nain, turn their backs on Truth and heed only the testimony of material sense, does not voice the truth of being nor bring disquiet to those who face the ever-living Christ. Though the way of Life may at times appear rough, and the burden seem heavy to the faithful, yet to these God is ever saying, as He said to Joshua of old, "Have not I commanded thee? Be strong and of a good courage; be not afraid, neither be thou dismayed; for the Lord thy God is with thee whithersoever thou goest."

ACKNOWLEDGING OUR GRATITUDE.

MARY STEWART.

THE present writer conceives the first testimonial meetings, held in the early days of Christian Science teaching and experience, to have been the spontaneous gathering of those persons who had "heard" the word and those who wished to hear, for the purpose of testifying to "the healing and regenerating power" of Truth which some of them had actually experienced and others had observed. It is difficult to think that any of those who were present on such occasions, drawn thither by gratitude and love, could have hesitated to tell their good news. Is it not more probable, because more natural, that their simple and grateful testimonies were eagerly told, not only in just acknowledgment of the power of Truth and Love, which had done the works, but with sincere longing that others should receive like help, and with such self-forgetfulness that the narrators did not obstruct the light, but rather became transparencies for it?

It is impossible to imagine their waiting till "some other time," when the needy were before them and the consciousness of the goodness and power of God filled their hearts; or that any one of them took critical note of the manner of speech or the construction of the "letter" of those testimonies; or that any kept silent because he feared such criticism.

There is but one opinion entertained regarding the "nine" who were cleansed of leprosy but who did not return to give thanks, and a criticism of the manner or words in which the one who did return expressed his recognition of the healing Christ, would be at least unique. The man healed of blindness from birth gave his testimony in a meeting composed of those who marveled and who desired to know what had healed him. Here is his simple, direct, unmistakable acknowledgment: "One thing I know, that, whereas I was blind, now I see." And of the one through whose purity and understanding of God the healing was made possible, he said: "If this man were not of God, he could do nothing."

This was sufficient, without any dissertation, exposition of methods, or rehearsal of doctrines, to open other eyes spiritually; to encourage any hungry heart to hope, and to turn that one to the way whereby he could be healed. The testimonies of this man's parents followed, corroborating their son's statement of the demonstration of the healing Principle revealed by Christ Jesus, and proven in this specific case; and, whether willing or not, all who had known the patient in his blindness and saw him now were also witnesses. It was doubtless through hearing just such simple, truthful statements by those who had experienced the healing power of the word, that many believed and were healed.

The spirit of Truth and Love, entertained and gratefully expressed, is more potent than "tongues of men or of angels." Mrs. Eddy says (Science and Health, p. 354), "If our words fail to express our deeds, God will redeem that weakness, and out of the mouth of babes He will perfect praise." At whatever cost to herself, the faithful, loving Leader in Christian Science has never failed to bear witness to the truth for the good of humanity; has never feared or failed to obey the injunction in the text-book of Christian Science (p. 570): "Give them a cup of cold water in Christ's name, and never fear the consequences." What shall be said of her followers?

PREACHING THE GOSPEL.

FRANKLIN BLAKE.

THE command of the Master, "Go ye into all the world, and preach the gospel to every creature," was intended not alone for the few disciples to whom it was spoken, but applies equally to all, as Christ Jesus is our great Exemplar and the Wayshower for all mankind. From the moment that he had fulfilled the Jewish law of obligation to parents, Jesus began to devote his entire life to healing and teaching, his first public declaration being the good news that the kingdom of heaven is at hand. As he came to do "the will of the Father," it is evident that this command to preach and to heal is from God, divine Mind, and that it rests upon all. This conclusion is logical under the summing up of the commandments which Jesus made, requiring us to love our neighbor as ourselves, for this involves the sharing with others of the good which has come to us. It is perfectly natural, therefore, for those who have in some measure entered into the kingdom, to desire that others shall receive the same blessing with themselves.

Can the Master's command be obeyed today in letter and in spirit? Most certainly, or it would not have been laid upon us, for Love never requires of us more than we are able to perform. In Jesus' day teaching was almost wholly by word of mouth. In later days the Christian church interpreted this command to mean that missionaries should be sent to preach the gospel to unenlightened nations. Today the most widely effective means is undoubtedly the printed page. The vast amount of literature of all kinds

Digitized by Google

which is now being published and read, indicates the desire of the human mind for enlightenment. Through the wisdom and foresight of our revered Leader, Mrs. Eddy, practical and efficient means for obeying the Master's command are provided in the Christian Science periodicals. The publication of these has been entrusted to The Christian Science Publishing Society, which, inasmuch as it has been a strong support to all the other branches of the church work, might be called, to use Paul's simile, the right arm of that working "body," The Church of Christ, Scientist. Its work, its responsibility, and its privilege belong, therefore, to every enlisted Christian Scientist, and may be shared by all who are in any way interested in the betterment of mankind.

The constantly enlarging operations of the Society clearly indicate that it was founded and is being managed on a sound basis, and nothing less than this would be either Christian Science or common sense. The periodicals which were from time to time established by Mrs. Eddy have not only been of inestimable value to their readers, but the longer established ones, having each in turn won their way to self-support, have contributed largely to the support of the newer ones and also to the work of the Cause in general. Today the periodicals are going to every part of the world: to the Arctic circle in Alaska, where they are sometimes sent by registered mail to insure delivery; to Mexico and Brazil in the tropics; to Russia, Egypt, and the southernmost points of Africa; and eastward and westward, encircling the globe.

In the light of these facts the obligation of Article VIII, Section 14, of the Church Manual, is seen with greater clearness. It is well for us to note that the wording of the by-law includes all the periodicals. There are numberless instances where those toiling under heavy burdens of sickness and sorrow have found a sweet release through the blessed ministration of Christian Science, and the first touch of this healing gospel came to them through one of the Christian Science periodicals. Specific cases of immediate healing resulting from reading a single article or testimony could be mentioned. With this first healing and uplifting influence of Christian Science there usually comes a desire to know more of the truth that has brought freedom, and the way is thus opened for a study of our Leader's works.

When we have advanced somewhat in understanding, and all our moments are filled with the more active demonstration of what we have learned, we may find less time for reading, but we should not forget that the literature can give the same help to others that it has given to us. If the way has not yet opened for us to take up active work, and we are puzzled to know how we may help others, here is at least one effective method at hand. Many active and earnest workers fail to support *Der Herold der Christian Science* because they do not themselves read German, forgetting what a boon this periodical has been to many earnest seekers for Truth who could not have read the periodicals in English. For this reason the *Herold* also should have our support.

Some of us have doubtless listened to the argument that we could not find time to read all the periodicals, and we have subscribed for only one or two, thereby shutting ourselves out of our share of good accomplished by the others, and depriving them of a portion of the support to which they are entitled. Through the state committees on publication and the local distribution committees there is ample opportunity for putting the literature into circulation. We do not need to know what final disposition will be made of the periodicals; we need only to be obedient and awake to our privilege, and "God will supply the wisdom and the occasion" (Science and Health, p. 571). To some the argument of lack of means may be presented. In such a case we may reason that if the publication of the periodicals is a rightful part of the church work, and it is right for us to have our part in it, the way to do so can be opened through the application of divine Principle. Love meets every need, and there are no exceptions. If the periodicals were not needed, they would not have been established, nor would they be maintained. If they are needed, it is right for us to do our share in meeting that need. The question is purely an individual one. The fact that we have opportunity to read the periodicals which others are taking, does not release any one of us from doing our part.

Mrs. Eddy has said that the church is the mouthpiece of Christian Science, and it is natural, logical, and beautiful that our ability to obey Jesus' command should come through one of the activities of The Mother Church.

THE UNREALITY OF EVIL.

FRED C. SHELDON.

PROBABLY no part of Mrs. Eddy's teachings has given rise to so much opposition and contention as her deduction of the unreality of evil. Every form of contumely of which mortals could conceive has been hurled against this statement. And yet Christian Science asks no more of human credence than is demanded by any branch of so-called natural science. In beginning the study of any subject the student is asked to accept certain statements or axioms as truths, which at first may not be thoroughly understood nor their reason perceived. As he progresses, however, and finds that from these axioms other rules are formulated or deduced which, when applied, correctly solve complicated and obscure problems beyond all question of doubt or dispute, the student's only possible conclusion is the absolute truth of these axioms.

Mrs. Eddy founds her teachings upon certain Scriptural axioms, from which she formulates or deduces her theories or rules, to the practical application of which, in the problems of life, she leaves the proof of their truth. The Scriptures declare that God made every thing that was made, that every thing He made was good, "and without him was not any thing made that was made." These axioms are accepted and professed by all Christian churches. Mrs. Eddy, however, was the first to deduce from them that if God made every thing, and made every thing good, He therefore did not make evil; and as He made every thing that was made, evil was not made and therefore does not exist in reality. Is this faulty reasoning? Does not the rejection of this deduction but prove disbelief in the professed axioms?

An illustration of the unreality of evil, as professed by Christian Scientists, may be found in the so-called exact science of mathematics. For example, in algebra we are taught to consider two classes of values, known as the positive and negative or plus and minus values, zero being taken as a suppositional center or neutral point, on the one side of which all values are plus and on the other side minus. In the solution of many algebraic equations we obtain two results, each equally correct in suppositional theory, but only one, the plus value, practical or really possible. In all practical applications the minus value is discarded or eliminated as an unreality or an absurdity. For instance, if, in the solution of an equation in which x is the unknown quantity we seek, we determine that x raised to the second power equals 4, then we are taught that x equals plus 2 or minus 2. In applying these results practically, we discard or eliminate the minus 2 as nothing or less than nothing, and use the plus 2 as the only reality. Yet in the formation and solution of the equation we must take into consideration this negative value, even while knowing its unreality.

Just so, in Christian Science, Mrs. Eddy tells us that good is the only reality and that evil is simply the sup-

Digitized by Google

positional absence of or opposite to the reality of all good; that evil has no more reality nor power than we give to it, which makes it necessary for us to guard against giving to it any power or reality. If, then, in working out our salvation, we eliminate the negative value, evil, as the unreal solution of each mortal equation, and substitute in our life-problem the positive value, good, as the only reality, we avoid inharmonious, false, and absurd results and bring out the correct solution—Life, harmonious and eternal.

GROWTH AND ACTIVITY.

BERTHA TRABAND MYERS.

In the midst of most unfavorable surroundings, in a busy part of a certain city, there stands by itself a beautiful tree, which despite seemingly adverse conditions has not only lived, but thrived,—grown sturdy and useful. In its infancy it was incased in heavy boards, but with its quiet, persistent growing it has burst them all away, until now it stands a beautiful symbol of what can be attained through steady obedience to the eternal law of God. Life operates through man, and when man is governed by Life, the loving activity of good, the law of Life that knows no hindrance to its infinite expression, like that tree he, too, can grow by obeying the eternal law of Life, God, "with whom is no variableness, neither shadow of turning." Jesus, the humble carpenter, the loving friend, the wise teacher, taught by his works as well as by his words what is possible when man is governed by divine Principle, which is ever operative, and changeless in its essence and bestowals. He so clearly discerned, understood, and obeyed the law of Life as to make powerless every belief in a man-made or material law. His consciousness was so illuminated by constant communion with the Father, the source of all good, that no wrong suggestion or temptation could hinder the good from being made manifest in all that came to him to be done. His loving obedience to the ever-operative law of good could have but one result, the overcoming of all so-called physical laws.

Christ Jesus understood better than any one before him how it is possible for man to dwell constantly "in the secret place of the most High," that shelter which David had proven was indeed a protection to whomsoever would abide there. When David met the bear and the lion in his way, he knew how and why he was protected. Later, through his understanding of divine law, he knew that he was clad in the sure armor which nothing could penetrate, and he said to Goliath: "Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the Lord of hosts, the God of the armies of Israel, whom thou hast defied. . . . And all this assembly shall know that the Lord saveth not with sword and spear: for the battle is the Lord's, and he will give you into our hands." David was victorious through his obedience to the one lawgiver, God, and thus it is that in the degree with which we comply with the rules and methods of right thinking and right acting, we shall overcome all suggestions and temptations to believe in material or man-made laws as able to hinder our progress.

To be governed by the ever-operative laws of spiritual sense is to divest boastful material sense of its seeming power. Let us not be deceived by listening to wrong suggestions of the tempter, who would make us believe that our surroundings, that opposition, or any belief in a power beside God and His laws could possibly hinder; but rather let us be awake to all the wiles of the enemy, watching and praying like Solomon of old for "an understanding heart;" and we shall be as wise as he, or even wiser, for since his day Christian Science has come to reveal to human consciousness a clearer interpretation of God's laws. This revelation could only come through one receptive to the God of Israel, the Mind that never sleeps but is ever active. Our Leader, Mrs. Eddy, by her constant communion with God, has made the way so plain to human consciousness that we need not mistake or rob ourselves of our rightful inheritance as God's children. In "Rudimental Divine Science" (p. 1) she defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony;" and on page 3 of the same book she says: "Jesus' healing was spiritual in its nature, method, and design. He wrought the cure of disease through the divine Mind, which gives all true volition, impulse, and action; and destroys the mental error made manifest physically, and establishes the opposite manifestation of Truth upon the body in harmony and health."

How joyfully we should express our gratitude to God, and to her who has revealed to us man's glorious birthright, by doing as the tree did,—by growing until we are strong and beautiful in character; for thus we shall bless many tired mortals by pointing thought heavenward, that they, too, may know the truth which alone can satisfy all human yearnings and which has so much good for each individual. As they listen to our message of peace, they will hear divine Love's invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

SELF-EXAMINATION.

ABBIE H. SKINNER.

If one is ever struggling with a belief of illness, thought has to be carefully examined, for we know that all conditions are mental. The following was found in a publication which is not at all given to Christian Science views: "No serious-minded person ever goes through an illness without gratitude for the chance it gives him to think." Browning says,—

> Hear the truth, and bear the truth.
> And bring the truth to bear on all you are
> And do.

This is just what we ought to do if we find ourselves in a discordant physical condition. It means, "Watch and pray;" or, as our beloved Leader counsels us, "Stand porter at the door of thought" (Science and Health, p. 393). St. Paul says, "Ye have put off the old man with his deeds, and have put on the new man." "With his deeds" is impressive, since it leaves no chance for a hope that we can put off the old man and continue to do evil. It is the daily thinking which needs to be purified and made strong. As Phillips Brooks expresses it in one of his poems,—

> Give us this day our daily bread, we pray:
> And give us likewise, Lord, our daily thought.

We read in Proverbs that "the heart knoweth its own bitterness;" and each knows his own deeds. I do not have to know the specific deeds of a patient; I do not have to ferret them out. The overcoming of the belief in evil is his own work. I know that as God's child one has spiritual and physical freedom. Man is not subject to matter, neither indeed can be. Mrs. Eddy says, "Spiritual law . . . overcomes material conditions and puts matter under the feet of Mind" (Science and Health, p. 182).

If our best moods continually dominated our whole life, we should all live well. We all mean to live well: at least there are times with all of us when we resolve to do so,—New Year days, birthdays, and other times. It would be well for us if there were some way of perpetuating these better moods and living up to these good intentions. If a life is to be admirable when finished, its periodical good intentions must become strong, self-sustaining principles, shaping its every act and ruling all its days and hours.—J. R. MILLER.

SELECTED ARTICLES.

[James D. Sherwood in *El Paso* (Tex.) *Herald.*]

In a recent issue of your publication there appears a challenge from an osteopathic physician to meet him in debate. It was a great surprise to me to see this, and I am unable to know just why and what the doctor wishes to debate. I have never made a study of osteopathy and have neither the qualification nor inclination to discuss its merits or demerits. The doctor has no understanding of Christian Science, and he likewise is not competent to discuss Christian Science. Further, if there were a disposition to enter into a discussion, it should be understood that Christian Science is not an argument; it is the gospel of good works, and is best known and seen in its benign influence upon the lives and in the characters of its faithful followers. Wrangling and strife accomplish nothing good for humanity, while kind words and loving deeds often smooth away the wrinkles of care and are a balm to the afflicted heart.

The doctor is mistaken in supposing that I am the "recognized mouthpiece of Mrs. Eddy," for I am only a modest student of her writings, and one of the many who have occasion for rejoicing in having found her teachings in strict accord with the Holy Scriptures, and that the divine Principle and the rules which she has elucidated are capable of proof by all who will honestly and earnestly test them in their lives and longings.

Judging from the strong language he uses, it seems to me that the doctor is hostile toward Christian Science, and surely that is not a good mental temperament in which to enter calmly upon the discussion of the merits of a religion, for Christian Science is a religion; it is not a doctor. It is practical Christianity, and its faithful students are endeavoring to follow in the steps and obey the teachings of Christ Jesus; many of them, indeed, are giving proof of their understanding by performing cures in like manner with Jesus and his followers.

The doctor is mistaken in his claim that Christian Science is ineffectual in cases of surgery, for too many instances of recovery from dislocated joints, etc., under Christian Science treatment are of record to leave room for doubt in this respect. Christian Scientists, however, are advised, for the present, to call a surgeon for the adjustment of broken bones and dislocations, leaving the Christian Science practitioner free to devote himself to alleviating the pain and reducing the inflammation, etc., connected with the case in hand. (See Science and Health, p. 401.)

Christ Jesus healed all manner of disease through his understanding of God, divine Mind, his heavenly Father; and when his followers come to understand the Science of being as he understood it, they will be able to repeat his works. That Christ Jesus worked according to a fixed law is indisputable, and it is equally certain that any one who understands that law sufficiently will be able to do the same works. It is mere folly to assume that his works were done in contravention of law, and that they cannot be repeated, because "the age of miracles is past." He himself said: "These signs shall follow them that believe: . . . they shall lay hands on the sick, and they shall recover."

The critics of Christian Science should be charitable enough not to mistake the beginning for the ultimate. Many who are students of Christian Science are mere beginners, and, while they are conscious of the many blessings that have come into their lives since their acceptance of the teachings of Christian Science, they also know that their demonstrations of its teachings are in proportion to their understanding. Therefore, it is unfair to the individual to demand of him all that is claimed for an exact science, and it is equally unwise to judge the Principle of divine Science by the poor work of some student. This is true in Christian Science just as it is in music and mathematics.

[Edward W. Dickey in *Anaheim* (Cal.) *Plain Dealer.*]

As Christian Scientists we take "the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). This does not mean a part of the Bible, but the whole. We regard the Bible from the standpoint of its own unity. In fact, it cannot well be regarded otherwise, and the Christian Scientist seeks the inspired or spiritual sense from Genesis to Revelation. His guide in this seeking is the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy. This book is indeed a "Key to the Scriptures," and is regarded as a commentary on the Bible. Other churches have their commentaries and Bible helps, they also have ministers to explain the Bible from the pulpit. Why, therefore, should the Christian Scientist be taken to task for having his commentary?

The Bible must be explained to be understood. It was characteristic of Jesus to explain the Scriptures, and in doing this he spoke in parables. These parables or expositions were always followed by object-lessons, or what have been regarded as miracles. Jesus said, "I am the way," and he taught his followers how to do the works he did. He also said that his followers should be known by their "fruits." Thus it is that our salvation comes through the spiritual sense of the Scriptures. It is not possible for men to know God aright through a literal reading of the Bible. It was inspiration that gave the Bible, and it must be understood in the same way in order to be of practical value.

True salvation, the Master said, is this, "that they might know thee the only true God, and Jesus Christ, whom thou hast sent." This knowledge frees from all the false beliefs of the carnal mind, including "temporal evils and earthly destruction." It was from sin, disease, and death that Jesus gave freedom, and we are commanded to do likewise. Does "Layman" know of a better scheme of salvation than that inaugurated by the Master?

Christian Science does not deny that from the human sense standpoint there is death. It shows, however, that we may overcome even "the last enemy." "To be spiritually minded," Paul tells us, "is life," and the conscious understanding of God's nature, power, and presence will surely cause the "former things," such as sin, disease, and death, to pass away and come no more into mind. Christian Science is based upon the fact that God is infinite Mind, supreme incorporeal Spirit, Life, Truth, Love, the only cause and creator. As a consequent it shows logically and conclusively that matter is unreal or non-existent. It is that which seemeth to be but is not. Christian Science does not seek to destroy one atom of creation, nor even to deny its existence. It does not declare that "earth is not earth, water not water, cattle not cattle." It is the mortal, finite concept of these that Christian Science abolishes, and instead thereof it gives the true spiritual idea. To this end it shows that the record of creation given in the first chapter of Genesis is spiritual, entire, and complete. All else is merely addendum; unlike God, Spirit, and therefore without reality. The Word of God, Spirit, was the creator here, and not one vestige of materiality is to be found in the record.

Who is qualified to say Christian Science is unreasonable, the critic who is unable to prove its declarations, or the student who, following its teaching, has proven that Christ is with us "even unto the end of the world." One of the most common tendencies of the human mind is to combat that which it does not understand. No amount of discussion, debate, or argument; no amount of quotation from the Bible pro or con; no amount of quotation from the Christian Science text-book, will either overthrow or uphold Christian Science, for it rests upon the everlasting foundation of demonstration, and what it thus accomplishes alone gives it the universal prestige it now enjoys.

[Sue H. Mims in *Atlanta* (Ga.) *Constitution*.]

To my sense of things, the remedy for the condition that faces us [the negro problem] demands more than schools, or reformatories, or prisons. These all, doubtless, are helps, but the demand is for a higher Christianization, for spirituality, consecration, devotion on the part of each and every individual Christian. If every Christian had the zeal of Paul, so to fix his gaze on the attainment of spiritual understanding that he could say with him, "I count all things but loss . . . that I may know him, and the power of his resurrection," then the outlook would brighten.

If our affections were so fixed on things above, not on things on the earth, that selfishness, pride, avarice, and greed were quenched in the divine essence of unselfishness, the spiritual love that seeketh not her own, but another's good, that thinketh no evil,—if endeavor to acquire the unsearchable, imperishable "riches of Christ" were to supersede the striving for the vain and perishable, what would result?

Would it not absolutely change the atmosphere of thought and environment? What, also, if every Christian on earth today should grasp and even partly realize that God is a divine ever-presence, in which "we live, and move, and have our being;" that God is the all-inclusive Mind that was with Christ Jesus, and that we are commanded to have this same Mind, and that there is but the one governing Mind, that is, God, or good, who made all that was made and pronounced it good,—if all would know that this Mind is Love, what would happen? Such a flood of love and light and joy would radiate throughout all consciousness, such wisdom, justice, mercy, compassion would environ all men, that fetters would fall, both the desire and power to sin would be destroyed, and Zion, the joy of the whole earth, would be established on an everlasting foundation. Every Christian can say in a degree what Jesus said: "And I, if I be lifted up, will draw all men unto me." Every individual consciousness, uplifted, does uplift all to a degree, for we are "all members of one body."

As thought is causation, is back of all phenomena, then only the highest spiritualization of Christian thought, and its radiation into the universal consciousness, can counteract the downward tendencies and earthward gravitation of the animal mind. This will make a mental atmosphere and environment in which the masses can be permanently helped.

[H. Coulson Fairchild in *Passaic* (N. J.) *Herald*.]

Christian Science healing is not based upon a belief in the influence of the human mind over matter, but upon the spiritual truth that man is the mental manifestation of infinite Mind and that Mind can control its mental creation. Man is really mental, although he appears to the senses to be material. We believe it to be upon this scientific basis that Christ Jesus effected the cure of all manner of diseases. Through his knowledge he turned the water into wine, healed the sick, raised the dead, walked on the water, and resurrected his own body from the grave. The "natural environment" of Jesus was a mental or spiritual environment; all his knowledge was obtained from Spirit, while the knowledge of the materialist is based upon his false material concepts.

To say that "mind and matter" act and react upon each other, evidently with equal force, and thus "maintain the equilibrium of the universe," leaves us to conclude that the equilibrium of the universe is maintained by two forces constantly warring with each other. Mrs. Eddy says regarding this: "To seize the first horn of this dilemma and consider matter as a power in and of itself, is to leave the creator out of His own universe; while to grasp the other horn of the dilemma and regard God as the creator of matter, is not only to make Him responsible for all disasters, physical and mental, but to announce Him as their source, thereby making Him guilty of maintaining perpetual misrule in the form and under the name of natural law" (Science and Health, p. 119). We cannot, of course, assume that God is the author of discord; we must therefore conclude that all discord is chargeable to human error.

In Christian Science what is termed a physical shock is really a mental shock, for without mortal mind to be conscious of it there could be no sense of shock. In a universe where God's government is recognized by all, there can be no accidents. Regarding food and indigestion, we must remember that Christ Jesus said: "There is nothing from without a man, that entering into him can defile him: . . . that which cometh out of the man, that defileth the man. For from within, out of the heart of men, proceed evil thoughts, adulteries, fornications, murders, thefts, covetousness, wickedness, deceit, lasciviousness, an evil eye, blasphemy, pride, foolishness: all these evil things come from within, and defile the man." Quoting from our editor, "This is the first lesson that should be drilled into our schoolteachers and all others." We thus conclude that it is not what a man eats that causes indigestion. Mental conditions enter into every case of indigestion. "Gluttony" is a false belief based upon a wrong thought, and such a thought would constitute causation; hence it would not be the food itself which caused the indigestion.

As to the relation existing between mendacity and a carbuncle, we reply that no specific sin produces a specific disease; the general and ignorant thought in the world produces all disease and sin. Ignorance of God and His power to heal is a sin of omission and subjects one to disease because of ignorance as to the law of healing. Jesus said to the man whom he healed at the pool of Bethesda: "Sin no more, lest a worse thing come unto thee."

The editor has justly stated that medicine cannot cure the lying instinct, but we know that the understanding of Truth as taught in Christian Science causes the evil man to forsake his way and the unrighteous man his thoughts. The editor of the *Herald* states a great truth when he says, "No disease was ever cured except by removal of its cause." He adds, "Serum treatments and anti-pyretics are directed against effects, and therefore are unscientific." All causation is mental according to Christian Science; therefore no disease is permanently cured except the mental cause be reached and destroyed. A mental cause is never reached by a material remedy.

Answering the question, "If all other things are equal, are good people healthier than bad people?" we answer that good people are always morally more healthy than bad people, and morality is the true basis of health; if a moral man suffers from a false belief, this might cause what is termed physical disease. Some really good people believe that they suffer according to the will of God, and that they must therefore be resigned to what they think is the divine will. Such a belief would cause suffering, even though a man were morally sound. Such Christians should be more alive to God's promises, for they are entitled to be free from disease. On page 404 of the Christian Science text-book, Mrs. Eddy states: "The healthy sinner is the hardened sinner." This is not because he deserves to be healthy, but because he is so sound asleep in sin that his sins do not trouble him much until the final awakening. The longer a man has indulged in sin, the more acute the awakening when it does come. Self-righteousness, by the way, is a form of sin which clings fast to iniquity.

Regarding the occasional failures under Christian Science treatment, we would say that there will be failures under all systems until a perfect understanding of the Science of being is reached. Where successful treatment can be shown in the majority of cases, it is not fair to judge any system by its failures. In the case referred to in your editorial, the typhoid fever had been completely met, but owing to the lack of a perfect understanding of Christian Science, other complications arose which baffled alike the skill of the Christian Scientist and of the physician.

[Eugene R. Cox in *New York American.*]

Christian Scientists regard evil in precisely the same manner that Jesus regarded it when he cast out devils and healed the sick. He accorded to evil neither place nor power. He plainly and emphatically denied its reality, and said, "Which of you convinceth me of sin?" When he drove the evil-doers out of the temple, he demonstrated the superiority of spiritual power over the belief in an opposite or evil power. Christian Science does not teach that evil does not exist to our human sense, but that evil is always subjective to the power of good. The spiritual power, generated by right thinking and living, tends to annihilate evil, and proves that we do not have to be overcome by evil, but that we can overcome evil with good.

The kind of intelligence that is needed in order to understand Christian Science is gained not so much by intellectual training as by sincerely striving to live in accordance with one's highest understanding of what is right. Referring to a stubborn type of evil, which his disciples had failed to cast out, the Founder of Christianity said, "This kind goeth not out but by prayer and fasting."

A Christian Scientist cannot exercise malevolent thought, for his power to be a Christian Scientist depends upon his consistency with the teachings of that faith and renders it impossible for him to become a malpractitioner. On the other hand, a person who endeavored to exercise hypnotic influence or personal control over others, would be trespassing upon the inalienable rights of his fellow-beings, and would proportionately lose his power to demonstrate the fact that good is the only power and the governing intelligence of man.

The popular mistake as to the exercise of mental power is that good and evil thoughts emanate from the human or mortal mind. This, Christian Science teaches, is not the case; for good thoughts are spiritual and are reflections of the divine Mind; while evil thoughts are mortal and are the outgrowth of a mistaken sense of things.

[Howard C. Van Meter in *Corvallis* (Ore.) *Gazette.*]

I quite agree that the reference to Christian Science in the sermon reported in a late issue was uncalled for. However, since it was made, the question may arise as to whether it is not significant that Christian Science should be mentioned as having something to do with calling attention to certain shortcomings in other directions. If the teaching of Christian Science is receiving the consideration of large numbers who have been unsatisfied elsewhere, it does not follow logically, as the gentleman infers, that such teaching is in the nature of illusion, but rather that it satisfies their hope and aspiration in larger degree.

Humanity expects certain things of the church. These things the Christian Science church and the writings of Mrs. Eddy are endeavoring to promote, and according to the signs of the times they are succeeding. Some of these things are, first, a better understanding of God as the only creating, maintaining, and controlling Principle. Second, a better understanding of God's law and what is necessary to obedience thereto, in order that it may be recognized as operative here and now, so that greater good will be the result. Third, the recognition of man as made in His image and likeness, and the process whereby this recognition is proved to be helpful in abolishing the false sense thereof. All this in order that mankind may have a larger degree of satisfaction than it has had, and the universe manifest more in the way of fulfilment of the divine purpose.

[C. R. Munro in *Brantford* (Can.) *Courier.*]

The statement that Christian Science is neither Christian nor scientific has been made and corrected so often that it would seem unnecessary to go over the ground again. However, it may not be out of place to say again that it is Christian because it is absolutely in accord with the teachings of the Master, and proves its usefulness in the way Jesus commanded and the way he himself proved his statements, namely, by actual demonstration in the healing of sickness and sin. The proofs of this are so overwhelming as to be apparent to any sincere investigator. Christian Science is scientific because it is based on exact knowledge of God and of man's relation to God, which knowledge, when applied understandingly, enables its possessor to solve the problems of life,—to heal the sick and reform the sinner in the way our Master taught.

The objection that the Christian Science view of sin is not Christian and that it "minimizes the seriousness of sin," has been repeatedly raised and as often disproved. From a great many references to sin in the Christian Science text-book, "Science and Health with Key to the Scriptures," one cannot perhaps do better than quote the following from page 291, which should effectually set the matter at rest: "The suppositions that sin is pardoned while unforsaken, that happiness can be genuine in the midst of sin, that the so-called death of the body frees from sin, and that God's pardon is aught but the destruction of sin, —these are grave mistakes."

The difficulties in which our critic has involved himself are mainly due to the fact that he has failed to appreciate vital points in the teaching of Christian Science, and therefore has not presented the subject fairly to his audience on those points. For instance, he has not discriminated, as Christian Scientists are taught to do, between man made in God's image, and mortals, who are not made in God's image. In a similar manner he has failed to distinguish clearly between the divine Mind and the carnal mind.

What is it, for instance, that testifies to the existence of matter, sin, sickness, pain, and death—in short, to a universe of chaos and discord, but not to the universe of God's creation? Is it not the carnal mind, or the mind (so-called) of mortals, which has manufactured for itself a false, fleeting, and perishable mortal concept of all that really exists? God, who is Spirit, who is "of purer eyes than to behold evil," has no consciousness of these things, and we get into trouble today, even as in the beginning, by trying to know something which God does not know and would not have us know.

The fact is that sin, sickness, and discord of all sorts can only be communicated through the carnal mind, and it is knowing the truth about these things, as taught in Christian Science, which frees us from their bondage, as Jesus promised it would. What happened when the material evidences of sickness, sin, and death were presented to Jesus? Did he not invariably and promptly prove that this testimony of the senses about man was false, by at once destroying it and showing that health was the eternal fact? This applies to the restoration of Lazarus. Was not the false testimony overthrown because Jesus knew the truth so effectually, viz., that Life is ever present?

Lest we forget that friendship's gentle hand
Has sealed a tie unbroken through the years,
Christ speaks to us, and, lo, we understand
The wings of freedom from a flight of fears.
Lest we forget, dear God, we owe to Thee
All love, all joy, all mental harmony;
The vast experience of those other years
When storms were stilled and many nameless fears
Were hushed in victory.
Lest we forget that in Thy perfect peace
Is all we need and all we can express,
Amid our restlessness Thy healing stream
Flows on in restfulness.

CAPT. R. E. KEY

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A STATEMENT BY MRS. EDDY.

Chestnut Hill, Mass., July 18, 1910.

Editor Christian Science Sentinel:

In reply to inquiries, will you please state that within the last five years I have given no assurance, no encouragement nor consent to have my picture issued, other than the ones now and heretofore presented in Science and Health.

MARY BAKER EDDY.

We are quite sure that the publication of the above note from Mrs. Eddy will answer all inquiries that are being made as to the authenticity, authorization, or approval of certain portraits which are extant.—EDITOR.

A TRIBUTE TO MRS. EDDY.

AT the head of the list of anniversary congratulations to well-known people which *Life* prints every week, there stands in the issue of July 14, 1910, the following tribute. It gives us much pleasure to reproduce this tribute from *Life*, and to express in Mrs. Eddy's behalf due acknowledgment and thanks for this courteous appreciation of her life and of her life-work.—EDITOR.

MARY BAKER EDDY.

It is a real pleasure to offer our felicitations to one of the most remarkable women ever born in this country. Mrs. Eddy has had truly a wonderful career. More maligned than any woman has ever been that we can now recall, and, on the other hand, more exalted, she has held her course in apparent serenity; and at present, at an advanced age, is still the head and front of one of the greatest religious movements known. She has made the doctors sit up and be more careful; she has attracted crowds of worshipers, and she still remains with us in undiminished glory. Every effort to dislodge her has only resulted in disaster.

Madam, you have established a true claim upon our respect. However much we may disagree with your views, it is of much more consequence that we should acknowledge your powerful personality.

We give you our blessing. Peace and a long life continue to be your lot.

"AS FOR HID TREASURES."

HE who reaches the heart of the wilderness of the Sierra Nevadas will find himself neighboring with nature's calm and unfailing greatness. As he lifts his eyes from the rough trail, his outlook will always compass at least three things which men have not been able, as yet, either to mar or monopolize,—a glorious rift of sky overhead, the tremendous shoulders of gray granite that hold it up, and an ocean of air that floods all the mountains with a forest-perfumed purity. As one advances into the fastnesses of the mountains, the way grows ever more broken and sinuous, the scenery more bold and inspiring, until he acquires a sense of being wholly separated from men and all their makings, and of having entered the stillness and strength that is from everlasting to everlasting, "with God."

Possessed by this feeling of remoteness, and mindful, as he has been made by many a climb, of the relative inaccessibility of the region, one can but be greatly astonished to come suddenly upon the evidences of a stupendous business enterprise, a huge mining-camp, with its mills, workshops, boarding-houses, etc., crowded into the confines of a little canyon whose wooded walls are something more or less than a half mile in height. The wanderer's wonder will grow apace when he comes to know something of the long-time toil and untold expenditure involved in the erection and operation of such a plant in such a place, and as he thinks of it in after years it may prove an impressive reminder that, as there is no halting at obstacles, however huge and stubborn, by those who are seeking for earthly gains, so should there be no lack of energy and abandon, willingness to venture and to invest for God, upon the part of those who are seeking for the true riches.

Every awakened man, and especially every Christian Scientist, is incidentally impelled to exploit ledges of human thought and achievement, in which the truth seems to be enmeshed with error. In all the fields of inherited opinion or educated acquirement there are veins of that wisdom which is an emanation of the light that lighteth every man coming into the world, and in so far as the hold of mesmeric belief is broken in the turmoil of affliction or voluntary self-subjugation, and in so far as spiritual sense is present to sift the true from the false, thus far we may make these grains of gold our own. One of the greatest benefits conferred by Christian Science is this, that it brings to honest seekers that "understanding heart" for which Solomon prayed, the power to discern between right and wrong, to perceive and extract from history, from literature, and from every-day living, their every increment of the true, the beautiful, and the good.

Christian Science stands not for the casting away of all human achievements, but for their discriminating analysis, for the determination of their spiritual values. It brings to light, as Mrs. Eddy has said, "the entireness of God, good, and the nothingness of evil" (Science and Health, p. 293). The adamant of educated belief is constantly being ground to powder, in the mills of disappointment and suffering, and when subjected to the test of verity which Science supplies, all that has worth may be graded and retained.

Today as never before, surely, in the philosophies of men, error is claiming to be the natural and legitimate matrix of truth, and one of our chief problems may be said to be the recovery of the pure gold of God from the embrace of educated fallacies. Upon this undertaking we may enter with joy, by virtue of the fact that through the apprehension of divine Principle and its idea, of God and man in His likeness, which we have gained, it is possible for each of us to verify the prophetic promise, "If thou seekest for her [wisdom] . . . as for hid treasures: then shalt thou understand the fear of the Lord, and find the knowledge of God."

JOHN B. WILLIS.

THE TRUTH ITSELF.

THINKERS in modern times have begun to make a clear distinction between the truth itself and some one's opinion about truth. Thus a widely-read author writes humorously about a Brownate of truth and a Paulate of truth, meaning, of course, the truth which filtered through the consciousness of the individualities thus indicated. As a matter of fact very few persons pause, before they determine any question, to ask themselves what is the truth involved; but this is what Christian Science insists upon, and at every step of the way.

There is one phrase which is used many times in Science and Health, namely, "the truth of being," and every thoughtful student of this text-book sees the importance

Digitized by Google

of comprehending it in order to arrive at right conclusions on any subject whatsoever. On page 218 we read, "When we wake to the truth of being, all disease, pain, weakness, weariness, sorrow, sin, death, will be unknown, and the mortal dream will forever cease." Who would not at least desire to know this truth of being? Of course no one would think of denying that there must be a truth of being, or that all the creeds and physical hypotheses ever formulated have aimed to express something of it; yet, strangely enough, very few have concerned themselves to know it in such a way as to be able to demonstrate it. As soon, however, as we begin to study the Christian Science text-book, we become aware that Christ Jesus knew the truth of being and that he held it to be knowable by all who were willing to accept it.

A more profound study of this subject reveals the fact that the truth of being is always different from the evidence given by material sense, and on this basis alone can the Master's wonderful works be understood or repeated. In the midst of a storm, when their little vessel was threatened with destruction, he said to the terrified disciples, "Why are ye so fearful?" Did they not understand the situation as well as did he—these men who from boyhood had been accustomed to the perils of the deep? They undoubtedly did, but it was because they could not grasp the truth of being that they said, "Carest thou not that we perish?" Happily for them the great Teacher did know this truth, and so the storm was stilled. The same was true when he raised Jairus' daughter from the dream of death, and when he called Lazarus from the grave; indeed in his every act and word we find evidence of what the knowing of the truth means, and respecting our relation thereto he said, "Ye shall know the truth, and the truth shall make you free."

At no time is Christian Science more misunderstood than when it is contended that its healing work is accomplished by suggestion. Those who take this position do not argue that truth heals, in fact they usually insist that the disease is real or true, and if this were admitted, a suggestion of health would be a mere falsehood. Now, Christian Science does not deny that one's belief in disease may be manifested on the body, but it does deny that this belief and its material manifestation can ever change for one instant the truth of being, which is eternal and universal, else there is no truth of being.

Jesus did not say that his recognition of the truth would make us free, but the truth itself, when recognized and accepted as such; and it is this very thing which Mrs. Eddy constantly insists upon. It is this also which explains the many wonderful cases of healing that result from the reading of Science and Health. People forget their diseases in their newly-awakened sense of the truth, and for them reality begins to take the place of unreality. There are some perhaps who are too discouraged to lift the healing draft to their own lips, and so another must bring it to them; but none the less it is the truth itself which heals, which restores the sense of Soul, which dispels the dream of fear, sorrow, sin, death, and reveals man as forever governed by his divine Principle, Life and Love.

ANNIE M. KNOTT.

WILL our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, also that by referring to the advertising pages of the *Journal* and *Sentinel* they will be able to ascertain the person or persons to whom their correspondence should be addressed in order to avoid delay.

The Editorial Department has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and NO REMITTANCES SHOULD BE MADE TO THE EDITOR. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

AMONG THE CHURCHES.

ENID, OKLA.

The new Christian Science church at 925 West Main street was opened Sunday morning [June 26]. Although the day was excessively hot, the church proved to be all that was anticipated as a cool assembly room. The structure is neatly finished inside and presented a very attractive appearance. No special ceremonies marked the opening, except that the president of the church read a history of the organization, in which he said in part,—

First Church of Christ, Scientist, of Enid, was organized in 1899. Regular services were held at various places until September of the following year, when they were temporarily discontinued; but the seed had been sown, and the great desire felt by a few loyal members, that the work be reestablished, resulted in a meeting in May, 1901, when church officers were elected. In August, 1901, arrangements were made to hold services regularly in a private residence on North Independence avenue, with a reading-room at the same place.

This was the meeting-place for about two years, when it became necessary to find larger quarters. The Weatherly Hall on the south side of the square was then secured and utilized for a period of a year, when the little congregation moved to the White-Goulding Hall on the west side of the square. There the work prospered and regular services were held during a period of about three years, except a short time in the midsummer of 1906, when the old Opera House on East Broadway was the place of meeting. A reading-room was maintained in the White-Goulding building from the time the hall there was occupied until the church moved to larger quarters in the Gannon-Hassler building on North Independence. This move was necessitated by the growth of the congregation. There the church and reading-room have remained and prospered, until to-day.

This church has fulfilled its duties of maintaining a reading-room for the distribution and sale of Christian Science literature, and has given some ten or eleven free lectures in the last nine years. This church is in perfect accord with The Mother Church, and obedient to the rules laid down by the parent Vine and the Church Manual. To the revered Discoverer and Founder of Christian Science, absolute loyalty is cultivated and cherished. Today we take another step forward. The opening of this little edifice is the realization of the hopes and dreams of many years. At last we have a church home. We are grateful to God, and also to our Leader, for the culmination of this happy event.

We rejoice that, while there is still a great lack of understanding as to what Christian Science is and what it aims to accomplish, there is in Enid and this community a minimum of that spirit of intolerance and persecution with which Christian Science churches and workers have had to contend. Looking back over the pathway this church has trod, and realizing that God has always opened the way, that every need has been met by divine Love, we are inspired to expect great blessings in the future. This church will prove a nucleus of spiritual power which will permeate the community in which it is located, bless all who come in touch with it, and aid in elevating mankind. Our sole aim and object is to do good.—*Enid Eagle.*

CORRECTION.

In the Lesson-Sermon on "Man" in the current *Quarterly*, September 4, the second reference from Science and Health in Section I. should read as follows: (2) 258: 13, 25-5 next p. (God expresses; Mortals).

THE LECTURES.

NAMPA, IDAHO.

The lecture by Frank H. Leonard at the Orpheum Theater May 8, drew a crowded house and was listened to with much interest. The lecturer was introduced by N. Jenness, editor of the *Nampa Leader Herald*, who said,—

We are gathered here this afternoon to investigate a subject which is attracting more and more attention. Men and women are searching for truth more than ever before in the history of the world. Truth is eternal and unchangeable, but man's conception of truth has been as imperfect and changeable as man himself. Here and there along the pathway of history has arisen one with clearer vision than his fellows, who has pointed the way to a higher and nobler plane of living. Man has ever struggled toward that higher plane, when it was made known to him. Some there are who contend to the contrary, but I believe it is true that the tendency has ever been from the darkness toward the light.

In comparatively recent years it was given to one to see, more clearly, perhaps, than any of her predecessors, man's true relation to God and to his brother man. Mrs. Eddy, Founder of the Christian Science church, gave years of the most careful study to the subject, and came to believe and know that it is possible for man to bring himself into such harmonious relation with the divine that all evils, physical and mental, will fall away, leaving men free and unfettered to fulfil their highest destiny. There was much opposition at first, and many were the shafts of sarcasm, ridicule, and invective hurled at Mrs. Eddy; but, clothed as she was in the armor of righteousness, these missiles fell broken and harmless at her feet. The only weapons she employed in return were those of love and kindness. The purity of her life and her indefatigable labors for the uplift of humanity gradually influenced those about her, and Christian Science took root,—slowly at first, but when firmly rooted it spread rapidly over New England, adjoining states, and then the whole United States; leaped the ocean, and found lodgment wherever civilized man has a habitation, until today thousands and hundreds of thousands have become adherents of the faith. When so many earnest men and women are devoting their lives to this Cause, it is well that those of us who have given but superficial study to this question should pause, and spend an hour with those who know of the power of Christian Science.—*Correspondence.*

LONDON, ENGLAND.

On Thursday, May 12, the Queen's Hall, London, was completely filled by an attentive and appreciative gathering, representing almost every class that lives in this great city, to listen to a lecture by the Rev. William P. McKenzie, who gained the ear and heart of his audience from the very start by making a beautiful and touching reference to the great loss that this nation and the world at large has recently suffered by the passing on of our late beloved King. The lecturer was introduced, at his own special request, by W. N. Miller, K.C., president of Third Church of Christ, Scientist, London, who spoke as follows:—

On behalf of the Churches of Christ, Scientist, in London, I have great pleasure in extending to you this evening a cordial welcome. You have come here to learn more of the problem of existence, more of what life is, its duties and responsibilities, and how to fulfil them. These are subjects which in the very nature of things must at some time or other present themselves to every thoughtful man and woman. Through the spiritual interpretation of the Bible in the light thrown on it by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, the Discoverer and Founder of Christian Science, these great questions are being solved. The conclusions thus obtained are proved to be correct by the healing of the sick, in the way taught and practised by Jesus the Christ, by those who adopt these conclusions and make them practical in daily life.

The misconceptions current as to what Christian Science is and what it does, and the erroneous views entertained about Mrs. Eddy, to whom the world owes a debt of gratitude it can never repay, have made it necessary in the interest of the truth that reliable information on these points should be given by authorized lecturers. Mr. McKenzie has for years been one of these lecturers, and an able exponent of Christian Science to scores of audiences throughout the United States and Canada. I have had the pleasure of knowing Mr. McKenzie for a number of years. When first I knew him he wore the sacerdotal robes of a duly ordained clergyman, but, as he grew in the understanding of the realities of being, these garments, too restrictive, were laid aside in order that he might give forth his wider knowledge of Truth. About this time Mr. McKenzie resigned his professorship in the University of Rochester, and he has ever since been an avowed Christian Scientist.—*Correspondence.*

JOLIET, ILL.

Before one of the largest audiences ever gathered in the Auditorium, Prof. Hermann S. Hering delivered a lecture on Christian Science yesterday afternoon [May 15]. Harry F. Roberts introduced the speaker, and in his preliminary address said,—

A Christian Science lecture is a message of good tidings, laden with highest opportunity to all, and especially to those who may be getting their first authoritative information regarding Christian Science or are just beginning the study of the subject. To meet their needs is the chief purpose of these lectures. It is an opportunity to learn something of the way which has brought and is bringing hundreds of thousands of people to the realization of a greater measure of happiness and contentment than they ever knew before, a greater measure of freedom from fear and from the ills that flesh is heir to.

The message to be delivered to us is one that today is circling the whole world, and everywhere that it is listened to and heeded it is bearing the fruits which prove it to be the truth—the truth which makes men free, fulfilling the promise of the Founder of Christianity,—"Ye shall know the truth, and the truth shall make you free;" and again demonstrating the statement of the psalmist, "He sent his word, and healed them, and delivered them from their destructions." Christian Science is a power for good wherever it is found, and right here in Joliet it is healing the sick, binding up the broken-hearted, preaching liberty, and giving the same to those bound by sin, disease, and fear. It is in gratitude for such blessings and healing that these lectures are provided, in order to correct the many false impressions the public holds concerning Christian Science and to give people a true idea of the subject, that they may know and avail themselves of its uplifting power.—*Joliet Herald.*

LINCOLN, NEB.

The Rev. Arthur R. Vosburgh of Rochester, N. Y., lectured at the Oliver last night [May 15] on the "Idealism of Jesus." Louis A. Gregory in introducing the speaker said in part,—

I would speak to those who are not familiar with Christian Science and its literature. My appeal to you is that you adopt for this hour the point of view of the speaker, accepting his statements of axiomatic truth for the purpose

Digitized by Google

of testing his conclusions. In no other way can you gain so fair an understanding of the Science he expounds. The fundamentals of Christian Science are directly opposed to prevalent theories, and unless you tentatively admit its basic truths there is little opportunity for understanding its ultimate deductions. Without this common standpoint you must necessarily disagree with the lecturer, just as the two knights in the fable quarreled about the shield, because each saw a different side of it.

A pertinent analogy is found in the development of the modern theory of the earth's relation to other bodies of the solar system. If you should try to explain the modern hypothesis of solar motion to one who still held to the ancient theory, you would have to induce him to adopt your point of view before you could make the truth apparent to him. If he refused to concede, even for the sake of argument, that the earth is round, because he believed he could see that it was flat or because his forefathers declared that it was flat, he would close his mind to every advance of truth. The mighty truths of astronomy are now apparent only to those who reverse the evidence of the eyes and realize the truth of an admitted standpoint. Christian Science reverses accepted theories of God, man, and the universe as completely as the science of astronomy reverses the Ptolemaic theory; and the attainment of demonstrable truth through the assumption of a new point of view is the result in each case.

I speak with conviction, because I have both seen and felt the demonstration of the practical benefits of Christian Science. Within the family of which I am a member, the so-called incurable diseases of locomotor ataxia, Bright's disease, and partial deafness have yielded to Christian Science treatment, as well as inflammatory rheumatism, pneumonia, tonsilitis, grippe, and other organic and functional ailments. If any one desires evidence of the power of this Science to heal all manner of disease, to restore mental faculties, to regenerate morally, he can find it in abundance in this city. There are more than five hundred people in Lincoln who have felt its life-giving power and gladly bear testimony to the fact. Christian Science is truth and power to its adherents only in so far as it enters into the very heart and life of the individual, therefore they submit wholly to the test of the Master, "By their fruits ye shall know them;" and the statement of this scientific truth is offered for your judgment by the same high standard.—*Nebraska State Journal.*

LOS ANGELES, CAL.

Sunday afternoon, May 22, Bicknell Young delivered a lecture on Christian Science in the Temple Auditorium. He was introduced by Lee C. Gates, who said:—

I know little of Christian Science, except as I see it in the lives of the happy men and women who profess its faith. What I do think is that this is an hour of investigation and unfoldment, but I do know that Christian Scientists are teaching a spiritual doctrine of hope and courage and good cheer, and a renewed vitality of thought. I know, too, that it is inculcating into the minds of the time the teachings of the Master when he said that "men ought always to pray and not to faint." I know that they are teaching that gospel embodied in the words of the Master when he said, "Go thy way; thy faith hath made thee whole."—*Correspondence.*

Not merely did the good and brave give us a reunited country, not merely did they leave us the memory of the great deeds they did, to be forever an inspiration to us, but they left us the memory of the way the deeds were done.

THEODORE ROOSEVELT.

TESTIMONIES OF HEALING.

I have been helped so much by the testimonies given in the *Sentinel* and *Journal*, that I want to tell a little of what Christian Science has done for me. I had been told that Christian Science was nothing but evil, and so great was my prejudice against Mrs. Eddy's book, "Science and Health with Key to the Scriptures," that I would not so much as touch it. There came a time, however, when I felt I must do something, and I finally decided to read this book, which was then in the home. I had read only a few pages when I was freed from all the burdens of doubt and distress, and was happier than I had been for years, for I had found the truth.

I had studied eagerly for about one month when I had convincing proof of God's care in every time of need. I was thrown from a runaway horse one evening, and after regaining consciousness I discovered that I was unable to stand, as one ankle seemed to be severely injured. Through my attempt to realize God's presence, and the utilization of what little understanding of the "scientific statement of being" (Science and Health, p. 468) I had thus far gained, I was able to rest all night, and the next morning was entirely free, no sign of the accident being left. Since then I have had many proofs of healing through divine law, but of far more value to me is the spiritual food which each day comes to me through the study of the Bible, which has become a new book to me, and Science and Health. I find too, that the understanding of Christian Science which I have gained is a wonderful help while teaching in the schoolroom.

Words could not express my gratitude to God, and to Mrs. Eddy, who has shown us the true God, but I trust that I may prove my gratitude by helping others to realize their heritage as children of the one Father.

CORA M. BLISS, Denver, Col.

My attention was first drawn to Christian Science through the healing of my mother, who had a disease which had been pronounced incurable by her physicians. At first I thought of this teaching only as something mysterious, but I knew my mother had been healed, although I did not understand how. I did not look upon Christian Science as a religion until some time later, and when I did see this, I feared to study it, though I still had no little faith in it as a healing agent, because I knew of other instances where people had been healed.

Later, after having been under medical treatment for a long time, I took treatment from a Christian Science practitioner. I attributed most of my trouble to overstudy while in college, and, although I was not dangerously ill, still at no time was I well. At the time that I began treatment in Christian Science I was teaching in Indiana, and was in such a condition that it seemed I would have to give up my school work if I did not soon get better. My friends mostly advised me to do so, as they thought it too taxing for me. During the week that I was being treated by the practitioner, I took up some additional work, and was working much harder than usual, but at the end of a week (and the hardest week's work of the term) I was healed—entirely free from my old complaints!

Though I had taken treatment several times before this, for various ills, and had received help, it was not till this time that I began the study of Science and Health in earnest. As I read it, with the Bible, a new light came, and I could see how I had been healed. Things took on a new meaning; many passages of Scripture that had always seemed dark were now illumined by the light of Truth in my new understanding. The blessed assurance of divine guidance makes life real and makes one fearless. We little realize how much there is in store for us if we would only avail our-

Digitized by Google

selves of it. Christian Science is not only of use in times of illness and trouble, but it is ours to use day by day in every walk of life, and it is ever aiding, guiding, and comforting.

Since taking up Christian Science I have overcome a chronic throat trouble, and at one time, when I had cut my foot so badly that it was predicted I could not wear a shoe for six weeks, I had the satisfaction of seeing the wound healed within four days. I wore a tight shoe in about eight days after the injury, and that without having applied any material remedies. Today Christ is to me the "great Physician." I realize that God through the Christ-idea redeems us from all sin and error, disease and death.

HARRY FOOTE, Antwerp, Ohio.

[Translated from the German.]

About two years ago I heard of Christian Science, but did not give it any consideration at the time. A year ago last fall I was suddenly taken ill. I lost all appetite, became greatly reduced in flesh, and at last reached a state where my relatives considered me to be at death's door. Toward the end of February I felt obliged to go on a business trip. A week before this pains in the side were added to my discomfort, so that I could hardly breathe. A physician to whom I applied in my extremity, for examination and treatment, stated that the condition was very serious. Remedies were applied for several days, but my general health did not improve and the pain in the side continued, so that it did not seem to be possible for me to go on my trip. I then called upon a Christian Science practitioner, and asked for treatment, which she gave me. During the following night I rested peacefully, and went on my trip, during which I experienced no pain, despite unpleasant weather. The appetite gradually returned, and I was again able to eat everything without its causing any disturbance. I have also been freed from headaches, with which I had suffered almost constantly during the past twenty years. This result is due solely to Christian Science, for which I herewith wish to express my sincerest gratitude.

MAX SCHUMANN, Dresden, Germany.

For eight years I was a more or less constant sufferer from asthma, being so weak during some attacks that I could not stand alone, and lying down was an impossibility. Various remedies were tried in turn, but they finally failed to give even temporary relief. Change of climate was tried, but a three-years residence in Arizona did not change conditions. Osteopathy then had its turn, but after a time gave no help. During the summer of 1908 I suffered an unusually severe and persistent attack, which completely disheartened me; I became very weak and thin, and night after night the same struggle recurred, sleep being out of the question.

After two months of this acute suffering, I turned to Christian Science for help. The first treatment gave me wonderful relief, and the iron bands that had seemed to hold me were removed. Treatment was continued for two weeks, when the healing was complete. The sense of freedom which my healing has given me—the knowledge that I am free to pursue my work anywhere, and that I am not a victim of heredity or material conditions—has been invaluable. My appreciation cannot be expressed in words; only by taking the divine Principle, that makes such freedom possible, to be my guide and stay, can I show my gratitude.—NIGEL DE BRULIER, Los Angeles, Cal.

Words fail me when I attempt to tell of all that Christian Science has done and is doing for me; but with the earnest desire that this testimony may help some one else, I will try to tell in a small way of the power of Truth. Five or more years ago some dear friends told me enough of Christian Science so that I felt I must know more; but my husband urged me to give it up, and I felt it my duty to do so. The time came, however, when sorrow over what seemed the sundering of earthly ties made me seek our loving Father. A little over a year ago I took my stand for the truth, as taught in "Science and Health with Key to the Scriptures," and only those who have journeyed that way can know the peace and rest which I have found. Many ills have been met and overcome, and the wonderful help in bringing up our two little girls is such that I wish all mothers could know of its benefits.

With deep gratitude to our beloved Leader, I pray I may journey on where she leads. I am also grateful for all our splendid Christian Science literature.

CORA KELLY MCKEEHAN, Marcus, Wash.

It is with a deep sense of gratitude that I wish to give honor where honor is due. About twelve years ago I was taking several kinds of medicine three times every day for heart trouble, and was almost blind also. I had a niece living in Dallas, and I went to see her. She was interested in Christian Science and told me about it, and I was ready for it. She gave me a treatment, and I have been free of the trouble ever since, and have taken no medicine since that time. I have learned to help myself in almost every case, and can trust Truth for everything. I cannot tell the half that divine Love has done for me.

I live away from any Christian Science church and Christian Scientists, but God is with me and I read the Lesson-Sermon every day, also Science and Health and all the rest of Mrs. Eddy's works, besides the Christian Science publications. I do not know how to be thankful enough to God for giving to us one so good and pure as our Leader. When I look back on the past I cannot see how I ever got along without the understanding of God, divine Love, as revealed in Christian Science.

MRS. W. G. CRISWELL, Mounds, Okla.

It is with the deepest gratitude that I give my testimony to what Christian Science has done for me. I was taken very suddenly ill with pain in my side. I tried to treat myself, but the pain became so severe I could think of nothing else. I could not sleep, and by morning could hardly move or breathe. My husband was anxious to send for a doctor, but I requested him to telephone to a Christian Science practitioner. He did so, but the people at the house neglected to deliver the message. As I did not improve, I told my husband to telephone again. This time he succeeded in finding her, and I was soon relieved. This attack was rather stubborn, but I was able in a day or so to go about my many duties. I feel grateful for Christian Science, and for the good work it is doing in our midst.

MRS. JNO. G. BOGAR, Roswell, New Mexico.

Three years ago this June I for the first time caught a glimpse of Christian Science. In the fall and winter of 1906-7 I had been very ill with stomach trouble. After consulting three doctors, one seemed to understand my condition and relieved me somewhat; but after being under his care for four or five months, and finding myself far from well, I consulted him again and was told that he could do no more for me. He said that the passage from the stomach was becoming obstructed, that I must be careful as to diet, etc. His statements caused me to feel that perhaps my days were numbered, and I went to my friends in that state of mind.

My niece then asked if I had ever thought about Christian Science. I replied that I had read some along that line, but to no special purpose, and she proposed that, as the doctor had given me no medicine, I allow a practitioner to see me. I acquiesced, thinking it was the only way out,

Digitized by Google

as the doctor, who was probably the best stomach specialist in the state, had given up my case. After two or three treatments I was able to walk to the practitioner's home, several blocks away, and while there ate an apple, though the doctor had said this fruit was very harmful for me and that I must not indulge in them. I told the practitioner, but she said that it would not hurt me. I enjoyed the apple, and suffered no bad effects. When I left her she told me to go to my friend's home and eat what was on the table, that nothing would harm me; and I did so, much to the alarm of those about me. I took two weeks' treatment, and came back to my home. Everybody here was surprised at my appearance,—I had improved so much.

I did not tell all my friends for many weeks, because I feared that the perfect harmony might be broken by the doubting Thomases; so I kept my own counsel. With further study and instruction I came to understand that "God is All-in-all" and that the "scientific statement of being" (Science and Health, pp. 113, 468) is true; and that we need nothing but God and His Christ to put our feet upon the rock of ages. I soon became a reader of Mrs. Eddy's "Science and Health with Key to the Scriptures," and found therein bread for my famished sense. The Bible, which before had been to me in many parts unintelligible, became illumined when read in the light of Science, and I have to thank God for His mercies in sending us this great truth.

Last November I allowed error to creep in, and one night I was very sick. I retired about eight o'clock in the evening, but passed a very painful, sleepless night. My husband, solicitous to relieve my suffering, proposed a hot application, which with much reluctance I allowed him to bring me; but after about two hours thus spent with no relief (only what it gave my husband to think he was doing something), I discarded it. Then he insisted that I try brandy, and to please him I took two doses, but neither was retained a moment—matter and Spirit would not mix. Not wishing to disturb any one outside our home, I endured the distress until daybreak, when I called my son from across the street and instructed him to telephone a practitioner forty miles away to come to me on the first train. This was about six o'clock, and as soon as the practitioner received the message she began absent treatment. By the time she arrived, three hours later, I was quite comfortable. She stayed with me until eleven o'clock, and when she left me the pain was all gone, only a sense of weakness remained. In the evening I got up for a little while, then retired and had a good night's rest. I was all right the next day, and at this date I am perfectly well and strong.—LUCY N. CASE, Baraboo, Wis.

No one can better testify to the verity of our Master's statement, that the knowing of the truth makes us free, than myself, since all that I have to enjoy today I owe to the truth pointed out in this age by our Leader, Mrs. Eddy, in "Science and Health with Key to the Scriptures." Nearly half of my life was spent as an invalid, during which time I had been treated by seven different physicians and had been under the surgeon's knife twice, once for what was termed four major operations in one, when I was brought very near the experience we call death. I spent many months in bed, and at times was a helpless and by some considered a hopeless invalid. Twice during these years Christian Science knocked at my door, but each time I refused it admittance. The ground was still unbroken, —the soil was not ready for the seed of Truth. When I did finally accept Christian Science, it was after two years of intense suffering,—at the time I had the two operations.

During my younger days I believed that I had great faith in God, and during those years of invalidism I prayed continually to God to restore me to health; and because my prayer was not answered in the manner in which I looked for the answer to come, namely, through material means, I lost faith in the God whom I had trusted as a loving heavenly Father, since, as I believed, He was afflicting me with such suffering and punishment as no human father would inflict upon his children. I became bitter in my thought toward God, thinking Him a cruel master. After that my prayer was changed to an earnest entreaty to God to take me out of this world of sorrow, since I believed death to be the only avenue through which I might be relieved of all suffering. This time my prayer was answered,—not as I longed for, but in a diviner way. As a messenger in the night came the "still small voice" which said to me, "No, you cannot go now; you have a work here to perform." Then my prayer was that God would send me light, more light—only show me the way; and as naturally as the daylight follows the dawn, I was led to Christian Science.

I was then ready for the truth,—hungry for some crumb of comfort from the Master's table,—and I eagerly read the literature given me by a friend, and soon began to attend the little service then being held in our town. I bought a copy of Science and Health and began to read it. I was eager for the spiritual light which I gleaned from its pages, but I did not believe in the healing efficacy of Christian Science. It was, however, the spiritual truth that I sought, and so, as naturally as the dead leaves fall from the decaying tree, my various ills began to drop away. When I began to read Science and Health I was a physical and nervous wreck, according to mortal thought; I was living partly on drugs, and partly starving myself, since I had the belief that most articles of food were my worst enemies, causing me great suffering.

In two months' time after I commenced the reading of the text-book I was eating anything and everything that I wished for, without any bad results; in a short time I discarded the glasses that an oculist told me I would undoubtedly always be obliged to wear, and have never felt the need of putting them on again. I was also soon able to do away with the supporter without which I had been unable, in belief, to stand on my feet more than a few minutes at a time for many years. Many other ailments have disappeared into their native nothingness, and since coming into Christian Science, five years ago, I have never resorted to drugs, but all my needs have been met through Christian Science.

For these blessings I am more grateful than words can express; but above all, I am grateful for the new understanding which I have of God and the realization of His truth, which has brought to me a peace that the world can neither give nor take away. Today I can truly say that all of the health and happiness which it is mine to enjoy, I owe to Christian Science and to our dear Leader. Because of what the truth has done for me, I count it a great joy, as well as a privilege, to stand as a witness to its healing power. I would say with the psalmist, "Because thou hast been my help, therefore in the shadow of thy wings will I rejoice."—MRS. GERTRUDE R. TORREY, Somerville, Mass.

I wish to express my gratitude for Christian Science, which was presented to me in 1907. I am very grateful for the help I have received, and do not see how we ever lived without it. I am also thankful to Mrs. Eddy for putting the truth in language which we can understand. A little over a year ago a baby came to us, and we are both in perfect health. Before getting the understanding I have in Christian Science, I was in very poor health, and at the birth of a child previous to this one, when I was under *materia medica*, I nearly passed on from fever, the doctor pronouncing my condition very serious. My baby is a living testimony to Christian Science.

MRS. SARAH J. GIBSON, Hayward, Cal.

With a grateful heart I send my testimony, hoping that it may be of help to some one else. In June, 1908, I first

Digitized by Google

came to Christian Science for help. For several years previous to that time I had suffered from a distressing nervous condition, besides a bowel disorder and female trouble. After having medical treatment for some time, and not getting any relief, the doctors said I must have an operation. So I went to Los Angeles, and was operated upon in one of the hospitals; but after several weeks I returned home in really a worse condition than when I left.

Some weeks later I was advised by friends to try Christian Science. I had been very much opposed to what I thought Christian Science was, and had gone so far as to say I thought it the work of the devil; but finally I made up my mind to try it. I went to a practitioner, and asked for treatment, and also asked her to forgive me for the things I had said about Christian Science. She said that there was nothing to forgive, that I did not understand what Christian Science is or I never would have said the things I did about it. She treated me, and within two weeks I was entirely healed.

I feel very grateful for the physical healing, but more grateful to God for the spiritual inspiration which I have received through the study of the Bible together with the Christian Science text-book. I have also received much help from reading the *Sentinel* and *Journal*. I hope I may prove my gratitude by living the truth taught by our beloved Leader, Mrs. Eddy.

MRS. CHARLES W. LUND, Searchlight, Nev.

I was a sufferer from rheumatism (at intervals) for years. In December, 1906, I had a very severe attack, which did not yield to the usual treatment; so I consulted a doctor and was under his care for seven or eight months, but was growing worse all the time. I finally got discouraged, and gave up all medicine except an opiate which he had left to make me sleep.

One day I met a friend, and he asked me why I did not try Christian Science. He gave me the name and address of a practitioner through whose aid he had been healed of a similar trouble. I laughed at the idea, but every time I had a severe twinge, his question would come up to me. About two weeks after that I did go to see the practitioner, and I was so impressed with what she said that before I left I took a treatment. She told me not to take the opiate that night. I did not believe I could get along without it, but I followed her instructions and immediately fell asleep. To my surprise it was seven o'clock when I opened my eyes the next morning, and then I realized that I had slept through the whole night without any pain or discomfort, a thing I had not done before for over a year. I continued to take treatment for about three months, and was entirely healed of the rheumatism and many other physical ailments, also of the habit of profanity, the liquor habit, and a most ungovernable temper.

I began to read the Bible and Science and Health, but did not understand them. The practitioner was, however, very patient with me, and tried to make me see and understand the truth, for which I am very grateful. I consider myself a young man now, at seventy-one years of age, and I am rejoicing in the spiritual and moral uplifting that has come into my life through Christian Science.

CHARLES W. MCLELLAN, Boston, Mass.

After many years of sickness and suffering, I was healed through Christian Science, and over eleven years have passed since then with no return of this trouble. I had suffered the greater part of my life with severe spinal headache, and many years with heart trouble, also the torture of a stomach disorder, accompanied by an almost incessant aching of the whole body; but I was healed—made free—in the way Jesus healed the sick. He said, "Ye shall know the truth, and the truth shall make you free." I was healed in one treatment of an abscess and of varicose veins. I found this truth made plain and demonstrable through the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I was led step by step to the threshold of the open door which we find in this book.

We had been reading from the text-book only a short time, when I was awakened one night with a sense of great agony, from an attack of the heart trouble. I awoke my husband and asked for help, expecting the usual material aid; but he said very quietly, "We will see what the text-book will do for you." He read aloud to me for perhaps ten minutes, and as I listened it seemed so beautiful to me that I forgot everything else but to listen. In a few moments I was free—there was no more pain. I slept, and awoke in the morning with such a sense of rest! I felt so free and so happy that I went about the house singing. A new life presented itself to me, and the "still small voice" seemed to say, "Be still, and know that I am God." I destroyed all the medicine I could find, which meant many kinds and a great quantity; but I never doubted that voice, and pressed onward with an assurance that "with God all things are possible." Later the trouble again presented itself, but was very quickly overcome.

These attacks, which came upon me both when asleep and when awake, would reduce me to a state of helplessness in a few minutes, and there were as many as seven in a day. Physicians were called, but I could get only temporary relief. I, however, felt there was something that could help me, and I asked God many times each day to show me a way out of this trouble. I was gradually led to Christian Science, and each day, as I read from our text-book, I found myself ascending higher on the mountain-side. Later on I had the privilege of class instruction, and as I gained in understanding I was asked to help others out of their trouble. I am truly thankful to God for all these blessings, and I am grateful not only for the physical healing, but for the spiritual quickening. I am also grateful to our dear Leader. Christian Science has taught me how to live.—MRS. MARY MADORA HARRIS, Chicago, Ill.

I wish to add a few lines to express my heartfelt gratitude for the healing of my wife. The conditions which she has mentioned seemed very real to me and to all who saw her at that time, but they have been eliminated through the operation of the truth and nothing else. I am glad to acknowledge this healing, and it has been very beneficial to me in many ways.

GRANVILLE E. HARRIS, Chicago, Ill.

I am very thankful to God that I am living, and more and more thankful for the wonderful unfolding of the truth that we learn through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, who was and is obedient to the law of divine Love. Among the many ills with which I was bound when I took my first treatment in Christian Science, was a stomach affection, which had caused me to suffer untold misery, so that I could eat only a few kinds of food. This disorder yielded to the first treatment. The other ills—fevers, biliousness, nervousness, partial blindness, and weakness—were not healed at once, but freedom came through the realization of the truth, and I praise God that it did come. My sight is good, also my health, and I have been freed from other ills, such as fear and pride, and this seems as important to me as relief from physical diseases. This calls our attention to the renewing of the mind, and I know I have been regenerated through the truth.

Science and Health has proven itself to be a priceless treasure, and my heart overflows with love to the giver of

Digitized by Google

all good for sending us this message through our beloved Leader, and for her love to suffering humanity. I am rejoicing in health through her teaching.

GEORGIA TAYLOR SMITH, Miami, Fla.

This is to testify that I was healed of jaundice and dropsy by one treatment in Christian Science, after I had been under the care of a doctor for several months and had received but little benefit. This healing was in November, 1904, and I have had no return of the trouble. In February, 1905, I was also treated for acute lung trouble and several other ailments, of which I have had no return, and I am truly thankful.

I have also seen many other cases of healing in Christian Science, one case being that of my niece in Peterborough, England. My sister wrote me that the girl had been under the doctor's care for two years, and they were afraid they would lose her, as she had lung disease. I then asked for Christian Science treatment for her, and she was healed in about two weeks. They knew nothing of Christian Science up to this time, but I have received beautiful letters from my niece, stating how thankful they all were that she was healed. This shows that distance is nothing to God.—JOHN CROFT, Port Hope, Ont.

I was troubled for twenty years with a weak heart and varicose veins. I had to wear elastic stockings always, and being unable to attend to my business, I lost a good deal in consequence. I was most of the time under a doctor's care and taking medicine, but continued to get worse. The doctor told me that my heart would never be strong, and I had no hope of ever being well.

At that time, when all seemed night, I came to Christian Science and began to read that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I told no one outside of my house what I was doing, but read all I could, and in about a month I was healed. My heart became strong and I was able to leave off my elastic stockings. This was over four years ago, and I have been free from sickness ever since. I am now able to attend to my business, which has increased considerably. A few weeks after I came to Christian Science all desire for smoking left me. For the physical healing I am grateful, but much more so for the better understanding of God that Christian Science has given me. I now know that He is ever-present Life and Love and an ever-present help in time of need. One can rejoice because of this God-given freedom from sickness, but one's heart goes out toward those who are yet in the bondage of sickness and fear. It is the truth, the love of God, that makes free.

For this freedom, and for the spiritual illumination which I have received, I thank God, the giver of all good. Christian Science has shown me the way to that peace, joy, health, and harmony which passes all human understanding.

EDWIN PARKINSON, Manchester, England.

[Written for the *Sentinel.*]

LOVE ONLY.

LAURA GERAHTY.

GRIEF came and touched me lightly on the shoulder—
With gruesome pressure as the light burned low;
With iron bands it bound as night grew bolder,
But with the dawn it died: in Love's bright glow.

Love's morning rose, with hope and joy to find me,
With all earth's beauties bloss'ming at my side!
Morning and Love! Where grief essayed to bind me
Love reigns supreme! 'Twas only grief that died.

FROM OUR EXCHANGES.

[*Christian Register.*]

The new movement in the religious life of America has shifted the emphasis from the future world to the present world. Religion is realizing that its task is here and now. This movement for turning the impulses of religion to the service of humanity and human life is not confined to one denomination or to a group of denominations; it has affected all denominations. A minister, prominent in one of the large orthodox denominations, recently said, "I have no interest in a religion which concerns itself with getting men into heaven. That is not the task of religion or of the church. God will take care of that. The work of the church is in this world. The service of religion is to the life that now is. Not only is the best way of preparing for the future life to live the present life as we ought, it is the only way that we can prepare. It is time for the church to turn its attention from heaven to earth and to give itself to the questions of the conditions under which men live, and the spirit in which they meet those conditions." This man is not standing alone in this position. It expresses the change which is coming in the attitude of organized religion toward life. Religion is, as never before, preparing men for citizenship in this world. It is laying hold of the problems of human life, of the conditions under which men live and the relationships they bear between man and man and class and class.

[*British Congregationalist.*]

It is inconceivable that those who have set themselves to discover how best to work together abroad should not realize that division means weakness everywhere; and that the first step toward Christian cooperation is the full, frank, and hearty recognition of the brotherhood of the churches, by whatever denominational titles they may be called and whatever distinctions of creed they may acknowledge. We shall probably be told that the time is not ripe for this—the time is never ripe for any forward movement with some people—but it is as certain as anything can be that the country will expect Christian leaders to be candid and outspoken. Otherwise the profession of desire for cooperation is not honest and sincere, which we do not for a moment believe.

[*Christian World.*]

We can hardly call this an era of great souls. We are writing our characters upon our newspapers; we are exhibiting them in clubs, in churches, in theaters, on the street, at the race-course, and it is not an entirely exhilarating exhibition. We pity the past, the dark ages as we call them. But it is disturbing to our complacency to ask whether we could today produce the souls we meet there; whether we have the stuff for making the spirits of heroic temper, the saints, the martyrs of those times; whether our homes, our schools, our churches, our factories, our training-grounds of all sorts are manufacturing, or are likely to manufacture, the highest kind of man.

[Rev. W. H. P. Faunce in *Watchman.*]

The greatest need of the time is not the conservation of forests and streams, important as that is, but the conservation of standards and ideals. We are keenly alive to the power of running water, and we harness it to ten thousand wheels. We are alive to the power of steam, electricity, of radio-activity; are we alive to the fact that the spiritual forces are infinitely greater and that they determine all our future? We are surrounded by more than a world of cause and effect, by a world of purpose and ideal. Though we should search through all possible effects and trace them to their causes, and reduce the whole physical

Digitized by Google

universe to a series of mathematical formulas, we should not necessarily advance mankind one iota in happiness or character. Character lies in another realm, in the realm of the personal choice of worthy ends, in the realm of social and spiritual value.

[*Christian Work and Evangelist.*]

In all the commencement sermons preached by laymen, service is the one note that is uppermost. While all are intensely practical, they are not trivial. They deal much more with the imitation of the spirit of Jesus than with the interpretations of his person; much more with a spirit of life, an attitude toward the world, than with confessions of faith. We would be the last to affirm that the great doctrines of the church have no value for life and are not practical in the highest sense, but we do feel that men are not much longer interested in them, except as they bear very directly on their every-day life. It is a pragmatical age. Doctrines which work are eagerly believed. Those which belong largely to the realm of the intellect are not so well entertained. It is not that we should give up doctrinal preaching, but we can learn from these hundreds of eagerly heard lay preachers that we must be careful to keep doctrine and life closely related; that for the populace doctrine gets its value only as it touches the life they are living today; that men will go much more eagerly to hear the men who tell them how to live than to hear those who tell them how to think; that men are much more interested in having light thrown on the problem that disturbed them last night than on the problems of those who wrote the Confession. Practical teaching is that which makes doctrine a power in today's conduct. Perhaps these lay preachers minimize the importance of doctrine. Yet we can learn from them that conduct is the end both of doctrine and preaching.

[President Hadley of Yale University in his baccalaureate sermon.]

Many good people will tell you that this is an age when faith has decayed, an age when the human race has lost its belief in the things which are most necessary to its life here and hereafter. This is a wrong view. We have lost faith in some things, but we have gained faith in others, and the faiths that we have gained are greater in number and importance and inspiration than the faiths we have lost. We have lost faith in signs and portents and supernatural manifestations of power, in certain dogmas and formulas once supposed to be essential to salvation. We have gained in their place faith in man, faith in law, faith in the truths of nature, and faith in the God of justice.

[*Congregationalist and Christian World.*]

If human life is in its most hopeful state today, as we believe it is, it is not because of the magnificence of its external trappings, but because of the dissatisfaction of its inner self. Our national hope is in the sense of our national need. It is because we are beginning to feel our poverty in the best things, the unseen possessions of the human spirit, that we are experiencing a renaissance of human life today.

[Rev. R. J. Campbell in *Christian Commonwealth.*]

Every one of us is a little point or center through which the eternal is expressing something. In the very worst and most ignorant among us something of that eternal reality is waiting to be unfolded, and in the very best and wisest of us not much of it is unfolded yet or ever will be in this world. And remember also that the whole infinitude of God is behind every upward effort of every separate soul.

[*Zion's Herald.*]

Those who think Christianity is declining make the mistake of comparing it, not with what it has been, but with what it ought to be. They see only the mistakes, the imperfections, the failures. There are far too many of these in life, but there are heroic struggles and glorious victories, too. The world is steadily growing better, and Christianity is not left behind, but leads the way.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75
The above prices are all prepaid. Orders for Miscellaneous *Writings in lots of twelve or more to one address may include* any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Christian Unity Foundation has just been incorporated by twenty-four men, all members of the Protestant Episcopal church, twelve lay and twelve clerical, with the avowed intention of welding all Christian denominations into one organic religious body. The Foundation is patterned upon the Sage Foundation, purposing to use the same methods that are employed by the Sage and similar foundations. It is unlike the Federal Council, organized three years ago, which seeks cooperation only. The new scheme would discard all names and sects and make simply one big religious body.

There was an examination this week in all the states and territories for the purpose of recruiting only men stenographers and typists, the demands for whom the civil service commission has been unable to meet. Practically all the various departments of the Government are seeking to replace women stenographers with men, on the ground, as they claim, that the latter are more amenable to discipline, are more easily transferred to places where their services are needed, and can more readily be drafted into other kinds of work.

Despite repeated rumors that the indictments found against James A. Patten and others with regard to the pool in May cotton had been quashed, they still exist, and an inquiry now on is said to relate to the operations of the pool in other futures. The activities of the Government in finding indictments against the recent bull pool on cotton futures and on the cotton leaks of a few years ago, suggest the advisability of ridding the cotton market of the disturbing element of speculation.

Senator Lodge of Massachusetts will be the Government representative who will officially turn over to the Cape Cod Memorial Association the Pilgrim memorial monument at Provincetown, Mass., at the dedication exercises on Aug. 5. President Taft will make a short address. President Emeritus Charles W. Eliot of Harvard will deliver the oration of the day.

Statehood has been granted by Congress to Arizona and New Mexico. Arizona has now a population close to one hundred and sixty thousand; New Mexico's population approximates two hundred and thirty thousand at the present time. The class of immigrants flocking toward the two is excellent. Eastern and western capital is finding profitable employment in the development of towns and cities and industries.

Interest throughout the country concerning the establishment of postal savings banks is shown by the application of about four hundred banks in forty-one states, to be depositories for postal funds. The President is anxious to have ten or twenty experimental postal banks in operation as soon as possible. The first one will probably be established at Washington, D. C.

Nearly twenty-five thousand of the immigrants who arrived at United States ports during the fiscal year ended June 30 last were denied admission for various reasons by the immigration officials and were compelled to return to the countries from which they came.

The eastern and western traffic managers have agreed to postpone until Nov. 1 all proposed increase in rates. This will give the interstate commerce commission sufficient time to pronounce on the reasonableness of the increases.

An important work soon to be taken up by the interstate commerce commission is the standardization of safety appliances on railroads, a law placing that duty upon the commission having been passed by the last Congress.

The restitution forced upon the directors of the Metropolitan Securities Company of New York city, in connection with the settlement of the recent traction suits, amounts to about six and a half million dollars.

Treasury returns show that up to July 29 there had been paid $26,445,699 of the assessments, as originally made aggregating $27,267,927, on account of the corporation tax.

Census returns for the state of Rhode Island give it a population of 542,674, an increase of 26.6 per cent over that of 1900.

Miss Caroline Hazard has resigned as president of Wellesley College, an office she has held for the past eleven years.

The Government has spent more than four million dollars for a survey of the Great Lakes.

The coal lands withdrawn from occupation by President Taft amount to 71,518,588 acres.

The cost of the nation's wars in pensions alone has been more than four billion dollars.

International.

That the municipal ownership of public utilities is profitable is the experience of Calgary, Alberta, with its street railway system, which has been in operation something less than a year. During the first six months it earned a net profit of ten per cent over all expenses, including principal and interest on sinking fund. This result is the more interesting in that, at the time the franchise was being sought by private corporations, it was stated that the road could not be made to pay for years to come. It is expected the profits for the present six months will be considerably in excess over the first.

The new budget, together with other bills relating to amendments to the present method of taxation, has been introduced into the Spanish Chamber of Deputies by the minister of finance. It is expected that the passing of the new measures will yield a surplus of about seventeen million dollars, in spite of the fact that the expenditure for the year 1911 will be ten million dollars in excess of that of 1910. A proposal that a progressive system of taxation on inheritances should be introduced is being especially criticized.

A meeting of Chinese bankers, held recently, decided that an association should be formed, with branches in the provinces, to take such steps as were possible to assist the government in carrying out the currency reform.

The profits on the gas, street railway, and electric supply departments of the city of Birmingham, England, for the year ended March 31, 1910, aggregated $562,845, an increase of $23,242 over the previous municipal year.

The Italian government has offered five prizes, totaling $5,790, for an international competition of appliances and systems for the prevention of labor accidents.

The work of erecting the Palace of Peace at The Hague, for which Andrew Carnegie gave one and a half million dollars, has begun.

It is said that China is pleased with the recent compact between Japan and Russia respecting Manchuria.

France has about three fifths of an acre of forest for each inhabitant.

Industrial and Commercial.

Within a year the great Ambrose channel in New York harbor, seven and one half miles long, two thousand feet wide, and forty feet deep, will be completed, the new Bay Ridge and Red Hook channels will be widened and deepened, and the work of making Governor's Island one hundred and one acres bigger than it was originally will be finished. At the present time the channel, seven eighths finished, provides a safe course for the largest steamships afloat. Since Congress authorized the Ambrose channel eleven years ago, various Congresses have voted $5,148,510 to carry on the work.

That "trade agreements" exist between the supposedly independent wholesale meat dealers of New Jersey and the "beef trust," and that the outward competition between them is a farce, was revealed to the special "beef trust" grand jury last week, after a sharp examination of seven eastern "independent" packers by Mr. Kenyon, assistant attorney-general, and his aids. It developed, it is said, that a complete understanding existed between the "trust" and the "independents," and that prices were a matter of mutual agreement.

The interstate commerce commission holds that the rates on yellow pine lumber and its products from points in Louisiana, Texas, Arkansas, and Missouri to points in Nebraska, Colorado, and Wyoming, reached by the lines of the Chicago, Burlington & Quincy Railroad Company and other carriers, are unreasonably high. By order of the commission the defendant carriers are required to put into effect, not later than Oct. 1, 1910, reduced rates.

Fruits and nuts valued at $458,000,000 have passed through the ports of the United States during the last ten years. Of this amount $285,000,000 represents the value of imports from foreign countries, $156,000,000 exports to foreign countries, $12,000,000 receipts from non-contiguous territories of the United States, and $5,000,000 shipments to those territories.

Increases in commutation rates, announced some time ago by the Delaware, Lackawanna & Western, the Central railroad of New Jersey and Erie railroads, to become effective June 28, but which were held up by appeals to the interstate commerce commission, have gone into effect.

Work has begun in developing the property in Boston formerly used by the Old Colony road as a station in Park square. It will open up seventeen acres of land in a busy section of Boston. The present assessed valuation is four and a half million dollars.

A tract of ten square miles, bordering on Lake Pontchartrain, lying about seven miles northwest of New Orleans, La., is to be drained and reclaimed.

Australia last season exported more than 2,435,000 bales of wool, valued at $165,640,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[Editorial in *Pittsburg* (Pa.) *Leader*.]

A WONDERFUL WOMAN.

THERE was nothing to startle the world in the brief item of news that came out of Brookline, Mass., yesterday, announcing that Mrs. Mary Baker Eddy, Founder and Leader of the Christian Science denomination, was quietly observing the eighty-ninth anniversary of her birth, surrounded by a few friends at her modest home.

The item itself was characteristic of the subject. Probably Mrs. Eddy herself would have preferred that nothing at all be said about it.

But there is a great deal in the plain fact that this remarkable woman is now rounding out her ninetieth year, of which the people everywhere may well take note.

Seldom do we have presented a subject more replete with valuable suggestion, ennobling inspiration, or general uplift.

Mrs. Eddy stands among the foremost women of her time and generation. Whether or not we subscribe to the doctrines which she has founded and maintained, we cannot take from the credit which rightfully accrues through her position as one of the world's workers, as one who has been devoted to the welfare of others, who has all but given her life to the cause of humanity.

* * *

By the sheer force of her personality, her untiring energy, and unfaltering faith in the correctness of her beliefs, this woman has succeeded in doing what tens of thousands of men fail to do.

Under her leadership and wise counsel a religion which must be classed among the principal faiths of civilized nations has taken root, and is in a most flourishing condition.

Its devotees are as earnest and sincere and as eager for the advancement of humanity toward the ultimate goal as those of any other religion.

Hundreds of thousands of believers have found comfort in the teachings of Mrs. Eddy. Men and women, racked with physical and mental pain, have found peace under the soothing influence of the Christian Science doctrines.

They have built up a great and influential property, they have made themselves a factor in the progress of the nation, and they have made the world eager to know more about the wonderful woman who has been their inspiration through it all.

She appears to the observer as one who has been inspired with a mission to bring salvation into a sin-ridden world. To her, self-sacrifice seemed an acceptable portion, and wherever it has been required of her she has made it willingly and cheerfully.

Throughout it all she has been moved by a single desire —to do something for suffering humanity and to advance the spiritual welfare of the people.

Where is it possible to find any greater work than this?

* * *

Mrs. Eddy's life has been one of constant effort for her fellow beings. She has had no selfish aims to accomplish, no unworthy aims to attain, no ulterior motives to shield with the cloak of religion.

Everything was done for others, and when she has finally passed to her reward those who are left behind will reap the full benefit of her labor of love.

Mrs. Eddy is a stanch advocate of prayer. She believes in the efficacy of prayer, and upon this belief the religion she has founded leans more strongly than anything else.

Belief in the efficacy of prayer is a strong pillar in all the best known religions today.

But Mrs. Eddy and her followers, perhaps, exemplify this belief to a greater degree than is done by the people of other denominations.

* * *

From a handful of original supporters Mrs. Eddy increased the number until the Christian Scientists are now a power in the religious world.

They met with many rebuffs. Critics were not sparing of the tender-hearted woman's feelings, and who can tell the pain she must have felt when the sharp thrusts of the public lance often reached their mark?

But she was resolute and undaunted. She was firmly founded in her belief, and she heeded not what her detractors said of her or her ideas.

Mrs. Eddy worked and prayed on. At times it seemed that the discouragements with which she met must in the end be too severe for a frail woman, but she conquered them all.

It is Mrs. Eddy's faith that affords the world the most inspiring example in connection with her career. She could not acknowledge defeat.

She believed that a Supreme Being was the rock on which everything else was founded, and that so long as she could cling to the rock no harm could come to her or her work.

That is what has made Mrs. Eddy one of the world's greatest women. No other attribute is so marked as that of unswerving faith in her principles and in the mission which she was sent into the world to perform.

* * *

Mrs. Eddy will not be classed as "great" in the same manner as other women of her time. She has not filled the public mind with those things that are of earth earthy.

Hers is a greatness of love, of heart, of mind, of faith, of all the higher elements that are too often crushed beneath the overpowering weight of mundane things.

She will always be known as the contemporary of such magnificent women and world's workers as Harriet Beecher Stowe, Queen Victoria, Jane Addams, Helen Gould, and their kind, of which there are few.

Who can estimate the real value of such a woman's work? It is as illimitable as the universe itself.

Herself the stanchest advocate of continued prayer, Mrs. Eddy doubtless will be the subject of thousands of fervent petitions to the throne of grace at this time.

And the burden of these prayers will be that her useful life may be spared to the people for other anniversaries such as that which took place at Brookline yesterday.

PROPHESYING EVIL.

CLARENCE W. CHADWICK.

THE so-called mind of mortals is constantly looking for trouble, and it usually finds it. Until quickened by the leaven of spiritual truth, it spends much valuable time in murmuring, faultfinding, criticizing, and condemning. It is pessimistic and pestilential, forever borrowing trouble and getting others into trouble. It is so accustomed to look on the dark side of human existence that it has become a veritable prophet of evil.

As the harmonies of spiritual Life unfold more and more in the universal consciousness, the devastating and obnoxious tendencies of this aggressive foreboder of evil become more apparent to those who are gaining a balance on the side of good and are striving to "live above corporeal sense and correct it" (Science and Health, p. 167). They feel the touch of error's boasted law of condemnation, but having learned that there is no material law they are enabled to annul this merciless usurper of divine power, and to find the one haven of rest and peace "in the secret place of the most High." In this way the Christian Scientist becomes reconciled to the good, and ever afterward, unless he loses sight of the goal of spiritual perfection, he will be found contending for the reality and operation of divine law as abundantly able to correct the discords of earth. He will never predict evil for friend or foe, but step by step he will prove that man is not a slave to matter, and that his knowledge of good is his spiritual dominion.

If all mankind could be brought to realize that what they know aright concerning God and His universe, including man, never enables them to know, see, or predict evil, what an awakening this would be! It is a too common error for mortals to believe that man has a perfect right to see and to know evil. This is equivalent to believing that it is right to know that two and two are five—a mental impossibility. If it is right to know evil, it is also right to think, speak, and do evil. Who could do evil or would want to if he did not mistakenly claim to know that evil is something, an entity? Does not an all-good God forbid man's knowing any such thing as evil? How could man be the image and likeness of God, and at the same time know or express something that God neither tolerates nor permits to exist in His universe? It is high time for humanity to awaken from the mesmeric dream of a good-and-evil existence, and to learn the real meaning of salvation as defined by Mrs. Eddy in Science and Health (p. 593): "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed."

No one has a right to know something that can be proven to be only a mistake or lie about something that is true. There is no law in existence that can cause or authorize him to know something that is not true and therefore not spiritually real. He may lose sight of infinite good so far as to believe a lie, but he can never in time or eternity know it to be true and real. Why not accept the truth in Christian Science, then, and begin to know that good is All-in-all, and evil simply a minus quantity, a mere nullity? This godless belief in evil that has been handed down from generation to generation will be wiped out of human consciousness when humanity realizes that it has no moral or legal right or authority to admit the existence of anything that is unlike God. When this point is reached, well-meaning men will cease to prophesy evil. They will reverse the would-be dictum of the material senses and no longer accept their false, misleading, and demoralizing testimony. They will learn to "walk by faith, not by sight." Having faith in good only, they will look for and predict the coming of good and not evil to man.

Although Christian Science teaches and demonstrates the reality and completeness of good, some of its would-be critics refer to it as the broad way leading to destruction. Does the healing of the worst of human vices lead men into hell, or out of it? Does the healing of the depraved appetite for liquor and tobacco degrade and poison human character, or purify and sweeten it? Does the healing of what the materialist calls incurable disease lead people to perdition, or does it give them a foretaste of the salvation vouchsafed to them by an all-merciful and all-loving God? Does the positive annihilation of sin, with its retinue of fear, hopelessness, and despair, tend to demoralize human conditions or to ameliorate them? Did the healing works of Christ Jesus, who came to do the will of the Father, lead to degeneracy, or did they open the door to the kingdom of heaven on earth? Passing strange that people who consider themselves intelligent and progressive should feel called upon to sit in judgment upon the practical results of Christianly scientific thinking and living! Why do they consider it perfectly natural to expect the experience of evil and deem it a violation of law to endeavor to get rid of it? Will such teaching ever reveal the goal of spiritual perfection? Will it ever do away with "man's inhumanity to man" and usher in the reign of "on earth peace, good will toward men"?

The mission of Christ Jesus was to "destroy the works of the devil;" "to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free;" "to set at liberty them that are bruised." How can present-day Christians emulate his example of unstinted goodness and mercy to benighted humanity, so long as they hold to a belief in the naturalness of evil and predict sorrow, pain, disaster, pestilence, blight, and manifold other troubles, and even express disappointment and surprise when such conditions do not come to pass? No wonder that Christian healing was lost sight of when an "evil eye" or material sense gained apparent ascendency in the minds of ethical, moral, and religious teachers. Christian Science healing results solely from the ascendency of spiritual sense, the offspring of that infinite Love which "thinketh no evil,"—predicteth no evil, seeth no evil, knoweth no evil, permitteth no evil. When all thinking people surrender to the righteous control of spiritual sense and no longer cultivate an "evil eye," the gospel of healing and salvation will be universally acknowledged, and the prophecy of Isaiah, "The earth shall be full of the knowledge of the Lord, as the waters cover the sea," will come to pass.

A PILGRIM SONG.

ROBERT NALL.

WHAT "rivers of refreshment and wells of consolation," as some one has called them, the Psalms have been and still are to mankind. Their value is untold. It has been well said that their language has become "part of the daily life of nations, passing into their proverbs, mingling with their conversation, and used at every critical stage of existence." The whole of the Psalms may be studied with profit by every Christian Scientist. Some students may be inclined to draw the line at the imprecatory Psalms, but wholesome lessons may be drawn from these when some measure of spiritual understanding is brought to bear in their interpretation. Probably the 91st Psalm is that which appeals to us most strongly, because it seems to bespeak a very wonderful "ark of safety," where we have the assurance that we can dwell with perfect confidence in the care and keeping of divine Love. But there is unfathomable richness embedded in others, including those Psalms known as the "songs of degrees," from the 121st to the 134th. The Revised Version calls them the "songs of ascents," or literally they may be styled, "songs of pilgrimages;" and how beautifully suited they are to those who are journeying to the heavenly Zion may be understood as they are studied from the true—that is, the spiritual—standpoint.

Digitized by Google

Take the 121st: "I will lift up mine eyes unto the hills." The poetic beauty and the musical rhythm are only surpassed by the profound trust in God, the universal Father, as the protector and keeper of His children, which runs like a crimson thread through every word. This is one of the psalms that has cheered and comforted Christians in all climes and all circumstances. It was the inspiration of the Covenanters of the seventeenth century, as they worshiped on the hillsides of Scotland when dangers beset them all around. It stimulated and encouraged Bishop Hannington on his toilsome journey to Lake Victoria Nyanza, which ended in martyrdom, for he recited it as he greeted the sunrise every morning. It is the psalm that David Livingstone read when he conducted family prayer on the morning of the day that he left his home to go out to his great work in Africa. It is part of the story of the Indian mutiny—the psalm that William Edwards found wonderfully fitted to the needs of the heroic and suffering band who for months were at death's door; and it is the psalm that saintly Francis de Sales resolved in his twentieth year to adopt as part of his "rule of life;" when midnight terrors beset him, he would remember the God who never slumbers or sleeps and who is ever near at hand.

In what direction are we as Christian Scientists looking for help? To what extent have we abandoned those earthly concepts and aspirations which so largely dominate the "rule of life" of humanity, and how far are we seeking to cultivate that spiritual sight and sense which will lead to harmony and health? Our Leader has told us that "if the disciple is advancing spiritually, . . . he constantly turns away from material sense, and looks toward the imperishable things of Spirit" (Science and Health, p. 21). Spiritual teaching such as this is clearly enshrined in that pilgrim song. The psalmist, at first using an illustration from the hills around Jerusalem, to which the footsore wanderers looked with eager eyes, was struck by the thought that there are times when human assistance is of no avail, and was then inspired by a vision of the omnipresent, omnipotent creator of the universe. Those who know what such a vision means—and it comes to every earnest truth-seeker—can well imagine that it brought courage and cheer and consolation.

Then he goes on, "My help cometh from the Lord." God will not suffer the foot to slip, nor will He forget to watch over His children. He will be a protection and a shade from all harm, and He will preserve from all evil—even "preserve thy soul." What has God's child then to fear, when God is our "keeper"?—that "blessed heaven-taught description of God," as it has been styled. Shall we ever falter in that journey from sense to Soul, respecting which we have so many guide-posts in the Bible and our text-book? While we are faithful and true, determined, in our hungering for spiritual nourishment, to let our gaze rest nowhere but in "the unsearchable realm of Mind" (*Ibid.*, p. 264), we may abide confidently in Love's sustaining and protecting power. The goal we are seeking is that perfect consciousness of Truth which will come to us as we look away beyond earth's fleeting visions to the hills of spiritual reality. Error may suggest that help will not come when most needed; may even tempt with the subtle thought that as the perfect overcoming has not yet been allowed, little or no further progress in the divine life can be made; but let us remember what the Master did when so tempted. Promptly and vigorously he cast out the Satanic suggestion, and it was forever destroyed by the Father's power.

As we hold fast to the promises of God's Word, and know that Love "will" (as the American Standard Version of this 121st Psalm puts it) "neither slumber nor sleep," but keep us everywhere,—on our journeyings, in our going out to our daily avocations, when we come into our homes, now, and at all times, and "evermore,"—then all fear will be cast out, and our song will be one of gratitude and joy continually.

MAN'S TRUE INDIVIDUALITY.

ANNE ELIZABETH JENKINS.

In the seventeenth chapter of Acts, we find the statement that Paul and his companions had "turned the world upside down." It may also be said that the fundamental teachings of Christian Science have literally turned upside down our preconceived notions about God, man, and the universe. It is as though we had for years been going around on our heads, and had suddenly been told about it. Perhaps a few of us would believe the statement and would with a great deal of difficulty make the reversal and stand upright. Everything would appear very strange to us at first, and all our friends would still be standing on their heads, very uncomfortable, greatly hampered in their efforts at activity, and yet rather angry with us for getting about so much more easily and happily.

Having stood on our heads so long, we would be very slow in accepting our freedom, our God-given dominion over our body and our environment, for it would be difficult to believe, all at once, that we were so free, and that our capacities for doing and being were so enlarged. We would have conceived of man for so long as upside down, that only by degrees could we be convinced that his true individuality is upright and Godlike. Gradually, as those about us saw our increased freedom and happiness, others could come to us, asking to be helped to stand upright, till at last there would be a great host of people who were no longer going about on their heads.

This illustration presents in a homely way the condition that existed before Mrs. Eddy made the remarkable statement regarding God and man which is turning the world right side up. Man's individuality was thought to be material. She declared it to be spiritual. Man was believed to be infirm, hampered, limited along every line. She declared him to be strong, unhampered, possessing unlimited capacities for progress and growth and for the accomplishment of good. Humanity had believed that God operated through laws of sickness and sin. She declared that God operated by means of the unchanging law of health and goodness, and neither created evil, employed evil, nor tolerated evil in His all-wise government of a perfect universe. Humanity, standing on its head, and seeing all things from this distorted view-point, believed that it was helping God to create. She declared that God's creation was already complete, and that it only remained for us to see it in its completeness.

Humanity believed that every man had his own home, and that he had the right to shut out of this every other man, and that some homes were stately and full of good cheer while others were mean and poor and bare, and that many people were left quite outside and had no homes at all. She came declaring that there is in reality but one household, the household of God, and that it includes all right ideas; that there is a place and a plan for each, and that work is provided for each, with its righteous reward. She declared that no right idea ever went out of this household, but that the household is eternally complete. Humanity imagined that it saw man when it looked at a material personality, composed of material parts, and that when this disappeared through the door of death, the individuality had been lost sight of. She declared that material personality is not individuality, and that, being wholly spiritual, "man's individual being can no more die nor disappear in unconsciousness than can Soul, for both are immortal" (Science and Health, p. 427).

As we study Science and Health these declarations become gradually more and more comprehensible to us, and

Digitized by Google

we begin to prove them, after which we can speak with authority. When that process which humanity calls death takes place, mortals say that they have lost a friend, or that some household is desolate, or some child is motherless, etc. This is the illegitimate conclusion from false premises, namely, that there are many homes, many mothers, two universes, heaven and earth, and a law of death.

Truly Science has turned things right side up when it declares that there is but one Father-Mother God, one all-inclusive household, one universe, one law, the law of life and activity. If we fully realize the truth of this, the legitimate and inevitable result will be that we cannot be separated from Love—in its infinite manifestations. If we have the right understanding of individuality as spiritual, and discerned through the senses of Spirit, we will know that there is no separation between God's ideas. Science reveals God as "the central Life and intelligence around which circle harmoniously all things in the systems of Mind" (*Ibid.*, p. 310). All of God's children are therefore in the one kingdom, the kingdom of heaven, the consciousness of harmony.

GETTING RID OF DIFFICULTIES.

WILLIAM HART SPENCER.

FOREIGN matter in the working parts of a machine interferes with its smooth running, and to the extent of the impairment it is an impediment, and hinders the purpose for which the machine was intended; therefore the competent machinist is alert to such an obstruction, and searches it out in order to remove it. So, too, unwarranted things in our mentality prove a clog to aspiring sense, the instinct for betterment. They deaden the moral incentive, and interfere with the activity of conscience. An awakened conscience is of the first importance, for it is only through the quickening of this element in our humanity that we are able to see the imperfections in our lives. Until these are seen, the necessity for correction is not apparent, and the false testimony of the senses will still pose in the garb of truth.

The outrageous conditions which are made plain by an awakened conscience may leave one in a deplorable state, unless the uncovering leads to that activity which finds a way of deliverance. In itself the awakening seems to accomplish nothing, beyond giving us an exaggerated view of the undesirable. It may be possible under these conditions for one to develop a tolerable patience; nevertheless this is seldom more than an element of stoicism, which comes from the feeling that there is no way out. Beyond a certain limit such a stimulus is non-effective, and mortal-mind philosophy fails to answer the purpose. If we gain the true incentive, the very longing to break away from an unsatisfactory mental environment aids us in our endeavors to overcome in our character those things which, presumably through lack of understanding, are the cause of our bondage to old beliefs and habits, and through such efforts we come into a stronger light, where the difficulty becomes plainly evident on self-examination. Possibly it is something which has hindered for years, but, not being recognized as a hindrance, no effort has been made to eradicate it; or it may be that we have simply been indifferent and careless, and the enemy has sown tares while we slept.

When approaching an obstacle in character building, it would be ludicrous, if it were not so pathetic, to note how daintily and ephemerally it is often touched upon by the very ones who, in the attempt to overcome obstacles to material success, can deal such sledge-hammer blows. The salient obstacles at least must be brought to light and conquered, before there can be that poise which will admit of our advance as a whole. If one has the desire for spiritual growth, he cannot look for a condition of ease, since every effort, in proportion to its success, seems to precipitate an assault of the enemy. An honest attempt to throw off the shackles of mortal mind belief requires strenuous effort on our part, for while "it is God that worketh" in us, it is demanded that we work out our own salvation.

A dead limb on a tree may be cut off, but the only remedy for an element of error in our mentality is elimination. The mere lopping off of a bad habit here, and the correction of an evil trait there, while commendable and often necessary, is not growth. Detachment, without attachment, is of small value. It matters but little if one be unworldly, unless he is also spiritual. The way out is always a spiritual way, and it must be spiritually discerned. On this material plane our understanding of mortal affairs is naturally greater than our knowledge of Spirit, and spirituality is frequently of slow growth, since we have to put away that which seems to be a part of us, the mental accumulations of the years, and this can be accomplished only as we apprehend and assimilate spiritual truth. It is apparent that an orderly procedure is necessary for the definite accomplishment of a desired result, and some rule is needful if a systematic undertaking in any line is to be made. The fact that success has not crowned one's effort in the first or succeeding attempt should not be discouraging, provided we have spent time and thought to prove to ourselves that a rule is right, and have then obeyed its behests. If we fail in our effort, it is not the fault of the rule, but of our application of it.

Job said, "How I wish the Almighty would speak, or my enemy write in a book" (Farrar Fenton translation). The Almighty has spoken in times past through devout men, and the record is before us in the Scriptures. Contained therein is a divine remedy for every abnormal condition of mind or body. All down the ages godly men have grasped the meaning of the Scriptures in a measure only, and hence they have been able to profit by its teachings only intermittently or partially. It remained for one in this age, through spiritual discernment, to give us a "key" which unlocks these treasures, and today, by its aid, the desirous and receptive mind can discern the Principle and rule which opens a way into the kingdom of heaven. In Christian Science, Mrs. Eddy has brought to light the teaching which has lain dormant since the falling away of the early church. The unfoldment, to the prayerful student, is not emotional but is rather logical and convincing. It shows the rock, Christ! it opens the window and gives us a vista of Truth. The closer the study, if one is amenable to spiritual leading, the larger grows the thought and comprehension of that saying of Jesus, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

To know eternal Life means to unknow our limited or mortal sense of life; it means, through the sweet effulgence of Spirit, to lift one's head above the mortal concept into the realm of the heavenly; to come into a large place, wherein this human consciousness of God can grow into a realization of our sonship. As we progress, the limitations of this so-called life fall away, and as we escape from the restraining influences of evil, we begin to see that Love is not merely an attribute of our heavenly Father, but that Love is God. In proportion to our apprehension and application of this truth, the mechanical side of character building ceases to interest us, and as a child outgrows childish things, so do we advance.

"Love." Love is the everlasting worker of miracles. When all seems hopeless, and the soul is descending upon the road that has no turning, let it be awakened by love, and immediately all the forces of the spiritual world converge upon it to lift it toward God. Love is the savior, love is the perpetual wonder of life.

EDWARD HOWARD GRIGGS.

SELECTED ARTICLES.

[Editorial in *Troy* (N. Y.) *Press.*]

Mrs. Mary Baker Eddy, Founder of Christian Science, and author of "Science and Health with Key to the Scriptures," enters upon her ninetieth year today, having been born July 16, 1821. Despite all newspaper gossip to the contrary, she is still the active and actual Leader of the great and growing religious movement she originated, no important action being taken by the authorities of the monster Mother Church in Boston (of which all others are branches) without her suggestion or sanction. Mrs. Eddy emphasizes the fact that she will have no individual successor; that her book, with the Bible, must be the sole standard of faith, and the church government must inhere in the official body of the church.

In her early forties Mrs. Eddy was broken down physically but wonderfully bright mentally, and her future seemed dark indeed. Today no woman in the world is better known, and so eminent a critic as Mark Twain, in a work adverse to her faith, declared his conviction that in future centuries her fame would be greater than that of any other person of this age. Myriads of Scientists feel and hope that this prediction will be verified. At any rate, friends and enemies alike know that her success to date is phenomenal. It is a familiar story, which needs not to be recounted here.

This is a birthday editorial, but it strikes a dissonant note. Mrs. Eddy believes that marking the progress of time, celebrating or dwelling upon the anniversaries of people's births, is a foolish habit, and one adapted to facilitate decrepitude—an enfeebling consciousness of old age. In a word, she is convinced that if birthday observances, presents, and special attentions of all kinds were discarded, and as little thought as possible given to the matter, people generally would retain their youth, health, and happiness much longer than they do in the existing order of things. She would make any reference to age or birthdays, excepting where something important required it, unfashionable. Her theory is corroborated conspicuously in her own case.

In regard to Mrs. Eddy's religious teaching, the allness of Spirit and the annihilation of matter, it is not necessary to speak here. It is one of the most controverted themes of the times. In our opinion her success is due in no small measure to her extraordinary literary aptitude. Her style is chaste, impressive, and intensely individualistic. Nowhere does she exhibit greater felicity than in writing hymns. One of her latest, entitled "Love," perhaps subconsciously harmonizes beautifully with the current advent of aviatory achievement. This may be noted in the opening stanza:—

Brood o'er us with Thy shelt'ring wing,
'Neath which our spirits blend
Like brother birds, that soar and sing,
And on the same branch bend.
The arrow that doth wound the dove
Darts not from those who watch and love.
"Miscellaneous Writings," p. 387.

[Editorial in *Rock Island* (Ill.) *Argus.*]

Mrs. Mary Baker Eddy, the inspiration of Christian Science, has entered upon her ninetieth year. At least half her years have been wonderfully eventful ones for herself as well as for that large and swelling army of men and women who interpret life and the Scriptures through her marvelous ken. One may contradict or seek to confute every fundamental thought in the propaganda of Christian Science, and yet it must be conceded, in fairness, that the life, example, writings, and teachings of Mrs. Eddy have been for the great betterment of the world and the advancement of the quality of citizenship.

Here is a gospel of Christian optimism, and healthful and wholesome results have established its right to serious recognition everywhere. It has grown beyond the stage where the tinsel weapons of the scoffer may prevail against it, and must henceforth be considered upon its merits.

[From an editorial in *Buffalo* (N. Y.) *Express.*]

Mrs. Mary Baker Eddy was eighty-nine years old yesterday. No woman of the present day is known to more people than is she. It is probably quite correct to say that in all the world's history there have been few women who have been so reverenced as is she. It is also true that there have been few who have been more savagely attacked than she, and few subjected to so much ridicule.

She is a wonderful woman. Whether one believes or not in the religion which she has established, and which has won its millions of followers throughout the world, one must concede this much. . . . The fact that she has developed it until it has become the power it is, that she has organized it as no other religion has ever been organized, the fact that she rules her followers as few heads of a church have ever done, these things mark her as a wonderful woman. And it must also be conceded that Christian Science has done a great deal in many ways for many people.

[Frederick Dixon in *South Wales Argus*, Newport, Eng.]

You write that the followers of every religion have assumed their own miracles to be real and superhuman, and those of other religions to have been ingenious tricks. This, as a general rule, may be the case, but it in no way affects the argument of Christian Science, which insists that the power to perform miracles, which you quite fairly define as the occurrence of generally unfamiliar and unexpected phenomena, is dependent entirely on the knowledge of the means by which these phenomena are produced. An understanding of the absolute is surely the most scientific knowledge a man can possess, and it must be demonstrable in proportion to its completeness. The worker by mental suggestion may induce the subject to believe that pain and disease, being mental, can be overcome by some hypnotic process, but this simply results in the fact that if, as Mrs. Eddy writes on page 104 of Science and Health, it is possible to heal "sickness through a belief, and a belief originally caused the sickness, it is a case of the greater error overcoming the lesser. This greater error thereafter occupies the ground, leaving the case worse than before it was grasped by the stronger error." The cause has not been affected in any way, and the result is liable to reassert itself at any moment.

Now divine healing is scientific. It is effected through the operation of the laws governed by divine Principle, and the knowledge of these laws is gained precisely in the ratio in which a knowledge of the absolute is acquired, a knowledge, that is to say, of the truth which Jesus said would make the world free. In this way, the Aaron's rod of divine healing swallows the magician's rod of mental suggestion, for mental suggestion, based on the mistaken belief that there is power in good and power in evil, is absolutely incapable of producing either a permanent effect or an effect which can be described as beneficial. It is, of course, simply the human misconception of power, alluded to in the allegory, in Genesis, as the fruit of "the tree of knowledge of good and evil," the eating of which was bound to result in death. Jesus, centuries later, put the same idea in different words, when he declared, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." In saying this, he drew a final distinction between any healing which may seem to result from mental suggestion, and the healing which results from an understanding of divine law, which not only destroys sickness and pain, but which brings, in addition to health, "the peace of God, which passeth all understanding."

The miracles of Christian Science, then, are not supernatural, but are simply the divinely natural results of a

Digitized by Google

knowledge of the truth which makes men free. Science and Health is the Christian Scientist's commentary on the Bible, and through the study of that commentary he may learn, not only how to gain this knowledge, but how to demonstrate it, and so to understand and avail himself of the promise, "He that believeth on me, the works that I do shall he do also."

[Edward W. Dickey in *Anaheim* (Cal.) *Plain Dealer.*]

"Layman" says, "Our very senses affirm matter to be real." Our eyes sometimes affirm a mirage to be real. These same senses affirm that the sun rises, that the horizon is a fixed line, that the earth is flat, and that the rails of a railroad converge in the distance. As a matter of fact, every sense impression must be corrected by thought before it can even simulate intelligence. Could there be any sense testimony without thought? Take away the so-called mortal mind, and the senses give no evidence of existence. Christian Science is revealing God to humanity, and this unreality of matter becomes manifest. Critics must give earnest heed to what Christian Science gives in place of what it takes away. Then, and only then, will they be able to understand the statements regarding evil, sin, disease, and death. We cannot find God by searching from a material standpoint. We must classify the spiritual as the real because it is like God, Spirit. All else "profiteth nothing," and is therefore temporal, finite, unreal. It is on this basis that Christian Science is bringing the Life that is "the light of men."

As understood in Christian Science, man is spiritual because he is the image and likeness of God. This man is not a mortal. No endeavor is made to place the false mortal concept of man on a basis with or on the level of God. In revealing the real nature of man, Christian Science uncovers and destroys the philosophy of the serpent, root and branch. Here again our critic is reasoning from a material standpoint in discussing spiritual things. You cannot mix the two, any more than light can commune with darkness or Christ have concord with Belial.

If "Layman" will give earnest heed to the teaching of Christian Science in the light of the spiritual illumination it is bringing to humanity, he will find that this is a practical, logical, and consistent religion, come to reaffirm the Christ-teaching, leading "into all truth." He will also find that this Science frees from all forms of disease and reclaims from sin. Furthermore, he will see the way open for all to prove that the "last enemy" will be overcome, in strict accord with the Scriptural promises. It is "by their fruits ye shall know them," and "every good tree bringeth forth good fruit."

[James D. Sherwood in *Beaumont* (Tex.) *Enterprise.*]

The building of splendid edifices in which to worship God seems to be a necessary concession to the need of the times, but the Christian Scientist understands that "the most High dwelleth not in temples made with hands;" that God is infinite Mind; that heaven is His throne and the earth His footstool. Again, the Christian Scientist believes the best is none too good, and when a church is to be built to accommodate their ever-increasing congregation they endeavor to build something commensurate with their requirements, and thus it is that many splendid church buildings are to be seen in our land; and the end is not yet.

Our critic contends for the doctrine of evil, and holds that with God "pain and evil are means of growth and of larger life." In order to judge rightly the Christian Science view-point where it is said that evil is unreal, one must be able to discriminate between man made in God's image and the mortal misnamed man, emanating from the Adam-dream, where the doctrine of dualism, the belief in good and evil, began. It is absolutely certain that God is, that He is infinite, and that He is infinitely good, and that He made all that was made and made it good, and so pronounced it: "very good." It is impossible for infinite good to know evil, since there is nothing beyond infinity; and there is but one creator, who has made all, and made it good, and finished His work. Evil, the opposite of infinite good, did not proceed from God nor from man made in God's image and likeness. Habakkuk declares that God is "of purer eyes than to behold evil, and canst not look on iniquity."

If evil were real, God would be its author, else there would be another creator; but we are told in the Bible that "there is none other God but one." God is infinite good and is the only causation. We believe that "like produces like," and from this premise we are compelled to admit that evil, as vividly as it may appear and as wicked as it may seem, is temporal, and that with all other illusions it will pass away at the dawn of understanding. When God is understood as infinite good, then evil will be seen as unreal because it is not of God. As long as sin is indulged in, there will be a sense of suffering, the suffering in the flesh which destroys the belief in the pleasure of sinning. When repentance and reformation lead to the understanding of reality, the sinner will cease from sinning and the penalty of suffering will be removed, and harmony, the normal state of man and the universe, will be established. A Christian Scientist is fully aware of the arrogant, but false, claims of evil; he recognizes its seeming presence, despotism, and activity, but he does not believe that evil proceeds from God, and in that sense he understands it is not real. This view of evil gives the Christian Scientist confidence in his ability to overcome evil with good, and he has many experiences which prove that his faith is well founded.

The rabbi says, "Whether anesthetics can be done away with and pain abolished by thinking that it is non-existent —well, all we can say is, happy are those who believe it possible." In reply we may be permitted to cite the case of Shadrach, Meshach, and Abednego, who were placed in a furnace seven times hotter than it was accustomed to be heated, and in spite of that, we read that "the princes, governors, and captains, and the king's counselors, being gathered together, saw these men, upon whose bodies the fire had no power, nor was an hair of their head singed, neither were their coats changed, nor the smell of fire had passed on them." Their means of defense was reliance upon the divine Mind. They trusted in God and passed safely through the fire and came out unharmed. The ancient prophets raised the dead, and so did Christ Jesus and his followers. Will any one doubt that an understanding of the Science of being that is capable of raising the dead can remove the physical sense of pain? Daily it is being proved that divine Mind is able to overcome pain, and that it is doing it. Proportionately to one's understanding of God as the only Mind, as All, and All-in-all, will he become immune, until finally heaven or harmony is reached, where man knows himself as he is known,—spiritual, perfect, immortal.

[Gray Montgomery in *Colorado Springs* (Col.) *Gazette.*]

The influence of Christian Science supplants one's desire for worldly riches and material wealth with the desire to be good, holy, pure, and righteous. The thought of the consecrated Christian Scientist is so filled with the allness of God, Spirit, that he is enabled to lift himself above the physical into the spiritual, a realm which is the desired habitation of those who follow God "in deed and in truth." Mrs. Eddy says: "Divine Science, rising above physical theories, excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123).

Christian Science exposes and denounces hypnotism or the influence of the erring human mind; it saves the victims of this enslaving mortal domination. Christian Science is

Digitized by Google

the realization and understanding of the omnipotence and infinite love of God, which frees man from all false bondage. The sick are healed and the sinning are reformed when man fully understands his relation to God, the all-loving Father, "full of compassion, and gracious, long-suffering, and plenteous in mercy and truth."

[Olcott Haskell in *Post and Globe*, San Francisco, Cal.]

The editorial in regard to mental healing presents some of the problems which must of necessity arise under any method of treating the sick, and leads to the question as to how Christian Scientists meet such problems.

We agree with the statement that ignorant attempts to go beyond what one is able to prove are not helpful and must result in disappointing experiences which it were better to avoid. Mrs. Eddy clearly teaches this where she says in her book, Science and Health (p. 401): "Until the advancing age admits the efficacy and supremacy of Mind, it is better for Christian Scientists to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon, while the mental healer confines himself chiefly to mental reconstruction and to the prevention of inflammation." Elsewhere (p. 443) she advises that, "if patients . . . think they can be benefited by certain ordinary physical methods of medical treatment, then the Mind-physician should give up such cases;" and that invalids should be left "free to resort to whatever other systems they fancy will afford relief."

Christian Scientists employ competent nurses. They are also taught to observe the rules of sanitation and quarantine, and to be careful not to expose their neighbors to anything these neighbors would consider harmful. They do not seek to force their treatment upon any one, even in their own families. The teachings of Christian Science are such as would prevent rash or ill-considered action, so that, if such action ever occurs, it is a result of not following the rules established—and no system is held responsible for those who disregard its precepts.

The majority of those who turn to Christian Science had first sought help from one or more of the schools of medicine. If there were any known system of healing which was always successful, then failure to employ this system might be characterized as "neglect," but so long as there are hundreds of deaths daily in spite of the attendance of those considered most skilled in medicine and surgery, there arises the question, Who shall determine what constitutes "neglect"? In order to use the remedy prescribed by Dr. K., the patient may have to "neglect" to use that recommended by Dr. H., but it would be a dangerous assumption of authority for the state to decide what means a man must employ.

The question as to the extent to which spiritual healing may be successfully practised is one which is daily receiving a satisfactory answer through the healing of many of our citizens, and while there are none today who would claim that amputated limbs had been restored, yet there are numbers of well authenticated cases where those examined by competent physicians who pronounced their diseases to be organic and incurable, have been later restored through Christian Science treatment.

What I have written is not intended as an argument for carelessness, or for the neglect in any way of either children or adults, but it is a plea that intelligent persons be allowed to exercise their inherent right to seek health through any system which offers to them the strongest proof that it is safe and beneficial.

[Alfred Farlow in *Stamford* (Conn.) *Advocate*.]

Our critic seeks to establish a variance between Mrs. Eddy's statement, "Man is never sick" (Science and Health, p. 393), and the assertions that she has cured carious bones, cancer, etc. Christian Science does not deny that disease and sin exist in erring human experience, and that it is real to that experience, and must be grappled with and overcome; but it destroys these discords by the understanding that the real man was never sick, that sin and sickness are no more a part of the real individual than is the mist a part of the earth which it hides and appears to distort, or the besmirching clay is a part of the diamond which it conceals. Science holds that God is not the author of sin and sickness, and that, therefore, it has nothing more than a seeming existence. The Scriptures declare: "God saw every thing that he had made, and, behold, it was very good." Sin and sickness are not a part of the "very good" things which God created, and we must be faithful to the proposition that there is but one creator. Moreover, the Scriptures teach that sin, sickness, and death are the works of the devil, and our Lord said of Satan: "When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it," meaning that the devil's own, his offspring, is a lie. The Master referred to the woman as having been "bound by Satan, lo, these eighteen years." He did not mention rheumatism. He gave disease no superficial diagnosis or name. If Satan is a liar, his own, as our Lord taught, can be nothing more than a lie. Thus, by axiomatical reasoning, it is shown that Jesus regarded sin and sickness in the same light in which they are held by Mrs. Eddy. It is not claimed that the author of the Christian Science text-book has originated something which our Saviour did not teach, but that she has discovered the Science of Christianity which the Bible contains, and has therefore made it practical.

[Charles W. J. Tennant in *Bath* (Eng.) *Citizen*.]

In a letter referring to Christian Science, the writer says: "Christian Science may or may not be Christian, but it does not impress one much on its scientific side." This is only the opinion of our critic. The hundreds of thousands of intelligent people throughout the world who are daily proving the truth of Christian Science are alone in a position to say whether it is Christian or scientific. Our great Master gives us a simple way of knowing a Christian when he says: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Scientists do not claim to have a perfect knowledge of the vast subject they are studying, and any failure they may make in no way reflects on the divine Principle of the Science. One would not be entitled to hold up the principle of mathematics to ridicule just because a student had failed in the demonstration of a problem. Lack of understanding would be the cause of failure, as it was in the case of the disciples of Jesus, when they were unable to heal the lunatic boy. They asked Jesus why they were not able to heal him, and he said, "Because of your unbelief." Then he added: "Howbeit this kind goeth not out but by prayer and fasting."

[John L. Rendall in *Washington* (Ia.) *Democrat*.]

Christian Scientists recognize that to the human sense of things, pain, sickness, and discords of various sorts are very real. There is, however, little to be gained by emphasizing the seeming reality of these things and much to be gained by that attitude of thought which minimizes fear and which entertains hope and confidence in God and in the promises given in Scripture of His healing and saving power. Christian Scientists appreciate all that is beautiful, good, and true in nature and in art. Their endeavor is to emphasize the good and to overcome the evil, and thus bring about better, happier, and more perfect conditions for themselves and for humanity.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

MORE THAN A "CURE-ALL."

MANY persons look upon Christian Science as being nothing more than a cure-all for disease, a sort of family doctor, and while they admit the clean and wholesome lives of those who are truly following Mrs. Eddy's teachings, they fail to see the connection between these teachings and the improved conditions which they have brought about. That the healing of disease and the improvement of moral and spiritual conditions are on the same basis is a leading point in Christian Science, and this is clearly expressed by Mrs. Eddy on page 370 of Science and Health as follows: "To be immortal, we must forsake the mortal sense of things, turn from the lie of false belief to Truth, and gather the facts of being from the divine Mind. The body improves under the same regimen which spiritualizes the thought." She also writes, on the same page, "A physical diagnosis of disease—since mortal mind must be the cause of disease—tends to induce disease;" and it is only reasonable to suppose that a physical or material diagnosis of spiritual and moral conditions would tend to induce inharmony also.

While Christian Science is most widely known to the general public at the present time by its work in the healing of physical ills, its work in the spiritual and moral regeneration of mankind is also distinctive. A great many testimonies come to us which show that the writers have turned to Christian Science not for physical relief, but because they were, as a well-known hymn puts it,—

> tossed about,
> With many a conflict, many a doubt,
> Fightings and fears within, without,—

and that they have found in its teachings not only surcease from spiritual unrest, but through its tender ministrations they have received joy for sadness, hope for fear, and instead of doubt a blessed assurance that infinite Love bestoweth only good on the children of men.

The well-known definition of the word "science,"—"Knowledge gained and verified by exact observation and correct thinking,"—is particularly applicable to Christian Science, because there should be no more exact knowledge of any subject than there is about God and His Christ. This knowledge or understanding of God is the knowledge or understanding which Christian Science brings to humanity in a demonstrable way, and it is by the demonstration of this Science that the sick are healed and the other good results to which attention has been called are accomplished.

The old and time-frayed catch phrase that Christian Science is neither Christian nor scientific, is not now so largely used by opponents of Christian Science as formerly, but when it is considered that such a large portion of the New Testament is given over to the account of Jesus' healing work, it is a wonder that it obtained currency at all. It would certainly seem that this feature of Christian Science practice is not that which can stamp it unchristian.

The many testimonies of physical healing published in the periodicals and related at the Wednesday evening meetings have perhaps made this feature more widely known, but the every-day lives of Christian Scientists themselves should be the most convincing evidence that their faith has made them whole in other and perhaps more important ways.

ARCHIBALD MCLELLAN.

"DO THYSELF NO HARM."

PAUL'S counsel to the Philippian jailer, "Do thyself no harm," may be pondered with advantage by most people today. In the 16th chapter of Acts we read that Paul and Silas had been cast into prison for preaching the gospel and healing the sick in accordance with the command of Christ Jesus, also for uncovering and destroying the false belief in sorcery; but, although they had been cruelly beaten by the order of the magistrates, and their feet made "fast in the stocks," they knew better than to harm themselves further by yielding to self-pity or vain regrets. At midnight, when others were asleep, these two men "prayed, and sang praises unto God." Then, we are told, there was "a great earthquake, so that the foundations of the prison were shaken: and immediately all the doors were opened, and every one's bands were loosed."

This seems wonderful, but it could not well have been otherwise. The entire overturning of mortal belief in the mental experience of Paul and Silas was even more wonderful than the outward occurrences here depicted. Who ever heard of men singing joyfully under such circumstances? Paul explains this, however, when he says, "Our light affliction, which is but for a moment, worketh for us a far more exceeding and eternal weight of glory; while we look not at the things which are seen, but at the things which are not seen." By looking away from material evidence and lifting thought to spiritual reality they could rejoice in tribulation and prove the all-power of divine Love. Paul was not held down by a narrowing sense of self; he was looking for another opportunity to declare the glorious Truth which had opened the prison doors, and when the terrified jailer was about to kill himself, Paul said to him, "Do thyself no harm." The man responded to this loving appeal, and ere morning he had accepted the Christ-teaching.

Paul's advice to the jailer may well be remembered by us if at any time we are tempted to respond to the beliefs of doubt and fear. There are many who may be said to dwell in the tombs (like one whom Jesus healed), concerning themselves not at all with the living issues of the hour, but instead dwelling upon dead, bygone experiences and, like that unfortunate, cutting and injuring themselves with thoughts which wrongly admit that evil has reality and power. To all such Christian Science says, "Do thyself no harm." It is certain that God never harms any one, and it is equally certain that mortal mind has no power to harm us if we keep close to Truth; then it surely rests upon us that we do ourselves no harm.

Our revered Leader says, "We are responsible for our thoughts and acts; and instead of aiding other people's devices by obeying them,—and then whining over misfortune,—rise and overthrow both" (Miscellaneous Writings, p. 110). In no way can we harm ourselves more than by indulging in self-pity when difficulties present themselves. These should simply be welcomed as opportunities for helping ourselves by realizing man's divinely bestowed possibilities, all of which tend toward limitless good. The greater seems the difficulty, the greater the achievement of overcoming it, and each obstacle surmounted through the understanding of Truth is a real victory which helps to make the glorious whole of a life that reflects the Life divine. The one who refuses to harm himself at error's suggestion not only helps himself, but helps and comforts all others who are striving to reach the heights.

"NOT ACCORDING TO THE APPEARANCE."

No one can meditate upon human disposition and history, even for a brief time, without realizing how all-inclusive is and ever has been the habit of hasty and erroneous criticism, and no one can ever measure or define the enormity of the injustice which has resulted therefrom, the wrongs that have been inflicted, and the consequent handicap which has been placed upon individual and racial advance. Most of us have been made familiar in our own experience with the unrighteousness and unfairness of the world's judgment as a whole. We all know, too, how ignoble and unchristian is this human impulse, and that Christ Jesus was but voicing a universal law when he counseled his disciples that they "judge not according to the appearance, but judge righteous judgment."

The significance of Christian Science to the success of our effort to conform to this divine requirement is seen the moment one comes to understand its teaching respecting the dispositions and tendencies that lead us into this sin. Among these mental laziness takes prominence. Men are wont, when a statement is heard respecting a given person or thing, to jump to a conclusion which is wholly unwarranted and the fallacy of which would be recognized were but a moment's careful thought given to the subject, or just a little effort made to know all the facts. We have also found, in our experience, that misjudgments are sure to attend anger; that they characterize the conclusions of those who are prejudiced or unduly self-assured, of those who are dominated by educational bias, and especially of those who maintain the better-than-thou attitude of self-righteousness. When, moreover, we remember that erroneous conclusions are the inevitable outcome of reliance upon the testimony of material sense, we begin to have some idea of the universality of this offense.

From all this mental superficiality and mesmeric stupor God calls men to awake, and the redemptive relation of Christian Science teaching to these unchristian states and conditions of thought is revealed in the fact that it addresses itself to the fundamental need of a quickening, vitalizing sense of and love for eternal Truth. No genuine Truth-lover can be content with anything less than the truth, and it is this that gives him poise in the presence of all seemings. He now begins to recognize the mandatory as well as the prophetic meaning of the Master's words, "Ye shall know the truth," and he makes judgment wait on verification. Furthermore, the Truth-lover is always a lover of men, and when the thought of man is separated in Christian Science from the thought of mortal weaknesses, the pitiableness of the human plight immediately appears, and that throb of brotherliness is felt which, while condemning the sin, would willingly suffer for the sinner.

And then?—well, then one finds that the "yoke" of true obedience is indeed "easy." He no longer has the disposition to criticize or condemn, and his "unrighteous judgment" of his fellow-men becomes a thing of the past. There is simply no question about it: the true love of Truth heals anger, prejudice, self-righteousness, and everything else that hinders the practice of the golden rule, the expression of a just judgment, in every word and act, and how much this means both for the loving and the loved.

Equally clear is it that Christian Science is the cure for all the false judgments which grow out of the acceptance of physical testimony. "Like our Master, we must depart from material sense into the spiritual sense of being" (Science and Health, p. 41). This might be well named the epitome of Christian Science teaching. It covers all requirements and its fulfilment will heal all ills. Like the Master, also, the true Christian Scientist will be careful to rebuke only as he can heal through the loving declaration of demonstrable truth, for he has come to know the unprofitableness, the saddening sequence of all other criticism.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BELOIT, WIS.

With two congregations which taxed the capacity of the building, the new First Church of Christ, Scientist, located at the corner of Bluff street and Garden lane, was formally opened yesterday [May 22]. The entire cost of the church is about fifteen thousand dollars. The building takes its place at once among the most beautiful of Beloit's many beautiful churches. It is finished within in pure white, the only spots of color being found in the seats and the carpets. Opera chairs are used for seating. J. B. Dow, president of the church organization, at the conclusion of the regular service in the evening, gave a brief address upon "The Occasion," in part as follows:—

"In the city of Beloit there has been an organization of Christian Scientists for upward of twenty years—this First Church of Christ, Scientist, was chartered under the laws of the state of Wisconsin in 1904. The first steps toward building this home structure, where larger opportunities could be afforded, were taken some three years ago by the purchase of the site where we now are. Closely following the event,—when we could read our title clear,—a building committee was appointed, charged with the unique responsibility of materializing such consummation as you witness here tonight. Relatively few in number, such a proposition would have been startling had it not been for the fact that the few in number believed that in God is infinite supply. On the morning of the fourth day of July, 1909, ground was broken and the work of construction begun. Later, on the second day of October, this cornerstone was laid, and last night, May 21, 1910, the finishing strokes were heard. The rising sun today witnessed the opening of the doors, surmounted with the greeting, 'How goodly are thy tents, O Jacob, and thy tabernacles, O Israel.' In this work, the consummation of which is so gratifying tonight, both to ourselves and to you who have gathered with us, there have been kindly hands extended and kindly wishes; and some of those kindly hands have been happily reinforced with tokens of substantial aid. In recognition of this, and voicing the spiritual consciousness of our membership, perhaps I can say nothing kindlier, sweeter, or truer of them than this, 'Of such is the kingdom of heaven.'"

Beloit News.

CHICAGO, ILL.

A new Christian Science church, to cost more than one hundred thousand dollars, and which is expected to be one of the finest church edifices on the south side, is to be erected by Eighth Church of Christ, Scientist, at the northeast corner of Michigan avenue and East Forty-fourth street. The immediate vicinity is thus becoming somewhat of a church center, the big Sinai temple being now under construction at East Forty-sixth street and Grand boulevard. The land to be occupied by the Christian Science church comprises 120 by 161 feet and was acquired for eighteen thousand dollars. It is expected that the structure will be finished by May 1 of next year. It will accommodate fifteen hundred persons.—*Chicago Daily News.*

NOTICE.

A list of Christian Science societies at universities and colleges is to be added to the advertising department of the *Journal*. The cards of these societies will include the name and location of the university or college, the name of the president of the society, the name of the secretary or corresponding secretary, and the time and place of meeting.

For cards to appear in the September number of the *Journal*, this data should be sent to the Publishing Society, by letter or telegram, so that it will be received before Aug. 5. Cards for that number need not be prepaid.

THE LECTURES.

DOVER, N. H.

A lecture on Christian Science was delivered in the Dover Opera House by Clarence C. Eaton, May 15. He was introduced by Attorney Arthur L. Foote of this city, who said in part,—

We have gathered here on this beautiful afternoon to enjoy, I trust, an intellectual feast, to obtain a deeper knowledge of Christian Science and a better understanding of its foundation, its teachings, and its practices; for in this enlightened day, when we observe that some of the most brilliant minds of our race have become converts to this faith, we cannot afford to be ignorant of the subject. From a superficial view, we have already learned that, like all religions which have been of benefit in the upbuilding of mankind, this Science has met and overcome the obstacles placed in its pathway, for the shining light of Truth and Love has dispelled the vapor of ridicule and oppression and compelled our admiration and respect.—*Democrat.*

CALGARY, ALBERTA.

"The Idealism of Jesus" was the subject of a lecture by the Rev. Arthur R. Vosburgh, Thursday night [May 5] in Sherman's Auditorium. J. A. Carson introduced the speaker, and said in part,—

Modern thought may explore all lines of philosophy and psychology, seeking salvation through the tangled webs of human opinion, but it must needs return meekly to the life and teachings of Jesus the Christ, as the one and only open door through which a real knowledge of God, of Life, Truth, and Love, may be found. I am persuaded that no man has the right to call himself a Christian, a true disciple of Christ, unless he can prove his clear title to that name by healing the sick. The Master gave us the definition of a Christian, a true believer, in these words: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Those who are making a special study of Christian Science, and who are applying it in their daily lives, can apprehend to some extent what Mrs. Eddy, the Discoverer and Founder of Christian Science, has done and is doing for the uplifting of mankind.—*Albertan.*

BERKELEY, CAL.

Bicknell Young delivered a lecture on Christian Science at the Rink Auditorium May 24. The large auditorium was crowded with an audience interested in the teachings of this faith, many of whom had come from a distance. The lecturer was introduced by C. F. Wieland, who spoke as follows:—

About nineteen centuries ago there lived one who had a message from his Father to deliver. Jesus gave that message to the world, and proved it to be practical, for it is recorded that he "went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people." It is evident that a teacher imparts his knowledge to his students in order that they may prove the truth of his teachings. Of what value would be the mathematician's labors in the class-room if thereafter his students were unable to work out the problems whose solution he had set forth by example? Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" but he pointed out that of himself he could do nothing, that it was the Father dwelling within him that did the works.

James said of Jesus' teachings, "Be ye doers of the word, and not hearers only." The truth which Jesus taught could and should have been practised uninterruptedly to this day; but that it was not generally obeyed is well known. In this day the message which Jesus delivered for the benefit of all mankind is again, through Christian Science, being given to the world understandingly, and is being practically demonstrated.—*Correspondence.*

HUTCHINSON, KAN.

Prof. Hermann S. Hering lectured here on Christian Science May 23. He was introduced by F. Dumont Smith, who said in part,—

I suppose that to many of you, like myself, the term Christian Science came with a kind of shock. Accustomed to the long and often bitter strife between Christianity and science, there seemed no two words more oppugnant; the phrase seemed a negation, self-destructive. Could it be that there was a true science of Christianity? Not merely a faith, but a knowledge, as of facts proven, for that is the meaning of science. The very phrase provokes interest and excites opposition. But there are some startling things about this new faith, too well assured to be doubted. In the face of the most materialistic age the world has ever known, it has boldly flung the challenge of pure spirituality. It invites the most luxurious and self-seeking generation among the children of men to a religion that appeals neither to the eye nor the ear, that offers no prize of temporality, no rewards of worldly power or pleasure. No vaulted domes or painted windows, no gorgeous altars or sumptuous vestments, no sonorous ritual or sensuous music have attracted you here tonight. Christian Science offers no allurements to the senses or the emotions.

And yet, in a day when the dry rot of unfaith is apparently undermining the oldest creeds, this new faith has a vigorous, growing life. When other churches complain of empty pews, these are filled. When other priests and pastors complain that men no longer go to church, these temples are crowded with men at every service. To all who are concerned with the problems of life and death, such facts are of the profoundest interest. Why is it? Does this new faith at last offer a key to the eternal mystery of human life? Does it afford an answer to the insoluble problems of mortal destiny? Has it a solace for the evils and sorrows of this world? For myself I can neither deny nor affirm. I am not a member of its fellowship. I am here, like many of you, only as an humble seeker for the truth. For us, I trust, as for those who truly believe, there is a message tonight.—*Correspondence.*

ROCKY FORD, COL.

A large audience that completely filled the lower floor, with an overflow into the gallery, assembled in the Grand Opera House on the afternoon of May 15 to listen to an address on Christian Science by Frank H. Leonard of Brooklyn, N. Y. Mrs. Anna Louise Norris Clark, First Reader of the local society, in introducing the lecturer, said,—

You have been invited here this afternoon to listen to an address on a subject that is commanding the attention of the world. We are living in an age of inquiry; of research along all lines of thought. A careful investigation is being made by thinking men and women into all that promises the betterment of the social, civil, and moral condition of humanity. The narrow walls of sectarianism, bearing the bigoted inscription, "My way is right and your way is wrong," are crumbling before an ever-widening liberalism; and the true spirit of freedom impels the man of broad mind and generous impulses to demand not alone his own right to worship God according to the dictates of his own conscience, but the right of his neighbor as well. That the direct beneficiaries of Christian Science are innumer-

Digitized by Google

able bespeaks for it an unprejudiced and thoughtful hearing. Christian Science bears to the sick and despairing a message of hope and cheer; to the sorrowing and sinful a message of joy and liberation from the bondage of evil, and to all it offers that larger acquaintance with God which makes for peace.—*Rocky Ford Tribune.*

NEW HAVEN, CONN.

Judge Septimus J. Hanna delivered an address on Christian Science at Warner Hall, last evening [May 17], under the auspices of Second Church of Christ, Scientist. He was introduced by J. B. Whitaker, Jr., who said in part,—

Throughout the world's history, the interrogation point has figured largely, and no more conspicuously, perhaps, in any other matter than in that of religion. Men have always been asking: Why? Who? When? What? Where? Many of you probably have gathered here this evening, in somewhat of a questioning attitude with reference to the subject which will be presented to you by the distinguished speaker of the hour, who may be termed an evangel of optimism, and who comes with a message pertaining to the so-called new religion, but which is in reality as old as Christianity itself—a religion which takes a firm stand upon the promises of Holy Writ and adheres to the declaration that everything that God made is good, drawing the legitimate inference therefrom that everything which seems not good is not made by God and is therefore unreal—a religion which silences the lamentations of despair and fills the soul with the melody of praise; wipes away tears and replaces them with smiles; dispels shadows and lets in the sunshine; destroys disease and establishes health and strength; conquers sin and enables man to claim freedom from bondage and to enter into his rightful heritage as a son of the King,—all through a realization of the omnipotence, omnipresence, and omniscience of divine Love; a religion full of health, happiness, harmony, and hope. A beautiful theory! Yes, and still more beautiful in practice, as thousands who have experienced its uplifting power and its health-giving inspiration gladly testify.

New Haven Register.

BRISTOL, ENGLAND.

There was a large attendance at Colston Hall last night [May 19], when the Rev. William P. McKenzie of Cambridge, Mass., delivered a lecture on "Christian Science: A Present Redemption." The chair was taken by Dr. Walter Wilding (Manchester).

The chairman said he at first desired to speak of the ideal qualities of the King they had just lost. He filled his office well, and won the love of his own people and of the world. He fulfilled the kingly mission of trying to bring all nations together in one universal brotherhood, and so to hasten the day when war should cease. He fulfilled equally the kingly duty of showing sympathy with people of all classes and in trying to bring happiness and peace to all his subjects. In fact, he sought to carry out the Christian doctrine of "on earth peace, good will toward men." It was especially fitting now that they should hear of Christian Science, that they might have life and that more abundantly, for it was meant to overcome sickness, and so overcome death. He went on to speak of the illness of a daughter who was restored to health through Christian Science, leading him ultimately to retire from his medical practice and adopt the teaching of Christian Science.—*Western Press.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Cotuit, Mass.—Willis F. Gross, Freedom Hall, Aug. 8.

TESTIMONIES OF HEALING.

I was said to have been born with what doctors and oculists called a "worn-out sight," being able to see objects a little with the left eye, and light only with the right one. At the age of six, spectacles were prescribed for me, and these had to be changed very often. Four years later my eyes were so much worse that I was sent to a specialist here in Brighton, who refused to prescribe for me, saying I was already blind; that nothing could be done for me, and it would be simply waste of money. I was then sent to a specialist in London (then considered the cleverest man of his day), and he prescribed stronger spectacles, telling my mother it was all that could be done; that it was a very serious case, and that help would not last long. I saw him again some two or three years later, and he then gave me the strongest spectacles procurable. These helped me for some two years, and then began years of the most dreadful agony. I tried very hard to use the little light that was left to me, although it cost me the most terrible pain I have ever experienced, and this went on for about ten years. I then went to the Royal Ophthalmic Hospital in London, as I was told that they did very wonderful things; but it was only to be informed that they could do nothing for me. They said that, although I was the fifteen thousand one hundred and thirty-ninth out-patient, they had never had a case there to touch mine, let alone come up to it; and they diagnosed it as a case of blindness in its very worst form. I went home greatly disappointed, but set to work to learn all I possibly could do by feeling, such as the Braille system of reading and writing for the blind, cane basket-work, etc.

A year or so later a lady who had come to stay at my home in the country, asked if we had heard of Christian Science, as she thought it might help me. No notice was taken of her question at the time, but some two years after this I came to live in Brighton, and then met her again. I went to the Christian Science service, and finally commenced to take treatment. In ten days all pain had ceased, and I left off the spectacles which I had worn constantly for twenty-four years and went out alone, here in Brighton, which was a big move for me, as I had lived in the country all my life until now and had never been allowed out alone where there were busy thoroughfares. In seven weeks I was able to see objects with my right eye, but only straight ahead. I then discovered there was no side-light to this eye; but this defect was healed in one afternoon, and since then I have gradually been able to see more and more. Malformation of the eyes, crooked lens and paralysis of the nerves and muscles of the eyes,—all these discords have been absolutely healed. I can now travel to any part of London or any other place entirely alone. I have been able to teach myself, from books, to do drawn-thread work and canvas embroidery, and can do crocheting and plain needlework. I have also been able to do all my own reading, from the third week after I left off my glasses.

Words are wholly inadequate to express the gratitude I feel to God for leading me to the one who has helped me to this freedom; also to our dear Leader, Mrs. Eddy, for her loving and untiring labors for mankind in giving us this practical Christianity, Christian Science, and for all that it has done and is doing for me. I trust that this testimony will help those who are trying Christian Science healing to press on toward the freedom it has brought to me, and those who are not trying it to begin now.

Miss Ada B. Charman, Brighton, England.

Nearly two years ago I was healed absolutely and almost instantly through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. It came about in this way: In August, 1908, I was away out in a little town in Colorado, stopping at a friend's house. They were some-

Digitized by Google

what interested in Christian Science, and had the text-book, Science and Health. One Sunday morning I picked it up and began to read. At that time I was suffering greatly from a dreadful skin disease, so that I could not sit up without pain. I became so interested in this book that I read until I was called for dinner, which was about two o'clock. I found I had been reading for about five hours, which was something I had not done for years, as my eyes had troubled me so much that I had given up reading almost altogether. After dinner I went at it again, and read until away on into the night. Then I waked up and read for about three hours in the early morning. The next morning I began again, but after reading the book nearly two days I could only understand a few statements; yet there was something about it which led me on.

That night I read until after eleven, and when I went to take off my glasses I found that I had been reading all the evening without them. I have not used them since, though I have done more reading than I had in years. The following morning I ran down the hill, something I had not done for a long time, as my joints would ache so with rheumatism that I could hardly walk in the morning. I also remarked to my friend that I had not had a drink or smoke since Saturday night; and as this was Tuesday morning, it was something unusual for me, as I was a heavy drinker. I had drank all my life, except a few years when I joined the church and resolved to do better and did do better. But that awful desire for drink never left me, until I came into the understanding of Christian Science. I was also a heavy smoker; I had used tobacco in all its forms, but now I have no desire for it.

I had become so interested in Christian Science that I at once sent to Boston for a copy of "Science and Health with Key to the Scriptures," and also for a *Quarterly*. I then found, to my surprise, that I needed a Bible; so the dear friends where I was stopping gave me one for a present. As I traveled a good deal, I had to make room in my grip for the books; so I threw out all my medicine, and from that time on I have not used any material remedy. One of these remedies I had carried was for stomach trouble. One doctor had told me that if I indulged in certain foods I was liable to drop off any time, so I thought I had to be very careful what I ate. The skin disease was the last to leave me. I had been treated for this by several different doctors, the best I could find, but none of them gave me any help except temporary relief, and I had been told that the trouble was incurable. About thirteen years ago I injured my side very badly, and one doctor told me that I would never again be able to carry on my business as I had done; but since I have come into the understanding of Christian Science, I have carried heavy weights up several flights of stairs, many times a day, without experiencing any trouble.

For the healing of many ills, through the understanding of Christian Science, I am very grateful to God. The Bible is now a very dear book to me. I had heard it said, some years ago, that Christian Scientists did not use a Bible, but I have found out that they actually wear their Bibles out with close study. Since I have come into the understanding of Christian Science, our whole family of five has been helped, and now they all rely on Christian Science. I have been blessed by God to such an extent that I have been able to help others, and have not once failed, in any case I have been called upon to help. Such a spiritual uplifting has come to me that I am like one born again. I had a very quick temper; but now I am free. Once I was sick; but now I am well, and I can say, also, as did the blind beggar, "Whereas I was blind, now I see." I am very thankful to Mrs. Eddy for her wonderful book, "Science and Health with Key to the Scriptures," and to God for the many blessings I have received while searching for the light.—THOMAS H. SMITH, Sacramento, Cal.

[Translated from the German.]

Last February I had such a severe cough, with other alarming symptoms, that for many nights I was unable to sleep. Finally the conditions were such that, as I am seventy-two years of age, the physician himself had very little hope of my recovery. I then was advised by a relative to try Christian Science, and see if it could not afford me help. With only a slight understanding of Christian Science I did my share of the work, and within a couple of days was able to leave my bed temporarily. Besides the lung affection I had a serious bladder trouble, which had taken on such a severe form that often I would become downcast and melancholy, as the attacks were so painful that I would often get tired of living. I sought Christian Science for the healing of this trouble also, and feel as if a miracle had been wrought, considering the fact that this serious disorder has been completely healed through God's great love and help and the work which was done for me in Christian Science.

"Out of the abundance of the heart the mouth speaketh," yet words are inadequate to express my gratitude. I thank God, divine Love, for all this, and Mrs. Eddy from the depths of my heart for the great help which I have received. I wish that God's blessing may extend over Christian Science a thousandfold, that many more people may be helped thereby.

H. L. SEMMIG, Klingenberg (Bz. Dresden), Germany.

For several years it has been my desire to express through our periodicals my deep gratitude for the blessings that have come to me through the teachings of Christian Science. When I was a young child my mother heard of Christian Science through the healing of a friend. In our family there had always been much illness, with attending fear, anxiety, and sorrow. We faithfully observed all health laws, and depended upon *materia medica*, without gaining either in general health or the ability to prevent disease; but we began to depend upon God for our help as soon as this rule in Christian Science came to us.

One of the first proofs of its efficacy in my own experience was the overcoming, or prevention, of all pain and suffering from felons on my hand. One after another they appeared, until I had had one on each finger of my right hand. Through the slight understanding which my mother had gained in studying Science and Health, pain was felt at one time only; and this was soon destroyed by the confidence we had gained of God's presence and power to protect and heal. The protecting power of Christian Science was a joy to me through my girlhood, and many of the fears and cares that burdened my friends had no part in my life. Having been in a terrible cyclone when I was quite young, I was left with a great fear of storms, but after several years of patient work in Christian Science this fear was destroyed. At the time my baby was born every condition was normal. The birth was painless and God was again proven to be the "great Physician."

Christian Science has given me happiness, courage, hope, love, confidence in God, and a changeless Principle upon which to depend in working out of any discordant condition that may arise. For more than twenty years I have taken no medicine of any kind, and in that time troubles of many kinds have been destroyed, leaving me not only well physically, but better morally. In my life Christian Science is no experiment, but after years of proof there is the solid conviction that God is the only power there is, and that there is safety in depending upon Him which can be experienced in no other way. For the few proofs I have mentioned, and for countless others even more vital in their meaning to me, I am grateful to our dear Leader, and to all the loving faithful followers who have worked according to God's law as explained by her.—MRS. ABBIE D. KINSMAN, Decatur, Ill.

Digitized by Google

I desire to express something of my deep feeling of gratitude for the joy and blessings I have received since coming into Christian Science, for I was a sufferer from many diseases when I found this truth. Perhaps the most painful of all was bladder trouble, although for many years I was never able to eat without abject fear that the food would produce violent pains in the stomach. For the benefit of those who are struggling with a sense of discouragement over slow healing, I wish to say that, as compared with many, my healing was slow; yet I rejoice now that it was, for this brought about an understanding of what the healing Principle is, and made me a better woman in every way.

Two and a half years ago our baby was born under Christian Science treatment, and there were none of the complications afterward which mortal belief has laid down for such occasions. Our baby has always been very receptive to the truth, any ailment being quickly overcome through the understanding of God and of man's relation to Him. She is rapidly learning to demonstrate this blessed truth for herself. Nearly a year ago, one very dear to me passed on, and I can truthfully say I could not have met the sore trial had it not been for my understanding of Christian Science, which is indeed "the Comforter." I have had many struggles since then with the sense of separation, but each has been more easily met than the previous one. These words of our dear Leader, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), have been a great solace to me.

Christian Science has taught me more forbearance, more patience, and a new sense of love; and each day my heart sings peans of praise for even the few crumbs of understanding I have gained through the daily study of the Lesson-Sermon and our periodicals, together with the Bible, which now has a new meaning for me. I have indeed so much to be grateful for that I feel I can never pay my debt of gratitude to God, or to Mrs. Eddy. I have been gently led over the hills of mortal belief, into the valley of peace, that "peace of God, which passeth all understanding."—Mrs. Alice C. Clark, Denver, Col.

It is over five years since I was healed and became interested in Christian Science, and although I have devoted but a small part of my time to its study, I have learned more of the Bible than I had hitherto in the ordinary way. I had always wished for an understanding and a systematic way in which to learn these truths, but never found it to my satisfaction until I sought physical help in Christian Science. I then found the truth, and am finding more each day and each year; it has met and is meeting my spiritual need, as well as the physical. The Lesson-Sermon, as I study it each day, supplies the food I need and strengthens me for my daily work. Through the faithful help of a practitioner and my own study, an obstinate headache, which periodically presented itself for many years, has vanished into its native nothingness. It is pleasing to notice, also, the advancement made by my two little girls in grasping this truth. When hurt or in pain they quickly begin to practise what they have learned, for it has been proven to them many times that Truth is an ever-present help, and that God is our unfailing strength. For this, and the blessings I receive daily, I am very grateful.—Mrs. L. B. Strow, Charleston, W. Va.

I wish to express my love and gratitude to God for Christian Science. Previous to becoming interested in this truth I was a great sufferer from what the physician called nervous and spinal trouble. He said the only help for me was through an operation, but that I would only be relieved and not cured unless I went through another operation. While suffering untold agony, a voice spoke to me as if an angel had brought the message, telling me of Christian Science, and I turned to a practitioner for help. After the first treatment the trouble grew less, and the most severe symptoms of disease vanished in about four or five weeks. I felt quite a different person and was full of hope because of the boundless good of every sort which had been revealed to me. Here was the truth of which I had been so sorely in need.

I am so entirely changed, both in appearance and temperament, that when I compare the present with the time when I was almost helpless, words are inadequate to express the joy that comes into my consciousness. I am thankful to God, and to our Leader, Mrs. Eddy, through whom this blessed truth has been revealed to mankind. My great desire is so to live that I may be worthy the name of Christian Scientist.—Mrs. Nellie Berg, Monroe, Mich.

The time has come when I feel that I would forfeit my right to enjoy and profit by the good received through the *Sentinel* and *Journal*, if I did not show my gratitude. I loved the church to which I had all my life belonged, and all work connected with it. Our motto, placed in the entry of the church building, read: "No creed but the Bible, no name but Christ's." I gloried in being in a church that recognized, as it then seemed, no limitations, and I felt that everything possible in religion was possible inside the church of which I was a member; so I was not open to investigation or consideration of any other form of religion, and refused to discuss Christian Science or to read the textbook.

I had to be brought to face the fact that no amount of mere belief or blind obedience to "carnal ordinances," which Paul tells us "perish with the using," could make us followers of the Master in deed and in truth. Even when we were forced to give up a child, through a fatal illness, I felt unwilling to call on my Science friend, for I said that I had no faith that any prayers could be more efficacious than those that were held at the church for me and mine. But when, the next year, a second child seemed to be fading away from us, I consented to ask help for myself, that I might have strength to care for the child in the siege of a relapse. I stipulated that the help was for me; that I would take no medicine, but I could not feel willing to give up the doctor and medicine for the child. The response was marvelous. I became calm and restful and, most wonderful of all, the child lost every dangerous symptom and was speedily restored to health.

I saw then a power in Christian Science that was not to be found elsewhere, and I procured a copy of Science and Health as soon as possible. I saw immediately that it would be all or nothing to me, and I began to struggle earnestly, with all the energy of my nature. I wanted to know for myself that it was founded on the Bible, so I kept a Bible with a Concordance near me, and every statement that produced any question or doubt in my thinking was weighed, through careful study of Bible references bearing on it. Each mental warfare ended by my recognizing the truth in our Leader's interpretations. I had always hoped for the healing, and believed that all Christians ought to be able to avail themselves of the promise Jesus gave so unreservedly to all who should believe on him. As I grasped little by little the import of "God with us," and found that I could relieve others, then at last the spiritual sense of baptism came to me and I was ready to accept for my children, as they should become ready for it, not the water baptism of John, but the baptism which is "a purification from all error" (Science and Health, p. 35), that which John foretold as Christ's baptism of the Holy Ghost, and with the fire of purification.

Lastly there came to me the realization that in healing, in the overcoming of sickness or sin, I was proving the

Digitized by Google

presence of the Christ and no longer needed memorials. This conviction brought me to the point where I felt I had finished with a church that decried Christian Science and its teachings, and I was entirely ready to cast my lot with the little band of Christian Scientists. During these two years of questioning there had been times when I was forced to let a physician treat the children, but every time my earnest desire for Science brought Science back to do the healing. Since I took my stand in 1896, myself and three of my children have depended on Christian Science for relief from all ills, and the two other members of my family have usually asked for Science help. Many ills, physical and otherwise, have been met and mastered, and Truth grows ever more dear and more real. I am learning to feel less impatience toward those not yet ready for Christian Science. I know they will see in due season, and I must leave them free from any mental chiding on my part. My one obligation to them is to overcome in myself whatever is unlike the Christ,—to follow, myself, in the light as it opens before me, and to be loving and patient, "trusting Truth, the strong deliverer," to use Mrs. Eddy's words, to guide all "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (*Ibid.*, p. 226).

I send these words with sincere gratitude to God for His wondrous gift to this age.

MRS. MARY BELLE LITTLE, Memphis, Tenn.

It is over eleven years since Christian Science was first presented to me while on a visit to a sister whom I had not seen for seven years. Four years of this time she had been interested in Christian Science, had herself been healed and had gained sufficient knowledge of the subject to heal others. For over seven years previous to this time I had suffered a great deal with stomach and heart troubles. I had been treated by three different doctors, also used every remedy that was recommended to me, but they only afforded temporary relief. My sister told me that food had no power to harm me, as I had believed. To me this was an extraordinary statement, but I found that what she said was true, and the good effect remained with me for about a month after I returned home. At the end of that time, however, the old trouble returned in full force and I suffered severely after eating.

I had been in conversation with my former pastor on the subject of Christian Science, and he had almost persuaded me that it was not Christian. I then lost no time in writing my sister to this effect, but in the mean time I prayed to be led of God, for I was convinced that Christian prayers should be answered in healing the sick and suffering, as they were in Jesus' time. My suffering was so intense that I decided it was a rebuke to me for denying the truth after I had had the proof of its power, so I wrote my sister a second letter, asking for treatment, and I was healed in one week. Since then I have had no trouble with the old complaint and have also found Christian Science equal to every necessity. In all this time Christian Science has been the only physician in our family of five persons,—my husband, three children, and myself. These children, whose ages are from four to ten years, have never taken any medicine or used any material remedies, and they are daily proving the power of God's Word to heal, and to protect them from the ills of the flesh, through the light thrown upon it by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. These children were all born under Christian Science treatment, and I have had wonderful proofs of the power of Truth at such times. I have also had the blessed joy and privilege of helping others, but to me the healing of disease is only the smallest part of Christian Science. The healing of sin and the spiritual uplifting that have come to me through this study is beyond human expression.

With deepest love and thankfulness to God, I send these lines, in the hope that they may encourage some weary pilgrim, for many a time the testimonies of others in the *Sentinel* and *Journal* have been a help to me. I also wish to express my thanks to our beloved Leader, Mrs. Eddy, for her untiring labor of love and wisdom in so richly providing us with an abundance of pure literature. Last but not least, is the *Monitor*, which is a welcome daily visitor at our house. Even the youngest member of the family looks for it with interest. There is always something to interest even a child of four, and I am never afraid of being questioned by the children as to something which they have read in the *Monitor* that they should not read, or some picture which would leave a wrong impression on their memory, as is often the case with the ordinary newspaper.

MRS. CELINA C. PHILLIPS, Port Hope, Ont.

From earliest childhood I was not strong, and in later years a stomach trouble appeared, which gradually grew worse until I was most wretched, being subject to almost constant vomiting. After my marriage, while living in the Canal Zone of Panama, I began to suffer from what the doctor called internal spasms—an alarming condition. Just at this time a dear friend told us of Christian Science. A few weeks later his wife came, and I was the first patient of this brave woman in this place. I was benefited from the start, but my healing was slow. Each day, however, I grew a little in the understanding of Truth, and I am now entirely well. Just in the degree that I have understood the teaching of Christian Science, and put it into practice, have the ills disappeared.

Looking back, it all seems so beautiful, so natural, to grow up and out of the old fears, envy, mistrust, hatred, and the like, into the sunshine of Truth and Love, as revealed in Science and Health by our Leader, Mrs. Eddy. Hope was awakened, happiness followed, accompanied by the greatest of all blessings—health. Cause and effect are thus revealed in a new light. I realize this is only the beginning in the right direction, and while much has been overcome, there is yet much more which requires earnest study before I can take a part in the great work. Only as we live the good we know, can we hope to gain more.

As other earnest Scientists have helped me in times of discouragement and darkness, so may I be ready and willing to help another, and may my life prove my gratitude to our Leader for giving us our text-book.

MRS. JAMES BOWDRY, Isla de Nars, Bay of Panama, Panama.

It is with gratitude and joy that I endeavor to express my thanks to God for the healing truth which has been unfolded to me by Christian Science. I feel sure that all who study this beautiful teaching, given to the world through our dear Leader, Mrs. Eddy, will see how we are bound to revere her for being so brave and steadfast in the face of the most bitter persecution, in order that the whole world might receive this revelation of something absolute, in place of what was relative and contingent.

I had been in search of physical help practically all my life; in fact, only through the greatest care and love that a mother could show, was I brought through childhood at all. I was a great sufferer from severe catarrh and earache, and each succeeding year was subject to colds and very aggravated throat trouble. During one of these attacks an operation had to be performed. In 1891 I was invalided home from New York, suffering from severe poisoning, and after an operation lingered for seven months between life and death. In 1897 my throat troubles became so serious that

Digitized by Google

on two occasions my life was despaired of. About 1904 the old wound caused by the operation commenced to give me intense pain, and although many remedies were tried, I did not get any permanent relief. Two years later my heart became very painful, and I was ordered by a specialist to give up my work and go abroad. I was refused insurance on account of this difficulty. I could not sleep on my left side, and suffered in many other ways from it.

In June, 1907, while spending the evening with an old friend, who had taken up the study of Christian Science, I asked him if he thought it could possibly help me to get free from my wretched physical condition, and his reply was so earnest and convincing that we made an appointment with a practitioner for the following afternoon. I must say here that, owing to my weak state of health, I had been allowed to do practically whatever I liked while a boy, and had contracted a passion for cards, racing, etc., so that hardly a day passed but found me indulging in one or the other. Never thinking of anything above material enjoyment, religion was practically unknown to me, and I had not read the Bible for a great many years. It must have seemed to those who knew me that if Christian Science could heal me physically it was wonderful, but if it could possibly lift me out of the mire and give me a desire to know God, then it indeed must be the teaching of the Christ.

It has done both. The feelings which I entertained on coming into the practitioner's presence will be an ever-present memory. The place seemed too good for me, but gradually the love expressed by the Scientist and the truth of the words enveloped me in a feeling of perfect security. My whole nature seemed so uplifted that, although I had bets on some races to be decided that day, I went home to read more of that wonderful book, Science and Health, which the practitioner had kindly lent me. I never thought of the races until the next day, when I closed all my betting accounts, and have never had any desire to bet since. My physical healing was received in less than five weeks' treatment, and never during the three years since this took place have I had any difficulty which has not been met without any help outside of Christian Science in less than forty-eight hours.

Any one who reads this can immediately see what a wonderful change this glorious freedom from both physical and mental trouble has brought into our home life. As said the Master, "Ye shall know the truth, and the truth shall make you free." May the complete change which this truth has made in me, be the means of causing others to seek this wondrous teaching of God, divine Love, who truly does "meet every human need" (Science and Health, p. 494).

FRED R. RHODES, Headingley, Leeds, England.

[Written for the *Sentinel.*]

LOVE.

JOSEPHINE HEERMANS GREENWOOD.

My heart was full of rapture yesterday,—
With sweetest joy my being overflowed,
For Love with me sojourned. Love then bestowed
A song that in my heart shall live alway,
Diffused, persistent, sweet; and though today
Love seems no more to brighten my abode,
Lack-luster now what then effulgent glowed
In splendor bright, yet Love's loss I gainsay.
Love hath its rhythm, its glorious day, no night,—
Love's presence making light. Love knows no dark
(Though sometimes I myself obscure the light
And lengthening shadows grim I cast). But mark:
The sun of Love keeps e'er his constant course,
From Love no dark, no shadow, has its source.

FROM OUR EXCHANGES.

[Charles S. Kay in *Standard.*]

That Christianity in its essence is the ultimate religion, the writer firmly believes: but as to what truly constitutes real Christianity it is possible, and even probable, that the conceptions of men may change in the future as they undoubtedly have changed in the past. There is no instinct of the human mind stronger than the desire to be able to put the stamp of finality on religious belief. In the matter of religion as a thing of mere intellectual belief, men will doubtless differ as long as the world stands. So long as religion is conceived of as being the acceptance of a set of intellectual opinions, couched in a certain phraseology, there will be no absolute uniformity of religion in the world. If the essence of religion is to be found in a certain unselfish attitude of heart, and a desire to help others and to be and do right oneself, there are evidences even now that mankind is getting together on these points. If it can be strongly entrenched in the innermost being of a man that before a great, all-wise, and all-good Being he must stand or fall, and not through the interference of any other human being like himself, a great advance has been made in the moral status of that man. Add to this belief the doctrines that are the very life of evangelical Christianity, and minor differences, built on human conceptions and on doubtful interpretations, will not materially disconcert the sincere seeker after truth and goodness. The religion of tomorrow will approach this conception of belief and conduct. In spirit and ethics it will be the Christian religion as we now have it; in creedal statement and in verbal phraseology it will change with the ages as they roll along.

[*Advance.*]

Jesus never talks about truth as an abstraction. It is a relation between persons, between God and himself or man, or between himself and man, a vital element in the lives of individuals. It is the true, rather than the truth. The weakness of present-day theology is that it ignores this important fact and treats truth as an abstraction. The result is that individuals are eliminated from Old Testament history, and abstract ideas and clever theories are made to take their place. And in the New Testament the great works of Jesus himself are ruled out by a conception of so-called law. Thus the living is made to give way to abstractions. Sin also is turned into a theory rather than an individual responsibility, and religion is subjected wholly to intellectual processes. It is made a matter of mentality instead of an appeal to the whole moral and spiritual nature of man, including will, heart, and conscience. The reconstruction of theology, about which we now hear so much, is an attempt to shift religion to this basis of the abstract and the merely intellectual. But it can no more become a practical success than would be the attempt to raise wheat on a chart in a scholar's study, instead of by casting seed into the ground.

[*Zion's Herald.*]

Lessing once said: "Christianity has been tried for eighteen centuries. The religion of Christ has yet to be tried." This is one of those brilliant epigrammatic deliverances which conceal as well as reveal truth. We do not know what Paul of Tarsus "tried," what Augustine "tried," what John Huss "tried," what Wesley and Whitefield "tried," what D. L. Moody and Gipsy Smith have "tried," if it was not Christ's religion. They were not perfect men, but they got at the heart of Christianity's secret, they lived close up to the cross, they had as their dominant mood, their overmastering passion, the mind of Christ. Yet, if Lessing means to remind us that after eighteen—now nineteen—centuries Christianity is for multitudes a name rather than a life, a theory rather than a deed, a sentiment rather than a

Digitized by Google

sacrifice, he is right. Moreover, no man, not even Paul, has tried out to the very uttermost all the possibilities of the Christian faith and experience. Moody, who probably never heard of Lessing, put that truth forcibly when he said that "the world has yet to see what God will do with a thoroughly consecrated man."

[*Watchman.*]

Strength of character is a high quality, but if lent to the propagation of error, may be an element of unrighteousness rather than of righteousness; or, if opposed to the progress of the truth, may become mere obstinacy. Noah, Daniel, and Job were loyal to God,—Noah in an evil world, Daniel in a pagan nation, and Job among self-righteous friends. The temptation of Noah was to go with the crowd; the temptation of Daniel was to yield to luxury and ease, and the temptation of Job was to succumb to sorrow and pain. But they all stood gloriously firm in loyalty to God and to the right; and this was an important element in the conspicuous honor they received in being selected by God as three typical righteous men.

[*Christian Register.*]

There are worse things behind us and better things before us. To rejoice because we have escaped from the evils behind us and to rest in that mood of rejoicing is fatal folly. To believe that better things are before us and that by the application of reason and the principles of love and justice they can be realized, makes the situation in which we now are, if we are content with it, an exhibition of ignorance and selfishness. The current of time flows on forever. Progress may or may not accompany it.

[*Universalist Leader.*]

In its deepest spiritual psychology the Bible is not an outgrown book. The most modern and prophetic soul will find in it exhaustless resources of inspiration. If one understands literature there will be no sense of compromise, no thought of turning away from light and truth, when he spends an hour with Job or Isaiah or the preacher or the psalmist. Those men were timeless. The spiritual Israel which exists within the shell of her outward priestly cult is perennial.

[*British Congregationalist.*]

Christianity has established a love of truth as one of the noblest motives that can actuate and direct the mind of man. In every great department of human life—science, art, politics, economics, and social well-being—there is an eager quest for truth. Disbelief claims the authority of conscience for urging the doubts with which it assails the Christian faith, and professes the purest motives for seeking to emancipate mankind from the illusions and superstitions of a worn-out faith.

[*Standard.*]

Doubtless impulse is given to the moral and spiritual nature of man by the consideration of abstract truth, but experience has taught us that it is truth incarnate in a life that grips us most strongly, moves us most profoundly. To have the didactic teaching of Jesus would mean much to the world, but to have that teaching expressed in conduct means more. The great Christian lives have been those which vividly apprehended Jesus Christ.

[*New-Church Messenger.*]

It seems strange that the church did not from the beginning perceive that the garden of Eden is a state of life, and that the "garden of God" is the church, or in particular the soul, wherein grows the virtues of His own planting.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A new form of declaration blank has been sent to the various steamship lines to be forwarded to the steamship agencies abroad, there to be distributed to passengers leaving for the United States. It is believed that the work of examining baggage of incoming transatlantic passengers will be expedited by the change of system. The passengers will fill and sign the declaration blanks as soon as the vessel leaves the foreign port, giving a complete list of the articles contained in their baggage. The declaration blanks will then be turned over to the proper authorities on the boat, to be in turn placed in charge of a deputy collector on the arrival of the vessel at port, where the passengers will take oath to the truth of the declarations.

Six hundred and thirty boxes or two hundred and ten barrels of the best commercial apples exhibited at the third national apple show in Spokane, Nov. 14 to 19, will win the sweepstake prize of one thousand dollars and a gold medal banner with the title of champion of the world for the owner, lessee, or authorized agent of the land where the fruit was grown. The second prize is three hundred dollars and a silver medal banner. Premiums of a total value of nineteen thousand dollars will be awarded in other contests, ranging from ten boxes each to a single apple. All competitions are free and open to the world, entries closing Nov. 9.

At Washington the commissioner of internal revenue has made public a list of several hundred patent medicines popular in various sections of the country, the manufacturers of which must pay the special tax of liquor dealers, regardless of the fact that their preparations are put up for medicinal use. The chemists of the internal revenue bureau have held that the preparations in question are insufficiently medicated, and therefore liable to be used as beverages in places where the sale of whisky and other intoxicants is prohibited.

Thumb-mark signatures are required of city employees of Milwaukee when receiving their pay. The system is not only to protect the city, but to assist those who are unable to write their names readily. Each employee is given a card with his thumb-print on one side. The other side is to be blank until the owner of the order calls for his money, when he will be asked to make another imprint. The two of course must correspond.

The hearings in the suit brought by the Government for the dissolution of the powder trust for alleged violations punishable under the Sherman anti-trust act, have been concluded. The hearings have continued for two years. Federal Examiner Mahaffy will submit his report about Sept. 15 to the presiding judges of the United States circuit court of Wilmington, Del.

There are said to be more than five thousand motor cars in storage in Kansas City and near-by towns, waiting for the coming of the harvest money to farmers in the southwest. These cars are valued at eight million dollars, and, according to the dealers, every one of them will be disposed of before the winter comes.

Mayor Gaynor of New York, by his determination to end extravagance in the matter of municipal advertising, is expected to save the city about seven hundred and fifty thousand dollars in the first year of his administration, in addition to other economies already adopted.

The board of army engineers charged with the duty of inspecting the various reclamation projects and reporting to the President upon the possibility of completing or extending them, has just started upon a tour of observation which will require about four months.

Proceedings have been begun by the department of justice against sixteen concerns manufacturing sanitary enameled iron ware, and their officers, located in nine states, in a bill in equity filed against them at Baltimore under the Sherman anti-trust law.

There are now altogether 2,108 buffalo in North America. These "buffalo" are really bison, but the term buffalo has been applied so long and generally to the American bison that the term conveys more meaning to the general reader.

Thirty-six naval vessels, which cost the United States Government $1,803,495.00, have been consigned to the junk heap in the last ten years. Of these, thirty-two have been sold by auction, bringing $266,779.41.

A campaign for the annexation to Chicago of every town and village within one hundred miles of the city hall will be discussed at a meeting of the Three Million Club soon to be called.

International.

Orsen, a town in Sweden, is probably the only municipality in the world which has ordinary city expenses but which imposes no taxes. The local railway is free to every citizen, and there is no charge for telephone service, schools, libraries, and the like. This state of affairs is due to the wisdom of a former generation of citizens and rulers of Orsen, who planted trees on all available ground. During the last thirty years the town authorities have sold no less than five million dollars worth of young trees and timber, and judicious replantings have provided for a similar income in the future.

A joint conference of considerable interest and importance to the cotton trade was held by the Federation of Master Cotton Spinners Association, the Amalgamated Association of Operative Cotton Spinners in Manchester, Eng., recently. After a discussion on the recent demand of the masters for a five per cent reduction in the wages, it was unanimously agreed that a settlement of the wages question by the withdrawal of the masters' demand should be recommended, the conditions being that no demand for advance or reduction in the present wages should be made for a period of five years.

It is expected that the contract for the high-level bridge to be constructed by the Canadian Pacific railway between Edmonton and Strathcona, Alberta, will be awarded soon. The bridge will be the largest of its kind yet erected in Canada, it being estimated that the concrete work alone will require two years to complete. The four center piers of concrete will, it is stated, be the highest in the world, rising one hundred and six feet above the water level, in addition to which there will be eighty-nine concrete pedestals and four abutments.

The shipments of Canadian grain across the Isthmus of Panama over the Tehuantepec railway have become so large that the Pearson Company of London, the largest contractors in the world and the controllers of this railway, are planning to make of it a four-track system. The present line shows practically no grade and therefore can be cheaply operated. The object in providing four tracks is to prepare for competition with the Panama canal.

"Demonstration farms," containing a total of approximately five thousand acres, have been started in Alberta along the line of the Canadian Pacific railway for the purpose of showing the incoming thousands of settlers from the states the most profitable crops either for irrigable or non-irrigable land. This, it is hoped, will be the means of preventing a series of unprofitable experiments by the new farmers. The "farms" are distributed over a wide area.

A telephone exchange, reported to be the largest in the world, has just been opened at Hamburg, Germany. Until recently the telephone systems of Hamburg have been worked from five centers, but under the new arrangements they will all be combined under one roof. The equipment includes eighty thousand connections, of which only half are at present in use, and fifteen hundred men and women officials.

In view of the recent discoveries of petroleum in Trinidad, which might be useful to the navy, and the importance which the island will acquire upon the completion of the Panama canal, the British government is considering the advisability of fortifying the entrances to the Gulf of Para.

The leaning tower of Pisa has increased its inclination from the vertical by about eight inches within a short time. The foundations are in an unstable condition, and the authorities have ordered that the bells in the tower shall not be rung, lest the vibration should hasten its collapse.

Industrial and Commercial.

The Presumpscott river in Maine is called the little giant of power streams. Its total length from the gateway where it leaves the Sebago lake basin to the point where it plunges over the dam at Presumpscot lower falls into the ocean is a trifle less than twenty miles, and in this distance it develops an energy of forty thousand horse-power for the turning of wheels and generating of electricity. The total fall of the river in that distance is two hundred and sixty-seven feet.

An electric locomotive of one thousand horse-power, which, it is said, can be used on any railway without live rails or wires, has been successfully tested at Glasgow, Scotland. It has a steam turbine which makes three thousand revolutions a minute and a dynamo which supplies electricity to four motors by which the wheels are directly driven.

The International Cotton Mill Corporation with a capital stock of twenty million dollars has been formed. Negotiations for the acquisition of certain textile mills in this country and in Canada, it is stated, are well under way. The various mills acquired by the company will manufacture some three thousand varieties of cotton fabrics.

The total output of the camphor monopoly of the government of Formosa for the fiscal year ended March 31, will be about eight million pounds of camphor and camphor oil. At the price fixed by the monopoly bureau the income to be derived will amount to $1,982,836.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

UNITY OF ACTION.

W. D. MC CRACKAN, M.A.

PETER was by occupation a humble fisherman, while Paul was a man of learning, of the proud sect of the Pharisees; yet these two men, so dissimilar in education and association with the world, learned to display unity of action of the highest and noblest type in healing the sick and sinning. The understanding of the one God whom they worshiped enabled Peter to heal the lame man at the gate of the temple called Beautiful, and to say to the noble woman whom they called dead, "Tabitha, arise." Through this same understanding Paul, when shipwrecked on the island of Melita (modern Malta), was able to shake off the viper which had fastened itself upon his hand and to remain unharmed; likewise, to heal the sick father of the chief man of the island.

It is recorded that when Jesus called upon Peter to follow him, he straightway left his nets and became a close companion of the Galilean Prophet; whereas Paul may not have known the great Teacher personally, and at one time considered it his duty to persecute and slay the followers of Jesus. Yet in Science these two men—the fisherman and the scholar—exhibited true unity of action, because they learned to reflect the healing power of Truth to suffering and sinning mankind. Furthermore, it is helpful to notice that although Paul had "made havoc of the church," yet this atrocious conduct was not remembered against him for evil by the members of the struggling church after he had once taken his stand in behalf of Truth. We read that there was some natural fear of him at first, when he suddenly joined the ranks of his former victims, but no expression of hate or revenge is recorded.

The understanding of the only true God brings with it a complete obliteration of past injuries, injustices, oppressions, and grudges,—a true forgiveness, a perpetual reconciliation. Whoever acquires the consciousness of good and holds fast to it, loses the consciousness of evils which once seemed hard to bear. A hush falls upon those who enter into the presence of God, stilling the tumult and strife of personal grievance and producing a calm wherein only the "still small voice" of divine Love can be heard. Mrs. Eddy states, "The substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin" (Science and Health, p. 241). This is the devotion which is capable of bringing about unity of action among persons who display differing characteristics due to temperament, education, environment, and experience. This devotion supplies the central motive governing all the members of a Christianly scientific organization. To heal, using the word in its broadest sense, is to be about our Father's business.

All the manifold activities of The Mother Church and its branches center in the healing motive. The several ways and means instituted for placing the understanding of Christian Science within the reach of those who are ready for its acceptance, these methods of bringing the facts of Spirit to the fleshly mind, are just so many avenues for healing. First and foremost, the text-book of Christian Science, and our Leader's other writings, elucidating the Scriptures, fulfil this glorious mission. Then all the other activities represented by class teaching, by our church services and testimonial meetings, by the reading-rooms, the Christian Science periodicals, the committees on publication, the lectures, etc.,—all in their several ways are designed to heal. And how wonderfully these ways are meeting and mastering specific phases of ignorance and sin!

When this central motive, this true devotion, is kept pure and unsullied, the foundation is laid and kept intact for a truly united Christian Science society or church. Its members, though representing types as dissimilar as Peter and Paul, can then cooperate under the one Mind, and thus do their part in evangelizing the world. What a glorious prospect is even now unfolding itself before the whole of Christendom, when men and women of every name and nature shall find their joy in this genuine devotion, this unity of action,—when every theologian shall voluntarily surrender the traditions of scholastic theology in order to become as a little child, when every physician shall relinquish his trust in the action and reaction of drugs to heal, because he has discovered an unfailing remedy for all ills in the divine Mind, and when the natural scientists, versed in the seeming laws of matter, shall rejoice that the beneficent law of God is above all; when every man of business shall prosper because he prefers the kingdom of God and His righteousness to material wealth; when every politician shall be willing to sacrifice his power of personal control because he esteems more highly the rights of others; when the school-teacher, the actor, the painter, the sculptor, the athlete, each in his way, shall heal by overcoming limitations and setting up the standard of perfection.

This healing unity of action has already begun its work. It is circling the earth; and as it advances it brushes aside into deserved oblivion all the petty misunderstandings, selfish motives, eccentric ambitions, subterfuges, plots, and plans which have heretofore divided men into hostile factions by separating them from God.

"DEMONSTRATING SUPPLY."

MABEL S. THOMSON.

THIS phrase, "demonstrating supply," is one which is so often on the lips of students of Christian Science, and indeed is used sometimes in such curious connections, that one is tempted to wonder if the speaker always understands its meaning and what it implies. Behind it, as a matter of fact, lies the whole of the problem of money, with all its ramifications in social economics. To deal fully with such a problem is, of course, beyond the scope of this article and of its writer, but possibly some aspects of it, as it affects the student of Christian Science, may be touched upon and

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

bring to light ideas which may help to elucidate the whole subject.

One of the first points which presents itself in the unfoldment of Christian Science, is the fact that all the standards of value to which the mind has been accustomed have to be changed and adjusted, the money value probably first of all, and at once it is seen that money has been given an entirely wrong estimate by mankind. Instead of being regarded as a symbol it has become a thing, a power, and men love it, and fear it, and desire it, and think they can do nothing, and worse still, think they are nothing without it. And yet any one who gives thought to the matter can see, without any metaphysical knowledge, that such a position is false, for no one can really be any richer than the amount he can use, no matter what his banking account may be, and therefore fundamentally his wealth is bounded by his mental concept of life and its desires and uses. Whatever he possesses beyond what he can make use of in the way of progress is, to all practical purposes, dead loss and waste.

Again, to take an instance which is probably familiar to every one, of two people occupying the same position in life, under the same conditions with the same income; one will always be rich and have plenty, while the other will always be poor and "hard up." It is impossible to explain why, except that each case is the outcome of the individual mentality, the mental concept, and money has nothing to do with it. These are, of course, very general statements, but if the student of Christian Science who is faced with the problem of "demonstrating supply," will take some such line of argument, he will realize that far more than just earning enough money to keep him in bread and butter is required if he would really solve the problem. The first thing to see is that the concept of money as substance must be changed. In and of itself money is nothing but a false sense of substance involving error, and only if this sense is touched by Truth to the uses of good in human experience, can it even symbolize substance.

No mere process of intellectual reasoning can induce this changed concept, but it comes about unconsciously, under the influence of Christian Science, as it works those revolutions in thought which entirely change the standpoint. After some thought and practical work the student will presently arrive at the point where he sees that the supply which he demonstrates in Christian Science is not material, and cannot be. He gains, through a perception and realization of the truth of being, a sense of plenty and abundance in consciousness which no doubt will be manifested in his human experience, just as a better sense of health is manifested physically. But this sense is generally gained only after a mighty struggle with various phases of fear and pride. In "Miscellaneous Writings" (p. 307) our Leader says: "God gives you His spiritual ideas, and in turn, they give you daily supplies." Would not this same truth underlie the psalmist's statement that he never yet saw the righteous forsaken or begging his bread? Christian Science, with its practical application to all the minutiæ of human affairs, illuminates many such sayings recorded in the Scriptures, and shows how the ancient worthies had to meet precisely the same difficulties with which we are confronted today, and it also reveals the secret of their success in meeting them.

When the student has advanced so far in his researches on this subject, the fallacy of many specious arguments about "demonstrating supply" will be exposed, and the suggestions that Christian Scientists ought to manifest wealth and ease and comfort *per se* will be seen for what they are. But the student will also recognize, on the other hand, that as his mental concept changes from the material to the spiritual, from the limitations of sense to the infinite sources of Soul, so his actual experience will throw off the old sense of bondage and will emerge into a knowledge of resources it never had before. In other words, if he seeks "first the kingdom of God, and his righteousness," all these things will be "added" unto him.

An illustration may be of use at this point. A student who was talking on this subject said, "I was able to demonstrate supply for so-and-so, and she is now in good employment; but she does not seem to think she can pay for her treatment. Why cannot I demonstrate my own supply?" The answer seemed obviously to be that the speaker did not have the right concept of supply. The mere fact of the friend having found employment was no argument that she had made a demonstration of supply, if she had not also been lifted mentally out of the beliefs of fear and dishonesty and lack which constitute poverty, into that knowledge of God which is wealth and abundance; and as long as the student was in ignorance on these points, it would be an impossibility to make any true demonstration of supply.

The conclusion of the whole matter seems to be this, that all which is meant and implied by the word money, or supply, is entirely a mental concept, a state of mind or of character, and that so long as one believes otherwise, and looks upon money, either in its abundance or in its lack, as a thing in or of itself, he cannot truly "demonstrate supply." The abundance of supply is that state of mind which knows God aright, and from which self and fear, pride and ambition, are being eliminated. It makes no difference what the particular case may be, whether it is a small individual problem, or a business involving thousands, it must be worked out in the same way, and it is equally necessary—and possibly more difficult—for the man who believes himself to be rich in this world, as for the man holding the opposite belief, to bring into a demonstration the fact that to know God aright is not only "life eternal," but it points to God as substance and the source of all supply, if one would build his house upon the rock which cannot be shaken.

GRATITUDE.

ADA BEERS FOSTER.

THE regenerated heart is of necessity a grateful heart. As one is purged, little by little, of the false beliefs which have enslaved, and a corresponding degree of freedom is attained, an ever-increasing measure of gratitude pervades the mentality thus emerging from the mists of error into the sunlight of eternal Truth.

The one who is earnest and loyal knows well the gratitude expressed by tears, rather than words, as the marvelous goodness of God is unfolded. In unknown ways, at unexpected times and places, under stern stress and bitter sorrow, Love's behests awaken mankind from these illusions of mortal sense by the inspiration of gratitude, —gratitude for the healing of sorrow; for every mistake corrected; for every error destroyed; for every false belief eliminated; for every sin forgiven, because forsaken; for every illuminated sense of Truth's appearing in individual consciousness. The joy of redemption floods thought with the spirit of praise, of love, of genuine humility. Purer desires and holier ambitions wait upon the recognition in human thought of man as the loved son of the ever loving Father-Mother God, and pure peace is augmented by the ever grateful consciousness that "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13).

Gratitude is inspirational. It brings the hidden things of God to light in seemingly burdened human hearts. It inspires a childlike faith in our heavenly Father, enabling us to be obedient "unto the heavenly vision," even when paralleling in individual experience the doubts and fears of the children of Israel,—the Red Sea in front of them, inaccessible rocky ramparts on either hand, and the pursuing Egyptians. They, in obedience to the divine command, went forward, and found, as do we, a safe path through

Digitized by Google

"the dark ebbing and flowing tides of human fear" (*Ibid.*, p. 566). On the "other side of the flood" they sang their hymn of grateful praise, even as it is being sung around the world today by countless thousands who have been healed in Christian Science.

Gratitude amplifies and exalts the human concept of love, elevating and sustaining aspiring thought until it apprehends somewhat the Love that is God. Love is all-embracing, therefore the thought which is grateful for the dawning understanding of Love as divine Principle, goes out, spontaneously, to all living things, from the tiny creatures of the grass up to the highest known exponent of the perfect Mind. Thus gratitude infuses the nature with Godlike tenderness, until it approaches the sublime patience depicted by Isaiah of the Saviour of men,—"A bruised reed shall he not break, and the smoking flax shall he not quench," —a fitting rebuke to the mortal thought which is ever ready to judge and condemn. Gratitude keeps the grateful one ever about the Father's business, and he finds that, in proportion to his gratitude, erstwhile distasteful tasks assume new meanings, and are performed with joy. This new joy, born of the apprehension of the true significance of work, is of itself cause for gratitude, for it unerringly indicates spiritual progress, unfolding selfless effort, invariably culminating in a high success.

The grateful nature is likewise aglow with love and reverence for our Leader. One can but faintly discern, from his own experience, what that heroic heart has endured in fulfilment of her mission to bless mankind. True, one can arrive at some faint estimate, in proportion to one's own fidelity to Truth. Mrs. Eddy's successive demonstrations that "one on God's side is a majority," are for our encouragement under all circumstances and conditions. The vision of impartial Love, sustaining and inspiring her, illumining her ascending pathway, falls athwart the lowly footpath of every faithful, obedient student as he daily takes up his cross and follows her even as she follows Christ.

THE WEDNESDAY EVENING MEETING.

BRIGMAN C. ODOM.

A FACTOR that is doing much toward awakening and uplifting humanity to higher spiritual ideals is the Wednesday evening meeting. These meetings in many cases attract large and intelligent congregations, and lookers-on marvel at this unusual interest. The hungry and thirsty, wandering "in the wilderness, in a solitary way," finding "no city to dwell in" are drawn hitherward; and, discerning that which begins to satisfy the longing soul and to speak peace to the troubled heart, they become earnest seekers for more of "the kingdom of God, and his righteousness." Jesus said to the multitudes, "What went ye out into the wilderness to see? A reed shaken with the wind? . . . A man clothed in soft raiment?" but these questions bring no rebuke to the sincere seeker after God. Human means and personal joys have afforded no rest to those "that labor and are heavy laden." To such as these the Master said, "Whosoever drinketh of this water [material sense pleasures] shall thirst again: but whosoever drinketh of the water that I shall give him [spiritual understanding] shall never thirst."

Those in whom these meetings awaken an interest come to realize the significance of the admonition, "Seek, and ye shall find; knock, and it shall be opened unto you;" and their spiritual enlightenment is in the ratio of their desire for truth and their endeavor toward its attainment. The parable of the talents serves to indicate to the investigator how a wise and active use of present opportunities brings its unfailing reward; and also that inactivity and fear occasion the hiding of the "talent" in the earth.

The regular attendant and active worker at the Wednesday evening meeting is inspired with a twofold purpose: he goes to get something and he goes to give something. Physical healing, moral reformation, and spiritual awakening are frequently experienced and reported as fruits of the Christ-coming to the receptive consciousness, resulting from attendance upon the testimonial meeting. The success of the meeting is not to be estimated by the large congregation, the number of testimonies given, and the quick succession in which they follow each other, but to a great extent the good accomplished is due to the wholesome mental atmosphere in which are to be found no criticism, envy, selfishness, nor like qualities of the carnal mind. In order to bring about consciously this atmosphere of harmony, the workers must put on in advance "the whole armor" by seeking to have that Mind "which was also in Christ Jesus," and by abiding in the spirit of love throughout the meeting.

To the prayerful worker some such fundamental truths as these might be helpful: that there is one infinite Mind and man in Science reflects this Mind; that human opinion and human will cannot utter themselves, since God is supreme and is the only intelligence. As thoughts concerning the meeting present themselves, discrimination is made between truth and error; the good alone are entertained, the faulty rejected. Each one should look within his own consciousness, realizing the ever-presence of divine Love, and knowing that his brother also has no other consciousness but good. The testimonies should be based on demonstration and practical experience and be spoken in fulfilment of a desire to bless and uplift others. Jesus emphasized the importance of such separation and self-examination in his parable of the net "that was cast into the sea, and gathered of every kind: which, when it was full, they drew to shore, and sat down, and gathered the good into vessels, but cast the bad away." This experience leaves the one who is alert spiritually in no doubt as to his duty in guarding thought.

It is clearly not the province of the Wednesday evening meeting to explain Christian Science, but its purpose is primarily to give information to the inquirer and seeker after the healing and regenerative results of Christian Science, and to offer to all an opportunity for greater and more thorough consecration and devotion to God.

INTELLIGENT CHURCH-MEMBERSHIP.

ANNE LE BARON DRUMM.

ON page 583 of our text-book, "Science and Health with Key to the Scriptures," our Leader gives us a definition of church which it were well for every member of The Mother Church and each branch church to study thoroughly, both with respect to its letter and its spirit. As the body of the church is composed of the individuals who are its members, it is self-evident that the more or less perfect demonstration of that definition by each Christian Science church depends upon the intelligent, faithful work and spiritual understanding of its members.

The difference between the members of a church and those who are merely attendants is that the members have openly subscribed to and are therefore pledged to support the Christian Science tenets, as given in Science and Health (p. 497), and also the by-laws of the church with which they unite. It may be taken for granted that all who unite with a Christian Science church are familiar with these tenets, and with the Manual of The Mother Church, to some extent at least, but are we all as careful to acquaint ourselves with the by-laws of the branch church which we join? Yet this is of great importance, so far as joining a branch church is concerned.

The Manual provides that each branch church shall be self-governed, and it is thoroughly in accord with the spirit of Christian Science that "governments shall derive their just powers from the consent of the governed." Does it

Digitized by Google

not, then, devolve on each one of the "governed," as an important duty, to have an intelligent understanding of the government in which each one has a voice? As this understanding can only be gained from a thorough acquaintance with the by-laws, these should be studied carefully, and every effort made to carry them out in consonance with the requirements of the Manual of The Mother Church. The study of the one will inevitably lead to the study of the other.

The Mother Church not only places the Manual within the reach of all of its members, but enjoins that it shall be studied. Is not this a hint to the directors of branch churches, that each and all who apply for membership shall be given an opportunity to become familiar with that to which they are to subscribe, and to become intelligent workers in the church which they have chosen? And is it not manifestly impossible for one to be a really helpful church-member without such knowledge? There would be greater progress, and higher demonstrations of the one Mind in our church meetings, if all had a clearer understanding of that to which we each give our loyal support by the act of joining a Christian Science church.

A NOTABLE PROPHECY.

FREDERIC W. ROOT.

WHETHER it be considered as a curious coincidence or a genuine inspiration, the following is interesting: In a volume of essays by Dr. Oliver Wendell Holmes, dated between 1857 and 1881, is one entitled "The Pulpit and the Pew." In this he refers to a "commonplace book" by the Rev. Joel Benedict, one of the New England clergy of a past generation, which contains the following record, made, he thinks, about the year 1773: "Conversing with Dr. Bellamy upon the downfall of Antichrist, after many things had been said upon the subject, the doctor began to warm, and uttered himself after this manner: 'Tell your children to tell their children that in the year 1866 something notable will happen in the church.'" Dr. Holmes continues: "The old man came pretty near hitting the mark;" and he proceeds to enumerate a few events which happened about the year specified, which seemed to him in some degree to justify the prophecy.

Mrs. Eddy gives 1866 as the date of her discovery of Christian Science; therefore this Science was probably in its early infancy when Dr. Holmes' essay was written. Had he lived to see what is evident today in the wonderful growth and effect upon mankind of the Christian Science movement, his estimate of those early divines as "interpreters of the prophecy" would have been still higher, and he might well have marveled at the old man's illuminated vision. Possibly, too, he would have been able to take the one step further in his position relative to the healing art; for at that time he could say: "No two professions should come into such intimate and cordial relations as those to which belong the healers of the body and the healers of the mind. There can be no more fatal mistake than that which brings them into hostile attitudes with reference to each other, both having in view the welfare of their fellow-creatures."

THE VALUE OF INSTRUCTION.

BELLE A. MUNDY.

A FRIEND of mine was trying to lay the foundation of an education in the mind of her maid—an immigrant just from the old country. When she told the maid that the sun did not rise and set and that the earth went around the sun, this statement caused much merriment in the mind of the untutored one, and it took a long time to convince her that the lady was not joking. "Why," said she, "if the world went around, all my plates and dishes would be thrown on the floor!" Before yielding to the instructions of Christian Science, my own mental attitude was much the same—ignorant merriment at the ideas presented to me. A good many of my "plates and dishes" have been thrown on the floor, not by a knowledge of the scientific facts, but for want of that knowledge.

We sometimes comfort ourselves with an ignorant and false belief, which gives a temporary comfort. This same maid was dreadfully homesick for the old country, so much so that her mistress did not know what to do to stop her tears and laments. But one day the girl dried her eyes and went cheerfully to work and nothing more was heard of her grief. Her mistress marveled, but wisely said nothing, until Christmas approached, when she asked her how she had conquered her homesickness so thoroughly. The girl replied, with a joyous laugh, "Oh, I remembered that winter was coming and the sea would freeze over, and then I could walk home!" Happy in her delusion, she had finally forgotten to be homesick.

A mind that is honest and open to instruction learns to value its opportunities. It neither ignorantly opposes the truth when presented, nor consoles itself with false arguments. It listens to the voice which says: "I will instruct thee and teach thee in the way which thou shalt go." Therefore it does not become "as the horse, or as the mule, which have no understanding." Mortal mind has to be bound "with bit and bridle," that it may not come near unto thee. After years of investigation and study of the subject of Christian Science, I can only rejoice in the value of the instruction I have received, and cry out with the poet,—

> The birdling a-swing in its nest on the bough,
> Is not so glad as my spirit now.

TRUTH REFORMATORY.

MATTIE BEACH.

CHRISTIAN SCIENCE is the only true reformatory institution in the world today. It not only reforms the sinner, but it pours its sweet influence into his life. In my own case it has changed and corrected an otherwise sour, discontented, and irritable disposition into one that is lovable, happy, and contented. It touched a tender chord in my mind, by its beneficent influence at the first service which I attended, in 1893. It took right hold of me, and has held me ever since. It has made a better woman of me at home, and in my domestic affairs it has made service light. In one instance I was made to see how beautifully we can accomplish this by doing all things as unto God.

I had always disliked to wash pots, and one day such an overwhelming sense of disgust came over me that I could not finish the washing of them. I turned away, declaring that I was an overburdened woman, doing menial service, and for a few moments I was very miserable over this thought. Then the "still small voice" of Spirit, or intuition, "the angel of his presence," whispered to me or gave me thought to read the leaflet "Service and Stipend." I obeyed this intuition and read it, and at the closing lines these verses from the Bible met my eye: "In that day shall there be upon the bells of the horses, Holiness unto the Lord; and the pots in the Lord's house shall be like the bowls before the altar. Yea, every pot in Jerusalem and in Judah shall be holiness unto the Lord of hosts; and all they that sacrifice shall come and take of them, and seethe therein; and in that day there shall be no more the Canaanite [slave] in the house of the Lord of hosts."

Since that day I have never had a discordant thought to meet so far as my household duties are concerned. The "pots" have become as "the bowls before the altar," and as the days go by I find that, as one of our hymns expresses it,—

> Love, crowning all with peace,
> Bids strife and tumult cease;
> Love, crowning all with peace,
> Makes service light.

SELECTED ARTICLES.

[C. L. Ramsay in *Edinburgh* (Scot.) *Dispatch.*]

Once a man admits that infinite Spirit or Mind is the creating, regenerating power of the universe, and that through a condition of mind which we may call faith or spiritual understanding, he can come into actual touch with that life-giving Spirit, and so experience what St. Paul calls transformation by the renewing of the mind; further, if he will admit that that mental transformation or regeneration can and does produce a corresponding effect upon the body, then he has admitted the possibility of healing by Christian Science; and who shall venture to draw the line, and say how far that renewing of mind and body can go?

Once more let it be repeated that Christian Science does not claim to work any miracles. No Christian Scientist flatters himself that by anything he can say or think he can interrupt the laws of the universe or change the purpose of the Almighty. But he does find that he can learn to know enough of the goodness and all-power of God to gain a large measure of freedom from fear and sin, and that the mental peace he thus attains sets the body also free from suffering and disease.

That many who see the results without understanding the process should attribute these results to something else is not surprising. But, in view of the ever-increasing mass of evidence in favor of healing by spiritual methods alone, we can afford to wait patiently to see the effect this evidence will produce upon the public mind in the near future.

[Alfred Farlow in *Lawrence* (Mass.) *Eagle.*]

In a late issue, commenting upon the death of a child under Christian Science treatment, the coroner is quoted as having stated: "The boy was a victim of the unusual belief of his parents." It seems entirely proper to ask, Upon what does the coroner base this conclusion? He does not need to go outside the records of his own city to find that scores of children have died under medical treatment, and the records of the world show that over one hundred and forty thousand persons die every day, an overwhelming majority of whom are children and the most of them treated medically. According to the coroner's logic it would be proper to say that these one hundred and forty thousand persons are "victims" of medical "belief." So long as those who believe in medical practice are not able to make a better showing regarding the results of their own practice, they might well remember the old adage concerning glass houses.

If medicine were proved an absolute cure, or even an approximation thereto, there would be some justice in pleading that it shall have the sole guardianship of the public health; but from the Christian Scientist's point of view Christian Science is the better remedy. I have witnessed the healing of a severe case of scarlet fever in three days' time. In the same neighborhood a child who had been left with a stiff neck because of the effects of this same trouble, was healed. These were the only cases in the neighborhood. Christian Science apparently prevented any further spread of the disease.

[Ida Holnett in *Montgomery* (Ala.) *Times.*]

Thinkers, as well as the merely curious or indifferent, are seeing a remarkable movement termed Christian Science spread throughout the world, rapidly in some localities, slowly in others. From the start, over forty years ago, the term provoked comment of all kinds, caustic, humorous, severe, wondering. The same varying comment continues today, coming up from new sources as Christian Science dawns upon differing phases of human thought in the nooks and crannies of the world. In thousands and tens of thousands of instances caustic comment has changed to grateful appreciation and blessing, as a glimpse has been caught of its helpfulness in human conditions. All this indicates that Christian Science has arrived. It is far enough above the horizon of obscurity to be recognized by both thoughtful and curious as "a most remarkable movement."

In any age the teaching and living which portrays a new, or what seems a new, concept of God meets surely with opposition, ridicule, abuse. In the past, it met the hemlock cup, the cross, the fagot and stake, the devouring lion, the headsman's axe, the Inquisition. We are perhaps unconscious of the deep hold upon us obtained by prevailing concepts imbibed from association, from the press, from the literature of the period, and we resent views which differ from those that thus hold us. Yet any observer of the history of the world's mentality may perceive, even if but faintly, that the human concept of God has continually changed. Looking still more closely, we see that according to the concept held of Deity in any age, by any nation, has developed the distinguishing marks or characteristics of that nation. It is quite true that in some instances an exalted concept has been formed theoretically by advanced thinkers without its taking hold of the every-day thought of the people at large. In such a case, the "Word" has not been "made flesh,"—has not become of practical significance,—and the beautiful theory is not the prevailing concept.

Has Christian Science presented a new concept of God? Let us see. Take this statement of the nature of God, which is accepted theoretically by those churches termed evangelical: "There is but one living and true God, everlasting, without body, parts, or passions; of infinite power, wisdom, and goodness; the Maker and Preserver of all things both visible and invisible" (Articles of Religion). Does Mrs. Eddy in her statement of the nature of God differ from the fundamental idea contained in the foregoing? By no means. On page 587 of Science and Health, the text-book of Christian-Science, we have her definition of God, as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life: Truth: Love; all substance; intelligence." Elsewhere Mrs. Eddy says that these synonymous terms "are also intended to express the nature, essence, and wholeness of Deity" (*Ibid.*, p. 465). This statement, unfolding a view of God which uplifts and vivifies the receptive human consciousness, emphasizes that just quoted from "Articles of Religion." It also emphasizes the Scripture, "Hear, O Israel: The Lord our God is one Lord;" from which follows inevitably the human need of making manifest the divine image and likeness in which man is formed or expressed: "And thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might." We grow to the likeness of that which we love.

Better and clearer views of God have come throughout the ages to those reaching out for divine enlightenment. Mrs. Eddy says in her chapter on Prayer, "Desire is prayer; . . . Prayer cannot change the Science of being, but it tends to bring us into harmony with it. . . . The unspoken desire does bring us nearer the source of all existence and blessedness" (Science and Health, p. 1).

So these clearer, more satisfying views of the divine nature have come to men in proportion to their intense longing for light, growing out of a background of living up to the highest they knew.

[Charles K. Skinner in *Detroit* (Mich.) *Free Press.*]

A critic says that "Christian Scientists declare they are discriminated against, because they are not allowed the same privileges as medical practitioners." I do not think there is any question in the mind of the public as to whether they are being discriminated against; but Christian Scientists are biding their time, until the public becomes still better educated as to the practice and results of Christian

Digitized by Google

Science treatment. They know that the matter will regulate itself, as all questions do which pertain to the public weal.

Statement is made that "Christian Scientists often leave cases until they are beyond hope, when a medical man is called and gets the blame." Reversing the case, the medical man often holds the case until the last hour, and Christian Science is called and saves the patient, for "man's extremity is God's opportunity." Now, to be fair (and my acquaintance with the doctor leads me to think he so intended), he should have said that seventy-five per cent of those who come to Christian Science for help have been given up by medicine after years of treatment, and like the drowning man clutching at a straw, have reached out for God's help.

The above is no rash statement, but the result of careful inquiry made in several states. Further than this, a very large majority of these cases are either healed or permanently benefited by Christian Science. The fact that all are not healed should be no criticism against Christian Science, when we see the long list of deaths under medical treatment. No patient is kept in durance by a Christian Scientist, but is given to understand that he is at liberty to return to medical treatment at any time he desires.

[Frederick Dixon in *South Wales Argus*, Newport, South Wales.]

Our critic is not quite correct, in saying that Christian Scientists imagine "they have made a wonderful new discovery." Christian Scientists believe that Mrs. Eddy has rediscovered the method by which the primitive church accomplished its healing. They do not imagine that this discovery is an absolutely new one, inasmuch as it was contained in the teaching of Jesus. Mrs. Eddy has made this perfectly clear in Science and Health, when, in speaking of her own discovery, she writes on page 126, "The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth."

The truth is that the ministry of Jesus had scarcely come to an end before his followers began to falter in the effort to obey his command, not merely in preaching the gospel, but in healing the sick. It is generally agreed that the epistle of James was written somewhere about the sixth decade of the first century, and already, in that epistle, there is the first warning of failure. "Faith," said that writer, "without works is dead." Preaching, that is to say, without healing, is of no avail. Because, as Jesus himself declared, those who believed on him would be able to do the works which he did, it followed necessarily that a failure to do the works implied a lack of faith. Those, he also declared, who knew the truth would be freed by that knowledge of the truth. Consequently, preaching without the works following, implied no less a lack of knowledge than it did a want of faith.

Still, though in an ever declining ratio, the healing work did linger on, for something like three centuries, till, after the time of Constantine, it ceased to be regarded as a vital element of Christian healing. Truth, however, still remained to be demonstrated, for the Christ was to be with men "alway, even unto the end of the world." The result of this was that, not even during the Dark Ages, not even in the midst of the gross materialism of the Renaissance, not even in the era of skepticism and rationalism which grew up with the Encyclopædists, did the "still small voice" fail to make itself occasionally heard. Harding and Sebald, Luther, Fox, and Wesley, all bore witness to the power of divine Love to destroy sickness and sin. The healing, however, so established, was of the most sporadic and uncertain description, because it was based on the belief that the God to whom these men appealed was the bestower of sickness as well as health, of death as well as life. Yet death, the apostle declared, entered the world through sin, while Jesus, who healed disease and raised the dead, declared, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit."

Such was the common belief, such was the common experience of men, when, on what threatened to be her deathbed, Mrs. Eddy was healed by what she recognized as the finger of God. What distinguished the healing in her case from the healing in the other cases which have been mentioned, was this, that she was not content to accept the healing as some special intervention of Providence, but realized that the power which had stilled the tempest and raised the widow's son from the bier, at the gateway of Nain, was an ever-operative divine law, for, "Lo, I am with you alway, even unto the end of the world." "I knew," she writes, on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." The debt, therefore, which humanity owes to Mrs. Eddy is that she has shown it what the teaching of Jesus was, and how it may be justified today.

It is not possible, of course, within the limits of a letter to show what the teaching of Christian Science is; that knowledge can only be gained from the patient study of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," which is the text-book of Christian Science. What it is possible to insist on is this, that in that book Mrs. Eddy has accepted the demand of the Founder of Christianity, that theory should in all cases be accompanied by proof. The Greek words translated miracle have not, and never have had, any supernatural significance. They mean simply either an act of power or a sign. The miracles of Jesus were indeed acts of power, insomuch as they showed the power of divine Love to overcome inharmony of every description, and they were indeed signs that his teaching was no mere theory of the goodness of God, but was the explanation of a phrase, used in the epistles, and translated knowledge of God, but which should, of course, be translated, full, exact—that is to say, scientific knowledge of God, and so of Truth. This is the knowledge of divine law which Christ Jesus declared, when understood, would make men free, and the Science of which he taught in his parables and demonstrated in his miracles.

[Herbert M. Beck in *Arkansas Democrat*, Little Rock, Ark.]

It is well known that Christian Scientists minister to sick people and they become well. Many are the instances where all other help had failed and all other hope had fled. This, according to the preacher, is "rankest blasphemy;" but it does not seem so to the practising Christian Scientist and it does not seem so to the one who is healed and can say: "Whereas I was blind, now I see." In Christian Science it does not appear how it could possibly be blasphemy to do these works.

The text of the sermon, as reported, reads: "And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people. And his fame went throughout all Syria, and they brought unto him all sick people that were taken with divers diseases and torments, and those which were possessed with devils, and those which were lunatic, and those that had the palsy; and he healed them." Luke says: "And he sent them to preach the kingdom of God, and to heal the sick." Jesus commands, in John's gospel, "Verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." In Mark we read: "And these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

In Gibbon's "Roman Empire" (Vol. II., p. 107) it reads: "The miraculous cure of diseases of the most inveterate or

Digitized by Google

even preternatural kind can no longer occasion any surprise, when we recollect that in the days of Irenæus, about the end of the second century, the resurrection of the dead was very far from being esteemed an uncommon event."

Wherein, in the light of the above, is the authority for saying that the Christ-healing "terminated with the apostles"? What of the seventy?—only to them in addition? What of "them that believe"? Was the power to heal not granted to them also? If we do not come under that head—but that is not the point at issue. It will not be denied that God healed the sick in numerous instances before the Christian era. The above Bible verses are submitted as examples of the many that both promise and demand spiritual healing, with a commission as specific as the one to "preach the gospel." Paul had no personal teaching from Jesus, yet Paul raised the dead. James says: "Is any sick among you? let him call for the elders of the church; . . . and the prayer of faith shall save the sick, . . . pray one for another, that ye may be healed."

To the Christian Scientist, as much as to any one else (perhaps more in some cases), the "world presents itself" as terribly "under the blight of sin" (to quote our critic) and of sickness and death; but has not Christianity for two thousand years prayed, "Thy will be done in earth, as it is in heaven"? Shall this prayer avail nothing? What is the victory over sin and death that is promised? What is the new heaven and the new earth that we are assured of by Isaiah, and by the prophet in Revelation?

Here, Christian Science, redeeming the promise of the Master, does not leave man comfortless, but provides him with a reason for the faith that it requires of him: and when men repeat the question, "Art thou he that should come?" it answers by referring to the works of healing the sick and the sin-sick that follow its ministry in the name of Christ, Truth. If that is "rankest blasphemy," it is done with greatest reverence, and those who have been healed are searching the Scriptures daily for more of the same thing, and are glorifying God.

[John H. Roe in *Ogden* (Utah) *Standard*.]

I find our clerical brother again attacking Christian Science, and reiterating his view that "cultured and cultivated people" have little or no right "to seek redemption and safety by pleading with Almighty God at the mercy-seat" (to use his own words).

If this article had not been written in the first person singular, it would be hard to believe that a minister of the gospel was its author. If this clergyman had confined this criticism to his own church, we would have nothing to say. But as he is attacking Christian Scientists again, as if they should specially be denied this right, we protest that such preaching is a flagrant departure from the Scriptural invitation—"Ho, every one that thirsteth, come ye." Are we not all invited to come and be "sheltered from the biting rage of the ages' tumultuous storms" (his language)? It would be interesting to know what the "cultured and cultivated" of his own congregation think of their pastor's denial of their right in this respect.

In a congregation of forty-five hundred people, that our critic tells of visiting in Boston, no doubt many would find it convenient and pleasant to go to church in automobiles—some go that way here in Salt Lake even—and it would be perfectly natural to leave the automobiles outside while their owners went inside, as our friend relates they did in Boston—they do the same way here. But in this connection our critic has raised the question by his implied protest against going to church in automobiles; whether their owners should not be denied the rights of the mercy-seat, along with the "cultured and cultivated," already without right in his view.

But our critic has a further indictment of this great Christian Science congregation. He says, "Within the church I found a class of people who told the strata of society to which they belonged by their language, dress, and bearing." Of course, our critic had no specific knowledge as to where those forty-five hundred people did come from to that meeting, but he ventures the assertion that "they had not emerged from the dives and hovels of Boston." Probably not. But why place that to their discredit? Does his congregation emerge from the dives and hovels of Ogden? In my reply to this critic last fall, I explained therein that the prosperous appearance of the Christian Science congregations was only the fulfilment of the promise of betterment in all ways which Christian Science brings to those who come to it and adopt its teachings into their daily lives. It does not make so much difference what conditions people leave, for Christian Science lived will soon lift them above the dives and hovels of the cities, even if it found them there.

Last summer I visited this great congregation in the same place. I heard the language, I saw the dress and the bearing; but what a different impression it made upon me from what it seems to have made upon our Ogden brother. To me it was quiet, peaceful, great, and grand—a sea of bright, happy faces and such sweet, inspiring singing and music as most people never hear in this world. I thanked God that He had permitted me to be there. And to me it was as the song of the angels, "Glory to God in the highest, and on earth peace, good will toward men." One's mental view-point makes a world of difference, and so our clerical friend has put in evidence only a list of dingy criticisms to indicate what his visit to this grand meeting meant to him.

We agree with our critic that he may be wrong, at least in part, in his "ideas of religion." He seems to deplore the consideration of "my body, my body" (where he found these expressions I do not know) and "my soul, my soul," and says, "The church is not a place where saved souls congregate to gloat over the thought of the hell they have escaped, nor is it a place where those who have been relieved of physical disability gather to rehearse their experience with disease." This seems to be a criticism of the Wednesday evening experience meetings, where the recipients of Christian Science healing meet and express their gratitude to God for relief thus obtained. But we have the Master's approbation for such acknowledgment, even against our critic's protest, and we submit that it is perfectly legitimate and proper to rejoice, even out loud, in church or any other place, over one's escape from hell.

In closing, our critic says, "The church is the gathering-place of men and women who have strength and enthusiasm and hope—eager to consecrate themselves to the service of God," etc. As for the strength and hope, we fail to see how they are going to have much strength with a helpless body or hope with a neglected soul. And as for the third requirement mentioned, the Bible speaks of it as the manifestation of "zeal without wisdom." And so we think we can see how these definitions fit into pastoral work to its detriment.

Transparency does not obstruct the light. Only opaqueness casts a shadow; and turning away from the sun, it sees that shadow and forgets that the sun is still shining. So mortal belief, dense to the rays of the truth of Spirit, casts its own shadow of material selfhood, and believes it sees a bodily personality, manifesting sin, disease, and death. Turning away from the Sun of righteousness, it fancies the light of good has ceased to shine. Only as belief becomes less material, as thought is cleared of its grosser elements, does its own shadow begin to melt into nothingness. Only as consciousness becomes wholly spiritualized, flooded throughout with divine illumination, is absolute and infinite reality revealed,—the allness of Love and its perfect idea,—and evil and matter no longer even seem to be.—MARY WHEELER.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE SPIRITUAL IS THE REAL.

CHRISTIAN SCIENCE, through its insistence upon the reality and allness of good, of necessity throws into corresponding relief the reverse of this proposition, namely, the unreality and nothingness of evil. Nevertheless, because of the very emphasis thus placed on evil's nothingness and unreality, many casual or superficial critics have run away with the belief that Christian Science is a negative system; whereas the negative is apparent only because of the reality of that which is true, just as the negative nature of darkness is apparent because of the reality of light.

This erroneous belief about Christian Science is largely responsible for the many ridiculous statements made by critics who imagine that Christian Scientists entirely ignore sin, disease, and suffering; that they heartlessly brush aside the appeals of those who are in need with such sayings as, "All you have to do is to think you are well," "Imagine you are warm, and you will not need an overcoat," *ad libitum*. Perhaps the wittiest presentation of this belief was the cartoon which appeared in one of the comic papers some time ago, which pictured a Christian Scientist in the attitude of sitting on an imaginary chair, with his feet resting on an imaginary table, and reading an imaginary newspaper.

Paul taught that "the things which are seen are temporal; but the things which are not seen are eternal," yet these critics utterly fail to understand that in Christian Science the word "real" is used in precisely this sense, that is, to express only that which is spiritual and eternal,—"the things which are not seen." Nor do they seem to be able to discriminate between the word "Mind," which when capitalized is in Christian Science teaching a synonym for God, and the so-called human mind, which is used interchangeably with the terms brain or intellect.

A leading point in Christian Science is that there is but one God, who is the only creator; that this God is infinite, divine Mind; that He is Spirit and His creation is spiritual; that He is infinite good, and His creation is likewise good, because it is impossible and unthinkable that good could create evil. The logic of this view-point is that sin, sickness, and death, being evil, cannot be of God's creating, and therefore are unreal. Mrs. Eddy has given us a wonderfully clear presentation of this in her "scientific statement of being" (Science and Health, p. 468), wherein she says, "Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual."

In practical experience, this understanding of God, and of man's relation to Him, corrects the false beliefs which would make man and his surroundings material, and brings to light the reality of being, just as the removal of that which tends to obscure the light destroys the darkness. Light is positive and darkness is negative, hence light is real and darkness is unreal in exactly the same sense as that in which Christian Scientists use these words in referring to good and evil.

Christian Scientists are not engaged, as these critics would have people believe, in the chimerical effort of trying to lift themselves by their bootstraps, but they are earnestly engaged in demonstrating that God is the divine Principle of the universe and is not the author of evil of any kind. It has been proved by Mrs. Eddy, and after her by her followers, in the degree they have apprehended and applied her teachings, that this right understanding of God and His creation heals the sick, not through the negative process of ignoring evil, but by the positive process of destroying the false belief by knowing the truth,—that knowledge which Christ Jesus taught would make us free indeed.

ARCHIBALD MCLELLAN.

"WITH EVERY SECRET THING."

DAVID'S prayer, "Cleanse thou me from secret faults," seems peculiarly fitting when we remember how grievously he had sinned "against light," against the truth taught by Moses when he said, "Thou hast set our iniquities . . . in the light of thy countenance," and today we all need to learn, even as did our fathers, that "there is nothing covered that shall not be revealed; and hid, that shall not be known."

History will undoubtedly record the fact that the pride of mortal sense never seemed more confident of its cleverness than at the opening of the twentieth century, and that the consequent temptation to do unideal things "on the sly," to shape conduct with regard for the ignorance of our neighbors, rather than for "the all-seeing eye," was apparently never more seductive and influential. Far better, perhaps, than did the ancient worthies, do all intelligent believers know today that however refined its subtlety, however careful its self-covering, wrong-doing can find no hiding-place in the light of Truth; that while men may fool their fellows many times, they can deceive God not in the least.

And yet, how often are the professed followers of the Nazarene led to ignore the Christ-ideal,—yes, even common morality,—both in their private life and in the realm of business, provided the questionable course or transaction is generally indulged in and they are reasonably certain that their deed will not become known. They are willing to hazard the judgment of God if they are sure of escaping the judgment of men, and the outcome of this masked living is well described by the Master when he says, "If therefore the light that is in thee be darkness, how great is that darkness!" When one consents to shape his conduct with regard for his reputation, rather than for his integrity, he is foolishly indifferent to the words of the apostle, "God shall judge the secrets of men by Jesus Christ."

While exalting, first and supremely, the positive and the good, the inherent winsomeness of the right and the true, Christian Science makes it forever clear that our moral account will have to be paid even to the last penny. It teaches that nothing less than perfection of purpose and of conduct is imperatively required now, and a professed Christian Scientist who knowingly lived a dual life or consented to deception or hypocrisy in any form,—who, in short, could not have his every desire, determination, and deed photographed to the world without shame,—such an one would be doing violence to the simplest requirements of the faith for which he stands.

The ruling fact behind every untruthfulness, every "secret sin," every Machiavellian maneuver in the business world, is disbelief in the practicability of a life which is righteous through and through, and hence in the teaching of Christ Jesus. If our Lord's words be true, then no man can afford to live a life in which there is anything to hide, anything done "behind the curtain," and no man can truly accept the Master's teaching, as interpreted in Christian Science, without being lifted above the possibility of temptation to cheat or knowingly deceive. Christian Science brings about and establishes what seems, strange to say, an entirely new mental attitude, namely, an imperturbable con-

Digitized by Google

viction that it pays to be wholly frank and true in every word and act; that a righteous life will insure the supply of every human need, and to those who have reached the fulness of this realization there has come the inspiration and the power to live in that ingenuous, Christlike way which entertains no thought of deception, and no fear for the day when the books shall be opened and all hidden things be made known.

Christian Science has come to bring open vision and make possible a clean, unblemished life, in present fulfilment before men of those prophetic words, "God [good] shall bring every work into judgment, with every secret thing."

JOHN B. WILLIS.

THE VANISHING OF MATERIALITY.

RELIGION and physical science have generally been agreed that the material world and all it contains will be destroyed at some period unknown to either science or religion, but people have usually trusted that this great change might not come in their day. Although it is distinctly stated in the Bible that the material must vanish before the spiritual can be recognized, yet even professed Christians have continued to cling to the material as if it were the real and eternal. In the second epistle of Peter we find definite reference to the teachings of the "holy prophets" on this subject, also to those of Christ Jesus as given to his apostles, and Peter speaks of the "scoffers," who deny the approach of spiritual conditions, saying that "all things continue as they were from the beginning of the creation;" that is, material, even as to the materialist they seem to be.

This apostle, however, maintains the necessity for the destruction of materiality in order that "new heavens and a new earth, wherein dwelleth righteousness," may appear. This is distinctly the teaching of Christian Science, but it also teaches that the material never was real, that the divine creation must be spiritual in order to express and reflect the creator who is Spirit. Mrs. Eddy illuminates this whole question when she says (Science and Health, p. 573), "The heavens and earth to one human consciousness, that consciousness which God bestows, are spiritual, while to another, the unillumined human mind, the vision is material." As the veil of material belief becomes thinner for us, we begin to see things somewhat as God sees them, and, of course, as they really are. If we could see the universe as God sees it, namely, as His reflection, every trace of evil and materiality would disappear for us, and we should know even as we are known.

The apostle tells us that "the elements shall melt with fervent heat," and in Deuteronomy and Hebrews we read that "God is a consuming fire." As the Bible also declares that God is Love, it becomes very clear that divine Love is forever consuming all that can be destroyed, all that is unlike God; but this does not mean that the real man or the real universe ever vanishes away. Christ Jesus explained this to some cavilers by the wonderful illustration of Moses at the burning bush. This bush was not destroyed by the fire, and although the Jews contended that Abraham, Moses, and the prophets were dead, the Master insisted that God "is not a God of the dead, but of the living: for all live unto him."

To God, no one is ever dead or held within the narrow limits of materiality, and Christian Science shows conclusively that material sense reveals neither God nor the universe of His creating. How vain, then, to speculate or argue about the human organism or its possible relation to real being, when the way of progress lies in quite another direction! Our great need is surely to know the man who reflects God, and Science and Health teaches us that "he is not made up of brain, blood, bones, and other material elements" (p. 475). These merely represent the beliefs of mortals, and the declaration of the truth brings to our present human sense health instead of disease, harmony instead of discord, life instead of death.

Although "it doth not yet appear what we shall be," we press on to realize what it means to be "like him,"—like God,—"warring no more over the corporeality, but rejoicing in the affluence of our God" (*Ibid.*, p. 140). If the vanishing of materiality, with the beliefs of sin, disease, and death, seems to be a slow process, we need but remember Peter's word, that with the Lord one day is "as a thousand years;" and if God waits, it is that none shall perish, but that all shall escape from evil and "be found of him in peace, without spot, and blameless."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BROOKLYN, N. Y.

A progressive step in the history of Christian Science in Brooklyn was taken yesterday morning [July 9] in laying the corner-stone of First Church of Christ, Scientist, at the southwest corner of New York avenue and Dean street. Only the officers of the church, its board of trustees, and building committee attended the ceremonies, which were very simple and were conducted by the First and Second Readers of the church.

The congregation, previous to last October, worshiped in the cosy little edifice at 404 Lafayette avenue, which had the distinction of having been the first church erected in New York state exclusively for Christian Science meetings. The Sunday School room on Dean street having been completed last October, has made it possible for a larger congregation to assemble, and therefore has been used for all the services since that time. There is still need for larger accommodations, and the main auditorium, when completed, will give a seating capacity of about twelve hundred.

Standard Union.

INDIANAPOLIS, IND.

Plans have been filed in the office of the building inspector for the new church building which First Church of Christ, Scientist, will erect at 2007 North Meridian street. The general contract has been let, and excavations have been started. It is expected that the church will cost, when completed, about fifty thousand dollars.

The building will be colonial in design, the front being largely of Bedford stone. A large porch extending all the way across the front and the top of the building will be supported by four stone columns. The purpose is to make the building a handsome structure, in keeping with the residences in the neighborhood. The lot on which the church will stand has a frontage of fifty feet in Meridian street and is one hundred and seventy feet in depth. The church will be set some distance back from the sidewalk, to conform with the residences on either side. The church will have a seating capacity of about eight hundred. It is expected to have the building completed by the first of December.—*Indianapolis News.*

TO CLERKS OF BRANCH CHURCHES.

The attention of clerks of branch organizations of The Mother Church is called to the necessity of forwarding to The Christian Science Publishing Society the names of newly appointed First Readers, whether regular or temporary, as soon as selected. The name which appears in the *Journal* card should be that of the Reader actually serving in that capacity.

THE LECTURES.

ST. PAUL, MINN.

On Sunday afternoon, May 22, Frank H. Leonard lectured on Christian Science, at the Auditorium, before a large and appreciative audience. He was introduced by the Governor of Minnesota, the Hon. A. O. Eberhart, who spoke as follows:—

It must indeed be very gratifying to the committee who have had this lecture under consideration and who have made the arrangements, to see so large an audience this afternoon; and while it is my first experience in listening to a lecture on this subject, I can say to you truly that I have not come here merely for the purpose of introducing the lecturer, but because I am anxious to hear what he has to say. I have taken an oath of office to give to the people of this state the best service, the best knowledge that there is in me, and anything that better qualifies me for rendering such service to the people of this state is something in which I am specially interested; therefore I wish to go where I may get such knowledge and such information.

When we look back upon the progress of humanity during the past ten or fifteen centuries, we find that the progress made during the last two or three decades has, in comparison, been wonderful. The time was when, as to religion, people were very narrow and restricted, but we find now that new occasions teach new duties. Time makes ancient good uncouth; they must press upward still, and onward, who would keep abreast with Truth. As a seeker after knowledge and Truth, I have come here to listen to this lecture, and I am sure that all who have come here will go away with the feeling that they have been well compensated for the time spent in listening to this present speaker, because he comes to us with a message which stands for the betterment and the uplifting of mankind.

Whoever teaches mankind to do right because it is right, is greater than Cæsar, Alexander, or Napoleon, and whoever spends his life for the betterment and uplifting of mankind is the greatest gift of divine Providence to the human race. For that reason, I bespeak for the lecturer, in delivering a message that means much to you, the best attention that you can give him, feeling that his message means much to the city of St. Paul and to the state of Minnesota, because I believe it stands for that which is best and truest and cleanest and purest and noblest in American citizenship, that it stands for the best manhood and womanhood.—*Correspondence.*

BANGOR, ME.

A large and representative audience listened to the lecture given in City Hall Thursday evening [May 19] by Clarence C. Eaton of Tacoma, Wash. The speaker was introduced by Andrew C. Sawyer of this city, who said,—

A little more than two years ago I was very gently and very unexpectedly led into Christian Science. It attracted me at once, because I found in its teachings many statements of truth which I already believed. I have been a Bible student nearly all my life and active in Christian work for many years. A short time after this, while visiting in some of the larger cities on the Atlantic coast, I improved every opportunity to investigate Christian Science. The large churches and the magnificent audiences that I saw, the many testimonies to which I listened both in public and in private, impressed me very much, and I felt sure that underneath it all was a great spiritual truth and I wanted to know more about it. Studying the Bible in the light of Christian Science, as taught in the Christian Science text-book, "Science and Health with Key to the Scriptures," made it read like another book. All this resulted in a complete mental transformation, and was followed in a short time with physical healing. This is in accordance with the teachings of Jesus, who said, "Ye shall know the truth, and the truth shall make you free;" and Mrs. Eddy writes in Science and Health (p. 480), that "if sin, sickness, and death were understood as nothingness, they would disappear." A physical trouble contracted in the Army of the Potomac during the last few months of the Civil War, and which in later years seemed to be assuming a somewhat serious condition, suddenly disappeared. I soon became conscious that whatever I may have said heretofore that could in any way be construed into criticism of Christian Science was only a criticism of what I thought it to be. Probably there is today no Christian teaching or practice that is so generally misunderstood and misrepresented as Christian Science.

Bangor Commercial.

WILLIAMSPORT, PA.

Judge Septimus J. Hanna lectured on Christian Science in the Y. M. C. A. Auditorium, on Sunday afternoon [May 22]. He was introduced by Clarence E. Sprout, Esq., a well-known attorney of this city, who said in part,—

While I have not the understanding and not the faith of many of my friends and neighbors who have come here this afternoon to receive a message from the very distinguished gentleman who is about to address you, nevertheless I am glad of this opportunity to attest my profound esteem for the many noble, cultured, and God fearing people of this city and elsewhere, who are the devoted adherents of the Christian Science faith. The months of February and March, of last year, I spent in the City of Mexico, the capital of the republic. My business—the special object of my mission—brought me into intimate association with a very prominent gentleman, who, with his very charming and highly cultured wife, was an earnest follower of Christian Science tenets. It was my good fortune, during all my stay in that beautiful city, to spend my leisure time in the environment of the Christian Science people, going every Sunday to their church, and attending with my friends, whose gracious and gentle hospitality I shall never forget, their mid-week and other meetings. The effect of this association made a lasting impression upon me, and I take this opportunity of making grateful acknowledgment for the permanent and lasting benefit I derived. I never met more charming and cultured people. Their charity and tolerance for the views of others; their immunity from the discordant conditions of the material world; the poise, serenity, and composure of their every-day life; their disregard of everything baneful and injurious to life and happiness; their love of the pure, the good, and the beautiful—all impressed me and inspired me with a desire for a greater understanding of the creed and philosophy of this splendid, happy, and harmonious people.

Gazette and Bulletin.

BERLIN, GERMANY.

A lecture on Christian Science was delivered by the Rev. William P. McKenzie, member of the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., at the Beethoven Saal, on Tuesday evening, May 24, under the auspices of First Church of Christ, Scientist, Berlin. There was a large, attentive, and earnest audience, whose sympathetic attitude toward the distinguished lecturer revealed the depth and strength of the Christian Science movement in Berlin. Dr. Carl Grauer, in introducing the lecturer, said,—

Progress always takes place only in the proportion in which our understanding, our knowledge, increases. A lecturer, speaking from this platform about six months

Digitized by Google

ago, asked, in a lecture on Christian Science, why, a hundred years ago, there were no railways, no telephone, no airship. There were then as now the same powers of nature in earth, air, and water at our disposal, but men did not then know how to make use of these natural powers. In religion we make the same observation. God, the great "I AM," was always the one God, infinite and perfect, but as such He was acknowledged only imperfectly by the nations of the Old Testament; every new prophet, it is true, enlarged their knowledge of God. But Jesus was the first to bring the scientific understanding of God. Jesus did not limit himself to teaching God, but he proved at the same time, through his works, that his teachings of God were true.

Jesus' teachings were accepted by later theologians, but Jesus' works were not practised by them. Mrs. Eddy, the Discoverer and Founder of Christian Science, in her text-book "Science and Health with Key to the Scriptures," is the first to state again the full understanding of the Christianity of Christ. Through the study of this text-book we are enabled to understand God as He was taught by Jesus. Earnest striving after truth, eagerly and faithfully studying the Christian Science literature, helps us to progress in this understanding of God, and the practical results which are hereby gained consist in an improvement of morals and health, in a better understanding of man and conditions, in fearless deportment in all dilemmas—the ups and downs of life. He who can look back on such results begins to understand the word, "Behold, the kingdom of God is within you"!

Christian Science teaches, above all, thankfulness. Thankful are the followers of Christian Science to their Leader, Mrs. Eddy; thankful are they for the Christian Science literature which provides them with a growing understanding of the teachings of Christian Science; thankful to every one who leads them on the straight way to Truth, to all good. Heartfelt thanks do they therefore give to Mrs. Eddy for establishing an especial committee, to whose members falls the duty of delivering lectures on Christian Science and correcting incorrect statements regarding that teaching.—*Continental Times.*

CHARLESTON, WEST VA.

Prof. Hermann S. Hering delivered a lecture May 31, to an attentive audience at the Burlew Opera House, of this city. He was introduced by Judge H. C. MacWhorter, who spoke in part as follows:—

We have assembled here tonight for the purpose of listening to a lecture on Christian Science, a subject which, while vitally interesting to a great many, is somewhat new to some of us here. I am very glad that we are in a country of free speech and belief, for you are all familiar with the trials of St. Paul,—how he suffered many hardships because of the lack of freedom of thought. Now I know very little about Christian Science myself, but I am at least willing to learn something of this great truth, and we should all be willing to hear any one who has a message for us. I think the lives of Christian Scientists are exemplary. What their belief is, I cannot say, but I am willing to uphold them in their good acts. "Wherefore by their fruits ye shall know them," said Jesus; and their fruits are good deeds. If a man is living aright, his theory cannot be wrong; and if the life of these people is right, their belief cannot be far wrong.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Randolph, Vt.—Prof. Hermann S. Hering, Bethany Church, Aug. 18.

TESTIMONIES OF HEALING.

Christian Science found me in Batavia, Java, about seven years ago. A friend came to see me one day, looking so radiant and happy that I scarcely knew her. She told me that a few days previously the wife of an American dentist had lent her a book, and after having read a few pages of it, she felt that the sun shone brighter and that all was love around her. This was because the book taught the allness and goodness of God and the nothingness of evil. The very same day we read together that most wonderful and poetic book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. A few days later a man fell under the electric tram, and by using the little truth which our text-book had taught me, I felt sure that God was able to take care of that man. A few moments later I saw him unharmed, but his clothes were torn to pieces.

I had to go back to my native country (Holland) two weeks afterward, and my only mental food during the voyage was the reading of three copies of the *Sentinel*. My first work when in Arnhem was to secure a copy of our text-book, and this book taught me the way to go to God in all my difficulties, as well as how to overcome fear which seemed very real to me.

Science and Health has literally educated me, and if I were to tell about all the blessings it has brought me, there would be no room for others in these columns. I would, however, like to mention some demonstrations, one being painless childbirth; and once, by realizing the truth, I overcame the effects of a severe scald on my child's hand, so that it left no trace. I have had the privilege of class instruction, and there it was pointed out to me that it is dreadfully selfish to be melancholy; so I was healed of this ailment, and now rejoice in the ever-presence of God, good. Some years ago my eldest daughter came home from school with a supposedly contagious illness, and I was able to protect the other three children (who remained at home), knowing that there is no disease in divine Mind. I learned much in that time, and so, a few weeks ago, when my second daughter was attacked with illness, she was able to go to school within two days, whereas her schoolmates had to stay at home much longer.

For a year I had studied alone, when one day a lady called to see me who said she was interested in Christian Science. This was the beginning of the work in Arnhem, for we two read the Lesson-Sermon each week and gradually got others interested. Finally, in November, 1908, we took a room in the Free Mason Lodge, where a very harmonious, happy band rejoice in the truth revealed by our beloved Leader. No words can express my gratitude to Mrs. Eddy, but I hope to be always able to express this gratitude by living up to the high standard she has taught us. How cold these words seem to me now that I have put them down, but how warm, joyful, and happy are the feelings they express.

MRS. C. HENNY, Arnhem, Holland.

I am deeply grateful to God for all the benefits I have received, and am still receiving, through Christian Science. About twelve or thirteen years ago I had a long illness, which left me with a weak heart, weak eyes, etc., and an internal trouble which finally developed into a serious kidney affection. Five and a half years ago I heard of Christian Science, and was given the text-book, "Science and Health with Key to the Scriptures," to read. I did not think at the time of being healed, but the inspiring thoughts that the book presented appealed to me. After I had been reading in it for a few weeks I found I could not see with my glasses, and thought that I should again need stronger ones. Then it occurred to me to try to see without them; that perhaps my eyes were cured. They were cured, and I have

Digitized by Google

never worn my glasses since that day. The other troubles all left me in a few weeks, just with the reading of this book.

I am now well and strong, and able to be a help instead of a burden to those around me. I am very deeply grateful for this healing, but I am more grateful still for the help I get in living my daily life. I pray for more understanding, so that I may be worthy to be called a Christian Scientist. MRS. M. CONSTANCE GALLOWAY, Oakleigh, Altrincham, England.

Christian Scientists are sometimes asked if they would dare trust Christian Science in serious cases. The question was answered for me about two and a half years ago. Our youngest child—a boy of four—had seemed to be quite ill for a day or two, and a Christian Science practitioner was called. His trouble was quickly met, but I then realized that I also had been feeling badly, though I had given little thought to myself.

That night I was taken violently ill, and in the morning my husband said he must call a doctor, at least to diagnose the case. An able physician was called, and pronounced the illness a very serious attack of acute lung trouble with high temperature. In the evening the doctor called again, and said my temperature was the same. That night my suffering was extreme and in the morning indications were alarming. I then said that I must have help—that I could not go on so.

When the doctor came he said, "You are no better, and must have a trained nurse." I replied, "No, doctor; I want Christian Science alone." He was very courteous, and expressed a hope that I would recover. The Christian Science practitioner was asked to come quickly, and she sat by my bedside for about three hours. At the end of that time all pain and discomfort had gone, and instead, there was a blessed peace. I could indeed feel with the poet that "the healing of the seamless dress is by our beds of pain." I sat up in bed and ate a hearty meal. It was like coming into a peaceful harbor after a stormy voyage.

Over and over again, for the past ten years, has the power of Truth been proven to us, in comforting, healing, strengthening, and in making the way plain. We rejoice that we have been shown the way in Christian Science.

MRS. ELIZABETH G. WITTER, Berkeley, Cal.

I am glad of this opportunity to tell what God has done for me through Christian Science. For years I was afflicted with all manner of ills, and especially with nervousness. I sought relief from doctors and numerous kinds of medicine, but it was only temporary. In December, 1907, there came a collapse, and for two and one half months I was doctored and nursed by the best medical skill obtainable. At last, when all hope of my recovery had been abandoned, I was induced to try Christian Science. I was treated by a practitioner in Kentucky, and was completely healed in three weeks.

Words are inadequate to express my gratitude for the light that has come into my life through this teaching. I find that Christian Science is a help in every time of need, and through this truth I shall be enabled to conquer every foe.—MRS. C. L. RANDOLPH, Golconda, Ill.

For many years I was a great sufferer, the pain being at times almost unbearable. I was a physical wreck, suffering from heart, stomach, and bladder trouble, and kidney affection, with hemorrhage as often as twice a day. For twenty-one years I tried many physicians, but failed to be healed with material remedies and applications. For eight years I could not walk.

Five years ago I sought aid from Christian Science. The doctors had informed me that it would be necessary to perform an operation, but I knew that I was too weak to pass through it. When I turned to Christian Science, I thought if it did not do me any good it would not harm me, and I found therein what I had been looking for. I had been praying all the time to get better, but it seemed that my prayers were not answered because, as I afterward learned, I did not understand God aright. The effect of the first treatment in Christian Science was beautiful; it brought me more than I was looking for—a spiritual uplifting which I had greatly desired. That day I walked nine blocks and did not feel tired, and it did not hurt me, much to my surprise. Under the physician's care I had not been allowed to eat what my appetite called for, many times being so hungry that I did not know what to do. Now I eat anything I relish and suffer no inconvenience. My health is very good. Christian Science has brought many blessings to me.

I am indeed thankful for the understanding of this blessed truth,—the understanding that God is All-in-all. I am grateful to God, and to our dear Leader, Mrs. Eddy, for Christian Science.

MRS. SARAH SMITH, Dayton, O.

After years of illness, I asked a friend, who is a Christian Scientist, if she thought Christian Science could help me. She advised me to go to a practitioner, but I told her that I had not the strength to go and that I had not much faith that I could be helped. She talked with me, telling me that God never made sickness, and I finally consented to go with her to see a practitioner. We went and he gave me a treatment. As we were starting for home, I ran to catch a car, although I had been walking with difficulty for months. I not only felt no ill effects from this, but I went home and slept all night. The second day after this I went to work, and have worked ever since. I have been healed of bladder and female trouble in a very aggravated form, from which I had suffered for fifteen years so that at times it seemed as though I would lose my mind. I have also been healed of a skin disease of the worst kind, and have not had the slightest return of the trouble. I have been healed of an eye difficulty, and have not put on glasses since my first Christian Science treatment.

For my physical healing I am very grateful, but words fail to express my gratitude to God, and to Mrs. Eddy, for the spiritual light I am receiving every day.

MRS. LOTTIE E. WAITE, West Somerville, Mass.

About a year ago I became interested in Christian Science through the healing of my wife, and commenced to read Science and Health. Afterward I went to a Christian Science practitioner for treatment for failure of eyesight, and after a few weeks I put aside my glasses and have not needed them since, being entirely healed of this trouble. About ten months after I became interested in Christian Science, I met with an accident and injured my ankle very badly. At this time I was doing regular night work, and this occurred about the middle of the night. I declared the truth as revealed in Science and Health as best I could, and was able to keep at work until eight o'clock in the morning, when my wife asked for help of a practitioner. I was treated for three days, keeping at work and using the foot each night, and I suffered no pain during this time.

Besides the physical healing, Christian Science has been a benefit in every way, and especially spiritually, for all of which I am most grateful.

W. F. WAITE, West Somerville, Mass.

For eighteen years I was almost constantly under the care of physicians, suffering from ills too numerous to mention, including headache, catarrh, and a bowel disorder of three years' standing, from which I was greatly reduced

Digitized by Google

in weight. I was treated by eight doctors during these years, also by a noted stomach specialist, and spent five weeks in a hospital. From there I went to the mountains and mineral springs; but nothing did me any good, except for a short while at a time, until I learned the truth,—that God is good, and that "the law of the Spirit of life in Christ Jesus" makes us "free from the law of sin and death."

My healing was wonderful, for which I am very grateful; but I am thankful most of all for the spiritual uplifting, for having been brought out of darkness into light. My greatest desire is to help spread the truth, and I trust that God's blessing on me may make me a blessing to others. I am more thankful than words can express to our Father for the glorious revelation given by Christ Jesus, which has been brought to us again by our beloved Leader, Mrs. Eddy, and made clear through our text-book, "Science and Health with Key to the Scriptures." Through the study of the Bible and this book I am daily encouraged to press on to the promised goal.

MRS. CORA L. BROWN, Asheville, N. C.

I take this opportunity to express my heartfelt thanks to God for the many blessings and comforts I am enjoying through the study and application of this new-old truth, as given to us in Science and Health by Mrs. Eddy, which truly is a "Key to the Scriptures." Eight years ago this truth was brought to us through a dear friend, and while reading the text-book I laid off the glasses which I had been wearing for defective vision. Since that time we have proven the power of Truth over many ills of the flesh, including neuralgia, headaches, fevers, throat and stomach trouble, etc., besides inharmony in the home, also business difficulties. Christian Science has indeed meant much to me and mine.

Words fail to express the sense of spiritual uplifting which I have experienced, especially within the last few weeks. Truth is indeed a guiding star to all who will follow it, and my sincere desire is to live the teachings of Christian Science. I would here express loving gratitude to our unselfish and devoted Leader.

DOROTHY CLARK MILLSPAUGH, Los Angeles, Cal.

Words fail to express my gratitude to God for what Christian Science has done for me. For more than twelve years I had been suffering with stomach trouble. I had taken all kinds of medicine, and been treated by many different doctors, but found only temporary relief. But thanks to God, two years ago, through Christian Science, I was healed, and have never had a return of said trouble since. I am indeed thankful that I have been enabled to touch at least the hem of Christ's garment.

CORA M. CASINGER, Crawfordsville, Ind.

I feel that I cannot let another week pass by without acknowledging with deep gratitude what Christian Science has done for me. It has been over twelve years since I was healed in this truth from a trouble with my eyes from which I had suffered ever since a very small child. I was forced, when a little girl, and also during the years I attended school, to be constantly taking treatment for my eyes, often using remedies several times during the day. In spite of the care taken, my eyes seemed to be growing weaker each year, the last oculist consulted, and who was considered very eminent in his profession, telling me that they could never be cured.

I was very much discouraged when Christian Science was suggested to me, but decided to give it a trial. I have often looked back to the talk which I had with the practitioner at the time of my first treatment, and to the first beautiful glimpse of the truth which I had that day. I had had a hunger for the truth ever since I was a small child,—at first an almost unconscious desire,—which afterward grew into a deep longing; therefore the words of the practitioner, giving me such a new and beautiful idea of the Father, who never sends any ill to His children, was as the first faint beams of spiritual light coming into my consciousness, filling me with happiness and a great desire to know more.

On the following day, when in a room bright with lights and heavy with the scent of flowers, an atmosphere which always caused more or less discomfort with my eyes, this glimpse of the truth enabled me to help myself. I thought of what had been told me, that the Father loves us too dearly to make us suffer, that He sends only good to His children, and that He is all-power. These few simple thoughts quieted me in a little while, and my eyes were less painful and less inflamed than they had ever been before under similar circumstances. Full of hope, I continued to take treatment, and in a short time was healed. Since that time I have used my eyes constantly and they have given me no trouble whatever. Besides being a student of Christian Science, I am also a student of art, therefore I am continually using my eyes. I am deeply grateful that with my healing came also the added privilege to follow a work which in its highest and noblest sense can unfold so much beauty and love. I thank the dear Father, and I also thank the Discoverer and Founder of Christian Science, Mrs. Eddy, that she was able to approach unto God and dwell in His courts, for by so doing she saw deep into the reality of God's creation,—the pure reality which is constantly being unfolded more and more clearly to all faithful followers of Christ, Truth.

As I look back over the steps which I have taken mentally, since first coming into Christian Science, I cannot say that they have all been easy; indeed, there have been some rough places, for the mortal sense of life must be purged, and human frailties which often cry out for that which is best withheld, must be uprooted for better, nobler qualities to take their place in consciousness; but this I can say, gratefully and lovingly, that if we push forward with our hand holding fast to the Father, we cannot help but come out into a "large place,"—into a fuller consciousness of Life as God,—into a truer and clearer understanding of "*the only*,—that is, the eternal verity and unity of God and man" (Science and Health, p. 502).

MARY A. KREMELBERG, Baltimore, Md.

Although a Scientist of some years' standing, I sometimes have occasion to ask for outside help, and Mrs. Eddy tells us not to hesitate to call for such help when we are unable to overcome the trouble ourselves. In July, 1906, my little ten-year-old daughter developed very alarming throat symptoms. To satisfy my family, a physician was called to diagnose the case, which he pronounced serious. He put the usual card on the house, and said he would return in the morning to administer antitoxine. About eight o'clock in the evening I called a Christian Science practitioner. In the morning the physician came, and to his amazement found the child so relieved that there was really no reason for her remaining in bed longer, save the fear of the family. About noon, however, when the practitioner called, the child was allowed to get up and go to the table, where she ate a hearty meal, and within a week I took her to Illinois on a visit. She was thoroughly well—perfectly healed, with none of the disastrous after effects usual out of Science.

In December of the same year I called upon the same lady one night for help for myself in an attack of acute lung trouble, and the healing was almost instantaneous, notwithstanding that my suffering was intense and accompanied by alarming symptoms. I arose the next morning well, and was able to resume my usual duties without losing any time whatever from my work! In giving this testimony I am expressing but a small portion of the gratitude that fills my

Digitized by Google

heart with love for our revered Leader, who has given to the world "Science and Health with Key to the Scriptures," whereby we are enabled to work out our own salvation. I am thankful, too, for her love and foresight in giving us teachers, to aid us in our search for Truth. Each day we are more thankful for Christian Science.

MALINDA J. CRUTCHFIELD, Lexington, Ky.

I have long wanted to add my mite, along with the many who have contributed to our garner of testimonials. Many times in the past few years the "still, small voice" has urged me to do that which now seems a duty. After returning from our service today, my being was so filled with love for our heavenly Father that I am impelled by a desire that this testimony may reach some of my brother locomotive engineers, who are often running through the valley of shadows. Right here let me add that, when Christian Science was brought to me on that memorable day, Aug. 4, 1900, I had no love for Christian Science nor faith in it. There was not, however, a ray of light before me, for all material means had been exhausted in trying to alleviate my suffering from an obstinate form of rheumatism. I can say with perfect truthfulness that after a few treatments the pains left me and the stiffened joints were freed. Many other ailments have been overcome in a very satisfactory way.

Christian Science has been proved to me to be founded upon a perfect Principle, because it is of God, good. My greatest desire is so to live that I may be deemed worthy to be a follower of that remarkable woman, Mrs. Eddy, who has blazed the way through the forest of error so plainly that a lost child could find the path to peace, plenty, and happiness.—GEO. A. BURNHAM, Moberly, Mo.

Subscribed and sworn to, at Moberly, Missouri, this 28th day of June, A.D., 1909.

J. W. DORSEY, Notary Public.

In September, 1907, I went to a hospital with a sore on my foot which the doctor there said was gangrene from a kidney disease, and that I must have it operated on. In October the limb was amputated below the knee, and I was discharged from the hospital the latter part of December, with instructions to diet the rest of my life and to drink all the whisky I could. That is what I had been drinking, and I had been under the doctor's care all the time.

A friend then advised me to try Christian Science, and in March, 1909, I took my first treatment. I have improved wonderfully; I eat everything I wish, and I no longer drink whisky. I had seemed to be losing my sight, but my eyes are improving rapidly. This is the first letter I have written in two years, and I cannot say enough for Christian Science, and for Mrs. Eddy, its Founder. Christian Science has shown me the spiritual way, as well as the physical healing.—W. J. SAVILLE, South Boston, Mass.

For twenty years I was afflicted with obstruction and bloating of the bowels. I tried many different physicians and medicines, which brought no permanent relief. I began to take Christian Science treatment in March, 1909, and I can truly say that I am healed. I have also laid aside my glasses. For all of this healing I feel very grateful to Christian Science.

MRS. WILLIAM J. SAVILLE, South Boston, Mass.

On Aug. 1, 1906, I was cured in one treatment of all desire for smoking. At that time I had been a confirmed smoker for about fifteen years, the amount of tobacco used being limited only by the opportunities I could make. It had been my custom every fall to "swear off" for a month. I had stubbornly kept each attempt by sheer will-power, and at the expense of much nervous energy and amiability. During each of these struggles the desire would be with me constantly, and at the end would be stronger than ever. Christian Science operated in an entirely different way. There was no nervous upset, no conscious effort of the will on my part; I simply discovered that I no longer cared for tobacco, and from that day to this I have not once had the slightest desire to smoke. If occasion requires, I can ride in a smoking-car or sit with men who are smoking, without having any desire aroused or without being unduly annoyed thereby.

I am not a Christian Scientist in the active sense of the word, indeed I realize that I know very little about it; but I am glad to state these facts in justice and gratitude, and in the hope that they may furnish encouragement to others.

TORRANCE PARKER, Belmont, Mass.

The Master's declaration, "Ye shall know the truth," has become the command and demand of my existence. Before it blind superstition, prejudice, doubt, and fear have given way to understanding, until a glance over the past eight years is like the reviewing of a battle-field strewn with conquered foes. The conquest was not easy, but hope ever held aloft its torch, illumining the way.

As far back as memory can travel, I can recall only a life of weakness and pain. North, east, south, and west was I sent at different periods, that change and climate might effect what medicine had failed to do—to give health and strength. Childhood and girlhood vanished into the past with its weight of wretchedness, and as on the threshold of womanhood I saw no relief, a wave of utter, bitter despair engulfed me. Heretofore I had prayed; now I bowed to the inevitable, but I would not be a hypocrite—I would not meekly say, "Thy will be done," when every fiber of my being was in hot rebellion. I had been taught that the misfortunes of the world, its utter misery, hopeless woe, and bitter pain, were sent us by an all-wise, loving God to test and purify our love, but I could not reconcile my poor human reason to such a conclusion. Thus, not understanding, doubt grew upon doubt, until every vestige of faith in the religion of my forefathers was swept away. Oh, those were indeed dark days—without hope or God in the world. The Scriptures rightly declare that as a man "thinketh in his heart, so is he," for so bitter grew my thoughts that they fairly corroded every outlook.

It was at this time Christian Science was mentioned, with the declaration that God is good. I shook my head. "I have heard that story before; but I don't believe it," I replied shortly. "Christian Science does not ask you to believe. It teaches you to understand," was the gentle rejoinder. To understand that God is good! The possibility was startling. It is habit to believe that which we do not understand, and to understand too little of that which we profess to believe, but houses built upon sand will not stand.

During spare moments, for three days, I eagerly read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The chapter on Prayer revolutionized my whole thought, and it was then there came to me the first gleam of Truth's healing power in the disappearance of a distressing bowel trouble which had been pronounced chronic and incurable by two schools of physicians. From that period not a drop of medicine has passed my lips. God's law has met every need. Stomach, liver, and heart trouble, also neuralgia, are a few of the many ills which have been entirely cured. One disease, never diagnosed, more than all else kept me in misery. Without a second's warning I would grow partially blind and remain in that state from a half to three quarters of an hour, and as sight grew clear I was nearly crazed with pain. My only relief was an opiate, which would cause a heavy stupor for some hours. Occasionally these attacks would occur three times a week; sometimes four months would elapse; but just

Digitized by Google

when I would begin to entertain the hope that they had gone forever, again I would be struck down. My eyes were treated, glasses worn, teeth extracted, hair thinned, in the endeavor to alleviate the trouble, but without avail; and as there was never a warning of the attacks, I was kept in a constant state of fear and was never allowed to go anywhere alone.

I had been studying Science about six months when this trouble returned. This time there was no fear—just a heavy weight of discouragement—but with it a determination to give Christian Science the same fair trial that I had given to medicine. Telephoning to a practitioner for absent treatment, I retired to my room, and to the surprise of my anxious family (none of whom are Scientists), in about twenty minutes I was in a dreamless sleep. When I awakened, in less than two hours, I was absolutely free from all pain, there was no dazed condition, no tender sore scalp. In the past eight years I have had probably a dozen attacks of this nature, but Truth has ever proved the perfect physician. The daily realization of "the law of the Spirit of life" is the only absolute preventive ever made known to humanity for all the ills to which flesh is heir.

Naturally the heart of every loyal Christian Scientist is filled with a deep sense of gratitude to the one through whose teachings they have been freed from bondage. Many, not understanding the magnitude of our debt to Mrs. Eddy, resent an expression of this gratitude, but an expression of our gratitude is not deification. Her identification with Christian Science is a sign to the seeker of Truth, as the word "sterling" is to the purchaser of silver. For every treasure there are a thousand imitations. We would but protect our treasure. As for the gratitude expressed: Is there an American who does not feel the deepest reverence at the very mention of the name of Washington—and why? Because, in spite of gross maligning, misrepresentation, treachery, and hardships, Washington, with undaunted courage, adhered steadfastly to the course he knew to be right, and thus has left to us the glorious heritage of civil freedom. Mrs. Eddy, in spite of similar attacks, has with loving and marvelous courage adhered to that which she knew to be true, and thus has awakened in the hearts of thousands of sick, worn, pain-racked, hopeless mortals the realization of their priceless heritage as the sons of God. To her we are grateful, and must ever continue to be, because gratitude is an attribute of Love in its highest sense.

MAUDE LOUISE NIDLINGER, St. Louis, Mo.

In giving my testimony I cannot tell all the blessings that have come to me since I accepted Christian Science, for they have been so many. I was healed of catarrh in two weeks' treatment, and all the ills that have come to me since then have been overcome by knowing the truth that makes us free. Christian Science has been a great help to me recently in taking a course in a business college, and for all my many blessings I am thankful to our heavenly Father, also to the beloved Leader of this Cause.

EUNICE WALLACE, Charleston, W. Va.

[Written for the *Sentinel.*]

FRIENDSHIP.

AGNES FLORIDA CHALMERS.

IT is so easy, is it not, dear friend,
To lend a hand to one sunk in the depths
Of sin and poverty. But oh, to lend
A helping hand to him whose own success
Surpasses ours,—this is a greater test
Of friendship. With Christlike humbleness,
I ask to stand as friend, O Love divine,
Both to the outcast and the man whose hand
Has wrought far greater, nobler tasks than mine.

FROM OUR EXCHANGES.

[From "A Letter to All Churches" by the World's Missionary Conference, Edinburgh.]

Our survey has impressed upon us the momentous character of the present hour. We have heard from many quarters of the awakening of great nations, of the opening of long-closed doors, and of movements which are placing all at once before the church a new world to be won for Christ. The next ten years will in all probability constitute a turning-point in human history, and may be of more critical importance in determining the spiritual evolution of mankind than many centuries of ordinary experience. If those years are wasted, havoc may be wrought that centuries are not able to repair. On the other hand, if they are rightly used, they may be among the most glorious in Christian history. Just as a great national danger demands a new standard of patriotism and service from every citizen, so the present condition of the world and the missionary task demands from every Christian, and from every congregation, a change in the existing scale of missionary zeal and service, and the elevation of our spiritual ideal. The old scale and the old ideal were framed in view of a state of the world which has ceased to exist. They are no longer adequate for the new world which is arising out of the ruins of the old. It is not only of the individual or the congregation that this new spirit is demanded. There is an imperative spiritual demand that national life and influence as a whole be Christianized; so that the entire impact, commercial and political, now of the West upon the East, and now of the stronger races upon the weaker, may confirm, and not impair, the message of the missionary enterprise.

[*Interior.*]

A missionary convention was called at Edinburgh, but it turned out a Christian union convention. In that remarkable phenomenon lies the profoundest significance of the World's Missionary Conference. It was not by purpose that this memorable assemblage took on the paramount character which distinguished it. No trap was set or sprung to catch any member of the body in a meeting different from what he had anticipated. Cooperation of churches on mission fields had been of course appointed as one topic among others to be discussed, but there was no intent to make it preeminent or even central. Not by device but by sheer pressure of the logic of conditions, Christian unity came uppermost as the master thought of the great gathering. The conference discovered that between missions and unity there is an inevitable link of natural association. The gift of perceiving this truth came through the mystic Christian seership of the single eye. "If thine eye be single, thy whole body shall be full of light"—the Lord Jesus Christ fulfilled that word of his to the delegates assembled in the Edinburgh conference. They had light. They went to Edinburgh with eyes singly fixed on the supreme work of establishing the lordship of Jesus in the whole earth.

[Rev. R. J. Campbell, M. A., in *Christian Commonwealth.*]

Kindle the flame of spiritual communion, of assurance of God, in any corner of our darkened world, and weary souls will gather round it without much compulsion. This has been proved a thousand times in the past and will, I trust, be proved again. John the Baptist came preaching in the wilderness of Judea. For long he had been alone, leading an austere life of self-renunciation, feeding his spirit upon sustenance that was not of this world. When he could keep silent no longer he began to speak; but once he had spoken, his solitude was at an end. People felt in his words a quality they could not describe, but which they knew to be of God, and they wanted to hear more. They did not wait for him to come into their cities; they went out to him;

Digitized by Google

they flocked around him on the banks of Jordan, accepting baptism at his hands, renouncing their old life, and doing their best to enter into and partake of his supernormal experience. In other words, they were hungry for God, and they found Him in the spiritual power of this dweller in the wilderness.

[*Christian Register.*]

Never in the time to which our memory runneth back has there been, during commencement week, such a succession of sermons, addresses, and speeches, in the colleges and universities from Maine to California, in which were set forth with such profound faith and glowing speech the principles of civil and religious liberty and the duty of men in the republic of letters to remember that the highest call of the educated man is to service of the brotherhood. Fidelity to public trusts and regard for the rights of the smallest child and the humblest citizen have been urged as prime duties of the hour. Generous statements also have been made concerning the principles of theology and religion which are the roots of all healthy growth and wholesome human life. The spirit of the strongest men has been distinctly hopeful, helpful, and inspiring.

[*British Congregationalist.*]

The love of things is not the real love, for real love is of eternity. The number of persons we can love, the intensity of the love we can give them, the purity of it—these are the measure of our life. It has been beautifully said that "Love is only the perfect tense of the word live." Let us remember this truth, that in widening the love of man we do not weaken it. It is a fallacy to say that we cannot love many much. We can; and the more we love the better we can love each. If we can manage to love all people, and to love them because they are persons made in the image of God, we have come into the circle of eternity, we have begun to live the life of God.

[*Christian Advocate.*]

The greatest single achievement of the World Missionary Conference at Edinburgh is that Calvinists and Arminians, Presbyterians, Baptists, Congregationalists, Lutherans, Friends, the High Church and the Low Church Anglicans, the divers sorts of Methodists, the Moravians, the Adventists, Disciples of Christ, the Mennonites, and many more, so love the kingdom of God that, for the time, they submerged their differences to meet for ten days to discuss ways and means to promote it.

[*Churchman.*]

We know that Paul believed in a church that was accomplishing something, that he did assume the existence of a Christian community which was at peace with itself, and that he was largely indifferent to matters of red tape and personal privilege. It would seem clear, therefore, that wherever divisive questions of church government are making the plain explicit commands of Christ to his followers of non-effect, there the unity of the witness must be stressed as primary.

[*Universalist Leader.*]

If we could once get it clear in our minds that forgiveness is reconciliation, and has nothing whatever to do with the consequences of sin which are involved in cause and effect, sowing and reaping, we would be well on our way to an understanding of how forgiveness is one of the profoundest spiritual obligations of all men.

[*Christian World.*]

We do not go to the Bible for our geology, our mathematics, our music, our electrical science. What we get there is the inspiration of heroic natures, the noble passion of prophets, the transformed lives of apostles and saints, the love and power that stream from the heart of Christ.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A great exposition of the manufacturing and other industries of New England is to be conducted by the Boston Chamber of Commerce in Mechanics Building in October, 1911. It will last four weeks, and the total attendance is estimated at three hundred thousand. The purposes are, first, to promote manufacturing and commercial activity in New England; second, to show the people of New England the methods and extent of their manufactures and resources; third, to attract the attention of the whole country to New England's enormous and varied industries; fourth, to bring the employer and workman, merchant and buyer into closer touch with the manufactory and its products; fifth, to stimulate the people of New England, particularly boys and girls, to a realization of the dignity and possibilities of working with the hands, and thus promote industrial education.

The United States department of agriculture is using this year on the national forests over ten tons of tree seed. There are now twenty-four national forest nurseries, with an annual productive capacity of over eight million seedlings. But there are many millions of old burns on the national forests which are waiting to be restocked, and some quicker and cheaper method than the actual planting of nursery-grown trees is urgently needed. Therefore the foresters are making experiments on a large scale with different methods of direct sowing and planting, and most of the seed gathered last year was obtained for this use.

Officers and directors of the Chicago Board of Trade are disturbed, it is said, over the manner in which certain big operators have ignored the board's resolution against the "running of corners in grain," and under repeated urging from the conservative members who are striving to allay the public agitation for the abolition of "exchanges" of all sorts, may conduct a thorough investigation into the July corner of wheat and expel those found guilty.

President Taft has taken the first steps in the plan for bringing about greater business efficiency and economy in the different departments of the Government by sending to Washington four sets of experts, who are to make a preliminary study of the situation and submit a program for carrying forward the work. The President has been given an appropriation of one hundred thousand dollars for the purpose of reorganizing departmental methods.

The Federal authorities are almost ready to bring their crowning anti-trust suit against the American Sugar Refining Company. The preparation of the case is virtually completed and it is only a matter of a short time before the issue of monopoly in the sugar trade of the country will be squarely presented and fought out in the courts.

Suits for an injunction and an accounting have been brought in the United States circuit court by the United Shoe Machinery Company against Thomas G. Plant Company and Thomas G. Plant, who have repudiated the shoe machinery leases with the former company and have installed independent "wonder-worker" machines.

The interstate commerce commission, pending an investigation into the reasonableness of the increase of rates on commutation tickets between New York and points in Connecticut on the New York, New Haven & Hartford railroad, has ordered the increase, operative June 4, to be suspended.

The "Pilgrim Monument" was dedicated Friday, Aug. 5, at Provincetown, Mass. Addresses were delivered by President Taft, Senator Lodge, Governor Draper, Lieutenant-Governor Frothingham, Charles W. Eliot, president emeritus of Harvard University, and others.

A conference of railroad attorneys, representing practically all the railroad systems of the country, met at Portsmouth, N. H., last week to discuss the railroad bill enacted by the last Congress, and to consider its effect upon railroads engaged in interstate traffic.

The special congressional committee has begun its investigation of the charges of bribery in connection with contracts with the Choctaw and Chickasaw Indians, involving a sale of land estimated at thirty million dollars' value.

A total gold coinage of 18,000 double eagles, valued at $360,000, a silver coinage of $217,000, embracing 240,000 half dollars and 20,000 quarters, $30,600 in one-cent pieces, constituted the coinage executed at the mints of the United States during July.

Appropriations totaling nearly three million dollars have been granted by the New York board of estimate for public improvements, chief of which is the completion of the easterly basin of Jerome park reservoir.

Guthrie is reestablished as the capital of Oklahoma in practically all respects, following the decision of the state supreme court, after an attempt to establish it at Oklahoma City.

Improvements in the treasury building at Washington to cost one hundred and eighty thousand dollars, are to be made this summer.

It is expected that some postal savings banks will be in operation by Oct. 15.

International.

There is no doubt that the English language is spreading steadily in all directions. In the state of Mysore in southern India, in 1892, the study of English was not permitted in the schools until after the third vernacular standard. Previous to this date English had been taught in many schools from the first class onward. In the next year a change was made, permitting the study of English after the second vernacular standard, and finally, two years ago, the study of English was made compulsory after the second vernacular standard. The same desire for the study of English in the vernacular schools has manifested itself in the state of Baroda.

A section, about one hundred miles long, of the Cape to Cairo railway, extending from Khartoum to Wad Mehani, has now been open to public traffic for six months, during which time the traffic has surpassed all expectations. The takings during the first month's workings amounted to fifty thousand dollars, the produce carried consisting mainly of dhurra, or native corn, gum, and cotton. This is the first portion of the railway to break away from the desert part of the Soudan and to touch the edge of that part of the country which is naturally fertile without being irrigated.

In presenting the budget to Parliament, Sir Joseph Ward, the prime minister of New Zealand, showed that the revenue for the past year is the highest yet recorded, and that the expenditure is below the estimates.

Strict police orders regulating aeroplane flights in the province of Brandenburg, Germany, have been put in force.

President Pedro Montt of Chile and his suite were in Boston last week. They met President Taft at Beverly.

Industrial and Commercial.

The proposed consolidation of cotton mills through the organization of a twenty-million-dollar International Cotton Mills Corporation, is said to be the largest cotton mill combination ever undertaken in the United States. The combination, while consisting of cotton duck mills, will include cotton yarn and cloth plants. Textile mills, sales and distributing agencies in this country and Canada, which manufacture and sell three thousand varieties of cotton fabrics, are included in the merger. The properties, consolidated, represent twenty-two mills and thirty-five principal brands, owning ten thousand acres of land, part of which is under cotton cultivation, and employing ten thousand hands, with an aggregate annual output valued at approximately eighteen million dollars. Briefly the proposition is one to establish warehouses in all parts of the cotton producing district of this country, as well as in the manufacturing centers, for the storing of the cotton crop, so that instead of selling it from hand to mouth, as has been the practice heretofore, it will be marketed through the entire year when desirable. It is expected that it will take probably five years to put the plan into operation. The American cotton crop is the only cotton crop in the world which is not packed for shipment at the point where it is ginned. It now goes to a compress, pays high rates for insurance, is subject to tremendous wastes in baling and freights, on account of its bulk, and is handled a needless number of times. It is proposed to adopt the Egyptian bale, which is much superior to that used in this country, to compress at the point of ginning, and to effect other economies which will result in the aggregate to a tremendous sum.

The earnings for the year of the General Motors Company of Michigan are twelve million dollars. This amount would be equivalent to six per cent interest on two hundred million dollars. The company has about twenty-five million dollars capital stock outstanding, and it is proposed to increase this at least five to one. This would make the new capitalization not less than one hundred and twenty-five million dollars.

Stockholders of the B. F. Goodrich Company of Akron, O., makers of automobile tires and other rubber goods, will hold a special meeting Aug. 24 to increase the capitalization from ten million to twenty million dollars. Half of the new stock is said to be intended for a stock dividend, while the five million dollars' balance will be sold to finance plant additions contemplated, and also to provide working capital.

The Federal Biscuit Company has been organized. In addition to the eighty independent companies that are to be purchased, fifteen concerns in Canada will come into the combination. The capitalization of thirty million dollars represents the potential idea of the operators of over eighty factories who have been working together as the Biscuit and Crackers Manufacturing Association.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE DEMONSTRATION OF FRIENDLINESS BY MEANS OF THE MONITOR.

REV. WM. P. MC KENZIE.

WHEN the newsboys in Boston began to call the *Monitor* on the corners and in the cars, there were a great many people who took a new interest in these enterprising young merchants of the street. Ladies unaccustomed to buying newspapers on the street-cars, became customers, and had friendly words of encouragement to give along with the coins that paid for the paper. Knowing the mission of the new paper, they had a sense of good will to those who supplied the public with it, and of kind congratulation for those who were seen to purchase and peruse it. Considering the general interest and welcome among the Christian Scientists of the world, it might be said that the appearing of the *Monitor* marked the beginning of an era of good will.

It may be worth while to refer to some of the ways in which this good will to men has already found expression. By means of the *Monitor* our people have been able to express appreciation of the work of those public servants in cities, police officers and firemen for example, who are caring for the public safety through the night as well as by day. At their various stations they often have to spend waiting hours, and with the consent of the proper authorities arrangements have been made to supply many fire halls and police stations regularly with the *Monitor*. Where this has been done it is usual for the men to express themselves gratefully to the friends who provide the paper as a token of personal interest in those who are doing service for the welfare of the community.

There are other public servants whose work is often unregarded, such as lighthouse keepers and coast-guardsmen, whose faithful watch is often kept in storm and darkness and in loneliness. To these men the good will of those who value their devotion has found expression through the *Monitor*, and the traveler by sea who watches the gleaming and the blinking of the coastwise lights, or enters his desired haven through their guidance, and thinks of the year-long nightly service that goes on without failure, cannot but feel glad to know that many of these public servants receive the *Monitor's* daily message of good will. It goes also to many of the stations from which the coast-guards start out on their patrol, and it encourages men at life-saving stations; thus becoming a means whereby the gratitude of unknown friends may reach those whose work for the general welfare has peculiar difficulties and trials.

Then there are places where men at work must congregate for intervals during the day, such as porters' rooms at railway stations in England, or waiting-rooms for motormen and conductors wherever there is street-car service. Where arrangements have been made to send the daily *Monitor* to such places, the paper has been read and valued, as many letters of appreciation testify.

Work done for the benefit of travelers has undoubted results, though they may not be so easy to trace as in other cases. Some of our churches supply ferry and railway stations through which thousands of people pass daily. In most cities the local workers have the *Monitor* on file in the best hotels, and the traveler who knows the paper is glad to see it, while many in that way make first acquaintance with and begin friendship for the paper. In public reading-rooms and libraries it is to be found, and sometimes the librarians ask for duplicate copies, since a single copy is frequently worn out by much use.

It is interesting to find how cooperant with human endeavor for man's welfare the *Monitor* is. For example, an earnest man whose interest in others was expressed in work for the cabmen of London, said that he had waited twenty-six years for just such a paper as the *Monitor* to place in cabmen's shelters. Many teachers who have been anxious to make their pupils acquainted with what is essential in contemporaneous history, have found in the *Monitor* an available help in cases where parents have refused to allow their children to peruse the daily papers in which space is too largely given to the description of "the evil that men do." Many, too, have found in it the help they had long desired in providing pupils with materials for essays and themes; and it is to be noticed that the new paper is peculiar in being distinctively educational. A Harvard student who read the *Monitor* regularly for a year, testified that it was as valuable as a course of lectures on contemporary history.

The need for self-education which Chautauqua courses have attempted to supply, and to which correspondence schools minister, is measurably met by the *Monitor* articles on history and travel, engineering and exploration, by the selections from standard authors and poets, and the daily article on practical religion, in addition to the news of the world. The result of such self-education as the *Monitor* gives is to change the view-point of the student, so that he ceases to be a mere parish-dweller, and becomes a world-citizen. It is a blessed change when parochial gossip loses its relish and a man feels his life enlarged by knowing of the useful efforts of other men in the big world, and takes an interest in all that assists the greatening of men.

A moment's effort may reach far through the agency of the *Monitor*. By means of copies sent casually by some one in England to a remembered friend in Australia, that friend found the trail which led into the way of understanding at last; and not only was her own life blessed, but a wide circle was reached by the blessing which Christian Science healing brings. A lady who met socially a foreign army officer, noticed soon after an interesting article in the *Monitor* referring to the city where he had his home, and marking this article she sent him the paper. When next she met him he was alert with inquiry regarding the book which taught people to understand Christian Science, and was directed to a reading-room where he could read the text-book, or procure a copy if he wished. Later he told this friend that he was taking home a copy of Science and Health along with a couple of hundred English books he had previously selected; that he had chosen a typical English paper and a typical American paper to be sent regularly to him in Japan, and that the *Monitor* had been his choice as the representative paper of America.

It is often desirable to send a message of remembrance to acquaintances with whom there is not the leisure to correspond. The picture post-card is often utilized for this service, but the post-card is overworked and so has ceased to be unique. The reader of the *Monitor* who peruses the articles which are of magazine interest, is sure to think of some one for whose scrap-book this or that article will be valued; and by marking and sending it he does a double service to his friend, introducing to his attention an ideal newspaper as well as furnishing him with special information. It is an item of kindness to designate on the wrapper the page where the marked article is to be found, since a busy man has not the time to hunt blindly; and the purposes of remembrance are served when the name of the sender is written also. Thus the *Monitor* carries to every corner of the world the message of good will from friend to friend, and is an agency for which those who use it are peculiarly grateful.

The progress of mankind is marked in the change of thought whereby the word "Reformatory" is given to a place where wrong-doers are detained. There was a time when the criminal was looked upon as one to be punished with cruelty, that thereby society might be revenged on him for the discomfort he caused; but now men believe that a good proportion of those in error can be educated into such better habits as may make them capable citizens. Already the *Monitor* has done educational service in a number of charity and reform schools for children, and in workhouses, jails, and reformatories where adults are confined. In some prisons and places of detention the inmates are not allowed to read daily papers, on the ground that the frequent sensational exploitation of crime, with the picturing of criminals, is misleading to their undeveloped minds, making the criminal appear as a hero. But as this feature is absent in the *Monitor*, and so much else is present that is educative and inspiring, the paper has found its way into fellowship with other methods for transforming the crime-infected ignorant foes of society into intelligent workmen and useful citizens.

This is a mere sketch of the way in which the *Monitor* proceeds on its mission, which was so clearly defined at the time of its inception by the Leader of the Christian Science movement, Mrs. Eddy. Every reader can no doubt with incident and demonstration fill in the outline, and enrich in this way his own appreciation of the paper which was established "to injure no man, but to bless mankind" (*The Christian Science Monitor*, Nov. 25, 1908).

SIN NO MORE.

EDITH L. IVES.

In the 5th chapter of St. John's Gospel is a wonderful story of the healing of an impotent man who "had an infirmity thirty and eight years." The Master again met him in the temple, after his healing, and said these most significant words to him, "Behold, thou art made whole: sin no more, lest a worse thing come unto thee." Here is both warning and encouragement. Jesus had made the man "whole," so that he who had suffered so many years "took up his bed and walked." He was a free man, but the rest of the work was to be done by him, not by the Master. He had to "work out [his] own salvation" in order to remain free from disease. The sin or error which had manifested itself in physical discord had to be rooted out and utterly destroyed "lest a worse thing" come unto him.

Do we not often wonder, and perhaps feel discouraged, because some old form of disease seems to return with greater force than ever? What are we doing? Are we putting on "the whole armor of God," and keeping it bright by watching our every thought? To leave one small place where pride, hate, criticism, malice, or any one of the many phases of evil can creep in, is fatal. The tiniest hole in a dam, unchecked, means its ultimate destruction. The arrow found the only vulnerable place in Achilles' body—his heel.

Our Leader strongly emphasizes the need of watchfulness when she bids us "stand porter at the door of thought" (Science and Health, p. 392). It is in the little things that one needs to watch. "He that is faithful in that which is least is faithful also in much." In "No and Yes" (p. 8) Mrs. Eddy writes: "Avoid voicing error; but utter the truth of God and the beauty of holiness, the joy of Love and 'the peace of God, which passeth all understanding.'" We read in Proverbs that as a man "thinketh in his heart, so is he." Let us, then, think truth, love, joy, peace, perfection, and these attributes will be manifested in our lives and words. We should not allow ourselves to enter into any discussion or description of disease or discord of any kind of which we or others have been healed, but "let the dead bury their dead," forget "those things which are behind" and "press toward the mark for the prize"—perfection. We must be constantly alert to detect even the appearance of evil, to keep our minds filled with the consciousness of the one presence, the healing, purifying presence of infinite Mind.

As we uncover and destroy these errors or wrong thoughts, the belief in disease will cease to trouble us. Let us then heed our Master's warning, and remember that it rests with each one whether his healing be permanent or not. This story has encouragement for those who are striving to follow in the Master's steps and to obey his command, "Heal the sick." Even Jesus could not assure the impotent man that after he was healed he would always be free from all thought of disease; but the Master had done his part, and the rest was for the man to do. The patient has his work as well as the practitioner; each one must root out the weeds in his own garden and cut down all that shuts out the sunlight of Truth and Love. We may and can help each other, but the working out of salvation from sickness and sin is an individual responsibility, which cannot be put on another's shoulders.

Sometimes we go to a practitioner for help, and think this is all that is necessary,—that the work will be done without any further effort on our part; and we relax our watchfulness and allow a sense of indolence to creep in. Do we realize that we are thus hindering our own demonstration and making the practitioner's work more difficult? Let us, too, be up and at work, striving to bring our every thought into captivity to the Christ command, so that in the fulness of time we too shall "be satisfied" when we awake with the divine likeness.

WORK.

MINNA TRAIN.

Mrs. Eddy says in "Miscellaneous Writings" (p. 340): "There is no excellence without labor; and the time to work is *now*." Elsewhere in the same book she says: "Let us serve instead of rule, knock instead of push" (p. 303). The first and most important step toward serving and advancing our cause is absolute obedience to the Principle of Christian Science, in every detail of life, whether in the larger affairs of the world, or in our more intimate home circles. In one of her addresses Mrs. Eddy thus defines obedience: "Never absent from your post, never off guard, never ill-humored, never unready to work for God" (*Ibid.*, p. 116).

Christian Science shows us how to do this work, in manifold ways, and although it may not be practicable or possible for all to labor in the more prominent positions, or at present become practitioners, yet there are innumerable opportunities for each one to aid in the necessary and loving work of serving humanity. To those who know nothing of the Principle and teaching of Christian Science, we can do immeasurably more by example than in

Digitized by Google

any other way: by showing in our every-day life cheerfulness and unselfishness and in radiating love and kindness to all with whom we come in contact. This radiation will first command attention, then respect, and finally investigation will be made by those who perhaps have been struggling vainly for the peace of mind and health of body which belief in the reality of matter has not given.

Christian Science, if studied and demonstrated faithfully, teaches us wisdom in our intercourse with our fellow-men. It teaches us when to keep silent and when to speak, and makes us tactful and wise in our conversation about our loved cause. We should be careful not to cast our pearls before those who are as yet unready to listen to and receive this priceless truth, and last but by no means least, we learn that, if we are about our "Father's business," we have quite enough to do in minding our own affairs. A demonstration of healing, however small, if pure and scientific, will do far more to prove the inestimable value of Christian Science, and aid its advancement, than any display of the letter without the spirit. One of the most efficient and far-reaching means for promulgating the cause is the wise distribution of our splendid literature, including our daily paper, the *Monitor*, which stands for purity and intelligence, and carries with it its own atmosphere of truth, wherever it goes.

The spread and growth of Christian Science devolves upon the consecrated effort of every man and woman who have named themselves Christian Scientists, and it is only error which would try to make us feel our inability to share in this serving. Daily must we gird on our armor and go ahead. We must watch and pray for the right and best means of doing God's work. Error would try to discourage us by saying, "What can little you do in such a mighty warfare? Let those who know more than you do this work, and you follow as best you can." But we must not listen to the tempter, for we know there should be no lack of activity, no half-heartedness in this great work of service to mankind.

To be quick to detect error, and always ready and happy to tell the glad tidings to others, and to stand by our faithful Leader in her loving work for humanity,—these will enable us to do our part toward destroying ignorant and erroneous beliefs about Christian Science. When we shall have learned to put into our spiritual labor the same amount of energy and persistency that we have been only too willing to give to the material interests of life, then we shall be doing the Master's work, and we shall find our light growing brighter "unto the perfect day."

THE ONE INTELLIGENCE.

L. C. KEMMING.

THAT God is the one intelligence has been very forcibly impressed upon me within the last year. A short time ago, when offered a good paying position, with work that required both judgment and great care, I at first questioned, being a young man of almost no business experience, as to whether or not I would be able to do the work in a way that would be satisfactory to my employers. I, however, decided to leave all to the guidance of divine Principle, and declared that I would be led to do the right thing. After working along this line for a day or so, I accepted the position, and then it was necessary to realize the source of man's intelligence. I declared that God, as He had given me this opportunity, would help me in my work, for man reflects infinite intelligence, and I could rely on infinite power at all times.

When I started in my office work, it seemed almost more than I could handle; but I pressed on, well knowing that "with God all things are possible." There was a great deal to learn and to look after, and which called for the exercise of good judgment on my part; but each day I took time to read from Science and Health, which so admirably answers every purpose for which we may need it, and I constantly held before me the Master's words, "I can of mine own self do nothing;" "The Father that dwelleth in me, he doeth the works." The result was, that instead of being almost overcome by the responsibility of the position (at least for the first few weeks, when everything was new to me, as I was left in charge of the office, with all the correspondence to attend to), as I would have been if unaided by Science, I was enabled to do my duties in a way to win the approval of my employers, and to be entirely free from all sense of worry or discouragement. When I undertook the work, I was told that I could expect to spend the first month or so in worry, but knowing God to be man's intelligence, who never fails, who never makes mistakes, I took hold of the work exceptionally well, and as already stated, have been absolutely free from all fear that I would not do the right thing; and as a result, I have been able to see what was the right thing to do.

For this experience I am more grateful than words can express. It has taught me to rely implicitly on God and His wisdom, and in every instance I find I am the gainer when I follow the divine guidance. If all mortals would only learn this lesson, how beautiful it would be. We need never make mistakes, need never be in doubt as to what to do, if only we know that "in him we live, and move, and have our being." What a grand outlook for those of us who have been struggling along, trying to do right, but relying on human wisdom to point out the way. So doing, mistakes, worry, and discouragement are inevitable; but when we place our trust in the infinite Principle of all that really exists, such things are impossible.

For this understanding which enables us to act in His power and to follow His guidance, we are deeply indebted to our dear Leader, who has taught us how to rely on God. This debt can never be paid, except by following her example, by loving our neighbor as ourselves, and by living lives which by their purity and goodness will bring others to this blessed truth,—to the understanding which enables us to see all things as they really are, as they exist in the realm of Spirit.

THE TEMPTATIONS OF JESUS.

S. F. SWANTEES, M.D.

THE poet Longfellow has said,—

> Lives of great men all remind us
> We can make our lives sublime.

If this be true of any great man, it certainly is true of Christ Jesus. By the aid of "Science and Health with Key to the Scriptures," the life of our Master becomes a wonderful inspiration to all seekers after Truth. Every part of his history is worthy of the deepest consideration. Having been led, many times, to study the temptations of Jesus, in order to see how he overcame error, I have finally come to the conclusion that the record of these temptations contains lessons of vast import to every Christian Scientist.

We are assured by a number of statements in the Bible that Jesus was "in all points tempted like as we are." Evidently the "fiery darts of the wicked" sought to enter his consciousness even as they seek to enter our own, but he refused them admittance, for he was "without sin" and even "without blemish." Now it seems that the question as to whether Jesus was or was not tempted, would be answered sufficiently without giving a special record of some of the forms which these temptations assumed; nevertheless, a record was made of certain temptations, and unless the significance of this record is spiritually discerned, one is likely to be misled into believing that the temptations

Digitized by Google

of Jesus and their overcoming were, after all, of small importance to him or to any one else. The relative value of these temptations may be surmised when it is remembered that the forty days of Jesus' temptation in the wilderness were analogous to the forty years of wandering in the wilderness by the Israelites. Mrs. Eddy tells us in Science and Health that "wilderness" signifies "doubt;" it is also "the vestibule in which a material sense of things disappears" (Science and Health, p. 597). Let us see what lessons this record teaches us.

Dominion is proof of kinship with God. The three forms of temptation, as recorded in Matthew and Luke, take it for granted that sonship with God means a demonstrable dominion, the power to prove our dominion here and now. There would be no logical reason for recording these temptations if sonship with God did not mean dominion, and the possibility of its demonstration at all times. "If thou art the Son of God," prove it by demonstration. The request was proper, but the source of the motive back of it was wrong. In the answer which Jesus returned, we notice that he did not listen to the suggestion of the tempter, but simply referred to that statement in Deuteronomy which forms one of the fundamental truths in Christian Science, namely, "Man doth not live by bread only, but by every word which proceedeth out of the mouth of the Lord doth man live." This shows that the word of God is the sustenance, the life of man—not bread or matter. In this reply it is also worthy of notice that, by including every child of God in the term "man," the fact is recognized that sonship means as much for one as for another. We are brothers in Christ,—coheirs in the kingdom,—and have dominion over sin, disease, and death. Our opportunities for demonstration are in truth all alike.

The next lesson which was noticed was that two of these temptations were based upon doubt. Could there be any temptation which did not include doubt of man's kinship with God? The third temptation came from a suggestion of temporal power, or a belief in personality. It becomes apparent, therefore, that the account of these forms of temptation was emphasized for the special benefit of those who are striving to know themselves as the "sons and daughters of God," in order to show them where they must guard thought the most. They were doubtless recorded to keep us awake, to warn us not to harbor doubt, nor, when we recognize the power which man's dominion confers, to think for a moment that personality has anything to do with the acquirement or the exercise of this power.

Jesus denied kinship with "the world, the flesh, and the devil" by a positive declaration of his sonship with God. Thus should every Christian Scientist strive to know himself in reality as God's idea, image, or likeness, and thus claim his birthright—his dominion. But as soon as the Scientist does this, we may depend upon it that the same temptations of doubt and suggestions of personal aggrandizement that assailed Jesus will attack him, and these are his most insidious foes. Let any one watch himself for a few days and see what a failure these errors would make of him as a Christian Scientist. It is wonderfully uplifting to notice that the replies of Jesus to the tempter rested upon the absolute understanding that God is All-in-all, and that every reply was a passage from the Scriptures. He did not speak his own but rather his Father's word.

Another lesson learned, which was suggested by the lines, "Thou shalt not tempt the Lord thy God," was this, that doubt cannot be made the basis of a demand for a demonstration. A darkened understanding contains more or less of unbelief, and there must be a willingness to learn and not to dictate—a desire for good and a disposition to trust "God with our desires" (Science and Health, p. 1), before our requests can be fulfilled. In studying the temptation of temporal power which came to the Master, we should pause for a moment and picture to ourselves the human Jesus and his environment. He was, doubtless, as patriotic as any Jew of his day, and must have been touched by the mental condition of his countrymen. Humanly speaking, what grander, nobler thing could he have done than to use his wonderful power to free the Jews from Rome and restore the lost glory of the Hebrew nation,—bring them to the foremost place in the world,—and then to be king over all. Yet how sublime was his reply: "Thou shalt worship the Lord thy God, and Him only shalt thou serve."

In nothing does our Master show his divinity and love for God, Spirit, so much as in the absolute denial of the claims of temporal power; and in nothing has our Leader so much shown herself to be divinely appointed and led, as in the way she has spurned personal aggrandizement. With this lesson before them, no Christian Scientist can afford to harbor a desire for personal aggrandizement, or entertain doubt for an instant. When tempted, we should do as Jesus did, know the allness of God, the nothingness of personality, and then "be not weary in well doing;" that is, in laying claim to man's birthright, which is the consciousness that he has a demonstrable dominion, here and now, over sin, disease, and death.

THE MESSAGE.

ALBERT L. MC BRIDE.

A MESSAGE was coming to me over the telephone when a confusion of sounds rushed in to drown the speaker's voice. The friend was asked to wait a moment, until there should be less noise on the wire. The request was made in tones which probably expressed some of the impatience felt toward the occasion of the interruption. The noise was evidently on the telephone wire, and the impatient thought was of the management that would permit such confusion on this avenue of conversation. The moment of waiting, however, gave time for a mental analysis of the situation. The noise on the wire continued, but there were also sounds from the street to be heard in the din. Certainly those were the same noises, and the open transmitter in my hands was letting them be carried to the receivers at both ends of the line.

It was a simple situation, the work of a moment to see and remedy the evil, but it gave opportunity to impress a needed lesson. The first and simplest lesson was that of care in the use of the telephone, to avoid leaving it open to the transmission of sounds which are discordant and disturbing, as it should receive and transmit only such sounds as are desirable. A second lesson was of deeper meaning, and has come up to me oftener. In any situation to which I am a party there comes a like responsibility. It is my duty to let into the situation only that which accords with the message and the result to be attained. There may be much at hand which is adverse to the cause, as there was much of confusion in the noisy office, much to exclude from the message. The part of excluding all else may be the chief work of him who would receive the message of Truth. No sense of discord should be allowed to disturb one's thought, or to drown "the still small voice." Error may be excluded by as slight an effort as the telephone transmitter was guarded. The message which we are all eager to receive is the divine message, "Be still and know that I am God;" or possibly that of the angel host, "On earth peace, good will toward men."

Every conscientious Christian Scientist would be a receiver and a transmitter of these messages. The great work to be done, in every individual case, is along the line of this simple experience of a moment. Can we listen too intently, or give out too faithfully the message of Truth to this age?

Life is not a goblet to be drained; it is a measure to be filled.—A. T. HADLEY.

SELECTED ARTICLES.

[E. M. Ramsay in *Montrose* (Scot.) *Review.*]

The critics of Christian Science have seldom taken the trouble to study it at first hand; most of them are content to take the opinion of others who are frank enough to admit that they do not understand the text-book, and ignorant enough to pronounce judgment on what they do not understand.

Far from being absurd, Christian Science is the only logical presentation of Christianity which has been laid before the world since the apostolic age. Our Lord expressly said that the power to heal the sick by spiritual means was to be the proof of the right understanding of what he taught; and if this proof be not forthcoming, what confidence can we have in the correctness of the teaching which the various Christian sects have to offer us?

If sin and illness are no part of God, they can be no essential part of the man made in His image and likeness. If they were not made by God—the creator of all things—then they are not real, and thus can be got rid of. By maintaining this unflinching attitude toward evil, and by thinking constantly of the omnipotent power of good, of Truth, of Life, of God, the Christian Science student finds that he is able to combat his faults and resist illness more successfully than when he regarded sin and disease as realities. If he can know what is true in his own case, he can know what is true for others also. Thus we can "comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God." On all sides we hear the cry that the churches are losing their hold on the people, that the Bible is less read, and faith becoming dimmer than of yore. This is not the experience of the Christian Scientist. He studies the Bible and attends the services of his church with ever-increasing pleasure and interest, because he finds that the more he knows of God, the more he knows of good, of happiness, health, and success. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." He finds this promise daily fulfilled in his life.

Ridicule and misrepresentation never have destroyed and never will destroy an iota of truth. There is but one way in which Christian Science could be successfully combated, and that would be by showing that some other interpretation of Scripture could do more to heal the sick and to reform the sinner. Our friends of the older churches need not fear the teaching of Christian Science. It inculcates the absolute necessity of purity, humility, self-renunciation, and courage, and accepts unreservedly the New Testament history from the virgin birth to the ascension of the world's Redeemer. The Christian Science student is endeavoring to live in the light of the gospel, and to carry ever in his heart the tender promise of his Lord—"Lo, I am with you alway, even unto the end of the world."

[Alfred Farlow in *Stamford* (Conn.) *Advocate.*]

The gentleman quotes at length from various distinguished men and authors who refer to death as inevitable. If I may do so politely, I would like to call his attention to the fact that he might have quoted the following from the most distinguished author the world has ever known: "He that believeth in me, though he were dead, yet shall he live; and whosoever liveth and believeth in me shall never die." His beloved disciple, St. John, prophesied that "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Death is described as an "enemy," and since it is mentioned as an enemy to be "overcome," though the last one, it is none the less expected that it shall eventually cease to occur. How? The Scriptures teach us that through righteousness, through spiritual growth and development, mortals are to put off mortality and put on immortality. They are to attain to the full stature of manhood in Christ. We do not hold that this exalted state may be attained in this generation nor in any near generation. Centuries may pass meanwhile. We only contend that such is the ultimate of Christianity as taught by Jesus Christ and his apostles, and not a mere whim of Christian Scientists.

We have not boasted regarding the ability of Christian Scientists, although we acknowledge with gratitude what has already been accomplished through Mrs. Eddy's teaching. If it be true, as it surely is, that Christian Scientists are not able to heal as successfully as the Master did, such failure is due to the same want that occasions the failure of other Christians, that is, to the limited degree of their faith or understanding. Christian Science is "founded" upon the teaching of our Lord. It plants itself unreservedly upon the Master's declaration, "God is a Spirit," and faithfully adheres to this premise in all its conclusions. Jesus said: "He that believeth on me, the works that I do shall he do also."

While we believe that one may be a Christian in a degree, without being able to do all that the Master accomplished, we believe that one is not a Christian, in the full and sufficient sense of the word, until he at least desires to do all that the Master performed. One would not hold that mathematics is incorrect because a neophyte is not able to demonstrate its most difficult propositions. In such a case the difficulty lies not with mathematics, but with the pupil's limited understanding thereof. Jesus' apostles were not as successful as the Master, although they relied upon the same God, and no one then or since has made an assertion that they were not Christian in their method. Upon one occasion they failed utterly to heal a patient and brought him to the Master, inquiring the reason of their ill success. Jesus answered them in a manner to indicate that their "prayer and fasting" was insufficient. He seemed to admit that they were on the right road, but intimated that they had not proceeded far enough.

It is quite true that Paul admonished Timothy to beware of the "oppositions of science falsely so called," but he did not admonish him against real science. Paul was a Christian and evidently had in mind that Timothy should beware of that which was opposed to Christianity, that he should beware of those assumptions of truth which were not true and therefore not scientific; that he should beware of anything that was unchristian and untrue, though offered in the name of science or truth. In other words, Paul urged Timothy to beware of all that is contrary to Christian Science.

[John L. Rendall in *Keokuk* (Ia.) *Constitution-Democrat.*]

To say that Christian Scientists do not believe in baptism is simply juggling with phrases and evasion of facts. Christian Scientists fully agree with the necessity for that which baptism includes in the word "purification," and the use of water in either allopathic or homeopathic doses does not aid in its attainment. The statement made by this critic, that "Christian Science does not believe even in the real existence of water," is not at all a logical deduction from any teachings of Christian Science. Christian Scientists do not deny the existence and reality of anything that pertains to God's creation. Their contention is that what appears to the human senses as real is merely "an object of sensation," the projection of the human concept as to what constitutes reality, and that this false sense will some day, under right conditions, be displaced by a spiritual understanding as to what is absolutely real.

There is no warrant in the teachings of Christian Science for the statement made by this critic that "God is the universe," or for his declaration that Christian Science is pantheistic. A clear distinction is made in Christian

Digitized by Google

Science between God and His creation, between God and that which expresses Him. The creator cannot be in the creation, because the greater cannot be in the lesser. It is very clearly and plainly taught that the universe and man reflect, express, or manifest the creative power of God, —Spirit. This is clearly that God, Spirit, is infinitely above that which He created. It seems to me that the charge of pantheism could more reasonably and logically be made against those who assume that God is infinite and also that He can be limited, outlined, or humanly circumscribed, or that He enters in some degree into material conditions.

The followers of Christian Science accept and practise the fundamental teachings of Christianity as emphasized by Jesus Christ and as practised by his disciples. They recognize but one God, one creator, one Christ,—the Wayshower, the Saviour of humanity. They recognize the resurrection of Christ Jesus from the dead, and the consequent proofs of immortality. The distinction which Christian Science makes between Jesus as the human man and Christ as the "divine idea" is scientifically accurate and Scripturally correct.

[Edward W. Dickey in *Los Angeles* (Cal.) *Express.*]

Christian Science is nothing more nor less than scientific Christianity. There is, therefore, nothing in it or about it apart from the ministry of the Master. In no sense of the word can it be classed as even remotely akin to methods which deal with suggestion. Furthermore, Christian Science, or the Science of Christ, presents itself as one complete whole, and a recognition of any good in it must mean its recognition as a whole, because it is without logical antithesis.

In view of the definite and emphatic statement of Jesus: "He that believeth on me, the works that I do shall he do also," there can be no question that the Christian religion has a very definite message in the relation of faith to health. The works of our Lord and Master in healing all manner of disease and sin, and his oft-repeated statement, "According to your faith be it unto you," leave no room for doubt as to our duty as his followers. This is the very import of the message of Christian Science. It is reestablishing primitive Christianity in all its purity and grandeur, and restoring lost faith in the power and availability of God's word to heal all manner of sickness, and to elevate and spiritualize human thought.

All too long has this healing gospel been lost, but since Mrs. Eddy gave her discovery and demonstration of Christian Science to the world, it is being restored. Respecting the course of this healing gospel she says, "As the ages advance in spirituality, Christian Science will be seen to depart from the trend of other Christian denominations in no wise except by increase of spirituality" (Miscellaneous Writings, p. 21). This should clearly show that Christian Science cannot be associated with any present-day teaching, aside from Christianity itself, of which it is the essence.

[Frederick Dixon in *Occult Review.*]

What then did Jesus teach? Simply that the only power was God, good, and that as soon as this fact was grasped, spiritual causation would begin to be understood, and as soon as it was understood, men would begin to get that understanding of the absolute which constitutes the truth, the knowledge of which, he said, would free mankind. Had Jesus stopped here, merely contenting himself with the statement of a theory, Christianity would never have gained the power it has. He knew, however, that absolute truth was the most scientific thing in the world, and that, because it was scientific, it could be demonstrated.

"Jesus of Nazareth," writes Mrs. Eddy, on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Knowing that God, good, is the cause of all that truly exists, he was able to do more than preach a theory to his listeners, he was able to demonstrate Science. He came preaching amid the Galilean hills and in the Jordan valley the gospel or good news of the omnipotence of divine Principle, and when the material instincts of his listeners shrank from the very spirituality of his message, he fell back on the miracle, declaring that if they could not believe for the words' sake, they must believe for the very works' sake. In this way he made the power of working miracles the demonstration of what is described in the epistles as the *epignosis tou theou*, the full, exact, that is to say, scientific knowledge of God, and so of Truth.

Now, neither of the words translated miracle in the New Testament has, or ever has had, any supernatural significance. They mean simply an act of power or a sign. The miracles of Jesus were acts of power to the shepherds and fishermen of Palestine, inasmuch as they revealed the law of spiritual causation, and they were, moreover, a sign that the gospel of Christ was no mere theory, but an absolute, demonstrable, scientific religion. "He," Jesus said, "that believeth on me, the works that I do shall he do also." In these words he made the power to demonstrate the truth which makes men free the proof of a man's knowledge of the Christian faith.

[W. E. Fell in *Yorkshire* (Eng.) *Herald.*]

Christian Science does by no means "stifle inquiry;" it is not so foolish as to attempt to do so, since the honest enquirer approaching the subject without bias is invariably convinced of the truth. In every Christian Science community large enough to support it there is a reading-room open to the public. This room is furnished with the canonical writings, the authorized text-book, "Science and Health with Key to the Scriptures," and such other literature as teaches this subject. Moreover, the text-book may be borrowed from the reading-room free of charge. It is also supplied to free libraries.

Our critic asserts that "Christian Science was impugning the sanctity of marriage." Well, all I can say is that any one who takes the trouble to read the chapter on Marriage in Science and Health will see what a very high ideal is held in regard to marriage and its obligations.

The criticism that follows appears to me to be nothing short of a frank attempt to create prejudice in the minds of the people, namely, that Christian Science "inflicted the most horrible cruelties on little children." There is not a word of truth in it. It is a simple matter to make such statements, and as wicked as it is simple. I do not, however, suppose for a moment that your intelligent readers will be misled by our critic's *ipse dixit*, unsupported, as it is, by any kind of evidence whatever. It remains to be said that thousands of children have been lifted out of agony and diseased conditions that would infallibly have resulted in lifelong deformity, through the ministrations of Christian Science.

Now I would like to give a word of advice to these evangelical clergymen. The Master whom they profess to serve distinctly commanded that his followers should abstain from sitting in judgment on others, and he also said, "If a man love me, he will keep my words." Are all Christ's commands being kept? Is there any attempt being made to keep them? One of the commands was: "Preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, cast out devils [evils]." What authority have the critics of Christian Science for divorcing the command of healing from that of preaching the gospel. Is one incumbent on the churches? Then equally must the other be enforced.

It is incontrovertible that Jesus gave but one proof of

Digitized by Google

those who should be known as his followers, and that was that they should do the works which he did. "These signs shall follow them that believe [understand]." All professing Christians are today without excuse. The Principle and the rule are manifest, and the Christ-works are again being done. It is a question of law and not of miracle, if by that is meant wonder-working,—the working out of the divine law of Spirit's dominion over all unlike its own pure and perfect self. Jesus demonstrated this law. His immediate followers demonstrated it for some three hundred years, as history relates, after his ascension, and the Science of Christianity again demonstrates this law in healing the sick, reforming the sinner, and casting out the demons of lust and intemperance. Plain speaking, you may say, but is it not full time that some one thus spoke?

[John M. Dean in *Chattanooga* (Tenn.) *Times*.]

Christian Science denies the reality of sin, sickness, and death in the sense that they are not God-made entities and consequently are not indestructible, for "whatsoever God doeth, it shall be for ever;" but it does not deny that these things have become a part of mortal experience, though it is constantly proving their nothingness by overcoming their asserted claims through the power of the simple gospel of Jesus. By recognizing the unreality of sin we destroy sin, and "where the spirit of God is, and there is no place where God is not, evil becomes nothing" (Science and Health, p. 480). When evil is seen as nothing, there can be no possible pleasure in its indulgence.

"God is a Spirit," says John, and Spirit cannot be personal in the sense of corporeality, or as a being with bodily form and parts, which is evidently the gentleman's conception of a "personal God," though he would doubtless assert his belief in God as omnipresent, a self-evident impossibility, if God is humanly circumscribed

So far from denying the facts of the death and resurrection of Jesus, Christian Scientists accept the Bible narrative literally and prove their faith by their works. They accept Jesus as the Wayshower, and endeavor to follow him every step of the way. This is their practical idea of the atonement, and this definition helps them to work out their own salvation, instead of "pinning one's faith without works to another's vicarious effort" (*Ibid.*, p. 22).

If the gentleman means to assert his belief in the resurrection and immortality of the material body, then we must differ with him. Paul writes, "Flesh and blood cannot inherit the kingdom of God," and this simple statement completely demolishes any theory of a mortal resurrection. Paul also says, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." This explains the inability of some honest inquirers to understand readily Christian Science and its teachings in relation to the varied problems of life; but there is one argument that cannot be answered by subtle sophistry, vindictive abuse, or malicious misstatements, and that is the effect of this teaching as manifest in the lives and morals of the unnumbered thousands of noble men and women who constitute its following. It is said that Ingersoll once made this statement: "The life and character of my mother constitute the one unanswerable argument in favor of the Christian religion;" and we invite our critics to apply the same test to Christian Science, feeling secure in the knowledge that the lives of its followers, taken as a whole, constitute a complete refutation of any vile calumny that may be directed at the purity of their faith.

If the gentleman will display the same zeal in expounding the truths in his own religion that he manifests in his attack on a false conception of another teaching, he will feel far better for the effort and accomplish an infinitely greater good for poor humanity.

[C. R. Munro in *Peterborough* (Ont.) *Times*.]

Christian Science is not a "fad," but a practical and demonstrable system of religion and healing, which for the past forty years, in the face of the bitterest opposition and ridicule, and oftentimes persecution, has proved beyond the shadow of a doubt its right to be recognized as the greatest blessing that has come to mankind since the day of our great Master, whose teachings and practice it logically explains and interprets, in the way he commanded; namely, by the healing of sickness and the overcoming of sin. To compel a Christian Scientist to resort to a system of healing in which he has no faith, simply because it happens to be the practice of the majority, and to deprive him of the privilege of depending upon that system which he has proven in his own experience to be the most efficacious, would be intolerance of the worst kind, and would not only be opposed to the precepts of the golden rule, but directly contrary to the British sense of justice and fair play upon which we in this country pride ourselves. Fortunately this sort of intolerance has fallen into disuse, and the law protects those who are in the minority as it does those in the majority. Were "Humanity's" ideas consistently carried out, and those who differed from the prevailing systems of healing prosecuted, he would some day find himself punished for practising his favorite method of healing, for at the present rate that drug healing is being abandoned it will be simply a matter of time till that system becomes a thing of the past. We must all learn to be more tolerant of the opinions and beliefs of those who differ from us, and be willing to accord to our neighbor the same rights which we ourselves enjoy.

[William J. Bonnin in *Manchester* (Eng.) *South District Advertiser*.]

At the Canterbury Diocesan Conference, Canon Gardiner declared that the religion which ignored the spiritual element in healing was not the Christianity of Christ, and that the church needed to accept our Lord's attitude toward sickness and disease, and overcome them in the power of God through Jesus Christ. Christian Science teaches that this can be achieved only by realizing that no evil, whether sin or sickness or death, is the work of God, who is Life and Love and the author of all things; hence that evil can only occur as an experience of our human senses and can have no existence as a reality in the absolute truth. So it is that Christian Scientists are proving every day that an understanding in some measure of this absolute truth destroys evil, proving also thereby that the Christianity of Christ is available today to heal and save as it did nineteen hundred years ago on the shore of the Galilean sea.

[From an editorial in *New York Telegraph*.]

Since the dedication of The Mother Church in Boston a few years ago, the growth of Christian Science, in the face of wide-spread and ofttimes bitter criticism, has been progressing steadily. It has grown in the cities and in the country. South America and South Africa have added no insignificant part to the total. Here in New York Christian Science is a recognized moving force for good. No more representative body can be found than worships in its churches. Critics of Christian Science would do well to study this growth. It will set them thinking.

[Editorial note in *Independent*, Fairmont, Minn.]

One need not be a Christian Scientist to be an admirer of their daily publication, the *Monitor*. It is rarely indeed that any newspaper serves such clean, concise, attractive news with such good taste as this paper. It has demonstrated that a paper can be newsy and yet not yellow, it can be interesting and yet clean.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A FULL SALVATION.

SOME of those who criticize Christian Science and Christian Scientists do so from the standpoint that too much is made of the healing of disease, and too little of the healing of sin; but there are at least two reasons why such criticism is not well founded. The first of these is that the example of Christ Jesus in healing the sick is always before us, both in his preaching and in his practice. Matthew makes mention of the fact that in the very beginning of his ministry "Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people." Indeed, such a large part of the Gospels is given over to a record of his healing work that no one can legitimately question the importance with which Jesus himself vested this labor for his fellows, even going so far as to demonstrate and instance this healing work, to the onlooking messengers from John the Baptist, as the proof of his Messiahship.

To the twelve disciples whom he sent forth, and also to the seventy, Jesus gave strict charge to heal the sick, and finally, when his earthly ministry was drawing to a close, there came as a climax that heart-comforting, soul-strengthening promise to "them that believe;" namely, "In my name shall they cast out devils: they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Surely there could be no stronger indorsement of healing as a part of the ministry of all true Christians, than is afforded by these parting words from the lips of the Founder of Christianity.

It is as true today as it was in the time of Jesus, that mankind is more concerned about being healed of its diseases, in which it has no pleasure, than it is in forsaking its sins, in which it believes there is pleasure; and it is for this reason that in both ages the healing of sickness has made the more startling record, the stronger impression on public thought. As a matter of fact, the healing of disease in the time of Jesus and his immediate followers was incidental to his ministry for the salvation of mankind, and today those who are endeavoring scientifically to follow his teachings, who have found in them a full salvation, are likewise applying them to all the affairs of life, instead of using them simply as a basis for future results and future rewards in a far-away heaven.

The second reason why the criticism to which we have referred is not well founded, is that observation of the lives of Christian Scientists will prove that the teaching and practice of Christian Science are doing much toward the improvement of both private and public morals. The great army of men who have been healed of intemperance and its allied vices, as well as those who are consistently striving to abandon hatred, envy, malice, resentment, and revenge, stand as the justification of Christian Science in its claim to be the Christianity of Jesus which delivers mortals from sin through the destruction of sin. A case of healing of the liquor and tobacco habits is related on page 994 of this issue by one who, in writing of a striking experience of physical healing, under Christian Science treatment, modestly states, "During that time the desire for intoxicating liquors and tobacco left me."

There are thousands of men today who are praying for just such deliverance as this, and there are thousands of friends and philanthropists who are trying to aid them in their efforts. Will any of these venture to say that the ministry which it has been proved over and over again does this work, healing men morally as well as physically, is not Christian and not meeting the needs of the sinful as well as of the sick? The teachings of Christian Science on this point are both clearly and emphatically set forth by Mrs. Eddy, who writes in Science and Health (p. 369), "To be every whit whole, man must be better spiritually as well as physically;" and on the following page she gives this strong assurance: "Truth is an alterative in the entire system, and can make it 'every whit whole.'"

ARCHIBALD MCLELLAN.

HOME-MAKERS.

CHRISTIAN SCIENTISTS are sometimes asked by those who are becoming interested in Christian Science, as to how certain things should be "demonstrated," as, for instance, a home. This does not always mean that the inquirer wishes to become possessed of a house and lot, but simply what is generally understood by a home. There are, however, very few who stop to consider that a home, in its true sense, is a spiritual idea, and that it can never be truly realized until this is understood and demonstrated. No one would deny that a home means a shelter, a place of refuge, not merely from the wind and rain, but from what some one has called "the world's wild discord;" yet there are probably very few who think of what wonderful opportunities await all of us to be home-makers.

One need not be the head of a house in order to attain this distinction, indeed the head of the house may sometimes think he is too busy to devote much thought to this subject, which is surely an important one; but when the home is seen to be a spiritual idea, it will soon be apparent that the duty of being a home-maker rests equally upon each member of the household, quite irrespective of one's position from a human point of view. Like the state, the home must be governed by law, and it is important to remember here the familiar adage, "Order is heaven's first law."

It is of course true that the mortal concept of order is narrow and limited, but if we lift thought above the material to the universe of God's creating, we shall at least have begun aright, and we may ask ourselves in Paul's words, "Who did hinder you that ye should not obey the truth,"—and thus respond to the divine order. Orderliness, both as to time and place, does wonders on the human plane in promoting harmony. A disorderly condition of thought has no place in the true home. It only indicates selfishness and a disregard for the comfort and rights of others, whereas a sense of order and neatness helps to establish and maintain harmony and is one of the foundations of prosperity.

Among the home-making qualities which might be enumerated are industry, intelligence, and integrity, also "diligence, promptness, and perseverance" (Science and Health, p. 514), all of which point away from the material to the spiritual. Any member of a household, whether it be master, mistress, servant, or sojourner, may be an invaluable aid in home-making, by the manifestation of these qualities, especially if they spring from the understanding of spiritual law, and are associated with these "fruits of the Spirit," namely, love, gentleness, goodness, faith. It goes without saying that, in addition to all that has been mentioned, the elimination of fear is an important step in the art of home-making. The belief in disease, sin, or discord of any sort should have no place in the home.

Digitized by Google

whether it be a simple cottage or a princely mansion, for these alike should be illumined by the holy light of Truth and warmed by the perpetual presence of divine Love.

The psalmist tells us that if we "abide under the shadow of the Almighty," neither pestilence, plague, nor destruction shall ever invade our place of refuge. God, as revealed through Christian Science, is Mind, intelligence, Life, Truth, Love, and it is the great privilege of every one who understands this, to reflect the divine nature and daily and hourly manifest the qualities which express the divine Mind; and in so doing we must prove our faith by our works. In our Father's house are "many mansions," so the great Teacher said, and it remains with each of us to take possession of his home by manifesting his worthiness to dwell therein, for it is here, today! The psalmist said, "Lord, thou hast been our dwelling place in all generations."

ANNIE M. KNOTT.

"SHALL HE FIND FAITH ON THE EARTH?"

"Is the Christianity they teach adequate? Will it be able to stand against the onslaughts of Christ's foes in their modern garb?" Such was the clearly defined doubt awakened in the heart of a very intelligent Englishwoman after having listened to the many addresses delivered before the recent World Missionary Conference at Edinburgh. She was deeply impressed, as she tells us, with the earnestness and ability of the representative men who had come together for mutual counsel and inspiration, and yet this question of the adequacy of their apprehension and presentation of spiritual truth to meet "the world's great need" forced itself upon her attention, even as it is stirring the thought of unnumbered people in all the Christian world.

This skepticism is asserting itself at a time when missionary enthusiasm is registering one of its highest tides,—when, as this great conference has evidenced, earnest longing for the advance of the cause of Christ is moving all Christian believers in an unusual way,—and this seeming paradox cannot be explained apart from two very discernible facts, viz., the contrast between the prevailing concept of Christian truth and that of the Master and his early disciples, and the unsatisfactoriness of the results which are attending the preaching of the Word today.

Christ Jesus declared and demonstrated that the truth which he voiced was adequate and immediately available for the solution of every earthly problem. To those who heard him gladly he not only gave assurance of ultimate salvation, but he proved the power of his gospel to annul material law and to overcome sickness and death; whereas, though the pall of pain still rests upon all the nations, most missionary workers today not only do not undertake to demonstrate the healing significance of the Master's teaching, but they practically deny that such results normally attend its acceptance! To perceive this radical departure from the concept and course of Christ Jesus and his disciples certainly authorizes wonderment, and when, furthermore, we place in comparison with the marvelous achievements of the early disciples the relatively meager returns which are attending the labors of a vast army of Christian workers in foreign lands today, the skepticism referred to is increased an hundredfold.

Mrs. Eddy has been perfectly logical, as all the world is rapidly recognizing, in her insistence that, if rightly understood and acted upon, our Lord's teaching would prove itself no less healing and redemptive today than it was in the first century. At a crucial time in Christian history the demonstrably efficient "gospel of Christ," in whose "power of God unto salvation" St. Paul so rejoiced, is again declared in Christian Science under circumstances which can but recall the Master's plaintive words, "Nevertheless when the Son of man cometh, shall he find faith on the earth?"

This inquiry into the adequacy of the presentment of saving truth for which we are responsible, pertinently relates itself, moreover, to the life and demonstration of each individual, and every true Christian Scientist will daily subject his living to the scrutiny of this test. If my words and conduct are not commending my faith to those with whom I have to do, and if my demonstration over the claims of sickness and sin is not evidencing the presence and power of Truth to save "unto the uttermost," then in all likelihood my onlooking neighbor will think, if he does not say of me, and that legitimately, "Thou art weighed in the balances, and art found wanting."

Surely "the love of Christ" must constrain every worthy Christian Scientist to be up and doing, that by both faith and works he may, as Paul says, "make known what is the riches of the glory of this mystery among the Gentiles."

JOHN B. WILLIS.

AMONG THE CHURCHES.

NASHVILLE, TENN.

The Christian Scientists at Nashville yesterday [July 5] came into full and complete possession of the Church of the Advent building, on Seventh avenue. Twenty-three thousand dollars in cash was paid over, making a total of thirty-one thousand dollars in cash paid for the building, eight thousand dollars having been paid some time ago. A fund has also been created by the Christian Scientists for use in repairs and improvements to the building, the work on which will begin at once and continue for several weeks. The deed on the property was filed yesterday and there is no incumbrance whatever on the church.

Nashville American.

SAN DIEGO, CAL.

Factory experts are now at work installing a monster pipe-organ in the auditorium of the handsome new edifice of First Church of Christ, Scientist, at the southwest corner of Second and Laurel streets. The instrument, which is costing the church more than eight thousand dollars, is claimed to be one of the finest, if not the finest in Southern California. It is finished in mahogany, to conform with the severely plain but rich interior finish of the church.

Arrangements have not yet been made for the dedication of this new edifice. In accordance with the fixed custom of all Christian Science churches, it will not be dedicated until entirely completed in every detail and fully paid for.

San Diego Union.

AMSTERDAM, N. Y.

First Church of Christ, Scientist, of Amsterdam, which has been holding services at 24 Market street, has moved to 9 Mohawk place, where the congregation will hold its first service in its new church home this morning [July 17]. The lot is centrally located, being within a few hundred feet of the new post-office site and sufficiently large so that at any time in the future the church people can erect a suitable edifice. The beautiful old home has been thoroughly renovated and redecorated. Three large rooms on the first floor have been thrown together, the result being a good-sized audience room with a seating capacity for about two hundred. The whole property presents a pleasing and desirable appearance, and the Christian Scientists of Amsterdam are to be congratulated in the progressive steps they have taken in securing such a valuable church home.

Christian Science was first introduced in Amsterdam about twenty years ago. The work has been continued here, since its inception, with great steadfastness, and while the church has not grown rapidly, its members and attendants have been most devoted to the cause.

Amsterdam Sentinel.

THE LECTURES.

QUINCY, ILL.

Before an attentive and deeply interested audience at the Empire Theater last night [May 26], Frank H. Leonard spoke on "Christian Science: A Demonstrable Religion." He was introduced by E. M. Botsford, who said in part,—

The world has come to know more of Christian Science in the last few years, and to hold its adherents in greater esteem. Honest men, regardless of their belief in this faith, are openly conceding that it has done much good and that Christian Scientists are endeavoring to uplift the race and bring higher happiness to the individual. Christian Science does not come to attack with vituperation and criticism the doctrines of other churches. It does not denounce those who have faith in drugs and medicines as the most efficient means of healing disease. It comes with calm, quiet, Christlike effort to show the reasons for the faith its followers profess. Its basic motto is "Right thinking and right living." It stands firmly on the Bible teachings and promises. It believes that Christ taught the truth; that he did heal all manner of diseases by his spiritual understanding of God, good, as the only power. Christian Science teaches that those who faithfully follow Christ's teachings and come out from the entanglement of materialism, can heal bodily ills as he did. They accept literally the statement of Christ Jesus that all these good works which he did, his faithful followers in this day and generation can do. They believe that sin is unreal because it is evil, and since God made everything and everything that He made must be good, there is no place for sin to those who, by study and devotion and uprightness and love and a pure life, have attained to this spiritual knowledge and understanding of God.—*Quincy Herald.*

OSHKOSH, WIS.

The Grand Opera House was taxed to its capacity Thursday evening [May 26] by hundreds of men and women who were interested in what Prof. Hermann S. Hering of Concord, N. H., had to say on Christian Science. He was introduced by the Rev. Stanley Manning, pastor of the Universalist church, who spoke in part as follows:—

Let me first express my appreciation of the Christian courtesy which prompted the invitation extended to me to introduce the speaker of the evening. Our theological and denominational fences are being broken down, and while differences exist and will continue to exist, in practical Christian life and work, they will be of decreasing importance. What the churches of this city need is not a common statement of faith,—that is impossible now and probably will be for a long time to come, if indeed it can ever be brought about,—but we need a working fellowship of service. The world is now demanding positive proof of the worth of even its oldest and most firmly established institutions. It is demanding this proof of the church, and the church must produce it not by arguments for divine ordination or infallibility, but in practical service in everyday life. This is the only kind of proof that will satisfy the demand, and unless it is offered the continued existence of the church cannot be justified.

Truth is eternal, changeless. It has a permanent quality which the variations and the vagaries of human thought do not affect. But our knowledge and appreciation of the truth do change with the passing of the years. Each age makes its own contribution, sometimes of greater and sometimes of less value, not only to the sum of human knowledge, but to the experience of the race in using that knowledge and applying it to the needs and problems of life. This latter task is the one which especially confronts us today, and in addressing ourselves to it, our efforts have followed two general lines. The first has been in the field of social service. Because from the dust of a century of theological controversy there has emerged a clear conception of the universal fatherhood of God, we are trying to apply more thoroughly our newly awakened consciousness of the universal human brotherhood. And this has led us into a thousand and one different forms of activity, all of them designed to improve the conditions under which men and women and children live, with the ultimate object of making possible the normal development of every individual until he knows himself a child of God.

In recent years the Christian Science church has attracted very general attention, because of the success which it has attained in applying a new method of accomplishing this world-old object,—an application that is new, at least so far as modern times are concerned. Our presence here this evening testifies to our desire to learn more concerning this interpretation of the gospel of Jesus, and concerning this church which has done so much to remind us that that gospel is "the power of God unto salvation," not from some future woe, but from sickness and sin in this present world.—*Correspondence.*

ANAMOSA, IA.

A lecture on Christian Science was delivered by Francis J. Fluno, M.D., of Oakland, Cal., Thursday evening, May 26, at the Opera House to a large and appreciative audience. The lecturer was introduced by Clark Beems of Anamosa, who said in part,—

The bigoted, self-centered, narrow-minded, egotistic man is seldom open to the truth, but it comes to the charitable, the broad-minded individual who is not afraid to think, to reason, and to make use of all his God-given faculties, who will neither criticize nor condemn the efforts put forth by any individual or organization of individuals for the uplifting of mankind without first making a thorough investigation of the subject. Like many others here tonight, I have not embraced this Christian Science form of healing and religion, yet the very fact that we are present on this occasion is the best evidence that we are anxious to know the truth, no matter from what source it emanates. During the past few months I have been brought into close touch with the results of Christian Science efforts, and have a personal knowledge of its transforming power. I believe that it is but proper that I should take this opportunity to confess that the evidence which has come to my personal notice is so convincing that all doubt is banished from my mind as to whether or not there is an invisible, intangible, mysterious something in Christian Science that almost borders on the miraculous in its operations.

It should be the desire of every person to be happy, healthy, contented, and charitable, and these blessings and virtues seem to be the Christian Scientist's chief stock in trade. Daily they admonish their fellow-associates: "Talk happiness; the world is sad enough without your woes. Smile: this old world needs your smiles, not tears. A smile is the sunshine of the soul, and peace, health, and happiness are the smile's harvest. Lift up the fallen, relieve the distressed, and restore peace to the troubled mind!" Is not this a beautiful, practical creed? We cannot hear too much nor learn too much about that great essence of life we call truth—the knowledge of which will bring us the desirable instead of the undesirable things of this life and the life to come. If we know and understand the truth, we shall think right, do right, and be right.

Correspondence.

MARION, O.

Bliss Knapp delivered a lecture on the subject of Christian Science Sunday afternoon, May 29, at the Grand Opera House. He was introduced by Landy F. Shoots, who said,—

We have met here this afternoon to hear a lecture on Christian Science, and that you may have an idea of what this Science is, I will give a brief illustration. A few years ago I knew a man who was almost a mental and physical wreck; he was branded an outcast, an habitual drunkard, doomed and forsaken by loved ones, homeless and friendless, discouraged, disheartened, and he soon would have been in a drunkard's or a suicide's grave. In this dark hour, as dark an hour I think as any mortal can experience on this plane of existence, Christian Science extended a helping hand, and destroyed his depraved appetites for time and for eternity. It led him out of a life (if such could be called life) of darkness, misery, and bondage, into a life of sunshine, freedom, happiness, and peace; and daily he thanks God that there is a truth that makes free, and for Mrs. Eddy, who drew so near to God that she discovered this truth, and has so kindly, lovingly, patiently, and unselfishly bestowed it on a sinsick and suffering world, that all who will may be partakers of this living water with her, without money and without price. I have every reason to know that I am giving you the truth, for I myself am that man.

Jesus said, "Ye shall know the truth, and the truth shall make you free;" and it is this truth—the truth that Jesus taught and demonstrated over nineteen hundred years ago and told his followers to preach and practise, the truth that healed the sick, raised the dead, cleansed the lepers, and cast out devils,—that has led me and thousands of others out of darkness and bondage into the liberty and sunshine of God's love. The platform of Christian Science is as high as the heavens and as broad as infinity, and yet it consists of only three words, "God is Love," and it is to an exposition of this truth that we are here this afternoon to listen.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Dover and Foxcroft, Me.—Bliss Knapp, Church Edifice, Aug. 30.

Kennebunk, Me.—Prof. Hermann S. Hering, Mousam Opera House, Aug. 16.

[Written for the *Sentinel.*]

"I WILL LIFT UP MINE EYES."

MYRA B. LORD.

Unto the hills I will lift up mine eyes!
Symbol and type to me are they
Of Him who did the heaven and earth create—
Whence comes my strength from day to day.

Nor snare nor pitfall shall my feet betray,
For He who slumbers not doth keep
Me when I walk the treacherous path,
Or confident lie down to sleep.

O blessed thought, that He to whom we pray
That evil may from us depart,
Shall to the end preserve us from its wiles,
Shall safely guard the struggling heart.

Unto the hills I will lift up mine eyes!
Father, be evermore my guide,—
I look to Thee for strength for daily needs,
That I from Truth turn not aside.

TESTIMONIES OF HEALING.

Deeply do I feel the debt of gratitude which I owe to Christian Science for the many benefits I have received, and it is with gladness that I claim the privilege of telling others what this healing truth will do. From childhood I suffered from extreme melancholy, which seemed to affect everything I tried to do. When working in music or any other line of study, a sense of hopelessness and fear was always present. This condition became worse as I grew older, and this was not conducive to bodily health. I found myself manifesting many discordant physical conditions, one being a pain in my back which was felt almost constantly.

We had known of Christian Science in our home for a number of years, and I had received help from it at different times, but without giving it any thought or study. But at last there came a day when my need was so great that I feared for my very reason. Being unable to do my office work any longer, I closed my books and went home, praying for something to give me relief. On entering my room, my eyes fell on a copy of Science and Health which my mother had given me a few months before, but which I had never opened. I had no thought of its helping me, but I opened it and commenced to read. It was hours before I put it down, and when I did so I found that I was healed—absolutely—both mentally and physically!

I cannot tell the joy and freedom I felt as I rose from my chair. Truly I had touched the hem of Christ's garment, and it seemed to me that the whole room was full of light. The buoyant happiness which then filled my thoughts has never left me, and though I have had many problems to solve since, there is always peace and love in my heart, and a surety of God's allness. Some physical inharmonies have come to me since I commenced the study of Christian Science, but the truth has always been found sufficient to meet my every need. Relief has not always come so quickly as at the first, of which I am now glad, because this has caused me to strive harder to know God and man's relation to Him.

I have found that exactly in proportion to my efforts to demonstrate and do the will of the Father, has the way been made clear and progress been realized. Many indeed have been the proofs which we have had in our home of the power and protection of divine Truth, and hence my heart is filled with gratitude to our Leader. My fervent prayer is that I may each day follow more closely.

CHARLOTTE F. BOYLE, Fairbury, Neb.

It is now twenty years since the healing work of Christian Science entered my consciousness. The first benefit received from reading "Science and Health with Key to the Scriptures" was a change of thought from agnosticism to a belief in God, divine Mind, which resulted in the overcoming of bad temper, the habit of profanity, selfishness, etc. When I began the study of Christian Science, catarrhal conditions of the head and throat were very serious. The sense of smell was almost wholly gone, and memory weakened. I became easily irritated and my sense of life was becoming vague and uncertain. I am thankful, and can truthfully say I have been relieved of all these troubles, and many of them have been banished entirely by the study of Mrs. Eddy's writings. Of the cigar habit and of a felon on one of my fingers I was healed in a few treatments through the help of a practitioner, but I have been able to help myself mainly through the understanding I have gained by the study of Science and Health, and I have also been able to help others in this way.

To me Christian Science is at once the center and circumference of the Christ-method of healing and destroying sickness and sin. Mrs. Eddy, through her innate desire for

Digitized by Google

truth, and spiritual activity of thought coupled with a longing to benefit all mankind and to know but one God, has been imbued with the Christ-spirit and with power from on high, to the degree of proving her words with deeds, healing the sick, changing the thought from an erroneous basis to one of demonstrable and scientific accomplishment. She has abundantly obeyed the command "to preach the kingdom of God, and to heal the sick," for today the glad tidings are coming from all over the world of the healing of the body and the renewing of the mind.

I am deeply grateful that these good things have reached me, and I rejoice with all who have been touched with the healing truth through her ministrations. I am thankful that I was able to accept Christian Science without fault-finding or criticisms of Mrs. Eddy's methods. I have endeavored to accept every by-law of The Mother Church; in fact, I may say I have anticipated some of them, and never have I questioned those which I did not understand, feeling sure their wisdom would be revealed to me if I were willing to be subject to them. It was my privilege to be one of the multitude who assembled at Mrs. Eddy's home on the occasion of her last public meeting at Pleasant View with the members of her church. I had longed to see the Founder of the Christian Science movement, and my desire was gratified. I shall never forget her closing words on that occasion: "Trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903). Since then I have tried to follow her admonition, and when I have done this faithfully I can truly say that Truth has been a "shield and buckler." I do not say, God bless our Leader, for I know that God does bless her, and I am glad for all the blessings she has brought to her followers and to the whole world.

JOHN GRAY, Pacific Grove, Cal.

I feel that the time has come for me to add my testimony to the list of those who have been freed from mortal bondage. When I took up "Science and Health with Key to the Scriptures" I felt that I had endured all that I could in the way of suffering. I thought the book a large one, and that I should never be able to read it, but I was anxious to know what Christian Science really was. I had seen this text quoted in *The Christian Science Journal*, "Ye shall know the truth, and the truth shall make you free," and it seemed to have a message that I soon proved to be very real. I read a little while in the text-book, and was lifted above my troubled sense by the revelations that were unfolded to me. I heard the voice of Life, Truth, and Love, and gained my healing, taking off the glasses which I had worn constantly for eighteen years for serious eye trouble.

My eyes had been bad for twenty-five years; I could not endure heat or cold without suffering and loss of sight. I had been in four different institutions for medical treatment, but medicine gave very little relief. One eye was considered hopeless, and I was in fear of losing the other, as the doctors had told me I would go completely blind if I was not careful, and I dreaded the thought of it. Some years ago I was anointed for "faith-healing," and believed that God could heal the sick, but no healing came to me. I thought it was God's will that I should suffer, and I was so glad when Christian Science showed me that the reverse is true. This brought me into the harbor wherein a safe anchorage was found. One beautiful demonstration took place in Hornsea church on Sunday morning, Aug. 20, 1908. There is a text at the back of the platform which I had never been able to see, but in the seeming darkness there arose in all its clearness the word "truth." The vividness of the scene was almost too much for me; I realized that it was "light at eventide," and that it was of God. The next time I went to the church I was able to read the whole of the text, "Ye shall know the truth, and the truth shall make you free." I can now read for hours together without pain or loss of sight.

Christian Science has done very much for me in one short year, and I feel deeply grateful to have the tightened cords loosened. Words can only faintly express my gratitude to God, and to Mrs. Eddy and all others who have helped me into the realization of peace.

ELIZABETH DUSTIN, Hornsea, Yorkshire, England.

About sixteen years ago I was taken with an acute attack of rheumatism which caused me much pain, and each year after that I had a similar experience, up to about ten years ago, when I began to have two or three attacks every year, each one more painful than the preceding and compelling me to remain in bed a week or ten days at a time. Later I was obliged to bend over until my head was on a level with my knees, in which state I remained for about four years. Seeing that medicine was useless, the doctors advised me to go to the springs. I did so, and remained there about eight months, taking hot baths daily, besides receiving massage and electric treatments; but, as I was getting no better, I finally left and went to San Francisco to consult a specialist. After several examinations, which included X-rays, they concluded to send me to a hospital, where I was placed in a plaster cast to get my dimensions for a leather corset, which I subsequently left with a Christian Science practitioner.

While I was in the hospital an arch-shaped cot was placed beside me, and at intervals of four hours each day I would alternate between it and the bed, the pain being so intense that it was impossible to lie longer than four hours at a time. After having the brace adjusted, it was found that it would not hold me erect, and it was then suggested that the muscles be cut. To this I objected, and with that I severed my connection with *materia medica*. After leaving the hospital I used crutches a good deal of the time, and later the disease appeared to be taking on symptoms of locomotor ataxia.

During different periods of my illness the subject of Christian Science was mentioned to me, but I paid no attention to it until one day I boarded a car and a gentleman who was seated beside me and had noticed the difficulty I had in getting on the car, asked what I was doing for my trouble. I told him. He then asked me if I had ever tried Christian Science, and went on to tell what it had done for him. He gave me a card to a practitioner, which I placed in my pocket, where it remained for a couple of months, until one day I came across it and made up my mind that I would go and see the practitioner; which I did. Treatment was continued for sixteen months, when my healing was accomplished. During that time the desire for intoxicating liquors and tobacco left me. I obtained a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it mechanically for several months without being able to understand it (the Bible and I were strangers); but I may say that it is now indispensable to me and an every-day companion.

After receiving treatment in Christian Science for about one year, a neighbor suggested that I try another kind of treatment, stating that he thought it had helped him of an eye trouble. (He has since taken up Christian Science.) I told my practitioner that I would like to pay this man a visit. He made no objection, but on the contrary told me I was at liberty to choose for myself. I took a physical examination and was told that mine was a very difficult case. The man would not say that he could cure me, but that he would take the case and do what he could for me. (Prior to my visit, my friend had told him that I was taking Christian Science treatment.) He also informed me that Christian Science would never cure me. I thanked him, and then took my departure. His positive statement forced me right back into

Digitized by Google

Christian Science, where I was healed in about three months from that time.

About six weeks after this healing, I was stricken one morning suddenly with an acute attack, which caused me to bend forward as formerly. The attack was accompanied by severe pains in my back and both of my limbs. With great difficulty I crawled into the house, refusing assistance. I then took the Bible and Science and Health and went to work, remaining at it for about two hours, when I got up from where I was sitting and crawled over to a lounge, where I lay for an hour and a half, declaring the truth on the lines of Christian Science, as our text-book teaches us. I finally had a desire to get up, but found that I was unable to do so. With some difficulty I rolled off the lounge to the floor and crawled to a table, then raised myself up and walked, all stooped over, very slowly into the next room and from there out to the back porch. Then the thought came to me, Transfer your reliance from the material to the spiritual, and lean on the "sustaining infinite" (Science and Health Preface, p. vii.). Almost instantly I straightened up, and walked back into the house as though nothing had happened to me, to the great astonishment of one of the members of the household, who had seen me a moment before all bent over and suffering great pain. All had disappeared, and I have not had a return of it since.

I thank God for this great blessing, and for this beautiful truth that has enabled me to lean with understanding on the "sustaining infinite," and to know that God is an ever-present help in trouble. I am also thankful for having been shown this illumined path which has been so clearly pointed out to us through the untiring and ceaseless efforts of our dear Leader, in which path I am earnestly and sincerely endeavoring to walk.—Wm. E. Bates, Alameda, Cal.

I give this testimony as to the healing power of Christian Science, so that others may turn to the truth and find relief as I have done. In January, 1909, I turned to Christian Science through suffering. I had been a much spoiled and self-willed individual, but there came a time when I was glad to accept salvation from sin and sickness through this truth. I was also healed of chronic bowel and stomach trouble, and severe headaches. In March I became a mother, and can truthfully and thankfully say that with Christian Science help I was delivered without pain. A Christian Science practitioner and I were alone with God at the time of the birth. I now have a beautiful baby who has never had any sickness.

We have had many wonderful demonstrations of the truth in our family. I am indeed thankful to God, who is eternal, unchanging good, and to Mrs. Eddy, His messenger to this age.

Mrs. Elsie Laurence Lucas, E. St. Louis, Ill.

I was very quickly healed in Christian Science of a bad cold. I had coughed all day; in fact, the ailment seemed to have taken possession of me as it used to do. I had been weeks, formerly, in getting rid of such a cold; but I was treated in Christian Science, and in less than half an hour I was entirely free. I went to bed and slept all night, and in the morning was perfectly well. For this healing and for many other blessings which I have received in Christian Science, I am very thankful.

Mrs. Mary Rheutan, Boston, Mass.

That peace-laden message, "The truth shall make you free," came to me when I was discouraged and unhappy, suffering acute pain, and mentally miserable because of an all-pervading fear. When a kind practitioner told me somewhat of the meaning of this truth, it came as a new and inspiring message, though I had heard the words many times before. It rang in my ears for days, and as I pondered its significance, as revealed in the teachings of Christian Science, it seemed that I was casting off some old, worn-out garment. The freedom from physical and mental bondage which I gained was to me wonderful, and I began to share in the peace that "passeth all understanding." The healing was slow, but it has been complete, and the monster of fear that held me has been destroyed through the truth revealed. The sense of exhaustion and nervousness has disappeared, and with it went aching eyes and an ailment which my physician had told me might develop into something serious, if I did not take great care of myself. These ills have all gone, and they have been replaced by "the freer step, the fuller breath, . . . the Life that maketh all things new," as one of our hymns expresses it.

With a heart full of love to God, and to Mrs. Eddy, who has shown us "the way," let me gratefully say I have proven, though in small degree, the blessed truth disclosed to us by our Leader's words in the Preface of Science and Health (p. vii.)—"To those leaning on the sustaining infinite, today is big with blessings."

Mrs. Mary Doty Fields, Ft. Morgan, Col.

I wish to express the gratitude I feel for the healing and new life which have come to me through Christian Science. I had suffered more or less all my life from a severe form of eye trouble, which could not be corrected by glasses. For eleven years I had been going first to one specialist then to another, sometimes being temporarily relieved, but gradually growing worse until I could not see even with glasses to read or sew. Finally I could scarcely do my housework. During this time I suffered intensely, the pain in my eyes being so severe that at times I was forced to take an anesthetic.

I was in this seemingly hopeless state, thinking there was no chance for me and that I must lose my sight, when I turned to Christian Science. At first I did not dare tell the practitioner how bad my eyes were, for fear she would not take the case—I only begged her to relieve the pain. I shall never forget that first ray of hope or my astonishment when she told me that it was not only possible for me to be free from pain, but that it was my divine right to have perfect sight. Her statement has been proven true. I was treated for five weeks, during which time there were some severe struggles with the pain and awful fear; but gradually all vanished. I laid aside my glasses during these treatments, and my sight has improved by degrees, until now, over a year and a half since, it is better than ever before. I read, sew, and do any close work I wish with perfect ease.

For this beautiful healing I am indeed grateful, and I am striving so to live that my life may prove my gratitude. Priceless though my sight seemed, the spiritual uplifting, with its sweet sense of peace, contentment, and hope, is infinitely more to me.

Mary D. Hunter, Golgona, Canal Zone, Panama.

[Translated from the German.]

I wish to express my sincerest gratitude for the blessings which have come to us through Christian Science. Last summer our daughter, eight years old, fell in the street as a result of sudden fright, and seriously injured the left thigh. I heard the child cry out, and when I reached her I at once declared the truth, with the result that the swelling went down immediately and the leg took its natural position. My husband carried the child home, and I sent word to a Christian Science practitioner, who came on the same day, although she lived at a distance from us. The pain soon stopped, and the child fell asleep. After some time, however, she awoke in pain, and as we did not seem to be able to get over our sense of fear, we called a physician, contrary to the child's wish, who kept saying: "God is right

Digitized by Google

here; He will help us; we need no doctor." The physician came the same evening, and was surprised to find no inflammation, as several hours had elapsed since the so-called accident. He said that he would call the next day to set the bone; that in the mean time we should use cold applications so as to prevent inflammation; but we did not use them, neither was there any inflammation.

On the following day the physician stretched the leg (this causing very little pain) and dressed the extended limb. He recommended the greatest care and told us that possibly the leg would become shorter than the other. He said that after four weeks' complete rest he would apply a light bandage, with which she would have to lie still for another week or two, and that she could then try to step on the leg while wearing a brace. This time, however, we were not afraid, for we knew the child to be safe in God's care. She suffered no pain, and when, two weeks later, the physician examined the leg and pressed the flesh around the bone, she laughed, much to his astonishment, as he had told us previous to the examination that it would be very painful, this being a case of splinter-fracture. He never had seen such a case before, but having engaged the physician's services, we thought it best to follow his further advice.

He applied a light bandage, which he said would have to remain for a couple of weeks, but in one week's time the bandage got torn on one side, and as the physician happened to be there that day he fixed it. The practitioner and the child had held in mind this verse from the 124th Psalm: "Our soul is escaped as a bird out of the snare of the fowlers: the snare is broken, and we are escaped," and a few hours later the bandage broke on the other side. The child was overjoyed. The physician then removed the bandage, and to his surprise found that the limb had not become shorter. He said that it was a wonderful success, that if all fractures were so perfectly healed, it would be delightful indeed to be a physician. We did not wish to deprive him of his joy, but we for our part knew what had accomplished the healing in this case,—the omnipotence of divine Love. The child could not be held back any longer, and although she had to consent to another light bandage, she ran about in the room, much to the physician's surprise.

Our little daughter was very brave during all this experience and showed unflinching faith. During this time, whenever relatives came and pitied her, she would say, after they were gone: "They can do me no harm with their fears; God is mightier with me," and she would talk in the same way whenever we advised her to be more careful in walking. All this having occurred during vacation time, the physician twice asked a colleague to take his place: thus the child had gone through the hands of three physicians. One of them asked me to have the child come to his rooms, that he might make one more examination. He, too, thought that the quick knitting of the bones was most surprising. In six weeks' time the child was able to take a thirty-five-minute walk with me to attend our service. The same child had been freed of a cough and afterward of an eruption, each ailment being overcome within three days. Smallpox was overcome in about a week's time, and in this case, too, the child was very brave. She was dressed every morning, then would lie down on the couch and ask to have the Bible read to her. We had asked a practitioner to take up treatment, but there seemed to be no change until after the third day. Then the child began to eat, and one week later she was perfectly well.

We are sincerely grateful to God for the many proofs of Love and Truth, and also to Mrs. Eddy, who has again brought to light this truth.

FRAU IDA KALBE, Dresden, Germany.

Christian Science has done so much for us that I do not know what to tell first. Our little grandchild had a false growth on her head, and for this we asked help of a Christian Science practitioner. The growth disappeared slowly but surely. It is over six years since I became interested in Christian Science, and during this time God has been my only physician. I have no desire to return to material remedies. Words fail to express my gratitude to God, and to Mrs. Eddy for the revelation of Truth to this age.

MRS. A. C. DAVENPORT, Acworth, Ga.

I feel it a duty to add my testimony to the thousands of others, in the hope that some sufferer may reap the benefit of it. Over seven years ago I was healed of chronic stomach affection from which I had suffered for eleven years. Doctors failed to help me, and I was a slave to drugs, but it was impossible for me to eat even a piece of bread without great distress. I had concluded to end my life, as I saw no other way, but little did I dream that deliverance was so near. Christian Science was brought to my notice by a dear girl, and in two or three treatments I was entirely healed. Other conditions yielded at the same time.

My gratitude is unbounded, and more than all for the spiritual uplift. Words are surely inadequate to express my love and thankfulness to God, also to our noble Leader. I hope to prove by my life that I am worthy to be called a Christian Scientist.

MRS. H. N. BLANKENSTEIN, San Francisco, Cal.

Ten years ago I began to investigate Christian Science, because I desired to know more of God, and friends had told me that I could obtain this knowledge through the study of "Science and Health with Key to the Scriptures." I am very glad to say that I have found Christian Science to be all and even more than I expected, and the Bible has become a new book to me. Aside from the spiritual help I have experienced physical healing. One Friday night a few years ago I was taken with a severe attack of illness, attended by high fever and intense pain. A practitioner was called by telephone, and in a very short time both of these conditions were entirely destroyed. I was able to attend church on Sunday, and Monday I went to my school perfectly well. I have never had the slightest return of any of these symptoms. My mother has been healed of a bad stomach trouble and my father of a carbuncle on the back of his neck. While under treatment for this trouble the desire for tobacco left him very suddenly, although he had used it for about forty years. That was three years ago, and he has never had the least desire for it since, in fact tobacco smoke is very disagreeable to him.

For all the blessings that have come to me through Christian Science I am very grateful to God, and to Mrs. Eddy, its Discoverer and Founder.

MAUD FERNALD FOLLETT, Belfast, Me.

Christian Science found me about six years ago, suffering from a very severe form of skin disease, also an attack of asthma, both of which I had had since childhood, having been sent to Colorado in 1882 as a last resort for the asthma. I was healed of it in four treatments in Christian Science. After having been treated for the other ailment for about two months, I was advised to "work out" my own salvation; so I got a copy of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and went to work. The healing seemed slow, but it gave me more time to study and a better understanding of the truth that makes us free—free from sin, disease, and fear.

The most wonderful experience, which proved to me that with God all things are possible, was my healing in an acute attack of lung trouble. I went to bed about noon, after calling a practitioner by telephone and asking for help. The practitioner came to the house in about two hours, finding me unable to turn over in bed. He was with

Digitized by Google

me until three o'clock, when I went to sleep. At six I awoke, dressed, had a light lunch, and with my daughters attended a reception until nine o'clock in the evening. I then went to the railroad office where I am employed, and worked the rest of the night. The healing was complete. There was not a sign of pain or soreness.

I am very grateful for the understanding which Christian Science has given me of God,—grateful to God, and to our Leader, Mrs. Eddy. I am also grateful that through the little understanding which I have I can help others to find Truth, and I daily pray that I may have more of that Mind in me "which was also in Christ Jesus."

CHAS. A. JONES, Denver, Col.

I awoke one morning with every indication of a severe attack of illness. I was teaching in the country and boarding with a sister who is not a Scientist, so had no one to help me. I applied my own knowledge of Christian Science the best I could, but got no relief. My brother-in-law went to town the next day, and arriving there at noon told another sister of my condition, and she commenced at once to treat me. I immediately began to improve, and by the time school was out at four o'clock I was perfectly well, except for a swelling in my throat of which she knew nothing. This became so bad that I could scarcely swallow at all, and could not make myself understood when trying to talk. When I arrived home on Friday evening and my sister learned of my other trouble, she took up treatment for it, and by the next morning I was able to speak plainly. The following day all soreness had vanished.

FANNIE A. GASTON, Emmetsburg, Ia.

It is about two years ago that we first became interested in Christian Science, during which time we have had several demonstrations of the healing power of Truth. I was enabled to prove that "Truth is here and has fulfilled its perfect work" (Science and Health, p. 463), at the birth of our little one. I had depended wholly upon Christian Science, and had none of the symptoms usually attending such an experience. At six o'clock I was helping to prepare supper, and fifteen minutes later the baby was born, before we could get either the nurse or a physician. Our state law requires that a physician be called in such cases, and we simply complied with the law, as his services were not necessary. There was absolutely no sense of pain, every material law having been overcome. On the sixth day I attended Wednesday evening service, where I was privileged to give my testimony and express in some measure my love and gratitude to God, and to Mrs. Eddy, for this wondrous truth which makes us free.

MRS. HETTIE B. FOXWELL, Racine, Wis.

[Written for the *Sentinel.*]

THE DAWN OF PEACE.

IDA SIMONEAU.

EARTH called it grief, 'twas but belief
That came to claim an hour;
Truth absolute, heart resolute,
Knows God the only power.

My faith is firm, and hope doth burn
That peace comes with the morrow;
My trust is sure, and thought made pure,
That joy comes after sorrow.

The night is spent, and hope hath lent
Her rays until the dawning;
To conscious thought comes peace, as sought,
And this proclaims Love's morning.

FROM OUR EXCHANGES.

[George B. Hatch in *Hartford (Conn.) Seminary Record.*]

Personally I do not blame the modern man for not responding to the average so-called "message" as presented to him through the church. And I feel sure that he never will respond, until the message of the church is presented to him out of the deep and glowing experiences of living men. What our preachers need is themselves to receive the atonement. It is all right to discuss socialism, ethics, therapeutics, and what not, for all things are ours and the circumference of Christianity sweeps out and includes whatever is human; but we may discuss these circumferential concerns till the day of doom, and still the church will run down, and all the faster it will run down and tend to become like other human institutions, unless the burden, the message, the heart and vitality of what we say is the evangel, the good news, the central reality, the love of God in Christ which takes away the sin of the world, spoken out of souls which themselves have received, are daily and deeply receiving, the atonement. The modern man would respond to St. Paul. The modern man would respond to anything real, however spiritual that reality might be. The modern man would listen to the atonement, if he knew how to say it. He would have to. He needs to. It is his deepest, most inclusive need.

[*Universalist Leader.*]

The Christian church has done great things in the past,—so many and so great that one might spend days in telling of them. No just man would forget this or fail to appreciate it. But a new age has come, and a new call is sounding in the air; and our prayer is that the noble institution which has done these other great things may meet this new demand to be the true and efficient instrument of righteousness in our modern, developing civilization. Only so can it hope to retain a place of honor and power among men. Not by claiming honor, but by deserving it, will the church win the regard and support of the people. It will be useless to scold because so many forsake or neglect the church. The church must make itself indispensable by doing its duty, by making its message so great and so vital, and the lives of its members so noble, as to command respect, confidence, and loving allegiance. It must lift itself above petty thoughts, methods, and policies; it must feel the greatness, the sacredness, the solemnity of its task. It must be full of a holy spirit and set itself to a holy purpose, or it cannot highly serve mankind. It will save itself only by helping to save the world.

[*Watchman.*]

To one who has been brought up under a strong church system with the weight of centuries of authority behind it, there is need of the very voice of God to detach from the old order and cast in his lot with the new. The coming of Jesus as Messiah was an event that ended the authority of Moses, but the Jewish nation in its blind adherence to the Mosaic system and its refusal to give proper attention to Jesus, was unable to break away from what seemed to them unchangeable authority. In the case of Saul of Tarsus it required also a heavenly vision to detach him in his ignorance and blindness. Likewise, in the experience of those who are the creators of new epochs in the kingdom of God, there is need of rich and full and exalted experience to clarify the mind from the traditions of their ecclesiastical order and to see the light of God upon their new message and pathway. If we are in such a period of change our only true leaders are those who have been in the holy mount and have heard the divine voice. They must see the Christ of God in higher, wider mission to man, connect him with the past, and yet discern the diviner way.

[*British Congregationalist.*]

What was the nature of Christ's teaching? A perpetual mingling of the spiritual and the ethical. All his teaching indicated that nothing is secular that God has created. He enforced a moral law so severe that this age still shrinks from it, and yet he was tender in his dealing with the sinner. We must not forget these things today. We must deal with sin with a severity that makes no truce, that smites and burns it, but we must be tender toward the sinner with a tenderness that is content to share the shame and the wounds if only thereby the sinner may be redeemed and brought back to God. Our ministry in the world is the continuation of his ministry. The supreme business of the church is to reveal God. If the outside world has lost its vision of God, it is because the inside church has failed to reveal God. Our first business in this age is to rearrest the thought and attention of careless and indifferent men by showing them what God is. He can only be seen by the hurrying world as He is incarnate in the life of His people.

[*Standard.*]

It does not follow that the church has no call to minister except in morals. She must take her cue from her Master. He fed the hungry and healed the sick. Were he here today, he would not be indifferent to the physical wretchedness of men. His people must stand ready to help wherever there is need, whatever the character of the need may be. Indeed, no man can be a disciple of Jesus without sharing in that spirit of helpfulness which automatically expresses itself as opportunity offers. More and more the church must undertake to care for the poor and abolish unjust social conditions. If she stands by, beholding suffering and hardship, without attempting relief, she thereby announces that she has lost likeness to her Lord. But her highest, most important contribution to human welfare will ever remain in her ministry to the soul. Jesus fed and healed, but his prime undertaking was to save the lost.

[Dr. J. H. Jowett in *Christian World.*]

We are to pray as seers, holding in our souls the vision of the perfected man, the perfected city, the perfected state. And I will give two reasons for this. First, there is always a peril of our forgetting the glory of the goal in the distractions of the immediate tasks. If we lose the vision we spoil the task. If we lose the vision of the end, the means become enthroned as the end. "Coming to church" becomes the end, instead of communion with God. And, secondly, we must pray as seers because of the vast inspiration which is born of the vision of finished achievement. We perhaps more readily see the operation of this principle in the contemplation of finished disaster. If a man keeps his eye steadily fixed on probable defeat, he will squander his resources all along the road. Constantly to anticipate defeat is almost to make certain of it. The anticipation of triumph is one of the secrets of victory.

[*Interior.*]

The most learned arguments for Christian unity must still remain powerless until a passionate care for the wish of Christ fuses Christendom in the heat of unlimited loyalty to the triumph of its one leader. This observation applies not more definitely to foreign mission work than to operations of the churches in Christian lands. The same consciousness which convicted delegates at Edinburgh of the wrong of waste by division in the face of heathendom will bring the same conviction relative to home labors when the churches attain to an equivalent vision of their home task.

[*Examiner.*]

As a practical question for every-day living, we shall do well not to be anxious or especially concerned about the question of happiness, but to turn our attention to the question of excellence of character.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.60.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In a statement detailing the reduction of $11,600,000 last year in the postal deficit, Postmaster-General Hitchcock shows that $2,000,000 of the sum represents economies in post-office management, and nearly $1,000,000 a more businesslike handling of city delivery service. While this service was extended and the number of carriers increased during the year the reforms of management introduced cut down the general cost. Reorganization without curtailment of the rural delivery service was responsible for a saving of $1,000,000 and a reduction of $300,000 was credited to the star route service, including miscellaneous transportation of mail other than railways. The combine in the cost of handling the mails in post-offices and other branches of the service excepting railroad transportation was $3,150,000 and the amount of deficiency reduction traceable to the railway mail service was $5,450,000.

The state has canceled the grant of four hundred thousand acres of land to the Wyoming Development Company because of its failure to carry out the provisions of its franchise. The Wyoming company has expended two hundred thousand dollars on the project and will lose this amount. The cancelation of the grant is looked upon as a big victory for homesteaders. Four years ago the Government opened to settlement the Shoshone Indian reservation and distributed nearly five hundred thousand acres of lands along the Wind river valley to homesteaders. When the farmers took possession they discovered that the state had given all the water in the Wild river to the Wyoming Development Company, and that the homesteaders had to obtain water for irrigation purposes from that company.

Former President Roosevelt's proposition to make conservation a world-wide movement by a conference of nations is pronounced officially by the state department to be unfavored. Of the forty-nine governments represented diplomatically in Washington, which were invited just before the former President went out of office to join the movement, only nineteen have replied. The answer of some of the governments was of such a disinterested character that it was officially decided to carry the proposal no further.

An investigation under the Sherman act of a combination of corporations, among them the Diamond Match Company and the Standard Wood Company, a fifteen hundred thousand-dollar corporation handling bundle wood, has nearly been completed by the department of justice. It resulted, it is said, in the discovery of a pool, in character similar to the cardboard trust agreement, and of a hard and fast interrelationship into which no outside concern could break.

William Loeb, Jr., collector of customs at the port of New York, during his first year in office has thoroughly reorganized the service. The treasury department in commenting on the matter says: "The revenues have been augmented to the extent, it is estimated, of twelve million dollars, wholly as the result of the rehabilitation of the service and the improvement in its morale."

A net increase of 4,445 new officers and employees in the Government machinery of the United States resulted from legislation enacted in the second session of the Sixty-first Congress. The grand total of appropriations made by the session was placed at $1,027,001,623. This was $16,500,228 less than the appropriation during the second session of the Sixtieth Congress.

The Payne-Aldrich tariff law has produced in its first year a revenue greater by seventy-five million dollars than the sum collected in any year in the country's history, except the banner year of 1907. The total ordinary receipts, including customs, ordinary internal revenue, corporation tax, and miscellaneous, aggregate $378,850,816.

The new Pennsylvania railroad terminal in New York city—the greatest railroad structure in the world—was formally opened Aug. 1, although the passenger service westward under the Hudson river, and to Long Island under the East river, will not begin until Sept. 8.

The assistant superintendents of the departments of salaries and allowances of the postal service have been in conference to consider possible ways of bettering the work under their care.

During the school year just closed more than fifty thousand seventh and eighth grade pupils received domestic science instruction in the public schools of Greater New York.

Police Commissioner Baker of New York city figures that the expenses of his department for 1911 will be $16,133,278.

International.

The principles of the Australian Labor party (federal) are set forth in an "objective" and a "general platform." The "objective" is the cultivation of an Australian sentiment based upon the maintenance of racial purity and the development in Australia of an enlightened and self-reliant community, the securing of the full results of their industry to all producers by the collective ownership of monopolies, and the extension of the industrial and economic functions of the state and the municipality. The platform includes maintenance of a white Australia; the new protection — amendment of constitution to insure effective federal legislation for new protection and arbitration; nationalization of monopolies; if necessary, amendment of constitution to provide for same; graduated tax on unimproved land values; citizen defense force; commonwealth bank; restriction of public borrowing; navigation laws; arbitration act amendment; old age and invalid pensions; general insurance department, with non-political management; civil equality of men and women; naval and military expenditure to be allotted from proceeds of direct taxation; initiative and referendum.

It has been the custom of Indian students to visit foreign countries with a view to securing for themselves higher technical training together with practical training in a workshop. As foreigners are beginning to show unwillingness to teach Indians what they regard as trade secrets, the time seems to have come when high-grade technical colleges should be established in India itself, and the *Leader*, of Allahabad, proposes that the money which is being subscribed toward the King Edward memorial fund should be utilized for the purpose.

There are upward of fifty thousand empty houses in the London area of all sorts and conditions. The reason for this is that increased facilities for traffic have enabled the poorer members of society to find pleasanter dwelling-places in the ever extending circle of suburbs, while motor-cars have made it possible for the richer members of society to live in comfort among the fields and come up to London whenever they choose without the tediousness or annoyance of a railway journey.

The high commissioner for New Zealand has announced that the New Zealand government has decided to erect five radiotelegraphic stations in different parts of the dominion. Two of the installations will have a minimum oversea range of twelve hundred and fifty miles, thus allowing of communication with Fiji, and also with Australia, where a high power station is now being erected. Provision will also be made for calls to be received from commercial vessels and from men-of-war at long or short distances.

Plans have been drawn for seven buildings to be erected for the American School for Girls at Constantinople, Turkey. The site selected for these buildings is about six miles up the Bosphorus on the European side and is one of the best sites on the Bosphorus, equaled only by that of Robert College, the American college for boys. Both sites are near at hand to the Old Towers of Europe, completed in 1452 A. D.

Owing to the fact that China has asked for more time in which to prepare for the meeting of the International Opium Congress, which was to have been held at The Hague, beginning Sept. 15, the meeting has been postponed, according to information sent out from The Netherlands.

President Montt of Chile sailed last week from New York for Europe.

Industrial and Commercial.

Astonishing results are being obtained in the growing of Egyptian wheat in the lower valley of the Rio Grande, Texas. This grain was not introduced into the San Benito region until this year. The acreage is comparatively small, but that which has been harvested gave the remarkable average yield of one hundred bushels per acre from its first cutting. A second crop has quickly sprung up from the stubble and it is expected to give a yield equally as large. It is claimed that a third cutting from the same sowing will be obtained and that the total yield per acre for the season will be upward of two hundred and fifty bushels. The grain is used for stock feed chiefly. The introduction of Egyptian wheat into this part of the United States was made through the Government department of agriculture. The results obtained have far exceeded all expectations.

A group of New York capitalists has practically completed plans for the railroad development of Asiatic Turkey and stands ready to embark from sixty million to one hundred million dollars in the enterprise, which is designed to open to modern development the rich mineral and oil fields of Kurdistan and the ancient Tigris and Euphrates valleys.

A conservative estimate of the value of the Texas watermelon crop this year is three million dollars, figuring on the basis of fifty thousand cars bringing an average price of sixty dollars each.

Argentina's corn crop for the 1909-10 season will amount to four million five hundred thousand tons, as estimated by the Argentine department of agriculture.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"I WILL BE WITH HIM IN TROUBLE."

SAMUEL GREENWOOD.

THE cause of Christian Science has prospered because of its fidelity to the divine verities, namely, the omnipotence, omnipresence, and omniscience of God. Its unqualified acceptance of the teaching of God's infinitude is, perhaps, its most distinguishing feature, for it alone among religious organizations has held to the all-power and all-presence of God in the face of material evidence to the contrary; and its rich reward has been to bear healing to the sick, joy to the sorrowing, and freedom to the sin-enslaved. Christian Science is in truth, to use Mrs. Eddy's words, "the revelation of Immanuel, 'God with us,'—the sovereign ever-presence, delivering the children of men from every ill 'that flesh is heir to'" (Science and Health, p. 107), which recalls the words of the 91st Psalm: "I will be with him in trouble; I will deliver him."

God's presence with men in time of trouble, as promised throughout the Scriptures, is evidently not for the purpose of giving them strength to bear it, but for the purpose of delivering them. One may endeavor to be patient in distress, believing it to be God-sent, but the heart's desire is for relief rather than endurance of the ill, and Jesus' healing work proved that the Father's will for mankind is life, health, and holiness, not their resignation to the beliefs of sin, disease, and death. Overcoming evil, not submitting to it, is the Christian's duty and privilege; it is the way the Master pointed out and the way in which he walked. Indeed, it is the experience of Christian Scientists that their troubles disappear to the extent that God's presence is realized.

It is a lamentable fact that the teaching of God's presence has brought little consolation to suffering mortals, because they have also been taught that their troubles were either divinely procured or permitted; and, believing thus, it is but natural they should not look to God for help. What comfort, to one struggling in deep water, would be the presence on the shore of the one who had either thrust him in, or was coldly permitting him to drown? To believe that God, by whom "all things were made," takes account of evil, and allows it reality and power, is to make Him the author of all the misery of earth and hell. But the infinite consciousness of God, or good, has never been touched by the mortal illusion of evil, otherwise one's realization of God's presence would not prove a protection from that illusion.

In the endeavor to express his sense of God's ever-presence the psalmist said, "If I make my bed in hell, behold, thou art there;" but this does not imply that God's children are or can be tortured in His presence. It means that even in the direst extremity of human misery, the truth of the ever-presence of good is waiting to deliver the wrong-doer, when he is ready to forsake his sinful sense, and to save the sufferer. When God said to Moses, "My presence shall go with thee," it was not to be a witness of the Israelites' misfortunes, but to be their preserver and deliverer. For God to be a spectator of human woe would be to acknowledge a power superior to Himself, omnipotence, since it is the essential nature of good to exclude all sense of evil. But God does destroy for mortals the illusion of evil, not as being cognizant of evil's seeming presence, but through their recognition of good, in the sense that darkness ceases to appear as one comes into the presence of light.

Christian Science teaches clearly and simply that, as God is incapable of any evil sense or sense of evil, this false sense exists only as a mortal belief, whose conditions are experienced as one may experience the illusions of a dream. The evidences of evil and discord, as presented by the so-called material senses, do not disprove the truth of the omnipresence of God; they only prove that suffering and sinning mortals are not aware of His presence. The mission of Christian Science is to effect that enlightenment, so to awaken thought to discern the spiritual presence of good that, through practical demonstration, mankind may learn the meaning of the allness of God, and no more acknowledge or submit to the deceptions of error. In a measure this enlightenment has already come, as witness the physical and moral healing which occurs in Christian Science practice.

While it is generally admitted that God is present to save the sinner, it is not so generally admitted that He is present to heal the sick. But why not? Although sin is the greater evil, the sick or destitute mortal needs to be delivered from his troubles also. If sin has no reality in the presence of God,—and it has not,—neither has sickness; they spring from the same root of error, and are destroyed by the same truth. If it could be said of the sick in Jesus' time, that "the power of the Lord was present to heal," it can as truly be said of the sick in our time. The infinite does not change! If it were possible for the goodness of God to be so circumscribed in its presence and activity by the asserted presence and power of disease, that those in physical trouble could not reasonably hope for healing from that divine source, then it could be so circumscribed forever, and the hope of ever attaining perfect harmony would be eternally postponed. But, in the essential nature of things, omnipotence is as available for one sick or sinning mortal as for another, irrespective of time or space; and, in proving this, Christian Science has destroyed for all time to come the belief that divine healing was ever limited to any special age or person.

Christian Science is pressing home the question of the practicability of Scriptural teaching, it is maintaining by precept and demonstration the unchangeability of divine Truth. It declares that God is with men, not theoretically but actually, and that they may know it. St. John wrote, "The Word was made flesh, and dwelt among us," and through Christian Science the Word is again made practical in the reappearing of Christian healing. Although God cannot appear to mortals as a visible presence, since Spirit is not materially discernible, He can become known to them through the effect of good thoughts. Human experience itself is a mental state, and expresses harmony or discord

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

according as thought is true or false to God. Good thinking, that is, right thinking, makes God's presence apparent in the harmony it brings, and it is the only means by which evil thinking and its results can be destroyed.

True to His infinite nature, God is present with all mankind, not as being aware of their sense of sin or suffering, but as the all-present good to whom no evil is, and by whom all need is eternally supplied. Students of Christian Science find that their recognition of this truth, feeble though it may seem, holds the secret of their triumph over wrong conditions, and enables them to deny with authority that which God knows not, nor can know. The dawning significance of the divine ever-presence, to one struggling to emerge from the belief of sin or sickness, accomplishes his deliverance as naturally as the rising sun dispels the shadows of the night.

RECLAMATION.

MARY WOOD GRIFFITHS.

In the Standard Dictionary we find the following definition of the word reclaim: "(1) To demand or to obtain the return or restoration of; recover, or seek to regain; (2) To bring from a wild or useless condition into subjection or under cultivation; subdue; tame; as, to reclaim swamplands." During the past summer I spent two months in a place where the work of reclaiming desert land was being done, and the word reclamation has taken on new meanings since this experience. A rather desolate view greeted us as we entered this valley which was to be transformed by being reclaimed. In the distance were beautiful mountains, but the valley was one great waste covered with sage-brush. A large river flowed through the valley, an irrigation system making its water available to each farmer on the tract.

We saw this work of reclaiming the desert done very differently by different farmers. Near us was a piece of land from which the sage-brush had been carelessly cleared, many stones left, the ground poorly leveled and not thoroughly prepared for the seed. The ditches were badly planned, so that the ground was unevenly irrigated. Later in the summer this field plainly showed by its poor crop the slipshod work which had been done, while many small sage-brushes were visible. This farmer had a crop of oats growing and so could "prove up" his claim of cultivating the land. Just across the road another piece of land was being reclaimed, but the work was carried on in a very different manner. The large sage-brush had been broken down, any small brush thoroughly grubbed out, then all removed. Great care was taken in removing stones, and equal care was exercised in using plow, harrow, and heavy scraper, so that the ground was level, while good judgment was displayed in the running of the ditches. This field had a fine harvest, as all the work of reclaiming had been well done.

During my first week, I read "The Life of Mary Baker Eddy," by Sybil Wilbur. As I read of the struggles and sacrifices which our beloved Leader underwent that she might give us demonstrable truth, these thoughts presented themselves to me: This mighty river had flowed through the valley for years with a few farms here and there on its banks, but when the irrigation system was perfected every foot of the land in the valley could be reclaimed; so the world has had the Bible all these years, but not until Mrs. Eddy gave us Science and Health was it possible for human thought to be reclaimed from all its woes. Surely, when we come to Christian Science our thought is like a desert which needs to be reclaimed. The growths of wrong belief regarding both God and His creation are to be uprooted and removed; the rocks of pride, criticism, selfishness, self-love, and self-pity to be disposed of—and these rocks have a great way of coming to the surface when we least expect them. The mounds of laziness and procrastination need to be leveled; the hollows of poverty, lack, and limitation must be filled.

If the seed—the Word—is to grow and bring forth a harvest, the stream of love must flow unobstructed through our thought. The farmer can read all the works published on the subject of reclamation, he can watch his neighbors doing the work, but he must work faithfully on his own ground if he desires a harvest. So is it with us. We must not only study the Bible and our text-book, but we must work patiently and persistently to reclaim our own thought. We love our Leader because she is teaching us the truth about God and Jesus the Christ,—the teaching which makes it possible for us to overcome our belief in the power of sin, disease, and death.

We can best show our gratitude for all this by doing our daily work well, knowing that it gladdens our Leader's heart to see the thousands of "husbandmen" all over the world who are busily engaged in reclaiming thought. If we "rejoice all the rugged way" (Miscellaneous Writings, p. 398), we shall find our work easier, and it will come to pass, even as foretold by the prophet, that "every valley shall be exalted, and every mountain and hill shall be made low; and the crooked shall be made straight, and the rough places plain."

JOSEPH'S SUCCESS.

REV. W. G. SCHOPPE.

We are told in the 39th chapter of Genesis that "the Lord was with Joseph, . . . and gave him favor in the sight of the keeper of the prison." When considered in its setting this statement is of striking significance. It indicates the secret of man's dominion over the earth, which depends upon the mental attitude which never quite fails to discern, at some point of experience, the hand of God, and never loses itself in what seems to contradict the divine presence.

Partiality in the home, the coat of many colors, the evil report, the dreams of their sheaves bowing to his sheaf, of the sun, moon, and eleven stars doing obeisance to him,—all these things had awakened a savage envy in Joseph's brethren. The father sent him to see if it was well with his brothers and with the flock. On his approach they said, "Behold, this dreamer cometh. Come now therefore, and let us slay him, . . . and we shall see what will become of his dreams." It is the mortal blunder of the ages,—kill the dreamer and stop the dream; but the sacrifice only fulfils it. "Blood of martyrs is the seed of religion."

The schemers cast Joseph into a pit, and sit down to eat bread. A caravan is passing. Judah says, "What profit is it if we slay our brother, . . . let us sell him to the Ishmaelites." And Judah claims credit for the sale. The word "slay" is repulsive; "sell," in comparison, sounds pleasing. According to the comparative standard of mortals, who are prone to reject the absolute, an evil deed, displacing a more evil deed contemplated, seems a virtue. So the brethren sold Joseph into Egypt. Then they dipped his coat in the blood of a kid and sent it to their father, saying, "This we have found." And Jacob said, "An evil beast hath devoured him." (This seems unfair to the beast.)

In Egypt, Joseph became a servant in the house of Potiphar, who confided all to his care. When tempted by his master's wife, his moral stamina appeared: "How then can I do this great wickedness, and sin against God?" was his reply to the tempter. For this noble stand he was slandered and cast into prison, where he was left for a term of years. But Joseph saw the divine hand in the favor of the jailer. It was the one rift in the cloud, and he eagerly accepted it. That one fact revealed the light that is forever shining, and it banished gloom, for God was in it. Disobedience would have said, Let God take me out of

Digitized by Google

prison, stop the mouth of slander, bring my brothers to justice, restore me to my father's house: then I will acknowledge Him. Why am I thus allowed to suffer wrong? Such a mental attitude would have meant failure; but Joseph turned from self-pity to the glory of the infinite. God is with the good: therefore he dwells with the good. The light never transforms while human thought is fixed on the shadow.

After their dreams, the butler and baker appear with troubled faces. Joseph asks, "Wherefore look ye so sadly today?" His habitual thought of the goodness of God gave him "sweetness and light." Such a thought tendency cannot be bound: it must externalize in freedom and blessing. It preserved and delivered Joseph and made him ruler, for the saving of much people, which was the fulfilment of his boyhood dreams. Such a thought tendency makes one a blessing to others, wherever he goes.

We read in the story, that "the Lord blessed the Egyptian's house for Joseph's sake." This is shown, in Christian Science, to be based on scientific Principle. Causation is mental, the good is of God and ever present; it is the only reality. Its clear, unhindered realization is externalized by thought, blessing the home, the state, the church. Such a mentality, an eye single to the glory of God, makes even failure work out for success. Joseph said of the deed of his brethren, "Ye thought evil against me; but God meant it unto good, to bring to pass, as it is this day, to save much people alive." To organize victory out of seeming defeat is the supreme test of the capacity given to man. The cross is its symbol. The gloom of Calvary dissolves before that clear vision of the Father, and we now see only the triumph of love.

Christian Science gives to the world a rich heritage in the example of its Founder, Mrs. Eddy, whom God has inspired with an enduring trust, untouched by the storms of time, and through whom He again shows the conquest of love. The beam of light was held, until the darkness fled away. The great bell in the Cologne cathedral was cast from the cannon once used in an attack on the city. The one-time instrument of destruction is now used to send forth a far-resounding peal in behalf of "The Prince of Peace." So the pure faith of Joseph turned banishment, envy, slavery, falsehood, and imprisonment into "altar stairs that lead upward unto God."

In Science and Health (p. 589) Mrs. Eddy gives a definition of Joseph that penetrates to the heart of his spiritual mission, and reveals the principle of his success: "A higher sense of Truth, rebuking mortal belief, or error, and showing the immortality and supremacy of Truth; pure affection blessing its enemies."

DEBTS VS. GIVING.

FLORENCE CLERIHEW BOYD.

THE spirit of giving which animates the Christian Science church, and which is manifested very largely by its individual members, is a characteristic which stands out quite clearly and attracts many who do not comprehend what is back of it and what produces it. This spirit of giving is also largely responsible for the impression which has gone abroad that all Christian Scientists are rich; yet there are many to whom Christian Science comes in the midst of financial distress, many who long to give but who think they cannot; who have to learn, sometimes through much suffering (always through scientific demonstration), that they can give, and how and why.

Giving is not true giving if it comes only from the pocket. It must be the expression of thought. There must first be consideration and recognition of the recipient. Then comes the motive. What is the reason for the gift? Is it to be seen of men? or from a sense of duty? because others think it right? or is it as an expression of love and gratitude? If the last, the gift does not come from matter, but emanates from Spirit; it carries with it blessing, and the giver loses nothing.

One who was struggling through the clouds of debt and lack, longing to give but thinking she had nothing, once had an experience which helped her into the light. She was still at the point where it seemed necessary to consider every household expenditure, when one day she purchased some pears. As she put them away she counted them, and noted that there were just two for each member of the family for two luncheons. Just then she noticed a caller on the porch whom she knew was fond of fruit, and instinctively she reached for a pear to take to her friend, but put it back with the thought that if she did there would not be enough for next day's luncheon. The next day, when she found that every pear left in the dish had rotted, she realized that the thought, "I have nothing: I cannot give," was a blighting thought, and she resolved never again to shut out the impulse to give. There were many times when she was tempted to believe that the evidence before the material senses was true, that because she had an empty pocketbook she had nothing: but she resolutely turned to the facts of Spirit,—that in reflecting God who is constantly giving, she could give; learned first to give her love and gratitude, thus day by day found it easier to give other things as well.

There is a subtle phase of error which says to Christian Scientists and to branch churches, "You cannot give until you have paid your debts." But what of the debt which every Christian Scientist owes to Christian Science! He owes a debt to the support of Christian Science in his own locality, to the support of The Mother Church, and to the extension of the Christian Science movement throughout the world. Where would he have been if Christian Science literature had not been supplied to him, if he had not had the church to attend? if the watchful Mother Church had not guarded his way? His debt must first be paid spiritually. He must support the local church and The Mother Church by his prayerful demonstration of Christian Science, by his testimony, thus giving of what he has. Many think they must wait until all their material debts are paid, until every claim of error has been destroyed, before giving of what they have; but those who give their mite, receive as they go.

Then the Scientist's debt to the literature must not be forgotten—the word of Truth which came to him in his dark hour must be sent to carry rejoicing to another, the invitation to the enlightening lecture must be delivered. There must be constant mental and spiritual activity to extend and upbuild the cause. One who works in this way will not long be bound by the belief that a dollar is worth more than the truth, or that filthy lucre is more to be desired than the kingdom of heaven. Learning to give of himself, he soon realizes that at least a tithe of every dollar he receives is necessary to aid in the upbuilding of the cause and for its extension; and this is an unselfish gift, for it may at first seem that it can be of no immediate benefit to himself. If retrenchment is needed, this should be in the way of self-denial, for we can often afford to do without some material thing which sense demands, and this will inevitably lead to expansion on the spiritual side.

As with individuals, so with churches. A branch church does not complete its work when it holds its services in conformity with the Manual, when it dedicates its church edifice free from debt. Its debts are not paid unless it sees beyond its own narrow outlook, is constantly watchful for an opportunity to extend the cause, is ever ready to help sister churches, ready to respond to all needs of The Mother Church. As true an obligation as the payment of salaries, running expenses, of our old bills, is the debt which each individual and each branch church owes to the support of the cause of Christian Science and to the extension of the

Digitized by Google

kingdom on earth. Neither can be overlooked, neither may be set aside. It is not enough to take special collections when a call comes from The Mother Church or the Publishing Society. There is always a call. There is always an opportunity to broaden the scope of the work, and he who looks beyond his own small field sees that the cause of Christian Science is his cause, whether in city or hamlet, whether among his friends or strangers. He should not only be prompt to respond to a call, but quick to see the need, and ready to supply it unasked. A branch church which has a permanent fund for the furthering of the cause of Christian Science wherever and whenever needed, a fund which is not stored away but kept active,—a church which has such a fund is fully awake to its privileges and to the importance of promoting the general welfare.

When it is recognized, both by individuals and by churches, that the debt to the cause is a positive obligation, it is no longer difficult to pay it. With earnest desire and scientific understanding the way is made plain and, more than that, joyous.

ACCURACY.

ERNEST W. DAVIS.

IT would seem that a faithful study of the Lesson-Sermon each week would make clear to every reader the difference between man in the image and likeness of God, and the mortal material man cognized by the physical senses, and Christian Scientists, or those who have accepted the teachings of Christ Jesus as interpreted in Christian Science, should realize the importance of being correct in their statements of the rules and Principle of this Science.

Not long ago the writer heard some one addressing another, who had asked for help, without any discrimination on this important point, quite forgetful of the fact that such statements are harmful, not only to a patient who is under such treatment, but those who are honestly seeking the truth, and who have the inclination and ability to think for themselves, are prejudiced against Christian Science because they see the incongruity of such statements. Incorrect interpretations of Christian Science are without excuse, because even a superficial study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will place one, who is humble enough really to seek the truth, and who is not blinded by personal ambition or pride in intellectuality, beyond the liability to err, greatly or for long, in either statement or application of its Principle.

Let us see what Mrs. Eddy says concerning man. On page 67 of Science and Health we read, "Man delivered from sin, disease, and death presents the true likeness or spiritual ideal." Again, on page 90, we are told that "at present we know not what man is, but we certainly shall know this when man reflects God." She also tells us that "a discontented, discordant mortal is no more a *man* than discord is music." After reading the many statements in Science and Health which deal with this question, it is surely clear that the mortal, material personality is not man. On page 482 in Science and Health we read that "Christian Science is the law of Truth, which heals the sick on the basis of the one Mind or God." Now law, according to Webster, is "a fixed rule of action or conduct, enforced by a sovereign authority; an invariable relation existing between cause and effect." Then Christian Science is a "fixed rule of action or conduct; an invariable relation existing between cause and effect," and those who would demonstrate its Principle by destroying the evidence of the physical senses, must strive earnestly not to deviate a hair's breadth from absolute accuracy in statement, whether verbally or otherwise.

That our Leader has seen the necessity for correct application of the Principle and rules for demonstrating Christian Science will be seen by reading the following excerpts from Science and Health. On page 128 Mrs. Eddy says that Science "rests on fixed Principle and not upon the judgment of false sensation. . . . If both the major and the minor propositions of a syllogism are correct, the conclusion, if properly drawn, cannot be false." Again, on page 251, she puts the same thought before us, rather more strongly, in these words: "Ignorance, like intentional wrong, is not Science." Looking farther, we find on page 361 this statement: "A human perception of divine Science, however limited, must be correct in order to be Science and subject to demonstration."

With these warnings continually before us, it seems incredible that any can fail to see the need of accuracy of statement in expressing their thought of Christian Science. Mrs. Eddy has been and is devoting her life to the cause of Christian Science, and in establishing this healing truth she has frequently warned her followers against adulteration and corruption by ignorant or wilful misapplication. We, as Christian Scientists, can do no less than to watch carefully and prayerfully, and be constantly on guard that we be not found adding to her labor by careless and inaccurate interpretation or statement of the Principle and rules, set forth in "Science and Health with Key to the Scriptures" so clearly that "he that runs may read."

[Written for the *Sentinel*.]

"THE KINGDOM AT HAND."

BEN. HAWORTH-BOOTH.

THERE is a state of being happier far
  Than this material consciousness of things:
Near to thine heart its sweet perfections are,
  Though far from earthly bourne of happenings.
The sunlight of His presence, and the truth
  Of God's unchanging equity uphold
The joy of that creation's ageless youth
  In plenitude of grace, in peace untold.
And such indeed is heaven—a true perceiving
  Of life uplifted and of love unfeigned;
The pure, the wise, the beautiful achieving,
  In truth accepted and in glory gained.
And on the threshold of thine heart one stands
  To bid thee enter there: the open page
Of Science and the nail print of his hands
  Give thee the guerdon of thine heritage:
Born of the lineage of the sons of light
  Under the lamp of Truth's high architrave,
We conquer earth's material, sensual night,
  And sin's abysmal deep, the sunless grave.
We fain would enter heaven: we long to taste
  The ambrosial sweetness of unfading flowers,
To see the Elysian lawns the seers have traced,
  And know the life of Spirit ever ours:
Cease then from man, who knows nor meed nor merit,
  Whose breath is in his nostrils, and unbar
Thy mind to heed the promptings of the Spirit
  That bids thee gaze upon the morning star.
We are His sons, and He our heavenly Sire,
  We have no life save that which flows from Soul:
Give Him thine all, He claims thine heart entire,
  And giving all, thou gainest still the whole.
Life, Truth, and Love, forever linked in one,
  For thee shall guide and guard thy faltering feet:
In them thou hast eternal unison,
  A threefold cord, consummate and complete:
They bid thee enter heaven; arise and taste
  The living waters in a thirsty land:
The cup of healing at thy lips is placed:
  Behold your King! The kingdom is at hand.

SELECTED ARTICLES.

[Frederick Dixon in *Shrewsbury* (Eng.) *Commercial and Literary Circular.*]

There is one fact with respect to the Christian Science movement which no reasonable person has ever been known to question. It is that it is always gathering force with the most amazing persistency, and yet without the aid of any of those proselytizing methods which for centuries have been regarded as inseparable from a successful religious propaganda. Fourteen years ago the entire "outward visible sign" of the movement in the United Kingdom could have been discovered in a tiny meeting of some half score of persons in a little west-end London flat. Today that meeting has not only burst its original confines, it has gathered such momentum that the teaching which inspired it has permeated the religious and social life of the whole kingdom, and is flowing with the placid force of some great river through the whole empire.

Now let any one turn back to the New Testament records of the first century, and he will find that the methods of the Founder of Christianity and of the apostles are the very methods which, after a lapse of all these centuries, are being again employed in the preaching of "Christ crucified," in the practice of Christian Science. When Jesus sent out the earliest Christian missionaries, he summed up his instructions to them in two phrases so simple and so direct as to be beyond human ingenuity to pervert. "Preach," he bade them, "saying, The kingdom of heaven is at hand;" and then he added, "Heal the sick." In those words he constituted Christianity a Science for all time, inasmuch as he made a demand not for a mere intellectual assent to a theory, but for consistent demonstration of the truth of that theory. If God is omnipotent, then good is omnipotent, for God is good; and if good is omnipotent, then the goodness of God can be demonstrated today as it was in the first century.

Calling God good, and standing helpless in the presence of evil, is what the man known to us as the brother of the Lord, who wrote the epistle of James, describes as "faith without works," a sentence which gains a terrific emphasis when it is remembered that Jesus pointed the disciples of the Baptist, who came to question him as to his claim to the Messiahship, to the works of physical healing he was daily accomplishing. It was Jesus the Christ who demonstrated the power of the Christ to heal all manner of sin and suffering in the first century; it was Jesus the Christ who declared that all people, irrespective of time and place, who believed in the Christ, would be able to repeat his works, and to do even greater works; and so Paul could urge no stronger claim on the church at Philippi than to "let this mind be in you, which was also in Christ Jesus."

Human knowledge may be made the handmaid of Truth, but human knowledge exalted to the throne becomes a veritable Pharaoh. Brain power is of little enough avail in the effort to understand the Christ, for spiritual things are only spiritually discerned. Were it otherwise, the scribes and Pharisees would have entered the kingdom of heaven before the publicans and harlots; but Jesus said that it was just the other way.

In, perhaps, the most solemn words he ever spoke, in the great prayer which he uttered as he led his disciples from the upper chamber to the gates of the city, on the eve of the crucifixion, he gave expression to this vital requirement to obey the demand for spiritual consecration, with all its varied depths of significance, in this single sentence, "For their sakes I sanctify myself, that they also might be sanctified through the truth." It was this absolute subordination of the human to the divine which constituted his unity with the Father, which endowed him with the Mind of Christ, and which enabled him, in practical contact with the world, to demonstrate the omnipotence of divine law in stilling the tempest and in raising the dead. Thus he preached a gospel which the world, accepting as a theory, had it in its power to prove a fact,—as the truth,—the knowledge of which would make it free.

Christian Science is teaching its adherents in the world today to preach the gospel as Christ Jesus commanded, and to heal the sick as he healed them. It is teaching not only the beauty of holiness, but the power and availability of it. In the Wednesday evening testimony meetings which, as the sun moves west, are held in continuous succession all around the globe, there is one perpetual theme, thanksgiving for the healing power of the Christ. For the Christian Science worker, if he is sincere in his effort to sanctify himself, must inevitably pass the healing of the Christ on to all who come to him for help in the destruction of sickness, in the overcoming of sorrow, and in the gradual victory over sin. "Today the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition." So writes Mrs. Eddy, on page 150 of Science and Health, and she adds, "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

[George Shaw Cook in *Peoria* (Ill.) *Star.*]

Mrs. Eddy is engaged in doing good, not in amassing wealth; and in calling forth the enmity of the envious, she is merely paying the penalty of success. Her fortune is the result of a lifetime of toil and self-denial such as fall to the lot of but few, and she finds the reward for such labor in the alleviation of suffering rather than in the accumulation of wealth. Millions of people owe their freedom from the bondage of sickness and sin to the teachings of Mrs. Eddy. Their gratitude goes out to her for her patient, self-sacrificing labor in establishing this religion which has been of such inestimable benefit to suffering humanity, and all fair-minded people everywhere, whether in accord with her views or not, can but acknowledge her as one of the foremost women of her time, as one who has devoted her life to the welfare of others and has worked unceasingly for human betterment.

[James D. Sherwood in *Houston* (Tex.) *Chronicle.*]

Malicious animal magnetism is only another name for evil and its suppositional activity and claim of power. Every religious organization recognizes the claim of evil as something to be overcome and cast out, and so do Christian Scientists; but the Christian Scientist understands God to be infinite, and good, and omnipotent, and that therefore evil is in reality neither person, place, nor thing. From this premise the Christian Scientist feels encouraged to strip from evil its pretense of power by showing it to be powerless. This action can never injure the individual, but it should and does benefit him and teaches him that God is omnipotent and good, hence good is the real and the only power.

[Edward W. Dickey in *Pasadena* (Cal.) *Star.*]

The basic idea of Christian Science is not so much philosophic as it is spiritual. Its early statement is found in the life and works of Jesus the Christ, and it has come to this age as the Comforter, "even the Spirit of truth," to show how Jesus did his work and to enable his followers to do likewise.

What is God? This is one of the oldest and by far the most important question in human history. It is so vast in its import—so full of meaning to humanity—so comprehensive in its nature, that it may well be regarded as the most profound and vital inquiry men can make. Christian Science declares God to be, "The great I AM; the all-know-

Digitized by Google

ing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (Science and Health, p. 587).

Christian Science also declares that God is good—supreme infinite good. To amplify further her definition of God, Mrs. Eddy has employed the term divine Principle. This is used synonymously with Love and accords with John's statement, "God is love." The word Principle is not used in the same sense in which it is used in mechanics, but refers to the all-wise, all-knowing heavenly Father, and means the one source of all being—called God. Christian Science further declares God to be omnipresence, as All-in-all. God is therefore always with us, but material terms and symbols do not express the proper spiritual idea of omnipresence. Paul says, "In him we live, and move, and have our being." As we reflect or manifest godliness, or the attributes of God, do we in a finite sense realize that God is with us.

The declaration that God is All-in-all does not signify that man is part of God—a deduction which would mean pantheism. Nor does it mean that when we act God acts, or when we breathe that God breathes. Christian Science agrees with the Scriptures that man is the "image and likeness of God." As a deduction from its all-inclusive declaration concerning God, Christian Science shows that man never loses his individuality or identity. The mist of material sense is cleared away by this Science and the true spiritual sense of things comes to light, bringing out the tender, compassionate relationship between God and His children.

[Olcott Haskell in *Vacaville* (Cal.) *Reporter.*]

The teachings of Christian Science involve no new philosophy, but are those of the Bible, and its practice is in strict conformity with that of Jesus and his disciples. Jesus treated sin and disease as things to be overcome and destroyed through an understanding of God, divine Truth. Had they been creations of God they could never have been destroyed, and Jesus, who did the will of his Father, would not have instructed his followers even to attempt to overcome them.

As Jesus' teaching cannot be separated from his practice, which was the necessary confirmation and proof of their correctness, so likewise the practice of Christian Science cannot be separated from its philosophy; and he who attempts to explain its healing on the basis of hypnotic suggestion and a so-called subconscious mind, is manifestly attempting to explain that of which he has no correct knowledge, while at the same time running perilously close to assuming that Jesus himself was but a mesmerist. Any such theory is man-made, and is directly contrary to the teaching of Christian Science.

The facts of Mrs. Eddy's life show that she is a woman of unusual culture and refinement, but it was her faithful Christian living, and her earnest search to understand God, that fitted her for the experience of His healing power after all human aid had failed, and that raised her from a bed of pain and weakness to become the Discoverer and Founder of Christian Science.

If any one questions that Christian Science has proved efficient in the cure of organic disease, he should read "Christian Science as a Religion and as a Therapeutic Agent," recently issued by the publishers of the *Twentieth Century Magazine*, in Boston, written by B. O. Flower, who was formerly editor of the *Arena*. Mr. Flower is not himself a Christian Scientist, but he has taken time to investigate thoroughly the work of the Christian Scientists, and his book presents such an array of evidence, drawn from the healings of prominent men who had been under the care of some of the noted physicians in this country and in Europe, and whose cases were diagnosed as organic and incurable, that after reading these and weighing the evidence no sincere person can doubt the proofs presented.

The appeal of Christian Science is to all in need of mental, moral, or physical help; and it is impossible a Christian should oppose its teachings after he has gained sufficient understanding to be able, even in a degree, to prove their beneficial effect in his own experience and upon the lives of others.

[Charles W. J. Tennant in *Bath* (Eng.) *Citizen.*]

Referring to the letter of "Disgusted," let me inform him that all students of theology are in the habit of using many commentaries on the Bible. Why should he entertain the desire to debar the Christian Scientist from using his commentary, "Science and Health with Key to the Scriptures" by Mrs. Eddy? Our critic is rather exercised over the price of the Christian Science text-book being twelve shillings six pence. I wonder what he thinks of the price of Lange's "Commentary on the Bible," published in twenty-four volumes at ten shillings six pence each? He seems to forget that Science and Health is also the text-book of a Science, and that people throughout the world are being healed of all manner of diseases through the reading and understanding of it. No one is forced to buy the book; in fact, any one desiring to do so can get the loan of a copy for a fortnight or three weeks from any of the Christian Science reading-rooms throughout the country, or from any of the free public libraries. How many authors would sell their books, if this privilege were general?

In another letter "Ratio" says "Disgusted" is quite right when he maintains that the term science as here applied is a misnomer. Then he proceeds to give a particular definition of the word, quite forgetting that its meaning is knowledge. All that one can ever know of the teachings of Jesus the Christ may be called Christian knowledge, or Christian Science, if one accepts the definition of science as "comprehension or understanding of facts or principles" (Century Dictionary).

[Dr. George F. Butler in *New York Medical Journal.*]

The practice of medicine seems to have little regard for anything beyond man's physical being. Mental, moral, and spiritual diseases by far outnumber those of the physical body. More than half of our diseases, as well, are of mental origin. Neither politics, civil statutes, nor physic will cure all the ills with which mankind is afflicted; for vicious habits of thought, greed for place, for power, for money, selfishness, etc., may be inherent affections of all humanity. . . . Another strongly developed fault in the profession is the lack of sympathy with patients, and the tendency to look upon them as merely "cases," or, as in hospitals, "material" for clinics or demonstration. This view, largely fostered and developed in the hospital graduate or attendant, is likely to be carried too far in private practice. The man or woman who is ill wants to be and is entitled to be considered a living, ailing human being, looking for aid to recovery, and not merely another case of typhoid, pneumonia, or what not, in the statistical material of the doctor's clientele. Doctors waste a great amount of time and energy in the gathering of statistics.

[From an editorial in *Dayton* (O.) *Journal.*]

Without going into the religious phases of such a situation, the fact is evident that there is such a thing as malicious animal magnetism, and that the world recognizes it under various names, and abhors it. We have two words in our language, that come from the Latin—malevolent and benevolent—which signify ill-wishing and well-wishing. And the malevolency that is in all of us to a greater or less extent is vicious, we admit. Yet through all the progress of the world we have failed to throw it off.

The followers of Mrs. Eddy have referred to malicious animal magnetism in times past merely by its initials, thus:

Digitized by Google

"M. A. M." How can we rout M. A. M.? Or, to shorten it, how can we rout malice from the world? First, undoubtedly, by eradicating it from ourselves—from our own thoughts. It is hard to believe that men can exist without malice. Yet the greatest figures of history, including the Nazarene himself, have been men free from malice—in so far as humankind can be free from it. When we pass a man or woman on the street, and note their expression of feature, we can determine, generally, the character of their thoughts. Only a fleeting glance is needed. Women may smear their complexions with cosmetics, and yet not attain beauty. Instead of rubbing powders and creams on their faces, they ought to rout the malicious thoughts that produce wrinkles. The snarl is characteristic of the wolf—it is an ill-fitting attribute of humankind.

We often stop in the bustle of modern life and ponder the face, long gone, of a dear, unforgotten relative. And what simplicity and what gentility are brought up by the memories of the gentleman or the lady of the old school! Gray hairs and smiles are ennobling attributes, when they come together. The faculty of growing old gracefully, it seems, can be enjoyed by everybody—that is, if malice is removed.

Truly a great doctrine is it, of any cult, whether religion be a part of it or not—this doctrine of the elimination of malice!

[R. Stanhope Easterday in *South Bend* (Ind.) *Times*.]

Our critic errs in his inference when he states that one so-called "element" of truth found in Christian Science, is "the influence of the mind over the body." The relationship and importance of "mind" and "body" as conceived of in Christian Science can best be couched in the terse words of Scriptural admonition thus: "The flesh profiteth nothing;" "They that are in the flesh cannot please God;" "Make not provision for the flesh," etc., together with Paul's startling arraignment of "the works of the flesh" in Galatians; as against the wholesome, life-giving, health-imparting, moral injunction, "Let this mind be in you, which was also in Christ Jesus;" that "to be carnally minded is death, but to be spiritually minded is life and peace;" "Willing rather to be absent from the body, and to be present with the Lord."

That our Saviour did indeed heal the sick, as graciously conceded by our critic, can, we most earnestly contend, be "proved by experience," as well as deduced from the Scriptures; but that he healed by despotic control of so-called "mind" over so-called "body," through exercise of sheer force of blind human will, cannot be proven either by Scripture or experience. Jesus healed by the benign benediction, "Go thy way; thy faith hath made thee whole;" "Thy sins are forgiven thee," etc. Christian Science, a present-day recapitulation of the teachings and practice of Jesus, heals the sick now, as in the first centuries of the Christian era, through the prayer of faith, through the subjugation of the human will or the human mind, and absolute subjection to the Mind of Christ, or the Mind of the Father. Of such healing through spiritual means, and without drugs, mesmerism, or damaging exercise of will-power, an ever increasing volume of well authenticated testimony bears undeniable witness.

[Gray Montgomery in *Denver* (Col.) *Times*.]

With reference to an article published in your issue of July 12, it is indeed cause for much rejoicing on the part of Christian Scientists that their religion is credited with all the good things that befall the lot of man. To attempt to influence another, however, by the use of mental suggestion and without the other's knowledge or consent, is not Christian Science, but as opposite to it as black is to white, or light to darkness. Mental suggestion should never be mistaken for the pure and uplifting religion of Christian Science. We read in the book of Isaiah: "For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts."

Good in various forms is made to flow into the lives of thousands by an adherence to the teachings of Christian Science. Not through any human will-power does this good come, but by a reliance on the one Mind, God, does man receive his rich inheritance, because blest with the peace and joy of the spiritually-minded. Christian Science brings forth its fruits by the power of God, not by the influence of human will. Its healing works are the sign of God's presence with us, made manifest to human consciousness through the destruction of error and the healing of sickness and sin.

[Mrs. J. D. Matlock in *Birmingham* (Ala.) *Age-Herald*.]

The conflicting methods of treatment in the different schools of medicine and the lack of unity among physicians of the same school prove that these systems are not founded upon exact science or fixed principle, and because of this people are seeking for something more reliable in their hour of need. Public opinion is changing, and the physician is no longer the court of last resort in the matter of human health.

Christian Scientists have neither time nor inclination to participate in controversies. The all-absorbing question with them is to learn more of the infallible Principle of healing. In searching for this Principle their only guide is the Bible and the teachings of Jesus, who commanded all to follow him and promised to his followers scientific and demonstrable understanding of the truth which he taught and applied. His parting instructions to his disciples were: "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you;" he also said, "These signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, on page 342 it is stated: "If Christianity is not scientific, and Science is not of God, then there is no invariable law, and truth becomes an accident. Shall it be denied that a system which works according to the Scriptures has Scriptural authority?" To quote again, "Our system of Mind-healing rests on the apprehension of the nature and essence of all being,—on the divine Mind and Love's essential qualities. Its pharmacy is moral, and its medicine is intellectual and spiritual, though used for physical healing" (p. 460). Christian Scientists are law-abiding citizens, and heartily cooperate with all who are working for the elevation and progress of mankind, yet the Church of Christ, Scientist, is founded upon the commands of Jesus to preach the gospel and heal the sick, and no other method of healing is acknowledged. While Christian Scientists acknowledge their limited understanding of this Science, and while failures occur in their application of its Principle, nevertheless there are thousands and thousands in all parts of the world who have been healed in Christian Science of all manner of diseases.

In Birmingham there have been scores of cases of successful healing of both functional and organic diseases. The membership of the local church is composed of those who are living witnesses of the healing power of Christian Science. Those who will take the time to investigate Christian Science will find that its work, instead of being a mere sentimentality, as is believed by many, is based on the divine Principle and is capable of the most scientific demonstration.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"A CUP OF COLD WATER."

How best to dispose of accumulating copies of the *Sentinel* and *Journal*, is a question that sometimes perplexes Christian Scientists who would like to pass along their "good things" to others, but are in doubt as to the most effective method of accomplishing their purpose. It is because this is a question that is often asked, showing that it is still an unsolved problem in many households, that we are glad to call attention to what was done with one copy of the *Sentinel*. In a testimony which appears on page 1013 of this issue, Mrs. Hoyle tells about her condition and its seeming hopelessness; of her dread to meet the God who, as she had been led to believe, had put this burden of pain and sickness upon her; and of how she felt that the healing of sickness, as it was done by Christ Jesus, was for her if she but knew how to ask for it.

Of her experience at this time she writes: "I prayed earnestly for light, and this promise came to me, 'Blessed are they which do hunger and thirst after righteousness: for they shall be filled'! And the help came! I then knew nothing of Christian Science, but a neighbor sent me a *Sentinel* (I have it yet), and a note with love and best wishes. It was like a drink of cold water to a thirsty traveler. I read and drank in every word, and when I read the testimonies I believed them and knew that I, too, could be healed. What a joy it was to know that God did not send the sickness!" The rest of the story is very simple. The new-found faith in God which the *Sentinel* had inspired was not vain, and the sufferer was healed. What better disposition could have been made of this copy of the *Sentinel?*

While there is a great satisfaction to Christian Scientists, as they frequently write us, in receiving and reading our periodicals, this is only a part of the good that these publications can and should accomplish. They were one and all instituted by our revered Leader with the intent that they should carry the gospel of healing from sin and sickness to every one who is in need and ready to listen, and it is within the province of every Christian Scientist to assist in this good work. Such ministry to the needy is like the "quality of mercy" of which Shakespeare wrote,—

> It is twice blest:
> It blesses him that gives and him that takes,—

and we can conceive of no greater joy than that which must have come to the neighbor who passed along the "good news" by which she had herself benefited.

In many cities the work of freely distributing our periodicals is systematically done, and much is thus accomplished in bringing the healing truth of Christian Science to the attention of those who are ready for it; but, as a rule, this work can be very largely increased, and results similar to those which followed the kindly action of this good neighbor will be duplicated, if every one enters into it with all his heart. It was only a little thing, this proffer to the sick one of that copy of the *Sentinel* with a message of love and good wishes, yet who will venture to say with what far-reaching consequences that simple, friendly act was fraught. It is of just such deeds that Mrs. Eddy writes in Science and Health (p. 570): "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences. . . . Those ready for the blessing you impart will give thanks."

ARCHIBALD MCLELLAN.

"WHENCE COMETH MY STRENGTH."

He who has not climbed the Gorner Grat has yet to experience a great event. Its approach, first of all, will yield a continuous pleasure, especially if at Visp one has the courage and wisdom to decide to "tramp it" up the valley, and thus comes to know for himself something of the Swiss lowlands, which are packed with the picturesque, even as are the highlands with the sublime. The quaint, heavy-roofed hamlets and villages, the scant but wondrously green hill-side farms and gardens, and yet more unique and interesting, the kindly peasant-folk beside the way,—all these crowd the day with delights; while ever and anon there opens up a vision of snowy skyland, glorious enough to awaken a thought of nearness to the threshold of the infinite.

At Zermatt, which nestles beneath the beetling grandeurs of the Matterhorn, one enters upon the precipitous path that leads to the summit of an outlook than which the world supplies nothing more inspiring. Here, in the midst of the mighty peaks that seem to have gathered themselves familiarly about him, one realizes as never before, perchance, the significance of elevation and a pure atmosphere to breadth and definiteness of vision; more than this, in the measure that his heart is hospitable to spiritual suggestion, there will come to him a new and quickening sense of the native exaltation and supremacy of the good and beautiful, without and within, a realization of the nobility of man, the true selfhood, and his relation to God, which can never be forgotten. Here the events of the earthly round, its aims and achievements, its joys and sorrows, are seen to be the merest trivialities, and gladly turning away from them all, one is impelled to say with the psalmist, "I will lift up mine eyes unto the hills;" be it mine, evermore, to live upon an exalted plane of ascending thought!

We profit by the highest ministry, surely, of so-called nature when it declares for us "the glory of God," when it promotes in us that mental ascension which is the very substance of prayer. The thought of the ancient bard, that the hills of God, the heights of spiritual intuition, yield perennial strength, is but recast by the later singer who said, "Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a believing soul. It is the Spirit of God pronouncing His works good."

Horeb and Hermon remind us ever of the need of this spiritual ascent, if we would "know God;" that we must seek, and dwell in contemplation upon, the high emprise of the eternal good, if we would gain the Master's outlook, and be able, with his compassion, to look down upon all human experience in its true perspective. Christian Science would make this experience the familiar of every-day Christian living. Says our Leader: "Divine Science alone can compass the heights and depths of being and reveal the infinite." "One's aim, a point beyond faith, should be to find the footsteps of Truth, the way to health and holiness. We should strive to reach the Horeb height where God is revealed" (Science and Health, pp. 292, 241).

When the aspiring heart longingly inquires, How can I make my demonstrations more immediate and complete, my life more radiant and helpful to men? the answer is expressed in a single word, and it is this, *ascension*. Said Phillips Brooks, "We may pierce through the clouds and reach the summit, and there, seeing His vision of our possibilities, . . . set to work to fulfil God's image of our lives." This is the goal and the endeavor of every worthy

Digitized by Google

Christian Scientist, to prove true for himself, through purity and prayer, the saying of the Master, "And I, if I be lifted up, will draw all men unto me."

JOHN B. WILLIS.

SELF-CORRECTION.

THE imperative command of the great Teacher, "Be ye therefore perfect, even as your Father which is in heaven is perfect," was given by one who had tested the possibilities of humanity, and who in consequence "knew what was in man," as we read in John's Gospel. In Hebrews we read that Jesus "was in all points tempted like as we are, yet without sin." This proves that at every point the spiritual predominated in his consciousness, and that it triumphed always, for had material sense been given the ascendency in any respect it could not have been written that he was "without sin." Paul said, "The good that I would I do not: but the evil which I would not, that I do." This showed that the spiritual had not been given its rightful ascendency, but he goes on to explain that the belief in a fleshly mind must be given up in order to have "the Spirit of Christ," and thus delight in doing the will of God.

Christian Science reveals the fact that the process of self-correction is the working out of that salvation which, to quote Paul again, God worketh in us, and which heals humanity of both sin and sickness. Mortals, unfortunately, cling blindly to the very evils which most hinder their progress, and this largely through force of habit; thus they miss, for a time at least, the great joy of working with God for their own redemption. John heard a great voice from the throne, saying, "Behold, I make all things new;" and, if God is at work making new creatures of us, we should surely be glad to do our part, especially as the benefit is all ours.

A homely illustration may serve to show how the process of self-correction begins in many cases. A little girl once remarked that she always wore out her shoes on the side. An older person who was present said rather brusquely that this was due to a slatternly habit in walking, which could easily be corrected, at the same time calling attention to a young lady whose light footfalls made one think of the "poetry of motion." It seemed a sharp rebuke, but the sting was soon forgotten in the resolve to overcome a bad habit which had not till then been recognized as such. This self-correction took some time and much watchfulness (as in the more serious problems of life), but the results were well worth while, for not only were the shoes preserved, but walking became a greater pleasure as the years went by, and this one simple lesson of self-discipline has often been a reminder of how much we may attain if only we are willing to work aright when the possibility of reaching perfection in all things is so clearly shown us in Christian Science.

There are many who have proved the power of Truth to heal, who yet find some physical ailment resisting, as it seems, their utmost efforts to dislodge it, although all the while they know that it is no part of their true being, since all of God's ideas are perfect. The precise mental condition which renders them susceptible to this discordant manifestation may be unrecognized either by themselves or others, but if there is a readiness to correct each thought, word, and deed that does not measure up to the divine demand for perfection, this will bring wonderful results in every direction and show what needs to be overcome. Our revered Leader tells us that "the human self must be evangelized" (Science and Health, p. 254), and this means that it can be evangelized. In this we rejoice, and we should not wait for others to point out our faults, but bend all our energies to the very important task of self-correction, cheered by the gracious assurance, "It is God which worketh in you both to will and to do of his good pleasure."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MINNEAPOLIS, MINN.

On Communion Sunday, July 10, Fifth Church of Christ, Scientist, held the first service in its new vestry. This vestry, which seats about seven hundred persons, is the Sunday School room of the church as it will be when completed, and adjoining it are commodious reading-rooms, check-rooms, and a rest-room. The church edifice, which is on the corner of University avenue and Twelfth avenue southeast, is across the street from the campus of the University of Minnesota. The building will be completed as rapidly as possible, and its members are naturally much gratified that the work has progressed thus far.

Correspondence.

LONDON, ENGLAND.

The corner-stone of the new church edifice which is being built in Curzon street, Mayfair, by Third Church of Christ, Scientist, London, was laid exactly at high noon on Saturday, July 9, in the presence of the building committee and officials of the church only. The service commenced with reading of the "scientific statement of being" (Science and Health, p. 468), followed by selections from the Bible and "Miscellaneous Writings" by Mrs. Eddy; then silent prayer, at the conclusion of which the stone was laid. The Lord's Prayer with its "spiritual interpretation" (Science and Health, p. 16), was then recited in unison, concluding with part of the second verse of "Laus Deo" by Mrs. Eddy. Before the service there had been enclosed within the stone a leaden casket which contained copies of the Bible and of all of Mrs. Eddy's writings, together with issues of all the Christian Science periodicals.—*Correspondence.*

CALGARY, ALBERTA.

First Church of Christ, Scientist, situated on the corner of Fourth avenue and Seventh street west, partly completed, was opened yesterday [July 17], a large attendance marking the inaugural service. This church is very artistically designed, and has been built with a view of enlarging in the near future. At the opening service the First Reader said in part,—

"Some forty years ago a woman, Mary Baker Eddy, whom we acknowledge as Leader, in accordance with her own words, so far as she herself follows Christ, proclaimed to the world the gospel of the Christ-healing. She reiterates to her followers the commands of Jesus the Christ, and in proof of the practical teaching of the Christ Science, or Christian Science (as Mrs. Eddy names it), temples are being built to the honor and glory of God by those who have been saved from sin and sickness and given the true idea of Life. By precept and example our Leader has taught us, for the present need, to build temples in which we may meet together and unite in prayer and thanksgiving.

"To this end we have built a house, a material manifestation of love for God and man and gratitude for sins forgiven and sickness healed through the practical teachings of Christian Science. This is the first church structure of its kind standing on its own ground in the province. The church is built for present need, with plans for enlargement when necessary. The building of this church has been accomplished within the first year of organization. The arrangements whereby the expenses will be fully met, are so complete that it will be possible in the very near future for the structure to be dedicated free of debt, the only way which is recognized by the Christian Science denomination."

THE LECTURES.

MANCHESTER, ENGLAND.

In the Public Hall, Burton Road, West Didsbury, on Thursday evening, April 28, the Rev. William P. McKenzie, of Boston, delivered a public lecture on Christian Science. The chair was occupied by the Rev. C. M. Shaw, who, in introducing the lecturer, said,—

I count it a great honor to preside over this meeting, but I value more the opportunity of bearing public testimony to my adherence to, and confidence in, Christian Science. I gladly associate myself with those who, in spite of denunciation and opposition, quietly and unflinchingly uphold, with such well-grounded conviction, a faith which possesses such possibilities of good for mankind. It may be of some interest if, in as few words as possible, I tell you why I, until recently a minister in another communion, left my church and joined the Christian Scientists.

I offer no apology for having changed my convictions. If a man's mind grows, he can no more hold by the formulas in which his earliest convictions found expression than he can wear the clothes of his boyhood. It is not easy for such changes to be made. It is all the more difficult and painful when one cherishes, as I do, sincere respect and affection for the church of one's fathers. Truth, however, and not sentiment, must be given the preeminence. There was a time when I scoffed at Christian Science, ridiculed it in public; but that was when I knew no more about it than could be gained from hearsay or from newspaper paragraphs. It was not on account of its promise of physical benefit that I was drawn to Christian Science. For some time previous to my investigation of the subject I was like many other men in every section of the church, dissatisfied with the state of religion. I was dissatisfied with my own spiritual condition, with the results of my work, and with the work of the churches generally. I was concerned about the drift of the people away from the churches, about the loosening of their hold on religion. The more I studied social questions, in which I was deeply interested, the more dismayed was I at the great gap between the ideal of Christianity and the actual conditions of life as indicated in our social, industrial, and political affairs. I began to wonder at times if our faith had lost its vitality and our labors their fruitfulness.

A subtle pessimism was creeping over me, though I would never acknowledge it. Some, I knew, believed that revival would come through return to the theology of our fathers; but this I could never accept. I had a growing conviction that much of our theology rested on sandy foundations. I felt the disturbing influences of the higher criticism, of scientific research, and of the new philosophy. Indeed, sometimes I felt like a man on a sand-bank before the advancing tide. Fortunately I clung to essential truth, but it grew less fitted to the old formulas. In this state of mind Christian Science found me. Certain physical and moral healings came under my notice, very much impressing me, and seeming to suggest that Christian Science possessed the secret of the victorious life. I began the study of the textbook to find out, if possible, wherein the power lay. At first I read it with difficulty and with rebelliousness. It puzzled and irritated me in turns, but I could not leave it. Then I sought the aid of Christian Scientists to discover their point of view. Meanwhile I read everything against Christian Science I could lay hands on, but for the most part these criticisms fell short of their aim, and only strengthened my interest. Besides, I could not gainsay the practical results. Gradually I began to get understanding of the subject. I found that thoughts and ideals which had floated more or less vaguely in my mind for a long time were defined, enlarged, and systematized in Christian Science. I entered a new world. And then I found I could no longer conscientiously preach the old doctrines, so I became a Christian Scientist.

And this is what Christian Science has done for me: it has given me a fuller, more satisfying doctrine of God. Much more, it has enabled me to prove that doctrine in the experiences of life. My physical health was improved, and fear and anxiety, those bugbears of so many lives, have been almost eliminated. Indeed the problem of evil has been solved for me and many others in the only way that concerns us, namely, by showing us how, here and now, evil may be destroyed. I can say in all sincerity that Christian Science has given me a more hopeful outlook upon life and the world. For these things, and for spiritual benefits of which I cannot here speak, I am indebted to Christian Science; and I am increasingly grateful to its Discoverer, Mrs. Eddy, whom nothing but ignorance and prejudice prevent the world from recognizing as one of its greatest benefactors.—*Manchester Chronicle.*

PITTSBURG, PA.

A lecture on Christian Science was delivered by Bliss Knapp at Carnegie Hall, May 30, under the auspices of First Church. The lecturer was introduced by W. La Rue Thomas, who said in part,—

In looking over this vast audience, one is impressed with two leading ideas. The first is that in this city and community there are a large number of students of Christian Science—people who, having investigated and studied the teachings of Mrs. Eddy and having adopted her interpretation of the Bible, are today in the full enjoyment of blessings never known before. They believe with her that God created man in His own image, and that the religion taught by Jesus Christ and his disciples two thousand years ago was not intended for the people of that generation alone, but was intended for all people and for all time. There are many in this audience this evening who with hundreds of thousands of their fellow-men have publicly and privately testified to the blessings they have received, and with whom health has taken the place of disease, joy the place of sorrow, happiness the place of grief, love the place of envy, malice, and hate, and harmony reigns supreme where formerly discord prevailed.

The second thought is that there are a large number of persons who have heard of the great blessings their friends or acquaintances have received from the teachings of Mrs. Eddy, and who are willing and anxious to learn more of this great truth. Whatever may have been their belief, their hearts yearn for something more, and they are prepared to listen to an explanation of this new-old religion.

Correspondence.

SCRANTON, PA.

Before an audience that almost filled the Lyceum theater yesterday afternoon [June 5], Bicknell Young of London, England, delivered his lecture on "Christian Science: The Power of Good over Evil." The big attendance at the lecture was evidence of the growing interest in the tenets of this church and the extent of its movement, while the attentive spirit of the listeners indicated the earnestness and force of the truths uttered by the speaker. Mr. Young was introduced by Col. L. A. Watres, who in presenting the speaker said,—

No one can read history without observing that there is discernible in the great religious leaders in all ages of the world—and every age has had its leader—a craving to get away from the low and unspiritual level of their respective times and from the formalism and conventionality of the average religious life, to find a union with God which shall be as real and as understandable as the common relationships of life. Thus it is that the Leader of the Christian Science

Digitized by Google

movement, imbued with that same craving, has sought and found a union with God which is based upon the immanence of God in His world as distinguished from the emanation of the world from God; a union which is demonstrable; a union which is practicable and applicable to every walk in life; a union based upon a better understanding of Soul and salvation—salvation from disease as well as from sin.—*Scranton Truth.*

JUNCTION CITY, KAN.

Clarence C. Eaton delivered a lecture on "Christian Science as a Religion," in the Universalist Church last evening [June 14]. The speaker was introduced by the Rev. Fred A. Line, who said:—

We live in an age of progress, an age of research and investigation. Men are studying the world and its forces, and are making noteworthy achievement in all realms of thought and activity. The world today, as never before, craves truth. Men are reaching out after reality, turning their faces to the light, endeavoring to learn of God and His world, that they may be better able to bring themselves into right relation with the infinite and eternal Spirit of creation.

The day for a blind acceptance of a time-honored system of religion has passed. Men and women who have been in bondage to creed and dogma and tradition are coming out into an atmosphere of greater intellectual and spiritual freedom. We are learning to know the essential relation existing between mind and soul, that we find the one through the cultivation of the other. Through the efforts of a few consecrated souls religion has been made reasonable and believable, a real vital working force in present-day life. In our opinion the greatest ideal of the religious world today is that of making religion a practical, potent power in satisfying the needs of man's intellectual and spiritual natures. To this end the emphasis is being transferred from the man-made scheme of theology and plan of salvation to the God-born principle of truth.

We are met together tonight to hear one who has for us a message of truth; one whose views perhaps do not in every particular coincide with our own, but who with us cherishes the larger thought of God, who regards Him as a Father unto all men; one who sees and appreciates the divinity in every human soul; one who, with us, is part of that great world movement which has as its end the bringing of mankind into the morning light of new truth. Dr. Rexford, writing some time ago in the *New Unitarian*, makes a strong plea for a union of the liberal forces of America. Tonight, perhaps we feel the force of this plea. United in our beautiful soul-inspiring conception of God and man and destiny, shall we not be united in spirit and effort?

We of this church have much reason for gratitude toward our friends in the Christian Science church of this city, because of the kindliness made manifest toward us in the past; and we are indeed glad to meet with you tonight in this our temple of worship.—*Junction City Union.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Athol, Mass.—Frank H. Leonard, Athol Opera House, 3:30 p. m., Aug. 28.
Charlevoix, Mich.—Bliss Knapp, Opera House, Sept. 2.
Gardiner, Me.—Bliss Knapp, Church Edifice, Lincoln Ave., Aug. 29.
Laramie, Wyo.—Judge Septimus J. Hanna, Carnegie Public Library, Sept. 6.
Martinez, Cal.—Francis J. Fluno, M.D., 3 p. m., Aug. 21.
Richmond, Ind.—Frank H. Leonard, Murray Opera House, Sept. 4.

TESTIMONIES OF HEALING.

In the 4th chapter of Hebrews it reads, "We which have believed do enter into rest." I thank God that I "believed" His word and have entered into the rest, the joy and peace which nothing but trust in God can give. In February, 1906, I was carried to a hospital, more dead than alive, as it seemed, and was operated upon for gall-stones. I shall not describe the years of suffering which I had previously endured, but will say that this operation was thought to be a success. This, however, was not my only trouble. There was a serious affection of the stomach and the surgeon said I would have to go back for another operation as soon as I was able. But I did not get strong, I could not retain my food, and was in pain all the time. I went to several specialists, and they all decided that I had a malignant disease of the liver and possibly of the stomach, and that I had but a short time to live. I was under the X-ray treatment, but soon decided that I did not want that. There seemed to be no help for me; I suffered night and day for four long months, waiting for death and trying to be reconciled to it.

I had been a church-member from youth, and tried to live in obedience to its teachings, but when I stood face to face with death I felt that I was about to take a leap in the dark. If this God I was going to meet was the one who had put this burden of pain and sickness upon me, then took me away from my two little ones and my aged mother, who needed my care, I shrank from meeting such a God. I studied the Bible and read that Christ Jesus healed the sick, and I felt the healing was for me if I only knew how to ask. I prayed earnestly for light, and this promise came to me, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled"! And the help came! I then knew nothing of Christian Science, but a neighbor sent me a *Sentinel* (I have it yet), and a note with love and best wishes. It was like a drink of cold water to a thirsty traveler. I read and drank in every word, and when I read the testimonies I believed them and knew that I, too, could be healed. What a joy it was to know that God did not send the sickness!

I sent at once to this friend for advice and for a copy of Science and Health. Her advice was to call a practitioner, so I sent for one at once. She began treatment about noon, and that night I rested more than I had for months. The next day the pain left me. I had a good rest, but still could not retain my food. In a few days the alarming symptoms returned and other serious difficulties appeared which resulted from the surgical operation to which I was subjected. In spite of all these things, however, I gained steadily for a few weeks. The bloating was greatly reduced and I looked for further improvement, but again the violent vomiting returned and the general conditions were such that the family called a doctor, who said he could do nothing; that nature had done a wonderful work for me, and that if I had strength I might pull through. In a few days an adhesion gave way, and I then gained for a while, but soon grew worse (I was not taking Christian Science treatment then), and my husband again called a doctor. He came and gave me a hypodermic injection, which quieted me; but the one thing I most feared had happened. The doctor said my stomach had closed, and he advised that I take nothing into the stomach, and if I could get strong enough another operation would have to be performed.

I lay quiet till the effect of the drug was gone, then the pain began to return. I realized that I was again facing death, and I cried out to God for deliverance. I began to realize that I had not trusted God entirely, but there and then I made a complete surrender, and trusted Him to take care of me. I remembered that Jesus said to take no thought for what we should eat, and these words came

Digitized by Google

to me as clearly as if some one had spoken them, "Fear not;" "Thou shalt have no other gods before me,"—and such a peace and calm came to me that I knew I was healed. I got up, and tried to walk, but had to hold to the furniture to get out in the sitting-room. I sat by the table and took up the Bible. When it was about dinner-time my mother came in, and was surprised to see me up. I told her that when dinner was ready I would eat with the family, and I did eat of the food that had been prepared for them. It did not hurt me, and I have eaten whatever has been set before me from that day to this, and have had no trouble of any kind from it.

I believed and trusted God with all my heart and entered into rest and peace and joy. I therefore wish to express my gratitude to God, and to Mrs. Eddy for "Science and Health with Key to the Scriptures."

MRS. ELDORA A. HOYLE, Fort Pierre, S. Dak.

It is with great pleasure and thankfulness that I write of the following experiences in Christian Science. In January, 1909, our baby was taken suddenly ill with bronchitis. When he was nearly at his worst, a Christian Science practitioner whom we knew made us a friendly call, and my wife asked her to give our baby treatment. She did so, and soon after she left our house; but before she had gotten out of sight there was a marvelous change in the baby for the better. He was directly afterward taken upstairs and put into his cot, and he slept soundly all night. The following day he was quite well, and since then has had no other attack.

I myself had hurt my back by doing heavy work to which I was unaccustomed. I suffered for nearly three weeks, so much so that I could scarcely walk; but one afternoon, when getting off my office stool, I was surprised at not feeling the usual pains, and at once began to bend my back to see if I was dreaming; but I was not, for the pains had gone! When I got home my wife asked me if I was better. I replied that I was, and went through various movements to show her that this was true. My wife then told me she had asked the practitioner mentioned above to give me treatment, and this was the happy result. Further, before coming into Christian Science I was troubled very often with headaches and biliousness; but now these ailments do not trouble me, for with my understanding of Christian Science I have overcome all indications of any such attacks.

Christian Science has brought health, happiness, and contentment into our home, and we are morally and spiritually thankful for it, and feel now we cannot do without this healing truth.

FRANK SHAW, Friendly, Sowerby Bridge, England.

It was the loving example of a sweet young girl that led me to take up the study of Christian Science in earnest. I had been called a Christian Scientist for a number of years, but had only an indifferent interest in it. I thought of it merely as a system of cure and often wondered at the interest in it shown by its followers. I could not understand Science and Health and did not care to study it, and the literature which came periodically to the house I never read.

We were traveling companions,—the young friend already mentioned, her mother, and myself,—and we spent several months together. I was very much impressed with her love for Christian Science, her devotion to its teachings, and the love and harmony expressed in all our daily intercourse. Her love for her mother appealed to me very strongly, and one night when her mother was ill, her realization of the truth dispelled the discordant condition so effectually that on the following day the mother was entirely recovered. When we were crossing from Tampa to Havana the sea was so rough that I was very ill; but relief came to me through the Christian Science prayers, as understood by my little friend; and though I had many times experienced Christian Science healing before this, none had impressed me so strongly. I thought I was too ill to be helped by Christian Science or anything else, but in less than half an hour I was asleep.

Later on, when I left North Carolina, where we had been staying for a few days, her mother gave me a little tract, issued by The Christian Science Publishing Society. I read it many times on my way home, thinking it would be good for my mother, who was ill at the time and whom I was going to visit, but I did not then realize the good it was doing me. The necessity for something more than mere human aid for my mother came to me very strongly one night. I asked her if I might help her, and she said "Yes." I had only the slightest idea as to how a Christian Science treatment is given, but I went to my room and for three or four hours with the Bible and Science and Health I earnestly strove to know something of Truth. My mother was better the next day, and through the help of a Christian Science practitioner she was soon restored to perfect health.

This experience led me to have my little friend help me to overcome an acute form of diseased gums with loose teeth. I had been under the dentist's care for several months, with the result of increased inflammation. The healing in Christian Science was thorough, and with it came the spiritual enlightenment that was the "eye salve" of Truth, and I began to see the reflected love of God manifested in the work of His child. Since that time (in April, 1899) I have spent day and night in striving to gain an understanding of Truth, studying our Leader's works and our Lesson-Sermons, reading carefully and prayerfully all the Christian Science literature. It has been my earnest desire to know God, and the happiness and joy this striving has brought to me I am unable to express.

It is now my daily prayer that I may be an example in leading others to Truth, for as I have grown in the knowledge of the love of God, I realize that the example which was the means of bringing me out of darkness into light was the understanding by my little friend of the example given us by the Master and exemplified in the life of our Leader, Mrs. Eddy.—JULIA C. LEONARD, Brooklyn, N. Y.

[Translated from the German]

It is with a heart filled with gratitude that I wish to testify as to how both our children were healed of severe sickness through Christian Science. It is but two years ago since we saw the light of Truth, our attention being called to Christian Science and its remarkable healing influence by acquaintances of ours. We asked for treatment for our little boy, then two years old, who was afflicted from his birth with a severe scrofulous eruption and a stubborn bowel disorder for which we had left no remedy untried. The first treatment in Christian Science furnished sufficient proof to us that we had found the true physician, and we learned that God is divine Love, omnipotent and omnipresent, and that He helps us always if we put all our trust in Him. Within a short time the little fellow was freed of both these diseases.

In March, 1909, our eight-year-old girl was taken severely ill with a children's disease. The condition seemed to grow very serious, so we notified a Christian Science practitioner, who immediately came to see the child and took up treatment. The child improved from the start; the fever abated, she fell asleep, and by the next morning felt very much better. Although the eruption remained, the temperature was normal, and a bowel complaint which had set in disappeared with the second treatment. After three days the disease, which to sense had seemed serious, was entirely overcome. Two weeks later our little boy was taken down with the same disease, although the symptoms

Digitized by Google

were manifested in a somewhat different form. During the first day the little fellow had severe spells of vomiting, and the condition of the throat seemed alarming. Had we not known that evil cannot affect the true child of God, that divine Love is all-power and an ever-present help, we would have been full of fear. Although the child had absent treatment only, we could see its effects plainly, and when the practitioner came to see the boy he was very much better. He then had one present treatment, and on the third day he was perfectly well and happy.

My heart was filled anew with thankfulness to God for these wonderful proofs of the power of divine Love and Truth, and words fail to express my thanks and my love for dear Mrs. Eddy, who has reexpressed this saving truth.

FRAU A. ILLING, Hannover, Germany.

There are so many things for which I am grateful to Christian Science that I cannot enumerate them even briefly. It has changed my thought completely and has opened my eyes to many blessings which even a very short time ago were unseen. Like Hagar, God has opened my eyes. I no longer wish to die, or feel that I am of no use, disliked, and in every one's way. I rejoice to know that I can live always, that as an idea of God I have my work to do, my own individual place in Mind, and so I can be in no one's way. I like people better, and know, as Mrs. Eddy says in Science and Health (p. 17), that "Love is reflected in love."

For all this, and for the help I many times have received in overcoming physical difficulties, I am indeed grateful to God for having given us at this time a Leader who, by her purity, goodness, and unselfishness, could show us the way to know Him aright.

KATHERINE BERENICE BAXTER, Chicago, Ill.

Last year, while working in a factory, my hand was badly injured, and although I paid a number of visits to a surgeon and had him dress the wound, still after several weeks there was pain and the wound did not heal. I then went to a Christian Science practitioner for treatment, and during one of our conversations I explained that I used tobacco, but that I should be glad to break the habit. I had smoked for over fifty years, and on various occasions I had tried to stop by will-power, but every effort to discontinue its use had ended in failure. After a few treatments my hand was perfectly healed, and all desire for tobacco left me, so that I have not smoked since.

I feel very thankful to God, and also to our dear Leader for the many blessings that have come into my life from the study of Christian Science.

W. H. CRABB, San Francisco, Cal.

I wish to express my gratitude for the help I have received in Christian Science, hoping that my testimony may help some one else who is suffering. A little over five years ago I cut my finger, but although it pained me very much, I paid no attention to it, until two or three months later, when my relatives began to be alarmed. I saw a doctor about it, and he did what he could, but the finger became helpless and the whole hand was affected. Finally he decided to amputate the tip of the finger; but the trouble, instead of being checked, spread over my whole hand and even my arm became helpless. Other physicians were consulted, and another operation was performed. I then tried specialists, and had electric treatment, including the X-ray. I went to different hospitals to be examined, but all the time I continued to grow worse. Still another operation was performed, and the bones in my hand and arm were said to be decayed. I had now given up all hope, as had my friends, and the doctors only gave me drugs to deaden the pain. Because of the intense suffering, I welcomed the thought of death.

Just about this time a friend asked me to try Christian Science treatment. I did so, and in a short time my hand and arm began to improve. In three months it was quite well. This was two years ago, and I am well and strong today. Jesus once said to the man with the withered hand, looking beyond the appearance and seeing the real and perfect, "Stretch forth thine hand;" and we read that the hand was restored whole. I am very grateful for this great blessing, and for many others which have come to me through the study of Christian Science. I am a living witness to the healing power of Christ, Truth, and I trust that my life will prove my thankfulness to God. To Mrs. Eddy, who has shown this truth to the world, I owe endless gratitude.—MABEL G. COON, Detroit, Mich.

Eight and a half years ago the truth that sets free came into our home. I had been trying for years to find relief for one of my daughters, who had suffered for thirteen years from a rheumatic affection. Every doctor said she was incurable, the last one we consulted saying to me in her presence that the case was quite hopeless; that she could never be any better, but would gradually grow worse. This was a terrible verdict, as she was already so crippled and helpless.

It was soon after this that Christian Science was brought to our notice as being able to do what the doctors could not do; so we tried it, with the result that in a very short time my daughter was relieved from the pain and suffering, and became well and able to earn her own living. We have had many beautiful demonstrations since that time, and I should like to tell of my own healing. I had a growth in my side for twelve years, with pain and greatly increased suffering whenever I attempted to rest on that side. I made this a matter of prayer, according to the teachings of Mrs. Eddy in "Science and Health with Key to the Scriptures," and in a fortnight or three weeks it had entirely disappeared. To me this was a glorious proof of the power of divine Love, that "always has met and always will meet every human need" (Science and Health, p. 494). In 1902 I had class instruction in Christian Science. At that time I had worn glasses for about twenty-seven years, being quite unable to read at all or see well without them. At the close of the class I found my eyesight had been restored, and I have never again worn glasses.

I may add that during the past eight and a half years, since first hearing of Christian Science, we have never consulted a doctor or used any drug or any material means.

ELLEN WRIGHT, Manchester, England.

I am both glad and grateful for the privilege of being a Christian Scientist. It is indeed a religion of love and makes life worth living. I am especially grateful for the spiritual understanding and peace of mind that Christian Science gives. I have been healed physically of fevers, a badly injured ankle, and numerous other ills. I love the Christian Science Sunday School, and get much help from the study of the Lessons. I am grateful to Mrs. Eddy for showing us that "the warfare with one's self is grand" (Miscellaneous Writings, p. 118), and I know that true gratitude is the reflection of divine Love.

GRACE WILSON BETTS, Vicksburg, Miss.

I am indeed glad to give my testimony to the power of Truth. It is over three years since I began to look into Christian Science. It appealed to me at once as the truth for which I had long been searching. I was warned to let it alone, but I said I should read it, for I knew what it had done for my friends, the great change in them for the better in every way, and I wanted anything that would

Digitized by Google

make me as happy as they seemed to be. I had no prejudices to combat, for I had always joyed to meet a Christian, —caring nothing for the "denomination," though I loved my own church and was loyal to it; but its teachings had not brought peace to me, and I was striving so to live as to attain it after death.

I can never forget the joy that pervaded my whole being on realizing that I did not have to wait until after death to attain heaven; that there was a way of escape from what I had ignorantly believed was God's will for me here. Immediately on realizing the truth of Christian Science, I began to prove it for myself and for others. I have been especially blessed in having no antagonism to meet from my family. They were all glad for me to have something that makes me so happy. Several of them are reading Science and Health, and they are much impressed with the truth of its teachings. It is over two years since I became a member of The Mother Church. I have had many demonstrations of the power of Truth over error; indeed there is so much to tell that I cannot seem to make even a beginning!

With a heart full of gratitude to our Father-Mother God for sending us this truth, and to dear Mrs. Eddy, through whom we have received it, I press on.

Mrs. Sue E. Finney, Gadsden, Ala.

It is with deep thankfulness that I testify to the healing power of divine Love and Truth, as taught in the Bible and explained by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My attention was drawn to Christian Science by a friend, who told me of some one she knew who had been healed so wonderfully (so it seemed to us) that I felt sure there must be something in it. That was more than two years ago. Some time after this I visited the Christian Science reading-room, and attended a testimony meeting in First Church of Christ, Scientist, Leeds, Yorkshire, where I heard such earnest testimonies given that I should have felt it was simply impossible to doubt that the people were speaking the truth.

Afterward I had Science and Health lent to me. In reading I saw much of the beauty of its spiritual teaching, but could not follow its line of reasoning regarding the healing. I was advised to read it again, and at the second perusal I was so much impressed by its spiritual beauty that I forgot I needed healing. I was then asked if I would like help. I said I would, and when it was explained to me what this help was, that it was just the truth and power of God, I said I should like to be healed in that way. In March, 1908, I received my first treatment in Christian Science. The practitioner visited me three times. I received my strength in about ten days, and after the first treatment was enabled to put off glasses which I had worn for nearly six years. A skin disease from which I had suffered severely four years vanished, and I can now say that a stomach and bowel trouble is healed. Of this last I had a great fear, and it is only recently that I know the fear has gone. So I know I am healed.

I have been studying this beautiful gospel of healing for nearly two years, and my great desire is to go on studying it. What it will reveal to me in the future is often a matter of wonder. I only feel that Mrs. Eddy must have lived very near to God to see it all so clearly, to have strength and courage to give it out, and "having done all, to stand." I am very thankful for her pure life.

Mrs. Fanny Crowther, Hyde Park, Leeds, England.

I thank God for the healing of my children in Christian Science. My little boy had a badly injured limb, but is now perfectly well and running about as if nothing had ever happened to him. My little girl, who was troubled with heart weakness, also with her eyes, is now perfectly well. My oldest girl had trouble with her teeth. I went to a dentist with her, and he said that he could not extract them, on account of an abscess which had formed. He told me I would have to take her to a specialist; but the doctors could not do anything for her at the time, telling me that I would have to come back when the abscess went down. At that time we thought of God as our best friend and healer, and after three days' treatment in Christian Science she was never troubled any more, and is now well. Everything seemed to go all at once, and I am very thankful to God, and to Mrs. Eddy for Christian Science.

Mrs. Louis Meese, Chicago, Ill.

With love and gratitude to our beloved Leader, Mrs. Eddy, I submit the following testimony of healing, in the hope that it will be of benefit to some one who may be afflicted as I was. For about seven years I was addicted to the use of intoxicants; not very bad at first, but as time wore on the habit seemed to get a stronger hold on me, until at last I was a total wreck. That which should have been sought first was put off till the last. I had always said that if everything failed, I would give Christian Science a trial, as I had seen my mother healed through its ministrations some years before. After numerous material remedies had failed, I became totally disgusted with myself, and on May 6, 1908, decided to give Christian Science a trial. I at once called on a practitioner, and my healing was instantaneous. Since then I have not had the least desire for drink.

From the time of my healing I began the study of Christian Science. It has been our only physician, and it has met all our needs. I find the study very interesting, and also practical for every-day life. My earnest desire is to know more of its teachings, that I may hold fast to that which is good. Thanks be to God, and to Mrs. Eddy for her wonderful work. I am also grateful to all the members of the Butte Society, who have taken much interest in us.

William W. Hotop, Butte, Mont.

In gratitude for what Christian Science has done for us I would like to give this testimonial. Our baby was taken ill with croup, and her temperature was very high from Saturday till Monday. The doctor was much worried from the start, and Sunday night and early Monday morning was with us for some time. There seemed to be nothing to be done, and by Monday noon she was very low. The doctor then brought another physician with him, and we felt that there was little hope. I asked, "Is there any immediate danger?" and the doctor just turned aside. They both went into another room and closed the door. It was very plain that the end was near, and it seemed as if I would die. I was in a very weak state myself, just out of a sick-bed. We had lost our first baby, and as this was our only one, I was simply overcome with fear.

In this distress I telephoned to a friend who was a Christian Scientist, and she asked why we did not send for a practitioner. I spoke to my husband about it, and he was willing to have Christian Science. We telephoned at two o'clock in the afternoon and the practitioner started absent treatment at once, saying she would be with us at eleven o'clock. From the start we could see an improvement; the baby breathed easier, became conscious and took some food, and then slept for a long time. The practitioner came on the eleven o'clock train, and she and the nurse stayed in the room with the child while the rest of us went to bed. In the morning when we went in baby was sitting up in bed, playing with her toys, and at noon she ate heartily. By two o'clock she was up and dressed and as strong as ever. The doctor came while she was crawling under the bed for a marble, and he said he could not believe his eyes. It is

Digitized by Google

needless to say how thankful to God we were. It seemed as if our hearts would burst with gratitude—it was so wonderful! I told every one of it. I had always believed in Christian Science; but if I had not, this certainly would have been a sufficient proof.

A year ago the child was again taken ill, this time with acute lung trouble. We called a doctor to diagnose the case, but used no material remedies. She also had a bowel disorder from teething. We called the same practitioner, but she could only stay a short time and we needed one right here, as baby was very low and the illness seemed stubborn. My own fear was great, for she seemed not to gain at all, and as on the former occasion she had been healed so quickly, we expected the same results this time. We sent for another practitioner, and she stayed from Sunday until Tuesday. After she left, the baby gained very slowly under absent treatment, having several seeming relapses, when the fever would go up and to sense she would be much worse; but finally, after several weeks' illness, all was overcome through divine Love. To see her gradually but slowly get to be her own self under this treatment was very wonderful indeed, and it was hard to tell which was the more wonderful, the first cure or the last. In all this trouble I derived much comfort from the promise of divine protection in Isaiah xli. 10.

It is the wish of both myself and husband to be true Christian Scientists, for we know it is the teaching of Christ Jesus, and these cases of healing, among many others, are the signs which "follow them that believe."

MRS. R. C. ROBINSON, Bismarck, N. Dak.

A little over a year ago I was not only an unbeliever in Christian Science, but was greatly prejudiced against what I thought it to be. But in my case man's extremity has surely been God's opportunity. In March, 1908, my youngest daughter, nineteen years of age, passed on, a victim of tuberculosis. She had just graduated from school and had before her a bright and promising future. It was a very heavy blow to me and it was impossible for me to rise above the great sense of grief that every day seemed to increase. Driven almost to desperation, I decided to visit a Christian Science practitioner and see if there was any help for me in that faith at which I had many times ridiculed and scoffed.

I was suffering mentally and physically at the time of this visit, but the words of loving encouragement and enlightenment were sufficient to open my eyes to the unreality of the bondage I had been in, and I was lifted out of darkness into light, and to freedom from the sense of a great grief. The physical benefit was the overcoming of neuralgia, and later, through the study of the text-book, I was enabled to take off a supporter which I had worn for nineteen years, during which time I had suffered greatly from a rupture. Science and Health is now my physician, and I know that God, divine Truth and Love, is an ever-present help in time of trouble.

Words cannot express my gratitude for these great blessings. I am deeply grateful to our dear Leader, Mrs. Eddy, who has made it possible, through the study of Science and Health, for us to understand the Christ-teaching and healing as given in the Scriptures.

MRS. MARY STEINMAN, Watertown, Wis.

In the spring of 1908 I suffered from an affection of the head and throat. At times it was almost impossible for me to swallow any food. I called a Christian Science practitioner to treat me, and in two or three days I was entirely well. Both myself and my husband have been greatly benefited by Christian Science, for which we are truly thankful.—MRS. MARTHA REINK, Los Angeles, Cal.

FROM OUR EXCHANGES.

[*Interior.*]

When a certain teacher of philosophy said that only a very naive person could believe in the Bible, the assertion ought hardly to be regarded as heretical, since it had been said by our Lord Jesus Christ long before and was made by him a cause of rejoicing. Indeed, when our Saviour thought how he had been rejected by "the wise and prudent," but had been accepted by those whom the learned called in derision "babes," he thanked the Father expressly for this fact. The scholars of his day did not accept him. The fashionable did not accept him. The rich did not accept him. But the common people did. Eminent teachers asked in scorn whether any of the rulers had believed on him. But so far from being depressed by this, he "rejoiced in spirit" when he thought of it. The fact is that experts and specialists are inclined to take themselves far more seriously than can be justified by history. There was not a little reason for Festus fearing that so learned a man as Paul had lost his bearings; the progress of mankind has been achieved as often in spite of the schools as by their aid. The early church had the Sanhedrin and the court equally opposed to it, but its foundations were broad and deep in the religious instincts, affections, and hopes of the common people. And all the vast learning which was the boast of scribes and doctors of the law, who curled the lip in contempt of the fishermen and peasants that followed the Nazarene—what has become of it? One may read it in musty tomes in our great libraries, but it seems to the mind of today mere jargon.

[*Universalist Leader.*]

Perhaps it is well for us, in order that we do not obscure the deeper significance of the ministry of Jesus, that we know nothing of how he climbed up to God. Perhaps if we knew all that happened to him during the silent thirty years, the struggle might obscure his greater days. Our sympathy is with those who strive. Could we see the long and earnest efforts which must have preceded our authentic knowledge of his life, it may be that our attention would rest there in pity, to the neglect of that brief period during which he made his return to the hearts of men from his interview with God. This much at least is clear. As the story lies before us in its large and noble outlines, all the struggle is over, all the climbing is at an end. From the summit of his high purpose, from the final hour of his perfect illumination, we see him turn his steps toward the village homes, and wayside opportunities and crowded city streets, there to pour his great love out upon all who need it. Upon the hilltop of life, close to heaven, he filled his bowl, and going thence down to the lower levels where most men live, he emptied what he had gathered from the world above, as the woman emptied her alabaster box upon his feet. And for the same reason. He loved much and therefore he gave all, even himself. This, then, is the gospel, that one filled his soul with God, and then poured all that his soul held out upon weary, sinful men. This is the descent of love, that one should go up where God is, and turning back should bring all that God gave him in that holy interview, as his own gift to men.

[Hon. Seth Low, LL.D., in *Churchman.*]

Protestant Christianity has evidently reached a point where native churches must be founded in all the mission fields, and the grave question pressed home upon the World Missionary Conference at Edinburgh, and through it upon the churches, was nothing less than this, Can a divided Christendom give to the non-Christian world a united Christianity? It was the testimony of the Japanese, the Chinese, and the Indian members of the conference, that

Digitized by Google

their countries desire a united church and not a divided church. They very frankly said—what is easily understood—that the divisions of western Christendom do not interest them. This, then, is the portentous problem laid upon the Christian church at home—to find out how to work together at home, and to get together at home, in such a fashion as not to be a stumbling-block in the missionary field. Church unity was not the problem of the conference; but the conference made it so plain "he that runs may read," that church unity at home is essential to the success of the Christian missions in the non-Christian world. Every church represented in the conference has it now laid upon its conscience to find some way of securing, both at home and abroad, a unity that shall embrace all that is best in our various divisions, and that at the same time shall be effective in enabling Christianity to present a united front to the non-Christian world.

[*Christian World.*]

When we look back over history we find that new movements in religion are led, not by men who stand outside the old religion, nor by men superficially attached to it, but by the men who have gone deepest into its heart, and have been most determined to apply it to life. Outsiders have sometimes seen the defects of religious institutions and beliefs with a keen eye, and have criticized them with truth and acuteness; but they have never led the new movements. Theirs was the spirit of negation, and the spirit of negation can never do any great work in this world. No mere breaking away can ever lead souls to freedom; no mere burning of old charters secures liberty; freedom can only be found in a new committal and liberty in attachments. It is the positive, not the negative spirit, that leads the world onward. The positive spirit negates much, but always in the interests of construction, and with the view of re-expressing the old soul in new embodiments. The leaders of a new time, therefore, must live at the inward heart of the old time. The reformers of religion must have a vital appreciation of its inmost soul, and the reform must be an effort to save that soul from all expressions of it which are either directly unworthy or too small.

[*Christian Register.*]

One of the most obvious defects of good people who have attained to some measure of excellence in the pursuit of justice and the exercise of mercy is a lack of humility. Spiritual pride follows the praise of men as naturally as one's shadow follows him in the sunshine. Some good people who can be trusted to do their duty always so far as they see it, and whose benevolence is unbounded, are still so intent upon the good they are doing, are so conscious of the lack of cooperation which they expect and demand of their fellows, that they become almost impossible as companions and friends in the ordinary conduct of life. Those who do not share their sentiments in full measure and enter with ardor into their pursuits seem to them persons of a lower order. They need the added grace of humility to make them fit for "human nature's daily food."

[*Christian Intelligencer.*]

It is only the fineness and the wealth of principle, not the glory of place or the greatness of possession, that gives worth to a man or his work. And as it is foolish to spoil the prospects of a lifetime for the pleasure of a day, as some do, so it is tragic to mar the things that are timeless in a man's life for the sake of the things of time, as many do. If there are spiritual and immortal qualities, there can be no greater necessity than to take account of them. They should plainly have precedence over all things else in a man's conduct of his own life and his contact with other lives. The wise man takes these things as they are, and makes them first.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

More than two thirds of the work required to bring water to Los Angeles, Cal., two hundred and fifty miles across the Mojave desert with its Death valley, under the Coast range and into Fernando valley, has been completed. The city is doing the work and it will cost less than the estimate of twenty-five million dollars. Along its way the water will generate one hundred and twenty thousand electric horse-power, and three hundred million gallons of water can be delivered daily in the dry season to the city for domestic and manufacturing purposes and for irrigation. The city has built its own hydro-electric power plants, manufactures its own materials, has perfected an admirable organization, interested the whole population in the work, and by skilful fostering of emulation among the construction sections, has secured a degree of efficiency by which all records of tunnel construction have been broken once and again.

"If the carriers can prove that they are entitled to an advance they ought to have it. If it can be proved that they are not entitled thereto, they should be denied." With this statement Judge Brown, chief examiner of the interstate commerce commission, opened the hearings in New York city into the question of increases in freight rates in the territory north of the Ohio and the Potomac and east of the Mississippi river. The railroads have asked for increases averaging sixteen per cent, which, it has been figured, would cause an advance of half a billion dollars in freight rates for the affected territory.

The tariff, trusts, combines, and monopolies, and an increased money metal supply, are the three most potent causes for the advance in prices in the United States, according to the report of the minority members of the special Senate committee appointed during the last session of Congress to investigate and make a report on wages and the prices of commodities. Vigorous attack is made in the report of these three Democratic members on almost all the reasons given by the majority in its report, submitted some time ago, as to the cause for the advance in prices.

As a measure of economy the Government will dispense with the pass-book in the conduct of the postal savings bank system. Certificates will be issued in denominations from one to ten dollars, twenty and fifty dollars. On the margin will be punched the amount of each deposit, together with the interest due the depositor. These certificates will not be transferable.

The new laws of California, which afford direct nominations by vote in primaries for candidates for state offices, had their first trial last week. Returns show strength for the "insurgency" cause and the breaking of the control by railroad interests in state politics.

There are approximately seven hundred and thirty-one million acres of the public domain. Most of this area is west of the Mississippi, but there is a considerable area in Florida, Alabama, Mississippi, Michigan, and Louisiana.

James A. Patten and others, indicted in June by a special Federal grand jury for conspiracy in restraint of trade in the alleged Chicago bull pool in cotton, have been reindicted by a regular Federal grand jury.

In the international race at Marblehead for the President Taft and Governor Draper trophies, the American sonder class boats beat the Spanish challengers at all points.

The Government derived $28,728,015 from collections of internal revenue, including the corporation tax, during the fiscal year ended June 30 last.

President Taft has signed proclamations eliminating 432,340 additional acres of land from the national forests in Colorado.

International.

The city council of Prince Rupert, B. C., has decided to inaugurate the single-tax system as the basis upon which the new city's revenue will be raised. The decision to base taxation upon land values alone is plainly stated to have as its purpose the elimination of the "land speculator," and the council has expressed almost unanimous conviction that all the civic interests will be benefited by relieving of taxation all commercial enterprise and real estate improvements. Other communities are waiting to see if the new method of taxation will effectively dampen the ardor of the land speculator in holding desirable land out of the market while the city builders increase its value for him. The city of Vancouver adopted the single-tax theory of Henry George less than a year ago. Citizens doubted its wisdom, but at the end of six months a record-breaking building activity was the result, over six million dollars being the registered valuation of new constructions, only a million less than that of the entire previous growth. Winnipeg, Manitoba, has also more recently than Vancouver started in upon a similar path.

A sum amounting to at least ten million dollars, to be spent during the next two years on the Turkish roads, was voted during the last session by the Turkish Parliament. Detailed plans, showing how the roads are to be built, were drawn up by the minister of public works, the French principles of road construction being largely followed. According to these plans over sixty-four hundred miles were to be laid divided into ten sections, eight of which would be in Asia Minor, the remainder being in European Turkey.

Representatives of the International Cotton Federation called at the India office, London, recently for the purpose of bringing to the attention of the Indian government the necessity for encouraging the growth of cotton in India and improving the quality of the product. It was pointed out that the amount of cotton goods exported from Great Britain represented half the total exports of Germany, and was within twenty million pounds of the value of the total export of manufactured goods from France.

The great cross-country aeroplane flight of four hundred and ninety-four miles from Paris to Issey was won last week by M. Le Blanc, who thus won the twenty-thousand-dollar prize offered by *Le Matin* and other prizes that bring the total up to forty-seven thousand dollars. He covered the distance in an actual time of eleven hours and fifty-six minutes. M. Aubrun, his only competitor at the finish, took thirteen hours and twenty-seven minutes for the distance.

Since the beginning of the year the Canadian Pacific railway's land sales in Alberta have averaged one million dollars per month, the total sales up to date being upward of two million acres. Almost all of the irrigated land has been disposed of, but the company is expending an immense sum in extending its irrigation system and expects to have more irrigable land for sale within a year.

Sir Ernest Cassel, the English financier, has arranged to establish a foundation of one million dollars, the income from which is to be used for the benefit of poor Germans seeking employment in England and poor British subjects seeking work in Germany, who are without money for their support. The new foundation will be in memory of the late King Edward of England.

A disastrous fire swept over a portion of the Brussels exposition last week, causing a loss estimated between six and ten million dollars, which was much less than the first estimates.

President Montt of Chile, who recently visited the United States and called upon its President, passed away at Bremen, Germany, last week.

Florence Nightingale, the heroine of the Crimean war in 1854-1856, has just passed away in London.

Industrial and Commercial.

The blueberry season of Maine has begun. The land devoted to the industry lies mostly in Washington county, where there are about one hundred and fifty thousand acres known as the "blueberry barrens." Individual owners of the "barrens" receive as rental one half cent per quart for all the fruit gathered; the pickers receive from one and a half to three cents per quart; those who lease the land and haul the fruit to the canning factory or to the station for shipment get one half cent a quart. The canning is largely in the hands of a few leading packers. The largest of these factories has a daily capacity of seven thousand bushels.

Notwithstanding inflated prices recently demanded for crude rubber in the open market, the United States, during the fiscal year ended June 30, imported in pounds approximately 17.9 per cent more rubber than in 1909, the highest previous record. In value there was imported more than twice as much as in 1908 and 63 per cent more than in 1909. This year, as in the previous year, rubber led all other articles of import in value. This growth has been largely due to the expansion of the automobile industry.

The United States Steel Corporation plans, it is reported, the establishment of a big steel plant at Ballard, a suburb of Seattle, Wash. It is understood that the new plant will cost at least five million dollars, and that one thousand men or more will be employed.

The quantity of sugar consumed in the United States during the fiscal year just ended was seven billion five hundred million pounds, or an average of eighty-two pounds *per capita*.

The importation of luxuries into the United States during the last fiscal year, ended with June 30, amounted in value to a quarter of a billion dollars.

A new invention has been given successful trials in England whereby it is possible to telephone from trains running at considerable speed.

It is estimated that the wheat crop in Saskatchewan will aggregate about sixty million bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"MORE THAN CONQUERORS."

WILLIS F. GROSS.

CHRISTIAN SCIENCE teaches that the truth of being remains forever the same. When reality is reached, the varied experiences of human existence will have passed away and consciousness will recognize only the forever unfolding of infinite good, wherein is no inharmony or imperfection, but every effect is the result of perfect cause and each created thing is in its right place and is, in harmony with all else, serving the purpose of good. To gain the true consciousness of being wherein all is good and evil is unknown, should be regarded as the most important thing in life. The Master said, "Seek ye first the kingdom of God, and his righteousness;" and he added that all things necessary to the harmony of present human experience would be provided. Mortals have not always recognized the importance and truth of these words of him who spake as no other man ever spake, hence they have many times failed to derive the greatest good from the experiences of daily life and have failed to improve the opportunities afforded them to gain a clearer sense of man's eternal being.

Those of us who have some practical knowledge of Christian Science have learned from experience that it is possible to escape much of the discord and suffering that was hitherto regarded as inevitable, and what is not avoided can be endured in a manner that results in the attainment of a larger sense of good. Mortals feel that they suffer many things in vain. Christian Science teaches that this should not be so. Every experience is an opportunity to learn some good, and the mortal will be better if the experience is met in the right way.

We read in "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 304): "It is ignorance and false belief, based on a material sense of things, which hide spiritual beauty and goodness." As ignorance and false belief are eliminated from human thought the beauty and harmony of real being are recognized. False belief is not overcome if it is believed to be true; its falsity must be recognized, for not otherwise can it be dealt with in an effectual manner. Christian Science teaches that false belief is the primal cause of all discord and suffering and that Truth is the remedy. The truth of this teaching has been demonstrated for nearly half a century and the number of those who find help in Christian Science is increasing daily.

The error of making God responsible either directly or indirectly for discord and suffering receives a well merited rebuke in Christian Science. This Science renders "to Cæsar the things that are Cæsar's, and to God the things that are God's," and herein lies the secret of its success in dealing with all forms of evil. It teaches that the understanding of Truth is the effectual remedy for all error, mental, moral, or physical. These evils are no part of reality, and the harmony and perfection of real being are never affected by the discords of mortal existence. Paul declared that nothing could separate him from God, and this assurance gave him strength and wisdom sufficient for all that was required of him and made him one of the most effectual ministers of the gospel. The gospel as he taught it had a practical application to the things of daily experience. When the affairs of life are regarded from the standpoint of the gospel, one begins to discern the deep meaning of the apostle's words when he said, "All things work together for good to them that love God."

When a little understanding of Christian Science is gained, the student learns to value his experiences because he is able to learn the needed lesson, and he does not suffer in vain. It has been said that experience is the best teacher. One thing is certain, that what a person learns from experience is not soon forgotten. If the experience is a disagreeable one, it is not enough that the inharmony and discomfort be gotten rid of. If the indulgence of evil produces discord, the indulgence should cease, and if one believes that he suffers on account of evil from without, he should learn to dwell "in the secret place of the most High."

As he went about preaching the gospel and healing the sick, Paul encountered the opposition of error in all its forms, but none of them nor all of them could turn his thought from Truth or rob him of the realization of God's presence. With the courage of a deep-seated conviction he declared, "Nay, in all these things we are more than conquerors." How much it means to gain the victory over evil, to break the shackles of sin and sickness and be free! How great is the blessing when one can realize that he is more than conqueror; when he can know that he has not only gained the victory over evil, but he has gained a clearer realization of Truth and God is more to him than ever before! If one is called upon to learn from experience, he should learn the lesson so well that future efforts can be devoted to problems farther along the way.

The manner in which one regards his experiences has much to do with determining whether his progress shall be fast or slow. If there is a spirit of complaining and valuable time is lost in wondering why he has so much to contend with when others seem to have so little, he is certainly not improving his opportunities and it can hardly be expected of him that he will come off more than conqueror. Paul was never heard to complain because of the hardness of his lot. On the other hand he said, "I take pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake: for when I am weak, then am I strong." In all the walks of life the successful man is not the one who encounters no opposition, but the one who is able to master the things that seem to stand between him and success and come off more than conqueror. And so it is in that most worthy of all undertakings, the working out of our salvation from all evil.

The genuine Christian Scientist is learning that "every trial of our faith in God makes us stronger" (Science and Health, p. 410). He regards evil as a temptation to believe in the reality of something apart from God, and so he begins to realize in some degree what the apostle James meant when he said, "Blessed is the man that endureth temptation."

ABSENT TREATMENT.

JOHN L. RENDALL.

THERE seems to be a disposition upon the part of some who are not thoroughly informed as to what Christian Science is and what it includes, to question or doubt as to the possibilities of any one's receiving help or healing through what is called "absent treatment." This doubt originates mainly in the old systems of healing, wherein the presence of the physician is considered necessary, and those who entertain it fail to grasp the fact, as taught in Christian Science, that the most available potency is that of infinite Mind, which is ever present and all powerful.

Those of our brethren who belong to other Christian churches do not think it strange or incredible that a prayer for spiritual help should be answered, even though the one prayed for might be at a considerable distance from the one who prays. In this instance it is recognized that God answers prayer and there is some concept of the forever fact that God is everywhere present. Why should it not be as consistent and reasonable to believe that a right prayer, one of understanding of God and man, for the healing of the sick, even though at a distance, is as surely answered by infinite Love as is the prayer for the sinner or the one in need of spiritual enlightenment? The experience of Christian Scientists proves to them conclusively that to Mind there is no distance, no space, no location: that the one infinite Love is everywhere present, and that, in keeping with the promises given in the Bible, "the prayer of faith shall save the sick."

In Science and Health (p. 487) Mrs. Eddy states: "This faith relies upon an understood Principle. This Principle makes whole the diseased, and brings out the enduring and harmonious phases of things." Christian Scientists are recognizing clearly that in order to bring about right results through prayer there must be a correct and scientific basis from which to work, and Mrs. Eddy has defined this basis as follows: "The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (*Ibid.*, p. 259). From this basis of perfect God and perfect man every conclusion in Christian Science is logically deduced. The Christian Scientist knows that because man is the perfect idea of "perfect Principle," and because this perfect idea must reflect the essential nature and character of its Principle, man is not sick, neither is he a sinner. It is therefore a mortal concept or false belief which alone constitutes the so-called sick man or sinner.

A Christian Science treatment is a declaration of the truth about man: it is intended to destroy every sense of error entertained by any individual. Intelligently given, it goes out with the potency of infinite Truth, in accordance with the Scriptural statement, "So shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it." Recognizing clearly that God, Mind, infinite Principle, governs man and the universe, and that this government of Truth cannot be impaired, cannot be disturbed or infringed upon, the Christian Scientist conforms his mental argument or prayer to the destruction of the false claims which an erroneous mortal sense presents.

There is abundant proof that a Christian Science treatment reaches those who are absent, and that its ministrations are as efficacious in the destruction of error for a patient at a distance as for those who are present at the time they are treated. There are several instances in Scripture which may be taken as authority for "absent treatment." For example, Naaman the Syrian, who, when he went to the land of Israel to be healed of leprosy, expected to see Elisha the prophet. Elisha, however, knew that it was not necessary for him to see Naaman, to lay his hands upon him, or to have material contact in any way; he knew the truth about man sufficiently to bring about the healing which Naaman desired, but it had to be in accordance with Truth's methods and not with those of personal sense.

Jesus healed both the centurion's servant and the nobleman's son by absent treatment, and thus established a precedent which no Christian should ignore. History does not record any better or more scientific healing than these cases mentioned. The history of Christian Science is replete with instances of the fact that "it is the spirit that quickeneth; the flesh profiteth nothing." Mrs. Eddy's spiritual discovery of the Principle of Christian Science has made it possible in this day and age for man to help his brother in a much larger degree than ever before, because of the enlightened spiritual understanding which comes through a careful study of the Christian Science text-book, "Science and Health with Key to the Scriptures," and because of the illumination of the Scriptures resultant therefrom.

THE PREPARATION OF EXPERIENCE.

FRANK P. EBERMAN.

IN that classic and successful Christian Science treatment which resulted in the healing of Job, Elihu instructed his patient almost at the outset that "God speaketh once, yea twice, yet man perceiveth it not;" and Cowper must have had a hint of the same truth when he sang,—

> God moves in a mysterious way
> His wonders to perform.

On page 107 of Science and Health Mrs. Eddy writes, "God had been graciously preparing me during many years for the reception of this final revelation of the absolute divine Principle of scientific mental healing;" and in a smaller, though no less significant way, many Christian Scientists, in the light of subsequent understanding, can look back upon much experience unusual enough to sidetrack their orthodoxy and turn consciousness toward this final solution of all human riddles, "Man is not material; he is spiritual" (Science and Health, p. 468).

Among several such preparatory experiences the writer recalls one that was especially calculated to awaken thought. After some years of work and worry on a farm, with prices going down and horses and implements and health wearing out, I became alarmed over a physical ailment which daily grew more persistent and severe. Having driven some distance to the drug-store one day in search of relief, a certain remedy was recommended as being a sure cure. Its praises were sung above all others; in fact, it could be depended upon absolutely to do the work. I got it at once and drove home happy. Why had I not done this before? I was exuberant,—all fear had disappeared, and I placed the panacea on a shelf, intending to "apply as directed" at the earliest possible moment; but that moment never came, for when I stopped to consider the situation again, the trouble had vanished and it never returned!

Within a few days, a dear one sent us a copy of Science and Health, and I was not long in discerning that my relief had not come from the remedy, which had never been used, but from mortal belief, my own as well as the belief of others, regarding the remedy. My experience and the reading of the book directed thought to the Scriptural statement that "the preparations of the heart . . . is from the Lord," and obedience to the vision has enabled me to overcome many of the evils of those days. The hard cider of our huskings and frolics no longer allures. The tobacco we raised by the ton and used in a riot of abundance and filth, has gone from my life, and I thank God for Christian Science, for its cleanliness, for its sanity, for its love, for our Leader's wisdom in precept, for her firmness in example, and for the noble and efficient men and women who are walking the earth today in the light of her message.

BEING LIKE-MINDED.

VIOLET KER SEYMER.

THERE is only one way in which the human race can become "like-minded," and that is by becoming divine-minded; by patiently emerging from the chaos of the carnal mind, so called, into the perfect order of that Mind "which was also in Christ Jesus." There being in reality but one Mind, and that Mind at peace with all its ideas, human warfare will cease and all nations be drawn together into one fellowship only in the degree in which each individual draws nearer to that one Mind, thinks and lives and acts in conformity with its inherent perfection. The Father-Mind blesses all its ideas, all its children, equally, and if there are those who are not inheriting the blessings, it is perhaps because they have not yet learned how to seek them. In pressing toward this common goal, each must keep his gaze fixed upon it, resisting the constant temptation to become absorbed either in his own or his neighbor's opinions, theories, triumphs, or failures.

For instance, in congregational singing, the effect leaves much to be desired if the singers listen to each other rather than to the organ, which is there to lead the voices. Each one's desire should be to keep in strict unison with the organ, and if all accomplished this, the hymn would sound as if sung by one voice. Sometimes one tries only to sing in time with his neighbor, who may be singing out of time; another is so absorbed in the words that he forgets to keep time with the organist. In concerted music, that orchestra alone is effective whose members keep their attention riveted on the conductor. So it is with our thinking: it needs to be done under the leadership of divine Mind, and no other. Our text-book enjoins us to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261); and Jesus said of his true followers: "A stranger will they not follow, but will flee from him: for they know not the voice of strangers. . . . I am the good shepherd, and know my sheep, and am known of mine."

The so-called carnal mind constantly seeks to divert our attention from the one divine Mind, and in the measure in which it succeeds, the ever-ready counsel of the "still small voice" of Truth is lost to us. Excessive criticism or excessive praise of another may mean that we are removing our gaze from the spiritual and straying into the by-paths of material belief, accepting lower standards, following misleading advice, collecting a lot of conflicting human opinions and trying to get order out of what must always be chaos. There is no disorder save in what is called mortal mind; there is no absolute order save in the divine Mind. Human beings have only opinions to offer, whether about truth or error, whereas the Father-Mind gives us facts, and moreover gives to each one of us the same facts, so that in drawing us to itself, it is also drawing us nearer to each other.

The study of the Christian Science text-book is neutralizing each one's warfare both with himself and with his neighbors, reducing friction to a minimum, improving business relations, undermining war; and it is doing all this by teaching us how to become like-minded. Let us suppose that one hundred Christian Scientists, strangers to each other and representing many different countries, should meet in a room and for one hour confine their conversation to the fundamental teachings of their text-book; would it not be found that each was in perfect agreement with all the rest? Would they not feel that they were among friends, all possessing like thoughts, like aspirations, like desires, and following identically the same mental methods in attaining the fruition of those desires? In an emergency, would not all find themselves turning with one accord to the "scientific statement of being" (Science and Health, p. 468), and trusting to its effective operation? But if, at the end of an hour, those same hundred individuals should start a discussion on temporal affairs, at once they would all be differing from each other, and this fact would indicate that there is no absolute unity except when we meet on the common ground of the divine Mind and its eternal facts. It is here that mutual love and forbearance are indispensable, in order that the friction resulting from differing opinions about temporal matters may be allayed. We close the door on temptation if we discuss temporal affairs as little as possible, if we agree to differ in love, and meanwhile seek to gain, through communion with the divine Mind, the common solution of our common problem, whatever it may be.

Another great factor for world-wide unity is the circulation of the Christian Science periodicals, notably so, *The Christian Science Monitor*, which deals with all the affairs of the day and at the same time exhales an atmosphere of peace, hope, progress, and regeneration. As the gulf-stream finds its way through many a sea, so this ideal paper circulates through many countries, bearing the promise of a wider love between man and man and consequently between nation and nation, a closer unity with God, and therefore a more practical and genuine unity between men. It brings to all a clearer knowledge of God and of their own true selves. Since it is evident that the ideas of divine Mind cannot quarrel, or even disagree, we must strike at the root of wrong thinking by declaring, on scientific grounds, the non-existence of a carnal mind, and gradually prove the statement by causing evil thoughts to retreat out of our own consciousness before they have added to the world's chaos in the form of deeds. There cannot be two minds, if one is infinite.

Perhaps a little illustration may serve to show how the tares and wheat of thought may be separated, "the one to be burned, the other to be garnered in heavenly places" (Science and Health, p. 535). Metal is tested by jewelers on a little black stone, on which the metal is scratched, leaving a bright streak on the stone; a liquid is then applied, which leaves the streak untouched provided it was made by a pure metal, but which at once effaces any impression left by a worthless composition. Thoughts can be tested in like manner on the touchstone of Truth. We can ask ourselves if this or that thought is traceable to the divine Mind. If not, Mrs. Eddy tells us, then these thoughts "are impotent, and they should appear thus" (Miscellaneous Writings, p. 252). If they are of the divine Mind, then they are bound to be harmonious in cause and effect. Each one who thus clearly reasons and faithfully acts, is doing his part to clear away the elements that make for discord in his own heart or home, in his community or country, and is helping to establish the kingdom of peace on earth.

A further incentive to individual effort is the recognition of the fact that whatever error we allow to hinder our own progress, hinders and delays the world's escape from evil; while whatever evil is replaced in our own individual thinking by a clearer view of Truth, at the same time clarifies the whole of mortal mind. In the midst of seemingly discordant conditions it is ours to uphold the spiritual ideal, to maintain the fact of spiritual harmony. The more faithfully each individual sees himself as part of a whole and does his part, the sooner will the human race become like-minded and rejoice mutually in the recognition of the spiritual idea and in the fulfilment of Christ Jesus' promise: "And I, if I be lifted up from the earth, will draw all men unto me."

THE OPEN VISION.

HELEN HARTWELL BAKER.

FROM earliest childhood, that is, after I was old enough to wonder about things which I read or heard, I was greatly impressed by a statement in the third chapter of the first book of Samuel: "There was no open vision." I used to try to puzzle the meaning of it out in my small head, and

Digitized by Google

once I heard a sermon on that subject, but it did not satisfy my craving to solve the mystery which enshrouded it, for to my childish sense one's vision must necessarily be open—if one's eyes were open.

As I grew older, I often wondered about that verse; and as time went on, I began to realize somewhat of its meaning. I could not believe,—I could not think things out. For several years I was an invalid, away from home and friends, and to me "there was no open vision." Yet I clung to the remnant of faith which I had always had,—that things would all come right somehow, or else they would not; and whichever way it was, it would be all right,—a sort of Stoic philosophy which kept me very cheerful. Still, I knew I was not satisfied, and I was always reaching out for something more,—that open vision which ought to be but was not.

Then Christian Science came into my life, and I began to see light, very slowly and with many seeming eclipses, but at last I found that where the open vision begins, one cannot become blinded by a return of false beliefs. On a recent railway journey I had a sudden opening of my mental vision to the wonderful symbolism which is all about us. The train had been running up a long steep grade between high, rocky walls and with a cloudy sky hanging over us—when suddenly we shot out of our rocky frame into a smooth upland, and outspread before us lay a wonderfully beautiful landscape of gently rolling hills and a tiny river.

Like an inspiration came the thought, Here is the open vision, while behind are the clouds of material sense, the hard up-hill struggle for something we know not what; and here, too, is the reward for persistent labor under heavy odds—here is the open vision which reveals all that God created and which He called good. How great should be our gratitude to our Leader for giving us Christian Science, which opens our vision to all that is good and beautiful in God's universe!

PENALTIES SELF-IMPOSED.

G. B. POTTER.

In studying the Lesson on "Everlasting Punishment," I came upon this passage from Science and Health (p. 542): "Sin will receive its full penalty, both for what it is and for what it does." This brought to my thought an experience which I had one summer, while on a vacation.

A friend seemed very anxious that I should climb a certain mountain near by, as the view from the top was grand. I did not want to make the trip, but was in a position where I could apparently do nothing else than consent; so I went, but most reluctantly. It was a hot July day, and was becoming warmer as we ascended. All the way up I resented the insistence upon my going, until I was in a much stirred up condition of thought. At last I declared that I would not go one step farther; so I turned and began to retrace my steps, but I had gone only a short distance when I fell, injuring my ankle very badly. For an instant I was indignant, then self-pity poured in upon me, and the pain was so great that I was ready to weep.

I then tried to realize the truth, and to know that a child of God could not be hurt, when it suddenly came to me that a child of God would not have any sense of resentment in his own thought, and I certainly had felt most resentful. I then began to see more clearly and to look within, in order to realize my own condition of thought. Resentment had brought its own punishment, and as soon as I had cleared my thought of this discordant feeling I was relieved of the physical suffering; I could stand on my foot without difficulty, and walked to the base of the mountain, then five miles home to the neighboring village. I am sure, had I gone on the trip in a more willing frame of mind, trusting in divine Love to deliver me, I would have been spared the fall and possibly even the climbing of the mountain.

If circumstances seem to force us into a position that is disagreeable to us, the question is how we shall meet it. Shall it be by resentment, or by turning to divine Love to deliver us? Until the wrong thought had received its full penalty and caused me suffering, I did not realize my own state of mind and did not turn from it and handle it in the right way. So the sinful thought of resentment receives its full penalty "for what it is and for what it does," but when we turn to Truth, the sin and suffering both disappear, as divine Truth annihilates all error.

"WHAT THINGS SOEVER YE DESIRE."

MARY L. HENLEY.

What wonderful reassurance of our faith is contained in that far-reaching promise of the Master, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." True substance cannot be acquired nor accumulated; it is reflected when absolute faith and spiritual understanding unite in realization. Only the spiritual understanding of man's inseparable unity with God, divine Mind, can produce the faith necessary for the fulfilment of this promise,—the understanding that only immortal thought and not the desire of mortal mind can claim the inheritance of the divine kingdom. Could the manifestation of the desires of mortal mind be insured, the universe would be chaos, without Principle or law, and men would be without hope. To believe that the desires of mortal mind can be rewarded, is to deny that all power belongs to God.

Unwittingly we often look for the realization of certain desires which spiritual sense shows us are but counterfeits of true desire, mortal concepts of good; therefore we must learn to distinguish "the line of demarcation between the real and unreal" (Science and Health, p. 505). Error must be detected and Truth be recognized; desire or preference for a specific object or course of action must give way to desire for what is right; and dread, dislike, prejudice, must vanish not only in willingness, but in love and joy. In short, only as we reflect the divine consciousness, in which impersonal, impartial desire for universal good predominates, can we claim this promise of Love. Nor can human will-power aid in this destruction of the mortal, but spiritual understanding. Constant recognition of the coincidence of divine Principle and the spiritual idea leaves no channel through which mortal desires can be expressed. As this fact becomes manifested in various human activities and relations, we realize to a greater extent the infinitude of spiritual creation and our individual sphere of action is enlarged.

To entertain, consciously or unconsciously, a belief that there can be any good desire other than that which emanates from divine consciousness, obstructs one's vision, impedes progress, and narrows his sphere of human experience and action. To eliminate material personality in the realm of desire, as in all other fields of thought, is but to forsake matter for Spirit and prove by demonstration the truth of Mrs. Eddy's statement: "This scientific sense of being, forsaking matter for Spirit, by no means suggests man's absorption into Deity and the loss of his identity, but confers upon man enlarged individuality, a wider sphere of thought and action, a more expansive love, a higher and more permanent peace" (*Ibid.*, p. 265).

To mete and sway a bounded sphere
With patient heart and free,
And harvest all his now and here,
Is man's infinity.

THEODORE C. WILLIAMS.

SELECTED ARTICLES.

[Alfred Farlow in *New England Magazine.*]

Mrs. Eddy, through a new form of higher criticism, which explains away many of the irrational interpretations of the Scripture and affords a scientific and demonstrable interpretation of God's Word, has saved the Bible for those who were troubled in heart. The premises of Christian Science, like all truly scientific propositions, are very simple when once understood, and they appeal to one as his very own. The major premise of the Christian Science syllogism is the Scriptural teaching, "God is Spirit."—Life, Truth, Love, the only substance. This spiritual idea is the foundation of all real understanding, for since God is the only cause and His creation the only effect, there is really nothing to know but God and His creation, and a correct understanding of God, the cause, includes a direct understanding of His creation. Thus we note that Christian Science is the Science of all sciences, and includes all real knowledge. The Christian Science teaching concerning God is Scriptural, but Mrs. Eddy has advanced beyond the abstract knowledge of Spirit, Life, Truth, Love, and has discovered the demonstrable meaning of these terms.

There is but one explanation of this discovery; namely, this, that Mrs. Eddy lived near enough to God to receive an illumination respecting His nature and manifestation, the allness of Truth, the unreality of evil. She must have been especially sensitive and responsive to spiritual things, and this being understood, one no longer wonders why she could persevere in the face of such a multiplicity of human obstructions, disappointments, and discouragements, with no promise of reward from a material point of view. She had come to understand the psalmist's words, "I shall be satisfied, when I awake, with thy likeness." She had discovered and demonstrated the fact that not only goodness and spirituality are in evidence as mortals awake from the sleep of materialism to spiritual life, but that health and every legitimate harmony follow as a consequence. Mrs. Eddy perceived that, although mortals upon every hand were struggling to improve their health and happiness by means and methods entirely apart from God, human affairs and conditions could not be really and substantially advanced except as God is more fully relied upon and the Christ more fully honored, in keeping with the Scriptural teaching, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Mrs. Eddy's thought has elevated human consciousness to a position from which it may give all glory and honor to the infinite creator. Respecting this, she has said, "If any system honors God, it ought to receive aid, not opposition, from all thinking persons. And Christian Science does honor God as no other theory honors Him, and it does this in the way of His appointing, by doing many wonderful works through the divine name and nature" (Science and Health, p. 483). The exalted and sweeping declaration that Spirit is the only Life, substance, and intelligence, may be startling to those who have just heard it for the first time, but upon sober second thought the state of being which it foretells is recognized to be the ultimate of Christian knowledge, and when demonstrated is proved to be the El Dorado of Christian hope.

What, therefore, shall we say of the greatness of the conquest of the individual whose explorations in the spiritual domain have brought her to the acceptance of this, the highest possible ideal! Christian Scientists, as well as others, still have much to accomplish before they shall have acquired a perfect realization of the true nature of Deity, and attained to the full stature of Godlike manhood, but the statement of spiritual truth which Mrs. Eddy has given; namely, that "God is Love" (*Ibid.*, p. 2) and Love is the only real substance, can never be improved upon. Her absolutely Christian and "scientific statement of being" (*Ibid.*, p. 468) has been declared to be the highest ideal of Christian teaching. Man is here correctly described, and when he is fully demonstrated mankind will realize the full fruitage of Christianity.

Mrs. Eddy's teaching appeals to the highest moral sense. It is impossible to adhere thereto without moral advancement. Its demands are so sweeping as not to admit of the slightest material indulgence; it acknowledges and demands the fulness and completeness of the spiritual life. Truthfully has she declared, "It is Christian Science to do right, and nothing short of right doing has any claim to the name" (*Ibid.*, p. 448). No one can possibly find fault with the sacrifices of a Christian Science life when he has learned to apply his new understanding to daily problems and thereby realizes what Christian Science gives in the place of that which it repudiates. Nothing is gained by adhering to the insubstantial and fleeting things of mortality at the expense of spiritual growth.

Mrs. Eddy's entire plea has been in behalf of human emancipation, release from sickness, sorrow, and sin, and she has asked this in Christ's name. She has disregarded the quite generally accepted conclusion that the day of "miracles"—spiritual and hence marvelous results—is passed. She has contended for the Scriptural teaching that permanent bodily improvement is contingent upon spiritual regeneration, and she is rapidly winning the endorsement of the world at large. Her ideas have permeated human consciousness, and ministers are everywhere preaching more or less the ideas of Christian Science which have accidentally or incidentally found lodgment in the thought of others.

The optimism of Christian Science has permeated social and business life, and faith in the ultimate triumph of right is steadily gaining ground. The teaching of our Lord, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," has become an axiom in the mind of an ever increasing number, and the nations are certainly reaching toward Christian Science, even before they have become settled in their opinions as to the advisability of the name. Although she has undertaken a task which was beyond human comprehension, Mrs. Eddy has never faltered. She has known no defeat, recognized no discouragement, but trusting in God she has fought on with infinite patience. Her genius for organization, her practical wisdom in the conduct of her campaign, has become proverbial, and her fame in this line is not a mere matter of personal observation, but is supported by that unmistakable proof which is ever open to public scrutiny; namely, what she has actually accomplished.

It is not necessary to say that Mrs. Eddy is wise, for her wise conduct, the only essential evidence, has precluded the necessity of such a declaration. One must be wise before he can act wisely. Mrs. Eddy's persistent industry and unfaltering confidence in Truth's final overcoming has been supported by her clear and certain knowledge of God and her consequent understanding of the requisites and possibilities of a Christian life. She has known all the while that there could be no failure, that Truth must and will triumph, because even now Truth is triumphant, and error has no more succeeded in interfering with God or His creation than has the fog succeeded in interfering with the sun, although temporarily interfering with our view of it. Mrs. Eddy can truthfully prophesy the final supremacy of good and the complete downfall of all error, because she knows that even now "God [good] is All-in-all" (*Ibid.*, p. 113), and that the mortal sense of being has no God-given existence.

Mrs. Eddy's faith in God, her God-supported industry and perseverance, have become characteristic of her following, and hence of the Christian Science movement; and thousands of up-to-date individuals, noting the Christian

Scientists' departure from material practices and usages and the harmony resultant therefrom, have been emboldened to follow their example, even before they have learned the spiritual premises of which such practice is the logical outcome.

[Frederick Dixon in *Cambridge* (Eng.) *Independent Press.*]

Christian Science is not the nonsense which some people attempt to travesty it as. It is simply the most thorough-going idealism ever opposed to materialism. The materialist sums up his belief in the fact that nothing exists but the forces inherent in matter, and the doctors who accept the materialistic standpoint treat their patients just as if they were composed of so many pounds of matter to which mind was incidental. The natural science idealist, on the other hand, maintains that matter is the subjective condition of mind, or, to put it more clearly, that the body is simply a mental concept. Now, if the body is simply a mental concept, it follows absolutely, irresistibly, that the only existence which bacilli can claim is that of a mental concept.

In these circumstances, to give a man drugs or to operate upon him is simply to adopt the clumsiest possible method of convincing the mind. Unlimited ridicule has been poured on Berkeley for making tar-water what Mr. Balfour has termed the universal panacea. Berkeley, however, was as strictly logical as he was illogical. He was logical because, if the mind has to be convinced by the use of a drug, it may as well be convinced by persuading it that tar-water can rid it of its concepts of sickness just as well as by convincing it that you must ring the changes on all the various drugs in the pharmacopœia. He was illogical, inasmuch as it is illogical to tell a man that in order to change his mind it is necessary for him to submit to a physical process. If, as Berkeley said, matter was nothing but the subjective condition of mind, then, in order to change the material concept, what was necessary was a change of mind, and it was ridiculous to attempt to bring this about by physic and not by argument.

The Christian Scientist is a thorough-going idealist, but he differs totally and absolutely from the mental scientist, inasmuch as he declares that the mind which produces sickness is incapable of destroying it. The mental scientist claims that the human mind, in which are the mental germs of sickness, can eradicate those germs and produce health, by some process of suggestion. Now, the human mind supposed to work in this manner was typified by Jesus as a house divided against a house, which he declared could not stand. It contains, in itself, the belief in the power of good and evil, themselves the fruit of the tree, the eating of which the writer of the Jehovistic document of Genesis declared meant death. In plain English, the claim that the human mind can be exerted for good and for evil is the claim that good and evil are coequal powers, and that sometimes one will weigh down the scale and sometimes the other.

This view Christian Science combats as strongly as it combats the purely materialistic view. When a man who has been sick is cured by mental suggestion, or by will-power, he is simply exchanging a belief of sickness for a belief of health, and that belief of health can at any moment relapse into a belief in sickness. This manifestly is not healing; it is simply a temporary substitution of a better belief for a worse. Healing does not consist of temporarily turning human thought into another channel; it consists in the destruction in the human consciousness of the mental germs which have produced the sickness. When this takes place a man is permanently healed.

This healing Jesus described as the casting out of devils with the finger of God. In other words, he explained that true healing could not be brought about by the same agency which produced disease. The agency by which it could be brought about he described elsewhere, and he summed up his description in the phrase, "Ye shall know the truth, and the truth shall make you free."

[From an editorial in *Toledo* (O.) *Times.*]

To make them good and healthy citizens, the school children of this country need instruction in but one thing, right living, which includes right thinking. Frightening children with the fear of tuberculosis or any other disease would have anything but the desired result. The best physicians recognize that the most dangerous epidemic in the world is that of fear. When a physician calls on a patient his first endeavor is to establish confidence. If the physician is not trusted by the patient, his medicine will do little good. And more and more medical authorities are teaching the necessity for sanitation in cities, houses, and personal lives as the only sure preventives of disease. Any instruction likely to fill with fear the mind of a child, is harmful instruction. Any instruction calculated to teach him to take care of his body and keep his mind ventilated with good thoughts and high purposes will have good results.

[Edward W. Dickey in *Fresno* (Cal.) *Republican.*]

I have read your editorial of March 31, in which you suggest that a competent experimenter conduct a series of experiments to test Christian Science as a healing agent, said experiments to have "no bearing whatever on the merits of Christian Science as a religion," and I ask space in your valuable paper to give some reasons against the feasibility of such a step.

Christian Science Mind-healing is an indissoluble part of Christian Science as a religion. All healing done under the name of Christian Science is but an expression of the worship of God. This religion teaches, as the Bible declares, that "the prayer of faith shall save the sick," and all Christian Science healing is the result of prayer, or reliance upon the one infinite God. To lower this sacred practice to the level of a mere series of experiments along the lines of certain material methods now in vogue, would to the Christian Scientist be not only irreligious but sacrilegious.

There is a far better and more satisfactory way, from the standpoint of human progress, to test the efficacy of Christian Science healing than by resorting to a series of material or mortal mind experiments. Witness, if you please, the million or more intelligent men and women who have been healed of all manner of disease and reclaimed from all forms of sin. An experiment, no matter what its character or its duration, pales into insignificance in comparison with this majestic achievement. The volume of Christian Science healing is so great that any one who so desires may satisfy himself of the verity thereof. This is the "experiment" Christian Scientists invite the world to behold, and to ponder its deep significance.

[H. Coulson Fairchild in *Plainfield* (N. J.) *Press.*]

It is hard for any Christian Scientist to understand how a Christian minister can so far forget himself as to declare any doctrine antichristian which heals the sick by spiritual means alone and has for its foundation the science and proof of the religion of Jesus Christ. Our clerical critic is quoted as saying, "I oppose Christian Science because it denies some of the fundamental truths of the Bible. It denies the reality of matter, the personality of God, the personality of Jesus Christ, the very plan of salvation, the reality of sin, and the reality of prayer." I reply that in denying the reality of matter, Christian Science exalts the supremacy and reality of Spirit; since Spirit and matter are necessarily opposites, we believe that the denial of matter is more Christianly consistent than to admit that God, divine Love, is the author of matter, and hence of all

Digitized by Google

human discord. To Spirit there can be no matter, and the kingdom of God for the Christian here and now begins with this Biblical promise, "It is the spirit that quickeneth; the flesh profiteth nothing [is of no profit to man]."

Regarding the personality of God, if our critic means this in the sense of infinite personality, I answer that Christian Science endorses the thought of God as infinite personality. If our critic means that God is a person after the manner of an enlarged human personality, Christian Science cannot endorse such a view. In the Congressional Library at Washington, a number of reproductions from famous Italian painters may be seen. One pictures God as an old man with a flowing robe, passing through space and having around Him a few human personalities which He is supposed to have created. He is represented in the act of placing Adam upon this sphere. Surely our critic cannot have this kind of a God in mind when he speaks of the personality of God. Surely he is not unmindful that in the Westminster Confession of Faith, God is indicated as a being "without body, parts, or passions," supreme, a most pure spirit, etc. A finite and physical conception of God is detrimental to human progress, and Christian Science repudiates such a view.

Replying to the assertion that Christian Science denies prayer, be it known that prayer in Christian Science is not a petition to "a God afar off," but is the realization that God is "at hand," "a very present help in trouble." In the words of a well-known hymn,—

> Prayer is the heart's sincere desire,
> Uttered or unexpressed;
> The motion of a hidden fire
> That trembles in the breast.

For the information of our critic and the public I may say that Christian Science accepts the science of the immaculate conception and the virgin birth of Jesus, and follows, as we believe, "the very plan of salvation" set forth in the life of Christ Jesus, that of healing the sick and overcoming sin through the power of God, good. We believe that in order to fulfil the Christian declaration of faith, we must prove it by healing the sick as well as reforming the sinner. This is the Christian Science plan of salvation, and I do not see why it should not receive the indorsement of every Christian clergyman.

Our critic says, "But if its prime object is to alleviate the sufferings of mankind, it should receive our Godspeed." Are we to assume from this that our reverend critic objects to the work of Christian Scientists in reforming sinners? In this Science we understand that the same Principle which heals sickness also destroys sin. Our critic does not hesitate to endorse mental suggestion, but I think he will find it difficult to reconcile any system of suggestive therapeutics with the religion of Jesus Christ, who said, "If I by Beelzebub cast out devils, by whom do your children cast them out?" He further states, "The Father that dwelleth in me, he doeth the works." Mental suggestion, hypnotism, spiritualism, and all efforts of carnal mind or human will, are not comparable with the healing power of God.

Christian Scientists do not concede that they are "throwing overboard" any of the essentials of the Christian religion in accepting Christian Science; and they feel sure that this Science will stand the Scriptural test, "By their fruits ye shall know them." For this reason Christian Science will not fall into oblivion; on the contrary, it will grow in the grandeur of universal goodness and will everywhere be sought and taught. Our great Master said, "Go ye into all the world, and preach the gospel;" "Heal the sick."

[Ida Hodnett in *Montgomery* (Ala.) *Times.*]

Those who have experienced metaphysical or Christian healing can merely say, when disputes arise on the nature of their former troubles, "One thing I know, that, whereas I was blind, now I see;" that is, Whereas I was suffering from this or that distress, now I am free.

Do some persons actually deny that Jesus, the master Metaphysician, healed organic disease? His method was purely metaphysical. It had no connection with hypnotism, or the influence of the human mind, and no conjunction with physic. The only basis of Jesus' metaphysical healing that can possibly be admitted is a right knowledge of God and of man's relation to God. Christian Science is teaching its adherents to discern the purely spiritual process of Jesus, and to practise it in proportion to their right apprehension. They do not claim to have attained as yet the height and depth of Jesus' knowledge. They are more or less beginners, but if they follow on, mastership will be attained. The student, when perfected, shall be as his master. This applies to the science of mathematics and just as surely to the Science of Christianity. The apostle Paul clearly discerned that when we have demonstrated ourselves to be children of God, we are "heirs of God, and joint-heirs with Christ."

The "optimism" of Christian Science bases itself, not on discounting the worries of a carnal existence, but on an advancing, though at present faint, perception of the nature of Spirit and the spiritual creation, and on the acknowledgment, through a faith which is advancing to understanding, of the permanence and present power of the spiritual creation. With the apostle Paul, a Christian Scientist of this day may say: "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

[James D. Sherwood in *El Paso* (Tex.) *Herald.*]

A Christian Scientist is never a physical diagnostician; he does not consult matter for a knowledge of man. The Christian Scientist accepts the statement made in the Bible that God is Spirit and is infinite; that He is All, and that man was made in God's image and likeness. The likeness of Spirit is spiritual, it is not matter; therefore the Christian Scientist understands that man is spiritual, and never material.

Disease, as an experience of mortal man, has its origin in the belief that life and intelligence exist in matter. This belief was the Adam-error which divine wisdom condemned, saying, "In the day that thou eatest thereof thou shalt surely die." The Christian Science practitioner makes his investigations along the lines of mental phenomena, and traces every effect to mental causation. He understands that the mind governs the body absolutely, and thus he comprehends what the wise man meant when he said of man that "as he thinketh in his heart, so is he."

Every individual who is engaged in relieving the sufferings of humanity should be permitted to pursue the path he believes to be right and best. A Christian Scientist asks to be permitted to enjoy the same privilege. His method, however, is purely metaphysical. He does not adulterate Christian Science practice by recourse to matter, either in diagnosis or in remedy. He understands the divine Mind to be All, and All-in-all; and, in the language of Joshua, he says to all those who oppose him with the methods of material systems: "Choose you this day whom ye will serve; . . . but as for me and my house, we will serve the Lord."

I woke to hear the hand of day
Divinely sweep the bars of time,
For all the pain had passed away,
And such a radiant peace was mine;
It seemed I never could express
The freedom of my thankfulness.

CAPT. R. E. KEY.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

SCIENCE AND HEALTH MOST WIDELY READ.

THE frequency with which books on certain subjects are borrowed from the public libraries may be taken as fairly indicative of the degree of interest which these subjects have for the people at large. For many years now it has been the practice of Christian Scientists to see that all public and institutional libraries are supplied with enough copies of Science and Health and our Leader's other writings to meet the demands for these books, and as showing that there is a popular demand for our text-book through this avenue of information, we quote from a recent issue of the *Boston Transcript* as follows:—

Lists of the novels most popular with readers are often compiled by the public libraries. So too with juvenile books, and with books other than fiction. It must be said, however, that in the non-fiction classes the lists frequently consist of the titles of books which librarians or other persons think ought to be read. Exact statistics are not so often met with. This fact makes especially interesting a list compiled by the circulation department of the St. Louis public library, and recently published in the report of that institution. It is a "list of non-fiction books circulating one hundred times or more at the central library during the year, May, 1909-April, 1910." The list is given herewith. The number set opposite each title is the number of times that book was issued during the year.

Eddy—Science and Health	618
Longfellow—Complete Poetical Works	416
Garrett—One Hundred Choice Selections	283
Bunyan—Pilgrim's Progress	259
Fiske—History of the United States for Schools	256
Darwin—Origin of Species	204
Goethe—Faust	175
Emerson—Essays	169
Irving—Sketch Book	154
Bryant—How to Tell Stories to Children	153
Green—History of the English People	151
Eddy—Miscellaneous Writings	148
Goodwin—Improved Bookkeeping	145
Milton—Paradise Lost	138
Stoddard—New Egg Farm	134
Tennyson—Poetic and Dramatic Works	132
Browning—Complete Poetic and Dramatic Works	129
Motley—Rise of the Dutch Republic	127
Bacon—Essays	121
Molnar—Devil	120
Shakespeare—Julius Cæsar	120
Kennedy—Servant in the House	118
Clemens—Innocents Abroad	114
Clemens—Tramp Abroad	110
Ibsen—Doll's House; Ghosts	110
Myers—General History	110
Trine—In Tune with the Infinite	110
Shaw—Man and Superman	108
Poe—Works	107
Snider—Shakespearean Drama: Tragedies	101

The first thing that strikes one is the triumphant ease with which Mrs. Eddy's name leads all the rest. And it may be remarked, parenthetically, that there is reason to believe that statistics from many other libraries throughout the country would show results not very different in respect to Science and Health. The book which thirty-five or forty years ago was being timidly sent to reviewers with the request that it be noticed favorably or not at all, is now a conspicuous "best seller."

Naturally it is a matter of considerable gratification to Christian Scientists thus to be assured that Mrs. Eddy's place as an author, and the importance of the subject of which she treats in her published works, are today being recognized by the reading public. Centuries ago the great Teacher said: "And because I tell you the truth, ye believe me not. . . . And if I say the truth, why do ye not believe me?" and Science and Health met with a similar attitude of disbelief and indifference when it first was given to the public. So clearly was this recognized by Mrs. Eddy that in a later edition she wrote: "The strictures on this volume would condemn to oblivion the truth which is raising up thousands from helplessness to strength and elevating them from a theoretical to a practical Christianity." But, as she goes on to say, "in Christian Science mere opinion is valueless. Proof is essential to a due estimate of this subject" (p. 341).

This is the great lesson to be drawn from this list, the proof which it affords that humanity is eager for salvation from both sickness and sin, and that it is finding this salvation in Christian Science. It is therefore plainly the duty of Christian Scientists so to show forth the fruits of their religion that "every one that thirsteth" may be assured there is both health and salvation for them in the teachings of this book. If those who through the medium of the public library are becoming acquainted with the great and vital truths taught in Christian Science, see these truths exemplified in the lives of its professed followers, they will gain courage for the next step, namely, to put it to the test for their own healing.

As Christian Scientists we know full well what Mrs. Eddy's writings have done and are doing for humanity, and when we think of the great number of persons who have found healing through the reading of Science and Health, we realize something of the great possibilities for good which lie in a free and unhampered circulation of this book through the public libraries. We feel justified, therefore, in urging upon Christian Scientists everywhere the importance of seeing that every one who seeks the healing truth to be found in our text-book shall go away from these libraries with his need supplied.

ARCHIBALD MCLELLAN.

THE CALL OF DUTY.

THE press of England and America has devoted many columns in the last week to giving heartfelt expressions of love and reverence for Florence Nightingale, the noble Englishwoman whose earthly career has so recently closed. In reading of what she had undertaken and accomplished, one could but recall Admiral Nelson's famous signal to the fleet, "England expects every man to do his duty." This call did not extend to women, whose duties were supposed to lie strictly within the sphere of the home, but a good many years after the "mighty seaman" had passed away, the brave woman, already named, stepped from the seclusion of a happy home to prove woman's fitness to serve the world, even on the battlefield, if need be; though never to hurt but to heal, to correct existing abuses, never in anywise to perpetuate them.

It is of course well known that Florence Nightingale had to encounter the fiercest opposition, and the most scathing ridicule, not only from men, but also from the many of her own sex who held narrow views respecting woman's duty, and possibilities, the majority insisting that women must fulfil their destinies by wifehood and motherhood, and that the one who failed to enter this sphere missed the greatest opportunity for the development of character. The melancholy tone of much of the literature of the earlier part of the last century, in dealing with this question, seems almost amusing today, as we think upon the wonderful achievements of the women who have stood alone with God and their own divinely-bestowed capabilities, in some of the many lines of reform work which are making for human progress.

Longfellow has said,—

> Love, that of every woman's heart
> Will have the whole, and not a part,
> That is to her, in nature's plan,
> More than ambition is to man,
> Her light, her life, her every breath,
> With no alternative but death.

This surely does not mean that because marital affection does not come to a woman her life is doomed to failure! If it ever meant this to women, it does no longer, for the bravest and best of them prove for all others the truth of Mrs. Eddy's words, "Human affection is not poured forth vainly, even though it meet no return. Love enriches the nature, enlarging, purifying, and elevating it" (Science and Health, p. 57). It is the pouring forth of the love that comes from a divine source which works wonders for womanhood, and the one who gives divinely will receive in full measure till even the human heart is satisfied.

Today the call is sounded in all lands not only that every man shall do his duty, but every woman as well. This means that a great exaltation of humanity has begun, and that it must go on until Truth and Love shall rule in the home, the city, the state, and above all, in the lives of men. It means the enforcing of all just laws and the annulling of all unjust ones. It means equal rights for all mankind and no place for wrong, either in the home or the state. It also means that not only shall a few brave, strong women respond to the call of duty, but that every woman shall look up and see emblazoned aloft the flaming signal, The spirit of the age expects every woman to do her duty,—by absolute loyalty to Truth, to purity, to the righteousness which exalteth a nation. There is no time to waste in trivialities, no room for the pettinesses of self-seeking. The inexorable demand of the hour, as proclaimed by the revered Leader of Christian Science, is that women shall by true and fearless living show their brothers how grand is life and how glorious is duty, when these are spiritually understood.

ANNIE M. KNOTT.

THE REFLECTION OF JOY.

How pleasant, in one's rambles, to come upon the little wild flowers, here and there, and receive their chaste and gentle greeting. Their gifts are not great, but we bless the kindly blossoms even as we twice bless those who bring us an equally cheery human face and word.

The heart of humanity has such frequent cause for heaviness that even the silly are often thanked for the sunniness that brings a moment's escape from suffering. Nevertheless we all know full well that "the world's great need" is not supplied by levity. It is the smile, the handclasp that speaks for gladness within; it is the spirit of the truly thankful man, of him who has come to know something of heaven,—it is this and this alone that can comfort and strengthen the fainting heart, and happily, this healing ministry pertains even to the least, in the kingdom of good on earth. If one's own thought is a wellspring whose waters find their way from the unfailing infinite, then his joy-bringing is made sure. However simple the air he sings, the weary-hearted will hungrily wait to hear him through. This was the secret of the Hebrew bards whose songs have been the joy of the whole earth; their gladness was drawn from the fountain of living water, and it is commended by St. Paul when he says, "Rejoice in the Lord alway: and again I say, Rejoice."

Such a Christianly rejoicing is awakened and nourished not only by the realization that our God is just and good, by our remembrance of His mercies, but by the realization that He is also joyous, and hence that His true reflection expresses gladness and beauty. He who sang, "And let the beauty of the Lord our God be upon us," must have understood this. He saw that the light of Truth makes glad, that the blitheness of the birds, the fragrance of the flowers, gives sure hint of the nearness of an ever rejoicing God. Says the poet,—

> If joy were not divine, immortal,
> No lark would sing;
> . . . . . .
> If bliss, some day, were but a vision,
> No rose would bloom.

The thought of the Supreme Being is cast by the many in too severe a mold. In "the pearl of the parables," He figures as a gladsome father who calls his household together and says, "Let us . . . be merry," and this native and inherent "joy of the Lord" must appear to all who have ears for the song of the birds, the hum of the bees, or who have eyes for that exquisite revelry of color and grace which decorates with the prodigality of an incomparable art both the fields below and the fields above. Surely He is no less spontaneously glad than supremely great who, despite humanity's dulness, succeeds in flooding every inlet of awakening thought with the tides of an eternal rejoicing. To know that He who conceives the lily and meditates the dawn is "our Father;" that regardless of the faultiness of mortal belief we may lean upon His arm as one that careth for us, and that in the measure of our entry into the estate and activities of man it is ours to reflect His beauty and His joy,—all this will broaden and enrich our thought of what it is to be a Christian Scientist; namely, to bring light and sweetness to every home we enter, every drooping and discouraged brother we greet.

It is written that "the ransomed of the Lord shall . . . come to Zion with songs and everlasting joy upon their heads;" and he who begins his rehearsals for this splendid event will rejoice, as Mrs. Eddy has said, "in the affluence of our God" (Science and Health, p. 140). Every hour of the day he will remember that, whatever the human outlook or condition, all the things of Spirit stand fast, and he will express the logic of this fact in a cheering and helpful way to all with whom he has to do. "Arise, shine; for thy light is come." This is the daily call to Christian Scientists, and it will have been fittingly translated when we bring to all whom we may meet the blossomings of a genuine loving-kindness, a persistent good cheer.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BAKERSFIELD, CAL.

A pretty building of immaculate whiteness is the new Christian Science church at the corner of Seventeenth and G streets, which was occupied for the first time at the 11 o'clock service yesterday morning [July 31] by the Bakersfield Christian Science congregation. The edifice covers thirty feet of ground on G street and runs back twice as far on Seventeenth street. The whole lot is 122x132 feet in area.—*Bakersfield Californian.*

DETROIT, MICH.

Plans have been prepared for the fine new edifice to be erected for Second Church of Christ, Scientist, on the East Grand boulevard, between Jefferson avenue and Champlain street, to cost about fifty thousand dollars. The site has one hundred and fifty-two feet frontage on the boulevard, and the church will be one of the handsomest in the city. The seating capacity will be about seven hundred and fifty.

Second Church was organized only last January, and the money for the building has all been subscribed since that time, First Church aiding in raising funds. Second Church has been meeting at No. 1045 Jefferson avenue since organization, and expects to get into its new home by the first of next year.—*Detroit Times.*

THE LECTURES.

TOPEKA, KAN.

June 16, at Second Church of Christ, Scientist, the Hon. Clarence A. Buskirk delivered a lecture on Christian Science. He was introduced by Judge C. C. Foote, who spoke as follows:—

My knowledge of Christian Science and its accomplishments is rather limited, but from what I have observed, read, and experienced, I am satisfied that if everybody on earth were Christian Scientists tonight, wars would cease and strife and discord be at an end; the battleships of the seas would be anchored in the harbors of peace; the artillery stacked on the fields of liberty; the swords beaten into plowshares, and the bayonets into pruning-hooks; and the nations of the earth would learn war no more. The music of the fife and drum, the rattle of musketry and the roar of battle, would die away, and the angelic song: "Glory to God in the highest, and on earth peace, good will toward men," would resound from shore to shore.

If everybody on earth were Christian Scientists tonight, corruption in private life and public trusts would not be practised; differences would be adjusted by arbitration; prisons would give up their fettered throngs; crime and suicide would curse the land no more; for all would have the Mind of Christ, and Love would fill the hearts of men. Almshouses, asylums, and homes for the friendless, would be rendered needless by the righteous distribution of God's wealth and the universal establishment of the brotherhood of man. The church would become pure and free from envy, scorn, and pride, and the earth would be filled with the knowledge of the Lord, even as the waters cover the sea.

If everybody on earth were Christian Scientists tonight, we should have better fathers, kinder mothers, and more obedient children; frowns would be changed to smiles, and tears be wiped away; sin would be destroyed, sickness overcome, death robbed of its sting, and the grave its victory; vision would be restored to sightless eyes, and strength returned to palsied limbs; earth would be a paradise, and every home a mansion of the blest. Such a religion would bankrupt hell, establish heaven on earth, and make man truly and indeed the image and reflection of his creator. A religion which would, if embraced and practised, accomplish such blessings for mankind, is worthy of the most profound consideration, the most careful and unprejudiced investigation; and the most loving and gracious acceptance by men everywhere.

This is the religion that was founded by Jesus of Nazareth nineteen hundred years ago, and its scientific and spiritual interpretation has been manifested in these latter days by that wonderful woman, Mary Baker Eddy, whose teachings are subscribed to by unnumbered thousands. For the former my soul is filled with adoration, thanksgiving, and praise, and for the latter I entertain the most profound admiration, unselfish esteem, and exalted conception of Christian womanhood. It is upon the subject of this new-old religion, and its scientific interpretation, that we are about to be addressed.—*Correspondence.*

KANSAS CITY, MO.

On May 15, Judge William G. Ewing lectured on Christian Science at the Auditorium Theater. He was introduced by Attorney Willis H. Leavitt, who said in part,—

Mortal man, unable to comprehend the nature and modus of the Christ-principle, has ever and anon cowered and staggered before the assumed potency of his own false concepts. Standing in the valley of material sense, he looks about him and beholds a world smitten with a curse; a world wherein cities, kingdoms, empires, and dynasties are obliterated by molten lava; a world that thunders forth its wrath from the sky, and whose lightning-bolts leave nothing in their wake but devastation; a world rocked by earthquakes that result in one vast charnel-house; a world that casts the grim shadow of fear, doubt, dismay, and despair on every path, and wrings from every heart a cry of woe; a world where loved ones come and go like meteors that flash in the heavens for a moment and are seen no more; a world infected with plagues and diseases of every kind and description; a world where affliction follows affliction, and from which there seems to be no escape.

Thus alienated from Truth, should it be thought strange that mortal man, in his extremity, should fashion in mind a God, a deification of himself, and casting himself into the "great beyond," and calling himself God, pray unto himself, only to hear the echo of his own voice? What, then, is his remedy? It is Christian Science—that Science which was discovered by that illustrious woman, Mrs. Eddy, and the Principle of which is identical with the Christ-principle of Christianity,—"the same yesterday, and to day, and for ever."

When Elisha, the man of God, raised the Shunammite's child from the dead; when Jesus, at Capernaum, spoke to the daughter of Jairus and said: "Damsel, I say unto thee, arise;" and the dead arose and walked, it was but the application of the same Principle that underlies Christian Science.—the Christ-principle, that which today, to the extent that it is understood and correctly applied, is destroying all forms of sin and disease, by whatever name known, as it did in the days of the inspired prophets and of the gentle Nazarene.—*Correspondence.*

WHITE PLAINS, N. Y.

Between five and six hundred people gathered in the Newell Theater, Sunday afternoon [May 29] to listen to a lecture on Christian Science, which was delivered by Judge Septimus J. Hanna of Colorado Springs, Col. With a few friendly words of greeting and encouragement the lecturer was introduced by Dr. H. Ernest Schmid, who is probably the best known physician in Westchester county, as well as being the president of the board of health. The doctor said that while he was not a Christian Scientist, he was interested in anything which promised practical help for suffering humanity, and that he had known of some of the good done by Christian Science; therefore he "welcomed an increase of knowledge." The doctor was an attentive member of the audience, and later expressed himself as having been much interested in what he had heard.

White Plains Argus.

WEST CHESTER, PA.

In First Church of Christ, Scientist, a large audience listened intently last evening [June 3] to a lecture on the beliefs of the denomination. The speaker, Bliss Knapp, was introduced by Percy Lloyd of Philadelphia, who said,—

The fact that so many of us are assembled together here is a proof that we are not quite satisfied with what we have and are reaching out for something better. No modern question is attracting so much attention as is Christian Science. It is extending through all civilized countries and the islands of the sea. It is attracting this wide-spread attention, because the world is weary of its sin and woe, and in Christian Science the people are finding a solution for their perplexities and sorrows. It teaches them to love their fellows, to refrain from judging each other or from harsh criticism of their brothers' religion.

JOHNSTOWN, PA.

Frank H. Leonard lectured Sunday, June 19, in the Majestic Theater. He was introduced by H. W. Storey, a prominent lawyer of this city, who spoke as follows:—

We are living in the most exalted period since the dawn of light. There never was a moment when public sentiment was so tender and courageous to overthrow wrong and install right. Ignorance and prejudice have given place to learning and intelligence, and righteousness is becoming the dominant rule in all things in state and church. This desirable epoch has only been attained through ages of cruelty and inhuman wars; intellectuality is the conqueror and is bringing peace, happiness, and prosperity.

Correspondence.

PHILADELPHIA, PA.

On the evening of June 26, the opening day of the new church edifice, Bicknell Young delivered a lecture on Christian Science. He was introduced as follows by John F. Braun:—

In the name of First Church of Christ, Scientist, of Philadelphia, I wish, first of all, to bid you welcome to this our new church edifice. It seems especially fitting that on this day of all days we should have here a lecture to explain to the people of Philadelphia what Christian Science is and why these churches go up in every city of this broad land of ours. The lecturer of this evening will give at least an outline of what Christian Science is and why people find in it health and happiness. The purpose of these lectures is not that of proselyting, but of removing misconceptions and placing the issue squarely before each one, leaving to each one the task of weighing the evidence calmly, dispassionately.

If we have come here this evening as seekers for the truth, then we should put aside for the time being the fact that we may be members of this or that denomination or of no denomination at all, and let us all meet on the ground of unprejudiced investigation of Christian Science. If it be of men, you will pass it by; if it be the truth and therefore of God, you cannot afford to pass it by. I bespeak for our lecturer your earnest attention.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Canajoharie, N. Y.—Willis F. Gross, Wagner Opera House, 3:30 p. m., Sept. 11.

Canon City, Col.—Francis J. Fluno, M.D., Church Edifice, 824 Main street, Sept. 13.

Cheyenne, Wyo.—Judge Septimus J. Hanna, Elks Hall, 3 p.m., Sept. 4.

Punxsutawney, Pa.—Hon. Clarence A. Buskirk, Jefferson Theater, 8:15 p.m., Sept. 9.

Rome, N. Y.—Hon. Clarence A. Buskirk, Chapel Auditorium, 409 North Washington street, Sept. 12.

San Diego, Cal.—Francis J. Fluno, M.D., Church Edifice, Second and Laurel streets, Sept. 9.

Telluride, Col.—Judge Septimus J. Hanna, Stubbs and Jakway Hall, Sept. 12.

Thou hast given of Thy goodly store,
Enough today to strengthen me;
It will suffice.
I ask for nothing more,
For through the mists Thy light I see,
And surely know I walk with Thee.

S. G. H.

TESTIMONIES OF HEALING.

I wish to acknowledge the many blessings that have come to myself and family through the teachings of Christian Science. Our family consists of six, and for the last nine years Christian Science has been our only physician. It was first brought to our attention about twenty years ago, when my husband's aunt was healed of a malignant growth on the breast. This relative has enjoyed good health ever since, but even this demonstration of the efficacy of divine Love was not sufficient to convince us, and we remained skeptical for eleven or twelve years.

In February, 1899, my husband was healed by Christian Science treatment of a serious trouble for which he was using drugs under the direction of a physician; but, as his condition grew worse, we called in a Christian Science practitioner, under whose treatment he improved rapidly and was able to go about his business as usual within two days. He then began the study of Christian Science, reading "Science and Health with Key to the Scriptures" regularly, and by this method he was permanently healed, during the following summer, of a rupture with which he had been afflicted for twenty years. Besides this, severe cases of croup, measles, whooping-cough, and fever have been successfully treated by Christian Science in our family. But the real test of our faith came in February, 1907.

Upon going to the door one morning of that month, I was informed that our sixteen-year-old son had met with a most serious accident. He was delivering morning papers in company with another boy about his own age, who, while examining a 32-caliber revolver, accidentally discharged it into our son's face, the bullet entering just beneath the right eye. The boy was badly frightened when he realized what he had done, and dropping the revolver he fled, without telling any one of the accident. As this happened at an early hour, our son lay unconscious for about forty-five minutes, when he was found by a milkman. We were immediately notified and my husband hurried to the spot, only to find that the boy had been removed to a hospital. As soon as we learned of the accident we began to declare the truth about man and his relation to God, and I immediately summoned a Christian Science practitioner. When the news came to me, I might say, in the words of David, "I had fainted, unless I had believed to see the goodness of the Lord in the land of the living."

On arriving at the hospital, my husband found our son on the operating-table, unconscious, and the doctors in attendance said they could do nothing for him, as the bullet was in the base of the brain. They gave him only two hours to live. Without having any material remedies administered, my husband had the boy removed to our home, where he was put under the care of a Christian Science practitioner and a Christian Science nurse. The boy had lost a large quantity of blood; was chilled through, and it was only after a great effort that we succeeded in restoring some circulation. While we were trying to realize Life and the perfection of God's creation, newsboys on the streets were selling an "Extra" announcing the accident and our son's dying condition, but in Science and Health we read (p. 358), "Can a leaden bullet deprive a man of Life,—that is, of God, who is man's Life?"

For eight days and nights we scarcely left his bedside. He partook of very little nourishment for several days, and we had to know that "man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." Also, in Science and Health (p. 495), we are told that in time of trouble we should "cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought." We were striving to do this, and day by day we knew the victory was ours. On the sixth day the boy brightened up and asked what the trouble was. We called

Digitized by Google

the nurse, who gently told him what had happened; but he could not remember the occurrence, and soon fell asleep again. From that day, however, his memory gradually returned, and on the twelfth day he was able to give us his explanation of the accident. He told us that during all this time he had suffered no pain. No drug had been used, either at the hospital or at home, to alleviate pain, but Christian Science alone was used throughout this case. Neighbors would hardly believe us when they were told that he was not suffering, as some had predicted that he would, if drugs were not used.

As a result of the accident his face was covered with grains of powder, which had penetrated the skin, and it seemed as though we must resort to material means to have them removed; but we left this problem also with God, and in a few days the powder marks had disappeared and we found that "the word of God is quick, and powerful, and sharper than any two-edged sword." When he became stronger we found the sight of his right eye was totally destroyed, the sight of the left impaired, and he was deaf in the right ear. We turned again to that inspiring book, Science and Health, and on page 214 we read: "Neither age nor accident can interfere with the senses of Soul, and there are no other real senses." The right side of the face was paralyzed also. The right eye was partially shrunken, and covered with a white film, and it did not seem as though it ever would be restored. The sight of the left eye returned in a short time, while the sight of the right and his hearing returned gradually. People who saw him weeks after the accident would remark to him, judging from appearances, that it was unfortunate that he had lost the sight of his eye; but he would tell them that his sight was returning, that he could distinguish light from darkness. Later he was able to read the large signs on the bill-boards, and so on, until he could read the small print in his Bible without any material help.

Six weeks from the day of this accident our son was able to take a position in a bank, which he held until the following fall, when he resumed his studies in the junior year of the high school, graduating in the mid-year class of January, 1909. During the last year in school he was captain of the football team and helped to edit the high school paper, besides keeping up his studies. On his return to school the teachers and pupils were surprised to see the improvement, and many told him that they did not think he would ever see out of that eye again. So unsightly at first, it is clear and normal today. The scar of the bullet wound can scarcely be found, and to see him one would never know that anything had happened. I can say, with the psalmist, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"

When Christian Science came to us we were a divided household. My husband was an unbeliever, while I had been reared in the orthodox faith. Now we are "of one accord," and are striving for that Mind to be in us "which was also in Christ Jesus." It is impossible to find words to express adequately our gratitude to God for this truth which enabled us to see the perfect man in God's image and likeness. Is it any wonder that we love Mrs. Eddy, who has labored so long and faithfully to give us this understanding of God and the real man? Christ Jesus said, centuries ago, "Ye shall know the truth, and the truth shall make you free." This testimony should prove to all that the day of miracles is not passed, but that God is, as the Scriptures declare Him to be, "the same yesterday, and to day, and for ever."

MRS. JESSIE B. TAYLOR, Chicago, Ill.

This testimony written by my wife is true, and as I was at the hospital about thirty minutes with our son, I saw everything that transpired there. I fully corroborate everything she has written.—C. A. TAYLOR, Chicago, Ill.

I wish to give this testimony of healing to the readers of the *Christian Science Sentinel*, because if I did not, I should lose my own respect, and be placed in the category of the nine lepers who never returned to give God the glory. I have been a lifelong Bible student, a truth-seeker, and as I look back, from my present standpoint, through the long vista of years, I can now see, as I never saw before, the leading hand of God in all my researches. If years ago I had recognized the source, and paid heed to the message, it would have been better. I was born and raised in the orthodox faith; my father, grandfather, besides uncles and cousins, were clergymen. It was a current remark that our family took to theology, just as a duck takes to water. I, however, proved an exception to that rule, and was considered wilfully obstinate. Seventy years ago sectarianism was rife in our land. Different religious denominations were at swords-points over their creeds, and hurled the dirk of defamation at each other with the greatest dexterity. Such was my early environment. Before I was eighteen years of age I was married to a member of my father's church, the superintendent of our Sunday School. The next year, through his influence, I united with the church. I consented to this, providing they would accept my confession of faith. This was fifty-eight years ago, but I never felt fully satisfied; so twelve years after, when we moved from Ohio to Michigan, I put my church letter into my bureau, and my husband his into the church. Later we both united with the Universalist church, in which faith he passed on.

I am now an old lady, seventy-seven years of age, and a little over six years ago I had a fall that severely injured my right knee. I was helped into the house and the usual remedies were applied. In two or three weeks I was seemingly as well as ever, but nearly a year after, I had an illness, then rheumatism settled in this knee. I sent for a doctor and during the next four years had three doctors, all well-read, skilful men. During the last year two of them told me that there was no cure for my knee, save by an operation, that the bones had become carious, but that owing to my age, they advised me not to have it done, as probably I could not endure the anesthetics. This was my condition a little over eight months ago,—doomed to be a "shut-in," and to use remedies for temporary relief of pain. A friend who was taking Christian Science treatment told her practitioner of my case, and she sent me word that if I would lay aside my medicines and bandages, take Mrs. Eddy's book, Science and Health, and read it carefully and prayerfully, she felt sure that I would be cured before I had finished the reading of the book. My prejudices were very great against Christian Science, so it was merely to please my friend that I consented to read the book. The day she telephoned for me to come after it, I said that I could not walk there (one block), as my knee was so swollen and painful; so she brought it over. It was three o'clock in the afternoon when I hobbled up to my room, book in hand. I put all the medicines into the closet, took off the bandage; raised my heart to God in prayer, saying: "Dear Father, if there is any healing power in this book, let me find it," and began to read.

I was perfectly astonished at what I read, for I had often been told that it was a mass of nonsensical twaddle, but I found it pure, deep, and soul-inspiring. I read about three hours that evening, slowly and prayerfully, and the same the next afternoon, about eighty pages out of the seven hundred of the book. The next morning when I awoke I was surprised to know that I had not been awakened once during the night with pain in my knee, something that had not happened before in five years. I examined the knee, and found the swelling, inflammation, pain, and soreness all gone. The English language is not adequate to express my feelings, as I hastened down to tell the glad news! My son laughed heartily and said, "Now, mother, do not tell

Digitized by Google

the neighbors, for they will surely think you have gone crazy. Just wait until a change in the weather comes, then you will see where the pain is."

But after more than eight months, with the worst changes of the weather during the whole year, there is no return of pain, no sign of any trouble whatever. If my knee never regains its former elasticity, I shall still have great cause to be thankful to Mrs. Eddy for my release from pain, and for the good refreshing sleep I now enjoy, and, best of all, for having my spiritual strength renewed. No one can ever say again, in my presence, that Christian Science is all a humbug without receiving a reprimand from me. I trust that by faithful study I may yet understand and accept all of its teachings.—Mrs. Mary M. Sage, Alma, Kan.

I give this experience with the hope that some one, through reading it, may be encouraged to take up the study of Christian Science, as set forth in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In the fall of 1905 I was troubled with a peculiar skin disease. A few weeks after its appearance I left my home in the middle West and came to California; but the change of climate caused me to feel much worse, and I began to realize that the time had come when I must choose whom I would serve.

Some years previous I had been remarkably healed through Christian Science treatment, and from that time until my arrival in California, I had used no material remedies, but had always looked to my mother, who was a Christian Scientist, to help me. During these years I had been very negligent about the study of Science, and preferred going to other places rather than to church. In one sense of the word I was a thief, trying to get something for nothing, desiring the physical healing and doing little or nothing to merit it. Like many others, I had to be divinely driven to do what I had for a long time known to be my duty. My healing was slow, but from the start I gained steadily, and I began to see that what I needed was moral and mental reformation. I am glad to say that the physical trouble has been entirely destroyed. The use of profanity, with other evil habits, has been overcome through the understanding of this beautiful and practical Science.

For the physical healing I am very grateful, but in no way does it compare with the spiritual uplift and moral reformation. One passage in our text-book reads, "Truth will at length compel us all to exchange the pleasures and pains of sense for the joys of Soul" (Science and Health, p. 300). This passage has given me great comfort, and is also teaching me that the pleasures of sense are more harmful than its pains. For the many blessings which Christian Science is bringing into my life, I am more thankful than words can express. I am thankful to God, the giver of all good, and I am also thankful to our revered Leader, Mrs. Eddy, who has so kindly and lovingly brought to our notice this great truth which meets our every-day needs.

Albert M. Chexey, Long Beach, Cal.

I wish to express my gratitude for what Christian Science has done for me. It came to me at a time when I was depressed in mind and sick in body. For many years I had not known what it is to feel well and strong. I was a constant sufferer, and, although I had every material advantage, I never enjoyed anything, because of my ill health. Christian Science has lifted me into joy and strength; it has brought to me peace of mind and health of body. It has never failed to help me, even when the most severe tests have come. Within the past two years it has cured me of a condition which is considered very alarming under *materia medica*. My baby is strong and happy, and has never had a sick day.

I should be most ungrateful if I did not have a deep appreciation of and love for Mrs. Eddy, the one who stood alone and endured everything to give to the world this new-old truth which Jesus said would make us free. It has made me free indeed, and I thank God with unspeakable joy for the understanding which I have of Christian Science.—Mrs. Ethel W. Mothershead, Pasadena, Cal.

With the hope of giving encouragement to some despairing one, I will state a little of what Christian Science has done for me, although the half cannot be told in one testimony. Always of a nervous temperament, I received, when yet a schoolgirl, an injury to the spine which caused constant and untold suffering for ten years. Doctors could give no relief, and I became a nervous wreck. I then tried osteopathy for two years or more, which did relieve me somewhat; but my system was so weakened that I could not take the necessary treatment.

After another five years of semiinvalidism, I hopelessly turned to Christian Science through the advice of a friend who had been healed by it. I commenced to read Science and Health, also the Lesson-Sermons and the *Sentinel*. While my healing has been slow, it has been sure. I am not now conscious that I have a back, so far as pain is concerned, and the bowel trouble which I had endured since infancy has been wholly removed. I now can do without fatigue work which once would have been impossible, and am better physically, mentally, and spiritually, than at any time during my past life. Is it any wonder that I praise God, "that girdeth me with strength," or honor that noble woman, Mrs. Eddy, who has made it possible for suffering humanity to find heaven upon earth—now and here?

I will gladly answer any question in regard to my case.

Miss Ella S. Pratt, Roseville, Ill.

I was first helped by Christian Science in 1903, and ever since then Truth has met all my needs and given me untold happiness. I would like to tell how it helped me in a fire. One morning, some time ago, I heard a woman scream, and I ran down the road to find the thatched roof of a cottage blazing. The woman told me she was not sure that the children were out, so I went in to see, but found only the father of the family, upstairs, hurriedly collecting his belongings, and I stayed to help him. Other people soon appeared, and the man and I passed the things down to them. It was getting very hot, and I had suggested we had better go, when they shouted from outside that we must come at once, as the roof was falling in; but we found it was impossible to get down, as the stairs were entirely blocked.

Then, instead of fear, there came to me an absolute certain sense of God's presence, and of our safety in His care. It was some few minutes before the way was cleared, and then we ran downstairs. The roof fell in with a crash almost directly after. Shortly after this a heavy scaffolding-pole fell on my head, and for the moment half stunned me. Then, almost immediately, I began to declare, "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). Then the intense pain and sickness were gone. In about ten minutes I was able to go on, helping to carry furniture and pass buckets, till at the end of two hours we had saved one cottage and emptied the other, which was burned to the ground. Though there was a seemingly deep dent in my head, and for two or three days there was a stiff feeling up my spine, I felt no more sickness and very little pain.

I can never be thankful enough for Christian Science, and to Mrs. Eddy for giving it to us.

Dorothy Maude, Horsmonden, Kent, England.

My little son was delicate in every way from his birth. He could not breathe naturally because of growths in his nose, and these were constantly growing larger. When he was two years old, he came down with a fever, and this was

Digitized by Google

followed by another severe illness, which left him with a cough for two years. A specialist on lung trouble said that the right lung was in a bad condition, and that there was no chance of his ever being any better.

A friend who had been healed through Christian Science talked with me, but although I knew of her healing I thought there could be no help for my child, because he was so very ill. I felt that he could live but a short time, and I had given up all hope when I first went to a Christian Science practitioner for treatment. After two treatments I could plainly see a difference in the child, and he himself got out of bed, much to my surprise. One day I started to give him a drink of water, telling him that it would stop his cough, when he said, "No, mama; that would be medicine." This seemed wonderful to me, because no one had talked Science to him. At the beginning of his treatments I let him go to school, but the teacher sent him home, because his cough was so bad that some mothers were afraid for their own children. After a few weeks' treatment, however, he went back to school, and is now completely healed of the growths in the nose, also of the lung and heart trouble, which before seemed a hopeless condition.

I thank God for the great blessings I have received through Christian Science, and I am so thankful to our beloved Leader that I shall try to walk in the path which she has shown us.—Myra A. Pestell, Boston, Mass.

I have been in Christian Science for something over three years, and have often seen its beautiful teaching worked out in my family, but being of a robust build from childhood I had little need of physical help until the occasion which I here relate.

I was on duty as conductor of an interurban train and some sixty miles from the terminal, when suddenly I felt a severe pain in my back, which rapidly became worse and soon affected my whole left side. It was with difficulty that I finished my run, and by the time I arrived at the terminal, two hours later, I could scarcely walk and could not lift my left arm at all. When I arrived home, after another half hour's suffering on a city street-car, my left side above the hips was useless and my face drawn so that I did not look like the same man. My wife then called a Christian Science practitioner and asked for help. I tried to lie down, and in the course of an hour or so I fell asleep, and when I awoke I was greatly improved and was able to get around fairly well. I kept on improving through the next day, and the third day I was completely well and able to resume my duties.

I am indeed very grateful to Christian Science, for it gave me almost immediate relief in this case, and I feel sure that if I had not known of it and had turned to material means for help, the result would have been very different.

A. C. Wright, Malott Park, Ind.

I write in loving gratitude to tell of the peace that Christian Science has brought to me. I joined an orthodox church when quite young, and for twenty years I struggled for something I could not find; but I have found it all in Christian Science, the Principle of which was made plain to me in the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. In 1906, when my baby was eight days old, I took cold and was seized with pain which was almost unbearable, and a sister-in-law who was present suggested Christian Science treatment; so I gave my consent to call a practitioner who lived just across the street (I then lived in Canyon City). The practitioner came at once, but I was fearful, not then knowing anything about Christian Science, so I asked her if she thought she could do me any good. She said, "God can." She gave me treatment, and all pain left me and I arose from the bed. But my fear was not all destroyed, so she treated me for a week, when I was perfectly healed.

My husband also was healed of rheumatism, and from the result of an accident, in three treatments. One of my boys was also healed in one week of a severe attack of fever. My boy was healed of acute lung trouble and a supposedly inherited cough, in one week. I have seen earache, croup, headache, and cough overcome by a knowledge of this truth, and I can say with the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

Since leaving Canyon City I find that I am able to demonstrate for myself this Principle, and I find Christian Science a "very present help in trouble." For all this I give thanks to God.

Mrs. Daisy Dooley, Curlew, Texas.

I am very grateful for all the blessings that Christian Science has brought to us in the past five years, beginning with the healing of our little son, who suffered from bronchitis from the time he was nine months to six years of age. After the doctors held out no hope, we turned to Christian Science, and in one absent treatment a severe attack was overcome which past experience indicates would have lasted anywhere from one to two weeks under *materia medica*. From a delicate child, he has developed into a strong, healthy boy, able to be out in all kinds of weather and capable of taking any amount of exercise.

For five years Christian Science has met our every need. It has helped us in business also. We feel very grateful to dear Mrs. Eddy, that she has made this truth plain to us, to help us at all times and under all circumstances.

Mrs. Louise G. Fitz Gerald, York, Pa.

Words can never express my gratitude to God, and to our dear Leader, for the healing and the understanding which have come to me through Christian Science. I had suffered for more than twenty years from internal hemorrhage, and from 1897 was a confirmed invalid, spending most of the time in bed. For eighteen months before hearing of Christian Science I had lived on the ground floor, and when I was able to go out was wheeled in an invalid carriage. My doctor advised me not to walk or exert myself at all, and I had not been out since September, 1907. I was just waiting patiently for the end to come, and perfectly resigned to what I believed to be the will of God. I had been an active worker in an orthodox church for more than thirty years, and had taken a prominent part in religious, social, and temperance reforms of the day, therefore the hardest lesson I had to learn was to be still,—to be obedient to the command, "Be still, and know that I am God." The Bible was very precious to me at this time, and I believed I was still serving the Master while lying in bed, because the ministers of the different churches who visited me said that my life was an inspiration to them.

At the beginning of May, 1908, a lady called to see my daughter on business. She was a stranger to me, but for convenience was shown into my room. She began to talk to me, saying she had often heard of my being an invalid, and asked me if I had ever heard of Christian Science. I said I had not. She told me that, according to its teachings, it was not God's will that I should lie there, but that I should be active and useful. At first I felt that the faith I had in God was perfect, but as she talked and related to me a wonderful case of healing, I began to see that what she said was true, and she promised to let me have some *Sentinels* to read. After she had gone, I thought over her conversation, and asked myself why I should not be healed. I professed to be one of God's children, and I knew that He is no respecter of persons; but I thought it would be marvelous if it were so, after all these years.

As I opened my Bible, my eye lighted on the text, "For with God nothing shall be impossible." I gave a start, and said, "Why, that is for me!" and I believe the hemorrhage

Digitized by Google

was healed immediately. This was on Friday afternoon, and on Sunday and Monday I got up to my meals, and there was no relapse. On Tuesday I asked for my clothes, but my daughter begged me to be careful. I assured her that it was all right, and I was dressed for the first time in nearly two years. Each day I got up a little earlier, and the following Sunday I went out to tea and also to church, and after the service walked about half a mile in the country. I never had any relapse. All my other ailments gradually disappeared,—cough, chronic bowel trouble, and various other ills,—and today I am feeling younger and more vigorous than I can remember doing; in fact, life is now worth living. I am an astonishment to all my friends; I have just returned from a two-months holiday among the Derbyshire hills, where I have been able to walk miles in a day, continuously. The joy of being able to help myself and to minister to others makes life a pleasure that words fail to express.

Divine Love has truly met our need, and I pray that my life may express what words fail me to do—my gratitude for "Science and Health with Key to the Scriptures," for it has unlocked the precious Bible promises for me.

MRS. ELIZA HUDDART, Blackpool, Lancashire, England.

I wish to tell what the knowledge of Christian Science has done for me, as I was instantaneously healed of stomach and bowel trouble. I had been subject to the latter disorder from girlhood, but I have never had to use any remedy since going to a Christian Science meeting for the first time. For about thirteen years I had suffered with my feet so that I could not stand, and at times I could not walk. It took about five months to heal this ailment. I used to think before my feet were healed that even if I did not get any more blessings, I would not give up Christian Science, for I felt so much happier and I knew God so much better.

I did not think it possible for any one to be so happy as I have been since I got to know of Christian Science. I had never expected to walk again like other people, and standing was out of the question. I had been to many doctors and could not get cured, so I had given in to the thought that I should always be lame. I am deeply grateful to God, and also to Mrs. Eddy, for showing us the way.

HANNAH MOORE, Cottingley, Bradford, England.

For years I was subject to severe headaches which lasted several days at a time, and which were constantly growing more frequent and more severe, but since I have been studying Christian Science I never have headaches. I once had a felon on my thumb, and for years feared that I might have another; but when I caught the sweet tone of reality, I would joyfully say to myself, Disease cannot frighten me. Now I never have any symptoms of its return. We can thus protect ourselves from every suggestion of error.

Would it be reasonable to expect us to enjoy all of these blessings, without expressing boundless gratitude to the one who made this understanding of the truth of being possible for us?—SARAH R. WOODS, Cottage Grove, Ore.

"Fear not, little flock!"
Words that are wondrous sweet—
Fear not, little flock,
Close to the mercy-seat.

Oh, may I love so tenderly,
That when Christ comes to me,
I shall behold him walking
Upon a quiet sea.

ELIZABETH MALLORY.

FROM OUR EXCHANGES.

[*Standard.*]

What is a church? It is not an organization or institution *per se*. It is an aggregation of persons who conform their lives to all things right, just, and pure, whether ecclesiastics or not. It includes, in large part, those identified with various religious organizations and many not connected with any such organization. Many who are regarded as unorthodox belong to the true *ecclesia*, and even those who do not adjust their lives to all the accepted social standards of their time. The church of Christ is constituted of all who make up the local organization and who follow out the teachings of the Master. The church, then, as an organized entity, consists of persons and principles: of those who build their lives upon the foundation truths of life enunciated by the Lord. The church is not a formulated creed to be adopted by all who enter it. It requires every man to have a creed of his own, which shall be accepted by the Head of the church. The church of the local community is not the numerical sum of those who constitute the church-roll, but includes all lives that are acceptable to God, and its work includes all moral, social, and political reforms, by whatever name designated. The church, then, is much broader in its essential constitution than we have been accustomed to think. It has been defined too largely in terms of ecclesiasticism and its communicants limited to defenders of a particular faith. In judging of the state and activity of the modern church, all these things should be taken into the problem.

[*Christian World.*]

We need today a strenuous preaching of the higher loyalties. We need, by some means or other, to convince every brother man, whether in the church or outside, that he can never come to his true self, that he can never touch the heights or taste the finer essences of life, till he is won to a supreme allegiance; till he yields his personality to the central personality; till his visible is caught up to the love of an all-holy invisible. In the loyalty that begins here, we find all the other loyalties worthy of the name. It is because of the weakening in society of this first allegiance that the other and more visible ones are today so much in peril. When people talk of eliminating God from modern thought and life, they cut at the root of all the loyalties. For loyalty is, first and last, an affair of personality. Chivalry, devotion, trust, love, these respond to one touch only, that of soul to soul. You cannot be loyal to the law of gravitation, to a chemical analysis, to a proposition of economics. For perfect love we want a perfect lover. When we have dismissed God, we have cut off the food supply of all our higher nature.

[*Churchman.*]

The desire to reduce the Bible to a set of theological abstractions obscures the real purpose for which the Bible was given to man. It fosters the baneful belief that the Bible is a mere doctrinal treatise; it is wrongful in method because it leads to laying down for man's acceptation a series of propositions that transcend man's intellect. The Bible is a record of life, a record of divine revelation to persons in particular circumstances and at particular seasons, and the great value of critical inquiry is the vindication of this real and human vitality in the Biblical records. Critical methods show how the authentic Word of God was given to man. . . . After a long isolation in the pale and thin abstractions of dogmatic statement, and after its reduction by apologists and defenders to an armory of sectarian polemic, the Bible, through the untiring labor of scholarship, is being brought into right relation with humanity, because it is treated as the record of man's living aspirations for God and of God's life-giving help to man.

[H. Hamilton Fyfe in *Outlook*.]

The only sure way to avert this peril of the gladiator's return is to give freer play to the universal instinct which demands that life shall be worth living. At present we are driving vast hordes of our workers along the path which led to the break-up of Rome. Cut off in all directions from the charm, the beauty, the variety of life, they turn inevitably to the only sources of pleasure and excitement which lie within their reach. If we are to save our civilization from such a fate as befell that which went before it, we must dethrone the mammon god of unrestricted industrialism. We must realize that an industry is to be judged, not only by the prosperity of the few who direct it, but by the condition of the many who carry it on. We must restore the pursuit of beauty to its place as a civic virtue. We must make life fuller and more interesting, less of a grinding struggle, more of a boon and an adventure for all.

[*Universalist Leader*.]

One of the great tasks of the twentieth century is religious reintegration. Our multiple denominational machinery has become wasteful of our religious resources. Last year the time of one hundred and sixty thousand ministers and the sum of two hundred million dollars was spent to maintain the churches of the United States. At least twenty-five per cent of this was wasted in an unnecessary and oftentimes mutually injurious duplication of churches. The remedy is not to be found in petty compromise, but in a growing liberty and increasing tolerance that aim at unity, not uniformity. We shall not be less sure of our own vision of truth because we admit truth in the vision of others; nor less loyal to a church when we grow to feel ourselves members of the church.

[Rev. James W. Fifield, D.D., in *Advance*.]

The questions with which we must deal for some time to come are the fundamental ones of Christian belief. The problems now are not surface ones. Men are not asking so much how they may do some form of spiritual work as they are questioning the basic truths of religious belief. The storm is upon all things, and those who have built upon the sand are asking the way to the rock, and those who have built upon the rock wish to hear again that it is tremorless. The great question before the church is not one of service but of belief, and until the church is strong in her assurance of truth she will not be pouring out her strength in activities. We are facing the fundamental and vital issues and there is need everywhere for a clear, definite word concerning the foundation of abiding faith.

[*New York Observer*.]

Production in the mental and moral realms becomes a kind of construction, or, to use a term taken from religious parlance, edification. The world takes account chiefly of that which contains its seed within itself—of that which possesses, under favorable conditions, the power of reproduction, staying on in its own posterity. In the religious sphere faiths and cults are to be tried by their practical ability to produce spiritual experience, and to construct character.

[*Congregationalist and Christian World*.]

The mission of the churches of Jesus Christ is to inspire all men to philanthropic, patriotic, educational service, and to persuade them, as far as possible, to do this service in love and obedience to him. But the unwillingness or inability of the churches to act as or to control the organizations that do these things, is not an evidence of sinfulness or weakness or failure. The chief business of the church is to inspire men to serve God and to serve their fellow-men through such agencies as seem to the community to be best suited to its needs.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $0.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $5. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.
