THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 63 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $6.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 96 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 92 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, also Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Folded cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 214 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 30 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A plan is under consideration for the reorganization of the New York Metropolitan Street Railway system, on a basis somewhat similar to that under which the street railways of Chicago were reorganized, which would involve taking in the city as a partner to a certain extent. Under the Chicago plan the city gave a twenty-year franchise, but with the privilege of buying the roads at any time, and in return the city received fifty-five per cent of the net receipts, after deducting five per cent of the appraised value of the physical structure of the property. New York city, however, cannot offer as an inducement the extension of franchise rights, inasmuch as most of the franchises held by the companies under the metropolitan system are perpetual.

Food experts from every section of the country, including Secretary of Agriculture Wilson, Chief Chemist Wiley, and representatives of the United States dairy commission and the bureau of animal industry, were present at the thirteenth annual convention of the Association of State and National Food and Dairy Departments, which convened in Denver last week. Much interest centered around the discussion of the report of the special committee, which maintained that the use of benzoate of soda as a food preservative is not harmful.

Under the enlarged homestead act, allowing three hundred and twenty instead of one hundred and sixty acres, Acting Secretary of the Interior Pierce has designated for settlement 524,480 additional acres in Montana, making a total so designated in that state of 26,030,080. Under the provisions of the same act 113,330 acres of land in San Juan county, Utah, have been similarly designated.

The latest ultimatum of the board of education of Denver is as follows: "No pupils in the elementary or high schools in School District 1 in the city and county of Denver shall form or belong to any school fraternity, society, or other secret organization. The superintendent and principals will suspend any pupil who fails to comply with the provisions of this rule."

Alarmed regarding the permanency of their state papers and other valuable documents, the leading governments of the world, headed by the United States, are seeking paper of as nearly an indestructible character as can be made, as well as light and thin.

When the Alaska-Yukon-Pacific Exposition closed its gates at the end of the first half of its season, there had been an attendance of 1,750,000 people, insuring the success of the exposition.

Addressing the convention of the National Association of First-Class Postmasters at Toledo, Postmaster General Hitchcock announced a policy of strict economy throughout the department.

Mayor Ozaki of Tokio has offered twenty thousand cherry trees as a gift to President Taft to plant in the new park on the banks of the Potomac river, Washington.

The total assessed valuation of real estate and personal property of New York for the year 1909 is $7,250,500,550.

A bulletin issued by the census bureau shows that in 1909 there were $1,250,000,000 invested in church edifices.

International.

The gentry of the province of Hupeh, China, have telegraphed to Grand Counselor Chang-Chi-Tung to protest against the granting of the Hankow-Sze-Chuen Railroad loan of $30,000,000 to American and other bankers. They declare that if the throne sanctions this proposal they will refuse to recognize the imperial edict. The fact that one half of the proceeds of the proposed loan is to be expended in railroad construction in Hupeh province makes the action of the gentry a matter of consequence. Whether the protest voices the sentiment of the people, and is spontaneous and wide-spread, or the result of work of the special interests without any popular backing, is not certain.

"I don't if there has ever been a year in which more important additions to geographical knowledge have been made than those resulting from the journeys of Dr. Sven Hedin, Dr. Stein, and Lieutenant Shackelton," said Col. Sir Duncan Johnston, president of the geographical section, at the seventy-ninth convention of the British Association for the Advancement of Science at Winnipeg, Manitoba, recently.

Copies of the agreement regarding the Antung-Moukden Railroad, signed at Moukden between China and Japan Aug. 10, have been handed to the diplomatic representatives of the interested Powers. This memorandum separates the commercial questions connected with the railroad from the political aspects of the case, and it is understood that Japan, in framing it, strove to eliminate anything that would offend Chinese sensibilities.

The French government, which already had the monopoly of the telegraph and telephone operations in France, has extended its legislation to include wireless telegraphy. No wireless telegraph or telephone apparatus may be set up on French territory or ships except where authorized by the state, and foreign vessels in French waters may not operate their apparatus in such a way as to conflict with government messages.

Testimony to the effect that the city of Montreal has lost millions of dollars in contract work, and that official positions of all kinds have been bought and sold for years, has been brought out by an investigation begun by the provincial government several weeks ago. The investigation is still in progress. It has so far covered the administration of the police, fire, and public works departments.

It is semiofficially announced that the Sultan of Turkey will not visit Emperor Nicholas in the Crimea, but instead will send a special embassy to greet him, and that Emperor Nicholas during his passage of the Dardanelles on his approaching visit to Italy will receive the Sultan aboard his yacht near Constantinople.

The Russian Foreign Office has leased the Dalstein villa at Odessa as a residence for the deposed Shah of Persia. The villa is situated picturesquely on the cliffs fronting the sea at the outskirts of the city, and affords the seclusion desired by the former Persian ruler.

In a test last week at Rheims, France, Hubert Latham in a monoplane airship covered ninety-five miles in two hours, eighteen minutes, nine and three fifths seconds. Henri Farman in a biplane covered 111.78 miles in three hours, four minutes, fifty-six and two fifths seconds.

Over the signatures of Emperor William and all the state ministers, the *Official Gazette* publishes an enactment authorizing an outlay of about fifty-six million dollars for the extension of the Prussian state railroads and the construction of proposed secondary lines.

The government report on forest fires in Canada during the last year shows that the damage to timber was $25,500,000. Forty million feet of timber were burned in British Columbia.

Statistics, issued by the English Board of Trade, show that not a single passenger in the United Kingdom lost his life in a train accident during the year 1908.

President Gomez of Cuba has signed a sixteen-million-dollar loan contract with a New York banking house.

Industrial and Commercial.

Orders for equipment and power necessitating an aggregate expenditure of approximately $11,000,000 have been announced by the Chicago and Northwestern Railroad, and orders by the Atchison, Topeka, and Santa Fé line for one hundred and thirty thousand tons of steel rails at an expenditure of over $3,000,000.

This year's cranberry crop throughout the country promises to be a good one. The New Jersey crop will be the largest in the history of that state; the crop on Cape Cod will show an increase of about twenty-five per cent over last year, while the total increase in the country is sixty per cent.

A merger has been formed of the leading carriage factories in Canada. A holding company is being formed with a capital of $4,000,000. It is understood that the principal object of the merger is to effect economies among the factories taken over, by the standardizing of outputs.

The first pile has been driven for the foundation of the Maverick cotton mill at East Boston. The mill will be five hundred and forty feet long, two hundred and fifty feet wide, and will have fifty thousand spindles.

From figures received from shipping points in New Jersey it is estimated that from South Jersey more than four thousand carloads of potatoes will be shipped this year. This will bring the farmer more than $1,200,000.

The international commerce of the world established a new record in 1907, total exports of the various countries and colonies of the world amounting to $14,000,000,000, and their imports to $10,000,000,000.

Between $150,000,000 and $175,000,000 represents the total amount of orders placed for rolling stock by steam and electric railroads, despatch companies, and others since Jan. 1 last.

A new two-hundred-thousand-dollar concern to manufacture paper boxes and paraffined milk bottles has been launched at Toledo, O.

The catch of seals in the Pribiloff Islands this season amounts to 14,360 skins.

General.

The amount spent on armies and navies in 1906—the latest year for which complete figures are available—by the nine great military Powers of the world was about $1,535,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE KEY TO THE SCRIPTURES.

FRANK H. SPRAGUE.

To one accustomed to regard religious questions according to the ordinary canons of theological interpretation, a work bearing the title "Key to the Scriptures" might suggest a treatise or commentary on the literal meaning of the Bible texts. It is in quite a different sense, however, that the phrase is applied to the Christian Science text-book. The attempts of theologians and ecclesiastics to fathom the Scriptural writings from a materialistic or semimaterialistic standpoint have resulted in a babel of conflicting interpretations. In addition to the standard orthodox commentaries, various attempts have been made to give a symbolical or figurative meaning to these writings. But, however cogently these doctrinal expositions may have appealed to the intellect, they have failed to confer the ability to do the works that Christ Jesus declared were necessary to attest the student's understanding of his teaching—works that were freely performed during the earlier centuries of the Christian era wherever this gospel was preached. Clearly the original exponents of Christianity were actuated by a sense of the presence and power of divine Mind which succeeding generations failed to realize.

Scattered through the Scripture records are accounts of experiences incomprehensible to material consciousness—experiences which to the unillumined sense of mortals appear subversive of law. These narratives may be treated either as myths, exaggerated accounts of occurrences that are susceptible of explanation on material grounds, or descriptions of experiences which represented the outcome of the natural and normal operation of spiritual law, the modes through which divine Mind is made known to human consciousness. While men may profess to believe in the authenticity of the Scripture narratives, the assurance that the "mighty works" credited to the early Christians were genuine occurrences, and not myths or misrepresentations of fact, can be gained only through kindred experience. If these works followed naturally from a superior understanding of divine law on the part of the earlier exponents of Christianity, then a like understanding today ought to bear fruit and will bear fruit in similar results.

Mrs. Eddy, the Discoverer of Christian Science, first became aware of the fact that the universe is in reality governed solely by spiritual law, through the illumination of spiritual sense in an extremity when, as she herself has written, she was "apparently near the confines of mortal existence, standing already within the shadow of the death-valley" (Science and Health, p. 108). Later she embodied the results of her discovery in the Christian Science text-book, "Science and Health with Key to the Scriptures," and in numerous other writings. This text-book is in the profoundest sense a key to the Scriptures, in that it declares the secret of the unusual exhibitions of divine power described in the Bible records. Demonstration of the truth set forth in this book has resulted in bridging the chasm that had been conceived to separate present-day experience from the remarkable achievements of apostolic Christianity. Christian Science furnishes the key to an understanding of the extraordinary events detailed in the Biblical writings by revealing, in the light of similar experiences today, the quality of consciousness which inspired those earlier events; even as the light shining through a stained glass cathedral window brings out a wealth of beauty and meaning in forms which, viewed from outside the edifice, appear expressionless and unintelligible. Without the aid of spiritual understanding to bring out its essential quality and intent, the Bible remains a sealed book.

The demonstrability of the true or spiritual understanding of God runs like a golden thread through the fabric of Biblical literature. With this standard as a guide, the deflection of thought from the normal lines of activity which lead to a right apprehension of the spiritual idea—as evidenced by mistranslations, verbal contradictions, discrepancies in historical detail, and other shortcomings of mortal sense—cannot hide the spiritual signification of the Word. The meaning of a word or sentence frequently hinges on the translator's choice between two or more possible renderings. As a case in point, the passage, "Work out your own salvation with fear and trembling," conveys the impression that fear and trembling are elements of experience to be consented to, if not indeed encouraged, in working out one's salvation; whereas, in the light of Christian Science, the case is exactly the opposite. Mrs. Eddy says: "Acquaintance with the original texts, and willingness to give up human beliefs . . . open the way for Christian Science to be understood, and make the Bible the chart of life, where the buoys and healing currents of Truth are pointed out" (Science and Health, p. 24).

Imbued with the doctrines of medieval theology, the translators to whom was committed the task of preparing the Authorized Version, recognized in the thought of fear and trembling nothing incompatible with their ideal of salvation. The same rendering is given in the Revised Version; Ferrar Fenton substitutes "amidst fear and terror;" while the Twentieth Century New Testament has it "with anxious care." Now, in the light of Christian Science, "fear and trembling," "terror," and "anxious care," are recognized as products of false belief, errors of the so-called human mind, to be met and overcome through the spiritual understanding of God as the Principle of being, and the consciousness of good as omnipresent. Mrs. Eddy says: "The understanding, even in a degree, of the divine All-power destroys fear, and plants the feet in the true path" (Science and Health, p. 454). In the present instance the Greek preposition *meta* may be translated with equal fidelity "against" (*i.e.*, in opposition to). It occurs with this signification in the passages "Michael and his angels fought against the dragon;" "I am come to set a man at variance against his father," and in numerous other instances that might be cited. Thus construed, the injunction of the apostle would read, "Work out your own salva-

Copyright, 1900, by Mary Baker Eddy.

Digitized by Google

tion against fear and trembling," *i.e.*, by overcoming fear and trembling; and he states his ground for this attitude in the sentence immediately following, "For it is God which worketh in you."

This example, as well as a multitude of others that might be instanced, shows how the spiritual or scientific viewpoint must supersede the canons of ordinary theological interpretation, before the thought underlying the Biblical writings can be apprehended and brought out in experience.

THE CHURCH.

ANNIE DINSMORE MC CLURE.

THE prophet Habakkuk declared: "The earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." He does not say that heaven shall be thus filled, but the earth.

In what may this "knowledge of the glory of the Lord" properly be said to consist? All presence and power and wisdom and goodness and love are universally admitted, by those who profess to be and call themselves Christians, to be the attributes of God and the expressions of His glory. Now if every person on earth belonged to some one of the denominations of those who are called Christians, would this mean that the time had come which was spoken of by the prophet?

Some one may answer, Yes, if they were all consistent and what is called "good" members of such a denomination. But is there any universal standard of consistency or goodness? and is there any power or influence by means of which the consistent and good can bring up to their ideal those who belong nominally to their class and who yet claim to judge for themselves what constitutes goodness and consistency? Unless there were some such standard and some such ability, the extension of a name over all the earth could not be equivalent to the extension of God's kingdom and glory, even assuming that the promulgators and the worthier members were themselves shining lights of righteousness and true reflectors of God's glory. There is no question that if every Christian should faithfully follow the grand heroes of religious history as they followed Christ, it would go far toward extending the kingdom of God. But how induce them to do this? They agree in venerating and canonizing such, but many seem to draw the line at following them—very far.

Jesus gave us an infallible test by which we may recognize the true church. He said: "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. . . . Wherefore by their fruits ye shall know them." Unless some church can seriously claim before a thinking world that the extension of its membership around the globe would be equivalent to the spread of God's kingdom and glory as prophesied, there is reason to question if it is indeed the church which Paul said Christ Jesus was to "sanctify and cleanse" that he might "present it to himself a glorious church, not having spot, or wrinkle, or any such thing."

The Christian Science church has one universal standard and infallible test. Its standard is the perfection which Jesus enjoined when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Its fruits are those which Jesus showed unto the emissaries of John: "The blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." While all its members may not be worthy and consistent up to its high standard and ideal, there is in its teaching that which continually forces them on to higher planes. To them wholeness and holiness is one and the same, and their health depends on their fidelity. They have no other gods—other powers or helpers—to whom to appeal in time of need; no medicinal palliatives nor religious sedatives are held in reserve to piece out faith. They must stand squarely on their relation to God, to their divine Principle, or renounce the name of Christian Scientist.

This, as all must admit, is a powerful stimulus to effort, an inducement to approximate the perfection which is the ultimate and inescapable demand of God. This state of perfection is the heaven where dwells the Father, and it is the heaven which Christian Scientists are striving to gain. Right living and not death brings them into this state of harmony. Paul said, "Though our outward man perish, yet the inward man is renewed day by day."

Christian Science sweetly reassures the "weary wanderers, athirst in the desert" (Science and Health, p. 570), and leads them safely home. It gives them an ideal and enables them to reach it. It is the light in which we may see what the church is which must usher in "the knowledge of the glory of the Lord" that shall cover the earth.

LESSONS FROM AN UNFINISHED BUILDING.

MARY J. LEAVITT.

NEAR my home there has stood for several years a large unfinished building. When the structure was ready for the roof, the building inspector had decided that it failed to conform to the given specifications, and ordered it torn down. The foundation, he declared, was insecure, the walls were not plumb; in fact, the entire construction from start to finish was defective. The order to tear it down was followed by a protracted period of litigation, and entailed on the owner much financial loss.

In this incident there was food for thought, and I endeavored for my own edification and enlightenment to read and apply to the best of my ability and understanding this "sermon in stone." Here was an imposing and stately building, one which to the unskilled and unpractised eye of the novice seemed perfect and symmetrical in every detail; but, subjected to the careful and rigid examination of the artisan trained in the finer points of his calling, it was found to be so insecure as to necessitate its being razed to the ground; and the trying and expensive litigation above referred to followed.

We are each building a structure destined to endure through all eternity, and our Leader warns us that "we cannot build safely on false foundations;" that "we should examine ourselves and learn what is the affection and purpose of the heart, for in this way only can we learn what we honestly are" (Science and Health, pp. 201, 8). Would it not be well for each of us constantly to ask ourselves these questions: Are our foundations of such a character as to support the superstructure? Do we know God and love Him? Is the structure that we are rearing in consciousness of such a nature as to stand the final, supreme test? Do we value the material more than the spiritual? Do we hate our fellow-man?

Do we, because of some fancied wrong, some malicious report brought to us by the relentless tongue of the gossip or the liar,—do we, because of this, pass with cold disdain our brother or sister, without a smile or nod of recognition, wrapping closely around us our robe of self-righteousness, and holding ourselves aloof in that haughty attitude which says, "I am holier than thou"? If so, at this point of our journey Godward it might be well to recall these lines:—

Just stand aside and watch yourself go by,
Think of yourself as he, instead of I;
Back to your walled-tenement you'll go
With tolerance to all who live below.

The faults of others then will dwarf and shrink,
Love's chain grow stronger by one mighty link—
When you, with he as substitute for I,
Have stood aside and watched yourself go by.

Digitized by Google

Are we selfish, dishonest, or indifferent to the welfare of others? Do we bitterly resent a loving rebuke which could have been administered from no possible motive save from a desire to benefit us? Are we "slothful in business," forgetting to be "fervent in spirit," and going about our Father's work with flagging interest? Do we magnify the faults of our neighbors, but minimize our own? Are we allowing our appetites, passions, self-will, pride, or revenge to encroach upon us, "here a little, and there a little"? Do we, when called to the bedside of pain, fail to administer to the sufferer the bread which giveth life and the peace which passeth human understanding?

Above all, are we, as Christian Scientists, striving for place and power, trying to gather about us a following for our own aggrandizement, instead of patterning after our revered and dauntless Leader, who is so bravely guiding us through the wilderness? If so, we are building upon the sand. (Our foundation is faulty, our walls are veering from the plumb-line, and sooner or later our houses will crumble into dust, and great will be the fall thereof.) Our text-book tells us that "if mortals are not progressive, past failures will be repeated until all wrong work is effaced or rectified" (Science and Health, p. 240).

One of the most conspicuous examples in the Bible, of one who built upon an imperfect concept of God and man, was the patriarch Job, though he was, we are told, "the greatest of all the men of the east." At the very zenith of his prosperity, apparently secure in the possession of flocks and herds, and surrounded by sons and daughters, suddenly he heard, as a thunderbolt from a clear sky, the imperative command to tear down and begin anew, and found himself bereft of both family and worldly possessions. When our work is tested by the demands of Principle, and is found to be faulty, mortal mind, clothed in self-righteousness and rebellion, arrays itself for resistance and prepares to argue the case. /But the demand of Principle cannot be evaded to suit a wrong concept of man's relation to God, infinite Mind./ As in the case of the litigation of the building inspector and the contractor, a long and tedious argument was begun by Job, and a few lines will show its trend. He says: "I caused the widow's heart to sing for joy. I put on righteousness, and it clothed me: my judgment was as a robe and a diadem. I was eyes to the blind, and feet was I to the lame. I was a father to the poor: and the cause which I knew not I searched out." In these and similar passages we trace Job's self-righteousness, one of the most specious and delusive of the errors which mislead mortals.

Again, Job expresses his self-pity in these words: "But now they that are younger than I have me in derision, whose fathers I would have disdained to have set with the dogs of my flock." His three friends failed to comfort him, inasmuch as they held up to him an anthropomorphic God; but at last, when through the truthful arguments used by Elihu he was brought face to face with Truth, which uncovered to him his errors, Job's reformation was complete, and he saw for the first time the false beliefs which had led to his downfall, and was ready to say, in all humility, "Wherefore I abhor myself, and repent in dust and ashes."

All of us will find, with Job, that our foundations must be broad, firm, and deep; built upon the solid rock, Christ, Truth. The walls that rise above them must not deviate a hair's breadth from a straight line; then, when our house is ready for the capstone and the roof, we shall find that we have "built upon the foundation of the apostles and prophets, Jesus Christ himself being the chief corner stone." We shall be in no danger then of the direful sentence which compels us to tear down and build again: instead, we shall hear the welcome commendation, "Well done, good and faithful servant; . . . enter thou into the joy of thy lord."

HONESTY.

KENNETH B. ELLIMAN.

WHEN a child, I used often to hear the saying, "Honesty is the best policy;" but nearly everything I saw seemed to teach the contrary, for dishonesty allied with cleverness was generally seen to succeed where what seemed to be honesty often apparently resulted in loss to the one who practised it. In Christian Science, however, we learn that "God never punishes man for doing right:" and also that "consciousness of right-doing brings its own reward" (Science and Health, pp. 384, 37). That these statements are true, and that honesty truly is the best policy, were proved to me some time ago by the following experience.

During the first few years that I was interested in Christian Science, urgent need for a practitioner's help, together with financial limitations, forced me to run into debt for nearly a year's treatment. The practitioner understood my circumstances and told me that he held me under no financial obligations, but I could not feel that this relieved me from paying him as soon as I was able to do so. For about three years after the treatment came to a successful conclusion, my income continued to be too small to allow me to pay the practitioner anything more than a trifling sum on account, so that with interest the debt was a considerable amount of money. At that time I owned a small property which had been left to me, but as I had no other steady income, and the income from this was only enough for my living expenses, I seemed to be dependent upon it. Although I had several times thought of selling part of the property to pay this debt, it did not seem wise to do so.

Meanwhile, however, through study and practice, the truth of Christian Science had been unfolding to me, and I gradually came to see that God was my source of supply, and that this source was sufficient for all my needs. Several small demonstrations of this truth convinced me that it was right for me to pay the debt, and that I could lose nothing by doing so, even though from a worldly point of view it seemed foolish and reckless to sacrifice my means of support to settle a debt which I was not legally obliged to pay. Faith in the right won the day, however, and I wrote to the practitioner who had helped me, offering to pay him the full amount due him for treatment, together with six per cent compound interest to date, and asking if the amount I named was correct.

Before I received his answer accepting my terms, another man, whom I had known only a short time, made me a wholly unexpected business proposition which involved an income much greater than that which I had sacrificed. Thus, instead of losing any money I gained a larger supply, and the lesson learned was worth far more to me than any money, and was a proof to me that honesty is indeed the best policy.

LESSON FROM A STONE.

LYDIA CUMMINS.

A STONE-CARVER who made his home with us one summer, occupied his spare moments in carving the frame of a clock from stone, and on the top of this frame he had designed the figure of an Egyptian slave. I watched the work with great interest. At first it seemed to progress very rapidly, till at last only the skilled eye could see anything yet to be done. One day, after having noted many evenings of steady work, I asked the carver if the figure was not completed; that I could see nothing more which could add to its beauty.

He smiled—perchance at my ignorance—and said that there was yet much to be done—that the expression of the face was certainly an unpleasant one, and if left in that form would be a poor illustration of his skill. He added

Digitized by Google

that the figure when finished would have a curl lying on the shoulder. In astonishment I asked him where he would get the material for the curl. His answer was, "It is all there now. All I have to do is to carve away the stone around it."

His answer gave me plenty of food for thought. How like my growth in Christian Science it seemed! How rapid the progress had appeared at first,—the ailments one after another disappearing under a practitioner's faithful work. It then seemed as if the rough corners of materiality were disappearing so rapidly that the work would soon be completed; but as we progress in our march Spiritward we become awakened to the need of more careful work, and as the understanding becomes clearer, we are enabled to discern more quickly the difference between the true idea and the mortal concept. I could see that God's idea or reflection can express nothing but happiness, harmony, and perfection; that any other seeming expression was simply our own incomplete work—beliefs in matter not yet overcome. God's perfect child does exist, however, even though that perfection is hidden from our gaze by material belief.

It is our business to learn to carve out our spiritual ideals carefully, closely, and accurately, until every phase of imperfection disappears under the chisel of scientific understanding, leaving in consciousness nothing but the expression of the perfect man.

LOVE AND LAW.

LAURA B. DOORLY.

PONDERING, the other day, that wonderful chapter on love (1 Corinthians, xiii.), the conviction came to me with fresh force that, to quote Robert Browning, "All's love, yet all's law." Do we not know people who, though they speak with the tongues of men and of angels, yet leave us untouched? Men who, though bestowing all their material wealth to supply material need, understand not how to "feed the famished affections" (Science and Health, p. 16)? On the other hand, there are those who are brimming over with a human sense of love and sympathy, yet neither of these helps to lift suffering humanity above material conditions, but rather the opposite.

At this point it flashed across my thought that our Leader's life is a remarkable exemplification of the truth of the above-mentioned chapter,—that the verses describing love's characteristics might have been written to give one a sense of the sweetness, self-containment, wisdom, serenity, and power of her life, "hid with Christ in God." We in this age need her example, the rightness of her spiritual concept and exemplification of love—the letter and the spirit, the love and the law. How beautiful to know that the teaching contained in our text-book is enabling us to fight, "not as one that beateth the air:" that the Science of being, the understanding of "the law of the Spirit of life in Christ Jesus," and of that love which is the fulfilling of the law, is surely making us free from the illusive bondage of sin and death.

THE MANUAL.

The 83d edition of The Mother Church Manual, containing all of the recent changes, has been issued and is now on sale.

Subsequent editions of the Manual will be issued when new By-laws are made or when important changes are made in By-laws already in effect; and due notice of each new edition will appear in the *Sentinel*.

Address all orders to Allison V. Stewart, Publisher, Falmouth and St. Paul streets, Boston.

SELECTED ARTICLES.

[From *Boston Advertiser*.]

Although the will left by Edward A. Kimball of Chicago transfers the copyrights on fourteen books from the pen of Mrs. Mary Baker Eddy, with the provisions that the proceeds form a fund for the preservation of "Pleasant View" at Concord, N. H., it is stated by Boston Christian Scientists that the copyrights are not now in Mr. Kimball's name.

Some years ago, it was stated, the title to the copyrights of Mrs. Eddy's works was transferred to Mr. Kimball as a matter of business convenience. At that time Mr. Kimball made his will, disposing of the copyrights. A few years later, however, the title of the copyrights passed back to Mrs. Eddy. That Mr. Kimball, however, apparently neglected to alter his will, was the only explanation given.

[Frederick Dixon in *Outlook*, London.]

May I be allowed to say a word with reference to the letter of the editor of the *British Medical Journal* in your last issue—of course without any wish to reopen the controversy, but simply in explanation? Anybody who will read the letter I wrote to you will be able to see that I quoted the *British Medical Journal* in proof of the fact that the evidence, which he ignored, of Mr. Wilding was as available for Mr. Paget as that of the numerous anonymous American doctors which he was at pains to get. I should be the last to attempt to strain the meaning of any editorial in the *British Medical Journal*, which has always fought Christian Science strenuously but fairly, and by fairly I mean by showing a readiness to insert Christian Science replies. At the same time, in writing that that paper admitted Mr. Wilding's qualifications, I have nothing to withdraw. It admitted that he was a M.R.C.S. and an L.R.C.P. These degrees, I presume, constitute his qualifications. If they do not, the qualifications of every doctor who gives evidence against Christian Science is open to question, and what shall we say of Mr. Paget, who quotes as authorities on Christian Science two gentlemen who are manifestly not Christian Scientists? The truth is that the argument of the *British Medical Journal* is the most crushing indictment of Mr. Paget and the medical profession. If Mr. Wilding, holding his degrees, is not qualified to diagnose and report on the cases in question, what is medical diagnosis worth? And why should we accept Mr. Paget's anonymous medical men as witnesses against Christian Science?

[J. C. White, M.D., in *San Francisco* (Cal.) *Bulletin*.]

It would be well and profitable, we think, if this critic would bear in mind that all, or nearly all, of the Christian Scientists have been members or attendants of the churches of the land, many of them very intelligent people; and after years of this experience have chosen the Christian Science method of "searching to find out God."

The cause of this departure is most evidently in the weakness or spiritual poverty of the pulpit—the theoretical in lieu of the practical—the vague utterance of the mysterious and the miraculous in place of the plain, practical, and vital truths. The effect of any act or of an expressed truth is measured by the depth of the sentiment from which it springs. When the "Word" is preached in "Christ's stead," the ministry will not want for hearers, nor will it be necessary to resort to modern methods to support the church. In this respect the Christian Scientists are models for all of the other churches.

My personal experience and observation is that they are a "peculiar people"—not given to vituperation and con-

Digitized by Google

demnation, nor to lack of charity or intelligence. If "by their fruits" we are to know them, they by far surpass all other professed Christian denominations. Their mode of worship is more nearly allied to that of the Friends or Quakers. I believe that their success in reforming and curing people is due to their method of teaching people to understand God and their individual relation to their creator. Plato said that "virtue is a knowledge of God." Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Man cannot love God without knowing Him in some degree.

It would be interesting to know the percentage of churchgoers or Christians who worship a material concept away off somewhere in a local heaven! How many of them realize that all the resurrection they will ever have is to a clearer knowledge of God! In many languages God is translated good. God is Spirit—God is Truth—God is Love—God is Life and Life is God.

Ecclesiasticism and theology have been a stumbling-block to humanity, have stood in the way of its finding out God. We may appreciate all earnest and sincere efforts of the clergy, and still observe that the moral platitude given in numerical sections from the average pulpit is a poor substitute for the basic, fundamental truth—Life (God) and man's inseparableness from this Principle which is omnipotent, omniscient, and omnipresent. Without some conception of this truth, as well try to teach higher mathematics to children who are ignorant of its rudiments.

A child in the fields and the woods with the flowers and the birds will find God sooner than in a synagogue with its catechism. I am not a Christian Scientist, but claim that liberty of conscience be given to all men to find out God. That physicians in general are more tolerant of the Christian Scientists than are the clergy of the land, I attribute to the fact that haply they have escaped the deep ruts of religious "traditions and conformity," and some of them are willing to relinquish their trade for the betterment of humanity. I am free to say that some of my "incurable cases" are now well and are happy members of the Christian Science church.

[Frank C. Barrett in *Portland* (Me.) *Telegram.*]

Christian Scientists are not stoics, as is claimed by the author of the book under consideration. Christian Scientists are not indifferent to pain, but believe that in Christian Science they have found the quickest and most permanent means of relief therefrom. Christian Science does teach that pain, sickness, etc., have no real existence in the sense that those untoward conditions are not included among the "very good" things which God created; but it does not teach that those conditions do not occur in the experience of mortals. Did it never occur to the reader that every doctor of whatsoever school is engaged in the endeavor to make sickness and pain unreal to his patients? Why, then, should Christian Scientists be criticized for doing the same thing, and succeeding, ofttimes after every other means had failed?

[W. J. Bonnin in *Rochdale* (Eng.) *Times.*]

In the account of the proceedings at the opening of St. Aidan's bazaar, one of the speakers is reported to have spoken somewhat harshly of Christian Scientists, for that they undertake to minister to both the spiritual and the physical ailments of humanity, and also to carry out the "duties of God." If "will" be substituted for "duties," as perhaps a rather more appropriate term to use in reference to divine omnipotence, Christian Scientists will gladly acknowledge that what is here laid to their charge is not only true, but that it represents their highest aspirations. But they fail entirely to see why such aims should bring reproach upon them. He who came as the Wayshower, to do the will of God, most assuredly indicated, not only by his own great example, but by his repeated command, that the way to do that will was to a very great extent by so ministering to our fellow-man.

There is no authority in the Bible for dividing this duty and allotting as separate duties to separate persons, holding perhaps widely differing views as to the source of all power and authority, the healing of the mind and the healing of the body. On the contrary, the divine mandate "to preach the gospel, and to heal the sick," was individual and indissoluble; and if it was one duty when laid upon the disciples, it surely remains one duty upon Christians today. The healing is the test of the preaching. There is no advice in the Book of Life to the effect that life should be guarded or prolonged by material means or remedy. Then either such a title is a misnomer or else life is something independent of matter. But the Bible tells us something about life on almost every page, and in that supreme statement of Jesus it tells us "this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

Christian Science is this knowledge of God, and Christian Scientists are students of this Science, who are proving for themselves and for others that this knowledge of God is not something to be acquired only after death, but that it is to be gained here and now; that it is a practical solution of the troubles that harass humanity; and by so proving, they are also proving that Christian Science is both essential Science and essential Christianity. Today there are literally hundreds of thousands who have tested and proved the truth of Christian Science, and their great desire is that others may know something of the joy and freedom from sickness and misery that is in store for all who will worship God in spirit and in truth.

[James D. Sherwood in *Beaumont* (Tex.) *Enterprise.*]

No Christian Scientist is complaining because our critic believes in and contends for the actual existence of a personal devil; and if Christian Scientists have outgrown some of the dogma and superstition of the past, they should not be called "deluded folk who talk about him [the devil] as an influence of mortal mind."

If the devil is a person and is one, how did Jesus cast seven devils out of Mary Magdalene? Is it possible to put seven persons in one person? When evil beguiled Judas into betraying the Master, he was influenced by a love of money and for the approbation of the Pharisees. When recording this incident St. John says, "After the sop Satan entered into him." Certainly no one believes that a person entered into the person of Judas. Sin tempted him, and he fell a victim to the baneful mental influence that was arrayed against his Master.

In St. Luke's record of the temptations we read that Jesus rebuked the tempter with the exclamation, "Get thee behind me, Satan." At another time Jesus said unto Peter, "Get thee behind me, Satan." He used the very same language in both instances. Did Jesus regard Peter as the personal devil? Was he not rather rebuking the evil suggestion which was influencing the thought and action of Peter? Jesus knew that evil thought was the procurator of evil deeds. Christ Jesus defined devil when he rebuked the scribes and Pharisees, declaring: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Here is the Master's declaration that there is no truth whatever in the belief called a personal devil.

Digitized by Google

Many little children are kept in terror by their nurses, who tell them of the "bogey man." Afterward, when these children become adults, they learn that the "bogey man" was a bogus man, a myth; yet they continue in bondage to fear by the exchange of a "bogey man" for a personal devil. Fear is the great enslaver which holds the children of men in bondage to myths. The time has come and now is when an infinite, omnipresent, all-loving Father-Mother God is being proclaimed as the real and all; and men and women everywhere are awaking from the dull slumber of materialism to demonstrate spiritual activity, with "signs following," as was promised by the Master,—the sick are healed, the sinful are reformed, and to the poor the gospel is preached.

The Christian Scientist is taught to keep the First Commandment: "Thou shalt have no other gods before me." He is taught to know that God is omnipresence, omniscience, omnipotence, and therefore that there is no other presence, no other Mind, no other power. On this basis he repudiates the claim of reality in another power, a powerful devil opposing God. The Christian Scientist does not deny the evidence of the claims of evil, which appear in the many forms of sin, disease, disaster, and death. While these appearances are everywhere manifest in a world of sense and sin, he has faith in the Bible, which declares that God made all that was made, and that all that God made He pronounced "very good;" therefore, what seems to mortal sense the opposite of God, what seems evil, is not the work of God, is not of Him, and is not eternal but temporal, and is passing away, just as darkness flees before the light. The Christian Scientist is endeavoring so to magnify his sense of God, so to grow in the understanding of God as the only Mind, the only presence, the only power, as will enable him to follow in some degree the example of Christ Jesus, who overcame the world, the flesh, and the devil, and taught his followers to do likewise.

[A. P. Cochran in *Le Roy* (Kan.) *Comment.*]

When the Christian Scientist turns to the Bible and consults it as his "sufficient guide," he reads a story of one whose "own received him not. But as many as received him, to them gave he power to become the sons of God, even to them that believe on his name." He learns that this message was delivered by authority, and that it was not "theoretical and fragmentary, but practical and complete" (Science and Health, p. 98). They accept it just this way. Jesus said to his disciples: "If ye love me, keep my commandments." These commandments were summed up: "Thou shalt love the Lord thy God with all thy heart, ... and thy neighbor as thyself." He left no doubt as to the result of obedience to this, but said unqualifiedly: "This do, and thou shalt live."

Further than this, he provided a way for the continuation of this work, and it also was simple and complete. There was no necessity for any changes either by adding to or taking from. He sent out the twelve and gave them "power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease." Then he "appointed other seventy also," with instructions: "And into whatsoever city ye enter, . . . heal the sick that are therein, and say unto them, The kingdom of God is come nigh unto you." More than this, he said unto the disciples: "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Scientists tell you that Jesus the Christ meant that these things should be done just as directed; and to prove that this is so, they offer the unanswerable proof of "works" that increase in number every day, and in fact every hour, in the lives of "them that believe." The fact is that there is not a basic truth accepted and acted upon by Christian Scientists that is not cited as the authority upon which orthodox theology formulates its dogmas. The difference can be briefly stated. The Christian Scientists refuse to accept anything as the result of the omnipotence, omniscience, and omnipresence of God that is not perfect. In the creation of such a God there is no place for anything that "worketh abomination or maketh a lie." They know that this is the truth for the very sufficient reason that it has made them a healthy, happy, and prosperous people, where just the reverse was true.

[John K. Allen in *Monmouth* (Ill.) *Review.*]

Science is organized knowledge. Christian Science is organized knowledge concerning Christ. That it is truth will be discovered not by comparing its teachings with man-made creeds and dogmas of theological councils, but by comparing them with the teachings of Jesus the Christ, who is certainly the best authority concerning what is or is not Christian. Jesus commanded his twelve disciples "to preach the kingdom of God, and to heal the sick." He commanded the seventy to "heal the sick," and to say, "The kingdom of God is come nigh unto you." These commandments are Christ's, therefore Christian; and Christian Scientists are endeavoring to carry them into effect.

Science is true knowledge. There can be no truth in knowledge of anything unlike God, for God made all, and certainly all that God made is good, not evil. It cannot be unscientific, therefore, using the word in its ultimate sense, to believe that sin, disease, and death are not real in the sense that they are not eternal. Christ Jesus healed sin and disease and overcame death. To him, therefore, these things were not real and eternal. Christian Scientists are following as best they may, the teachings of Jesus, and if they heal sin and disease (as our critic admits), and hope some time to overcome death, as Jesus promised those who believed on him would do, are they not scientific, using that word not as physical scientists do, but as it should be used when dealing with things pertaining to the spiritual realm?

[William E. Brown in *Riverside* (Cal.) *Press.*]

Christian Science does not deny the existence of man and the universe, but maintains that these are not material as they seem to be, and its mission is to purify and spiritualize the consciousness of mankind, so that they may see things in their spiritual perfection as God sees them. Spiritual things are spiritually discerned.

Our critic cites quotations apart from their context, and thus a false impression is created. The Bible or any other book under such treatment could be made to appear inconsistent and ridiculous. When Mrs. Eddy makes the statement that man is incapable of sin, she plainly tells us that she is referring to the ideal man who is absolutely governed by God. The apostle John said, "Whosoever is born of God doth not commit sin."

If our critic had carefully read the text-book of Christian Science, "Science and Health with Key to the Scriptures," he would know that Mrs. Eddy deals with man as he seems to exist materially and also as he really exists spiritually, apart from all sin and sensuality. Spiritual man never dies, and is coexistent with God. Jesus said, "If a man keep my saying, he shall never see death."

That Christian Science is the religion of Jesus is being constantly proven in the reclamation of the sinner and the restoration of the sick. There is ample opportunity for critics to satisfy themselves on this point, and in all fair-

Digitized by Google

ness they should do so before making statements which are groundless. The fruits of Christian Science prove it to be of immense value to mankind, most of its beneficiaries being those who have failed to secure help from other methods. Its divine origin is attested in its works, and by those it is willing to be judged.

[M. S. Bruen in *Dublin* (Ire.) *Express.*]

We have the assurance that spiritual healing is not the perquisite of any one congregation, but is the duty and privilege of every Christian to undertake. "These signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Science has no need to try experiments for the satisfaction of critical observers. The healing power of Christian Science has been established beyond question in every civilized country in the world. An attendance at a Wednesday evening meeting in any Christian Science church will enable an honest inquirer to hear the testimony of those who have been healed, from their own lips. Christian Science is the interpretation to the present age, of the divine relation between God and man, bringing it home to individual experience. The healing of sickness is one step on the road, the beginning, to some, of the practical acquaintance with salvation which will finally deliver us from all evil, as the gospel promises.

[Royal D. Stearns in *Lincoln* (Neb.) *News.*]

Christian Scientists claim with entire good faith that Christian Science is wholly founded upon the Bible and the teachings of Christ. What Mrs. Eddy claims in this connection, as stated in "Retrospection and Introspection," page 24, is as follows: "I discovered the Science of divine metaphysical healing which I afterward named Christian Science." She discovered the *modus operandi*, the process by means of which healing is effected. We contend that it is simply the application of the faith and of the spiritual understanding that enabled Jesus and the prophets before him to heal.

Christian Science has developed far beyond the experimental stage; its success is measured by the honest assurance of thousands of those who have come up out of bondage, from sorrow, suffering, and despair, after having exhausted all other remedial agencies, into the calm sunshine and heavenly peace and contentment that come with the clear and well established recognition of the fact that the redemptive Principle is available now as of old through the medium of righteous prayer.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 5, 1909. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 20, 1909.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

AMONG THE CHURCHES.

SHELDON, IA.

First Church of Christ, Scientist, of Sheldon, has purchased a building in a very desirable location, and has repaired and decorated it for a church edifice. The reading-rooms are also located in the building, and the members are well pleased with their new home.—*Correspondence.*

ST. PAUL, MINN.

First Church of Christ, Scientist, of St. Paul, has purchased for twenty thousand dollars two lots on Summit avenue at the corner of Grotto and extending through to Portland. An architect is drawing plans for a new church, a portion of which will probably be erected this summer, the remainder to be added at some later time.

Minneapolis Journal.

MICHIGAN CITY, IND.

First Church of Christ, Scientist, will soon have its own place of worship. A trade was closed yesterday [July 9] whereby the congregation becomes the owner of the Murphy property at the northwest corner of East Seventh and Cedar streets. The lot is fifty-five feet wide on Seventh street by ninety feet deep on Cedar street and is occupied by a two-story double-front frame dwelling. It is planned to utilize the present building by remodeling and enlarging it.

The Christian Scientists here have occupied rented quarters ever since their organization, but they have increased in numbers and financial strength until they are able to provide a church home of their own, which is an end they have long striven to attain.

Michigan City Dispatch.

WASHINGTON, D. C.

Plans have been practically perfected by the congregation of First Church of Christ, Scientist, for the construction of a new and much larger edifice to meet their growing need of space. The church will be located on Washington Heights, and an option has been secured on a large lot at the intersection of Euclid street and Champlain avenue, facing a small public reservation formed by the junction of Euclid street, Champlain avenue, and Columbia road. The lot has a frontage of about one hundred and forty-eight feet by a depth of one hundred and fifty feet to a public alley.

It is understood that the local followers of Christian Science have raised upward of seventeen thousand dollars toward the purchase of the property since the project was first broached at a church meeting a few weeks ago, and a portion of this sum has been paid for the option. The purchase must be consummated in August, and it is assured that the remainder of the purchase price, or a total of about thirty thousand dollars, will be in the hands of the church committee by that time.

With the ownership of the desired lot assured, it will be a simple matter for the church to finance the actual construction, and it is planned to break ground some time late this summer and to have the structure completed probably a year hence. The amount of money to be expended upon the edifice has not yet been finally determined, the congregation having the question before it whether to include or exclude an ornate dome in the building plan. In the former event the structure will cost upward of one hundred thousand dollars, and in the latter approximately sixty thousand dollars. The present church has a seating capacity for about four hundred persons, while the new edifice will accommodate more than eleven hundred.

Washington Star.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THERE IS NO DEATH.

A SUPPOSITIONAL gust of evil in this evil world is the dark hour that precedes the dawn. This gust blows away the baubles of belief, for there is in reality no evil, no disease, no death; and the Christian Scientist who believes that he dies, gains a rich blessing of disbelief in death, and a higher realization of heaven.

My beloved Edward A. Kimball, whose clear, correct teaching of Christian Science has been and is an inspiration to the whole Field, is here now as veritably as when he visited me a year ago. If we would awaken to this recognition, we should see him here and realize that he never died; thus demonstrating the fundamental truth of Christian Science.

MARY BAKER EDDY.

"LECTURES TO BE DELIVERED."

EVER since the organization of the board of lectureship, it has been the custom to publish in the *Sentinel* a list of the lectures which have been delivered by the members of this board. Apart, however, from the fact that the publication of this list has been gratifying to the churches under whose auspices the lectures had been delivered, it must be conceded that not enough good has been accomplished in this way to justify the further use of our columns for such a purpose, and we now propose to devote the same amount of space to advance notices of lectures.

This does not mean that we shall discontinue the publication of extracts from the remarks of those who introduce the lecturers, but only that the information which has heretofore been given under the caption "Lectures in Other Places" will be omitted, and in its place will be substituted a list of "Lectures to be Delivered." The completeness and resultant usefulness of this list will depend largely upon the cooperation, in this new departure, of the branch churches and societies. We therefore ask that, as soon as arrangements for a lecture have been definitely made, the necessary particulars be mailed, or better, telegraphed, to the Editorial Department at this office.

One reason for making this change is that the notice of a forthcoming lecture will thus reach the large number of our readers, many of them extensive travelers, who eagerly avail themselves of the privilege of listening to our lecturers whenever an opportunity presents itself; and while we are fully aware that some lectures may not be arranged for long enough in advance to secure mention in our columns, we shall do all we can to make the list complete and accurate. Like all weekly papers, the *Sentinel* goes to press several days before the date of issue, and for this reason the notice of a lecture must reach this office not later than Monday of the week in which it is desired that it shall appear.

ARCHIBALD MCLELLAN.

THE GARMENTS OF BEAUTY.

LONG ago the psalmist prayed, "Let the beauty of the Lord our God be upon us," and when one thinks how flawless is the divine nature he realizes how ideal this "beauty of the Lord" must be. Further, when he learns in Christian Science that this adornment of the Lord becomes his own as he apprehends the truth of being, he perceives how fittingly the Christian evangel was described in the prophet's words, "How beautiful upon the mountains are the feet of him that bringeth good tidings of good, . . . that saith unto Zion, Thy God reigneth!"

Christian Science teaches that all reality is no less harmonious and beautiful than true. This bases the possibility of art, against which there can be no contention save in its departure from the spiritual ideal. True art appears only when men think God's thoughts after Him. Spiritual beauty like truth is infinite, it companions with omnipresence. God's universe is its inexhaustible storehouse. Its wealth adorns every creature of God's creating. Separated from the sense of materiality, the sunset and the starry night veritably "declare the glory of God."

The universality of spiritual beauty, its eternal freshness and its unfailing appearance in the faces of inspired men and women, leaves no question that it is an end in revelation and that it is inherent in every manifestation of Mind. Hence, rightly to divine and recognize the beautiful is to become responsive to the good. We become the children of God in loving both the beauty and the truth of Spirit, and we are thus to be saved from all awkwardness of expression and unideality of taste,—begin to live in harmony with that divine law which "is perfect."

The significance of all this cannot fail to become more manifest to us as we live and move amid an infinite variety of those suggestions of the beauty of the divine manifestation, to one of which Christ Jesus directed our attention when he said, "Consider the lilies how they grow." When Mrs. Eddy declared that "it is ignorance and false belief, based on a material sense of things, which hide spiritual beauty" (Science and Health, p. 304), she gave to the idealist a key which may open to him the very gates of heaven. He sees that awakened spiritual sense may become responsive to all that speaks for the splendors of the art of God. Instead of thinking of beauty as pertaining to the material, he begins to realize that with goodness and truth it is the expression of Spirit and the spiritual alone; that, despite the handicap of materiality, the "glory of God," the ideality of His thought, is revealed in some degree to human sense, and that as the clouds of material belief are dispelled the eternal beauty of the divine handiwork will be apprehended in ever-increasing ratio. The advance of spiritual perception thus enhances his daily delight in that unsullied art which is the resultant and expression of forces concerning which our Leader has said that "human knowledge calls them forces of matter; but divine Science declares that they belong wholly to divine Mind" (*Ibid.*, p. 124). For every spiritual nature-lover an obscuring veil is being withdrawn, and the inspiring wonders of omnipresent Mind break upon a vision that grows ever more clear.

Speaking of the rose, Mrs. Eddy writes, "The joy of its presence, its beauty and fragrance, should uplift thought" (*Ibid.*, p. 175); and the practical value of this perception of spiritual beauty through these fragrant symbols, as pertaining to the nature and activities of omnipresent Truth and Love, appears when we remember how rich and continuous in human experience is the appeal of the beautiful. In the presence of human wretchedness and want, suffering and sorrow, doubt and disease, one may sometimes be tempted to question if there can be any ultimate truth and goodness; but in the presence of the sky, the mountains, the flowers, and the faces of little children, the appeal of that which is above all materiality may be felt every hour of the day. As we come to understand in Christian Science that every divine idea is clothed with the beauty of perfectness, we can realize as we have not before that "the beauty of the Lord our God" may continually inspire our thought and become for us, in the measure of our spiritual aspiration, a "garment of praise."

JOHN B. WILLIS.

"INDUSTRY, INTELLIGENCE, INTEGRITY."

On the walls of the municipal building of a large city in Canada are some fine symbolic pictures, representing the arts and crafts, and one of these has for its title the words quoted above. These words were recalled as the thought of Labor day presented itself, an occasion which brings to the fore one of the most important questions of the hour. Happily for us, we live at a time when the dignity of labor is being more and more recognized, when it is no longer considered a disgrace to be a worker, but when instead it is regarded as a disgrace to be an idler. And the kind of work is no longer held to be of such importance as the quality, for the barriers to progress are one by one being removed, and excellence in work is being accorded, as never before, the recognition which it deserves.

Real excellence is always a product of "industry, intelligence, and integrity," and is inseparable from them. In Christian Science we go farther and trace it back to its source, viz., the divine demand for perfection, which is the basis of all real progress, and the truest developer of individual character. We thus come to appreciate the force of Paul's words, where he warns against "eyeservice," and bids us serve "in singleness of heart, fearing God." He adds, "Whatsoever ye do, do it heartily, as to the Lord, and not unto men; knowing that of the Lord ye shall receive the reward of the inheritance: for ye serve the Lord Christ."

It is here that Christian Science is of supreme value to every true worker in showing him, first of all, how true his service must be to meet the demands of such a master, for perfection and nothing less is what Truth calls for. At the same time we have the assurance that the Christ-idea which abides with us, is governed and protected by its divine Principle, by impartial, infinite justice. Our King "can do no wrong;" no, nor suffer wrong; and we have but to see that we are on the side of right to be eternally safe.

We should never forget that we must reflect divine intelligence if we would be intelligent, and if we would express industry and integrity. In too many instances would-be workers forget that mere toil is not work, that real work must be intelligent, hence progressive, and work of this sort is ever at a premium. This marks the vital distinction between service and slavery. The one who is master of himself and of his work is never a slave to caprice, ignorance, or injustice; but this high attainment is not reached in a day. It may take many years of right thinking and right working to reach this goal, but every step in the right direction is a step of progress, and it brings blessings which are not limited to oneself alone. Every overcoming of ill is as "a light that shineth in a dark place," to quote St. Peter, and we owe it to Mrs. Eddy's teachings that we may prove in every experience the spiritual fact that we need not suffer either mentally or physically from constant toil. On this point she says, "The spiritual demand, quelling the material, supplies energy and endurance surpassing all other aids, and forestalls the penalty which our beliefs would attach to our best deeds" (Science and Health, p. 385).

As we come to recognize and understand the "kingdom of God," which Christ Jesus declared to be present nearly two thousand years ago, we shall help to establish its "righteousness" in all human conditions. This must come by giving priority to the spiritual on every occasion, even as he said, for not otherwise can rightness be established on earth. With a true concept of intelligence and integrity, we shall have "holiness unto the Lord" inscribed not alone upon the sacred things of the sanctuary, but upon all that represents what a thinker has named "the sacrament of our daily industry."

Annie M. Knott.

LETTERS TO OUR LEADER.

Colorado Springs, Col., Aug. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Cherished Friend:—The students of Judge Septimus J. Hanna, here gathered at the first meeting of his association, send you respectful and loving greeting.

We make grateful acknowledgment of the blessings with which our lives have been enriched through the understanding of God as the divine source of all supply; we rejoice in the increasing evidences that the scientific Christianity of the Master is here and now promoting the establishment of the kingdom of heaven on earth through the healing of sin and sickness; and, in gratitude for your consecrated life and clear perception and fearless voicing of the truth, we give you assurance of our loving and unswerving loyalty to the Christian Science Cause, and to you as its Discoverer, Founder, and Leader.

"Peace be to the brethren, and love with faith, from God the Father and the Lord Jesus Christ." "Grace and peace be multiplied unto you through the knowledge of God, and of Jesus our Lord."

Faithfully yours,

Roselpha G. Wright,
Secretary of the Association.

By unanimous vote of the meeting.

Oswego, N. Y., Aug. 21, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Teacher:—I have just finished reading Chapter XIV., "The First Edition of Science and Health," in Sibyl Wilbur's "Life of Mary Baker Eddy," and I am more than ever thankful that I am the fortunate possessor of a copy of that edition. I was familiar with a few of the incidents narrated in her book, leading up to that great step,—the actual launching of that ark of safety, Science and Health,—but the narration in detail of all the steps in the way, fills me with reverence, and such yearning, tender love as I have never before experienced.

Such a succession of humiliations, sorrows, bereavements, and disappointments surely never before fell to the lot of any one mortal; but to no other mortal was committed the high trust of accomplishing a task so great as forever to uplift and bless mankind. If, as Science and Health teaches of the life and work of the Saviour, the sacrifice required was so great that the motive and incentive must have been love, could a lesser motive have incited and enabled you to endure what had been endured up to that time—and what has been endured since? Through every page of Sibyl Wilbur's book I see the hand of the "guiding God," and I still see it in your every word and act. Every amended or new by-law is a fresh attestation of wisdom for the hour—of patient waiting, of long-suffering and forbearance.

I rejoice daily that I am on this plane at the time when the vision is so clear and God again speaks through His prophet, my dear faithful friend and Leader. That our relations be forever expressed in the one Scriptural word "Mizpah," is my sincere wish. With a deeper sense of the value of the spiritual, and a greater longing for growth in grace, I am

Truly yours,

Ellen E. Cross.

Abilene, Kan., Aug. 20, 1909.

Dearly Beloved Leader:—When the new by-law came out, it was a surprise to our field. The practitioners here for years have acted as librarians, and have also received

Digitized by Google

patients in the reading-room and rooms adjoining. I was at that time receiving patients here, and immediately saw the necessity of active obedience. The board of trustees agreed with me, and within a few hours we had a new librarian and I had a new office equipped. Through responding joyfully to this call of Principle, we have learned more obedience, more love, and something more of the fragrance of gratitude.

The board of trustees join with me in love and thankfulness to you, our revered Leader, for this bringing to light of an erroneous condition, in the line of partiality; and for this, our experience.

Lovingly yours,
ETHEL B. BODKIN.

Hartford, Conn., Aug. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Often, longing to say to you, I thank you, I have felt, as did the publican, that my unworthiness smites me before the mercy of God. Yet I would say this: that of all the mercies which have come to me through your reflection of His love and wisdom, one of the greatest is the opportunity to do even a little work in His field. You have told us that we shall find healing "in working for God" (Miscellaneous Writings, p. 343). The work entrusted to me as Second Reader in a branch of your dear church, has saved me from being overwhelmed with pain, fear, grief, sin. This, and the tender love of older students, who have known more of this healing, are two of the blessings that have helped me to discern a little and to appreciate a little your great love in telling us of "our Father-Mother God." In Christian Science I have found the only vital, satisfying joy I have ever known.

With deep desire to be able to say truly that I love and follow you in Christ,

MAY JACOBS.

Waltham, Mass., Aug. 4, 1909.

Dear Mrs. Eddy:—Please accept a faint expression of gratitude for the great benefit your book "Science and Health with Key to the Scriptures" has been to me. Through studying it in connection with the Bible I am a better woman and have been freed from a sense of poverty. My desire is to go forth and show others the way, even as it has been shown to me.

Gratefully and lovingly,
A. C. UNDERWOOD.

New York, N. Y., June 6, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—May God bless and guide you in your great work for humanity. The understanding of God which has come to me from the study of Christian Science during the past ten years has enabled me to meet disease in its various phases, and even to know the powerlessness of "the last enemy" by the understanding of Life as indestructible. At this time I desire to express to you again my loyal and loving gratitude.

Yours sincerely,
ROBERT E. CAREY.

Kansas City, Mo., July 21, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—Permit me to express my gratitude to you for your leadership. Recent events have brought out more clearly to me the fact that your giving of truth is for all. The wisdom of such a course becomes clearer to me in view of events passing under my observation. Your recent published communications have brought a sense of the amplitude of what you have given to govern and direct. It is mine because it is for all. There is no room for a thought that another can gain direction more direct. Impartial leadership is the only good leadership. It has no special favors to bestow and no special favorites upon whom to bestow them. I am grateful to you for such leadership. To follow it enables me to discern better between good and bad. I thank you for all the benefits Christian Science is bringing to me. God bless you.

Sincerely,
ALBERT L. MCBRIDE.

Fitchburg, Mass., July 26, 1909.

Beloved Leader:—I cannot refrain from expressing gratitude to you for the amended by-law, wherein you state: "In Christian Science each branch church shall be distinctly democratic in its government, and no individual, and no other church, shall interfere with its affairs." I want to thank you for our *Sentinel*. The two editorials, "The Lord giveth wisdom," and "Seek, and ye shall find," March 27 and July 17 respectively, coupled with this by-law, will awaken every obedient student throughout the entire field to depend absolutely on the Principle of Christian Science to solve every church problem. The battle is not ours but God's.

Lovingly and loyally yours,
MRS. JENNIE M. STEVENS.

Humboldt, Ia., July 27, 1909.

Dear Leader:—Words are inadequate when I try to express what your teachings have been to me. Life would seem empty indeed shorn of the light your deep, spiritual insight has thrown upon the Scriptures. I thank God that I live in the present, a present so blessed by your labors. Please accept the tardily expressed gratitude of a thankful heart. Yours in truth and love,

LAURA HAMERSLY.

Pittsburgh, Pa., Aug. 26, 1909.

Mrs. Mary Baker Eddy, Box G, Brookline, Mass.

Beloved Leader:—Would that I might find words to tell you of the feeling of reverence I have for your "Key to the Scriptures," Science and Health, which you have so lovingly given to suffering humanity. Through the truth as revealed in this wonderful book, I was, with the aid of a Christian Science practitioner, completely healed of the fear and belief of hereditary tuberculosis. Am I grateful? I hope and pray each day of my life to be more able to show my gratitude by following your teaching of the truth. My heart goes out in the fullest sense of love to God, and to you, dear Mrs. Eddy, that there was one spiritual enough to discern this truth.

Lovingly,
J. CHARLES WUERTZER.

Des Moines, Ia., Aug. 2, 1909.

Dear Mrs. Eddy:—I want to thank you for this beautiful and practical religion which you, through your pure thought, have been able to give to sinning and suffering humanity,—what a blessing to know that there is but one Father (God) and that He does care for and maintain His own; that His work is finished, and now it is for each individual to do the work that belongs to him alone. I cannot tell you all that Christian Science has done for me; I can only send you my loving gratitude.

MRS. A. E. BROOKS.

THE LECTURES.

OMAHA, NEB.

A lecture on Christian Science, under the auspices of Second Church of Christ, Scientist, by Bicknell Young of Chicago, was given at the Orpheum Theater of this city, Thursday, June 17, to a large and appreciative audience. Mr. Young was introduced to the audience by the Hon. C. J. Greene, a prominent attorney of this city, who said in part,—

I do not think there is any force in modern life which has lifted and is lifting so many men and women into the realms of peace and comfort and joy, as Christian Science. It operates directly and immediately upon the sick, the weary, and the hopeless, to rescue them from their intolerable burdens. There is nothing mysterious about it. Its inspiration is in the most simple and elementary fact in life. It is this: that God is not merely an idea, a sort of working hypothesis, but that He is, or should be, a vital force in each individual's life and experience.

Almost two thousand years ago there was sent one who in thirty-three years of living demonstrated by precept and example that God is a vital force. This messenger exemplified in human form the supreme fact that God is actually omnipotent, omniscient, omnipresent, and immanent. Nevertheless, disregarding his example and teaching, we still pray to the "being whom we call God, and know no more." Theoretically we accept God; practically we deny Him. While denouncing atheism, we are atheists.

We may not know much about our neighbors and friends, for the life of an individual is obscured in as much mystery as the life of the eternal. Mortal man, controlled by self-interest, influenced by each passing circumstance, governed too often by ignorant and passionate impulses, denying today what he said yesterday, inconsistent and contradictory in his conduct, lives a life which completed is but a vague and fragmentary revelation of the mighty force that moves him. We have missed the true significance of Christ's mission, for he came to solve this mystery by revealing in his life and teachings man's true greatness; to discover to men the omnipotence and immanence of the eternal God.

As I understand the matter, the Christian Scientist believes in this power. He believes that by the laws of Spirit changes may be wrought that are miraculous only because unusual, and unusual only because the power which produces them has been unused. In a generation thousands of men and women have been recreated,—"born again,"—and there is a cloud of witnesses tonight to testify that there is in man a force which can be made effective through an intense consciousness of the divine presence.

I know but little of the teaching of Mrs. Eddy. I know something of the work which has been done by her followers, and I reverence the teacher as I appreciate the work; and I have been unable to discover wherein either the teaching or the work is contrary to natural law.

Correspondence.

NEW YORK, N. Y.

The introductory remarks by E. K. Roberts, Second Reader, at a lecture delivered by Frank H. Leonard of Brooklyn, June 27, in Masonic Temple, under the auspices of the Christian Science Society of the Bronx, were in part as follows:—

We read in Matthew's Gospel that the wise men of the East followed the star until they came to the place where the young child lay. In the early sixties of the last century Mrs. Eddy discovered that star,—the star of Truth. For three years, with that star always in view, she labored incessantly, with the Bible as her only guide, until she was enabled to give to the world anew that truth which makes us free. She gave us Christian Science. She illumined the Science of being in what is known as the "scientific statement of being."

Hundreds of thousands have studied this statement, and the other teachings of our Leader, and thousands have been enabled thereby to fulfil the last command of our Master, "Go ye into all the world, and preach the gospel to every creature," and to experience the promise, "And these signs shall follow them that believe; In my name they shall cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Hundreds of thousands have been healed through Christian Science of sin, sorrow, and disease, and from all parts of the world comes the chorus, "Glory to God in the highest, and on earth peace, good will toward men."

We would not be doing our duty, in fact, we would not be Christian Scientists, if we did not provide for giving these truths to the world, so that those who inquire may learn. Hence, this lecture.—*Correspondence.*

ATHOL, MASS.

The Rev. F. K. Gifford, in introducing Judge William G. Ewing, who lectured on Christian Science June 20, said in part,—

The only testimony worth hearing is that which comes from the friends, sympathizers, and apostles of a new movement. All other testimonies, however well meant, are certain to be vitiated by some element of hearsay, prejudice, or falsehood. The blindest of all guides is popular report. If we are ever able to learn the truth or error, whether of Christian Science or of any modern essay, we can only learn it from its acknowledged and accredited spokesmen. One of the ablest of the spokesmen of Christian Science is here today, and you and I are present to accord him the great modern right of a fair hearing.—*Church Record.*

TESTIMONIES OF HEALING.

I should have to write volumes if I were to tell all that Christian Science has done for me. When I was first induced to look into this Science, I was a nervous, suffering piece of humanity, finding my greatest comfort and happiness in the sympathy and constant attention of friends. This truth first presented itself to me as a reasonable, practical religion, which not only answered satisfactorily all statements in the Bible over which I had pondered and asked questions,—only to receive unsatisfactory answers,—but it shed a new light upon the whole Bible.

I then began to realize that as Christian Science proves God's words and promises to be true, inevitably God's child is not subject to any material laws. I also realized that God did not create sickness, sin, or discord, as all that He made was good; therefore, God being the only creator, there could be no room or place for sickness, sin, or discord. I began at once to try to prove the truth of these statements, with the result that in less than six weeks I was perfectly well. My nerves had ceased to distress me; a chronic throat trouble, a supposedly inherited stomach affection, etc., also another severe chronic complaint for which I had doctored with a specialist for ten years with only temporary relief, as well as some minor troubles, had completely disappeared.

From overstudy and a great deal of reading my eyes had given out completely while I was still a child, and as I suffered a great deal my parents took me out of school and consulted a specialist. He said the condition was very critical; that he was much afraid I would become entirely blind; so for more than a year I was not allowed to use my eyes. This was the beginning of about fifteen years of almost constant suffering, but when my healing came in Christian Science my eyes were perfectly healed, as well as all the other troubles. I at first decided I would not part with my glasses, but I soon realized that my sight was normal, and that I did not need the glasses, so I took them off. It is now about eight years since my healing took place—eight years of almost perfect health! Only one who has suffered a great deal from ill health can fully appreciate what these years of health and strength have meant to me.

Another blessing which means much to me is almost perfect freedom from weariness. Many times, during my years of illness, I would wish, when I retired at night, that I might never awake to live through another day, as I felt so weary and discouraged that life seemed a burden. I had never, from early childhood, until my healing, been free from weariness, but if the temptation of pain or weariness comes to me now, I seldom give it a chance to linger in my consciousness. When I declare the truth as I understand it in Christian Science, the false dream is destroyed sooner or later, though I have asked help of a practitioner on two or three occasions. I have found through experience that it is far wiser and better to "stand porter at the door of thought" (Science and Health, p. 392), and not allow these wrong thoughts to enter, as they are much easier to destroy when they first present themselves than after they have taken root.

My healing seemed so wonderful to me at first that I came very near being satisfied with that alone, although this truth dispelled so much darkness that everything appeared in a new light. Financial difficulties began to straighten out beyond all power of comprehension. Difficulties of every sort began to lessen to a wonderful degree. As I look back upon all this, I am amazed at my reluctance to give Mrs. Eddy the credit for bringing to mankind this wonderful truth. I thought it was so clear that we should always have known it. For a year I did not attend church. I then commenced to attend the Christian Science services, as I was hungry for more of this blessed truth, and I began to realize how much I had missed all the year by not attending before. Since then I have seldom missed the Sunday morning or Wednesday evening service, as I find the truth explained so clearly in our Lesson-Sermons. I find our text-book to be truly the "Key to the Scriptures," from which I would not be parted at any price.

About four years ago, my teacher so clearly pointed out our relation to our beloved Leader that I could not help being grateful to her. When one has been saved from death, that one is usually grateful to the person who saved him. I have surely been saved from worse than death, even hell itself, the hell into which suffering, hatred, self-pity, or selfishness leads one. I am daily proving that we advance on our heavenward journey only as we rise above all selfishness, discord, and strife. I have had, and am constantly having, many proofs of the healing, saving efficacy of Christian Science. I also find that only to the degree I use and live this truth, does it benefit me. I know that when the truth is rightly applied, every human ill is destroyed.

I am indeed grateful to God that in Mrs. Eddy He has given us a woman pure and good enough to declare this healing truth to us, and it is my great desire to be a worthy follower of our beloved Leader, who has bidden us to follow her only as she follows Christ.

EDITH BOWE, Portland, Ore.

As I have been helped in many instances by Christian Science, I feel that it is time I made an acknowledgment of the same. I hope that the proofs which have come to me through the application of Christian Science, may help others to see the truth. Christian Science has helped me spiritually and physically, it is resurrecting the best part of me and annihilating much that has for years held me in bondage.

About three years ago I was in Elwood, Ind., at which time there was an epidemic of fever and there were a number of deaths every day. My nephew became ill, and having no knowledge of Christian Science, he was attended for several weeks by a physician. The doctor worked hard to save his life, but there came a day when he advised me to call some one else, as he had done all he could. I then sent word to a Christian Science practitioner who had helped me some twelve years previous, when I had an attack of lead-poisoning. Although this practitioner was three thousand miles away, the response came promptly. In a week's time my nephew could sit up in a chair, and from that time on he gained rapidly in strength. When the call for Science help was sent out the boy was terribly emaciated. Not only do I feel that his life was saved through Christian Science, but I feel that I was myself saved from the same disease by having every symptom met in Christian Science as it appeared.

Another experience came to me about a year ago, when I was in Pacific Grove, Cal. While preparing kindling-wood I stepped on a large nail, which passed through my foot. When I tried to raise my foot from the board in which the nail was, it stuck fast, so that I had to take both hands to release my foot. After I had done this I went to the telephone and called up the practitioner who had helped me before, and then started for home. She immediately began to treat me, and although I had some severe trouble, and felt several times as though I would have to give up and send for a physician, I held to Christian Science and was perfectly healed. Inside of two weeks I could not tell which foot the nail had gone through.

In closing I will say that Christian Science has helped me in a great many ways. I am now studying Science and Health and I am sure that it will help any one who will do the same.—H. H. MCLEROTH, San Francisco, Cal.

[Translated from the German.]

It is with a heart filled with gratitude that I am writing what Christian Science has done for me. From childhood I suffered with an affection which physicians said was an organic disease of the heart. I had severe fainting-spells, and a nervous disorder. As the years passed by my condition grew worse, so that I finally became very miserable. I was lame in my right arm, but yet dependent upon the work of my hands, so that, go wherever I would, worry went with me, and when I awoke in the night it stood at my bedside like a ghost. I could write at length about all that, but instead I shall stop and thank and praise God for Christian Science, which has delivered me from all these conditions and has made of me a healthy and happy woman.

I shall never forget the day when I attended the meeting for the first time, and heard that God does not impose suffering upon us; that God is Love, and Love only, and that He does not desire His children to suffer. I attended the meetings as often as I could, and although I did not understand much at first, yet I took home each time a thought which brought comfort and help, and I also learned a great deal by the testimonies which were given. I began to examine myself and found much that needed to be put off. I used to be irritable, easily offended, and would quickly lose my temper, but I began to ponder these things and to reform. A kind lady ordered the *Herold* for me without my knowledge. I began to read it, and could hardly wait for the next number to come. I laid everything else aside and read only the Bible and the *Herold*, and how much better I understand the Bible now! I am so happy to have found Christian Science, and I thank God daily for it and for our beloved Leader, Mrs. Eddy, who has done so much for us.

FRAU GEORGINE GEISSLER, Dresden, Germany.

Over two years ago, when struggling for health and strength, after an illness of five months under the physician's care, when discouraged and unable to walk but a few steps at a time, a friend suggested that I try Christian Science. I did not then think seriously of it, but a few days later this friend sent a practitioner to call on me. He talked with me, and I decided to try the treatment, though I had but little faith that anything could cure me. I had suffered with severe headaches for over eight years, often becoming nearly insane from the pain; and I had a serious affection of the spine, which caused me much additional pain and loss of sleep.

Physicians had tried in vain to help me, and an osteopath had also failed. The Christian Science practitioner said that I would make more rapid progress if I had a copy of "Science and Health with Key to the Scriptures." I did not think it necessary, but I was determined that I would give this mode of treatment as fair a trial as I had the others. I, however, soon learned to love the "little book" and its author, and for the first time in my life I began to enjoy reading the Bible, which I now realize is the Book of Life instead of a book of legends and enigmas as I had always thought it. I forgot to mention the spinal curvature to the practitioner, but in just a week from the time I began treatment, I found that my spine had become perfectly straight, and I have never had any discomfort from it since. This was a sufficient proof to me that God's laws when properly applied can and do heal, and in a short time I felt better and stronger than for many years.

In a few weeks, however, my feet, limbs, and hands began to swell and pain me, and it became very difficult for me to step. Two days only was I confined to my bed; then, very much against my wishes, a physician was called. His verdict was an acute attack of rheumatism, and he predicted months of confinement to my room. I did not take his advice or his medicine, and after allowing him to make a few calls, I dismissed him on my own responsibility, but kept on with my reading and Science treatment. In a few weeks I could walk a little, although weak, stiff, and lame, and started on a trip with a pair of very large slippers on very much swollen feet, covered by overshoes. My people did not expect me to live to reach my destination, but I knew in whose care I was, and felt no fear. Christian Science treatment was continued during the journey, but soon after my arrival the practitioner left me to care for myself. In just four weeks from the time of my arrival, I walked nearly a mile, with my own shoes on, and felt no fatigue. From that time I gained in health and strength, and consider myself perfectly well and unusually strong.

Surely it is my duty to show my gratitude to God for the release from so many evils by obeying the commandments of the great Master, and the teachings of our Leader. This Science has been a great help to me in every way, and I know now that there is one "who forgiveth all thine iniquities; who healeth all thy diseases." I have joined The Mother Church, and deem it an honor as well as a duty, and am glad and willing to say, "Thou my daily task shalt give"—and to obey.

VIOLET B. SANBORN, Norwood, Mass.

Many times I have been on the point of sending a few words to our *Sentinel*, with the hope that my experience might help some other weary one through the discouragement, discontent, unhappiness, and darkness of unbelief through which I passed before knowing of the blessed truth of Christian Science. Surely I have reason to rise up and call our dear Leader, Mrs. Eddy, "blessed," but it is because words seem so inadequate to express what I feel, that I have kept silent so long.

It is just five years since I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. This book had been loaned me by a friend, as at that time I thought I never could spend the money needed for a copy, now I know that if I could not get another, no amount of money could buy mine. Fifteen years ago I started out to earn my own living. I felt that six days of the week were enough in which to perform my duty, and the seventh I could not give to anything so unprofitable as going to church—for to me it seemed unprofitable; consequently, for ten years I was scarcely inside a church, although up to that time I had been a regular attendant—I suppose because I had been brought up to go and to feel that it was the proper thing to do; but as for any practical help, there was none.

Ten years ago my home was burned to the ground, and my Bible was lost along with all my other personal belongings. From that time until I began to study Christian Science, I neither owned a Bible nor looked into one. It seemed as though the more I tried to do my duty, the harder experience I had, until I was so disgusted with life that I wished some unexpected chance would take me out of it, and I wondered how it would all end. Needless to say this mental state made me a very miserable creature physically, and day after day and month after month I have gone home from my work, hoping that I would never see the beginning of another day.

Although I did not begin the study of Science and Health with the thought of being helped physically, and was not—at least consciously—looking for the truth, I found both in reading this book. I was looking for I knew not what,—anything that would help me to bear the burden of life without the awful dread and worry which the future seemed to hold, when I could not work and no one would want to be bothered with me. Terrible headaches, which had held me in bondage five days out of every

Digitized by Google

seven, disappeared; glasses which I had worn for eight years were laid aside; the sense of weariness, which had seemed to overpower me at the end of each day, melted away into its native nothingness, and before many months people around me were saying, "What have you been doing to yourself—you look ten years younger?"

The joy, the happiness, the peace that have been mine for the last five years, I cannot express in words, and I always feel that those are the only things I can speak about, and yet when I can say that for five years I have not used a single material remedy, nor lost one hour from my work on account of sickness, while before I lost many days and even weeks each year; surely I have a right to reverence and be grateful to the one whose pure, good life has made such a change possible in mine. Of course I have had many things to meet during those years, but I have always had something with which to meet them; not just a stolid endurance, with resentment, hate, and envy in my heart that my lot should be so hard. I have also had the joy of bringing truth and love into my work, so that it is a pleasure, and many of those around me have become interested in Christian Science and been helped by it.

I always feel that our gratitude to our dear Leader is best expressed in deeds, not words; therefore I am striving each day to let my light so shine that I shall gladden and help those around me.

MISS MARY LOUISE SMITH, Philadelphia, Pa.

When I look back over the last sixteen or seventeen years, my whole heart goes out in gratitude to God for giving me Christian Science. I had four dear children, but I was impatient with them, although this grieved me nearly to desperation. My old way was to get angry and then be sorry, and I would depend on God's final forgiveness. I got along in that way till I lost my four children, in less than two weeks, with what we then called a fatal throat affection, though I have learned to see that it was mortal mind and a false sense of God and man which was responsible. I have learned that it is important to heed our dear Leader's words on page 495 of Science and Health, where she says, "Study thoroughly the letter and imbibe the spirit," and I have proved that it is the true sense of Spirit, God, that overcomes the belief in evil spirits, whether they manifest themselves in anger, lust, hatred, pain, or grief. With deepest gratitude I thank our dear Leader, and God shall have the glory. Again we have three sweet children, and I have now imbibed enough of the Christ-spirit, through the Christian Science literature, together with the companionship of Christian Scientists and a regular attendance at the Christian Science meetings, to realize the resurrecting power of Truth, which has lifted me out of the belief in materiality in which I was once buried.

In the spring of 1908 I felt led to memorize Paul's words which tell of the fruits of the Spirit: "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." He adds, "Against such there is no law." Soon afterward we had a severe frost which threatened to destroy our fruit for the coming season, but having this text in fresh remembrance, I worked to realize peace instead of fear in regard to the seeming prospect of destruction, and the result was very good. Our trees were a marvel to every one who saw them. I am so glad that I have been able to gain as much as I have through Christian Science, for it was my only hope of deliverance from sin.

That I may be enabled to make my life an expression of thankfulness to God, and to His servant, Mrs. Eddy, is my sincere prayer, for I have received manifold blessings since taking up the study of Christian Science. The cross has seemed heavy at times, but when I have turned for help to our inspired literature, or to some friend and faithful follower of Mrs. Eddy, there has always appeared some Simon who has helped me to bear it. I have been healed of severe mental trouble, an affection of the heart, headaches, and many lesser ailments. If I could but express my thankfulness for being healed of extreme fretfulness at my dear ones, and for the help that Christian Science has been to me in bringing up and caring for my children! The youngest, now eight years old, has never tasted any kind of medicine.

The reading of Mrs. Eddy's books, together with the Bible, imbues one with the true spirit of obedience to divine Love.—ANNA E. PAULSON, Genoa, Neb.

[Translated from the German.]

For years I had suffered with a chronic disorder of the stomach and bowels. I used all kinds of remedies, but none had a lasting effect; the trouble rather grew worse. Moreover, I was afflicted almost constantly with a skin disease on the face, which was very painful and disfiguring. Through sad experiences I had become embittered, and as the physical ills kept growing worse, my prospects for the future became still darker.

Some time ago a sister, who had been healed through Christian Science of a seemingly incurable disease of several years' standing, had advised me to seek help in Christian Science. I, however, believed that this meant that I must renounce all the pleasures in life, and I was not willing to do this, as I always hoped to be happy again. My sister gradually made plain to me that Christian Science not only leaves us all the pure joys, but that it enhances them, and that it only takes away from us the false pleasures and all that makes life heavy to bear. I then wrote to the practitioner who had helped my sister, and asked her to give me treatment, and very soon I became happier; thoughts altogether different entered into my mind, and the eruption, of which I was having a severe attack, disappeared immediately. The other ailment, too, began to improve, and after a little over five weeks I felt so well that I needed no further help.

I have found complete healing, and am happy that Christian Science has come into my life, for now I am no more without God, and without hope and faith in the world. I have also applied the truth for myself with success; for instance, when I scalded myself so badly that I suffered great pain and could not open the right eye at all, I declared the truth, with the result that the pain lessened in a short while, and neither blisters nor scars appeared. That I am happy now, and cheerful, and look toward the future with trust in God, I owe entirely to Christian Science. I thank our heavenly Father that we have in Mrs. Eddy a Leader who teaches us how to understand and to do His will.

JOHANNA FICKER, Zimmersacher-Eibenstock, Germany.

I wish to say that I am exceedingly thankful for the good health that has come to me through Christian Science. I had suffered with headaches and various other ills for years. I had taken all kinds of medicine, worn glasses a short while, and had an operation on the nose, in the hope that I might be relieved of the terrible pain. Christian Science has entirely healed me of the headaches, and of other complaints which I have always felt that medicine could not help. It did me more good in a month than I had gotten in years from medicine. Although I am not a Christian Scientist, I cannot say enough for what Christian Science has done for me. I know it is all good, and that nothing but good can come from it.

EMMA WYCHE, Greenville, Miss.

Many years ago, a dear woman came to my home on some business errand, and during the transaction she discovered that I was being treated by a physician for a number of ills,—so-called organic diseases,—and she learned from my conversation that I was very much disheartened about myself, for after years of medicine and medical treatment I had been told by a specialist that I would never be a well woman until I submitted to an operation. This I objected to as being most repugnant to me, so I went on for another period of years, at the end of which I was to go either to a sanitarium or a hospital for further treatment.

At this time the friend above mentioned asked if, when I felt sure doctors and medicine could do no more for me, I would come to them (meaning the Christian Science church), and said that they would try to help me. She also said I should not be discouraged; that there was help for me. I do not remember just what I answered, but I do recall wondering what this help might be like, and I questioned my friend about it the next time I saw her. She then told me that she had been healed through Christian Science of ills very much the same as those from which I was suffering. I knew she was a good woman, and I felt that she was telling me something for my benefit. Then I heard a lecture on Christian Science, and the important thing (to me) was the question which the lecturer asked as he was ending his talk, "What did Jesus mean when he said, 'Come unto me, all ye that labor and are heavy laden, and I will give you rest'—what did he mean?"

This query gave me much to think about, and wonderful to relate, the next morning, when I tried to take some medicine, I could not do it, and from that day, nearly six years ago, I have not touched drugs in any shape. I did not then know that the power of the Word of God had already done its work. A short time after this event, I called on one of the Christian Science practitioners, and during our talk I shed many tears, but I left her presence happy and contented,—a new-born creature,—all my troubles, aches, and weariness was gone, and these errors had been destroyed through the law of God, omnipotent good, Life, Love, and Truth, which she lovingly explained to me. I was only too glad and grateful to be told of this wondrous truth. I had about ten treatments at that time, and then I felt greatly uplifted spiritually and physically. I had never before enjoyed such health. Surely this beautiful statement in Science and Health (p. 248) has been verified in my experience: "Immortal Mind feeds the body with supernal freshness and fairness, supplying it with beautiful images of thought and destroying the woes of sense which each day brings to a nearer tomb."

This journey from sense to Soul is not altogether a path of roses. Many trials and pitfalls have been encountered along the way, but never has the help failed, nor the light of Love and Truth, as revealed to us by our grand and noble Leader, grown dim. Her courage and steadfastness have been a spur to me many times, and my hope is that I may always be found worthy of the name Christian Scientist.—MINNIE ELOISE CLARK, Jersey City, N. J.

In the summer of 1907 my husband went from our home in Virginia to his old home in Ohio, a physical wreck; but Christian Science healed him, for which he gave glad testimony in the *Sentinel* of Feb. 11, 1908. When he returned home, he brought with him a copy of Science and Health, which became living water to my thirsty thought, for I had been a semiinvalid for over twelve years, in fact I had been frail from childhood. The following spring found me a physical wreck, and as we had not sufficient understanding to overcome the condition, I went to Ohio, where my husband had been healed, and after one week's treatment I was well. Chronic kidney, bladder, and heart disorders, also malaria and lung trouble, left me, and I rejoice to say that I am now free, and enjoying better health than I ever have since my childhood. I am glad to return home to carry the good tidings of great joy to several waiting sufferers who are reaching out for the same divine power to help them through the same blessed means.

I cannot be too thankful for the wonderful transformation in our home since the light of divine Love entered it in Christian Science. I am thankful to Mrs. Eddy, who has brought us this understanding of God which makes free.—ELLA CASE, Emporia, Va.

Two years ago my eldest son and myself were afflicted with malaria in a very alarming form, which continued for several months with no beneficial results under the best of medical treatment. In our extremity we sought Christian Science aid, and in a few weeks we were sound and well, and have remained so ever since. God's work is permanent.

I had often heard of Christian Science, but was very much opposed to reading its literature or having it read by any member of the family, for I could not become convinced of its efficacy, being ignorant of the healing truths it conveyed. I am glad now that some of the demonstrations were manifested slowly, as our earnest and honest perusals of the Bible and the Christian Science textbook have indeed been the means of revealing much truth to our consciousness, thereby enabling us to rise above and quickly overcome many ills which present themselves.

A short time ago we had a beautiful demonstration of Truth's power,—an instantaneous healing of our youngest son. He was subject to severe attacks of stomach trouble, accompanied by high fever and vomiting. During one of these, with aggravated conditions which had lasted several hours, my husband went out and telephoned a Christian Science practitioner. In less than ten minutes entire harmony had been restored, and the boy was sitting up and asking for his dinner. After his appetite had been sufficiently appeased, and his desire to be dressed was gratified, he played as usual until bedtime. We have every reason to believe that this sickness has been completely mastered through our consecrated trust in God as an ever-present help in time of trouble.

We have put Christian Science to the test in many ways, and are pleased to state that we have found it equal to every emergency. For the demonstrations of physical healing, and all the other blessings which have come to us through the ministry of Christian Science, we are truly grateful to God; also to Mrs. Eddy, the revelator of this truth which heals and saves, proving to us the nothingness of error and the allness of God, good.

MRS. NANNIE MORGAL, Indianapolis, Ind.

[Written for the Sentinel.]

'TIS SUMMER.

HARVEY HADLOCK.

'TIS summer, and the fragrant air
Wafts incense of the flowers:
'Tis summer, and the tuneful world
Allures to woodland bowers:
'Tis summer, and my heart is glad
That winter lost his reign:
'Tis summer, and my sense is free
From every mortal pain:
'Tis summer in my joyful heart
For I have found the "better part."

FROM OUR EXCHANGES.

[*Outlook.*]

The endeavor to get the results of religious living without going through the processes, to secure possession of the fruits of character without enduring the discipline, is renewed in every generation, and the long and unbroken history of defeats does not seem to exhaust the credulity of men and women. We are willing to do everything except work out our salvation. We want a royal road to faith; are not willing to take the long, quiet path which is open to each one of us. We long for a great and final vision of God. We are eager for a complete and permanent settlement of all our doubts. At the beginning of the journey we want the enlargement, liberation, and certainty which can be found only at the end. We forget the significance of the divine commendation, "Well done, good and faithful servant." We change it to read, "Well thought," or "Well felt, good and faithful servant!" We want to feel the presence of God. We want to be able to think our way to Him in perfect clearness. We are not willing, hour by hour, day by day, year by year, with infinite patience, so to enlarge ourselves by work and life that we shall be fitted to stand in His presence and great enough to realize Him in our thought. We want strength, but we are not willing to exercise; we simply wish to pray for it. We want peace, but we are not ready to set our lives in order. We want trust and that quiet faith which is the source of joy and happiness, but we are not willing to gain faith in the one way in which it can be gained—by patient continuance in well-doing.

[*Christian Life.*]

The common people of civilized nations, having gained intelligence enough to think for themselves on the great questions of religion, are fast casting aside the falsities of the old theologies, and are awakening to the discovery of religious truth as it is in Jesus. They have somehow attained a new and vivid perception of the fact that the fundamental doctrine of Christianity is the divine sonship of men. They have won a new consciousness of the dignity of their nature, and of the powers with which it is endowed. They are beginning to respect themselves, and to demand that God's bountiful provision of means to the end of human happiness in this world shall no longer be enjoyed exclusively by the few, but shall be righteously apportioned among all sections of society. They are asking whether grinding penury for any portion of the race is inevitable in the constitution of things, or whether it is not mainly owing to the absence in society of the true Christian spirit of brotherhood. They are helping to create a cosmopolitan public opinion which calls upon earthly rulers to make social justice everywhere a concrete reality. This moral uprising of the masses should encourage us to look with new hope on the future, should give us a new trust in the divine guidance of human destiny.

[Rev. Samuel H. Bishop in *American Journal of Theology.*]

The situation exists in the world today, that a body of theological scholars and thinkers, and a larger body of adherents to the church of Jesus Christ, are actuated by intellectual considerations, feel emotions, and take positions which have almost no influence upon that great public mind and interest which control modern life in America. A wise and accurate observer said to the writer recently that the church, her thought and her attitude, are of no real interest today to the public mind; that apart from a very small contingent of readers, theological and religious books have no commercial value. The same man, be it said further, went on to express the opinion that if the church were really to be united in the taking of a positive attitude upon any great question she would exercise an overwhelming influence upon the public mind.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in this column.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the Field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

PAMPHLETS IN FRENCH.—Three new French pamphlets, "Christian Science: Le Pouvoir De L'Homme Sur Le Mal," "Christian Science: Ses Bienfaits Pour L'Humanité by Edward A. Kimball, and "Christian Science: La Délivrance Du Mal" by William P. McKenzie, are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has just been issued by the Society, copies of which will be mailed to our patrons on application.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, must be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY. DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.60 for six months; all other countries, $8.00 a year, $4.50 for six months. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

CHRISTIAN SCIENCE: A RELIGION OF DOING. A Lecture. By JUDGE WILLIAM G. EWING. 26 pages.

MISCELLANEOUS

BIBLES. Clarendon Brevier (0148 3 x), heavy faced, very distinct type. Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75. Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (0136 x), pica square type. Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

QUARTERLY COVERS WITH CHANGE POCKETS.—Regular size, $1.50 each or $15.00 a dozen. Pocket size, $1.40 each or $14.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. The arrangement for both high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN. "SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 27 cents the copy; $2.75 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 27 cents the copy; $2.75 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

Our Catalogue for 1909, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should be made by check, post-office money order, express money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money remittances or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a fac-simile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.06
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50: six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen: $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages, Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address; twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Dr. Frederick A. Cook, the American explorer, reached the north pole April 21, 1908, according to a telegram received Sept. 1 at the Colonial Office at Copenhagen. Heretofore every explorer has pushed as far north as he could during his first summer, and then has established winter quarters, but Dr. Cook went into the polar regions on this trip with a new theory. He intended so to time his advance that his journey over the ice would fall in the winter. On his previous expeditions he made a full study of ice and ice conditions, and found that not only was the ice firmer in the winter, but comparatively smooth surfaces were presented for sledge parties, making progress easy for mile after mile. He reckoned that a winter dash would not be balked so frequently by the open lanes and that the advance would be regular. As he had often found it as cold as sixty degrees below zero, a few degrees colder in the winter would make little difference, and the long Arctic night would be about as bright as our moonlight nights in the open country. He left Etah, Greenland, for the north on March 3, 1908, Cape Thomas Hubbard, March 17, 1908, and discovered the pole April 21, one month and four days later. The distance is approximately six hundred miles.

On the 13th of this month the first vocational or trade school to be planned, equipped, and conducted by the public school authorities of New York city will open to boys of mechanical tendencies, whose ages are not less than fourteen years. The principal of the school, Charles J. Pickett, Ph.D., says: "I do not plan to turn out boys who are going to take journeymen jobs. My boys will be admitted at fourteen years of age. In the average shop the fourteen-year-old boy is looked upon as a nuisance; he is neither fish, fowl, nor good red herring. The ordinary school training has absolutely unfitted him, particularly if he has had no manual training. I aim to impress the boys with the dignity of labor. I hope to have them realize that there need be no distinction between the grime and soil of the shop and the instincts of the gentleman. After all, the mechanic is the backbone of this country's progress, and in the very nature of things the nation must progress in direct ratio to the intelligence and skill of its workmen."

From a beginning which contemplated only betterment of the living conditions of workingmen, the latest philanthropy of Mrs. Russell Sage has grown to the point where the organization of a subsidiary company, known as the Sage Foundation Homes Company, was deemed necessary to the proper development of the work. A model workingmen's village at Forest Hills, near Jamaica, Long Island, is proposed. It is understood that the model homes will be laid out something after the manner of the Krupp Gun Works workingmen's village at Essen, Germany.

The National Conservation Congress at Denver adopted the water rights resolution of the majority resolutions committee. This is the resolution championed by ex-Governor Pardee of California, and favored by Chief Forester Pinchot. The majority of the committee reported a resolution to the effect that the Federal Government ought to limit grants and water rights to a reasonable and definite time and fix an annual tax upon them. The resolution was patterned after one adopted by the National Irrigation Congress at its recent meeting in Spokane.

The National Association of Attorneys-General, meeting east of the Mississippi river for the first time in its existence, held its annual convention at Buffalo, N. Y., last week. The questions discussed included the liquor question, particularly in the South, the police power of the state, and the effectiveness of ouster proceedings in the control of corporations, corporation and income taxes.

The government has decided to take the first step in what may develop into an important case against Standard Oil interests in the Oklahoma oil belt. The Indian Office of the Interior Department has been at work several months on complaint by the Indian owners of the oil-fields that their leases had seriously diminished in value owing to a conspiracy between the pipe lines.

Plans for a subway system for Chicago that will eliminate the present loop in the downtown district and substitute eight loops that will be operated entirely underground and do away with all grade and elevated crossings, have been drawn up and are to be submitted soon to Mayor Busse. The estimated cost of the new system is in excess of eighty million dollars.

Tree planting is being carried on systematically on the Massachusetts roads. During the year ending Nov. 30, 1908, 1,184 new trees were planted and 744 old trees were replaced. During the preceding five years, 13,113 trees had been distributed among fifty-five towns. The cost in 1908 of new trees averaged $1.20 each, and the average cost of maintenance was twenty cents per tree.

Prince Kiniyoshi Kuni, grandson of the Emperor of Japan, accompanied by the princess and Colonel Kurita, his aide-de-camp, have arrived in New York where he will represent the Japanese government at the Hudson-Fulton celebration. At the conclusion of this ceremony the prince will visit President Taft and then make a tour of the United States.

Under the auspices of the Aero Club of New England thus far this season its balloons have made twenty-eight flights, taken up sixty-eight people, sailing in the air 1,137 miles air line, and remaining up seventy-four hours and twenty-nine minutes.

International.

The aviation meeting at Rheims has been an enormous success financially. There were over two hundred thousand paid entries to the aerodrome Sunday, and probably one hundred thousand people witnessed the flight from the hills outside the course. The aeroplane companies took orders for fifty-two aeroplanes during the week, most of them from persons not before known to be interested in aviation. Manufacturers believe that sportsmen of every country will now begin to buy aeroplanes, particularly as the number of actual flights during the week, estimated at over thirteen hundred, were without a single fatal accident. The cost of the different machines ranges from $2,000 to $5,000.

A Russian imperial ukase just published suppresses the council of imperial defense created June 21, 1905. The presidency of Grand Duke Nicholas and the membership of two other grand dukes made the council a powerful instrument of government to which ministers of war and marine and even the members of the cabinet frequently had to bow. Its suppression amounts to a substantial victory for the Stolypin cabinet, which is working to coordinate the branches of the government in the constitutional sense, eliminating grand ducal interference.

The transit from New York to London—counting from the pier on the Hudson river to the station platform at London—has been reduced to five days, nine hours and twenty-two minutes by the latest achievement of the big Cunarder Mauretania on her first voyage by the Fishguard route. The days' run by knots to Brow Head, were: 590, 589, 584, 578, 475. The Lusitania just arrived at New York has established a new record from Daunt's Rock to the Ambrose Channel lightship. Her daily runs by knots were: 61, 650, 652, 651, 647, 123.

The Italian Aeronautical Society has decided that Lieutenant Mina, who made an ascension in the balloon Albatross, Aug 10, did not beat the world's record for altitude. It seems that the Albatross attained a height of 30,840 feet instead of 38,714 feet, as first announced. The record consequently is still held by the German balloon, Preussen, which ascended to a height of 30,078 feet.

Glenn H. Curtiss, an American, won the international cup of aviation, the most important event of aviation week at Rheims, France. He covered the two laps of the course of twenty kilometers, or 12.42 miles, in fifteen minutes, fifty and three fifths seconds. This is at the rate of 47.65 miles an hour.

Walter Wellman, who recently made an unsuccessful attempt to reach the north pole in a dirigible balloon, has arrived at Tromsoe, Norway, having left three men to guard the airship at the Spitzbergen camp through the winter.

Industrial and Commercial.

In furtherance of its policy to prolong as long as possible the life of cross-ties by treating them with creosote, the Pennsylvania Railroad has awarded a contract for the erection of a complete pressure wood-preserving plant at Point House Pier, Greenwich Point, Philadelphia. The company already has one at Mt. Union, Pa., and a small experimental plant at Greenwich Point, both of which are in successful operation. The Pennsylvania uses nearly four million ties each year for renewals and new work. The average life of these red oak and chestnut ties under present conditions in main running tracks is from three to four years, while white oak lasts from seven to eight years. It is estimated that preservative treatment will increase the life of red oak and other treatable ties to at least fifteen years.

The largest individual irrigation enterprise in Mexico is now being established upon a plantation situated near Torreon. The canal system will cover approximately fifty thousand acres of land. The water supply will be obtained from artesian wells. More than two million dollars gold will be expended in constructing the system.

Estimates dealing with thirteen of the largest wheat-producing countries of the world place the total for this year at 2,996,000,000 bushels.

General.

The golden anniversary of the drilling of the first oil-well in the world was celebrated Aug. 27 at Titusville, Pa., by a banquet attended by prominent oil men. Fifty years ago a well drilled by Col. Edwin W. Drake tapped a vein of oil 69½ feet below the surface. A movement is now on foot to erect a suitable memorial over the site of the old Drake well.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WHEN MATERIAL MEANS HAVE FAILED.

WILLIS F. GROSS.

MATERIAL things seem real to mortal consciousness, and to this consciousness it seems natural to look to materiality in some form to supply whatever is needed or desired. In times of sickness and suffering, the thought of most mortals turns instinctively to materiality for help, and so long as the need seems to be met in this way they are content to rely on material remedies. This is all due to education and to universal belief in the efficacy of drugs and other material agencies. When material remedies fail, then the wisdom of this world says that there is no hope; that nothing more can be done for the unfortunate one. He must rely on "nature" to remedy the difficulty, and if the trouble is not removed in this way, it must continue its course to the end. This experience is by no means an uncommon one. Thousands are today in bondage to disease and suffering who are persuaded that—all known remedies having failed in their case—it is required of them to face the situation with as much fortitude as they can command.

The following incident is a good illustration of how little those who have trusted to material methods have to depend upon when these remedies fail them. A physician who was testifying in behalf of the plaintiff in a suit for damages, was asked what treatment he would prescribe for the disease with which the plaintiff was afflicted as the result of an accident. He replied that there was not much that could be done. He would perhaps prescribe a little tonic, but the principal thing he would recommend was rest and quiet. Evidently from his point of view there was no drug or other material remedy that could supply what was needed in the case.

Another physician, testifying in the same case, was asked what would produce the physical infirmity with which the person under consideration was afflicted. Unhesitatingly he replied that worry would produce it. When he was asked what remedy he would prescribe, he said that the treatment of this disease had been very unsatisfactory, and all that he could prescribe was rest and quiet and perhaps a change of scene.

Here were two physicians declaring under oath that there was no material remedy known that could reach the trouble with which this unfortunate man was afflicted. Nothing could be done for him and nature must be allowed to run its course. The result might be favorable, but it would probably be fatal, and that within a short time.

A similar verdict has been pronounced in cases almost without number. Material remedies have failed and there is no hope, but many in this condition have turned to Christian Science, and it has been demonstrated to them that there is a remedy for sickness, even though material means have failed. Christian Science turns thought away from matter to Spirit; it inspires hope and confidence; and it heals, even though human knowledge affirms that the case is incurable.

In Christian Science it can never be said, "Nothing more can be done and there is no hope." So long as thought turns to God there is hope, and there is always something that can be done to relieve and heal. There is much that Christian Science can do after all other remedies have been tried and found wanting. It is often the case that the hopeless ones are most quickly and easily healed. This is no doubt due, in part at least, to the fact that there is no clinging to material remedies, but a complete turning to God and implicit reliance on Him to help. The failure of material things often causes humanity to turn from them. When thought turns lovingly to Spirit the individual is rewarded according to his fitness to receive the divine blessing.

Christian Science is available at all times. It is the effectual remedy for all discordant conditions, and when its healing power is sought in the right way the honest effort is richly rewarded. Many so-called incurable diseases have been healed in Christian Science. As the understanding of this Science is gained, the fear of disease is overcome and the conviction obtains that there is a divine remedy for all the discords of earth. It is the privilege of all to know this remedy and to experience its saving power.

When the Christian Scientist hears it said that nothing can be done in a particular case; that the physician has recommended rest and quiet and hopes for favorable results, he cannot help but contrast that view of the situation with what it is understood to be in Christian Science. Perhaps he may have been in just such a position when Christian Science was brought to his own attention and he decided to give it a trial. If so, he recalls how he was left to think of himself. Even though he sought rest and quiet, there was nothing so important or that required so much attention as himself. The thought of his condition was before him continually, and he wondered what the ending would be; but when he turned to Christian Science he found something else to think about. He was told that God is man's Life, and that man is subject only to the laws of divine Mind. He caught a glimpse of the eternal truth that God is the only creator and that He did not make disease and suffering, neither do they exist according to His will.

The thought that God is the only power and presence lifted him out of himself, and the body was left free to act according to the law of divine Mind. In a short time he found that he was being restored to health in a perfectly natural way, but he realized that the mere rest and quiet, from a material point of view, was not doing the work. There was a positive influence at work, and this influence was the power of Spirit, purifying and elevating thought, casting out the images of disease and the fear of suffering, and a more harmonious condition followed as naturally as darkness disappears before the rising sun.

Christian Scientists object to material remedies, so-called, because these are "other gods" before the one infinite God; however, in the working out of life's problem,

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

the best that human experience affords is required to meet the demands of Christian Science. That which humanity considers the best is not always the best, or the most desirable from a Christian Science point of view. The best is that which approaches most nearly to the spiritual fact of being. Pure air, wholesome food, suitable clothing, a comfortable dwelling-place, and a certain amount of rest and quiet are not only desirable but they are preferable to their opposites. These things are not, however, the aim of endeavor in Christian Science, for of themselves they cannot save humanity from sickness and sin; improvement in our surroundings should come as the result of obedience to divine law and order. "Science and Health with Key to the Scriptures" says (p. 442): "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually."

The Christian Scientist learns to take a practical, common-sense view of things at all times. Under certain conditions and circumstances even a change of scene may be desirable. Not that the Christian Scientist would depend on climate or material environment to heal, but in this way the opportunity may be afforded to do better work in overcoming thoughts of sin and sickness or other inharmonious conditions. The Christian Scientist is learning to rely on God and to trust Him at all times. He requires pure water, wholesome food, and fresh air because these are more nearly in harmony with real being than are the less desirable things of material sense. As thought is uplifted and spiritualized, mortals are not satisfied with the things that were at one time in harmony with their mental condition. A higher mental attainment requires a higher expression of harmony in its surroundings, and this is as it should be. The understanding of Truth, however, finds the kingdom of heaven—the reign of harmony—within, and it does not rely on the outward manifestation but on the unseen things of Spirit.

It is learned in Christian Science that much can be done for the sick and suffering even though all material means have failed. The invalid is not left to himself. God has not forsaken him. There is hope for the hopeless if thought turns away from earth to heaven, from matter to Mind, from evil to good. Reliance on matter prevents full and complete reliance on Mind, but it is not necessary for one to learn from bitter experience that matter cannot supply the human need before he learns to trust God. The power that heals sickness can prevent sickness, and the power that removes discord can preserve harmony. It is possible for every man to know this, because he has found it true in his own experience.

The greater work that Christian Science is destined to accomplish is the prevention of sickness and sin. How much has already been accomplished in this direction "no man knoweth." Wherever a man is, and whatever his condition, divine Love is his Saviour. It is not necessary that he learn through suffering; his experience in good can teach him the way of life.

"MEETING OUR BROTHER'S NEED."

HAROLD BOARDMAN.

It is the heartfelt desire of every Christian Scientist, the natural expression of his gratitude for the joy Truth has brought him, to tell others of the good he has gained; but if we would feed the Father's sheep, we must listen for the Father's voice. It may be that some part of the Lesson, some aspect of the truth which has met our individual need, has appealed to us very strongly, and in the fulness of our joy we perhaps think that every one else must have had the same view and appreciation thereof.

One needs, however, on such occasions, to remember that very few receive and assimilate the same crumbs of comfort. Let us therefore eat and be thankful for the divine Love that feeds each child with the food convenient for him, but let us not presumptuously think that we can straightway take the morsel of bread that has fed us, and give it to others indiscriminately, whether they need it or not. If we would save our brother needless discouragement, perplexity, and doubt, we shall remember to think first upon Love's ever-presence. This will silence the egotism, conceit, and self-will in ourselves and enable us to lift up our brother into that consciousness where no need can be felt or known, where no thought or condition of want or woe can ever enter, for nothing that defileth or maketh a lie shall enter the heavenly kingdom.

Meeting thus on the same level of attainment, as children of the one Father, we enter His temple together and prove our privilege of being able to say, as did Christ Jesus, "My Father's house is the house of prayer." By this silent, meek, and loving attitude the thief which would rob us of our realization of man's unity with the all-sufficing love of the one Mind is disclosed, if present; our brother's need voices itself, and is quickly met in the mutual realization of Truth's all-powerful presence. Peace and harmony are thus restored, and Love is enthroned.

THE AWAKENING.

WILLIAM HART SPENCER.

From out the vagaries of the human mind there seem to come visions of reality, like objects looming up through a drift of fog. Our text-book teaches that "mortal existence is a dream" (Science and Health, p. 250), and our dream of life is expressed in thought-pictures, which panorama-like continually pass before us. Often assuming fantastic shapes, and lacking the guidance and control of understanding, these sense-images, like weeds in a garden, grow rank betimes and thus stifle the desire for love and purity.

Every one is conscious, however, in some degree, of the desirability of overcoming sin, even if only to avoid the intuitive human sense of loss or punishment, and the only remedy is to change absolutely the conditions; hence the vital importance of expurgating all that defiles, and of allowing our thought to dwell only on that which is good and pure. This habit will lead us to seek aid from a source outside and higher than our human selves, perceiving as we do that the mortal sense which is the medium of inharmony, cannot in any wise be the means of its removal.

In its inception, when we have been somewhat awakened by Spirit to the need of changing our lives for the better, the initial effort is generally in the line of an endeavor to govern our conduct. With the best of men there will come at times a condition of thought which is erratic, chaotic, riotous, evil, and the seeming reality of the flood which sweeps over us is apt to bring a sense of weakness; but if we hold strenuously to the letter of right action, that of itself is a victory, and we shall ultimately overcome the evil in our thought.

The chief incentive to pure and good thought and action is an enlightened conscience, that sense of right which is implanted in every aspiring nature. There may be a measure of the perception of good in each of us, but such perception is inoperative except there be spiritual aspiration. Every one has some idea of right and wrong, even if his concept is vague, but to act effectively this must have merged into spiritual understanding, the highest phase of consciousness. Often we do not discern our lack of spiritual growth, but the consciousness of an unfolding and uplifting of our spiritual nature always shows us that we are making advance. It is not enough that we live a life

Digitized by Google

whose only virtue is that it does no wrong. We cannot remain negative. Evil must be overcome through positive activity for good.

Inharmony of any kind witnesses to our consent, in some degree, to the belief of life in matter. On the other hand, in proportion as we know and realize that God is All-in-all, in that measure may we control materiality, which control is preliminary to our mastery of evil. Evil cannot make a law for us, and the attack of evil, in itself, is not sin. It is only when we allow our minds to dwell on a falsity, and become discouraged or bitter, or responsive to it, that we unconsciously and erroneously admit that evil has power. It is thus that we give error a standing in our consciousness, allow it to exert its influence over us until temptations graduate into sin.

Made in God's own image, man is neither negative nor incompetent, and it is our privilege to recognize his divine rights and assert his prerogatives, which means neither more nor less than victory over every sense of inharmony. It is ours to realize that God has one all-comprehensive law, the law of harmony, to which alone man is subject; and that the harmony of God is far removed from the "compensating balance" of things, wherein good is offset by a like amount of evil. God does not require the contrast of darkness to enhance His glory, for "in him is no darkness at all." He who is all good has no need of evil to adjust His scales of justice.

THE CHRISTIAN SCIENCE PARENTS' PROBLEMS.

W. H. JENKINS.

THE greatest task ever set before men is to unlearn the errors in their lives,—to reform habits already formed. Most parents have suffered from the pains and limitations of material thinking and living, and they wish their children to escape them. They are trying to teach their children rightly in the home, and when their children come in contact with other children, those who because of home influences know little else than the sensual, the parents must meet what seems a hard problem. This is especially true in a village or country neighborhood, where children play together and are brought together in the schools.

Boys who enjoy athletic games and sports want to be together often. A neighbor across the street may be a man who is profane in his talk, who uses tobacco and liquor and is very material in many ways; still we feel that he is our brother; one whom we would help to be himself. We are on friendly terms, and we wish to remain so. His boy comes to our house to play with our boy. We know this boy reads a low class of fiction, hears error voiced constantly in his home, tries to excel other boys in profanity and other bad habits, and we feel that our boy may absorb some of this evil by contact with him. If we send the neighbor's boy home, or prevent their playing together, we make the boy our enemy, and friendly relations no longer exist between the two families.

Again, the Science parents may live in a locality in which there is no Christian Science church, society, or Sunday School, and there may be another church near them which has a Sunday School. The children were members of this Sunday School before their parents found Christian Science, and their teacher has become attached to them and pleads for them to remain. They have made friends with other children in the school, and these ties are broken, the children may be ostracized for a time from the society where Christian Science is not wanted.

The writer has been called on to meet all the above problems, and it has often needed more than human wisdom to meet them rightly. Many times he has gone out fully decided to send home a neighbor's boy, who had come to play with his son; but he did not do it, and perhaps for a little time he would enter into their athletic sports with them, knowing that the way to get at the heart of a boy is to join in his play with the spirit of a boy. These he found were opportunities to show the boys that there are true ideals in recreation, as in all else. It would seem that girls generally are in less danger from contact with immoral influences in their association with other children than are boys.

Recreation, all play as well as all work, should inspire and uplift thought. Athletics should be for training and discipline, and the camera and field-glass should take the place of the rod and gun,—all followed with the right motive and in the right spirit. While improving such opportunities, one should stand firmly for the demands of Principle. If, after trying with all patience and tact, the neighbor's boy does not respond to such treatment, it would seem right to go to his parents and frankly and kindly give our reasons why it does not seem best for the children to play together for a time. Our neighbors will respect us the more for so doing; and if an estrangement follows, it will be only temporary.

It should be emphasized that the best one can do is to give the children that environment, example, and instruction which will impel them instinctively to love the good. Goodness, beauty, truth, all spiritual realities, will attract a child more than evil. When the child is rightly taught, evil temptations have but little power. Nothing will make a child so safe in a world of evil belief as the love of the good and pure which comes from the faithful and daily study of the Christian Science Lesson-Sermons in the home, the singing of wholesome Christian songs, and attendance at the church services and Sunday School, together with the living and practice of Christian Science by the parents, and the meeting of all attacks of sickness and all troubles with its help. This is the best possible protection for the child from outside influences, and it makes less work to do in the home.

Most Christian Science parents cannot afford the expense of private instruction, and must send their children to the public schools. In such cases it is better to comply with the requirements of the school as cheerfully as possible. Christ Jesus always obeyed the laws of the state. It is better to have our children study all the text-books required by law, but it is our right also to encourage them to forget that which we believe to be erroneous. One Christian Scientist said to me, "I told my boy to study his physiology so that he could pass examinations, then forget it as soon as possible." The best thing about error is that it is forgotten when the truth is learned that should take its place. The children of Christian Scientists who are well taught at home, who study the Christian Science text-book, and read our other literature, will do much good by living and demonstrating this truth in their school life. Their work should be done more easily and quickly, as they reflect love, kindness, patience, and intelligence in their relations with their teachers and other children, and so bear testimony to the great value of Christian Science.

It seems to be a universal belief of mortal mind that children are bound to learn about error. Often the remark is heard, "I cannot protect my boy from the education of the street, but if he does learn some bad habits, he will tire of them sometime, reform, and make a good man." This is equivalent to saying that the first half of human life must be given to learning error, and the latter half to unlearning it, so as to get ready to live rightly on some other plane of existence. This is not Christian Science, as the writer understands Mrs. Eddy's teachings, and the sooner all parents clear their minds of any such belief the better it will be for them and their children, as this belief stands in the way of more rapid progress. We are not called upon to learn anything about error except that it is unreal. God does not want any of His children to drift

Digitized by Google

away into the illusion of evil, until suffering causes them to retrace their steps. All prodigals must come back to the Father's house, but there is something wrong in a system of education that makes prodigals.

With the teaching possible in Christian Science there is no need of learning error at home, and if error is learned outside it need not be retained very long. If the writer understands correctly what our Leader teaches her students, children in Christian Science may unfold as naturally, as harmoniously, and as perfectly as the flower. Right education is not a process of giving anything to the child that it does not possess, it is the bringing out of the spiritual faculties which constitute the real child. In all the world there is nothing with such wonderful possibilities as a little child, nothing so interesting; and there is no higher or better work than so to guide children into "paths of righteousness," that in their purity they may reflect the perfection of our heavenly Father, and do His healing work better than their earthly parents are doing it in a sin-sick world. Jesus loved little children, and said, "Suffer little children, and forbid them not, to come unto me: for of such is the kingdom of heaven."

The following points merit restatement and emphasis: We should live Christian Science in the home; make the home life so good and beautiful that it is the strongest attraction for the child; practise Christian Science in the home by helping the child in all its needs; and what is still better, teach the child to be a practitioner of Christian Science at an early age, then the work of protecting the child from contact with evil will be less and less difficult. This points to the solution of the parents' problems.

TRUST.

SARAH PERRY BROWNING.

One evening, several years ago, a girl reclining on a couch at the foot of an invalid's bed, keeping careful guard over the work of an incompetent nurse, was surprised at the anxiety expressed by the sufferer as to the adjustment of the gas and windows. Then she remembered that her friend was not aware of her presence, as she had slipped into the room unobserved, and a high foot-board hid her from view. Had the sick woman realized with what loving care she was surrounded, trust would have supplanted fear.

The memory of this little experience has often come back as a reproof to the watcher of that night, when she finds herself disturbed over some seeming lack of harmony. She is learning through Christian Science that a Father's love does encircle His children; that when they trust Him, when they lean "on the sustaining infinite" (Science and Health, Pref., p. vii.), terrors prove only shadows. Why is it so hard to trust? From our text-book (p. 373) comes the answer: "The fear of disease and the love of sin are the sources of man's enslavement." What is the remedy? "Study thoroughly the letter and imbibe the spirit" (*Ibid.*, p. 495).

That girl, now a woman, has again been a watcher at the bedside of suffering. Not by the revealing of her own presence, but by awakening the mind of the patient to the realization of the divine presence, as taught in the Bible and Science and Health, the pain has retreated to its native nothingness and the patient has arisen refreshed.

SELECTED ARTICLES.

[Alfred Farlow in *Ashland* (Ky.) *Independent.*]

When our Lord had the discussion with the woman of Samaria at the well, the woman said: "Our fathers worshiped in this mountain; and ye say, that in Jerusalem is the place where men ought to worship." The Master replied, "Woman, believe me, the hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father. Ye worship ye know not what: we know what we worship. . . . But the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him. God is a Spirit: and they that worship him must worship him in spirit and in truth."

This was an entirely new proposition in respect to the question of worship, and in order that the position of the Master might be maintained, it became necessary for him to give the woman a fundamental lesson concerning the God to be worshiped. Evidently the belief that God had taken up His residence in Jerusalem, and that, therefore, prayers must be directed to that city, did not differ from the Samaritan's belief that God resided in a certain mountain. It was a belief in a humanly circumscribed being—a limited personality. Jesus corrected this erroneous belief by His teaching that God is infinite Spirit, everywhere present, and therefore must be worshiped spiritually, not materially; that it was not necessary to make a journey in order to find God, nor to cry aloud in order to make Him hear. It was only necessary to open our spiritual vision, to become conscious of the divine presence, and therefore discover that our prayers are heard even before they are uttered.

Mrs. Eddy has founded her entire system upon the Master's definition of God. She teaches that the personality of God is infinite Spirit, that our heavenly Father is omnipotent, omniscient, omnipresent Mind. Every statement contained in the Christian Science text-book, Science and Health, is consistently deduced from this premise. If God is Spirit, then His creation, which is after His kind, is spiritual; and, if spiritual, it is not material. This teaching explains the otherwise mysterious declaration of the Master: "It is the spirit that quickeneth; the flesh profiteth nothing." "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit."

Christian Science is indeed a science, the Science of Christ. It is the uncompromising spiritual truth. It is demonstrable in the healing of sin and sickness, because it gives all power, all life, substance, and intelligence to Spirit, and, according to the consistency of the Master's affirmation, insists that matter profiteth nothing.

[W. J. Bonnin in *Blackpool* (Eng.) *Times.*]

Christian Science cannot fail. Students of Christian Science may. The only real proof of the science of mathematics lies in the application of it, and a failure to work out a problem is failure in the application and not of the science itself. So it is with Christian Science.

Christian Science does not deny that sin, suffering, and death are facts to our physical senses. It teaches, however, that these senses can tell us nothing of the realities of existence, but only of material phenomena. "The things which are seen are temporal; but the things which are not seen are eternal." The supreme aim of man must surely be to comprehend in as full degree as may be these eternal things; any other aim must in comparison fall into insignificance. To study Christian Science is to develop the capacity for such comprehension. It enables one to see the law of God, which is a perfect law

Digitized by Google

throughout His creation, constituting His omnipresence and disclosing all that is not perfection as temporal and unreal, as human beliefs having no foundation in truth. "The law," wrote Paul, "of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Could the law of sin and death be a true eternal law, if it is possible to escape it? Christian Science teaches that such a law has no more force than its victims endue it with, and that just so long as we ascribe power to it, so long are we breaking the First Commandment, and so long shall we suffer in consequence.

To compare a Christian today with our Lord's disciples, not in regard to spiritual understanding attained, but to capacity for such understanding, cannot surely be presumptuous, if we are to consider obedience to the mandate "Be ye therefore perfect" as an attainable ideal. Christian Science knows no other ideal, and our progress toward it is manifested only by the overcoming of sin and sickness, the demonstrating of our knowledge of their falsity. "I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye." So wrote Ezekiel, and Christian Science says, Turn yourselves, and live ye.

[Gray Montgomery in *Modern World.*]

People have become adherents of Christian Science because it has brought them out of the gloom of much sorrow and tribulation and lifted them into the sunshine of Truth; it has turned them away from many subtle forms of error, destroyed their fears, and turned them to God, infinite, tender Love.

The world at large is ignorant of the delusions of mortal mind, and Mrs. Eddy has shown her followers how to detect its workings, but she has not implanted any fear of error in their minds. She has taught them how to overcome evil with good, how to understand God aright and thereby destroy error. Christian Science adheres firmly to the teaching that God is All and that God is good. The realization of the perfection and all-inclusiveness of God and His ideas enables Christian Scientists to destroy fear, heal the sick, and reform the sinner.

The wrong mental influence of one human mind over another is animal magnetism—the operator dispossesses the subject under his mental control of freedom, placing him in a condition of practical mental slavery. Animal magnetism is, however, wholly devoid of power to the Christian Scientist, protected by his understanding of God as all-powerful Love. Christian Science teaches that animal magnetism is of the devil and that the devil is only impersonal evil, an illusion, a lie without place or power. Animal magnetism has only supposititious power, and when one is freed from the belief in it by the understanding of Truth, even its seeming power is wholly destroyed. It is only the influence of the carnal mind which is not real, not eternal, referred to by St. Paul when he says: "For to be carnally minded is death; but to be spiritually minded is life and peace. Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

Some critics insist that Christian Science healing is "occult." The Century Dictionary defines the word "occult" as "mysterious; beyond the bounds of natural knowledge." The phenomenon of Christian healing is as natural and apparent as the disappearance of darkness before the presence of light. It is the natural result of a realization of the presence and power of God and the understanding that nothing apart from God has presence or power. The pure consciousness of perfect spiritual existence expels all thought of error, every fear, every disease. It is not a hidden power, unseen by the spiritual senses; it is as manifest to the Christian Science practitioner as is the solution of a problem in mathematics to the mathematician.

Christian Scientists do not deny that Truth has existed forever. Mrs. Eddy says in Science and Health, page 146: "This healing power of Truth must have been far anterior to the period in which Jesus lived. It is as ancient as 'the Ancient of days.' It lives through all Life, and extends throughout all space."

Christian Scientists love, honor, and revere their dauntless Leader, and this because of the fact that she has lived a life of purity and has been enabled to give to the world a scientific religion so systematized and explained that all who are willing may understand and practise it. They follow her because she follows only Christ. They respect and admire her because in the face of bitter persecution she cherished the spark of infinite Truth which was revealed to her, until it grew into a great light, shedding its radiance into the darkened places of human existence, causing mortals to behold the fulfilment of Isaiah's counsel and prophecy of peace: "Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and he will have mercy upon him; and to our God, for he will abundantly pardon. For my thoughts are not your thoughts, neither are your ways my ways, saith the Lord. . . . For ye shall go out with joy, and be led forth with peace: the mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands."

Christian Scientists are simply striving to fulfil all the demands of Jesus, and many, daily comforted, loosened from bonds of sin and misery through Truth's ministrations, are swelling the happy throng of grateful adherents who have harvested its fruits of good.

[Frederick Dixon in the *Surbriton Times*, Surbriton, Eng.]

Of course if one were satisfied with misstating another person's premises, there is no particular reason why one should not reduce their conclusions to a *reductio ad absurdum*. That is what our critic has done; and this, if you like, is unscientific. He says, for instance, that Mrs. Eddy would argue that if you lived over a cesspool, and imagined there was no cesspool, you would never suffer from typhoid. Now this is sheer nonsense; it is the kind of reasoning indulged in by all critics who argue from sentences cut out of contexts. What Mrs. Eddy has said is this, that all physical phenomena are the subjective condition of what she terms mortal mind, or of what the scientific idealist commonly terms energy; consequently, that physical disease is the result of a mortal-mind belief, that is, of believing in a physical law. The question therefore resolves itself into the understanding of law.

Mrs. Eddy maintains that mortal mind is itself an unreality, is indeed nothing but a negation of the divine Mind which we term God; and that the physical laws which are the product of this mortal mind are therefore only a human misconception of spiritual law. Now, speaking scientifically, a law is that in which there is no variation, and if a variation is observable there is no law. Jesus broke every physical law; it is certain, therefore, not only that the physical law is not God's law, but that it is not even law; that is, that a variation in it is possible. The fact is that he healed the sick and raised the dead, not by breaking God's law, but by the strictest conformity to it. What he did break was the human sense of law which breeds typhoid out of cesspools. So long as men believe that physical causation is governed by law they will be subject to that law; but when they learn that the only law is God's law, then, though they walk through the valley of the shadow of death, they will "fear no evil." The only true thing that can be said

Digitized by Google

of evil is that it is a lie, and the only semblance of power it can ever manifest is the illusion produced by being deceived by a lie.

Christian Science, it may be said finally, is the effort to give the world that magnificent trust in God, that complete understanding of divine law, which made the first century of the Christian era the age of miracles; and just exactly in proportion as one acquires this trust and this understanding, he gains a knowledge of the truth; he knows, in the words of Jesus, the truth, and the truth makes him free.

[Capt. H. C. F. Cumberlege in *Aldershot* (Eng.) *News*.]

Your correspondent states that "all true Christians make the Word of God their sole rule of faith and practice, and hold that it contains all things necessary to man's salvation," and then goes on to say, "but Mrs. Eddy, in Science and Health, asserts the Bible to be incomplete." Mrs. Eddy has certainly written a book which discovers to the student a deep spiritual meaning in the Bible texts which clears away the seeming inconsistencies that have puzzled mankind for so long, but she specifically quotes the Bible as her only authority, and writes on page 497, "We take the inspired Word of the Bible as our sufficient guide to eternal Life." This quotation proves that the teaching of Christian Science is fundamentally in complete agreement with your correspondent's own definition of true Christianity. Therefore the only possible point at which a difference between the two can seem to arise must be where their respective interpretations of "the Word" diverge.

Your readers will no doubt realize that the clergy of all denominations expound the Word of God from the pulpit every Sunday, but is it considered that they thereby belittle the completeness of the Bible? Because Mrs. Eddy has put her interpretation in a book instead of continuing to voice it from a pulpit, will any thoughtful man consider that her mode of exposition furnishes cause for complaint any more than the mode followed by the clergy? On the contrary, he will no doubt agree that the following point brought out by the author of Science and Health shows very clearly the great need of humanity for an intelligent explanation of the Scriptures: "The most distinguished theologians in Europe and America agree that the Scriptures have both a spiritual and literal meaning," and "the manifest mistakes in the ancient versions; the thirty thousand different readings in the Old Testament, and the three hundred thousand in the New,—these facts show how a mortal and material sense stole into the divine record, with its own hue darkening to some extent the inspired pages" (Science and Health, pp. 320 and 139).

Well may the seeker after truth echo today Pilate's famous question, "What is truth?" when he reviews these multitudinous renderings of the text of the Bible, for it is obvious that in each instance only one translation can be strictly accurate. Had Christian Science nothing but human opinion to back it, it would have no more claim to be regarded as the truth than any other denomination. But Christian Science echoes the words of the apostle James: "What doth it profit, my brethren, though a man say he hath faith, and have not works? can faith save him? . . . show me thy faith without thy works, and I will show thee my faith by my works." "And the prayer of faith shall save the sick."

[William E. Brown in *Covina* (Cal.) *Argus*.]

In a late issue a critic asserts that he has studied Christian Science "as few Scientists ever do." In this connection it may be said that he alone understands the teachings of Christian Science who can demonstrate its rules in healing the sick and redeeming the sinner.

Our critic seeks to detract from the importance of the "works" that the Master said should follow them that believe. These works were not "the cheap exhibition of supernatural power," but were the incontrovertible evidence that Jesus was the Christ. When John sent a message to Jesus inquiring if he were the Messiah, he did not send as evidence a creed or dogma. No! He said, "Tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

In this answer to John it is evident that Jesus did not "minimize the importance of these wonders," nor can they be minimized by any true follower of the Master, whose command to heal the sick is inseparably connected with the command to preach the gospel. Indeed, the only proof that one understands this gospel lies in one's ability to heal the sick. In Mark's Gospel it is said of the disciples, "And they went forth, and preached every where, the Lord working with them, and confirming the word with signs following."

While Christian Science recognizes the necessity and importance of healing the sick through the gospel, it is not primarily a school of physical healing. Its real mission is the healing of sin, the latent cause of all disease. The term "sin" here is used in its broad sense, and includes all wrong thinking and acting, whether born of ignorance or self-will—all ignorance of God and His laws. The immunity resulting from the abandonment of sin is clearly set forth in Exodus: "If thou wilt dilligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, and wilt give ear to his commandments, and keep all his statutes, I will put none of these diseases upon thee which I have brought upon the Egyptians: for I am the Lord that healeth thee."

[George Shaw Cook in *Mendota* (Ill.) *Bulletin*.]

Our critic says that preachers, editors, physicians and philosophers have been for years trying to show the "deluded people," who are carried away by Christian Science the errors and deception of this "despicable superstition," but that "in spite of all their efforts it grows by leaps and bounds." It might have been added that many of these same preachers, editors, physicians, and philosophers, who at one time were engaged in opposing what they thought Christian Science to be, have since become its ardent advocates, having discovered that what they were combating was not Christian Science at all, but merely their very imperfect and incorrect conception of it. Is it not possible that our present critic will some day find that the "thousands of intelligent people who have been carried away by the underlying truths of Christian Science," among which he mentions "freedom from sense and passion," "victory over the body and its tyrants, fear and anger," etc., etc., have learned through proof and demonstration that Christian Science is indeed the "Spirit of truth" which Jesus said would come to the world and lead us "into all truth"?

Christian Scientists do not claim to be infallible in their demonstration of Christian Science. They simply realize that Christian Science correctly understood and applied by those who are living consistent Christian lives will do and is doing all that is claimed for it in the way of healing sickness and destroying sin. They do not, as our critic claims, boast [illegible] generative work which Christian Science is enabling them to do, but they are glad to testify at the right time and in the right way to benefits received. They do not therefore claim that the Christian Science treatment never fails, but they do know that it succeeds in a great majority of cases in spite of the fact that many persons turn to Christian Science only as a last resort. There are on record thousands upon thousands of authenticated cases of the healing of organic and functional diseases as well as of all forms of sin, immorality, and vice. This is not mere assertion; it is recorded fact.

[Charles K. Skinner in *Detroit* (Mich.) *Free Press.*]

A clergyman tells us that "the duty of the Christian minister is to warn people against danger and error," and he quotes the Scripture, "Beware of the leaven of the Pharisees and of the Sadducees." I would like to remind our brother of another saying of the Master: "But woe unto you, scribes and Pharisees, hypocrites! for ye shut up the kingdom of heaven against men: for ye neither go in yourselves, neither suffer ye them that are entering to go in." "Ye judge after the flesh; I judge no man." The pastor criticizes the name Christian Science, because "it claims to heal the sick," and he tells us that "Jannes and Jambres performed some miracles, Jesus and the early church healed the sick," and that many others have also wrought cures. To all of this we grant cheerful assent, but we trust he does not mean to assume that the Master did his great works in the same manner as did Jannes and Jambres.

We are told that "there is a wide difference between the power of the risen Christ and Christian Science." How does our critic know this? The promise of the Master was, "Greater works than these shall he do; because I go unto my Father." Has this critic ever healed any one through his understanding of Christ's teaching? Has he a knowledge or understanding of this "power of the risen Christ"? If he has, why is he not using it, when his Master's command is constantly staring him in the face as he reads the Scriptures? "Preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils." "Go ye therefore, and teach all nations, . . . Teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world." If our critic is not doing these things, why is he condemning those who are? Neither he nor any other person can show one word of authority for divorcing the healing from the preaching. It is true that Christian Scientists may not at this hour be able to do all the mighty works of Jesus, because of the lack of spiritual understanding. If they were able to do all of them, they surely would be ready for translation. At the same time the command is binding to do the little we are able, lest, in accord with the Scriptures, we "shall be beaten with many stripes" for our disobedience. Is not this thought worthy of consideration by the clergy?

[From *Buffalo* (N. Y.) *Commercial.*]

"Half the people of the present day only imagine that they are ill, and the present fad of the medical profession in adding disease to disease has led many people to call in physicians where they would formerly have applied a little common sense and been well in a few days." So says a physician connected with a large hospital in Philadelphia. "In the present day the number of patients increase as the number of hospitals is made larger, while the hospitals should follow the patients. We have people come in here every night with practically nothing wrong with them. It is the result of the 'medical craze,' and when a patient does come in with something really the matter he has worried himself into a much worse condition than is warranted." Is not Christian Science doing great work in trying to put an end to this unfortunate [illegible]?

[Frederic C. Hotchkiss in [illegible] (Conn.) *Farmer.*]

Treatment in Christian Science consists of eliminating fear from the thought of the patient, uplifting his faith and hope to a final realization of God's power to heal, and thus produces on the body the effects of normal functional action. A Christian Scientist never resorts to deception, but heals on the basis of scientific, demonstrable Truth.

AMONG THE CHURCHES.

ONTARIO, CAL.

The local church of Christian Science has decided to erect a modern house of worship, it is reported, on its property in Ontario. The edifice will be erected some time during the year, and strenuous efforts are being made by the local members to raise the funds necessary for the same. The lot on which they will build the church is very centrally located, being only half a block from the business center and conveniently located. The society has grown steadily and quietly, and this year there has been a good increase in the attendance at the church services and the Sunday School. The society was organized on July 5, 1895, by a few Christian Scientists, for the purpose of studying the Scriptures and the Christian Science text-book, Science and Health. In July, 1908, the society organized, with a board of directors and a clerk, and on March 13, 1909, the society was incorporated under the laws of the state of California. In January, 1909, the society purchased the lot upon which they are planning to erect their church. Taking a retrospective view of the growth of the Christian Science faith in this town, the prospect cannot but be pleasing to the members of that church.—*Ontario Record.*

HERMOSA BEACH, CAL.

The Field will be glad to hear that our little society here held its first service in our new bungalow chapel, on Sixteenth street, between the Strand and Hermosa avenue, yesterday (Aug. 15). The congregation filled all the chairs we had or could borrow. The chapel, which cost about nine hundred dollars, was built this summer on a lot of land which was given to the society by people who do not call themselves Christian Scientists.—*Correspondence.*

BELOIT, KAN.

The congregation of First Church of Christ, Scientist, of Beloit, has purchased of the United Brethren their church edifice, located at the corner of Third street and Hersey avenue, and will take possession of the same the first of September. They are to be congratulated on securing this property, as it is one of the most desirable locations for a church in the city.—*Correspondence.*

[Written for the *Sentinel.*]

TRUTH'S CALL.

M. B. CROWE.

THROUGH long, long years I stumbled, deaf and blind
To all the truths thou camest to unfold:
Poor, blind, and self-imprisoned; with vain cries
And eyes perverse, looking afar to find
Blessings that groping hands, by taking hold,
Might more than overflowing fulness know.
Deaf to the Spirit's pleadings, cowed by fear,
I groped and stumbled; until, sweet and low,
A voice spoke to my opened ears, a glow
Pierced through the darkness of my blinded eyes,
And, face to face, thou saidst, Lo, I am here!

Ah! the long years of ignorance and fear,
Misspent in doubt and pain without surcease!
'Twas I who knew not thou art always here,
Waiting to give health, happiness, soul-cheer,
Life, love unmeasured, and God's perfect peace!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"THE LAW OF THE SPIRIT OF LIFE."

THE usefulness of the board of lectureship, established by our Leader, Mrs. Eddy, several years ago, has been abundantly proved by the results of the work done by members of this board in correcting misconceptions of Christian Science, but that there is still something to be accomplished along this line is shown by the following excerpt from an editorial which appeared recently in a prominent western newspaper, and which we believe was intended to be respectful and even friendly:—

Encroaching for the moment upon the field of Mary Baker Eddy, let it be said that most of us are paying too much attention to our little ills, forgetting that we are still alive, have families to support, friends to cheer, and above all, work to do. We think too much about our aches and pains. This applies more particularly to those of us who have not enough work to occupy our attention. The man who has his mind concentrated on his business during business hours, on his fads during his leisure hours, and on his family's welfare and happiness all the time, is not usually to be found spending his good money on the latest remedies, for he has nothing to cure. We will not go so far as to say that illness always is merely a state of mind; undoubtedly it is often very real. But there are many, many instances where cures have been effected merely by "changing the subject."

The most common misunderstanding of Christian Science seems to be the one set forth above, that it is simply a system of so-called mind-cure, the cure being effected by distracting the thought of the patient, and this may account for the light view which so many have taken of Christian Science as a remedial agent, and for some of the opposition which it has encountered. The fact that the divine Mind, God, is invoked to do the healing is not appreciated by those who hold this view of Christian Science, and to these there is nothing more spiritual or exalting in the cure of a supposedly fatal disease by the demonstration of this Science, than there is in the administration of a bread pill.

It is true, as this editor asserts, that humanity is given to paying too much attention to its little ills, and it is also true that the person who is least afraid of breaking the myriad "health laws" which are preached on every hand, is least liable to disease; but, while all this is good, it is not of itself Christian Science. There is still need for the lecturers to continue the good work they have been doing in awakening popular thought to the truth of Christian Science,—to the fact that it is not trifling with human ailments, but is treating them with the same scientific method of healing which Christ Jesus applied so successfully.

St. Paul said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." It is through demonstration of this same law that Christian Science heals the sick, and our text-book teaches that "the only way to this living Truth, which heals the sick, is found in the Science of divine Mind as taught and demonstrated by Christ Jesus" (Science and Health, p. 180).

ARCHIBALD MCLELLAN.

"HUMAN CAPACITIES."

IN Science and Health we read that "Moses advanced a nation to the worship of God in Spirit instead of matter, and illustrated the grand human capacities of being bestowed by immortal Mind" (p. 200). This statement turns the light of Truth upon the pages of human history, and points to the fact that every truly great character has owed its greatness to some recognition of divine power as controlling the destinies of mankind, and also to some sense, however imperfect, of spiritual reality. The pages of the Bible are illumined records of the lives of those who rose from obscurity to greatness because their capacities were "enlarged and perfected" (*Ibid.*, p. 258) by communion with the Mind that governs the universe. Thus Moses the shepherd became the great lawgiver and the deliverer of a race from cruel bondage. Of him a poet says,—

This was the truest warrior
That ever buckled sword;
This the most gifted poet
That ever breathed a word.
And never earth's philosopher
Traced with his golden pen,
On the deathless page, truths half so sage,
As he wrote down for men.

We read, too, of David, who from being a shepherd boy became musician, poet, soldier, statesman, king! Before his day, Joseph had been prime minister in Egypt, when that nation was at the height of its power. His only preparation for this exalted position had been gained in the school of adversity, with years spent in prison, serving an unjust sentence; but all the while his divinely-bestowed capacities were unfolding, so that all men could recognize them, and even Pharaoh said, "Can we find such a one as this is, a man in whom the Spirit of God is?" Again, we read of Daniel, who rose to great distinction in Babylon and who reflected enough of the Christ-spirit to triumph over the hate which cast him into the den of lions, so that he came out of the ordeal unharmed.

When we read the wonderful story of Jesus' human experiences, we are awed by the majesty of divinity which he reflected from his boyhood days to the hour of his complete triumph over death, the grave, and mortality. As we read of his marvelous demonstrations, we can hardly wonder that mankind shrank from following where he led, even though they called him the great Exemplar. They failed to see that the divinely bestowed capacities which enabled him to feed the multitudes, to heal the sick, to give sight to the blind, and to raise the dead, were free to all who were ready to exalt the spiritual above the material. The heavenly Father is ever impartial, and Jesus said to Mary Magdalene, "My Father, and your Father; . . . my God, and your God." Never once did he hint that his capacities were different from those that God bestows upon all His children; on the contrary, he said that even "greater works" than his should be done by his followers.

The present age witnesses in a marvelous way to the unfolding of human capacities, and it would seem as if

Whatever men dare they can do!

The splendid courage with which the greatest dangers are faced is surely the result of a quickened sense of man's possibilities, and the demand of the age that limitations of every kind must be thrown off at any cost. Well may we pray that greatness and goodness shall be more and more closely united, and that these two which "God hath joined together" shall never be sundered in the liberation of human thought from its self-imposed bondage.

Christian Science shows very clearly that though men gain dominion over all the so-called forces of the material universe, they are still helpless victims to the belief in sin, disease, and death, unless Christ, Truth, has made them free. With spiritual freedom comes the normal unfoldment of man's divinely bestowed capacities, and the truth of Paul's words is then realized: "I can do all things through Christ."

ANNIE M. KNOTT.

TARRY YE IN JERUSALEM.

RELIGIOUS history has disclosed no more persistent mortal predisposition than that which leads men to center their interests upon some human sense or symbol of the truth, or some phenomenon of its unfoldment, and give this such emphasis in thought that in the end they quite pass by the truth itself. Again and again has some doctrine or some form of faith's expression been thus "lifted up," and devotion to the secondary and suggestive usurped the place of loyalty to the primary and permanent, until for many the incidental has seemed quite to eclipse the essential.

This forgetfulness of fundamental Truth, even the God of their fathers, was the great sin of the children of Israel. They were quite willing to escape from Egypt through the divine guidance, but in the presence of after demands for faith, and consecration to their deliverer, they turned with longing to the leeks and onions which indeed symbolized the divine bounty but which ministered to a most transient satisfaction: in the place of God they demanded the golden calf of their enslavers.

This same disposition expressed itself among the disciples, and in counseling them to tarry in Jerusalem until they should be filled with "power from on high," Jesus must have awakened in their thought the need of preserving ever their articulation with fundamental and eternal Truth. This necessity was reaffirmed when he declared to Peter that upon the rock of spiritual perception his church was to be founded, and it is to be seen that the divisions and strifes of organized Christianity, together with the bulk of all those contentions and difficulties among men which have destroyed so much happiness and defeated so many hopes, have been the result of indifference to the larger issues, an insistence upon some point which after all was relatively unimportant.

All this betrays a lack of that sense of proportion, and loyalty to the larger vision, which characterizes so much of human conduct. It capitalizes, moreover, the requirement of Christian Science that we make no substitution of the subsidiary for the fundamental, rest at no progressive step or improved belief in our spiritual advance, be content with no experience or realization short of conscious and continuous communion with God,—that individual knowing of ultimate Truth which gives a fully satisfying account of itself in daily demonstrations over sin and disharmony.

It is here that the significance of Mrs. Eddy's stand for the main contention, for God, the All-in-all, and for man in His image, begins to appear. He who lives in the thought of any other goal than the knowing of God and of His man, is sure to be seduced by the subordinate things of human sense. We may well rejoice in every helpful acquirement, every overcoming of human weakness, but nothing must be permitted to obscure that understanding of God and His universe and government which "unifies men and nations" (Science and Health, p. 340).

Christian Scientists no less than others need to be thoughtful with respect to this question of always standing by and for the all-important thing. They need to remember momentarily that God is the only source of all real good. The freedom and satisfactions of health of body make it very easy for the unalert to think of harmonious physical and family conditions as an end, when thought should clearly grasp the only fitting goal, viz., the attainment and maintenance of spiritual sense, the "conscious, constant capacity to understand God" (*Ibid.*, p. 209). The "hundredfold now in this time" must not be allowed to dim the glory or lessen the attractions of that kingdom within, that spiritualized consciousness of which all genuine earthly blessings are but an incidental expression.

To tarry ever at Jerusalem, to separate our thought for no single moment from the citadel of spiritual understanding,—this alone is safe and scientific.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Sept. 5, 1909.

Beloved Leader:—I am deeply grateful for your tribute to Mr. Kimball, published in the *Sentinel*. He was to me all that a teacher and friend should be, and your words help me to realize that this relation is not severed.

Lovingly,
CLIFFORD P. SMITH.

Boston, Mass., Sept. 5, 1909.

Beloved Teacher:—Very recently I learned of the passing on of our dear Mr. Kimball. Tenderly my loving sympathy went out to you, although I know that you do not mourn as they who have no hope, for the dear God comforteth you. Mr. Kimball was my classmate. I knew him well, and knew how he loved you and loved to serve you. He has gone on to greater usefulness and to higher joys. The knowledge of this, and the memory of his unswerving devotion to you, will brighten your ascending pathway. Today I looked into the faces of your many other steadfast students and helpers, and appreciated what a mighty army of workers God has raised up around you, who, loving not their lives unto the death, will heal the sick and reclaim the sinner as you have done and taught them to do—and nations shall arise and call you blessed.

Error has claimed to strike down a faithful Scientist and to deal a blow at our Cause, but we know that the wrath of man shall praise God, and you have drawn nearer to the great heart of Love because of this.

God bless, comfort, and protect you.

Tenderly your student,
NEMI ROBERTSON.

Shreveport, La., Aug. 26, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—My heart overflows with love and gratitude more than ever since reading "The Life of Mary Baker Eddy" by Sybil Wilbur. Reading of your struggles, your unflinching faith in God, your loyalty to Truth, your willingness to sacrifice every material pleasure for right, has made me love and respect you more and more. I feel that the world owes you unspeakable gratitude for Christian Science. For a long time I have wanted to tell you what it means to me, but words are inadequate to express the joy, the comfort, it brings daily. The truth which you have given to the world, by which we can live and ennoble our lives, has given happiness to countless thousands; we can in return but love you, and pray that the "everlasting arms" of Love will surround you.

Yours in love and respect,
MRS. S. B. CHEATHAM.

Gresham, Ore., Aug. 20, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I thought I knew what it was to be grateful, but it is only within the past few months that I have learned what true gratitude means. Your standard has always been a high one, and I now see how wonderfully and patiently you have worked on and on, overcoming and growing out and away from the material sense of things, never thinking whether or not the world saw or knew, but patiently, joyfully, and lovingly working on. You saw the Principle of all good, and gave this to poor humanity, that for ages has been homesick for a haven of rest. How bountifully your great works are feeding humanity, and I am so thankful to you for giving us this bread from heaven, which does indeed give a peace and

Digitized by Google

rest that the world can neither give nor take away. I am thankful for the many and various channels through which the light of God's goodness comes,—our Leader and her works; our Publishing Society and the periodicals; our reading-rooms and attendants; our teachers, lecturers, and practitioners. I am also thankful for our Lesson-Sermons, which, if studied daily, with our understanding of them put into practice, will surely bring the millennium. I am thankful for the privilege of doing the work that has been given me to do by our dear church in Portland, and my daily prayer is that my service as Second Reader may be an intelligent, pure, loving, joyful, and impersonal service; and I know that it will be so in the degree that self is forgotten and God is known and reflected.

Gratefully and lovingly yours,
MRS. PERCIE PROCTOR.

Putnam, Conn., June 14, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—To one revealing and abiding, whose life is lived above the flood of years, and whose selfless love and high-hearted courage sing each day more clearly their song of service to the hearts of men,—to such a one is known that peace of the eternal presence where no shadow of earth's discordant malice can enter in.

May your message, springing from the "white flower of a blameless life," find more and more its ready response in the deeper, sincerer living of each one who today would share in the work of Christ revealed; in the cherishing of all that is beautiful and true in one another, because we hold sacred the example of our "elder brother;" in serving loyally, in all reverence and true humility, omnipotent good, and those who, manifesting in word and life the influence of the Mind divine, have brought anew to us, who were in the gray gloom of sin and sorrow, glad tidings of peace and love and joy.

With gratitude,
EDEN TATEM.

Durban, Natal, South Africa, May 15, 1909.

Dear Mrs. Eddy:—Although our society is not yet fully organized, it has been for some time our desire to send some expression of our gratitude to you for the wonderful revelation of Christian Science which you have given to the world, and for the many blessings it has brought into our lives and into the lives of others. At our committee meeting held today, it was unanimously resolved to send you this letter.

You will be pleased to hear that genuine interest in Christian Science is steadily growing throughout Natal. In Durban, the Sunday services were first held in a private house on the Berea. About two years ago a tiny reading-room was opened, where five or six of us used to meet and read the Lesson on Sundays. For about a year past we have had a pleasant reading-room and service hall situated in a central locality. Those who attend at the reading-room are kept busy, and our "lending copies" of Science and Health are constantly in circulation. There are among us those who have been healed of sickness and those who are being healed of sin. We have always had with us an abiding sense of unity, and at our services a consciousness of rest and peace, but we know that our growth in the future is assured only as we are honest and faithful, only as we practise in our daily lives the teachings of Christian Science, and it has always been our endeavor to impress this upon those interested.

We thank you for your example of purity and self-sacrifice; for your steadfast adherence to the spiritual realities you have uncovered for us, and for your inspired writings, which enable us, even with the measure of our present understanding, to "undo the heavy burdens, and to let the oppressed go free."

Yours always sincerely,
BESSIE DEAN,
MARGARET HUME ANDERSON,
WILLIAM ALBERT BURNHAM,
For the Committee.

San Francisco, Cal., Aug., 26, 1909.

Dear Leader:—Christian Science has healed me physically and solved for me the riddle of existence. Many were the ills of the flesh which seemed to beset me, and though I was learned in medicine and the laws of hygiene, I found no sovereign panacea for my discomfort until Christian Science healed me. I read the Bible, but could not understand it. I studied every religion, every creed, every ism, ology, and osophy under the sun, and found beautiful precepts a plenty, but no practical rule for living that brought present results. There was no reason to believe that the religious man was more happy, prosperous, or more healthy than his neighbor, the man with no religion. In Christian Science I have found proof abundant that the understanding herein gained, teaches us so to live that we are able to reap a present reward,—health, holiness, joy, peace, prosperity, protection,—"and in the world to come, life everlasting."

When I find myself facing a claim of sin or sickness, and there wells up in my heart a sense of thankfulness that I am counted worthy to suffer,—to take up this cross and prove its nothingness and God's allness,—then I know that I am growing into the practical kind of gratitude which is the only return that we can render to you for what you have done and are doing for suffering humanity. When I was driven to Christian Science for help, nearly four years ago, there was not a Scientist in our family. Now, there are sixteen immediate relatives, some healed, and some helped, physically; most of them attending services, studying the text-book, and trying to live and demonstrate the truth. How the tide is swelling! How the redeemed are coming in!

With gratitude unspeakable,
ELIZABETH ROSS.

Dublin, Ireland, Aug. 17, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The central point of our Lesson today is Christ's dazzling reflection of God, by way of answer to the world's prayer voiced by Philip, "Show us the Father, and it sufficeth us." You have shown us the Father, and I for one am satisfied and grateful. My heart's desire is to prove this by reflecting God to a seeking world, thus honoring your teaching in physical and spiritual health, for in both have I benefited by you, having been healed of paralysis, rheumatism, and other diseases.

Lovingly and loyally yours,
WILLIAM MILLS.

CHICAGO SUBSCRIBERS PLEASE NOTE.

The renumbering of the streets in Chicago necessitates the revision of our mailing-lists for that city. As it is our desire to deliver the periodicals as regularly and promptly as possible, we would request that our subscribers in Chicago assist us by sending promptly complete information to enable us to make the changes of address, taking care to give both the old and new addresses in full. Each periodical subscribed for should also be named, in order that all our lists may be correct.

THE LECTURES.

LECTURES TO BE DELIVERED.

Racine, Wis.—Bliss Knapp, Guild Hall, Sept. 13.
Denison, Ia.—Hon. Clarence A. Buskirk, Sept. 19.

ALDERSHOT, ENG.

Christian Science in Aldershot, and Aldershot means also the extensive surrounding district, received further impetus by the lecture delivered by Francis J. Fluno, M.D., at the Theater Royal on Wednesday afternoon [May 26]. Fashionably dressed ladies and folk of all grades and position in life comprised the audience, which listened with intense eagerness to the lecturer's able exposition.

Chairman Major L. N. Hughes D'Aeth, D.L., J.P., paved the way for Dr. Fluno. He felt it a privilege to preside and assist with that splendid audience in the welcome of the distinguished lecturer. Rather less than fifty years ago, said Major D'Aeth, the new-old religion, or old-new religion, which was first preached to the Jews, was, after lying dormant for nearly two thousand years, rediscovered and reintroduced to mankind—the one and only healing religion of all times. Understanding that all was Mind, and that there was only one Mind and one creator, both infinite and both good, Christian Scientists knew that their religion could and did heal every disease known to mortal man. But that religion did far more than heal the body. Physical healing simply accompanied the reformation and regeneration of the moral nature by the destruction of all sense of hatred, jealousy, drunkenness, vice of every description. The rediscoverer of the wonderful truth was the Rev. Mary Baker Eddy, whom Christian Scientists loved to honor. They had a fond regard for their beloved Leader.—*Sheldrake's Aldershot Military Gazette.*

MISSOULA, MONT.

An interesting and thorough exposition of the chief tenets of Christian Science was made yesterday afternoon [July 25] by Miss Mary Brookins, who addressed a large audience at the Harnois Theater. Miss Brookins was introduced by Ellis Sedman, who said in part,—

In the ninth chapter of Matthew, we read this statement: "And Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people." All Christians will agree with Christian Scientists that Jesus healed the sick, besides reforming the sinful and comforting the sorrowing by the power of God and in response to the will of God; for he said, "I came . . . not to do mine own will, but the will of him that sent me." But many believe that Christian healing belonged exclusively to an age that is past; and that it is of no avail now for a suffering man to turn to God in his hour of extreme need—when perhaps he has been pronounced incurable under modern methods of healing.

Christian Science holds out to the men and women of today a brighter promise than that. It teaches that God's healing and saving power is available now just as it was in the time of our great Master; and it proves the correctness of this teaching by healing all manner of diseases. Two years ago I heard a prominent and successful physician in a large eastern city speak before a committee of the state Legislature, in protest against a proposed bill intended to restrict the practice of Christian Science in that state. A member of the committee said to this physician: "Do you believe that Christian Science heals?" And the physician replied: "I know that it does, for I have seen several cases that I had failed to cure healed through Christian Science." A professor in Harvard university, whose name is familiar to scholars on both sides of the Atlantic, after asking about my own healing, said to me, "I know that Christian Science heals. I have observed enough to convince me of that."

If any of the claims made for Christian Science this afternoon strike some of you as extreme, or too good to be true, remember that Christian Science asks you to believe nothing—except what can be proved true. Paul's advice is excellent: "Prove all things; hold fast that which is good."—*Daily Missoulian.*

EDMONTON, ALTA.

Bicknell Young lectured on Christian Science at the Empire Theater July 12. He was introduced by Daniel Dyer, who said in part,—

It is most gratifying to see an audience of this size assembled to hear a lecture on Christian Science, because it is an indication that the instinct which impels mankind to seek the truth is neither dormant nor overcome by the grosser desires and ambitions that are so evident in this western country. Every one who has given serious thought to the subject, acknowledges the supremacy of mind over matter. Christian Science goes farther and acknowledges the supremacy of one Mind, the one eternal First Cause, that divine Mind or Spirit which men everywhere, in some form or another, worship as God. It deduces from this that all causation is spiritual, and consequently that there cannot possibly be any real law save that which is of God. The understanding of this restores man's birthright,—freedom,—freedom in the highest sense, the freedom that Jesus of Nazareth referred to when he said, "Ye shall know the truth, and the truth shall make you free." Every forward movement for uplifting and benefiting the human race has met with opposition, and Christian Science is no exception. With a great revolutionary movement like this, which shakes the very foundations of established beliefs and institutions, it is not to be wondered at that misrepresentations are made and wrong impressions created. The purpose of this lecture is to correct these misrepresentations and remove wrong impressions. I am satisfied that enough will be said tonight to convince you that Christian Science is not a religion of creeds or dogmas, nor yet of mere theories, but that it is a religion of good works and of practical usefulness in every walk of life.—*Correspondence.*

TESTIMONIES OF HEALING.

Truth is radical, unchanging, and immutable. The great men and women of all time, who because of their advanced thought advocate truths not recognized by their contemporaries, have always been called radical. This truth which has healed me seemed to me too radical, and even unreasonable, a few months ago, but now it seems perfectly natural and reasonable. It is not altogether pleasant for me to recall my experience, but I do so for the encouragement and help it may bring to some other suffering mortal. I am not a member of the Christian Science church, but have been a member of an orthodox denomination for over fifteen years.

About four years ago I became afflicted with rheumatism in a severe form, and for three and a half years I suffered intensely. For two weeks at a time I did not go to bed, not being able to lie down on account of extreme pain. The doctor who attended me administered an opiate almost daily to relieve the pain, and when I had recovered somewhat I found I was a victim of the drug habit as well as of the disease. I got around, though with difficulty, with the aid of a cane, and for three years I could not put on my shoes or take them off. During this time my spine had become twisted, and I was a veritable slave to the opiate. The time came, this past winter, when I realized that I must have help or the grave was not far off. I had tried medicines administered by distinguished physicians, one being the chief medical director of a well-known life insurance company, another a noted nerve specialist, besides many others. One who was a homeopath gave me less medicine than the others, but he did me more good than all the rest, although that good was not lasting.

I then concluded that if less medicine was a good thing (and I certainly had taken a great quantity of drugs), that none at all would be still better, so I quit the doctors, and all the drugs except the opiate, and this I believed I could not live without, as the pain was constant, day and night. The condition of my back had become dreadful, and the drug had so undermined my nervous system that I was practically a wreck. I could eat but little, and tried to keep up my strength in various ways, using wines, etc., and to quiet my nerves I smoked excessively. In other words, I had the original disease, plus three awfully degrading and repulsive habits, fastened firmly upon me.

In this desperate condition (and it was desperate indeed), I was induced to try Christian Science. We are told that it was a woman who tempted Adam, and many other things have since been ungenerously laid at woman's door, but a good woman, whom I have the honor to call my wife, was the one who induced me to try Christian Science, and she is the daughter of a leading clergyman of Iowa, now retired, but who spent fifty years in the service of a church of that state. She read to me from "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I began to take treatment from a practitioner. I struggled for a week between truth and error, gaining slightly; then I came to the conclusion that there must be a complete separation between them, or rather the enthronement of Truth in my consciousness, which would mean the annihilation of error. In forty-eight hours more I was entirely cured,—healed, and I may say regenerated. Morphine, liquor, and tobacco habits, as well as the disease, had all vanished, together with their effects; my mind was again as clear and acute as ever; my back was straight, and all pain or traces of it gone; my appetite was restored, as several around my family board can emphatically testify, and in about six weeks I had regained my normal weight.

In telling a friend of my experience, he admitted that a great change had taken place in me; that it was even wonderful; but he added that he thought it due to will-power more than to Christian Science. I told him he paid me a splendid compliment, but that I was acquainted both with my will-power and with the truth as taught in Christian Science, and that it was the latter which had healed me and wrought the great change. In conclusion I want to say that heretofore heaven had seemed to me a very distant, inaccessible place, to which very few seemed to be able to guide. Now I realize that to me it is not very far from my home, where any interested person may call and learn of my healing as here related.

FRED H. CUTTING, Chicago, Ill.

I have been interested in Christian Science for two years, and through its teaching I have been so helped and have realized such a change of thought, that I feel as if I had literally been born again, or had had an awakening to a true understanding of the reality of being. From being a morbid, hypersensitive woman, who took a melancholy view of everything, I have been lifted into a consciousness and realization of all good, as being the inheritance of God's children.

Last spring I had a wonderful experience. I had been reading "Unity of Good" by Mrs. Eddy, and studying the Christian Science Bible Lesson, all the week. On Sunday morning every word of the service seemed so clear and real that my mind never once wandered from it. After church, when I took a street-car to go home, I realized that I had been healed during the service of near-sightedness, an infirmity which had manifested itself, apparently, for over fifteen years. My amazement, as I gazed upon a new world and tested my new-found sight, will never be forgotten. I could see small objects across the Hudson river and as far as the eye could reach. This was wonderful to one who had aways relied upon the conductor to tell her when to get off the car, because of inability to distinguish the numbers on the street-corners. This was four months ago, and I have never had a return of the lack of sight since.

At another time I was cured of deafness which had resulted from illness, while telling a Christian Science practitioner of the difficulty. A peculiar sensation came, as if a band which had bound my head had dropped off, and then I could hear. These are only two of the many manifestations of good which have come to me through Science. I know of no way to express my thankfulness to God for leading me to know Christian Science, or to Mrs. Eddy for discovering it and for her bravery in standing alone to declare it to us. I feel that not half has been told, and that we are only in the beginning of a wonderful unfolding of a new world, which is to become manifest through Christian Science. What has been done is but little compared to what will be done through the knowledge and application of this wondrous law of Life and Truth.—CLARE TORRENCE WHITE, New York, N. Y.

[Translated from the German.]

Twelve years ago I suffered from a malignant disease —according to medical diagnosis—and had to submit to an exceedingly painful operation. I was relieved in some measure, but another disease soon set in, namely, gall-stones. I consulted my physician, who told me that an operation would again be necessary; but as I demurred at this, he complied with my wish and sent me to Karlsbad, where I gradually got relief from the pain. I felt rather better for about a year, but was not healed permanently, for after that time the primary trouble appeared again and continued to increase, giving me almost unbearable pain. In the mean while my former physician had passed on, and as I did not know to whom to apply with full

Digitized by Google

confidence, my condition grew worse. Through an acquaintance I heard that the successor of the physician in whose clinic I had been was a very capable man, and so I decided to seek help there.

The first operation having caused me such torment, I struggled greatly against another one, and would perhaps have postponed the matter still longer, but after an examination the physician said that I had waited much too long, that the protuberance was already too large. It seemed no use to struggle longer; therefore I had to yield. Compared with this operation, the former was only child's play, both with respect to its seriousness and to the slow recovery. I was kept in a state of stupefaction by the use of the strongest opiates for two weeks, and four weeks later I could only be brought home in a carriage. Then I realized how many of my friends had given me up. For the following six weeks I crept about in my house, using a stick for support, and only then could I attend somewhat to my business. Now that I had gone through all this, I hoped I had regained my health completely; but I was disappointed, for after a short while a throat trouble set in, so that I had to submit to the treatment of a specialist in Braunschweig. When I told him for what disease I had been operated upon, he immediately said that the case was a very serious one. I went to this specialist for nine months; my throat was finally so sore from the cauterization that I had difficulty in swallowing, and twitching of the muscles of the throat and neck had set in.

It is now three years ago that a traveling man, who knew my condition and what I had gone through, came to see me, and he told me wonderful things about Christian Science. He advised me to get up my courage and go to Hannover, as I surely would find healing, for he himself had seen cases of healing which could indeed be called wonderful. I therefore went to Hannover, and stayed there for two weeks. The Christian Science practitioner fortunately could take up the treatment at once. She explained to me precisely what I had to do, and I set all my trust upon our Father in heaven. After three days the pain diminished, and I kept on improving daily, so that my throat was completely healed in two weeks' time, and I felt well again.

I must state that this is not the only healing I experienced in Christian Science. I was so weakened physically that I felt much more tired when I got up in the morning than when I retired at night, and was so weak that I did not dare to walk more than a few minutes at a time for fear I should fall. All this, however, disappeared during those two weeks, so that I felt like one new-born, and I really did receive new life. After this I only felt ill when I became excited and terribly angry because of business annoyances. Experience soon taught me, however, that we should not let anything of this kind disturb us, but that we must always remain conscious of the fact that good will triumph under all circumstances, if we only hold fast to it in our thought, and that any reappearance of the disease was proof that I had failed in this respect. I would commune with myself, have a few treatments, and the diseased condition would be removed after a short while. Since that time I have felt absolutely well, and may say that since I have come to know the divine Principle of Christian Science and try to live according to God's law, I have become a strong man, and I have gained greatly in weight.

I would also like to tell of the experience my wife had with Christian Science. She had for years suffered with violent and acute pains and had only been able to drag herself about. Various physicians had tried to cure her, but failed. All kinds of remedies were prescribed, but in spite of the closest adherence to medical prescriptions my wife felt nothing in the way of an improvement; the pain rather grew more severe. She then made up her mind to seek the physician under whose attendance I had gone through my last operation, and he stated that in addition to the first disorder there was another disease. This physician now made very great efforts to cure her, and succeeded in having the pain grow less, but he could not restore her to perfect health. Nothing was left, therefore, but to go the way I had gone before; and so, in the fall of 1907, I went with her to Hannover to ask for Christian Science treatment. After a short time she was restored to health; the gout, pain, etc., were all gone. Now, through strict adherence to the teachings of Christian Science, my wife knows no more of pain or disease.

I would like to give also an account of the healing of my son. He suffered for a whole year with attacks of appendicitis. The family physician could not help him, as he did not know whether there was another disease back of this trouble. Things became worse with him daily, so that nearly all of us gave him up. Finally I took him to the professor mentioned in my own testimony, and the latter confirmed the physician's opinion that the condition of my son was serious indeed, but he hoped to restore him to health. After a while the boy did improve, but he did not get entirely well. Then, unfortunately for him, he fell and sustained an injury of the abdomen, so that complications set in. My son was then sixteen years old. The physician believed that in this case tuberculosis had set in, but when the operation was performed he discovered that the awful pain had been produced by an abnormal growth. About four weeks later the boy was dismissed as being well, in the opinion of the physicians; but after a few weeks painful symptoms of the former disease reappeared. This was about the same time that my wife and I went to Hannover for Christian Science treatment, and we took our son with us, seeking healing for him. In about two weeks' time he was healed, so that disease and pain are today unknown to him. He also is striving to live according to the teachings of Christian Science.

I thank our heavenly Father for our healing, and my faith is strong that He alone can help us, and that we are shown the only true way in the teachings of Christ Jesus—to learn to know God as our creator and preserver.

C. H. MARQUARDT, Prettin a/E., Germany.

When my little girl was about two weeks old, she had what one doctor called a nightmare. Every night thereafter she would scream for several hours and we could not quiet her. I went from one doctor to another, seeking help for her. One said she would outgrow it; another said it was indigestion; every doctor had a different theory. I had become greatly discouraged and all broken up for want of sleep, when one day I met a friend who had been cured through Christian Science, and she advised me to try it for my baby. At first I could not understand how a child could be cured, but I had tried so many things that I decided to give this a trial as the last resort. I spoke to a practitioner, who immediately started in to treat the baby. In ten days she was healed, and for the first time since her birth she slept through the entire night.

I cannot express my thanks for all that was done, as it was the first night's rest we had had in over two years. The practitioner told me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, saying that it would help me very much. I became so interested in it that it was the last thing I would look at before going to bed at night, and I can remember many nights I fell asleep with this book in my hand. It has helped me in many ways. For twenty-four years I could not eat certain kinds of fruit, and when I saw the first of them the next season, I tried a few, knowing that I could eat them because what we eat or drink cannot harm us; and the fruit did not hurt me at all. For twelve years I had suffered with severe headaches. I was so used to them that I never realized

Digitized by Google

they had disappeared until one day my daughter asked about them, and I remembered that it was nearly two years since I had had one.

Christian Science has done so much for me and my family that I cannot express my thanks to God, and to our beloved Leader, Mrs. Eddy, for showing me the way to Truth.—Mrs. E. Berckmann, Jersey City, N. J.

My heart goes out in gratitude to God for what Christian Science has done in our family. This wonderful truth came into our home, bringing its healing touch to my sister, after all material means had failed. Through the same practitioner I received my first spiritual healing, and have been helped many times since. A little nephew was healed of bronchial trouble; my father was healed of tubercular disease, and otherwise helped; my mother has also been greatly benefited through Christian Science treatment. May God's blessing and guidance be constantly with the workers in Christian Science.

Verna Hepburn, New Haven, Conn.

In studying one of the Lesson-Sermons I was impressed with this thought from Isaiah: "I will mention the lovingkindnesses of the Lord;" and I wish to tell, with the thousands of others, what God has done in our home, through Christian Science. Over two years ago, after an illness of three and a half years, I was asked to try Christian Science, and being discouraged with medicine, and not having any particular prejudice against Christian Science, I consented, and wrote to a practitioner in Omaha. I could not understand how she could do any good by absent treatment, and did not wish to give up all the medicine, but on being advised that otherwise I could not have Christian Science treatment, I consented to this also. I mention this because so many think they must have faith, but I only had the faith to put my case into her hands. But as hope revived, how faith grew; what joy and what a longing to know this truth for myself, when, after one or two treatments, I felt and knew I was to be well again.

From overwork and sorrow I had become prostrated; unable to move. There seemed to be a general breakdown, though I supposed I would be all right in a short time; but weeks had stretched into months, months into years, and though I could sit up some of the time, walk a little, and work some, I could not ride, as the least jar would cause a sick spell. My ills were many and serious, and I could write at length of my hopelessness and disappointments. I would lie and wonder what I had done that God should send such afflictions, for I had been active in church work from childhood, often neglecting home duties therefor. Thinking thus, it was only a step to rebelliousness, and I found no more comfort in the Bible. Now, in the light of Christian Science, how I love the Bible, and what food I get as I daily study it, with Science and Health, and read the *Sentinel* and *Journal!*

It was a long time before the last physical ailment had disappeared; but I am not sorry, as it kept me studying till the love for this wonderful teaching grew. Since then I have been doing most of my housework, ride all I please (we live eight miles from town), and eat anything I choose. We are thankful for these blessings, and for having been so gently and patiently pointed to the straight and narrow way which our Leader has made plain for us.

Mrs. H. C. La Tourette, Oberlin, Kan.

Recently one who was going through the neighborhood, collecting money for the poor, conceived the idea of announcing his approach by playing on a cornet the familiar strain, "Tell me the old, old story of Jesus and his love." To me the words of the old hymn were recalled distinctly, and they brought this message: Christian Science is "the old, old story," told in a new and more comprehensive form, and given to us in such a practical way that it can be used to meet the needs of humanity today. We who have realized its wonderful power should speak and testify that the healing Christ Jesus instituted is being carried on in this generation.

I came into Christian Science through conviction of its truth. I saw the application of its teachings in the life of a beloved sister, and the antagonism which I had felt before that time all passed away. Six months later I had my first practical test of Truth's power. I struggled with a severe case of throat inflammation for two days, trying to overcome it with my own limited knowledge. I finally called a Christian Science practitioner, and the disease was entirely healed inside of twenty-four hours. This disease had been an old enemy of mine, and an attack had never yielded to medical care inside of two weeks.

Two months later I lost the use of my right hand. It became helpless from the constant grasp of brush and pen in my studio. I had previously been warned by a physician of the likelihood of such an attack, but I had wilfully kept on with my work. The instant that the trouble appeared I knew that there was help for me in Christian Science alone, and I went at once to a practitioner. I stayed with her most of the day, reading and listening to the precious truths. The next morning I went to work in my studio perfectly well—my hand steady and strong. That was four years ago, and I have never had the slightest trouble since.

That winter my husband and I severed our connection with the church where we had been active members for many years. We felt that the understanding of the infinite Mind which we were receiving was something so wonderful and so all-satisfying that we must be connected with a church where that was taught. During that year a still greater test came. My left side was affected as my hand had been. This attack was entirely overcome in a week, and I was well, with no trace of the disease left. Since that time severe headaches, lung and bronchial difficulties, have yielded one by one to the power of Truth.

As I study our text-book my gratitude to our beloved Leader for the truth she has given to the world, ever deepens and increases, and it is my most sincere desire that through this study I may receive such an understanding of the infinite Mind as will enable me to follow the example of the Wayshower.

Katherine B. Focke, Massillon, O.

I desire to express my gratitude for Christian Science and what it has done for me. It was through the healing of two of my best friends that my attention was first called to this Science. I had for nearly a year been under the doctor's care for a very bad case of stomach disorder, dieting rigidly and taking all manner of drugs. From all this I received no benefit, but gradually grew weaker, until my friends began to wonder how much longer I would be able to hold out. About this time the second one of my friends, who was even worse off than myself, found relief and was eventually cured by Christian Science. Then the question came to me, If they can be cured, why not I? Immediately I called upon my friend's practitioner, with the result that I was healed of this complaint in a few treatments. While I continued to take treatment for about ten days, yet I was practically cured with the first treatment, as that evening I ate a hearty meal and felt no bad results from it. Prior to this time, even my plain diet had caused me a great deal of suffering. I was also, at the same time, cured of other weaknesses from which I had suffered for years. I had been able to walk but

Digitized by Google

a few blocks at a time without suffering for it afterward. Now I can walk any reasonable distance and feel no bad effects from it.

I am truly thankful to God for the physical healing, and also for the new understanding that I am daily receiving from His Word. I am also grateful to Mrs. Eddy for her patient and persistent life of study and work, which has revealed to the world this great truth, whose acceptance leads to life eternal.

MRS. R. L. BLEDSOE, Los Angeles, Cal.

While reading the current issue of the *Journal*, wherein I found a great many helpful passages, the thought came to me, Why not write your testimony now? Paul said, "Now is the accepted time." My delay in not writing a testimony before this is not because I have not had demonstrations of the truth, for I have been healed of many ills, —fever, chills, ivy-poisoning, neuralgic and spinal difficulty, and other ills of the human flesh. My desire is very great to advance in Science, and I fully comprehend that we must live the truth,—put into practice what we know.

I can say that I have never for a moment regretted my acceptance of Christian Science, and I want to encourage others to accept the truth that makes free. At present I am the only Scientist in Osgood, but that does not bar me from studying the Lesson-Sermons, also Mrs. Eddy's writings, besides the *Sentinel* and *Journal*. The lectures and articles written on Science subjects by competent Scientists are much appreciated, and are found to be great helps. The Scripture teaching has become much plainer; it is an inspiration to study it, and I gain the knowledge for which I have long sought. Christian Science truly reveals the Comforter.

Rightly to appreciate Mrs. Eddy is to follow her teachings. I hope that my example may encourage others to accept her teachings, and to comprehend more fully what it means to "love thy neighbor as thyself."

MRS. MELVINA H. WILLSON, Osgood, Ind.

Twelve years ago I was told by a physician that I must go to a hospital for the removal of an internal growth. I did so, and after three weeks of preparation I was put upon the operating-table. After the incision had been made, the doctors pronounced the growth malignant, and said it had advanced beyond the possibility of removal. My husband was told I could not possibly live more than six months—probably not so long—and that nothing could be done for me. I was utterly helpless at this time. I then turned to Christian Science. An attendant from the hospital carried me in his arms to the home of the Christian Science practitioner. I was under treatment about a year, since which time I have never been in bed one day from illness, although I have had treatment several times for minor troubles. I am indeed thankful to God, and to Mrs. Eddy, for the spiritual and physical help I have received.—MRS. ALICE R. CARTER, Ashland, Ore.

For a number of years I was afflicted, suffering a great deal with what the doctor called chronic diseases, such as cough, headaches, and a very bad leg and foot. At times I had to use crutches, and often I was unable to sleep because of the pain. The doctors said there was no cure for such a condition. My husband wrote to a Christian Science practitioner, who gave me absent treatment, and I was immediately healed. Some eight years ago one of our boys was healed of a very bad case of eye trouble, after years of medical treatment, having been in a hospital at one time. In less than two weeks he was healed through Christian Science, and the disease has never returned. Two of our boys were sick last winter and were healed in a few days by absent treatment. After my own healing my little girl said it seemed so good not to have mamma sick, and to hear her sing. We are taught to sing praises to God for His goodness.

Words can never express fully my love and thankfulness to God for this healing power, and to Mrs. Eddy for our text-book, Science and Health, which is such a help to us in understanding the Bible. We meet with some trials on the way, but God's grace is sufficient to carry us through, and we have so many things to be thankful for. Occasionally we drive over to Alma to the Christian Science service, and although it is a distance of twenty miles, we feel wonderfully repaid. My earnest desire is that we may be the means of bringing many others to this glorious light of liberty which is in Christ Jesus.

MRS. J. S. BARGER, Carson City, Mich.

If I were to try to tell the particulars of my healing my testimony would be too long for publication. I have been healed of hernia, bronchial and asthmatic trouble, with the usual complications, a chronic throat affection, gallstones, and many minor complaints. The physical healing, while great, is small compared with the spiritual joy and peace that come with the study of Christian Science. Words fail to express my thankfulness to God, and my gratitude to Mrs. Eddy for Science and Health, and the publications, that are as manna to the hungry soul.

MRS. PATTIE N. BAKER, Palmyra, N. C.

I have received so much benefit from Christian Science that I gladly acknowledge my indebtedness for what it has done for me. Some fifteen years ago I was thrown from a horse, and injured my knee and ankle so seriously that I was not able to use this foot in running the sewing-machine. About three years ago I was thrown from a buggy, and in consequence the left side was so badly affected that I could hardly use my arm. I had other ailments also, and I believe I should have been dead or in an insane asylum today, but for Christian Science. I called on a Christian Science practitioner for help, and I began to get better from the very first treatment. I am now entirely free from the effects of the accidents, and was also healed of a very serious stomach disorder.

I take this method of expressing my thanks to God for all the blessings that have come to me, and I especially appreciate the benefit Christian Science has been to me in unfolding the spiritual meaning of the Scriptures, for the physical healing is nothing as compared with the spiritual awakening.—MRS. ELLA EDDY, Texhoma, Okla.

So stood of old the holy Christ
Amidst the suffering throng:
With whom his lightest touch sufficed
To make the weakest strong.

That healing gift he lends to them
Who use it in his name;
The power that filled his garment's hem
Is evermore the same.

For, lo! in human hearts unseen
The healer dwelleth still,
And they who make his temples clean
The best subserve his will.

WHITTIER.

FROM OUR EXCHANGES.

[*Outlook.*]

Life itself is the teacher of the prophets and poets, the saints and martyrs. We cannot silence our doubts by thinking; we cannot find God by searching; but we can do His will, and then we shall know His doctrine. . . . We keep in His presence by doing the work and living the life of faith. There is no baffling mystery about all this; for the clouds and darkness which surround a man do not make the path at his feet invisible or uncertain; and that path leads, through rough places and smooth, sometimes in light and sometimes in darkness, to the summit. All that a man needs to do is to keep his feet in it. The road is as open to the humblest as to the greatest and the most obscure often find themselves on those higher peaks where the divine vision is most distinct.

[*The Churchman.*]

As the name of Christ becomes known, and as his followers realize his purpose for making the world one common brotherhood, his absolute position as the revealer of God and the revealer of man is likely to be more intensely realized. Indeed it is plainly recognized at the present time that though interest in theological systems has declined, the influence of great personalities is greater than it ever was. There is a wide-spread desire for leadership, a conviction that mere verbal declarations are unsatisfying. So arises the common indifference toward church organizations, which seem to live for formulas and to care so little for life.

[Rev. Dr. Milner in *North Shore News*, Rogers Park, Chicago.]

The belief of every church should rest upon the gospel. And for the integrity of this wonderful book you need have no fear; friends of the Bible will never try to undermine its teachings; enemies of the Bible cannot. Heretical doctrine and the philosophy of false teachers need never cause you the slightest alarm. Some churches, it would seem, endeavor to see how much they can get out of a community. It should be the aim of a church, on the contrary, to see how much it can put into a community. And an institution which has this for its purpose will not fail to get all that it needs for all that it wants.

[*New York Observer.*]

The solicitude of Jesus Christ, when upon this earth, was not for his own comfort or well-being, or his own religious state, but for the spiritual welfare of his followers and of those who should be his disciples. The chief aim and desire of Christ was to develop in men who had been accustomed to ritualistic routine the spirit of vital religion, welling deep from the heart; and in order to the production of such a spiritual type of religious experience, he everywhere and at all times insisted on the need of faith in God, which was at the same time to be faith in Jesus Christ himself.

[*Examiner.*]

The teachings revealed in the New Testament have often been perverted. They have been, and are today, misstated and misinterpreted. But the "mold of doctrine" is perfect, unsurpassed, unsurpassable. Whenever the church has gone back, even imperfectly, to this divine source of doctrine, it has gained in purity and power. If, therefore, by "the old-time religion" is meant the religion of the New Testament, interpreted by a "Christian consciousness" enlightened by the Holy Spirit, then it is "good enough" for us and for all men.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the Field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

PAMPHLETS IN FRENCH.—Three new French pamphlets, "Christian Science: Le Pouvoir De L'Homme Sur Le Mal," "Christian Science: Ses Bienfaits Pour L'Humanité by Edward A. Kimball, and "Christian Science: La Délivrance Du Mal" by William P. McKenzie, are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has just been issued by the Society, copies of which will be mailed to our patrons on application.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, must be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months; all other countries, $8.00 a year, $4.50 for six months. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE, THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 20 pages.

CHRISTIAN SCIENCE: A RELIGION OF DOING. A Lecture. By JUDGE WILLIAM G. EWING. 26 pages.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D. 37 pages.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy . . . . . $.03
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The secretary-treasurer of the Postal Progress League says: "Under the legislation proposed by the league the posting of two four-pound parcels a year by the average of our 80,000,000 population would give the post-office an income of over $50,000,000 from its general merchandise traffic alone (in 1907 the income from this part of the service was but $8,000,000). The posting of one four-pound parcel a year per head of our 28,000,000 urban population in the new local sealed parcels service would add about $1,000,000. Estimating the needs of the average rural family to require the mailing of but one suitcase packet a week to and from the post town and the home, the postal income from the new rural service—4,000,000 families—would be over $40,000,000. The enactment of this bill into law would eliminate the long continued postal deficit; it would go far to relieve the public from the extortion of our private express companies." The bill provides for a reduction of the one-cent an ounce postal rate on merchandise to one cent for two ounces, the old rate of 1874; a local letter post, four ounces for two cents, each additional ounce one cent, the general letter rate of Great Britain; a local service on the rural routes, all matters in one class, parcels up to 1 by 6 by 12 inches in bulk, one pound in weight, one cent; larger parcels up to 6 by 12 by 12 inches in bulk, eleven pounds in weight, five cents; larger parcels up to 6 by 12 by 24 inches, the capacity of the ordinary suitcase, or one cubic foot, and up to twenty-five pounds, ten cents.

Prof. Percival Lowell has discovered oxygen in the atmosphere of Mars. This announcement comes almost on the moment of the confirmation of Dr. Lowell's declaration of last year of water vapor in the atmosphere of Mars. The original announcement was made a year ago in consequence of observations made some time before, while the confirmation is in consequence of a special expedition to the summit of Mt. Whitney made by Dr. W. W. Campbell, director of Lick Observatory.

One hundred students of Denver high schools have been suspended because they refused to sign pledges renouncing fraternities, societies, and other school organizations. The fraternities will ask for a temporary injunction to restrain the principals from suspending any more pupils who are fraternity members until the matter as to whether the school board really possesses this authority shall be determined by law.

The year-book of the Young Men's Christian Association of North America, just issued, shows that the organization now includes 1,014 associations with 450,027 members—a gain of 10,500 in twelve months. The association's property holdings are valued at $62,800,000 and the aggregate debt is only $7,100,000. The yearly expenses, provided for by membership fees and contributions, are more than $7,000,000.

The report of the monetary commission, which it is now expected will be made late in the regular session of Congress, is likely to lead to much debate in the legislative branch of the Government. Many doubt whether any report of the commission for a comprehensive reorganization of the banking and currency system can be enacted into law.

During his long trip through the West and South, which began Sept. 15, President Taft will be in constant touch with the White House by means of special wires. The official itinerary of the President's trip shows the total mileage to be 12,750. Of this 1,165 miles will be made on a steamboat down the Mississippi river.

Twenty-eight countries have signified their intention of participating in the celebration to be held on the Hudson river from Sept. 25 to Oct. 9, commemorative of the discovery of that waterway by Henry Hudson and of the first successful application of steam to its navigation by Robert Fulton in 1807.

The value of crops produced last year on the six and a half million farms of the United States reached the enormous total of $7,778,000,000, the greatest in the world's history, and it is predicted that this record will be surpassed this year.

Upon recommendation of the committee on federal relations, the Connecticut Senate has voted that action on the proposed amendment to the Federal Constitution to permit the collection of an income tax be referred to the next General Assembly.

More than two thousand delegates, representing every city of importance of every state west of the Mississippi river, attended the opening of the twentieth trans-Mississippi commercial congress in the Auditorium at Denver last week.

Governor Hughes of New York has appointed an extraordinary trial term of the Supreme Court, to be held in New York county on Oct. 4, to take up four indictments against the American Ice Company.

The forty-third convention of the National Peace Society has recently been in session at Mystic, Conn.

The thirty-first annual target contest of the National Archery Association of the United States has just met in Chicago.

International.

The Foreign Office of Venezuela has issued a check for $50,375, one eighth of the amount which is to be paid to the New York and Venezuela Company as indemnity for the confiscation of its properties by the late Castro government. This is the first of several large awards that will be paid.

The international air navigation exposition has decided on the week beginning Oct. 3 for "aviation week," at Frankfort, Germany. A total of $30,000 will be offered in prizes. All the principal aviators of the world will be invited to attend.

Officials of Wells, Fargo & Co. have completed arrangements which in effect give their company a monopoly of the express business in Mexico, together with a concession of the parcels post privilege, on a partnership basis with that government.

Industrial and Commercial.

At a recent meeting of the cloth manufacturers of New Bedford, Mass., it was determined to submit the issue of higher wages of the New Bedford mill operatives to the state board of arbitration. The letter sent to the secretary of the Textile Council in response to the proposal of that body to submit the justice of their claim to arbitration was in substance as follows: "Cotton manufacturing is a business proposition and the mills, like any other business, are to be run in the interest of the owners. It is the policy of New Bedford manufacturers to be as liberal in the wage question as is consistent with good business, and no individual or community has the right to expect or demand that we pay much, if any, higher wages than our competitors. No amount of arbitration can change this fact. We maintain that our wages are higher and, under present conditions, fair and just to the operatives. We court any investigation that will determine the relative earnings of the operatives in New Bedford as compared with other cotton centers, and we will gladly assist the state board of arbitration toward this end."

The Boston Consolidated Gas Company is making its third distribution to employees under the profit-sharing plan adopted in 1906, which calls for the payment of $48,026 to the 638 employees for the fiscal year ended June 30 last. Since the plan has been in operation the company has paid its employees $118,737, the premium paid each year being calculated at the same rate as the dividend on the stock, which was nine per cent in the fiscal year just closed, eight per cent in the previous fiscal year, and seven per cent in the fiscal year ended June 3, 1907.

Wireless telegraphy as a means of giving alarm in the event of fire is the plan advocated by timber cruisers in Spokane to protect the forests in Washington, Idaho, Oregon, Montana, Nevada, California, and British Columbia, which contain approximately seven hundred million acres of standing timber.

Recent statistics on the cotton industry of the South, including territory covering Texas and Oklahoma to the west and Missouri, Kentucky, and Virginia to the north, show the number of mills to be 762. The spindleage is 11,720,100, and loomage 267,430. Total mill capitalization is $115,771,000.

In addition to the $5,400,000 in car orders recently placed by the Pennsylvania Railroad Company, the Pennsylvania line west of Pittsburg has awarded contracts for approximately three million dollars' worth of freight equipment to the Standard Steel Car Company and the Cambria Steel Company.

Permanent organization of the International Agricultural Corporation, which was recently incorporated under the laws of New York with an authorized capitalization of $15,000,000, has been perfected.

Germany has appropriated for new construction and armaments in 1909–10 no less than $53,757,340; Great Britain, $51,280,070; America, $30,075,505; France, $28,800,880; Japan, $12,471,905; Italy, $10,953,535; Russia, $9,111,185.

The import trade of China for 1908 amounted to $258,000,000 and the export to $181,000,000.

General.

Spanning two hundred and seventy-four feet and over three hundred feet high, a natural bridge, said to be the largest known, has been discovered by members of the Utah Archeological Society, which has returned from an expedition along the Colorado river in northern Arizona and southern Utah. The bridge is located four miles north of the Arizona line in the state of Utah, six miles east of the Colorado river. On its top were found imbedded several fossils of remarkable size, indicating the presence at earlier times of giant animal life.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"LEST WE FORGET."

SAMUEL GREENWOOD.

THE belief that life and intelligence are material, moving in limited personal orbits, and that, therefore, men can live and act independently of God, is the supreme folly of mortals. Controlled by this belief, the devotion of thought to God is mainly looked upon as a matter of choice or desire, rather than as the necessity of living. Life goes on the same, say they, whether they think much or little, rightly or wrongly, of God, for does not the sun of being shine on the evil as well as on the good? But the suffering and the mortality which accompany the belief of life in matter are its own condemnation, and confirm the Scriptural teaching upon which Christian Science is based, namely, that Life is God, and that apart from Him and His manifestation there is nothing,—no life, no truth, no intelligence, no reality.

We read in Deuteronomy that Moses, after declaring to the Israelites the commandments of God, as revealed to his understanding, went on to say: "And these words, which I command thee this day, shall be in thine heart: and thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up. And thou shalt bind them for a sign upon thine hand, and they shall be as frontlets between thine eyes. And thou shalt write them upon the posts of thy house, and on thy gates."

What does this mean but that God, whom Jesus declared to be "good," must be held in constant remembrance, must dominate the thoughts and affections, must be with us wherever we go, in all we see or do, must be the burden of our conversation and the object of our desire; and that this truth of the infinitude of good must guard the entrance to our consciousness? If there is any less absolute devotion of thought to God, any less complete surrender of the human to the divine whereby mankind can be saved from evil, the Scripture does not reveal it, neither has human invention or desire discovered it.

An inspired writer has aptly described hell as the condition of those who "forget God." In Scripture this word forget is frequently used to imply neglect, rather than the mere absence of recollection, for although the fact that God exists may be faithfully borne in mind, it is evident that He is forgotten, to the degree that His requirements are not fulfilled. It is practical rather than intellectual remembrance that constitutes vital Christianity. One's religious creed may affirm the infinite nature of God, and may correctly declare the divine attributes, yet the actual practice of that creed fall woefully short. But it is the constant living of one's convictions, the constant reliance upon and demonstration of good, that Truth demands, and for which no amount of creedal belief or religious fervor can be substituted.

But, it may be asked, wherein do Christians forget God, since Christendom is literally dotted with churches erected for divine worship? The Christian religion may indeed be said to occupy the largest share of the attention of the civilized world, while missionaries are bearing its message to every uncivilized land, but in how many of these churches is God worshiped as infinite Love or omnipotent good? How many theological schools and religious publications teach the absolute supremacy of God? How many religious creeds so acknowledge the omnipotence of God that no other power is admitted to exist? In how many places of worship is the First Commandment enunciated in its entirety, so as to exclude the supposition of any life, intelligence, law, or creation apart from God?

On the contrary, does not the preacher too often turn from the exhaustless theme of God's omnipotence, to descant upon the belief that an evil power exists, and that it can destroy God's image and drag His likeness down into iniquity? Does not the missionary too often bear a message of fear as well as of hope to his pagan hearers,—fear of a power that is not God? Do not the beliefs of most religionists regard Deity, not only as the passive spectator of their woes, but even as the dispenser thereof,—teaching, in effect, that the same watchful Love which follows the sparrow in its flight afflicts mankind with their ceaseless miseries?

One cannot seriously question that even Christians need to be reminded of the true nature of God as unchanging Love, as the Life of all, when His name is thus coupled with the sufferings of mankind, when He is regarded as causing or permitting the death-dealing earthquake, the blasting thunderbolt, the ruthless, indiscriminate destruction wrought by wind and wave and fire, and the merciless Juggernaut of disease, striking down young and old, sinner and saint. Is not God's protecting power pitifully forgotten when everything in material belief is acknowledged to have power to destroy human health and life? Is not incense being offered to "strange gods" as much today as in the days of the early Israelites,—incense to the gods that project pain and decrepitude and death upon humanity? Do not even God's professed people need to be reminded that the understanding of His omnipotence is the only protection from evil, and that their beliefs leave Him out of the question entirely in the healing of their diseases, every material remedy being preferred before God?

A sweet story is told of a child who had healed a sufferer through what she had learned of Christian Science. In answer to the question as to how she had done it, she replied that he (the patient) had forgotten that God is Love, and she had only reminded him of it. There is more practical Christianity, is there not, in this simple object-lesson taught by a child, than in a lifetime of sermonizing with the ever-present, healing power of Christ left out. Indeed, one might acquire all that has been taught in every school of theology, and yet have less real knowledge of God than had this little one.

This incident illustrates the boundless possibilities open to mankind in the working out of their salvation, for what may not one accomplish who always remembers God with

such unmixed faith? Can we conceive the result of all Christians thus remembering that God is Love, and actually living in that remembrance? Coming closer home, have we considered the effect individually of remembering, for even one whole day, that there is absolutely nothing real besides good and its manifestation,—no other law, intelligence, power, presence? Would not consciousness rise to better things, and the sense of evil be destroyed by that much? Could we think or talk evilly of another if thought was occupied wholly with good? If we have tried this faithfully for one day, so far as we understand what God is, we know that it can be done, not only for one day but for all days. Does not our Leader teach that the only way to heaven "is to know no other reality—to have no other consciousness of life—than good, God and His reflection" (Science and Health, p. 242)? and that in urging the claims of Christian Science she asks no impossible thing, although it is not implied that this work can be accomplished without toil and struggle, and, at the present period, without defeats as well as triumphs.

It may be said of Jesus that his mission was to remind mankind of God, and he proved God's presence and power in his healing works; but, in the encroaching materialism of the age, even the church in large measure lost sight of the mission he bequeathed to it. Today, in Christian Science, the voice of the Christ is again heard, calling to human remembrance the eternal truth about God and man which Jesus taught, and for the demonstration of which he suffered. Christian Science is the message of divine Love, recalling mortals from the darkness and the misery of the belief of life in matter to the recognition of Life as God, and that His children are not created to sin, suffer, or die.

The bearer of this God-revealed message, the revered Founder and Leader of the Christian Science movement, has proved through the healing works of Christian Science that her discovery is indeed the Science of Christianity, the living word of Truth which heals and redeems humanity.

JONAH.

ELLEN B. PEASE.

In studying the account of the prophet Jonah's experiences, several helpful lessons have come to the writer. As we read the story we find that his first mistake, when he was commanded to go to Nineveh, was in thinking that he could get away from God's presence. The attempt seemed to succeed, for he went down to Joppa and there he found a ship which would take him to Tarshish. Then, his fears being lulled to rest by a false sense of safety, he fell asleep in the hold of the ship. But Jonah was not to escape so easily, for we are told that "the Lord sent out a great wind into the sea," and if we read the definition of wind as given in Science and Health (p. 597) in this connection, we shall get a clearer thought of what is meant. Here we find it defined as "that which indicates the might of omnipotence and the movements of God's spiritual government, encompassing all things. Destruction; anger; mortal passions." To the mariners on the ship it meant the latter, but Jonah, when they had awakened him, recognized it as an indication of God's omnipotence.

Jonah then saw that his disobedience was endangering the well-being of others no less than his own, and for the first time in this account we find him willing to take a step in the right direction. He said to the men, "Take me up, and cast me forth into the sea; so shall the sea be calm unto you: for I know that for my sake this great tempest is upon you." Science and Health (p. 240) tells us that "the divine method of paying sin's wages' involves unwinding one's snarls and learning from experience how to divide between sense and Soul." Jonah's willingness to save others saved himself, for though he was thrown into the sea God had prepared a place of safety for him, and there for three days Jonah wrestled with error. He found that, as our Leader says, "sorrow for wrong-doing is but one step toward reform" (*Ibid.*, p. 5), and it was not until he determined to obey the command of God that deliverance came.

Now when, in obedience to the second command of the Lord, Jonah went to Nineveh, his words caused the people of that wicked city to repent in sackcloth and ashes. This was all that Truth required: by falling into line with God's law they escaped the punishment that Jonah had prophesied, and which would otherwise have been theirs. But the mercy thus extended, we read, "displeased Jonah exceedingly, and he was very angry." Truth again gave him a lesson, by means of a gourd, which "came up in a night" and shaded Jonah from the sun as he sat outside the city, waiting to see if mayhap the destruction he had foretold would come to pass. Then a worm, typical of the sin which had all but destroyed Nineveh, "smote the gourd that it withered;" and now Jonah saw that even as he had pity in his heart for the gourd, so the divine Mind had gained His end with the people of Nineveh and their human sense of life was not destroyed.

Thus Jonah learned the lessons which many of us are just beginning to learn today, namely: That we cannot escape from God's presence, for there is no place where God is not; and that, "if living in disobedience to Him, we ought to feel no security, although God is good" (Science and Health, p. 19). Jonah also discovered that the results for wrong-doing were not confined to himself, and that he must not contend for his own opinions as to the proper methods of bringing about God's ends. Sooner or later we must all learn what it means to pray with understanding, "Not my will, but thine, be done."

LOVE'S ETERNAL NOW.

EDWARD C. BUTLER.

Whatever helps one person may help another. Every statement in Truth has an accumulative power. Passing along to others what has been helpful to ourselves, thus lifts us and lifts them; for

> Love looseth thee,
> And lifteth me,

as Mrs. Eddy says in her poem "Satisfied" (*Christian Science Journal*, February, 1900).

Five postulates, recently read, from an author unknown to the writer, have been very helpful. They are as follows: "God is the only cause. Spirit is the only substance. Love is the only force. Harmony is the only law. Now is the only time." The last sentence is exceedingly impressive: "Now is the only time." Our Leader says: "Eternity, not time, expresses the thought of Life, and time is no part of eternity" (Science and Health, p. 468); while in the 90th Psalm we read: "A thousand years in thy sight are but as yesterday when it is past, and as a watch in the night." In his second epistle the apostle Peter expresses the same idea: "But, beloved, be not ignorant of this one thing, that one day is with the Lord as a thousand years, and a thousand years as one day."

A careful study of the Lord's Prayer, and of the "scientific statement of being" (Science and Health, p. 468) shows the present tense to predominate in both. The word "is" occurs eleven times in the latter statement. Indeed, as Paul truly exclaims, "Now is the accepted time; behold, now is the day of salvation." Salvation from what? Salvation from whatever troubles us. We are apt to think that because we suffered in the past, we must continue to suffer, to drag forever the chain of our fearful

Digitized by Google

forging, like the Roman prisoner chained to a corpse. Remembering, instead of "forgetting those things which are behind," as the apostle advises, we manacle the present and mortgage the future, and then wonder why we are not free. The three so-called periods, past, present, and future, are of human arbitration. God knows only an "eternal now."

"Now are we the sons of God." This reading from the first epistle of John reaches us every Sunday from our pulpits, and it is ours to give it the weight it deserves in consciousness. The same reading proceeds to give promise of what we shall be when we awaken in the divine likeness. Of a truth man is in that likeness, but mortals must waken to that truth; otherwise, they are dreaming. Natural scientists tell us that dreams last but a second or two; yet men are said to have lived a lifetime in a dream. Imaginary, fanciful, vague the vision may be, but one can suffer therein, and suffer fearfully, unless awakened. Coming out of such a suffering condition, we thank God that it was but a dream. In reality it had no power to hurt us, but if we cling to the vision, refuse to awaken, the suffering must continue.

As in Christian Science we learn that the truth of being is unceasing, continuous, so we come to see that the present is perfect. "There is no discordant past, no clouded present, no dreaded future," said an able Christian Scientist. All we have to concern ourselves with is that no clouds settle upon our present, and the future (as we call it) we can safely leave with God, to whom it belongs. We do not own the "future," so we cannot mortgage it.

Any good dictionary is a help to those who are trying to understand Christian Science. Dreams are described as imaginary, and the word belief is shown to be a matter of opinion, or as we might say, an opinion of matter, if one could make matter sentient. Sickness and sin are thus beliefs in the reality of the unreal, the material. On the other hand, law is defined as "a rule of order or conduct established by authority;" the law is therefore the truth. Suffering may be called a law, but it is never other than a belief. Law is Life manifested. Law is Love manifested, the order of that expression of Truth which makes us free.

Dante is said to have measured his approach to Paradise by the light of love or divine understanding which played upon the uplifted features of Beatrice. It was the love or knowledge of God, Truth, that caused the face of Moses to shine. It was the consciousness of God as ever present that glorified Jesus, our Wayshower, and today it rests, like a coronal, upon our dear Leader.

CHARITY.

JOHN E. FELLERS.

WHEN in every phase of human experience men learn to practise the command of the Saviour, "Whatsoever ye would that men should do to you, do ye even so to them," then will the earth "be full of the knowledge of the Lord, as the waters cover the sea." The splendid ideal shown in that wondrous call to the race can never be lost. It quickens the generous impulses of men. It knows no self. It lives for others. It is indeed the newer and truer life, obtained and retained by having given itself to one who needs a steadier step to support his load. It is the friendly guide leading the stranger who has lost the path back to a safe and sure way. It reunites what God joined together, but which the storms of earth-passions have torn asunder. It is our counselor at the bar where souls are being tried.

Doing is giving. To do to others as you would have them do to you, and to think of others as you would have them think of you, is to enter upon a ministry which is healing humanity's sickness and its sin. The kindly thought of another, or the gentle word, is the carrier-dove bearing its message of love to some sad heart. To live the golden rule is to leave, for those who follow, a track of light, showing that the Christ has passed that way. It speaks the parable of Christian Science to human thought, and it awakens again the music which was heard in the gray dawn of history "when the morning stars sang together." Doing to others as you would have them do to you is the flowering of that sweet charity whose ripened fruit is the freedom of man.

Today, thanks to our beloved Leader, we have learned to discern the spiritual meaning of this familiar command of our Saviour, which despoils the kingdom of pain and reestablishes the kingdom of peace.

GIVING AND INCREASE.

KATHARINE ERWIN JERVEY.

PERHAPS the most difficult task which confronts one who is trying to be a Christian Scientist, is that of giving testimony at the Wednesday evening meetings. This has been my own experience, and others have told me the same of themselves. It seems much easier to do our silent work in the sanctuary of our own consciousness, and this silent work is very important, but we are told that there is "a time to keep silence, and a time to speak,"—a time to feed ourselves, and a time to give lovingly to others of our store, however large or small the stock may be. There can be no doubt that all who have endeavored to practise Christian Science in any degree have received some benefit therefrom. All may not as yet have experienced physical healing, but some good comes through any and every honest effort to live up to this high standard, and some knowledge of God is gained, which immediately multiplies itself if shared.

Sometimes our own knowledge of divine Science appears to us so small that it seems absurd to attempt to divide it, and the temptation often comes to hoard up what little we have, as a miser does his gold, and to add to it every crumb which we can get from others or from our study of the Bible and our text-book. Many times, however, I have been helped out of this miserly thought by the Bible story of the widow's cruse. We are told that she had only a handful of meal and a little oil in a cruse to feed herself and her son. At first, when Elijah begged "a morsel of bread," she feared to give any of her scanty store, not realizing how inexhaustible is the divine source of supply; but after she had shared her little store of food with the man of God, she found that "she, and he, and her house, did eat many days, and the barrel of meal wasted not, neither did the cruse of oil fail."

The story of the loaves and fishes is also most helpful. To the disciples, the feeding of five thousand with the few loaves and fishes which constituted their supply of food, seemed an utter impossibility, but they did not withhold it on this account. They gave it willingly at the Master's command, and the wonderful multiplication took place, so that "they did all eat, and were filled," and there remained to those who had given their all, twelve baskets full.

To me the widow's cruse and the loaves and fishes stand as type and symbol of spiritual food or knowledge of God, possessed in a very small degree, which, when willingly and lovingly divided among others, few or many as the case may be, is not only a help and blessing to those who receive it, but returns to the giver increased and multiplied many fold. We all have cause to feel very grateful for every little bit of such knowledge which we possess, and we should not neglect the opportunities which are provided us to give and to share. Mrs. Eddy has given marvelously of her supply by bringing divine Science, or

Digitized by Google

the truth about God, to our apprehension, and she has thus enabled us to obtain this spiritual food, which, if we share it cheerfully and ungrudgingly, will not return unto us "void." These beautiful words from our Hymnal express so well this thought of giving:—

For we must share if we would keep
That blessing from above;
Ceasing to give, we cease to have,
Such is the law of love.

REAL SUCCESS.

GRAY MONTGOMERY.

REAL success, which can be won only through the practice of honesty, sincerity, perseverance, and courage, is the guerdon that the golden rule ensures, when practically carried out as the maxim of business and social life. The old adage that "honesty is the best policy," holds good under any and every circumstance. The taint of wrong-doing clings to the perpetrator. One who has been known to tell deliberate falsehoods is not believed even when he tells the truth; one who has the reputation of being dishonest is mistrusted even when he may be strictly honest.

The business man should be very careful not to try to force through transactions by the use of will-power or mental suggestions, not only because these methods are intrinsically wrong, but because he will thus eventually lose the trust and good will of his customers. While one should be persevering in his work, this does not mean that he is to exercise unwise or undue mental persuasion, as one who has been unduly influenced will inevitably feel that he has been persuaded against his better judgment. The business man's sphere is simply to supply actual needs and to educate the public as to their need for particular services or commodities. He must overcome prejudice and antiquated ideas by showing the advantages of the best and latest goods, devices, inventions, and improvements, over poorer goods and methods. He must establish a reputation for reliability, and actually have for sale that which is advertised. He must enlighten, educate, and convince his customers by properly presenting the truth about his goods.

Temporary advantage might seem to be gained by the exercise of human will, but eventually mental and moral failure will be the result when this method is persisted in. On the other hand there are numerous examples of noble men and women who, though they failed to attain immediate success, have finally won lasting honors because their lives were ordered according to the golden rule. Even the martyrs, who seemed not to win honor while on this human plane, left behind them good which will live forever.

Gladstone, the great English commoner, won permanent and true success, and his reforms will be an enduring monument. His great motive power was unselfish love. He strove to overcome fear, avert war, and elevate national ideals, and he was always a sincere Christian. His religion was the intensely vivid and energizing rule and guiding influence of his life, and ran like a golden thread through the complex and variegated web of his human existence. He battled against error of every sort, and demonstrated that spotless integrity and lofty ideals are not incompatible with true success and greatness.

Abraham Lincoln, an American contemporary of Gladstone, was world-renowned for his honesty, a man whose character was resplendent with true dignity, simplicity, purity, and power. Lincoln abhorred meanness, trickery, wilful domination, and oppression. He had the highest ideals of brotherly love, the broadest and most courageous charity; and his life-work was an offering for the advancement of all humanity. His martyrdom lighted the way to the higher, grander emancipation from mental slavery, prefiguring the revelation of Christian Science, which was discovered and given to the world by Mrs. Eddy, who stands today one of the most remarkable characters in history and the most noble example of the triumph of brotherly love and righteousness. Her life is a practical exemplification of her teachings, which free mankind from bondage to sickness and sin in their manifold forms and present a practical Science of Life, which today is reforming the world, enabling the business man to overcome fear, envy, hate, bitterness, and dishonesty by the might of divine Love, and thus empowering him actually to demonstrate that true success is the result of doing good—that it comes as the result of seeking "first the kingdom of God, and his righteousness."

THE TRUE REFLECTION.

IDA L. BAKER.

IN the Bible we read, "Thou shalt love thy neighbor as thyself." For years I had been trying to fathom the meaning of this marvelous teaching. I believed that in this divine command was infolded the secret of all true living, of all freedom and bliss; but not until I began the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, did I perceive any tangible reason why one should love his neighbor as himself, or seek his own in another's good.

The revelation in Christian Science that "man reflects infinity, and this reflection is the true idea of God" (Science and Health, p. 258), removes thought from self to God, and sets one free to become a partaker of the good reflected by each one of His ideas in the universe of Spirit. Under the light of this truth, the veil of material self and of sense begins to lift, giving glimpses of that Life which "eye hath not seen, nor ear heard," and we perceive with a feeling of awe and rapture that every living thing has a message for us,—something distinct and individual from the one infinite Mind,—and that we are standing upon the threshold of an endless unfolding,—Life understood as God, good.

The psalmist writes, "All thy works shall praise thee." Love is reflected to us in the realm of nature from every leaf and flower; in the marvelous outlines and in the wondrous colors seen in nature, we behold symbols of the handiwork of the creator. Our revered Leader says, "Arctic regions, sunny tropics, giant hills, . . . all point to Mind, the spiritual intelligence they reflect" (Science and Health, p. 240). The artist presents on canvas his interpretation of life, and thus enriches mankind with his conception of infinity, immortality, reality; the musician, with heart attuned to harmony, discerning somewhat of "the rhythm of Spirit" (*Ibid.*, p. 510), suggests to us mental melodies as from the spiritual realm of the real. Christian Science teaches us that in the degree in which the Christ-idea is discerned in all things, are we truly ready to love our neighbors as ourselves, ready to enter into our inheritance as "heirs of God, and joint-heirs with Christ"—partakers of the divine nature in all things.

Divine Love reaches us through His infinite ideas, and all down the ages prophets and apostles have brought forth their messages of love and good will, reflecting to mankind the way of righteousness and life. It is, however, the "eye single," that penetrates beneath the oft-times forbidding appearance of the physical senses and sees Love's original design,—perfect and complete. Jesus saw the infinite possibilities of spiritual unfoldment for each one. He looked beyond the evidence of the material senses and saw Mind's perfect idea.

In this age divine Love is revealed to mankind as never before through "Science and Health with Key to the Scriptures," and this revelation of Truth enlarges our consciousness of the harmony of being and the reality of all existence, thus healing our incompleteness.

"VICTORY OF TRUTH OVER ERROR."

CALEB H. CUSHING.

MANY of our readers will recall an article in the *Sentinel* respecting the picture by Mr. Fuller which attracted so much attention a year or more ago, and which was called "Victory of Truth over Error." Truth, represented with white extended wings, noble and attractive features, and beauty of figure, bringing out the thought of strength and purity, had taken the scythe from the powerless hands of error, which was represented as a darkling, cringing form in the background, whose utter impotence was indicated by the facile hand of the artist in an apt and unmistakable manner. The thought brought out in this painting was that when Truth appeared error became nothing. There was no fight nor struggle, because the allness of Truth obviates all necessity for fighting. One cannot struggle with nothing, and Science indicates the nothingness of error in whatsoever form it may seem to take to itself.

The apostle James said, "Resist the devil [evil], and he will flee from you." A definition of "resist" in the Standard Dictionary is "to bring to naught," and this gives the Christianly scientific meaning of the word. Jesus clearly indicated that his mission to mankind was to prove this possible, as his demonstrations and teachings were all to show that evil or error, whether manifested as sin, sickness, or mortality, could be reduced to its native nothingness. He taught the omnipotence, omnipresence, and omniscience of God in a greater and more comprehensive manner than had any other teacher mentioned in the Bible, and his insistence that all human discord was the product of a false sense of a power apart from God was proof positive that this unlikeness of God was unreal.

Now we do not fear that which is not, and as we daily work out our problem along this line in knowing that evil, error, is no thing, holding to the allness of God, good, we shall reap good results in proportion to our faithfulness in holding to this scientific fact. If in the initial steps in his journey "from sense to Soul" the student finds it necessary to engage in what may seem to be a strenuous effort to hold in thought the right concept, let him be neither frightened nor discouraged, for every vigorous and persistent attempt to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261), will bring nearer and nearer the ability to realize instantaneously the allness of Truth, the knowing which measures up to the perfect standard demonstrated by Christ Jesus and indicated in the teachings of the Discoverer and Founder of Christian Science.

We may as well be awake at one time as another to the fact that we need not expect desirable results if we are content to do our work passively or indifferently. One should strive to hold the scientific thought up in consciousness, even if it does interfere with that state of dreamy ease which mortal mind would like to fool us into believing is harmony. Keeping up an active warfare all the time, knowing that we are not fighting a reality but a false sense that possesses neither mind, power, nor substance, will give the lie to any erroneous suggestion that this battling will tire us; and as we finish each engagement with the enemy, and take an advanced step, we shall have that peace "which passeth all understanding," and which is infinitely more restful and refreshing than anything in the way of material rest or recreation could possibly be.

The reward for this complete overcoming of a belief in all power opposed to God is clearly indicated in several references in Revelation, and this victory is assured, and may be confidently and joyously expected by, every earnest and honest student of Christian Science who is practising its teachings daily and hourly up to his highest understanding.

SELECTED ARTICLES.

[Frederick Dixon in *Dublin* (Ireland) *Express.*]

Our critic desires to know what the Christian Science theory of microbes is. There is not the slightest difficulty in answering him. Microbes are part of the phenomenon termed matter, and are just as real or just as unreal as all material phenomena. It has been said that every man, whether he knows it or not, is a materialist or an idealist. The theory of pure materialism is not difficult to grasp. It may be stated roughly as the hypothesis that nothing exists beyond the forces inherent in matter, and that the life and civilization of this planet, as it appears to us today, were evolved by a process of natural evolution. Idealism, on the other hand, is the doctrine that matter is the hypothetical substance of mind. If you regard this mind frankly as energy, your first cause becomes practically as purely physical as the materialist's; if, on the other hand, you regard this mind as God, you reach the standpoint of what is known as orthodox theology.

The first position is that taken up by Professor Ostwald, and explained by him with the utmost clearness in the phrase, "Matter is only a thing imagined which we have constructed for ourselves, very imperfectly to represent the constant element in the changing series of phenomena. Now that we begin to understand that the actual, *i.e.*, that which acts upon us, is only energy, we have to ascertain by tests in what relation the two conceptions stand, and the result is, without a doubt, that of energy alone can reality be predicated." The second position is that taken up by Berkeley, and explained in the words that there is "no substance of matter, but only a substance of mind termed spirit; that there are two kinds of spiritual substance, the one eternal and uncreated, the substance of Deity, the other created, and, once created, naturally eternal."

It is perfectly clear from this that it is quite immaterial whether you accept the definition of the idealistic bishop of the seventeenth century, or the idealistic philosopher of the twentieth century. It is indeed so essentially immaterial that Huxley once declared that "if the hypothetical substance of mind is possessed of energy, I for my part am unable to see how it is to be discriminated from the hypothetical substance of matter." As a matter of fact, it cannot be, and that is why Mrs. Eddy has written on page 409 of Science and Health, "*Mortal mind* and body combine as one."

It was really this confusion which reduced Berkeley to what Huxley elsewhere described as a "mixed logician." After saying that all that existed was mind, he proceeded to attempt to heal the inharmonious phenomena produced by that mind with tar-water. No doubt he would have replied that he was perfectly aware of the apparent inconsistency, but that the method he was advocating was, with the knowledge at his disposal, the best one available for influencing the mind, and so bringing about the necessary change in the phenomena. This as a matter of fact, is the only power a drug really has; and it accounts, incidentally, for the recent declaration of Sir Almroth Wright, that "it is useless to look to drugs to kill microbes in the interior of the body."

The idealism of Christian Science is far more radical than anything conceived of in such theorizing. It denies outright the reality not only of the phenomenon of matter, but of the energy which is supposed to produce it. This energy is, in fact, only the modern term for that which Berkeley described as mind; and the "mind" of the natural science idealist of the seventeenth century, and the "energy" of the natural science idealist of the twentieth century, the idealism of Christian Science describes equally

Digitized by Google

as unreality, as nothing but the negation of the only real cause, the divine Mind, or God. That is why Mrs. Eddy has written, on page 170 of Science and Health, "Spiritual causation is the one question to be considered, for more than all others, spiritual causation relates to human progress." It is because the logic of Christian Science is not "mired," because it presses back, not only in theory, but in practice, to the one inevitable conclusion "that all causation is Mind, acting through spiritual law" (Science and Health, p. 417), that it has aroused such bitter opposition. If it had been content with the theory that matter was the hypothetical substance of mind, and had demonstrated its realization of this by drinking tar-water, or some modern substitute for tar-water, such as quinine, it would have been regarded with respect. Its crime has been that it is logical.

It is this realization of the infinity of Spirit, of the allness of God, which constitutes the truth, the knowledge of which Jesus declared would make men free. Precisely in the ratio in which they grasp this truth they are able to demonstrate it in the spiritual healing of sorrow and sickness and sin; in a word, of all that is unlike God. In this way the miracle resolves itself into its original and natural meaning of the demonstration of divine power, for the word miracle never has had, and never can have, any supernatural significance beyond that which has been given to it in scholastic theology. As the human being learns the true relationship of man to God, he learns why Jesus said, I and the Father (not my Father, as may be seen by a reference to the original text) are one, and begins to understand how it is that "the kingdom of God is within you."

Man enters heaven precisely in the proportion in which he recognizes his spiritual sonship, and ceases to be deceived by the illusion of life in matter. This does not mean that so long as man remains under that illusion he is incapable of experiencing the suffering produced through that illusion. He may suffer tortures in the illusion of a dream, or when awake under some equally delusive belief; but when he wakes out of that dream, or learns the truth about the delusion under which he has been suffering, he gains the freedom which comes with the knowledge of the truth. "Repent," Jesus said, "for the kingdom of heaven is at hand." The word translated repent means actually a change of mind, a recognition of the opposite of what you have been believing; and as man wakes out of the dream that there is life, truth, substance, and intelligence in matter, and rises into the consciousness that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), he learns that "the kingdom of God cometh not with observation; neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you."

[Alfred Farlow in *Shreveport* (La.) *Journal*.]

Christian Science does not repudiate baptism, but accepts in its entirety what the Scriptures teach on this subject. It is said that Jesus was baptized by John, declaring, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness." John was very much astonished when the Lord came to him, as he knew that Jesus had come to establish an order of baptism differing entirely from that which he himself practised: for John had said of the Christ, "He shall indeed baptize you with the Holy Ghost, and with fire."

It is said that Jesus himself baptized no man, that is, with water. It was his mission to lift the world entirely above material ordinances and to teach a purely spiritual method of regenerating mankind, a method which was entirely devoid of symbols; and yet he did not condemn those methods which were in vogue, realizing that they were essential stepping-stones for those who were unprepared for the advanced spiritual method which he came to establish. Later, Paul said: "I thank God that I baptized none of you, but Crispus and Gaius; . . . and I baptized also the household of Stephanus: besides, I know not whether I baptized any other. For Christ sent me not to baptize, but to preach the gospel." Paul realized the spiritual essentials of Christianity, and he was thankful to have been lifted above material forms. He was one of the most noted masters of the gospel, and yet he did not recommend water baptism.

It is the teaching of Christian Science that John's baptism should give place to the spiritual baptism which Jesus himself practised. In the latter part of Mark's Gospel is found the statement: "He that believeth and is baptized shall be saved; . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This points to the fact that those who are baptized in a spiritual way are endowed with the spiritual understanding requisite to the destroying of sin and sickness. It is said: "And they went forth, and preached every where, the Lord working with them, and confirming the word with signs following."

The material ordinances are referred to in the Scriptures as "shadows" of things to come. It is the teaching of Christian Science that the spiritual Christ has come, that through Christian Science the world is enabled to understand God and His creation from a spiritual point of view, and thereby observe the ordinances in a spiritual sense and set aside the material form. Thus it may be observed that Christian Science does not do away with the ordinances. It simply does away with the material form, and observes them in a more spiritual way, and this too is in keeping with the Scriptural demands.

The gentleman declares that "to liken alleged cures by Christian Science to the miracles of Jesus and his apostles —as is done—is to compare the acts of man to the acts of God." This statement overlooks entirely the point at issue. We do not contend that Christian Scientists or any other class of Christians at this period can heal the sick as successfully as Jesus and his apostles did, and it should be noted that the apostles could not do as well as the Master did. They sometimes failed entirely, as in the case of the young man which is recorded in the Scriptures. It might be said concerning a pupil in mathematics that he cannot demonstrate mathematics as successfully as his teacher, and yet he uses the same rule, is in the right line, and will eventually, if he is faithful, attain to the proficiency of his master. I do not undertake to say to what extent Christian Scientists are following our Lord, nor in what degree they compare with him in results. I only contend that Christian Science has shown the way. Jesus proved what can be done by perfect reliance upon God, while Christian Science shows how the results can be obtained; and Christian Scientists are practising in this line with at least some measure of success.

He also declares: "The miracles of Jesus Christ and of his apostles were in the first place instantaneous, and in no instance was there a delay or a failure." The gentleman should read his Bible through once more. Evidently he has missed a few points. It is said that on one occasion the Master himself gave a man two treatments. After the first treatment the patient saw men as trees walking. After the second he saw clearly. We will admit that this is in the nature of an instantaneous cure, for the delay was not sufficient to be considered seriously; but in the case of the young man the apostles failed altogether, and they brought him to Jesus, inquiring as to why they had not been able to "cast him out," and the Master replied, "This kind goeth not out but by prayer and fasting." "Prayer and fasting" evidently means whatever is required

Digitized by Google

to demonstrate successfully the truth; namely, a perfectly consecrated life, high spiritual attainment. All who believe in God may be considered Christians to a certain extent, but we insist that no one of us is a believer according to the fulness of divine requirement until he has attained to such an exalted spirituality as will measure up to the demands of our Lord when he said: "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and when such a state shall be attained, then there will be no failures in healing the sick.

[M. S. Bruen in *Dublin* (Ireland) *Express.*]

The miracles recorded in the New Testament seem to have been as great a source of wonder to the Jews as the testimonies of Christian Science healing, cited by our critic, are to the observers of the present day. The word "miracle" means "wonder," something beyond ordinary experience. M. Bleriot's flight would seem miraculous to a South Sea Islander, but we do not discredit his performance, though it did not take place before our eyes. Thinking people see the true value of wonderful things, and thank God that "nothing is too good to be true," and that the richer and more practical meaning of Christianity is now known.

The enlightenment gained from the Christian Science text-book has, as the critic quotes, often changed a state of sickness into a state of health. It is well known that the study of the Bible and Christian literature has turned many a man and woman from wrong to right, from sin to holiness; so why should it be thought incredible that the knowledge of God and man, as revealed through Christ Jesus, should heal sickness, by change of thought, in the same way as it did in earlier times? This is not will-power, suggestion, or hypnotism, which certainly have never healed blindness or any disease permanently. This turning of the human to the Divine is what St. Paul calls putting off "the old man," or "carnal mind," and putting on "the new man," the Mind "that was also in Christ Jesus." Medical opinion traces many illnesses to fear, worry, anxiety, ill temper, and wrong desires, and the Science of the Bible traces all disease to "unrighteousness;" it says "the end of those things is death." In the light of scientific knowledge—the knowledge Jesus taught—sickness loses its reality, and disappears. He attributed sicknesses to the devil. He said the devil, or evil, was "a liar, and the father of it," showing plainly that the work of a liar could only be a lie also: that is, it could only have the feeling or appearance of reality to erring human sense. The "fundamental propositions of Christian Science," quoted in the critic's letter, bear out this conclusion, and are found to be in line with the Sermon on the Mount, and the scientific demonstrations—or, in less technical words, the visible proofs—of our Master.

There is no doubt that Jesus healed many sick people in the face of bitter enmity and opposition, but there is every reason to believe he would have healed more, had not his enemies "thrust him out of the city" on one occasion. He had just told them that "many lepers were in Israel in the time of Eliseus the prophet, and none of them was cleansed, saving Naaman the Syrian." Christian Science and its healing have always been in the world, but have only been "discovered" for practical use during the last half century. When more fully understood there is no doubt that healing will be possible, even when it is "bitterly criticized." The healing of sufferers who are not surrounded by opposition is going on continually. Honest searchers for truth will find it, but those who read only to look for flaws receive no benefit. Random "specimens" plucked from the Christian Science text-book, Science and Health, with mistaken assertions as to Mrs. Eddy's meaning, are an unworthy form of comment, even though accompanied by shadowy "offers." The fact still remains that Christian Science is healing sin and suffering all over the world.

AMONG THE CHURCHES.

SAN FRANCISCO, CAL.

At a meeting of the members of First Church of Christ, Scientist, in San Francisco, held last Friday night [Aug. 13], the action of the directors in securing a building site at the corner of California and Franklin streets was ratified. The board of directors is now empowered to complete the purchase of the lot and to proceed with the securing of plans and the erection of a suitable church edifice.

The lot, which is situated on the northeast corner, has a frontage of 135.3 on California street and of 137.6 on Franklin street and slopes in such a way as to be available for the requirements of the Christian Scientists with but little grading. Definite plans have not been chosen as yet, but it is generally understood that the building will be so designed as to have accommodations for the Sunday School on the ground floor, where a bright sunny assembly-room and class-rooms can be provided, and that the edifice will front on Franklin street, where entrance can be made without stairs to the main auditorium. The cost of the lot was $80,000 and the structure to be erected will probably cost in the neighborhood of $145,000. It is understood that, as is frequently the practice in cities where there are two or more churches of this denomination, all will unite in assisting toward the erection of this first church building, and after its completion they will again unite in the erection of edifices for the other congregations as they are needed.

Christian Science was introduced in San Francisco about 1887, when one of Mrs. Eddy's students located here and commenced the work of teaching and healing, and the first church in San Francisco was organized Oct. 15, 1895.

San Francisco Sunset Journal.

DENVER, COL.

The remarkable growth of the Cause of Christian Science in Denver is evidenced by the fact that a new church on the North side has been started by the followers of that faith. Up to January of this year all of the Christian Scientists in Denver had their church home in First Church of Christ, Scientist, located at Fourteenth and Logan. In January those living on the South side withdrew, starting Second Church. Not long after, Third Church was organized, and now the Northsiders have leased Woodman Hall, located at the corner of Clay street and Dunkeld place, for a meeting-place, where they have established a church and Sunday School.

This is in no sense a division of the Christian Scientists here, but is the outgrowth of the work of First Church. It was found necessary to organize this church in order to meet the needs of the field and to relieve the congestion in the church and Sunday School of First Church.—*Denver Republican.*

THE DALLES, ORE.

The Christian Science association of this city has begun the erection of a church edifice on the corner of Case and Seventh streets. It is a wooden structure with stone basement, which will cost in the neighborhood of two thousand dollars, not including furnishings. The main auditorium will be 24x30 feet, with a 10x16 class-room in front, besides an 8x10 hall. The general style of architecture is Doric. The seating capacity of the auditorium will be one hundred and seventy-five.—*Portland Journal.*

NOTICE.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"DECEIVE NOT WITH THY LIPS."

From time to time Christian Scientists have been charged by critics of this denomination with being double-minded; that is, it is claimed that in their statements concerning themselves and their affairs, they make certain mental reservations in order that these statements shall coincide with an individual concept of what they term "absolute" Christian Science, rather than with the phenomena of sense perception with which they are dealing. In other words, they are accused of attempting to cover their sins and shortcomings by palliating a direct denial with the mental reservation that, since the image and likeness of God never sinned—never knew and could not know of the matter under discussion—therefore they cannot have sinned, notwithstanding the obvious facts in the case would seem to justify the critic's belief that they are, in polite parlance, endeavoring to "explain away a lie."

It can be safely said, in refutation of this criticism, that no true Christian Scientist will knowingly lay himself open to such a charge, for he fully understands that to make the perfection of Christ, of man in the image and likeness of God, a cloak for deception of any kind, whether it be the blackest of sins or the "white lies" of conventionality, is to commit an enormity; it is what a poet of a century ago aptly termed stealing "the livery of the court of heaven to serve the devil in."

Even if individuals calling themselves Christian Scientists should be guilty of such an offense, it would be committed in the face of the teachings of their text-book, and in the face of the words and works of the great Master, who said, "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's." Here as elsewhere there is no mistaking the clear-cut dividing line between right and wrong.

There is no warrant in Christian Science for any juggling with words, and every true Christian Scientist will be careful that his words are not intended to deceive, but rather to elucidate the truth. Mortals in talking to mortals about mortal experiences must speak in terms which will be understood in the dictionary sense of the language used, otherwise they may create a wrong impression about the teachings of Christian Science and render themselves liable to be charged with having lied.

Two dictionary definitions of the word lie are as follows: "A statement made with intention to deceive; the uttering or acting of that which is false, for the purpose of misleading; intentional misstatement; falsehood." "That which is designed to deceive, or which creates a wrong impression." Nor is there any doubt as to the paternity of a lie, when we recall the Master's scathing rebuke: "Ye are of your father the devil, . . . When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

Christian Science is true, and Truth is its Principle; therefore it cannot be used to deceive or to mislead. Genuine Christian Scientists know this, and act accordingly. If there be any who act otherwise, they do so because of a lack of understanding of the teaching of Christian Science.

ARCHIBALD MCLELLAN.

"THERE IS NONE OTHER NAME."

The average Christian believer has no difficulty in recognizing that there can be no element of evil in that infinite good which men call God, though he often fails to perceive that the manifestation of Spirit with the asserted power of matter is equally incongruous and impossible under any divine order. It has thus come about that the belief of the copartnership of the spiritual and the material has desecrated human thought since the time when Adam and Eve were assured by the serpent that the knowledge of this admixture would make them godlike.

The habit of consenting to the asserted fellowship of concepts which are opposed or even antagonistic to each other, exhibits itself in many ways, and nowhere with greater significance to human happiness than when it insists upon bringing drugs to the aid of Truth in order that the healing work which Christ Jesus instituted and demonstrated may be accomplished in our day. Progressive and truly humanitarian physicians have always been on the *qui vive* for any new remedial agency, but even they are balking at the idea that infinite Spirit should be classified with arsenic, belladonna, etc., as one of many available remedies.

In a medical journal which lies before us, the editor calls attention to some phases of the incongruity of that clerical effort which essays to weld the spiritual and material into a homogeneous therapeutic system. Respecting the inevitable clash between the two, he says:—

> Even though there may be the wished for placidity of thought between patient and clergyman, the third factor, the doctor, cannot be overlooked, since his purely medical machinations may be diametrically opposed to mental states which make much of the supernal. . . . We cannot suppress a smile as to what would happen in the presence of a patient, if some of the doctors who have crossed our path should be requested to hold consultations with clergymen. In truth, it would be no consultation at all; for, if the medical man were the sort we have in mind, the spirituality of the clergyman's talk would be as a faint whisper against his mighty words, armed to the teeth, as he is, with all the teachings the latest evolution of medical science has granted him. And the only result achieved would be the complete discomfiture of the gentleman of the cloth, the towering rage of the Æsculapian, and the hysterical seizure of the patient!

The undisguised ridicule and contempt of this sketch of a prospective situation has its root in the recognition of a truth that is becoming more and more clear to the great body of the people, viz., the impossibility of coordinating Spirit with its opposite in the work of the world's redemption. The appearance of Christ Jesus was for the removal of all that brings disharmony and death. He said of himself, "I am come that they might have life, and that they might have it more abundantly;" and he defined his meaning by healing every type of disease, and by bringing freedom from every kind of enslavement. In all these doings he declared that the means employed was spiritual understanding, God with him to will and to do.

As we think of the compass and splendor of his enterprise, and of the transcendant because wholly spiritual means which he instituted both by word and example for its accomplishment, we can but be impressed with the pitiful unworthiness of the fact that today those who stand before men as the exponents of Christ Jesus have so far forgotten the Master's teaching that they regard matter rather than Mind, the lowest rather than the highest object of human sense, as the divinely appointed remedy for the relief of a suffering world. It is a significant sign of the times, however, that this attitude which so dishonors the fundamental Christian teaching of Truth's present and eternal sovereignty, is rebuked not only by Christian Science, but by the many physicians who are ready to concede that, when so understood as to be available, the power which Christ Jesus utilized must be no less adequate for the relief of humanity today than it was when he called the multitudes of the maimed and suffering about him, and "healed them all."

JOHN B. WILLIS.

THE FOURTH COMMANDMENT.

IN studying the commandments it is always well to remember the introductory statement, "I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage." We are then prepared to see that all the commandments have a distinct relation to our moral and spiritual freedom; or, to be more exact, to the process of acquiring and retaining it. We may not at once see that all are of vital importance, that we cannot obey in one particular and offend in another, but the great Teacher has said, "Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled." It is true that his sense of moral obligation was different from that of his contemporaries and coreligionists, so different that the scribes and Pharisees failed utterly to understand him and thought him a lawbreaker; but he verified the proverb, "Wisdom is justified of all her children." On more than one occasion they thought to convict him of Sabbath-breaking because he healed the sick on the Sabbath day, and also when his disciples plucked some ears of corn. It was on this latter occasion that he made the memorable and oft-quoted reply, "The sabbath was made for man, and not man for the sabbath."

The statement that the Sabbath was made for man may be said to explain the whole problem. Man's real needs are spiritual, and the institution of the Sabbath was a wise and merciful provision for this need. Mortals seek to satisfy their restless longings in the pursuit of material pleasures, and then they are driven by the scourge of an incessant demand for material sustenance: "What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed?" and it is at this point that we are bidden, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." The "first day of the week" should thus mark for each one a resurrection out of the beliefs of materiality, and it will bring blessings to every other day of the week, if we carry the spiritual sense then gained into all the days and all the problems.

We can never think that Jesus desecrated any day by mere indolence or the pursuit of pleasure. The "Father's business"—the establishment of the kingdom—was too vital a consideration to be forgotten for a moment. It was always "first" with him, and it should be so with us. Our revered Leader says of Christ Jesus, "He knew that men can . . . observe the Sabbath, make long prayers, and yet be sensual and sinful" (Science and Health, p. 20). We have all seen instances where a strict observance of the Sabbath was unaccompanied by consistent Christian conduct, but this is no argument against its true observance. It only shows the necessity for greater spirituality, for without this we cannot keep any of the commandments in the spirit as well as in the letter. Paul says, "That the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit." The Sabbath should ever be characterized by joy and gladness, for these are fruits of the Spirit; and we should "remember" the joy as inseparable from the holiness.

Long ago Isaiah said concerning the Sabbath that it should be "a delight," and that it should be observed "not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words." This may seem merely negative, but when we cease the doing of our own ways we find that God's ways are all ways of "pleasantness" and "paths of peace." The Sabbath should bring to us the rest of renewed strength, with new joys, holier hopes, and loftier aspirations. Did not the poet catch something of its truer meaning who said,—

> This is the first of days:
> Send forth Thy quickening breath,
> And wake dead souls to love and praise,
> O vanquisher of death.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Waukegan, Ill., Sept. 6, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—We hasten to express gratitude for your forceful and helpful lines,—"There is no Death,"—published in this issue of the *Sentinel*. We who are Mr. Kimball's students appreciate the "clear, correct teaching" we received; and also his precept and example of unfaltering and unwavering loyalty and obedience to you. In loving and grateful appreciation for these lines we will continue to follow implicitly your every request, as he taught us to; and in humility consecrate our lives anew, that we may become better demonstrators of the truth and more worthy of the blessings we have received through him from you.

Ever yours in love,
CHAUNCEY J. GUTHRIE,
ALICE E. GUTHRIE.

MRS. EDDY'S COMMENT.

The above tribute to our beloved brother is *just*, and my soul sends forth its echo.

MARY BAKER EDDY.

Chicago, Ill., Sept. 6, 1909.

Beloved Teacher:—Yesterday morning, when error presented itself in an almost overwhelming wave of sorrow and desolation, the *Sentinel* containing your latest word to us, your students, and to the world, was placed in my hands. Almost instantly the peace "which passeth all understanding," performed its loving office, and I was comforted.

Your tender tribute to my dear one and his faithful work is very precious to me and mine, and more now than ever shall we strive to "awaken" to the recognition that Life is eternal and ever present, and that there is no separation and no death. The Science that you taught us preserved my husband for twenty-two years after mortal mind said he must die, and that same truth is now smoothing for me the pathway which mortal thought would claim is very rough.

May our dear Father-Mother God bless and sustain you in all your ways, is the prayer of

Your faithful and loving student,
KATE DAVIDSON KIMBALL.

Chelsea, S. W., England, Sept. 1, 1909.

Beloved Leader:—Your letter has been to me a joy which I do not know how to express. That you should think that my work has been of service to the Cause, is not merely the greatest encouragement I could have, but the greatest happiness to me. Whatever I have learned of Truth, I have learned from you, sometimes by following a road which seemed to lead into the night, but always proved to lead into the day.

The first real perception which came to me that evil was unreal and powerless gave me, I think, the first true glimpse I ever had of heaven; it meant the first moment when I could say that I even dimly saw what Christ Jesus meant in saying, "The kingdom of God is within you." I am very, very grateful, and I am trying, however poorly, to prove my love and my gratitude by my faithfulness to your teaching.

Your loving follower,
FREDERICK DIXON.

Digitized by Google

Manchester-by-the-Sea, Aug. 6, 1909.

Beloved Leader:—An angel voice uttered a clear call as through a trumpet when you aroused dull, stupid mortal mind by your ringing words of truth in regard to Mr. Kimball's presence with us in the environment of Mind. The great hosts of Israel must follow on to make this final demonstration at your bidding, for they know that divine wisdom speaks through the Discoverer of Christian Science. In my dreams you often seem to come to me and urge me to more earnest efforts in striving to find "me, and mine, and all" (Miscellaneous Writings, p. 389) in Mind only. I love the truth, and you its exponent, more each day.

With unbounded faith in your revelation and realization of heaven, I am

Lovingly yours to command,
MARY BEECHER LONGYEAR.

Denver, Col., Sept. 3, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Christian Scientists, formerly members of First Church of Christ, Scientist, in Denver, living on the North Side, feeling the need of a church in their midst, have organized Fourth Church of Christ, Scientist, and send you their love and gratitude, and pledge of loyalty as defined by you in "Retrospection and Introspection," page 50: "Allegiance to God, subordination of the human to the divine, steadfast justice, and strict adherence to divine Truth and Love."

Yours in the bond of Christ,
Board of Directors.
MRS. ANNIE E. CARDWELL, *Clerk.*

London, England, Sept. 1, 1909.

Dear Leader:—For the last eight years, ever since the light of Christian Science first shone in upon my life and healed me, I have longed to avail myself of the privilege you allow your followers of writing to you. A knowledge of the inadequacy of my feeble words alone kept me silent, but divine Love has led me out of much tribulation and long years of waiting into the joy of active service this year as Second Reader for Second Church of Christ, Scientist, London, England. The deep wave of gratitude which has been swelling and growing ever since, must break and fall at your feet. I echo continually your own beautifully expressed thought, and thank you for giving me words in which to express my thanks.

Oh, Thou hast heard my prayer;
And I am blest!
This is Thy high behest:
Thou, here and *everywhere.*
"Miscellaneous Writings," page 385.

The joy and peace of our Science service is inexpressible, and reflects the "peace of God, which passeth all understanding." My one desire and prayer is that the Word may go forth with power, the healing power of Truth and Love which you have taught and demonstrated for us.

With reverent love,
DIANA JACKSON.

Cleveland, O., Sept. 6, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It is now almost nine years since I first saw the light of the healing truth which you through your great wisdom and understanding have unfolded to this age. My healing of a serious complaint of many years' standing was perfect and complete in a few treatments, and aroused in me a great desire to know more of this life-giving and demonstrable truth for the understanding of which the world today is your debtor. Through a careful study of your inspired text-book, Science and Health, and through the application of the Principle and rule as revealed to you in this book, I have been able to meet every need which has arisen, and indeed I have had daily proofs that this demonstrable truth not only heals, but is the source of all good and in unlimited abundance. I am grateful to you not alone for the example of your beautiful life, which has been full to overflowing of love and blessing for all mankind, but for the splendid literature which you have given us. The *Journal* is an apostle of Truth, preaching as St. Paul did, to all nations, the *Sentinel* stands guard over the truth-seekers and points out the right pathway, while the splendid *Monitor* is today the peer of all the dailies for clean and authentic news; but best of all is your text-book, which is indeed a "Key to the Scriptures," unlocking and making clear to this age the hidden truths which do heal and uplift us spiritually and teach us to know God, good, and man made in His image and likeness. Truly mankind will forever call you blessed. "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!" Lovingly your student's student,

BURTON B. TURNER.

Lake Charles, La., Aug. 31, 1909.

Dear Mrs. Eddy:—I want to thank you for the new by-laws. The first, in regard to "Class Teaching," came to me when I was passing through deep waters. I had received much benefit from class instruction, and for many years I have tried as best I could to help the struggling hearts, so far as I have known the way of Truth and Love. The last two years I have been very anxious to see other students have the great privilege of class help, and not long since I rather insisted upon this, and encouraged several students to take class instruction. Since that time I have had much to meet. When this by-law came out I rejoiced, for it opened to me the error of influencing others, and I at once saw the wisdom and the great need of this by-law. I am sure that it will save many from this one form of error.

When the next by-law came out (Art. 23, Sect. 2), my gratitude to the great and good Father was unbounded, and I exclaimed aloud, "I thank Thee for this channel of Love and Truth that has shown us the way to heaven (harmony) and that has told us in Science and Health (p. 13) that 'Love is impartial and universal in its adaptations and bestowals.'" I called the board of directors, resigned my position as librarian, and moved my office from the church the same day that I read the by-law. The board of directors employed a librarian in my place. The reading-room was in the rear of the church, and my office adjoined the church. The quick response was met by Love, and I was relieved that very day.

I do not know how to express my gratitude and love for this leading, that one has been raised up to call us back to our Father-Mother God, where the protecting arms of Love can shield its child. Lovingly yours,

MRS. MARY E. CHEATHAM.

Boston, Mass., Aug. 1, 1909.

Dear Mrs. Eddy:—Before leaving this beautiful city I want to express to you my love and gratitude for a clearer apprehension of the immanence of divine Love, which has come to me through your admonition that we are to see you only in your writings and in your love for mankind. It is my earnest desire so to lift up the Christ-idea "from the earth" as to eliminate self, and thus aid in the fulfilment of the Master's promise, "I . . . will draw all men unto me."

With loyal love.
CHARLES F. KRAFT.

ESTHERVILLE, IA.

Miss Mary Brookins delivered a very interesting lecture on Christian Science in the Free Baptist church Sunday afternoon [Aug. 8]. Attorney C. W. Crim, who introduced her, spoke in part as follows:—

I am an optimist by nature and believe that good only will eventually survive, whether in religious teachings or secular matters. If you have troubles, get rid of them: if you desire to lead a better life, "ask, and ye shall receive." We stand in the narrow valley of life with an indefinite, misty past at our back, and before us an infinite future holding the just rewards for our earthly conduct and endeavors. The past has fled, the present admonishes us that to the future our minds should be directed. Christian Science embodies moral fundamentals coeval with the beginning and enunciated by Jesus of Nazareth. The application of these fundamentals to the every-day affairs of life, it enjoins upon all. It asks you to enjoy the blessings of life in their fullest measure, because it is the will of our Father in heaven, and to avoid sin and error as the source of unhappiness.—*Estherville-Democrat.*

SEA CLIFF, N. Y.

Frank H. Leonard lectured on Christian Science in Central Hall, Sunday, Aug. 8. He was introduced by Dr. Orison Swett Marden, editor of *Success Magazine,* who said in part,—

Your presence here is a tribute to your respect for the Scientists who have come into your midst. It was Christian Scientists who first attracted me to Christian Science. I hated (because I knew nothing about it) the Science doctrine, but I had a great admiration for many of the Scientists whom I knew, because I saw they had a secret which brought out in them character qualities which I did not find in others, to the same degree.

There was a light in their eyes which was never on sea or land. I found a fairness in their dealings which came nearer illustrating the golden rule than I had found in any other class of people as a whole. I have never been cheated by a real Scientist. I found these people wonderfully cheerful and optimistic under most trying circumstances, and I wanted to know the secret of the leaven which had transformed them.

These lectures are given from time to time, largely to correct misapprehensions and false impressions regarding Christian Science and Scientists. No person in modern times has been so misunderstood and so abused by the press and by individuals as has Mrs. Eddy. The abuse of this sweet, beautiful woman, whose whole life has been spent in doing good to others, is one of the cruelest things in history. No one has ever yet, to my knowledge, been able to show that she has ever injured a single human being.

I was born in New Hampshire and lived within twelve miles of Mrs. Eddy, and I know that thousands of the best citizens there are, as I am, proud that Mrs. Eddy was born and lived the better part of a century in the old "granite state." If greatness is measured by notable service to humanity, Mrs. Eddy will go down in history as the greatest of her generation—not excepting Daniel Webster, who was born near her. Webster may be forgotten, but Mrs. Eddy, never. Mrs. Eddy made the greatest discovery of the last century, embodied in this sentence: "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).—*Sea Cliff News.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 5, 1909. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 20, 1909.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

That the truth revealed to this age by Mrs. Eddy is being felt in all religious work, was proven to me by my healing in Christian Science of the liquor and tobacco habits, also of profanity and all that goes with a life lived for the supposed pleasure in vice. I attended a religious service one night, as I had no other place to go, and the subject of the discourse was the peace of God's love. We were told in such a simple way how this peace is man's right, and that we did not need to go anywhere to get it. The minister held up the Christ-ideal in such a way that after the service I stopped and spoke with him, and told him that if it was true it was man's right to have that peace, I wanted it, for I then had anything but peace. He gave me the Bible which he had used for years, and told me to study the New Testament. I left him that night with the intention, God helping me, to live a different life; and from that day I did not use liquor or profanity, but I still kept the tobacco habit.

I was a railroad trainman and had lots of time to read, and I did study the New Testament. I then knew nothing of Christian Science by that name, nevertheless it was a glimpse of light from Christian Science that had helped me, though I knew it not. I went back to the church of which I had been a member years before, and was received with love; but the more I read the Bible, the less I understood how God could condemn one man and save another. I was troubled, too, because, although I had been helped, I still had all my old desires, and sometimes it seemed as if they would get the better of me.

About this time I went to see the minister I had heard preach that night. I told him my doubts, and we had a long talk. He told me that for the past few years Science and Health by Mrs. Eddy had been his help,—or "Key to the Scriptures," as it is. When I left him I had a copy of Science and Health, and after I began to read it I found that I was leaving everything else for it. I kept it with me, and all the spare time I had I read it. I did not seem to understand it very much, but it held my attention, and the first thing I knew my desire for liquor was gone, and I no longer wanted the old company, I had something better. The tobacco habit held on longest, but that also disappeared. One morning before going to work I made up my mind that Christian Science could heal me of the tobacco habit just as well as of the other habits, so I left my pipe and tobacco at home. At first it seemed as if I must have them, but I found time, after I had been at work a short while, to get my copy of Science and Health, and I read a little from it. When I went to work again I had forgotten about my tobacco, and I have never wanted it since, although I have had to be in a smoking-car sometimes four and five hours at a time.

I then began to attend Christian Science services and to study the Lesson-Sermon, and it is now clear to me where that minister got his sermon. I had been brought up by Christian parents, and Sunday afternoons and evenings our mother used to read the Bible to us and it was always a pleasure to listen. Now the reading of that same Bible has become not only a pleasure, but by the aid of Science and Health it is a guide for every-day life. I have joined The Mother Church and am trying daily to reflect that peace which comes from realizing God's love. I will say that the minister above mentioned has since resigned from his pulpit, and is now working in Christian Science, —healing both the sick and the sinful. For the blessing of Christian Science, which has been my only physician for the past two and a half years, I am thankful to God, and to Mrs. Eddy. I can but hope that my testimony may help some one who is looking for the truth.

GEO. M. SWAN, New Haven, Conn.

The testimonies in the *Sentinel* and *Journal* have helped me very much, and I feel that if I can aid some one who is suffering, I will gladly add my mite. For seventeen years I was a sufferer from an eruption on my hands. I tried different remedies advised by friends, also sought relief from many physicians, but received no help; instead, the disease spread and became more painful, especially in the summer, and I could not put my hands in water without great suffering. I have many friends who are Christian Scientists, and they advised me to try this new-old remedy for my trouble. I felt that if I could be relieved even a little I would be grateful, as the physicians had assured me I would never be free.

In June, 1905, I went to see an old friend who is a practitioner, and asked her if she thought I could get relief through Christian Science. My friend assured me that all things are possible with God, and that this disease could be as readily destroyed as any other. I asked for treatments for myself and for a daughter who was afflicted with the same trouble, though of shorter duration—only three years. I am indeed happy to state that in a short time we knew that we were using the right remedy this time, and after a few weeks' treatment we realized that we were both entirely free.

Since then we have had no return of the disease, and to say that we are very grateful for this healing is to express our thanks but feebly, as in many ways we have experienced the workings of truth in our family. For all of this we thank God, also our dear Leader for showing us the way.—MRS. T. B. GILBERT, Kansas City, Kan.

In the hope that this expression of my heartfelt gratitude for what Christian Science has done for me may benefit others, I will say that for more than forty years I had been troubled with heart disease, so that I never went away from home without carrying a bottle of medicine along, and many times I thought that my last moment had come. Early in 1907 I had such a severe attack that my children telephoned immediately for a doctor, and my condition became so alarming that a second doctor was sent for. They held a consultation, and medicines were given to me. After four months' treatment they thought it better that I should change my home from San Jose to Carmel, but first it had to be found out if I could stand the trip. The change was made, but I needed at once the help of a doctor, who came twice a day.

At this time a neighbor inquired after me, and asked my daughter if I would not like to try Christian Science. I gave my consent willingly, so a practitioner was sent for, and I never shall forget the healing words she spoke to me. I had always thought that I knew the Bible pretty well, and had great trust in the power of God, but I found that I did not understand it rightly. My eyes were opened, thanks to our heavenly Father, also to Mrs. Eddy. I felt a great change in a few days, and my healing was accomplished inside of two months. I remember with much joy one day, when I wanted to go to the beach, where my children and friends were to have a breakfast, but they thought that I was not able yet to walk four blocks. I, however, knew that God was my strength, and that He would make my way perfect. I went alone to where they were, had breakfast with them, and walked home also. From that time my healing went on very fast, and since then I have had no trouble with my heart. I have also been healed through Christian Science of a terrible pain in my shoulder and arm, pain so severe that I could not use my arm; also from other ailments. Thanks to God these have all disappeared into the nothingness which was their origin. I hope I may progress in the knowledge of God as the only power.

MRS. H. VAN LEEUWEN, San Francisco, Cal.

I wish to give thanks for the wonderful blessings that have come to me through Christian Science. After having been given up to die by five physicians, one of them a specialist in tubercular disease, I was healed completely of a tubercular affection of the head, lungs, and stomach. For about two years I had been ill, but the last stages were very rapid, and I had been in bed but two months when the end seemed to be near. So terrible was the pain that an opiate in large doses was administered frequently. I had taken no solid food for two and a half months, and every function had practically ceased action. The doctor told my parents that he could do no more; that possibly I had three hours to live; but if there was anything else that could be tried, he would be glad to have it.

A Christian Science practitioner was finally called, and from the first treatment I ceased to take the opiate. This was on Wednesday, and a week from the following Friday a clear sense of God as my strength enabled me to rise and walk down stairs absolutely unaided. I was healed, and from that time on I gained in weight and strength. At the time I commenced the treatment, a little over six months ago, I weighed eighty-five pounds, while today I weigh one hundred and forty. About a month after I was healed, the physician who had given me so short a time to live, examined my lungs and found them perfectly sound, though while treating my case he had pronounced them practically gone. This physician is willing to verify the statement of my healing.

Aside from the physical healing, which relieved me of such untold suffering, I am indeed grateful for the wonderful spiritual uplifting. I have been healed of a great sorrow, one that seemed unendurable, and I feel that I can absolutely trust God to aid me in every problem of life.

AIMEE E. TITUS, Portland, Ore.

Some fourteen years ago, in removing a small piece of steel which had lodged in one of my eyes, the physician discovered that my eyelids were affected with a disease which required attention. After treating me for this trouble for six months or more, the physician noticed a condition of the eyes for which he gave me further treatment. He then informed me that I would need to wear glasses, and from that time until I was healed in Christian Science I used glasses continually.

Some two and a half years ago I heard a great deal about Christian Science, and being an active member in an orthodox church, I felt that I wanted to know something about this Science for myself. On consulting with my wife, it was decided that we would send for a copy of Science and Health and read it as a piece of literature. It was our custom on Sunday afternoons to read aloud to each other, and when this book came we started to read it aloud the same as we would any other. One Sunday, while I was thus reading Science and Health, I realized that I did not need my glasses, and I so stated to my wife. Taking them off, I put them aside and continued to read for an hour or more. From that time to this I have never felt the need of glasses nor experienced any sense of pain or inconvenience, although my work has been as close and continuous as before.

Peculiar as it may seem, neither my wife nor I said anything about this experience to others, and very seldom mentioned it ourselves. My friends did not seem to notice that I had taken off my glasses, and only two or three asked about it. I was grateful for this, in a way, but strangely enough I did not seem to realize just what had taken place or my own responsibility in the case. Several months later I was rudely awakened from this apathy by the dark shadow of the belief in disease and death, which fell upon one who was very dear to me. Suffice it to say that during this experience I saw as it were the "burning bush," and realized that a change had been wrought in my whole understanding of life, and that I had a work to do. As truth after truth has been revealed to me through my study of Science and Health, my cup is full. I realize as never before what true joy and happiness mean, and I know that our foundation is laid upon the rock, Christ, Truth.

To say that I am grateful expresses it mildly; it is difficult to tell in words the tender love that manifests itself toward our dear Leader, who has made it possible for me to know the truth. I can only show my gratitude to God, and to her, by my fruits and by loyalty to the First Commandment, "Thou shalt have no other gods before me."

N. L. GODFREY, Davenport, Ia.

From childhood I suffered from stomach trouble, and tried every material remedy of which I could hear. I first heard of Christian Science in 1890, and in two treatments I was healed, though I did not then become interested in the Science. In the winter of 1900 I had a paralytic attack, which caused me to be blind at times. I had medical treatment, the doctor cauterizing the spine, but I was not able to walk. I turned to Christian Science again, and was helped so much that I was soon able to walk. I then began to read the literature, and to study Science and Health with the Bible. I have also been healed of severe headaches, and of more serious disorders. Through the study of the Lesson-Sermons many other blessings have come to me, and I am now a well and happy woman. I have also been able to help others, and I owe all to Christian Science,—life, health, and sight. I am able to read any kind of print. I am a member of The Mother Church and have had class instruction. I am thankful to God, and I have great reverence for our Leader, Mrs. Eddy, for her life of love to humanity.

LUDEEMA B. TENNENT, Dayton, O.

My gratitude to God for Christian Science can never be fully expressed by either tongue or pen. If Mary Magdalene had seven devils, I had even more, but Christian Science has freed me. I was a victim of severe headaches, extreme nervous conditions, serious throat trouble, and a bowel disorder of twenty years' standing. I was healed of all these ills and also laid aside glasses. In August, 1908, I met with a severe accident, fracturing a rib and sustaining internal injuries. I was not sufficiently advanced spiritually to overcome these, and the pain seemed very real,—in fact, almost unendurable. A Christian Science practitioner was sent for, and while I was receiving the first treatment the awful pain in my side and back disappeared. The fourth day I took up my duties as usual. My highest aim and wish is that I may live Christian Science in deeds, meekly and obediently.

MRS. DENVER L. RICHARDSON, Coeur D'Alene, Idaho.

I have had convincing proof that Christian Science heals the sick. My baby, about two years old, had bowel trouble in a very severe form. I had heard enough of Christian Science from my sister, who lives in a distant city, to know that I should rely upon Truth alone. I used all the understanding I had of Christian Science, but failed to meet the case, so decided to have a practitioner who lived here help me, as the symptoms seemed too alarming to wait for a letter to reach my sister. The practitioner came to our home as soon as she was called, and worked faithfully, and in a week the child was healed. I gladly acknowledge this healing, and my desire is to be a real Christian Scientist.

MRS. MAGGIE BLACKLEY, Durham, N. C.

Digitized by Google

It is now nearly fourteen years since I became interested in Christian Science, and I wish to add my testimony to help swell the praises of the healing religion practised by Christ Jesus, and brought to this age by our beloved Leader, Mrs. Eddy. I was convinced of the wonderful healing power of Christian Science by seeing my wife healed from terrible injuries received from a runaway team. None who saw her at that time believed she would live till morning. A few hours after the accident she was removed a distance of about five miles to her home,—a Christian Science practitioner going with her and remaining through the night. The next morning my wife was up and dressed, and in a very short time she was entirely healed.

A few months after the above occurrence I had an attack of acute lung trouble, and felt that I was very near the end. At my wife's earnest request the same practitioner was sent for, and I was relieved almost instantly and soon had fully recovered. In 1900 I was helping a man unload some large logs, when one of them rolled from the wagon and started down the skidway, gaining velocity at every revolution. Before I could get out of the way, it struck me violently in the chest and crushed me against a solid background of logs, where I was held almost senseless and in great agony until help could be called and the log removed. Again Christian Science was my only remedy, and I did not trust in vain, for health was restored after a short interval.

I wish to record one more out of the many demonstrations which I could cite. About four years ago I awoke one night in great distress, and grew steadily worse till it seemed that I could not endure my suffering much longer. My wife immediately communicated with the Scientist who had always helped us so quickly in the past, and in about an hour I was resting quietly, though very weak; and after a few days I was fully restored. Christian Science has been our only physician for the last fourteen years, and it has never failed us in our time of need.

J. F. WALLACE, Jefferson, Col.

Trusting this brief testimony may help some poor sufferer to turn to the "great Physician" and learn to live aright, I cheerfully and gratefully acknowledge the all-power of God. It is now nearly two years since I first learned of the healing truth revealed in Christian Science. My baby was not well and the doctor was a frequent visitor at our house. Throat trouble was a frequent source of worry, and after one of these attacks there was an enlargement of the glands. After a long time this enlargement disappeared, but it was only for a time. Soon there was another attack and the conditions seemed worse than before; all the medicine that was used had no effect.

One day I visited friends who were Christian Scientists, and during the conversation the lady advised me to try Christian Science, and said that God would make the baby well. I thought upon her words for some time, and at last decided to try Christian Science. I took my baby to a practitioner, told her of the trouble, and asked if anything could be done. She assured me that God would make her well. After a week's treatment the swelling had nearly disappeared, and in less than two weeks it was entirely gone, and it has not recurred. Here was a permanent cure in two weeks, a cure that *materia medica* had not been able to effect at all!

My baby is now four years old and a wide-awake little Christian Scientist. She repeats our Leader's prayer for the little ones (Miscellaneous Writings, p. 400), and in all her little trials she turns to God as her protector and comforter. After seeing the help that my baby received, it did not take me long to turn to God for my own relief, and many and varied have been the blessings which I have experienced. I wish to express my gratitude to God, and to Mrs. Eddy for showing us how to know God,—how to find Him an ever present help in trouble.

MRS. L. MCGREGOR, Butte, Mont.

Although it is now almost nine years since I began the study of Christian Science, I have never before given a written testimony to the power of Truth. This is the more inexcusable in that for the most of this time I have been isolated from other Christian Scientists and from church privileges, and the Science literature has meant very much to me.

My healing was slow, because I was so wedded to my idols,—heredity, *materia medica*, and the reasoning power of mortal mind, which I thought capable of solving all mental problems. When I began to appreciate how beautifully simple and logical Christian Science is, I began to gain in understanding and also in physical health. To me the logic of Christian Science is now seen to be so clear, convincing, and satisfying, that, though all who read it may not be willing to accept it, none can refute it; and when once the Principle of Christian Science is understood, its truth can no more be questioned than can the truth of mathematics.

Through this understanding of divine Principle I have been able to overcome much of self-love, self-pity, impatience, and irritability, besides various physical disorders. The more I ponder the allness of God, good, the happier I am and the more I realize that nothing can separate us from this God who is Love. My appreciation of Mrs. Eddy, and gratitude to her, are hard to express, but I do try to show them in my life.

MRS. EMMA W. HOLYOKE, Fairmont, Neb.

I did not take up the study of Christian Science for the physical healing—it attracted me as a religion, because of its radical difference from the belief in which I had been reared; although I had been a church-member for nearly twenty years. One day, without any warning, intense pain in my back and lower limbs manifested itself. I tried to overcome the pain through the slight understanding I had gained from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but I did not make much progress. I then called upon a Christian Science practitioner for treatment, and while to one who was suffering the healing might seem slow, yet in about a week I was well. The sickness was diagnosed as an acute form of rheumatism. The understanding and spiritual uplifting which I received during the treatment was indeed a glimpse of Life, Truth, and Love.

Again, when a great grief came to us through the accidental death of our only child, the loving encouragement given in Christian Science helped me to overcome this great sorrow. It seemed that I should have died, had it not been for Christian Science. I am indeed grateful to Mrs. Eddy for having given us Science and Health, for it has taught me to know God aright.

EMILY R. SMITH, Mankato, Minn.

[Translated from the German.]

Before I became acquainted with Christian Science I had suffered for several years from severe headaches, distress in the stomach, etc. Besides this the pain in my hands and feet caused me difficulty in working and walking. All the material means I had tried brought only temporary relief.

I then heard of Christian Science, through a lady who

Digitized by Google

told me about it and also lent me several copies of the *Herold,* which I read; but I did not understand the articles, neither did I believe the healing testimonies. I thought that a religion which accomplishes so much good would be better known. I, however, attended a Wednesday evening meeting, but was not satisfied,—I doubted. I was like Thomas,—first I must see, then I would believe. If only I knew somebody who really had been ill and was healed through Christian Science! I again attended a meeting, and God sent me a witness. I met there a lady whom I knew to have always been sick, and lame in one arm. I talked with her and asked her if she was now well. She answered that she had been healed only through Christian Science. She was happy, healthy, and able to carry on her work. Then I knew that I, too, would find help, and I firmly and confidently believed that God alone was my physician and that He would help me. Within a short time I was made whole. I did not have regular treatment, but was freed from all my ills in the measure in which I discerned the truth.

Three years have gone by since, and I am entirely well and can attend to all my work. Many blessings have also come to my family, spiritually and physically, for which I am sincerely grateful. I thank God, also our beloved Leader and all those here who help us to grow in the understanding of the truth.

FRAU HELENE REMPT, Dresden, Germany.

Having received so much benefit and encouragement from the testimonies published in the *Sentinel,* this is sent in the hope that it may serve the same purpose. Previous to coming into touch with Christian Science, while reading the parable of the prodigal son, I received an understanding of the character and nature of God which was certainly new to me. After this I read the record of healing work in the New Testament with an interest which I had never before experienced. My interest was centered upon the healing of the palsied man and the answer given by Jesus to the scribes. The inference which I drew from this account was that forgiveness of sin and physical healing were included in the gospel and are therefore inseparable. At this time the wonderful promise of the Master was too plain to be misunderstood: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." So I determined to know how it could be fulfilled. At this point in my experience I was brought into touch with Christian Science literature. I also attended the services, and felt assured that my need would be supplied in Christian Science.

Strange to relate, at this juncture I was deceived by a suggestion that I could accomplish the most good by continuing to work along the old lines, in connection with a mission in this town. I failed also to interpret the message given to me, and the consequence was that I attended no place of worship for many months. After this my wife's health broke down, and at the same time I was thrown out of employment. Being out of work, I could not employ any one to nurse the wife and care for the children, so I had to face the situation alone, and while laboring under adverse circumstances the opportunity was given me to retrace my steps and regain my position. The Bible says, "As many as I love, I rebuke and chasten."

My wife was in a low way and very weak; the medicine prescribed by the doctor (who had been called in at my wife's request) failed and was set aside; eventually the doctor ceased to call. To my wife there seemed to be no hope left; but "man's extremity is God's opportunity." All that I had read in Christian Science seemed to have left me; but one thought remained, which was that God is not the author of sickness or suffering. I reasoned from this that it was not God's will to take a mother from her children. It took time to turn my wife's thoughts from what she seemed to think was inevitable, yet the scale was slowly balanced to the side of Truth. At times it seemed as if error would swamp me, but my stronghold at such times was in the realization that the struggle was not without a purpose, and that I had to be turned away from the worshiping of idols (material means); also that God had not called me out of Egypt (material sense) to die in the wilderness. My confidence would thus be restored, and then I would encourage the faltering steps of my wife. After the little that I knew had been put into operation, Christian Science treatment was given her by a lady and afterward by a gentleman, which help was very much appreciated.

My wife's recovery seemed slow at times, yet her restoration was effected; and with it came an abiding sense of gratitude and also a strong proof of the efficacy of Christian Science. The prophet Jonah said, "I will pay that that I have vowed. Salvation is of the Lord." I take this opportunity to express my gratitude for that monument of labor and love, "Science and Health with Key to the Scriptures;" also for the noble and inspiring example found in the Discoverer, Founder, and Leader of the Christian Science movement.

WILLIAM LAZENBY, Darlington, Durham, England.

[Mrs. Lazenby's corroborative statement of her healing follows.—EDITOR.]

My husband's statement respecting my condition is quite correct. The doctor said he could do no more for me, and it seemed as though there was nothing but death before me. I used to lie in my bed day and night, and my constant thought was as to how I would be buried, as we had no provision for this; but I am thankful to say that after the doctor ceased to call, and when I saw that medicine was doing me no good, I began to listen to my husband as he talked about Christian Science. (He had spoken of it before, but I would not listen.) It was only when there seemed to be no hope elsewhere that I was ready to listen, and although I gave Christian Science credit for putting me on my feet, I would not go to the meeting, as I did not like the idea of changing my form of worship. The first thought that helped me was that there is no life in matter, and that in God "we live, and move, and have our being."

I am thankful to God for inspiring Mrs. Eddy with such a grand message, one which heals the sick as well as reclaims the sinner. My healing was slow, but with it has come to me a better understanding of what God really is. In the old thought we were taught to believe that God sent sickness for our good; yet if this is so, why should we take medicine to destroy it. It was like throwing kindness back into God's face. Since coming into Christian Science, however, I have begun to learn that God is the only power; that He is all good, and that evil has no power; and also that sickness is a false belief. I am very thankful for the little understanding I have gained, and hope as I live from day to day to gain more, so as to be able to help others as I would myself.

ELLEN LAZENBY, Darlington, Durham, England.

What though the day has proved
A sad Gethsemane,
And at its end a grim
And torturing Calvary,
If when the stillness comes
To lonely, dark-filled tomb,
Outside an angel waits,
Bearing a lily-bloom!

STELLA E. SAXTON.

FROM OUR EXCHANGES.

[*Outlook.*]

To be kind in judgment does not involve indifference to moral standards or desertion of ideals. It is not a question of blindness; it is a question of largeness of view. The offensiveness of sin, which rested so heavily on the hearts and minds of our ancestors, is not a whit lessened. Sin is still a horror when it works out its fruits in human life. But there has come a vast difference of feeling toward the sinner, because there has come so much larger and penetrating a knowledge of the influence of conditions of all sorts and kinds. What has happened has not been a desertion of the old standpoint of the righteous man who hated sin, but a recognition of the complexity of the individual problem and the difficulty of doing justice to the individual sinner. We still hate the sin, but we no longer hate the sinner. What has happened has been a change of position from the standpoint of the Old to the standpoint of the New Testament. The emphasis of our criticism and judgment ought to rest on our own faults, not on the faults of other people. But few of us have the capacity for self-denial involved in leaving other people's faults alone and dealing firmly and with clear eyes with our own. And yet, as a rule, the faults of others do not harm us. They rather amuse us, or irritate us; while our own faults are constantly inflicting the most serious injuries on us.

[*Examiner.*]

If one's prayer is merely a selfish wish, aimed at an ear in the invisible world on the mere chance of persuading a listener who has the power to grant our wish, there is no reason on either natural or spiritual grounds for hoping that it will be answered. Its selfishness makes it certain that a wise and good being would not answer it; for to answer would be to make selfishness dominant over wisdom and goodness, and dominant selfishness means dominant badness and final ruin. God as a being can mean nothing less to a really prayerful man than the highest conceivable goodness and purity manifested in supreme personality. The very meaning of prayer to him is that there is in us a ruling desire to be brought into closer likeness to God, and to be overruled by Him. A selfish prayer could be addressed to God only under the conception that He was the mighty executor of the universe, rather than the loving Father and righteous ruler. Prayer is not a short cut to personal gratification. It is not the bringing of pressure to bear upon the power which touches the springs of life, but is bringing divine influence upon us, that we may give full effect to the good and wise will of God in our living and in our character.

[*Christian World*, London.]

You cannot live by another man's truth; you must live by your own. You cannot be saved by untruths, whatever may be their outside sanctions. The winning of the higher truths involves a perpetual moral discipline. As the discipline proceeds the truths will shine with ever brightening luster. The way of ascent here, as one of the church fathers observes, is by holiness of life. We can only influence our fellows by the truth we have ourselves won.

[*Zion's Herald.*]

To be a Christian is not simply to hold some kind of a theory of religion, or even the theory of the Christian religion, but means a practical obedience to the revealed precepts of God, so that we follow him who is the truth in the way and press of life, pursuant to his behest: "If ye love me, keep my commandments." We must get on with truth, and truth must get into us, and be evaluated in daily living.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

Attention is called to the announcement over our Leader's signature, which appeared in the *Sentinel* of Jan. 9, to the effect that Christian Scientists in the Field who send four subscriptions to the *Monitor* for one year, will receive their own paper gratuitously.

PAMPHLETS IN FRENCH.—Three new French pamphlets, "Christian Science: Le Pouvoir De L'Homme Sur Le Mal," "Christian Science: Ses Bienfaits Pour L'Humanité by Edward A. Kimball, and "Christian Science: La Délivrance Du Mal" by William P. McKenzie, are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has just been issued by the Society, copies of which will be mailed to our patrons on application.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, must be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. **Please do not send currency.**

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.60 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

School yards in England are generally larger than in the United States, and fascinating school games, carefully supervised, shared by all, are made an educational factor. Besides the large yard, there are usually playing fields added, bordered by trees, grassed, and of a size and attractiveness that make them delightful. After school and on holidays the teachers often frequent these fields with the boys and play games which are free from the excessive noisiness of the American games. Excursions into the country are another feature. These develop in some cases into fortnights spent in camp. The same teachers go year after year with their classes, and teaching, largely of natural history, goes on every day.

The thirty-fifth annual convention of the American Bankers' Association was in session last week in Chicago. The organization of a central bank of issue for the country, with a capitalization of not less than $100,000,000, as a preventive of a recurrence of the financial disturbance of 1907, was outlined by the president of the association in his annual address. The clearing-house section reported a plan for clearing-house examiners. The association opposes postal savings banks and guaranty deposit funds for both state and national banks.

In the Kansas City post-office it was found recently that a large number of postal orders given out were not presented to be cashed within the usual time, and investigation showed that a large number of foreigners who did not trust banks had learned that money was safe when deposited in the post-office. They found they could get it out when they wanted it, and the news spread abroad until the post-office was made a bank against its will. The incident is indicative of the need of postal banks.

The list of those who will accompany President Taft down the Mississippi river to the fourth annual convention of the Lakes-to-the-Gulf Deep Water Association at New Orleans, includes thirty-six governors, seventy-six United States senators, more than one hundred and fifty congressmen, and ten foreign ministers. They will go as guests of the Business Men's League of St. Louis.

That notes will be addressed to certain European governments with which the United States has treaties, looking to the suppression of the white slave traffic, protesting against the failure of such governments to live up to their treaty obligations, is believed to be certain. This Government has been informed, so it is stated, that foreign officialdom winks at the practice.

About two and a half million acres of public lands in North and South Dakota will be thrown open to homestead entry next month. It is believed that fully two hundred thousand intending homesteaders will register for a chance to obtain farms of one hundred and sixty acres each.

President Taft has appointed on the tariff commission, which was authorized by the late tariff bill, Prof. Henry Crosby Emery of Yale, Assistant Secretary of the Treasury James B. Reynolds, and Alvin H. Sanders of the *Breeders' Gazette* of Chicago.

The million-dollar navigation project for the Missouri river, which was agitated in Kansas City last spring, is to become a reality. Articles of association of the Kansas City, Missouri, Navigation Company have been filed.

The Federal grand jury is conducting an investigation into certain alleged violations of the Sherman anti-trust act, the Elkins rebate law, and the Dingley tariff act by several railroads and transatlantic steamship lines.

President Taft, in his finding on the alleged misconduct of the Interior Department in connection with the Cunningham coal lands in Alaska, completely exonerates Secretary Ballinger.

Reformers at Atlantic City, N. J., are endeavoring to secure the enforcement against the saloon and café proprietors of the Sunday closing laws.

The budget of New York city the coming year may reach $183,000,000, an excess by more than a quarter of a million over that of last year.

About sixty-five thousand enumerators will be needed for the thirteenth decennial census of the United States, Hawaii, and Porto Rico.

International.

The Swedish Cabinet has decided to present a bill to the Rikstag to abolish all orders of rank and grades of precedence, except among the officers of the army and navy. The decision may be one of the indirect results of the recent general strike. Chief among the burdens imposed upon the Swedish commoners has been that of the privileged classes, whose corruption and greed have been one of the chief sources of disaffection with the Swedish power.

The Swedish government has intervened to settle the dispute between the Employers' Union and the Confederation of Labor, which was the cause of the recent general strike in Stockholm. Arbitrators have been appointed for this purpose, as well as to draw up regulations for the settlement of future disputes by arbitration.

Pauperism is on the increase in Great Britain, according to the annual report of the local government board. The total number of paupers relieved on the last day of December was 835,068, being an increase of 34,067 on the number a year earlier. The total expenditure amounted to $71,542,120.

A government expedition to Otumba, in the state of Mexico, has uncovered a buried city of great antiquity. A pyramid similar to that uncovered at San Juan De Teotihacan has been exposed. The pyramid is sixty feet in height, and measures two hundred feet square at the base.

The ninety-ninth anniversary of Mexico's independence was celebrated throughout the republic at eleven o'clock on the evening of the fifteenth by the ringing of liberty bells and the pronouncement of the "*grito*" (shout).

Industrial and Commercial.

By legislative action the Massachusetts Assembly this year entrusted the decision of plans for bettering the dock and railroad facilities of Boston to a joint commission composed of the Boston transit commission, the railroad commission, the harbor and land commission, and the park commission, the "Big Four." They are now conducting hearings. One plan proposes that a "public trust" of eminent men of affairs in Boston and suburbs should be created to handle the railroad and dock business in Boston. This trust should take the harbor front by right of eminent domain and build docks and dry docks and a new belt line. This belt line should run along the water front, connect with all the wharves, and then continue out in a complete circuit, passing through the suburbs some miles distant from the city, where great freight terminals should be constructed. Similar action has been taken with great success in England and Germany.

The Missouri, Kansas, and Texas Railway plans to expend four million dollars for freight terminals in St. Louis, Mo. At Memphis, Tenn., the Louisville and Nashville Railroad Company will expend two and a half million dollars for a passenger station and terminals.

Twelve billion dollars worth of manufactures have been exported from the United States in the last one hundred and twenty years,—two-thirds of this enormous total within the last twenty years, and one half in the last eleven years.

More than four thousand tons of old stockings are sent annually from the United States to Europe to be worked up into shoddy. American black stockings are worth from $1 to $1.20 per one hundred pounds, f. o. b. American ports.

The American Shipbuilding Company has closed contracts with a southern iron-furnace company for four large ore-carrying steel ships of modern type to cost about $1,300,000, and one passenger steamer for Buffalo interests, costing $200,000.

Plans have been adopted for the erection at Mercedes, in the lower Rio Grande valley, of the largest sugar mill in the United States at an estimated cost of two and a half million dollars.

The Russian telegraph system has adopted the twenty-four hour clock, the numerals after twelve to twenty-three being used to designate the afternoon.

The sugar crop of Cuba is expected to reach a total of 1,600,000 tons.

General.

In the flight of birds of the Southern Federation of Homing Pigeon Fanciers, a short time ago, a record that has stood for twelve years was broken. The birds were liberated at North Bay, Ont., 510 miles from Baltimore, and the first to arrive covered the distance in nine hours and seventeen minutes, an average of 1,600.05 yards a minute. The previous record was 1,340 yards a minute. Nearly five hundred birds were liberated at North Bay, and of these sixty-seven beat the previous record referred to.

Halley's comet has been observed at Heidelberg. This is one of the most famous of the comets and the first whose periodic return was predicted. Its last previous appearance was seventy years ago. On earlier occasions of its appearance it was so brilliant as to be regarded as a fearful portent. It has been identified as the comet mentioned in numerous historical references.

The unprecedented elevation of 95,250 feet, or eighteen miles, was attained by an unmanned registering balloon which was recently released at the Belgian meteorological institute at Uccle. At this elevation the barometric pressure is only two fifths of an inch.

A movement is being organized to secure the reforesting of the islands in Boston harbor.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE FIRST STEP.

LOUISE KNIGHT WHEATLEY.

A CERTAIN Christian Science church recently decided to build a much needed room for the Sunday School, and at a meeting of its members which had been called to discuss the matter, money was freely given and pledges made for that purpose. Among that company of eager, happy people there was one whose heart was heavy. She longed to give, but she had no income of her own, and circumstances at home were such that she did not feel justified in asking others to contribute to a cause in which she alone was interested. How could she make even a pledge? A pledge is a promise, and she had been brought up to consider a promise a sacred thing, not to be made lightly, nor without absolute assurance of ultimate fulfilment. A promise to pay a certain amount within a specified time, without the slightest idea as to where the money was to come from, seemed a proposition so fraught with risk as to be scarcely within reason; so, while those around her were busy, her own pencil lay idle in her fingers. She who would gladly have given a thousand dollars seemed utterly unable to give as many cents!

But she had learned in Christian Science that "desire is prayer" (Science and Health, p. 1), and that all right prayer is answered. As she sat there, struggling with the situation, the "still small voice" of Truth came to her, as it comes to all who listen for that loving call. And she thought, Suppose I do not now know where the money is to come from; what does it matter? Where does "every good gift and every perfect gift" come from, in the first place? Is not God the one source of supply? "The silver is mine, and the gold is mine, saith the Lord of hosts." It is just a false belief which would try to keep me sitting here, bound hand and foot, helpless, doubting, and afraid. I can give to this Sunday School, for my income does not depend upon any person, but upon the one perfect Principle that has all, and is All. I can make a pledge, and I do not need to know how it is going to be paid. That is God's part. My part is to trust Him—absolutely—to take the only step that I can see ahead, and to leave the rest to Him.

She took up her pencil and wrote. The amount pledged was small, perhaps the smallest, in actual dollars and cents, which was made that night; but if she had signed her name for a million it could not have looked, at the moment, more hopeless of attainment. At this point a new perplexity confronted her, as the printed slip asked the donor to state in what way the money was to be paid,—whether weekly, monthly, or semiannually. How could she say? But after a few minutes' study the sturdy little pencil was again at work, and she wrote the non-committal statement, "As I can." For she said to herself, Perhaps God will give it all to me tomorrow, who knows? All sense of personal responsibility seemed suddenly lifted. She dropped her pledge among the others, with these words from the textbook singing themselves over and over in her heart: "Working and praying with true motives, your Father will open the way" (Science and Health, p. 326).

And He did! Three days later there came to her the opportunity to earn the amount of her pledge many times over. It was absolutely unsolicited; in fact, she knew nothing about it until the messenger whom divine Love had chosen to answer her prayer stood at her door. It was work so pleasant, so congenial, so sweetly full of possibilities for giving and receiving good, that she accepted it with joy. What did it matter that it was all new to her? Would not Love be less than Love to give her something to do, and then not show her how to do it? Again she looked straight to Principle for help, without one doubt or fear for the future; and can it be a matter of the smallest surprise to any one that work thus begun was successful from the first? By the end of the first week she had paid her pledge, thus rendering unto God the "firstfruits." As she placed the envelope in the brimming basket of money that Sunday, the words which she had heard Sunday after Sunday in the church which she had left, came to her with a new and sudden significance: "All things come of thee, and of thine own have we given thee."

Some time has passed since then, but she has never ceased to remember that many of the blessings which have come to her can be directly traced to the mental decision of that crucial moment when she broke in her own consciousness the thought of dependence upon any human being, even the nearest and dearest, and looked from personality to Principle for her supply. When we do this, in the way which Christian Science teaches, there can be but one outcome. But the first step lies with us. And the nature of that first step can be best expressed in our Leader's words in Miscellaneous Writings (p. 158): "Let us be faithful and obedient, and God will do the rest."

TITHES AND TESTIMONIES.

WILLIAM S. GILBREATH.

THE first Christian Science meeting which I ever attended was a Wednesday evening meeting, held in a Jewish temple in Chicago, and that one fact was impressive of itself. All through the meeting the interior of the edifice, together with the constant mention of Christ and Christian Science, was creating an impression which is not wholly eradicated as yet, but it was in a measure favorable.

There were some ten persons who testified that evening, and each in his turn was judged by his appearance and manner. I had come to the meeting with a sense of Christian Science as not being true; I came from the camp of the enemy, as it were, so the speakers were judged rather more by their appearance than otherwise. Yet, perhaps this was fortunate, as after all the general impression of the contented and happy and sometimes actually joyous speakers left more of a mark than was at first realized: What they said seemed rather strange; but what left the most lasting impression was the statement quoted from

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

Science and Health that "divine Love always has met and always will meet every human need" (p. 494). These words seemed to stick, and recur at intervals, always with the question, What is divine Love?

This first meeting has always seemed, since then, to have been a far-away, hazy appearance,—rather indistinct, as though one were just emerging from a fog. Coleridge, in his "Religious Musings," tells of a shepherd creeping along in the early morning fog, where all things assume dark and fantastic shapes and forms—

> But lo! the bursting sun!
> Touched by the enchantment of that sudden beam
> Straight the black vapor melteth, and in globes
> Of dewy glitter gems each plant and tree;
> On every leaf, on every blade it hangs!
> Dance glad the new-born intermingling rays,
> And wide around the landscape streams with glory!

To me this meeting proved to be the first glint of those "new-born intermingling rays," and many times since then has come the thought that at every meeting some one may be undergoing this same experience. Again there comes the reflection that one meeting is apt to be characterized as good, and another not so good; this one as having dragged; many quiet pauses in that one, and so on. Can the "structure of Truth and Love" (Science and Health, p. 583) harbor aught but good? Did we not once come to these meetings ourselves an hungered and athirst? And is not the fact that we are still coming proof that we were fed? Perhaps it may have been only a word, and yet it was enough to fill some hungry one.

The words, "O make me glad for every scalding tear," from our revered Leader's poem (Miscellaneous Writings, p. 389) were to the writer a full meal on one occasion, and the tears that came were not tears of self-pity, but rather of joy for a great and lasting victory. "But lo! the bursting sun!" and the silence that followed seemed like a great calm expanse of water, gloriously clear and peaceful. One could sing with Isaiah: "Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat; yea, come, buy wine and milk without money and without price. Wherefore do ye spend money for that which is not bread? and your labor for that which satisfieth not? hearken diligently unto me, and eat ye that which is good, and let your soul delight itself in fatness." One can almost see this old prophet fresh from the feast, radiant with all the good provided, declaring the glory of Truth's bounteous supply. How many of us can go to our meetings with the thought contained in these verses?

At one time, when feeling thankful beyond measure for blessings upon blessings received, the fear of the "multitude," the lack of proper words, a sense of a limited education, and many other little thoughts and things, loomed up like a great fog. Some time before, these words from Malachi, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts," had been read on the walls of the reading-room in a Christian Science church, and as the writer was only a few weeks old in Science, this seemed like a call for money, and it caused a prompt tightening of the purse-strings. Now, the thought being clearer, the need of declaring at least a tenth part of what had been accomplished by the power of divine Love was evident, and the real beauty of the passage came out again like the "bursting sun."

It was apparent that spiritual riches had been heaping up, and that a "tithe" would indeed be a small portion to give from the store. But how to give it? In dwelling over this a line or two from Isaiah caught the eye: "The Lord God hath given me the tongue of the learned, that I should know how to speak a word in season to him that is weary." This looked good, and sounded even better, and several times a tithe was brought without fear to the storehouse, until there seemed to be a desire to count out a few tithes; and just which ones occupied the thoughts so much, together with the thought of the "tongue of the learned," that other people's good things were forgotten. Again it was necessary to go back and work, and the latter part of this same verse from Isaiah, together with the following verse, seemed to stand out above all else, and appealed to me very strongly: "He wakeneth morning by morning, he wakeneth mine ear to hear as the learned. The Lord God hath opened mine ear, and I was not rebellious, neither turned away back."

Since then the Wednesday evening meetings have been ever new; the long pauses have been glorious in that they have afforded the opportunity to listen to that "still small voice" which is helping us to grasp a little more firmly the good we have heard with the "ear of the learned." That low, sometimes indistinct, murmur sounds good, for some one just within its range may be receiving the bread and wine and water so freely given—the tithe is being handed out. Another person, talking loudly, and perhaps in a rambling manner, has said one or two things which are good, and the "ear of the learned" recognizes them as good, and holds them, letting the chaff blow away; still another may be telling a marvelous story, which we at one time would have thought impossible or even ridiculous. But, can we limit the power of God? Can anything unholy or untrue or questionable enter the "structure of Truth and Love"? Let us ask ourselves each day this question, What is the "structure of Truth and Love"? and then stop to think what it means.

The prophet Nehemiah said, "The God of heaven, he will prosper us; therefore we his servants will arise and build;" and Mrs. Eddy tells us on page 583 of Science and Health, that church is "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle."

IMMORTALITY.

JESSE B. TWISS.

THE writer recently listened to an address by an eminent clergyman who, after referring to Wordsworth's ode on "Intimations of Immortality," declared that intimations are all we have,—that we possess no positive proof of immortality. This line of thought, trailing closely upon agnosticism, recalls to me the years when I, though trained to weigh legal evidence, sought vainly to find any preponderance of evidence as to immortality. The Bible indeed teemed with unqualified statements of immortality, but where was the proof that the Bible was true? I studied such "Intimations," "Apologies," and "Evidences" as I could readily find, but they only left uncertainty more deeply rooted.

There had arisen, however, during the youth of this clergyman and myself, a thinker, clear, disillusioned, and vigorous; she who today, crowned with the labors of many years, bears the honored name of Mary Baker Eddy. She, too, has asked: "What evidence of Soul or of immortality have you within mortality?" (Science and Health, p. 478). Yet this same revered woman has guided unnumbered people to experience the most convincing proofs of immortality. They have experienced these proofs not in the broad fields of belief in mortality, but by climbing steadfastly in the highway of immortality; not by dying, but by living; not by "vain repetitions," but by praying understandingly; not by intellectual search of "apologies," but by individually living the immortal life.

In illustration, I will say that I have sought to take the rules of Christian Science just as a boy should take his rules in arithmetic, or a cook directions for making a new cake, with a measure of faith that the rule is correct and a measure of confidence that I can apply the rule correctly. If the rule is true, and the work done correctly, the results.

Digitized by Google

should justify the rule. This is true justification by faith, wherein the works prove one's faith. Among my earlier proofs I remember the struggle for two days with what is called an ulcerated tooth. Because I did not do my work correctly during that time, the pain persisted; but the moment I remembered the correct way to work, and applied the rule, the pain ceased with startling abruptness, and the ulcer stopped its progress midway and vanished.

This is only a sample of the many, seemingly an endless succession of tests and proofs which I in my individual experience have given this grand Science, and I am but a business man in a position where, broadly speaking, tests can be applied only to my own mental, physical, and business problems, and differing from that of the Christian Science practitioner, who is daily called to heal the sick and to raise the dying; although in several instances I, too, have been called to do such work and have been successful. Can we imagine that doubt about immortality ever crept into the consciousness of Jesus of Nazareth, when he could heal the sick and raise Jarius' daughter despite the scorn of the assembled people, and afterward say to the world, "He that believeth on me hath everlasting life"? What doubt of immortality could this mighty one have, who brought forth Lazarus from his three days of incarceration in the tomb, and declared to his sister, "Whosoever liveth and believeth in me shall never die"? Or what doubt about immortality could Peter have had when he healed the congenital cripple at the gate Beautiful? Or Paul in raising from death the fallen Eutychus? Mark the conviction in his subsequent cry, "O death, where is thy sting? O grave, where is thy victory?"

So, in degree, the Christian Scientist, who is daily called to beds of pain, even where dissolution seems impending, and from which medical practitioners have retired baffled and hopeless, holds aloft the same glad tidings of immortality whereby Elijah and Elisha healed the sick and raised the dead; the same clear understanding of divine Love with which Jesus and Peter and Paul did their uplifting work. As success crowns their joyous work, they no longer think of immortality as a vain hope, but know that it is already man's heritage; no longer ask if there be a future heaven, for they have already entered it, and are daily opening its doors to others; no longer question if the Bible be true, for they are daily proving every essential statement to be virtually true.

Thus Christian Scientists, like Jesus and the apostles, come to see with the psalmist that "the valley of the shadow of death" is in fact only a "shadow," which, like every shadow, melts away the moment light appears,—the light of understanding; and this light may appear to mankind before, as well as after, that "shadow" seems to fall. Therefore, if we may not like Elijah dispel this "shadow" with a chariot of fire, or walk with God as far beyond the confines of mortality as did Enoch, or like Moses climb the mountains of interpretation beyond all trace of mortality, or like Elisha, Jesus, and Paul, recall whom we will from the gloom of the grave, we yet, and perhaps early in our progress, may cast out from thought and destroy every shadow of doubt as to the immortality of man, and know with the assurance of positive personal experience that the Bible is true, and that even now man is immortal.

All honor be to her who has shown us the way to prove man's immortal birthright to be the heritage of all who love Christ's appearing.

AN APPRECIATION.

MARTHA SUTTON-THOMPSON.

I WAS glad and rejoiced when I again read (in the *Sentinel* of March 13) our Leader's words: "The Magna Charta of Christian Science . . . stands for the inalienable, universal rights of men." The editorial "Freedom to worship God," in the *Sentinel* of March 20, also strikes the key-note of individual self-government. These two points have been very precious to me, *i.e.*, the democratic government of our churches of Christ, Scientist, and the mental, moral, and bodily liberty of the student in following Christ as he understands Christ, Truth; allowing experience to become the index and lever whereby God instructs, chastens, reforms, unfolds, and uplifts. Without this face-to-face experience with God his life-problems must remain unsolved.

A student of mathematics becomes a mathematician only to the extent that he solves his own problems and demonstrates his own theorems. Jesus interpreted the Word, and his students were required to work out their salvation by virtue of their own understanding; even their Master's divine knowledge could not do their work for them. So a teacher of Christian Science today is an interpreter of divine Science and its rules of demonstration. The understanding gained by the student of the true teacher is not an acceptance of that teacher's opinion, but the comprehension of the Principle made plain to him through scientific analysis; and the student's own comprehension, not his teacher's, must be his basis for work. Upon this basis he learns to discern the line of demarcation between Truth and error and demonstrate harmony in all the affairs of his life.

To teach the Principle of divine Science and explain to students the mythical nature of the opposite, error; to assist all patients to a simple understanding of the same, and how to work for themselves; to receive into church-membership only persons who have become in some degree demonstrators of the truths of Christian Science; to provide a democratic, practical, and eminently Christian form of church government,—these are surely the essentials of a righteous conduct of the Christian Science movement. And that these essentials have been the rule—not the exception—is one great reason why Christian Science has stood and thrived in the face of all opposition.

God has not placed the standard of Christian Science in the hands of human will. The true Christian Scientist is found following Christ, and assisting others to do so. In doing this he finds it necessary to advocate and support every part of the work that our Leader has instituted,—healing, class teaching, church organization, the board of lectureship, etc. And in all of these he will desire to witness and to labor for that collective and individual liberty which alone is able and clear-sighted enough to practise scientifically the truth of being which attains to the demonstration of Life, Love, immortality.

The ever-present and all-wise Father will and does protect the Christian Science Cause and the faithful Christian Scientist. As the psalmist said, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty."

SEEING AND ACTING.

CARL HORTON PIERCE.

To the true Christian Scientist seeing is acting,—one is identical with the other,—and thereby mankind may come to understand the practical nature of Christian Science. It may be that one's "besetting sin" is drowsiness, or laziness, or inaction of any kind, such as procrastination; but do we realize that we have omnipotence at our side to aid us in overcoming the evil propensities of mortal mind? The Christian Scientist realizes that his first step is to declare the truth. We read that "the only begotten Son, which is in the bosom of the Father, he hath declared him;" then let us act. If the besetment is drowsiness in the morning, we can declare the truth the night before, affirm that evil of any nature cannot keep us from activity,

Digitized by Google

the manifestation of Life. Mind will then bring it to pass that we shall wake up in due season, and when awake we should get up. If action does not follow, of what avail is the declaration?

We reflect Life when we are active; Truth when we are truthful; Love when we are loving. There is no use in declaring that our brother is God's child, when deep in our consciousness is lurking a sense of vengeance that would cut off his ear. Our revered Leader says, "Faith illumined by works; the spiritual understanding which cannot choose but to labor and love; hope holding steadfastly to good in the midst of seething evil; charity that suffereth long and is kind, but cancels not sin until it be destroyed,—these afford the only rule I have found which demonstrates Christian Science" (Miscellaneous Writings, p. 338).

Every one who has come into Christian Science has probably, in gratitude for this practical religion, wished that he could help our Leader, and daily the privilege is given us of letting our lives witness to mankind, as hers is witnessing, the fruits of this healing, saving gospel. It is undoubtedly true that if any Christian Scientist were asked what he would take for Christian Science, he would reply, "Nothing—not all the gold and silver, not all the material wealth of the world." Clearly, Science is a priceless boon, and we should be instant in coming to the altar with our tithes, to aid in spreading the knowledge of this precious pearl of truth. The true Christian Scientist acts not for the loaves and fishes; he gives not with a selfish motive; but he sees the need of action, and he acts willingly, and now.

QUIETNESS.

ADA J. MILLER.

OUR joy in demonstration cannot safely be spoken to those who are not awake to the truth of being. In so speaking we are casting our pearls before that phase of thought which may turn and rend us. Experience teaches us the value of dwelling "in the secret place," and we learn that "in quietness and confidence" is our strength; we discern why there was a holy of holies; why Joseph and Mary were told to take the young child into Egypt; why the Master said, "When thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret;" and why he said, "See thou tell no man."

To speak out of season, no matter how joyous the words, is to disturb dreamers, and they do not like to be disturbed. The quiet work of constantly separating the tares from the wheat—mortal from immortal thought—is joyous activity, and our joy in it is most secure and most helpful when it remains a radiance. The light we reflect in the joy of truth demonstrated will illumine the way for some one who is seeking the Christ-healing.

[Written for the *Sentinel*.]

PILGRIM, PRESS ON.

EDMUND K. GOLDSBOROUGH, JR.

PILGRIM, press on: the path seems dark,
And stones of mortal sense have cut our feet,
But gentle breezes waft a perfume sweet,
And, lo, I hear the singing of a lark!

Pilgrim, press on: I see the light;
The purple shadows are foretelling dawn,
And soon will come that fair and glorious morn,
When past forever is the hideous night.

Pilgrim, press on: the path grows clear;
I hear the voices of the angels singing,
And joyful bells of harmony are ringing,
Dispelling every thought of grief and fear.

SELECTED ARTICLES.

[Willard S. Mattox in *Transvaal* (Johannesburg, South Africa) *Leader*.]

Because Christian Science denies that there is any real entity or substance outside of Spirit and spiritual existence, it should not be assumed that it denies man's existence. On the contrary, it ennobles our concept of man and frees us from many of the limitations which are part and parcel of mortal man's existence. Christian Science does indeed deny power to the human will, but what Christian is there who can object to the doctrine that ascribes all power to the divine Mind? It was Paul who said: "Let this mind be in you, which was also in Christ Jesus."

Christian Science has been called "transcendental mysticism." On the contrary it is the simplest and most rational statement of Christ's theology. If Christian Science is mistaken for transcendental mysticism it is because its spiritual message is not understood. Referring to the pharisaical inability to understand the primitive Christian doctrines, Paul said: "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen . . . the weak things of the world to confound the things which are mighty."

Your correspondent's surmise that a Christian Scientist regards himself as a "God-intoxicated man," is as untrue as is his speculation that the Christian Scientist is often "drunk with self." The Christian Scientist is engaged in working out his salvation according to Scriptural command, and in the process he is endeavoring with some success to realize with Paul that neither height nor depth nor any other creature can separate him from the love of God. This consciousness of God's presence and man's unity with God is different from the grossly materialistic concept of the writer of the article under discussion.

This gentleman concludes, because Christian Scientists sometimes have bones set by a surgeon and are permitted in extreme cases to use an anesthetic, that Christian Science "has its limitations." He would have stated the case more accurately if he had said that Christian Scientists at the present time are not able to prove absolute truth in its entirety. It would be as logical and as fair to say, because the Christian religion has not stamped out all forms of sin and vice, because there yet remain a great many evil things and evil persons, that the Christian religion has its limitations. The limitation is not in the saving power of Truth; it is in the human comprehension and application of this unlimited power.

Your correspondent says: "According to the sect [Christian Science] it is sin that causes disease." This bald statement, without explanation, may cause misapprehension as to what Christian Science does teach on this subject. It is true that sin causes disease. We are warranted in this conclusion by the Scriptural statement: "By one man sin entered into the world, and death by sin." Here death is made a result of sin, and as death is a direct sequence of disease or accident it is fair to assume that in Paul's opinion sin was the cause of disease and death. Indeed, he says in so many words, "To be carnally minded is death."

It should be understood, however, that Christian Science gives a broader definition to sin than is found in some orthodox interpretations of that term. According to Christian Science all unspiritual thinking is sin. Any consciousness that is not Godlike would be termed sin. Most people will admit that it is a sin to be angry, and physicians even maintain that paroxysms of anger have caused blood-vessels to burst, and produced death. Christian Science goes one step farther, and says that it is a sin to be anxious, to have fear, simply because to have fear means a lack of that all-sufficient trust in God which

Digitized by Google

Christianity, in theory at least, inculcates. What modern scientist does not now admit that strong emotions, such as fear, remorse, anxiety, worry, hatred, and revenge, poison the system and produce chemical and structural changes as direct and positive as any that are produced by so-called bacteria or germs? In this broader sense it will be seen that the Christian Science statements regarding sin and disease are consistent. Christian Scientists do not claim to have gained complete victory over the grave. They claim that victory over the grave is possible, and will ultimately be accomplished by those who understand and demorstrate Jesus' teachings.

[William E. Brown in *Santa Ana* (Cal.) *Register.*]

The healing agency employed in Christian Science is a spiritual understanding of the allness of God and the consequent realization of the unreality of all that is unlike Him. This enables the patient to overcome and cast out lust, hatred, malice, revenge, dishonesty, and all the works of the flesh, and their consequent poisonous effects on the system. Thus it will be seen that Christian Science does not seek to remove discord by displacement or substitution through suggestion; it effectually destroys it by bringing to the patient's consciousness a knowledge of the truth which, as the Master promised, sets us free.

Christian Science is primarily a religion, the religion of Jesus, and its chief mission is to destroy sin, the physical healing being the outward expression of the spiritual transformation that is taking place. Christian Science can heal no one without improving him spiritually and morally, as well as physically, and it can be successfully employed only by those whose lives are being cleansed by Christ.

[Lindley Fogg in *Marion* (O.) *Mirror.*]

If Christian Science had no more merit than the person representing himself as a doctor in your issue of the 15th professes to believe, you would not be asked to publish attacks upon it, for it would have ceased to attract public attention long ago. The work of Mrs. Eddy, in pointing to a Saviour who gave his disciples power "to heal all manner of sickness and all manner of disease," and in showing her followers that the same power to heal and to save is here today, may have resulted in curtailing to some extent the revenues of the physicians, but this is not a justifiable reason for their stoning her, for there should be no doubt in the minds of well informed and unprejudiced people as to her integrity of purpose and earnest desire to benefit mankind through her work.

Three dollars, the price of Science and Health, need not be regarded as a large amount for a book of seven hundred pages, whether it be regarded as a scientific work or as a commentary on the Bible, and Christian Scientists have satisfied themselves that it is both the most scientific work and the best commentary on the Bible which they have ever found. Those who are opposed to Christian Science, and therefore have no use for its text-book, certainly have no cause for complaint on account of the price, so long as those who do wish to purchase the book are satisfied.

Jesus declared that he came not to destroy the law, but to fulfil it; and as a matter of logical reasoning, as well as revelation, it must be apparent that the same power is in the world today that was here nineteen hundred years ago; and the failure of the Christian church to carry out more fully the injunction of the Master when he said, "He that believeth on me, the works that I do shall he do also," arises not so much from lack of desire as from a lack of understanding of the power which was used by Jesus and his disciples in healing the sick.

The many thousands of intelligent men and women throughout the world who are today adherents of the Christian Science faith, believe that Mrs. Eddy has rediscovered the divine Principle by which Jesus healed; and this Principle has been proved by actual demonstrations, resulting in the restoration to health in thousands of cases of persons who were hopelessly ill and who had failed to secure relief through other means. This divine Principle has been explained, and its practical application to healing the sick has been given to the world by her, in the Christian Science text-book, "Science and Health with Key to the Scriptures."

[Frederick Dixon in *Bedford* (Eng.) *Circular.*]

Christian Science is not asking humanity to accept anything which it cannot demonstrate for itself, and consequently, more than any religion since the days of Paul, it relies on the great saying of the apostle, "Prove all things; hold fast that which is good." Christian Science has not been accepted by Christian Scientists lightly and without thought. The movement is composed of too many capable and cultivated men and women to make that possible. It is because these men and women have proved it, and are proving it every day and hour of their lives, that they are holding fast to it and are able to reply to all the angry and bitter criticism which is hurled at them, in the words of Paul, "None of these things move me."

Christian Science is nothing but primitive Christianity made practical today. The Christianity preached by Jesus was not only the most beautiful, but the most practical understanding of truth his hearers had ever listened to. Again and again he told them in varying ways that heaven and earth would pass away, but that his word would not pass away; and through the healing by Christian Science not only of sickness, disease, and pain, but of sorrow and despair and sin, in short, of everything that is unlike God, that teaching is being made practical in the world today. Healing of this nature is not merely a necessity of Christian practice; it is the test of a man's Christianity.

Again and again Christ Jesus declared that those who believed in him, understood his teaching, would be able to work his miracles; to demonstrate, that is, their understanding. To gain such an understanding, to learn sufficient of the truth that makes men free, to be able to bring the gospel of this healing in some measure into their own lives and the lives of those about them, should be the aim of every Christian thinker and worker. For it is manifest that, if the words of Jesus are true, man's ability to demonstrate the omnipotence of good is in exact proportion to his knowledge of God, of Truth. "Citizens of the world," Mrs. Eddy has written, on page 227 of Science and Health, "accept the 'glorious liberty of the children of God,' and be free! This is your divine right. The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body, and defaced the tablet of your being."

[H. M. Mason in *Chattanooga* (Tenn.) *Times.*]

One mistakes the teaching of Christian Science who calculates that its *modus operandi* is a mere wordy denial of sin and disease, and an affirmation of health and life. A person could accomplish no more toward the destruction of disease and the establishment of health through such a process than one could toward the removal of discord and the supplantation of harmony in connection with music by this same method. Both undertakings require demonstrable knowledge of what is true, before one can detect and dispose of the false sense of that which is true.

It is all wrong to say that Christian Science teaches there is "no body, no matter, and consequently no pain; and that all pain, sickness, and disease exist in mind only." Christian Science teaches that when we know and demon-

Digitized by Google

strate enough of the truth which Jesus said would make free, we shall not find ourselves unclothed (bodiless), but, as Paul says, "clothed upon, that mortality might be swallowed up of life." No one could reasonably expect to bring about this change in any other way than through an educational process; and as the human mind is renewed with truth, in a corresponding degree this transformation will take place. No one could immortalize his body through the employment of material laws and their remedies. "It is the spirit that quickeneth; the flesh profiteth nothing." Man's body is subject to his thought. This fact is supported by evidence from every conceivable view-point. For instance, sorrow or some mental agitation must precede tears; mortification or some perturbance comes before the flushed cheek; pallor may result from terror. Health appeared when Jesus said: "Thy faith hath made thee whole."

Understanding is the very heart and soul of Christian Science teaching. It reiterates in its every line Christ Jesus' statement: "Ye shall know the truth, and the truth shall make you free." Our critic misunderstands Mrs. Eddy's statement that "all disease is the result of education," as he construes it to mean that all education results in disease, while Mrs. Eddy explains that "as a man thinketh, so is he" (Science and Health, p. 166). It was wrong education that taught and perpetuated the belief in a flat earth, and it was right education that changed the thought of the world to the contrary.

The clergyman said: "God believed in leprosy," and decreed a separation of such sufferers from mankind. He also stated that "a cure for leprosy has been discovered. This is a result of the education which the Christian Scientists would do away with." This process of reasoning is equivalent to saying that the belief of God regarding leprosy is foolishness to advanced education. Christian Science bases its teaching upon the Bible statement that God "will have all men to be saved, and to come unto the knowledge of the truth"—the truth that His anointed one said would make free. On this basis Jesus healed the lepers. The rediscovery of this method of cure is Christian Science—an education that all may acquire.

"Mental suggestion" is as foreign to Christian Science as it is to mathematics. If it were employed in the endeavor to heal disease, it could only bring about an exchange of beliefs, and the belief accepted might be no purer and no healthier than the one rejected, while the influence of Christian Science regenerates mind and body. It is true that the Bible refers to "sin, sickness, disease, and pain." Perhaps the most sweeping statement making reference to these conditions was made by Isaiah, who said, "The whole head is sick, and the whole heart faint. From the sole of the foot even unto the head there is no soundness in it." But Isaiah also presented the foundation upon which to build health: "Put away the evil of your doings from before mine eyes; cease to do evil; learn to do well; seek judgment, relieve the oppressed, judge the fatherless, plead for the widow. Come now, and let us reason together, saith the Lord: though your sins be as scarlet, they shall be as white as snow."

[Alfred Farlow in *Shreveport* (La.) *Journal*.]

Our critic erroneously assumes that Mrs. Eddy teaches there is no power in a material drug until mortals consciously invest it with power. It is not the individual's belief in a special drug which gives it power, but his belief in matter in general: that is, his belief in the general constituency, conditions, and effects of materiality; and this applies to an infant, for even the embryonic mortal is subject to the universal belief in material law until it attains to sufficient spiritual strength to overrule it. Mortals naturally believe in the power of matter; they even believe it has unknown properties until, through a proper understanding of God, they lose this belief. Therefore Mrs. Eddy makes reference to the fact that the law of general belief must be broken in order that a patient may be healed through Christian Science.

Just how much power my understanding of God would have in antidoting a poison for myself I do not know; I am not sure that I have ever had occasion to test it in this respect, though I have been able in my practice to destroy the effects of poison in others. I only hold that it is in accord with the intelligent law of God, and with the present demonstration of mortals, to overrule the power of poison through an absolute dependence upon Spirit; that the rational, scientific explanation of this possibility lies in the fact that whatever of power there may be in poison is supported by the universal belief, either consciously or unconsciously. Either this is true or the dreadful results of the poison must be attributed to the law of Him who is named Love.

When we are able to antidote poison by correcting the victim's thought, we have our proof that poison was an erroneous thought. Also, by our victory over the erroneous belief we prove that the spiritual thought of one is capable of destroying the erroneous belief of the majority. Even the poison of which a patient is unconscious and which is unknown to any mortal is nevertheless supported by the universal belief of life, substance, and intelligence in matter, which belief can be overcome and overruled by a sufficient realization that God, Spirit, is the only real power.

The gentleman blandly affirms that Mrs. Eddy considers broken bones "too much to overcome with her system" when she declares that "until the advancing age admits the efficacy and supremacy of Mind, it is better for Christian Scientists to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon" (Science and Health, p. 401). In keeping with this sort of logic, the gentleman might say that if a pupil in mathematics admits his inability to demonstrate a difficult proposition, he thereby admits that there is nothing in the system of mathematics; when in fact he does not admit that there is anything wrong with the system, but honestly admits his inability to demonstrate it in all its fulness. Suppose I should say to our critic, "The Master commanded, 'Be ye therefore perfect, even as your Father which is in heaven is perfect';" and should ask him if he considers himself to be perfect. If he were to answer: "No, not quite," and I should twit him by saying, "Then you discredit the whole system of Christianity," he might justly consider such a position unfair.

[Olcott Haskell in *Alameda* (Cal.) *Argus*.]

Christian Science is a religion, and it applies to the whole man and reveals the law of his being. Then obedience to this law should save him from bodily sickness as surely as from mental and moral ills. This was abundantly proved in the life of Jesus and in the experiences of the early Christians; and it is today shown in the healing under Christian Science of practically every known disease.

Some expressions used by Christian Scientists are not always understood by those who hear them, and these expressions are sometimes deemed meaningless or absurd, but it should be remembered that the Christian Scientist is learning to look at things from a spiritual and absolute view-point, using the term "unreal" to designate that which is mutable and transitory, and reserving the term "real" to be used (in absolute sense) only of that which is immutable and eternal. The mistakes made by a pupil in working a mathematical problem are "unreal" in the absolute sense, because they are not permanent facts supported by mathematical law; yet in a limited human sense these very mistakes are all too "real" and are sure to cause the student trouble until they are corrected.

Digitized by Google

So it is with human sin and suffering; the Christian Scientist does not ignore these, for he admits that they are mistakes which need to be corrected and overcome, while still maintaining that they are not sent by God and are not sustained by the Principle of man's being—otherwise they could never be eliminated. As in the science of astronomy it is necessary to look beyond the immediate evidence of the senses to state correctly the relative motion of the sun and our earth, so in Christian Science it is often necessary to look deeper into the real facts of life than our mistaken physical senses can take us, but this never requires the Christian Scientist to be untruthful in his statements or in any manner to deceive his patient. Jesus said to his students, "Ye shall know the truth, and the truth shall make you free." These words sound the key-note for all Christian Science practice.

The doctor quotes Christian Science as teaching that "all is mind," and he then speaks as though he considered brain as a synonym for mind. Yet the Mind referred to in the quotation is evidently neither brain nor the human mind, but God, divine Mind, or the intelligence that governs all; and the quotation to be correct should read: "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

Undoubtedly the final test for every system is the results it produces. The fact that in spite of hostile criticism and misconception the work of Christian Science has steadily grown, adding to its adherents from the ranks of those who had had years of experience under *materia medica* and who later found a more practical way of obtaining relief, would indicate that there is a healing power greater than that of medicine, and one to which every man and woman can have recourse, even the power of God.

[George Shaw Cook in *Quincy* (Ill.) *Journal*.]

In saying that "Christian Science can never expect to have the same treatment accorded it as can be to the ordinary Christian churches of other denominations," I think our critic is mistaken. He reasons that Christian Science is not entitled to the same consideration as other denominations because its teachings are in many particulars quite unlike those which prevail in other churches of the present day. Yet this is hardly a safe position to take in these days of enlightened progress, for the reason that this very progress may and I believe will eventually compel the present critics of Christian Science to agree with many of its claims to which they now object. Their objection, it is understood, of course, is based upon previous education along entirely different lines.

Is it not possible that their education instead of Christian Science teaching is at fault? There was a time when every one believed that the earth was flat, and one who taught that it was round would have been considered ridiculous. Subsequent developments established the fact of the earth's rotundity, and now those who believed it to be flat appear to have been the victims of ignorance. The testimony of the senses was in favor of the belief that the earth is flat and stationary, while the fact always has been that it is round, or nearly so, and that it revolves. In view of this, and of other instances which might be cited, is it not reasonable to suppose that at no distant day the teaching of Christian Science regarding the nature of matter may be accepted as the established fact and that the prevalent beliefs about it may be seen to be the result of ignorance? Already many philosophers are substantially in agreement with Mrs. Eddy's teaching on this subject.

What, in fact, can be more absurd than to suppose that we can think anything fit to be thought which is contrary to or different from the thinking of God.—BUSHNELL.

AMONG THE CHURCHES.

PORTLAND, ORE.

Second Church of Christ, Scientist, is to be erected shortly on the northeast corner of East Pine and East Seventh, at a cost of forty thousand dollars. Plans are in the architect's office, undergoing needed changes, and the buildings now occupying the quarter block will be removed after these plans are perfected. The ground was bought by the building committee something over two years ago for eight thousand dollars, and is now valued at fifteen thousand, or nearly double what it cost in 1907. In architecture the edifice will be of the Greek order, with massive pillars supporting a grand dome, and it will be an ornament to the landscape. The vicinity selected is already the site of several graceful church edifices.—*Portland Telegram*.

SEATTLE, WASH.

The wanderings of First Church of Christ, Scientist, will cease today [Aug. 29], when services will be held at eleven o'clock in the temporary structure erected within the walls of the proposed new church building at Sixteenth avenue and Denny way, where they will be continued until the new building, to cost $100,000, is finished.

The church was organized in August, 1896, with fourteen members. The first meeting was held in the old Russell house, and several changes of location were made during its early history. The congregation had gained so many converts in the mean time that the Unitarian church building was secured. The members of this church, who had temporarily abandoned it, took possession, and the Christian Scientists sought in vain for a building. Plans were hurriedly made for a building of their own at Sixth avenue and Marion street, but two years ago, with a congregation of six hundred, this became inadequate, and the property was sold and the meetings transferred to Christensen's Hall, Madison and Broadway. During the two years that meetings have been held in this hall, the attendance has increased to one thousand, and the seating capacity, at both the Sunday services and Wednesday evening meetings, has repeatedly been taxed.—*Seattle Post-Intelligence*.

[Written for the *Sentinel*.]

SEPTEMBER DAY.

ISABEL LEE.

My heart is thine, fade not away,
O beautiful September day!
Thy calm is mine—Love's message clear
Comes gently to my list'ning ear:
It heals all grief and soothes all fear.
Canst thou not stay,
September day?

If thou wilt stay I'll watch and pray,
O restful, rare September day!
I'll heed the lesson of thy life,
To turn from scenes where storms are rife,
To love—to live above all strife—
Canst thou not stay,
September day?

Though night should come without one ray,
O peaceful, fair September day,
Can I forget, or be untrue?
Still dost thou bide in heav'nly hue,
God's own sweet message comes anew;
And thou shalt stay with me for aye,
O beautiful September day!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"THE DIVINE LAW OF LOVE."

WRITING of those systems of mental practice which are not Christian Science and which are opposed to its teachings, Mrs. Eddy says: "My contest is not with the individual, but with the false system. I love mankind, and shall continue to labor and endure" (Science and Health, p. 99). In these two short sentences she has given her followers a rule of Christian conduct which they will find invaluable in every way, and from which they must not depart if they wish to be Christian Scientists.

The way of the world has been to wage war upon persons, but the way of Christ is far different, and is pointed out by Mrs. Eddy on page 30 of Science and Health in these words: "Rabbi and priest taught the Mosaic law, which said: 'An eye for an eye,' and 'Whoso sheddeth man's blood, by man shall his blood be shed.' Not so did Jesus, the new executor for God, present the divine law of Love, which blesses even those that curse it."

If all mankind were to take home to themselves these sayings, and make them their guide in their intercourse with their fellows, the record of wars and murders, of "man's inhumanity to man," would soon become a thing of the past, and the brotherhood of man would more readily appear. Slowly perhaps, but surely, the practical demonstration of the teachings of Christian Science is ushering in that blessed era when men shall regard it but their "reasonable service," as the apostle Paul admonishes, that they "be kindly affectioned one to another with brotherly love; in honor preferring one another;" and this notwithstanding that some of those who have named the name of Christian Science appear to forget at times these teachings, with which they should be as familiar as they are with their own names.

The problem which should more particularly interest these latter is what they shall do to be saved from this unchristian conduct. The answer is in the Decalogue and in the fifth, sixth, and seventh chapters of Matthew. Of these portions of the Scriptures Mrs. Eddy writes: "The thunder of Sinai and the Sermon on the Mount are pursuing and will overtake the ages, rebuking in their course all error and proclaiming the kingdom of heaven on earth. Truth is revealed. It needs only to be practised" (Science and Health, p. 174).

ARCHIBALD MCLELLAN.

EFFECTUAL PRAYER.

IT is sometimes asked whether prayer is of any avail to mankind in their struggles to overcome the besetments of evil. To this it may be replied that prayer is one of the necessities of our being, as all discover sooner or later. We may pray well or pray ill, but pray we must, for existence without some attempt to reach up to God is unthinkable. All prayer is necessarily dependent upon the petitioner's concept of God—indeed the petitioner himself is framed after this concept. The one who fails to understand the omnipotence of God, as good, has in belief another power, namely, evil, and his prayers inevitably make provision for this belief and express this concept. Failing to see that God is all wise, mortals proceed to inform Him of their struggles with this supposititious power which seems to make inroads upon their harmony, possibly in the form of disease or some other person's wrong-doing; then, when their prayers are not answered in the way they expect, they are apt to lose faith in prayer, if not in God.

The Bible is full of records of prayer, some of which are wonderfully illustrative of the spiritually scientific sense of being. In the fourth chapter of Genesis we find this significant statement: "Then began men to call upon the name of the Lord," and we are told that as a result of this calling upon God, Enoch "walked with God," and that he did not see death. In Hebrews we read that "before his translation he had this testimony, that he pleased God." This surely points to the wonderful results which follow true prayer, or communion with God.

It is worthy of notice that in many of these records of communion with the divine Mind, the emphasis is laid upon what God says, not upon what man tells God; as, for instance, where God said to Jacob, when he was a lonely wanderer, and when the ladder was let down from heaven, "Behold, I am with thee, and will keep thee in all places whither thou goest, . . . I will not leave thee." This recalls the lines in Mrs. Eddy's beautiful hymn,—

> I will listen for Thy voice,
> Lest my footsteps stray.

It would seem as if this was the form of prayer which prevailed among the ancient prophets and we may well ponder the simple prayer given by Eli to the child Samuel: "Speak, Lord; for thy servant heareth." The great Teacher said, "When ye pray, use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking." He gave his disciples several rules for prayer which have been largely overlooked by his professed followers. One was, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Another was, "When ye stand praying, forgive, if ye have ought against any."

A careful study of the Bible shows that the highest form of prayer is that of spiritual aspiration and affirmation, a noble example of this being found in the seventeenth chapter of John. What could be more sublime than these words of Christ Jesus: "The glory which thou gavest me I have given them; that they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one;" but, as our revered Leader has said, "a great sacrifice of material things must precede this advanced spiritual understanding" (Science and Health, p. 16). The same form is used by Paul in the third chapter of Ephesians, where he prays that we may "be strengthened with might by his Spirit in the inner man;" and he goes on, "that Christ may dwell in your hearts by faith; . . . that ye might be filled with all the fulness of God." This, be it remembered, is a prayer for "the whole family in heaven and earth." When we realize the might of Spirit to overcome sickness and sin our prayer is effectual, for we know that divine Truth is "the power that worketh in us;" not alone at the dawn of Christianity, but "throughout all ages, world without end."

ANNIE M. KNOTT.

THE INTELLIGIBILITY OF DIVINE LAW.

THE world is familiar with the fact that in studying a given force or influence the phenomena which have characterized a known period of its history are naturally looked for in any as yet unknown period, and this so-called law of the maintenance of type is sure to determine the expectation of all who are investigating the subject.

In the study of Christianity this law would lead one to expect that all the vital and well-attested results which followed its acceptance in the first century would be found attending it in the fifth or twenty-fifth, and those who believe in the historic verity of the miracles of the New Testament, but who deny the legitimacy of any expectation

Digitized by Google

of their recurrence today, are therefore called upon to give reasons for the incongruity of their position. This responsibility they accept, and the usual explanation given is that Christ Jesus was unique; that he had an understanding of things, a perception of divine Truth which does not pertain to us, and which we cannot hope to acquire.

In considering this explanation we are pertinently reminded that Christ Jesus always spoke of his healing works as the result of his knowledge of Truth, hence the question of the present intelligibility of divine law is immediately precipitated. Respecting this question Christian Science has taken a position which is awakening universal interest. It teaches that in its nature all truth is knowable to us in proportion to our likeness to God, and in support of this contention it cites not only the law of the maintenance of type, but also Christ Jesus' explicit declaration that his followers should know and be made free by the truth, together with the fact of the continuance of the healing work by his disciples.

That Christ Jesus understood the law in conformity with which he healed all manner of disease, would not be denied by any believer in his miracles, and hence for them the determination of our capacity to understand this law becomes a question of the likeness of our intelligence to his. Respecting this, it will be remembered that he declared all men to be brothers, the children of his Father, and that he communed with his disciples freely and continually about the law of God, the healing truth, quite as though he both wanted and expected them to understand it. That he could have talked with them as he did month after month, of redemptive truth, its knowableness and power to make free, and of their call to continue his ministry and miracles, while knowing all the time that the apprehension of the spiritual law involved was quite impossible to them, is simply unthinkable, and for the sufficient reason that it would involve the Master in a course of deception.

It cannot be questioned, furthermore, that the keeping of the law of God is imposed on men in all the Scriptures, and especially in the Master's teaching, and that complete redemption from sin and its consequences is unequivocally assured to all who meet the divine requirements. It logically follows that the law pertaining to an ideal Christian life, the life lived by Christ Jesus, must be intelligible, since the requirement to keep a law whose meaning could not be understood would deny that justice and right dealing which certainly constitutes the divine order. The counsel that we be perfect and have dominion over sin and sickness, becomes utterly foolish unless the law of Life which leads to these results is intelligible to men.

Declaring for the divinity of man as the image and likeness of God, Christian Science not only teaches that we may savingly understand divine law, as did the Master, but it proceeds to prove it by enabling us to do those works of healing which attended his apprehension of Truth.

JOHN B. WILLIS.

MR. YOUNG TO WORK IN EUROPE.

The rapid growth of the Christian Science movement makes it expedient that another member of the board of lectureship should reside permanently in Europe, and through the Directors of The Mother Church arrangements to that effect have been consummated with Bicknell Young. Mr. Young's headquarters will be in London, England, and his office address will be announced later.

LECTURE IN THE MOTHER CHURCH.

The semiannual lecture on Christian Science in The First Church of Christ, Scientist, in Boston, Mass., will be delivered by William D. McCrackan, M.A., C.S.B., member of the Christian Science Board of Lectureship, Thursday evening, Oct. 7, at eight o'clock. The lecture will be free, and the public is cordially invited.

LETTERS TO OUR LEADER.

San Jose, Cal., Sept. 3, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—This evening, the occasion of the quarterly meeting of the members of First Church of Christ, Scientist, San Jose, Cal., we want to take the opportunity of unitedly thanking you for restoring to our Christian Science Hymnal the old familiar tunes to which your beautiful and dearly loved hymns were originally set. It has been for the past ten years or more the joyous custom of this branch church to sing each week one of your hymns, so that many of us, as well as many of the congregation, are thoroughly familiar with both the old and new tunes; but, like the dear old scenes of our childhood and youth, the old tunes touch a very tender chord, and we are deeply rejoiced to have you restore them. Your love and gentle yet firm watchfulness for the good of all is an hourly inspiration to your followers to deeper and holier consecration to Christ and his Cause. With much love,

First Church of Christ, Scientist, San Jose, Cal.
MRS. JETTORA W. HYDE, *Clerk.*

Columbus, O., Sept. 9, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—All seekers after Truth will thank you deeply for your brave and inspired declaration in the current number of the *Sentinel*, under the caption, "There is no Death." Since I commenced the study of your writings ten years ago, there has been an increasing understanding of what your teaching will lead to in its spiritual uplift, but this message to the world, bearing as it does the seal of your spiritual apprehension, and its application to a concrete case with which we are all more or less acquainted, sweeps away the last uncertainty as to the teaching of unadulterated Christian Science upon this subject. You are helping, as no other mortal is doing, to awaken the world to the recognition of the immortality of which you speak.

With sincere appreciation, and thanks,

ELLIOT HOWARD GILKEY.

Cleveland, O., Sept. 10, 1909.

Rev. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Your announcement in the *Sentinel* of Sept. 4 has explicated the Scripture, John xi. 25: "He that believeth in me, though he were dead, yet shall he live;" also John v. 24: "He that heareth my word, and believeth on him that hath sent me, hath everlasting life, . . . is passed from death unto life." Our beloved friend, Edward A. Kimball, was with us four weeks ago, and said he was "so thankful to be at home;" thus giving us the privilege of ministering to him. His masterful recognition of the allness of divine Love, and the handling of error to its nothingness, together with his deep sense of gratitude and loyalty to you for the revelation of Truth, remained with him to the last. During the last sad human rites the sense of death was almost eliminated. We still think of him as here, and will endeavor to follow you in the Christ understanding that he never died, but lives.

Having had the privilege of the Normal Class of 1901, over which he presided with wonderful ability, and having enjoyed his close friendship ever since, Mrs. Merritt and I can give testimony of his "clear, correct teaching," and are deeply grateful for your loving reference to this teaching. We join in loving gratitude for all you have done for us as revelator and Leader.

Sincerely and gratefully,

EDWARD A. MERRITT.

Digitized by Google

Detroit, Mich., Sept. 12, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Your timely message and loving tribute, which appeared in the *Sentinel* of Sept. 4 under the heading, "There is no Death," brings to us a deep sense of gratitude. It was our privilege to have been students in Mr. Kimball's class one year ago, and we fully realize the truth of your statement that his teaching "has been and is an inspiration," for the Christlike tenderness and patient love with which he so faithfully broke the bread of life to us has been and ever will be a definite help "onward in the march toward righteousness, peace, and purity" (Science and Health, p. 323). His unflinching loyalty to you as our Leader and his unswerving fidelity to your teachings as found in our text-book, "Science and Health with Key to the Scriptures," marked each progressive step. Like him, we are determined to reflect constant loyalty and love to you, for through the application of your teachings we are being led out of bondage into the "glorious liberty of the children of God."

With gratitude which words fail to express, we are

Faithfully yours,

WILLIAM C. SKINNER,
CLARA C. SKINNER.

Atlanta, Ga., Sept. 9, 1909.

Beloved Leader:—A thousand thanks for your grand trumpet tones, "There is no Death." It is reverberating through consciousness, stimulating hope, pure desire, and aspiration. God, omnipotent good, is holding you ever in His divine protection.

Devotedly yours,

SUE H. MIMS.

Kansas City, Mo., Sept. 1, 1909.

Dear Mrs. Eddy:—It is with the deepest gratitude that I wish to express my appreciation of what Christian Science has done for me. I have been healed of an extreme case of nervous prostration, also of other troubles, and have seen in our home for the past nine years various types of disease healed. The constant, daily protection which even a small knowledge of ever-present Truth gives to us, as revealed through your book, "Science and Health with Key to the Scriptures," the joy and freedom that come with the overcoming of the human experiences and burdens of mortal existence, the relief from physical suffering, the uplifting sense of man's rightful dominion over all forms of evil, fear, sin, disease, and death,—all this is surely a priceless gift to humanity in this and all the ages to come. Words are inadequate to express to you, dear Leader, what I owe you for this revelation to mankind.

With gratitude and love,

EURITH F. FETTY.

Concord, N. H., Sept. 3, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I called today at Miss Caswell's on Warren street near Pleasant View. You may remember that she makes a specialty of raising dahlias. When I saw the large, beautiful specimens of five hundred varieties, I thought how much you would enjoy seeing them, and I am sending you by express a box of selected ones.

A prominent business man of Concord (not a Christian Scientist) recently said, "How much we miss Mrs. Eddy; she was so progressive and did so much for Concord. Is there anything we can do to get her back? If a petition signed by the best and leading citizens of Concord will do it, we will quickly get up one." You will be pleased to know that many new faces are to be seen at our church services, and that some good healing is being done in Concord and in other parts of New Hampshire.

With ever-increasing gratitude and love,

Faithfully yours,

CHARLES B. JAMIESON.

Manchester, Eng., Sept. 3, 1909.

Dear Mrs. Eddy:—We rejoice to be able to tell you of a further step in the progress of Christian Science in Manchester. At a meeting of members of First Church of Christ, Scientist, Manchester, the following minute was recorded: "The full attendance at the church, notwithstanding the holiday season, makes it imperative to establish forthwith Second Church of Christ, Scientist, in Manchester; and in view of the fact that a large proportion of the congregation reside in or near Didsbury, it is resolved that the members of this church resident in Didsbury and its neighborhood be asked to resign their membership in First Church and to organize Second Church of Christ, Scientist, Manchester."

The response to this loving invitation to form another branch of The Mother Church in this city by the members of First Church of Christ, Scientist, Manchester, was promptly and cheerfully acceded to by those indicated in the resolution, and Second Church of Christ, Scientist, Manchester, has been organized today.

First Church of Christ, Scientist, Manchester, was organized in July, 1902, and during these seven intervening years it has so grown in unity and activity that the members welcome and rejoice in the privilege this growth necessitates, the formation of another branch church. The members of Second Church are not conscious of any separation, as we all realize that we are members of one universal church of Christ, and our purpose and joy will be to strive zealously to ensure unity of thought and action in all things. We feel sure it will give you joy to know that the members of Second Church are appointing as First Reader one who was formerly an active minister of another denomination, but who is now devoting his whole service to the Cause of Christian Science.

Our desire is that our gratitude to you, our dear Leader, may find its fullest expression in letting our lives attest our sincerity by works, so that the sick may be healed and the sorrowing ones comforted.

Yours gratefully in love and truth,

The Members of Second Church of Christ, Scientist, Manchester, England.

Sewickley, Pa., July 27, 1909.

Beloved Leader:—I would that all were familiar with your interpretation of loyalty in students as given on page 50 of "Retrospection and Introspection." The reading of this destroyed my latent fear that in becoming a member of The Mother Church, and a student of one of your loyal students, I might be called upon to surrender some individual right. Through the study and practice of Christian Science I have gained a consciousness of freedom beyond any previous concept of liberty. "The despotic tendencies, inherent in mortal mind . . . must be rooted out through the action of the divine Mind;" and through an understanding of God as divine Principle, Love, we are relieved of the responsibility of personal control.

In a letter to a student in the *Journal* for March, 1900, you said, "Christ is meekness and Truth enthroned. Put on the robes of Christ, and you will be lifted up and will draw all men unto you." This I am endeavoring to do. To be fitted spiritually to serve you, either personally or through serving mankind, is my prayer.

With ever-increasing appreciation and love,

Your student's student,

(MISS) M. GERTRUDE YATES.

THE LECTURES.

RUTLAND, VT.

The Rev. Arthur Reeves Vosburgh of Rochester, N. Y., delivered an address on "The Idealism of Jesus" to an audience of about one hundred assembled in Bethany church last Thursday evening [Aug. 12]. He was introduced by Principal E. G. Ham, who said in part,—

I am glad to stand shoulder to shoulder with any man who is honestly seeking to know the truth, though our views may be far apart. So only can we be fair to each other. Tonight Bethany church opens her doors to believers in Christian Science, not because she believes in it, but because she does believe in fair play. This church is taking a broad and progressive stand on many matters in this community, and is honestly searching for the truth. She will not deny to others what she claims for herself. She asks that we be honest and open-minded in matters of religious faith, that we do all in our power to make the truth known.—*Herald and News.*

OCONOMOWOC, WIS.

A large number of people listened to a lecture on Christian Science at the Auditorium on Sunday afternoon [Aug. 15], by Miss Mary Brookins of Minneapolis. In introducing the speaker, Judge Loren Edwards said in part,—

What is truth? Many honest and thoughtful investigators in the different ages have believed that they had discovered the answer, but the years have proved their mistake. The teachings of Jesus marked a great advance, from the material world into the spiritual. He taught that the Father was a Spirit, and that he who would worship the Father must worship Him in spirit and in truth. The worship of material images and idols was from that time doomed. Humanity advanced to the great plane of the spiritual life. The Christian church began its conquest of the world. The Christian Science church has made an advance, and teaches a more spiritual life—that the spirit of good fills the world and leaves no room for the material and evil. It has made great advances, building beautiful edifices and gathering into its fold great numbers of the intelligent men and women of every community. Those of us who are not Christian Scientists recognize the great good accomplished—the sick have been healed, the blind have received sight, and the poor have had the gospel of Christian Science preached to them.

Oconomowoc Free Press.

KENNEBUNK, ME.

A lecture was given Monday evening [Aug. 16] at the Mousam Opera House, under the auspices of the Christian Science society of this town, by Frank H. Leonard of Brooklyn, N. Y. The lecturer was introduced by Charles E. Lord of Newton, Mass., who resides during the summer months at his delightful farm, "The Elms," about two miles from this village. Mr. Lord spoke briefly, saying in part:

In behalf of the Christian Science society of Kennebunk I am very glad to welcome you this evening to a lecture on Christian Science. Christian Science is a religion which shows definite and practical results in healing both sin and disease, and it brings to all a loving message of hope and encouragement, as thousands are testifying by their daily living.—*Eastern Star.*

LECTURES TO BE DELIVERED.

Redfield, S. Dak.—Bliss Knapp, Opera House, 3 p.m., Sept. 26.
Dickinson, N. Dak.—Prof. Hermann S. Hering, Opera House, Sept. 30.
Oak Park, Ill.—Judge William G. Ewing, Warrington Opera House, Oct. 1.
Fremont, O.—Bliss Knapp, Colonial Hall, Oct. 2.
San Diego, Cal.—Judge Septimus J. Hanna, Auditorium, Methodist Church Block, Fourth and D streets, Oct. 3.
Crawfordsville, Ind.—Frank H. Leonard, Music Hall, 8 p.m., Oct. 3.
Peoria, Ill.—William D. McCrackan, M.A., Grand Opera House, Sunday afternoon, Oct. 3.
Norwich, Conn.—Rev. William P. McKenzie, Broadway Theater, 3 p.m., Oct. 3.
Norristown, Pa.—Bliss Knapp, City Hall, Oct. 4.
Bucyrus, O.—Frank H. Leonard, Oct. 4.
Springfield, O.—Frank H. Leonard, Oct. 5.
Indianapolis, Ind.—Clarence C. Eaton, Oct. 7.
Milford, N. H.—Bliss Knapp, Town Hall, Oct. 7.
Saginaw, Mich.—Frank H. Leonard, Oct. 7.
Ottumwa, Ia.—Mrs. Sue Harper Mims, Oct. 7.
Riley, Kan.—Miss Mary Brookins, Oct. 8.
Northampton, Mass.—Prof. Hermann S. Hering, City Hall, Oct. 8.
Wabash, Ind.—Frank H. Leonard, Oct. 8.
Guthrie, Okla.—Miss Mary Brookins, Brooks Opera House, 3:30 p.m., Oct. 10.
Mitchell, S. Dak.—Judge William G. Ewing, Oct. 10.
Milwaukee, Wis.—Prof. Hermann S. Hering, New Auditorium, 3:30 p.m., Oct. 10.
Council Bluffs, Ia.—Mrs. Sue Harper Mims, Star Theater, 3 p.m., Oct. 10.
Keene, N. H.—Frank H. Leonard, Wildey Hall, Odd Fellows Building, Oct. 11.
Webster City, Ia.—William D. McCrackan, M.A., Oct. 12.
Independence, Ia.—Mrs. Sue Harper Mims, Gedney Opera House, 8 p.m., Oct. 12.
Chicago, Ill.—Prof. Hermann S. Hering, at Second Church, Oct. 11, 12, and 14.

There is another kind of silence to be cultivated, beside that of the tongue as regards others. I mean silence as regards one's self—restraining the imagination. Be sure that you have made no small progress in the spiritual life, when you can control your imagination so as to fix it on the duty and occupation actually existing to the exclusion of the crowd of thoughts which are perpetually sweeping the mind. If you cannot prevent those thoughts from arising, you can prevent yourself from dwelling on them; you can check the self-complacency, or irritation, or earthly longings which feed them, and by the practice of such control you will attain that spirit of inward silence which draws the soul into a closer intercourse with God.

JEAN N. GROU.

NOTICE.

The clerk of any Christian Science church will confer a favor if he will send the Editorial Department a report of any transaction or undertaking pertaining to the church, which may prove of interest to the Field. All newspaper clippings which refer to such transactions should be looked over carefully before being mailed us, and corrected if need be.—THE EDITOR.

TESTIMONIES OF HEALING.

How thankful I am to God for healing my diseases and for this wonderful truth as revealed to us through our text-book, "Science and Health with Key to the Scriptures." I always loved to read the Bible, but did not understand it then as I do now; and it is much more beautiful to me. All the promises now seem so true and real, and they are all for us today. As we read in Jeremiah, "I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord." I hope that this testimony may give courage to some hopeless sufferer.

My case was considered hopeless, according to *materia medica*, for my physician (to whom I am grateful for his efforts to restore me to health) at last told me that the less medicine I took, the better. I realized then that God alone could cure me, but how this was to be accomplished I did not know. I believed that, as James says, "the prayer of faith shall save the sick, and the Lord shall raise him up;" but I did not have that faith. In February, 1906, I was taken sick with a severe gastric disorder, and a physician kept me on a strict diet for five months, but this and the drugs did not benefit me. We then took a trip overland to the Yosemite and were gone eight weeks. I seemed to be much benefited for a while, but in November I took cold and all the old symptoms returned. I gradually grew worse, and the following February the doctor pronounced my case a serious affection of the stomach and both lungs.

About three weeks before I turned to Christian Science, the disease which had affected the lungs appeared in my throat, and I continued to fail until the latter part of April, when I gave up all hope, for my prayers had apparently not been answered. The doctor could do no more for me, but I could not be resigned to leaving my husband and three little ones. In my anguish I cried aloud to God, and He answered me, for in the morning my husband went to see a friend, and together they concluded that Christian Science was the only help for me. That afternoon this friend went with me to a practitioner, who gave me treatment, then told me to eat anything I wanted. I ate for supper the same as the family had, and it did not hurt me; nor has food ever hurt me since. Three days later, when my maid left me, I cleaned a room, and have done all my housework ever since.

I was healed in twenty-three treatments, given between April 27 and July 2, 1907. There can be no doubt about my healing, for on July 26 of the same year I walked, with two other women as my companions, to the top of a mountain (10,500 feet above sea level) and returned the same day, a distance of over twelve miles. This promise was with me all that day: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." I can truly say that I was not tired that night and never have been since my healing. When half a mile from camp, it became so dark that we could not see the path, and four times we waded a stream, which varied in depth from six to eighteen inches. Even then I did not fear, for I remembered these promises: "I will never leave thee, nor forsake thee;" "I will instruct thee and teach thee in the way which thou shalt go." We were led along safely, and at the first camp we met a party in search for us, as they supposed we were lost or too weary to return. The next day I was as well as usual. I made the same trip about three weeks later, with a party of young people, coming down from the top in two hours and five minutes.

I thank God not only for the physical healing, but for the joy and peace which I have gained, and for the understanding of our heavenly Father, and His willingness to answer prayer. I used to "ask, and receive not," for I asked "amiss." Now I am learning how to "ask in faith, nothing wavering," so that when my children come to me with reports of ailments or accidents, I can receive an answer to my prayer. Our baby, at the age of two and a half years, had a most serious attack one evening. I went to the telephone and asked a Christian Science practitioner to treat him, and when I returned to the child he was coming out of the attack. That night he had no fever, whereas, before, under such conditions, we usually had to sit up most of the night and give him medicine. A few days later, he began to have symptoms of the same trouble, and he said, "Mama, pray for me." I took him to the next room, and in about ten minutes he was able to eat his supper.

My daily desire is that I may so live as to be worthy of all these blessings and many others, including my own healing.

MRS. CORA A. ARBUTHNOT, Pomona, Los Angeles Co., Cal.

[Translated from the German.]

It is six years since I first heard of Christian Science. At that time I was suffering with severe headaches, chronic throat trouble, and bowel disorders, for which I had consulted many physicians without getting relief. They all told me that I must give up my profession and lead a quiet life. I followed their advice, but without any good result.

Christian Science was then brought to my attention through a friend. I became a close attendant of the meetings, secured the *Herold* and other scientific literature, and through zealous reading and study gained sufficient understanding to mitigate my troubles. I also bought a copy of the text-book, although I did not understand a word of English. I, however, began to study earnestly, and today I am able to read and to translate that book, and also the other publications, quite well, and have gained sufficiently in understanding so that not only have my old complaints left me entirely, but I have also been enabled to help others.

Thus Christian Science has become an ever-present help to me, and I trust that this new-old faith may be understood as vital Christianity by every one, for I have proved that it can be applied not only in cases of sickness but in daily life as well. It awakens humanity from the delusion that everything is mere chance, as it shows that there exist positive spiritual laws, which work infallibly and produce effects accordingly. The farther one gets in an understanding of Christian Science, the more he sees what a debt of gratitude we owe to Mrs. Eddy, who has separated true Christianity from the rubbish of materialism. May all humanity soon profit by her teachings.

CONRAD LEIMBACHER, Basel, Switzerland.

I take this opportunity to express my thankfulness for the benefits received from Christian Science. I give my testimony gladly, hoping that it may be the means of helping others to find the truth, and also healing from disease. I had suffered for a number of years with uterine trouble; I had tried many physicians, but they could give me no permanent help. At last the doctor pronounced the disease a malignant growth, and gave me up to die. I was very low for weeks, and then we called in a Christian Science practitioner. In one week I was able to sit up, and I am now completely healed. The desire for an opiate, which had been given me because of the great suffering, was destroyed at once.

When I look back and see how I have been led out of bondage, I am filled with gratitude to Mrs. Eddy for showing me the way to health. With thankfulness to God, I close this testimony.—MRS. ELLA MOTT, Elkhart, Ind.

Digitized by Google

Three years ago, on a Wednesday before Thanksgiving day, I had reached that state of consciousness where "man's extremity is God's opportunity." I was not physically ill, but my husband had been sentenced by our family physician, and close friend for seven years, to not less than six months in a sanitarium, with little hope of a recovery from a complication of diseases. I could not see a ray of hope anywhere, and in my intense mental anguish I went to a Christian Science practitioner. I was so excited that I could scarcely tell my need, but in less than an hour I came away calm and hopeful.

On Saturday of the same week the physician called me up and said that if I did not take immediate steps to follow her advice in regard to my husband, she would have to ask to be released from all responsibility in the case, urging many reasons, such as duty to my husband and his family, for my following her advice. My husband was opposed to going away, and was not capable of deciding for himself, so I released the physician. The calm, strong trust of the Christian Science practitioner had convinced me that she knew the truth which would free myself and family. As my fear was overcome, all conditions of limitation and discord were improved, as well as my husband's physical condition. He voluntarily gave up the medicine, and began at once to read Science and Health with me. I also had one week's treatment. He missed but a few days from business, and had no treatments until the February following, when he was healed of the desire for tobacco and liquor in one treatment, and in a week's treatment was completely healed of the diseases from which he had suffered.

I also have been healed of chronic catarrhal, stomach, and bowel disorders, and of hay-fever and asthma, from which I had suffered every season for fourteen years. The latter healing was gradual, the final deliverance coming at a Wednesday evening meeting in the midst of the so-called hay-fever season, and as a result of a testimony which uncovered a most subtle error in my consciousness. We have had no other physician in our family of five for almost three years; Christian Science has overcome all our ills, physical, mental, moral, and financial. I am grateful for the Christian Science literature, because it was through a *Journal* sent me by a friend, the only Scientist in a small village in Mississippi, that I turned to Christian Science, and from it I secured a practitioner's address in my extreme need. I am grateful for the silent testimonies given in the joyous faces which so much impressed me when I first went to a Christian Science church. I am grateful for every feature of the church services; to me they are healing, comforting, and instructive.

I am grateful for a larger understanding of God, whom to know aright is life eternal, here and now. No language is adequate to express my gratitude to our beloved Leader for the healing truth revealed in "Science and Health with Key to the Scriptures." My greatest desire is to be a living witness to the healing and regenerating influence of Christian Science.—MRS. SUSIE E. SAMS, Chicago, Ill.

About five years ago our little son accidentally shot me with a toy pistol which had been loaded with what is known as a B.B. shot, and the wound was the most painful I ever felt. The shot entered the fleshy part of my leg, and I limped for ten days. It then took me six months to overcome the after-effects of the wound, and one night especially, I remember that I was afraid to go to bed, as I feared I was about to die. A great deal of fear was held for me, and I was told of people who had passed on from blood-poisoning, the effect of pistol wounds, etc. I had a battle to fight, and I fought it alone with God, for I knew that Truth was on my side. The shot came to the surface in six months from the time of the accident, and the same surgeon who at the time of the accident probed for it but did not find it, took it out, as it was right under the cuticle. I asked if it was not unusual for shot to travel in that way, and he said, "Yes."

It seemed necessary to narrate the above to explain the nothingness of disease, which came to me in a new guise recently. Some friends were telling me of their trials, and to encourage them I gave them the above experience. Later in the evening, the old scar, or identical spot of the old wound, began to trouble me, until I thought that something had surely stung me, and before the illusion became clear to me I began to feel that I would have to do something about it. I had to laugh as I discovered the subtlety of the error. I declared the truth vigorously, and that was the last of the pain. As I think of this experience I see that there was no cause whatever for a relapse, or a return of the pain, except the belief in error.

I love and revere our dear Leader for teaching us that God is Love; for teaching that it is necessary to deny error, even while speaking of it to elucidate a point.

JEANNETTE M. MOORE, Ardmore, Okla.

Although I do not consider myself a Christian Scientist, I would like to tell what Truth has done for me. Last March I was wearing a truss for a hernia which had troubled me for about fifteen years. I had worn a truss much of the time, especially when doing heavy work, but my wife, who is a student of Christian Science, treated me, and I have not worn one for over four months, although I have in the mean time done some heavy work, and some that required much reaching. One day I carried fifteen bushels of ashes from my cellar up a flight of stairs without any fear of injury. At another time I had a painful swelling on my neck, but I was healed of that in one treatment. I have also been healed of rheumatism and a troublesome skin disease. I send this testimony in the hope that it may benefit some reader of the *Sentinel*.

JOS. H. WARREN, Dexter, Maine.

In view of the possibility that some one who reads the *Sentinel* may still doubt that "with God nothing shall be impossible," I take this opportunity to speak a word of encouragement to those who seemingly cannot realize God's power to heal. Not long ago I severely injured my left hip and knee. The sense of pain and fear tried all night long to persuade me that life and intelligence are in matter, and I was in a place where I had to work out my own salvation. In the evening I retired with a misplaced and painful hip, but awoke in the morning to find my hip in its right place though still very sore; it had been restored during the night by divine Love, without my knowing it. Before a week had passed my hip and knee were both perfectly well and without the slightest trace of soreness.

The omnipotence of God has been proven for me in many other ways. I have been healed of appendicitis, acute lung trouble, and numerous small but very aggravating and disagreeable sicknesses and injuries. When I was thirteen years old I was healed of a very strong desire for tobacco. Through will-power I resisted the temptation for two weeks, but then that gave way and I had to turn to God for protection from the false desire. I had been taught at home that it was wrong to do such things, nevertheless that teaching did me no good until I realized the all-powerful help of our Father-Mother God, through my understanding of Christian Science, to show me the right way to go. As soon as I had left the thing in God's hands, and realized that "reform comes by understanding that there is no abiding pleasure in evil" (Science and Health, p. 327), there was not the least physical effort needed on my part to overcome the desire. In one day

Digitized by Google

and a half I was free, and have never had any temptation to touch tobacco since.

Should I not then be willing to prove my gratitude by my daily life, when I have been shown the path through a field of plenty and comfort, and have been spared the trials of ill health, due to a false concept of God and man? Though words are inadequate, I try to express my gratitude to our beloved Leader, Mrs. Eddy, who has shown us how, through the right understanding of God, we may have the Mind "which was also in Christ Jesus." I am indeed very thankful for what Christian Science has done and is doing every day for me and for our family. For ten years we have been able, through Christian Science, to prove that there is nothing impossible with God. I can say with David, "Yea, though I walk through the valley of the shadow of death, I will fear no evil."

PAUL L. SANDAHL, Omaha, Neb.

I feel that I should, through the *Sentinel*, give public expression to my gratitude for what Christian Science has done for me and my family. Two and a half years ago I was an active and faithful church-member, but for some time I had gradually been losing interest in the church. I had gone to the services partly from a sense of duty, and partly because I was hungering for spiritual truth, for which I looked in vain. As I went about my home duties day after day, the thought would come to me, What is this life for, anyway? Why did God place us here to go through with so much trouble, sorrow, and pain? I questioned most seriously the meaning of it all, and like a flash it seemed as if a curtain in front of me had parted, but only for an instant, to give me a glimpse of something of which I longed inexpressibly to see more. I prayed most earnestly to God to lead me, and to make me and all my family what we ought to be.

Soon after my daughter, who was attending school in Chicago, wrote me concerning a friend who had been greatly benefited by Christian Science treatment after the doctors had failed to cure her. I happened to have in the house a pamphlet published by a chemical company, containing some lectures by a well-known clergyman against Christian Science. From this pamphlet I made several quotations in my reply to my daughter, who I feared was being misled. My husband, who was a medical practitioner at that time, proposed that we bring the younger daughter home, to save her from the false views evidently held by her older sister, but this I was really unwilling to do. Then came the thought that the older daughter had received enough training at home to help her to distinguish between what was right and wrong according to the Bible teaching, but in her next letter she asked, "If we can accept some of the sayings of Jesus, why cannot we accept all?" Then came a sharp realization of the fact that I had not been accepting all of Jesus' sayings, but that I had been considering some of them as applicable only to centuries long past, and without any right reason for so thinking.

The pamphlet referred to above had spoken of the "vague meaning and generally unsatisfactory wording" of Mrs. Eddy's writings. This expression, coming from a minister, aroused my curiosity at once, and I resolved, if I had a chance, to read Science and Health for myself. Far sooner than I could have expected, the chance came. My husband had been troubled with rheumatism for some time, and one day on his way home from town he stopped in at a neighbor's to rest. On arising to go home he complained of his trouble, and the lady told him he did not need to suffer that way. She then explained Christian Science to him for a while, told him she would give him treatment (for he had no faith in material remedies for his trouble), and loaned him her copy of Science and Health and some *Sentinels* and *Journals*. He was helped in a short time. The disease left and has never returned, although he has been exposed to wet and cold even worse than before,—the very conditions which he had in the past considered the cause of his trouble.

We began to read the testimonials eagerly. I remember what a hope sprang up in my heart when I read one which told of a child whose crossed eye had been straightened. My youngest daughter's right eye had been turned very considerably since her babyhood. It was a great grief to me, and every one was recommending an operation. I concluded to ask for Christian Science treatment for her without consulting my husband. I did so, and in a few weeks I saw a difference in the eye, but I was impatient and somewhat fearful. I was going to Kansas City with the child, then five years old, for a visit, but mostly because my friends were anxious for me to consult an oculist. After I was among my friends, who were much prejudiced against what they thought was Christian Science, the eye appeared to be much worse than when I left home; so I was persuaded to visit the oculist, who prescribed glasses, which he said would have to be worn constantly and changed every two or three years. He said the child would have to wear glasses many years, and for close work all her life. When the glasses were on her eye seemed straight, but it turned at once on their removal.

In a few days I returned home, and I then set to work to carry out my firm determination to find out what was in Christian Science. After I had read for about three weeks it suddenly dawned upon my consciousness that to put faith in matter is not to trust God; then I had to choose whom I would serve. I saw that lifeless, non-intelligent matter could not do anything toward straightening the child's eye, any more than the Hindoo's idol of wood or stone could help him. From that moment the glasses did not seem to do her any good, for the trouble was just as bad with them on as when off. I kept on reading Science and Health and gradually gained more understanding. Then I laid aside the glasses, resolving never to put them on the child again, and my heart overflowed with joy, for I saw that her eyes were perfectly straight, and—what was so wonderful to me—they were far more beautiful than ever before.

I had not sought Christian Science with any view of physical help for myself, but when I was about half way through with the reading of the "little book" I realized that I had been healed of a diseased condition from which I had suffered for twenty-eight years, and which a professor of a well known medical college had pronounced an affection of the bone, caused by a bruise on my hip. Many times I had prayed for my trouble to be removed, but all to no purpose it seemed. I knew this was due to my lack of faith, but how could I acquire the needed faith? I would read the Master's words as recorded by Mark: "Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." How I wished I could understand that verse! But "Science and Health with Key to the Scriptures" by Mrs. Eddy threw such a light on this text that I saw the meaning clearly, and my trouble left me that instant. Then truly could I say, "Bless the Lord, O my soul: and all that is within me, bless his holy name." God had healed me of my disease!

Every year I used to take a cold in August or September, which would last about a month, despite my efforts to cure it with medicine, in which I then had almost unlimited faith. Since studying Christian Science my fear of taking cold has been overcome to such an extent that I have passed the last two summers without these attacks. It has also helped to remove the fear I had for my children, who are now far more free from colds than ever before. On several other occasions when help was needed I have been

Digitized by Google

enabled to overcome the discordant conditions through the understanding of the truth which Jesus said would make us free.

At first I was up in arms against what I feared Christian Science might be, for no other reason than that it was not considered "orthodox." Now I realize that it came to me as a direct answer to my prayer for God to lead me; and only those who have had similar experience can understand my gratitude to God for this blessed light. Thank God that one noble woman was such an earnest seeker after the truth as to pursue her way till she found it, and then to make plain the path to as many as are willing to walk in it. It is my most earnest desire to live so as to be really worthy of being called a Christian Scientist, and to be able to prove by my works that I am a true follower of Christ Jesus, who said that those who believed on him should do the works that he did.

MRS. ADA M. H. MILLS, Mena, Ark.

I have been studying Christian Science over two years, and am very grateful for the happiness and the peace of mind it has brought into my life. I did not come to this Science for physical healing, but I find that a number of ailments have disappeared, particularly that of nervous headache, from which I suffered frequent attacks for about fifteen years. When I was sixteen years of age I had a growth removed, and the wound never healed properly; but I am very thankful to say it has only opened and discharged once since I began to study Science and Health, and that was a year and a half ago. We had only been studying Science a month when our oldest child, nine years of age, was healed in one treatment of a very aggravated form of illness. A few months later the youngest child, five years old, was healed of an eruptive fever in one treatment. We were at this time living in a house with a physician, and he was very much surprised to find that the child did not have any one of the numerous disorders which, as he said, usually follow "a neglected case" of this kind.

I particularly wish to speak of an experience I had recently. I became very ill, and not knowing what the trouble was and fearing that it might terminate seriously, we were very much alarmed, and called a prominent physician of this city. He said that I had a very bad case of abdominal trouble. My suffering was intense; I could neither eat nor sleep, and the only relief that I got was while under an opiate. The doctor kept me packed in ice, and gave me several kinds of medicine; he kept up this treatment for almost two weeks, and then said I would have to go to the hospital for an operation. I had always had a great fear of operations, and had had a previous experience of that kind, so instead of my going to the hospital we called a Christian Science practitioner, who gave me one week's treatment. Before the close of the week I was out of bed, and in ten days was able to do my own work, and have been in perfect health ever since.

I am truly very grateful to Mrs. Eddy for bringing us this wonderful truth that does make free from the law of sin, disease, and death.

MRS. W. J. WISWALL, Portland, Ore.

After the healing of my daughter by Christian Science, I began to read and study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I then concluded to take treatment of a practitioner for an affection of the stomach and bowels, from which I had suffered twenty years, and in two months I was completely healed. My case had been diagnosed by one physician as tubercular disease of the bowels; by another, as a serious disease of the kidneys, others were wholly unable to classify it. With the complications that ensued, my condition was most distressing. I tried many physicians and all kinds of medicines; there was not a day I did not take some opiate, and I was on a rigid diet all the time.

In the four years since I was healed by Christian Science I have not taken one drop of medicine, and I can eat anything that is set before me. I am thankful to God, and grateful to Mrs. Eddy for the spiritual uplifting which I have received, also for the revelation of the truth which enables me to free others from the bondage of physical ills. My greatest desire is to get a better understanding of this healing truth.

MRS. FANNIE E. MARSHALL, San Francisco, Cal.

I was born in Russia of very poor parents, and when only a child was left alone in very poor health. The knowledge which I possess was gained through my own efforts, though all my life I suffered from ill health. My ambition was to find the truth through art, poetry, beauty, and social movements, atheism, etc., but all in vain. I learned that every human system, every movement and every doctrine, is only temporary, and like old clothes is changed for new. I lost ambition and hope in seeking relief, had spent nearly all I had on medicine, and was expecting to go to a sanitarium when I accidentally visited the home of a Christian Science practitioner. In spite of the fact that I was a freethinker, from an orthodox Jewish family, without any knowledge of Christian Science, and had in my possession but a single dollar, I did not hesitate to pay the noble woman for one treatment. In the name of divine Love she saved me from death. I cannot describe my misery and suffering up to the time of that first treatment, and the good health I have enjoyed ever since. I started to read "Science and Health with Key to the Scriptures," and began to understand something of God and also of the human Jesus, and the answer of that godly woman, Mrs. Eddy, to the question, "What is truth?" By relieving myself of all the thoughts of the past, I have attained the happy results in which I at present rejoice. I am convinced that the Jew's safety is in this understanding of Truth, and that the obligation of every Jew is to begin the struggle for his Jewish brethren. Of late I have made my home in Winnipeg, where I enjoy the best of health through the truth revealed in Christian Science.—JAMES FRIEDMAN, Winnipeg, Can.

[Written for the *Sentinel*.]

OMNIPOTENCE.

MARION COOK STOW.

ABOVE the battle's din and mortal fray,
Love holds its own;
Amid beliefs that mock and cloud our day,
Mind rules alone.

Across our path, dark error's shadows fall;
Fear seemeth real;
We scarce can see the sun which, conquering all,
God's truths reveal.

Hearts warped and weary with the fruitless strife
And fears of men,
Must needs draw near the very Life of life,
For peace again.

Then error pales; for in the deepest night
God reigns supreme;
His watchful care, redeeming earth with light,
Dispels the dream.

All power unto me is giv'n, Christ saith,
In heaven and earth.
Let understanding bloom from timid faith,
And truth have birth!

FROM OUR EXCHANGES.

[Rev. A. A. Pfanstiehl in *Christian Work and Evangelist.*]

Amid the present-day luxuries and comforts and opportunities—the world has never known these to be so many and alluring—there still goes up an ominous cry of discontent. The capitalist is uneasy, the laborer restless, and relations between the classes and the masses are strained almost to the breaking-point. The churches of Jesus never were so rich in money, equipment, luxuries, costly meeting-houses and numbers of members as today; and yet there never has been a greater need, whether wanted or not, or consciously felt or not, for showers from on high to bring strength, life, hope, enthusiasm, comfort, contentment into the hearts of church-members than now! Why? Who can answer? May the answer not lie in reply to the question of Jesus: "When the Son of man cometh, shall he find faith on the earth?" The faith that binds the heart in love and service to God in him? When and where he does find this faith, he finds comfort amid distressful conditions, hope amid discouraging outlooks, a note of joy amid troubles, whether in the palace of the rich or in the hovel of the poor.

[*Christian Work and Evangelist.*]

There is some quality in the mind of the common people which is potent to dissolve systems. Theological systems are erected as a sacrifice to logic, and "the common people" are not logical. The living part of Christianity—the Christianity Christ taught—produces very much the same result in simple people, no matter under what form they receive it. They still hear Christ gladly, and give but a conventional attention to the scribes. People who have to work hard in order to live have very little time or thought to spare for theological reasoning. Moreover, it wearies them. But every one has time for hope, and hope confirmed is the most prolific source of joy. Christ gathered up and expressed the hope of the world, in terms of faith.

[*New York Observer.*]

There is no such thing as failing when each Christian performs his or her God-given task in the spirit of absolute devotion to the will of Jehovah. Leadership essentially, when analyzed into its structural elements, is a combination of qualities and capacities which may be collectively described as efficiency, and there is no efficiency in the world like that of the life which is utterly consecrated to God and His service. The call today—and ever—is for leadership, and the supreme leadership is that of the Lord Himself, and when His will is obeyed, things get on.

[Rev. Frederick A. Bisbee, D.D., in *Universalist Leader.*]

I am not a prophet, and yet I have faith to proclaim that we are standing in the twilight of a dawning day in which the light of reason, love, and truth shall shed new glory over life. I see old views retreating, and religion, no longer the laggard lingering in the rear of human progress, but the advance guard, on whose banner, as it glistens in the morning sun, I trace the lines of divine purpose and human consummation in the picture of the perfect man.

[*Outlook.*]

It is not by thinking or feeling, but by doing—that is to say, by actual experience—that we get the knowledge and the command of ourselves. And there is no other way. We create ourselves by translating our feeling into thought and our thought into action.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Postmaster General, with the object in view of securing greater economy and equal efficiency in handling the postal business, has ordered a complete examination of the methods in vogue in every branch of the service. Forty odd experts are now making a thorough examination of the registry department, which has been showing a growing deficit year after year, and has far outgrown the methods that were first employed in it. It is his intention to bring it down to a more businesslike institution. Later a commission of money order experts will make a similar examination of the money order division, which also has been showing a growing deficiency. After the money order division has received an overhauling, work probably will be begun on the rural free delivery system to ascertain if there is any waste of efforts or funds, and to conserve both. The subject of the "franking" privilege, or the sending of matter through the mails free by Government officials and members of Congress, will also come in for a share of consideration in the effort to maintain the efficiency of the service, and at the same time save money wherever a saving can be effected. This system has been very expensive, and is in part responsible for the heavy deficit of $3,000,000 in the registry division.

The General Federation of Women's Clubs announces a scholarship of $1,500 at either Oxford, Cambridge, or London university for the year beginning October, 1910, to be awarded to an American woman. College graduates whose age does not exceed twenty-seven years may take the qualifying examinations, which are the same as provided for men who are competing for the Cecil Rhodes scholarships. These examinations are to be held in every state in the Union Oct. 19 and 20, and are in mathematics, Latin, and Greek. Admission will be allowed only upon the written certification of a candidate by the national chairman of education of the General Federation, and will be issued only upon the request of a state federation president or chairman of education. The applicant must file credentials regarding her good health, her mental and moral qualities, her literary and scholastic attainments, and her promise of distinction.

An inventory of the forest resources shows that we are taking every year three and a half times as much wood as is added by the new growth; less than one third of the growing tree felled by the lumberman is ever used at all, so that two thirds of all the timber cut is simply destroyed; that one eleventh of all the forests are swept by fires every year, and that on the average since 1870 forest fires have yearly cost $50,000,000 in timber; that over ninety-nine per cent of the forests in private hands—which comprise three fourths of all the forest land and four fifths of all the wood—is thus devastated by destructive use and the scourge of unchecked fires, while less than one per cent is properly handled for successive crops or effectively protected from fire.

A suit against the United States for $61,287,800 probably will be tried by the United States Court of Claims during the coming winter. This suit was instituted some time ago by the Missouri, Kansas & Texas Railroad Company, one of the land grant railroads, by the filing of a petition in which it was alleged that by acts of Congress the United States had agreed to convey to it in fee simple title to every alternate section of land to the extent of ten sections per mile on each side of its line through the Indian Territory and Kansas, and that subsequently many of these lands had been deeded to the Indians in severalty, and had otherwise been disposed of to the loss of the railroad company.

Expert road builders, promoters of good roads, and the manufacturers of road-making machinery to the number of several thousand met at Cleveland, O., last week for a three-day session of the second annual good roads convention. Delegates to the convention included governors and Government officials, delegates from practically every state in the Union, delegates from cities, representatives of the American Automobile Association and delegates from scores of automobile clubs and many state granges.

The Department of Agriculture is showing activity throughout the country in enforcing the pure food law against food products which are decomposed, mildewed, wormy, or otherwise unfit for food. Two pie-bakers in Washington, who make pie on which thousands of Government clerks make their noon luncheons, have lately been deprived of large quantities of wormy raisins and mildewed and wormy evaporated peaches. Large seizures have also been made of wheat flour and corn flour utterly unfit for food.

At Montrose, Col., last week President Taft operated the electric connection which officially opened the Gunnison irrigation tunnel. This tunnel was the first project undertaken by the United States Government Reclamation Service, and the work on it has been progressing steadily for four and a half years, entailing an outlay of five million dollars. It conducts water from the Gunnison river to the arid Uncompahgre valley, and will irrigate one hundred and fifty thousand acres of land.

A sounding balloon sent up at Pittsfield, Mass., by the Blue Hill Observatory ten months ago, has just been returned. Its automatic recording instruments showed that an elevation of eleven miles had been reached, and a minimum temperature of 54.5 C. below zero at an elevation of eight miles, above which lay a stratum of air 8 degrees C. warmer.

When the delegates to the International Tax Association met at Louisville, Ky., last week for the second session of their annual convention, there was much discussion of the suggestion that a joint conference of governors be called in the near future to consider uniform tax legislation.

According to the figures compiled in the current number of the *Journal of the American Medical Association* 210 lives were lost in the celebration of July 4 in the United States.

William MacAbee, the only surviving member of the crew of the old frigate Constitution, last week celebrated his 106th birthday in the Naval Home in Philadelphia.

International.

This fall Turkey at her own expense is sending two hundred of her young men to European schools to be educated, and five young women to the American College for Women at Scutari, near Constantinople. The Turkish Normal School for Girls in Stamboul, numbering five hundred students, has recently requested the American College to recommend an American teacher to undertake the supervision of that school.

The success of aviation week at Rheims prompted the holding of another such meeting in Berlin, beginning Sept. 26. Fifty thousand dollars in prizes are to be given, and among the entries are Farman, Bleriot, Latham, Le Blanc, Rongier, Besa, Edwards, Orville Wright, and Dufour.

Industrial and Commercial.

Except for a few short distances, totaling one hundred and twenty-seven miles, automatic block signals now extend from the Atlantic to the Pacific ocean. According to the *Railroad Age Gazette*, of the distance unprotected by this system 93.4 miles on the Southern Pacific in the Sierra Nevada mountains uses the electric train staff. The next longest gap, twenty miles in length, occurs where a change of line is about to be made. The remaining gaps are due to bridges and points where changes are in progress. The line thus operated by the block system extends from Jersey City on the Atlantic to Oakland on the Pacific, over a total distance of 3,245 miles; and it includes the Lehigh Valley Railway to Buffalo, the Lake Shore & Michigan Southern to Chicago, the Chicago & Northwestern to Council Bluffs, the Union Pacific Railway to Ogden, and the Southern Pacific to Oakland.

The announcement is made by the Chicago & Northwestern Railway that for the year which ended June 30, 1910, twenty-seven million passengers were carried over its rails without a single fatality. This result is brought about by the combination of a hearty conformity to rules by the employees, and liberal expenditures by the company in obtaining the best equipment possible in rolling stock and safety appliances.

The Standard Oil Company announces the manufacture of petroleum butter. It is said to be of the same consistency as lacteal butter, but brown in color. It lasts a great deal longer than real butter, it is said, and does not become rancid.

A number of Arkansas lumbermen have combined resources and closed a contract with the British government for five billion feet of stumpage in British Columbia, not far from Seattle, for which $1,000,000 cash is to be paid.

The more important extensions of the Union Pacific and Southern Pacific which have been decided upon, when completed will add two thousand and five miles of line to these systems, and will have cost $100,000,000.

The world's stock of gold has increased about one half in the last decade, and doubled in the last quarter of a century. The gold production from the discovery of America to the present time aggregates $13,000,000,000.

General.

The growing scarcity of American timber suitable for railroad ties has induced one of the largest Japanese importing companies to introduce Japanese white oak as a desirable foreign species to take the place of the American oak for railroad purposes. Several of the western roads have already purchased a large quantity of the Japanese white oak to be used in replacing worn-out ties along their rights of way. Recently an application was made to the United States Forest Service to conduct experiments at their Berkeley timber-testing station to determine the value and life of the Japanese oak timber when properly treated. This application brought up the interesting point as to whether or not the Forest Service would be allowed to undertake experiments with foreign species of timber, inasmuch as their tests are restricted by law to native timber.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE SCIENCE OF BEING.

CLARENCE W. CHADWICK.

THE divine demand, "Be ye therefore perfect, even as your Father which is in heaven is perfect," calls forth the inquiry, Is there a scientific or exact knowledge of man? The so-called "carnal mind" would answer in the negative. It would claim that man is of the earth, earthly; that he is "born unto trouble, as the sparks fly upward;" that he is "of few days, and full of trouble." This false concept of man has been the source of untold misery to the human race. It has led them over a rugged road "from the cradle to the grave," has fed them upon the husks of materiality, and has left them no alternative but to die in order to reach heaven. This mental picture of a so-called fallen man fortunately does not have anything to do with the spiritual facts of being. It bears no resemblance to the real man of God's creating.

Christian Science pierces the veil of matter, revealing the mythical nature of this demoralized concept of man, and replacing it with the true mental or spiritual idea. The daily contemplation of this true idea of man has already worked wonders in the alleviation of human suffering and in displacing the degrading and demoralizing tendencies of the so-called human nature with Life's ennobling ideals. It has already revealed the open gate into the kingdom of heaven on earth, so that "whosoever will" may enter the "new and living way" of Soul and find out the real meaning of God's "image and likeness." Why is this possible? Because the true Science of man is revealed in Christian Science. No longer is there any need of surmising or guessing as to man's nature, origin, or destiny. The demonstration of Christian healing has planted the banner of Truth upon the rock of spiritual understanding, so that no one who has had this practical proof of God's power and presence can question the Science that has made such proof possible.

The veil of mystery no longer enshrouds the thought of God or man. The consecrated student of Christian Science knows who God is and who man is. He knows that the real man is not born of the flesh, that he is not part divine and part human; he knows that he has lived forever in the divine Mind, and that he can never be divorced therefrom. This spiritual understanding of man and of his true relationship to God has made possible the overcoming of all that is unlike good, and this without the employment of material means. The guesswork knowledge of the past has declared man both sick and sinful. The Science of man's being reveals the spiritual fact of his perfection in Spirit, and this enables humanity to overcome both sickness and sin, in proof that they are no part of man's true existence.

One often hears the argument that it was easy for Jesus to do the works he did, because he was divine, the Son of God; but that no one else could expect to exercise the same power. There is nothing in Jesus' recorded words to prove any such argument. There is much to disprove it. He taught plainly that all who truly believed on him would be empowered to do the works that he did. The Principle which he taught and demonstrated is independent of time, space, or locality. It is eternally operative in all ages and generations. If this were not true, there would be no hope of salvation for the human race. Jesus relied upon the divine power at all times, and demonstrated its possibilities in order to bring to light the true Science of man. Had he ascended to the Father without having proven the impartiality of divine Love in healing the multitudes, there might be some shadow of excuse for believing that man is mortal, but as it is, the Christian world is absolutely inexcusable for accepting the Adam-account of creation and rejecting the scientific explanation of man as found in the first chapter of Genesis.

The professing believer is without excuse for attempting to make these two accounts of creation blend, under the plea that they must be believed because they are in the Bible. Christian Science contends that they must be spiritually understood, that the Christ-idea of purity and perfection must be allowed to discriminate between that which is true and that which is false. When this separation is allowed to take place, the science of the real man stands out in bold relief against the transitory belief in man's mortality. There is no science, health, peace, happiness, truth, nor Christianity in the blind belief that God has bequeathed a legacy of mortality to His children, and then placed them in a world of sin and pain where they would not be expected to rely upon their Maker for help in time of trouble, but would be required to be the bond-servants of matter so long as they remained inhabitants of earth. This Adam-legacy theory is as irrational as would be the belief that the sun had clothed its rays in darkness and was trying to illumine the world therewith.

The Science of being replaces human theories and opinions based upon sense testimony with divine ideas, and these ideas are the avenues through which all that is good and pure and ennobling comes to the human race. Through the belief that man is mortal naught but evil has ever come or ever will come to humanity. It requires Science and understanding to establish the spiritual fact of man's unity with God, and thereby to reveal the kingdom of heaven on earth. Material thinking will never displace mortality with immortality. It calls heaven a place and man a sinner outside of the heavenly portals. The Science of being calls heaven a condition of purity and holiness, and man the image and likeness of perfect Mind, forever in the kingdom of heaven.

The great need of mortals is to apprehend the kingdom of Spirit or heaven, and to do this they must ascertain what does not belong to the heavenly kingdom and then proceed to extirpate it. Our first step is to awaken from the Adam-dream of life in matter, to arouse ourselves from the mesmeric belief of a suppositional conscious existence apart from God, then to "put on the new man." We shall find the "old man" to be our own mistaken sense of self, the self that Jesus said must be denied if one would become

Copyright, 1900, by Mary Baker Eddy.

Digitized by Google

a follower of Christ, Truth. The least discernment of the Science of man inspires this practical denial of the false self, and leads thought out of matter into the spiritual and ideal.

The Science of the real man is humanity's best friend. It shows the mythical nature of the Adam-legacy and furnishes us with rules of thought and conduct by which to emerge from a dream-existence into the conscious possession of "the glorious liberty of the children of God." It destroys all sense of satisfaction in any material or theoretical knowledge of man, and brings out the practical demonstration of the divine power and presence by "preaching the gospel [Science] of the kingdom, and healing all manner of sickness and all manner of disease among the people." The Science of being is absolutely essential to bring about a spiritualization of thought which will enable humanity to enter into Life here or hereafter, and to prove by signs following that "the kingdom of God cometh not with observation."

THE PRISM OF SCIENCE.

WINIFRED ROOT.

It must early strike even the superficial reader of the Christian Science text-book, "Science and Health with Key to the Scriptures," with what a wealth of metaphor and illustration its statement of truth is made—a statement which its author, Mrs. Eddy, has embodied in condensed but complete form in the eleven pages of text known as the "platform" of Christian Science (Science and Health, pp. 330-340), but which she has expanded and enriched to the extent of a volume of six hundred pages. Such resource of expression and definition, in its great variety cannot fail and has not failed to touch at some point every type of seeking thought. A more extended study of the letter of this Science soon discloses the pregnant value of each noun and adjective in its place and connection, revealing a veritable "new tongue." One loses the mere sense of the aptness of the figure or illustration in the spiritual intent expressed through the exact meaning of the words chosen.

In countless passages of the Bible and the writings of our Leader the word "light" is used as a symbol of spiritual truth. We read in the first epistle of John: "God is light, and in him is no darkness at all;" and the same writer defines the Christ as "the true Light, which lighteth every man that cometh into the world." Through an understanding illuminated by this ever-present light of truth, Mrs. Eddy has elucidated through her works the means by which mortals may awaken to and find harmony in the spiritual facts of existence which the Christ Science reveals. She says, "In divine Science . . . God is revealed as infinite light. In the eternal Mind, no night is there." And further: "To mortal sense Science seems at first obscure, abstract, and dark; but a bright promise crowns its brow. When understood, it is Truth's prism and praise" (Science and Health, pp. 511, 558).

What is humanity's great need? To heed the "rainbow promise" contained in Jesus' words and works, and in patience and perseverance to use the "prism" of Christian Science in studying their purport, their application to daily wants and experience. To the unassisted human eye the sun's light seems to be simply a blinding white; but when its rays are divided by the triangular glass prism seven glowing colors appear, with tremulous suggestion of a yet greater gamut of beauty which the human sense is too dull to perceive. The white light of divine Mind illumines the universe, and is constant, unchanging, unclouded, and though mortals are blinded to this vital fact by their belief in darkness and chaos—light's opposite, by their belief in matter and sin—Life's opposite, the word is given by the psalmist that "in thy light shall we see light."

Through the prism of Science the infinite ideas, attributes, beauty, and activity of divine Life, Truth, and Love are divided (unfolded) to consciousness, and man is seen reflecting the light of Spirit in all the living colors (qualities) of divine Mind, which find their unity in the white light of purity. When this bright vision of truth is attained, the rainbow of hope glows in the firmament of understanding and praise shines in our hearts and through our lives.

Today, in the dawn of a new light, mankind is still struggling with the sense of a mixture of good and evil, light and darkness—believing in and fearing matter and evil as real, but longing to be healed of its discords, its disease and sorrow. It is here that Christian Science comes to instruct the "double-minded" senses, and to prove that just as the glass prism meets with no response from darkness, which is wholly devoid of light and action, so the seeming opacity of matter, error, self-love, etc., is recognized to be illusion, nothingness, without substance, life, or reality, in the presence of the allness of God, infinite, omnipresent Mind.

As declared in our inspired text-book, page 479, "darkness and chaos are the imaginary opposites of light, understanding, and eternal harmony, and they are the elements of nothingness. We admit that black is not a color, because it reflects no light. So evil should be denied identity or power, because it has none of the divine hues." Mrs. Eddy makes unmistakably clear one of the necessary steps to be taken in our progress from sense to Soul, darkness to light: "Humility is lens and prism to the understanding of Mind-healing; . . . it is indispensable to personal growth" (Miscellaneous Writings, p. 356). Through honest desire and effort for self-knowledge humility is gained, and becomes the lens which brings into focus the hidden and seemingly insignificant temptations and sins of material sense, that they may be dispersed as shadows before the effulgence of spiritual understanding.

With such a beacon as our Leader has kindled for the guidance of humanity, we need no longer merit the Master's just rebuke, "Having eyes, ye see not," but may daily reflect more clearly "the Sun of righteousness," until the time when

> Man shall walk transparent,
> Like some holy thing.

"THE HOUSEHOLD OF GOD."

M. ADELAIDE HOLTON.

What does it mean to belong to a household? It means to be a member of a family, a participant in all the experiences and daily life of a family. In the second chapter of his epistle to the Ephesians the apostle Paul sums up his discourse on what we were by nature and what we are by grace, with this comforting conclusion: "Therefore ye are no more strangers and foreigners, but fellowcitizens with the saints, and of the household of God." Then we who have been "saved by grace" are "of the household of God," members of His family.

In Christian Science we learn that God's household is the only real household, and that it is universal, spiritual, perfect, harmonious, and eternal. In this household God is the Father-Mother, and man is His child. God loves, protects, feeds, clothes, instructs, influences, controls, and governs His entire household, in which all is good and the divine law is the only law operating in or affecting it. The divine government is supreme, imperative, absolute, and eternal, and it is never interfered with, cut off, obstructed, or reversed by evil of any name or nature.

In this real household of Spirit, man, all spiritual individualities, live, move, and have their being, now and forever. Fear, worry, discord, lack, sin, sickness, and

Digitized by Google

death have no place, no presence, no power, no law, no influence, and no manifestation in this household or kingdom of God. Omnipotent Mind is the only Mind ever known, recognized, or acknowledged as power, influence, or control in this perfect household. Matter, mortal mind, sin, disease, and death, were not created by our Father-Mother God, therefore they are not elements or entities in the real household, and they have no relationship whatever with its inmates.

The spiritual and harmonious household was from the beginning, is now, and ever will be. We enter into conscious membership with it and come into possession of our birthright and privileges, as we turn from the beliefs of life, substance, and intelligence in matter to the truth of being—from materiality to Spirit, God. There is no other door and no other way.

TRUTH IS POSITIVE.

ANNA L. SANBORN.

THE beginner in Christian Science passes through the most marvelous change of thought which can take place in human consciousness. A new spiritual world opens before him: cosmos is emerging from chaos, and with this first awakening to the truth there comes often an almost overwhelming sense of the amount of erroneous thinking which must be reversed. In our attempt at constant denial of these countless incorrect thoughts which crowd for admission, we often slip into a negative way of working. We declare, "It is not," or "There is not," until the sense of that which is—God's allness—is lost. Consequently we fail to see the truth of our denials, and the confronting errors, instead of being eliminated seem to flourish like the green bay-tree, and cloud all our sense of the actual and real.

The first step in all scientific reasoning is the establishment or acceptance of a basic law which is positive. Starting with an absolute affirmative proposition, one has something, a first fact, upon which to base his denials, and it is only as the negations are logically deduced from this major premise that they have any weight as fact or truth. In Christian Science we are dealing with the truth respecting God and man. We should, then, have clearly in mind what God (our positive Principle) is, before it can be apparent to us what error is not. Working in the negative alone is utterly fruitless. God, we know, is not a principle, but Principle itself,—all-law, all-power, all-government, all-encompassing divine Love. There is nothing negative about Him, nothing to deny. He is all inclusive, all good. "Nothing" and "not" cannot be associated with "I am that I am." All that ever can be changed or negatived is our false concept of Him and His universe.

Then what is man? "In his own image, in the image of God created he him." Again an affirmation, a healing truth, that man is created as the expression of God, good; and the conclusion follows that he too is perfect, "good" and "very good." He has then no errors and no problems. We must, therefore, lift our eyes "unto the hills," work in Truth, not error, until we see clearly that it is because God is infinite good and man is His perfect reflection, that all these arguments which confront us are miserable lies, causeless, mindless, powerless. Mere illusions they are, lacking logic and reason, for in the realm of the real they can have no existence.

This insistence on the positive does not mean that negation is to be eliminated in our work, for affirmation and denial are both integral parts of our present progress in Christian Science. The one gives us the basic truth upon which to work, the other destroys by logical argument the seeming validity of sense testimony. Such chapters in Science and Health as that on Christian Science Practice, such statements as "the scientific statement of being" (p. 468), arouse us to the necessity of denial, but they demand a clear sense of the truth by which to make the negation intelligible and demonstrable. Mrs. Eddy bids us, in an oft-quoted passage, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full" (*Sentinel*, Oct. 6, 1906).

Christ's commands, a step higher than the Mosaic Decalogue, declare "Thou shalt;" not, "Thou shalt not." It is always the affirmative, the truth, that does the healing. Too often we fail to convince ourselves of the validity of our own statements; either we do not reason clearly why this or that inharmony cannot exist, a reason which will always be found to be an affirmation; or, thinking logically, we fail to believe. Nothing but clinging to the actual will clear the thought. That God, good, is All, and man is His reflection, is enough for us to know, if we do really know it. We must stop trying merely to put out the darkness by unsupported denial; we must let in the light of Truth. In "Miscellaneous Writings" (p. 355) we read: "To strike out right and left against the mist never clears the vision; but to lift your head above it, is a sovereign panacea."

Just as the Romans built roads which radiated in all directions from their princely city, and then cried, "All roads lead to Rome," so in Christian Science all roads lead to the allness of God. With divine Mind we begin and end; He is the Alpha and Omega. The Bible itself is but a compilation of inspired and historical instances which exist there only as they prove the omnipotence of God. We must grasp this sense of His allness, and then "rise in the conscious strength of the spirit of Truth to overthrow the plea of mortal mind" (Science and Health, p. 390). Then our denials will be clear to us. Finally we must know, as did the psalmist, that this word of God, this truth, this affirmation, does heal: "He sent his word, and healed them."

THE SOWING.

PORTER EELLES JORDAN.

THERE seems to be in the thought of many parents a latent conviction that their sons must pass through a period in which youthful follies are to be indulged and "wild oats" sown. With resignation, unconscious in many cases, this event is sanctioned, and frequently a defensive explanation is heard, to the effect that it is better to have the "wild oats" sown and harvested as soon as possible, rather than to have them come later in life at a less opportune time. The parable of the prodigal son is even used in substantiation of this attitude, from which it is argued that the prodigal needed his bitter experience in order to learn life's larger lessons, and that thereafter he was a better man as a result of it.

A careful study of the entire fifteenth chapter of Luke unfolds quite a different moral in this parable. The chapter discloses the joy which is experienced by every just person when through repentance the wandering are led back to the true fold. The father's joy when receiving his son was not caused because of the "wild oats" which had been sown, but because the impetuous wilfulness of the youth had given place to humility and repentance. The prodigal had indeed returned to begin his life anew, but the shadows of his earlier experiences were not wholly eliminated thereby. Mistakes, though never to be repeated in action, yet left their impress upon his consciousness, and the process of eradicating their memories was a more difficult task than simply ceasing from their indulgence. Time and persevering toil in the right direction alone could efface the darkening shades of earlier wrong-doing.

We of today are living in an age which is facing gigantic problems. Every department of commerce, every profes-

Digitized by Google

sion, every social, political, and religious organization, is awakening to its need of men,—of men so imbued with altruistic motives, with absolute honesty, justice, intelligent efficiency, honor, and equitable regard for the rights of others, that they will be able to meet and master these problems in the right way. The frequency with which we are startled by disclosures of dishonesty where honesty was supposed to exist, the shocking injustices arising where justice was expected, the needless suffering caused by the setting aside of the golden rule, plainly indicate that this age is in need of something more spiritual than its own material success, something more divine than its human platitudes, something more vitalized with the Christly tenderness which loves one's neighbor as one's self, than the mere mental acquiescence to and appreciation of the highest and best ethics. This age is demanding the actual application of lofty ideals; and the repeated failures to realize them can be largely attributed to the inability of poor humanity, through itself, to measure up to and manifest in action those qualities which it plainly desires and realizes are essential.

What has Christian Science to offer? It offers a hope which should thrill every parent with joy. If the present generation is handicapped because of the shadows of the "knowledge of good and evil" which have not yet been fully dissipated from our thought, then obviously our higher achievements are to be wrought through a generation which has gained an apprehension of the right idea.

Our Leader, Mrs. Eddy, writes: "A feasible as well as rational means of improvement at present is the elevation of society in general and the achievement of a nobler race for legislation,—a race having higher aims and motives" (Science and Health, p. 63). This race will be obtained when parents surround their children with those thoughts which do not admit the necessity of "wild oats," realizing that the only joy is in the sowing of those seeds of Truth and Love which are worthy of eternal fruitage. It is recorded that Mary, having heard from the shepherds what the angels had told them of Jesus, "kept all these things, and pondered them in her heart." The abiding conviction that Jesus was the spiritually-conceived Son of God, was a realization never absent from her consciousness. Nor was it necessary for Jesus to experience evil in order to know its banefulness and unreality, yet no one ever knew its impotence and God's omnipotence better than he; in fact, the unreality of evil can never be known while evil is indulged.

We are taught in Christian Science that either through suffering or Science our salvation is to be attained, and also that our progress should be painless. (See Science and Health, pp. 296, 224.) Thus, through the application of this religion, our young people can be spared the suffering and saved from the devious byways of the prodigal, and be prepared for the greatest possible usefulness to the world, through the Science of Christ Jesus the Wayshower.

SENSE TESTIMONY REBUKED.

HATTIE P. WILLIAMS.

ONE day, while thinking of the wondrous work and scope of Christian Science, it came to me suddenly that, in order to demonstrate its teachings more fully in daily life, every claim made by the corporeal senses, in their effort to manifest and maintain the belief of either pleasure or pain in the body, must be quickly detected and denied. This I knew would require increased alertness, and constant watchfulness to prevent the counterfeits of material sense testimony from entering consciousness and passing themselves off for the ideas of Truth. Every expression that went to make up the "old man" of mortal belief must be challenged, brought before the judgment-seat of Truth, and measured by the standard of the "new man," God's image and likeness, and if found lacking in the slightest particular, denied admission, or any power to influence thought and action.

Very soon the chance came to prove if I were on guard. An old and very alluring sense of material pleasure swept over me, insistently demanding that I follow the former paths and participate again in what in the old way had given me so much seeming enjoyment (sense satisfaction). A sharp struggle ensued; error bringing up its arguments that a little excursion into the old playgrounds of mortal mind was harmless, etc.; the prospect looked attractive, promising some excitement, and a renewal of old friendships that had existed solely on the basis of selfishness and love of admiration. Then quickly a voice whispered, This is the opportunity to repulse and cast out the claim of any sense of pleasure apart from Spirit and spiritual being. Immediately the desire was gone, and a wondrous sense of peace came to my consciousness.

I knew that the idea of Truth had bruised the head of the serpent, and the utter falsity of the suggestion of any life or joy apart from the pursuit of holiness, the knowledge of God, was made plain to me. I rejoiced that another step had been taken out of Egypt (mortal mind) into the promised land of spiritual understanding and completeness, wherein man is the forever expression of purity and spiritual content.

[Written for the *Sentinel*.]

PRAYER.

HON. CLARENCE A. BUSKIRK.

If I in pride and arrogance
Presume to judge God's ways,
And seek to better them perchance,
The while my lips may praise;

Or, if I lift my voice on high
In selfish consciousness,
My own desires to gratify,—
Then do I pray amiss.

But when with good, with Truth and Love,
I seek communion pure,
And dream and falsehood rise above,
To regions which endure;

When I have raised my earnest thought
Above all earthly sense,
And all of my desires have brought
In humble penitence;

When thus I've shut my eyes and ears
Against all things below,
Have quieted my doubts and fears,
And lost all pain and woe;

Then have I come, with head bowed low,
Into God's realm of light,
Out of the darkness, and I know
That I have prayed aright.

We pray amiss, and words are naught;
But when we rightly pray,
Men cannot measure with their thought
The wonders of God's way.

First count the myriad stars on high,
Proud man, before you dare
With all your vaunted tools to try
To map the realm of prayer.

SELECTED ARTICLES.

[Frederick Dixon in *Dublin* (Ireland) *Express.*]

St. Peter and St. Paul both healed the sick in the way Jesus had taught, and the way Jesus taught was contained in the words, "He that believeth on me, the works that I do shall he do also." Jesus said, "Ye shall know the truth, and the truth shall make you free." Now, as one of the greatest of scholars and churchmen has pointed out, the Greek text of the Gospel of St. John draws a marked distinction between "the truth," by which the writer means the absolute truth, and "truth" without the article, by which he is in the habit of referring to a mere relative sense of truth. It is plain that the more a man knows of absolute truth, the more scientific is his knowledge, and the greater his knowledge of God. This may help to explain why, in the epistles, both St. Peter and St. Paul make use of an expression translated in the Authorized Version "knowledge of God," but which should actually be translated full, exact, that is, scientific knowledge of God. It is this scientific knowledge, this full knowledge of God, which obviously constitutes the knowledge of the truth which Christ Jesus said would make men free. This, it is to be suspected, was the knowledge possessed by St. Peter when, at the Beautiful gate of the temple, ignoring all the material conditions which constitute lameness, he said to the cripple, "In the name of Jesus Christ of Nazareth rise up and walk."

The healing of the lame man was what is commonly described as a miracle. It cannot, however, be too often insisted that the words translated miracle in the Bible have not, and never have had, any supernatural significance. They mean sometimes that which is wonderful, sometimes simply a sign. For instance, the word translated signs, in the last chapter of Mark, in the phrase, "These signs shall follow them that believe," is the word elsewhere translated miracles, so that it might equally be translated, "These miracles shall follow them that believe." The more a man knows of the truth of anything the more he necessarily and naturally believes in it. Therefore, the fuller a man's knowledge of God, the more scientific his knowledge of truth, the stronger his faith becomes, and the greater his ability to take advantage of the promise of Christ Jesus: "He that believeth on me, the works that I do shall he do also." In those words Jesus himself made Christian healing a test of Christian faith. There is no possibility of escape from this. On the day when the orthodox churches separated the healing of sickness from the healing of sin, and declared that for one a man must go to a church and for the other to a hospital, they made the effort to divide the seamless garment, and wrote in the pages of their church histories the record of the decline of their faith. "Whether is easier, to say," Jesus had demanded, "Thy sins be forgiven thee; or to say, Arise, and walk."

Christian Science is the effort to make this healing as practical in the world today as it was in the first century. The disciples themselves did not always succeed in healing the sick, and Christian Scientists have never pretended that they know enough of God never to fail in helping those who come to them for healing. They are painfully aware that at present they are demonstrating very imperfectly and insufficiently this truth which makes men free, but they are at least striving humbly and persistently to let that Mind be in them which was also in Christ Jesus, for they know that just in proportion as they gain the Mind that was in the Christ they will gain that absolute knowledge of Truth which constitutes that full or exact knowledge of God, the possession of which Christ Jesus promised the world would enable men to perform not only the works he had performed, but even greater works than these.

Christ Jesus commanded his followers to strive not merely to preach the gospel but to heal the sick. Christian Scientists are endeavoring, to the utmost of their ability, to fulfil this demand, to prove that the seamless garment has not been rent in twain. The healing of the sick was certainly amongst the foremost of the works of Jesus, but this was because the healing of sickness was a necessary part of rescuing humanity from the false views of Truth in which materiality had enveloped it. "Now, as then," writes Mrs. Eddy on page 150 of Science and Health, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

["Battle Creek Reader" in *Detroit* (Mich.) *Free Press.*]

I notice in today's *Free Press* an editorial in which an assertion is made that, while honestly meant, is nevertheless misleading and untrue. The statement that the superstructure of Christian Science rests upon the apex of any one person's conception of truth, is as incorrect as the statement that gravitation depends upon Newton, electricity upon Franklin, or steam navigation upon Robert Fulton. The discoverer of a truth or law that is new to the world is certainly entitled to all honor due one in this position, but to say that the operation of an active principle or law depends in any way upon any single person's conception of that law is absurd, to say the least.

The writer is a student of Christian Science, because he believes that Christianity must be either scientific—exact—or become a farce. If perfection is ever to be reached it must be through an absolute law and not through sentiment. The Bible gives us such a law. In Psalms we find, "The law of the Lord is perfect, converting the soul," and Paul says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." The Bible is full of references to God's law, as perfect and exact. The true student of Christian Science is earnestly striving to live according to this same law, and finds that his progress depends in no way upon Mrs. Eddy's personality, but entirely upon his own demonstration of the truth taught in Christian Science.

In Science and Health Mrs. Eddy states clearly the scientific interpretation of God's law as she discovered it over forty years ago. The teachings of her book cannot be accepted as the result of a belief in any personality; they must be understood by the student himself. The superstructure of Christian Science exists today because of what Christian Science is and what it does. "By their fruits ye shall know them."

[Jesse Pickard in *Brooklyn* (N. Y.) *Eagle.*]

A recent correspondent expressed the opinion that Christian Science had a very limited sense of God's goodness, in that it failed to recognize what he declared to be plain to himself and others, namely, divine wisdom in the permission of sin, with the purpose of making goodness more apparent.

Christian Science is waging successful warfare upon evil of every sort, and in so doing it neither calls evil good nor good evil. Christian Scientists strive to follow the example and commands of Christ Jesus in healing the sick and overcoming sin. And they recognize that this work must be in fulfilment of the law of God, which, indeed, Jesus himself declared. If the all-wise and supreme power caused evil, it would not be our privilege or province to annul His decree, and your correspondent would have no basis for his statement that "it is for us to choose life or death."

Without a correct understanding of God's standpoint it would seem impossible to pray with that positive faith or conviction which Jesus required, and this may perhaps indicate a sufficient reason why there is so much doubt as to the efficacy of the prayer of blind supplication. Paul admonishes the Romans to "prove what is that good, and acceptable, and perfect, will of God;" and the teachings and practices of Christian Science support the fact that evil is neither lawful nor God-ordained, and that it is therefore wholly destructible. On this basis Christian Scientists are gaining more and more ability to master evil in the Christ way, replacing sickness, evil, and despair with life and peace.

[From an editorial in *Santa Cruz* (Cal.) *News.*]

The editor of this paper is not a Christian Scientist, . . . but so long as he has a voice in his community he will lift it in behalf of religious toleration—in behalf of the right of every man to worship at any altar he sees fit. This paper has been charged with a desire to stir up dissension in this community. It is singular that this charge comes from the very ones who seem bent on rending this people into warring factions—for what ends we do not know, but they certainly do not seem to be the ends of the gentle "Prince of Peace," who admonished his followers to love one another. We would suggest to some of the humble workers in the cause of the Saviour of mankind that they will best serve him by setting an example in forbearance and brotherly love before the community whose spiritual guides they would be.

We do not know anything about Mr. ——; perhaps our ignorance of him is as profound as that possessed by the clergymen who support him. We only know that since his appearance in a neighboring city the papers there have been filled with wrangling letters from Christians who are on the one side or the other, and we know that no good is to come of a movement on the part of the local ministers to crush any sect, or drive people away from another church into their own. The churches have enough to contend with in the way of opposition without stirring up more of their own.

Moreover, no clergyman with a fine sense of the proprieties should devote his church to any purpose other than that of religious worship. He gets exemption from taxation only upon the sworn statement that his church is used for no other purpose. The clergyman who rails at others for failure to observe the law should observe it himself. Certainly the Christian Scientists of California, who are very numerous, have a right to protest as individual property owners against carrying the burden of taxation of church property which is used for attacks upon their creed.

[Charles K. Skinner in *Jackson* (Mich.) *Citizen Press.*]

The recent sermon by Elder —— on the subject of Christian Science indicates that while the gentleman expresses a desire to be fair in his criticisms, he is not as familiar with the teachings of this religion as one should be to discuss them intelligently. Our brother has quoted at length from the Scriptures to prove his contention that Christian Science did not accord with them, but he has neglected to note the Master's caution, "Judge not, that ye be not judged." The speaker quoted St. Paul's words, "Prove all things," and we are glad that he did so, for if there is anything which Christian Scientists are enjoined to do it is to prove their profession by their lives.

Words are but empty sounds,
Unless the deeds accord.

Jesus laid strong emphasis on this proof of man's religion. He said, "He that believeth on me, the works that I do shall he do also." In fact, the only distinguishing mark the Master gave by which his followers should be known was that they should heal the sick, cast out devils (evils), cleanse the lepers, and raise the dead. He also added this reminder: "If ye love me, keep my commandments." Christian Scientists say modestly, that they are doing these works in a quiet way all over the world. The question naturally presents itself: Is our brother doing these works? If not, would it not have been wiser to have withheld his criticism until he understood better the works of Christian Science?

The gentleman tells us "it could not be urged as proof of a doctrine that because it had a large following it was right," and he refers to Jesus' words: "Enter ye in at the strait gate." He neglected, however, to say that the Master specially taught that he "was the way, the truth, and the life," and that his works were the proof. He enjoined Philip, "Believe me that I am in the Father, and the Father in me: or else believe me for the very works' sake." It must be evident that to enter in at the strait gate one must have a desire to live in obedience to the rules regulating this privilege.

We are told that "the foundation is the Bible, and not creed." We certainly agree on this point, for because of it, Christian Science stands today. Its entire foundation is the Scripture and the works and teachings of Jesus Christ. It is, however, only by understanding the spiritual import of the Scriptures, and putting them into practice, that we can hope to profit therefrom. One may read over the rules of grammar and mathematics day by day, but unless they are applied, the student will graduate at the foot of the class. Jesus constantly tried to have his disciples realize the practical application of his teachings, for he said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Our critic tells us that Christian Science teaches "there is nothing material," and cites Daniel's vision to prove that God had a material body. He ignores utterly the Scripture, "God is a Spirit," which, taken in connection with Genesis i. 26, shows conclusively that man, the creation of God, is not material, but spiritual, because he is the image and likeness of Spirit. We are taken to task because Mrs. Eddy teaches that God is Mind, Soul, Spirit, Life. As the Scriptures refer to God as Spirit, Life, Light, Truth, Love, and that Mind "which was also in Christ Jesus," does this indicate that there is anything illogical in Mrs. Eddy's statements?

Our brother objects to Mrs. Eddy's definition of angels as being "good thoughts." He should have been just in the quotation, which reads: "God's thoughts passing to man; . . . counteracting all evil, sensuality, and mortality" (Science and Health, p. 581). Is not this more reasonable than the belief that angels are physical, and have winged forms? Is there not a comfort in the realization that God's thoughts are protecting all those who unreservedly trust Him? We are glad to note that the elder disclaims "personal thrusts at any religion," and if he will pursue an open, sincere investigation of what Christian Science really does teach, and actually prove, he will find that it coincides with the teaching of the Scriptures and of Christ Jesus.

[Alfred Farlow in *Montreal* (Can.) *Witness.*]

The clergyman's assertion that "Christian Science has stumbled upon a great health-producing principle, with no more idea than the man in the moon how it got there," means simply that he has failed to comprehend how it got there. One who is not well informed on the subject of mathematics might say that the mathematician has stumbled on to a rule without knowing how he got there, but it does not so appear to the one who understands sufficiently to demonstrate the proposition according to the rule.

Digitized by Google

Christian Science is indeed a science which can be understood and practised by any one who is willing to accept it. So far as concerns the proposition to "limit its field of treatment to functional disorders," experience proves that it is easier to cure some people of a serious organic malady than it is to cure others of the most simple functional disorder. God's method of healing the sick is as sure in its result as a rule in mathematics. If one problem seems more difficult than another, it is only because the pupil does not sufficiently understand the rule. There is no such thing as a difficult problem to master, for the same reason that the Master of Christianity always succeeded, while his disciples were sometimes baffled in their efforts. The proper remedy for this situation, however, does not lie in the practice of leaving the most difficult cases to the physician, but in striving for a higher degree of spirituality.

Far from "doing away with the fair common sense of the interpretation of the Scriptures," Christian Science plants itself unreservedly upon the Scriptures. Its premises are Scripture affirmations.

[From New York *Evening Post.*]

In the September *Christian Science Journal* nearly one hundred pages are given up to a list of Christian Science churches and societies, and of practitioners, all over the world. Africa has two churches, in the Transvaal; there is one at Hongkong, China, and one at Manila, in the Philippines; Australia reports 4, and Europe has 11—1 in France, 1 in Holland, 1 in Norway, 2 in Switzerland, and 5 in Germany. In Great Britain and Ireland there are 43: in Scotland 3, in Wales 1.

Taking the North American continent, there are 36 in Canada, 3 in Mexico, 1 in Panama. In the United States the churches and societies number as follows, by states: Alabama 4, Arizona 4, Arkansas 8, California 66, Colorado 34, Connecticut 16, Delaware, 1, the District of Columbia 1, Florida 10, Georgia 10, Idaho 14, Illinois 86, Indiana 42, Iowa 64, Kansas 46, Kentucky 7, Louisiana 6, Maine 19, Maryland 4, Massachusetts 47, Michigan 53, Minnesota 27, Mississippi 6, Missouri 25, Montana 11, Nebraska 25, Nevada 4, New Hampshire 18, New Jersey 24, New Mexico 3, New York 78, North Carolina 7, North Dakota 4, Ohio 55, Oklahoma 19, Oregon 19, Pennsylvania 45, Rhode Island 5, South Carolina 1, South Dakota 14, Tennessee 6, Texas 27, Utah 5, Vermont 10, Virginia 4, Washington 25, West Virginia 5, Wisconsin 40, Wyoming 3. There is one in the Hawaiian Islands. Argentina, in South America, reports one.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 5, 1909. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 20, 1909.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

Great occasions do not make heroes or cowards; they simply unveil them. Silently and imperceptibly we grow and wax strong, we grow and wax weak; and at last some crisis shows what we have become.—CANON WESTCOTT.

AMONG THE CHURCHES.

VICTORIA, B. C.

The new Christian Science church, which has recently been completed on Pandora street, two doors east of the Metropolitan church, immediately attracts the attention of the passerby, for its exterior is materially different in appearance to that of any building in the city. It does not look like a dwelling-house, and even less like a church, for it has nothing of the customary steeples, buttresses, and long perpendicular windows, through custom commonly connected with sacred edifices. In fact, this church is built in an auditorium style. Including the lot and the furnishings, it has cost eight thousand dollars, all of which was subscribed by local members and friends. The building is of frame with a veneer of silica brick from the ground to the second story. In front a cavelike porch extends for fifteen feet under the second story, with the entrance to the auditorium on the right. The body of the church extends to the full height of the building. The room has an unusually neat and cozy appearance, with its stained glass windows, native fir paneling,—all the interior woodwork is of native fir selected for its grain,—heavy beam ceilings, tasteful chandeliers, and dark red folding seats arranged in semicircles facing the two Readers.

The local Christian Science church was organized seven years ago. At that time there were only five or six members of the flock. Two years ago the membership had greatly increased, and the meetings were held in the Knights of Pythias Hall. Since then the congregation has doubled, and the need of larger quarters and a place where Wednesday night meetings could be held was felt. The present building is the result.—*Evening Post.*

CINCINNATI, O.

An application was filed with the building inspector Thursday [Sept. 16] by First Church of Christ, Scientist, for a permit to build a church on the west side of Park avenue, opposite Cypress avenue. It will be a handsome edifice of one and two stories, of brick, stone, and concrete, and will cost sixty-six thousand dollars, exclusive of furnishings and organ. The cost of the lot was eighteen thousand dollars.—*Cincinnati Times-Star.*

[Written for the *Sentinel.*]

PROTECTION AT NIGHT.

JANE DRANSFIELD STONE.

WE cannot be alone, for thou art near!
What though the midnight shadows close us round,
And terror seems to lurk in sight and sound:
Still are we safe, since thou, O Christ, art here!

We cannot be alone, though far be friends,
And all our rooms stand vacant now, and still:
Hush! beating heart, the quiet bodes no ill,
For at thy side is he, thy Friend of friends.

We need not be afraid: we dwell in light.
The lamp of Truth is lit within our walls,
And wheresoe'er its searching radiance falls,
Naught can be hidden: therefore, fear not night.

We cannot be alone. Our hand in thine,
In confidence we wait, and talk to thee,
Until upon our vision silently
There dawns the sense of day and Light divine.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"NOT IN HARMONY WITH CHRISTIAN SCIENCE."

A FEW days ago we received a letter from a gentleman in the far West, in which he inquired concerning the teachings of Christian Science in regard to the use of alcoholic beverages. He stated that in the section of the country from which he was writing the drinking habit was very prevalent, and that even some Christian Scientists not only indulged in this habit, but also attempted to justify it as not being inconsistent with the practice of their religion. Being a comparatively young student of Christian Science, our correspondent wished to verify his own understanding, which was that the use of liquor is plainly against the teachings of Science and Health.

What we gathered from our correspondent's letter was that those who indulged in the use of liquors felt that they might do so "moderately" and without harm to themselves or to others; in other words, that drinking is not wrong *per se*, but only intemperance is wrong. Consistent with such an argument would be the statement that both good and evil can be contained in the one thing, and are equally real and eternal, a statement which is entirely at variance with the Principle and teachings of Christian Science and which should mislead no one.

Mrs. Eddy's clear and emphatic statement that "the use of tobacco or intoxicating drinks is not in harmony with Christian Science" (Science and Health, p. 454), is very much to the point, and in replying to our correspondent we assured him of the correctness of his understanding of the teachings of our text-book, and referred him to the numerous testimonies which have appeared in the *Sentinel* and *Journal* of those who have been healed through Christian Science of the liquor habit in its varied phases.

That the one who indulges this habit even moderately is deluded by the false belief that he is in no danger, is graphically told in a testimony which appeared in the *Sentinel* of Aug. 7. The writer, Newton A. Oleson, Pontiac, Mich., says in part,—

> Through the social glass and medical prescriptions I had formed an appetite for liquor, and I frequently took too much of it. After a space I felt bad, and then I took more drink, as it seemed to revive me; but after the effect of it had worked off I felt the need of yet more, and before I knew it I would be again intoxicated. After some years I got so sick that I could not work. Surely "the way of the transgressor is hard." I was paying the penalty for not keeping the commandments of God. I have said I was sick. I had been so for many years, but could find no help. I did, however, find help when I took up Christian Science, and with it came health and happiness. It has been said that the price of the text-book, Science and Health, is high, but if I had had all the money in the world I could not otherwise have found my freedom from the slavery to false appetite.

We do not think it necessary to point out to our readers the specific evils of the liquor habit, for these evils are too well known and too serious to have escaped the attention of any thoughtful observer, but we do think it necessary to warn them against the subtle error of trying to mix good and evil in any wise, remembering our Leader's warning that "from first to last the supposed coexistence of Mind and matter and the mingling of good and evil have resulted from the philosophy of the serpent" (*Ibid.*, p. 269).

ARCHIBALD MCLELLAN.

CAPACITY AND CONSECRATION.

THE desire to be great may be said to distinguish the *genus homo*. However varied their ideas as to what constitutes greatness, this common factor of aspiration serves to distinguish men from all other creatures. With men the estimate of greatness allies itself very generally with the thought of what people have or have done, but Christ Jesus identified greatness with humility, unselfishness, spiritual aspiration, devotion to the ideal. This may be said to be the crowning thought of the parable of the ten talents. It was not what each one had, but what he was trying to do with what he had, that determined his ethical status. The Master measured worth not by capacity, but by the consecration of capacity; and with splendid insistence Mrs. Eddy has again pressed this teaching upon human thought.

The dissociation of talent and worth, ability and merit, is a fact of common observation, and human desire for the most part is constantly laying hold upon something to have rather than something to be. In the parable referred to, capacity, the number of talents, was a matter which the individual did not determine, since it was a gift or commission. All he had to answer for was the utilization of capacity, and respecting this he was judged. The parable further brings out the thought that consecration is causally related to the increase of capacity; that a right desire to do means a greater ability to do, and the philosophy of this fact is made clear in the teaching of Christian Science, that the faithful effort to be good contributes directly to that awakening to spiritual consciousness which is the true selfhood, and through which capacity is discovered and God made manifest to men.

The extent of the philanthropy of our times is phenomenal, and the bulk of it, perhaps, is prompted by unselfish purpose; nevertheless, to the thoughtful it can but be apparent that as a whole it is distinctly material. It builds colleges, libraries, homes, etc., and endows all kinds of enterprises which look to the lessening of human want and wretchedness. This is well and altogether praiseworthy, especially for those who can do no better; and yet Christ Jesus, the greatest of all philanthropists, did none of these things. He proved that the highest service, the service of Truth, is separate from all materiality. While he not only did not ignore the breaking of bread, but commended it, how little it had to do with his ministry to mankind, and how clearly he taught that every real betterment for the race is accomplished only through the coming of the divine idea to individual consciousness. The school, the library, the orphanage may supply a temporarily necessary condition to human advance, but the essential of this advance is the dawning of spiritual truth. Christian Science enables one to see, as never before, that the best way he can help in this work is to consent in every moment and every thing to the government and guidance of divine Love. He perceives that the measure of this consent is the measure of his capacity for good, and that he truly gives to God and to men in the consecration of capacity.

In the radiance of this realization we gain a new sense of the psalmist's meaning when he says, "What shall I render unto the Lord for all his benefits toward me? I will take the cup of salvation, and call upon the name of the Lord." Thought needs to be centered ever on the fact that we truly serve only as we realize man's spiritual nature as the image of God, and become indeed the "ministers of Christ." The claims of sense limitation will then be rebuked, and the "venture of faith" will become an expression of our conscious freedom. We have learned that man's capacity has no limits, since the infinite is behind him; that Christlikeness alone determines our real effectiveness for good, and that the alert and continuous desire for the Mind that was in him is the noblest and truest consecration.

JOHN B. WILLIS.

"REMEMBER NOW THY CREATOR."

IT is not surprising that thought should turn betimes to the twelfth chapter of Ecclesiastes, which begins with an admonition to remember our creator before the evil days draw nigh. Unfortunately, however, the whole of this beautiful chapter is regarded as a sort of *memento mori*, and many sincere Christians have believed that one of our most important duties is to remember death. It is true that if this chapter be read from the view-point of materiality, the thought of death and desolation is given great prominence. If we look through the windows of sense, the light of sun, moon, and stars will be darkened, "the keepers of the house shall tremble," and "the daughters of music shall be brought low." It was against this very thing, however, that the wise man sought to warn us when he wrote: "Remember now thy Creator . . . while the evil days come not;" and one who declared himself "greater than Solomon," said to those who accepted sense testimony, that although they had eyes they did not see, and he went farther than this when he declared, "If a man keep my saying, he shall never see death."

In studying the chapter further, we find what at first appears to be a dark picture of mourners going about the streets, and we are told about the loosing of "the silver cord." This is usually taken to mean that the tie which binds man to life is severed, but in Christian Science we find a higher meaning: we come to see that the belief which would hold us to a sense of life in matter is gently loosed, and thought then rises toward the deathless realm of Spirit. Let "the dust" return to dust, and let spiritual sense "return unto God who gave it"! As we learn what it means to "die daily" (to quote St. Paul), we cease to fear death, because Life as God is becoming each day more real to us.

In this chapter we are told that "the preacher sought to find out acceptable words, . . . even words of truth," yet he offers us what seems a mournful picture of mortal existence. It is only too true that unless we "remember" our creator, understand spiritual being, the way here outlined is the way of all flesh, but it is not the Christ way. The Master said, "I am come that they might have life, and that they might have it more abundantly." It was always life with him! Our revered Leader says, "His senses drank in the spiritual evidence of health, holiness, and life;" whereas, in the case of his opponents, "their senses testified oppositely, and absorbed the material evidence of sin, sickness, and death" (Science and Health, p. 52).

To heal the sick as Jesus did we must pierce through the veil of belief in matter. At every point we must grasp and hold the spiritual fact of God and His idea, which is clothed with immortality. Then we shall know what is meant by man's going "to his long home." We used to believe that this meant the grave. But does anything which stands for manhood go into the grave? Does love, or life, or hope, or aspiration? Never! The psalmist said, "Lord, thou hast been our dwelling place in all generations." How good, then, to have this for our "long home." Mrs. Eddy says, "Our surety is in our confidence that we are indeed dwellers in Truth and Love, man's eternal mansion" (Pulpit and Press, p. 3).

There is no note of uncertainty in any of the sayings of Christ Jesus as we read them in the light of Christian Science, nor for that matter in any of the Bible statements when they are illumined by Truth. What if to the early writers the Christ-appearing seemed to be in the far future, as to many professed Christians of today it is held to have been in the far past! Christian Science reveals the ever-present Christ, and bids us "remember now" and always that God is not the creator of sin, disease, or death. Thus doing, the "evil days" will never come; nay, they cannot come, to those who "dwell in the house of the Lord for ever."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

[The following letter from a member of the board of lectureship not only shows a just and loving appreciation of Mrs. Eddy's work and achievement, but is also a tribute to the teaching of one who was taught by her, and who faithfully upheld the gospel which he received.—EDITOR.

Nebraska City, Neb., Sept. 15, 1909.

Dearly Loved Leader:—How often, as I look at your signature in my Science and Health and in "Miscellaneous Writings," do I think of your loving tribute to my dear mother when I saw you last, and I shall always prize those two special copies of your works as my two dearest treasures. Your tribute to Mr. Kimball filled me with joy and thanksgiving, and with its statement of the deathless life he is always living, takes away the sting of death and robs the grave of its victory.

I rejoiced at your upholding of his teaching. Sitting in his class in the college, I saw his high spiritual endeavor to make us see the allness of Spirit and the nothingness of matter. His teaching has been misunderstood and misused, also misquoted, and it was said that he taught there are spiritual organs, but nothing he ever taught in the class I attended brought out any such sense of things to me. He taught that everywhere are to be found God's ideas, manifesting the infinity of creation, and that where mortal mind said there was a sick organ, in that very place was one of God's ideas, for neither mortal mind nor its beliefs about itself are either person, place, or thing, and are nowhere at all. His loyalty to you, his love for you, and his devotion to our Cause still stand as waymarks to encourage us all to strive for the higher, holier living which shall give some measure of reassurance in your lonely waiting to know if one of your followers is able and willing to watch with you.

I look back over past years and see the figure of the sentinel watching over the restless flock. I see the restless resentment of the flock when directed away from danger toward the land of plenty, and I see, too, dear Leader, the resistless calm of your knowing and the all-inclusive patience of your love for the flock. I also know that none other than the dear God could enable you to endure and stand and always love.

Only as eternity writes the word *Finis* after the belief in time, shall we be able to realize all that you have endured or accomplished for the sake of salvation unto the brethren and the recognition of the glory of God. God does bless you, dear Leader, and He does lift up His face upon you and give you peace.

Devotedly and gratefully your student,

FRANK H. LEONARD.

Boston, Mass., Sept. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—At a special meeting of the executive board of the New England Woman's Press Association this afternoon, the announcement of your generous gift of five hundred dollars to the journalists' fund touched us deeply. We are indeed grateful for this proof of your sympathetic interest in the welfare of your fellow-workers, and happy in the relief that can now be extended.

No one knows better than yourself the exactions of journalistic work, and we feel that a peculiar graciousness attaches to this gift from one who is not only a New England woman, but is herself numbered among the pioneer women journalists, with the added distinction that for more than a quarter century she has been at the helm of publications that have attained a world-wide circulation. Surely a special blessing will attend each disbursement, because it has been made possible by one who

Digitized by Google

is bearing with us the burden and heat of the day. We recognize that this is but an item in your great work for humanity, but we wish to record our appreciation of your interest in all that makes for the good of mankind.

It was the unanimous sentiment of the board that this acknowledgment of your gift should be tendered you with our grateful thanks. It is our intention to make it the nucleus of a permanent fund, as we hope that your gracious action will be an incentive to others to aid us in what you have termed our "noble work in helping the needy."

Sincerely yours,

MYRA B. LORD, BESSIE BROWN COBB,
ISABELLA A. POTTER, *Committee.*

Kansas City, Mo., Sept. 18, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—Today I have very great reason to be grateful to the Giver of "every good gift and every perfect gift" for Christian Science, and my heart goes out in deep love and grateful appreciation to you, the one found worthy by divine Love to deliver "this final revelation" to suffering humanity. The truth of your last message, "There is no Death," in the *Sentinel* of Sept. 4, I saw demonstrated in my office yesterday afternoon, through the practical application of the "clear, correct teaching" of your beloved Edward A. Kimball. A patient, unconscious, and seemingly at the confines of this earthly existence with what *materia medica* would have pronounced heart failure, was completely restored in a few minutes through the ministration of a Christian Science practitioner summoned from a near-by office.

Surely in this experience I may rejoice with you in the realization (if for only a moment) that "a suppositional gust of evil . . . blows away the baubles of belief, for there is in reality no evil, no disease, no death."

Most sincerely,

A. L. VAN ARSDALL, D.D.S.

Eau Claire, Wis., Sept. 14, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Teacher:—I feel that there should go to you, our revered teacher and Leader, an expression of love and gratitude for your matchless tribute to Mr. Kimball, his life, his teaching, and his work; and I desire as one of the beneficiaries of that work, to add if I may, my own deep appreciation of his labor of love for the world at large. His fealty to you may be best expressed in his own words: "Mrs. Eddy's slightest wish should be to us law." His work for humanity, who shall measure? It is just that these words be said; right that we acknowledge our debt to Mr. Kimball and to you; for it is a debt of love.

We thank God that we have no need to weep; we bless you for your word in season which has "lifted [us] higher than [our] poor thought-models would allow" (Science and Health, p. 259); and it is bringing us nearer to God, nearer to you, and nearer to each other.

Tenderly and lovingly your student,

LAURA C. NOURSE.

Bridgeport, Conn., Sept. 18, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—Your tribute to Mr. Kimball, and the clear statements contained in the recent article entitled "There is no Death," mean so much to me that I desire to thank you personally. For ten years I have been a student of the text-book, "Science and Health with Key to the Scriptures," together with your other writings on Christian Science, and have found healing, mentally, morally, and physically. With a heart full of love, and an earnest desire to do good work in the service of our one Lord and Master, "I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus. . . . Forgetting those things which are behind, and reaching forth unto those things which are before," I press forward to the final awakening, when I shall come into the full realization of man in God's likeness.

Sincerely,

FREDERIC C. HOTCHKISS.

Chicago, Ill., July 30, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—That I can address you thus, and mean it, is in itself a demonstration that God is Love, for only a few short years ago I had only sarcasm and criticism for you and for Christian Science. This morning, while reading in "Miscellaneous Writings" (p. 341), such a sense of gratitude and obligation came over me that I stopped to write these few words to you. I love you dearly, because you have taught me to love God, and my neighbor as myself; at least this is what I am striving for, and I know that by following the teaching in Science and Health I shall go on to the next step.

Lovingly and loyally yours,

MRS. LOUISE MARSHALL.

West Chester, Pa., Sept. 10, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—In acknowledging innumerable individual benefits, received in common with all who have shared the blessings of Christian Science, we believe that you will be rejoiced to know that on June 14, 1909, we made application to the Court of Common Pleas of Chester county for a charter for First Church of Christ, Scientist, in West Chester, Pa., in order that we might the more conveniently take and hold title to a centrally located lot in our borough, which we had purchased as a site for our church building. On June 28 our application was granted, and on Aug. 19, at half past six in the morning, the corner-stone was laid. After the years of slow growth incident to the establishment of a church in this field of labor, this simple service in the early morning, consisting of the reading of brief selections from the Bible and Science and Health, with silent prayer, was fraught with true blessing, and indeed seemed typical of that precious corner-stone which is the sure foundation in Zion.

We pray that our growth may be always steady, and worthy of your wise direction, as heretofore.

Board of Trustees of First Church of Christ, Scientist, in West Chester, Pa.

IRENE A. WILLIAMS, *Clerk.*

Marshalltown, Ia., Sept. 10, 1909.

Beloved Leader:—I am deeply grateful for the positive declaration of truth voiced through you in the *Sentinel* of Sept. 4, "There is no Death." To "stick to the truth of being in contradistinction to the error that life, substance, or intelligence can be in matter" (Science and Health, p. 418), is all we need to know to prove here and now of a cessation of death, sorrow, and pain. Striving to be more receptive to "the still small voice" of Truth and Love, Jesus said, "Fear not, little flock: for it is your Father's good pleasure to give you the kingdom."

A humble follower,

ADDIE M. ROBBINS.

THE LECTURES.

PORTSMOUTH, N. H.

About six hundred people gathered at Music Hall Sunday afternoon [Sept. 5] to listen to a lecture on Christian Science by Prof. Hermann S. Hering. He was introduced by His Honor Mayor Edward H. Adams, who said in part,—

Somewhere I have read that a long time ago, in an ancient church, there was an old organ which no one had really learned to play upon. Occasionally some one would sit before it, draw out its stops, and awaken its harmonies, but as yet no one really knew the great wealth of music that it contained. One day a master teacher entered the church and, sitting down at the organ, as many had done before him, drew out its stops and touched its keys. Immediately the people were hushed into silence, as they heard the old organ first sigh and weep, then thrill with passion and shout for joy. They said among themselves: "Can this be the old organ we have had so long, and never knew its power before?" From that time onward, it was the ambition of many to reproduce the harmonies which had been awakened by the master touch, and whenever the best of them did their best, the others listening would say, "That sounds like the master's playing."

This human life is similar to the organ, with its complex mechanism, its hidden harmonies, its possible discords. Many teachers have been successful in drawing out and developing some of its best powers; but a long time ago, in a little hamlet of Palestine, there appeared one called "Jesus the Master." He declared that in himself was to be the fulfilment of all the prophecies. He associated with men, taught them, labored with them, revealed unto them the beauties of a human life in action. He told his disciples to do the same work that he was doing. His commission to them was, "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Since that time, it has been the ambition of many to reproduce in thought, in word, in action, the life and teachings of the Master, and whenever men do their best we say: "That action was Christlike. How much that sounds like the Master's playing!"

We do well to remember that every life which is brought into contact with the life of Jesus the Master, by a living, loving faith, must in some way unfold and develop and complete all the powers God has given men. For the teachings of the Master, as given in the Gospels, have come to take hold of all these human powers. They have come to suppress and destroy every angry and unholy passion; they have come to purify and beautify every affection; they have come to dignify every emotion; they have come to sanctify every volition; they have come to ennoble men from the crown of the head to the sole of the foot. Moreover these teachings go out from the individual and take hold of society. They elevate every vocation. The humblest calling becomes significant in the hands of the man who proposes to work out the best in himself with the power God has given him. There is not a law that holds families together, nor a law that binds man to his fellow-man, which is not in some way touched and affected so as to lift men out of the realms of nature into that faith relationship with Jesus, the Son of God.

One of the teachers of the gospel, whose life has been consecrated for more than forty years to a fuller and higher and deeper interpretation of the gospel, is Mrs. Eddy. I entertain the highest regard for her and her labors, for the Christian Science church, for its members, and for the work they are doing. Today I count myself happy for the privilege to be present with this large and representative gathering to hear one competent to speak upon the subject of Christian Science.

Portsmouth Herald.

LECTURES TO BE DELIVERED.

Boston, Mass.—William D. McCrackan, M.A., The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, 8 p.m., Oct. 7.
Frankfort, Ind.—Frank H. Leonard, Blinn Theater, 3:30 p.m., Oct. 3.
Corona, Cal.—Judge Septimus J. Hanna, Oct. 5.
Jackson, Mich.—Clarence C. Eaton, The Athenaum, Oct. 8.
Jacksonville, Ill.—Hon. Clarence A. Buskirk, Grand Opera House, 2:30 p.m., Oct. 10.
Redlands, Cal.—Judge Septimus J. Hanna, Contemporary Club House, 3 p.m., Oct. 10.
Fitchburg, Mass.—Frank H. Leonard, City Hall, 3 p.m., Oct. 10.
Chicago, Ill. (Fifth Church).—Clarence C. Eaton, Oct. 10, 11, and 12.
Bakersfield, Cal.—Judge Septimus J. Hanna, Oct. 12.
Oneonta, N. Y.—Frank H. Leonard, Municipal Building, 55 River street, Oct. 12.
Joliet, Ill.—Clarence C. Eaton, Oct. 14.
Amsterdam, N. Y.—Frank H. Leonard, Opera House, Oct. 14.
Minneapolis, Minn.—William D. McCrackan, M.A., church edifice, Second avenue south and Eleventh street, Oct. 14 and 15.
Hanford, Cal.—Judge Septimus J. Hanna, Hanford Opera House, Oct. 15.

TESTIMONIES OF HEALING.

So many things have come to me for which I have cause to be thankful, that I feel I want others to know of my blessings. Not very long ago rumors were afloat that the Christian Scientists were going to organize a church in our suburb, a report which was received by some with a shrug of disdain, and to many of us the news was unwelcome. It was all done so quietly, however, that we thought the rumor unfounded, until one Sunday morning we saw streams of people going toward the Country Club, and we found that the Christian Scientists had rented the clubhouse to hold services in until their new church edifice was finished. The same crowds gathered Wednesday evenings, all looking very happy. At first we regarded the movement in a rather superior way, then curiosity got the better of us, and we found ourselves one Sunday morning joining the late goers.

At this time I had been suffering from a condition which caused mental disturbance, and at times gave me a great deal of trouble from blood pressure, dizziness, etc., and there was nothing that afforded me any relief. Even my husband, who was a physician, could give me nothing to help me. I went to church that morning miserable, physically and mentally, and in sorrow over the loss of a dear sister. We reached the hall in which the services were held just as the silent prayer was announced. My first thought was to stand till it was over, and then a desire came to me to worship with these people; which I did throughout the service. I was healed during that Sunday morning service Oct. 13, 1907, although I had never heard of such an occurrence, and it filled me with awe and gratitude. The dawning of the spiritual sense, and the uplifting that came to me, are the most beautiful gift of all; and the truth with all its blessings, as it was unfolded to me, has filled me with love and gratitude for our dear Leader; and her name, which once was a stumbling-block, is now revered not only by me but also by my husband and son.

Since coming into Science I have been healed of many ills,—stomach and bowel disorders of many years' standing; of irritability; of a feeling of loss; of sorrow for the dear ones who have passed on. Now there is no longer a feeling of separation for them, but a daily, hourly communion with the one Mind, which makes me feel that we need not dread death if only we understand Life. I have found that there is no condition in human experience that is not met by divine Love. To grow in the understanding of Christian Science, to be diligent and faithful in thought and deed, is my earnest desire.

LUCIA CHASE BEEBE, Chicago, Ill.

In March, 1907, I was healed by Christian Science treatment, almost instantaneously, of tubercular disease, which had first resulted from a severe cold, accompanying a very bad case of alcoholic poisoning and two attacks of acute lung trouble. The attending physician, and an able specialist who had been called in for a consultation, came to the conclusion that I had the disease mentioned above, and that it would terminate fatally in a very short time, as I was very low and the case was running a rapid course. My wife previous to our marriage had been a trained nurse, and she knew that everything possible had been done for me in a medical way. She believed in Christian Science, and spoke of it to me, and although I knew nothing about it, I readily consented to have a practitioner come to our home and give me treatment. She came, and I was healed, through the understanding of the truth, not only of the disease, but morally and spiritually as well. Today I am a strong and healthy man. Nor is this all that God's power has done in my home.

I thank God for this wonderful regenerating truth, and my gratitude to the Discoverer of Christian Science is very great.—THOMAS E. CHILDS, Republic, Pa.

[Translated from the German.]

I suffered from pains in the stomach for many years. For a long time I was not able to eat certain kinds of food, and tried many things to get relief. During the treatment which I underwent last, I became so miserable that I did not know what to do, especially in consideration of the strenuous work in which I was engaged. I had often heard through a relative of the help that sick people receive through Christian Science, but I had no confidence in the healing work, being strictly religious according to the old views.

On Jan. 23, 1909, however, I was so distressed that I could not even eat bread. I then decided that this condition could not continue, and called upon a Christian Science practitioner. I told her all my troubles, and also my doubts. Even then I could not well grasp what I was told, but as I was suffering severe pain I asked for treatment. On the following day we had guests at dinner, and I ate of everything just like the others. They saw with surprise that I could eat again of all the dishes, and asked me how I felt. I was glad to tell them that I was very well. It seemed a miracle to myself, and had I heard of such a healing through others, I would not have believed it. When, a few days later, the physician who had attended my case called, and I was able to tell her that I was quite well, she was surprised and incredulous.

Two weeks later I had an attack of throat trouble, with high fever, as I had had it oftentimes before. The weather was stormy, and I felt so weak that I did not venture to go out, but the thought that I, who had so many duties to perform, should perhaps be ill for a long while, induced me to go again to the Christian Science practitioner. She kindly gave me treatment, and when I left her the pressure in the head and the pain in the throat had disappeared, and I felt quite well again. I felt as if a miracle had been performed, and cannot readily express in words the gratitude which I felt. I want to offer once more my sincere and heartfelt thanks to God, that I have been helped to discern the truth. I am thankful for the quick help which I have received, and that I have found in Christian Science the religion of Christ, the truth about God.

MARIE SCHUMANN, Dresden, Germany.

About sixteen years ago I was taken suddenly ill with appendicitis, and after many months of invalidism gradually gained strength. At that time an operation for this disease was not so common as it is today, and it was dispensed with in my case; but the physician informed me that, owing to this, I might have a serious blood trouble, and he cautioned me in many ways about it. A thought of fear was thus implanted in my mind, and I began to watch for symptoms of the disease; and before a week had passed it commenced to manifest itself on my face in the form of an eruption, although I never had had any blemish on my skin before this time. The trouble increased, as my fear increased, and for fifteen years it was a constant struggle to overcome what had then become a severe case of blood-poisoning.

I was under the care of eminent physicians, and also a very skilful dermatologist, and followed their instructions faithfully; but without any permanent improvement. Finally I consulted one of the most noted physicians in America. He advised a slight internal operation, which was performed; still without any abatement of the trouble. I used to think I could appreciate how Job felt with his boils. After all these years I was not improving, but rather

Digitized by Google

growing worse. These physicians did everything in their power to help me, and I deeply appreciate their kindness and interest in my case. I then came to California to visit a friend, and on my arrival I remarked how wonderfully changed for the better my friend was, for she had been a semiinvalid for years. When I asked what had caused her improvement, she answered that it was Christian Science, and asked why I did not try it, as I had tried about everything else. She added that she was sure Christian Science would help me.

This was certainly food for thought, but I had a vague notion that Christian Science was a sort of hypnotic influence, and this had always been contrary to my ideas of right; but after noting for several weeks my friend's bright face, cheerfulness, and health, I decided that there must be something good in Christian Science. I went to a practitioner, and from the first treatment I felt encouraged. I read all the Christian Science literature I could obtain and felt sure I would be healed. At the end of the first ten days I went out without my veil, which I had worn for many years when on the street. Gradually the painful sensitiveness and fear of meeting people wore away, and as a new light began to dawn in my consciousness, I became less mindful of self, and began to realize what is meant by the perfect child of God. I received treatment for two months and a half and was healed. All the pit-marks in my skin gradually disappeared, and I was free. Only those who have gone through a similar experience can realize what this freedom meant to me.

My healing occurred six years ago, and though it was wonderful, and a great relief, still the spiritual light which I have gained through the study of the Bible and Science and Health has been a greater blessing. Our text-book has certainly been proven over and over again to be a perfect "Key to the Scriptures." It is my earnest desire, in gratitude for the many blessings I have received from the study of Christian Science, that I may each day gain a deeper and clearer understanding of humility and love, and reflect more of the Christ-spirit; that by so doing I may prove my thankfulness to God, and to our beloved Leader, Mrs. Eddy.—BESSIE HULL BAKER, Lordsburg, Cal.

In our text-book, "Science and Health with Key to the Scriptures" (p. 494), we read: "Divine Love always has met and always will meet every human need." Four years ago a great need was met when Christian Science came into our home; and words cannot express my gratitude for what it has done for my mother and myself. My mother had suffered for six years from extreme nervous trouble. Our home was broken up, and she was sent from one sanitarium to another, continually growing worse, until, after spending two years under the care of a noted nerve specialist, we were told that nothing could be done for her. We made a home and brought her to it; but wrong thoughts, which had grown to seem real to her, brought wrong physical conditions, which the doctors pronounced incurable, and the mental condition was even more distressing.

A friend, whose mother had been healed of rheumatism, suggested Christian Science to us, and as it was the one way that offered us hope, we were eager to try it. Mother at first refused to have it; then she gave a half-hearted consent. The practitioner met her opposition with patience and love, until it was replaced by an earnest desire for the truth. After several months' treatment she was examined by a physician, as one of the members of the family desired this, and was found to be physically normal. And we who had been with her knew what beautiful healing had come to her mental condition. When she realized that she was no longer a slave to that which for so many years had held her in bondage, she expressed only thoughts of peace. Those ignorant of Christian Science did not appreciate what had been done for her, because she passed away. But I could only rejoice, knowing, as I did, that errors had been corrected which would have continued to seem real to her until corrected, as they were, by Christian Science, the law of Truth; and she knew that she was growing, through Christian Science, into a clearer understanding of God, whom to know aright is life eternal.

After reading Science and Health for a month I was healed of an eye difficulty for which I had worn glasses ten years. During the past four years Christian Science has been my only medicine; has met my every need; and I am satisfied that it is a speedy, effectual remedy, as well as a preventive of disease and disaster. I am very grateful for the spiritual sense of God and His creation which Christian Science is bringing to me; for the understanding that evil is unreal and impersonal, and for the purification which this truth causes in consciousness. I am grateful to our beloved Leader, Mrs. Eddy, for the example she is giving us of man governed by God, and for her wonderful discovery, Christian Science, which reveals the truth about God and man and the reign of righteousness on earth.

EDITH MERRICK, Pittsfield, Mass.

I feel that the time has come to make a public acknowledgment of what Christian Science has done for me. In the summer of 1905 I had a very severe illness, and the doctors said that an operation was necessary to save my life. My recovery from this was very slow, and I was taken to a sanitarium, where I remained for more than five months. During that time I had another severe attack of stomach trouble. The doctors then advised my going away, as they could do nothing more, so I was taken to the station in a wheel-chair, and carried into the train. When I reached my destination I sent for a physician of another school, thinking that I would surely recover my health, but I only improved for a time, and then the old trouble returned, until I was in bed again for eight weeks.

At that time a friend recommended Christian Science, so a practitioner was sent for. After the first treatment I ate food which I had not dared to take for months, and after the second visit, two days later, I got up and walked about the room. The next day I asked the nurse to dress me; then I walked out into the other room, unaided, and in a few days went to two meals daily. In two weeks I was going up and down stairs as often as I wished. All this was done without the truss which I had worn for more than twenty-five years, and I have never used it since. My quick recovery was a marvel to all my friends, who expected me to be an invalid the rest of my life.

I am truly thankful to our heavenly Father, who is Life, and to Mrs. Eddy, who has made the truth so plain, for I have never felt such peace, comfort, and joy as since I have known of Christian Science. Medicine has been entirely discarded since Aug. 20, 1906, for I find Truth to be an ever-present help in time of need.

STELLA R. WOOD, Mount Kisco, N. Y.

While at a southern resort, last year, we were surrounded by people whose views on the subject of health, and other things were very different from those of Christian Scientists. One night about eleven o'clock I awoke to find myself very ill, according to the testimony of the senses. I tried to overcome the difficulty myself, but failing to do so I called my husband, who is also a student of Christian Science, and we declared the truth until 5:30 a.m., when I fell asleep. On awaking I was trying to think of some excuse to offer for not appearing at the breakfast-table, but just then my husband asked me to get ready to go to the dining-room, and I immediately knew that he was certain I could do it, with God's help, or he would not have asked

Digitized by Google

me. I obeyed with some difficulty, but when we entered the dining-room I was able to appear perfectly comfortable, and no one would have imagined what a struggle I had had all night. We had to remain downstairs for an hour, to consult about some business matters, and I overheard one guest remark to another, "I wonder how Mrs. —— is. The doctor in attendance did not expect to bring her through the night, as the air last night was the kind he dreaded; and two other guests are afflicted." The disorder was the same as that from which I had suffered, and my thankfulness may be imagined that, instead of being a thousand miles from my home physician, we had our God, the "great Physician," right with us. I realized as never before how our heavenly Father covers us with His wings, protecting us from the evil beliefs of mortal mind.

We have been in Christian Science over twenty years, and have never doubted its ability to cope with any of the ills that flesh is heir to. We have proven it a practical Science to rely upon all day long and every day of the week. Words fail to express my love and gratitude to our dear Leader, but this mite may help to swell the grand strain which is floating heavenward. All the good we have and are able to do we owe to this great truth, and Mrs. Eddy has shown us, by her untiring and selfless love, how to grow better each day.

CLARA MANN BATES, Ridgetown, Ont.

After more than eighteen years' study of our dear Leader's works, with daily proof of the power of Truth over error, we realize that we have but touched the hem of the garment, and eagerly press forward with renewed desire to obey the precepts laid down in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. For the benefit of others who are on the way, I gladly stand a witness to the healing of many forms of disease through Christian Science.

A year ago last July my husband passed unharmed through what seemed to be "the valley of the shadow of death." Through the demonstration of the truth he was delivered from each symptom that appeared, and instead of weeks of convalescence he regained in a few days the flesh and strength lost in several weeks, together with a deeper insight into the truth, which enabled him to do the very things about his business which were said to have made him sick, and to do more office work than ever before, continuously from that time until now. Briefly would I mention my own experience in 1901, when to sense conditions were most unfavorable. With my first three children I had a doctor, and an anesthetic was used. Quite a contrast to these was the birth of my last child under Christian Science treatment, this experience being a practically painless one, devoid of evil forebodings and full of peace; and the days which followed were marked by unusual health and strength.

Only by close study and faithful practice of the teaching and rules laid down in our Leader's writings could these things have been done, for it requires understanding to handle a matter wisely, that we may find good. For this we honor her who by noble example leads the way, and to her we render heartfelt thanks for providing what is needful for our advancement, our periodicals; the lectures; the Lesson-Sermons; and we are grateful for every means of spreading this gospel of peace on earth and good will to men.—MARY S. C. UTLEY, Eddyville, Ky.

Through the great benefit which my brother had received, I was induced to come to Christian Science for help, and it was while taking treatment myself that the question of the healing of my little girl was brought up. The child, then five years old, had been unable from her birth to see anything when looking down, though she could see distinctly any object in front of her or at a distance; consequently she was unable to run and play as other children could, as she was apt to stumble. I rejoice to be able to state that with less than one week's treatment she was perfectly healed, being able to stand erect and to see a pin at her feet.

I also wish to tell of the healing of my husband, from what the doctor pronounced an incurable disease, said to be the effect of a fall eight years ago, which had injured the spine. When the pain became so intense that he would become unconscious at times, and when all material means had failed, he consented to have a Christian Science practitioner called in. This was about five o'clock in the evening; and by twelve o'clock he was able to go to bed and to sleep. He went to his work in a week, perfectly well, and has continued so ever since.

I will say, too, that my own needs were met, and whereas in former years we did not attend any church, we are now regular attendants of the Christian Science church in Pacific Grove, and are thankful that this truth has come into our lives.—MRS. ANGIE MCWAY, Oak Grove, Cal.

[Translated from the German.]

For thirty years I suffered with a stomach and bowel disorder, with all its attendant ills, such as headaches, indigestion, etc. I had consulted many doctors and tried all kinds of cures, but I only grew more miserable, and if at that time I had not stood on a positive religious basis I would myself have put an end to my tortures. While in this pitiful condition, in the spring of 1907, a near relative from America came to see me, and made me acquainted with the healing efficacy of Christian Science, which she herself had tried. By reason of my studies in natural science, I opposed it strongly in the beginning, although I could not deny the logic of the fundamental thought which pervades Christian Science.

Finally I applied to a Christian Science practitioner here in Dresden and asked for treatment. The valuable and convincing information which I received removed my doubts and scruples, and after a few weeks the stomach trouble completely left me, and the rigid diet, without which I had believed I could not exist, became needless. From this time forward I ate and drank everything I wished. Filled with confidence and zeal, I now made rapid strides toward the understanding of this glorious Science, and grew stronger all the time. I saw thereby the all-powerful and all-loving ministry of Truth for him who trusts God entirely. Thus the other manifestations of disease were soon overcome, and my feeling of gratitude found but one expression: "Lord, I am not worthy of Thy grace." Many troubles in my family, as well as financial difficulties, were solved in the same seemingly wonderful way.

I give this testimony with a heart full of gratitude, and would be pleased to furnish any further information desired.—BENNO NEHAB, Dresden, Germany.

I am longing to express something of the gratitude and love which fill my heart for all that Christian Science has done for me and mine. This truth has come to me slowly, but it is this very fact which may give courage to others. So slowly did I progress that at times I wondered if I had lost all which was so positive and uplifting; but I did not question long, for as each time of doubt passed, the truth shone more radiantly, and was demonstrated more fully than ever before.

A few years ago I broke down in health and fell into a state of mental depression, so that my family feared for

Digitized by Google

my reason. A friend took me to consult a Christian Scientist, and after the first treatment I began to improve wonderfully. I immediately procured a copy of Science and Health, which has never left my side since, for the reading of it has changed my whole life, dispersing the clouds of gloom and fear and replacing them with the calm, strength, and happiness learned through Science and Health as the truth is gradually unfolded to me. My health and mental tone were quite restored, and since I have learned to trust the Giver of all good, many blessings have come to me. Thank God for this penetration unto spiritual things on the part of our dear Leader, who has opened our eyes to the truth and pointed out to us the way.

MRS. G. D. WEBB, Paris, France.

For a long time I have felt it due to the Field that I bear testimony to what Christian Science has done for us, remembering the words of our Leader on page 372 of Science and Health, that "a just acknowledgment of Truth and what it has done for us is an effectual help." Our family consists of my aunt, now in her eighty-seventh year, for whom it is my duty to care, and myself. About six years ago, she was taken with a violent attack of heart trouble, and as she was not in Science, I told her she must have help of some kind immediately. She replied, with the seeming trustfulness of a child, "You are responsible for me." I wrote at once for Christian Science treatment, and relief came with the first treatment. She continued to improve until she was entirely free, and she has had no return of the trouble.

A year ago last June, while unloading lumber, I fell from a car, striking on the corner of a large piece of timber. This caused great pain in my chest and what seemed to be a fractured rib. At eleven o'clock in the morning I telephoned to a practitioner for Christian Science treatment. In the afternoon I went to work, and continued to work for several days, when I wrote the practitioner to stop treatment, as the rib was not in evidence against me.

These are some of the many proofs of the healing power of Christian Science which have come to us, and our hearts are filled with gratitude for a knowledge of this truth.

EUGENE F. BURTON, Cowles, Neb.

I am so filled with gratitude to God that I feel I must impart some of the blessings which I have received and which I am receiving every day through the study of "Science and Health with Key to the Scriptures." Before this understanding of Truth came to me the Bible was a sealed book, but now its teaching is so simple that a child could understand it. I have been a student of Christian Science for ten years, and my first demonstrations with the children were marvelous to me, such as the overcoming of colds, coughs, etc. But there were still greater proofs of the power of divine Love in store for me. I have had the experience of a painless birth, and we have a lovely boy, now nearly four years old. I received absent treatment at the time, and the doctor who was called in was so surprised at the result that he asked how it had come about. I was very happy, and wanted to tell him all, but remembering Jesus' words, "See thou tell no man," I answered "God did it." I was perfectly well after the birth, but remained in bed three days to please my husband and the nurse, who were not Scientists.

Another proof of the power of divine Love which was wonderful to me, was the healing of our little girl. When six years old she was completely helpless. I called in a doctor to diagnose her case. He said it was paralysis, or possibly an affection of the spine, and that she might outgrow it; but his expression conveyed more to me than his words. I was simply heartbroken for a few moments, then I turned to God, whom I had already proven to be my helper in time of trouble, and I saw that this was only another trial of my faith. I called on a Christian Science practitioner in Jacksonville, and for eight long weeks I was never out of sight of the child, as she seemed to be afraid of everything and was so drawn and so thin that I dreaded to have any one see her; but with the help of the faithful practitioner all this was overcome and she was once more a lovely child; even her eyes seemed to be larger and more beautiful. She is now eight years old, and no sign of the disease has ever come up since that time. I have never feared for a moment that it would or could return, knowing that "Truth, Life, and Love fill immensity and are ever present" (Science and Health, p. 504), and that disease is nowhere, is neither person, place, nor thing. She finished in the first and second grades at school last year, and received a certificate for being neither tardy nor absent a day during the term. We have also had three severe attacks of acute lung trouble overcome in our little family.

We have service here on Sundays in a private house, but this winter we shall be compelled to have larger quarters down town, as so many tourists are coming in. I certainly appreciate Mrs. Eddy and what she has done for the world.

MRS. GABRIEL G. LEE, St. Augustine, Fla.

Through the understanding of Truth which has come to her in Christian Science, my mother has been able to help her family in many ways. It was her faith in Christian Science which influenced me to take my little daughter to a practitioner, two years ago. From the time that she had a fever, a year before, she had had considerable trouble with her ears, and was hard of hearing. She was healed instantly in Christian Science, and has been perfectly well and strong ever since, never needing another treatment. Surely "God moves in a mysterious way, His wonders to perform." I am very thankful for Christian Science. I read Mrs. Eddy's book, "Science and Health with Key to the Scriptures," every day, and am learning to depend upon it more and more.

MRS. C. BRESEE, Pacific Grove, Cal.

I would like to say that Christian Science has not only helped my little daughter in the way described, but I myself have been benefited by it in many ways.

CHARLES BRESEE, Pacific Grove, Cal.

I wish to express my deep gratitude for the transformation which Christian Science has wrought in me. Through the realization of man's true relationship to God, as revealed and taught in Science and Health, I have been able to manifest qualities essential to success and a Christian life, in which, in the old thought, I had been entirely lacking. A long-standing nervous disorder has been completely overcome, and though my physical healing and spiritual uplifting have seemed slow, the change has been radical and productive of health, happiness, and usefulness.

WALTER KONIER, Arlington, Mass.

Neither a borrower nor a lender be;
For loan oft loses both itself and friend,
And borrowing dulls the edge of husbandry.
This above all: To thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.

SHAKESPEARE.

FROM OUR EXCHANGES.

[*Christian Register.*]

The world has learned that to be a mere professor of religion is not enough. Profession is good, church-membership is good, strict observance of Christian duties is good; but, if these things are external, joined to harsh and censorious judgments, dark suspicions of evil where no evil exists, a shadow blighting human happiness, let us not call these things by any holy name, but brand and stigmatize them as they deserve. Without true-heartedness, humility, charity, and love, that knit the soul to the living God, there can be no religious life. If our religion brings no happiness to ourselves or others, it is inconceivable that it should be real. The test of its truth is the personal philosophy it brings with it, the courage, cheer, and brightness it kindles in the soul.

[*Christian Register.*]

There are great days coming, and they who will be leaders and victors in the struggle and strife which are before us will be the great-hearted men and women who are patient with the insufficiency of things as they are, who are hospitable to all the good the past has had, and who are eagerly using every tool, every source of power, every opportunity that is given to them to make truth more lovable than error, the right more attractive than the wrong, and justice more sublime than any success which comes to the unjust. In the true process of evolution nothing is destroyed until it has given birth to something better than itself. The danger now is that the new births will be prevented by those who destroy that which is just ready to unfold into a new and better form.

[*Advance.*]

The Demetrius of today, like the Demetrius of old, would stop the whole movement of human progress, of reform and the establishment of justice and righteousness among men, in order to keep his investment and profits safe. But the mighty forces of Christianity swept the old Demetrius and his Diana out of the way, and so must the onward movement of today drive the modern Demetrius from his false position. If a man has put his money into a wrong business, or into wrong practices in business, so much the worse for the man. He must bear the consequences of his alliance with a false goddess of fortune. The betterment of the world cannot stop because he is in a wrong business.

[*Congregationalist and Christian World.*]

A self-centered life will always be a disturbed life, because it is a life out of poise. Everything is centripetal. There is nothing to prevent a whole universe of friction from crushing and wearing upon the soul. Attention, interest, affection—all center on self. No wonder there is distress. The cure is normal action—action in the interest of others. And the supreme motive for action is love. Get in love with something, or somebody: lose yourself in some absorbing effort to better the life of your fellows, and in that absorption shall come balance, immunity, and peace.

[*Christian Intelligencer.*]

If a man indulges in loud professions of his inward religious experience, and disregards the claims of justice, kindness, honesty, and truth toward his fellow-men, he is deceived, and knows as little of the power of godliness in his heart as of the fruits of godliness in his life. Neither a regard for one precept of the Bible, nor for another precept, affords evidence of sincere piety, but a regard for all the precepts.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'", "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Governors of New York and New Jersey, officers of the Hudson-Fulton celebration commission, and the commission whose work made the event possible, participated on the 27th ult. in the dedication of the Palisades Interstate Park, which stretches for fourteen miles on the west side of the Hudson river opposite New York city and Yonkers. This marks the crowning event of fourteen years of unremitting efforts to save the beautiful Palisades from destruction by blasting. This strip of land and precipitous cliff constitutes one of the most picturesque bits of scenery in the state. It comprises seven hundred acres of level land, giving opportunity for a beautiful boulevard drive along the base of the cliff and for recreation to the millions of persons huddled in the tenements of New York and near-by cities. The cost of this park is about $627,000, of which $502,000 was paid by the states of New York and New Jersey, and $125,000 by contribution of J. Pierpont Morgan. The first tangible attempt to save the Palisades was made in 1895, when the United States Government was asked to take them for military purposes. This plan failed, but the New Jersey State Federation of Women's Clubs took up the matter with enthusiasm, and the result of their active campaigning was the appointment of committees by Governors Roosevelt of New York and Voorhees of New Jersey to investigate the opportunities of protecting the Palisades.

The announcement that the Interborough Rapid Transit Company of New York would bid on the construction of a four-track subway up Madison avenue from Forty-second street to the Harlem river, with branches in the Bronx, in connection with its projected Seventh avenue extension downtown, is the most important victory of the public service commission since last spring, when it secured the passage of the Travis-Robinson bill, enabling the construction of subways by private capital. In addition to being a clean-cut triumph for the commission over the Interborough Rapid Transit Company, it rounds out the achievement of the legislative session in proving that the Travis-Robinson bill is a workable statute under which subways can and will be built. This bill was a measure framed with the idea of freeing the city from the rapid transit embarrassment to which the excesses of the city's bond issues had subjected it. It allowed the construction of subways by private capital on the principle of profit sharing and the indeterminate franchise; the construction of subways by the assessment principle and, in connection with the pending constitutional amendment exempting self-supporting bonds from the debt limit computation, the construction by the city itself, should private offers not prove satisfactory.

Last week three thousand women, part of the army of persons in Chicago who obtain their mail at the general delivery window in the Chicago post-office, revealed to the postal authorities, many under protest, their true names and addresses. They were requested to sign "cards of identification," and these were placed in card indexes for reference at each recurring application for mail. The requirement will end many a clandestine correspondence and will produce a reform for which urgent demand recently has gone up from ministers, reform leagues, and others working for the city's purification.

Scientists now have placed at their disposal the highest meteorological and astronomical observatory on the American continent. It is situated at the top of Mt. Whitney, California, fourteen thousand feet above sea level, far above the clouds and free from dust and smoke near great cities. Although built by the Smithsonian Institute, it may be used by any scientist gratuitously.

It is the ambition of Edwin Ginn, the Boston publisher, to see established what he calls an International School of Peace, to be conducted along sound business lines. When the proper times comes he will lay the foundation stone of such a school by an annual contribution of fifty thousand dollars and provide for a permanent endowment.

An examiner and supervisor of Government surveys, employed in the land office at Seattle, pleaded guilty in the Federal Court to embezzling $5,718 since last March, and has been sentenced to three years in the Federal penitentiary at McNeils Island.

International.

The British Government, after prolonged negotiations, has completed arrangements to take over all the coast stations of the Marconi wireless system, excepting the long distance stations at Poldhu and Clifton, which the company retains for its projected transatlantic service. The Government pays seventy-five thousand dollars for these stations and gets also the right to use all existing patents and all improvements made during the next fourteen years. Under the control of the British post-office, the Marconi stations will be opened for communication equally with all ships, irrespective of their wireless system. Heretofore the Marconi company has endeavored to persuade all ships to install its system. The post-office is taking over also all the Lloyds wireless stations. The admiralty has long urged the vital importance of vesting the control of wireless telegraphy in the post-office, and there is a wide-spread sentiment against allowing the establishment of a private monopoly in wireless telegraphy.

Telegraphic reports from Persia to London pass over the longest telegraph circuit in the world. The telegraph operator at London "speaks" directly to his colleague in Teheran, four thousand miles away, by wire, automatic repeaters taking the place of operators at eleven points on the route. The first repeating station from London is at Lowestoft, where the message is carried forward two hundred miles by cable under the North sea to Emden, Hanover, where it is again automatically repeated; stations at Berlin, Warsaw, Rouno, Odessa, Kertch, Sukhum, Kalch, Tiflis, and Tauris flash it instantaneously without human intervention, the operator at Teheran being the first to handle it since it left London. The line is continued to India, but in no other place is there so long an automatic circuit.

The destruction of harmful moths by means of a combination of electric light and a suction blower has been carried out with great success at Zittau, Germany. The beam from a search-light mounted on the roof of the municipal electric plant is played upon the forest several miles distant, and the moths come fluttering up the beam in swarms to where the intake of a powerful suction blower is concealed below massed arc lamps. The moths are drawn in by the suction and exhausted into a wire net cage which is removed as often as filled. As much as one hundred and forty pounds' weight, representing some four hundred thousand moths, has been destroyed in this way in one night.

A syndicate of Americans is arranging to spend one million dollars in establishing a system of irrigation and making other improvements on a tract of ninety thousand acres of land which it owns near San Geronimo, Mexico, situated adjacent to the Tehuantepec National and the Pan-American railroads. It is planned to place sixty thousand acres under irrigation and to convert it into a sugar plantation upon which a colony of American and German farmers will be located. The syndicate will build schools, churches, hotels, and surround the colonists with as many of the comforts of living as possible.

The American Government, it is said, will file soon an official protest against the recently concluded convention between Japan and China, wherein the former secured a mining monopoly in Manchuria. Japan's failure to consult Washington in the matter is regarded as a breach of good faith and a violation of the "open door" policy to which Japan is pledged.

The Spanish troops last week occupied Mt. Guruga, near Melilla, Morocco. This had been the stronghold of the Riff tribesmen and its occupation is regarded as signifying the end of the war. The Spanish king was greatly pleased at the news. The war has not been at all popular in Spain and was the occasion of a serious outbreak at Barcelona.

A memorandum from the French treasury presents further information concerning the aluminum sou, two-sou, and five-sou pieces which will go into circulation early in 1910. The one-sou coins will be the size of a five-cent piece, the two-sou that of a quarter, and the five-sou pieces midway between a quarter and a half dollar.

Industrial and Commercial.

The Pennsylvania Railroad, in order to encourage agriculture along its lines, has purchased a farm of fifty acres at Bacon, Del., on the Delaware Railroad, where it proposes to operate an experimental agricultural station for the benefit of farmers in the Maryland, Delaware, and Virginia peninsula. Thousands of acres in one of the richest agricultural districts of the world here lie idle, despite the fact that adjoining farms flourish. A number of years ago the Pennsylvania road established two experimental farms along the line of its Long Island Railroad, in districts where the natives said that farming was out of the question, and the success attained at these places encourages the road to enter now upon this new enterprise.

United States army engineers have begun the surveys and borings for the storage reservoir on the Etowah river, near Cartersville, Ga. The plan is to have the dam built at the expense of the United States Government, to cost about $2,500,000, which sum will gradually be refunded to the Government by the water companies which derive benefit from the increased power value of the river. The dam on the Etowah will be about one hundred feet high, with a storage capacity of about thirty-five million cubic feet.

This season is witnessing another farm revolution in the wheat counties of central and western Kansas. For several years the growing scarcity of labor has been a great hindrance to farming operations. The farmers are now investing heavily in gasoline ploughing engines and gang ploughs. With one of these ploughs one man can turn thirteen to fifteen acres in a day of ten hours and the whole machine costs hardly the price of two teams and ploughs.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE IMPORTANCE OF A RIGHT POINT OF VIEW.

FRANK H. SPRAGUE.

So fixed in the thought of the ancients was the mental picture of a flat earth, that their mistaken theory of the solar system passed unchallenged in the face of indications which, to the more enlightened sense of today, enforce an altogether different conclusion. The object-lessons furnished by the gradual disappearance of receding ships below the horizon, the curvature of the earth's shadow as it falls across the moon during an eclipse, and other equally significant natural phenomena, were insufficient to loose belief from its traditional moorings in a radically wrong concept of the solar system, and turn inquiry in the direction of more rational interpretations.

As the imaginative thinker pictures the movements of the heavenly bodies comprehensively from a standpoint far removed in space, it seems to him fairly incredible that intelligent and learned observers should have allowed the astronomical fact to be so obscured by an illusion of the senses. And yet, a similar state of affairs still prevails to quite an extent in the religious world. As we survey Christendom, with its scores of opposing sects, each claiming Scriptural authority for its distinctive theological views, we may well marvel at the obtuseness of mortal mind and the self-complacency with which it regards its own finite, ever shifting opinions. It is self-evident that all these differing sects and conflicting creeds cannot derive their sanction from the teaching of the Bible. Nevertheless, each exponent of the Scriptures professes to be satisfied with the correctness of his peculiar interpretation and the untenableness of all contrary views.

Such is the chaos of human belief. The fact is, the abnormal and erratic position of human mentality offers an unlimited number of possible points of observation, from each of which a different impression of things is obtainable. A suggestive hint of this circumstance may be had by following out the illustration just cited from the domain of solar physics. To the observer at the earth's equator the sun appears to cross the zenith in its course and the entire galaxy of the starry heavens to pass over the earth in daily revolution. As the observer moves in the direction of either pole, however, the celestial aspect changes. The sun no longer touches the zenith, and a portion only of the starry firmament appears above the horizon. The nearer he approaches the pole the more the scene changes, until at length the sun is visible continuously above the horizon, ascending slowly in a spiral orbit, and descending again until it disappears below the horizon for another long period. Moreover, from the standpoint at either pole but one half, approximately, of the stellar panorama is ever visible.

This illustration points by analogy to the manner in which mortal mind is deceived and inveigled into accepting false interpretations of things as they exist in the real, the spiritual universe of God's creating. So long as thought dwells in the realm of the finite and material, it finds itself confronted by conflicting theories and unstable scientific and religious systems growing out of differing points of observation or angles of vision. Christian Science discredits the earth-born, theoretical interpretations, which spring from the inconsistent and irreconcilable standpoints of human mentality. It not only affirms that God is the only Mind and intelligence, but it shows how the truth of this proposition may be known and verified. As the phenomena of solar physics admit of a rational explanation only as the key to the situation is recognized in the sun's centrality, so the profoundest problems of religion and science are capable of elucidation only from the standpoint of divine Mind, as made known in its reflection, the spiritual idea. In the unfolding of truth in human consciousness the observations of Copernicus in the realm of physical phenomena may be regarded as foreshadowing Mrs. Eddy's discovery of Christian Science; for, while the former presented the solar system in the light of a new standpoint, the latter acquainted understanding with the spiritual viewpoint from which the scientific order of creation appears.

Mrs. Eddy says: "As astronomy reverses the human perception of the movement of the solar system, so Christian Science reverses the seeming relation of soul and body and makes body tributary to Mind." "Mind, supreme over all its formations and governing them all, is the central sun of its own systems of ideas, the life and light of all its own vast creation" (Science and Health, pp. 119, 209). Man, from the point of view of spiritual sense revealed in Christian Science, is found to be the reflection of divine Mind, manifesting Godlikeness; even as, from the solar center, the earth is seen to be a sphere tributary to the sun, reflecting the brightness of the sun's light, and not, as human ignorance formerly pictured it, a flat expanse, the explored region of which was bounded on all sides by *terra incognita*.

As the false astronomical theories of the ancients rested on a gratuitous assumption, so materialistic systems today rest on the assumption that physical sense testimony is a valid basis for the development of religious and scientific understanding. Such systems, though differing widely among themselves in matters of detail, are all on a par in this respect, that they are elaborated on the basis of finite, material impressions instead of metaphysical, spiritual fact. So long as people took it for granted that the earth was flat, this ignorance of the facts of the case prevented them from taking advantage of geographical considerations that had always existed, though unrecognized. The liberation of thought which followed the discovery of the truth about the earth's formation, ushered in a revolutionary era in commercial enterprise and social progress; and in a similar way Mrs. Eddy's teaching that man is wholly spiritual, governed by spiritual law, and tributary to divine Mind alone,—this is revolutionizing the physical and moral ideals of mankind and effecting a readjustment of all human activities and relations on the basis of an understanding of God and His creation.

CHRISTIAN SCIENCE: THE STRAIGHT AND NARROW WAY.

BLEECKER LUCE.

ONE of the clearest evidences of the wisdom of Mrs. Eddy, the Discoverer and Founder of Christian Science, is the manner in which, in her elaboration of this great theme, she has gone straight for the goal and refused to be allured to the one side or the other, or to dally with the innumerable phenomena that lay claim to the psychic or spiritual. Many easy and plausible side issues tempt the searcher after truth, and in one way or the other not infrequently succeed in deluding the unwary if sincere student. It may be assured that it is never an easy task, while investigating the region of Soul, to "try the spirits whether they are of God," and many theories are plausible enough to deceive, if possible, "the very elect." The phenomena referred to are hypnotism, spiritualism, etc. Numerous theories are laid at the door of each of these cults, and seem deeply significant, to the extent at least of showing the utter unreliability of physical sense testimony.

With a steadfastness that a very clear and uniform insight into her subject alone can account for, Mrs. Eddy has held steadily to the great central fact, has not deviated from her course because of these side issues, nor suffered the theories based upon sense evidence to modify in the slightest degree the simplicity or the singleness of purpose of her great teaching. In thus rigorously excluding the abnormal in all its phases, in refusing absolutely to compromise with that which of itself may be classed as mere mental sleight of hand or jugglery, having neither scientific basis nor conclusion, she has revealed a supremely natural concept of God as reflected in a supremely natural man.

More than this, she has shown that the real man has all the elements necessary to his God-relation already perfect and complete in his own consciousness. Moreover, she teaches mankind how to prove and expand their understanding of these great capabilities. Her system does not abrogate or modify a particle of the real good in antecedent teaching, so-called orthodox or otherwise. On the contrary it but confirms and emphasizes the enduring value of all good. Indeed it introduces and explains the ideal man, and teaches that by the right understanding and application of the spiritual forces inherent in and forever manifested through the consciousness of man, there is revealed to us the God whom we have ignorantly worshiped.

The natural tendency of mortal man is to shirk the inevitable self-discipline required by Truth; to explore space for a deliverer from without, and thus perchance to secure a salvation made easy. He would overleap the homely details of his every-day struggle, and be lifted from the mire of his own mental confusion and penury by the strong grasp of some shining visitant from a far-away heaven. Jesus said, "An evil and adulterous generation seeketh after a sign; and there shall no sign be given it." The writer recalls how in his early struggles to know and apply Christian Science he prayed that God would by some sign or token give him to understand that he was in conscious touch with the infinite Father. Later, he came to see and know that by such a mental attitude he was simply looking away from and rendering himself deaf to the abundant and ever-recurring evidences of God's presence. God was so close to him, and God's voice and monitions such usual and natural phenomena of true consciousness, that he overlooked them entirely. He eventually perceived that he had but to look within, and there learn to distinguish the wheat from the tares, to separate the spiritual from the material.

In "Miscellaneous Writings" (p. 95) Mrs. Eddy says: "There have always attended my life phenomena of an uncommon order, which spiritualists have miscalled mediumship." But when it came to her great life-work, in her God-bestowed wisdom she rightly classified the claims and fruits of occultism and all kindred phenomena as of mortal mind only, and not at all conducive or necessary to man's spiritual well-being. In Science and Health (p. 302) we read, "It is impossible that man should lose aught that is real, when God is all and eternally his." Through Christian Science we learn that the phenomenon of true consciousness has its origin and perpetuity exclusively in God, and from this one and only source the truth is reflected in man. It is therefore through ignorance alone that men have buried this divinely bestowed talent, instead of making it gain yet another talent by industrious self-analysis and obedience to Truth.

It is the joy of Christian Science that it may be proven. This capability of proof is the rock that makes constancy and progress possible, and this proof lies not only in the overcoming of disease, which is usually the first step, but in the profound mental amen that arises from an illumined and chastened consciousness. The riches of Soul are then found to be not abstract capricious phantoms, now glimpsed and anon unperceived, but the natural and God-designed expression of advancing spiritual sense, the predestined and real state of man.

The best thought of material science, so called, has defined cause as a unit, and all manifestations of life as effects of this one cause. Christian Science voices the inevitable conclusion in recognizing this one cause as God, and man collectively and individually as effect, the perfect complement of perfect cause. Humanity, then, through true self-understanding should and does discover the highway to God, should and does realize the bond of union that is forever holding man in unity with his Maker. Christian Science has discovered and charted this highway and made marvelously intelligible Scripture revelation as to its nature and location. Mrs. Eddy proclaims with Jesus that the kingdom of God is within; but, most comforting and encouraging fact of all, in traveling this indicated highway to God, in obediently looking within, and in patiently striving to understand the wonders therein discovered, we gradually awaken in a new world, and slowly the rapturous consciousness possesses us that we have truly entered "the secret place of the most High," the very presence of God. Then proof rapidly multiplies, that "the Spirit itself beareth witness with our spirit, that we are the children of God." We enjoy the highest evidence of the sublime truth of Christian Science,—acquiring in consequence a faith, an understanding, that cannot be shaken. Now may we exclaim with Job, "I have heard of thee by the hearing of the ear; but now mine eye seeth thee." As we look back along the troubled and devious path by which we have come, we sometimes wonder that we see the goal; and then the thought comes, that but for the chart of Christian Science, both in uncovering the withholding error and in clearly and undeviatingly pointing the straight and narrow way, this comforting measure of success would have been denied us or at least indefinitely deferred.

Finally, the crowning blossom in this wondrous growth of understanding is the realization that God's mode is love, —selfless love, seeking not its own, but finding that own in another's good. In this unspeakable realization that at last the pearl of greatest price is thus made one's very own, what matters it that others still groping would decry and discredit the reality of his treasure. Are they not those who know not what they do? Does not this illumined one feel beneath his feet the rock of ages?

What wonder that one thus blest pours out his very soul in deepest gratitude to all who have aided him to this unspeakable consummation: to prophet and psalmist, those sacred bards of Israel who chanted so grandly and perfectly the anthems of joy and praise which now thrill every cord of his own overflowing heart. And the Master,

Digitized by Google

sublime in patient precept and exposition! Wonderful, incomparable teacher, thou hast indeed made immortal for all time the hills and vales where healing works bore witness to the truth of thy words. Last but not least, comes the work of our Leader, who gave us Christian Science. Has not this key unlocked and opened wide the door to these treasures of the ages? Has it not made available for us the rich treasures in this storehouse of God? Let the countless golden sheaves of enriched spiritual experience be our glad response.

WHY WE SHOULD REJOICE.

MABEL ALBERTA SPICER.

On page 15 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read, "Christians rejoice in secret beauty and bounty, hidden from the world, but known to God." In Luke's Gospel we are told that when the seventy returned from their mission that it was "with joy, saying, Lord, even the devils are subject unto us through thy name." Jesus replied, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you. Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven." According to this we are not to rejoice in material prosperity or even physical health, but rather in the possession of the understanding that God is the only power, and that all creation, including man, is subject to this one power alone. The improved material conditions are only "signs following," and not the primary reason for rejoicing.

Most of us before learning of Christian Science were in doubt and uncertainty as to the nature of God and His relation to man; or, if we held any fixed opinions of Him, they were of a God who sent or permitted sin, disease, and death. Though we declared Him to be omnipotent, we believed that His plans might be thwarted by the will of mortal man, who had it within his power to estrange himself from his creator for time and eternity; but what great cause of rejoicing have we, when we learn through the teachings of Christian Science that God is the Principle of all good, and that His relation to man is harmonious and indestructible; when we learn that sin, disease, and death are not a part of His plan, and that an understanding of God as Principle will destroy these impostors; that evil is not power, and that though the storm may still seem to rage, we are planted on a rock which cannot be moved.

It was this spiritual insight which enabled the psalmist to sing in time of trouble: "God is our refuge and strength, a very present help in trouble. Therefore will not we fear, though the earth be removed, and though the mountains be carried into the midst of the sea; though the waters thereof roar and be troubled, though the mountains shake with the swelling thereof. There is a river, the streams whereof shall make glad the city of God, the holy place of the tabernacles of the most High. God is in the midst of her; she shall not be moved."

The true cause for rejoicing is again brought out in the account of the raising of Lazarus from the dead, as given in the eleventh chapter of St. John. Followed by the mourning sisters and friends of Lazarus, Jesus approached the tomb where his friend had been four days, and ordered the stone to be removed from the entrance. Then, with Lazarus still lying in the tomb, with Mary and Martha and their friends weeping near by, and all of the mournful conditions unchanged to material sense, "Jesus lifted up his eyes, and said, Father, I thank thee that thou hast heard me." Why should Jesus say, "I thank thee that thou hast heard me," while Lazarus still lay in the tomb? Was he not rather giving thanks for the spiritual discernment which revealed to him that, whatever the physical manifestations, his friend continued to live, that God as Life cannot be separated from His creation? Matthew and Luke record Jesus' gratitude that the things hidden from the "wise and prudent" had been revealed unto "babes." He did not need the testimony of material sense, he rejoiced in the spiritual fact.

Why should we, as Christian Scientists, rejoice, though we still seem to see discord and unhappiness about us? Should not the cause of our rejoicing be found in the spiritual fact of the oneness of God and the spiritual man, and in the understanding of the unreality of evil? On page 471 of our text-book we are told that "the facts of divine Science should be admitted,—although the evidence as to these facts is not supported by evil, by matter, or by material sense,—because the evidence that God and man coexist is fully sustained by spiritual sense." In giving a treatment we should rejoice in the truth of each statement made, rather than in the material manifestation of harmony, which is but the result of abiding in the consciousness of the truth.

The narrative in St. John continues, "And when he [Jesus] thus had spoken, he cried with a loud voice, Lazarus, come forth. And he that was dead came forth." This coming forth of Lazarus from the tomb was the natural result of Jesus' joy-giving spiritual discernment of the ever-presence of God as Life. Likewise the improved material and physical conditions of Christian Scientists are the result of quickened spiritual sense, which reveals to them the infinite provisions of Truth. Let us, then, rejoice that Truth is revealed, and that we have been shown the way which leads out of all discord, remembering the beautiful words of our Leader in "Miscellaneous Writings" (p. 398):—

I will follow and rejoice
All the rugged way.

WHO SHALL BE GREATEST?

EVELYN SYLVESTER KNOWLES.

People outside the ranks of Christian Science are sometimes heard to speak of various individuals as Christian Science "leaders" in this or that church or community. Coming from this source such a statement may be excused, although it should not go uncorrected. For a Scientist, however, to speak of some friend or favorite as a leader, is entirely out of keeping and not helpful to our Cause.

We have one recognized Leader, who is such by virtue of her unique position as the Discoverer and Founder of Christian Science. She has not sought, but accepts her place, and fills it as no other could. It is self-evident that there cannot be two discoverers of a truth, although this truth may be rediscovered after being lost to human sense for centuries; but countless multitudes may follow in the footsteps of a discoverer and, by reason of using it, make the new knowledge their own. No one would think for a moment that Moses sought personal following among his brethren in Israel. He strove to lead the people out of their bondage to materiality, and on to the exalted plane of a spiritual knowledge of God. Like Moses, Mrs. Eddy has sought to bring about a spiritual end, while declaring herself still to be "a willing disciple at the heavenly gate" (Science and Health, Pref., p. ix.).

It is manifest that true leadership is something entirely apart from the desire for human recognition. It is constituted only when divine Mind is dominant in human consciousness, and thus draws "all men." The desire to be great, or to lead our fellow-men, will not accomplish any more in Christian Science than it did when our Master's disciples were striving over a similar point. They were

Digitized by Google

told plainly that true greatness came only through loving service; that the "greatest" should "be as the younger;" the "chief, as he that doth serve;" and that even "the Son of man came not to be ministered unto, but to minister, and to give his life."

He who follows this teaching unconsciously becomes a helper and guide to others, since selflessness, righteousness, and humility are lodestars that attract all who are seeking these highest ideals. It is right to love noble qualities wherever we behold them; indeed, it is impossible not to do so. When all desire for precedence melts away, we find that the greatest privilege accorded Christian Scientists is to become followers,—humble followers of Christ. Through this clarified perception we are able to interpret that hitherto enigmatical saying of our Master: "Many that are first shall be last; and the last shall be first."

BAPTISM.

WILLIAM HOLMAN JENNINGS.

FEW dogmas have made more discord in the theological realm than have the different doctrines concerning baptism. Among my earliest recollections of religious discussions was the question, What is the right form of baptism? Already my good mother had taken the precaution of having me baptized (sprinkled) when an infant. By this sign I was supposed to be among the elect, but later our brethren in other denominations disputed the point so successfully that, to "make assurance double sure," I had a reverend friend immerse me. (A distinguished lecturer on Palestine says that over there they practise both immersion and sprinkling. After the immersion, water is sprinkled on the head, symbolizing the descent of the Spirit.) After having been thus "buried" in baptism, I did not seem any nearer to God; though there was a sense of having obeyed what was thought to be a command of the Master.

What was the matter? Why, after the symbolic act of being buried with Jesus in baptism, did I not arise, as did he, into a more spiritual state of consciousness? If I could have met the apostle Paul then, he might well have asked me, as he did certain disciples at Ephesus, "Have ye received the Holy Ghost since ye believed?" And I would have been compelled, like them, to answer in the negative. Clearly, then, a mere baptism in water or with water was not sufficient to give either more spirituality or a greater sense of safety or salvation. We must turn away from matter and material symbols of baptism to the real baptism in Spirit, as is so clearly explained in our text-book. In Science and Health (p. 35), Mrs. Eddy has written: "Our baptism is a purification from all error." Again (p. 581), we find this definition of baptism: "Purification by Spirit; submergence in Spirit." Here, at last, is again revealed the baptism spoken of by John, who said of the Christ, "He shall baptize you with the Holy Ghost and with fire." If God is Spirit, and God is everywhere; therefore "we live, and move, and have our being" in Spirit; that is, we are forever submerged in Spirit.

If one is immersed in water, one must be lifted out at once, for water is not the natural element in which mortals live; but to be submerged in Spirit is to be wholly in or within Spirit, as the eternal element and substance which fills the universe. This then is surely the true baptismal concept,—"submergence in Spirit;" not the loss or absorption of man's individuality, but rather the individualization of the infinite idea in and through man. In this baptismal burial of error, this resurrection or ascension of purified sense into conscious identity with Spirit, we are willing rather to be absent from the body, and to be present with the Lord.

God is omnipresent. Individual spiritual man is in this universal presence, and Spirit pervades man and the universe. Being thus submerged in Spirit, there is no way by which man can be separated from Spirit. The real man, then, is baptized in Spirit, and Spirit is the life-giving, substance-giving, thought-giving, and power-giving Principle of man and the universe. We thus recognize the letter of spiritual baptism. May the living God give us the real consciousness of man's spiritual state and substance, so that all shall see and be what man is in Truth—not material, but spiritual.

TEMPERANCE.

FREDERICK MANN.

AN editorial on the subject of temperance in a recent issue of the *Sentinel*, recalls to thought my own mental attitude as to this subject before Christian Science quickened my sense of right and wrong. Although I had been brought up under the influence of church and Sabbath-School, and had faithfully kept up my interest in these, in my daily activities as a prosperous business man I was gradually becoming more stubbornly set against the reform movement. I never drank to excess, still I can now see that the habit of using stimulants was fast claiming me. When, however, I learned in Christian Science that I could keep well without the use of medicine, etc., I found that I no longer needed whisky because the water was unwholesome, or because the weather conditions were not just right.

For more than twenty years I have been a total abstainer, casting my ballot accordingly and never failing to vote "No" on the license question. Mrs. Eddy in her "Miscellaneous Writings" (p. 289) says: "Strong drink is unquestionably an evil, and evil cannot be used temperately: its slightest use is abuse; hence the only temperance is total abstinence." In Science and Health (p. 454) we read: "It need not be added that the use of tobacco or intoxicating drinks is not in harmony with Christian Science." I owe to our Leader a debt of gratitude for all that her teachings have done for me in reforming my life; thus enabling me to help others out of the bondage of this evil habit. I know from my own experiences, both in public and in private life, that Christian Science has done more for the cause of temperance than those outside of our ranks are aware. It did for me and mine what the religious teaching of my former church connection had failed to accomplish. In my own case it was not a drunkard who had been reformed, but a respectable drinker (which is a much more subtle claim of evil) was changed, and an evil habit destroyed.

The Church of Christ, Scientist, is doing much for mankind, in lifting them most effectually above and out of the grasp of this demon, the sin of intemperance. Each one of us should become a law to himself, in his individual striving to overcome all that is unlike God in his daily living; in striving for that mind which finds no pleasure in any sinful indulgence.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 5, 1909. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 20, 1909.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[The readers of the *Sentinel* will be pleased with the logical and scholarly manner in which some recent misstatements of Christian Science are met in the article which follows.—EDITOR.]

[Frederick Dixon in *Literary Guide*, London.]

IN a famous sentence Carlyle once declared that little knowledge of a man was to be gained by dwelling only on what those who disagreed with him were pleased to consider as his faults. The great Rembrandt of words knew better than most men what he was speaking of. He had waded through the quagmires of tracts in which the biographers of the past had scrupulously distorted the stories of the careers of those who had the audacity to be opposed to them, and he knew that the man did not exist whom it was not possible to represent as possessed of seven devils. It is a fact, which there is no difficulty in understanding, that, while this class of biography has disappeared from every other phase of literature, it is still not uncommon when its subject is a religious thinker; and the consequence is that we have people writing today of Mrs. Eddy very much as the ecclesiastics of the fourteenth century wrote of Wyclif.

There is nothing in the teaching of Christian Science to rouse such antagonism in any one, either from the point of view of Christianity or Freethought, of revelation or of science. From a Christian point of view, Christian Science is based on an understanding of the Bible which is at once reverent and practical; from the standpoint of Freethought, it outrages no principle of individual judgment; while it is so essentially scientific that it requires that its premises should be reduced to demonstration. It is obvious that there is absolutely nothing in such a religion to arouse the extraordinary venom which is so frequently manifested in the attack on Christian Science. The venom of that attack must be accounted for on other grounds. These grounds are, first, the natural antipathy of evil to good, and, secondly, the misconception of Christian Science teaching where this antipathy is not apparent.

Jesus of Nazareth, in the words of Mrs. Eddy on pages 52 and 313 of Science and Health, was not only the best, but the most scientific, man that ever trod the globe. From the ordinary view-point of the world, it may seem a *non-sequitur* to say that he was the best man because he was the most scientific, or that he was the most scientific because he was the best; but this is none the less the case. He was the most scientific man because he was the only man who has grasped the absolute truth, and the best man because he was, on this account, the only man capable of demonstrating the omnipotence of good. Huxley once declared that Thomas Aquinas was perhaps, judged by his times, the greatest thinker the world has produced. Now, Aquinas declared that the only absolute science was the science of theology—that is, of the word of God: every other science he described as merely relative. This, in itself, is only a thirteenth-century way of putting a truth expressed by Peter and by Paul in the phrase, "*Epignosis tou theou*"—that is to say, a full, exact, or scientific knowledge of God, and so necessarily of truth. It was this fact to which Jesus himself had given utterance in the phrase, "Ye shall know the truth, and the truth shall make you free." Free, that is to say, from everything which is not truth. And this statement he made good through the medium of the miracles.

A great deal of time and labor has been expended in attempting to prove that a miracle is something which it is not. Burns' schoolmaster need not print his notes in order that the world may grasp the fact that the Greek words translated "miracle" in the Bible mean nothing more or less than something wonderful or something in the nature of proof. Jesus of Nazareth came down the Jordan valley, and over the Galilean hills, preaching to the world his gospel, comprised in an accurate knowledge of God—a knowledge, that is to say, of absolute truth; and, when the dull materialism of his listeners recoiled from the very spirituality of this gospel, he fell back on the miracle, which was, in short, only the object-lesson in demonstration of the correctness of his teaching. This object-lesson was, of course, a proof of what he taught; and, inasmuch as it was something beyond the spiritual grasp of those about him, it was wonderful. Not one of the words translated "miracle" in the Bible has any more supernatural meaning than this. Indeed, the introduction of the word *miraculum* did not occur till a period posterior to the making of the translation now known as the Vulgate, and, when it was first used, had no more supernatural meaning than the Greek words whose place it took. Gradually, however, as men lost the spiritual conception of the gospel teaching, they lost their power to demonstrate it. The works performed by Jesus and the apostles, and in a rapidly diminishing ratio by the primitive church, began to seem through the gathering mist of the centuries miraculous in the sense of supernatural, because men had become ignorant of the teaching by means of which they had been accomplished; and, as the human mind began to revolt against this ignorance, the miracles were cast into the limbo of superstition.

It has been said, with very little appreciation of what is conveyed by the saying, that the growth of Christianity may be traced in the spread of the hospital. If there is any truth whatever in the teaching of the Bible, it might be said that the failure of the Christian churches might be traced in the spread of the hospitals. There is nothing more certain in the world than the fact that the healing practised by Jesus and the disciples was purely spiritual in its method. It is this which gives such force to the saying of Harnack that Luke the physician embraced Christianity "in the conviction that by its means, and by quite new methods, he would be able to heal disease and drive out evil spirits." On the day on which the Christian churches attempted to separate the seamless garment, and handed over the healing of men's bodies to physicians who might or who might not be Christians, they proclaimed, if they could have understood it, their own faithlessness, for Christ Jesus had declared in unmistakable language that those who believed on him would be able to perform his works.

The task which Mrs. Eddy set herself in writing Science and Health was the task of making Christianity once more scientific in its practical application to human life. It is this task which has aroused the anger of creeds, whether those creeds were what is known as sectarian or scientific. The Bishop of London denounces Christian Science as "a gigantic heresy," in pious disregard of the fact that one of his own predecessors was burned at the stake for holding the heretical opinions which in his case have become orthodox. Mr. Paget writes a whole volume to prove that Christian Science is from a scientific standpoint nonsensical. Mr. Paget, however, goes much farther than this. Whatever the Bishop of London may have done, Mr. Paget has not forgotten Smithfield. His idea of religious toleration and civil liberty finds expression in the suggestion that the local doctor and clergyman should combine to make the lives of Christian Scientists a "positive burden" to them. Prayer, says this new defender of the faith, cannot reach the cells of the liver, and so he proposes to intimidate Christian Scientists into a recantation of their opinions.

Mr. Paget has formulated a number of specific charges of the failure of Christian Science healing. But as he has left these cases for the most part "wropt in mystery," his ideas of evidence seem to approximate more nearly to those of Mr. Weller than anybody else. Such instances as it has been possible to identify have been dealt with elsewhere, and the result, judging by the author's attempts at escape, do not appear to have been particularly agreeable. One

Digitized by Google

example must suffice. Wishing to prove that a certain patient died as the result of Christian Science treatment, he states that he left the hospital with "a practically healed bed-sore and some improving cystitis." It is a pity that there is not space to quote the whole of the evidence on this point in the court, but there was an entry read from the hospital book which Mr. Paget appears to have overlooked. It was as follows: "Condition on discharge not so good as on admission, in consequence of attack of cystitis and abscess." It is, perhaps, not wonderful that in these circumstances Mr. Justice Bigham put the question: "When he left your hospital was he in as good a condition as when he came into it?" The answer was: "Well, I suppose not, if you put it like that." To which Mr. Justice Bigham drily replied: "How else would you like to put it?" This is the kind of evidence upon which Mr. Paget has founded his book. That book is written for all the world as if medical science was an exact science, and nobody had ever been known to suffer or die under medical treatment. Yet there were thirty-one hundred and eleven cases of wrong diagnosis admitted to the isolation hospitals of the Metropolitan Asylums Board alone in the course of the last year. The fact is that anybody with a disregard for evidence and a capacity for strong language could have written the statements in Mr. Paget's book which the reviewer in the *Literary Guide* has selected to quote. The whole attack is based on exactly the same type of argument with which a generation or so ago it was sought to stamp out homeopathy, and the result will be an equally conspicuous failure.

One of the things which has disturbed Mr. Paget very much, and to which Mrs. H. Bradlaugh Bonner alludes, is the price of Science and Health and the amount of Mrs. Eddy's fortune. Science and Health is published at various prices, and there is really no more difficulty in obtaining the cheapest than the dearest edition—indeed, the dearest edition, I have no doubt, would be much the most difficult to obtain. The price of the book has been fixed at its present figures for reasons which are quite satisfactory to the author, the publisher, and the members of the Christian Science movement. If the desire was to make money out of it, obviously the best way would be to print a very cheap edition and strew it about the world. That this is not done is the strongest proof that there is no mercenary motive in maintaining the price at its present figure. As a matter of fact, nobody is precluded from reading Science and Health by its price. The book has been placed in every free library which will accept it, and can at any time be borrowed from the libraries attached to the various churches. There is no person in the world who is called upon to buy it until he has had the opportunity of reading it. When the ordinary publishers assist the public in borrowing their books previous to buying them, they will have reached the mercenary standard of the Christian Science Publishing Society.

Mrs. Eddy's fortune has been secured entirely by her own labors as a writer and teacher. Because the public has sought her teaching and bought her books, it is scarcely a cause of offense. The vast sum paid to Macaulay, in one check, as part of the profits on his history of England, has not hitherto been regarded as any stain upon his character. The exact amount of Mrs. Eddy's fortune is no secret. It was disclosed in the recent lawsuit forced upon her at Concord. There were other things disclosed in that lawsuit, very different from anything its promoters had intended. For it was then that the amount of her charities came to light: and it was, no doubt, partially in consequence of it that, when a few months later she removed to Boston, the members of the city council—men of all sorts of religious and political opinions—voted a unanimous farewell address, in proposing which the mover declared: "It is quite unnecessary for me to prompt your memory of her countless deeds of charity and her endless gifts. Neither is it necessary for me to call your attention to her innumerable donations to the more unfortunate ones in our midst." These methods of attacking Mrs. Eddy are daily finding their level in her own country, and this is so manifest that a great New York paper only quite recently wrote: "The public is tired of the hue and cry against Christian Science, and is not a little sympathetic with the dignified lady who presides over the councils of that church."

To attempt to answer categorically the various criticisms in the August issue of this journal would require more space than it is possible to demand. I have made an effort to strip the controversy of personalities, and to attempt to explain, in a necessarily elementary and fragmentary way, something of the truths which have inspired, and are inspiring, the Christian Science movement. The Christian Scientists of the world are grateful beyond words to Mrs. Eddy, because her words of hope and inspiration have come to them when they were sick, or weary, or heavy laden; and they are striving to manifest their gratitude in the only way in which it can please her—by carrying that hope and that inspiration to those who are still bound with the fetters of sorrow, and sickness, and sin. If they are true to her teaching, they will strive to consecrate their lives more and more to the service of Truth; and they are conscious that in the exact proportion in which they may succeed in doing this it shall be said of them: "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!"

[George Shaw Cook in *Mendota* (Ill.) *Bulletin.*]

Christ, according to the teaching of Christian Science, is "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). In other words, Christ is the divine idea or spiritual idea of God, and necessarily is as eternal and as universal as God. Jesus was the man who best understood this divine idea and who most successfully demonstrated its power in the destruction of sin and disease. Christian Scientists look to Christ Jesus as the Wayshower and Exemplar. They believe that it is right for them to undertake the destruction of sin and evil in the way that he destroyed them, and that it is possible for them to succeed in proportion as they are able to follow his example of spirituality and goodness.

No one who is correctly informed on this subject would suppose for one moment that Christian Scientists believe that they can get rid of sin by ignoring it or by simply calling it a delusion. Christian Science turns the sinner from his sin by convincing him that he need not fear sin and cannot love it because it is not of God. It shows him that God does not create sin, and that He does not permit its existence. It teaches him that sin and evil are entirely contrary to the will of God and that they have nothing to do with God's man. Thus it induces the sinner to abandon his belief in the reality, power, and pleasure of sin, and enables him to win forgiveness by forsaking sin. For this reason it will be seen that it is a mistake to suppose that in teaching the unreality of sin Christian Science encourages the indulgence of sin. On the contrary, it awakens the sinner to the absolute necessity of gaining a love for goodness that will enable him to abandon not only the flagrant forms of immorality and vice, but also the more subtle phases of evil. Thousands of sinners have been reformed by Christian Science, and many have been lifted by it out of the very depths of degradation. Indeed, it would be impossible for any one to be healed physically by Christian Science without becoming better morally.

Digitized by Google

No one who is at all familiar with the teaching of Christian Science concerning the cause of disease supposes that conscious and wilful sin is the only cause of disease. The Christian Science text-book shows plainly that fear, superstition, ignorance, and many other mental conditions cause disease. It also shows that the generally accepted beliefs of the human mind claiming to operate as law are responsible for much suffering. It, however, shows that every one of these causes may be annulled and their supposed effect prevented by a sufficient understanding of the law of God.

Christian Scientists are beginning, through right thinking and right living, to prove the destructibility and unreality of disease and sin by removing them to a considerable extent from their experience here and now. They do not claim to have done more than make a beginning, but they are thankful to have begun to work out their own salvation by a Christianly scientific process. Christian Science, while speaking of mortal mind and its phenomena, matter and evil, as a part of human experience, does not admit the actual existence of either. It teaches that in reality "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and it seems to me that there is no other logical position for the true Christian to take.

[Olcott Haskell in *Alameda* (Cal.) *Times-Star.*]

Christian Science never attempts to work through will-power or through what is known as mental suggestion; it does not rely for cure upon any supposed influence of the human mind, but depends wholly upon God—divine Mind. Many persons admit theoretically that God is the only creator; that He is good, and all powerful; but the Christian Scientist is learning to apply these truths in his daily life. As a necessary consequence of this application, the Christian Scientist finds his entire thought transformed and elevated. That the effects of such a change are seen in his physical well-being as well as in his mental state, is natural. Viewed from this standpoint, healing is not miraculous, but is the normal working out of law. That this law was clearly understood by Jesus and his disciples was shown by their teaching and works of healing.

[Gray Montgomery in *Denver* (Col.) *Republican.*]

The great success of Christian Science is simply the fruit of its healing and regenerative teaching. It has lifted many out of poverty and misery, and Mrs. Eddy has been a most noble and notable example of the truth of the Biblical statement: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you;" she has sought for the kingdom of heaven, and found it in God's Word lived and demonstrated. She has sown the seed of Truth, sacrificing all for it; she has reaped its good fruit, and is now rich in spiritual blessings, as was Christ Jesus. Her material possessions are the result of her honest labors, and much of her income is spent in deeds of charity, in succoring the poor, and in benefiting all mankind.

It is not true that mothers who have accepted the teachings of Christian Science "permit their helpless children to suffer." These mothers care for their children far better than before learning its teachings. They themselves not only become more gentle, loving, and considerate, but they early teach their children of God's infinite, tender love. The pure and simple trust and faith in divine Love of the little child brought up in the Christian Science household renders him receptive to the truth, causes him to be less fearful and less liable to disease. Many children have been healed through Christian Science after *materia medica* had failed to benefit them.

AN APPRECIATION OF THE MONITOR.

Portsmouth, N. H., Sept. 25, 1909.

The Christian Science Monitor, Boston, Mass.

Dear Friends:—I wish to express my appreciation for the *Monitor,* which is so gloriously bringing before the thought of the people all that is good, pure, and true in its wide range of news of the day, and for its educational value.

Through a desire to have the people of Portsmouth become better acquainted with the *Monitor,* the local Christian Science society ordered several hundred copies of the latest edition of the *Monitor* for distribution at the close of their lecture of Sept. 5. This proved to be a happy thought, as it has helped greatly to awaken the people to a realizing sense of the fact that the *Monitor* is a newspaper that can be depended upon for exact statements and high ideals.

From the experience of having used the *Monitor* for this purpose, I am convinced that the success of a lecture, and the good accomplished, must be much greater where this paper finds its place as a practical auxiliary at the lecture. All must appreciate the good resulting from the distribution of the *Sentinel* at the lectures, and surely the *Monitor* has its place and its message, and I cannot but feel that both papers have an individual mission of love and helpfulness in this part of our work. I am deeply grateful to our beloved Leader, Mrs. Eddy, and to the Publishing Society, for giving to the world today the *Monitor,* with all that it stands for. It gives to those who are hungering for truth and purity through the channels of the press, that which satisfies; and it must create an awakening interest for all that is good among all people.

Hoping that this experience may, in some way, be a help to others in their means of making the lectures more fruitful, and the recognition and appreciation of the *Monitor* more assured, I am

Yours very sincerely,

GRACE E. ALLEN.

SPECIAL OFFER ON BOUND VOLUMES.

For a limited time the Publishing Society offers bound volumes of the *Journal* and *Sentinel* in sets at the following prices:—

JOURNALS.

Bound in cloth:

Sets of 5 consecutive volumes 1904–8	$8.00
Sets of 7 consecutive volumes 1902–8	10.85
Sets of 9 consecutive volumes 1900–8	13.50

Bound in half calf or half morocco:

Sets of 5 consecutive volumes 1904–8	11.50
Sets of 7 consecutive volumes 1902–8	14.85
Sets of 9 consecutive volumes 1900–8	19.00

SENTINELS.

Bound in cloth:

Sets of 5 consecutive volumes 1905–9	9.00
Sets of 8 consecutive volumes 1902–9	13.50

Bound in half calf or half morocco:

Sets of 5 consecutive volumes 1905–9	14.00
Sets of 8 consecutive volumes 1902–9	21.00

These special prices apply *only* on sets of books arranged by years, as above listed, and in no case on single volumes.

The voices of the good, the kind, the true, are more in number and excel in strength.

There is more love than hate, more hope than fear, in the mixed murmur of the human heart.

HENRY VAN DYKE.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A NEW BY-LAW.

ARTICLE XXIII.

RECOGNITION.—SECT. 12. In order to be eligible to a card in *The Christian Science Journal,* churches and societies are required to acknowledge as such all other Christian Science churches and societies advertised in said *Journal,* and to maintain toward them an attitude of Christian fellowship.

"LINES OF DEMARCATION." *

IT has often been said, and we believe it to be true, that many of the false impressions of Christian Science which prevail with the public are largely due to the foolish and utterly unscientific talk and actions of persons who are supposed to be, and in name are, Christian Scientists, but who, alas, entertain a concept of its teachings more or less at variance with its text-book, "Science and Health with Key to the Scriptures." Not the least harmful of these erroneous concepts of Christian Science is one of which we have heard much recently, namely, the vain effort to regard human beings as wholly spiritual or divine, a condition which mortals have not attained and in the very nature of things cannot attain. Our text-book says: "Only impotent error would seek to unite Spirit with matter, good with evil, immortality with mortality, and call this sham unity *man,* as if man were the offspring of both Mind and matter, of both Deity and humanity" (Science and Health, p. 555).

Mrs. Eddy does not teach the doctrine of spiritualized mortals, nor anything like it. On the contrary, her teachings are addressed to mortals in terms understandable by mortals, and for the purpose of enabling them to be healed of their mortal beliefs of sickness and sin through their correct understanding of God and the real man in His image and likeness. In "Miscellaneous Writings" (p. 307) she says: "Christian Scientists should beware of unseen snares, and adhere to the divine Principle and rules for demonstration. They must guard against the deification of finite personality. Every human thought must turn instinctively to the divine Mind as its sole center and intelligence. Until this be done, man will never be found harmonious and inimortal."

Christian Scientists may well ponder this teaching, and refrain from entertaining a concept of any human personality which invests it with spiritual existence. Those who unwittingly have done this are casting discredit on the religion they profess, but to continue to entertain such a belief is to part company with Christian Science. If they honestly desire to be Christian Scientists, they will follow Mrs. Eddy's advice, namely, "Study thoroughly the letter and imbibe the spirit" (Science and Health p. 495) of her teachings, so that they may indeed be faithful followers of the Master who claimed naught of honor or power for himself, but said, "Why callest thou me good? there is none good but one, that is, God."

* Science and Health, p. 294.

Mrs. Eddy has written in Science and Health (p. 345): "Anybody who is able to perceive the incongruity between God's idea and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam."

ARCHIBALD MCLELLAN.

"INCREASE OUR FAITH."

THE teachings of Christ Jesus are remarkable for their applicability to all human conditions, and this because they express divine Principle. His words, spoken to his own apostles, apply to all sincere followers of Truth today as surely as they did when uttered by the Master; and what is more, they are applicable in all the varied experiences of life. Mrs. Eddy tells us that "the same power which heals sin heals also sickness" (Science and Health, p. 135). On one occasion Jesus prepared his students to meet the tenacity of error by persistency in the truth; that, in the case of trespasses against themselves, they were to forgive the offender "seven times in a day." To this the apostles responded, "Increase our faith." They doubtless saw that in such cases they would have to overcome their own belief that evil can outlast good, which, if admitted, would be a virtual denial of the omnipotence of God. If we take in this connection another statement of the great Teacher, to the effect that in some cases they might have to forgive up to "seventy times seven," we can see that he here pointed to the utter extinction of error, and to reach this spiritual achievement we, too, may well pray, "Increase our faith."

The Christian Science sense of forgiveness means the destruction of error, and where another is concerned we are called upon to prove to ourselves that evil has no power to rob us of our peace or of aught that God gives us, and this must be done by "laying aside all malice, and all guile," to quote St. Peter. It is good to know that in working out our problems along spiritually scientific lines we are laying sure foundations for progress, and that the same faith or understanding is needed, whether we are dealing with the belief of sin or sickness.

Our dear Leader says that we should "forsake the mortal sense of things, turn from the lie of false belief to Truth, and gather the facts of being from the divine Mind;" and she adds, "The body improves under the same regimen which spiritualizes the thought" (*Ibid.*, p. 370). What if erroneous belief in the form of sickness were to present itself seven times in a day, or "seventy times seven!" Would not this give us opportunity to gain the kind of faith which can cast mountains into the sea? It would certainly call upon us to "forsake the mortal sense of things," and find refuge and healing in spiritual reality. We surely need a more vigorous type of Christian than the world has seen for many centuries, and Christian Science is producing this type—the product of

> A faith that will not shrink,
> Though pressed by every foe—

a faith that will stand the assaults of sin and pain and come forth unharmed from every ordeal.

Our text-book makes it very clear that the spiritualization of thought improves bodily conditions; hence our efforts are needed, not to fight error, but to gain spirituality, for this is what determines the result. The Master did not demand much faith,—only as "a grain of mustard seed;" but it must be of the right sort, or it will not heal sickness and destroy sin. Faith in matter may seem to produce temporary results, but that which can be applied to the "seventy times seven" problems of each day and night must rest upon infinite Spirit. We would never think of asking for increased faith in matter, but we should ever desire to have more faith in Truth and Love, in God and His Christ.

ANNIE M. KNOTT.

FAITH'S ONLY ANCHORAGE.

Of all human possessions, none surely is so essential to our peace and progress as to have and maintain a thought of God that enables us to escape the assaults of doubt which untoward earthly experience is forever precipitating, and which eventuate in the moral wreck of so many careers. Today the injunction of the Master is again heard, "Be not faithless, but believing;" and that we may fulfil it, the Christ-concept of God and of man has again been revealed through Christian Science.

However much the worldly wisdom of physical science may contribute to creature comfort and dominion over material things, it throws no light whatever upon the deep problems of life, gives no explanation of the nature and philosophy of being; and those who have the largest opportunity to profit by the achievements of this wisdom bear testimony to the fact that, as a whole, peace of mind and satisfaction of heart are not increased thereby. On the other hand, Christian believers have always accepted Christ Jesus' statement that to know God "is life eternal," but in consenting to the materialistic concept of substance and reality their truth has, to human sense, been pitifully entangled with error. Their thought of God has not met "the heart's great need," because of its fundamental contradictions. Thus the inquiring and the troubled have found themselves floundering between a so-called science which, having nothing to do with causation, cannot even consider their deepest questions, and a Christianity which has harbored hopeless incongruities in the major premise of its philosophy of things, its concept of the only cause and creator.

Into this situation Christian Science has come, not to bring an immediate answer to all questions, but to name and honor an absolutely consistent and unimpeachable Deity, "the God and Father of our Lord Jesus Christ," and to supply, in the perfect nature of the immediate source of all being, the basis of an intelligible order of things. More than this, it proceeds in a scientific way to prove by healing works the verity of its point of view. The moment one acquires a sense of God which satisfies both head and heart, and which is found to be adequate to the solution of today's problems, that moment faith has found its anchorage. He can now contentedly say, "I don't know," regarding many a heretofore perplexing question, and for the reason that he has begun to know the God whom Christ Jesus revealed, and on whom he effectively relied. To this God he can commit every problem that lies without the compass of his own apprehension. He knows that a finite sense cannot apprehend the manifestations of an infinite intelligence, and hence that there must be many questions which are at present beyond his ken. He remembers his Leader's statement, "To understand God is the work of eternity" (Science and Health, p. 3), and freely concedes his relatively meager knowledge of divine Principle, but he rejoices in that demonstration of healing which removes all doubt as to the correctness of his deductions so far as he has gone. Understanding has become the haven of faith; he knows that he knows some things aright: he has reached "a point beyond faith," and is following "the footsteps of Truth" (*Ibid.*, p. 241).

The agnostic says, "I don't know," not only because of his lack of perception, but because of his lack of faith in the possibility of knowing. The Christian Scientist says, "I don't know," respecting many things, not because of a contentment with ignorance, but because that which he cannot know as yet is committed to One whom he does know, and in whom, as he has proven, he can unhesitatingly confide. A limited knowledge has thus given ground for unlimited faith and confidence. This is the tremendous gain of Christian Science, and it explains the optimism, the glad expectation of good, which characterizes its every worthy representative.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

[It will not be out of place, perhaps, to state that the letters which appear in this column from week to week are but a few out of the many wise and good communications received by Mrs. Eddy, and that lack of space is the only reason why more of these are not published. In the abundant supply of good things which come to us, choice is often difficult, but we indulge the hope that those which have been crowded out of the current issue will find place in the next, only to be confronted with a like problem each week. We regret that the demands of other departments do not admit of our devoting more space to this interesting and valuable feature of the *Sentinel*, and that therefore the greater part of these tokens of love and gratitude to our revered Leader must remain unpublished.—EDITOR.]

Spokane, Wash., Sept. 22, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—I love you, but cannot find words to express the gratitude and reflection of love that I feel. It is the sign of Immanuel, or "God with us." When Christian Science found me, an art student in Chicago, I longed to thank you for the blessings it brought to me, but refrained from thus intruding on your time; since, however, reading of your life, so beautiful and so consecrated, I rejoice that the privilege of expressing appreciation is mine.

My grateful testimony is not of physical healing, but for the uplifting and purifying influence of the truth. The beauty of Christian Science seems to me to be its applicability to every problem in every walk of life. The sweet simplicity of overcoming evil with good, by thinking the right thought in place of a wrong, makes it possible for all to receive the manifold blessings of its teaching. Christian Science is unfolding a growing appreciation for every good gift, and a capacity for the development and accomplishment of every good thing.

With all my heart I thank you, and may God, bestowing His own reward, bless you abundantly, comfort you, and protect you.

Lovingly and gratefully yours,
(MISS) FLORENCE I. DAVIS.

Bestbury, Minchinhampton, England, Sept. 20, 1909.

Dear Leader:—I want to thank you for what you have given us in the *Sentinel* in reference to dear Edward A. Kimball. It has nerved us to higher endeavor. For the last twenty-one years I have reckoned him, next to you, one of my best friends. I loved him for his loyalty to you, for the honest, earnest way in which he spoke of your untiring patience and love in helping all. The seeming loss of a friend will make us rise up, I hope, to be a greater help to you, by more closely following your example in watchfulness and unselfishness.

The work goes well here, good honest people coming in, who recognize that it is you we have to thank for showing us the way out of the bondage of personal sense. As for myself, I am sure I recognize more than ever what you have done and are doing, and the brave and fearless stand you take against malice and wickedness. My health and peace, I realize, are the outcome of your priceless teaching, and my great desire is to help others as I have been helped. Much love goes with this to you and your household.

Your grateful and loving student,
MARJORIE COLLES.

Baltimore, Md., Sept. 30, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Every day, as the glory of Christian Science grows upon me, my thankfulness to God grows

Digitized by Google

deeper and deeper, that through the purity of your life and your selfless love of mankind, He revealed this great truth to you. As I read and ponder over Science and Health, I feel so grateful that I am privileged to see the wonder and beauty of it, and that I, too, may follow the Christ as you have shown us how. I am also so grateful for our splendid literature; for the strength and dignity of our church organization, and for the establishment of class instruction. It was by going through class under a loyal teacher that I learned what it means to be a loyal follower of our dear Leader. Again, I am deeply grateful for the revelation of your life as given us in the book by Sibyl Wilbur, which you have permitted us to have, and as I read of the trials you endured in order that the truth might be given to the world, it is easy to understand why God revealed it, in its fulness, to you.

With ever increasing love and thankfulness to God and to you, I am happy to sign myself,

Your loyal follower,

ADELAIDE G. KENNARD.

Philadelphia, Pa., Sept. 28, 1909.

Mrs. Mary Baker Eddy.

Beloved and Revered Leader:—Christian Science has done so much for me that I cannot refrain longer from penning you this note to express in some measure the love I hold for you. God has certainly blessed you (and through you us) in selecting you to rediscover Christ Jesus' plan of salvation. Every day I grow more grateful.

Yours in truth and love,

C. M. CARROLL WHITE.

Bussum, Holland, Sept. 20, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—You have told us in "Miscellaneous Writings" (p. 249), that you are in awe before the meaning of the word Love. Today I am standing in awe before the word obedience. Love brings us into the image and likeness, the true substance; but it is through obedience alone that we come into the law. And in the law, as it is in Christ, there is no hindrance nor imperfection that we should not know and manifest "the only true God," whom Jesus declared. We recognize every summons of yours to be invaluable to the Cause, and your latest call to service is found in the last few lines of your article in the *Sentinel* of Sept. 9. Thank you for this call.

In the same post with this letter I am sending you a few pressed Alpine flowers, hoping that their beautiful colors may cheer you as they have delighted me. You will find among them the edelweiss, the Alpine rose, and the violet.

Lovingly,

JANE C. HAVENS.

New York, Sept. 24, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—Some four years ago a certain New York city paper was making a bitter attack upon you, and I took a fiendish delight in blue penciling the articles and sending my paper away after half reading it. A little over a year and a half ago I attended my first Wednesday night meeting, entirely to please some dear friends, and with the belief of being utterly disgusted at the very mention of the name Mary Baker Eddy or Christian Science, but what I saw and heard that night led me to look into the matter thoroughly and honestly, with the result that I myself not only received physical healing benefits, but a spiritual uplifting beyond description, proving your statement on page 254 of your book, "Science and Health with Key to the Scriptures," that "when we wait patiently on God and seek Truth righteously, He directs our path."

I have often felt that I owed you personally an apology for my previous thought, comments, and actions, hence this letter; and just here I wish to say that I have rectified the wrong done in the family by sending them those papers, and in that home today can be found your books. I cannot refrain from telling you what a world of comfort your book "Miscellaneous Writings" has been to me at a most trying time, in showing me so clearly that it is to God, and not to personality, that we must look. In all humbleness I thank you, beloved Leader, for the love which I know you send out to all, as is so beautifully told by you in your article "Judge Not," page 290 of the same book.

I am daily striving to be worthy of the name Christian Scientist, and again Jesus' saying has in a degree been proven: "Ye shall know the truth, and the truth shall make you free."

Faithfully yours,

RALPH R. CHAPMAN.

Chicago, Ill., Sept. 22, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Divine Love surely does meet every human need, and it is in recognition of this that I desire to express the deep gratitude my heart feels for your last message to the Field: "There is no Death." It has completely healed me of a sorrow that my understanding of Christian Science had lifted me above but had not wholly destroyed. It has done more than this, for it has awakened me to a clearer perception of man's immortality here and now, and the possibility of demonstrating it. I am one who has had the privilege and blessing of Mr. Kimball's "clear, correct teaching," and the divine qualities of humility, gentleness, compassion, and love which he manifested will ever be an inspiration and help to me on my way Godward.

With an ever-increasing sense of love and gratitude to you for your life and work, believe me

Faithfully yours,

JEANNETTE ROSE GOODMAN.

Brisbane, Australia, Sept. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass., U. S. A.

Beloved Leader:—At a meeting of members of this branch church it was unanimously decided to forward to you the enclosed letter from the Rev. W. Osborne Lilley—a clergyman in this city. The members sent Mr. Lilley a pocket edition of the text-book, together with a current copy of the *Quarterly*, and his loving reference to you in accepting the same, gave our members much joy.

Yours truly,

W. S. ILIFF, *Clerk.*

[Following is the letter above referred to.—EDITOR.]

Bourn Hills, July 6, 1909.

W. S. Iliff, Clerk, First Church of Christ,
Scientist, Brisbane.

Dear Sir:—Permit me warmly to thank you, and First Church of Christ, Scientist, for your thoughtful courtesy in asking me to accept the copy of Science and Health, the text-book of Christian Science, which you have so kindly forwarded to me. I do so with much pleasure. I have great sympathy with the religious movement initiated by Mrs. Eddy, and believe she is a great Leader, honored of God, in the present uplift of humanity toward truth and righteousness. I intend to give her teachings a closer study.

Again thanking you, and your church, I remain,

Your sincerely,

W. OSBORNE LILLEY.

THE LECTURES.

LACONIA, N. H.

Tuesday evening, Sept. 21, in the Unitarian Church, William D. McCrackan, M.A., delivered a lecture on Christian Science. The speaker was introduced by Col. Stephen S. Jewett, who said in part,—

Life is superb when, as little children, we each day receive on the light wings of morning, in the sweet breath of dawn, some welcome surprise from the infinite storehouse of God. Within the memory of many here present a movement in Christianity has engaged the attention of the thinking people of the world. Christian Science is today occupying a conspicuous place in human thought and endeavor. Churches have sprung up all over this land, and in foreign lands. Its teachings have a firm hold upon the hearts and minds of great numbers of people. I am not a Christian Scientist and do not know enough of its teachings to talk intelligently about it, but I do not hesitate to say that any religious belief or influence that makes men happy and contented, that gives courage and strength, and inculcates a more firm belief in God and the teachings of Jesus Christ, and is attaching to its standard thousands of thinking people the world over, is well worthy the attention and serious consideration of right-minded people.

Laconia Democrat.

EUREKA SPRINGS, ARK.

Bliss Knapp delivered a lecture on Christian Science at the Opera House Friday evening, Sept. 15, under the auspices of the local church. He was introduced by Mr. Giles E. Miller, who said in part,—

We have met tonight to listen to a lecture on Christian Science. It is a subject worthy our earnest consideration. Christian Science restores health, brings contentment, and plucks the fangs of sarcasm, hatred, and envy from the hearts of men and women, leaving with them peace and harmony. Its beauties cannot be appreciated until understood, and there is much that the present generation will have to unlearn before the truths of its teachings will be generally accepted. It is a religion which furnishes a rule of action for every walk of life. It teaches that God is infinite Life, Truth, and Love, filling all space and creating only good. And since He made all that was made, such forces as seem opposed are only of mortal concept, unreal, and dependent solely upon recognition for their lasting qualities.—*Correspondence.*

FARGO, N. D.

Prof. Hermann S. Hering lectured on Christian Science at the Opera House Sept. 21. He was introduced by the Hon. H. F. Miller, who said in part,—

Christian Science is young, but during the period of its infancy it has attracted so many intellectual and earnest people of this nation that it does not require a prophet to predict that in the near future, with a gain proportionate to that of the past, it will be the strongest church in America, barring perhaps one. Thus viewing the situation, we think we are in a proper mood earnestly to inquire into the subject, to listen attentively to the explanation of this Science, accepting as true that which appears to be good and truthful to us, recognizing the fact that the only way each of us has for determining the truth of any matter is to pass the individual facts through the crucible of our reason and subject them to the arbitrament of our conscience; then, if they seem to us to be reasonable and true, they are true in so far as we are concerned.

Correspondence.

LECTURES TO BE DELIVERED.

Mitchell, S. Dak.—Judge William G. Ewing, Sunday afternoon, Oct. 10.
Reading, Pa.—Bliss Knapp, Orpheum Theater, 3:15 p.m., Oct. 10.
Hurley, S. Dak.—William D. McCrackan, M.A., Oct. 11.
Joliet, Ill.—Clarence C. Eaton, Oct. 15. (Change of date).
Lincoln, Kan.—Bliss Knapp, Court House, Oct. 15.
Pottsville, Pa.—Frank H. Leonard, Oct. 15.
Topeka, Kan.—Bliss Knapp, Grand Opera House, 3 p.m., Oct. 17.
Lawrence, Kan.—Bliss Knapp, F. A. A. Building, 8 p.m., Oct. 17.
Hutchinson, Kan.—Clarence C. Eaton, Home Theater, Oct. 19.
Los Gatos, Cal.—Judge Septimus J. Hanna, Ford's Opera House, Oct. 19.
Schenectady, N. Y.—Prof. Hermann S. Hering, Red Men's Hall, Oct. 19.
Ocean Park, Cal.—Hon. Clarence A. Buskirk, Horseshoe Pier Auditorium, Oct. 21.
Sedalia, Mo.—Clarence C. Eaton, Sedalia Opera House, Oct. 21.
New York, N. Y.—Prof. Hermann S. Hering, Church Edifice, Central Park West and 68th St., Oct. 21.
Stillwater, Okla.—Bliss Knapp, Oct. 21.
Elmira, N. Y.—Frank H. Leonard, Assembly Chamber, City Hall, Oct. 21.
Mt. Vernon, N. Y.—Prof. Hermann S. Hering, at First Church, Oct. 22.
Glens Falls, N. Y.—Frank H. Leonard, Empire Theater, Oct. 22.
Spokane, Wash.—William D. McCrackan, M.A., The Armory, Second avenue and McClellen street, Oct. 22.
Lockport, N. Y.—Miss Mary Brookins, Hodge Opera House, 3 p.m., Oct. 24.
Santa Barbara, Cal.—Hon. Clarence A. Buskirk, Potter Theater, Sunday afternoon, Oct. 24.
Camden, N. J.—Clarence C. Eaton, Temple Building, 3:30 p.m., Oct. 24.
Lincoln, Ill.—Judge William G. Ewing, Oct. 24.
Palo Alto, Cal.—Judge Septimus J. Hanna, Church Edifice, 501 Waverly Street, 3 p.m., Oct. 24.
Chelsea, Mass.—Prof. Hermann S. Hering, Town Hall, Revere, 8 p.m., Oct. 24.
Concord, Mass.—Prof. Hermann S. Hering, Town Hall, 3 p.m., Oct. 24.
Montreal, Can.—Frank H. Leonard, Windsor Hall, 3:15 p.m., Oct. 24.
Tacoma, Wash.—William D. McCrackan, M.A., Sunday afternoon, Oct. 24.
Brooklyn, N. Y.—Rev. William P. McKenzie, Academy of Music, 3:30 p.m., Oct. 24.
St. Johnsbury, Vt.—Frank H. Leonard, Pythian Hall, Oct. 25.
Troy, N. Y.—Rev. William P. McKenzie, Music Hall, Oct. 25.
Ventura, Cal.—Hon. Clarence A. Buskirk, Oct. 26.
Mill Valley, Cal.—Judge Septimus J. Hanna, Out Door Art Club, Oct. 26.
Brattleboro, Vt.—Frank H. Leonard, Auditorium, 7:30 p.m., Oct. 26.
Seattle, Wash.—William D. McCrackan, M.A., Junction Hall, Ballard, Oct. 26.
Manchester, Eng.—Rev. Arthur R. Vosburgh, Midland Hall, 7:30 p.m., Oct. 26.
Bellingham, Wash.—William D. McCrackan, M.A., Oct. 28.

CORRECTION.

In the *Sentinel* of Sept. 25 a lecture is credited to Rutland, Vt. It should have been Randolph, Vt.

TESTIMONIES OF HEALING.

In grateful acknowledgment of the blessings that have come into my life during the past two years, I write this testimony. I have had many proofs of the ever-presence of divine Love, and have unbounded faith in this blessed truth. I shall never forget the first testimonial meeting I ever attended; it opened up a new world for me. I had attended a Sunday service, but it did not appeal to me, as I did not then understand Christian Science. I was not in need of physical healing, as I had always had reasonably good health, although I would frequently have a day or two of severe headache and about every three months a bilious attack. This went on for years, until I came to think that I must have these attacks, so of course concluded that I had no need of Christian Science; but I certainly was mentally sick and blind.

We had a very sick child, and as we had lost two others in two years' time, I thought this one would die, too. His fever was very high, and I had almost come to be resigned, although I was very bitter at times and thought in my ignorance and blindness that God had cursed me; yet I wondered what I had done to be so punished, and thought He surely could not be the loving Father I had been taught to believe in. In that state of mind I went to the drug-store for medicine—five different kinds were being given to the child, and we had three doctors in attendance. While on my way home I met a friend who was interested in Christian Science, and she asked me to go that night to a testimonial meeting. After much urging I was persuaded to do so, and a testimony which a lady gave impressed me very much; it was something about another sick child, who had been healed. The next morning the baby's fever was still high and he was threatened with spasms, so I telephoned to a Christian Science practitioner to come and treat him. The healing was instantaneous; I simply could not believe my eyes; I thought I was dreaming. Could this be possible, after he had been so sick? But he has been well from that day. Then my husband was freed from that old demon, whisky, by reading Science and Health, and in three weeks' treatment healed of rheumatism of many years' standing. My son was healed after he had been unconscious for seventy-two hours, as the result of being thrown from a horse.

I could go on and write page after page, and the half would not be told. I am very thankful for all the healing, and more so for the spiritual uplifting. I never before understood the Bible; it was always a book of mystery and contradictions to me. Truly Science and Health is a "Key" to the Bible. I am thankful to God for the clearer understanding of Him that I have gained; I am also thankful to our dear Leader for the discovery of this wondrous truth, and my sincere desire is to help others. This truth does heal the sick, reform the sinner, and bind up the broken-hearted.—Mrs. Mary S. Harper, El Paso, Texas.

I should like to tell others of the quickening that has come to me through Christian Science and Bible study. Twenty-two years ago I had an attack of what is known as hay-fever, and my mother consulted her physician about it. He said that I should be sent to northern Michigan, that this was the best thing he could recommend. I went to Michigan many times for relief, but in the fall of 1908, not realizing as much benefit as I had seemed to receive at other times, I came home nearly a month earlier than usual. I was so poorly the first evening after I arrived that something had to be done for me. My hostess advised Christian Science treatment, and I told her I was willing and that she might call a practitioner; which she did. After the treatment I went to sleep, and rested the best I had for a long time; and treatment the second evening was followed by the same result. Since that time I have taken several treatments.

I had been told over and over again that hay-fever was incurable, and I had accepted the thought, and said that I did not believe there was any permanent cure by taking medicine. I had, however, always believed, and held to the thought, that God was able and could heal; the difficulty was to bring my faith to the point of belief in His willingness to do it. After I began to read in Science and Health I took up the Bible and looked for some passage to strengthen my faith in God's willingness to heal me, and I found these promises: "I will heal thee;" "I will restore health unto thee." The question then came to my mind, Who is this "I"? Many times in the twenty-two years of my affliction I have gone to physicians and asked them if they could do anything for me, and sometimes they would say that they could cure me, and would give me some medicine; but often there was not even a palliative effect. To drug medication I may say, "Thou hast no healing medicines."

But I had begun to ask, Who is this "I," that the Bible speaks of, with the promise, "I will heal thee;" and "I will restore health unto thee"? As I thought long and deeply of the matter I realized that in God's presence there is no sickness, no sorrow, nothing to grieve over, no hatred, no jealousy, for God is Love, and God is All-in-all. Then early in the morning came the answer in a "still small voice," to my question: This "I" is He who was, and is, and ever will be. Again, one evening, I became agitated and restless, and feared that I could not sleep; then I turned my thought to the "I" the one Mind, with the result that I went to sleep, and slept soundly. In the morning there came to me these words: "God hath not given us the spirit of fear," but "the Spirit of adoption, whereby we cry, Abba, Father," and I realized that rest which remaineth for the children of God, and which the practitioner had said was man's divine right. The healing stream of divine Love flowed on perceptibly through consciousness, and I remembered these words of Jesus: "I am the way, the truth, and the life;" and "I am the door: by me if any man enter in, he shall be saved, and shall go in and out, and find pasture."

I thank God, and all who have been coworkers with Him in helping me to come into this spiritual healing. I am grateful for the physical healing which has resulted therefrom, and I desire to drink continually at the fount of divine Love and to do what I can to help others.

Rebecca Street, Kokomo, Ind.

I have long felt that I should tell of the many blessings which have been mine since I heard of Christian Science, and thus help some other travelers on their road from sense to Soul. I was fifty-nine years old when Christian Science was brought to my notice, through the healing of my adopted daughter. I applied for treatment, and was relieved of a stomach disorder of ten years' standing, although the healing of this ailment was completed only after nearly two years of study. I have been thankful that my healing was slow, for it was because of this that I studied,—searched and found the truth.

I saw and acknowledged the beauty and power of the truth, for which I had long been looking, and I wanted to know more of it. To mortal sense I was a very poor scholar, not even knowing all the letters of the alphabet, but my practitioner said, "God is your teacher, and as there is no age in Spirit you can learn to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. The members of my family thought this impossible, greatly fearing that because of my many years of sickness, being melancholy and weak, I would become insane; but the truth that I had heard—"God is your teacher"—was stronger than their fears.

Digitized by Google

This was my beginning, and I humbly asked to be led, guided, helped, and guarded. I was sure that it was possible for me to know, for the truth came from God. Of myself I knew nothing. All my spare moments, gained by sacrificing worldly enjoyments, gossip, and sleep, I spent in learning my letters and in putting them into words. How closely I watched when the Bible and the hymns were read, and each day I gained a little; and even if it was but as much as a grain of mustard-seed, I knew that just that much of error or darkness had to depart. When my family thought I was asleep, I was studying, watching, and praying for the light to shine.

It is now five and a half years since I began to study Christian Science, and though sometimes the road was rugged and I traveled slowly, and very often I was discouraged, I would remember our Leader, Mrs. Eddy, and the words of her hymn (Miscellaneous Writings, p. 398):

I will follow and rejoice
All the rugged way;

and then new courage would spring up in me. The Christian Science Hymnal has been my constant companion; those beautiful words of praise to God do drive away earthly fears. By singing the hymns (something I had never done before), more light came, and I gained one word after another, until now I can read our Lesson-Sermon. Daily when I arise, I open the hymnal anywhere, and my day begins with a song of praise, and never do I retire until I have had my spiritual food, which is most necessary.

I am so thankful that I can never express it in words, for surely God has been good to me, to show me the way to health and life. It has indeed been proved to me that there is nothing impossible with God. My only thought is to love more. All these years I have been looking to "have;" now I want to "give" love. I see how I wanted to reap where I had not sown. I know divine Truth and Love will enable me to learn more from day to day as I live Christian Science, and I thank God for having sent this healing truth in this age, through Mrs. Eddy's patience, endurance, and great love for humanity.

MRS. MINNIE THIMMIG, Sheboygan, Wis.

I have received many benefits through the study of the Christian Science text-book, and I have come to the point where I must voice my gratitude or be self-condemned. When I took up the study of Christian Science it seemed to me that it was spiritual peace I was looking for, not physical healing. I have always been an independent thinker, one who believed most implicitly in God—His goodness, mercy, love, justice, and greatness—but who could not honestly say anything else of Him. I joined a church when I was sixteen, and found enjoyment in its work for about ten years. After that time I became repelled by the difference between theory and practice, and declared that I would not darken the doors of any church which did not show a practical religion. I went to the woods, fields, rivers, and mountains on Sundays, and tried to find God there. He evidently was, but so much that was unlike Him was also apparently there, that in despair I gave up trying to find Him.

Some three years ago a loving friend pointed me to the way in which a demonstrable religion could be found. I had been searching so long, and so barren had been the results of the search, that I could not believe it. I was, however, loaned some of the periodicals, attended a lecture or so, and eventually borrowed an old copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. At last it dawned on me that I had found a religion which could be lived, and I lost no time in joining one of the branch churches. Although I was not looking for any material conditions to be corrected, I was relieved of a sprained ankle, and was protected when exposed to every chance of a severe electric burn. What gives me most joy, however, is the fact that my temperament has changed and is still changing. To nearly every one I seemed a sour, stern, and unlovable man. Now the outlook has so changed that I find I cannot help loving every one. It is a great relief to know that "Love is reflected in love" (Science and Health, p. 17), and to see love reflected all around me.

Words cannot express my appreciation of the loving kindness shown me by the various Scientists whom I have met, and nothing can portray the gratitude I feel toward God and toward Mrs. Eddy for giving men a religion that is real and understandable. I have been able in a few cases to point the way to others, so that erroneous conditions have been successfully met and overcome, and the joy of these healings was worth more to me than anything that earth can give. The Bible has been illuminated to me, and thoughts which were an inexpressible jumble have been straightened out so that they are understandable. It is with the hope that some one who is searching blindly for the truth may be led to the God who is Love, that this testimonial is written.

ARTHUR H. THOMAS, Montclair, N. J.

In these days when so much is being written and said about Christian Science not being able to heal organic lesions, or of there being no proof thereof, I feel it is time for Christian Scientists to speak whereof they know. There must be hundreds of unimpeachable cases, and I, for one, would like to present the evidence in my own case to these critics. Let them go on and do what good they can; I would say, as did the Master "Forbid him not;" but let them forbear from making statements which can be disproved so easily.

In the fall of 1904 I seemed to have reached low water-mark. For about six years I had been struggling against a physical breakdown. Medicine, massage, and electricity failed to help me. My church and religious experiences became a dead letter to me—they could not help me in my extreme need. In 1900 I got temporary help from psychic treatments, only to sink lower than I was before. I then launched into a flood of speculative literature, in some of which there seemed to be good, but there was nothing that I could apply to my own relief. About this time I borrowed a copy of Science and Health, which I kept four weeks, but it seemed unintelligible to me. In October, 1904, a crisis came. A cyst of considerable size, which had formed on the right side of my neck fourteen years before, suddenly became malignant. I had previously had one removed from my left temple by a surgeon. That one, being over a bone, was easily removed, but this was in soft tissue near the jugular vein, which made it much more serious, and I feared an operation. I consulted with a neighbor who was a Christian Scientist, with the result that I went to a practitioner and began to take treatments. At the same time I bought a copy of Science and Health and began to read it. This time the book was intelligible to me from the beginning, and seemed most wonderful. The removal of the tumor and the healing took three months, during which time I kept on with my housework. It was an unspeakable relief to be saved from the surgeon's knife, and since then I have had many minor demonstrations, besides three others which may be worth mentioning.

In the latter part of December, 1905, I fell on the ice and sustained a very severe injury of the right wrist. The large bones were involved from elbow to wrist, also the small wrist bones, and besides this the middle finger was badly wrenched. I at once telephoned a Christian Science practitioner. Neither the arm nor wrist was ever bandaged, and as I went about my work I gradually brought

Digitized by Google

the hand into service. It is the very best healing of a Colles fracture that I have ever seen, and I am ready to show the wrist to any one who may be interested. My next demonstration was in the case of a hard bronchial attack, and at another time an eruption on the head. Both of these complaints were quickly and thoroughly healed in Christian Science. (With the latter attack I lost all my hair, but it is growing finely now.)

In the time of my extremity a dear friend told me that I must never expect to do much work again, that if I could do a little work for small pay I must be satisfied. I thank God, and also our good friend, Mrs. Eddy, who blazed the trail for us, that I have been delivered from such a fate. My health is excellent, and I have good success in my chosen occupation, nursing. It is from my heart that I can say, as our Leader has written in "Miscellaneous Writings" (p. 397),—

My prayer, some daily good to do
To Thine, for Thee;
An offering pure of love, whereto
God leadeth me.

ELLEN G. EVANS, Utica, N. Y.

With the hope that my testimony may help some one who thinks he has carried his burden too long to be relieved of it here and now, I wish to tell what Christian Science has done for me. For some twenty-five years I was annoyed with a constant throat affection, which at times was quite severe and marred my hearing. After an examination, about eight years ago, the doctors informed me that I would become totally deaf; but with a few weeks' treatment in Christian Science my throat was entirely healed, and has remained so ever since, over a year ago. I am very thankful for the understanding which shows us the way out of bondage into man's God-given freedom.—MRS. M. L. RICH, Pacific Grove, Cal.

I wish to express my deep gratitude for what Christian Science has done for me and my family. It has been a little over three years since we first commenced the study of Christian Science. Prior to that time some one of the family was constantly under a doctor's care, but now this wonderful truth meets our every need. Our little daughter of eight years was very delicate from her birth, and a number of physicians said we would never raise her. Three years ago she was a very frail, nervous child, but now, after only a few treatments in Christian Science, she is as strong and healthy as most girls of her age, and attends school regularly.

A wonderful proof that "the word of God is quick, and powerful, and sharper than any twoedged sword, piercing even to the dividing asunder . . . of the joints and marrow," came to us when our little boy's wrist, which had been out of joint for hours, was instantly restored through an absent treatment. In less than five minutes after we called for help over the telephone, my boy came to me, pressing the injured hand backward with the other and telling me it was well. And so it was! Even the evidence of there having been anything the matter with it had disappeared. The practitioner had little more than time to leave the telephone, before I again called her up to tell her the joyful news.

About five years ago, our oldest boy, now over thirteen years old, had an attack of throat trouble which left him with a weak heart, and he could not run and play like other boys. Today he, too, is a strong, healthy boy, able to take his place anywhere, as the result of only a few treatments. Our youngest child was healed of a constant cough, in one treatment, by explaining to him that God did not make him cough. He accepted the truth of this statement very quickly, though only four years old.

Severe headaches, from which I had suffered since girlhood, are becoming less and less frequent and severe, and my husband has been greatly helped from asthmatic trouble and the discordant conditions are gradually yielding to truth. As a family we have always become affected with so-called poison-oak, if we went near it, and at one time the whole family were attacked so severely that we needed a practitioner's help. After a week's treatment we were all healed, and since then any one of us can go to the woods without even a thought of danger from this shrub. I am indeed thankful for this truth, which meets all our needs, and my heart goes out in gratitude and love to Mrs. Eddy, through whom this great good has been brought practically into our lives.

It is impossible for me to tell all that Christian Science has done and is doing for us, but we are striving to live the lives of true Christian Scientists, and hope by so doing to help others find the truth which is making us free.

MRS. G. E. EIB, Pacific Grove, Cal.

I would like to give my testimony to the saving effects of Christian Science. It was first presented to me while I was suffering from a neuralgic attack and was going home to go to bed until it wore off,—my usual course of procedure. I met a lady whom I knew, and she spoke to me cheerily; but I was in so much pain that her happy greeting jarred upon me. Seeing my plight, she told me that it was not necessary for me to suffer, if I would only realize that the body without mind could not suffer. I of course agreed to that, and that the Mind which was God could not be sick. Instantly I saw that this was a self-evident truth, and I repeated it over several times. When I turned my thought again to the pain, I found it had all gone, and I was as free as a bird. I was so overjoyed that I hastened home to tell them the good news of my release, but when I explained to them what to me seemed so simple and logical, to my great surprise they treated it as a joke and would have none of it. With even this small knowledge I found I could help myself out of many troubles, but if I tried to help others they could not or would not accept it; until at length I gradually came to forget all about it myself.

Several years after this the same old trouble returned with renewed force, and I cried out to God for help; this time earnestly, determined to find out more of that which had healed me so long ago, and I was led into the fold of Christian Science. Since 1900, when I took class instruction, divine Love has led me gently and lovingly, showing me the nothingness of all seeming power apart from God. The struggle against the testimony of the material senses in overcoming self has been very interesting, especially as its illusive character is more and more realized.

The overcoming of a sense of lack where the circumstances were such that there seemed to be absolutely no avenue of escape, meant much to me. This was done by claiming God's allness and Spirit as the only substance, and by putting away every sense of the error which seemed to talk louder than the good, until at length the bonds of mesmerism broke and I was flooded with a sense of opulence that filled every desire, and opened up the spiritual world to my entranced vision. These glimpses are but sureties of the permanence of spiritual reality, as we shall know it when all error yields to Truth. My gratitude and love go out to our dear Leader, Mrs. Eddy, who took these same steps alone ere she could give to us her experience and so save us much suffering. We all think we would have been the ones to follow the Master had we lived in his time, but would we, if we close our eyes to the same works that are done today, which affect unnumbered thousands for good? We who profess to love

Digitized by Google

Christian Science should each day ask ourselves the question, Do I love God, Spirit, with all my heart, soul, strength, and mind? Mrs. Eddy tells us that this means "the surrender of all merely material sensation, affection, and worship" (Science and Health, p. 9).

JULIA A. BURDELL, New York, N. Y.

[Translated from the German.]

In September, 1902, I became acquainted with Christian Science here in Hannover, after I had suffered for seventeen years both physically and mentally. Frequent attacks of rheumatism, a stubborn, painful disease of the skin, heart trouble, and shattered nerves had brought me near insanity. Moreover, a condition of deep discord reigned in our home and business life, and all I longed for was death; but even as the flower responds to the light, so did I imbibe the comforting teachings of Christian Science, for I felt immediately that the overwhelming truth presented, and the great love which was shown me, alone could help me; and thus I was to experience through divine Love a gradual awakening from the dream of materiality. The old Adam-way with all its windings was given up, and the new man by and by led my thought toward the light,—the new man, before whose spiritual vision "the world passeth away, and the lust thereof," and to whom the origin, end, and aim of life, contents and sum total, mean God and His idea.

Since that time everything has turned toward good. For the past five years and a half no physician has entered our home; I have been enabled to treat my children and all my loved ones in Christian Science, and with good results, and I am becoming the master of my body and of our circumstances; all this through the understanding and application of Christian Science. I understand perfectly that Mrs. Eddy, through the rediscovery of the Science of Christ, has given to humanity that which is far above gold and silver and all earthly things. Next to God, our daily thanks are due to her.

FRAU INGENIEUR JULIUS MUELLER, Hannover, Germany.

I first heard of Christian Science in the winter of 1902, when a niece who had been healed visited me. I then thought very little of it, and smiled at the idea of anything of the kind healing the sick. My niece, however, left with me a copy of *The Christian Science Journal*, but I did not read it until I was driven by extreme suffering to look into Christian Science. From childhood I had suffered from a weak stomach, and for twenty-five years I had been constantly under the care of a doctor, besides taking a great deal of medicine. Four different doctors treated me at various times, but only temporary relief resulted. In the mean time the disease had become chronic, and normal action was a thing unknown. Nearly all the organs of the body seemed to be involved, and at times I suffered such intense pain that only opiates would afford relief. In December, 1906, I consulted a specialist, who gave me treatment and prescribed a very careful diet. After four weeks of faithful adherence to the doctor's orders I found myself no better, but instead growing weaker.

Just here my young daughter, who had heard something of Christian Science, persuaded me much against my wishes to try it. I was relieved of all the stomach difficulty at one absent treatment. My appetite returned at once, and I have since been able to eat anything I wished without distress. I continued the treatment for about two weeks, and ever since have been strong and well. I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the understanding which has come to me from reading my Bible in connection with this wonderful book, I have been able to overcome many forms of illness, a sprained ankle being entirely relieved in three hours.

For all these blessings I am very thankful to God, and I feel that great gratitude is due Mrs. Eddy from all mankind for her discovery, whereby we learn that God is indeed "a very present help in trouble."

MRS. ELIZA J. KING, Genoa, N. Y.

I am glad to express my gratitude for Christian Science, because it has helped us in so many ways; indeed, the half can never be told. Some time ago, my little son stepped on a rusty nail, and when he came home the pain from the wound seemed to be very great, as also the loss of blood. I immediately sent word to a Christian Science practitioner, who treated him at once, and again during the evening. He rested well during the night, and next morning the practitioner came to see him. She told him to get up and dress, as the foot was entirely well, there being no inflammation at all. It was indeed a beautiful demonstration of the power of Truth, and for this and many other blessings I am truly thankful to God, and grateful to Mrs. Eddy.

MRS. WILLIAM MUTZBERG, Bethlehem, Pa.

It is with great pleasure that I write to express my deep gratitude for all the help that Christian Science has brought me. For some years I suffered from an eye trouble which seemed to produce headaches, and I was unable to read or write without glasses. I was, however, completely healed of this complaint at the first Christian Science testimony meeting I attended. Later, when I had a serious affection of the veins of one leg, which is considered by doctors to be a disease that is tedious to cure, I was healed of it very quickly through Christian Science treatment.

I have heard people say that Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is expensive, but when we consider the large amount many of us used to spend on *materia medica*, which so often failed to help us, the price of this book seems very small, for the study of it brings health, strength, and happiness; thus making life worth living. Christian Science also taught me to understand the Bible and to care for it. I feel that I cannot be thankful enough to God for this truth, and grateful to Mrs. Eddy, who does so much to show us how to follow this wonderful teaching.—MISS M. BACON, London, England.

[Translated from the German.]

Two years ago I was healed, through ten treatments in Christian Science, of severe headaches from which I had suffered for about ten years. I could not make the slightest exertion without suffering terribly in this way. I often had to go to Berlin on business, and as soon as I was in the stir and bustle of the large city the attack would come on, and it required several hours of rest before I would get any better. I was healed at the same time of a stomach affection, also of catarrh and oppression of the chest. I had dragged myself along with all these troubles for years, had used many remedies and consulted many specialists, but without success. Later on I was taken with attacks of melancholy, and again sought the help of a Christian Science practitioner. I was also healed of this condition, and have been a healthy and contented man since. My wife, too, has been completely healed of neuralgia in a short time through Christian Science, and my two-year-old boy of a bad eruption, through absent treatment. My family and I are very grateful to God, and next to our dear Leader, for she has brought us out upon the right road through her works, which express the healing truth.

RICHARD HERTER, Krenmmen, Germany.

FROM OUR EXCHANGES.

[Lyman Abbott in *Outlook.*]

The apostle John has given us the lofty, the noble, the divine meaning of words: "In the beginning was the Word, and the Word was with God, and the Word was God." God was always a speaking God,—speaking through the mountain and the flower that bloomed upon its sides and the bird that sang above it; speaking in the words of the poet, the achievement of the statesman, the authority of the father, the comforting love of the mother. The picture is the word of the artist; the bridge is the word of the engineer; the home is the word of the mother. Words are the expressions of the hidden life of the soul. It may be the life of emotion or the life of intellect; the life of instruction or the life of mere fellow-feeling; the life of serious thought or the life of sparkling wit or of mere good humor. But if it expresses no life, it is an idle word, and "every idle word that men shall speak, they shall give account thereof in the day of judgment."

[*British Congregationalist.*]

There is always a rare interest in the verdict of contemporaries upon a great mind; Jesus, in plunging into the stream of human life, had to submit himself, as others have done, to "that fierce light which beats" upon all human things. The judgment of his own generation was as varied as possible. Every shade of religious sensitiveness was to be found in Galilee and Judæa. The unimaginative, the superstitious, the censorious, the sceptical were there. They passed before him; they said what they thought of him, and they condemned themselves to a pathetic immortality as representatives of human hearts in their blindness and dulness and spiritual destitution; or they rose to that dignity given to all who were the first to see the glory of Jesus, and wherever the gospel is proclaimed stand forth as the first-born sons of light.

[Rev. Frederick A. Bisbee, D.D., in *Universalist Leader.*]

If the religion of Jesus Christ has been of any use in improving the world during the last nineteen hundred years,—and who shall question this?—if through the influence of the Christ-life upon men, mankind has been uplifted nearer to his level, so as to see more nearly from his point of view, then the world is more competent today to judge of him and his religion than ever before. We say, therefore, the conception of Christ's religion in the past was not as good as that of today, and of course the statement of that religion and its object was not as good. And a new generation is not asking too much in demanding a redefining of its purpose and motive and method.

[*Congregationalist and Christian World.*]

Depth of spiritual life and breadth of interest in the life of men are so far from being contradictory that neither is possible without the other. A man to love and live with God must love his neighbor as himself. And the way of deepening love of God is the way of brotherly affection. We must find the divinity in humanity. And we may be sure that without true neighborly relations we shall get no hold on the power of God.

[Rev. Dr. Franklin Hamilton in *Pacific Christian Advocate.*]

We need not so much a new patriotism as a new Puritanism, not so much the call to a deeper love of truth as to a new vision of the person of Jesus, not so much the summons to a better brotherhood as to a humbler walk with God, not so much the demand for a Christian socialism as for an uncompromising godliness. Make Jesus King.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

No. 6.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00: in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.40; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE. THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 20 pages.

CHRISTIAN SCIENCE: A RELIGION OF DOING. A Lecture. By JUDGE WILLIAM G. EWING. 26 pages.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.
Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.
Text Bible. (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

QUARTERLY COVERS WITH CHANGE POCKETS.—Regular size, $1.50 each or $15.00 a dozen. Pocket size, $1.40 each or $14.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. The arrangement for both high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 27 cents the copy; $2.75 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 27 cents the copy; $2.75 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

Our Catalogue for 1909, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should be made by check, post-office money order, express money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money remittances or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a fac-simile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The temporary legislation which was enacted to meet the conditions of the panic of 1907 will come up for reconsideration when Congress convenes in December. The monetary commission, it is now believed, will report at that time in favor of a central bank of issue. "A bank of the people and for the people" is the definition of this institution made by George H. Reynolds, president of the American Bankers' Association, in his Chicago speech. He pointed out that the people were to be the stockholders, for any one would be privileged to buy the bank stock just as he might a Government bond. A small interest on such an investment would be guaranteed by the Government; any earnings more than sufficient to pay the guaranteed interest would be shared by the Government and by the stockholders. Political control of the great bank would be made at least extremely difficult by the life appointment of the officers. Integrity of operation would be assured by the board of supervisors, appointed by the President, the Secretary of the Treasury, and the Comptroller of the Currency (subject to the approval of the Senate), for alternate terms of at least eight years, to bridge over political mutations.

That a great water-power trust is in process of formation; that legislation to protect the water-powers of the country without delay is absolutely necessary; that the present situation is dangerous to the public welfare; that an investigation is on foot by the bureau of corporations which will disclose the exact conditions in the country with respect to water-powers; that other important conservation legislation is needed; that the forest service is in better condition than ever, and that the people of the United States are awakened as never before on the subject of conservation, and that another great conservation meeting is likely to be held in Washington the coming winter, were among the assertions made last week by Gifford Pinchot, chief forester, who has just returned to Washington from a prolonged trip in the West.

Dr. Abbott Lawrence Lowell was inaugurated president of Harvard, Oct. 6, to succeed President Charles W. Eliot, who has held the position forty years. Into his care, with academic formality, were placed the seal, keys, and charter, symbols of his office as head of the oldest and largest institution of learning in America. The inauguration exercises were held in the yard and were viewed by an audience which filled the enclosure. The leading universities of England, Scotland, and the countries of Europe, and practically every university, college, and learned society on this side of the Atlantic, sent representatives, and thirty of these were awarded honorary degrees. With them were the men of the governing boards and faculties of Harvard, representatives of the state and nation, and other distinguished guests.

Paintings valued at more than one million dollars and more than twenty years old have been held up recently for payment of duties by Fifth avenue art dealers, despite the tariff act providing for the free entry of works of art in existence more than twenty years prior to the date of importation. It is said that another million dollars' worth of paintings entitled to free duty under the new law are on their way here from Europe, and that the importers of this collection are likely to undergo a similar experience. In drawing the various affidavits which are necessary, the law has been practically made inoperative, as it stands at the present moment. The Government demands not only the name of the artist and the subject, but the place where the picture was painted, the date of production, and the month even.

The Postmaster General has provided for a postal card more ornate and decidedly superior to the one now in use, by awarding a contract for 3,487,000,000 cards to the Government Printing Office. The estimated cost, covering a period of four years from Jan. 1, 1910, is $134,714. While the weight of the card will be reduced from 150 to 130 pounds to the ream, its tensile strength will be increased from forty-five to fifty pounds as compared with the current card, thus resulting in a lighter and stronger card. Of the total number of postal cards contracted for, 3,400,000,000 are to be 3½ x 5½ inches, the regular or single size; 77,000,000 are to be double or reply cards, and 10,000,000 are to be the size corresponding to the current index card, three by five inches.

To economize in the cost of printing and binding of reports and bulletins issued by the Census Bureau, Director Durand has decided that in the future only fifty copies of each publication shall be printed on paper insuring permanent preservation, in special bindings. In view of the great cost of a certain grade of Oriental vellum, it was decided that there should be printed and bound of every report and bulletin thirty-five copies on the best quality all-white new rag, to be deposited in the leading libraries of the country, and fifteen copies on Shidzuoka Japan vellum, of which five are to be retained for the use of the Bureau and the Department of Commerce and Labor, two to be deposited in the Library of Congress, the remainder to be kept to supply further demands.

Notice was recently given to the Treasury Department at Washington by the Pennsylvania Railroad Company that it proposes to operate its trains into the new station in New York city on the first day of December. In the great terminal between Seventh and Eighth avenues and Thirty-first and Thirty-third streets there are sixteen miles of track, including twenty-one standing stations. Two tunnels connect the station with New Jersey, and four with Long Island. Started in 1902, work has been carried on continuously ever since, and when the scheme is fully completed it will have cost over ninety million dollars.

The Lahm cup for long-distance balloon flight was won from Capt. C. de Forrest Chandler of the United States army by one of three balloons which left St. Louis on Monday of last week. Two of the balloons late on Wednesday passed over Minnesota towns. A third was reported to have been sighted at Livingstone, Ala. Captain Chandler won the cup in October, 1907, by voyaging from St. Louis to Walton, W. Va., 474.8 miles from the start.

The gross income from the automobile department of the highway commission of Massachusetts for the season has been nearly one hundred and sixty thousand dollars. This is practically a contribution from motorists for the maintenance of state roads, and has come in the way of fees for licenses, registration certificates, and examinations. There have been registered 22,804 automobiles, 7,570 private operators, and 8,514 chauffeurs.

The profit on the garden lots established by the Chicago City Gardens Association this year, where the poor of the big city can raise vegetables, averaged thirty dollars per lot, according to the report of the treasurer. Lots were set aside for one hundred families and the average cost per lot was $11.20.

It is the intention of the Federal Government to take every precaution, through the board of food and drug inspection of the Department of Agriculture, to see that exact justice is given to the public regarding the weight or volume of foods or drugs purchased.

International.

A big gas plant is being constructed in the City of Mexico by the Mexican National Gas Company, an American concern. It will be the first introduction of gas for domestic purposes, and the plant, including the extensive system of pipe lines that will extend to every part of the city, will involve the expenditure of about two million dollars gold, it is stated. The gas supply will be manufactured from crude oil, which the company will pipe from its producing wells situated at Ebano, near Tampico, about four hundred miles distant. The contract for the pipe for the proposed pipe line has been let. In order to reach the high altitude in which the City of Mexico is situated, the pipe line must be built from sea level up to the plateau, mounting more than seven thousand feet within a distance of thirty miles. The plant which the company is installing will have a daily production of one million feet in the beginning.

The number of men actually under arms in Japan, according to published statements, is 184,500. On a war footing the army is put at 1,214,000, exclusive of 10,000 troops serving in Formosa, 15,000 officers and non-commissioned officers serving with the colors, and a very large number of officers and non-commissioned officers whose names are borne on the reserves.

Industrial and Commercial.

Shipments of ore from the Lake Superior iron region compiled to Oct. 1 show that already this season approximately thirty million tons have been forwarded by water to the lower lakes. There are still more than two months of the season of navigation, yet to date this year the shipments exceed those of the entire season of 1908 by four million tons and there is every indication that the tonnage sent out will be the greatest in the history of the region, surpassing even the record-breaking outgo of 1907.

An acre of land in the Wenatchee Valley in Central Washington, owned by an orchardist, is expected to yield a net profit this season of two thousand dollars. The trees, nine years old, are of the Winesap variety.

The pig iron production record of the entire iron and steel industry in the United States will be broken this month, with the furnaces of the country going at the rate of twenty-eight million tons or over.

The Mauretania on her last westward trip made still another record. She averaged 26.06 knots for the trip and her time was 4 days, 10 hours, and 51 minutes over a course 2,784 miles long.

The high price of cotton, if present plans of manufacturers mature, is to result in an international closing of mills sufficient to reduce consumption of raw cotton very severely—one million bales in this country alone.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HAVING EYES, THEY SEE.

REV. IRVING C. TOMLINSON, M.A.

IT is recorded of the celebrated naturalist, Charles Darwin, that he raised over sixty wild plants from seed imbedded in a pellet of mud taken from the leg of a partridge. Where an untrained eye would have found only the barrenness of death, the penetrative vision of the great naturalist beheld a bright prophecy of growing plants and flowers. Likewise, oftentimes where blind material sense sees only clay and nothingness, spiritual sense finds substance, being, and immortality. In this connection it is worth remembering that those who have eyes which see, also have hands which dig, since demonstration accompanies understanding. Practice is the close comrade of perception.

In the observation of human experience, that which is but a pellet of mud to some, may upon analysis be found to contain many valuable seed-thoughts, and a few of these, having blossomed for one gardener, are now shared with others. The first of these ministers of good to voice its message, represents the lily family, and bears the suggestive name of Wild Oats. It immediately calls to mind the returning prodigal who was sentenced by two judges. One, the elder brother, weighing all things from the standpoint of material sense, saw in the homecoming wanderer only a hardened criminal. The other, having a father's tender eyes, and knowing that the soiled raiment is no part of the real man, found not a child of sin, but the long-lost son. This latter judge, being like him of whom it has been said, "A bruised reed shall he not break, and smoking flax shall he not quench," accorded to the younger son the character which pertained to his true selfhood; and, lo, what to the elder brother appeared to be a pellet of mud, was found to be instinct with life. The prodigal returned, redeemed, restored, was no longer an outcast, but a loving son, and from a father's joyous heart went forth the glad acclaim: "This my son was dead, and is alive again; he was lost, and is found."

The next of these seed-thoughts may be given the name of Heal-All, and it suggests how differently two physicians may view the same sick-chamber. The first sees only matter and the material conditions surrounding the patient. Taking into account the testimony of material sense, he attempts to remedy sickness and suffering, disease and death, by material means. The other, the follower of the "great Physician," is not blinded by the material conditions which seem to encompass the patient. Having eyes that see, he knows only Spirit, and the spiritual, the ever-living God and the man of His creating. Refusing to accept the material as the real, he perceives not a sick and suffering mortal, but the immortal, spiritual man; and, because of this higher understanding, Paul's words are again proved true: "The things which are seen are temporal; but the things which are not seen are eternal."

The blossom of another of these seed-thoughts is identified as the Sensitive Plant. This shrinking messenger tells of the mortal who, allowing the senses to hold sway, has permitted the enemy to give him a tinge of blue. This azure cast, so charming in the sky and in flowers, is far from agreeable in men, for it hides the real from consciousness, and leads to persistent self-condemnation. How many mortal sensitive plants, enveloped by this earth-mist, have falsely dubbed themselves pellets of mud, *alias* ne'er-do-wells, or sick men. Such as these should ponder well Mrs. Eddy's weighty words: "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this. Then you will find that one is as important a factor as duodecillions in being and doing right, and thus demonstrating deific Principle. . . . A single drop of water may help to hide the stars, or crown the tree with blossoms" (Pulpit and Press, p. 4).

As the keen-eyed naturalist sees in a piece of clay, not a lump of dirt, but the promise of flowering shrubs and ripened fruit, so should the Christian, ever loyal to his faith, discover not mortal man, when the eye is turned on self, but the reflection of Life, the idea of Truth, that which is spiritual and Christlike. If the human sensitive plant will but come out of the mist and into the sunshine, he will find himself not clay, nor even a sensitive plant; but, facing the sun, he will know himself to be a joy-reflecting, health-imparting Easter lily, the resurrection flower.

No better name can we give the bloom of our next seed-thought than the Star of Bethlehem. All know that the great Master was an illustration of "eyes that see." The blinded Pharisees said of him: "Who is this that speaketh blasphemies?" but simple fishermen and true-hearted women beheld in him the Son of God, the Saviour of the world. This clear-visioned one never let the enveloping mire hide from his view the vital germs of truth and beauty. Once, when at a banquet, there came behind him a woman who washed his feet with her tears and anointed them with ointment. Said the Pharisee, "This man, if he were a prophet, would have known who and what manner of woman this is that toucheth him: for she is a sinner." The true seer, turning to the woman, said, "Thy faith hath saved thee; go in peace." What to the eye of the Pharisee was a poor outcast, was to Jesus a child of faith, she whom we know as Mary Magdalene, the last at the cross, the first at the tomb. On a different occasion, when the Master was at the grave of Lazarus, the weeping Martha, who knew her brother only as lifeless clay, cried out, "Lord, . . . he hath been dead four days." But Jesus answered, "Said I not unto thee, that, if thou wouldest believe, thou shouldest see the glory of God?" Refuting the testimony of all the world, this man with the seeing eye beheld Life, not death; and at his command the grave gave up its victim, and life and immortality were brought to light.

Another witness to the seeing eye, whose beauty is hid only from those that are blind, blossoms in the modest Mother's Heart. In this example of the open vision a new-old evangel is given to the world, and its message is named

"Science and Health with Key to the Scriptures." Eyes that see not declare the volume to be meaningless; but its author, with penetrating sight, knows the "little book" to be pulsating with life and love. Its seeds of truth, bedewed with a loving woman's tears of joy, are borne to every land. Multitudes, who once found earth a dreary wilderness, greatly rejoice that their desert has been made to blossom as the rose; and this happy throng, awakened to the radiance of a new day, are calling to their brothers: "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

Our last seed-thought is represented by one of that widely scattered family which bears the significant name of Loosestrife. This floral envoy has a special message for those who honor the man of Galilee. All such will not let these illustrations, taken from the pellet of mud with its sixty plant-germs, hide the facts of Science. They will understand that spiritual creation is not within the material universe, and that there is neither birth, growth, nor decay to the spiritual universe, since all the real is perfect and eternal, "having neither beginning of days, nor end of life." To true Christians, those with the open eye and active hand, there is given the solution of age-long problems. However discordant the seeming conditions, they know that Life, Truth, and Love, joy, peace, and plenty, are the realities of being. In their consciousness all strife is stilled, all discord ended. "Nation shall not lift up sword against nation, neither shall they learn war any more."

Where the blinded see only pellets of mud, Christian Scientists may find the living seeds that give sure promise of flowering plants and ripened fruit. Having eyes, they see.

TAKING UP THE CROSS.

REV. GEORGE R. LOWE.

As a youth the writer was impressed with the demand which Jesus made of his followers to take up the cross. When the call came to "preach the gospel," it was found irresistible; and timidity, fear of breaking down publicly in the attempt to "preach," and a sense of lack of language in which to clothe thought, all were overcome in a way which has ever seemed wonderful to him, and which he now knows to have been a manifestation of the power of Mind. But it was soon found that pulpit preaching was but a small part of the cross, and grave defects arose regarding the interpretation of "the gospel," which had been received at first with unquestioning faith in tradition.

A course of many years of study in a university and theological hall, while it indicated lines along which the reconciliation of faith and reason might be sought, raised many more questionings regarding the gospel as preached modernly; and experience brought many doubts as to the efficacy of the usual forms of public worship, such as audible prayer, the material observance of the sacrament, and the preaching of a gospel whose wings were clipped by doubt, because no verifiable understanding of the life and works of Christ Jesus was found. A sort of "ethical gospel" was not enough. Traditional standards of belief and creed were outgrown. And yet the call of Jesus to his disciples, "If any man will come after me, let him deny himself, and take up his cross, and follow me," was clear and emphatic as ever, reaching across the centuries and appealing to the true and heroic in man now and forever. But how could it be done?

The answer was found in Christian Science, the whole gospel of Christ Jesus, the spiritual interpretation that reconciles faith and reason, revelation and logic, Christianity and Science, verifying their unity by demonstration. Part of the self-denial involved in my case was the giving up of pulpit preaching, the outlook of "kirk, manse, and stipend," in order to become equipped for the higher ministry demanded by "the higher criticism," the higher gospel of Christ's Science today. Part of the cross was the misunderstanding on the part of friends, college-mates, and others. But Christ, Truth, has higher compensations for those who would follow the higher way, the rewards and friendships of a higher usefulness being a part thereof. To learn to heal sickness and sin, to prove the Christian method, opens up ever-widening avenues of good,—peace, joy, service, praise. Christian Science does not involve "a trick of evading the cross," as some critics would say. It does not say, This is an easy way; walk ye in it, and glide smoothly along. It does say, Learn of the Christ the right way, which is the way indicated by his words: "My yoke is easy, and my burden is light," but which is not a way of ease. It requires effort, the carrying of the cross, readiness to encounter any extremity,—to be a man, unafraid and heroic. In a word, it appeals to manhood in the Christly way.

And so I am finding it, these many years. Christian Science glorifies the cross, gives peace to antidote pain, it does "heal the heart," as Mrs. Eddy has expressed it so beautifully in her hymn, "Shepherd, show me how to go" (Miscellaneous Writings, p. 309); it gives "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness," to quote Isaiah. It is doing so daily; and so we are encouraged to follow the Christ in the manner which he demands, viz., to "preach the gospel" and "heal the sick." In "Retrospection and Introspection" (p. 81), by Mrs. Eddy, we read: "Though our first lessons are changed, modified, broadened, yet their core is constantly renewed;" and renewed help has recently come to me from a verse found at the end of "Message to The Mother Church," June, 1901:—

O the Love divine that plucks us
From the human agony!
O the Master's glory won thus,
Doth it dawn on you and me?

MAKING A DEMONSTRATION.

M. CORNELIA HOPPOCK.

We learn from our dear Leader, Mrs. Eddy, that "giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). It was with this thought that I heard the call to bring "all the tithes into the storehouse," for we had overflowed the seating capacity of our church and were now in the act of buying an expensive piece of property on which to build another edifice. Only a part of a month was given to bring in our gifts, and I had not the sum on hand which I wished to contribute. Error whispered of taxes which must be paid, and other dues to be met, which would leave nothing for our dear church. Being willing to make a sacrifice, my thought rested upon some property which I owned, and which might with some difficulty be disposed of. With only this in view, I promised the money, holding in thought the unlimited supply which is always at hand for God's dear children. I felt at once that a lack of means meant lack of understanding of His affluence.

I knew personally some individuals who said they had given all they had to God's work, or had sacrificed what had been reserved for another purpose, and shortly after had received these amounts, and more too. So, with this encouraging testimony before me and twelve days in which to work it out, I began to use the letter of the promises in the Bible and Mrs. Eddy's verification of them, imbibing the spirit as I read thoughtfully these passages. I perceived in the scientific sense a rule, the Christ-rule, just as there is a fixed law in mathematics, and that I must adhere strictly to this rule, which to me meant never to let my

Digitized by Google

thought drop from the ideal mountain-height of revelation; and in the joy of working I felt myself to be stepping up into a higher altitude, a little higher each day.

A number of days passed away, and still I had no expression or manifestation as a proof of my work, but the amount I had promised now looked much smaller to my mental vision, until it seemed that the mists were dispersing, and I felt sure of being near the summit. As difficulties still seemed to block the way, I felt that I was willing to give up all I had in order to make this demonstration; and, unlike many other times, I meant that this experience should be a lesson to me, and that I would receive from it an understanding which would be my reward—for I never once doubted but that this must be accomplished. I also felt at the time of giving the pledge that I was sowing a seed in Christ's name, according to a fixed and unfailing rule; and afterward the passing of the days was to me the developing of the plant, and the final manifestation was the blossom or fruit. I worked with great faith, hardly ceasing some days, so intent was I to see only the one straight path. I listened for the "still small voice" to command me, and acted upon these thoughts as they were presented to me, and I remember the feelings of gratitude which enveloped me as I heard, and how with a hearty "Thank you," mentally, I plodded along, obeying.

Knowing from the letter that the calmer one becomes the easier the path seems to grow, I felt assured later of being near the end of my journey. From the first act on my part I found a way open to receive the money without sacrificing my property, and I discovered that through kindness unlooked for the amount was to be at my disposal in time. My faith was absolute that God's work could not be retarded, and the money was finally handed to me an hour before the appointed time I had promised it. I should like to add that confidence in my own ability to realize God's ever-present abundance gave me a quiet thought to talk boldly to others of God's promises, and this brought me the added joy of receiving from them their tithes for the storehouse.

During this time the text, "He that spareth his rod hateth his son," was illumined in my consciousness. The "rod" was to me that unvarying rule of Christ which must be applied with such continual force as to beat mortal mind contradictions at every move, and thus the child is spared from being spoiled.

THE CONGREGATION'S OPPORTUNITY.

EMMA R. LEWIS.

THE heading of these lines, but not the subject-matter, was suggested by a very helpful article, entitled "The Church Usher's Opportunity," which appeared in the *Sentinel* not long ago. Very few, if any, of the members of a congregation can understand, unless they have had a like experience, just what the first appearance before a church body means to the Readers. Though theirs is, or should always be, a "labor of love," it is none the less labor, and calls forth its portion of self-giving, of effort, of care.

To one who is not a trained public speaker, the adaptation of the voice to the unusual and often large space, takes time and practice. The effort to make each word distinct across the unaccustomed distance is apt to absorb the Reader's attention to the exclusion of the proper expression, and as a result one sometimes hears from recently installed Readers the same mechanical intonation a child gives when he first begins to read aloud. The variety of tone is sacrificed to the volume of sound. The very intenseness of the Reader's desire to be about the Father's business, and that to the utmost of his or her ability, may cause an appearance of too deep concentration on the books and consequent lack of attention to the audience.

And how soul-satisfying it is to know that we, the congregation, can by the love-illumined understanding which Christian Science brings to each and all of us, understand all this, and so think as we would be thought of; that by our right thinking we may furnish our Readers with such a "sure foundation" that every sentence shall bring hope to the helpless, peace to the troubled, and healing to the sick. The Readers are but speaking the truth in love, and we should consider it one of our best opportunities to assist them in every way possible, ever giving them that word of commendation which honest effort always merits, but most of all, whether we be only attendants or full-fledged members, showing by our regular presence at the services that their effort is appreciated.

It is but fair to those whom we have placed in any position, to stand by them; and since Mrs. Eddy has, in her far-seeing wisdom, brought about this method of presenting to us every Sunday the truth of all truths, we as individuals should welcome each opportunity to prove our wholehearted loyalty to Christian Science and to our Leader. A loving valuation of the efforts of our Readers in our behalf is surely one of our many opportunities. Ah, dear love, thy Midas touch turns every opportunity into one that is golden.

GLEANINGS FROM CHRISTIAN SCIENCE.

NIELS PEDERSEN.

[A year ago I heard a lecture on Christian Science, and was convinced that it is the truth. I came from Denmark, a young man, twenty-two years ago, and learned to speak English fairly well, but before I became interested in Christian Science I could not correspond in English. Through the study of this truth I have begun to realize that there is only one intelligence, and that this is God; that God is everywhere present, and as man is made in His image, this divine intelligence is ours to reflect. This is my first attempt to write an article in English, and words cannot express my gratitude to God, and to Mrs. Eddy for this awakening to man's true sonship.]

THROUGH the study of "Science and Health with Key to the Scriptures," by Mrs. Eddy, the Bible has become clearer to me, and I stumble no longer in darkness. Christian Science stands for love and truth. It would not be Christian if it did not express love, and it would not be scientific if it were not the truth. When we begin to live up to its teachings, and to reflect divine Truth and Love, we can demonstrate this Science, and it never fails when we follow its rules. We sometimes fail to reflect Truth and Love; then the failure is not with Science, but with us. Love is the whole commandment to man. God is Love. How can we possibly conceive or think of God as anything less than Love? God is Mind, and man as the reflection of God must reflect the Mind that is God.

Christian Science shows us very clearly what love stands for. In Science and Health, page 256, we read, "Love, the divine Principle, is the Father and Mother of the universe, including man." As we rise above the human sense of love into the spiritual sense of Life and Love, the true reflection of God, which is the new birth, takes place. Jesus said, "Except a man be born again, he cannot see the kingdom of God." Then we begin to see our brother in the true light, and no matter what mortal man may say or do against us, we do not lay it to his charge, for we understand that he does not know what he does or says, as he is still asleep in the material dream, thinking that life is in matter and that death is as real as life. He has a selfish sense which loves one and hates another, and which sees his own gain in another's loss.

In Christian Science we realize that we cannot be benefited ourselves if it is not to the benefit of our brother. "God is no respecter of persons." He loves all His children alike; there can be no partiality in divine Mind, and how could there be any in His idea when we reflect God. What a blessing Truth brings! It is the open fount from which all blessings flow, all wisdom, all life, all goodness. It was

Digitized by Google

the Mind that was in Christ Jesus which enabled him to say, "Father, forgive them; for they know not what they do," when mortal sense was trying to kill him. Then was love shown to be the law that destroys death. Let us always declare that love, let that same Mind be in us,—the Mind that recognizes no material law, the Mind that speaks good cheer to all, that said to the paralytic, "Arise, take up thy bed, and go unto thine house."

We have the glorious promise that those who believe in the Christ shall do the same works which Jesus did. It is the same Christ that is with us today, and will be with us until the end of the world; but in order to do the works which the Master did, and commanded his followers to do, we must overcome the world and the will of the flesh, for "the flesh lusteth against the Spirit;" and we must realize that there is only one Mind and that in divine Mind there is no sin.

To reflect God's likeness, we must strive each day to do the will of our Father, and His will is to reflect love to all. The way to heaven is through love and truth. In the Sermon on the Mount we read these words: "But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you." In the same chapter we read: "Be ye therefore perfect, even as your Father which is in heaven is perfect." We cannot become perfect in a day; we must strive each day to declare the truth, to reflect love; to take no thought for the morrow nor for the past, but spend each day with the Lord, no matter where we are nor what our work may be.

We should seek divine guidance and rise from where we are through the reflection of love, for the Mind that is God, all good, does not know evil or error, for error is nothing to be known or remembered. All our thoughts should be of Truth and Love. We must shut the door to material sense, so that no evil can enter, and be filled with that sense of love which destroys all fear and worry and anxiety, for the Mind that was in Christ Jesus brings the peace that passeth understanding. Wisdom and understanding come to us from divine Mind, and show us the way. How could the Mind that is God, the Mind that was in Christ Jesus, and should be in us, bring death? Sin brings death; not Truth and Love!

[Written for the *Sentinel*.]

CONFIDENCE.

KATHARINE J. SMITH.

NIGHT found me in a pathless way and drear,
Halting before the temper of the hail;
I looked to train my steps, but groped in fear;
I prayed with hapless patience to avail
One favor of the beam-bestowing moon,
Though blotted out the sun of all her light,
And all her olden path was spell'd in gloom.

I laid me down and trusted, for I knew
That sullen night pays gentlest court to dawn;
And when, refreshed, I saw mid-morning's blue,
Despite the regnant sun a sign was born,—
A sky-swung silvern sickle, spectral pure,
Had reaped the clouds, and o'er a world benign
Paused day resplendent and with comfort sure.

Whose but the mighty hand of Love can reap
The tossing clouds, the fears that rock and rend,
And stay the straying foot upon the steep,
Gloom-pinnacled, where crag-browed wastes ascend?
The hope that hath no ray by morn, nor moon,
Shall see, betimes, the omen missed by night
Shine in her olden path at tide of noon.

SELECTED ARTICLES.

[Alfred Farlow in *Shreveport* (La.) *Journal*.]

Mrs. Eddy's declaration that life is not contingent upon the heart, blood, etc., means simply that life is above and beyond material organism, that God is the life of the universe, as is set forth in the Master's declaration, "It is the spirit that quickeneth,"—it is Spirit that gives life and existence. If our Master's teaching is carefully observed, we learn to anchor our hope beyond the evidence of the senses and to rely primarily upon God in compliance with Paul's teaching: "Set your affection on things above, not on things on the earth." On one occasion Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," meaning that a true and correct understanding of God and His Christ, His "express image," gives an understanding of the Science of being whereby existence can be made more permanent and substantial.

While our critic finds opportunity for ridicule in the theories and experiments of scientific men, thousands upon thousands of cultured and thinking persons are waking to the fact that there is something more worthy of the supreme attention of man than materiality. Why should it be thought a matter of ridicule that an implicit reliance upon God, who created man in the first instance, should give occasion for the instantaneous reproduction of a lost member? To ridicule such a proposition is to ridicule the sacredness of divine cause and effect, to ridicule the teaching and practice of our Lord.

The most important matter is that we shall understand and live according to the kingdom of God; that we shall attain unto righteousness and thereby rise above the unnecessary anxieties of mortal existence; and since man in the full stature of manhood in Christ is wholly spiritual and not even partly material, it is evident that nothing short of spiritual perfection will do away with all anxiety. We may, by diverting our thoughts to God, in our present condition, escape a part of the anxiety which usually attends the life of the individual. To escape all anxiety means to rise to a point where the body does not have to be considered at all from a material point of view, but where perfect harmony of the body is vouchsafed in the divine presence; and such a climax is the ultimatum of Christianity.

Our Lord said: "Be ye therefore perfect, even as your Father which is in heaven is perfect." It is certain that it is quite as impossible to be perfect in a moment of time as it is in a moment of time to attain to that degree of spirituality where it is not necessary to take thought for the body. The command is sweeping, and yet our Lord knew that nothing short of perfection could meet with the divine requirement. He must have known that perfection is attained by gradual growth and not by any instantaneous process.

Reverting again to the text in regard to taking thought for the body, I desire to call attention to the context: "Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them." The text points to an implicit reliance upon God, in contradistinction to any human dependence whatever, and this is the point for which we contend. Note the statement: "And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: and yet I say unto you, That even Solomon in all his glory was not arrayed like one of these." The lily is left entirely to the care of God, and we are asked to consider its beauty and perfection. It takes no thought for its clothing. The meaning of this text is unmistakable. It points to a growth entirely above material conditions into that state wherein man is governed alone by the power of God.

[Charles K. Skinner in *Battle Creek* (Mich.) *Enquirer.*]

In an article entitled "Truth and Error," which appeared in a recent issue of the *Enquirer*, the writer, having referred to Christian Science as a "beautiful half truth," desires to be noted "as first commending the good in it" before taking issue with what he does not understand and therefore condemns as error. We are thankful for the credit given Christian Science, and will endeavor to correct the misapprehension yet remaining. Speaking of "half truths" may remind us that we used to hear of "white lies." As a child I was puzzled over the difference between "white lies" and any other kind of wrong stories, and I am glad to say that I have never been able to see any reason for making concessions to "white lies" or "half truths."

To the true Christian, of whatever creed, a thing is either true or false,—there is no half-way position. Christian Science is not a half truth. It declares that God is Truth, and that His Word, as taught and demonstrated by Christ Jesus, is the foundation of Christian Science. When the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is read and studied from the author's point of view, viz., that of the spiritual universe, including man, every statement therein will be found to be true.

Should an ignorant person assert that the sciences of mathematics and of electricity are but partial truths, because of the misapprehension of the speaker concerning the rules which govern them, the fact that they are exact sciences would not be changed; and thus it is with Christian Science. Our critical friend takes issue with Christian Science because we do not admit that "suggestion" is the *modus operandi* by which its healing work is accomplished. It is related that ages ago, a certain king made the same denial of God's power, and produced wizards to perform the wonders which Aaron did in response to God's command; but the climax came when Aaron's rod swallowed up those of the wizards, and those persons were compelled to admit to Pharaoh that the works of Aaron were done by the finger of God.

Christian Scientists assert positively, without fear of successful refutal, that all disease and discord is the effect of mental conditions, either immediate or remote, conscious or unconscious. Our friend tells us that "Christian Science denies the physical." If this means that we deny the material to be a reality or creation of God, this is true, for Spirit never created matter. As a condition of mortal belief, however, and one with which we have to deal during this life-experience, the physical is certainly real to the material senses.

As to broken bones and dislocations, Mrs. Eddy has this to say on page 401 of Science and Health: "Until the advancing age admits the efficacy and supremacy of Mind, it is better to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon, while the mental healer confines himself chiefly to mental reconstruction and the prevention of inflammation." There are, however, many cases on record where mental surgery alone has successfully readjusted broken bones and dislocated joints. Careful reading would have shown our friend that Christian Science does not teach that mortals should grasp the ultimate before the intermediate has been passed.

Contrary to the statement of our critical friend, other religious movements have produced no "consternation" in the ranks of Christian Scientists. Their watchword is, that God is the only power, and they do not divide His prerogative with matter. The Scripture, "I am the Lord that healeth thee," means to them exactly what it says. It must not be considered, however, that physical healing is the most important work of Christian Science. The healing of the desire to sin, and of evil habits, which control mortals because of the seeming pleasure in them, and the saving of their victims from the necessary fatal consequence, is the work of Christian Science today.

[Frederick Dixon in *Glasgow* (Scot.) *News.*]

Strange as are your correspondent's views on evidence, they are perhaps not so strange as his theological views. "If nothing exists which God did not create, where," he demands, "did all this mortal error come from?" The writer of the book of Genesis declares distinctly that "God saw all that he had made, and, behold, it was very good;" the writer of the fourth Gospel declares that "without him was not any thing made that was made." It follows inevitably that if evil is real, it was not only made by God, but is good. Your correspondent seems to have realized this, for he writes that "it will be a sad day for you when your helpers and sympathizers realize that there is no such thing as sin, sickness, pain, or death." In plain English, he looks forward to an eternity of suffering with perfect equanimity. The Christian Scientist, on the other hand, regards it as sad that anybody should believe that God, who is infinite, should have created evil in the name of good. "God," says the apostle John, "is love."

"Evil," writes Mrs. Eddy on page 327 of Science and Health, "has in reality neither place nor power in the human or the divine economy." Orthodox theology quarrels with this statement, but when pressed it has not the courage of its convictions. Evil, it insists, is real, but God did not make it. He created man with the power of free will, and man fell away from grace, and did evil in His sight. Such teaching is centuries behind that of the pagan Epictetus, who wrote, "As a mark is not set up for the purpose of being missed, so the nature of evil has no existence in the universe."

Now, if evil is real, so real that it could appear to the first man in the form of a snake, it must have come from somewhere. If God did not create it, it created itself, and you have a world with more than one first cause, that is to say, without any first cause, which is frankly absurd. It follows, therefore, with inexorable logic, either that evil is unreal, or that God made it. In which last case, as He pronounced all that He made very good, evil must of necessity be very good, and you will have to fall back for an explanation on the Heraclitean theory of the identity of contraries.

As a matter of fact the supporters of the theory of the reality of evil are deceived by the evidence of their own material senses. They see sin, disease, and death, wherever they look, and they conclude that it would be the merest self-deception to deny its reality. They might as reasonably insist that the sun revolves around the earth, because the physical evidence of this is so strong that Huxley himself declared that, though he knew scientifically that it was stationary, he had never been able to convince his senses of the fact.

To the physical senses of the Christian Scientist evil is extremely real, but he is proving its unreality scientifically every hour of his life. Every case of sickness healed, every case of sin destroyed, every case of sorrow vanquished, adds to the inductive evidence by which he is establishing his premises. So that, just as Galileo is said to have muttered in the chambers of the Inquisition, "It does move," he, when he listens to the arguments of the world in favor of the reality of evil, is able to reply in the words of St. Paul, "None of these things move me."

No one ever demonstrated the unreality of evil so completely as Jesus of Nazareth; and no one presumably supposes that if it had been real, that is, God-made, he would have been able to do this. He repudiated the reality of evil in the most unequivocal terms. Speaking after the manner of the age and country in which he taught, he personified it, called it devil and Satan, but he never gave it life. The devil, he said, was "a liar," and "abode not in the truth, because there is no truth in him." Some day the world will come to admit that those words mean literally, as well as metaphorically, that in reality evil never existed, because there is no truth in it.

[Editorial in *Hammond* (Ind.) *Times.*]

Lake county seems to offer a good field for Christian Science. Just a few days ago the organization in Gary decided upon a new location for their church, having determined to enlarge their quarters and establish a permanent reading-room. Not long since, the members of the cult in Hammond were obliged to take new quarters four times as large as those occupied by them when they started here a couple of years ago.

This speaks well for Lake county. Scientists are a desirable sect wherever located. They are made up largely of the thinking, intelligent element, and conduct their work in a modest, unostentatious manner. They win their proselytes, not by sensational revivals, in which impassioned utterances are the mainspring, but by a calm exploitation of logic. There is no fuss or feathers about the Christian Scientists. Yet while they are thus pursuing the even tenor of their way, they are perhaps more opposed by orthodox church-goers and preachers, than any other religious body. This may or may not be because the Scientists are making perceptible inroads into the ranks of other organizations, taking away from them some of their best thinkers and most desirable members.

While the *Times* is not committed to Christian Science, it believes in living and letting live, and would extend the welcoming hand to any creed which seems to possess enough of truth and virtue to make it a power for good in the community.

[*Oakland* (Cal.) *Tribune.*]

I am not a Christian Scientist, nor a press agent for that growing faith, but I have sometimes wondered why the newspapers are so chary about publishing the many Christian Science cures that everybody hears of except through the press. One evening paper has recorded the statement that Richard Jose, the singer, has been cured by Christian Science of a malignant cancer of the tongue. We all hear an abundance of evidence of similar cures of all sorts of ailments, but we do not see them in print except in Christian Science publications. Jose's case, however, is apparently authenticated, and it was told how he stood up in meeting and "testified" to the seeming miracle.

I could fill half this page with accounts of the Christian Science cures that have been described to me. One of the latest is that of former Justice Garroutte, who, it is said, was condemned to death not long ago by three or four doctors in this city, who had him mewed in a hospital and diagnosed his ailment as cancer of the stomach. Garroutte said he did not want to die in a hospital, and so he was taken to his home in Berkeley, where a Christian Science healer was called in and soon made him well. The record might be continued almost indefinitely, and any one can add at least a few cases to the list. It makes a tale that is not quickly told, and in the mean time the Scientists here are increasing so fast that they are about to build a church that will be one of the finest structures in San Francisco.

[From an editorial in *Pittsburgh* (Pa.) *Post.*]

Nothing so convicts the world of faith without understanding, of belief without demonstration, as its haunting fear of that which the really well-ordered, faithful, and righteous know is not at all to be feared. Those who can see no prospect of making bright or endurable a long gray vista of days and years, have always to live the next few hours and days to reach these unpromising times. And no one is ever so sadly off that he cannot improve these moments nearest to him, in thought at least, if not in material ways. And this is the rule for happiness and peace and hope.

[George Shaw Cook in *Streator* (Ill.) *Independent Times.*]

Our critic objects to Mrs. Eddy's teaching that God and His creation, being spiritual, cannot include materiality. It is true that the first chapter of Genesis contains the statement that "God created the heaven and the earth," but there is nothing in this Scriptural record of creation which justifies the conclusion that God created a material heaven and earth. The theory that the universe is material and is evolved from atoms is man-made; it does not proceed from the God who made all that is and pronounced it good.

Our critic also objects to Mrs. Eddy's teaching that God is Life and Life is God; yet Jesus, who came to teach the will of God, said: "I am come that they might have life, and that they might have it more abundantly;" "Whosoever liveth and believeth in me [the Son of God] shall never die;" "God is not a God of the dead, but of the living;" showing that he regarded God (his Father) as the source of being, and that immortality depended upon believing or understanding that God is Life.

Mrs. Eddy does not, as our critic implies, simply dismiss pain and disease by saying that they are unreal. A study of Science and Health will disclose the teaching that while pain and disease seem perfectly real to human sense, they are not eternal and therefore must be destructible. It is through the destruction of pain and disease, as Jesus destroyed them, that Christian Scientists are proving that in the best sense of the word they are unreal because not Godlike.

Our critic says that Mrs. Eddy "ignores the difference between functional and organic diseases." An increasing number of physicians are failing to see where the line between these classes of disease should be drawn, and many of them will admit that organic disease often originates in a functional disorder. Jesus and his disciples absolutely failed to discriminate between the classes of disease, but healed "all manner of sickness and all manner of disease" by the power of Spirit, or God alone. Christian Scientists are proving in hundreds of instances that such healing is possible today.

[John Henry Keene in *Baltimore* (Md.) *American.*]

The method of Jesus is the leaven which never, since he set it in the world, has ceased or can cease to work in all old or new religions. The substratum of this new-old religion is love, joy, peace, patience, kindness, goodness, faith, mildness, self-control. These virtues embrace the record of the whole world's revealed faith. There is no longer any reason why a spirit of watchful jealousy should ignore Christian Science. Its beginnings and the signs which have spread all over the world are that Christian Science has reenthroned the method and secret of Jesus.

It is plainly visible that the eternal God has been our refuge from one generation to another. Christian Science is the new-old religion which is turning the world back to the Bible. In the progression of Christian Science the saying of the prophet Amos is being fulfilled. An old-new religion has been rediscovered and refounded by an American woman. Her fame fills the earth and the uttermost parts of the sea. Christian Science may well be called an American religion. Said the prophet Amos, "They shall wander from sea to sea, and from the north even to the east, they shall run to and fro to seek the word of the Lord." The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, already has proven and is daily demonstrating the ground thought, the living water, the bread of life brimful of promise and of joy to mankind—"and the gates of it shall not be shut at all by day: for there shall be no night there." "The exterminator of error is the great truth that God, good, is the *only* Mind, and that the suppositi-

Digitized by Google

tious opposite of infinite Mind—called *devil* or evil—is not Mind, is not Truth, but error, without intelligence or reality" (Science and Health, p. 469).

Again, Science and Health says (p. 335), "Reality is spiritual, harmonious, immutable, immortal, divine, eternal." Plato, Aristotle, and Cousin, Descartes, Leibnitz, on these points are of one and the same opinion. Christian Science (as the writer understands) teaches the divine essence to be Spirit, Life, Truth, Love. This great truism is not inaccessible and interdicted to human intelligence. As Science it is easily taught to the most humble mind.

This new-old religion is represented by Christian Science in great and luminous characters in the visible, moral, and sociological progression of the human race throughout Christendom. It seems to the writer the results of Christian Science in healing sin and sickness are well worth the pains of being sought. In the life and light of this divine intelligence you have that life and intelligence with harmonious elements which are necessary to them in order to be a true life—light and intelligence.

Said St. Paul: "The invisible things of him from the creation of the world are clearly seen, being understood by the things that are made." This saying is being demonstrated by Christian Science in thousands of families almost daily. What older or what newer world-wide religion can men find than divine intelligence, harmoniously reflected in their daily life?

[Jesse Pickard in *Buffalo* (N. Y.) *Enquirer.*]

Christian Science teaches only respect for the honorable physician, however much it disagrees with his method of trying to help sick humanity. If the works of Christian Science have helped the public to understand that they may reasonably seek relief in a spiritual, rather than in a material way, this should not be construed as an attack upon the medical profession. Christian Scientists carefully accord to others personal liberty of thought and action, and seek to demonstrate that Christian Science ensures them the personal liberty of health and righteousness.

In their avowed intention to follow Christ, and to heal the sick as well as reform the sinner through prayer alone, Christian Scientists have never professed to understand the practice of medicine. Your contributor is, therefore, wrong in calling them "quack doctors." His further statements that "Christian Scientists have no scientific remedy for the disease they attempt to cure," and that "they try to remove an effect without intelligently studying the cause," are adequately refuted by the definiteness and the permanency of Christian Science healings.

Christian Science practice is none the less scientific nor analytical because it is wholly mental. If the good results of such accurate thinking have been unlooked for, they should be the more gladly welcomed.

[W. J. Bonnin in *Blackpool* (Eng.) *Gazette-News.*]

It is incorrect to aver that "Christian Science says that people make themselves well by refusing to think they can be ill." Were this so, Christian Science would be little else than autosuggestion, whereas the two are in fact polar opposites. Christian Scientists refuse to think they can be ill; not blindly or unreasonably, but because they have learned something of the truth that has shown such thinking to be erroneous and profitless. When through the study of Christian Science the omnipresence and infinite love of God have ceased to be mere words or religious dogma, and present themselves to an awakened consciousness as the verity and reality of existence, the inevitable corresponding result is the dwindling away of the material concept of reality and the consequent vanishing of the discord born of such a concept and apparent in the form of sin, sickness, and misery.

The student of Christian Science gains a little of that understanding which is "a wellspring of life unto him that hath it," and learns that the "good news" of Christianity is salvation, not as a condition of happiness he has to die to attain, but as a release from all that harasses and oppresses him here and now.

[Howard C. Van Meter in *Roseburg* (Ore.) *Review.*]

"Science and Health with Key to the Scriptures" cannot properly be referred to as "the Bible of the Christian Scientists," and is never so referred to by Christian Scientists themselves. It is what the title infers—a key to the Scriptures,—inasmuch as its study makes clear the spiritual meaning of the Scriptures, enabling the student to make practical application of the truth contained in the Bible in the healing of sin and disease. Christian Science is awakening universal interest in the Scriptures, and it is impossible to be a student of the Christian Science text-book without also being a student of the Bible.

It might be said in passing that it is time the sensational stories about Mrs. Eddy's health, mentality, and impersonation, so often discredited and proved false, be stopped by the refusal of an enlightened people to give credence to them. Mrs. Eddy is probably the busiest woman in the world, and if she still desires to "keep aloof from society," certainly her wise leadership of the Christian Science movement, her charity and good works, richly entitle her to the seclusion she claims in which to work out her purpose of blessing mankind.

[W. E. Brown in *Los Angeles* (Cal.) *Herald.*]

Recently in the *Herald* a Pasadena correspondent asked for enlightenment as to the Christian Science attitude toward the "existing industrial and social system." To begin with, Christian Scientists perceive much in these systems which is not right, but they do not believe in iconoclasm as a cure. Nor do they believe that evil can be legislated out of existence. Christian Science teaches that the ills of society must be overcome through the improvement of the individual, and it therefore concentrates its effort in this direction. When the individual is right the city, state, and nation are right. When the individual does right from a love of right we need not worry about results.

In the mean time, and while a better class of individuals is in the making, Christian Science believes in the wisest possible legislation that will hold evil and selfishness in check and encourage equity to all. This, however, is expediency and not cure. The cure, as already stated, must begin with the individual who, in proportion to his acquisition of the Christ-mind, voluntarily practises the golden rule, which creates the kingdom of heaven on earth.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 5, 1909. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 20, 1909.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TAKE NOTICE.

I APPROVE the By-laws of The Mother Church, and require the Christian Science Board of Directors to maintain them and sustain them. These Directors do not act contrary to the rules of the Church Manual, neither do they trouble me with their difficulties with individuals in their own church or with the members of branch churches.

My province as a Leader—as the Discoverer and Founder of Christian Science—is not to interfere in cases of discipline, and I hereby publicly declare that I am not personally involved in the affairs of the church in any other way than through my written and published rules, all of which can be read by the individual who desires to inform himself of the facts.

MARY BAKER EDDY.

Oct. 12, 1909.

A LETTER FROM MRS. EDDY.

In our issue of July 31, 1909, there appeared under the heading "None good but one," a number of quotations from a composite letter, dated July 10, which had been written to Mrs. Augusta E. Stetson by twenty-four of her students who then occupied offices in the building of First Church of Christ, Scientist, of New York, and were known as "the practitioners." This letter was forwarded to Mrs. Eddy by Mrs. Stetson with the latter's unqualified approval. Upon receipt of this letter Mrs. Eddy wrote to Mrs. Stetson as follows:—

Brookline, Mass., July 23, 1909.

My Dear Student:—Awake and arise from this temptation produced by animal magnetism upon yourself, allowing your students to deify you and me. Treat yourself for it and get your students to help you rise out of it. It will be your destruction if you do not do this. Answer this letter immediately.

As ever, lovingly your teacher,

MARY BAKER EDDY.

AMENDED BY-LAWS.

ARTICLE XXVI.

CARE OF PUPILS.—SECT. 2. Christian Scientists who are teachers shall carefully select for pupils such only as have good past records and promising proclivities toward Christian Science. A teacher shall not assume personal control of, or attempt to dominate his pupils, but he shall hold himself morally obligated to promote their progress in the understanding of divine Principle, not only during the class term but after it, and to watch well that they prove sound in sentiment and practical in Christian Science. He shall persistently and patiently counsel his pupils in conformity with the unerring laws of God, and shall enjoin them habitually to study the Scriptures, and "Science and Health with Key to the Scriptures" as a help thereto.

ASSOCIATIONS.—SECT. 6. Teachers' associations shall convene annually, and their pupils shall be guided by the Bible, and Science and Health, not by their teachers' personal views. Teachers shall not call their pupils together, or assemble a selected number of them, for more frequent meetings.

A SINGLE FIELD OF LABOR.—SECT. 7. A loyal teacher of Christian Science shall not teach another loyal teacher's pupil, except it be in the board of education. Outside of this board each student occupies only his own field of labor. Pupils may visit each other's churches, and by invitation attend each other's associations.

"MEEK AND LOWLY IN HEART."

OUR great Master humbly said, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls;" and it is only in this humble and unassuming spirit of the Master, that "self-abnegation by which we lay down all for Truth, or Christ, in our warfare against error" (Science and Health, p. 568), that Christian Science in its truth and purity is being successfully taught. Mrs. Eddy emphasizes this clearly and unmistakably in "Retrospection and Introspection," where she writes (p. 84): "That teacher does most for his students who divests himself most of pride and self, and by reason thereof is able to empty his students' minds of error, that they may be filled with Truth. Thus doing, posterity will call him blessed, and the tired tongue of history be enriched. The less the teacher personally controls other minds, and the more he trusts them to the divine Truth and Love, the better it will be for both teacher and student."

It is not the purpose of class instruction in Christian Science to establish between teacher and pupil any other than a sane and sensible relationship, that which has its basis in a mutual understanding of divine Principle, and which involves no sense of domination on the part of the teacher and no sense of subserviency on the part of the pupil. The duty of the teacher is to impart to the pupil a correct understanding of Christian Science as set forth in its text-book, Science and Health, and it should be the greatest desire of the pupil to receive this correct understanding, and only this. When this duty is performed and this desire is satisfied, the true purpose of class instruction has been accomplished and a basis for a proper relationship has been established.

The pupil, if he has been properly taught, is then ready to go forth, in fulfilment of the Master's command, to preach the gospel and heal the sick, and thus work out his own salvation. His constant prayer will then be for that Mind to be in him which was also in Christ Jesus, and not the mind of a human teacher. It is for the dominance of this spirit of self-abnegation that our Leader has taught and worked in all the years, both by precept and example. She writes in Science and Health (p. 464): "In founding a pathological system of Christianity, the author has labored to expound divine Principle, and not to exalt personality." In "Miscellaneous Writings" she says (p. 135): "Again I repeat, person is not in the question of Christian Science. Principle, instead of person, is next to our hearts, on our lips, and in our lives;" and she adds: "If you falter, or fail to fulfil this golden rule, though you should build to the heavens, you would build on sand."

The sole object of class teaching is to help the pupil to turn intelligently to divine Mind for all guidance. The true relation of teacher and pupil is established neither upon will-power nor upon personal idolatry. The wise teacher of Christian Science teaches his students to look to God, divine Mind, for all help and direction, and the typical pupil will do nothing else.

ARCHIBALD MCLELLAN.

TWO LETTERS.

First Church of Christ, Scientist,
New York City, Oct. 9, 1909.

The Chairman, The Board of Directors, The First Church of Christ, Scientist, Boston, Mass.

My Dear Sir:—The Board of Trustees of First Church of Christ, Scientist, New York city, take this opportunity, as per resolution of this date—

To acknowledge publicly as a Church of Christ, Scientist, every Christian Science church and society, as enjoined by Article XXIII., Section 12, of the Manual of The Mother Church, as announced in the *Christian Science Sentinel* of Oct. 9, 1909;

To recognize that it is the duty of every such branch church or society to maintain toward each other an attitude of Christian fellowship; and

To express to our beloved Leader, Mary Baker Eddy, the Discoverer and Founder of Christian Science, the fervent gratitude of this particular branch of her church for her unceasing care and effectual protection, evidenced by all her actions and words, not least among which are "The Rules and By-laws in the Manual of The First Church of Christ, Scientist, Boston." "They were impelled by a power not one's own. . . . They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our Cause" (Manual of The Mother Church, p. 3, quoting from Miscellaneous Writings).

Very respectfully yours,
E. F. HATFIELD,
Chairman, Board of Trustees.

Boston, Mass., Oct. 11, 1909.

Board of Trustees, First Church of Christ, Scientist,
New York City.

Gentlemen:—Your letter of the 9th is at hand. It is also the duty of every Church of Christ, Scientist, to keep itself fit to be recognized as such by other churches, and fit to represent the Cause of Christian Science. The recent inquiry conducted by this board disclosed the methods and practices of certain members of your church to be radically wrong. We are informed that the facts of the case are known not only to the twenty-five members of your church whom we examined, but to other members of your church, including the chairman of your board, and also to certain persons who have left your church on account of such conditions, although the deplorable conditions may be unknown to the greater part of your membership. The facts are well known to both of your Readers, and they are, we believe, ready and willing to assist in any right action.

The results of our investigation were communicated to a majority of your board on Sept. 24 in our room in The Mother Church. The same facts were the basis of our letter to you dated Oct. 4, to which no answer has been received.

Under these circumstances, we again call on you to arouse yourselves to the seriousness of the situation, and to do your duty without fear or favor.

Very sincerely,
The Christian Science Board of Directors,
JOHN V. DITTEMORE, *Secretary.*

LETTERS TO OUR LEADER.

Grand Rapids, Mich., Oct. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It is with deepest gratitude that I thank you for your constant watchful prayer of faith, hope, and love, pointing out in Science and Health the ever-governing Principle, Love. Your words in our text-book have just now brought an inexpressible peace and an understanding of God's law to the annihilation of an almost overwhelming sense of failure, disappointment, and fear. I know that the study of Science and Health will make clear to me how to put this illumination into daily living, whereby I may help others to feel the heaven within—the realization of man's oneness with our Father-Mother God.

Gratefully and lovingly,
HELEN E. STUDLEY.

Worcester, Mass., Oct. 6, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Humbly do I send to you my gratitude and love for the understanding of God as revealed to me through Christian Science, which I did not accept for the physical healing, but for the wonderful truths contained in the text-book, "Science and Health with Key to the Scriptures." Through the application of the Principle and rule I have had daily proofs that this truth heals and saves.

The prayer you gave in the loving message to First Church of Christ, Scientist, in Concord, N. H. (*Journal*, April, 1899), I am striving to live and make my own: "Ask God to enable you to reflect God—to become His own image and likeness—even the calm, clear, radiant reflection of Christ's glory, healing the sick, bringing the sinner to repentance, and raising the spiritually dead in trespasses and sins to life in God."

Lovingly your student's student,
ALICE C. COOKE.

Chicago, Ill., Sept. 28, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We had read your books for several years without fully realizing the great boon you had brought to struggling humanity, and it was not until we had sat in a class of your beloved student, Mr. Kimball, and had heard him explain and expound your immaculate Science, that a new desire was awakened in our consciousness and spiritual sense led us to say,—

I'll be what you want me to be, dear Lord,
I'll do what you want me to do.

At one session of our class Mr. Kimball spoke of you and his words were endearing and respectful. In simple eloquence he painted a picture in which all thought of personality was eliminated and the impersonal Truth, as revealed through the inspired thought which had reached the height where the clouds of sense least obscured the light, was clearly shown to be the manifestation of Love coming through the one best fitted by superior spiritual discernment to perceive and understand and explain to all mankind that ever-operative Principle which had been lost sight of by those groping blindly in materialism.

Your message, "There is no Death," has been a great comfort to us and has proved a trumpet-call to action in the warfare against the hosts of the enemy. It is but another proof of that unfailing wisdom which prompts you always to speak at the right time the command which stills the tempest.

Sincerely and gratefully,
Your student's students,
H. B. MILLAR.
MINNIE S. MILLAR.

Montego Bay, Jamaica, B. W. I., Sept. 17, 1909.

Dear Mrs. Eddy:—I hope these few lines, expressing my love and gratitude, will be acceptable to you. I thank God for Christian Science, and you, dear Mrs. Eddy, for showing us the way to ask and receive the many blessings that are ours. There were no Scientists that I knew of in this

Digitized by Google

beautiful "isle of the sea," but with God's help I have succeeded in getting a small number interested, who are studying your wonderful book, "Science and Health with Key to the Scriptures." I hope some day, not far distant, to be able to study the Lessons along with a few grateful hearts.

Lovingly yours,

L. AARONS.

San Francisco, Cal., Sept. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Last spring you granted permission to Third Church of Christ, Scientist, in this city, to incorporate in their by-laws the "Magna Charta of Christian Science" which originally appeared in *The Christian Science Journal* of June, 1904, and which says:—

"The Magna Charta of Christian Science means much, *multum in parvo*,—all-in-one and one-in-all. It stands for the inalienable, universal rights of men. Essentially democratic, its government is administered by the common consent of the governed, wherein and whereby man governed by his creator is self-governed. The church is the mouthpiece of Christian Science,—its law and gospel are according to Christ Jesus; its rules are health, holiness, and immortality,—equal rights and privileges, equality of the sexes, rotation in office."

Second Church had already accepted this as its "guiding star," and First Church has recently adopted it as a part of its by-laws, proclaiming it "the embodiment of the spirit of our church government." This committee is composed of two delegates from each of these three churches, and we are sending you herewith a copy of our semiannual report, feeling that you may be interested to learn of some of the fruits gathered by following the spirit epitomized in the "Magna Charta of Christian Science." We have found that the church work can be carried on in an "essentially democratic" way, affording "equal rights and privileges," and yet lose none of its efficiency. It would gladden your heart to see the eager, loving spirit of brotherly cooperation manifested by over one hundred members and friends, who have volunteered and helped in the past six months in this glorious work of spreading the gospel of Love; for they have worked long and faithfully, sparing no pains to keep the work up, each esteeming it a privilege to have a share in "giving a cup of cold water in Christ's name" (Science and Health, p. 436).

We thank you, dear Leader, for the clear revelation of Truth that you have given to a weary world; for showing us how our Saviour did his mighty works, and for showing us by your own life that these works can be repeated here and now to the degree that we let that Mind be in us "which was also in Christ Jesus."

In love and truth,

Christian Science Distribution Committee.

FRANK M. HILL, *Secretary.*

Dubuque, Ia., Sept. 27, 1909.

Dear Mrs. Eddy:—In your recent articles to our periodicals there has been an unlimited unfoldment of truth to me—a clearer apprehension of Life and its reflection. From my heart I thank you for all you have done for us. Christian Science has shown me "the way," and many times I find myself trying to count the numberless blessings I have received, only to find that they were indeed without number. I have had wonderful proofs of "what the understanding of God brings to man" (Science and Health, p. 496) within the last few years, and it is with the sense of gratitude that I strive daily for even more of that truth which opens wide the gates of paradise.

Lovingly,

JOHN T. NEU.

New York, N. Y., Oct. 2, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Your interpretation of Truth to this age, which you have wisely named Christian Science, has for the past ten years been an ever-present help. It has practically given me immunity from disease of the body, and enabled me to distinguish between the consciousness of divine Mind and belief of the so-called human mind, and for this I am deeply grateful to you, the Founder of Christian Science, and I know that my gratitude may best be expressed by keeping my thought awake to the truth and declining to be deceived even temporarily by beliefs of material sense, under whatever names they may appear.

I have come to understand more and more that real freedom is conscious unity with God, and that the advancement of our Cause is wholly dependent on individual growth and perception of spiritual Truth and its actual demonstration. Of late I have seen more clearly that public thought is becoming more enlightened as to Christian Science and its wonderful possibilities, and as a result metaphysical inventions claiming to be equally as good are filling our magazines, etc.; and more than ever I realize the necessity of Christian Scientists accepting no conclusions as final except those they have reached scientifically through the study of Christian Science. The mesmerism of alcoholism, intemperance, and the mesmerism of the flesh, sensuality, are being scientifically destroyed through the truth as revealed in Christian Science—and normality is being understood.

My gratitude and loyalty to your brave leadership in the truth is sincere.

Yours loyally,

ROBERT E. CAREY.

Cape Town, South Africa, Sept. 7, 1909.

Mrs. Mary Baker Eddy, Boston, Mass.

Dear Teacher and Leader:—We thought it might interest you to know that we have had at our lectures in South Africa large and attentive audiences. The Cause of Christian Science is making rapid strides in this land of the Southern Cross, and the number of Scientists and of interested ones in each particular place visited by us has far exceeded our highest expectations. Mrs. Fluno is with me down here, as she also was on our lecture trip through England and the Continent, and joins in love to you.

Yours in the bonds of Christ,

FRANCIS J. FLUNO.

Indianapolis, Ind., Aug. 22, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Just one moment of your precious time. Since hearing the Lesson read this morning, and knowing our dear children, though in different cities, were enjoying the same blessed privilege, I feel more grateful than ever before for you, the Discoverer and Founder of this beautiful religion. We have had many proofs of God's healing power, and of our relationship to Him. He has been our only physician for over eight years. For your patience and kindness I do want to say that we thank you and love you.

MRS. SARAH E. CRABB.

NOTICE.

The Editorial Department has nothing to do with the business affairs of the Christian Science Publishing Society, nor with practitioners' cards and church notices in the *Journal*, and NO REMITTANCES SHOULD BE MADE TO THE EDITOR. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

THE LECTURES.

LECTURE IN THE MOTHER CHURCH.

William D. McCrackan, M.A., delivered the semiannual lecture on Christian Science under the auspices of The First Church of Christ, Scientist, in The Mother Church edifice, Falmouth, Norway, and St. Paul streets, Boston, Mass., Thursday evening [Oct. 7], before an audience of about five thousand people. Judge Clifford P. Smith, First Reader of The Mother Church, introduced the lecturer, as follows:—

The speaker who will address you this evening needs no introduction to the members of this church. To those who are not of this faith, I can say that he has proved his usefulness in this world as an author and historian, as a practitioner and teacher of Christian Science, as First Reader of this church, and as a member of the Christian Science board of lectureship. It is in this last capacity that he is here tonight.

The religion aptly called Christian Science presents the truth about God and His universe, including man, in such a reasonable and logical manner that it appeals to little children and to men who are able to examine it on the highest plane of human comprehension. It appeals especially to men who are great enough to be humble, and who are so compassionate, helpful, and spiritual as to be truly Christian. In this way it has enlisted the services of William D. McCrackan, who will now address you.

The Christian Science Monitor.

EMPORIA, KAN.

Frank H. Leonard spoke in Emporia Sunday night, Sept. 26, and a large crowd greeted his appearance. He was introduced by William Allen White, who said in part.—

It has seemed to me that in this material age through which we have been passing, the civilized world has been much like Pontius Pilate, who asked, "What is truth?" and then would not wait for an answer. We have been running up and down the earth, asking what truth is, and when any one would answer us we have moved on. It seems to me that a most convincing argument that the world is changing, that the age of materialism is passing, and that the world is beginning to know that God's world is spiritual, is found in the fact that here in this audience more people are assembled than may be seen tonight in any three of our churches. We are here because we are seeking for truth—the truth that shall make us free. I do not know that the speaker here tonight has the truth, I do not know that I believe in all of his message; but I do know that the truth—whatever he has of it—will make us free. For only as the world has grasped the truth—slowly, during the ages—has it slowly grown into liberty. Truth has smashed the social shams, the moral pretenses, the political pretensions, the religious forms that for ages held men in error and darkness and bondage, and the truth is our only hope against the chains of folly we wear now. In so much as this man's message tonight holds the truth in it, in so much as it brings us together, all equals in the great democracy of the children of God, in just that much will it make us free.—*Correspondence.*

LECTURES TO BE DELIVERED.

Salina, Kan.—Bliss Knapp, Opera House, 8:30 p.m., Oct. 16.
Colfax, Wash.—William D. McCrackan, M.A., Ridgeway Theater, Oct. 19.
Moscow, Idaho.—William D. McCrackan, M.A., Oct. 21.
Red Wing, Minn.—Judge William G. Ewing, Auditorium, Oct. 22.
Mt. Vernon, N. Y.—Prof. Hermann S. Hering, Church Edifice, corner Valentine street and North 9th avenue, 8:30 p.m., Oct. 22.
Lincoln, Ill.—Judge William G. Ewing, Opera House, 3 p.m., Oct. 24.
Centralia, Ill.—Bliss Knapp, Pittenger Grand Opera House, 3 p.m., Oct. 24.
Bangor, Me.—Prof. Hermann S. Hering, City Hall, Oct. 25.
Bradford, England.—Rev. Arthur R. Vosburgh, Central Hall, Manchester Road, 7:30 p.m., Oct. 25.

TESTIMONIES OF HEALING.

It is with the deepest gratitude to God that I pen these lines, in my endeavor to explain briefly what Christian Science has meant to both my wife and myself. At the close of the year 1907 my wife was in a very bad state of health: her lungs being diseased. After following the advice of two medical practitioners and receiving no benefit, she consulted a specialist upon chest diseases. Having lost her father and a brother through an affection of the lungs, she quite naturally feared a similar fate. The old thought of heredity loomed before her as well as before myself. We engaged another physician in London, who after a lengthy examination informed us that there was but little hope for my wife's recovery, as her lungs were in a very bad condition. As each day passed she became weaker, until at last she could scarcely walk more than a few yards without becoming exhausted.

At this time a dear friend of hers gave her an invitation to go and stay at her country residence in Kent. This invitation was accepted, and during the first two weeks of her stay, my wife was examined by three more physicians. One advised her to leave England and spend the winter abroad, as it would mean death to her to winter in England. Another advised her to get away at once from Kent and go to the lake district in Cumberland. The third had quite a different suggestion to offer. Their advice as to my wife taking medicine was as contradictory as their views about the climate.

At this period, when nothing but despair stared us in the face, my cousin, who was interested in Christian Science, told me of the wonderful healings that were going on daily through the practice of Christian Science. At these I marveled, and could not at first believe that such things were possible. At that time I was not at all favorably disposed to Christian Science, in fact on previous occasions I had ridiculed it. My cousin, however, explained to me the outline of the teachings, and then I started to read "Science and Health with Key to the Scriptures." After some nine hours' careful study I became convinced that what I had criticized as being Christian Science was merely my narrow-minded opinion of it. I soon found, upon reading carefully, that the teachings were far different from what I had imagined them to be. The first passage I read in Science and Health (the first sentence of the Preface) arrested my attention: "To those leaning on the sustaining infinite, today is big with blessings." I thought over these words, and soon came to the conclusion that we must lean upon God only.

The next thing to do was to introduce Christian Science to my wife, and I am thankful to say that she started right away to read Science and Health. She also received help from a Christian Science practitioner, and after the first few days began to improve in health. This was over a year ago, and at the present day she is healed not only of the lung disease, but of a severe kidney and bowel trouble, sleeplessness, neuralgia, besides some minor ailments. Within three months she could walk miles, eat and sleep well, and had no fear of bad weather. She had also gained considerably in weight.

Before concluding I should like to add that while reading Science and Health one evening, I came across the passage relating to the use of tobacco and intoxicating drink (p. 454). I had been a heavy smoker for fourteen years and occasionally partook of alcoholic drink. I had often openly boasted that nothing in this world would ever cause me to give up smoking; but alas! it gave me up, for upon rising the following morning I had not the slightest desire to smoke, and since that day I have not smoked, neither have I felt any desire to do so. The desire for alcoholic drink joined company with that for smoking and left me at the same time. After studying Christian Science for three weeks I gave up the wearing of body belts, which I had been using for five years. I have had several demonstrations since, in my daily life, which have proved to me that God is "a very present help in trouble."

The spiritual uplifting that my wife and myself have experienced helps us to realize that God is with us always. We both unite in offering our love and gratitude to our beloved Leader, Mrs. Eddy, for her love for humanity, and for revealing this glorious truth to us. We pray that we may prove to be earnest followers of her teachings, and able to help others in the same way in which we have been helped. We trust that this testimony may be the means of helping some earnest seeker for the truth to realize the full meaning of the statement, "God is Love," and our united song will be that of the psalmist: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

ALFRED ENFIELD HAYNES, Stratford, Essex, England.

It is now almost twenty-five years since I was healed in Christian Science. November, 1884, found me living in South Ryegate, Vt. I was a helpless sufferer from a sixth attack of rheumatism,—confined to an invalid's chair and very much crippled and unable to move. The lady with whom I boarded, told me of a friend who had been healed by "faith-cure," or something like that. Although I did not then realize what was prompting me to do so, I asked if she would write and find out more about what had healed her friend. She wrote to the lady, who in reply sent a copy of *The Christian Science Journal*, in which I found numerous references to the "text-book," "Science and Health with Key to the Scriptures" by Mrs. Eddy. So my husband sent for this book, and when it came it was the twelfth edition, in two volumes.

The first thing I read was a testimonial in the back of the book, given by a man living in Washington, D. C., who had been healed by reading this book of illness the same as that from which I suffered. I had my landlady write him, to ask if this was true, and he answered that it was true, and that I could be healed also, by reading the book. This gave me a little more confidence, for I had never heard anything about Christian Science. I felt this man was no more to God than I, and if He had healed him He would hear my prayer also. At first I found great difficulty in reading, as my fingers were so stiffened that I could not turn the pages; but I persevered, and in a little while my fingers relaxed sufficiently for me to do so. With this gain came a little more understanding of the truth, and in less than a week I could move my hands, and soon was able to rise from my chair without assistance. On Christmas day I combed my own hair for the first time in six months. My joy may be imagined when I discovered that I could wait upon myself!

Mrs. Eddy says in Science and Health that a mother's thoughts "form the embryo of another mortal mind, and unconsciously mold it" (p. 236). I had a little daughter, then three years of age, who had curvature of the spine. She had been examined by three prominent physicians in Kansas City, Mo., who had advised us to take her to Boston or New York to be fitted with a brace, as she could not walk across the floor without falling. I immediately began to tell her that those falls could not hurt her, that she could jump and play just as much as the other children. Soon she began to say, if she had fallen, "Mamma, that didn't hurt baby," which proved that my fear that the fall would harm her was disappearing. I examined her at various times, and found that her spine was straightening out. By February she and I were perfectly well, having been absolutely healed by the power of divine Love, by the truth that makes free.

Digitized by Google

My husband had also become interested in the books—they appealed to him from a religious standpoint—and he said he had at last found a religion that suited him. We were both church-members, but our religion had not healed either myself or our daughter. It was through the reading of Science and Health that we had both been restored to health and my husband had found a practical religion. We then went to Boston, but it was to see the woman who had written this wonderful book, instead of going to a physician for a brace for the child. We called at the Metaphysical College, at 571 Columbus avenue, and there met Mrs. Eddy at one of her afternoon receptions. We were introduced to her, and my husband told her of my healing and that of our little girl from the reading of her book. She said, "You ought to enter class and know what healed you," whereupon I answered, "The book healed us." But she said, "No, not the book; it was the truth contained in the book that healed you."

We were much impressed with our visit to Mrs. Eddy, and the following Sunday we went to a small hall in Boston to hear her preach. She took for her text Jesus' words, "Upon this rock I will build my church; and the gates of hell shall not prevail against it." This was the first text that I had ever remembered from any sermon which I had heard preached. The congregation numbered about forty people—plain, honest looking men and women, who showed that they had all been raised from beds of sickness, and were eager for the truth. We visited the college the next day to ask more about class instruction. We were told there would be a class in March, and though at that time it seemed impossible for us to join it, Truth opened the way and we entered the March class of 1885. The teaching was all so new and strange that when we came from the class we seemed spellbound for a time. After three weeks the students in the class were fitted for the healing work, and were sent out to do it in the various fields. Then began the demonstration of what we had been taught,—how to keep well ourselves and to heal others. My daughter, today, is a healthy, well formed woman, having no evidence of the dread condition of curvature of the spine, thus proving that Christian Science heals mental and physical ailments, also the deformed.

In all these years, whatever has come to us on the mental or physical plane has always been met by the truth contained in Science and Health, which has been my only healer and guide, showing that the truth as taught by Mrs. Eddy, in the class instruction and in Science and Health, is the truth which Jesus taught and demonstrated. Words cannot begin to express my appreciation of and gratitude for the great privilege of being numbered as one of our Leader's students.

MRS. LYSBETH L. CAMPBELL, New York, N. Y.

Many times, both in our meetings and in private, I have availed myself of the privilege of testifying to the power of Christ, Truth, in telling what Christian Science has done for me; yet, when the thought has presented itself that I ought to write an account of my healing for one of our publications, I have felt that I would be unable to voice properly and sufficiently my gratitude.

More than eleven years ago I was a nearly hopeless invalid, and was at various times under the care of different physicians, some of whom were distinctly eminent in their profession. My home at that time was in a large city, and after a winter of great suffering I went to a hospital and submitted to an operation. Greatly to the disappointment of physicians and nurses, I was not relieved. After being more than five weeks in the hospital, I returned home very nearly in despair of ever being well; indeed I was told that everything which medicine or surgery could do for me had been done. One kind and liberal-minded physician even advised me to try Christian Science, and related to me the history of two cases which had come under his observation, and which the Scientists had cured after physicians had been unable to bring relief.

I had a number of ailments, but my greatest suffering was from a stomach trouble which made it impossible for me to take any food with comfort. Even that prepared for infants seemed to distress me as greatly as the more substantial varieties. The only sleep I secured was obtained by means of opiates. I will not attempt to describe further my seemingly hopeless condition. My relatives were determined to leave nothing untried, and secured the services of a faithful Christian Scientist. During his first visit he requested me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I at once began to read the book, and the stomach trouble vanished within two or three days, so that I ate whatever I desired and with absolutely no resulting distress or inconvenience.

By this time I was intensely interested in the marvelous statements contained in Science and Health, and was fairly deluging the practitioner with questions. His kindly patience is something to remember, and his logical explanations were of great value to me. I accepted Christian Science as the truth, and I shall never forget my happiness as one difficulty after another was surmounted and I gained some understanding of the Principle of this teaching. I slept well and peacefully, my strength was restored, and I was enabled once more to fulfil my duties in the home. For the first time I had a satisfactory religion. I no longer was trying to reconcile the idea of a God who is Love with that of one who also permits or causes sin and suffering. It meant the dropping of a great burden and working with a certainty as to the result.

During the course of the last eleven years I have seen many different diseases cured and discordant conditions overcome by the understanding of Christian Science. I have had some battles, but have spent only two days in bed during that time—quite a contrast to my habit previously. I have been a witness to several cases of instantaneous healing of disease. My little boy, six years of age, suffered for several days with fever, would take practically no food, and was unable to sit up in bed. I seemed unable to meet the case, and called upon a practitioner. In a few minutes the child sat up and asked for something to eat; next he wanted to be dressed, and at once began to play about the house. We were greatly surprised, in spite of our former experiences of the power of Christian Science. This boy has always expected healing to be done instantaneously.

Having recently moved to the far West, I felt a sense of disappointment upon finding no other Scientists at this place. However, I have more time for study, and am most grateful that we have our Lesson-Sermons and a perfect remedy for every ill always at hand.

Although we so greatly rejoice over the healing of disease, how much more it means to see sin overcome and human life uplifted and regenerated. This perfect salvation from both sickness and sin is what Mrs. Eddy has made possible in this age, through her discovery of the Principle of all that Jesus taught.

CARRIE L. COBB, Casper, Wyo.

[Translated from the German.]

It has long been my desire to express my heartfelt thanks for the benefits, the great blessings that have come to me through Christian Science. About fifteen months ago I was on a visit for a few days at my sister's home in Dresden, and through her heard for the first time of Christian Science and its great success. I had been suffering for years, and as the physician could not help me, my sister advised me to turn to Christian Science. I attended a

Digitized by Google

service first, and immediately asked for treatment, which was kindly given me. I was suffering severely with rheumatism and (as it was said) with twisting of the tendons. I could hardly cut bread, and to attend to my household duties seemed torture. Added to this I had a nervous trouble which caused me great pain.

As soon as Christian Science treatment was given me, however, I was able to drop the material remedies without suffering, and although I had plenty of work to do, my condition improved gradually, so that I was enabled to do some additional work and take charge of a three-months-old baby. I could do all this because I felt that divine power strengthened me, and because I became conscious that divine Love surrounded me, blessing and protecting me. An inward feeling of peace and trust filled me, and this in spite of all sorts of troubles, for domestic circumstances of a very difficult nature had made life a burden to me; but by and by my pains left me,—I do not know how, it all seemed so wonderful to me. Together with the trouble mentioned, an injury to my left thumb, as well as a growth on it, disappeared. In the same way my eyesight improved.

In our domestic life much has turned toward good. It is also very noteworthy that my husband, who had no work, soon found very good employment, although this seemed impossible at first, owing to prevailing circumstances. This showed us that all things are possible to God; that He leads everything gloriously, if we but put our trust in Him alone. Through this employment of my husband my desire to take up my former vocation as a housekeeper was realized at the same time. Whereas formerly I had dreaded the future and believed it could bring only sorrow, I now saw that God had helped us in every way, that He continues to help, and that everything turns out better than we expect. My little foster-child and my twelve-year-old daughter have also experienced help through Christian Science for all sorts of ailments. My daughter became ill with an attack of lung trouble as the result of a cold, and as I did not believe it would become serious I waited before asking for help in Christian Science; but I was very fearful, as the child had suffered severely with this disease once before and missed the school for a whole year. Through Christian Science help, however, she recovered quickly this time, and soon was able to attend school without experiencing any after-effects.

For all these blessings I thank God, and also Mrs. Eddy, who has made known to us this healing religion. I send out this testimony in the hope that all who are in need and sorrow may find comfort and deliverance through Christian Science, which has become so dear to me, and the teachings of which I shall always love and follow.

ANNA WENDLER, Jaenkendorf, O.-Lausitz, Germany.

I have felt for some time that it was a duty I owed to suffering humanity, to give my testimony of what Christian Science has done for me. The spring of 1905 found me suffering from what *materia medica* called a malignant growth with dropsical complications, and after being examined by three doctors, it was decided that the only thing which could do me any good would be an operation for the removal of the tumor. I was taken to a hospital and the operation was begun, but it was found, when the growth was located, that it would be impossible to remove it, and save my life; so it was decided to empty it, and go no farther. At the same time my husband was told that this was all that could be done, and that I might live a few months; but as I was growing weaker each day, I realized only too clearly that without relief my stay here must be very short.

I was then advised by a dear daughter to try Christian Science, although it seemed that I could have but little faith in it. I, however, thought it could do no harm to try, so I was taken to see a Christian Science practitioner, and placed myself in her care. I was given treatment while there, and absent treatment was continued for a week, when I was taken there again; but I could not say that I was feeling any better. The treatment was continued, and during the second week I found myself greatly improved as to strength, and the effects of the growth were rapidly disappearing. At the end of the third week I was able to take charge of my home again, and in a very short while found myself feeling as well as of old. During the next year I was healed of a very severe attack of heart trouble, when it was thought I could not possibly recover, and since that time I have experienced a few minor difficulties, which Christian Science has aided me to overcome.

I am indeed thankful to God, and to dear Mrs. Eddy, for the help I have received through Christian Science. I have not as yet received the spiritual consciousness of sight for which I am striving, but I know that by being faithful the demonstration will be completed. I will gladly answer all inquiries in reference to my healing.

MRS. JOSEPHINE PILLIOD, Stockton, Cal.

The day after Christmas of 1907, I turned to Christian Science, and I thank God each day for this best of all Christmas presents. When Science found me I had extreme nervous suffering, and had not slept one night in three months without taking some sort of an opiate. I was also greatly reduced in flesh as well as in strength, but now I sleep like a child, have become quite robust, and am not conscious that I have any nerves.

I was attacked with malignant throat trouble shortly after coming to Science, and this disease was overcome in four days, with practically no suffering after the first treatment and without my losing one meal; whereas always before I had suffered most severely for about three weeks and it had been impossible for me to take food at all. Quite recently I was awakened at four o'clock in the morning with the most severe symptoms, which seemed to be the result of poisoning. I did not get help that morning until about nine o'clock, when the attack was met almost instantly. By evening of that day all pain had left me and I was absolutely well.

For these and the many other blessings,—the peace of mind and the freedom from worry that Christian Science has brought to me,—I wish to express my sincere thanks and gratitude to that dear woman, Mrs. Eddy, who has shown us this wonderful healing truth.

MRS. LOUISE MORROGH, New York, N. Y.

I wish to tell of my wonderful healing through Christian Science of a malignant disease of the bowels. I had been sick for two years, going from one doctor to another, but was getting worse, until they said they could give no further help except by an operation. I went to a hospital and had the operation, and after being at home for three weeks, returned and went through another, and still a third. Then one of the doctors told my wife that nothing on earth could help me, as the disease had spread so that I could live but a week at the longest. He said it was the worst case of the kind that he had ever had. My wife then brought me home, and the second day after, a lady told her of a man, living in the town, who had been healed of the same disease of the liver by Christian Science. When my wife came home and told me of this I sent her right back to town to see this man. He told her of his healing, and gave the address of the one who had helped him. I at once sent to this lady for treatment, and the pain left so that I could sleep. God's power is wonderful!

That was six years ago, and though the pain kept coming back, it got less at each time, and now I am in perfect health,

Digitized by Google

and can do harder work than ever I could. With all my heart I give thanks to God for the blessings which have been mine through Christian Science. God bless Mrs. Eddy.

GEORGE BRAUN, Mount Forest, Ont.

[Translated from the German.]

A year ago I began to feel severe pain in the region of the heart. The physician made an examination and told me that I must keep very quiet, as I would no more be able to undergo fatigue; that I had a disease of the arteries which he could only retard but not remedy. I then turned to a Christian Science practitioner and asked for help. In two months the pain had disappeared so that I could hold the right thought myself, and I have endeavored since then to grow in understanding. Last summer I walked at times for five and six hours without experiencing pain, and still felt fresh and strong.

I thank God, and also our dear Leader, Mrs. Eddy, for the blessing that has come to me.

FRAU LEONHARDT, Dresden, Germany.

Nearly all my life I had been sick. Every year some new phase of illness would attack me, till I became a physical wreck. I was said to have hereditary lung trouble, with marked symptoms; then I underwent three surgical operations, which left me in a very weakened condition. Serious mental trouble was fast developing, when Christian Science came to the rescue. It has healed me, and I am well; I am glad that my healing was slow, for thereby I learned much more of Truth.

My mother had been in an asylum for many years, and last winter the doctor said she could not live till spring. I went to see her, and asked if she would like the help of Christian Science. She gladly accepted, and by this means was taken out of the asylum, and is now in better health in every way than I can ever remember of seeing her before. Words can never express my gratitude to God for what Christian Science has done for me and mine.

MATILDA BAILEY, Columbus, O.

It is my duty and pleasure to bear witness to the help that Christian Science has been to me and mine. Twelve years ago I tried to read the Christian Science text-book; but it was a sealed book to me, and after repeated attempts I gave it up as not worth while. Some years later there began for me a siege of nervous exhaustion, involving intense suffering in the right arm and side as well as in the eyes. This lasted two years, depressing me to the point of desire for self-destruction.

Failing to find relief in any other way, I applied to a Christian Science practitioner for help. She soon uncovered to me the most important mistake I was making in my habits of thinking, and before long her help brought me out of the horror into sane and useful living. Still I did not grasp the real point in the teaching of Christian Science. After that an injured knee, which had kept troubling me in the most obstinate fashion for a year or more, became normal after a few weeks' treatment. All this time my good friend had been giving without charge many hours out of her busy days, trying to explain to me the questions in Christian Science which I could not reconcile with my preconceived notions. Meanwhile many a practical problem had been solved, many an ache and pain had been banished, instep plates were abandoned, and even the symptoms of contagious diseases had been remarkably lightened.

Christian Science had proved itself a friend in need, but still a friend very little understood. Finally we had in our family a case of severe illness, and found to our dismay that the old belief in the reality of two worlds, a world of matter fully as real and eternal as a world of Spirit, was still with us. The time had come to make a decision once for all—to accept Christ's application of spiritual law to all things, or to limit it to the realm of the unseen. With all our hearts we now wanted to understand, and because of our "importunity" we saw, I believe for the first time, the teachings of Jesus in their true light. We saw that there is only one reality, the divine Principle of harmony and its manifestation. This vision of reality grows brighter daily, thank God, and we see more clearly every day how to apply the new light to every practical detail of life,—to our social intercourse, to business, and, most useful of all, to the bringing up of our children.

For bringing home to us this knowledge of eternal Truth, and for restoring to us its application to practical life, we are surely very much indebted to Mrs. Eddy, and from our hearts we thank those who from day to day and year to year are spreading abroad this wonderful gospel of healing.—E. C. ADAMS, Cambridge, Mass.

I am very thankful for what Christian Science has done for me, and is still doing. One year ago, I was healed of lung trouble in its severest form in less than five weeks. I am the mother of six children, and was taken down with this terrible disease, from which I knew the doctors could not cure me or even give me relief. I had Christian Science treatment, and was entirely healed. Now I am doing all the household duties for my family, and can accommodate others also. Here I wish to state that none of my friends or my family thought I could possibly live through this terrible ordeal. I was so miserable and had become so terribly wasted, that I did not care to see any one or even to speak a word, but now I am in perfect health.

Words fail to express my gratitude for my healing and for the many blessings which have come into my life through Christian Science. I am more than thankful to God, and to Mrs. Eddy for bringing this wonderful truth to all mankind. I would also like to tell of a beautiful demonstration that was made in our family. My oldest boy had asthmatic attacks so bad that he could not lie down. The doctor told me that he would outgrow the disease, but it seemed to be getting worse until he began to study Christian Science. This was about a year ago, and he has never had an attack since. Many other wonderful demonstrations we have had in our family, for which we are indeed grateful.

MRS. CHARLES STEINMETZ, Bakersfield, Cal.

[Written for the *Sentinel*.]

"REVELATION."

VIOLET KER SEYMER.

A HEAV'NLY yearning rises in my heart
To pierce beyond the shifting veil of sense,
To see all Thou beholdest, all Thou art,
To know what underlies this frail pretense.

Then, open Thou mine eyes full wide and clear,
Let not my gaze be dimmed with earthly fear:
So may mine ears catch the celestial sounds
With which Thy Spirit-universe abounds.

The fulness of Thy joy surroundeth me!
O grant me ears to hear and eyes to see;
Unfailing strength to follow and obey,
And childlike yielding to Thy loving sway.

So shall my lips break into sacred song,
And tranquilize earth's dismal cry of wrong;
Dispel the load of doubt and fear and care,
And rouse the ringing echoes ev'rywhere!

FROM OUR EXCHANGES.

[*Christian Commonwealth.*]

Every denomination is recording a decrease in membership, in spite of the fact that the churches never had so many organizations, never paid as many officials, never spent so much in advertisements, as at the present time. Much of this activity is a sign of weakness, not of strength. It is a fact of great significance that this decline of the churches synchronizes with a deep and widespread revival of spiritual religion, which is to be found in almost all countries of the world. There are thousands of people in England alone who never go to church, but who meet together in groups to meditate on the things of the soul, the relation of the soul to God, and the relation of this life on the earth-plane to the cosmic significance of man. Many among these people are finders of the deepest things of life, and many others are earnest inquirers. Now, it seems to us that the Christian churches need to see with a clear vision the significance of what is taking place outside them: the churches are too enveloped in their own smoke to see how large and how rich the country is through which they are passing; they are too cramped by their point of view, too self-involved.

[Rev. Frederick A. Bisbee, D.D., in *Universalist Leader.*]

The age of religious progress is dawning; and why not? In no other field of life has there been such inertia. The sciences have taken gigantic steps, and with commercial enterprise and intellectual improvement have done more missionary work than religion; because religion has persistently clung to old ideas and antique methods. Men with a false reverence, the outgrowth of ignorance, have feared to touch anything pertaining to religion, for that, they said, is God's! But we are coming to see that not less are other things God's. God's day is not only Sunday, but every day as well. God's place is not only in the sanctuary, it may be as truly in the shop and office. The praise of God may find expression, quite as satisfactory to Him, through conduct as through creed.

[*Christian Register.*]

Orthodoxy errs in attributing heaven or hell to the fiat of a being outside of ourselves, giving heaven as a reward to his followers and hell as a punishment to his enemies. It errs equally in describing heaven as consisting essentially of pleasure, and hell of suffering or sorrow; for at the present time it is not those who are surrounded by pleasures who are most happy. It is quite as great a mistake to assert that our ultimate moral condition is dependent on belief and worship; and not less reprehensible is the picture of heaven as something beyond death, while hell belongs to a future life. The moral law of compensation begins now and right here, and is universal and eternal.

[*Christian Intelligencer.*]

The world today is demanding that the church, in order to prove her power and hold her place with men, face the conditions of the industrial and social realms and bring religion into effective relation with them. The modern crisis of the church is not theological but social.

[*Interior.*]

The field of religion is inside a man's own soul. There any man willing to do the will of God may come as close as any other to the sources of religious knowledge. Each must judge for himself what appeals to the apprehension of his soul as his soul's safe reliance.

[*Examiner.*]

God is speaking in the Bible today as He spoke to the fathers. He is always contemporary, and His word to the soul of man never grows old.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

"The greatness of a nation," said Mr. Chamberlain, president of the Massachusetts board of trade, at its recent annual meeting, "rests upon its natural resources and upon the industry and intelligence as well as the patriotism of the individual citizen. Anything which tends to prevent the full expression of any one of these is contrary to the spirit of sound growth. There is a limit to a nation's capacity to yield up taxes. The nations of the world are today staggering under the burdens incident to competitive armament. This insane rivalry exhausts the natural resources and the relative strength is still maintained. Business men can be engaged in no better business than to educate the people to see the iniquity of this modern craze, in which unfortunately the United States seems to be in sympathy if not in actual competition."

A. Holland Forbes of New York and Max Fleischmann of Cincinnati won the Lahm cup for the longest flight made in a balloon under the auspices of the Aero Club of America, and also broke all speed records for long distance in a flight which began at St. Louis, Mo., and ended in Chesterfield county, Va., twenty miles south of Richmond. The distance of 731 miles was made in 19 hours, 15 minutes at an average rate of thirty-eight miles an hour. The Lahm cup has been held since October, 1907, by Captain de Forest Chandler, who covered a distance of 475 miles.

Initial steps toward the organization of a forest protective association in California were taken last week, when several of the largest lumber dealers in San Francisco gathered to discuss ways and means of safeguarding the timber reserves from forest fires. All the sugar pine and redwood interests in the state were represented. A corps of forest guards and fire fighters will be maintained. The timber land in question comprises about twenty-eight million acres not safeguarded by the government service, and represents three hundred and fifty million dollars in private capital.

The Cudahy Packing Company, on trial at Leavenworth, Kan., for the violation of the internal revenue laws by failing to place stamps of proper denomination on packages of oleomargarine, was fined $5,000 and agreed to pay a back stamp tax of $82,777.50 and special tax of $10,000 for agencies. It was alleged that the packing company colored the oleomargarine, which should have subjected the company to a tax of ten cents a pound, and that it was disposed of as the uncolored product, upon which the revenue is but a quarter of a cent a pound.

An ordinance which has every prospect of being accepted, has been introduced at a meeting of the city council of Chicago, making it compulsory for all railroads operating within eight miles of the City Hall to use electricity on their lines in place of steam. The ordinance requires that within a year after its passage and publication, all railroads shall submit plans to the commissioner of public works, and within six months after the plans and specifications have been approved they shall commence to electrify their roads.

The Panama canal commission has submitted to the Secretary of War an estimate of appropriations aggregating $48,063,524 for work on the canal during the fiscal year beginning July 1, 1910. Of the amount asked for $15,504,030 is for skilled and unskilled labor and $20,218,083 is for materials and supplies used in construction work. The total appropriations made by Congress up to this time on account of the canal are $210,070,468.

Official figures show that today there are more than three hundred thousand Indians in the United States, an increase of about forty thousand during the last two decades. Three and one third million dollars is being expended by the United States annually for the education of more than thirty thousand Indian boys and girls.

The total excavation at the Panama canal for the month of September was 2,836,385 cubic yards, against 2,755,178 cubic yards in the previous month. There were twenty-five working days in September, against twenty-six in the previous month, while the rainfall for September was 10.07 inches, against 9.28 inches in August.

Edwin Ginn, the Boston publisher, has set aside one million dollars, to be available at his decease in the interest of his plan for universal peace. This is in addition to the fifty thousand dollars which he will contribute annually to the cause. Among those whom Mr. Ginn has been able to interest in his scheme is Andrew Carnegie.

Dr. Ernest Fox Nichols, scientist and scholar, was on Oct. 14 inaugurated as Dartmouth's tenth president in the presence of a distinguished assemblage. One hundred or more colleges, American and European, sent their representative scholars to do him honor.

The property used for summer residential and vacation purposes in the state of Maine represents a total investment of about forty million dollars, three fourths of this amount being held by people outside the state.

Pratt Institute of Brooklyn, N. Y., has just received a gift of $1,700,000. Columbia about $300,000, and Yale about half a million.

International.

The Finns were recently invited to pay sixteen million rubles, or about eight million dollars annually, which is double the previous amount, toward the maintenance of the Russian imperial defenses in Finnish territory in the Viborg region. The Diet of Finland adopted a resolution declaring that they were unable to afford the extra assessment. Lately they have passed a bill appropriating three hundred thousand rubles annually for free education, the continuation of schools for poor pupils, and for village schools, which the Czar as grand duke of Finland has refused to ratify, on the ground that Finland cannot afford the extra appropriation if she cannot afford her share of the imperial defense.

Because of its importance industrially and commercially to the community, the opening of the Northcliffe paper and pulp wood manufacturing industries at Grand Falls, Newfoundland, was celebrated last week with a festival lasting two days. Although a corporation known as the Anglo-Newfoundland Development Company is in charge of the enterprise, the leading spirit is Lord Northcliffe, the proprietor of the *London Daily Mail* and numerous other daily, weekly, and monthly publications. In the development of the enterprise more than six million dollars has been spent.

The permanent international peace bureau at Brussels, Holland, has adopted a resolution in favor of the various governments of the world joining in the creation of an international fund for distribution in relief of sufferers in the event of the occurrence of great disasters in any part of the world. A motion was also passed in favor of the interdiction of throwing explosives from airships in time of war. A resolution urging the Belgian delegates to bring pressure on the government at Belgium for Congo reform was unanimously adopted.

The first group of Chinese students whose education in American schools will be paid for by the Peking government out of funds derived from that part of the Boxer indemnity that was returned to China by America, left Shanghai last week on the steamer China for San Francisco. The students chosen by the government number forty-seven, and there are also six self-supporting students. The group was selected from over six hundred candidates.

The financial condition in Cuba has improved considerably since the close of the period of American intervention. Then the treasury had a balance of $2,685,228, against obligations of $8,404,956. The balance Sept. 30 showed $1,035,302, against obligations of $5,117,151.

All the legislatures of the self-governing provinces of China held their first meetings last week preparatory to the drafting of a constitution for the Empire. Each province will be represented in the imperial assembly that will draft the constitution, with fifty members publicly elected.

The Chinese naval commission left Peking last week for Europe, to investigate matters of naval construction. Contracts involving the purchase of more than twenty million dollars of war munitions and battleships will be made by China within the next six months.

The extraordinary budget of the Ministry of Railroads, Russia, has been submitted to the Douma. It calls for $31,100,000 for new construction in 1910. The great bulk of this will be expended in Siberia and on the Amur Railroad.

The new industrial census of Germany gives 4,025,501 industrial concerns employing 14,318,389 people, of whom 3,510,466 are women. These figures do not include railroad, postal, telegraph, and telephone employees.

Industrial and Commercial.

According to an article in the *Technical World Magazine*, the best alcohol (ethyl) can now be made from sawdust by a new and secret process at a cost of six cents per gallon. A ton of dry sawdust, worth fifty cents, will produce 22½ gallons of alcohol; a ton of corn, worth at present prices over twenty dollars, will produce ninety gallons. Molasses is a trifle cheaper, but the comparative cost of producing a gallon of alcohol from these three sources is: Corn, twenty-eight cents; molasses, twenty-six cents, and sawdust six cents.

The increase in the iron industry is so marked in the Pittsburg district that the filling of present bookings, rather than the acceptance of new contracts, is the predominant consideration. The full capacities of the mills are not now sufficient for the demands.

Exports through Gulf ports have grown from $104,000,000 in 1899 to $410,000,000 in 1909, an increase of one hundred and twelve per cent, while the Atlantic ports were increasing but twelve per cent.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL—WATCH" JESUS

DIVINE PROTECTION.

BLANCHE HERSEY HOGUE.

CHRISTIAN SCIENCE has entered the world to help humanity. The need of men is to learn more of God, of God's law, God's presence, God's power; and Christian Science brings to its students the surer knowledge of God, "on earth" as "in heaven," which makes plain His saving way. It may seem to the disinterested observer that Christian Science claims a great deal when it announces that the way of salvation—exact, scientific, demonstrable salvation—has been found and is unfolded to the understanding of this age; yet if Christian Science did not bring to a troubled world a positive and provable remedy for its trouble, it would have little or no value.

The student of the Christian Science text-book sees early in his investigation that Christian Science is a statement of revealed and demonstrable truth, and that it can substantiate its claim, give proofs of its beneficent nature and influence. Mankind needs to understand how God's power and presence may become practically, availably protective to the human being in his hour of need, and it is just this sure knowledge of God and His law which Christian Science makes clear to the God-seeking man when his need for protection and help presses hard upon him.

The need for protection is continually with mortals, for the inventions of unrighteous belief in activities and forces apart from divine Love threaten their health and happiness almost constantly. Concerning this need the Scriptures assure us of a divine care which goes out to meet every upward-journeying heart with ample promise of shelter and help. The prophets voiced their visions of God's tender consideration for His creatures, the psalmist sang of it, priest and poet and righteous ruler uttered praise for it.

Every page of Holy Writ testifies to God's goodness, and to the safety and well-being of the one who puts his trust in Him. Jesus' work was protective to himself and to others, and his loyal disciples found themselves and those whom they would help protected, too, from much that would assail them. And yet, in the face of all this holy assurance and evidence of the divine availability for man's need, the blind old world has stumbled on its way of woe unheeding and unredeemed.

To this darkened and discouraged condition of thought Christian Science declares that the promises of Scripture may be fulfilled, every one, when men are ready to come into right relationship to God; and it further announces that its message sets forth with clearness how this relationship may be found and maintained. Mrs. Eddy is telling the world that matter is not man; that evil is not man; and that sickness, want, and sorrow are no part of man's inheritance. She is saying that an acquaintance with man as he really is, the spiritual likeness and image of a perfect God, ushers humanity into an entirely new set of experiences; and she declares further that these new experiences, in which sin and disease are rapidly lessening, follow the understanding of Christian Science for the reason that a knowledge of the truth very naturally becomes protective to the present human belief.

Just here is the practical value of the understanding of God bestowed by Christian Science; such knowledge operates to take care of the mortal in his present state of growth and progress. Christian Science maintains that what it has to say about God and man and the universe is absolute revealed truth, and that this absolute truth, if obeyed and applied with an honest heart, begins at once to improve the conditions of the life it has entered. And, indeed, if Christian Science did not present a teaching which will avail today, and which will relieve trouble today, it would be a poor philosophy and worth no more than any human opinion or theory.

The beneficiary of Christian Science must bear in mind, then, that his growing knowledge of his right relationship to God is a vital, life-giving, health-giving activity in his experience; that he may expect all good from God; and that this good comes to him just so fast as he abandons the indulgence of evil and submits himself to the purifying processes of the law of God. Should he ever feel in the dark about God and His law, let him study diligently the Scriptures and the Christian Science text-book, and he will find that the Word of God is indeed a lamp, and that it lights his way into better understanding. Let him remember always that, whether he understands little or much, whether his way seems for the moment dark or light, the office of what he knows of God is to protect him from evil today, even in his present sense of limitation and ignorance. Herein lies the value of Christian Science.

The student who accepts the teaching of Christian Science and enters upon an honest endeavor to live it, must watch his habits of thinking. He no longer fears a draft of air, a season of overwork, a contagious disease, or a change of climate. He knows these things cannot harm him if he trusts the law of God to sustain his health. But if he has not made some headway in overcoming the mental habit of fear, he is likely to change the object of his fear but not to cease his fearing,—likely to carry his fearing into another field, instead of destroying it. Having abandoned the fears of an earlier period, he may, even after he knows something of God's protection as Christian Science teaches it, be afraid that he cannot understand God, that he is not good enough to be healed, or that the thoughts of some one else can hinder or harass him or make him suffer. This is only the same mental process transferred to another area of experience, and is just as inconsistent for the man who endeavors to trust God, as is the fear of a draft or of food.

To come at the root of the matter and begin to "grow in grace," one must begin to rid himself of the whole business of fear; and to do this one must know enough of God to be convinced that He can protect and help man in every moment of his experience, and against any kind of a foe. Our former theological teaching has been incomplete in that it has failed to foster a confidence in God that would

Digitized by Google

entirely cast out fear. Christian Science, bringing to the world a quickened and scientific understanding of God, has so unveiled man's relation to God, so revealed the actual ways of God's goodness to men, and so clearly set forth the spiritual thought-process by which this divine goodness enters into the affairs of men, that its student cannot help trusting God more than he did before his spiritual knowledge was so increased; and he naturally fears less everything that would threaten him. The genuine Christian Scientist, the one who is ridding himself, honestly and patiently, of thought-habits which are not sanctioned by God, is coming to feel that by this very effort he is hidden safely away in a good place, where the fear of evil cannot find him and cannot abide.

Surely the knowledge of God's presence and power would be of little help, did it not protect us in the happenings of the present hour; and because this knowledge does avail, instantly and constantly, every Christian Scientist who obeys consistently his highest understanding of God is entitled to a righteous expectation that good will prevail in all that concerns him. What a man knows of God becomes his armor,—his "shield and buckler;" and always when he wears it will he be protected by it.

"THE WICKED THAT OPPRESS ME."

J. S. BRAITHWAITE, M.A.

So much is written about the healing work of Christian Science (and ever and anon skepticism will break out in spite of all the evidence—"though one rose from the dead"), that it may be permissible to touch briefly on an aspect of it which to many carries a larger message of hope than even the promise of perfect physical health. I refer to life's great problem of how to get on with one's neighbor—how to love the objectionable, how to suffer the insufferable. That Christian Science has solved and is solving these questions is best evidenced by the vista of happy faces which any gathering of Scientists presents. One notices also that there is nothing forced or unnatural about this cheerfulness of countenance, for the possessor of it wears it as one who has a right to it.

When Christianity was first taught to the world, its students were given power "over all the power of the enemy," and were told that nothing should by any means harm them. If a man believed this today, he would naturally wear a happy look, and still more so if he had observed the warning not to be triumphant on that account, but because his name was "written in heaven"—satisfaction achieved. The goal for which most of us are striving is satisfaction, but we do not all agree as to the best means whereby to attain it. None of us have wholly attained to it, and many are merely hiding or trying to hide from intense dissatisfaction with themselves and the world as they find it. "As for me," said the psalmist, "I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness." Before him was the ideal true and clear, and the attainment, he saw, lay in waking up out of the imperfect and illusory personality which brought him so much trouble—"the wicked that oppress me," "my deadly enemies, who compass me about," and so on.

We are all more or less oppressed by the wicked and compassed about by deadly enemies, but Mrs. Eddy has pointed out to her followers that these same persecutors are not persons, but thoughts; a fact which, being once told one, he may prove for himself. Adherence to an ideal is a sure means of bringing about a bombardment of this kind of enemy. And the force of the bombardment varies in proportion to the purity of the ideal. Again it is not persons but thoughts, and be it remembered that "whatsoever thing from without" cannot defile; but the "evil thoughts" that come from within, they defile. The Christian Scientist is by no means exempt from this bombardment, but he is fortified by the clearness with which his ideal has been presented to him by his Leader. He cannot fail to gain courage and inspiration from the fact that his ideal, so far from harming another, must benefit all, particularly those with whom he comes in contact, if he is honest in his work.

In the past, many have thought that the only course left to them was to withdraw from human society altogether and spend their lives in quiet contemplation of their ideal. Had they ever been taught to see their enemies or their persecutors as thoughts, they had never been trapped into such a narrow view. It is strange that a mode of life so utterly at variance with the Master's teachings should have found a foothold among the adherents of Christianity. He who said, "Go ye into all the world, and preach the gospel to every creature," was certainly not teaching seclusion and isolation as the path to perfection. Perhaps we may find it difficult, even impossible, to get on with A—his very presence in the same room with us exercises a damping influence on our spirits; whereas with B, whose friendly manner and genial thoughts seem to bring out the best that is in us, it is quite different. Naturally we like B better than A, yet we will probably gain more from A than from B, for A will reveal our own shortcomings to us, which B would never do for fear of hurting our feelings.

No one can apply himself to the study of Christian Science without beginning to awaken from this dream wherein happiness and perfection seem to be swayed by the thoughts of A and B, his neighbors, and to find the real man and his real neighbor governed by one Mind, thinking and being and doing only good. To see this clearly is to be relieved of the fear of the influence of A or even B, and to enjoy a more independent companionship with all mankind. The writer knows hardly anything for which he is more grateful than this changed idea as to who or what his neighbor is and in what direction his duty to him lies. I must release him from criticism and disparagement, just as I would be released, and thus leave him free also to awake in the divine likeness. It is no use to try to organize hell and make a heaven of it, and when a man sees that the dwellers in hell are his own mean and hateful thoughts, he will realize that they cannot be saved, but must be given up, if he is ever to taste of heaven.

Mrs. Eddy says in Science and Health (p. 481): "Human hypotheses first assume the reality of sickness, sin, and death, and then assume the necessity of these evils because of their admitted actuality. These human verdicts are the procurers of all discord." To correct this tremendous mistake is the message of Christian Science today. A long time ago, in describing the ideal that he foresaw as humanity's ultimate goal, Augustine particularly emphasized two conditions of thought as belonging to the state we call heaven; viz., contentment and freedom to choose the right. He says, "Along with his gift, greater or less, each shall receive this further gift of contentment, to desire no more than he has. Free will will be all the more truly free because set free from delight in sinning to take unfeigned delight in not sinning."

This is splendid so far as it goes, but it seems to apply to some dim and remote future age in which we can hardly now be greatly interested. Christian Science brings that time very near; nay, it says it is now, and that you must find this out; just as it brings God very close and reveals Him as All-in-all, instead of as a dim and distant figure, venerable but prejudiced and cruel in thought. There is no delirium about Christian Science; it is, as Mrs. Eddy has herself described it in "No and Yes" (p. 19), "the sober second thought of advancing humanity."

GOD IS GOOD.

ETHEL M. ISAACS.

EVERY beginner in Christian Science knows how difficult it seems at first to answer the apparently puzzling questions which our acquaintances who have not studied this wonderful Science put to us, so I will relate one of my own experiences in this line, with the hope that it may help some one else.

On my making the positive assertion that God is good, and only good, a friend said he could not see how that was true in every case and at all times, and he put the following question to me: "Two little boys of the same age climb an apple-tree for the purpose of stealing the apples, and both fall down; one is badly hurt, and the other has no injury befall him. Now, if God is good and just, why should one be hurt and not the other; or why, in fact, should either one be hurt?" At the time, I could not give a satisfactory answer, but I insisted that God is good and that He does not cause evil. With the enlarged understanding which has come to me through the study of Christian Science, I now find the answer perfectly clear.

Wrong-doing brings its own punishment, until "reformation cancels the crime" (Science and Health, p. 404); but God's law is the only law, and it is good, perfect, and eternal. The boy who fell and was hurt learned his lesson then and there, and would not again attempt to steal apples, but Science and Health (p. 40) also teaches that "another's suffering cannot lessen our own liability," and the boy who was not hurt would not see so clearly the evil in stealing and would be tempted to do it again until he learned that "escape from punishment is not in accordance with God's government, since justice is the handmaid of mercy" (*Ibid.*, p. 36), and then he would give up his evil ways, knowing that like brings like and that only through doing the right thing could he expect good results.

Thus will all mortals, young and old, give up their belief in evil, when they come into the understanding that God is good, and that, since God is All, good is All; therefore evil has neither place nor power.

OUR SERVICE IN CHURCH.

NELLIE HEYSER COOKE.

WE cannot be too familiar with the definition of "church," given on page 583 of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Here we are told that "the church is that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick." In attending the Christian Science church, it is our privilege as well as our duty to have ever in mind the thought that we are there not only to get, but to give. Several years ago the writer was healed, during the Sunday service, of a most annoying cough. This healing brought with it a clear vision of the privilege we each have of contributing our share of the Christ-spirit, both at the Wednesday and Sunday services.

At times we fail to realize that at every service many may have come thither in deepest gloom, in a sense of sickness or of want. They come to be spiritually uplifted, to touch the hem of the Christ-consciousness and find relief. Let each, then, ask himself: Am I doing all I can at every service to lift up the Christ? Jesus said, "I, if I be lifted up from the earth, will draw all men unto me." At the first peal of the organ the service begins, and do we reverently lift our thoughts heavenward and keep them there, until the closing words are spoken? Does the thought of each one go out in yearning love to help all the needy ones in our midst? And do we throughout the service continue to pray for them without ceasing?

A few helpful thoughts have recently come to the writer along these lines. For over eighteen months I had not the privilege of attending a large Christian Science church. Upon my return to the city where I live, I was impressed with the disturbance incident to the adjustment of some hundreds of ladies' hats immediately after the Lesson-Sermon; and the thought came, Would it not be well to guard against marring the spiritual atmosphere of others? Should we not wait until after the benediction to replace our millinery? The flurry of hats is a little thing, but instead of the flurry how much better if there were a reverently uplifted thought at the presence of the Word of God, concerning which St. John writes: "In the beginning was the Word, and the Word was with God, and the Word was God."

When a child, my school teacher taught her pupils to refrain from coughing and similar disturbances after the Bible reading, and called attention to the activity of this habit in churches after prayer or silence. The faithful in Christian Science need not be ensnared by this temptation, but many of us have fallen into this habit without knowing it, and sometimes fail to rise above it on coming into Science. I, for one, found I had not done so, until suddenly there came to me a realization of the prophet's declaration, "The Lord is in his holy temple: let all the earth [error] keep silence before him." We do not keep silence before God if, during the singing of the last stanza of our closing, or any other hymn, we drop our hymnals into the racks. In Ecclesiastes we read, "To every thing there is a season, and a time to every purpose under the heaven." If we are seeking to apply the spiritual import of the hymns to the needs of those present, will we not wait until the singing has ceased before we close and put away our books?

Let us remember the Master's appeal: "Could ye not watch with me one hour?" and be prepared to reject all but spiritual thoughts and impulses throughout the hour of service—to watch with Truth and Love this one hour.

HUMAN NEEDS.

WALTER SHAW.

WHEN Jesus fed the multitude, it was doubtless because it was evident to him that in the human sense they needed food. In one account we read that the people had been with Jesus a long time and had nothing to eat. Their truly absorbed interest in the Master's teaching had made them forget hunger, and the great heart of our Saviour was touched by their yearning for the truth. Mrs. Eddy writes (Science and Health, p. 427), "Immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so called, as well as in the spiritual;" that is, all our human wants and conditions are subject to the Principle and rule by which universal harmony is attained, and the apparent hindrances to the realization of this fact have ultimately no power to withstand divine law.

Humanly speaking, how could five loaves and a few fishes satisfy the hunger of that enormous crowd, for human sense is ever unable to grasp the exhaustless abundance of spiritual supply. We may need a tenant for a house, a purchaser for property, customers for business, employment that shall yield us salary, all legitimate requirements according to our circumstances, in order to demonstrate to ourselves or others the harmony which an adequate knowledge of the truth brings. It is desirable, however, always to remember that in reality there is no matter, and that all these things merely represent different stages of our human consciousness. Reality is spiritual, and harmonious results follow the correct application of the

Digitized by Google

Principle of Christian Science. The joy of relief from pain or discord is often quite overwhelmed by a glorious sense of God's presence and power thus manifested to us, and people are constantly giving testimony to this spiritual uplift.

Our demonstrations over financial problems may be protracted, because in these instances our fears are apt to be greater and more subtle than in the case of bodily ailments. We may be entertaining a martyrlike air of resignation to circumstances, or our fear may be so great that for the time being we are oblivious to aught else, and meet the adverse circumstance undismayed. Our motives must also be devoid of a desire for mere sense gratification. It has been said that if Jesus had yielded to the temptation to "command these stones to be made bread" it is probable that he would have been unable to feed the five thousand. The sense of hunger never controlled Jesus any more than did fear. He faced and mastered every human condition, and thus he was "in all points tempted like as we are, yet without sin,"—the sin of yielding to a belief that something besides God, good, has power.

When our motive is a pure desire to prove by demonstration the truth of Christian Science rather than a wish to acquire the thing we want, we are nearing the solution of our problem. As our Leader tells us in Science and Health (p. 18), "Jesus . . . demonstrated man's oneness with the Father, and for this we owe him endless homage;" and Jesus was our Wayshower and guide. Our one aim should be to gain such a sense of at-one-ment with God, good, that all needed supply is ours, for we read, "Son, . . . all that I have is thine." By this means we shall cease to hanker after matter for the gratification of the senses, but we shall instead long for the evidence of this law of harmony which shall present to ourselves and others a proof that "the Lord God omnipotent reigneth."

[Written for the *Sentinel*.]

THE FALSE AND THE REAL.

LAURA GERAHTY.

I THOUGHT I loved—but when the sun was shining
I caught the shadows only, on the grass.
Alone I mourned, for loved ones ever pining,
And lo! Love's presence—yet I let it pass.

The dainty flowers were scenting all the highway,
All radiant in their sweetness where I stepped;
I trod upon the thistle in the byway,
Leaving the blood-stains where I walked and wept.

Harvests were ripened; and the cattle weary
Through drought and heat dragged home the golden grain;
I saw no prospect, save a winter dreary;
Through my cold heart the snow, through tears the rain.

I leaned upon a brother in my sorrow,
His arm around me ever in my pain;
Then by my impotence there fell a morrow
That he grew weary—and our paths were twain.

Long in the shadow-land I sought him, yearning
To bid him lean on me, his load to share;
And while I prayed I found him, home returning,
Disguised in sorrow, worn and bent with care.

My sorrow vanished in the joy of giving;
Raising the drooping form, the weary head.
Ah, then I loved! When for another striving—
Lo! in my arms I found the Christ instead.

SELECTED ARTICLES

[From "A Book Study" in *Twentieth Century Magazine* for October, B. O. Flower, editor.]

That portion of this work [Faith and Works of Christian Science] which deals with Christian Science as a religion, its genesis, and the life of its Founder, is so crowded with misstatements, misinterpretations, innendoes, exaggerations, distortions, and strained and unwarranted interpretations advanced to give sinister meaning where there is no warrant for the inferences conveyed, together with the restatement of falsehoods, calumnies, and slanders that have time and again been refuted and disproved, that it would take a volume to expose them. Want of space compels us to notice only a few typical exhibitions from the host which crowd these pages and render the book worthless for thoughtful lovers of fair play.

(1) Our author is greatly exercised over Mrs. Eddy's revisions of Science and Health. He gravely informs his readers that she has "endlessly revised and expurgated, without sense, without conscience"—a very sweeping and reckless charge but very characteristic of this writer. On another occasion he speaks of her "innumerable changes and expurgations." The aim of the doctor is clear. He would intimate that Mrs. Eddy has no well-defined religious philosophy; that she is constantly changing her views and is as unstable as water. Those who know her and her teachings will understand that the very reverse of this is true. Moreover, in the light of the simple facts, the absurdity of such silly carping is manifest. All students of metaphysical or idealistic philosophy know full well that the great prophets, mystics, and leaders have at all times experienced the greatest difficulty in making spiritual truths discernible to the minds of those steeped in materialism. The great Galilean found even his own students listening to his luminous spiritual truths with uncomprehending ears. To them many of the Nazarene's words were as utterances in an unknown tongue, and he had constantly to explain and interpret his truths. Even to Confucius, the lofty idealism of Lao-tze was incomprehensible. Plato's noble idealism has had to be explained and reexplained before it has been comprehended by the many. Kant and all the great transcendental philosophers have found the same difficulty in translating idealistic and spiritual concepts into language that could be comprehended even by ordinary schoolmen. Says Prof. Herbert E. Cushman, Ph.D., of the chair of philosophy in Tufts College: "I do not find the difficulty with Mrs. Eddy's literary style that others find, for one gets used to lack of style in philosophical writings where the thought is difficult to express."

Now, what Mrs. Eddy has striven to do in her revisions has been to make clearer and more readily comprehensible to the many who have long been accustomed to think along materialistic lines, the spiritual truth she believes to hold redemptive power for the children of earth—the power to bring them into rapport with the cosmic Mind, or to awaken in them the Mind that was in Christ Jesus. When this fact is understood, how pitifully puerile is the attempt to discredit the author of Science and Health by inferences intended to prejudice and poison the minds of those who know nothing of Science and Health; and yet this is merely one of many similar examples of unfairness that bristle from the pages of this work.

(2) Dr. Paget in his criticism cites the fact that Christian Science does not favor audible prayer, other than the Lord's Prayer. We might ask him if in so doing Mrs. Eddy is defying the teachings of the Founder of Christianity. One might think he was ignorant of Christ's solemn injunction to his disciples: "But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

Digitized by Google

We imagine, judging from numerous indications in the book, as well as from the doctor's utterances since the appearance of the volume, that he is so wedded to externalism, so much under the influence of material symbol. rite, and form. that he cannot understand the force and import of a religious message which seeks to turn the mind from the letter which killeth to the spirit which maketh alive. Mrs. Eddy has displayed the highest wisdom in resolutely discountenancing externalism in an age and hour when materialism was more and more gaining possession of the popular mind.

(3) In Dr. Paget's discussion of the religious teachings of Christian Science, there is from first to last no attempt to find out the Christian Science view-point or to criticize it intelligently. It is precisely as though the eminent churchman of Galileo's time who refused to look into the telescope for fear he would be convinced, had assailed the great philosopher on the assumption that because the scholars of Egypt, Greece, Rome, and medieval Europe had agreed that the world was flat, anything that demonstrated these conclusions to be erroneous must be false. Mrs. Eddy strives to do precisely the thing which offended the ritualists and devotees of externalism in Palestine two thousand years ago. Jesus aroused the animosity of the scribes and Pharisees when he exalted the spiritual above the material and proclaimed the loftiest gospel of spiritual idealism the world had ever known, to a civilization sunk in materialism. Mrs. Eddy has striven with all her power to subordinate externalism to spiritual verities, to a living faith and a virile religion marked by idealistic supremacy; and because she has done this she has aroused the aggressive opposition of the same class that has always fought all efforts to exalt spiritual idealism over materialism and externalism.

(4) For two thousand years church councils, popes, prelates, religious leaders, and the clergy have been interpreting various passages of the Bible. Great church leaders have based their distinctive messages and formulated creeds on their conception or interpretation of Scripture; and finally, throughout Christendom every Sunday, the clergy and ministers are engaged in interpreting passages in the Bible. But when Mrs. Eddy gives a spiritual interpretation of the Lord's Prayer, in connection with that prayer, Dr. Paget confesses to a condition that might well give his medical brethren concern for his mental or physical state.

(5) In spite of the author's devotion to externalism and symbolism, and though he is much exercised over the simplicity of the church architecture, the absence of crosses and formalistic and symbolic carvings, he is greatly offended because Science and Health bears on its cover a cross and crown, together with a solemn injunction of Jesus. Now here is a symbol that has been ever present in architecture, painting, sculpture, and song through the Christian centuries. Surely this should merit the doctor's approval. Instead, we find this amazing comment: "Crest and motto between them proclaim the vulgarity of Christian Science and her contempt or hatred for the Christian faith." It is almost inconceivable that a sane man should pen these words, and especially one who pretends to be a Christian.

Christian Science has had to meet the combined opposition of a large part of the medical profession and leading theologians, and the deep-seated prejudice of conservative and conventional thought. It has had to run the gantlet of misrepresentation, misinterpretation, slander, and falsehood, born of ignorance or mendacity, which all new messages and philosophies have to encounter; and in spite of this, through its wonderful works and its healing power over body, mind, and soul, it has steadily and rapidly grown wherever it has gained a foothold. All sensible people know that the sick and suffering are the last people who would seek and consort with persons who have no pity or sympathy, who are cruelly indifferent and contemptuously neglectful of the sick and suffering. If half the vicious and false charges made by Dr. Paget were true, the marvelous spread of Christian Science among the most thoughtful and enlightened people of England and America would in itself constitute an indictment against the sanity and moral rectitude of the English-speaking world, more grave than anything that its worst foes have had the hardihood to advance.

[E. M. Ramsay in *Edinburgh* (Scot.) *Scotsman.*]

Christian Science is an enigma to the critics, and will continue to be an enigma, as long as they reject the explanation of the healing given by Mrs. Eddy, and insist that the cures are effected by suggestion. It is because they one and all start on this false assumption that they find the text-book, Science and Health, unintelligible. The fact is that the large majority, even among otherwise well-informed people, are in almost complete ignorance of the nature of thought, and cannot distinguish between the true and the false; hence they confound the action of absolute Truth, the divine Mind, with the activity of the so-called human mind. According to the teachings of Christian Science, all the troubles of the world, sin, sickness, poverty, sorrow, are the outcome of inaccurate thinking, of an imperfect conception of the nature of the First Cause, Life, God, and of the relationship between God and man. In order to be delivered from the evil effects of inaccurate thinking, thought must be corrected, not by the substitution of one suggestion for another, but by the absolute truth. "Ye shall know the truth, and the truth shall make you free."

The practice of Christian Science destroys mesmerism, or to speak more accurately, dispels it, as the truth revealed in mathematics dispels false impressions about the numbers; thus it will be seen that far from being the offspring or ally of mesmerism, Christian Science is its opponent. It no more follows because suggestion and Christian Science are both intangible and imponderable that they must be akin, than that gas must be abstract because it is invisible, a mistake which is frequently made by children when first asked to distinguish between the abstract and the concrete.

The subject of Christian Science is one of immense interest and importance, and we believe that ere long it will be treated with the respect which is its due. Meanwhile the students of this Science go quietly on their way, knowing that neither derision nor misrepresentation can alter the fundamental facts of being. "Heaven and earth shall pass away, but my words shall not pass away."

[Jesse Pickard in *Survey*, New York.]

It will be found upon investigation that thousands of individuals have proved the efficacy of Christian Science to lift them out of the very depths of want as well as to heal them of every kind of physical and moral disease. If Christian Science relied upon the activity of the human mind, our critic might be more correct in his statement that it did not heal that baneful disease, poverty, but because Christian Science is above all a religion, and relies upon the divine Mind to meet all needs, it can and does meet and heal this condition. Christian Science, as its name indicates, presents to the world accurate, demonstrable Christian knowledge, based upon one infinite Principle, the divine Mind, God, and the correct application of its rules is followed by positive results that prove the truth of its premise. It is therefore available to all men alike.

As to the statement that we disregard the play of social forces and overlook the dangers of personal contact, let me

Digitized by Google

say that Christian Science demonstrates the privileges of man as an intellectual individual not only to be uninfluenced by social evils, but to be a positive influence for the overcoming of these evils through individual right thinking, whereby he reflects the eternal power of absolute Truth.

Our critic does not rightfully assume that Christian Scientists look with "disdain" or "contempt" on his belief. It is not reasonable to think that those who have once experienced every form of human suffering would thus regard any honest endeavor to combat these evils, or that, because they have finally found relief therefrom, they would be deficient in their understanding of these problems. On the contrary they understand and sympathize the more deeply, and earnestly recommend the mode of escape which has proved efficacious for them.

[Alfred Farlow in *Shreveport* (La.) *Journal.*]

We are of the opinion that the best way for a clergyman to prevent his flock from migrating is to make his own gospel so practical and desirable as to forestall any desire to look for "greener pastures." Whether or not it may be in good taste for a minister of the gospel to spend his time in an effort to discredit the religion of others instead of faithfully preaching his own sense of the gospel, we think all will agree that he should at least avoid any statements that are likely to give a wrong impression of the religion which he attacks.

Christ is the divine idea appearing in consciousness, which governed the human personality of Jesus and by means of which he did his wonderful works. We may illustrate the first and second coming of Christ in the following manner. A mathematician demonstrates a proposition on the board and thus proves that he is a mathematician, that he understands mathematics; but this is not sufficient to make a mathematician of the pupil. Nevertheless this may be considered the first coming of the mathematician, and it is an essential feature in the process of making mathematics practical. By and by the pupil learns what the mathematician knows. He acquires the mentality of the mathematician and is thereafter able to take up the book and demonstrate the proposition as it has been done by the teacher; and thus he, too, becomes a mathematician. This latter experience may be thought of as the second coming of the knowledge which constituted the mathematician.

Similarly, the first coming of Christ was in the person of Jesus, who understood and demonstrated the truth in all its perfection. The second coming is the realization of what he understood, by means of which the disciple is able to do what he did, in confirmation of his promise, "He that believeth on me, the works that I do shall he do also." The difficulty with our critic is that he does not follow the Scriptural injunction to compare spiritual things with spiritual in his discussion of what Mrs. Eddy teaches. He admits that Christian Science is founded upon the premise, "God is a Spirit;" that Spirit made all that was made and made it spiritually, and therefore that the universe, including man, is spiritual and not material. The gentleman also knows, if he has read the Christian Science text-book at all, that Christian Science recognizes the false belief of life, substance, and intelligence in matter, which must be overcome by spiritual growth.

If he will turn to Scriptural teaching, he will find that Jesus and his apostles taught exactly the same thing: Paul declared: "They which are the children of the flesh, these are not the children of God;" which means that God made man spiritually, and that the material sense of man is a false sense which must be overcome by putting off the old man with his deeds, and putting on the new man, "which is renewed in knowledge after the image of him that created him." Jesus said: "It is the spirit that quickeneth; the flesh profiteth nothing." Spirit alone gives life and existence to creation. In other words, there is nothing real in existence which is not the product of Spirit. Flesh, matter, material sense, is altogether unprofitable, that is, it does not add to nor take from the creation of God, Spirit. It is not included in the divine economy and has no signification.

Again, the Master said, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit;" which means, that which is of God, Spirit, is spiritual and not material. Materiality is not of God, and since God is the only creator, it does not exist at all, and is only real to material sense. It was necessary that the Christ should appear, and Christ did appear, not because of any material origin but in spite of the fleshly, false, material sense. Christ appeared in the flesh just as light appears in the midst of darkness. Darkness has nothing to do with the manifestation of light, neither can it withstand the light. Light appears in the midst of darkness and dispels it.

So, Christ Jesus appeared first as a child; he "waxed strong in spirit" as he grew in stature. Step by step he advanced, until he overcame the "world, the flesh, and the devil;" triumphed over death, and finally overcame matter altogether and was translated—became spiritually perfect and rose above material sense altogether. Although he had said, "Lo, I am with you alway," he was not thereafter perceptible to human sense. The critics who do not understand this teaching of Christian Science would do well not to attempt to explain it.

[Frederick Dixon in *East Anglian Daily Times,* Ipswich, Eng.]

The story about Christian Science, quoted in your issue of the 20th inst., has more claims to respect than you are perhaps aware of, one of these being that it is extremely venerable. At the risk, however, of being taken for a person without any sense of humor, will you allow me to explain that among its many merits there is not even a suspicion of accuracy. I am obliged to say this, for I find that numbers of its admirers have never dreamed of it. Seriously, then, will you permit me to point out that the story is leading people to believe that Christian Science healing is a form of will-power. Now will-power is expressly repudiated as a healing factor in Christian Science. If it were a factor, then it could only be said that evil is power, for such a power could undoubtedly be exerted for good or evil.

Jesus said, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Therefore, it is certain that will-power is not the fruit of a good tree; it is the fruit, of course, of "the tree of the knowledge of good and evil," the effect of eating which the Bible describes as death. Fortunately, the only true thing that can be said of evil is that it is a lie, and the only semblance of power it can ever manifest is the illusion produced by being deceived by a lie. Everybody who has ever tried to use will-power must know perfectly well that it is a broken reed; the day comes inevitably when, like every house built upon the sand, it exposes its own frailty by suddenly collapsing. Christian Science healing, on the other hand, has its foundations sunk deep in the rock, the spiritual foundation on which Jesus built his church; in a word, in the absolute truth. Jesus said, "Ye shall know the truth, and the truth shall make you free;" and as man begins to grasp this truth, he begins to repent; that is, to change his mind from a material to a spiritual outlook, from a belief that evil is power, to an understanding that there is no power but good, that is God, and so to find that "the kingdom of heaven is at hand," for "the kingdom of God is within you."

[H. Coulson Fairchild in *Short Hills* (N. J.) *Item.*]

We believe that the ascension of Christ Jesus demonstrated the reality of the spiritual and the unreality of

Digitized by Google

that which is termed material. Jesus said: "It is the spirit that quickeneth; the flesh [matter] profiteth nothing."

As to the personal nature of God, Christian Science indicates that God is personal in an infinite sense, but not in a finite sense. This infinite idea of the Deity in Christian Science constitutes a concept which makes God universal; a God who is ever present and omnipotent; it takes away the limited thought of God. Christian Science teaches that Christ Jesus had at all times the mastery over evil and sickness, and shows that the same Principle destroys them both. It further teaches that Christians must gain dominion over all error through an understanding of the teachings of Christ Jesus, and a life lived in conformity therewith. It is not taught in Christian Science that a blind belief in the personality of Jesus will save us.

[Ida Hodnett in *Birmingham* (Ala.) *Age-Herald.*]

The purpose of Christian Science is simply the correction of all kinds of error, no matter how time-worn or how new to the present sense of the individual and of the human race in general this error may be. That it has healed both sickness and sin in very many instances is now generally admitted; also it is admitted that those who are faithfully following its teachings, obedient to its rules, are men and women of clean and joyous lives. How is this purpose accomplished? It is not by the influence of one human mind over another, the injection, so to speak, of human beliefs, opinions, or impulses into the conscious or unconscious, willing or unwilling personality. The influence of the human mind is avoided. It is the looking to God as the only creative Principle of all that exists, as the infinite Mind or Spirit, wisely and lovingly enforcing obedience to spiritual law, in the realization of whose presence all the discords of human error must cease. "Be still, and know that I am God," is the key-note of Christian Science practice. To confuse this process of invoking the power of that always-nigh presence with hypnosis, the process of inducing the hypnotic state, is merely to misunderstand the actual facts. The confusion, however, between the action of the human mind, sometimes good and sometimes bad, and the action of the divine Mind, which must of necessity be always harmonious,—this confusion will eventually disappear.

[Written for the *Sentinel.*]

SELF-QUESTIONING.

FRANCIS E. FALKENBURY.

HAVE I no faith today,
That I go halting on the road to God?
Have I so soon forgot the backward desert way,
Have I so soon forgot the love that led each day?

Have I no faith today,
That I trust not in my all-loving God?
Have I forgot His food that was my daily stay,
The water-springs which flowed from rocks that barred the way?

Have I no faith today?
That I should falter in my thoughts of God?
Have I so soon forgot the walls that fell away,
So we came into Jericho all sin to slay?

Have I no faith today,
That I feel not the glory of my true being, God?
Have I forgot the thrill—that first sweet sacrament,
The glowing of the ark that stood within the tent?

AMONG THE CHURCHES.

ASHEVILLE, N. C.

The members of the Christian Science society of Asheville wish to announce that, because they feel that the specific mission of their organization has been fulfilled, and for the sake of increased unity and spiritual cooperation among the Christian Scientists of Asheville, their organization, namely, the Christian Science society, has been permanently dissolved. ELIZABETH EARLE JONES.

Asheville Citizen.

[We learn that the former members of the above society are now in attendance at First Church of Christ, Scientist, of Asheville, and are very glad to note this evidence of unity among the workers in this field.—EDITOR.]

PORTLAND, ORE.

Fifteen hundred persons can be comfortably seated in the great auditorium of the new First Church of Christ, Scientist, now building on the half block on Everett street, between Eighteenth and Nineteenth, the corner-stone of which was laid last Tuesday morning [Aug. 31] with appropriate ceremonies.

The new church, which will be one of the handsomest and largest edifices of its kind in Portland, will cost one hundred thousand dollars. Work of laying the foundations began several weeks ago and has progressed rapidly. It is expected that the building will be completed by Sept. 1, 1910, just a year from the laying of the corner-stone.

Faced brick of Wilkeson sandstone, from Wilkeson, Wash., is the material of which the building will be constructed. Architecturally the church will differ materially from any other in the city. Simple lines and the classic style are the features predominating in the architecture. The dome, arising over the central part of the building, will probably be the largest in the city. It will measure fifty-two feet across the interior. In the center of the dome will be a skylight, with a "sunburst" in the ceiling. All the main columns and trusses for the dome will be of steel. Its highest point will be fifty feet above the level of the street.—*Portland Oregonian.*

GALESBURG, ILL.

Sunday, Sept. 5, was a memorable day for the Christian Scientists of Galesburg. On that day, for the first time since the inception of the work here, services were held in their own home. As is known, some months ago they acquired the Hale property on the corner of Cedar and South streets, and remodeled the dwelling sufficiently to permit of holding services there for the present. Sunday the room was filled with an attentive congregation, and while the service did not vary from the usual simple Lesson-Sermon, there was much quiet rejoicing over this first step toward securing a building suitable to their needs and commensurate with the growth of the Cause.

Galesburg Mail.

CORRECTION.

We learn that the statement copied from the *Minneapolis Journal,* in our issue of Sept. 4, to the effect that First Church of Christ, Scientist, of Minneapolis had paid twenty thousand dollars for a new building site, was an error. The purchase price was ten thousand dollars.—EDITOR.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

AN AMENDED BY-LAW.

ARTICLE XXVI.

ASSOCIATIONS.—SECT. 6. The associations of the pupils of loyal teachers shall convene annually. The pupils shall be guided by the Bible, and Science and Health, not by their teachers' personal views. Teachers shall not call their pupils together, or assemble a selected number of them, for more frequent meetings.

"FEAR NOT."

THROUGH all the centuries mankind has been cheated and defrauded by its belief that evil is something real and powerful, but in the last half century, fortunately, through the discovery of Christian Science and its teachings by Mrs. Eddy, multitudes have been awakened to the falseness and iniquity of this belief, and thereby they are being freed from it and from its consequences. Through this belief in the supposed power of evil, and through it only, fear has entered into human consciousness, and only by its destruction can mankind avail itself of the blessed gospel proclaimed by the Master, who came "to heal the brokenhearted, to preach deliverance to the captives, . . . to set at liberty them that are bruised."

The admission that evil is real, whether this admission be tacit or expressed, must of necessity carry with it the belief that evil is of divine origin, a belief which, when stated in plain words, is seen to be opposed to Christianity, because it either denies the omnipotence of God or holds Him to be the creator of evil and thus responsible for all sin, sickness, and death.

Evil not being of divine origin, and therefore being unreal in the sense that only God's creation is real, has no power; therefore, in fearing it mankind is simply fearing a self-imposed belief. This is a strong point in Christian Science, and Christian Scientists must rouse themselves not only to claim their freedom from evil, but also to assert their freedom from the fear which would give it power. Mrs. Eddy writes, on page 380 of Science and Health: "The physical effects of fear illustrate its illusion. Gazing at a chained lion, crouched for a spring, should not terrify a man;" and she adds, "Nothing but the power of Truth can prevent the fear of error, and prove man's dominion over error."

That evil is held in Christian Science to be an unreality does not give Christian Scientists liberty to practise it, and Mrs. Eddy makes this very clear when she writes: "The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality" (Messages to The Mother Church, p. 50).

Jesus' saying, "Be not afraid," is a note of divine encouragement to mankind, and we are taught in Science and Health (p. 425) that we are to "correct material belief by spiritual understanding," and that when we do this we "will never fear again except to offend God."

ARCHIBALD MCLELLAN.

EVIL'S INCONGRUITY.

EVERY truly noble nature has met with unnumbered experiences which have excited outspoken revolt against the untoward companionship in human life and thought of good and evil, truth and error. How few are the hours that do not bring us some exhibition of that continuous tragedy which is incident to the belief in the association of these opposites in nature and in experience. Delighted with a rose, so exquisitely modeled as to suggest the divine, we pluck it only to find a repulsive worm feeding upon its heart. The little bird whose cute ways and seraph song have made it a household treasure is left unguarded for a moment, and we are recalled by its despairing cry as it is snatched from its perch by a cruel claw. Thus in the home, the garden, the street, everywhere, the beautiful and the bestial, the inspiring and the iniquitous, are often found in that incongruous contact which begets in sensitive souls well-nigh continuous pain and protest.

The offense is yet more intimate—in the make-up of our friends, the members of our family, yes, in our own consciousness, we often come upon utter contradictions of nature and of impulse. How often have we found ourselves harboring a prejudice or a resentment that is wholly foreign to our aspiration and general attitude of thought!

Despite the multiplicity of such experiences, however, there remains the ineradicable sense that these things are unnatural, and unauthorized by any legitimate law or government, and we are sure that the innateness and persistence of the protest of higher sense is a prophecy of better things, a promise that the harmony and peace which should be, will be. Christian Science has tremendously intensified this conviction by its disclosure that in truth the good is never touched by evil, although the immediate effect of its study and acceptance sometimes seems to be an increase of the show and intensity of evil. Phases of ignoble and unchristian temperament that were latent are apparently made active, so that, in his becoming, the Christian Scientist has sometimes been a surprise to himself and his friends! This stir speaks, however, both for the uncovering of error and for the vitality and significance of the truth which is thus turning the fallow ground of mortal selfhood, and in the ever-increasing light more wholesome conditions presently appear.

The dewdrops which laden the leaves with purity and with light may be brushed away and be seemingly lost in the slime of the roadside; but the sun calls to them and they respond, for they are the children of the upper air, and as they blossom in the gardens of the sunset they declare again the eternal fact that truth and goodness and beauty are forever clean and pure, forever ideal; that they belong to God and are safely kept by Him "unto eternal life." The protest of our better nature is legitimate and right. Though honored by the erudite and practically consented to by many Christians, the philosophy that evil is good in the making, that their association is heaven-designed, is forever false, and every sane and saintly intuition rises up to assert it in our hearts and in all the ministries of Christian Science.

This is the strength of Mrs. Eddy's teaching, that she declares God, good, aright, forever ideal, forever sovereign. This, too, is the joy of Christian Science. Break the belief in the planned-for place and service of materiality and a new sense of freedom and of gladness immediately springs up in the heart. The longing of every better self for an unmarred life, the life that knows no sin, disease, or death, the life that is the heaven of humanity's undying hope,—this is the voice that was heard "crying in the wilderness of Judæa," and it is speaking again in our hearts for a perfect God and His perfect universe.

JOHN B. WILLIS.

THE TENTH COMMANDMENT.

In the sixth chapter of Deuteronomy we read: "And the Lord commanded us to do all these statutes, to fear the Lord our God, for our good always, that he might preserve us alive, as it is at this day." There are many who mistakenly believe that God's laws are intended to enforce the divine authority rather than to bless those who obey them, but nothing could be farther from the truth. God is altogether too great to need honor of us, and He could not be honored by anything less than the happiness and prosperity of all His children. Our obedience to divine law is "for our good always," and it is also for the universal good, since Christian Science teaches us that "whatever blesses one blesses all" (Science and Health, p. 206). The one who strives constantly to obey God's law is a public benefactor, and Christ Jesus said of those who obeyed and taught these commandments, "that the same shall be called great in the kingdom of heaven."

It goes without saying that obedience to be of any real value must be intelligent. We must understand something of the one who demands our obedience, and we must also learn how to obey. In the case of a student of art or applied science, no mere effort to work out a problem would bring the desired result. Some measure of understanding is needed from the start, and this quickly unfolds into fuller understanding, as it is put into practice.

The tenth commandment "Thou shalt not covet" is unique in that it is addressed wholly to thought and gives no hint of either reward or punishment, yet it is tremendously comprehensive. It can be readily seen that if it were understood and obeyed, no crimes would ever be committed. Disobedience to it may be said to spring from what St John calls "the lust of the eye," the desire for material things. It was this which tempted Eve, when she believed that the forbidden fruit was "pleasant to the eyes," and through her disobedience and that of her husband "many were made sinners" (to quote St. Paul).

The utter folly of covetousness is illustrated in the account given in Genesis. According to the record, God had left no need unsupplied, yet we find that the acceptance of the serpent's suggestion blinded the eyes of Adam and Eve to the infinite provision made by divine Love for all human need, and as soon as they turned away from that which was divinely provided their troubles began, and this will be our experience also until we learn the wisdom of seeking our supply from God who is Spirit and who alone can give us that which satisfies and endures. To covet that which another possesses shuts out from our vision that which God has for us, and we cannot do this if we really understand Christian Science. Our revered Leader says that, in her own experience, "the first spontaneous motion of Truth and Love, . . . banished at once and forever the fundamental error of faith in things material; for this trust is the unseen sin, the unknown foe,—the heart's untamed desire which breaketh the divine commandments" (Retrospection and Introspection, p. 31).

Truth is calling loudly to us at this hour to rise to greater spirituality, for thus only can we stand in "the hour of temptation, which shall come upon all the world, to try them that dwell upon the earth," as we read in Revelation. Paul bids us "covet earnestly the best gifts," and those that he enumerates are spiritual. A story is told of one who in time of shipwreck loaded himself with the gold which some miners had thrown away. They were saved, but he sank into the depths. If we would teach the children to "love not the world, neither the things that are in the world," we must prove to them how real and satisfying are the things of Spirit, for this alone will lift them above the sin of covetousness and enable them to fulfil God's law in the Christ way.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

New Haven, Conn., Oct. 11, 1909.

Mrs. Mary Baker Eddy.

Dear Leader:—Divine guidance alone led to the enactment of the new by-law published in the *Sentinel* of Oct. 9, 1909. It meets at the proper time a need that many have recognized, and declares a basic law which is vital to true Science. It will point the way for those who are anxious for that unity which is indispensable, give new courage to the pure in heart, who see in those prominent in Science work the triumph of Truth, rather than personal greatness. To those who realize divine Love and the presence of the "Comforter," it reaffirms, "Lo, I am with you alway, even unto the end of the world." May we all strive for that oneness with the Father which will demonstrate the unity of God's ideas, and so emulate your example.

The more I study your writings the more I realize the debt of gratitude I owe to you, the more I see how in time the world will appreciate your mission and its fulfilment.

With gratitude and love,

L. N. BLYDENBURGH.

Boston, Mass., Oct. 14, 1909.

Beloved Leader:—In "Miscellaneous Writings" you quote the words of Jesus, "What I do thou knowest not now; but thou shalt know hereafter." In faint, perhaps, but oh, in such pure and joyous tones, their echo seems to reach my longing heart.

Deep down in human consciousness, in my own life, I see the sickle of the "lord of the harvest" at work. At times I see clearly, and always strive to remember your teaching that "all mesmerism is one of three kinds; namely, the ignorant, the fraudulent, or the malicious workings of error or mortal mind" (Miscellaneous Writings, p. 51). I am striving to keep awake myself and to help awaken others, that I may know and demonstrate that I shall not defraud myself of the fulness of joy by believing in the reality of a selfhood apart from good. To have on the "wedding garment" in this hour is to catch in my work eternal tones of courage and joy from your ascending footsteps. The multitudes that call you blessed!

With deep gratitude and love,

HELEN A. NIXON.

Chicago, Ill., Oct. 8, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The students of Edward A. Kimball, assembled for their annual meeting, have elected Mrs. Kimball president of the association. We are grateful that the teaching we have received enables us to realize, in a measure, the import of your message, published in the *Sentinel* of Sept. 4, "There is no Death." Refreshed and satisfied by this soul-inspiring article, we thank you for your additional assurance of the reality of Life and the unreality of evil, disease, and death. We also appreciate your comment on a student's tribute to Mr. Kimball's "clear, correct teaching" contained in the *Sentinel* of Sept. 18.

We are convinced that the law of God discovered by you through Christian Science is ever operative. We pray that our lives may attest our consecration to the Cause of Christian Science and the applicability of your teaching found in Science and Health (p. 497): "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

Lovingly yours,

Mr. Kimball's Association,
ROWLAND T. ROGERS,
Committee.

J. PORTER JOPLIN,
WINIFRED S. ROSS,

Digitized by Google

Evanston, Ill., Oct. 10, 1909.

Dearly Beloved Leader:—I have long wished to express my love and gratitude to you for your loving, unselfish, guiding care in leading us to know God aright. It has enabled me to rise above pain and sorrow, to forgive and love, and I know of no more fitting time than the present to express this gratitude, since we have gained such an uplift from your message, "There is no Death." I shall never cease to love and be grateful to my beloved teacher, Edward A. Kimball, for his "correct teaching," and grateful to his dear wife, who so bravely steps forward to help his students and conduct his association. It is my prayer to be more worthy of this teaching, and to consecrate thought more closely to God, by endeavoring to live the life you commend.

Lovingly your follower,
STELLA SCOTT THOMPSON.

London, W., England, Oct. 2, 1909.

Dear Mrs. Eddy:—Words convey the very smallest expression of what I feel for the wonderful truth you have through your purity been able to give to a careworn, sorrowing world; for the practical scientific understanding of God, and the power it has given us to put this understanding into practice, bringing into our lives the natural results, peace, harmony, activity, and the real understanding of what Love is. As we gradually learn that "the Christian Scientist loves man more because he loves God most" (Miscellaneous Writings, p. 100), we gain a further glimpse of this great truth. For this revelation alone I feel compelled to write and tell you how deeply grateful I am to you, and I pray my actions may prove my sincerity. God bless you, dear Mrs. Eddy.

Yours in loving obedience,
MRS. EDITH I. COHEN.

Boston, Mass., Oct. 5, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved and Faithful Leader:—That you are justly entitled to this designation is the enduring belief of one who had for many years fought what he understood scientific Christianity to stand for, when denominated by you Christian Science.

Not quite two years ago, while adding to my supposed fund of knowledge by reading the *McClure* articles, one of your "little ones" asked my respectful attention to your book entitled "Unity of Good." In response thereto I endeavored to read it from the view-point which prompted you in giving it to the world, and strange as it may appear, I accepted first of all the chapter, "Is There no Death?" From that hour to the present I have been striving to grasp more and more of the revelation of Truth which I have since found within the covers of the priceless Christian Science text-book and your other writings.

Your recent wonderful article, entitled "There is no Death," prompted me to write you and return thanks for this added evidence of your faithfulness, regardless of any and all manifestations of error. God is good; and, as you say, "the time for thinkers has come" (Science and Health, Pref. p. vii.). Yet, while under the teachings of scholastic theology, as a Bible student, I found that a right way to Truth was not discoverable, unless it was admitted either in premise or conclusion that God is hopelessly involved (presumably for our good of course) in all the activities of His creation, whether good or evil. Christian Science, as I understand it, tears the mask absolutely away from all false systems of religion, with the result that God, good, is seen as the infinite creator of goodness; that Christ, Truth, is the only way to life,—and that the true worshiper always worships the Father in spirit and in truth.

Since accepting Christian Science as a rational, commonsense, practical religion, I have been able to demonstrate its truth in overcoming false desires, appetites, and passions. In nearly every section of North America I have come in contact with Christian Science and Christian Scientists, and I know that sickness and sin are being overcome, "by one and the same metaphysical process" (Science and Health, p. 210), just in proportion as the Christ-life is being lived.

I am not as yet a member of any Christian Science church, but when I have the greatest of all earthly honors of being identified as an active, honest member, I shall be content to follow you, dear Leader, as you follow Christ, and as you have so lovingly advised us to do. With reference to present events heralded in the press of the hour, with Paul I declare: "None of these things move me." I am confident no real Christian Scientist entertains the thought for an instant that you do not exist in the flesh right now. It is also plain that we have the right to love you as the revelator of Truth to this age.

Sincerely and gratefully,
ARTHUR HENRY SWANK.

Bagot, Hale, Cheshire, England, Sept. 24, 1909.

Beloved Leader:—My heart overflows with joy and gratitude to you, for the glorious truths which are being unfolded to me through our "Key to the Scriptures." For the past fourteen months it has been my privilege to do a little work for the Cause in a very active field, and I know you will be glad to hear about a strong little center which has been started here at Hale-Altrincham, Cheshire, England. In July, 1908, a society was formed, the outgrowth of work done by a few earnest Scientists. Seven months later (April, 1909), Dr. Fluno gave us our first lecture. It was very well attended, and listened to with great attention. During the lecture there occurred a case of healing where much pain had been endured for many months, and a chronic ailment of many years' standing, in the same person, was greatly relieved, and is now disappearing. He is now a regular attendant at our services, and his wife and children have been brought into Science through this.

The good seed has been sown in our midst, and though as yet we are very few workers, we know that with earnest loving thought, and loyalty in following your teaching and example, we shall soon be a large and vigorous center, bringing love and joy to the sick and suffering, as we realize that "to all mankind and in every hour, divine Love supplies all good" (Science and Health, p. 494).

Lovingly and gratefully,
IDA HUME.

San Jose, Cal., Sept. 21, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—For fifteen years I have read "Science and Health with Key to the Scriptures." When the book came to my home, life was a burden. Through its study I have found the only satisfying joy I have ever known. It is your teaching and your obedience to divine Principle that has given woman her place with man. "Sometime we shall learn how Spirit, the great architect, has created men and women in Science" (Science and Health, p. 68). I love you because you have given us a better understanding of the truth of being.

Truly yours,
MRS. NELLIE M. WHITESIDE.

THE LECTURES.

The address of Bicknell Young, member of the board of lectureship, is Whitehall court, S. W., London, England.

WESTMOUNT, QUEBEC.

A lecture was given by William D. McCrackan, M.A., of Boston, Mass., in Victoria Hall, Sept. 23. The lecturer was introduced by Major Lacey R. Johnson, who said in part,—

I have been asked to introduce to you this evening a speaker who will address you upon the most momentous question that has ever occupied the public mind. Christian Science seems to me wonderful in the way it has taken hold of the minds of men and women throughout the whole world. No matter where you go—on trains, or in hotels, before you have been in conversation long with the people around you, some one is sure to mention the subject of Christian Science. I am not a Christian Scientist myself, but I have for some months past given the subject careful study, and the more I know of it the more I want to know. Like you, I have come to learn.—*Correspondence.*

OLEAN, N. Y.

Bliss Knapp delivered an address on Christian Science yesterday afternoon [Oct. 3]. He was introduced by Willard Rooks of Salamanca, who said in part,—

Christ Jesus was the most scientific man that ever lived. He knew more of God than other men. In doing the will of the Father he expressed eternal and universal law. By his greater knowledge of the divine Principle of all, he redeemed and saved humanity—he healed the sick and suffering, he lifted the burdens of sin and sorrow, yea, and he raised the dead. He taught his followers to imitate him. He said that whosoever believed on him and kept his sayings should do the work he did. He promised that even greater works should be done.

This, my friends, was the priceless import of the Master's career, for had not his doctrines been applicable to all needs in every time and in every place, he could not have been the Wayshower and Saviour to a needy humanity. For many years Christian Science has been emphasizing this great fact, and today Christian Science Mind-healing stands out as a universally accomplished and admitted fact.—*Olean Times.*

LECTURES TO BE DELIVERED.

Evanston, Ill.—Mrs. Sue Harper Mims, Church Edifice, Chicago avenue and Grove street, Sunday afternoon, Oct. 24.

Poughkeepsie, N. Y.—Rev. William P. McKenzie, Collingwood Opera House, Oct. 26.

Bellingham, Wash.—William D. McCrackan, M.A., Aftermath Club House, Eldredge avenue and Broadway, Oct. 28.

TESTIMONIES OF HEALING.

It is with great joy that I give my testimony to express my thanks to God, and my gratitude to Mrs. Eddy, for Christian Science—the truth which makes free. For seven years I suffered with severe spinal and stomach trouble, although I had many physicians. In October, 1908, I was very ill, and after two weeks' treatment a prominent physician here said that he had given me the strongest medicine known to medical science, but that my stomach would not respond to medicine, and he could do no more for me.

I had almost reached the limit of human endurance, when a neighbor asked me to try Christian Science. She told me that many people had been healed by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did not believe in Christian Science myself, but I had many friends who had been wonderfully benefited; so I read the book through once, but I did not seem to understand what I was reading. My neighbor said I should read it again, that the light would come to me; so I read, studied, and prayed for understanding. I soon realized that my stomach did not distress me, and I could eat anything with no ill effect, which should have convinced me of the truth in the book; but I was still suffering terribly from the spinal trouble, and my husband insisted upon my consulting a lady physician. I did so, but with no beneficial results. Then, having lost all faith in man, I turned with all my heart to Science and Health, which brought to light the only living and true God, and man made in His image and likeness. It proved to me that sin, sickness, and death are but human beliefs, having no power or place in the kingdom of God.

I was blessed with this understanding in reading the book for the third time, and was healed. My physical healing has, however, passed into insignificance, compared with the spiritual uplifting. Mrs. Eddy's book was truly a "Key to the Scriptures" for me. I had seldom read the Bible, thinking it mere history of the past, which could not be lived or practised in this age; but I have learned that with God it is always now, that He is our ever-present help, and that in acknowledging no other power, all sorrows and fears vanish. I have derived great comfort from these words on page 446 of Science and Health: "To understand God strengthens hope, enthrones faith in Truth, and verifies Jesus' word: 'Lo, I am with you alway, even unto the end of the world;'" and again, on page 14: "Sorrow is turned into joy when the body is controlled by spiritual Life, Truth, and Love. Hence the hope of the promise Jesus bestows: 'He that believeth on me, the works that I do shall he do also.'" I have proven this true, and now my greatest pleasure is in helping others.

God is abundantly blessing His faithful servant, Mrs. Eddy, for devoting her life to that uplifting of humanity which is made apparent by the "signs following," all over the world. I hope this testimony will encourage some one to investigate this truth, by reading Science and Health, and that he may thus be blessed with the "peace of God, which passeth all understanding."

MRS. CHARLOTTE J. WHITNEY, Omaha, Neb.

[Translated from the German.]

Sincere and heartfelt gratitude impels me to tell others what Christian Science has done for me and my family. Five years ago it found me ill and full of sorrow. I had suffered for seven years with a severe trouble in the back; neither medical treatment, nor massage, baths, etc., brought relief. I then heard of Christian Science, and immediately had great faith in this teaching. I asked for treatment, and when I was told that God did not want me to suffer, a heavy load dropped from me, for up to that time I had borne it all, believing that God had inflicted it upon me. After the first treatment the pain that troubled me most disappeared, and in three months' time I was completely healed. I was also healed of a so-called inherited stomach and liver complaint, as well as of blood-poisoning in the left hand.

My husband was healed through Christian Science of a serious affection of the lungs and kidneys, also of peritoneal inflammation. My oldest daughter became afflicted with a disease of the eyes, but was entirely healed in three months. We have overcome many other physical ailments through the understanding gained by the wonderful teachings of Christian Science. Christian Science has helped us under many circumstances, and this surely would be reason enough for being thankful all one's life, yet at times these benefits seem small to me compared with what I have received spiritually. I have been studying Science and Health for the past three years, and although I did not know one word of English I began to translate it word for word with the help of a dictionary. The love for this task, and the ardent desire to gain more and more of the glorious truth and a better understanding of God, helped me to go on faithfully and patiently step by step, so that today I am able to read and understand well the text-book.

The truth which I have received through the daily study of the Lesson-Sermons, and by attending the meetings and services which are so dear to me, has enabled me to understand God better and better and to recognize that Christian Science is a demonstrable religion,—that it is the truth which Jesus said would make us free,—for it has freed me of sickness, impatience, temper, a desire to rule, self-righteousness, envy, etc. Our faithful and beloved Leader has shown us through the revelation of this glorious religion the way to shield ourselves from the attacks of sickness as well as from the temptation to sin.

I cannot express in words my heartfelt gratitude to God, and to our dear Leader, Mrs. Eddy, but I am daily and hourly striving to do that which will prove my sincere gratitude. My earnest longing is to become more nearly perfect in my love to God and to my fellow-beings, and to rise higher and higher in the understanding of this truth, that I may be able some time to help others as I have been helped.—FRAU ANNA MOGWITZ, Berlin, Germany.

It is with sincere gratitude for the many blessings that have come to me through Christian Science, that I give this testimony. In the fall of 1907 I began to suffer with my left side, also my arm and throat. My throat seemed to be affected inside and somewhat swollen, and instead of getting better it grew worse, until some time in February, when the pain became so bad that I could hardly endure it. It was worse at night, and the pain and discomfort were so great that I could not rest or sleep. This condition lasted almost a week, until I was very weak and could scarcely sit up. My wife went to see a Christian Science practitioner in the afternoon, and asked her to treat me. I had not slept for three nights, but I slept all that night without once waking, and was surprised to find the next morning that the pain was all gone, and I had such a sense of peace and rest as I had never before experienced. While my throat was still somewhat sore, this soon went away, and I was healed of the disease in that one treatment.

Words cannot express my gratitude for what has been done for me. It was like coming out of darkness into light; out of pain into peace. I have been reading our text-book, "Science and Health with Key to the Scriptures" ever since. I give thanks to God for this wonderful truth, and to Mrs. Eddy for making it plain to us that we may walk in the paths of peace.

EMORY MCLEAN, Asheville, N. C.

Digitized by Google

I wish to testify, as best I may, to what Christian Science has done for me and mine. I am now fifty-two years old, and was always taught from early childhood that bodily afflictions were sent by God as a punishment for some wrong-doing, but since reading "Science and Health with Key to the Scriptures," and making a close study of the Bible, I have been constrained to change my way of thinking. Something less than two years ago I became interested in Christian Science, and determined to investigate it for myself, so I procured a copy of the text-book, and with a prayerful heart, desiring to know the truth, I read it through, then reread it, and made a study of the Bible in connection with it. I was then led to renounce many of my former opinions and beliefs. Having been a professed Christian for more than thirty-eight years, and a recipient of God's grace, I can truthfully say that the last eighteen months have been the most peaceful and fruitful period of all these years. In addition to the spiritual uplifting, I have been healed through this Science of various physical ills, and it is now over two years since I have taken or applied any medicine. About two years ago my little boy was healed almost instantly of a serious attack of bowel trouble through Christian Science. Last summer he had another attack of the same trouble, and although this like the other was very severe, it quickly yielded to the power of Truth. To God be the praise. I feel very grateful to Mrs. Eddy for this new-old light and way, and my prayer is that many may soon behold and follow this light.

W. A. PARKER, North Enid, Okla.

[Translated from the German.]

Ten years ago I was first afflicted with a most severe affection of the eyes, and four times since then have had a return of the trouble. The first three times I was cured through a course of medical treatment lasting nearly a year. The improvement, however, was not permanent, the headaches, heart trouble, and weakness returning after a short time. I had a very severe attack of this disease in the fall of 1908. The medical means which I applied, and which were very expensive, brought no relief; the disturbance of the heart and the headaches became so severe that I was nearly in despair.

While in this great need, I heard of Christian Science, applied by letter to a Christian Science practitioner, and was freed of all pain in three weeks' time. I felt light and cheerful, although I had not taken one drop of medicine, and can hardly tell how happy and grateful I am for my wonderful healing. The feeling of security under God's protection does not leave me, and I greet every day with deep gratitude that with God's help I am able to take up my duties cheerfully and with renewed strength, without being tormented by pain or the fear of becoming sick again.—ANNA WIECHERT, Dombrowken, Germany.

In the fall of 1903 it was my good fortune to procure a room with a Christian Scientist in New York city. She invited me to attend church with her, and in that way I became interested in this Science. All my life I had been looking for a religion which would meet my needs and a God who would answer prayer, and to this end I had attended churches of almost every denomination, read deeply into various theories, and looked into any cult that happened to present itself to me; but after investigation there seemed to be nothing for me in any of them. A month after I first attended the Christian Science church, I purchased a Bible, a copy of Science and Health, and a *Quarterly*, and from that time till now they have been my daily companions. Some six weeks after first hearing of Science, I was healed instantaneously of a violent attack of throat trouble by reading the following quotation from our text-book: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495). I seemed to grasp instantly the fact that if my consciousness was filled with God, there was certainly no room for anything else, and with this realization I was healed. I have never had to call a practitioner to my house, and can only remember of having had help six times. With these exceptions I have been able to meet all attacks, mental, physical, and financial, for five years. I also was able to help my son get rid of a malarial condition, and I have helped others on several occasions.

But the spiritual help which Christian Science has been to me outweighs all else. It is such a joy to realize what it means to be a child of God now; not alone in the future, but "now are we the sons of God," and as such we share in all the bounties of a loving Father. When we can once realize that God is the source of our supply, every need is met. When we learn to live very close to God, the beliefs of sin and sickness are kept out of our consciousness and our lives are all harmony. For the knowledge of these facts which I have gained in Science, I am most deeply thankful to God, who has given us our noble Leader, Mrs. Eddy, and also grateful to her for teaching us this wonderful truth which makes all men free.

MRS. H. VENABLE WILLIAMS, Jacksonville, Fla.

Ever since I have been in Science, a little more than two years, I have had a great desire to testify to the new life that has dawned for me in Christian Science. I know that it is the truth, that it can be applied, tested, and proven in our daily lives. When I first went to the reading-room for investigation, I was loaned a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. On my way home I felt, with such a deep satisfaction, that I was carrying a book that contained the truth for which I had been diligently searching for many long and weary years. When I arrived home I sat down to read, and it seemed as if every page revealed such wonderful truths, such illuminations. I have never ceased to be grateful for them.

At that time I was suffering much from a supposedly organic eye trouble, and was trying to gain relief and strength by wearing glasses, but after reading this book three or four months I was healed completely. I then got a copy of my own, also a *Quarterly*, and took the Bible, which had never before received so much attention from me, and went to work in earnest. Since then many other physical, moral, and mental derangements have been overcome by the daily study of the Lesson-Sermons, while others are yielding more slowly but surely, sometimes requiring the aid of a practitioner.

While I am very grateful for these healings, I am even more grateful for the knowledge of the divine Principle that heals the sick, casts out error, and restores harmony. Clouds of error may arise, and to our mortal sense bring a great deal of disturbance, but in the truth these clouds pass away, leaving the mental atmosphere perfectly clear and calm. Then it is that the light of truth reveals to us in glorious splendor our Father-Mother God, and our hearts are filled to overflowing with a joy and peace that can only be known by those who have experienced it. We are bidden to put on the whole armor of God, which is dazzling bright, and studded with the precious jewels of patience, meekness, purity, and holiness, which never lose their brilliancy.

I have often wondered how the world can ever thank Mrs. Eddy for rediscovering this divine Science, this lost art of Christian healing, but it can best be done by following her teachings.—LOTTIE L. HART, Lafayette, Ind.

Digitized by Google

I wish to express my gratitude for the many blessings which I have received in Christian Science. I have learned through its teachings, as set forth in "Science and Health with Key to the Scriptures" by Mrs. Eddy, to understand the Bible, and I have been able to overcome many ills of the flesh. My first demonstration after coming into Christian Science was over a case of deformity, and this was indeed a proof to me of its healing power. Shortly after, I was healed, by reading Science and Health, of a throat trouble from which I had suffered every winter. I had also suffered all my life with severe headaches, and within the last two years I have been able to work out my own salvation along this line.

I have had many proofs of the power of Christian Science in cases of earache, toothache, fever, and colds, also in financial difficulties, etc. Both of my children were born with help from Christian Science treatment, and the demonstration with my last one was indeed wonderful to me. I attended entirely to the baby, and was about the house, doing the needful things. The instruction, the spiritual uplifting, and the love which I received at this time, are beyond words.

I wish to express deepest gratitude to our beloved Leader, Mrs. Eddy, for this healing truth which has been given to us through her. My cup is full and running over with love and thankfulness to God for giving us so wise and loving a Leader.—Mrs. Lena M. Hurtt, Decatur, Ill.

Christian Science has wrought marvelous things for me. As a child, I was always ill and in dread of disease. The fear of tubercular disease was fastened upon me, my mother having passed on with that trouble. A great many different diseases seemed to afflict me, while my brother and sister escaped them. Later on, physicians said that I had spinal trouble, one remarking that in order to be made well I would require a new backbone, but his treatment was worse than the disease. I tried every doctor within reach, but did not get any help. The medicine they gave me seemed to drive the pain all over my body, until finally it settled in the stomach. Twenty-six years ago, at the birth of a child, I was left worse than before, and was not able to leave my room for four months. Then I lost the use of my hands, and this seemed the hardest cross to bear, as music, needlework, and painting had to be given up. I was advised to take sun-baths, which I did faithfully, with some temporary benefit. I then went to a hospital, the best in the state, but they claimed that they could give me no help without an operation. I could not consent to this, so I tried new remedies, then the starving system. I next tried physical culture for two years, and for fifteen years I was under rigorous dieting in one way or another.

One morning, a year and a half ago, I awoke to find that seemingly all the troubles I had ever had were afflicting me at once. What to do was a problem, and the tears came fast. Then something seemed to say to me: Read the Bible. I opened at Matthew's Gospel and read: "Ask, and it shall be given you." I thought at once of Mrs. Eddy's book, Science and Health, which I had previously promised a friend I would look into when I had the time. I went to the public library, not knowing whether the book I sought was there, but I returned with a copy of Science and Health, and read for a whole hour without removing my hat or coat; then ate an orange, and continued to read until twelve o'clock. I shall never forget how well I slept that night, and on awaking in the morning my first thought was, This is the resurrection morn, for I am born again in this truth that makes us free. I realized what it means to be a child of God, and not of Adam. Jesus said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." I realized that I had been dead to the truth for forty years. Great, too, was my surprise to find that the organs said to have been misplaced for twenty-six years, were now in a normal condition. I went to breakfast, and ate food which I had not eaten for fifteen years; and ever since then I have been able to eat every kind of food at any time with perfect freedom. I have enjoyed "the primitive custom of taking no thought about food," of which Mrs. Eddy writes on page 176 of Science and Health. In less than four months I found that a small growth which had given me a great deal of pain had disappeared, also that I was cured of a bowel disorder of many years' standing. Today I am a well woman.

The spiritual uplifting is even more to me than all the physical healing. The Bible never was clear to me before. I could not understand it, but I can truly say that I have proved Science and Health to be the key which unlocks the treasure-house of the Scriptures. What joy and peace the truth brings to us, in working out our salvation, clearing the consciousness of all impure thoughts, words, and deeds. The saying of Jesus which is printed on the front cover of the *Sentinel* has helped me more than I can express in words: "What I say unto you I say unto all, Watch." That means to me, that we should watch our own consciousness,—that we speak no evil, think no evil, hear no evil, see no evil, only to destroy it with divine Love. The study of the Bible with Science and Health became so interesting that three or four o'clock in the morning often found me reading the Lesson through, as my business demanded my taking early trains. After two months' study, I gave up a prosperous business of four years' standing and took up a form of work which occasioned me to call upon people from house to house. How my heart went out to them, as they told their stories of suffering and disappointment. In a year and half, I gave up all else to take up the work of a Christian Science practitioner.

The bright hopes of childhood have given place to the kingdom of heaven on earth. I have experienced health, joy, and peace, a peace which passeth all understanding. I am indeed thankful to God, and grateful to our beloved Leader, Mrs. Eddy, for this truth which frees from sin, sickness, and death. My daily prayer is for that Mind which was also in Christ Jesus.

Mrs. Millie Viola Carlisle, Gardner, Mass.

In the book of Job we read: "He will deliver his soul from going into the pit, and his life shall see the light." Christian Science has lifted me out of the pit of sickness and suffering into gladness and health. About two and a half years ago I was taken with severe pain, which gradually developed into acute stomach trouble. At first my condition did not seem very serious, but I could not help wondering why I was not well, as I had taken every remedy that was suggested; but none of them had any effect on me. I then consulted my father, who was a well-known practising physician in San Francisco at that time; but, although I restricted myself as to diet, and took faithfully the medicine my father prescribed, I grew worse and worse. Finally I could not eat without terrible pain, and was unable to walk more than a few blocks at a time. I was obliged to give up high school, and I spent hours in hopeless crying, not understanding why I had to suffer so.

When all new medicines and everything my father could do for me had failed, my sister proposed Christian Science. She had heard something of its healing efficacy, but I was very prejudiced against what I thought Christian Science to be. I had relied on *materia medica* all my life, but now the staff I had leaned upon was broken, and in my desperation I forgot prejudice, and consented to try this new means of relief. That very afternoon my sister went for a practitioner of whom she had heard, but the practitioner

Digitized by Google

was not in. In bitter disappointment she started for home, feeling that she must get some one, and divine Love led her to the house of a Christian Scientist. Although I was somewhat doubtful, I stopped the use of all medicines, as I was told. That night the practitioner gave me absent treatment, but the next morning I went to see her, and in four treatments I was completely healed. Soon after this a chronic bowel disorder, which was considered hereditary, quickly yielded, and I was also enabled to lay aside the glasses which I had been obliged to wear when reading for any length of time.

Before this I had tried to believe in the orthodox religion, but I never could accept the doctrine of eternal punishment. Our Leader's words best express my thought: "In common justice, we must admit that God will not punish man for doing what He created man capable of doing, and knew from the outset that man would do" (Science and Health, p. 357). Now I have learned that the real man, whom God created, never does anything that God would not have him do, and that evil is not a part of man. Christian Science has answered all my longings, and has given me more than I ever dared to expect. Nor can I measure the bounds of my hope, for I have been taken into a realm of thought, where I can each day learn more of Life eternal.

To God's messenger, Mrs. Eddy, I cannot find words to express my love and gratitude. All things have indeed been made new, and for this I am very grateful to our Leader.—LOUISE CLEVELAND, Berkeley, Cal.

It is with a great sense of joy that I testify to my healing in Christian Science of rheumatism. I awoke one Monday morning with a swollen hand and arm, and dressed with the greatest difficulty. At dinner I nearly fainted with the pain, and my daughter called on a Christian Science practitioner for help. The next morning my hand and arm presented an alarming appearance, and I had to be fed. I had in all three treatments, and on Wednesday I was perfectly free—entirely healed—and able to attend church in the evening. For this demonstration of the truth, and for many others, I am truly grateful. I feel I never can sufficiently express my gratitude, except by becoming more and more a channel for Truth.

JANET HUME, Bethlehem, Pa.

While away on a visit in the spring of 1908 my hand was quite severely injured by a fall. I was unable to obtain help where I was, and tried to treat myself in Christian Science, but at the end of twenty-four hours the hand and arm had become so swollen and painful that I came home and placed myself under the care of a practitioner. This was the third day after the accident and the conditions were such that there was great fear of blood-poisoning. In a few hours the pain was very much relieved, and also the fear. After two weeks' treatment a sliver of wood about a quarter of an inch long and the size of a lead-pencil, was discharged from the wound with almost no pain at all. For this and for many other demonstrations of Truth's power that have been made by Christian Science, I am indeed very grateful.

MARGARETTA K. HUME, Bethlehem, Pa.

In 1899 I was perfectly healed, through one treatment in Christian Science, of a neuralgic affection of the stomach of fifteen years' standing. As I began to read Science and Health, a catarrhal trouble of thirty years' standing was also healed. Since gaining a better understanding of Christian Science I have had many proofs of the healing power of Truth and Love. Through the ministration of the same practitioner my husband was healed of a chronic bowel disorder which had affected him for thirty years. I am very thankful for Christian Science.

MRS. FANNY L. CAMPBELL, Troy, O.

I was a sufferer from sleeplessness and a stomach disorder which dated back a long period of years. In fact I had never been well and strong even as a child, and my ailments were believed to be hereditary. I tried all the material remedies of which I knew, and spent several months in two different sanitariums. I would seem to be better for a time, and then would be worse than before trying these means. In the winter of 1907 I was apparently in a very bad condition; I slept very poorly and whatever I ate gave me great discomfort. I was discouraged, despondent, and well-nigh desperate, for I could not see any means of escape. One night, during this time, when I could not sleep, I said to myself that if there was a hell I was experiencing it.

About this time Christian Science was brought to my notice by a friend, who had known of some wonderful cures which had been wrought by it. This friend urged me very earnestly and persistently to try Science. At first I was quite indignant, and said in no uncertain language that I would have nothing to do with it; that while I was aware that I had a number of different ailments, I did not have a disordered imagination. But because there was nothing else to try, and because I was so wretched, I finally decided to try Christian Science. The sleeplessness was overcome in a very short time, but the stomach difficulty was slower to yield. I seemed to be so wedded to the thought that material means were needed, that I had to be divorced from this belief. I had to know that God is my life, that in Him I live, move, and have my being. The practitioner told me that if I was inclined to be discouraged I should read the first chapter of Joshua. Sometimes I read it twice a day in those first weeks. It would seem after I read it that I had something to hold to—it was my sheet anchor. Finally the symptoms began to drop away, one after another, as I came to an understanding of the truth, and after several months had elapsed I was healed.

When I first came to Christian Science I was very desirous that I should be healed quickly, but now I am glad I was not, for if I had been I am sure I should have forgotten all about it in a short time—should have forgotten even to be glad and thankful; but because I had to strive and work and watch and pray, and still do so, I shall not "forget." We know that this is the same truth that Christ Jesus taught nineteen centuries ago, and enjoined on his disciples to preach, and it is just as efficacious today as it was then, if it is understood aright. It is the truth that heals the sick and sinning.

MRS. HANNAH G. DAMPMAN, Brooklyn, N. Y.

I am in the midst of some marvelous reading.

I have recently finished the most wonderful biography in the world.

I am now reading the fascinating history of the most peculiar nation.

A little book of rules for success in life by a wise king interests my children and me.

In my reading I have learned the cure for the world's oldest and most fearful disease.

I am also studying sociology, political economy, statesmanship, and patriotism.

My reading is brightened by interesting anecdotes, by beautiful poems, by vivid stories with a point, and by marvelous word-pictures without number.

Would you like to know the name of my wonderful book?

I am reading the Bible. AXON.

FROM OUR EXCHANGES.

[*Christian Commonwealth.*]

We are today at the dawn of a new spiritual era. We can say, perhaps with greater truth than could Paul in the first century, that the mystery hid from ages and generations is now being made manifest. There is being felt in many hearts the need for a new revelation of spiritual truth. The faith of our fathers has lost power, not because it was not once vital and sufficient, but because it is inadequate to our present needs. It inspires us no longer because it no longer symbolizes what we can see of God and duty. It is outgrown. It is not as it was in the first century—all do not yet know that the old faith is dead or dying. But there are some souls that are awake or awaking, and know the thing whereof we speak. To them it is given to know the mystery of the kingdom of heaven; to others it is not given. There are those whose hearts demand a larger vision of God, a more vital sense of relationship to Him, a new and deeper love to their fellows, a more imperative motive to duty. They see not only the crumbling forms of the old faith, but they feel the throb of the larger life that is coming. The present time is giving us a new interpretation of life, of nature, and of the purpose of existence. New ideas are pressing in upon the human mind. A great mental and spiritual awakening is taking place in the world today. The nineteenth century was called the "wonderful century," but it was only the introduction to a far greater century. The note of the nineteenth century was physical science. The note of the twentieth bids fair to be spiritual development. Men have been fed on the dry husks of materialism until they are crying out for food which will satisfy the craving of the higher nature. There is a search for the real penetrating the mind of the world as never before. There is a new and widespread interest in the spiritual aspect of life.

[*Christian World*, London.]

Only religion can supply the strongest incentive to the good life or guarantee its worth-whileness, because religion alone has the promise that "there shall never be one lost good," and that right and truth must prevail. Take away the idea of a God whose will it is that righteousness shall triumph, that love and life shall be victorious over sin and death, and there is nothing to assure us but that all the efforts and sacrifices of martyr and reformer may be in vain, and the hope of the world a delusion. We may accept such a view and still fight our losing battle of goodness against an evil world, but there is no regenerative power in mere stoicism, as history proves. It is only the believer who can never despair, who knows that his work will endure and enrich the life of future ages; that there will be no collapse or final disarray; that the world is neither blot nor blank, but means intensely, and means good.

[*Christian Intelligencer.*]

Religion too often is apt to be regarded as a thing apart from daily work. The field of the ordinary industry of the world has sometimes seemed to be very uncongenial soil for the cultivation of spiritual grace and power. There has been a fear of degrading religion by bringing it into touch with the common task. But that fear is irrational. It is a sign of power if religion can make what have so frequently been the tools of greed, oppression, and evil, instruments of righteousness and fraternity. And it surely glorifies the daily task to see in it the possibility of spiritual uses. And the fact that these things can be, that religion and work can and must be brought together, needs emphatic utterance.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; In the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Supreme Court of the United States last week refused to take cognizance in a case involving responsibility for a note given to pay a debt assumed in connection with a speculation on the stock exchange. The debt was contracted in Tennessee and a note was given with Mississippi real estate as security. The laws of both these states prohibit gambling, and it was contended that under such laws the note could not be collected. The United States Circuit Court of Appeals sustained this view, and the ruling of the Supreme Court upholds the finding of that court.

Governor Blackburn of the Canal Zone says: "The canal will certainly be completed by the latter part of 1913. They have thirty-six thousand men employed and are taking out four million yards of dirt every month. This is an increase of two hundred per cent over last year's record. The engineer corps says the canal will not be completed before 1915. I believe it will be finished two years earlier, because I have watched the work many months."

When the honorary commercial commissioners of Japan arrive in Washington on Nov. 1 they will be taken on an automobile ride which will include the Potomac drive, along which two thousand cherry-trees, presented to this country by the Emperor of Japan, will be planted. The Emperor is sending to New York also a large number of cherry-trees to be planted along Riverside drive in the neighborhood of Grant's tomb.

The United States received last year, in fees from inventors, enough to pay $1,887,443 in expenses for running the United States patent office, and leave a surplus of $88,476. Applications for patents on mechanical inventions reached a total of 62,800; 35,215 patents were granted. The total number of applications of all kinds, including inventions, designs, patents, trademarks, labels, prints, etc., reached 73,026.

The last stone of the Pilgrim monument at Provincetown, Mass., which towers two hundred and fifty feet above ground level, has been laid. Among the stones placed in the monument were rocks contributed by one hundred and twenty-five towns in Massachusetts and by a number of towns in England.

Resolutions fiercely denouncing the "murder" of Francesco Ferrer, the Spanish revolutionist who was recently condemned by court martial and shot in Barcelona, were adopted at Washington last week at a session of the executive council of the American Federation of Labor.

So great has been the demand for the new Lincoln cents that nothing else has been coined at the Philadelphia mint since the end of June. The coinage has reached the total of seventy million cents, which is equivalent to the average annual output for the last decade.

More than two billion dollars worth of mineral oil has been exported from the United States since that product began to be an article of exportation, less than a half-century ago.

International.

The occupation of Mt. Guruga, near Melilla, by the Spanish troops, which was confidently expected to end the war with the Riff tribesmen, did not fulfil expectations, for the tribesmen were employing the Fabian policy of delay and afterward regained the position at a considerable cost to the Spanish forces. Since that event the Maura Cabinet has been summarily dismissed by King Alfonso, and what will be the attitude of the new Cabinet toward the war is not yet known. The war has been unpopular from the first, since, as it is alleged, it is being waged in behalf of a few capitalists who have investments in that section. The resignation of the Cabinet was precipitated by the unpopularity of the war and by the outspoken disapproval, in Spain and outside, of the execution of Francesco Ferrer, a highly educated revolutionist.

The Chinese government has announced that four treaty ports in Chien-tao will be opened Nov. 2. These treaty ports were provided for in the agreement reached between Japan and China and signed at Peking on Sept. 4 last, and which was designed to settle the Chien-tao boundary dispute between the two countries. Japan recognized the Tiumen river as the boundary between Korea and Manchuria and promised to withdraw all her officials from the Chien-tao district, while China agreed to open to foreign trade the towns of Lunchinchun, Chutzucha, Tactoku, and Peitsokou.

The Turkish government has officially repudiated liability for the foreign claims in connection with the Adana massacres. It is believed that the embassies will propose that the claims be submitted to The Hague tribunal. However, as the particulars of the forthcoming Turkish loan indicate that the Turkish government intended to set aside six hundred thousand dollars for the payment of the Adana claims, it is believed that the disclaimer by the Sublime Porte of liability is only technical.

The Canadian Pacific Railroad has found the telephone so serviceable for train despatching that the present system of about five hundred miles of telephone lines will be extended to one thousand miles within a year. The company states that about fifty per cent more traffic can be handled now than was possible under the old telegraph system of despatching.

It is understood that Japan will advance some four million dollars to Korea during the current year, and that this amount will largely be devoted to the building of roads in the agricultural districts, where at present, practically speaking, there are no roads.

The Japanese budget has been approved by the Privy Council. It totals $264,500,000. The development of resources and the avoidance of unproductive expenditure is the policy outlined by Premier Katsura.

The Chilean Government has decided upon naval expenditures to the amount of twenty million dollars. The program includes the building of one Dreadnought.

Industrial and Commercial.

Four million pounds of beans for which the growers will receive from three to three and one half cents a pound, were produced on four thousand acres of land on the Kendrick ridges in Latah county, Idaho, this season, and, as a result of the success of the industry, buyers say that the coming year should see a yield worth not less than two hundred and fifty thousand dollars, or double this year's crop.

Statistics compiled by the state grain commission show that 2,905,000 acres of non-irrigated land in Washington, devoted to cereals, produced in 1909 a crop of 49,565,000 bushels, of which 35,015,000 was wheat, 9,290,000 oats, and 5,180,000 barley. Practically all the wheat was produced in thirteen counties in eastern Washington, in the districts designated as the Big Bend, the Palouse, and Walla Walla.

Close upon the announcement that the Lynn plant of the General Electric Company is to be extended by the erection of two great new buildings at the River Works, comes another to the effect that the concern plans to make additions that will give it the largest single factory building in Massachusetts, if not in New England. It is understood that the employees at the Lynn plant will be increased from 9,200 to 15,000 men.

The total production of the fisheries of Massachusetts for the year ending Dec. 31, 1908, was 229,248,000, with a value of $7,005,230. The number of independent fishermen engaged in the industry in that state was 3,141, while the wage-earning fishermen number 8,436. Vessels engaged in the industry number 671, valued at $2,027,766. Of the entire output, cod led with 72,217,900, while haddock came next with 48,402,400.

The Pennsylvania Railroad announces plans for the erection of a new Chicago union passenger and terminal station, to cost not less than twenty-five million dollars. With the Pennsylvania in the project are to be joined the Chicago and Alton, the Chicago, Burlington and Quincy, and the Chicago, Milwaukee and St. Paul railroads, all users of the present Union Station.

The onion crop of 1909 is placed at 4,175,000 bushels from an area of 14,300 acres. The cranberry crop is placed at 1,325,000 bushels against 1,060,000 bushels in 1908, and 1,280,000 bushels in 1907. Eight hundred and fifty thousand bushels is credited to New England and New York, mostly in Massachusetts. The New Jersey crop approximates 425,000 bushels.

The Lehigh Valley Railroad has placed additional orders for 2,250 cars. The Standard Steel Car Company will furnish 1,000 drop-end gondola, 1,000 box, 150 refrigerator, and one hundred automobile cars.

It is estimated that Germany made twenty-five million dollars' worth of toys in 1907 and all but six million dollars' worth of the toys were exported, most of them going to England and America.

The Pennsylvania Railroad has placed orders for 200,360 tons of steel rails for its 1910 requirements. The price is said to be twenty-eight dollars a ton and the total value of the order $5,600,000.

The rice crop in Japan is said to be the largest ever known, and is expected to amount to over two hundred and seventy-three million bushels.

General.

Halley's great comet will be visible in the spring of next year to the naked eye. History records the return of this comet twenty-eight times during the past two thousand years.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CONCERNING PROGRESS.

SAMUEL GREENWOOD.

LOOKING at the immense distance between present attainment and the perfect ideal, there may come to the student at times a feeling akin to dismay at the relatively insignificant portion of that distance which he has covered; or he may go to the extreme of regarding his problem too indulgently, excusing himself with the thought that he has all eternity in which to do his work. Mrs. Eddy has well said of the "neophyte in Christian Science," that he is inclined to be "too fast or too slow" (Retrospection and Introspection, p. 78); hence one's aim should be to find that happy medium wherein he can work undisturbed by the fear of delay, and untempted to slight his work in the desire for haste. Absolute thoroughness is demanded of the Christian Scientist, else his work will not stand. It is a most commendable desire to "gain good rapidly," but if one feels that he is unable to hold his ground, it may lead to a more enduring progress to "attain slowly and yield not to discouragement" (Science and Health, p. 254).

If the student is always faithful to what he has, his progress will be as rapid as his knowledge of Truth permits. It is the unfaithful disciple who should be alarmed because of mental stagnation, which is ever a breeding-ground for trouble. To be discouraged over apparently slow growth is better than to be indifferent as to whether one is progressing at all. The supposition that mortals have all eternity in which to work out their salvation tends to induce a sense of self-satisfaction with present experience and achievement rather than to stimulate the effort to reach a higher consciousness. If it is true that mortal man has eternity in which to correct his wrong thinking, it would also be true that erroneous thought might, in some degree, sway mankind forever. But the very falsity of error ensures its total self-extinction, and to postpone unnecessarily the corrective process on our part, for the sake of prolonging the belief of material ease or pleasure, will only add to the pain of our awakening.

It is not wise to be continually measuring progress, but there should be sufficient concern over this question to see that the demands of Truth are fulfilled according to each day's requirements. It is the duty of all Christian Scientists to grow and bear fruit according to their opportunities. There is no encouragement in our Leader's writings for the student who does less than his best at all times. When it is remembered that freedom from error must come through one's own and not through another's knowledge of the truth, and that the demand of divine Principle for perfection is no respecter of persons, it will be seen that for the Christian Scientist there are no legitimate occasions for idleness. Every moment of the day demands that the Father's business be attended to in keeping thought perpetually true to God and man, and every desire centered in holiness. It may be that not many have reached that point, but it is humanly possible, and until thought is wholly given to the demonstration of Christian Science the student's progress will not keep pace with his opportunity.

The question is, How shall progress be measured or judged: on the basis of physical, or of moral and spiritual benefit? To judge entirely from a physical standpoint would spell discouragement for those whose healing is slow, and despair for those who, despite honest endeavor, do not seem at present to improve physically at all. It would not be just to say of these latter that they are not advancing toward the point where their needs can be fully met. In some instances much preparatory work seems necessary before the physical conditions are harmoniously adjusted, but this does not mean that for these there is no present comfort and uplift in Science, no gaining of that which, in its relation to their problem, is more priceless than the restoration of physical health.

When Mrs. Eddy counsels Christian Scientists to "emerge gently from matter into Spirit" (Science and Health, p. 485), it is not that they shall tarry needlessly in that illusion, but that they shall reach a higher sense of Life through spiritual growth rather than through the attempt to force conclusions or experiences to which they have not spiritually attained. Christian Scientists are yet in the infantile stages of growth, and while some may have learned well a few of the primary lessons of Christian Science, others may be only preparing to learn them. In some cases there is a long mental journey to travel before the spiritual teachings of Christian Science are freely accepted, and it may be that with many of us progress has been largely toward and not in the truth.

When inclined to magnify unduly the relative importance of physical results we should remember that it does not take much Christian Science to heal the sick. We should give heed to the Master's words, "If ye have faith as a grain of mustard seed, . . . nothing shall be impossible unto you." In "Rudimental Divine Science" (p. 2) Mrs. Eddy says that the healing of physical sickness "is the smallest part of Christian Science. It is only the bugle-call to thought and action in the higher range of infinite goodness." It can thus be seen that mere physical healing is but the first step in the Science of Christianity, but when this step has been firmly taken one's concern should be to take the next step, which involves the casting out of sin and evil. The healing of disease is in reality but a preparatory process wherein human thought becomes ready to relinquish its material concepts.

The important question for the Christian Scientist is not whether he is becoming less liable to pain and disease, but whether his thoughts are becoming purer and more loving, and whether the things of Spirit are becoming more substantial and attractive than the beliefs which pertain to so-called material sense. If one is progressing spiritually, the springs of disease are being cleared out, and dominion over evil will consequently be more readily and effectively exercised. Although the student may be taking only his first step in Christian Science, and his efforts may be accompanied by much stumbling and occupy a seemingly long time, he will still be wise to heed our Leader's injunction to "look beyond a single step in the line of spiritual advancement" (Science and Health, p. 429).

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

Although one may be struggling in the depths because of long delay in experiencing physical healing, let him not be discouraged, for if he has turned honestly to Christian Science the truth has already begun to "overturn" what is not right in his thought, and will continue to overturn "until he come whose right it is." The physical evidence of this mental process may not always be quickly appreciable, but, despite the dark outlook, the night of error will surely pass when truth dawns, whether that dawning come soon or late, according to the human measurement of time. After all, what are a few years in the working out of a life-problem? The evil in human consciousness disappears only as the infinitude of good is understood, and this understanding does not come quickly to mortals, for it demands of them more than they are at first willing to sacrifice. But when endurance "to the end" has wrought one's salvation, it will be seen that the whole long dream of material existence, with its pleasures and pains, its struggles, triumphs, and discouragements, was but a negation, "destitute of time and space" (No and Yes, p. 16).

One's present experience on the so-called physical plane may not hold all that he desires, or that seems necessary for happiness, yet the truth that good is infinite, that God is omnipresent Love, is ever at hand to be understood and realized. Nothing can hinder our progress Godward if to know God is our supreme desire. Every day lived in obedience to truth means that matter and evil have become a little less real to us than the day before, and though the gain may seem at times infinitesimal, it is surely fulfilling its part in our redemption. If we are accomplishing all that we can today, we need not be discouraged at the final outcome, for though each attainment necessary to that end may seem a thousand times deferred, we shall surely reach the consummation of our right desires, hear the "well done" for faithful service, and enter into the joy of awakening in God's likeness.

THE "THORN IN THE FLESH."

E. E. LAWRENCE.

As the clear notes of truth begin to make their way into our awakened consciousness through the teaching of Christian Science, as given to this age by Mrs. Eddy in our text-book, "Science and Health with Key to the Scriptures," we begin to realize what a thorn is the flesh. We very soon learn we have a "thorn in the flesh" as did Paul, and though we may rebel at times in the struggle to overcome it and the many ills to which flesh is assertedly heir, yet we have to know that God's grace is sufficient for us, that our strength is made perfect as we overcome mortal weakness, the belief of life in matter. To beseech God to take us out of the flesh before we have done our work thoroughly, is not the way to eternal life, for we have to "work out" our own salvation by overcoming every temptation as it presents itself.

Our Leader says (Science and Health, p. 254): "The human self must be evangelized. This task God demands us to accept lovingly today, and to abandon so fast as practical the material, and to work out the spiritual which determines the outward and actual." The belief in the flesh is our great temptation, and we must overcome it by the understanding of Spirit and spiritual law. Our advance will be steady and sure if our work is well done, and when the battle between the flesh and Spirit is ended, we shall be rid of our "thorn."

Paul caught a glimpse of the perfect spiritual man, and he wished to manifest at once the true reflection, thinking he could do his work better out of the flesh. He failed to realize that he had work to do first in purifying the human element in himself; that then and then only could the "thorn" depart from him. It is well-nigh impossible to believe that Paul suffered from some incurable disease, as the material interpretation of the text would lead one to infer, when we know that Paul had so great an understanding of Truth that he raised the dead and healed the sick, and would certainly have been able to overcome any physical trouble in himself.

We read that Jesus overcame all things and put matter under his feet, and we must do likewise, for he was the Wayshower. Then, as Isaiah says, "the glory of the Lord shall be revealed, and all flesh shall see it together: for the mouth of the Lord hath spoken it;" and again we have that confident assurance of Job, "In my flesh shall I see God," and as Mrs. Eddy explains, this text "gives a profound idea of the divine power to heal the ills of the flesh, and encourages mortals to hope in Him who healeth all our diseases" (Science and Health, p. 320). Can we ever be grateful enough to our dear Leader for pointing the way for us, and giving us an understanding whereby we can overcome the flesh and work out our own salvation!

CONTINGENCIES.

J. MILES CHAMBERS, M.R.C.S., ENG., L.R.C.P., LONDON.

How often we are tempted, when thinking over events which are past or still proceeding, to make use of the words, "It would have been better if we had done this, or that," instead of what we actually did do; and much valuable time is thus spent in ineffectual speculation as to what would have happened if we had done what we did not do. In the days when we believed that right effects were the result of actions prompted by that which had its origin in our own finite minds, there might possibly have been urged good reasons for encouraging such rumination as a mental exercise, but to the Christian Scientist, whose earnest endeavor is to progress in the understanding of the Mind which was in Christ Jesus, there is a much more instructive and valuable lesson to be learned from experiences which have seemed to be wholly or partially discordant, than that gained from speculation on results which we think might have appeared under a different set of conditions which were not present.

If we would reap the greatest benefit from our various human experiences, we must use our understanding of divine Principle to the fullest extent in order to interpret each experience in the light of its full spiritual import. For example, if a trusted friend has been found to have acted fraudulently toward us, and perhaps also vilified us in excusing his fault to others, we have not completed our demonstration over this incident when our work has resulted in repentance by our friend for the wrong done, and in full human reparation by him, and when our forgiveness has been extended to him. These human footsteps are absolutely necessary; we have been "tilling the ground," but we should not be content to leave the incident at this stage, nor to learn from it only human wisdom; we should look for, and reap, the fruit of our labor.

In the 1st Psalm we are told: "Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. But his delight is in the law of the Lord; and in his law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." In "Miscellaneous Writings" (p. 60) our Leader has said that "every creation or idea of Spirit has its counterfeit in some matter belief. Every material belief hints the existence of spiritual reality." Let us pause for a moment and consider, What is the knowledge possessed by Mind in respect to such an incident? Is it of error? Is it of fraud? "Thou art of purer eyes than to behold evil, and canst not look on iniquity," the Scriptures tell us. Is it in the punishment of

Digitized by Google

fraud, in the destruction of evil that God engages? is it for the annihilation of that which is a negation, that which is "nothing, no thing, mind, nor power" (Science and Health, p. 330), that the activity of omnipotent Mind is exerted? Is it not, rather, "that the works of God should be made manifest"? Is it not that divine Principle, Truth, and Love, in whose presence evil is self-destroyed, may be revealed to men?

It is an incontrovertible fact that the only activity which is, and therefore from which effect can result, is the activity of Mind, the effect of which must always be positive, substantial good, and is available to man as such. Hence, while the human sense of an incident such as the one suggested above, cannot be said to evidence the articulation of divine Principle with false human concepts or conditions, we have not, as stated before, obtained the full benefit from such an experience unless, in addition to neutralizing the error which appeared to material sense, we have also apprehended the truth which is perceptible only to spiritual sense; unless through this "spoiling of our goods" we have also sought for, and obtained, the "better and more enduring substance" which was being unfolded; viz., increased understanding of divine Principle, for it is only by making full use of these opportunities that spiritual sense is developed and we grow in grace "unto a perfect man, unto the measure of the stature of the fulness of Christ."

If we would obtain power with God and man we must wrestle with the "angel," as did Jacob at Peniel, and even after light begins to dawn on our consciousness, and the darkness of mortal error is clearing away, our determination must still be as firm as was his, "I will not let thee go, except thou bless me;" then we shall receive the angel ministrations which will be our support and strength in future trials, for we shall have earned the approbation of the Father, which was bestowed upon the patriarch, "As a prince hast thou power with God and with men, and hast prevailed."

NOW.

HELEN L. YOUNG.

THOUGH often reminded, we are apt to forget that the present moment is the only time we really possess; it is the only time that is really in our keeping. "Now," the apostle Paul declared, "is the accepted time: behold, now is the day of salvation." Every overcoming of evil with good marks the birth of the Christ-child in the mind of him who overcomes the animal instinct of retaliation.

Every moment that we think good thoughts is bringing us into at-one-ment with the divine Mind, into communion with God; and this communion should be continuous. Every day, indeed every hour, is judgment-day. Jesus said that for every idle word we speak we must give an account; for every wrong thought we must pay the penalty; therefore the command, "Judge not, that ye be not judged." When Christ Jesus judged the sinful woman she was healed, she was free. "He that is without sin among you," said the Christ to her accusers, "let him first cast a stone at her." Every thought of criticism or condemnation strikes back at the offender. On page 91 of her "Messages to The Mother Church," our Leader reminds us that we must "square accounts with each passing hour."

As the light of Truth comes to dispel the darkness, so the resurrection thought bursts upon the human understanding and floods us with the light which enables us to see man as the perfect image and likeness of God. This idea of the risen Christ is always with us, and is redolent with the life, hope, and activity of the divine Principle of being, and this light shines clearest when we are enabled to rise above the mortal sense and conquer hate with love, replace sickness with health, sorrow with joy, resentment with forgiveness.

REQUIREMENTS IN CHRISTIAN SCIENCE PRACTICE.

EMMA C. SHIPMAN.

THE question is often asked, "What are the qualifications for a practitioner of Christian Science?" and in trying to answer this question it may be well to define the term Christian Science. No one can do this as clearly as has Mrs. Eddy, the Discoverer and Founder of Christian Science and its pioneer practitioner.

In "Rudimental Divine Science," in answer to the question "How would you define Christian Science?" she says, "As the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony." In Science and Health she writes: "The term Science, properly understood, refers only to the laws of God and to His government of the universe, inclusive of man." "The term Christian Science relates especially to Science as applied to humanity" (pp. 128, 127). Again, in "Retrospection and Introspection," we read: "I named it *Christian*, because it is compassionate, helpful, and spiritual" (p. 25). From all this it will be seen that the requirements for practising this Science are not superficial. They must reach to the depths of one's nature and exact the final destruction of all that is not Christian, not based on divine Principle.

The first necessity is honesty, absolute integrity of thought. A certain frankness in surface relations with others is considered honesty by many. Such persons may not consciously cheat, lie, nor steal, yet they constantly deceive themselves regarding their motives and desires. Selfishness largely actuates their acts of supposed kindness and charity. This being the case, there is need for each one to obey the terse injunction of the old Greek, "Know thyself!" There are two ways in which one must know himself. He must be able to recognize his faults, weaknesses, and sins. He must also comprehend in some degree the actuality of his true being as the perfect expression of divine Mind, God's own image and likeness. This knowledge of himself enables one to overcome human weaknesses and manifest in their stead the qualities of God.

The right motive for the practice of Christian Science is the establishment of God's kingdom, here and now, through the elimination of all evil in our consciousness. One must intelligently study the Bible and "Science and Health with Key to the Scriptures" in order to form a concept of Life from the standpoint of Spirit. The spiritual concept of Life and man is the basis of true healing. One learns from Mrs. Eddy's teachings that the process of Christian Science practice is moral and spiritual, not coldly intellectual and formal. This is the point not grasped by some philosophers who criticize Christian Science. In their pursuit of a philosophy based on the human mind, they have overlooked the fact that there is a spiritual philosophy which transcends the human mind and can be grasped only as the human mind becomes meek and exchanges its limitations for the boundless unfoldments of Spirit.

The practitioner must prove by his work that Christian Science is not personal magnetism. He must guard against fear, self-will, self-seeking, and conceit, for these prevent progress. Worldly success and high-sounding talk do not bear witness to a real Christian Science practitioner, neither do mock humility and puritanical pretense. The witness to real success is healing—disease banished, grief assuaged discordant homes made happy, and sin overcome. In the serene activities of good and in the eradication of every thought of self-aggrandizement, the Christian Science practitioner gains dominion over human beliefs.

Broad-minded compassion and much patience are needed to deal rightly with the sick and sinning. Each day one needs to seek a deeper insight into the ways and means of Spirit. He should expect and be content with nothing less

Digitized by Google

than a manifest and continuous growth in the understanding of God, as shown by the ability to apply this understanding to the problems of daily living. The inspiration of today will not serve for tomorrow, unless it is increased and deepened. It is well to take time for self-examination and self-correction. The ignorance of the human mind is not overcome by ignoring it, but by acquiring knowledge of the divine Mind.

One may well ask, Have all who are practitioners of Christian Science attained to these requirements? The answer is, No; but all who have consecrated their lives to this great work daily "press toward the mark," and keep their model, Christ Jesus, always before them. The more they learn of Spirit, the less they lean toward materiality, and so the way grows less complex. They do not forget that they have much to overcome in themselves, and that unceasing watchfulness is the price of liberty.

CONVERSATION.

ANNE DODGE.

How uplifting, refreshing, and revivifying are the inspired utterances of divine Truth and Love! Only ponder the marvelous beauty of the following words: "Give ear, O ye heavens, and I will speak; and hear, O earth, the words of my mouth. My doctrine shall drop as the rain, my speech shall distil as the dew, as the small rain upon the tender herb, and as the showers upon the grass." Watch a gentle summer shower descend! How tenderly, softly, easily, and evenly it falls. And then the sweetness of the vapory dew that spreads as a bridal veil o'er hill and dell, and leaves a blessing resting on the thirsty earth beneath, a token of the brooding watchfulness, care, and protection of divine Love. How peacefully, gently, and naturally falls this dew, leaving a divine benediction in its wake. Like this is the speech or teaching of Truth, the conversation "ordered aright" and governed by divine Principle.

Such holy conversation distils, or communicates, Truth, Love, and Life, comforting, blessing, edifying. It leaves in its track revived hope, strengthened faith, mercy, tenderness, sweetness, and peace,—all spiritual blessings. It is charitable and compassionate and kind, full of grace, gratitude, and praise. How thankful we should be to the Giver of all good that He has bestowed upon us the power to express in speech His hidden beauty. Right conversation flows in an even, harmonious stream, as the natural result of right thinking, benefiting all who have "ears to hear," glorifying God, and showing forth His salvation. If we would but turn our gaze toward the contemplation of the invisible, the "beauty of holiness," we would be surprised to learn how easily and naturally we may express in language that inner spiritual vision. The right words will fall as naturally as distils the dew or drops in gentle shower the summer rain. But, if we allow our thoughts to dwell upon error, instead of on the truth of being, our conversation cannot be ordered aright.

What wonderful language our Master used at all times—in the Sermon on the Mount, the parables, in teaching his disciples, yea, even in his carefully worded rebukes. He never said a word too much, or left out a word that should have been spoken. And at the last, in telling of the dispensation of truth to come, he said, "They shall speak with new tongues." Is not the spiritual language used by our Leader in Science and Health, and in all of her writings and teachings, a new tongue? Is it not the language that Christian Scientists should use, the "doctrine" that distils as the dew, bearing healing in its wings, leaving healing in its wake, blessing all who listen and even those who will not listen; falling as softly and gently as the "small rain;" refreshing, and giving new life, publishing salvation? How necessary, then, for us to base our conversation upon holiness, and to order it aright.

SELECTED ARTICLES.

[Special despatch from Washington, D. C., in Chicago *Record-Herald*.]

Striking illustrations of the rapid decline in the use of drugs in the hospitals of the country featured the session of the eleventh annual conference of the American Hospital Association here. They were shown in the report of the committee on hospital efficiency, hospital finance, and economics of administration, which was presented by Dr. R. R. Ross, superintendent of the Buffalo (N. Y.) General Hospital.

Dr. Ross declared that fifteen years ago the annual cost of medicines for each patient in the Massachusetts General Hospital was over two dollars, while last year it was only ninety-one cents. He showed that the cost of drugs in the Buffalo General Hospital also had shown a decrease for the last year. "It is difficult to predict what the future of medicine in hospitals is going to be," said Dr. Ross. "Undoubtedly drugs will continue to be used, but other agencies or some agency still unknown to us will have a place. They will perhaps be doctors to preach and pray, doctors to prescribe the correct methods for the use of the mind, specialists on fresh air and exercise, and doctors to prescribe drugs and operate. These statements may seem to be in lighter vein, yet hospitals are beginning to adapt themselves to the changed conditions."

[Frederick Dixon in *Observer*, London.]

The words translated "miracle" in the Greek text of the Bible do not mean anything supernatural. They mean sometimes something wonderful, but more commonly simply a sign. The word, for instance, translated "signs" in the passage, "And these signs shall follow them that believe," is the word elsewhere translated "miracle," so that the passage should read, "And these miracles shall follow them that believe," if the word "miracle" is ever a legitimate translation. As a matter of fact, the word "miracle" is of Latin origin, and was adopted at a much later period. Even then it had no supernatural significance, but was simply a term in use among the pagan philosophers.

The Bible use of the word "miracle" is, consequently, not in the least a matter of opinion, and signifies nothing more or less than something wonderful to the human senses, which Christ Jesus made use of as a sign—that is to say, as a demonstration of the truth of his teaching. Faced by the dense materiality of his listeners and their inability to understand the spiritual import of his message, he made use of the miracle, or, to be more accurate, of the sign, to substantiate the spiritual facts he was endeavoring to explain to them. And that, of course, is exactly what he meant in saying that those who believed on him would be able to give the same signs,—to work the miracles he did.

The message that Jesus brought to the world was the knowledge of the spiritual truth which, he explained, would make the world free; and just as a man grasps the absoluteness of this spiritual truth the mere relativeness of the human sense of truth becomes apparent to him, and he is able to demonstrate his new knowledge, as all knowledge is demonstrable, by the signs or miracles through which Jesus promised that it should be made demonstrable. "Ye shall know the truth, and the truth shall make you free" —free, that is to say, from the belief that sorrow and sickness and sin have any existence save as a relative fact in the human consciousness.

[Alfred Farlow in *Shreveport* (La.) *Times*.]

This age cares little for dogmas and creeds; the value of religion nowadays is estimated by its effectiveness, and surely Mrs. Eddy's teaching is a religion of good works, since thousands of persons in this country and abroad are

Digitized by Google

alive and well today through the benign influence of Christian Science, after having failed to recover through other means. Many a drunkard has been reclaimed, many a family feud has been destroyed, and thousands have been reformed through the strength gained in Christian Science.

A careful study of the Christian Science text-book, Science and Health, is convincing that Mrs. Eddy plants herself unreservedly upon the teaching of the Master, the fundamental lesson in Christian Science being our Lord's declaration, "God is a Spirit." She does not deviate from this premise in any of her conclusions. She endorses the Christ of the Bible, and the proof of this fact is the practicality of her religion. Jesus said, "He that believeth on me, the works that I do shall he do also." Christian Science proves its divine orgin, its consistency with the Christ, by its good fruits; even as the Master proved his divinity by good works. Jesus said: "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth." He taught that his departure was necessary to usher in the Spirit of truth. Thus the Master confirms Mrs. Eddy's teaching that the definite rule by which he performed his mighty works would be perceived as a result of a correct understanding of his life and works. The Spirit of truth is the spiritual understanding of Truth as distinct from material observation. It is that understanding which is deduced from the premise, "God is a Spirit," in contradistinction to the evidence of the material senses. Paul said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other."

All these statements go to show that Jesus was guided by a consciousness which was wholly apart from material evidence. His ascension proved the unreality of mortal existence. He taught that flesh and blood cannot enter the kingdom of God, and yet he left no body of flesh to be buried. This mysterious disappearance, when properly understood, constitutes a demonstration of the unreality of matter. Pondering this question, Mrs. Eddy discovered the Science which it teaches. She had before her the convincing demonstration of the Master, and was thus strengthened in her faith, which otherwise might not have been sufficient. She ventured upon this discovery, and has proved its truthfulness by healing the sick. Her followers have done likewise, and are therefore quite as certain in the understanding of Christian Science as is the mathematician in his understanding of mathematics.

Our critic declares that Mrs. Eddy "places Christian Science above Jesus Christ." On the contrary, she teaches that Christian Science is the "Spirit of truth" which Jesus understood and demonstrated, and points to Jesus Christ as the perfect example of the ideal manhood, to his life as the perfect demonstration of Christianity.

[Jesse Pickard in *Brooklyn* (N. Y.) *Life.*]

In a recent issue there appeared an article containing this statement: "Almost everybody outside of the Christian Science persuasion already believes in prevention and skilful surgeons." Now Christian Scientists believe most emphatically in prevention, and by mental resistance to all suggestions of disease, and by casting out the fear of disease, they preserve themselves notably free from all forms of prevalent disorder. They also believe that the world has still need of skilful surgery. Where they take issue with popular belief is in their implicit faith in the power of God under all circumstances, and whereas Christian Scientists have not yet reached a point where they have demonstrated the Principle of Christian Science in its entirety, and do not therefore claim to be entirely immune from all disease and accident, there are few conditions which have not already been met by Christian Scientists. They are striving individually and unobtrusively to overcome evil at every point, and thousands of healthy and pure-minded individuals who belong to this denomination attest the fact that they are proving this dominion with increasing success. Those who are not ready to believe as thoroughly in the power of God as do Christian Scientists, should not quarrel with them because they are consistent with their Principle, and certainly Christian Scientists do not seek to deprive those who desire the aid of the skilled, or of remedies which they think will prevent the development of disease, of that in which they desire to put their trust. The world is better for Christian Science. Its *modus operandi*, its Principle and laws, may not be understood by the community in general, but its works are forcing a more general and wholesome conviction that a practical and entirely spiritual remedy for every evil condition is now available.

[George A. Law in *New London* (Conn.) *Telegraph.*]

While reading a communication in a recent issue signed "Spectator," it seemed to me that much difficulty might arise in determining which of the many different methods of treating disease should be classified as "false and ignorant systems." And if parents are not to select the kind of treatment for their children, more or less conflict might arise over the question as to which system should be used. One parent might object to allopathy for his child and prefer homeopathy, while one who had adopted the eclectic school might protest if osteopathy were insisted upon for his child. There also arises the question of responsibility. Where is the responsibility going to rest; on the parent or the state?

Just so long as the state regards the parent as the natural guardian, and requires the parent to provide all necessities for the child, nothing can take from the parent the duty of electing what system of healing shall be used. This being so, the parent would certainly select the system which in his experience has proven the most efficient. He naturally would not have faith in a method which had failed him and which he had abandoned. Christian Scientists teach their children at an early age to decide for themselves what they will rely upon for their healing, and any one observing a company of such children will certainly note the absence of any evidence of neglect.

Many thousands of children have been healed by Christian Science after *materia medica* has failed. The writer at this time recalls two such cases which came under his own observation, where the doctors declared they had done all that was possible, and nothing could save the children. Both of these children are today well, having been healed through Christian Science, to which they owe all. This healing took place several years ago, and since then these children have depended entirely upon Christian Science for their healing. The injustice of requiring their parents to deprive these children of that which saved their lives is too apparent to call for comment.

[W. J. Bonnin in *Birkdale and Southport* (Eng.) *Pioneer.*]

It would be impossible for any one to believe more firmly and unequivocally in the divinity of Christ than Christian Scientists are taught to believe in it. It would be impossible to read the Christian Science text-book, "Science and Health with Key to the Scriptures," and mistake that teaching, for it permeates the entire book. For instance, on page 333 one may read: "The divine image, idea, or Christ was, is, and ever will be inseparable from the divine Principle, God." Christian Science finds no warrant, however, in Scripture for teaching that the personal and corporeal Jesus was God. His own words certainly do not justify any such contention. "Why callest thou me good? there is none good but one, that is, God." "Nevertheless

Digitized by Google

not my will, but thine, be done." Paul says, "There is one God, and one mediator between God and men, the man Christ Jesus."

Much confusion, it is safe to say, has arisen from regarding Christianity as a religion or creed, instead of as the truth about God and man as revealed in and demonstrated by Jesus and as having neither beginning of years nor end of days. Christian Science teaches that Jesus' mission was to disclose to humanity man's eternal spiritual nature, the truth of man's unity with God. "To this end was I born, . . . that I should bear witness unto the truth."

Christian Science declares that if we comprehend this truth to which Jesus bore witness, we shall find the freedom promised by him; that bondage to sin and sickness and misery is but evidence of want of knowledge; that the dawning consciousness of man's real existence as the image and likeness of God is the coming of Christ to the individual. And Christian Scientists know that to dispute the statement that Jesus was human and Christ divine would be to rob Christianity of its availability to man, and to deprive Jesus of his character as the "Wayshower." For by following the Pauline injunction, "Let this mind be in you, which was also in Christ Jesus," as far as each may be able, they find themselves on that highway of which it is promised that the wayfaring men shall not err therein!

[W. C. Williams in *Baltimore* (Md.) *American.*]

Our critic states that "Christ is the same yesterday, today, and forever; and is just as able to heal today as when he said to the leper, 'Be thou clean.'" He must also believe Jesus said that all those who followed him could do the works, and greater works, and commanded that they heal the sick as well as preach the gospel. Because Mrs. Eddy has made prominent this neglected command and obeyed it, she is maligned and denounced by those who do not obey it. It is because Mrs. Eddy teaches that the Christ doctrines are the only doctrines, that Jesus' personality, "his atonement, his miracles, and his resurrection" are true, and for our example, and because she glorifies his works, that hundreds of thousands all over the world are Christian Scientists, helping to prove that Christ is the same today, and the majority have been healed of all manner of diseases. Is it belittling divine Truth to acknowledge it as the only truth and to endeavor to live up to it as far as it is conceived? Is it belittling to endeavor to understand it and to prove your understanding by the fruits? We read in the Bible, "Knock, and it shall be opened unto you." Mystery is not truth.

Bald statements without their context made by our friend do not appeal to those who have studied Christian Science (and as it is a science, it has to be studied) and are not arguments. For instance, he quotes: "Matter has no existence; all is mind." This, though, is being acknowledged by many natural scientists. Christian Science states that as God is Spirit, man, the child of God, is spiritual. This does not mean that man as he appears is not very material to those who believe that materiality is reality; nor does it mean that spiritual man is realized by all as the only man at the present time, and the nothingness of matter proved to the satisfaction of all now as Jesus proved it. Disease like materiality, does not exist in reality, but the lie of disease, like all lies, is very real to us until we know and prove that it is a lie; then we know it is not the truth and did not emanate from Truth.

The claim is made that Christian Science is inconsistent, because it heals diseases that do not exist. If disease did really exist—was God-ordained—Christian Science could not cure it, nor could any science; but the apparent disease is healed, and though this is generally understood, in common usage the word "apparent" is left out. Reality to Christian Scientists is that which is eternal, never-changing, made in the image of God. All that is temporal, therefore, in this sense only, is unreal. It is the misconception of this distinction that causes the unthinking criticism of Christian Science. If our critic believes in the immaculate conception he must realize that Jesus had less materiality to overcome than most of us, but there is nothing in Christian Science that claims he was "not a personal man." The Christ-truth, the God-element that inspired and actuated Jesus, was not personal, though individualized in him.

Christian Science has nothing in common with mystic or occult philosophy or Hindooism which teach mostly the subjugation of the body to the control of mortal will-power and not the uplifting of man by the realization that God will control him absolutely if man will but seek Him.

[Gray Montgomery in *Boulder* (Col.) *Camera.*]

Mrs. Eddy recognizes that to the sense of mortals there is sin in the world, but she maintains in accordance with the Holy Scriptures that God is All and God is good; hence sin is not of God, is not spiritual, eternal, or real. The mission of Christian Science is to reform mankind by showing the sinner the way out of the bondage of ignorance and sin. It teaches, as did the Saviour, that sin brings its own punishment; but through suffering and Christ the sinner is reformed and saved. Christian Science so clearly and logically explains the divine teachings of the Bible that all may learn how to become more Christlike, to cast sin out of themselves and others, and to heal the sick. Christian Science is bringing about the banishment of evil, and for its good fruits it should be commended by all men.

[Olcott Haskell in *Pacific*, San Francisco, Cal.]

Christian Science relies wholly upon the power of God to heal; and since God is all powerful, it follows that there is no disease that cannot be healed through the correct application of the method taught in Christian Science. This conclusion is not only a logical deduction from correct premises, but it is substantiated by numerous well authenticated cases of the permanent cure of the very diseases which our critic has concluded, in accordance with his theory, cannot be healed.

Christian Science does not depend upon the influence of the human mind, nor does it consider this mind a healing factor; rather does it teach men to seek that Mind "which was also in Christ Jesus," in order that the "signs" of healing, both of sin and sickness may follow those that "believe," even as was illustrated in the early Christian church.

[William C. Kaufman in *Billings* (Mont.) *Journal.*]

Christianity is and should be the outcome of the life of Christ Jesus. He taught the only essentials necessary to man's salvation. They are the oneness and omnipotence of God, Spirit, and the unity of man with his Maker. Christian Science teaches these points, and proves them by demonstration. God, understood and reflected in daily life and demonstration, would be manifested in the destruction of evil and the healing of the sick. When Jesus taught these points he was strongly opposed by the religious teachings of his time.

Christian Science teaches the divinity of Christ, the sacredness of the inspired word of the Bible, and that we should love our neighbor as ourselves.

[Nellie M. Johnson in *Omaha* (Neb.) *World-Herald.*]

Nineteen centuries ago a teacher startled a slumbering world by presenting in a new way the eternal truth concerning God and man. Reiterating the Decalogue as enunciated by Moses, he declared that his mission was "not to destroy, but to fulfil" that law. Although the teaching was elucidated by works, it was seriously questioned by many, but his success in imparting his teaching is recorded in the history of the churches founded by his immediate disciples. These churches taught and practised the healing of the sick, together with the reformation of the sinner, for a period of about three hundred years. The promise was perpetual, and though lost to sight, the ability to heal through divine power remained intact, to be again discerned and restored to Christianity.

This great Teacher, known as Christ Jesus, wrought life's problem correctly, teaching and proving that through spiritual understanding God's immutable law is ever available, supplying adequately every human need. This perfect example of our Master has stood, and still stands, distinct and refulgent, against the background of the ages. Mrs. Eddy discovered, discerned, the spiritual import of this work, and presents it to this age as Christian Science. She so designates it because it repeats the full chord of Christ's teaching, and obeys the apostolic admonition to prove its faith by its works.

Today, as in bygone centuries, some may pronounce this teaching a human vagary, but the demonstration of its rules, even in a small degree, convinces the student that it is the power of God, bringing deliverance to earth-bound humanity. Let us patiently work and wait for the establishment of God's kingdom upon earth, until we "in the unity of the faith" recognize and realize the glorious liberty conferred by God upon His children.

[Written for the *Sentinel.*]

RECOMPENSE.

LILLA ELLEN BOWLEY.

GONE! all the struggle and the vain regret.
Gone, with the hope I strove for and could not attain.
Gone, like the childish dream about a joy; and yet
The dream was not the real desire, deep-hidden in my heart by pain
And all the surface jangle of a mimic life.

Vain words! that could not hint my soul's true speech;
Vain efforts to arrest the freezing touch of hate;
Vain tears! dropped on the frosted pane; they could not reach
The heart of winter, but they thawed the ice which late
Obscured a fairer vision from my longing eyes.

. . . . . .

Dawn! on a scene of glistening beauty white!
Dawn, with its soft gray background for the fairy lines
Traced on each blade and branch and twig by hoar-frost light,
And limned with myriad detail on the feathered pines—
Soon, all will shine resplendent, though 'tis winter's day.

Live! that the hope so striven for shall range
On wings of freer thought to worthier words, and leave
The strife and jangle till they cease and change
To truer judgment; then shall radiant justice cleave
The heart of winter. Live! do not strive or cry!

Love! that the true desire shall yet arise
With sweet and tender songs of joy from out its grave.
Love! that the hardened scales shall fall from other eyes
With swifter, kindlier touch. Love! with the hope to save
Vain strife and tears. Love is impartial. Live and love!

AMONG THE CHURCHES.

SAN FRANCISCO, CAL.

That the members of First Church of Christ, Scientist, have determined to erect an imposing temple in the Western Addition is now assured, and the church will be erected upon their lot at the corner of Franklin and California streets. It will be class-A, with a steel frame and made thoroughly fire-proof, and will cost about one hundred and twenty-five thousand dollars.

San Francisco News Bureau.

CLEVELAND, O.

Second Church of Christ, Scientist, has moved into its new and commodious quarters in Euclid Point Building, Euclid avenue and Huron road. New furniture, draperies, etc., have been contributed as love-offerings by members and friends. The church had outgrown its former quarters, and the new rooms will amply meet the present requirements.—*Correspondence.*

GLENS FALLS, N. Y.

The Christian Scientists of Glens Falls have purchased a plat of land at the corner of Lincoln avenue and Davis street, in the residential section of the city, on which a new church will be erected. At present the church meetings are held in a remodeled residence on Warren street, which will now be sold. The new church will be a handsome stone structure. The plans are incomplete, but the building will probably cost fifty thousand dollars.

Troy Times.

WELLESLEY, MASS.

A large lot of land has been purchased in Wellesley by the Christian Science church, upon which it is intended to erect a church edifice at some future date. The land is situated at the corner of Wellesley avenue and Brooks street and is centrally located. For the past few years Christian Science services have been held in the town weekly, and owing to the large attendance it has been decided to erect a church. When the work of construction will begin has not yet been settled definitely.—*Boston Herald.*

HAMILTON, O.

A deal of more than ordinary interest was closed today [Oct. 8] when the Cornell property, 128 North Second street, passed into the hands of First Church of Christ, Scientist, of Hamilton. It is the purpose of the Scientists to remodel completely both the exterior and the interior. The seating capacity will probably be two hundred, and the interior will be beautifully and appropriately decorated.

The Hamilton Christian Science church was organized in the year 1902. The early meetings were held in the homes of the members; then in the Webster Building on High street. In 1906 the church rented a room in the Hammerle Building, Main and C streets, and it is from the last-named location that the congregation will move to the new church building in North Second street. It is planned to open the new church in November. The program will be very simple, but quite in keeping with the customs of the Christian Science church. The purchase of the Cornell property indicates that the Christian Science church in Hamilton is growing rapidly; in fact, so rapidly is the work spreading here that despite the fact that the new location is expected to be a permanent home for the church, plans are already under way for erecting, some time in the future, a handsome new building.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

DEMOCRATIC GOVERNMENT.

SINCE the publication of the amended by-law, Article XXIII., Section 10, in the *Sentinel* of May 22, 1909, there have been received at this office a number of inquiries as to what properly constitutes a democratic form of government, and as most of the questions thus asked had been previously covered in an editorial which appeared in *The Christian Science Journal* of December, 1902, we have been requested to reprint that editorial, which was as follows:—

Many of the branch churches are to hold their annual meeting within the next few weeks, and since some of them contemplate changing their by-laws in order to meet new requirements, a few words of counsel may not be amiss.

It is of great importance that the by-laws conform to the laws of the state in which the church is incorporated, and if the state law prescribes a line of procedure to be followed in the amendment of by-laws, strict attention should be paid to it. If the state law does not prescribe a method for amending the by-laws, it is necessary that the by-laws themselves provide for this contingency.

Some of the branch churches, in their zeal, have adopted a by-law to the effect that any rule promulgated by our Leader shall immediately become a part of the by-laws, without formal action by the society. The loyalty and good intention of such churches are commendable, but by-laws cannot be legally changed or amended in this manner. Formal action is called for in every instance.

We believe that our friends in the branch churches will be glad to have us advise them that a democratic form of church government, which lodges the responsibility for the management of church affairs with officers elected by the membership at large, instead of with some one or two persons in whose election the members do not participate, will be found to be more conducive to unity and harmony, more consistent with the liberty which all desire, and more certain to enlist the hearty cooperation of progressive and capable students.

In the election of officers, personal attachment and partisanship should have no place. What is most needed is the service of competent persons to do the work, and in selecting them nothing less than infinite intelligence can guide us without mistake. Individual demonstration is as necessary here as elsewhere. Personal ambition and desire for authority are very poor equipment for the responsibilities of office in a Christian Science church, and such qualities have not worked for the advancement of our Cause. Humility and unselfish consecration are as necessary for the harmonious conduct of the business affairs of a church, as for the advancement of its spiritual interests.

ARCHIBALD MCLELLAN.

"BE COURTEOUS."

LONG ago the apostle Peter gave this counsel: "Be ye all of one mind, . . . love as brethren, be pitiful, be courteous." We are very apt to think that courtesy is a grace which results only from education and culture, but this is a mistake. True courtesy springs from innate refinement, and is of the heart rather than the head. It forgets self in thinking of others and betokens that healthful mental condition which indicates breadth of thought and progressiveness.

The apostle who admonishes us to be courteous had learned of the great Teacher the value of those qualities which express the one perfect Mind, and in his many years of Christian endeavor he had doubtless seen the lack of these qualities on the part of those who were not finely attuned to the things of Spirit, whether these people were great or lowly in station. It is quite likely that he was present on the memorable occasion (mentioned in the seventh chapter of Luke) when Jesus dined in the house of a Pharisee, and when a woman said to be a sinner came there as an unbidden guest. We are told that she bathed the Master's feet with her tears, kissed them, then wiped them with the hairs of her head and anointed them with precious ointment. For this gentle service she had the rich reward of sin forgiven,—destroyed by the consuming fire of divine Love.

At this point Simon the Pharisee, who had dared to criticize both the lowly penitent and the one who had accepted her homage, received a much needed lesson on courtesy. Jesus proceeded to uncover, by a parable, Simon's self-righteousness, and made him render a decision against himself. He then turned to the woman, and gave all present a lesson which can never grow old. He reminded Simon that he had wholly neglected the deference usually shown to a guest,—but that this omission had been more than supplied by the unwelcome visitor. Jesus said, "Thou gavest me no water for my feet: but she hath washed my feet with tears, and wiped them with the hairs of her head." Well might Peter say years after, "Be pitiful, be courteous."

There are many today who come to our services as did that woman in the olden time, to draw nearer to the healing Christ,—indeed that is why we all attend,—and shall the gentle Christian courtesy enjoined by the apostle ever be missing there? Whether the visitor be a stranger to Christian Science or one of our own faith who may have come from another field, it should never be said that any such leaves a Christian Science church without receiving a loving greeting and a fervent Godspeed on his way. We should never forget the Master's words, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

If a lingering doubt as to the need of Christian courtesy should remain, let us read what Paul says in the sixteenth chapter of Romans. He begins by commending a good woman to the kindness of the brethren, then he sends greetings and salutations to one after another, and he says, "the churches of Christ salute you." Shall the churches of Christ, Scientist, do less? A kindly word may be as the water of life to the wayfarer, and our courtesy will be a small but fitting token of our gratitude for the truth which has so richly blessed us.

ANNIE M. KNOTT.

CORRESPONDENCE BETWEEN A COMMITTEE OF INQUIRY AND THE DIRECTORS.

First Church of Christ, Scientist,
New York City, Oct. 21, 1909.

The First Church of Christ, Scientist, Boston, Mass.

Dear Sirs:—The committee of inquiry, appointed by the board of trustees of First Church of Christ, Scientist, New York city, to inquire into conditions, teachings, and practices in said church, has before it certain evidence to the effect that members of this church have sent you complaints or notices regarding errors alleged to have been manifested by members of this church.

The committee of inquiry requests that you will forward to me, as its chairman, the names of members of this church

Digitized by Google

who have done this, and also the nature of the errors complained of. Unless there be some reason why this would be improper, the committee would like to have the letters themselves, or copies, and at your earliest convenience, in order to expedite the inquiry now in progress.

Very truly yours,
E. F. HATFIELD, *Chairman.*

Boston, Mass., Oct. 23, 1909.
Mr. E. F. Hatfield, Chairman, Board of Inquiry, First Church of Christ, Scientist, New York City.

Dear Sir:—We do not know of any complaints or notices from members of your church, such as are described in your letter dated Oct. 21; the evidence received during the inquiry recently held by this Board was given orally. Since then we have received many letters from members of your church, but none of them could properly be called complaints, and the most of them only expressed the writer's satisfaction at the prospect of a house-cleaning in your church.

The absence of such complaints need not, however, hamper your inquiry; there are plenty of witnesses, both within and without the present membership of your church, who can furnish the evidence for which your committee is seeking, or ought to be seeking. Their names should be known to you by reason of your presence for many years in the inner circle of Mrs. Stetson's students. And if your committee would permit the First Reader of your church to take part in the inquiry, as provided by Article III., Sections 7 and 8, of the Manual, he is able and willing to furnish the names of witnesses, and to aid in obtaining their testimony, unless your committee has resolved itself into a committee solely for the defense of Mrs. Stetson. The fact that your committee has excluded Mr. Strickler from this function, and the fact that your committee has appointed in his stead a person whose card has been removed from *The Christian Science Journal*, and to whom this Board recently gave an admonition that is as yet unheeded,—these facts are circumstances tending strongly to impeach the good faith of the inquiry now being conducted by your committee. Nor do these facts stand alone: for instance, when the persons who now constitute a majority of your committee were in our room in The Mother Church on Sept. 24, 1909, and we were inviting them to listen to a statement of the conditions disclosed by our investigation, their sole purpose appeared to be the defense of their teacher, whom their spokesman referred to as "the teacher."

During the recent inquiry held by this Board, it was put in evidence that you had on three different occasions spoken to Mr. Strickler of Mrs. Stetson's practice in regard to treating persons without their consent, as being contrary to the teachings of Christian Science. According to the entries in his diary, you had a conversation with him on Feb. 13, 1909, in which you referred to her practice in this respect as "shocking;" you also said to him, on March 22, 1909, while referring to the audible treatments which she gave in the "practitioners meetings" held in your church edifice, that it fairly made you tremble to hear her make those attacks against persons; and on March 26, 1909, you showed him extracts from the writings of our Leader, Mrs. Eddy, to prove that Mrs. Stetson's practice was contrary to Mrs. Eddy's teachings. If these statements are true—and we have not heard them denied—your position as the writer of the letter now before us is quite anomalous.

The membership of your church includes a large number of splendid people, and we hope that your committee will not subordinate their interests and the actual interests of all parties concerned to a "mere personal attachment" (Church Manual, Article VIII., Section 1).

Sincerely yours,
The Christian Science Board of Directors,
JOHN V. DITTEMORE, *Secretary.*

THANKSGIVING NUMBER OF THE MONITOR.

The completion of the first year's publication of *The Christian Science Monitor* will be signalized by the issue, on Wednesday, Nov. 24, of a special Thanksgiving number of sixty or more pages, which will embody all that this name implies. The usual high standard of special articles will be maintained, and the extension of the regular features and the addition of many new ones will serve to make this issue both unique and interesting.

Regular subscribers to the *Monitor* will receive the Thanksgiving number without extra charge. The price of single copies will be five cents each, and a plan has been arranged by which individuals who send to the Publishing Society a list of fifteen names and addresses, with one dollar (which will cover the cost of papers and postage), can have the papers mailed to their friends direct from this office. In the Thanksgiving number the regular readers of the *Monitor* will have a particularly good opportunity to introduce the paper to their friends and neighbors.

LETTERS TO OUR LEADER.

Brookline, Mass., Oct. 19, 1909.
Mrs. Mary Baker Eddy.

Beloved Leader:—Suspense is always trying, and the past week has been one of especial joy that the Directors of The Mother Church have been found brave enough to separate the "tares from the wheat." I am so grateful for the many rousing "bugle-calls," in our last *Sentinel*, to the necessity of studying our by-laws, which have always been a marvel to me in their adaptation to our needs and growth. Many of us needed to be awakened to our privilege of finding out for ourselves what Principle requires us to do, as taught by our Manual and your writings. I am glad you do not stay behind to be troubled with our difficulties, but that you are pressing on, bearing such a brilliant torch-light of Truth that its rays will reach us as rapidly as we are ready to respond to them.

I am beginning to see plainly the necessity for obedience in all the small things, that we may have the power and courage to overcome the bigger temptations as they arise, and we learn that by becoming obedient in small matters even the greatest temptations become less and less significant. My constant desire is that I may grow in gratitude and in comprehension of the great work that is being accomplished by your efforts to bring out the "structure of Truth and Love" in our consciousness.

Ever sincerely yours,
EVA S. LOMBARD.

MRS. EDDY'S REPLY.

Box G, Brookline, Mass., Oct. 21, 1909.
Mrs. Eva S. Lombard, Hotel Beaconsfield,
Brookline, Mass.

My Dear Student:—In return for your letter please accept my love and thanks. You have turned to the central light and gained an illumination. Flickering beams do not give the object its proper proportions.

Lovingly yours,
MARY BAKER EDDY.

[Telegram.]

New York, N. Y., Oct. 19, 1909.
Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of Third Church of Christ, Scientist, of New York city, at its annual corporate

Digitized by Google

meeting, held this evening, desire to express our love for you and our appreciation of the help we have received from the inspired interpretation of the Bible, as given by you in "Science and Health with Key to the Scriptures," and we pledge our loyalty to the teachings therein contained, and to you, our Leader.

W. H. VOGELL, J. ALLEN BARRIS,
EDITH SACKETT, *Committee.*

[Telegram.]

Indianapolis, Ind., Oct. 19, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the delegates from the Christian Science churches and society of Indiana, assembled in conference in Indianapolis, are reminded, in the midst of the varied activities of our beneficent Cause, that our sole obligation is to you for such an opportunity to serve Christ and suffering humanity. Our hearts go out in gratitude to God for benefits thus coming through your spiritual insight into Scripture, and we long to express in words, however feebly, our allegiance to you, our dearest friend and the efficient and honored Leader of the age's greatest reform.

R. STANHOPE EASTERDAY, CLARE G. CAMERON,
EMILY WRIGHT HOOD, STEPHEN METCALF,
OLIVE ALLISON, EMERSON W. CHAILLE,
Committee.

New York, N. Y., Oct. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—May I occupy a moment of your valuable time to thank you for giving to humanity in your writings and life the answer to all of life's problems. In giving us the answer to the "infinite query!" "What is the Principle and rule of Christian Science?" (Miscellaneous Writings, p. 337) you have enabled all who desire to know what the Principle of life is and what the golden rule of action is, covering every problem without exception, when this Principle and rule is interpreted according to the divine metaphysics and ethics of Christian Science. You have indeed demonstrated the illustration you give of this "infinite query."

I am so grateful to you for making possible the spiritual healing and the healing of physical conditions, and also to all who have helped me to know God better. For the revelation of divine Love that has opened the kingdom of heaven within to me, and made it possible for me even to wound in order to heal those whom I would bless as I have been blessed, I am trying to make my life bespeak my gratitude.

Gratefully and lovingly,
ARTHUR E. OVERBURY.

Ithaca, N. Y., Oct. 15, 1909.

Dear Leader:—Though you may not read these lines, I know that I am blessed in accepting the privilege you have granted us of writing to you to express our gratitude for this wonderful truth. With every faithful struggle for a conquest over evil comes at length the joy of victory, and a new, a sweeter revelation of God, good. Through what have seemed most awful failures, that made life seem a desolate, black waste, I have found this truth more than a deliverer. Life was never so rich, God never so near as since these experiences have taught me the inexpressible joy of finding that there is but one Life, but one Mind, but one God and that good. Your article "There is no Death" brought to me also the deep realization that there is also no sin and no sorrow. Oh, to be always conscious of this great fact in Science! I am only one of the many thousands for whom sorrow has been turned to joy.

You will be interested to know that the work in the Christian Science society of Cornell University is growing in the hearts of its members. The foundation here was honestly laid by earlier students, and though they are gone away their interest is still manifest and the new workers that have come are taking hold with much earnestness; and this year promises to be the best of its existence. For what you have done and are doing for mankind I thank you.

Faithfully yours,
MRS. GRACE S. VOORHEES.

Jamestown, N. Y., Oct. 13, 1909.

Dear Leader and Teacher:—For months and years I have wished to thank you for all you have done for me and mine, but could not, for it would be impossible. It is a long time since I have written you, but I am indeed grateful to you, my teacher, for healing the sick and comforting the sorrowing.

Yours gratefully and lovingly,
ROSE E. KENT.

Boston, Mass., Oct. 20, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I know that to you words in themselves are idle and meaningless; fruit is what you demand, and to you it is the only evidence of growth, but an expression of gratitude from one who has been blessed beyond measure by your writings, and also by having the privilege of personal teaching from you at intervals during a period of nine or ten years, may be allowed.

The fog of personal "mad ambition," like that which appears upon sea and land, evaporates when the sunlight of Truth shines upon it. Jesus said, "Every plant, which my heavenly Father hath not planted, shall be rooted up;" and you tell us that "success in error is defeat in Truth" (Science and Health, p. 239). You also say: "Through the channels of material sense, of worldly policy, pomp, and pride, cometh no success in Truth." "Though the divine rebuke is effectual to the pulling down of sin's strongholds, it may stir the human heart to resist Truth, before this heart becomes obediently receptive of the heavenly discipline. If the Christian Scientist recognize the mingled sternness and gentleness which permeate justice and Love, he will not scorn the timely reproof, but will so absorb it that this warning will be within him a spring, welling up into unceasing spiritual rise and progress." "Nothing except sin, in the students themselves, can separate them from me. Therefore we should guard thought and action, keeping them in accord with Christ, and our friendship will surely continue" (Retrospection and Introspection, pp. 79, 80, 81).

These quotations from the Bible, and from your writings, ought to awaken all, and cause the scales to fall from dim eyes, and the dull ears to be unstopped.

Loyally and lovingly yours,
CALVIN C. HILL.

Wolfboro, N. H., Oct. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader and Teacher:—I feel that I must write you just a word. Every wind of error that would overthrow you and the Cause of Christian Science draws me nearer to you; makes me love you more; makes me lift my heart in prayer: "Cleanse thou me from secret faults." God is with you, His messenger, and sustains you. The waves of error beat vainly against the eternal Rock, Christ.

Yours in truth,
HANNAH M. EVANS.

THE LECTURES.

GRAND RAPIDS, MICH.

The Rev. Arthur R. Vosburgh lectured on Christian Science at Powers' Theater Sunday afternoon Sept. 26. He was introduced by Percival B. Garvey, First Reader, who said in part.—

Christian Science stands on its own merits—the fruits of the Spirit. The world at large is yearning for Truth, hungering for "crumbs of comfort from Christ's table," and Christian Science comes to supply the needs of humanity here and now, "feeding the hungry and giving living waters to the thirsty." Its healing, saving, and regenerating message from Life, Truth, and Love is educating and elevating all mankind into better, purer, holier thinking and living, through a clearer apprehension of Principle. It asserts the practical possibility of understanding God as all-inclusive good, the creator, and the Giver of every good and perfect gift.—*Correspondence.*

SOUTH BEND, IND.

William D. McCrackan, M.A., addressed a large meeting in the interest of the Christian Science teaching at the Auditorium last night [Oct. 1]. J. F. Gaylor of Mishawaka, in introducing Mr. McCrackan, said,—

It has been said of Christian Scientists, that their religion is the "great fact" of their lives, and this is true, for Christian Science enters so entirely into every activity of the one who practises it, that in truth it becomes more than a fact in his life,—it becomes his very life. And this will account for the optimism and intense enthusiasm which is so apparent in every Scientist; he has found something which in reality transforms his being; which is more to him than a religion; more, vastly more than a Sabbath-day affair; it is hourly, momentarily, a present help to him in every need, affording relief not only from sin and sorrow, from misery and woe, but from disease and want and every ill that flesh is heir to.

The Christian Science lecture is designed to tell you the truth about its teachings, and incidentally to correct false reports which from time to time are put into circulation through various agencies. Happily, however, for the Cause of Science, and even more happily for the race of men, these false reports are becoming less and less frequent, and there is evidence on every side that the world is growing into a better understanding of the great truths which are presented in this Science; and with this better understanding there has come also a higher appreciation of the character and nobility of the woman who discovered its laws and, through the magnificent church organization which she has established and still so wisely directs, is endeavoring to establish among men the religion of Christ Jesus, and restore that element of physical healing which gave primitive Christianity its vitality and force in the early centuries.

Christian Science preaches by its healing and heals by its preaching. Its practitioners cure by their understanding of the fundamental laws of health, not by their knowledge of disease. The salvation it offers is for today, and its philosophy so simple that the child can grasp it. It comes readily to the receptive heart, but never to the prejudiced mind.—*Times.*

LECTURES TO BE DELIVERED.

Braintree, Mass.—Prof. Hermann S. Hering, Music Hall, Quincy, 7.45 p.m., Oct. 31.
Elmira, N. Y.—Frank H. Leonard, Assembly Room, City Hall, postponed to Nov. 4.
Kansas City, Kan.—Hon. Clarence A. Buskirk, Auditorium, 6th street and Minnesota avenue, Nov. 5.
Lynn, Mass.—Prof. Hermann S. Hering, Olympia Theater, 406 Washington street, 2:30 p.m., Nov. 7 (note change of hour).
Winchester, Mass.—Prof. Hermann S. Hering, Town Hall, Nov. 8.
Harrisburg, Pa.—Frank H. Leonard, Majestic Theater, Nov. 8.
Logansport, Ind.—Bliss Knapp, Elks Hall, Nov. 9.
Amesbury, Mass.—Prof. Hermann S. Hering, Town Hall, Nov. 11.
San Mateo, Cal.—Rev. William P. McKenzie, Harts Theater, B street, Nov. 11.
Paris, Tex.—Bliss Knapp, Opera House, Nov. 12.
New York, N. Y.—Prof. Hermann S. Hering, Third Church, 125th street, between Fifth and Madison avenues, Nov. 12.
Rome, Ga.—Frank H. Leonard, Rome Opera House, Nov. 12.
Denver, Col.—William D. McCrackan, M.A., Nov. 11 and 12.
San Jose, Cal.—Rev. William P. McKenzie, Victory Theater, Nov. 12.
Plainfield, N. J.—Prof. Hermann S. Hering, Hartridge School Auditorium, Nov. 13.
Memphis, Tenn.—Miss Mary Brookins, Bijou Theater, Sunday afternoon, Nov. 14.
Newark, O.—Hon. Clarence A. Buskirk, High School Chapel, West Main street, 3 p.m., Nov. 14.
Easton, Pa.—Clarence C. Eaton, Able Opera House, 3 p.m., Nov. 14.
Salt Lake City, Utah.—Judge William G. Ewing, Salt Lake Theater, 8 p.m., Nov. 14.
Seattle, Wash.—Judge Septimus J. Hanna, afternoon and evening, Dreamland Rink, Nov. 14.
Utica, N. Y.—Prof. Hermann S. Hering, Majestic Theater, 3:30 p.m., Nov. 14.
Syracuse, N. Y.—Prof. Hermann S. Hering, Weiting Opera House, 8 p.m., Nov. 14.
Dallas, Tex.—Bliss Knapp, Dallas Opera House, 3 p.m., Nov. 14.
Atlanta, Ga.—Frank H. Leonard, Grand Opera House, 3:30 p.m., Nov. 14.
Florence, Col.—William D. McCrackan, M.A., Sunday afternoon, Nov. 14.
Wenatchee, Wash.—Judge Septimus J. Hanna, Wenatchee Theater, Nov. 15.
Rochester, N. Y.—Prof. Hermann S. Hering, Lyceum Theater, Nov. 15.
Kalamazoo, Mich.—Frank H. Leonard, Academy of Music, Nov. 15.
Boulder, Col.—William D. McCrackan, M.A., Curran Opera House, Nov. 15.
Fresno, Cal.—Rev. William P. McKenzie, Barton Opera House, Nov. 15.
Amarillo, Tex.—Bliss Knapp, Grand Opera House, Nov. 16.
Ann Arbor, Mich.—Frank H. Leonard, Newberry Hall, Nov. 16.
Fort Collins, Col.—William D. McCrackan, M.A., Opera House, N. College avenue, Nov. 16.
Geneva, Switzerland.—Rev. Arthur R. Vosburgh, Nov. 30.

Out of th' abysmal past,
Up from the Stygian darkness drawn,
Into the light at last—
Night's gate unbarred—escapes the dawn.
The truth hath set me free:
Bleak chaos and old night succumb.
Lord, ever up to Thee.
On wings of love, I come! I come!

T. E. SCANTLIN.

TESTIMONIES OF HEALING.

I accepted Christian Science, took a few weeks' treatment, and after studying the Bible in connection with Science and Health, in one year I was back in business, and have been constantly growing stronger in the Lord, seeking to follow as a little child in the way shown us, and experiencing that blessed assurance of God's love and His watchful care with a sense of peace, harmony, and trust in Him that is very satisfying, and that I never knew before.

The first of the evils to go was the tobacco habit. I had not thought it possible for me to quit smoking, and had not intended to quit, but I was honest in my search for the healing power of Christ, and while I was being treated for another ailment, I was healed of this habit in accordance with God's will, not mine. The healing from tobacco converted me at once, as I realized that it was no human power that had done the work, and I did not doubt from that time on. The healing was comparatively slow, and what seemed to me the greatest affliction was the last to go, for which I am now very thankful, as I can see the wisdom of God's way. I am now a well man, having experienced in a very large measure the spiritual and physical healing that makes us whole. First in importance I count the spiritual uplifting, that has enabled me to begin the construction of a new habitation, to build this new house upon a rock and not on the sand as was the old; to possess a structure not made with hands, but eternal in the heavens.

The second blessing I will name was the physical healing, and the other was the reunion with my beloved family, with whom I have been rejoicing now for more than a year. Coming to me from the East, after many years of enforced and cruel separation, we have been wonderfully blessed, our every need is supplied, and there is no more fear of poverty. Our faith is sufficient to carry us through this life, fearing no evil, for our trust is in God, who doeth all things well. The "old man" is being "put off," and the "new man" is growing in the knowledge of our Lord and Saviour Jesus Christ a little every day, and will some day attain that perfect state when Truth is altogether understood.

With a sense of rejoicing in this new-found hope, and a realization that it is God's good pleasure to give us the kingdom, with unspeakable love and gratitude to the Giver of every good and perfect gift for the mercies and forbearance extended to me throughout all the years of my disobedience, I am glad to acknowledge to Almighty God the debt of love I owe and can never repay, and to His Son and our Saviour, who overcame all evil, sin, sickness, and death, that we might have everlasting life, thus showing us how we may enter in "at the strait gate," after having taken up the cross and followed him as best we could. I know that God will abundantly bless our dear Leader, whom He has sent with a message of healing to this age, and to whom we owe so much for having pointed out to us anew the old way. Of a truth her reward will surely be very great.

I realize that by my works I may best express the deep sense of love for all the blessings that have come to me and mine, and it is my dearest pleasure to help some suffering mortal out of the pit of despair, as I have been helped.

P. L. YARBROUGH, Sacramento, Cal.

[Translated from the German.]

Thanks be to God that I have lived to see the pure Christ-teaching brought to light again through Mrs. Eddy, who has made practical the wonderful teachings of Christ Jesus, which were obscured by material theories and false doctrine. I shall never cease the striving to make this view of life my own, even though there may be some stumbling and rising again on the way thereto. Besides this main point, I must give thanks for repeated healing, and will tell about one of the most important instances.

I had suffered for years with my eyes; the trouble had set in suddenly, and I felt very ill. The specialist whom I consulted declared it to be a serious affection of the iris, and for weeks I was tormented both by the pain and the treatment employed. Even after the disease was temporarily overcome I was unable to see well for several weeks, owing to the after-effects of the remedy prescribed, and the disease came back for years at shortening intervals, so that besides leading a solitary life I was in a sad condition. A physician told me that my eyesight would be impaired through the frequent recurrence of the trouble, and finally gave me a remedy to use with the remark that, as a result of its frequent use, blindness might follow. I did not use this remedy, however. Thank God, I was then treated in Christian Science, and the effect was a most happy one. The disease began to go away when Christian Science treatment was resorted to, and it has disappeared entirely within the last few years. My sight is also strengthened.

FRAU EMMA VON GANSANGE, Wernigerode a|Harz, Germany.

I wish to express my gratitude for what Christian Science has done for me. About nine years ago I seemed to be a nervous wreck, suffering from several ailments. A physician stated that I must undergo an operation to gain relief, but he could not promise complete healing. He said that I might have to undergo two or three operations before I could be well. This seemed very uncertain to me, and I was suffering so much that I turned to Christian Science, which I had previously scorned. My trouble was said to be internal, a malformation which caused tumors to form on various organs, and all material means had failed, after three years' trial. In two weeks' treatment from a Christian Science practitioner I was healed, and I have been perfectly well ever since.

Nearly three years ago I married, and now have a little daughter who has never been ill a day. She has passed through her second summer safely, and is the happiest baby I ever saw—a little sunbeam. I could offer many proofs of the beneficial effects of Christian Science. I am thankful also for the spiritual uplift, and gladly give this testimony.—MRS. ELENOR BROWN-MORT, Dayton, O.

I have long felt that I wanted to add my testimony to those of the many who are endeavoring to live their lives according to Christian Science. My interest in this Science dates from about nine years ago, but the greatest demonstration for me was when my youngest child, now eight years old, was born, as the conditions were all so very harmonious, and so totally different from what I had experienced with my other children. This little girl has been an exceedingly healthy child; almost her only illness having been an attack which occurred last winter, and which was overcome by Christian Science treatment in a very short time. We now rely upon Christian Science for the cure of all ills that come up, and feel that God is indeed the only physician for us. There have been some very persistent difficulties, but I feel that we are making progress and have every reason to be hopeful that in time they will all be met.

For the loving and constant help I have received I am indeed grateful, and feel as so many have said, that words are not adequate to express my deep gratitude to God for sending, through that pure-minded woman, Mrs. Eddy, this healing message to our age.

LOUISE STARR CONRAD, Chicago, Ill.

Digitized by Google

Seven years ago I was healed in Christian Science of a throat ailment which had baffled six physicians. They had told me that it had come to me from some possibly remote ancestor, thus fastening the belief of heredity upon me; but I was cured in about two weeks, and because of my ignorance of Christian Science I accepted this healing without making any return other than a dazed sense of gratitude. I became interested in Christian Science in a desultory fashion, still clinging to worldly ways which did not interfere at all with my church relations; but several years later I had a bad fever, which was followed by a long period of general breakdown, one manifestation of which was a contagious skin disease which was spreading rapidly over one hand and foot. I had a physician, considered the best in our city, to attend to it, but without any seeming results. I then asked for Christian Science help on Monday, and by Saturday the bandages were left off and only a slight redness remained. Since then I have had Christian Science only.

The last year has been one of travel from sense to Soul, with me, and there have been times of mental darkness, but I can now see that there has been growth,—more discernment, and a willingness to wait patiently on God. I have many reasons to be grateful, but only in the last few months have I had real waves of gratitude break into my consciousness—gratitude to God for the illumination of His Word, and gratitude for the "Key" which opened it up to me, so that I was awakened to the truth.

LILY M. FELLERS, Jacksonville, Fla.

[Translated from the German.]

I had been suffering from a chronic cystic disease for some time, and had also become mentally ill, in which condition I was for nearly a year. I did not enjoy my work nor my life, and medical treatment had only made me give up all hope of ever being well again. My attention was then called to Christian Science. I turned to it and, thank God, I was healed of this trouble in a short time, for which I have always been very grateful.

FRAU BALSIGER WIRZ, Zunzgen, Baselland, Switzerland.

I am pleased to acknowledge through the pages of the *Sentinel* what Christian Science has done for me. I am seventy-two years old. I had suffered from bowel difficulties all my life, having had to take medicine continually for relief. I had also suffered intensely for the last twelve years with gall-stone, the doctors not being able to help me in any way, and they finally told me that I could never be relieved without undergoing a surgical operation, to which I could not consent. I had always trusted in God, that is, in a vague way. I often said that I felt things would work out all right, and so it has proven, even in this instance. How sure are His precious promises: "Commit thy way unto the Lord; trust also in him: and he shall bring it to pass;" and "I will never leave thee, nor forsake thee."

About a year ago my married daughter was beautifully healed through Christian Science, and wanted me to try it, so I bought a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to read it. In a very short time I was entirely healed of both of the above-mentioned troubles. I now feel perfectly well and so fresh and young. I have also begun in a small way to help others. My son has been relieved from suffering just from my reading the book to him. He is now interested in reading for himself, and we both enjoy the *Sentinel* very much. I cannot find language with which to express my heartfelt gratitude to God, and to Mrs. Eddy, through whom all these things have been made possible for me here and now. I trust that this testimony may enable others to come to the true source and find the fountain of life which flows so freely for all.

MRS. L. J. LUCAS, Brentwood, Tenn.

My attention was called to Christian Science by the healing of a friend from a very serious ailment, and it was through her that I was induced to call on the practitioner through whom she had been healed. My trouble had been diagnosed by several physicians as an ovarian disorder, and I had previously been through an operation for a similar trouble without getting any relief. At the time when I came to Christian Science for help, I was scarcely able at times to be about the house. After one week's treatment I was, however, completely healed, could run up and down stairs, and found myself singing as I went about the house. I consider myself well, and feel that I owe it all to Christian Science. I sincerely hope this testimony will help some sufferer to turn to divine Love for the health which one may have for the asking. I am reading and studying Christian Science, as is also my entire family, and I feel that I cannot be grateful enough for what this truth has done for me.—MRS. E. I. BROWN, Monterey, Cal.

A few months ago, when spent with disease, my steps were directed in a marvelous way to a Christian Science practitioner. In three days a troublesome cough was gone, and in less than three weeks a cane, which had been absolutely necessary in walking, was laid aside entirely. The sense of gloom and depression gave way to the joy of living, and today my soul is sounding a pean of praise to God, good, that He was ready and waiting to heal me. I am profoundly grateful for the earnest, intelligent, and spiritual guidance that has led me far into that realm where there is perfect harmony, the peace "which passeth all understanding."

LUELLA W. POWELL, Brooklyn, N. Y.

I feel it a duty as well as a privilege to tell others what Christian Science has done for me. After a lingering illness of about five months, in September, 1898, my case was diagnosed by a physician as a severe form of rheumatism. At that time I was almost helpless in my lower limbs, but through Christian Science treatment I was enabled in five or six weeks to spend almost all day at my employer's place of business (he being a retail grocer) and to render some assistance in handling the books for him, but as I seemed to be slow in regaining strength and activity, it was about two months later before he felt that I could take up my regular work. On Dec. 16, 1898, I was, however, permitted to resume my work, and from that day to the present time (over ten years) I have not lost a single day on account of illness, although about two or three years after the above-stated experience, I was spared by Christian Science from being brought down by severe nervous illness.

For these and many other blessings received through Christian Science, I wish to thank God, and also our dear Leader, Mrs. Eddy. I am very grateful to The Christian Science Publishing Society, and to each and every one of God's children who have labored so patiently to help me in time of trouble and who have enabled me to gain some understanding of this truth which makes free indeed.

JOHN H. PRICE, Chattanooga, Tenn.

My experience of July 4, 1908, may be of help to others, should they ever find themselves confronted by the same form of error that confronted me on this day. In the afternoon I gathered a large quantity of what I thought were

Digitized by Google

edible mushrooms, and prepared them for supper. My mother, my little boy, a trained nurse who was caring for a relative in the house, and myself partook of them, and as I am especially fond of them, I ate the most. About a half hour after supper I became quite ill, and my mother also was experiencing the same condition. My little boy was out playing, and I had no idea where he was. I went upstairs to try to treat myself, when I found the nurse almost overcome. I asked her if she wanted a doctor, and she answered that in this case a doctor was useless; so I hurried over to a friend's house and called for help in Christian Science. I seemed to be affected through every part of my body, and we continued to get rapidly worse. I had almost no strength left, but I went to the telephone and the helpful reassuring words that came to my ears from the practitioner did their work. When I reached home we were all very much improved, and in about one hour all were well again.

I am indeed grateful for my deliverance, and I consider this a wonderful demonstration of the Christ-healing. I am so happy each day to find that I am growing in this truth which our God-inspired Leader has given us, and my daily prayer is for more of it. If this testimony should convince some one that Christ's promise is fulfilled here and now, I shall be more grateful than I can express. May it put new courage into those who are disheartened at some supposed obstacle in their path.

LILLIAN LEWIS VOSE, Hyde Park, Mass.

I wish to express my gratitude for what Christian Science has done for me. It has been my only physician for ten years. In August, 1908, I had a very convincing proof of the protecting care of divine Love. One Sunday morning, as I started to come down stairs, I fell from the top to the bottom, striking on my head. My shoulder was badly injured by my fall against a heavy iron hook with sufficient force to break it. My husband, much alarmed, ran to my assistance, but I immediately declared the truth and these words from our text-book were most helpful: "Resist evil—error of whatever sort—and it will flee from you" (Science and Health, p. 406). Four hours after the accident I was able to attend church. There was no discoloration and the swelling on the head was scarcely noticeable. In less than a week the injury to the shoulder was entirely healed, and all lameness had disappeared. During this time I was able to attend to all my household duties as usual.

Another proof of Truth's power was the overcoming of poison. One of my fingers was badly swollen, and some of my friends were fearful as to the result, but after a few days' treatment in Christian Science all swelling and inflammation had disappeared and the healing was complete. My work necessitated the using of this hand in ways which under *materia medica* would have seemed impossible. For these, and a great many other demonstrations, I am indeed thankful to God, and grateful to our Leader, Mrs. Eddy, for showing me this way.

LETTIE A. MOORE, Vinalhaven, Me.

I have been interested in Christian Science over four years, and all honor and gratitude are due from me for its teaching. The liquor and tobacco habits of long years' standing have been overcome, and I am completely healed. The benefits that I am daily receiving and rejoicing over, are from the light of Truth that shines forth in my consciousness, the light of spiritual understanding, which alone brings health and peace of a satisfying nature. These words are written in the highest sense of appreciation for all that is good and true, as made known in Christian Science.—JOHN M. CRAIG, Louisville, Ky.

For a long time I have felt that I should tell of my healing through Christian Science, which took place about four years ago. I had been taken with an attack of appendicitis and other abdominal trouble, and after an illness of seven weeks, with only a liquid diet for nourishment, the physicians said that an operation would be absolutely necessary as soon as I had sufficient strength. I decided to try Christian Science before submitting to the knife, having been interested for some time before in the spiritual uplifting which I had seen demonstrated on visits I had made to a dear friend who is a practitioner. I had my husband telephone to this friend and ask for treatment, and she advised my coming to her the next morning. At that time we did not see how it could be possible for me to make a trip of one hundred and fifty miles, but my friend assured us that "with God all things are possible," and that the needed strength would come from Him. I was able to leave the next morning, and reached the home of my friend that afternoon.

My healing commenced from the time we telephoned, and continued rapidly. In a week's time I was like a new person; at the expiration of two weeks I was well and strong, and have been ever since. After this healing I began the study of Christian Science, and it has been a help and comfort to me in every way. I joined the Christian Science church here about one year ago. I feel deeply grateful for the faithful work done for me, and for all the benefits I have received through a knowledge of Truth.

MRS. ETTA M. DOTY, Nashville, Tenn.

I wish to express my gratitude for the numerous blessings that have come to me through Christian Science. Two years or more ago, I appealed to a practitioner for treatment. At that time I was out of employment, and a heavy user of liquor and tobacco; but these conditions have been overcome with this healing truth, as well as the use of glasses and many ailments. I am deeply grateful to God for the spiritual understanding which I have received through the study of Science and Health, also to Mrs. Eddy. Christian Science has indeed supplied every need.

JOHN MUIR, Alameda, Cal.

During the month of August, 1906, I was suffering from a form of malarial fever, as diagnosed by a physician, and had no normal action of the system for weeks. I tried at first to help myself, but did not seem to understand sufficiently, and only grew weaker each day, till at last to please my family I consented to see a physician, who prescribed the usual remedies; but still no good came of it. My bowels were much enlarged, and I began to feel the gravity of the situation. I told my family that I knew that God could heal me, and I asked for pen and paper in order to write to a Christian Science practitioner at Jacksonville, Fla., whom I had once met. On the second day after my letter was mailed the fever left me, and painless action of the bowels followed; the swelling went down, and I was free from all pains or aches, and so happy! I felt as though I could fly. The third day after writing to the Scientist I received a letter from her, which stated that she had commenced to treat me the very evening I was so greatly relieved. My strength came back gradually, but from the first day I was a well and happy woman.

Jesus said, "Ye shall know the truth, and the truth shall make you free." I am indeed glad to be able to say to my friends who do not understand this great truth, when they ask if I still believe in Christian Science, "I not only believe, but I know!" and then a great desire goes out that they, too, may know that Christ is with us today, for do we not read, "Lo, I am with you alway."

ELIZA MANN, Bulow, Fla.

Digitized by Google

[Translated from the German.]

Last spring I was taken with a serious indisposition, which within a few days brought about a severe affection of the lungs. For a few days I seemed to be at death's door. As I had often talked about Christian Science with my sister, and also had read much on this subject, I turned to it. I asked a neighbor who came to see me daily, to write for me to a Christian Science practitioner. As soon as the letter reached its destination I felt the pain grow less, and a few days later I was able to get up, and although I was very weak, I felt that the disease had yielded. I am truly grateful that I was ready to hear the voice of Truth. My heart is full of gratitude to God, and to our Leader, Mrs. Eddy, that she has shown us so patiently and lovingly the way to apply this saving truth. I know that any one can recover his health who puts his trust in God and believes what He says. I do thank God for this healing.

FRAU IDA MEIER, Laubberg-Saland, Ct. Zuerich, Switzerland.

I am moved by deep gratitude to God to add my testimony to the thousands that have already been given in our periodicals. When my little son was five days old he was taken with an attack of convulsions, which lasted about a half hour. Our family physician was in doubt as to what had brought on the trouble, but the child did not have any more till he was four months old, and then he had another very severe spell, after which he remained rigid for seven hours. The physician then began to experiment with different kinds of food, but the baby seemed to grow steadily worse and the attacks came more and more frequently. Finally we seemed to strike the right food, and we thought surely he was cured, but alas, the attacks returned and one night he had fourteen convulsions. I thought surely he could not outlive the night, but in the morning he was better. That night's experience, however, proved to me how utterly powerless the physicians were even to relieve his awful suffering.

Soon after this I heard of some wonderful cures through Christian Science, and determined to try it for my baby. One night when he was taken with a terrible attack, I called up a practitioner and he was quickly relieved. He was entirely healed of this awful trouble in that one night, and has never had a return of it. It is now over two years since he was healed, and he is a perfectly healthy, bright child. My gratitude is so great that my heart is full to overflowing, and I cannot find words to express myself. I feel as though I could not do enough, or be good enough, to show my great love for God, who healed my little child. I myself have been cured of a severe form of rheumatism, also of a heart trouble which physicians had pronounced incurable. Surely Mrs. Eddy has brought back to the world the true life which Jesus taught, and I feel that too much love or respect can never be shown her for the great boon which she has brought to all who will accept it.

MRS. CHARLES F. MAXWELL, Chicago, Ill.

For several years my husband and I have spent a few weeks in the summer at a watering-place in New Jersey. During the winter one of our friends remarked that there were fever germs in the water at that city, and although I mentally denied the statement, I did not go farther and realize the perfection of God's creation, and that He is All. The next visit we made to that city, I would think of what my friend had told me nearly every time I drank water: consequently, after about two weeks, I awoke one morning very ill and in great pain, with every symptom of the disease mentioned. After trying to realize the unreality of pain for two or three hours, but growing rapidly worse, I felt sure I was safe in relying on Mrs. Eddy's statement in Science and Health (p. 420), in which she says that "if students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them."

I asked my husband to treat me, which he did for about ten minutes, and I then made an effort to dress myself; but I seemed to be even worse than I had been before, and I asked him to repeat the work. He immediately did so, and in about two minutes the pain had all left me and I was perfectly well. He, too, knew when he had touched the hem of Christ's garment, for without any comment from me he began to prepare for the routine of the day. In less than an hour we were taking our regular surf bath. I have always been very grateful for this instantaneous healing, which proved to me beyond a doubt the power of Truth.—MRS. GRACIE D. MORIN, Boston, Mass.

I wish to express my gratitude for what Christian Science has done for me. Eight years ago I was hurried off to Colorado, as I was suffering from serious lung trouble. After many months of medical treatment, which was of no avail, I turned in my extremity (which proved to be God's opportunity) to Christian Science. I sought a practitioner, threw away all material remedies, and was healed of the lung trouble; but the demonstration did not end there. After this healing I returned to Pittsburg, and my former physician and friends felt very fearful for me, but I am thankful to God and to Christian Science that there has been no return of the old trouble, although error has since presented itself in many different forms, only to be destroyed by Truth.

One ailment which I will especially mention was chronic stomach trouble, of which I was also permanently healed. The greatest of all is, however, the mental and spiritual uplift gained by studying the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I feel truly thankful for this wonderful truth.

J. H. RIDEOUT, Pittsburg, Pa.

With loving gratitude do I testify to what Christian Science has done for my little girl. It has healed her of numerous ailments,—of an eruptive fever, a severe cough, and of throat and stomach trouble. It has helped us in a financial way, and has given me great cause to be thankful to our dear Leader, Mrs. Eddy.

MRS. INEZ RIDEOUT, Pittsburg, Pa.

[Written for the *Sentinel*.]

THE HOUSE OF LIFE.

HARRIET F. PICKARD.

O LOVE! O Love divine! didst Thou
  In very truth draw near?
When sleep had drowsed my waking eye,
  Had closed my outward ear?

Was it a vision, or did I
  For a brief moment go
From this environment wherein
  I feel life's ebb and flow?

Or didst Thou, all-compassion, ope
  Mine inner eyes to see—
That here and now within Thy house
  Of life I live with Thee?

Yea, here and now—for death is not,
  And all that is Thou art!
Life, Truth, and Love in whom we live,
  Nor may from Thee depart.

FROM OUR EXCHANGES.

[*Christian World.*]

Religion is an integral and necessary element in human affairs. We cannot, as communities, get on without it. Among the competing faiths Christianity exhibits itself as the religion of the foremost races. It holds its place as, in its essence, a manifestation of the highest life. During its course through the ages it has been encrusted with divers errors and evils, but has developed in itself the force by which these contradictories have been successively discovered and thrown off. In all ages, in our own not the least, where its spirit has been loyally accepted, it has developed the noblest types of humanity, has shown its capacity to lift the soul to the highest possibilities. Its future depends on the extent to which it prunes itself of its excrescences, and works on its ultimate principle, as the pure love of God and the pure love of the brotherhood of man.

[*Christian Work and Evangelist.*]

To reconstruct society on the basis of brotherhood is the aim of modern democratic Christianity; and a Christianity of any other nature is now clearly impossible. Though Jesus was not a politician, he created the democratic idea which reigns over the modern world, and which is subduing organized Christianity also to itself. The democratizing of the churches hastens apace. They are coming to see that Christianity is wholly for equality before God as against usurpation, false prestige, and hollow degree; for the poor as against his despoiler; for the people as against those who exploit them. Rejecting as unphilosophical the theory of an actual equality of personal worth, and as impossible the aspiration after a rigid equality of condition, it is the more necessary to assert, as the root of all social justice, the divine impartiality which respects no man's person or property.

[Lyman Abbott in *Outlook.*]

The time to interrogate conscience is in the morning before the day begins. It is well to forecast the day; to consider beforehand the questions that are likely to arise, to demand of conscience its judgments on those questions, and so to be prepared to meet them with some measure of prevision. This is better than to wait till the day is over and then pass its events in review and call on conscience to pass judgments on what can no longer be changed. This also may be sometimes wise, but chiefly as a preparation for similar events that are likely to recur in ensuing days. Conscience is intended to be our guide rather than our judge: and a judge only that it may be a better guide.

[Rev. William S. Morgan, Ph.D., in *Christian Register.*]

Religion has its obligation in bringing about the better day. Individual piety does not exhaust the business of religion. Righteousness must not only be hidden in the heart, but must express itself in the various forms of our life together. Its final purpose is the kingdom of God. Its watchwords are a perfect man in a perfect society. This is civilization, this is religion incarnated in human society. And, while we are here to render thanks to Almighty God for all that has been accomplished,—and much has been accomplished on this continent,—let us face our ideals, face the problems that we must, willy-nilly, proceed to solve.

[*Universalist Leader.*]

The social problem is not half so complicated as we think. Were the world really converted to the spirit of Jesus Christ, half our evils would fold their tents like the Arabs and silently steal away, and the other half would melt before the world-heart of love.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

President Taft, in his long tour of the country, which has taken him through the Northwest, the Pacific coast, and the Southwest, reached the Mississippi river last week. He was accompanied on the trip down the river to New Orleans, where he attended the fourth annual convention of the Lakes-to-the-Gulf Deep Water Association, by thirty-six governors, seventy-six United States senators, more than one hundred and fifty congressmen, and ten foreign ministers. At a banquet to the governors aboard ship, he invited them to come to the White House in December when the civic federation is to meet to consider the question of securing uniformity in state laws. This question of uniformity was touched upon also in the late convention at Louisville, Ky., of the National Tax Association, when it suggested a conference in the future of all state governors to consider the matter.

A decision of the court of appeals gives New York city a margin of $100,000,000 in its borrowing capacity. This condition results from releasing the subway and dock bonds, which are self-supporting, from the computations of the debt limit. The amendment allowing this to be done and so enabling the city to undertake further subway work, has been opposed by some who have believed that it opened the way to various extravagances, and by others who were in sympathy with the efforts of the Interborough Rapid Transit Company to keep the city's hands tied in the matter of building subways until the city should yield to the traction combination the monopoly it has until recently demanded in the construction of new routes.

That a bond issue for the improvement of the inland waterways will not be recommended by the national waterways commission, is the information brought to Washington unofficially by members of this commission who have just returned from a tour of Europe. The national rivers and harbors congress, which is to hold its annual meeting in Washington in December, is demanding an annual expenditure of fifty million dollars for such improvements, the money to be raised through a bond issue. President Taft has on several occasions since he started on his present tour of the country, declared in favor of such an issue.

Judge Holt, in the Circuit Court at New York, has sustained the plea of the statute of limitations in favor of the American Sugar Refinery Company and its directors, charged with conspiracy in restraint of trade in closing up another modern and completely equipped refinery, the control of whose stock had been gained by a loan of money under misrepresentation. The offense occurred more than three years ago. The decision affects the whole of the Government's case. The case also involves violations of the laws of conspiracy. An appeal will be taken.

The head of the hydrographic department of the Government declares that the work of the department should be extended so as to include the charting not only of home waters, but foreign waters as well. The purchase of charts from European countries he declares a mistake. He explains, as an illustration, that it was necessary to buy thirty-five thousand charts of foreign waters from England just before the fleet went on its recent tour of the world.

Half the excavation which the engineers estimated would be necessary when the completion of the Panama canal was undertaken, after the purchase of the French interests, is already completed, according to calculations made by the Isthmian canal commission, the total excavation made to the end of September being 87,172,058 cubic yards. The amount excavated by the French amounted to 81,548,000 cubic yards.

The state guaranty bank system in Oklahoma is said to be working unsatisfactorily. A similar law has been declared unconstitutional in Nebraska, and the question of its constitutionality is pending in the state courts. Following the adoption of the statute, more than sixty of the national banks of Oklahoma renounced their Federal charters and became state associations. Trouble began a short time ago, when the state banks were called upon to pay their assessments to meet the failure of another bank.

Justification for the radical reorganization of the customs service by Collector Loeb at the port of New York is found not only in the disclosures made in the late trial in the United States Circuit Court of a cheese importing firm, which was charged with conspiracy to defraud the Government by underweighing its imports, but also in the earlier case of the sugar-weighing frauds.

During the recent visit of the honorable Japanese commission of merchants to Boston and its vicinity, the ladies of the party went by special invitation to Wellesley College. They expressed pleasure at finding on its walls the portraits of the Emperor and Empress which were presented by the Emperor a few years ago.

More than thirteen million dollars is represented in church edifices reported in the *Manufacturers' Record* as having been built, in course of erection or definitely planned during the first nine months of 1909 in the fourteen southern states, the District of Columbia, Oklahoma, and Missouri.

To train the Indians in agricultural pursuits on a broader and more practical scale, the Indian Bureau has undertaken the project of installing model farms on all Indian reservations, with teachers who have been trained in scientific agricultural schools.

International.

Premier Asquith has announced in the House of Commons that on Nov. 5 he would move for the rejection of the entire House of Lords amendments to the Irish land bill. This bill is of tremendous importance. By its terms all estates and untenanted lands of Ireland are put into the power of a body of commissioners, who may fix the price for their sale. Under this bill loans for Irish land purchases amount to $315,000,000, while recompense to landlords, etc., will raise the amount to nearly a billion dollars. For the purchase of land in the allotted districts it is necessary for the applicant, in case he is refused sale by the holder, to appeal to the estates commission, which is then authorized to take the land by compulsion, the price to be settled by the commission. The price, however, is subject to appeal to a higher board or land commission. The jurisdiction of the estates commissioners comprises almost two thirds of the island. The remainder, which embraces the whole of the five counties of Connaught, is under the dominion of the congested districts board, which may condemn land for sale to tenants upon demand. The bill is opposed by the great land-owners. In this matter the British peers are standing behind their Irish compeers, seeing in the radical measure for Ireland what may happen in England. In spite of this, however, the Upper House voted for the principle of compulsion on the measure, but when it went into the committee stage it was very seriously modified.

An actual revolt in the Grecian navy took place last week. The band of naval officers which quitted the capital and withdrew to Salamis, an island ten miles to the west, seized the arsenal there and intrenched themselves. Later they were driven from their position by the loyal fleet and forced to surrender. The eight ringleaders were put in solitary confinement and will be courtmartialed. This revolt follows close upon the narrow escape a couple of weeks ago of a revolution engineered by the officers of the army. The trouble opened with the demands of the military men for army reform. The chief objects of attack were the positions held by the royal princes. At first it was merely asked that these be removed from actual command, maintaining honorary titles. Finally, as their withdrawal was pressed, the princes handed in their resignations, but the officers refused to allow them to be accepted, and forced their dismissals to be published in the official gazette.

An international federation of shipowners has just been formed. Delegates from the shipowners' federation of Great Britain, Germany, Holland, Belgium, Denmark, and Sweden, representing more than sixteen million tons of shipping, met in London recently and registered the new federation with the British law. This federation is intended to embrace ultimately all shipowners' federations of the world. The objects of the federation are declared to be purely defensive. It is "designed to resist unreasonable attacks which may be made by trades' unions and others upon the shipowners, and for freedom of contract in the employment of labor."

One of the chief topics that is being discussed at present by British motorists is the road bill introduced by the government in Parliament, which contemplates among other things the construction of special roads for the exclusive use of motor vehicles. The increased use of self-propelled vehicles has caused great damage to the highways, and, confronted by the tremendous expense of maintenance, the government has put forward the idea of the construction of special motor roads with no speed limit, and the exclusion of motor vehicles from the other highways.

According to official statistics, the first six months of 1909 show a continued decline in the population of France.

Industrial and Commercial.

The House of Representatives of Colombia has adopted a resolution disapproving of the contract by which the Muzo emerald mines were leased to a British syndicate by former President Rafael Reyes. This lease had long been a subject of severe criticism.

A company will erect a sugar refinery in St. John, New Brunswick, to cost two million dollars and to employ at least five hundred men. The city will grant a free site and exemption from taxes and water rates for a term of years.

The British government has instituted a fishing school for boys, to provide captains and mates for the fishing fleets which are so numerous.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

UNITY.

M. G. KAINS, M.S.

THE dominant desire of every human being is the attainment of good. It prompts well-nigh every thought that the individual thinks and every act that he performs in his own behalf, and, until it is held in check by a higher motive, it arraigns every thought and act of other individuals who seek good in a different direction. Thus on the one hand it tends to separate mankind into groups led by differing desires, and on the other to bind these segregations together within themselves by the common bond of similarity of interests. The individuals in each group will be intent upon what they believe to be the best thing for them and those with whom they are associated, and they will be more or less pronounced in their views concerning the futility or at least the inadvisability of searching in other directions. Only as the individual comes to recognize that the search for good is equally the right of every other individual, even of each individual who differs radically from his views, is he willing to make allowance or concessions, and to manifest that spirit of tolerance which is peculiar to the generous mind, the Christian character.

He who naturally has gained such an altitude of thought can look down upon the seething of adverse motives with equanimity, because he knows that all are prompted by the one primary motive, the search for ultimate good; and no matter how wofully wrong any individual or group of individuals may be as to the direction in which to search, he can feel only compassion for those who are pursuing a wrong course. He will see that the infidels, the atheists, the agnostics, and the free-thinkers are just as earnest for ultimate good as are others; in fact that, no matter what the varying shades of belief or unbelief, the primary object of each is unity so far as aim is concerned, namely, good. The only wrong is in the direction in which the search is made.

Without going deeply into the subject, let us discuss that phase in which the professed followers of Jesus of Nazareth are concerned. All these agree as to the authenticity of the record in the New Testament, the fulfilment of prophecy concerning the Master's nativity and mission, and the historic incidents of his career. But not all, by any means, are agreed upon the direction and manner in which these teachings are to be applied: hence the many differing sects, all purporting to follow the true path but leading in radically different directions and by many routes. Surely the Master's own recorded teachings should be the sufficient guide. If we are to judge by the emphasis Jesus laid upon healing the sick as characteristic of correct preaching, the one purport of the Master's ministry was to teach mankind to worship the Father "in spirit and in truth," and thus to destroy the falsities, sin, sickness, and death, over which he triumphed step by step until he reached the climax, as Enoch and Elijah had done centuries before.

It is evident from this that Jesus' aim was to establish one religion; and yet there are more than one hundred and fifty sects still existent, to say nothing of countless moribund and defunct ones, all claiming to be founded upon the Master's teachings but each failing for the most part to show the "signs" which he specified should characterize the teaching of "them that believe." History records that these signs of healing continued for two or three hundred years after the Master's ascension and that sporadic cases have occurred through the centuries. It is noteworthy, however, that these cases occurred only in the careers of spiritually-minded men and women, who thus showed in some degree unity of thought and result with those of the Master.

Every one who reads the seventeenth chapter of John's Gospel must be struck by the exalted thought Jesus presented in this wonderful prayer. Not only was the Saviour praying for the disciples, but for "all," as shown in the tenth, twentieth, and twenty-first verses: "All mine are thine, and thine are mine: . . . Neither pray I for these alone [the disciples], but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me."

The one most prominent thought of this prayer is unity. Not only was Jesus certain of the rightness of his attitude and of his mission, but he was unwavering in his conviction and the expression of that conviction, that all mankind must at some time recognize and act upon this same basis. From the one statement, "My words shall not pass away," it is evident that he knew and taught that Truth is imperative, inexorable, final, and that every falsity must disappear, be demolished by the manifestation of Truth. As Truth becomes better and better understood through apprehension and demonstration, then will the fulfilment of Jesus' prophesy approach nearer and nearer its completion: "There shall be one fold and one shepherd," and the long centuries of disunion and separation recede into the darkness with which they are already merging.

We of today can rejoice in our privilege to aid in this movement, which took its most modern, most definite, and most tangible form when, "at a meeting of the Christian Scientist Association, April 19, 1879, on motion of Mrs. Eddy, it was voted,—To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17). Upon this foundation "the chief corner-stone whereof is," as we read further, "that Christian Science, as taught and demonstrated by our Master, casts out error, heals the sick, and restores the lost of Israel," the Christian Science movement has grown, until, as may be seen from the church directory in *The Christian Science Journal*, it has branches in nearly all the civilized countries of the globe. These branch churches and societies are striving, each to the extent of its understanding, to prove the present-day practical utility of Jesus' teachings by healing the sick, reforming the sinful, and progressing toward the actual realization upon the earth of the brotherhood of man and the fatherhood

of God, when all shall attest and by their brotherly love prove that there is only, as one of our hymns reads,

One holy church, one army strong,
One steadfast high intent,
One working band, one harvest song,
One King omnipotent.

THE NINETEENTH PSALM.

AGNATA F. BUTLER.

THE 19th Psalm was learnt by the writer in early childhood, and in later days she had often pondered over the statements in verses seven to nine, and tried without much success to understand the distinctions involved. Even a slight understanding of Christian Science has made the sense clear and practical, and no doubt a fuller understanding will bring out wider and deeper meanings, for when statements are founded on Principle their applications are infinite.

"The law of the Lord is perfect, converting the soul":

In the Revised Version the last clause is rendered, "restoring the soul." Science and Health (p. 578) explains this phrase to mean restoring the spiritual sense, and in "Miscellaneous Writings" (p. 73) we learn that "the appearing of divine law to human understanding" constitutes regeneration. As we come to perceive what divine law, "the law of the Lord," really is, that it is indeed the law of perfection, the law of unchanging goodness, of Life and Love at all times and to all persons, and that this law underlies and governs all real existence, we lose the material instincts of fear, rebellion, selfishness, hatred; the mortal personality is regenerated, and the true individuality, or spiritual sense, is "restored," brought to light. There is no longer any ground for enmity against either God or man.

"The testimony of the Lord is sure, making wise the simple":

The restoring of spiritual sense enables us to recognize the testimony of the Lord, the testimony of Spirit, speaking through the spiritual sense and contradicting the false evidence of material sense. The voice of Spirit bears eternal witness to the perfection of God and man, the omnipotence of Truth and Life and Love. It is a sure and ever-present guide, imparting to the simple and humble-minded who are willing to listen and obey, the wisdom and power of omniscience. How often it has happened to the student of Christian Science to be confronted with some practical question which his experience and judgment seemed unable to decide; and how often, withdrawing from the turmoil of his own conflicting thoughts, he has entered the "quiet sanctuary" of Truth and heard the "still small voice" of Spirit making his way plain before his face, and guiding to a happy issue beyond the foresight of the most prudent human judgment!

"The statutes of the Lord are right, rejoicing the heart":

The statutes or precepts of the Lord must surely include all rules of conduct derived from Principle and declared to men through the higher perception of a spiritual leader. Inaugurated in the Ten Commandments, restated and explained in the Sermon on the Mount, their application is defined and adapted to present needs in every by-law that safeguards the Church of Christ, Scientist, in the narrow way of Truth and Love. When we understand these rules, and discern their purpose, they do indeed rejoice our hearts, for we see that they are all right, dictated by the spirit of justice, Truth, and Love, tending to the life, peace, and happiness of mankind.

"The commandment of the Lord is pure, enlightening the eyes":

Every impulse of divine Principle, the Principle that is Life and Truth and Love, received in the heart of man, is a commandment of the Lord, and obedience to any such commandment brings the sure reward of fuller light. If we act on the impulsion of Spirit, our vision is cleared, we rise in some degree out of the mist and confusion of materiality. The commandment of the Lord is always pure. Spiritual intuitions are by their very nature pure and perfect, "counteracting all evil, sensuality, and mortality" (Science and Health, p. 581).

"The fear of the Lord is clean, enduring for ever":

The worship of God, of Spirit, is essentially clean; it admits of no element of evil, sensuality, hypocrisy, worldly compromise. Therefore it endures forever. In the truthful and spiritual worship which the Father approves, there is nothing to be destroyed by the cleansing fire of Spirit.

"The judgments of the Lord are true and righteous altogether. More to be desired are they than gold, yea, than much fine gold: sweeter also than honey and the honeycomb. Moreover by them is thy servant warned: and in keeping of them there is great reward":

Judgment, discernment between truth and error, good and evil, is the perpetual function of the enlightened human mind. Strictly speaking, the term seems to imply knowledge of evil, and in this sense it cannot accurately be applied to divine Mind, which is conscious only of good. Hence in John's Gospel we read: "The Father judgeth no man, but hath committed all judgment unto the Son: . . . and hath given him authority to execute judgment also, because he is the Son of man." And yet, in the truest and deepest sense, it is only divine Mind, the Principle of goodness, which by its very nature denies and excludes falsity and evil,—that can execute unerring judgment. It is because the Son is inseparable from the Father that he is empowered to judge aright. Said Christ Jesus: "I judge no man. And yet if I judge, my judgment is true: for I am not alone, but I and the Father that sent me."

When the human mind is governed by divine Mind, its judgments are judgments of the Lord. Every genuine Christian Science demonstration is such a judgment made manifest, being a practical and effective discrimination between truth and error. In Science and Health (p. 291) we read: "The judgment-day of wisdom comes hourly and continually, even the judgment by which mortal man is divested of all material error." True and righteous are these demonstrations of divine justice and law. No material symbol is adequate to describe the joy and enduring happiness resulting from the destructive action of Truth upon disease and sin. But the judgments of the Lord are not confined to outward demonstrations. They must surely include every clear inward perception whereby the Spirit of truth distinguishes between right and wrong in the thoughts of man's heart. These search-light rays which show up error in its true colors, and separate good from evil, are our warnings; and great is the reward of those who diligently heed them. So shall they come more and more to discern their errors and to be cleansed from their hidden faults.

PERSISTENCY.

DAISY BEDFORD.

THE snowdrop, tiny flower though it be, and despite frost and snow, is the first harbinger of the coming spring. As is well known, it is the sturdiest plant, for its size, of nature's kingdom, and the tiny green shoot will be seen forcing its way upward, despite the apparently great difficulties in its way. It will overturn a piece of earth four times its size by its seeming concentration of purpose, its instinctive reaching up to the light; and in this concentration and persistence there is a lesson for the earnest Christian Scientist, who by unwavering obedience to Truth may prove the nothingness of all seeming obstacles with which error appears to obstruct his path.

Digitized by Google

The green sheath of the plant unfolds, disclosing the tiny white bell, a symbol of hope and purity, no matter what the discordant conditions around—the biting wind, the chilling frost are powerless against its steadfastness, and why? In the tiny inverted cup the warmth is preserved which is necessary to its growth; in this secret hiding-place it stores it up secure from the forces which to material sense are destructive; nor does it attempt to do more than this or to dissipate the warmth in endeavoring to alter conditions in the ice-bound world around it—rather does it faithfully do its own work, telling its glad message of life, and of hope for the coming spring.

It is said of Mary, the mother of Jesus, that as her wise child said wondrous things, she kept them, "and pondered them in her heart." How often, instead of keeping safely the things which are so helpful to our growth and true understanding, pondering them in our heart until the harvest-time when they shall bear much fruit, do we rashly fling our pearls before the unprepared thought, and then find ourselves astonished and hurt because it turns and rends us.

Our flower symbol may further teach us a lesson. The crocus and other spring flowers, tempted by one or two balmy days, follow the snowdrop's example, only to find too late that their blossoms are destroyed by the biting frost. So many, when first starting along the straight and narrow path of Christian Science, instead of pondering on the pattern shown to us in the mount, rashly talk about it to every seemingly receptive thought, and speedily find themselves chilled by the icy winds of contemptuous criticism. Had they gone on quietly putting into practice what they knew, while dwelling "in the secret place of the most High," endeavoring in meek obedience and steadfast concentration of purpose to follow in the steps of our Master, they would have been saved very many bitter pangs of experience.

It is well for the rash flowers if the frost only checks their overzeal and does not effect the loss of their blossom and leaves for that season, and it is well for us if the biting wind of adverse comment serves only to check our too ardent desire to impart the small understanding of Truth we have gained to every one who may listen to us, and does not entirely destroy our work for the time. Like Mary, we shall do well to ponder these things in our hearts. The Father who seeth in secret will reward us openly, because our light will then be the true reflection and wisely directed.

"THE POWER OF THE WORD."*

HARRIET M. ARMSTRONG.

HAVE we ever tried to realize the power of the word of Truth, whether spoken, written, or silently declared? Many times, when reading the *Sentinel* or *Journal*, I have wished to express my gratitude for the beautiful thoughts found therein, thoughts so uplifting, pure, and spiritual that the cares and perplexities which sometimes arise, pass away like mist before the sunshine, and a sweet sense of peace and quietness reigns within.

Our beloved Leader, Mrs. Eddy, with wonderful foresight, has made clear to thousands the power of the word, through "Science and Health with Key to the Scriptures," and the truth taught therein permeates all the Christian Science publications. One turns from the usual daily record of news to *The Christian Science Monitor*, with a sense of relief and gratitude that we have been able through divine wisdom to secure this gift, and to know that through the power of the Christ-thought the purification of the press has begun. I can give but a faint idea of what this means, not only to myself but to all who are looking for the reign of righteousness here and now.

* "Miscellaneous Writings," page 398.

One day in the early spring, while walking among the foot-hills of the mountains in California, I came across a stream of clear water, and followed it for some distance toward its source. On either side and far above me trees, bright shrubs, and brilliant vines were clinging to the grayish green mountain-side, and the crystal stream reflected them in delicate tints from its pebbly bottom. I sat down, in a silence unbroken save by the musical ripple of the water and of distant bird notes; all nature seemed peaceful and harmonious. I knew that the source of this pure stream was far above me, even as the source of all purity is far above mortal sense, in the "mount of holiness;" and as the water of that mountain rivulet satisfied and rejoiced the thirsty, so does the spoken and written word of Truth nourish and gladden the weary ones of earth.

In Science and Health (p. 570) our Leader says, "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences."

GOD REFLECTED IN HIS CREATION.

HERBERT T. PROUDFIT.

A MAJORITY of the greatest thinkers this world has produced—astronomers, scientists, and philosophers, whose utterances are regarded as authoritative—have acknowledged the necessity for a creative and governing principle in the universe. Observing the immutability of law, they have concluded that this principle must be at least mechanically intelligent. Christians call this Principle God, and ascribe additional attributes to Him. Resting their belief on the statements concerning God which have been made by the Founder of Christianity, they believe that the Principle they call God is synonymous with the Principle called Love, or the highest essence of absolute good of which it is possible to conceive. Further, the Christian, still relying on the words of Jesus,—words expressing far more than mere theories, as was proved by accompanying "works,"—understands the relationship that exists between the creative Principle and its creatures to be that of parenthood, with all that this implies of tender solicitude and affection.

In the main, these views are shared alike by both so-called orthodox Christians and Christian Scientists. It is true that the application of the word Principle to Deity is an offense to some, but schooled by the results of scientific research and philosophic analysis to realize that the "infinite and eternal energy from which all things proceed," to quote Herbert Spencer, can only be Principle, all advanced religionists must admit the correctness of the term. Beyond this point, however, the Christian Scientist proceeds alone, with the accompaniment of misunderstanding (and too often abuse) which is the invariable lot of the pioneer. He believes the creator to be eternally reflected in His creation. Other Christians either do not believe this, or else they are obliged to attribute qualities to God which violate every sense of the loving and pure relationship of parenthood. To defend his position the theologian quotes passages from the Scriptures, and, it must be confessed with seeming reason, points to things as they are, or at least as they seem to be, to the material senses. To defend his position the Christian Scientist also quotes from the same authority, and then calls attention to the fact that the highest intelligences of the world have reached the conclusion that the testimony of the material senses is unreliable, in that they do not and cannot afford us any glimpse whatever of the reality lying back of the things we seem to see.

Here, then, we have two points of view,—one, supported entirely by testimony, impeached at the very outset by those who understand it best; the other, resting on

Digitized by Google

logical deductions from the concept of God's nature and essence which Jesus imparted, and which is held to be correct by practically all Christian religionists. Were the case to rest here, it would not be unreasonable for the agnostic to refuse to accept either of these views. It does not, however, for, like the original promulgators of Christianity, the Christian Scientist supports his words by his works; in other words, he proves the truth of his theories by bringing forward concrete, tangible facts in the way of thousands of cures of so-called incurable diseases. It requires little thought to see which of these two opposing views honors God, that of the Christian Scientist, who believes God to be all that our fondest hopes might wish Him to be, and also believes that the creator is an ever active agent in His own creation; or that of the orthodox Christian, who believes that God either exerts little or no influence in the universe, or else is obliged to admit that He who is "of too pure eyes to behold evil," uses evil as an implement in exercising His rule.

Which of these two views is true? There is but one way to find out. Jesus' statement that those who would know the truth of his doctrine could only prove it by actual practice, applies equally in this case. To those who study and apply this new-old doctrine of Christianity, proof after proof of its correctness presents itself to his experience, until all possibility of coincidental explanation is eliminated, and the wonderful fact comes to view that all material activity is but the shadow cast on the veil by the harmonious action of a perfect creator, moving in a perfect creation.

GIVING.

NELLIE B. MACE.

CHRISTIAN SCIENTISTS, when they awaken to the necessity of giving for the support of the Cause of which they are beneficiaries, find that the adoption of the early custom of tithing is a systematic way to begin. If, however, they are progressive, they do not rest here, but press forward toward that more bountiful giving which speaks of an increasing perception and realization of the true substance.

The first Scriptural record of tithing is when Abram rendered tithes to Melchizedek. He thus acknowledged that he was indebted to God for his victory and success, and took this way of expressing homage and gratitude. Next is found the vow of Jacob: "Of all that thou shalt give me I will surely give the tenth unto thee." Later, under the law, Moses ordained that "all the tithe of the land, whether of the seed of the land, or of the fruit of the tree, is the Lord's: it is holy unto the Lord." That the paying of tithes was regarded as an honoring of God, with an accompanying blessing, is shown in Proverbs, where we are bidden: "Honor the Lord with thy substance, and with the firstfruits of all thine increase: so shalt thy barns be filled with plenty, and thy presses shall burst out with new wine."

The last word that the Old Testament gives on this subject is given by the prophet Malachi: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." In the New Testament, in the rules for giving expounded by Jesus, particular stress is laid not upon the amount given, but upon the thought underlying the outward expression; that, according to the inward or secret purpose, so shall the reward be. If the secret purpose in giving is to be "seen of men," then the praise of men alone will be the reward. If, however, there is the inward recognition of God as the only substance, and of man as reflecting this substance, then there will be the open reward from the Father—a better understanding of God and a correspondingly better and higher reflection of substance.

We read in Proverbs that "the liberal soul shall be made fat: and he that watereth shall be watered also himself." Liberal giving is virtually an acknowledgment of God as the source of unlimited supply, which cannot be diminished by any act of ours; whereas, a fearful or selfish withholding is based upon the belief of a material substance, and it fails to recognize the omnipresence of exhaustless spiritual substance. This latter condition of thought inevitably deprives the fearful or selfish giver of the blessing which accompanies the more spiritual sense.

It is this liberal giving, based upon the spiritual understanding of God, divine Love, as the one source, which underlies the outward expression of church building. Here, as in every phase of the activity of Principle, the primary work of church building is within; the inward upbuilding of the "structure of Truth and Love" (Science and Health, p. 583), and its outward expression in church edifices is our declaration to the world that inward spiritual building has been progressing through change of character, the restoration of health, the exchange of the "spirit of heaviness" for "the garment of praise;" and an awakening perception that all we have comes of God; that we have nothing of our own to give, but that, as Solomon acknowledged, "all things come of thee, and of thine own have we given thee."

As each individual church-member endeavors to gain this higher understanding that giving is reflecting, the sense of limitation, or belief in material substance, will be found proportionably diminishing, together with its manifestation of illiberal giving. The spiritual animus of the church, that which expresses the condition of its individual members, having thus declared for higher activity, the building fund will be found to be speedily increasing, and the necessary church edifice will appear, because it will have been learned that "God is able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work."

SELF-LOVE OVERTHROWN.

HARRY FRANKLIN PORTER.

NOT to proclaim but to do; not to relate but to meditate; not to perceive greatness but to aspire to goodness; not to seek fame but a better faith; not to assume anything but to hope all things—this is the humble spirit that gaineth all things. To prate of past glories, to predict future ones; to discourse constantly of personal prowess, to search out new ways for self-glorification—this is to invite disorder, dismay, and defeat. It is the vanity of vanities, of which cometh naught.

The true spirit—that which loses sight of self in the pure effulgence of the common good—goeth ever on to greater and more glorious destinies. Seeking neither notoriety nor reputation, and caring for neither praise nor condemnation, desiring only and wholly the approval of his own inner counsel—to such a soul, simple and inornate, gravitates all the goodness and beauty in the universe.

O BIBLE, ever open wide
That men of every race may read
How Jesus, dying, death defied
And rose to meet the wide world's need—.
Were all the ponderous tomes of earth
Incased in gold and given to me,
Their lore would be as nothing worth
Beside salvation's history!

FAITH HEARN.

SELECTED ARTICLES.

[J. R. Mosley in *Atlanta* (Ga.) *Journal.*]

Years ago, when Mrs. Eddy first saw the healing and redemptive power of God and Christ which she named Christian Science, she left all to follow what she felt to be the leadings of God, of duty, and of love; and it should be a matter of joy to every fair-minded person that everything which she has found worthy of her interest, devotion, and love has prospered. She has been at work to alleviate the poverty as well as the sin and sufferings of the world. She delights to see every one live comfortably and would have no one live in poverty. She believes that all labor, the highest as well as the lowest, should be adequately rewarded. She uses her income not only to advance the specific activities of Christian Science, but also to meet all pressing human needs. Her charities are very large, much larger than any of us know anything about, as she prefers to give in secret and leave it to God to reward openly.

No one is deprived of the help of Christian Science on account of his poverty, and yet it is at work to help him overcome his poverty as well as his other troubles. It is a part of the work of the Christian Science movement to see that every one has the literature who desires it and who will use it rightly, whether he has the money to pay for it or not. Its motive and effort are wholly philanthropic and beneficent, though individual Christian Scientists are still at work on the problem of overcoming their own selfishness as well as the errors of those to whom they are trying to minister.

Mrs. Eddy revises her works in order to give to her followers the benefit of her own unfolding insight. She believes that truth forever unfolds to those who seek and obey these unfoldings. She believes that the Spirit of truth, if we will only follow it, will lead us into the way of all truth. Many of the changes that she has made have been at a financial sacrifice to her, and only selfishness could attribute selfishness to such a self-sacrificing, generous, and noble nature.

[Willard S. Mattox in *Age-Herald*, Birmingham, Ala.]

Christian Science analyzes all discord and inharmony as error, and declares that the remedy is Truth. The Christian Scientist believes that his method of healing is in conformity with Jesus' methods, and he refuses to believe that Jesus was a hypnotist. The idea is repugnant to Christians and Christian Scientists alike. In fact, it is the very thing Jesus was accused of by his scholastic enemies, and your contributor is doubtless familiar with Jesus' reply: "If I by Beelzebub cast out devils, by whom do your children cast them out?"

If, as it asserts, Christian Science does its work in imitation of the practice of Jesus, it is important to know what he thought of his own methods, and how he described his healing. According to John, he declared, "My Father worketh hitherto, and I work." Again he said, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." Here it is plain that Jesus ascribed his healing power, not to any hypnotic ability of his own; not to the human mind, but to his Father, to the one infinite intelligence called God. Paul understood this when he said to the early disciples, "Let this mind be in you, which was also in Christ Jesus." In other words, Christian Science is Mind-healing on a spiritual basis. Hypnotism is mind-healing on a material basis. The Mind employed by the Christian Scientist is not what in common parlance is called his own mind, but is the Mind that governed Jesus Christ, and which, he said, did the works.

If our critic is correct in asserting that Jesus was a hypnotist, and if we accept Jesus' statement that his Father was responsible for all that he did, then we must conclude that God is the master hypnotist of the universe; a conclusion so monstrous that it cannot be considered seriously for a single instant. God is "of purer eyes than to behold evil." This critic may have his own theories and beliefs about Christian Science practice, but until he has put them to test and has actually attempted to heal the sick, according to the rule of Christian Science, he will not be in a position to speak with authority.

Your contributor says, among other things, "Mrs. Eddy appreciated the fact that Jesus used very powerful suggestions when he fed the multitude with a few loaves and fishes, when he turned water into wine, when he healed the sick and cured the blind, and when he raised Lazarus from the dead." In other words, this writer means that Jesus was little better than a mountebank, and that he merely "suggested" to earth's sufferers that there was a way of redemption from sin and pain and human want. This is a parody on the Saviour's mission, and Christian Scientists, fortunately, have a more noble concept of Jesus and his work. In this connection it is interesting to read Mrs. Eddy's analysis of cures by hypnotism: "In no instance," she says, "is the effect of animal magnetism, recently called hypnotism, other than the effect of illusion. Any seeming benefit derived from it is proportional to one's faith in esoteric magic" (Science and Health, p. 101). In other words, if this critic is correct, it was only an illusion that Lazarus returned from the grave and was restored to his family. The five thousand were not really fed and were not really satisfied, they were only tricked into believing that their need had been met. I think our critic will find many earnest thinkers, outside the ranks of Christian Science, who will take issue with him on this most important question.

[Frederick Dixon in *Bedford* (Eng.) *Circular.*]

Great as was the intellectual change wrought by the renascence, it made no outward difference in men's views of miracles. The first change came when, with the advent of rationalism, men began to cast ridicule on them. And it was then that Hume committed himself to that famous and unfortunate definition of one, as "a transgression of a law of nature by a particular volition of the Deity." The inherent fallacy of this definition was pointed out by Huxley in his own luminous way. A violated law, he showed, had ceased to be a law; and if, to take Hume's own example, a man saw a lump of lead suspended without visible support in the atmosphere, so far from proving a violation of law, it would prove, on the contrary, evidence of a hitherto unsuspected law, which it would be more intelligent to examine than to ignore. That is exactly the position in which Christian Science healing stands to natural science today; and natural scientists would be better advised in taking Huxley's advice than in joining orthodox theology in smiling.

The fact is that Jesus, who, as Mrs. Eddy says, was not only the best man but the most scientific man that ever trod the globe (Science and Health, pp. 52, 313), met and overcame natural science and scholastic theology by his demonstration of Christian Science, and in bringing Christian healing to the sick man and the sinner today Christian Scientists are striving to walk in his footsteps. The natural scientist maintains that science is confined to secondary causes, or physical facts, and smiles at the recital of Christian Science healing or attempts to account for it in some other way. His whole attitude is an unscientific one, for if you declare in advance that nothing can be known of spiritual causation, nothing ever will be to you.

The theologian, on the other hand, declares that the miracles were performed, but the power was supernatural, and was confined to Jesus and his disciples. This position is even more hopeless than the other. On two recorded occasions Christ Jesus, speaking not of the disciples, but of the world, not of that age, but for all time, declared that those who believed on him would be able to do the works, the miracles he had done. These passages occur in the last chapter of Mark and the 14th chapter of John, while finally, in the concluding words of the Gospel of Matthew, in the last of his recorded words, he commanded the disciples to teach all the nations "to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world." If the miracles of healing were not among the things commanded, it would be difficult to say what were.

Christ Jesus knew more of God, that is, of Truth, than any other man, and he was consequently able to demonstrate this knowledge more fully in his miracles, which were, indeed, the object-lessons with which he brought his spiritual teaching home to a material world. He gave that world the spiritual truths which he had won through his purity and love, and when its material instincts revolted from the very spirituality of his message, he told it, if it could not believe him for his words, it must do so for the works' sake. The world asks frequently today what it is that is drawing men and women to Christian Science. It is the growing perception of this knowledge of God, brought home to them through the teaching of their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and demonstrated through innumerable cases of the healing of sin and sickness of every description.

[Eugene R. Cox in *Plattsburg* (N. Y.) *Press.*]

The Century Dictionary devotes more than a column to the definition of the word "Christian," and I will therefore give only brief extracts therefrom as follows: "Pertaining to or derived from Christ or his teachings;" "Having adopted or believing in the religion of Christ;" "In accord with or exhibiting the spirit of the teachings of Christ;" "A believer in and follower of Jesus Christ;" "Specifically, one who possesses the spiritual character proper to a follower of Christ; one who exemplifies in his life the teachings of Christ."

One very important command of Jesus to his disciples was, "Go ye into all the world;" "Heal the sick, cleanse the lepers, raise the dead, cast out devils;" and again he said, "He that believeth on me, the works that I do shall he do also." Now, therefore, according to the dictionary definition, to be a Christian one must be spiritual and one must be a follower of the commands of Christ Jesus; and these Christian Scientists endeavor to be.

The Century gives an equal amount of space to the definition of "science," as follows: "Knowledge; comprehension or understanding of facts or principles;" "Knowledge gained by systematic observation, experiment, and reasoning." Applied science is science "when its laws are employed and exemplified in dealing with concrete phenomena." If, therefore, we have a knowledge of the Principle on which the works of Jesus were founded, and if we apply that knowledge as directed by him and do the works which he did, how can it be said that Christian Science is a misnomer?

Christian Scientists endeavor to do this in a modest, quiet way, preferring to be judged more by what they do than by what they say, and it is hard to see, therefore, why any one should attempt to bar the gates of Christendom to the follower of a religion whose whole being is based on the Bible, as shown again by the Century in the following definition of Christian Science: "A system of religious teaching based on the Scriptures."

[C. R. Munro in *Brantford* (Ont.) *Courier.*]

In attempting to prove that the distinction made by Christian Science between Jesus and Christ is at variance with Bible teaching, the critic shows that he fails to perceive Mrs. Eddy's meaning. The Christian Science definition of Christ is, "The divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). Jesus was, as Science and Health says (p. 364), "the best man that ever trod this planet." Christian Scientists look to Christ Jesus as the Wayshower and Exemplar, and try to follow in his footsteps, in destroying sin and sickness as he did.

We insist that every statement in the Christian Science text-book is in strict accord with the teachings of the Bible; that its premises are Scriptural, and that it adheres to its premises throughout, though in some cases it may differ from the interpretation given by some theologians.

Just a word as to the charge that Christian Science is anti-Christian. It is generally accepted that a Christian is one who believes in Jesus Christ, and Jesus' own definition of a believer is given unmistakably in the last chapter of Mark's Gospel. He says, "These signs shall follow them that believe," and then he enumerates the "signs," which include the healing of the sick. It is well known that the "signs" do follow the understanding of Christian Science, and among other "fruits" of the understanding of this Science are a greater faith in God, and a greater love for His Word, manifested in an increased desire to follow in the way mapped out by Jesus the Christ. Do these things indicate that Christian Science is anti-Christian?

Critics may continue to criticize Christian Science from now to the end of the chapter, but the time thus wasted might be spent to better advantage by trying to emulate the good works of Christian Science. The critics have tried in many ways and for many years to prevent the growth of Christian Science. They have tried first one argument and then another, and when their arguments are exhausted, they repeat the process. There is only one effectual method they might use by which to overcome Christian Science, and this method has never yet been tried. It is to provide a more practical and more satisfying religion to a world weary of sickness and sin and care, and which is crying out for healing and comfort. If all the time and energy that is used in denouncing our neighbors' religion were used in trying to follow out our great Master's teachings in a practical way, the world would greatly benefit.

The difficulty with most critics is that they fail to grasp the spiritual import of the teachings of Christian Science. They do not compare spiritual things with spiritual, but they interpret the purely spiritual teachings of Christian Science by their own material conception.

[L. H. Jones in *Owensboro* (Ky.) *Messenger.*]

Every form of mental healing that claims to work through suggestion or through the influence of one human mind over another human mind, is opposed to the teaching of Jesus and diametrically opposed to the Principle and practice of Christian Science healing. This is the great line of demarcation between Christian Science healing and every other form of mental healing; and any form of healing that departs from Jesus' method, however slight the departure may be and whether it consists in calling in the aid of suggestion or the aid of the doctor's pellet, has no right or title to be called a form of Christian healing. To claim to be doing Christian healing while using any other power or agency than the Spirit of God, is to fly in the face of the teachings of Jesus or reduce him to the level of a common hypnotist. This is blasphemy. Christian Science, in obedience to the teaching and example of Jesus, recognizes no healing agency other than the one Mind, or Spirit.

You report the speaker as advising his hearers, when sick, to call in the best physician. This is good advice, and is exactly what the Christian Scientists do. They believe that the Father as revealed to us by Christ Jesus is the "great Physician." They believe that if there were a better physician or a better way, Jesus would have revealed the fact to the world. Why make a pretense of believing that God is present and exerting His healing power in favor of the sick, and yet maintain that He is not sufficient in Himself but must needs require the help of a human or material agency in order to accomplish His work? Why make a mockery of God and religion in this manner?

Everything from which the medicines of today are manufactured was in the world when Jesus was on earth: did he fail to recommend these so-called healing agencies because he was not sufficiently enlightened, and does the "best physician" of today know better how to heal the sick than Jesus knew? If God prefers to work through drugs and material agencies to heal the sick, would not Jesus have known it, and would he not have worked and taught his disciples to work in that way? Was not the healing done by Jesus, and by his disciples after him, better healing than the "best physician" can do today? Jesus healed the sick everywhere and of all manner of diseases, and taught his disciples to heal in the same manner that he healed; that is, without the use of drugs or agencies other than the Spirit of God.

What warrant has a Christian minister for advising the disciples of Jesus that there is another way which is better than the way Jesus taught and practised? The Bible does not teach that God sent drugs and nostrums into the world to heal the sick, but says, "He sent his word, and healed them." It also says, "My glory will I not give to another, neither my praise to graven images."

[Alfred Farlow in *Public Ledger*, Philadelphia, Pa.]

My attention has just been called to a London despatch which contains the following statement concerning a coroner's decision: "The verdict carried a rider to the effect that Christian Science treatment in serious cases was to be deprecated, and that the taking of money in fees by Christian Scientists was decidedly unchristian conduct."

This despatch does not contain sufficient information to give us any knowledge of its merits, but when we take into consideration the fact that persons set apart for the purpose, in all parts of the world, are allowed a fee for the very thing which Christian Scientists are doing in possibly a differing method, we are led to wonder to what class the persons belong who consider an item of this character of sufficient importance to justify cabling it from London. If Christian Science is a benefit to the sick, and this fact is conceded even by its enemies, why should not the Christian Scientist be entitled to a fee, as are the practitioners of any other school of therapeutics or religion? When we remember that thousands of "serious" cases have been healed by Christian Science treatment, a considerable percentage of which had not been cured by other methods, we are constrained to believe that the criticism of the coroner's jury is due either to ignorance of Christian Science, or to the fact that in this instance they made use of their opportunity to express an unwarranted opinion.

When we take into consideration that thousands of "serious" cases are permitted to go from bad to worse, even unto death, every day under the sort of treatment which the coroner's jury in question would be obliged to fall back upon in case they discarded Christian Science, and when we remember that a large percentage of cases which had failed to recover through medical treatment have been saved through Christian Science, whatever failures Christian Science practice may have had, we find no ground whatever to justify the declaration in question.

AMONG THE CHURCHES.

COLUMBIA UNIVERSITY.

The Christian Science society of Columbia University, New York, has begun its regular meetings for the academic year. These meetings, which are held the first and third Friday nights in each month, are open to all the students.—*Correspondence.*

PASADENA, CAL.

The magnificent new Christian Science church on South Oakland avenue was thrown open for inspection yesterday afternoon [Sept. 22] from five to six o'clock, and many availed themselves of the invitation to inspect it. The main part of the structure is advanced so that one may gain an idea of its proportions, but about four months will be required in which to complete it. The great dome is rising fast and will soon dominate all that portion of the city. The building is of beautiful design, in pure Greek Ionic architecture, and will be one of the most imposing edifices in the city when completed.—*Pasadena News.*

KANSAS CITY, MO.

Two additions to the Christian Science church at Ninth street and Forest avenue are now being built, and will be completed about the last of November. The congregation has grown to such an extent that more room is necessary. On the south side, facing Forest avenue, a Sunday School auditorium is being constructed. The dimension of this wing is 50 x 125 feet. This building, when completed, will be used for a lecture auditorium and a space will be partitioned off for class-rooms. The west wing will be built later. It will measure 30 x 75 feet, and will be used exclusively for a cloak-room. The additions will be the same height as the main church building. Phœnix stone is being used for the structure.—*Kansas City Post.*

GALESBURG, ILL.

Sunday, Sept. 5, was a memorable day for the Christian Scientists of Galesburg, as on that day, for the first time since the inception of the work here, services were held in their own home. Some months ago they acquired the Hale property on the corner of Cedar and South streets, and remodeled the dwelling sufficiently to permit of holding services there for the present. Sunday the room was filled with an attentive congregation, and while the service did not vary from the usual simple Lesson-Sermon, there was much quiet rejoicing over this first step toward securing a building suitable to their needs and commensurate with the growth of the Cause. The members feel much encouraged, and will work even more earnestly than before to the end that they may soon see the realization of their hopes —a beautiful and substantial church building.

Galesburg Evening Mail.

CORRECTION.

The reference in a late issue, to the purchase of a lot by First Church of Christ, Scientist, Minneapolis, Minn., should have read First Church of Christ, Scientist, of St. Paul, Minn.—EDITOR.

Not for tomorrow does the promise read,
But grace today to fill each present need;
Each day to feel Love's all-sustaining power;
Each day to know that Life is man's great dower;
Each day to grow still more to understand
That all things good and true are from His hand;
And, trusting daily in His tender care,
To climb the hilltops and find angels there.

ETHEL B. CHENEY.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"THE LETTER AND THE SPIRIT."

We have been requested to reprint an editorial which appeared in *The Christian Science Journal* for November, 1906, and as the conditions which prompted this editorial have not been overcome, we are glad to respond to this request. The editorial is as follows:—

Our Leader has said of the Christian Science platform (Science and Health, pp. 330–340), "When the following platform is understood and the letter and the spirit bear witness, the infallibility of divine metaphysics will be demonstrated," and we are reminded of this by the misstatements of the letter which so frequently appear in the writings of Christian Scientists. We believe that most of these misstatements are due to the inexperience of those who write, but when experienced and well-taught students of Christian Science fall into the same errors, the cause must be sought elsewhere.

As many of these inaccurate statements of the letter of Christian Science necessarily come under the notice of the editors in their work of preparing the *Journal* and *Sentinel*, it may be that a few words based upon editorial experience will prove helpful to our contributors, and what we shall say in this connection will account for the non-publication of some articles that have been received and for the editorial changes which have been made in others that have been published.

Perhaps the greatest number of these misstatements are in connection with the word *man*. Notwithstanding the clear definition of man given by Mrs. Eddy on page 591 of Science and Health, the answer to the question, "What is man?" on page 475, and the complete elucidation of man's relation to God in sections XXII. to XXIX., inclusive, of the platform (Science and Health, pp. 336–338), very many contributors fail to differentiate between man and mortals,—between the image and likeness of God and "material man" who "is made up of involuntary and voluntary error, of a negative right and a positive wrong, the latter calling itself right" (Science and Health, p. 491).

To know and demonstrate Christian Science we must know God and man aright, and to state Christian Science correctly we must correctly define God and man. An exact Science cannot be stated except in exact terms. In multiplication both multiplicand and multiplier must be stated correctly in order to obtain a given product. If the product of two numbers is thirty-five, and the multiplicand is seven, then the multiplier must be five. Four and ninety-nine one hundredths will not do, neither will five and one one hundredth.

Another defect in not a few of the articles submitted for publication is the false assumption on the part of the writers that man has fallen from his original state of perfection, and that he is now engaged in an endeavor to regain his first estate. This is true neither of man nor of mortals. Mrs. Eddy writes in Science and Health (p. 476), "When speaking of God's children, not the children of men, Jesus said, 'The kingdom of God is within you;' that is, Truth and Love reign in the real man, showing that man in God's image is unfallen and eternal;" and again on the same page, "Mortals are not fallen children of God. They never had a perfect state of being, which may subsequently be regained."

Still another defect in many articles is the failure of the writers to differentiate between

"Christ. The divine manifestation of God, which comes to the flesh to destroy incarnate error."

and

"Jesus. The highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality" (Science and Health, pp. 583, 589).

Mrs. Eddy has treated this subject exhaustively in sections IX. to XVI., inclusive, of the platform (Science and Health, pp. 332-334), and diligent study of these sections is essential to a thorough understanding of Christian Science.

As an example of the accuracy with which both the letter and the spirit of Christian Science may be stated, and as an illustration of fine discrimination in the selection of words which convey the exact shade of meaning necessary for the expression of the author's thought, we refer our contributors to our Leader's article, "Where Art Thou?" on page 332 of "Miscellaneous Writings."

ARCHIBALD MCLELLAN.

FURTHER CORRESPONDENCE BETWEEN A COMMITTEE OF INQUIRY AND THE BOARD OF DIRECTORS.

New York, N. Y., Oct. 29, 1909.

The Christian Science Board of Directors, The First Church of Christ, Scientist, Boston, Massachusetts.

Dear Sirs and Brethren:—The gravity of the situation produced by your letter of Oct. 23, together with other occurrences, has made any reply impossible until the committee of inquiry of First Church of Christ, Scientist, New York city, could give such consideration to the conditions thus created as their importance demanded.

The board of trustees of First Church of Christ, Scientist, New York city, can alone speak officially for this branch church, but this committee of inquiry seems to have a duty in this matter while still engaged in the performance of the duties imposed by the by-laws of The Mother Church, and of this branch church, in view of the authority vested in this committee by the resolution which created it.

This committee regards as fundamental the following facts:—

1. The First Church of Christ, Scientist, in Boston, Massachusetts, is The Mother Church, and First Church of Christ, Scientist, New York city, is a loyal branch of said Mother Church.

2. Different jurisdictions are granted to The First Church of Christ, Scientist, in Boston, Mass., and to the several branch churches of Christ, Scientist; these jurisdictions being defined in the Church Manual of The First Church of Christ, Scientist, of Boston, Mass., in connection with the laws of the several states.

3. The Board of Directors of The Mother Church, and the boards of trustees of branch churches, have distinctive duties. Among these duties are the enforcement of church by-laws within their respective jurisdictions, and the scrupulous respect for the rights of each other.

4. The fulfilment of these duties includes not only the full and fearless administration of just discipline within their respective jurisdictions by each of said constituted authorities, but also non-interference with the other in the performance of its duty.

5. This duty of non-interference extends not only to the boards of The Mother Church and of the branch churches

Digitized by Google

in their official capacities, but to each and every member of said boards.

6. Furthermore, the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, Discoverer and Founder of Christian Science, imposes permanently upon all persons concerned the duty of realizing and declaring that every one charged with a duty in the conduct of the church's business, and in the administration of its by-laws, is an individual manifestation or reflection of the divine Mind, and is governed by that Mind.

The daily papers have been conspicuous in the publication of erroneous reports tending to mislead the uninformed regarding the proceedings of this committee, and the purpose and outcome of this inquiry now in progress under the authority of the board of trustees of this branch church. These reports were manifestly the work of enemies of Christian Science, and they were properly answered by the publication of this committee's announcement of Oct. 18, copy of which was sent you in our letter of the 21st instant.

Notwithstanding the facts above set forth, your letters continue to charge this committee, as they previously charged the board of trustees of this branch church, with not knowing and not doing and not intending to do its duty under the conditions which now exist.

The facts are, that the board of trustees of this branch church instituted this inquiry as soon as possible after being informed of the conditions alleged to exist among its members, and that this committee has not ceased since its appointment to devote itself to the duties thus imposed upon it.

According to our understanding of Christian Science there is only one Mind, and this Mind is manifested in and through all that really exists. To acknowledge any other mind as existent or as operating, is to deny the fundamental spiritual fact declared and emphasized in our beloved Leader's writings, and constituting the corner-stone of all Christian Science churches.

In the name of Christian Science, this committee takes this occasion to call upon you, and each of your members to know that every one connected with this inquiry, or with the constituted authority of this branch church, is a reflection of and is subject only to the one infinite Mind, and is faithfully fulfilling the action which this fact makes possible and imperative under the operation of divine Principle, which our beloved Leader, Mary Baker Eddy, has once for all discovered, effectually declared, and continues to demonstrate for the salvation of the whole world from sin, sickness, and death.

Error cannot separate this branch church from The Mother Church, any more than error can separate man from God, idea from Principle. In the assurance of this fact, and of power, under our beloved Leader's divine guidance, to know and do our duty, we remain,

Faithfully in truth,
The Committee of Inquiry, of First Church of Christ, Scientist, New York City.
E. F. HATFIELD, *Chairman.*
JOHN FRANKLIN CROWELL, *Secretary.*

Boston, Mass., Nov. 3, 1909.

The Committee of Inquiry, of First Church of Christ, Scientist, New York City.

Beloved Brethren:—Your letter dated Oct. 29 is before us. With respect to your protest against what you call interference on our part, we beg to say that the jurisdiction of this Board extends to every matter affecting the Cause of Christian Science as a whole. Also, that this Board may deal with such matters directly, or take them up with the officers of branch churches, according to the exigency of each case, and in accordance with the by-laws of this church. The relation between The Mother Church and its branches necessarily gives to this Board such supervision over the branches as may be necessary to preserve the purity and integrity of the Christian religion which it represents.

We must, in Christian fellowship, call your attention to the fact that your concept of Christian Science as expressed in your letter is erroneous, and of itself shows the difficulty under which you are laboring. Your statement that you call upon the members of this Board "to know that every one connected with this inquiry, or with the constituted authority of this branch church, is a reflection of and is subject only to the one infinite Mind, and is faithfully fulfilling the action which this fact makes possible," etc., etc., is nothing more nor less than a claim on your part that mortals are the reflection of infinite Mind. Of such a claim Mrs. Eddy writes, on page 572 of Science and Health, "In Science we are children of God; but whatever is of material sense, or mortal, belongs not to His children, for materiality is the inverted image of spirituality;" and again, on page 27 of "No and Yes," "Mortal man is the antipode of immortal man, and the two should not be confounded." The logical effect of your demand is to require us to attribute to you, as mortals, the infallibility of divine Mind.

Finally, brethren, we assure you of our hope that you do know and will do your duty; but this will be disclosed by your report; for, as Christ Jesus said, "By their fruits ye shall know them."

Very sincerely,
The Christian Science Board of Directors,
JOHN V. DITTEMORE, *Secretary.*

LETTERS TO OUR LEADER.

[We are glad to give a word of commendation to the following letter, which so aptly expresses appreciation of our Leader's great work and its bearing upon the lives of men.—EDITOR.]

San Francisco, Cal., Oct. 12, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The assistant committees on publication, the Readers, boards of directors, and committees on the distribution of literature of the various churches, and the practitioners whose names are in *The Christian Science Journal* for the northern half of California, being assembled in San Francisco for the purpose of meeting with Willard S. Mattox, your associate manager of committees on publication, desire to avail ourselves of this gathering to express to you our deep love and appreciation of your untold and ceaseless labors for mankind. It will rejoice you to know that here on the Pacific coast, as elsewhere, Christian Science is growing surely and steadily in the affections of the people. It is growing because your discovery and loving life have brought to the understanding of human consciousness the eternal fact that matter, with all its accompaniments of sin, disease, and death, is but a false belief and has no genuine foundation, and that God and His idea are the only realities. How can we thank you for this glorious truth except in reformed lives. We realize that Christlike works alone can repay our measure of debt, and we resolve to consecrate ourselves more earnestly to this service. We are most grateful for the meeting this afternoon; it has been in every way helpful and instructive, and will aid us all to do more active and intelligent work.

Each day, dear Leader, we more truly love and honor your self-abnegating warfare for Christ and his church,

Digitized by Google

and appreciate somewhat its great cost and value. Our tenderest love is always yours.

Signed for those in attendance:

WILLIAM E. BROWN,
Chairman of the Meeting.

HERBERT W. EUSTACE, FRANK W. GALE,
HENRIETTA ROSENGARDEN, OLCOTT HASKELL,
HUGH T. SIME, *Committee.*

New York, N. Y., Oct. 30, 1909.

Dear Leader:—I have recently awakened to the true meaning of hypocrisy—"feigning to be what one is not." I have tried to be a Christian Scientist, and to love you, also my fellow-beings. I see now that I did not. Why? Because I have for sixteen years been following (not willingly, but through the greatest rebellion) a mistaken sense of personality—trying to find God through a person. It had so limited me that finally I found myself face to face with death. It was then I turned away from all human sense to God, and was healed. What sublime patience you have had to lead us so lovingly along, until we were enough awake to stand the more radical awakening. Truly God has tempered the winds to the shorn lambs. With tender love,

Gratefully yours,
MARION E. STEPHENS.

New York, N. Y., Oct. 30, 1909.

Dearly Beloved Leader:—About five years ago the glorious truth which you found for this age in the Scriptures came to my knowledge and I was healed. Ever since my love and gratitude toward you has been unbounded. During the past months your tender love and watchful care for this little flock, felt in your own words of admonition as well as in those of the dear ones who are guided by the wisdom which you reflect, has done so much for many of us that my love and gratitude toward you, dear Mrs. Eddy, has taken on such proportions as to demand some expression from me. It is such a blessing to know that from now on we also shall have Christian Science in all its simplicity and beauty according to your writings. I love you and thank you, dear Leader, for my understanding of God as divine Principle, and for all that you have done and are doing for all mankind.

Very lovingly your follower,
MRS. IDA EHRICH.

Orange, N. J., Oct. 16, 1909.

Beloved Leader:—My heart is full of love for and gratitude to you, the Discoverer and Founder of Christian Science, for this beautiful life-giving, all-healing truth revealed to human consciousness. I thank you for the institution of class instruction, which has enabled me to obey, in some degree, the Master's command to heal the sick and reform the sinner. I am grateful to you for your loving messages of protection, tender correction, and admonition.

Dear Leader, "the eternal God is thy refuge, and underneath are the everlasting arms."

Lovingly yours,
WM. K. KITCHEN.

Seattle, Wash., Oct. 12, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Revered Leader:—The desire to express to you my gratitude for your selfless work for humanity will no longer be repressed. Personally I have been helped physically and morally, and uplifted spiritually more than words can tell. Christian Science has rescued me from the very depths of despair and agnosticism. Now the weekly Lesson-Sermon is my daily companion, giving me "strength for daily needs." Nothing could tempt me to do without your precious book, "Science and Health with Key to the Scriptures." From it, and your other published works, also our periodicals, I am learning the straight and narrow way to which Jesus constantly directed his followers. His words: "And I, if I be lifted up from the earth, will draw all men unto me," are being verified.

As point by point material law is being driven to the wall and made to surrender to your explanation of it, I stand in awe before your life of purity and truth. God sustains and protects you, His faithful messenger to this age. May I so live as to encourage and lead others to this "fountain of living waters," and "Thy rich promises in me fulfil," is my prayer.

Loyally and lovingly,
E. CAROLYN JACKSON.

Darlington, England, Oct. 8, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass., U. S. A.

Beloved Leader:—Nothing has rejoiced my heart so much for a long time as the meeting of the committees on publication of Great Britain and Ireland, and their assistants, held in London last night. It was a gathering of loyal Christian Scientists from all parts—like the first one I attended in Mr. Farlow's office in Boston; and you know better than all of us what that means for the future of Christian Science over here. We were in the "one mind" on all questions, the harmony of the meeting being most marked. Your mission to the world and the work of Christian Scientists in this department was stated by Mr. Dixon in unmistakable words, and this will inevitably arouse an interest in the publication committee work in every one of your followers on these shores. From my soul I earnestly pray that it may help to spread our literature, and thereby sustain our Cause and you. In the words of your inspiring Message of 1902, "Let us all pray . . . for more grace, a more fulfilled life and spiritual understanding, bringing music to the ear, rapture to the heart—a fathomless peace between Soul and sense—and that our works be as worthy as our words."

Yours gratefully and lovingly,
ARTHUR E. JENNINGS.

Denver, Col., Oct. 21, 1909.

Dear Mrs. Eddy:—When I had finished reading, in the last *Sentinel* (Oct. 16), your letter, the amended by-laws, and the editorial "Meek and lowly in heart," I felt a sense of the love, protection, and guidance which keeps us ever turned to God; and through the day, when the temptation came to dwell unduly on person or thing, I steadfastly turned to your words in "Miscellaneous Writings" (p. 135), "Principle, instead of person, is next to our hearts, on our lips, and in our lives." The evening brought to me peace and strength, and I could truly say, "I know that my redeemer liveth;" and "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

Thankfulness goes out to you, and to those who have constantly pointed the way to "our Father which art in heaven."

Lovingly,
EMMA OLDFIELD.

South Bend, Ind., Oct. 19, 1909.

Beloved Leader:—For the many blessings which have come to me, through obedience to your teachings; for the ability, through spiritual understanding, to heal the sick and sinning, to comfort those that mourn, I humbly send you my love and gratitude. My prayer is, since taking up the active work of Christian Science, that my life may be of service to this grand Cause that you have brought to us.

Your student's student,
ELMER A. HIGGINS.

THE LECTURES.

CHEYENNE, WYO.

At the Capitol Avenue Theater last evening [Sept. 23] Bliss Knapp delivered an able address on Christian Science. In introducing the speaker, Gen. John Charles Thompson said:—

As you know, we are here tonight to listen to an official lecture by a distinguished visitor to our city, upon Christian Science, a comparatively new phase of the oldest and most important subject which has held the attention of the human race, viz., religion. Knowledge of truth, or the laws of nature, should be the paramount concern of every rational creature, and is the only valid basis of religion. Although truth has been the constitution of the universe from the beginning, its achievement by mankind as to religion has been as slow and arduous as has been the conquest of all other laws of nature. However, mankind has at last transcended that worst false conception of primitive humanity, that there ever was or is now anything supernatural (or above law) in the universe; and as a natural consequence the free and intelligent minds of the present age are being lifted out of belief in any of those old theologies which are rooted in barbaric superstitions.

Science, or knowledge of truth, is now the goal of civilization. About the middle of the century last past there occurred a most remarkable revulsion in both science and religion from the dominant conceit of both for centuries, namely, that matter was the substantive cause of life phenomena; and a conversion to the truth that being and all phenomena connected with it is produced by Mind or Spirit; and coeval with that revolution in thought began what may be termed the second great reformation of Christianity. Great and devout scientists turned their attention to the discovery of the laws of nature, which they knew must be at the bottom of the philosophy taught and the phenomena of healing practised by Jesus of Nazareth, if there was any truth in the narratives of his life and deeds.

The preeminent constructive genius of that nineteenth century reformation of Christianity was a woman, Mrs. Mary Baker Eddy of Massachusetts. She essayed to crystallize into a book, entitled "Science and Health with Key to the Scriptures," the Science of the truth taught by Jesus, and founded a church to give practical expression to it as the correct rule of living and the right method of healing disease. The success of the gospel she reflected and the church she founded is the marvel of the ages. Christian Science has driven fear and worry and disease from the hearts and hearthstones of thousands, and enthroned hope and faith and happiness in their stead. It has transformed hate and envy and jealousy into loving-kindness, which is the expression of all divine emotions and deeds. It has transfigured our concept of God as our omnipresent and all-loving Father, and extinguished the personality of a devil and the existence of a material hell. It has established the truth that men's sins are the prolific causes of disease, and their return to righteousness of thought and action, the natural and available physician. In fine, Christian Science has practically transformed religion from a hopeless and helpless superstition into a Science of goodness, truth, and beauty, which can be reached and utilized by all.—*Wyoming Tribune.*

LECTURES TO BE DELIVERED.

Eugene, Ore.—Judge Septimus J. Hanna, Eugene Opera House, Nov. 9.
Fort Smith, Ark.—Bliss Knapp, Nov. 11.
Chattanooga, Tenn.—Frank H. Leonard, Auditorium, Nov. 11.
Sherman, Tex.—Bliss Knapp, Sherman Opera House, 8:30 p.m., Nov. 14.

TESTIMONIES OF HEALING.

I have postponed writing my testimony, feeling that I could not do justice to the truth, or make one who has not learned to avail himself of God's mighty power believe or understand one half of my experiences, for the blessings and the healing which the study of Christian Science has brought me are beyond description. One year ago I bought a copy of Science and Health, a book which I had never seen until the week before, but I felt as soon as I began to read that it was just what I wanted and had long been looking for. I must have been healed of my various diseases at once, although I did not surely know it then.

I had been very miserable for years, in fact had never been considered by myself or my friends as at all strong, and always had something the matter. I had suffered intensely for nearly twenty years from an intestinal trouble which is considered incurable by many of our best physicians. I tried the strictest dieting, till finally there were only a few things which I could eat without their causing great distress. A few years ago I began to have rheumatism in different parts of the body, but did not pay much attention to it until last fall. At first my feet were very badly affected; then I was taken down suddenly with a disorder of the bowels, so severe that nothing would relieve the pain except a narcotic. I was in bed over two weeks, and although I took what the physicians considered the best medicine, the pain continued most of the time for a month, until the day I began to read Science and Health; and I have never felt it since. For a year, and the first year in my life, I have been a perfectly healthy woman, and in that time I have not taken medicine of any kind or treatment other than Christian Science, of which I have needed a great deal.

This cure is not by any means "faith without works," as some claim, for if one has ever had a sick mind, it takes time and effort to cure it. I have a few times thought that my old troubles were beginning again, but a short period of mental treatment has entirely cured them all—just by realizing that immortal Mind governs me, and that God is "All-in-all." I began to eat of everything as soon as I got the book Science and Health, and I can now eat those things which used to cause great distress, without any discomfort. I have gained in weight greatly. I used often to have very severe colds, but I have not had one during the year, although I have had the symptoms several times; but they have never lasted more than a few hours, and I used nothing but Christian Science.

One knee had troubled me for ten years. It started from an injury and I employed the very best specialists in New York city besides many doctors in other cities. They experimented with very painful remedies, but they did not cure me. In time my knee got better, but never well or strong. I never used it in going upstairs and never hoped to, and I fully expected to wear an elastic knee-cap while I lived, as I had done for years, and even with that on I would often be lame for weeks. Very soon after learning to rely on the infinite Mind for help, I left off the knee-cap, and have never felt the need of it. The knee seems to be perfectly well and strong, and I use it naturally in going upstairs. During the year I have hurt that knee twice very seriously by falling, but it caused me no trouble, getting well without any material medicine.

I cannot begin to tell of all the ways that I have been helped through Christian Science. I feel, however, that the increase in peace and happiness which has come to me is far beyond all the other help. I had always thought I was a good Christian, but I did not before fully know of that peace which passeth understanding and which is sure to be followed by health and happiness. I then read the Bible from duty; now I love to read it, and by reading it in connection with Science and Health I gain a new and inspiring apprehension of it. This healing by divine Mind does not now seem at all miraculous to me, but simply natural and right. The only wonder to me is that I could have lived so many years and not realized the truth of being. I cannot tell how thankful I am to God for giving this true understanding to one who had the courage and perseverance to put it into words which all can comprehend. When I try to convince others of the truth, I realize a little how hard it must have been for our Leader, when all were opposed to it. I wish I might help others to learn the truth, and I shall be glad to answer any one who may wish to hear further of my experiences.

I appreciate the *Monitor* very highly, as I have always wished for a paper which did not publish crimes and scandals. I also am a subscriber to the *Sentinel;* I love to read it very much, and get a great deal of help from it.

MRS. MARTHA M. WAKELEE, Southbury, Conn.

In the hope of helping some one in a similar case, and also as an expression of gratitude for what Christian Science has done for me, I send this for publication. In 1899 I returned from service in tropical Africa, where I had suffered severely from fever. From that date up to the end of 1907 I experienced constantly recurring attacks of digestive disorder, accompanied by great pain and high temperature. In 1903 I was on this account invalided home from the Mediterranean Station, and then had about half my teeth extracted, as it was believed that this would make me better; but the attacks still continued, and about two years ago I spent three weeks in hospital on account of this trouble.

In the end of 1907, while visiting some friends I became interested in Christian Science, and I was lent a copy of "Science and Health with Key to the Scriptures." Without any thought of being healed I commenced the reading of this book. Very shortly afterward I had one more painful attack, since which time I have not only been free from any further attack, but I have been far better in health than I can remember feeling since I was a boy. Physical healing—great as is the salvation in this respect which Christian Science is revealing—is, however, as almost nothing compared to the mental and moral healing which I have experienced through Mrs. Eddy's wonderful discovery. Evil habits and thoughts, together with the grossest sins, had for years held me in bondage; but almost unconsciously, as I read and understood a little of the Christ Science, these passed out of my life.

I had, in search of knowledge, read the Bible and studied more or less diligently Buddhism and various philosophies, but I had almost abandoned hope when this "Key to the Scriptures" revealed to me the fact that we can, as adherents of Truth, "take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). Mrs. Eddy's writings, and the Bible which they spiritually interpret, have become to me an engrossing study. In place of fretfulness and insubordination, I realize more and more the peace of God and the authority of divine Mind, who bringeth forth Mazzaroth in his season and guideth Arcturus with his sons.

It is not possible to express in words what I owe to Mrs. Eddy for her splendid work and example. She tells us that "action expresses more gratitude than speech" (Science and Health, p. 3), and my endeavor must ever be to follow her as she follows Christ. Thus may I fulfil Paul's admonition, "Glorify God in your body, and in your spirit."

LIEUT. F. W. HANAN, R.N., H.M.S. "Defence," Home Fleet, England.

Digitized by Google

After many years of poor health, I had four surgical operations for abdominal trouble. The incisions did not heal for over a year, and when they did, a growth formed which so enlarged my body that I could scarcely walk and could not sleep. "Weary and heavy laden," I was longing for rest, and when a dear neighbor told me that I need not return to the hospital for the fifth operation, because I could be healed in Christian Science, the clouds began to disperse, hope was awakened, and I wrote to a practitioner for treatment. She, too, assured me that "with God all things are possible," and how sweet it was to fall into the hands of divine Love, trusting all to God, who heals all our diseases. When that sweet peace of mind which passeth all understanding came upon me, I slept like a babe all night. The next day (this was June 27, 1908) my pains and aches had vanished, and at the end of three weeks' treatment the physical manifestation had all disappeared, and I was able to wear the clothing which I had been wearing before the growth had formed. Now I am perfectly well, just as God wants His children to be.

The spiritual blessing that comes with this healing is the best of all. Would that every one might cast aside all prejudice and take up Christian Science as a daily study, for it will prove to be a lamp to their feet and a light on their path. God bless Mrs. Eddy, who has striven to make plain these great Bible truths to sin-sick humanity, and through whom today unnumbered thousands are testifying to the healing and other blessings received.

JESSIE MOORE PONDER, Walnut Ridge, Ark.

[Translated from the German.]

For several years I suffered greatly from pain in the hands and knee-joints, but especially in the feet, and at times it was so bad that I could not walk at all. I asked medical advice and applied all the remedies I was advised to try, but without success. In the later part of September, 1908, my sister gave me a copy of *Der Herold der Christian Science*, which I read with great interest. I immediately wrote to Dresden, asking for help, and when a Christian Science practitioner wrote that she would treat me, but that I must do my share, I replied that I was willing to do so. Through my own prayers I had not before gained anything satisfactory; my prayers had always brought me some relief, but never permanent help. Now, however, I was confident that I would become quite well through the Christ-healing as taught in Christian Science. Two weeks later I found myself much better physically and mentally, and felt that this good health would be lasting. I have now enjoyed good health for a long time; I can walk all day without inconvenience and have no pain at all. I also have enjoyed foot-tours of several hours' duration.

I would also like to return thanks for the help my six-year-old boy received through Christian Science. He suffered from an ear trouble which caused him great pain, so that he would sometimes cry all the night through. Two years ago he had an attack which lasted very long, and the physician could afford no help at that time. When in December the boy again began to complain of his ears, and the pain became as severe as it had been two years previous, I asked the lady in Dresden with whose help I had regained my health, to give treatment to my child; and after a short time he was healed of the pain and of an excitable and angry disposition as well. After two weeks' treatment the boy was quite well, also good and happy. At the same time I learned how to bring up a child according to the truth, that is, in overcoming all evil with good.

My heart is filled with gratitude and love to God, and to Mrs. Eddy, the revered Founder of Christian Science, which has brought me so many blessings.

FRAU HILMA MUELLER, Schwarzenberg i. Sachsen, Germany.

It is with pleasure that I give my testimony, and I hope that my experience may be the means of bringing health to others. A year ago I was suffering from intense headaches, said to be caused by weak eyes, which troubled me very much, so that I was compelled to wear glasses. A friend recommended Christian Science. I immediately took treatment, and in a week laid aside my glasses, and have not needed them since, nor have I had a headache. I wish to express my gratitude for what Christian Science has done for me.—ADDIE E. WOLTER, Monterey, Cal.

I feel that the following testimonial of my gratitude is due for what Christian Science has done for me and mine. Some time ago my two children strayed away from their nurse and were playing with a tank of gasoline. The oldest got himself wet with the oil and called to the other for a match. He struck the match, and at once he and the five-gallon tank were in flames. The fire was quickly put out by those near, but the hair had been burned from the child's head and there was every appearance of his having inhaled flames. His screams were so loud that I was terrified and could do nothing, so I asked a friend to call up a practitioner in Jacksonville. In five minutes from the time the message was received the child was easy, and the next train brought the practitioner. In two weeks the burns, which were in many places over the child's body, were entirely healed. A doctor was called by my husband, but not a drop of medicine was used.

When "Science and Health with Key to the Scriptures" was first presented to me I was not sick, but was eager for the truth and read the book trustfully. In about a year from this time I had a very severe accident, and seemed to be in the "valley of the shadow of death." I prayed earnestly for help, and one night at midnight felt God's presence with me. When day dawned I was up, well and happy.

How can we ever cease to love Mrs. Eddy for having shown us the way to such understanding and peace! The half has not been told of the many blessings which have come to me during the last nine years, and words are inadequate to express my gratitude, but I can say with the psalmist, "I will be glad and rejoice in thee: I will sing praise to thy name, O thou most High."

MRS. AUGUSTA WILSON, St. Augustine, Fla.

My Thanksgiving season would not be complete without offering my thanks to God, and speaking of my gratitude to Mrs. Eddy for the understanding of divine Truth obtained through the study of her book, "Science and Health with Key to the Scriptures." As a Jewess my opinions as to Jesus and the Christ have undergone a radical and a beautiful change since I have come into Christian Science. The Bible is my daily companion, and I can now see why in the old belief my spiritual hunger was never satisfied. For ten years I suffered tortures from what seven different physicians, whom I at different times employed (some of them specialists), pronounced an unknown and incurable spinal malady. The days were full of dread and the nights even fuller of misery, when Christian Science was recommended. Now, after one and a half years of not only earnest seeking but of striving to have that Mind in me "which was also in Christ Jesus," I am a perfectly well woman; indeed, I can say I am "every whit whole."

Last spring, my son, sixteen years of age, was felled to the ground by a stroke of lightning and his eyes seriously injured. The wires were down, and I could not reach the nearest practitioner for two days by letter, so I took up the case myself. My trust was fully rewarded, for, with the practitioner's help to complete the work, my son had in a week's time fully recovered from the shock,

Digitized by Google

and very soon his eyes were again normal. Many tests of our faith came to us within that first year, but we as a family relied solely upon the infinite Father, in whom "we live, and move, and have our being." We earnestly desire to bring to others the knowledge that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

EMMA FLEISHMAN FELDER, Wilbur, Wash.

I wish to express my gratitude for what Christian Science has done for me and my family. Eight or nine years ago I was healed of a bowel disorder which had become chronic. At the time mentioned I had an acute attack, which caused me much suffering and inconvenience. I called on a faithful Christian Science practitioner for help, and in two or three treatments I was healed. Only once since have I had a return of the trouble, and that but a slight attack, which was quickly overcome in Science, and I have had no return of it since.

About the time that the above demonstration was made for me, our youngest son was taken with a fever. The symptoms were alarming and he became delirious. We sent to the same practitioner for help, and in two or three days from the time he was first taken, he was entirely healed and was able to be about as usual. This seemed wonderful to us, because, some years previous to this, I had nursed him through this same disease, which under the care of one of the best physicians had kept him in bed three months. For the many blessings Christian Science has brought us, we are truly thankful to God, and to the Discoverer of Christian Science.

MRS. ELIZABETH CARR, Hurley, S. D.

I write this in behalf of my mother, Mrs. Louise Dunker, who does not know enough of the English language to write it herself. My mother was ill with what the doctor pronounced a neuralgic affection of the eyes. This was very painful, and after she had taken medical treatment for about two weeks, the doctor told her she ought to see a specialist, as she was getting no better. She did so, and the medicine was changed about every other day, but each new remedy seemed to make her worse.

I finally asked her if she would be willing to take Christian Science treatment. She said she would take anything to get rid of the dreadful pain. Her eyes were closed, as she could not bear to open them, and her whole body seemed to be affected, for she could hardly walk. She began with the Science treatment, and in three treatments she was able to come to the table and help herself, could keep her eyes open most of the time, and in ten days was able to go out and do her usual work. In less than two weeks after the first treatment she went to church with me. She is now perfectly well and happy.

AMANDA TRYON, Chicago, Ill.

I am deeply grateful for what Christian Science has done for me and my family, both spiritually and physically, through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. With the assistance of a practitioner my wife has been healed of a diseased leg, and my little son, aged six years, has been healed of hip disease. He was bound in steel bands, one round his body, another down his back, and two round his leg. He was in these irons for eighteen months and under the doctor's care all the time. When myself and my wife used to lift him from one bed to another his cries were distressing to hear. After the doctor had attended him for eighteen months he said he could do no more for him. He gave me to understand that the only thing to be done for the boy was to put him in a hospital to undergo an operation for the hip disease, but I refused to consent to it.

I was then recommended to try Christian Science, and thank God we did try it. I cannot tell how grateful I am to our dear Leader, Mrs. Eddy, for making this blessed truth so plain. We all have received many blessings from it. My little son was better the very first night he was treated. He was free from all the irons in about six months, and can now walk without the assistance of any one. I sincerely hope this testimony will be of help to some poor sufferer. I am better myself than I have been for the last twenty years. Four of my children attend the Sunday School, and everything seems glorious with them. I am deeply thankful to God for this wonderful truth. I cannot express in words the great change it has made in my home.—WILLIAM COULSON, London, England.

As I read the testimony of others I feel a great desire to tell of my own healing. I thank God for revealing this Christ Science to our Leader, Mrs. Eddy. This truth has helped me to overcome a quick temper, a jealous disposition, and many other errors of the senses. Since I can remember I had always been sickly. One of the most dreaded ailments was biliousness, with terrible pains in the stomach. In attacks of this kind the suffering was most severe. I was married at seventeen, and soon after the attacks came oftener and were more violent. One night I awoke very sick, and my husband did all he could for me. He finally called in a neighbor who is a Christian Science practitioner, but as we had little use for Science, not knowing what it was, they worked for me materially for a while, until it seemed that I would die. Finally I asked for Christian Science treatment, and in a half hour all were asleep. In the morning I felt fine, whereas, without Science, I would have been very sore. I took further treatment, and although I was not entirely healed right away, the pains were lessened and the attacks farther apart, until they finally disappeared.

It is now over two and a half years since I have had any sign of the illness, and for this my husband and I are most thankful. I have had many good demonstrations for myself and baby, who was born under Science treatment. To us she is certainly one of those "representatives of Life, Truth, and Love" of which we read in Science and Health (p. 582). Her goodness and sweetness are acknowledged by all who know her. We had two epidemics of contagious disease in our neighborhood. The neighbors thought our baby could not escape, but we can thank God she did escape these attacks and many other prophecies of mortal mind. I am striving to be a better woman, a better wife and mother; to love my neighbor as myself; to have the Mind that was in Christ Jesus.

MRS. F. A. CERVENY, Los Angeles, Cal.

In gratitude for all that Christian Science has done for me I wish to add my tribute to the anthem of praise going out "to the great heart of Love" (Science and Health, p. 448). I have been healed of several serious as well as many minor physical ailments, which the study and practice of truth revealed as the results of ugly temper, revenge, self-interest, etc. While there are still many weeds of error to be rooted out, I have confidence to "press toward the mark," resting in the assurance that with God all things are possible.

The Bible bids us sing praises with understanding. Mrs. Eddy has given to the world a religion which makes this understanding obtainable. This was realized in a case of ulcerated jaw-bone and lockjaw. I had been suffering for several days, and one night I walked the floor all night. At five o'clock in the morning I telephoned to a Christian Science practitioner; treatment was at once given, and in ten or fifteen minutes all pain was gone. There was no

Digitized by Google

return of the pain, but the jaw remained set for a day or so longer. Even this healing does not compare with some other demonstrations which I have had, one of which I will mention,—the removal of an abnormal growth of twelve years' standing or longer. I treated myself for six months without a sign. At this stage I learned that some progress had been made, and in three more months the ailment was entirely overcome. The lessons learned during this experience are of incalculable value to me.

I thank God for the blessing of class instruction, and for all the provisions for our benefit which our dear Leader has made, in the several periodicals issued by the Publishing Society, etc. I thank God that there was one spiritual enough to become His messenger to a needy world, and my prayer is that I may live so as to be worthy to be called her follower.—MRS. E. CAROLYN JACKSON, Seattle, Wash.

I came to Christian Science for the physical healing, and to my joy found even more than I sought in the spiritual and moral. To say that I am grateful to God, also to Mrs. Eddy, for the help received is to express my gratitude very mildly; words are too inadequate to tell the joy in my heart because I have come to know of divine Love's watchful care. It is my aim in life to show to others the allness of God, and may Love be reflected by me as I move among my fellow-men.

LUCILE EVANS MULLINS, Marion, S. C.

During the winter of 1907–8 I was attending Yankton college, and one day I slipped in going down some steps, and fell to the bottom with my foot bent back under me. The pain was very severe, but I went about my work as usual. In the afternoon I went down town, and when I came back my ankle was paining me so I could scarcely walk. During the evening the pain grew worse, and after supper I felt that I needed help, so called up a Christian Science practitioner and asked for treatment. Before I went to sleep the pain was much relieved, and when I awoke in the morning there was no pain, my ankle was its normal size, and there was only a very slight stiffness in the muscles of the leg to remind me that I had had any trouble whatever.

That fall, a short time after I returned to school, a boil began to appear on my left arm. I tried to see the practitioner, but found that she was out of town; so I could not get treatment until the boil had become quite large and was somewhat painful. As soon as the practitioner returned home I had treatment, and immediately the pain ceased. During the time when a boil is supposed to be most painful, I suffered the least, as there was no pain, and it opened of itself, without the use of any material means. I am certainly grateful for the help received, and the fact that I did not need to have the services of a surgeon, as so many advised me to do.

ADESSA WERCKHEISER, Yankton, S. D.

It gives me great pleasure to testify in behalf of Christian Science healing. In August, 1907, I was taken with severe rheumatic pains in my right shoulder. My suffering was intense; I could not sleep, and in spite of massage and other material remedies I grew constantly worse. In October I telephoned to a Christian Science practitioner for treatment, and at the end of three weeks the pain had entirely left me. At the end of four weeks I was healed. To my surprise, I was not only cured of the rheumatic trouble but my whole body responded, so that now my health is perfect. I have also gained in weight.

I would like to add that when I asked for healing, that was all I wanted, or at least I thought so; but the audible explanations given, together with the treatment, produced such an interest in Christian Science that I bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the *Quarterly*, and study them daily. This truth is meat and drink to me. I am truly grateful for the benefits I have received.

H. F. WINN, Cambridge, Mass.

Like many others, I came to Christian Science for the physical healing alone. I had suffered for years with neuralgia, also had hard lumps form on the muscles of the arms until I could not raise my arms to my head, and I wore glasses. Members of my family who were interested in Christian Science would tell me about the wonderful things it was doing for them, but I thought they only imagined such to be true. I finally told my sister that she could ask her friend to treat me, but that I would not go myself. I had been suffering so much with my teeth that I could not sleep at all, but I slept that night and have not had neuralgia since. I believed right then and there in Christian Science; I forgot to wear my glasses, and the other troubles all vanished.

I now fully realize what a great thing Christian Science is, and I would not be without it for anything. It makes life so different when one does worry about everything, as so many certainly do in the old way. I could tell of very many beautiful demonstrations, but give this one with the thought that some doubter may try it as I did; for I was a doubter, but now know Christian Science to be the saving truth.—MRS. LIZZIE MARJENHOFF, Charleston, S. C.

[Translated from the German.]

I suffered with asthma for many years and used many material remedies, but without any improvement. Finally I sought healing through travel and change of air, but was not relieved by either; I always returned home with my ailments. In the summer of 1899 I happened to hear about the spiritual healing in Christian Science, and immediately decided to give it a trial; so I went to see a practitioner and asked for treatment. After having called upon her several times I was better, and although the trouble was a very stubborn one, I was completely restored with twenty-two treatments. Last summer I was suddenly stricken with a severe swelling of the face, so that my eyes were completely closed. I sent word to the practitioner, asking her to treat me absently. From the first treatment the eyes improved, and after the third I was completely restored. Having experienced this healing power of Truth, I consider it my duty to call the attention of all sufferers to Christian Science.

FRAU AUGUSTE FUHRBERG, Hannover, Germany.

[Written for the *Sentinel*.]

SHEPHERDED.

EVELYN GAGE KNIFFIN.

Behold, he that keepeth Israel shall neither slumber nor sleep.—PSALMS CXXI. 4.

FEAR not; though dark thy pathway lies,
Behind the clouds are azure skies;
And angels watch, and guide thy feet
By waters still, through meadows sweet;
For, lo, the Shepherd guards His sheep,
And doth not slumber, neither sleep.

And when the weary day is done,
And gathering clouds shut out the sun,
While lowering bends a starless sky,
And nameless fears come creeping nigh,—
Lie down in peace, thy slumber take;
The God who loves thee is awake.

FROM OUR EXCHANGES.

[*Christian Register.*]

Men build supports for religion,—forms of worship, statements of faith, methods of spiritual discipline. And religion, a living thing in the midst of human life, outgrows these supports. Experience, ever reaching out in new directions, and truth, ever coming to us by new avenues, become larger than the old supports of faith and spiritual life. When Isaiah said that Jehovah had had enough of burnt offerings, that He said "incense is an abomination," and "your appointed feasts my soul hateth," he was but one of many men in a long series, through the generations, who have broken the hold that venerable forms had upon living religion.

[*Christian Intelligencer.*]

If the extraordinary deed is ever accomplished, it will be by one prepared by fidelity to the common tasks that have come to him day by day. And only he is made ready for the great moment who has lived fully and truly his common days. The commonplace is God's preparation for the larger and the higher. A man comes to do best what he does most. He gains efficiency by practice. The familiar task is his most beneficial contribution to the life of his fellow-men. And it seems folly for any one to grow impatient with that which makes him most useful in the world.

[*Outlook.*]

If a man is to be happy, he must be happy now; if he is to be happy, he must be happy here; if he is to be happy, he must be happy in himself and not in his conditions. A great many people speak of heaven as if it were a walled city, through the gates of which they hope, by some blessed mercy, to pass at some future time, at some distant place; not knowing that nobody enters heaven who does not enter it through the Gate of Life, and not the Gate of Death; and that life eternal begins now, or began long ago, but under no circumstances can begin in the future. It is a present possession.

[Rev. H. L. Haywood in *Dayton* (O.) *Journal.*]

The belief in a material heaven is a relic carried over from the old days when men thought of God as dwelling in a place above the stars. God is everywhere. Should you journey to the farthest star you would be no nearer to Him. And we must give up the idea that we must die and be transported to another sphere ere we can be in heaven or stand in the presence of God. Heaven is where God is, and God is everywhere. Heaven is not won by a change of locality, but by a change of heart. The heavenly gates are in the soul.

[*Congregationalist and Christian World.*]

The Bible, the church, the Sabbath are creations of men. Religion existed before they did. We believe the Spirit of God moved men to create this trinity of institutions by which Christian faith expresses itself. It is the faith that is essential, not the forms of its expression. The works that express the faith change with changing times. So long as faith is vital the institutions which spring from it will be renewed according to human needs and will be acknowledged by God as His own.

[*Christian World,* London.]

What is certain is that our gospel in all its thinking, in all its doing; in its theology, its ethics and its practice, must not stop with ourselves. In its commands and prohibitions; in its hope and its fear; in its justice and its compassion, it must include every creature that God has made.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.50 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In his journey about the nation President Taft last week visited Jackson, Miss., named for a president. Governor Noel, in his kindly, generous words of greeting, said: "Today for the first time in its history Mississippi rejoices in the delightful opportunity of welcoming at its state capital as its guest the man whom our country as a whole honored by choosing as the head of our Federal Government, the greatest honor within the gift of any free people. As to the great essentials of good government, good people nearly all agree in demanding of those who seek the highest stations, unblemished honesty, skilled intelligence, and proved patriotism. The questions of political disagreement are points of less vital importance. Those of us who were against you, Mr. President, in last year's political conflict, enjoy the satisfaction of knowing we were defeated by the best and greatest man that could be found in the ranks of our political opponents; and our failure and your success proves that you and your policies most clearly reflected prevailing public sentiment, and that you are clearly entitled to our loyal support in your discharge of the great powers with which you are invested; and we are entitled to and I am sure will receive all the benefits that flow from a just administration of the executive department of the Federal Government."

Dr. James D. Angell, president emeritus of the University of Michigan, has received the following letter from K. Matsui, *chargé d'affaires* of the Japanese embassy at Washington: "I have the honor to inform you that his Majesty the Emperor of Japan has graciously been pleased to confer upon you the first class of the Imperial Order of the Sacred Treasure, in token of his high esteem for you as one of the foremost educators of the age and also his recognition of the distinguished services rendered by you during the period of no less than forty years as president of the University of Michigan, especially in the education of a number of our countrymen who have proved themselves extremely useful to Japan."

Boston has just had a successful and exciting ten-day campaign in raising a half million dollars for a new Y. M. C. A. building. Other campaigns are now being carried on in the neighboring cities of Quincy, Newton, Chelsea, Cambridge, Beverly, Lowell, and Lawrence, to raise sums varying from $25,000 to $150,000 and reaching in the aggregate another half million dollars.

By a majority of over seven thousand the voters of Pittsburg decided in favor of a bond issue of $6,775,000 for improvements to the city. Six hundred thousand dollars of the money thus raised will be used in cutting down "The Hump," a hillock in the heart of Pittsburg. Among other items is the expenditure of $3,000,000 for improving the water system, $500,000 for new playgrounds, $200,000 for popularizing the parks by placing ball grounds, lawn tennis courts, etc., in them, and $250,000 for a hospital.

Commander Robert E. Peary has been voted a gold medal by the National Geographic Society for having reached the north pole, this claim having been unanimously conceded after a careful investigation of his records. Whether or not any explorer reached the north pole prior to April 6, 1909, is a question which the society referred to a sub-committee of experts with authority to send for papers or make such journeys as may be necessary to inspect original records.

Wireless communication direct overland between the Gulf of Mexico and the Great Lakes of the North was established last week, when a message was flashed from the Port Arthur wireless station carrying the compliments of the *Houston Post* to the *Record-Herald* in Chicago. At San Francisco, the same week, a record wireless message was received from the steamer Korea on the Pacific ocean, 4,305 miles distant.

More than a half million dollars contributed by the state banks of Oklahoma, under the deposit guaranty law, has been used in paying depositors of the insolvent Columbia Bank and Trust Company of Oklahoma City. There remains more than $400,000 in deposits to be paid, with only $1,123 in cash on hand to pay them, though sufficient assets apparently are available to cover the remaining deposits.

After the trial of an accounting department at the Boston Navy Yard, Secretary Meyer of the navy has decided to establish a uniform central pay accounting system at all navy yards in the country. One of the important features of this plan is the separation of accounting from manufacture, thus according with the best practice in commercial life.

At a meeting of the Panama-California Exposition directors at San Diego it was decided to raise one million dollars as the nucleus of the fund that will be required for holding the exposition to celebrate the opening of the canal in 1915.

Over forty thousand dollars was collected recently in Chicago on a "tag day," to be divided among sixteen charities.

Boston's splendid new museum of Fine Arts will be opened to the public on Monday, Nov. 15.

International.

A contract has just been given by the Brazilian government to a French telegraph company to erect a wireless telegraph station on a small island two hundred miles off the coast of Rio Grande do Norte, the easternmost point of South America. The island is four hundred miles from Pernambuco. The station will have an operating radius of one thousand miles. It will be connected by an auxiliary station of Pernambuco with the Brazilian telegraph system.

Henry Farman, the English aviator, last week made a flight for the Michelin cup, beating all aeroplane records for duration and distance. He covered a little over 144 miles in 4 hours 6 minutes and 25 seconds. The previous best record was made by Farman at Bethany Aviation Field, Rheims, in August last, when he won the Grand Prix de la Champagne, traveling 111.78 miles in 3 hours 4 minutes 56 2-5 seconds.

J. Alden Loring, a naturalist, and Maj Edgar A. Mearns have returned from their expedition to Mount Kenia, East Africa. They ascended the mountain to an estimated height of 16,500 feet. This was within seven hundred feet of the summit. They collected specimens of more than two thousand birds and mammals and made many photographs of the mountain.

The Japanese-Korean residency has been withdrawn from Chien-tao in fulfilment of the agreement reached between Japan and China on Sept. 4 last and which recognized Chien-tao as Chinese territory from which the Japanese military forces, then held there for the protection of Japanese and Korean interests, should be withdrawn.

Work on the last section of the Jungfrau railway has progressed so well during the recent summer that it will probably be opened next year from Eismeer to Jungfrau Joch. A station at the former place has been hewn out of the solid rock, at an altitude of about 10,350 feet, capable of accommodating two hundred persons.

Beginning Nov. 1, the French government is applying maximum rates on American importations covered by the tariff agreement between the two governments which expired the last day of October.

A bill is pending in the Argentine Legislature to authorize the construction in Buenos Ayres of underground electric railways operating in connection with existing surface lines.

Industrial and Commercial.

President Gomez of Cuba has signed a decree providing for the registration and periodical inspection of all banks and other corporations. Men prominent in commercial life and bankers say that if the decree is permitted to become operative it will have a very bad effect on all classes of business, especially foreign corporations doing business in Cuba, whose methods of accounting render impossible compliance with the terms of the decree. It will also tend, they say, to discourage investments of foreign capital in Cuban enterprises.

The arrival in the Thames of a cargo of chilled beef from Australia, said to be in tip-top condition, is heralded as foreshadowing the relief of the British meat market "from the danger of being throttled by the American beef trust." Previous attempts to bring chilled beef from Australia have failed, the time of transportation being so great that the meat invariably was condemned upon its receipt. The frozen variety from that source brings scarcely half the price paid for American chilled beef.

A company capitalized at half a million dollars has been organized at Birmingham, Ala., to build a model city on property between Ensley and Wylam. It will be planned after the order of the United States Steel Corporation plant at Gary, Ind. The property adjoins that recently added to the holdings of the Tennessee Coal, Iron, and Railroad Company, which contemplates extensive industrial additions.

The Standard Oil Company has compromised its controversy with the state of Oklahoma by organizing the Oklahoma Pipe Line Company to build an eight-inch pipe line to carry oil to the Standard refinery at Baton Rouge, La. The company will be exclusively a common carrier and will not buy oil or own property of any kind in Oklahoma, save for the purpose of operating its pipe line.

The great irrigation dam across the Nazas river in Mexico will cost eleven million dollars and will form one of the largest water storage reservoirs in the world. The whole valley of the Nazas river will be irrigated from this reservoir.

Lieutenant Tibaldos, the naval officer who led the recent revolt against the Grecian government, and a companion, Lieutenant Dimoulis, have been captured. All the principals in the mutiny are now in custody.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE GULF BETWEEN PERSONALITY AND PRINCIPLE.

New York City, Nov. 5, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I have never before felt so grateful to you for pointing out the great gulf that is fixed between personality and Principle. Recent experiences have shown me clearly how imperative it is to choose which of these two we will serve.

In an article from your pen in the *Sentinel* of July 7, 1906, on "Personal Contagion," you say: "There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality." The wisdom you have shown in protecting the Cause of Christian Science from this "mental malady" is a perpetual marvel to me.

In the same article you ask: "'What went ye out for to see?' A person, or a Principle? Whichever it be, determines the right or the wrong of this following." Looking back over the ages in the light of your teachings, it is apparent that the "temptation produced by animal magnetism" has always tended to deify some one's personality.

In the last paragraph of the article you say: "Only the disobedient spread personal contagion, and any imaginary benefit they receive is the effect of self-mesmerism wherein the remedy is worse than the disease." Although I have been a student of Christian Science for nearly seventeen years, I have never before comprehended the paramount significance of your teachings on this subject.

With a heart full of love and gratitude, I remain

Sincerely yours,

RICHARD P. VERRALL.

TRUE REPENTANCE.

CLARENCE W. CHADWICK.

THE word repentance is a very common one in the Christian's vocabulary. It is hoary with time. Both prophet and apostle were familiar with it. The modern preacher and exhorter continues to use the word with all the emphasis that it is possible to give it. But who has grasped its full meaning? To some, repentance may mean simply sorrow for wrong-doing, the admission or confession of guilt, followed by an effort to do better in the future; but is this its full significance? A careful study of the Scriptures brings out a far more comprehensive meaning.

The apostle Paul struck the key-note when he said that "the goodness of God leadeth thee to repentance." Unless one loves the good more than he does the evil, he is not in a repentant condition of thought. Through fear of punishment he may acknowledge his wrong-doing, but unless the love of God is uppermost in his affections, he will not forsake his sins. He may try to do so, but he will repeatedly find the scales tipping in the wrong direction, until he gains an affection for the good which is so genuine that he cannot be tempted to let go of it. If his sorrow for the wrong done is of the godly sort spoken of in Scripture, it "worketh repentance to salvation not to be repented of: but the sorrow of the world worketh death." The sorrow that knows no relapse or recurrence is accompanied by humility, honesty, and sincerity; it is something more than lip-service; it is a godly desire and determination to become obedient to the law of righteousness.

Webster gives this as the theological concept of repent: "To be sorry for sin as morally evil, to turn from it, and to seek forgiveness." The turning away from sin is the important step. It is evident that this cannot be done successfully without some adequate idea of what sin is. One may discountenance certain evils and still remain the unconscious servant of others. This is not true repentance, although it may be a step in the right direction. The admonition of the Scripture is that the truly penitent bring forth fruits to prove their sincerity and honesty. If the lips confess guilt and express sorrow therefor, while the heart still clings to the sin, the fruits of righteousness will not be in evidence. The turning from sin means nothing short of reformation in thought as well as in course of conduct. Neither is complete without the other. The prophet's counsel to "amend your ways and your doings" strongly suggests the thought of reformation in thought and deed. The psalmist expresses the true thought of repentance in these words: "Depart from evil, and do good; seek peace, and pursue it."

Evil cannot be put off so long as it is believed in as having power or reality. The student of Christian Science is daily striving to think and to live above the idolatrous belief that evil has actual power, presence, or reality. By so doing, he becomes the conscious servant of the one God, becomes obedient to His laws, which annul the so-called laws of matter. When sickness overcomes him, he recognizes it as a false mental argument devoid of law or reality, and this brings surcease from suffering. When tempted to sin, he strives to know that there is nothing within the consciousness of God's man which can be induced to believe that there is pleasure or satisfaction in doing wrong; that "whosoever is born of God doth not commit sin;" and if he stands firm for man's spiritual at-one-ment with God, good, the temptation is overcome. In this way he is proving his genuine repentance and fidelity to God. He is seeking spiritual peace and pursuing it; he is amending his ways and his doings. Every sin that he turns from, with no lingering desire to indulge it, is thereby forgiven, for it is destroyed. If tomorrow finds one repeating the offense of today, thinking that lip-service will bring remission or absolution from sin, he has not truly repented.

The ebbing and flowing of human thought does not indicate a repentant or forgiven state of consciousness. Repentance is manifest in steadfast devotion to the truth, not in spasmodic attempts to escape the penalty for repeated wrong-doing. It is the "patient continuance in well doing" spoken of by the apostle. To the Christian Scientist it means a radical change of thought from a material

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

to a spiritual basis, and the exercise of this thought in daily living. It means to stand guard at the door of consciousness and to bring into captivity every wrong thought. It means to surrender all belief in the supposed reality of matter and its assumed laws and to acknowledge the infinitude of Spirit or Mind. It means implicit reliance upon divine power at all times, yielding no obedience to the arguments of the so-called physical senses. Genuine repentance will be made manifest in obedience to the Ten Commandments in thought as well as deed, and Christian Science maintains that such obedience is impossible so long as one believes in the reality of both Mind and matter, good and evil. Good must be accepted as supreme and omnipotent before true repentance ensues. No one is truly repentant until he has touched the hem of Christ's garment and can acknowledge physical and moral healing. Then he is mentally equipped to watch his thinking and to obey one master, Mind and not matter.

The prophet Jeremiah makes the discernment of the fatherhood of God one of the requisites of true repentance: "Thou shalt call me, My father; and shalt not turn away from me." And Ezekiel goes so far as to require the renunciation of the belief in death as a necessary element of penitence: "Repent, and turn yourselves from all your transgressions; so iniquity shall not be your ruin . . . and make you a new heart and a new spirit: for why will ye die, O house of Israel? For I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye." The necessary preparation of the heart "to meet thy God" here and now certainly demands a most radical departure from the world's standards of thinking and living. Christian Science differentiates between true repentance and the human belief in repentance, which is "ever learning, and never able to come to the knowledge of the truth."

John the Baptist emphasized the thought of practical repentance, but it is evident that he did not fully comprehend the metaphysical signification of the word or he would have been enabled to heal the sick. As it was, neither he nor his disciples had the understanding necessary to heal. John admitted that his baptism was only to the point of repentance, so to speak, and that the baptism of Spirit was necessary to bring about real repentance. This is further evidenced by the fact that Jesus, when he entered upon his public ministry, found it necessary to repeat John's very words, "Repent: for the kingdom of heaven is at hand." John believed in, but did not fully understand Truth. He could carry his disciples no farther than he himself discerned. Jesus, through his understanding of divine Truth, could impart the spiritual illumination that enabled his disciples to heal by the power of Spirit. They in turn preached repentance, and then healed the sick to prove that they understood the full meaning of the word. All Christian believers are commanded to go and do likewise.

"FOR OUR SAKES."

ANNIE M. PAYNE.

FILLED with the Holy Ghost; conscious through meekness and obedience of his nearness to the Father; hearing with joy his great kinsman's humble acknowledgment of his unspoken claim; and crowned during the initial step of his career by a heavenly voice which characterized him as indeed the Son of God,—there came to Jesus after his baptism that human sense of reaction which shadows the footsteps of the reformer and which has hurled many from the heights of assurance to the depths of doubt. Driven by mortal strain into the wilderness, Jesus tasted in full measure its "loneliness; doubt; and darkness" (Science and Health, p. 597); yet, like the knight in Briton Rivière's fine picture, he could say, "Into thy hands, O God!" even as the pitchy darkness of the unknown path closed around him.

Was he the Son of God? Why, then, was he here in the wilderness, alone and hungry? Even the rebellious children of Israel had their manna, but before him lay nothing but stones. What then! If he were indeed the child of omnipotence, he could surely command that those stones be turned into bread! So argued the tempter, ready as he always is to suggest the mingling of evil with good, to cause disheartenment by suggesting the material, or by demanding a higher demonstration than one is ready for.

But Jesus was equal to the wiles of his subtle foe. He realized that materiality could not disappear so long as a sense of despondency, or absence of God, obtained in consciousness, and he replied significantly: "It is written, that man shall not live by bread alone, but by every word of God." The phrase, "every word of God," reminds us of many passages in our Leader's writings, among them these: "The human footsteps leading to perfection are indispensable. . . . When we wait patiently on God and seek Truth righteously, He directs our path" (Science and Health, p. 254). The hour would come when through the bounty of perfect understanding and trust the thronging multitudes would find five loaves sufficient to meet their need. The hour would come when to a crucified body a great stone at the grave's mouth could offer no resistance. But the time of such fruitage was not yet.

O the silences of the Bible! Did the "man of sorrows" return hungry and unkempt to Mary, and humbly bear with her gentle reproof the while the hastened meal was set before him? Or did some good Samaritan offer the poor Nazarene a share of his journey's provision? Or, the temptations not being over, was hunger again forgotten in their intenser strain? It matters not; we have ample proof in a later Scripture, namely, when the fathers were asked whether they would offer a child a stone in lieu of bread, that Jesus' recollection of the wilderness included Love's ample provision.

The writer prefers the order of the temptations in Luke to that given by Matthew. Luke finishes with the lonely mountain retreats before bringing Jesus back to the city. He also deals first with the mission in general and the danger of regarding this from the mountain-top of personal ascendency, before turning to the specific and hazardous work of cleansing the temple. Again, it seems that when the appeal to his sonship failed to move Jesus, the tempter tried next the motive of human power, and this effort also proving abortive, he came back again to the sonship, seeking to overwhelm the sufferer by another and stronger appeal to this in its connection with the exigencies of the national religion.

The severity of the retort to the second temptation imports that it was the most hateful (yet perhaps the most insidious) to the pure sense it strove to wreck. For one moment the young reformer saw the world at his feet, not paying vulgar homage as to a Cæsar, but welcoming him as the bringer of peace to men and praise to God. Just a little reliance on popular good will, a little use of personal influence, a little silence where truth was unpalatable—then he might quickly take his place as that great ruler for whom all the world was looking, the king who should govern the nations in righteousness.

Beloved fellow-laborers in the Cause of Christian Science, let us ponder well this temptation, and its contrast to the road really taken by Jesus—the road that led by way of the cross to the resurrection and ascension. Our Leader well understood the contrast of the two paths when she wrote: "Exercise more faith in God and His spiritual means and methods, than in man and his material ways and means, of establishing the Cause of Christian Science. If right yourself, God will confirm His inheritance" (Mis-

Digitized by Google

cellaneous Writings, p. 152). Jesus was destined to reach many a mountain-top of holy teaching and transfigured thought, but never again, surely, for one instant did he glance at his life's work from the heights of personal ascendency.

Having vanquished, in one form at least, the temptation of the disobedient neophytes who "rush in where angels fear to tread," having further defied worldly methods to attract him with their plausibility, "the Anointed" (on some festal occasion, it may be) turns his steps toward Jerusalem. Mary is doubtless at his side, and together they share many a holy thought concerning the beautiful city, its past greatness and foretold glory. But already the trend of the son's thought has diverged from the mother, and she is becoming a little tremulous at his strange deliverances. Surely this her son, born to her after such marvelous fashion, must be the great "Prince of Peace" for whom the nation has prayed so long, and yet—and yet—

Meanwhile the thoughts of Jesus have passed quickly from national joy and desire to a sense of burning indignation at the worldliness of the priests and the rulers of the people. At night perchance, while Mary sleeps, the contrast between what he has witnessed in his "Father's house" and the purity of his own holy ideal, makes thought an agony. The hour will come when again approaching the favored city he will shed tears over his failure to win it to righteousness; but tonight action allures him, and the tempter in his usual anticipatory style would have him hurl himself from the very highest point of the nation's hope into the battle with egotism and hypocrisy: You know yourself the Son of God, and yet dare not make it known, dare not begin at once to point out to the priests and scribes their wickedness. Rely upon God's protection and cast yourself down without fear.

Ah, wise serpent; but not so wise as thy God-governed conqueror. Yes indeed he is the very Son of God, and therefore will do nothing except at the Father's call. Quietly this time does Jesus dismiss the tempter, knowing that the step suggested will verily be taken in due course, though not until Love demands it. And so the tempter vanished, at least "for a season," and the angels of hope, faith, patience, constancy of purpose, with many another winged expression of God, came and ministered unto him, sustaining and encouraging him by their wondrous power, so that he felt no longer the gravitation of earth's hard doubts, but instead the infinite attraction of Spirit.

THE BEST WAY.

WALTER M. DIXON.

ABOVE all the many contradictory opinions about physical, mental, moral, social, civil, political, religious, national, and international reform movements, there must be a best way; and it must be best for mankind to walk in this best way, which must necessarily transcend all other ways because it is based on truth, and all other ways must lack in some degree the faultlessness of truth. It has been called the straight and narrow way for the very reason that it is based on the straight and narrow line of truth. It is straight because it leads direct to God. It is narrow to mortal sense because it admits of no error in premise or conclusion; but to spiritual sense it is as broad as the universe, for truth is all there is, all there ever can be.

This best way has been the world's quest throughout the past ages, and yet to mortal sense there was never more unrest, uncertainty, dissatisfaction, and distress in every walk of life than there is today, and why? Why has mankind failed to attain to its high ideals? Because their quest has been carried out on the line of worldly wisdom—the traditions of the elders have led them astray like sheep. We have occasion to be thankful, however, that in our day there has been found one, pure, humble, and true enough to perceive this best way, unselfish and courageous enough to give it to the world. This way is open to all who will approach it with purity of motive, with honesty and humility, and to them its every step can be demonstrated. But how, it may be asked, is one to know that Christian Science is the best and only way? In reply it may be said that Christian Science does not ask the inquirer to place any impossible faith in its teachings, but only to make reasonable investigation into the subject, as he would in regard to any other that he was anxious to learn about. Christian Scientists know that if this is done with honesty and humility and without prejudice, all will find in Christian Science the pearl of great price.

The writer met a gentleman the other day who said he had read the books on Christian Science, but he was sorry to find he could not accept all its teachings. I said, "Do you accept all that mathematics claims to be able to do?" "Yes." "Why?" "Because I can work out some of its minor problems and am thereby encouraged to believe that all its claims are true." "That is quite all that Christian Science asks of you," was my reply. People say they cannot accept all that Christian Science teaches for the reason that they open their eyes to spiritual facts for a moment and say, "I believe what Christian Science says about God, that He is all-mighty, all-presence, all-science, in a word, infinite being;" then they close their eyes to spiritual facts and open them to matter, thereby letting in material sense, which impels them to say, "We cannot believe that there is no matter;" but Christian Science tells them they will never see that matter is non-existent while they keep their gaze fixed upon that which is temporal. People believe that the planets are spherical, that they rotate on their axes and revolve around the sun, because there is nothing in this beyond their reasoning power, but when they are told that the diameter of the sun, which is ninety-two million miles away, can be measured, they may say they cannot accept the statement, and the reason for incredulity lies in the fact that they have not sufficiently investigated the science of astronomy. The text-books on physical science tell us that there is no such thing as color or sound as we understand these words; that if a cannon could be fired in the center of a desert out of the range of hearing it would go off in perfect silence, and yet the mortal sense of hearing seems very convincing and we are led to believe in it.

These instances of the unreliability of physical sense are cited to show how wonderful it is that Mrs. Eddy should have uttered such momentous statements of truth forty years ago, and that since then step by step the errors of belief which she pointed out have been uncovered to all the world. Physical science does not know what to do with these fallacies, while Christian Science does. It teaches how this false sense can gradually be replaced by the true, by spiritual sense. This is the best and only way—the way that leadeth out of sense to Soul, out of disease to health, out of sorrow to joy, out of pain to true pleasure, out of matter to Spirit, out of death to Life.

OVERCOMING EVIL.

FRANK B. HOMANS.

AN item which is going the round of the papers says that a western farmer has discovered that artichokes will crowd out Canadian thistles, and that now some other farmer must find something to crowd out the artichokes! This suggests the line of action which very many are pursuing today. They are relying upon one evil to destroy another, without giving due consideration to either first cause or ultimate result. It was supposed that the English sparrow, when it was introduced into this country, would

Digitized by Google

destroy the grubworm; now the cry is, What shall we do with the sparrow? A levee built to prevent a river from overflowing its banks simply tends to raise the river-bed, and more embankment is needed until this attempt to check the evil is proven to be only a temporary relief. Thus it is ever, until we learn that we must strike at the root of error and destroy it, rather than temporize with experimental means that may become a greater evil.

This lesson is applicable to the business world as well as to the physical. Many are they whose lives have been made hard because they were led to borrow money to pay their obligations. With no apparent means of repaying the loan, they continued to pay large interest until finally principal and interest became a nightmare and they were driven to do something desperate. The result is as it always must be if we put off the day of reckoning, instead of boldly facing it. The child who is continually fed on candy to keep it from crying, or soothing-syrups to lull it into quiet, is very liable to become the man who keeps himself well supplied with tobacco and liquor, regardless of the fact that his wife may not have proper clothing; or the woman who dresses far beyond her husband's income, with no thought as to how the bills are to be paid.

Error seems to adapt itself to its surroundings, and from its present position it is surely symbolized by the "great red dragon" spoken of by St. John in Revelation. While the modern name of this dragon is mesmerism or hypnotism, it has so many *aliases* that its true identity is sometimes hidden, and under these conditions it is frequently employed where if it were clearly recognized it would be rejected.

Christian Science emphasizes the clear distinction between human suggestion and divine guidance. It teaches that it is God "who healeth all thy diseases," and that to recognize any other power is to break the First Commandment. In Science and Health Mrs. Eddy has made clear the way for us to practise this Christ-healing. After having fully tested its applicability to present human needs, she taught the method of its application to others, and thousands of her followers have proved her statements true. The work is done in the same manner which Jesus taught; hence there is no occasion for us to try other methods.

The attempted removal of one ill by that which proves a more serious ill is seen today when a trusted physician prescribes, as a remedy for the malady, some stimulant or opiate. Very frequently the person's first desire for these drugs is the result of a doctor's prescription, and the cruel appetite grows until the patient becomes a pitiful slave to a debasing habit. He has been relieved, perchance, of his first complaint, but how fearful the price he pays for this relief.

Is there no adequate remedy for both "thistle" and "artichoke"? Yes, Christian Science goes to the bottom of all evil, not simply to relieve but to destroy the evil by annihilating all belief of pleasure in it, all fear of disease and death. This is accomplished not on a material basis or by material means, but on a spiritual basis and by spiritual means. Such is the only sure and safe method of treating disease.

Beyond the clouds
Shine the sweet stars:
Forever shining clear and still,
A symbol of the Love that doth fulfil,
In all and always, His most perfect will.
Though blind with tears, I know right well
The stars shine there,—
And in the blackest night they seem
An answer to my prayer.

LAURA B. DOORLY.

AMONG THE CHURCHES.

OMAHA NEB.

On the sixth day of October, 1909, First Church of Christ, Scientist, of Omaha, Neb., laid the corner-stone of its new church edifice now being constructed at 24th street and St. Mary's avenue. The ceremony was in conformity with the Manual of The Mother Church, the only persons present being the elective officers of the church and the resident charter members. The church, when completed, will have a seating capacity of twelve hundred.

Correspondence.

KANSAS CITY, KAN.

First Church of Christ, Scientist, of Kansas City, will erect a twenty-five thousand dollar edifice at the northwest corner of Eleventh street and Washington boulevard. The lot has a frontage of one hundred and sixty feet on the boulevard, and was purchased for three thousand dollars. Work on the building will begin as soon as the plans are drawn. This will be the first Christian Science church in Kansas City, Kan.—*Kansas City Star.*

NEW BEDFORD, MASS.

Christian Scientists of this city are much gratified over the fact that arrangements have been completed for the purchase by First Church of Christ, Scientist, of the lot at the southeast corner of County and Mill streets, known as the rink lot, and residents of the neighborhood are equally pleased that a handsome church edifice will eventually be erected on what has for some time been an unsightly and unimproved corner. A binder was paid by the society yesterday afternoon [Oct. 22], and within thirty days the deeds of transfer will pass. The price to be paid is six thousand dollars, which is a maximum price for real estate in the residential district. The society probably will not begin building for a year. The church will be planned to seat about five hundred persons.—*New Bedford Times.*

BROOKLYN, N. Y.

Inaugural services in part of the new edifice of First Church of Christ, Scientist, of Brooklyn, at New York avenue and Dean street, were held yesterday [Oct. 17], and two thousand persons attended the three services held during the course of the day. Not until the entire church edifice is completed will formal dedicatory services be held. The present portion of the structure, while complete in itself, will be utilized as a Sunday School room when the major portion is put up, two or three years hence; but even as it stands at present the church is an attractive and imposing structure. When completed the building, which stands on a plot one hundred and fifty feet square, will have cost, together with the site, over two hundred and twenty-five thousand dollars. The building was started in the fall of last year, but the foundations were not laid until April.

First Church of Christ, Scientist, of Brooklyn is made up of what were originally First and Second churches in this borough. Both these churches outgrew their accommodations, and in 1905 they merged, the congregations forming the present First Church in Brooklyn.

Brooklyn Citizen.

CORRECTION.

The reference to Second Church of Christ, Scientist, Cleveland, O., in our issue of Oct. 30, should have stated that the reading-room of the church (not the church itself) had been provided with more commodious quarters.

[From *The Christian Science Monitor.*]

MRS. EDDY MAKES FURTHER GIFTS TO HER SON AND HIS FAMILY. HER ADOPTED SON ALSO PROVIDED FOR.

A family settlement between Mrs. Mary Baker Eddy and George W. Glover (a son) and Ebenezer J. Foster Eddy (an adopted son), has been concluded and the deeds evidencing the terms of said settlement have been duly executed and delivered. Under these settlement arrangements and the trust heretofore established by Mrs. Eddy, George W. Glover and his family receive the sum of $245,000, and Ebenezer J. Foster Eddy the sum of $45,000.

On Feb. 25, 1907, Mrs. Eddy conveyed to Frank S. Streeter, Archibald McLellan, and Irving C. Tomlinson, $125,000 in trust for her son George and his family, which these trustees now hold. To that trust fund of $125,000 is now added $50,000 of the present payment to George W. Glover, making the total amount held by said trustees the sum of $175,000, which, added to the balance of the moneys now paid, make $245,000 either paid to Glover or set apart in trust for the benefit of himself and his family.

The two sons, in consideration of these moneys, have executed deeds relinquishing all their present and prospective rights or expectant interests in their mother's estate, either as heirs-at-law or as legatees under any will now or heretofore made by Mrs. Eddy; and the sons respectively covenant that neither they nor any one claiming under them will contest or retard the probate of any will which their mother may leave, or attempt to set aside any gifts, deed, or other disposition of property which she has heretofore made, or make any further claim at any time to any portion of her property or estate. They also severally acknowledge that full particulars regarding her estate have been exhibited to them. The details of this settlement have been under consideration since last September.

William E. Chandler, John W. Kelly, and Martin and Howe were counsel on behalf of the sons, and Henry M. Baker with Frank S. Streeter represented Mrs. Eddy. The settlement deeds were submitted to Samuel J. Elder and were approved by him.

[Alfred Farlow in *New York* (N.Y.) *Tribune.*]

The conjoined propositions of the Christian Science textbook, that God is Spirit and that Spirit is the only Life, substance, and intelligence, are not to be found anywhere in literature outside the Scriptures and in those writings which are founded upon Mrs. Eddy's premises. Thus it may be noted that Mrs. Eddy's teachings are based wholly upon the Bible, and that they do not include any of the magnetic or philosophical beliefs which were in vogue previous to her time.

It is not correct to say that Christian Science is a mere therapeutic system, unless we be permitted to use the word therapeutics in the broad sense, as applied in the overcoming of sin as well as sickness. As mortals we stand in a more or less imperfect state, and in recognition of this condition the Scriptures admonish: "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure." This working out means an overcoming of all that is unlike God in the individual. It means a growth into the full stature of manhood in Christ, Truth. The psalmist said: "I shall be satisfied, when I awake, with thy likeness." Thus he expressed the proposition that we shall be satisfied when we become entirely Godlike, and that this state is to be reached by an awakening. This corroborates the teaching of Christian Science that man in his real individuality is the image and likeness of God, and that we need only to awaken to a full consciousness of this fact in order to attain to that state of perfect harmony which is named heaven.

It is apparent that there is something to know and to practise in order to be Godlike or to be God's likeness. Such knowledge is justly entitled to the name Science, hence the propriety of the name Christian Science. Christian Science may be effectually applied to every righteous act of the individual, since it gives to him added understanding of right and additional moral strength to do the right. Whatever of prosperity may accrue to the individual as a demonstration of Christian Science is in keeping with the Scriptural promise: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is a perversion of Christian Science to assume that every individual can be made rich as the result of Christian Science treatment, or that a lack of riches can be taken as evidence of a lack of Christian Science practice.

Mortals have sought health, peace, and prosperity through various means and methods, with varying success. History justifies the conclusion that Christ Jesus understood the perfect way of bringing out such results, since his experience was fraught with perfect triumphs over sin, sickness, and death. There is no record that he failed in a single instance, which proves not only that his way was perfect, but that his understanding and ability to demonstrate it were also perfect. We may therefore safely look to him as the great Exemplar, and accept undoubtingly his declaration: "I am the way, the truth, and the life." His marvelous success proved what mortals can do by implicit reliance upon Spirit, the infinite good. Christian Science reveals the spiritual import of the Master's teaching and practice, and thus enables mortals to follow in his footsteps —do as he did, and accomplish what he accomplished. Jesus said, "He that believeth in me, the works that I do shall he do also." This declaration might have read: He who understands what I understand, and deports himself accordingly, will find his efforts followed by the same results which have crowned my efforts.

Christian Science will remain a living religion so long as there is a demand for the pure and the good, and so long as there are men and women who are willing to live up to its exalted spiritual demands.

[John L. Rendall in *Mitchell County Press*, Osage, Ia.]

In their efforts to benefit humanity Christian Scientists are impelled by very much the same motives that actuate their brethren of other religious denominations. It is true that Christian Science in its religious presentations differs on many points from those religious beliefs which are called "orthodox." It must also be recognized that each distinct religious teaching which has made its appearance during the history of Christianity was characterized by differences which its adherents considered fundamental. Every discovery of recent times which has aided in the progress of humanity is different from that which has heretofore been known and accepted. This difference does not, however, detract from its usefulness but in most instances constitutes the value of the discovery.

That which appears to the ordinary thinker as the greatest difference between Christian Science and other religious teachings is the fact that Christian Science teaches that healing the sick is as much a fundamental part of Christianity as is reforming the sinner. This position has occasioned most of the criticism directed against this movement, and yet if the Bible teaches anything of a positive nature it is that the "word of God" heals the sick, uplifts the fallen, reforms the sinner, and establishes perfect and harmonious conditions in every particular. Christian Science is, as its title indicates, the Science of Christianity. It is scientific because it is a demonstrable teaching of Principle, because it is an "orderly arrangement of ascertained

Digitized by Google

facts" concerning God, man, and the universe, and because it adequately explains the relationship between God and man. The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has thrown that light upon the Scriptures which enables its students to demonstrate scientifically that "understanding is a wellspring of life unto him that hath it."

Our ministerial friend contends that there is a large field for Christian Science without taking up the healing work, but why the limitation? A careful study of Jesus' teachings and example proves conclusively that he healed the sick and reformed the sinner, and said of his followers, "These signs shall follow them that believe;" also, "And greater works than these shall he do; because I go unto my Father." He understood that divine Mind changes not, and that all the potency there is, is in and of divine Mind, or "God with us." It is the activity of this Mind that heals the sick and reforms the sinner in Christian Science, and in proportion as mankind relinquishes its limited finite sense of mind and accepts the divine Mind as "All-in-all," will the full fruition of Christ's mission be made manifest.

[Frederick Dixon in *Daily Graphic*, London, Eng.]

Healing in Christian Science is the attempt to demonstrate in the world today the practical effects of grasping the meaning of that great saying of Christ Jesus, "Ye shall know the truth, and the truth shall make you free." The more a man knows of Truth, the more he necessarily knows of God, and the less real, of equal necessity, does evil become to him. Healing, consequently, to be worthy of the name, must destroy in the human consciousness the mental germs which produce sin, disease, and death, and which were catalogued by Paul as the works of the flesh, and it must do this by substituting for them the fruits of the Spirit.

This is why Jesus demanded of the scribes, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" and this is why Mrs. Eddy has written, on page 366 of Science and Health: "In order to cure his patient, the metaphysician must first cast moral evils out of himself and thus attain the spiritual freedom which will enable him to cast physical evils out of his patient." Christian Science healing, in short, is not effected by a mental effort directed at a particular moment to suggest thoughts of health to another human mind; it is accomplished through days and weeks and years of a struggle to know God so completely as to realize the absolute nothingness of sorrow and sickness and sin, when the sufferers from these ask to be healed of them. "For their sakes," Jesus said, "I sanctify myself." The kingdom of God, in short, never came to any human being through hypnotic suggestion; it comes through the gradual destruction of sin, of the belief in everything that is unlike God, in the human consciousness, which brings with it "the peace of God, which passeth all understanding."

[C. A. Newman in *Sydney* (Australia) *Times*.]

If Christian Science is what its critics believe it to be, it would have succumbed ere now to the numerous attacks made upon it. It is a subject that appears to disturb many thinking people, who endeavor, with every good intention, to expose what they imagine to be the errors in Mrs. Eddy's book. Christian Science is not Mrs. Eddy's invention. It is a religion of love, and Mrs. Eddy discovered what a religion of love can do for mankind, and has given to the world the fruits of her experiences. It is undoubtedly idealistic, but none the less practical here and now; and all who grasp the spirit of her teaching, and live up to it, cannot fail to be benefited to the degree in which they do this.

What a wonderful example of love Jesus Christ gave to the world! Mrs. Eddy saw the import of that example, and advises Christian Scientists to follow her only as she follows Christ. Was our Master received by mankind? Were his words and works accepted by those he labored to help? The prophecy concerning him was fulfilled—"He is despised and rejected of men." The Bible teaches us that God is Love, and this is the Christian Scientist's God, and he communes daily with Love, in order that he may manifest more and more of that Mind "which was also in Christ Jesus." Christianity may be called the Science of loving. When the scribe came to our Master and asked him, "Which is the first commandment of all?" he answered, "The first of all the commandments is, Hear, O Israel: The Lord our God is one Lord: and thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbor as thyself. There is none other commandment greater than these."

On page 1 of the Christian Science text-book, Science and Health, Mrs. Eddy states: "The prayer that reclaims the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love."

[George A. Law in *New Haven* (Conn.) *Leader*.]

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is just what the title implies—a key to the Scriptures, or a Bible commentary. It is used as an aid to the study of the Bible. It does not take the place of the Bible any more than does any of the many other Bible commentaries, but it unfolds the spiritual import of the Word. The result of this illumination of the Scriptures is that a Christian Scientist rarely omits his daily Bible study. As Christian Science is a knowledge of God and His creation, including man, the one who is studying Christian Science realizes that a study of the Scriptures is essential to his health, happiness, and progress. The new editions of Science and Health and its revisions introduce no new Principle. The intent in the revision of this work is the same as in any other text-book, wherein the revisions simply give a fuller elucidation of the principle. On page 361 of Science and Health, Mrs. Eddy says, "I have revised Science and Health only to give a clearer and fuller expression of its original meaning. Spiritual ideas unfold as we advance."

[Jesse Pickard in *Truth Seeker*, New York.]

It should not be a cause for displeasure to any honest "truth seeker" that there is a truth which, properly understood, will and does make free—free from worry, anxiety, and fear; free from want, disease, and despair; free from lack and limitation; wholly and practically free. It should be cause for honest satisfaction to know that all which makes for destruction and death has its origin and activity in a false sense, an ignorance of the eternal laws, and that escape therefrom may be made through a corrected understanding of the truth which is God. Furthermore, it should be cause for satisfaction that a growing body of intelligent people believe that they are demonstrating the practical value of this truth, and that wholesome investigation of their works strongly indicates that their confidence is well grounded.

Christian Scientists are human. They do not claim to be errorless, and in their unceasing and conscientious endeavors to bring Christian Science to the understanding of mankind (the practical value of which labors have now a fitting testimonial in the countless thousands healed of all manner of evil); they seek only a correct presentation of the subject as stated in the work "Science and Health

Digitized by Google

with Key to the Scriptures" by Mrs. Eddy, wherein every honest investigator will find the highest Christian spirit both advocated and exemplified.

[Olcott Haskell in *Alameda* (Cal.) *Argus.*]

Our ministerial critic generously admits that Christian Science has done good in awakening those spiritually listless to a more earnest study of their Bibles, in making people more unselfish and cheerful, and in curing "a limited number of functional troubles." All this is good, but we would add that the power of God is not limited to saving His children from minor ills only, but, as was illustrated in the practice of Jesus and his disciples, that it is available for full salvation from all evil.

The Christian Scientist recognizes God to be infinite and wholly good, and the creator only of good, so that evil cannot exist as a veritable reality. From this it follows that evil, sickness, and sin are human illusions and not eternal verities; yet Christian Science also teaches that to believe in or follow an illusion is a sin in itself and will bring suffering so long as it is indulged in. Jesus defined evil as a lie, and said, "Ye shall know the truth, and the truth shall make you free." By this teaching of the truth the Christian Scientists seek to save men from poverty, vice, and sickness, and they also encourage every human effort toward righteousness. Their gifts to charities are liberal. They heartily approve every movement toward civic reform, and they conduct a daily newspaper which aims "to injure no man, but to bless all mankind," by following St. Paul's advice, "Whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

The Christian Science practitioner sometimes avails himself of a physician's diagnosis, but in every case he looks beyond the physical symptoms, scientifically searching into the mental conditions as the root of the difficulty. Cleanliness and order are the natural results of pure and orderly thinking; thus the Christian Scientist aids in establishing sanitary conditions; and his respect for the thoughts of others causes him to report contagious diseases, to observe the rules of quarantine, and to comply with such regulations as the state decides are for the public good.

[E. M. Ramsay in *Edinburgh* (Scot.) *Despatch.*]

Christian Science does not claim to work miracles; on the contrary, it teaches that no miracle ever has been performed. It maintains that our Lord's acts of healing were not miracles in the modern sense of the word, were not in contravention of the law of the universe, the law of God, but were in complete accord with this law. Before becoming Christian Scientists, many of us were earnest members of well-known churches, but the understanding we then possessed of the nature of God and God's law did not enable us to heal ourselves or any one else. Others of our number had never been able to accept the Bible teaching, or to find any help or comfort in religion. Thus people who started from the opposite poles of thought have been brought together by this scientific explanation of our Lord's words and works, and are learning how to keep themselves in health, and how to lift others out of the bondage of sin and suffering into some measure of the liberty of the sons of God.

No person who is at all well informed on current topics can pretend any longer that Christian Science does not heal. Christian Scientists have marked success in their practice, and those who come to them for help generally do so because other systems have failed to relieve them. If the drugs of which Dr. Paget speaks were as efficacious as his words imply, there would be little demand for Christian Science healing.

[Eugene R. Cox in *Lowville* (N. Y.) *Republican.*]

But why bandy words in vain disputations? The literature of the last two thousand years is replete with discussions, declarations, denials, and dicta concerning the meaning of the Scriptures, and this largely because men insist on reducing every declaration of the Bible to a material basis, and what has the sum total of it all amounted to? Has any definite good come to the human race from all the books upon these subjects?

Reducing to a practical basis for a practical age this gospel of life, Jesus said, "By their fruits ye shall know them," and he also said, "The works that I do shall he do also." These works are healing the sick, saving the sinner, and helping humanity, and Christian Scientists are willing to be judged by the fidelity with which they follow him in this gospel of "doing." That they are successful is shown by their growth, by the testimonies of thousands who have been raised from hopeless beds of pain, by those eased from the bonds of appetite, by those uplifted from thoughts and acts of sin; and in so far as they do these things, ought not all Christians to rejoice instead of revile?

[William E. Brown in *Fresno* (Cal.) *Republican.*]

Christian Science is the religion of Jesus. Mrs. Eddy does not claim to have founded a new religion, but has simply made clear to suffering humanity that the teachings, promises, and works of the Master have lost none of their vitality and are just as much of service to mankind now as they were in his time. Christian Science is founded on the teachings of Jesus, and proves that it has correctly interpreted them by healing the sick and the sinful in accordance with the promise that "these signs shall follow them that believe." This proof unquestionably establishes the Christianity of Christian Science.

One of the definitions of science given by Webster is, "Ascertained truth of facts." As the practice of Christian Science depends upon a knowledge of God and His laws, it is essentially scientific. It is the Science of all sciences because it teaches the truth about God, man, and the universe. Those who understand the teachings of Christian Science sufficiently to prove them, know that it is both Christian and scientific in the fullest sense of the words.

CORRECTION.

In the *Sentinel* of Oct. 16 we published a clipping from the *Oakland* (Cal.) *Tribune* which stated that Richard Jose, the singer, had been healed in Christian Science of a cancer of the tongue. We have since been informed that this statement was incorrect, so far as Mr. Jose's being healed of this particular malady is concerned, but that he was healed of another serious ailment, and is in consequence deeply interested in Christian Science.—EDITOR.

FOR READERS OF THE CHRISTIAN SCIENCE MONITOR.

The following recommendation is offered in a letter recently received by the editor of the *Monitor*:—

"After each subscriber reads his daily *Monitor*, why not send that copy to some individual as a specimen number? If this were done throughout the land, think how much missionary work could be accomplished. If the copies were mailed to different persons each day, much more ground would be covered. It would cost the subscriber but six cents a week to send out the *Monitor* in this manner. Possibly a recommendation to Christian Scientists through the columns of the *Sentinel* might put the wheels in motion."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

[From *The Christian Science Journal*, July, 1895.]

TO THE MEMBERS OF THE CHRISTIAN SCIENCE ASSOCIATION.

MARY BAKER EDDY.

My address before the Christian Scientist Association has been misrepresented and evidently misunderstood by some students. The gist of the whole subject was not to malpractise unwittingly. In order to be sure that one is not doing this he must avoid naming, in his mental treatment, any other individual but the patient whom he is treating, and practise only to heal. Any deviation from this direct rule is more or less dangerous. No mortal is infallible,—hence the Scripture, "Judge no man."

. . . . . .

The rule of mental practice in Christian Science is strictly to handle no other mentality but the mind of your patient, and treat this mind to be Christly. Any departure from this golden rule is inadmissible. This mental practice includes and inculcates the commandment, "Thou shalt have no other gods before me." Animal magnetism, hypnotism, etc., are disarmed by the practitioner who excludes from his own consciousness, and that of his patients, all sense of the realism of any other cause or effect save that which cometh from God. And he should teach his students to defend themselves from all evil, and to heal the sick by recognizing the supremacy and allness of good. This epitomizes what heals all manner of sickness and disease, moral or physical.

TO WHOM IT MAY CONCERN.

As there seems to be an effort to misrepresent the motives of Virgil O. Strickler, First Reader of First Church of Christ, Scientist, New York, in connection with the investigation by the Christian Science Board of Directors of the methods and practices of members of that church, it is proper to state that Mr. Strickler appeared before this Board with great reluctance, and only after he had pleaded with Mrs. Stetson to abandon the practices and teachings which he, with others of her students, saw to be entirely inconsistent with Christian Science. Mr. Strickler hoped that Mrs. Stetson could be induced to see and acknowledge what was manifestly erroneous in her teachings and practices, and to this end he begged the Board to withhold its action, until his efforts along this line had proved unavailing.

Mr. Strickler, as well as all other witnesses who testified before this Board, appeared in response to its summons, and those who frankly disclosed the proceedings in the so-called "practitioners' meetings" were actuated only by the Christian motives of duty and truthfulness.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

Boston, Nov. 9, 1909.

[Republished by request from the *Sentinel* of Sept. 19, 1903.]

UNAUTHORIZED LITERATURE.

SINCE the publication of the article, "The Integrity of Christian Science Literature," in our issue of Aug. 15, we have been given an opportunity to inspect three papers of the kind referred to. One purports to be notes taken in a class, another is said to be a copy of a letter to a student, and the third is a formula. The alleged notes are utterly repudiated by the teacher, the letter was found to be equally spurious, and the formula is, of course, in direct violation of the by-laws of The Mother Church. All three of the papers are faulty and misleading, and, if considered as attempts to elucidate Christian Science, must prove harmful to young students and inquirers who give heed to them; and yet we regret to say that inquiries which have been received since the publication of the article referred to indicate that in some instances there is a desire to cling to these papers, which are "doubtful as to authorship or clearness of statement."

We feel under the necessity of again warning our readers against this class of unauthorized and faulty literature and against the subtle and specious manner in which it is circulated, for it is usually put forth as the production of some well-known Christian Scientist, and in some instances the papers even purport to be copies of letters written by Mrs. Eddy.

That these papers are passed from hand to hand without sufficient inquiry as to whether their reputed authors stand sponsor for them, is an evidence of carelessness, but an even greater danger would seem to be that more or less change is inevitably made every time the papers are copied, and what may have been a correct presentation of Christian Science in the original is likely to become a doubtful or absolutely incorrect statement in the copy.

When it is clearly understood that Christian Science is an exact science, and that any deviation from the true line of its expression must necessarily obscure its teaching, it will be seen why these efforts to adulterate our denominational literature should be frustrated. It is of the utmost importance that no literature should be circulated as Christian Science which has not passed the scrutiny of those capable of pronouncing upon its correctness and authenticity, and it is for this reason that great care is taken to preserve the purity of the authorized publications.

ARCHIBALD MCLELLAN.

"LET HIM DENY HIMSELF."

"I AM God's perfect child, and I am trying to know it." So writes a well-meaning student of Christian Science, who follows the statement with the description of an astonishing number of ailments from which she has long suffered and which are still making her life altogether miserable. If the reader of such a statement interests himself sufficiently to substitute the suffering self thus outlined for the "I" declared to be "God's perfect child," the startling incongruity of the thought is at once revealed.

In Christian Science the eternal oneness of Principle and idea, the unfailing likeness of the thing created to the creator, of man to God, is made perfectly clear, hence for a Christian Scientist to classify a sick and suffering personality as God's child is to use terms that would degrade Deity in human judgment and precipitate mental chaos, and it is difficult to explain how any sincere student of our text-book could express himself in terms which are so contrary to its teaching, and which to the intelligent non-Scientist must prove utterly confusing. Nevertheless it is lamentably true that both in private conversation and in public testimony statements like the one quoted are not infrequently heard.

Speaking of the Christ-coming, John says, "As many as received him, to them gave he power to become the sons

Digitized by Google

of God." In other words, the realization of spiritual sonship may be gained by all who open the heart and mind to Truth, and it was in keeping with this "blest assurance" of the progressive possibility of attaining unto the divine likeness that Paul wrote to the Philippians, "Brethren, I count not myself to have apprehended: but this one thing I do, . . . I press toward the mark for the prize of the high calling of God in Christ Jesus." In this and many other passages the apostle has discriminated clearly between God's man and the "I" of human sense. Said Jesus, "If any man will come after me, let him deny himself." This self-denial is not demanded of God's child, surely, but of false material sense, of presumptuous human personality.

Christian Science repudiates the self that is centered in physicality, and calls all men to escape from the enslavement of its glamour. In Science and Health we read: "The visible universe and material man are the poor counterfeits of the invisible universe and spiritual man." "Anybody, who is able to perceive the incongruity between God's man and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam" (pp. 337, 345). In this and unnumbered other passages Mrs. Eddy rebukes the error of failing to distinguish between God's man and this man of false sense. Science makes the distinction explicit and intelligible, and if all were careful always to express themselves in keeping therewith, God and man would be honored and inquiring thought would be saved from the occasions of stumbling which careless and undiscriminating statement is ever placing in its path.

The student of Christian Science whose thought is centered on material selfhood is ever tempted to spiritual inactivity by the experience of freedom from pain, and some have been known to say under such circumstances, "I feel so well that I don't need to work any more." Their status in truth has been inferred from a physical condition, and hence the sense of need to work out their salvation has been determined by the presence or absence of pain! This thought of Christian Science as merely a means of escape from suffering differs little from the old thought of conversion as a means of escape from hell, and it is equally unwarranted and unworthy. The true ideal, the ideal of Christian Science, is the Christ-man, who is not material but spiritual. The true end is to glorify God by apprehending all that for which we are apprehended in Christ Jesus, and both ideal and end involve the forever denial of material selfhood.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

HEAR, O ISRAEL.

THE following letter from Mr. Mattox tends to comfort, reconcile, and elevate the waiting hearts of all Christian Scientists. MARY BAKER EDDY.

Boston, Mass., Nov. 3, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Leader:—I have just returned from a six-weeks trip to the Northwest and to the Pacific coast, where I attended meetings of the state committee on publication and assistants. It may interest you to hear briefly of the nature of these meetings and of some of the conditions prevailing in the field. The energy and vigor of our great western country and of the Pacific coast are proverbial, and I found that this typical western alertness was characteristic of the Christian Scientists and of their work.

The meetings were everywhere well attended, and the Scientists seemed eager to get any message that would improve the quality of their service and make them more intelligent and more effective workers in our great Cause. I was most hospitably received, and it made me especially happy to notice everywhere a hearty and generous desire to support the Directors and all of the activities at headquarters. There were many expressions of grateful appreciation of the Directors and others connected with The Mother Church. One man, who came to the meeting at Portland, Ore., traveled ninety miles over the mountains in a stage-coach before he reached the railroad line. This shows how keen the Scientists are for anything that will be a benefit to them.

What impressed me most and what pleased me most, were the evidences of the loving regard in which you are held by Christian Scientists everywhere. Your wise leadership is recognized, and the genuine love for you which is being constantly expressed, is so substantial and so potent a force for good that I feel sure it must encourage and sustain you. One gentleman, at the meeting at Los Angeles, said that he did not want the meeting to close without expressing his thanks for what he had got out of it, that the point which had impressed him most was the necessity for shielding and protecting our Leader. He said he could see, as never before, that this was one of the practical ways in which we could prove our gratitude and affection.

The subject-matter of the meetings seemed to be interesting and helpful to those who attended, and I sincerely hope, and have every reason to believe, that much good will result from this series of conferences. If the churches and societies of each state are brought into closer fellowship, if the ties are strengthened which unite in a common cause The Mother Church and the branch churches, if individual thought is aroused to more scientific and more consecrated activity, the purposes of the meetings will have been achieved. With much love,

Sincerely yours,
WILLARD S. MATTOX.

Philadelphia, Pa., Nov. 1, 1909.

Dear Mrs. Eddy:—Our rejoicing "in the midst of tribulation" is that you have taught and do teach us obedience. What a blessing that we are privileged to take a stand in this Cause, which nothing can overthrow, since "the only power of evil is to destroy itself" (Science and Health, p. 186). I, too, once longed to see you—before I knew where to look for our true Leader. Now I know that "the spiritually minded meet on the stairs which lead up to spiritual love" (Retrospection and Introspection, p. 76), and so there I see you often and am spurred on to greater efforts.

I thank you more than language can express, and am striving, by a daily study of all your works, to know more of our common Father. Lovingly,

FRIDA REMONT.

MRS. EDDY'S COMMENT.

Yours for "upstairs."

MARY BAKER EDDY.

New York, N. Y., Oct. 24, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—I have recently had cause to reflect upon the subject of leadership. If I correctly understand the term "Leader" as you sanction its application to yourself, it indicates your function with respect to the Christian Science movement, because you have demonstrated more broadly than has any one else in this age the omnipotence of God, and thus qualified yourself to teach mankind. Nothing, however, that I have discerned in your writings seems to me to indicate that you stand for more or less

Digitized by Google

than a spiritually-minded teacher, whose aim is to hasten the day when all shall know God, from the least to the greatest. This, to me, is sufficiently clear from studying Science and Health and your other writings, in which your chief aim seems to be to turn humanity away from persons or finite personality, even (and I may almost say especially) from yourself, to God as the creator of all that really exists.

Such conclusions, if correctly drawn, show that it is the duty, nay the function, of true Christian Scientists, no matter how "far advanced," to follow in your footsteps by directing thought away from self (whether himself, herself, or yourself), to God. Indeed, these conclusions imply that one can be said to be truly "far advanced" only in proportion as he achieves the height of humility Jesus revealed by his statements: "He that is least among you all, the same shall be great;" and, "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me."

I take this opportunity to acknowledge my indebtedness to you for your teachings, especially those in the text-book and "Miscellaneous Writings," in which I have lived for the past seven years.

Yours to command,

M. G. KAINS.

New York, N. Y., Nov. 5, 1909.

Beloved Leader:—This is to offer myself, my love, my life, and my loyalty, to you, as the Discoverer and Founder of Christian Science, as the Leader of all true Christian Scientists,—to offer myself as a living witness of the healing and regenerating truth that you have revealed to the world.

Yesterday I attended a meeting of First Church of Christ, Scientist, New York city, where I saw and heard Virgil O. Strickler, First Reader, and Miss Ella G. Young, Second Reader, attacked and assailed by the adherents of Mrs. Augusta E. Stetson and her teachings. I saw infuriated men rush down the aisles to the platform, and shake their fists at your loyal representative, Mr. Strickler —and then, I saw with spiritual sight, beyond the evidence of material sense, the destruction of error, and the triumph of Truth; for, above the shouts and denunciations, I heard the voice of Love, saying to my consciousness,—

> And o'er earth's troubled, angry sea
> I see Christ walk,
> And come to me, and tenderly,
> Divinely talk.

In that moment I realized that I was no part of this error, because the error was no part of God.

Your loving follower,

HAROLD SUSMAN.

Columbus, O., Nov. 1, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—At our last Wednesday evening meeting, in the hall of our society here, I listened to such a heartfelt surrender of an individual's opinions to the larger wisdom of the Church Manual that I think you would like to know of the fruitage borne by your new by-laws in a perhaps unexpected direction.

A gentleman who has been greatly benefited by Christian Science, and is a constant attendant on church services wherever he may happen to be, has for years held the thought that church organization and church by-laws were not necessary features in the progress of the Cause. He has been honest in this attitude, and has mentioned it quite freely, somewhat to the chagrin of those of his friends who naturally wished him to have all the advantages of Christian Science, and felt he could not have this without forming some church attachment and thus placing himself under the discipline and benefits conferred by the Church Manual.

Last Wednesday evening, with an apology for introducing the subject at such a time, he rose to say that recent developments, including the exercise of needed authority by the officers of The Mother Church, in Boston, had opened his eyes to the wisdom of the establishment of that church and to the wonderful foresight which had provided in that church and in its Manual a means for protecting and safeguarding Christian Science throughout the world. He said that he made this statement, at this time and in this place, in justice to those friends who were so well acquainted with his former position on the subject of church government. He saw the need for The Mother Church and its Manual as he had never seen it before, and wished to say so as publicly as possible as his contribution to the spirit of the meeting.

A look of wonder marked the faces of those who heard this gentleman and caught the drift of his remarks as he proceeded; so great was the sense of spiritual movement in the uncovering of this truth to his consciousness.

Yours in truth,

E. HOWARD GILKEY.

New York, N. Y., Nov. 6, 1909.

Dear Mrs. Eddy:—More than ever do I love and heed your pure, beautiful teachings in Christian Science, and your warning as to "mere personal attachment." I am but a small ship in the great armament of which you are the beloved Leader, not even "a student of one of your students," but I stand ready to battle for pure, unadulterated Christian Science, as taught in our text-book, "Science and Health with Key to the Scriptures," and all other writings from your pen. To them I owe all that I am or can ever hope to be.

Lovingly and loyally yours,

ANNIE B. THOMPSON.

Omaha, Neb., Oct. 27, 1909.

Beloved Leader:—We, members of First Church of Christ, Scientist, Omaha, Neb., in annual meeting assembled, do unanimously assure you of our undisturbed allegiance to your unselfish and constructive leadership. We also assure you of a feeling of gratitude, beyond expression in words, for what you have accomplished for humanity through the courageous demonstration in your personal and official life of the teachings of our immortal text-book.

We bow ourselves in reverent thankfulness to Almighty God for the opportunity given us, through your example, to realize such a degree of courage and active fidelity to Christ as will establish us as worthy, wise, and devoted demonstrators of Christian Science, to the end that we may manifest in our daily lives charity, humility, health, and a conscious dominion over all materiality.

JOHN FORBES, EMMA WHITMORE,
ANNA F. DOE, *Committee.*

London, England, Oct. 7, 1909.

Dear Leader:—I wish to express my gratitude to you for Christian Science. I did not come to it for physical healing but when I heard of it I felt it was the truth. I began to study Christian Science about two and a half years ago, and it has been my greatest joy and help ever since. I cannot in words express sufficiently my great gratitude to God, and to you, for all the joy which Christian Science has brought to me. I can only endeavor to prove my gratitude by helping the sick and sinning, and those who are in ignorance, to receive the good which divine Love has bestowed on them and which comes to all those who strive to follow in the Master's footsteps.

Sincerely and gratefully,

FRANCES C. OAKES.

THE LECTURES.

FORT WAYNE, IND.

In the presence of the largest audience that ever attended such a lecture in Fort Wayne, Judge William G. Ewing of Chicago delivered an interesting and eloquent address on the doctrines of Christian Science yesterday afternoon [Sept. 26] at the Majestic Theater. Probably a thousand people heard him. The Hon. J. B. Harper of this city presided. In introducing the speaker he said in part,—

This splendid audience is a tribute alike to the speaker and his theme. It indicates to my mind that you are interested in the subject and desire greater spiritual enlightenment. Nineteen hundred years ago, on that memorable morning in the temple when the people had gathered about him, the divine Master made this immortal statement: "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Ever since that time multitudes have followed him. Many have stumbled, because the light as they saw it was dim and uncertain; but that was not the fault of the light. As for myself, I might say that I do not know much about this subject with which the speaker will deal today, but like many of you I have drunk at its fountain and I know that it satisfies.

The declared object and purpose of Christian Science is to enable men to see this light more clearly. How it is succeeding is abundantly attested by the fact that it is constantly challenging the attention of increasing numbers of the thoughtful and truth-loving the world over.

Fort Wayne Journal-Gazette.

EXCELSIOR SPRINGS, MO.

The lecture on Christian Science which was given in the Auditorium Monday evening [Oct. 18] by Clarence C. Eaton was well attended, the Auditorium being filled with a most attentive audience. The lecturer was introduced by the Hon. E. L. Riley, city attorney, who said in part,—

Christian Scientists believe that they have come into certain understandings of certain truths. They believe that the teachings and principles of Christ are just as true, that his commands are just as imperative, and that the power of God is just as great in the present age as they were nearly twenty centuries ago. They believe that good is the only activity; that the activity of good is sustained by divine providence; that when the Master said, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life," he had in his mind the accomplishment of good; that the power of evil was a secondary consideration, or else he would not have "shed the light on mortal man, but would have let the human race remain in eternal and everlasting darkness."

Whether you believe in the doctrine of Christian Science or not, there is no disputing the fact that its many adherents exert and wield a beautiful influence over the great mass of humanity today by their constant cheerfulness and their never failing optimism. These two characteristics are bound to exert a beneficent influence over every person with whom they come in contact. One who always has a word of cheerfulness, one who always finds a kindness for every situation, one who sees the brightness of life rather than the darkness, one who, in the daily activities of a strenuous commercial existence, finds the time to live the good, the noble, the moral, the pure, the Christian life—that man, or that woman, or that child makes the world better for having lived in it, and exemplifies the highest type of American character and American citizenship.

Excelsior Springs Journal.

LECTURES TO BE DELIVERED.

Alameda, Cal.—Rev. William P. McKenzie, Unitarian Church, Grand street, near Santa Clara Avenue, 8 p.m., Nov. 14.
Everett, Wash.—Judge Septimus J. Hanna, Everett Theater, Nov. 16.
Peterborough, Ont.—Prof. Hermann S. Hering, Conservatory of Music, Nov. 18 (correction).
Kingston, Ont.—Prof. Hermann S. Hering, Church Edifice, Johnston street, Nov. 19.
Niles, Mich.—Frank H. Leonard, Opera House, 8:15 p.m., Nov. 19.
Oakland, Cal.—Francis J. Fluno, M.D., Macdonough Theater, 3 p.m., Nov. 21.
La Grange, Ill.—William D. McCrackan, M.A., Church Edifice, Cossitt boulevard and Catherine avenue, 8 p. m., Nov. 21.
Upland, Cal.—Rev. William P. McKenzie, Grammar School Auditorium, Nov. 22.
Port Huron, Mich.—Clarence C. Eaton, Society Hall, Nov. 23.
Indianapolis, Ind.—William D. McCrackan, M.A., Caleb Mills Hall, Nov. 23.
Neligh, Neb.—Frank H. Leonard, Auditorium, Nov. 25.
Battle Creek, Mich.—Clarence C. Eaton, Nov. 26.
Rutherford, N. J.—Prof. Hermann S. Hering, City Hall, 8:15 p.m., Nov. 26.
Marshall, Tex.—Bliss Knapp, Auditorium, Nov. 26.
Cedar Rapids, Ia.—Frank H. Leonard, Greene's Opera House, Nov. 26.
Chicago, Ill.—William D. McCrackan, M.A., Third Church, Washington boulevard and Leavitt street, Nov. 26 and 27.
Carbondale, Ill.—Hon. Clarence A. Buskirk, Opera House, 3 p.m., Nov. 28.
Mexico, Mo.—Clarence C. Eaton, Court House, 3 p.m., Nov. 28.
Joplin, Mo.—Judge William G. Ewing, Joplin Theater, 3 p.m., Nov. 28.
Erie, Pa.—Prof. Hermann S. Hering, Majestic Theater, 3 p.m., Nov. 28.
Cairo, Ill.—Bliss Knapp, Cairo Opera House, Sunday afternoon, Nov. 28.
Parsons, Kan.—Frank H. Leonard, Elks Theater, Nov. 27.
Oklahoma City, Okla.—Frank H. Leonard, Nov. 28.
Sioux City, Ia.—Rev. William P. McKenzie, Auditorium, 3 p.m., Nov. 28.
Jacksonville, Ill.—Prof. Hermann S. Hering, Nov. 29.
Tulsa, Okla.—Frank H. Leonard, Grand Opera House, Nov. 29.
Waukegan, Ill.—Rev. William P. McKenzie, Parish House, Grand avenue and Utica street, Nov. 29.
Arkansas City, Kan.—Clarence C. Eaton, Fifth Avenue Opera House, Nov. 30.
Miami, Okla.—William D. McCrackan, M.A., McWilliams Opera House, Nov. 30.

[Written for the *Sentinel.*]

INFINITY.

FRANCIS C. BATSON.

"Nor height nor depth . . . shall be able to separate us from the love of God."

Behold the sea, that boundless waste unfathomably deep,
Where wavelets toss in ever-varied shape beneath the light!
Unmeasured is the space beyond that mystic moon above,
Whose pale but penetrating beams have dimmed the stars that sleep,—
An endless void from world to world and height again on height,—
Yet greater far than depth or height, infinity is Love!

TESTIMONIES OF HEALING.

In the spring of 1897 my attention was called to Christian Science and a friend loaned me a copy of "Retrospection and Introspection" by Mrs. Eddy to read. I read the biographical sketch of the author as given therein, and thought it reasonable and true. I then read Science and Health without grasping the writer's meaning, but I gained an earnest desire to study and ponder it. When I commenced the second reading, I took up the study of the Bible, which I never wanted to read before, and as I pondered the great truths contained in these two books there was unfolded to me the simple logic of our dear Leader's teaching,—perfect God, perfect man, a perfect universe, and all error an illusion, simply a false sense. I at once began to attend the Christian Science services, and have never ceased to do so.

My early life was passed at a light station on a small island out at sea, where my chances for acquiring an education were very limited. When we moved to the mainland I found myself five years behind other boys of my age, but after becoming interested in Christian Science I was able to catch up with them. This blessed truth has been a greater educator of the right kind than all my schooling and teaching put together. It has wonderfully increased my power of discrimination; and given me greater ability for acquirement and application.

One of the first things I had to overcome was an ungovernable temper. One day, while our normal school team was playing baseball with another team, in sliding to third base I knocked the third baseman's feet from under him, which angered him very much. He turned and struck at me, but I avoided the blow. In an instant a thought from that week's Lesson-Sermon came to me: "Christian Science reveals Truth and Love as the motive-powers of man" (Science and Health, p. 490). I was able to control myself and to realize the presence of divine Love. Both teams seized bats and were ready to take sides, but when I did not return the blow quiet was restored. This meant much to me and to the honor of the school. A special meeting of the members of the school faculty was held, resolutions were drawn up, and a vote of thanks was extended to me.

Not only in my student life, but in my work as a teacher, I find Christian Science ever available. One afternoon, when it seemed impossible to interest the many restless boys and girls under my charge, these words from our inspired text-book came to my aid: "The universe of Spirit is peopled with spiritual beings, and its government is divine Science" (p. 264). When I looked up from meditating on this eternal fact, a hush had come over all, and the pupils were busy with their work. In reviewing my school work for last year the clerk of the school board and the superintendent said they could not find one thing to criticize. This may recall Jesus' words, "I can of mine own self do nothing."

I have been healed of a physical difficulty which affected the hearing of one ear and the sight of one eye; also of colds, fevers, and other ailments. After nearly twelve years of the study and application of Christian Science, I can truly say that it is all it claims to be. It has brought my wife "out of darkness and the shadow of death," and restored her to health and strength. It has taught us that we must be pure in thought, word, and deed. There is much yet to be overcome, but with the many proofs of God's "tender love and watchful care" we are encouraged to labor on, knowing that "he that endureth to the end shall be saved."

I cannot close this testimony without lifting up my heart in love and gratitude to God for His goodness, and for the wonderful works which reveal the power of Truth. I am thankful to Him that there is one brave, patient woman, our Leader, who for over forty years has labored and prayed, endured and taught, that all mankind might be redeemed from sin, disease, and death.

HENRY L. UPTON, Augusta, Me.

For nine years I was a trained nurse. After my marriage it was deemed advisable for me to submit to a minor operation; which I did; but it brought no permanent results. A year later I had a severe attack of illness, which resulted in chronic stomach trouble. Although I followed the medical counsel faithfully, I was gradually becoming a wreck and the victim of that dreaded foe—the worry habit. Because of a contemplated change of residence, the physician was urged to be absolutely frank in the matter of diagnosis, and I was informed that the presumable cause of the trouble was an abnormal growth. He advised no operation at the time, but offered no other alternative nor did I expect any.

Some six months later (in 1906) I became interested in Christian Science. Through the reading of Science and Health the stomach disorder and worry habit were entirely overcome, also a continual sense of fatigue and almost constant backache, and gradually the diagnosis of a growth faded from my memory. After I had been interested in Science nearly two years, there came into my experience something to which I was unwilling to submit, but after some weeks' struggle I became absolutely willing to take up the cross, and also to rejoice "all the rugged way" (Miscellaneous Writings, p. 398). Later a physical trial came, and I called for help. The following day my practitioner was led to work for me along this line of thought: "A spiritual idea has not a single element of error, and this truth removes properly whatever is offensive" (Science and Health, p. 463), with the result that not only was that condition beautifully met, but also the growth, which weighed about two pounds, was detached and came away. To say that I am thankful for these physical benefits is but a feeble expression, but far above the physical benefits I am thankful for the spiritual understanding which has come to me and which has enabled me to clear up the tangled doubts of creed and dogma. I realize that the only real gratitude I can express is to follow the Master's command, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."—KATHRYN VAN HORNE, Columbus, O.

[Translated from the German.]

Through my sister, who had been healed in Christian Science of a hopeless disease of ten years' standing, I became acquainted with Christian Science at a time when I was expecting childbirth. I and my relatives were looking forward to that hour with the greatest fear and anxiety, as twice before I had gone through puerperal fever in its severest form, and suffered from rheumatism and kidney trouble. The fever was very high the first time, and I was unconscious for days together. The physician, after the first examination, had said that there was no hope of recovery; I survived, however, but for years after this illness I suffered greatly.

After my sister's healing I sent for the same practitioner, and by her comforting words I immediately began to have courage and trust in God, for I had lost both through fortune's blows, and believed that sorrowful things only must come to me. I was greatly reduced physically, as well as broken down mentally, and unspeakable melancholy reigned within me, but through the treatment which the lady gave me my condition improved—I felt more free and things seemed not so heavy to bear, and I looked forward to the future almost gladly. I experienced the power of divine Love, and although I understood but very little at that time, everything went

Digitized by Google

quite smoothly with God's help. The child was a strong boy, who to our great joy, has not been ill one hour since. I, too, continued in strength, getting up the first day; and I also could give the child abundant nourishment. I was very soon able to attend to my daily occupation, could lift and carry things better than ever, and this without fear. I have had no trouble whatever since then, and God's help is also manifest with the little one. He is very strong, and can eat anything without it causing him any trouble. One can see plainly that it is palpable error to believe that any food can harm us.

We all are sincerely thankful that God has led us into the right path, and made us find good people, who took us by the hand, so to speak, and led us toward the infinite good which is eternal. Heartfelt thanks also to Mrs. Eddy.—IDA GNAUCK, Dresden, Germany.

I want to let others know what Christian Science has done for me. I suffered from rheumatic trouble for sixteen years. For a time I was so bad that I could not walk without crutches, although I had been taking medicine all the time; but it did me no good—only relieved me a little. About two years ago, I was so ill that I could not walk. For three months I lay in bed and could not move. I had no one to help me, until a kind man gave me a *Christian Science Sentinel*. I read it, and found there was something in it, so I looked it over closely, to see if there was any hope for me. I wrote to Mrs. Eddy, not knowing anything else to do about it, and I got a letter from her secretary. He told me I should get a practitioner to help me, that I would find some one near me. I found there were several in Decatur, Ill. I wrote to one of them, and after waiting some time for a reply, I wrote to another. I was on the poor-farm at this time. I got a letter from the practitioner, who told me I could be made well, and from that time I began to get better. I began to put my trust in God, and now I am as well as I can be. I have no pain, and I am very thankful to God, and to Mrs. Eddy for the healing I got through Christian Science. I trust that by the will of God and the power of God I shall stay well.—JACKSON K. GRIFFITH, Cerro Gordo, Ill.

Last March my three children became very ill. The doctor told me it was a very severe attack of a supposedly infectious cough. I asked a Christian Science practitioner to treat them, and after five days' treatment the eldest boy was able to go out, and at the end of two weeks the children were perfectly well. The greatest demonstration was the cure of the youngest child, aged one year and eight months, who from her birth had held her head on one side, and as she grew older the head was more drawn down and it also shook. The doctor said that she would never be better of this trouble, but while the child was being treated by Christian Science she was able to hold her head perfectly straight, and the shaking has also ceased. We feel most deeply grateful for this wonderful proof of the power of infinite Love, and the many blessings received through Christian Science.

Mrs. WILLIAM G. ASHWORTH, Milnrow, near Rochdale, England.

[Translated from the German.]

We always think with great joy and gratitude of our loving Father, the dispenser of health and harmony; we are mindful of His Son, Jesus Christ, who has revealed to us the divine power, and we remember with gratitude the Discoverer of Christian Science, through whom the Christ-healing has come to the world again. Several of our nearest relatives have experienced the wholesome influence of this pure teaching, and we note the successful healing of troubles, in part of long standing, through the treatment of a practitioner who has lovingly showed us the right way.

Through the right apprehension of the Christ-idea we now are enabled to oppose error successfully, whenever it tries to enter in. We have been freed of bad habits without constraint, so that we exclaim today, "How dull is the life in which Truth is not understood!" It really is a joy to live when one gets a right comprehension of the Christ-principle, of infinite Love. When the truth is truly grasped it works quickly, surely, and without danger. Our most earnest desire is, that humanity altogether may awake from the frenzy of enslaving materialism and become acquainted with the power of spiritual thought and freedom in its full beauty.

J. and B. DUEBENDORFER, Grellingen, Switzerland.

Christian Science treatment, given me some time ago, was a great help to me in my affliction (a painful organic swelling). Soon after treatment I was very much relieved; felt more comfortable, and could easily discern that a change had taken place. My improvement was continuous from that time, until a normal condition had again been reached.—E. A. SNIDER, Yankton, S. D.

I wish to express my gratitude for what Christian Science has done for me. When I was fifteen years of age I began to have trouble with my left limb, which pained me terribly at times and continued to get worse. We had medical advice, and the doctors pronounced the trouble hip disease. The X-ray was used and the bone was said to be tuberculous. My health in other respects was giving way, and the family physician said it was a very serious case, with danger to life as well as limb.

We had heard of Christian Science, and determined to try that first, thinking it could not hurt me and might help me. When I went to the practitioner I was unable to step on my foot. I was there a week and a half, and came home walking as straight as ever. I had three weeks of absent treatment after coming home, and I have never before been so well in all my life. I have had some beautiful demonstrations since then, each giving me a better understanding of God.

I thank our dear Leader, Mrs. Eddy, for putting this healing truth before us.

Mrs. ETHAL LEEKLEY, Mitchell, S. D.

Since my own healing, three years ago, when I gained uplifted views of the world and of mankind, I have not had to ask help from a practitioner except on two occasions, one of which was at the birth of my son. The other occasion was when it seemed that evil would rob me of him. I mention this experience with rejoicing, for it was a demonstration of quick and positive healing. The babe was six months old when I brought him South last August from New York city, and because of teething many expressed their fear of change of climate and atmospheric conditions. In spite of my efforts to overcome this perturbed thought, one morning I awoke with alarm and dread, for the child seemed to be very ill, as if he were struggling hard for his life. My family were all overcome with fear, but my father sent a message to a Christian Science practitioner. I then hurriedly wrapped the baby in a blanket, and got to this dear friend as soon as I could. The child appeared to suffer all the way, but as soon as the practitioner took him in her arms he commenced to regain his normal state, and in a very few minutes he was healed.

No one but a mother can comprehend the thanksgiving in my heart for this healing,—the power of divine Love,

Digitized by Google

as demonstrated in Christian Science. I feel more blessed every day, because I am one of the great number who have the enlightenment and are trying to pattern a life whose footsteps tread only that path made by the great Wayshower. God bless Mrs. Eddy, whose teachings have helped me to regain my health and revealed the creator as triune Principle—Life, Truth, and Love.

MAUDE PATTERSON CRAVEN, Memphis, Tenn.

It is with a heart full of thankfulness to God for the blessings received in Christian Science that I give this testimony. From childhood I had been troubled with a very severe cough, so bad often, in the winter time, that sleep was almost impossible; but I have been entirely healed by Christian Science. In 1907 I was also healed of a very severe attack of lung trouble in three days, so that I could be up to attend to business, and was entirely free from all the bad effects in five days. I have also been cured of the tobacco habit and of many other ills. My wife has been healed of a very severe stomach trouble.

The spiritual help which I have received has been very great, and I am striving to live so as to be worthy the name of a Christian Scientist. My heartfelt thanks go out daily to God for Mrs. Eddy's wonderful discovery of Christian Science.—W. T. CAMPEN, Charleston, S. C.

[Translated from the German.]

Over three years have elapsed since I became interested in Christian Science, and I send in my testimony with a grateful heart for all that it has done and is still doing for me, hoping that many may thereby be led to investigate this great teaching and discern that it is the truth. For ten years I suffered with a stomach trouble and nervous disease, and had applied for help to many physicians, without getting relief. I was in such a condition that I could retain no food whatever, and was visibly failing. In order not to leave anything untried, I also consulted a doctor who had been warmly recommended to me, but I was told that my condition was incurable, and that I had but a few weeks longer to live.

While in this condition of great need, I was told about Christian Science. I set all my hope upon it, and attended a Wednesday evening meeting, which convinced me at once. I took treatment from a Christian Science practitioner, and when I told her that I could neither eat nor drink, she immediately said that God makes all things to grow for the benefit of man, and not to injure him. I kept this saying in thought, and after the first treatment was able to eat and drink whatever I had appetite for. In a very short time I was a healthy woman. When I came to Christian Science I was greatly reduced, but a few weeks later I had gained fourteen pounds in weight.

For the blessings which Christian Science has brought me, as well as for its teachings, I am grateful with all my heart to God, and to our faithful Leader, Mrs. Eddy.

ADELHEID JAMROWSKA, Berlin, Germany.

I feel it a duty which I owe to Christian Science to testify to my healing in the case of a kidney disease declared incurable by the best physicians. For about ten years I had been a great sufferer, and constantly called upon eminent doctors, some of them specialists in this country and a few from abroad. They attempted at various times to diagnose my case, and treated me, but I received only temporary help, never having been relieved for any length of time. My case was considered a puzzling one, as the different doctors were unable to state the origin of my ailment or to prescribe any medicine or remedy for my healing. After years of suffering, which was often endured in silence, my case was pronounced a kidney disease in its worst form, and I was given but a short time to live, being told my age was against me, and that no further relief could be assured.

At this time a lady called at my home, who proved to be a Christian Scientist. After meeting her and asking many questions, I decided to take treatment, thinking there might be some virtue in it, although I was not sure. I had tried everything that *materia medica* could offer, so I felt that this could not harm me. Those who know anything of the disease mentioned know what I endured, and when I can say that after but two weeks of Christian Science treatment I found myself well and happy, it seems surely like a return to the so-called miracles of Jesus' time. Thus we see that man's extremity is ever God's opportunity. The same doctor who had limited my life to a few weeks, also examined me thoroughly after my healing in Christian Science. He pronounced me well of this disease, and asked what had cured me, as he knew he could not. When told that Christian Science had healed me, he said, "Well, give it the glory." This was about four years ago, and I have never had any symptoms of that disease since.

My faith in God as the only healing power, causes me to be very thankful. I have joined The Mother Church, where I attend regularly, and daily I read the Bible, which is like a new book to me, made plain by my study of Science and Health, which is surely a "Key to the Scriptures," as it explains how God heals us. Our Lesson-Sermons are gradually awakening me to a higher understanding of God and His love for all His children, and as I daily live what I know of the truth, more of good is added unto me.

MRS. E. N. PHILBRICK, Boston, Mass.

I have for some time felt that I should express my gratitude for the benefits received from Christian Science. It is now over four years since I returned to Christian Science, after having left it for a short time, being led away by the false belief that I would enjoy material things better if I discontinued the study and application of the truth; but I would like to impress upon those who read this testimony, never to allow a suggestion of that kind to take hold upon them. I had such terrible experiences, such hours and days of utter darkness to pass through, which would easily have been dispelled with the knowledge of Truth. Thanks to God, and to the teachings of our dear Leader, I have again taken up the study and application of Christian Science, and have been delivered out of many difficulties, also healed of many forms of sickness.

I have three children, who have received great good from Christian Science. We have been healed of various attacks of disease, sometimes after the first application of the truth. The *Sentinel* is a welcome visitor in our home, and I am always glad when the day comes for it to reach me. The articles are very helpful to me, and they sometimes answer questions that have been puzzling me. I am truly thankful to Mrs. Eddy for discovering this truth and making it plain to us.

MRS. HELEN TEMPLE, Tallahassee, Fla.

It is with a feeling of deep gratitude to Mrs. Eddy for having shown us that through an understanding of the blessed teachings of Christ Jesus all ailments of the body can be cured, that I wish to relate my own experience in the past five years. At that time my wife was taken down with rheumatic fever, from which she slowly recovered, but it left her with what physicians pronounced an organic heart trouble, for which they said there was no cure. Many times has she seemed to be at death's door, and only by powerful medicine could the heart be put in action; but

Digitized by Google

the same thing had to be gone through again after a few months, or weeks, and in April, 1908, she was confined to her bed, with a physician attending her daily. Then dropsy set in, and a consultation of physicians was held. They told me that there was no hope of her living, that all that could be done to relieve her was to draw off the water.

At this time a friend let my wife take a copy of Science and Health, and after reading this, she urged me to get a practitioner to come and see her; which I did. The Scientist came on Tuesday, and was with her for one hour. The next day my wife was up and dressed and was at the table to dinner with me. Tuesday of the following week she went alone to visit the practitioner who had treated her, going sixteen miles and changing cars once. I will say that all medicine was thrown away and none has been in the house since. Five months later, my wife was taken with an attack of the rheumatic disease from which she had first suffered, but after ten days she again took the trip of sixteen miles. This last time she was treated by the same practitioner, and in citing this case I wish to say that while the attack was very severe, so that she could not move hands or feet, yet no symptoms of the old heart trouble appeared, thus proving that the organic affection had been cured.

Christ Jesus said, "Thy faith hath made thee whole;" but the wonderful part of it is that while for ages men have preached of the blessings to be received by believing on him, yet they have not in any way taught us that sickness and disease, as well as sin, can be cured by this faith. Too much honor and respect cannot be given to Mrs. Eddy for showing us that all these blessings are available for us today. "Science and Health with Key to the Scriptures" has been given us, not in place of the Bible, but that we may understand the Word of God as we should, and thereby gain the blessings which Christ Jesus promised us should be ours if we would have faith in God and follow his teachings. God be praised for having used Mrs. Eddy to enlighten the world as to the great blessings which follow the saving faith in Christ.—CHARLES SWAN, Ladd, Ill.

Whenever the question of Christian Science treatment for children is agitated, I feel that it is my privilege to state a few facts from the experience of one mother, and the little daughter eight years old, who has never known anything but Christian Science treatment for bodily ills. At an early age this little girl developed a tendency to congestion of the lungs with every cold, but at the end of four years of faithful work, through Christian Science treatment in every case, she was entirely relieved of this tendency. Severe attacks of croup have yielded in a few minutes, either through silent work or the audible reading of Science and Health, and throat trouble has also been healed several times. On one occasion there was an attack in the afternoon, when the symptoms were alarming, but I wish to express my gratitude for the quick help which came then, and so many other times, since I have made a study of the teachings of "Science and Health with Key to the Scriptures."

MRS. FLORENCE D. WELLS, Coldwater, Mich.

Having suffered for several days from an attack of stomach trouble, during which the simplest kind of food and even breathing caused great distress, I turned to the Lesson-Sermon, hoping to find some word that would bring relief. As I read I came upon this passage of Scripture: "All that the Father giveth me shall come to me; and him that cometh to me I will in no wise cast out." Then I realized that the Father is absolute good, and all that He gives is like Himself—good. His gifts are beneficent, and among His bestowals are health, friendship, activity, dominion, and perpetual harmony; all that would impart a sense of comfort and abiding peace. Before I had completed this line of reasoning, a sense of ease and freedom passed over me. I arose and walked around the room, and found that I had been healed. This instance is but one of many over which I have been able to rejoice. Sorrow, despondency, and fear, and also heart failure, have all been overcome for me by the declaration of the truth.

In times past, my concept of a Supreme Being was very vague, my earliest being that of a God far distant and unresponsive, and later agnosticism had fast hold of me. It was in this condition that Christian Science found me, and gave me a sensible and satisfying answer to all my questions in regard to Deity. I am deeply grateful for the message of Christian Science and lovingly grateful for the strengthening and encouraging example of the Leader who is so bravely blazing the way out of human discord into the consciousness of ever-present peace.

MRS. ADELAIDE A. ACKERMAN, Boston, Mass.

About four years ago I was troubled with an obstinate skin disease, having up to that time suffered for a period of fifteen years, during which I had consulted several physicians without obtaining any relief. I then appealed to Christian Science, and in about three weeks was entirely healed; since which time I have had no return of the trouble. I acknowledge with gratitude that Christian Science has healed me.

MRS. JENNY WARD, Moultrieville, S. C.

It gives me great pleasure to testify to the following facts, and if this testimony is of benefit to others it will be an even greater pleasure. I participated in the military operations which commenced in the year 1860, known as the Civil War, and soon after arriving at our destination "down South" our regiment started on a long march. I had not provided myself with army shoes, but wore ordinary boots, such as were used by civilians at that time. I soon began to have serious trouble with my feet, which resulted in two bad ingrowing nails. These were a constant source of trouble and suffering for a great many years, or until Christian Science healed them, about nine years ago. I remember that while going home from my work one night they were troubling me severely, and although my understanding of Christian Science was very small at that time, I declared the truth to the best of my ability. I gave them no material care or attention at that time, but the result was that they ceased to trouble me and have caused me no suffering since. Sometimes I realize that we might show our gratitude for Christian Science more effectively than we do.

JOHN H. JONES, Everett, Mass.

[Written for the *Sentinel*.]

"JOHN YOUNG OF EDINBURGH."*

BEN. HAWORTH-BOOTH.

IT was well said, John Young,
And history hath approved thy sturdy tongue.
When proud theology was wont to preach
God made all things; He is the Sire of each,
Thy plain philosophy rebelled, and cried
God is the father of mind, and naught beside!
Though, like that other John, thou did'st appear
A voice upon a desert of despair,
Thy words, as bread upon the waters flung,
Were bravely spoke, John Young!

* Science and Health, page 208.

FROM OUR EXCHANGES.

[*Christian World.*]

The religious life in its essence is, we say, a break into freedom, the freedom won over our lower selves, which gives us here and now a taste of the infinite. In its essence and pure manifestation it is all this, but that, alas! is not how we get it. As it is offered to us in the churches, the religious life itself needs freeing. Its glorious possibilities are there hampered by false alliances. It is bound up with old theologies. The theology of our text-books is excellent in its place. It is the attempt of the age that produced it to explain the world and life as it knew them. It is the history of the mental stage at which the race had arrived. Taken in this way, it is a useful, though somewhat dusty, record. But ecclesiasticism demands more; demands that these theories shall be accepted as the masters of our thought today, barriers to all the soul's new activities. What endless confusions, what agonies in young, ardent minds, are produced by this demand, are known too well to some of us. The correspondence of the present writer —to cite his own experience—is burdened with appeals from young men, from students, candidates for the ministry, and often from their elders, who find their spiritual instinct crying out against the impossible suppositions about God and man that are by authority thrust upon them. And one has to try to show to these imprisoned spirits a way out; to explain to them that spiritual life is one thing and old-world guesses about it another. But how difficult a business is this—to break the shell that holds the bird! to break it without damaging the young life inside!

[*Christian Commonwealth.*]

The supreme interest for the writers of the Bible was religion, and religion has nothing to do with history as such. It has to do with the soul, which is above history, and deals, therefore, not with things literal and historical which belong to the senses, but with things interior and mystical or spiritual, with things which are true always and everywhere and which do not grow fainter with the lapse of time. One of the greatest mistakes made by the church has been and is the mistaking of Scripture for history. . . . The literal and historical interpretation of Scripture is the interpretation of the natural man, and is wide of the mark simply because it is not the standpoint of the writers.

[*Christian Work and Evangelist.*]

What is a church for? It is to build the city of God in the earth. Every church should have for its main object the bringing of the kingdom of God to pass in the community where it stands. It is to do it in many ways, but the great thing is to remember that God has given the place where it stands into its hands as a piece of land to be turned into a beautiful garden, evil things to be banished and the place to be made fair with pure lives.

[*New York Observer.*]

The life which puts Jesus at the very center of its heart and will, and in the forefront of its ambition and advance, will always in some deep, true sense be successful. The world may not appreciate that life, but it will be the better for it; such a life may not be rich or famous or powerful, but it will truly be helpful to men and interesting to angels.

[*Christian Register.*]

We may be sure that by blessing the poor in spirit Jesus did not exalt spiritual dearth or stagnation, no cheap imitation of humility, no hypocritical assumption of meekness, but rather that noble renunciation which causes a man to lose his life to find it.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly*, subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.50 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy . . . . . $.30
Twelve or more books to one address, prepaid, each . .25

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

That the organized conservation movement is preparing for a big national effort to obtain, at the coming session of Congress, revision of the national laws under which coal lands and water-powers are administered, is made apparent by the issuance of a statement by Dr. Charles W. Eliot, president of the new National Conservation Association. He says: "The association is convinced of the urgent need of immediate measures to prevent the control of the great sources of heat and mechanical power in the United States from being seized by monopolistic organizations and to secure the best development of the sources in the interest of the whole people. These sources are waterfalls and coal. Under the existing laws, the wisest development is practically impossible."

Ground for the new South Brooklyn, N. Y., subway was broken last week. Drawings of the proposed structure show many improvements over the style of elevated construction now in use in the city. An important feature will be the noise-deadening plan, a solid concrete floor from eleven to fifteen inches thick laid on top of the steel structures. This flooring will weld together the steel girders and prevent the noise from vibration caused by the running of trains. A foot-path extending the whole length of the road will enable passengers to dismount at any point during a block or other emergency with perfect safety.

A joint army and navy board has been appointed by the Secretary of War to visit the Canal Zone and draw up plans for defense and report to the department. The idea is to put the entire plan before Congress in the coming session, and to begin work so that the canal may be properly defended by the beginning of 1915, when it is to be opened to navigation.

What is regarded as the forerunner of a large international combination of hotels is the filing of papers at Dover, Del., for the $7,500,000 Carlton Investing Company, which is backed by interests on both sides of the Atlantic. The total capital stock is divided into $1,000,000 eight per cent first preferred, $4,000,000 six per cent second preferred, and $2,500,000 common stock.

The Park Square Station, formerly the Boston terminus of the Boston and Providence Railroad, but abandoned eight or ten years ago upon the completion of the South Terminal Union Station, has just been sold to the Park Square Real Estate Trust, for which they have issued stock for five million two hundred thousand dollars.

Argument has begun in the United States Supreme Court in the case of the great Northern Railroad Company against the state of Minnesota to test the state law taxing railroads four per cent of their gross earnings.

John Stewart Kennedy, one of America's little-known rich men, just deceased in New York, left bequests of more than twenty-five million dollars to religious, charitable, and educational institutions in his will.

Investigation by the Federal Government into the sugar underweighing frauds is being continued with unabated vigor. The Government investigators, it is reported, are on the trail of men "higher up."

The St. Louis (Mo.) Board of Education has adopted a resolution putting a veto on football in the high schools, and ordered the cancellation by pupils of all engagements for games.

An aerogram has been received at San Francisco from the Pacific steamship Korea when she was 4,720 miles away.

International.

When Tsingtau, China, was occupied by the Germans about eleven years ago, the hills were found bare and barren, with only a sporadic growth of scrub pine and weeds. Plans for reforestation were made at once, and about 2,965 acres have already been planted,—about half in acacias, the balance in pine, larch, walnut, oak, ash, maple, and alders. Already the point has been reached where the sale of timber can be made. The sale and exportation of acacia is expected to become a considerable source of revenue during the next few years. This work has been successful in spite of the light rainfall, lack of moisture, insect enemies, and Chinese thieves. The Chinese Government is now undertaking forestry schemes in a number of places under advice from German experts. The first Chinese forest school was established at Mukden two years ago. Six hundred and twenty-five acres have already been set apart for cultivation, and 24,710 acres are to be purchased for afforestation. Three large mines in China, managed by Europeans, are making plans for afforestation and the Shantung railway is planting acacias along 200 miles of its track. The Chinese government now has in contemplation the inauguration of extensive afforestation work in different parts of China.

Opposition has shown itself in some sections of Canada, principally in the northwest, against the establishment of a Canadian navy. The leader of the Conservative party in the province of Quebec, speaking at a banquet, declared that Canada did not need a navy of her own, and that any navy she could place on the seas would be of no use in helping to maintain British naval supremacy. A bill which the government will present to Parliament early in the session will provide for the construction of three second-class cruisers and four torpedo boat destroyers.

The Turkish ministry will urge upon the Ottoman Parliament soon after it reconvenes, the adoption of a naval program providing for the expenditure within the next seven years of one hundred million dollars. According to this program, it is learned, seven battleships will be constructed, a number of torpedo destroyers and a hospital ship. For the next fiscal year an appropriation of twelve million dollars to begin the construction of two of the proposed warships will be asked.

The decision of the Hague court of arbitration on the subject of the maritime frontier between Norway and Sweden has been published. The Grisbadarna islands, important fishery centers, are allotted to Sweden, and the Skjoette Grund is awarded to Norway. The frontier, as determined by the tribunal, almost coincides with the old Swedish frontier line, and to a great extent the Swedish claims have been accepted.

The committee on program, consisting of the Secretary of State, the ambassadors of Brazil and Mexico, the ministers of Costa Rica, Argentine, Peru, Chile, and Cuba, and John Barrett, director of the International Bureau of American Republics, has reported on a tentative program for the next Pan-American conference, which will be held in Buenos Aires July 9, next.

It is said that it has been definitely settled that Lord Lansdowne, the leader of the Opposition in the House of Lords, will move a resolution declining to accept the finance bill until its principles have received the sanction of the electors.

Plans are maturing for making an immediate beginning upon the reconstruction work on the Hindie dam, which is of the first importance in the Mesopotamian reclamation scheme being undertaken for the Turkish government.

Industrial and Commercial.

The largest irrigation enterprise and rice plantation in Mexico is situated just across the Rio Grande from Del Rio. It is owned by General Trevino. His ranch embraces two million acres of land, all in a solid body, and bordering on the Rio Grande for two hundred miles. Several streams flow through the property, which is said to be the most magnificent in Mexico. He already has thirty-five thousand acres of land under irrigation, and is adding to the irrigated acreage at the rate of about ten thousand acres a year. As fast as the canals and ditches can be dug the land is being reclaimed. He is preparing to build a railroad sixty miles long to run through the property and give him a shipping outlet for his products.

Five million dollars is the stated capital of a company now being organized in Spokane to develop a power site on the Snake and Salmon rivers in central Idaho, forty miles south of Grangeville. The project involves the boring of a tunnel of seven and a half miles through solid rock, which will give a fall of five hundred and thirty feet. Two hundred and eighty thousand horsepower can be developed for railroad, irrigation, and other purposes.

The United States Steel Corporation will spend five hundred thousand dollars for a universal Portland cement company at Buffington, Ind., to double the size of its present plant and make it the largest cement manufacturing plant in the world. It will then have a capacity of six million barrels a year.

The H. C. Frick Coke Company of Pittsburg, the fuel end of the United States Steel Corporation, has decided to grant an advance of more than fifteen and a half per cent on present wages for the coming year. The advance will be a restoration of the old wage scale of 1907.

The Baltimore and Ohio Railroad Company has just placed orders for four hundred steel hopper coal cars and for one thousand steel underframe box cars. These orders call for an expenditure of $4,500,000.

The nineteen Boston savings banks on Oct. 31 had combined deposits of $232,125,000, the largest in their history and an increase of $11,564,000 or 5.24 per cent within the year.

The crop of potatoes grown this year in Aroostook County, Me., is estimated at twenty-five million bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE PRESIDENT'S THANKSGIVING PROCLAMATION.

THE season of the year has returned when, in accordance with the reverent custom established by our forefathers, the people of the United States are wont to meet in their usual places of worship on a day of thanksgiving appointed by the civil magistrate to return thanks to God for the great mercies and benefits which they have enjoyed.

During this past year we have been highly blessed. No great calamities of flood or tempest or epidemic of sickness have befallen us. We have lived in quietness, undisturbed by wars or rumors of wars. Peace and the plenty of bounteous crops and of great industrial production animate a cheerful and resolute people to all the renewed energies of beneficent industry and material and moral progress. It is altogether fitting that we should humbly and gratefully acknowledge the divine source of these blessings.

Therefore, I hereby appoint Thursday, the twenty-fifth day of November, as a day of general thanksgiving, and I call upon the people on that day, laying aside their usual vocations, to repair to their churches and unite in appropriate services of praise and thanks to Almighty God.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this fifteenth day of November of the year of our Lord one thousand nine hundred and nine and the independence of the United States the one hundred and thirty-fourth.

WILLIAM H. TAFT.

By the President:

P. C. KNOX, *Secretary of State.*

PRINCIPLE OR PERSONALITY.

M. G. KAINS, M.S.

ALL Christians agree that Jesus of Nazareth laid the foundations of the Christian religion. In support of this statement they contend that the predictions of prophets and seers have been met by Jesus as by no other man whose record has been handed down to us. They accept the declaration that Jesus did not "come to destroy the law, or the prophets: . . . but to fulfil," as having been proved by the fact that he unified all the work of his predecessors, and himself supplied the one missing segment which makes the complete sphere of the Christian religion; namely, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

No Christian, it is presumed, will contend that Jesus failed to demonstrate this kind of worship. On the contrary, if questioned, all would maintain that had Jesus not exemplified his prayers by his works he would have made but a faint impression upon the page of history. Instead, the imprint is indelible; even the attrition of centuries of ignorance, of atheism, of materialism, and of all else has been powerless to deface or erase it. His record of works, more than of words, is imperishable; or rather, the words have persisted through their indissoluble relation to the works, because these are characteristic of "the effectual fervent prayer of a righteous man." Had Jesus not given sight to the blind, healed the sick, walked on the water, raised the dead, triumphed over the grave, and ascended beyond human ken, his sphere of influence would have been limited almost wholly to his immediate followers. His teachings, stripped of such proofs of their authenticity, would have appealed to very few in later years, beyond being an interesting hypothesis as devoid of practicality as many of the speculative philosophies propounded from time to time by those whom the world calls thinkers.

Professing Christians admit that the New Testament, besides detailing Jesus' ministry, also gives partial records of the work of "the twelve," of "the seventy," of Paul and other close followers of the Master. All of these disciples proved that they had learned how to pray the "effectual fervent prayer," by showing the signs of healing, raising the dead, and so on, just as Jesus had done. Not only so, but, just as Jesus had prophesied, they presented at least some of the "greater works" which the Master, speaking generally for all mankind, propounded in the declaration, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Among these "greater works" were Peter's escape from prison and Philip's transportation after baptizing the Ethiopian.

If any of this evidence is to be admitted as genuine, all of it must be. Nay, further, since like effects cannot result from unlike causes, all evidence, in the form of similar effects, that coincides with the Scriptural evidence must be attributed to the same cause. Thus the healing of the sick and the raising of the dead which persisted for about three hundred years after the ascension can be due to no other cause than the practice of Jesus' teachings and wholly irrespective of a human personality. A careful study of the Gospels, especially the Gospel according to John, will sufficiently show that Jesus constantly pointed away from himself by such declarations as, "The Father that dwelleth in me, he doeth the works;" "I can of mine own self do nothing," and similar ones. Thus, to use a term which Christian Science has adopted to summarize the terms omnipotent, omniscient, omnipresent, and omniactive, all of which are applied exclusively to God, Jesus revealed the Principle of life, the proximate cause of all true being. His work and that of his immediate followers was mainly that of rectifying mistakes and teaching humanity how to avoid them by bringing individuals into harmony with this Principle, God.

The falling away from Jesus' teachings about sixteen hundred years ago is sufficiently apparent in the history of the early church. Personal greatness and ambition, pomp, display, in a word, worldliness, were made the desideratum, instead of spirituality, humility, simplicity. During the dark ages, or the age of personality which followed the rise

Copyright, 1909, by Mary Baker Eddy.

Digitized by Google

of worldliness in the church, the Christian religion, though having the "form of godliness," may be said to have been in almost total eclipse, for it presented none of the characteristic signs which "follow them that believe." This condition continued with varying fluctuations until about fifty years ago, when Christian Science was discovered.

Toward the dawn of the returning light the signs of spirituality began to appear in the form of tolerance, brotherliness, and similar mitigations, and occasionally in the form of healing. But only within the time specified have the healing signs aroused systematic study in order to discover the cause. In "Science and Health with Key to the Scriptures," Mrs. Eddy sufficiently details her experiences as the Discoverer of Christian Science, so that these need not be touched upon here. This volume has proved its practicality and Christianity, for by its rules the same signs which characterized the work of Jesus, the apostles, and less intimate followers, are presented today by those who apply the teachings correctly. Therefore, only one conclusion can be drawn; namely, that since the effects are identical with those characteristic of Jesus' mission and of the spiritual leaders of the primitive Christian church, the cause must be identical.

Science and Health teaches that God is Principle by scores of such statements as: "God is infinite, therefore ever present, and there is no other power nor presence." "There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God." "There is but one primal cause. Therefore there can be no effect from any other cause, and there can be no reality in aught which does not proceed from this great and only cause" (pp. 471, 228, 207). Such statements as these disclose the reason why Jesus turned thought away from himself when he said, "Why callest thou me good? there is none good but one, that is, God." Conversely, they show why the ascendency of personality must result in the eclipse of spirituality, just as it did in the dark ages. Such is the history of the decadence in the third century, since when, until the past half century, the healing by spiritual means has been but a tradition of the church.

If, on the contrary, Principle is to rule, hitherto unfulfilled prophecy will reach its fulfilment, and men "shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for all shall know me, from the least of them unto the greatest." Which shall it be, Principle or personality? Choose ye!

"LET US COME BEFORE HIS PRESENCE WITH THANKSGIVING."

FRANKLYN J. MORGAN, M.D.

THE word "thankful" is defined as: "Deeply sensible of kindness received and disposed to acknowledge it; grateful; as, a thankful spirit." "Thanksgiving" as: "The expression of gratitude, of the acknowledgment of kindnesses, particularly, the rendering of such thanks to God." Paul says: "For every creature of God is good, and nothing to be refused, if it be received with thanksgiving."

The word "gratitude," as a synonym for thanksgiving, more properly and correctly interprets the true thought of the subject in this instance, as the following definitions amply testify: "A sense of appreciation of favors received, accompanied with good will toward the benefactor. Gratitude is the natural repose of the heart to kindness intended or received" (Standard Dictionary). The author of "Science and Health with Key to the Scriptures" on page 3 clearly defines the true Scriptural meaning of gratitude —and in this case thanksgiving—thus: "Gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech." And on the following page she says, "Outward worship is not of itself sufficient to express loyal and heartfelt gratitude." It is well also, in this connection, to study the words of opposite meaning. "Ingratitude" is defined as: "Indisposition to reciprocate; insensibility to kindness." Seneca has said, "Ingratitude is, of all the crimes, that which we are to account the most venial in others, and the most unpardonable in ourselves." Mrs. Eddy associates ingratitude with injustice, sensuality, hatred, and greed, in connection with the betrayal and persecution of Jesus. (See Science and Health, pp. 47, 94.)

After the supposed fate of Daniel had been sealed and he was about to be cast into the lions' den, he "prayed, and gave thanks before his God, as he did aforetime." Jesus the great Master prefaced his demonstration over sickness and death with "Father, I thank thee." Paul admonishes the Colossians: "Continue in prayer, and watch in the same with thanksgiving." He counseled the Ephesians to give thanks "always for all things unto God;" and to the Thessalonians he said: "In every thing give thanks: for this is the will of God." The Bible is pregnant with this thought of gratitude as being a necessary condition of mind in order to experience the influx of divine aid, guidance, and ministration. Paul says that thanksgiving should be continuous,—"for all things" and "in every thing,"—for this is according to divine law; meaning thereby the quality of thought as expressed in the deeper sense of appreciation, as well as the just recognition of God as the Giver of all good gifts.

It is quite evident that the psalmist as a teacher well knew the import of this amiable and conformable condition of mind when he sought to purify and elevate the minds of the people by urging them, one and all, to sing, to give praise, and to give thanks. His method of address, "Let us come," preludes a gentle, leading, kindly frame of mind, which would join together in unity of thought, and which presupposes right desire, the effort to put aside any and all of those traits of the carnal mind designated as hate, malice, envy, jealousy, revenge, selfishness, since these are at "enmity against God." To come before God's presence by or through the avenue of thanksgiving or gratitude must surely mean to receive a divine blessing—to be healed of every mental and bodily ill; to be made every whit whole; to be regenerated, and this without regard to the limitation of age or time, of place, circumstance, or condition; in fact, it is not even thinkable that any one could approach the presence of divine Love and not receive the blessings which God, who is Love, can and does bestow.

Aside from the Biblical admonition to "give thanks," human experience furnishes abundant proofs of the benefit derived from this quality and attitude of human thought. Indeed it is quite evident that he who cultivates the true spirit of thankfulness is a most fortunate and happy individual; and as the definitions plainly indicate, the attainment of this Christian state of mind is worthy of the highest aspiration and constant effort of every human being.

For nearly two thousand years the Bible has proffered to mankind gracious promises and assurances: that "God is a very present help in trouble;" that He is "no respecter of persons;" neither withholdeth He good from any man. Scholastic theology has and still does proclaim these divine promises, but it has failed to make them practical and available to suffering humanity, and because of this many an unfortunate sufferer has become disheartened. To such, the advent of Christian Science is the dawn of a new day in its practical fulfilment of these promises. The tens of thousands who bear testimony to this fact furnish the irrefutable evidence of its value. This practical record of Christian Science is of itself a sufficient reason for praise and thanksgiving to God as the Giver of all good, and for deepest gratitude to the one whose purity of thought, integrity of purpose, fidelity to truth, and depth of love enabled her to "come before his presence" and receive the

Digitized by Google

revealed word which, today as of old, is healing "all manner of sicknesses," setting the captive free.

The import of thanksgiving to students of Christian Science is a law of harmony to their well-being. Experience has taught them that the more freely they give praise to God for the blessings which Christian Science has brought them, and the more obedient they are to the command, "Seek ye first the kingdom of God, and his righteousness," the more freely do they receive from the infinite abundance. Christian Scientists know the truth of what Mrs. Eddy teaches, that "Soul has infinite resources with which to bless mankind," and that "giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, pp. 60, 79). Therefore the free giving of all things does not take from but rather adds to the capacity and opportunity of receiving. This wisdom of generosity and kindness must include the giving of a cup of cold water in Christ's name, the forgiving of our debtors, the putting aside of cherished views and beliefs of so-called human knowledge, and the breaking asunder of the bonds and limitations of sense.

This open way of gratitude in Christian Science, which leads us into the presence of the all-good, all-truth, all-intelligence, and all-love, is now and forever free and unobstructed for all, and to all, who may choose to enter the path to the "green pastures" of plenteous grace, and "beside the still waters" of living sustenance, and who receive the healing, redeeming influence of omnipotent Love, the infinite blessings which Christian Science confers upon men and women here and now, whereby they may enter into the joy of the Lord.

OUT OF DARKNESS INTO LIGHT.

FANNY CARSTARPHEN BRADY.

We read in the first epistle of John that "God is light, and in him is no darkness at all;" and in Genesis, that "God created man in his own image." I had been reared very carefully in an orthodox faith and was taught by God-loving parents to read and study the Bible every day; but when quite a child my eyes began to trouble me, and they became worse as I grew older, until finally I could not see to read at all. After a while I became totally blind, and one of the finest oculists in the country said I would never see again. I then pondered very much the beautiful verses above quoted, but to me they seemed very contradictory, for if God was light at all times, and if man was made in God's own image, how could man for one instant be in darkness? Yet here was I, living in total darkness. I believed that I was made in God's image, and that God is light, and yet I seemed to be a manifestation of darkness. The more I pondered these two quotations, the more perplexed I became, until I gave up in despair.

After several oculists had pronounced my case hopeless, I was persuaded to try Christian Science. I had no faith that it would heal me, but I was told that Christian Scientists have a wonderful understanding of God, and I was perfectly willing to pay for this spiritual understanding, although it might never heal me. When they began to read to me from their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I saw at once that it gave the true interpretation of the Bible, and when they read the statement on page 504, "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence," it dawned upon my consciousness slowly but surely that this divine light was represented by a state of consciousness which included the entire universe; that God must be absolutely unconscious of anything unlike Himself; that being All-in-all, there could be nothing else; and all His ideas have always existed, did exist now, and would always exist, perfect,—even as the Father in heaven is perfect. I saw that as God had made all, there could be no other authority or power,—God being the only power,—and to claim that man ever was or could be sick or sinful was a denial of the truth.

As this wondrous spiritual light dawned on my consciousness, the physical sense of sight came to my eyes, and I was perfectly healed of blindness. I, however, found that to remain healed I must dwell in this state of consciousness wherein I had proven to the material senses, so called, that "God is light, and in him is no darkness at all." I saw that in my religious life, my home life, my social and business life, I must not for one instant see or acknowledge as real any life or light but that of God, Spirit. It is now over twelve years since I began the study of Christian Science, and all these years I have continually read and studied these two books, the Bible and Science and Health, and have endeavored to live according to their teachings. My eyes have remained perfectly healed, for which I lovingly thank God, and I am deeply grateful to our Leader, Mrs. Eddy.

TWO THANKSGIVINGS.

ELOISE CAMERON MAC GREGOR.

It was two hundred and eighty-eight years ago that a band of people, small in number but large in faith and in loyal devotion to right, came together for a public thanksgiving to God for their first scanty harvest, wrested from nature by untold toil, privation, and self-sacrifice, in the wilderness of a strange land. This harvest was rejoiced over, not merely as the material means for satisfying the needs of the so-called physical man, but because it indicated their partial release from a state and church government which was too tolerant of evil, according to a rising moral standard.

As we look back, we are thankful to the Pilgrim Fathers for their high ideals, intrepid courage, and brave persistency in separating themselves from all that would soil their sense of honor, justice, and religion, or that would interfere with their rights of conscience to worship God with less of formalism and dogmatism. Yet we may see today precisely the same need of purification from a reliance on forms or ceremonies as a means to holiness, and the need to be rid of a reliance on drugs, matter, or mortal mind, as a means to health. We hear the same call of reason to come out from the popular but ignorant superstitions about God, in order to gain in some measure a rational concept of Him as infinite good, the divine Principle of all goodness, working according to immutable law, which can therefore be understood instead of remaining a mystery. We hear the same demand of conscience to love right because it is right, regardless of any reward; to love goodness for the sake of good, and to express this love in the more practical ways of honesty, justice, mercy, charity, cooperation, and a consecrated pocketbook.

If we consider it truly admirable in the Pilgrims to have left the old friends and the old homes, for the sake of a purer, more honest concept of religion, we have the opportunity to put our admiration to the proof by emulating their example today in leaving old haunts, however attractive to the senses; in casting off old habits of thought; in resolutely guarding our speech against the voicing of error; and in setting sail, however stormy the seas, for this new country,—"the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 227).

When our old ways of thinking have brought forth their full and inevitable results of sin, sickness, and death, when

Digitized by Google

we have suffered sufficiently from the old mistakes, then we are as glad to hear of Christian Science as were the Pilgrim Fathers to be assured of the new world of freedom in the west; and in proportion to our relinquishment of the false, we become as grateful to Mrs. Eddy for having made the great discovery of this new-old truth, as were the Puritans grateful to Columbus. No intelligent person, at that time or since, ever claimed that Columbus invented America, nor did any one ever complain that the Puritans worshiped Columbus. While in Christian Science, as on a new continent, every one may have a place and a fresh opportunity to begin anew, yet mere believing in better things will never enable one to make his way, any more than mere believing in Columbus' discovery would bring one the benefits of it. While we are grateful to Christ Jesus, who first showed us the way across the troubled sea of mortal experience, and grateful to Mrs. Eddy, who rediscovered this way after it had been forgotten for over sixteen centuries, the only gratitude worthy of the name is manifest when we follow their example in thought, word, and deed. As we do this we find that their work for humanity bears a relation to our present problems similar to that which the work of Columbus bore to the Pilgrims.

To know that there is a definite and a desirable goal is a great encouragement, and to know that it has been reached by some other pilgrim removes much fear of the journey; while to understand that Mrs. Eddy has given us the rules and directions for reaching it in "Science and Health with Key to the Scriptures," the most priceless benefaction to this age, stimulates us to press on toward the goal. Her great discovery yields us only an indirect and general benefit, however, unless we learn and apply its teachings in patient obedience to Principle, with the same persistent self-sacrifice that she has shown. Christian Science offers wonderful results in proportion to its great demands and requirements. Whenever its conditions are fulfilled, effects follow, exactly as in any other science.

After all the centuries of speculation and guessing, can any tongue or pen express the gratitude we ought to feel to our Leader for her logical and demonstrable explanation of God, man, and the universe, whereby all are enabled, in the measure of their understanding and honest practice, to attack confidently and destroy effectively the belief in sin, sickness, and death.

LOOKING UPWARD.

D. R. MC NUTT.

In the book of Daniel we read: "I Nebuchadnezzar lifted up mine eyes unto heaven, and mine understanding returned unto me." This is what Christian Scientists are doing the world over—looking up into heaven; not into the blue, starry canopy overhead, but up out of the material into the spiritual; to be, as Paul says, "absent from the body, and to be present with the Lord;" out of finite into the infinite; away from the sordid conditions of mortal belief, and above the mutations of the transitory into the sacred sanctuary of God, where the soul is saturated with His hallowed presence. "Oh, what must it be to be there!" in the language of an old hymn. We who are Christian Scientists know, for we have often been there—not in an idealistic realm of peace where we may "lay our burdens down," but rather by walking "in the spirit" and bearing our burdens, which are never too weighty, for Love gives us strength for our day.

Looking up—what a privilege! What a relief to be borne above the human horizon with its sense of limitation, and to have "understanding" come to us: the understanding that man is not a mere corporeal being subject to diseases and limitations of every nature, as the ages have claimed. For in Christ, Truth, is fulness, and Paul says we are "complete in him." Neither principalities nor powers can pluck us from God's hand, for He is omnipotence, and knows "no variableness, neither shadow of turning." Could anything be more secure or permanent?

What a glorified vision of being,—to realize the great verity of our true sonship. Then let us recognize the Father in all things, as Christ Jesus did, for we cannot disregard Him in whom we live, move, and have our being. Let God have the glory for all His benefits as we have learned to estimate them in Christian Science,—the healing of our sicknesses, the forgiveness of our sins; and, most of all, for the understanding of the truth which heals and saves.

OCCASIONS FOR GRATITUDE.

MILTON B. MARKS.

Mortals are so accustomed to insist that all things shall come to them only through the inspection office of physical sense, there receiving its stamp of approval or condemnation and being consigned to a mission of joy or sorrow as the officer of human opinion may dictate, that even gratitude for that which arouses us from a sense of materiality needs to be learned in Christian Science.

Working, as we strive to do, under the rule that "God is Spirit" and that all good is spiritually discerned, it becomes apparent that to submit to the temptation of discouragement is to deviate from this rule. It indicates a failure to perceive that it is material sense only—that which had aspired to advance by something other than spiritual evolution—which is cast down. God's spiritual idea, which never has hope in aught besides God, is not and cannot be discomforted; its anchorage is eternal. If the physical senses say, "I am discouraged," shall one therefore admit, "I have nothing to be grateful for"? Rather than thus stultify our reasoning from the rule laid down, it is essential that we refuse to measure our gratitude according to old standards, refuse to accept the dictum of material belief that there must be something tangible to the material senses before we can be happy. Then Spirit, God, gives us the courage to declare and the ability to know that, by reason of the fact that those hopes and aspirations which were built upon the sand of human desire have fallen, we have reached a new occasion for gratitude and joy, for now we desire to build upon the rock, Christ, Truth, and by the light of eternal Love we see more clearly where the spiritual foundation lies.

Our text-book says (Science and Health, p. 91), "The destruction of error is by no means the destruction of Truth or Life, but is the acknowledgment of them." It is our privilege, then, to take heart, rejoicing always in the ever-presence of Love and Truth, well knowing that the one who hopes only in God can never be disheartened with that prospect, and remembering that man as God's likeness is spiritual in his thinking and in his doing as well.

[Written for the *Sentinel*.]

LOYALTY.

AGNES FLORIDA CHALMERS.

Father, I look to Thee for all I need,
From these, my brethren, whom I aid today
I would exact no homage. Truth's bright way
Grows brighter when each kindly deed is giv'n
For Love's sake. Yea, this is the only path to heav'n,—
Gladly to work, and know that work well done
Brings God's own recompense to every one.
Father, all wise, teach me to watch and pray
That I, nor homage give nor homage ask,
Save loyalty to Thee, and for each daily task.

SELECTED ARTICLES.

[We publish with great pleasure the following terse and convincing article by Mr. Dixon, realizing that there is no other subject of such vital interest to humanity as the healing work of Christ Jesus, and its restoration in Christian Science practice.—EDITOR.]

[Frederick Dixon in *Daily Express*, London.]

In his letter contained in your issue of Thursday the critic asks me a question to which I am most happy to reply. He is anxious to know what meaning I attach to the word "works" in the passage from John, "He that believeth on me, the works that I do shall he do also." I attach to it the natural unstrained meaning of the English and Greek text.

The word translated "works" is *erga*, and if the critic will look up the word *erga* as used by John he will probably come to the conclusion that it would have been wiser if he had not asked the question. I cannot give him all the instances in which it is used, but I will give him one. When John heard in prison the "works of Christ," he sent his disciples to Jesus, and Jesus recounted his works to them in the following words: "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." I imagine, therefore, that it is quite clear that the works which Jesus did, and which he said could be performed by those who believed in him, included something more than the healing of functional disease, under the egis of a doctor.

Spiritual healing is effected by gaining a knowledge of the truth which Christ Jesus said would make men free, and this knowledge is acquired exactly in proportion as a man, walking in the footsteps of Christ Jesus, attains the Mind of Christ. Any person in the entire world who gains this knowledge of Truth will gain, precisely in the same proportion, the power to do the works which Christ Jesus did.

A Christian Scientist does not say he can perform all the works Christ Jesus performed, but he does say that not only he but every other person can perform those works exactly in proportion as they acquire the Mind which was in Christ Jesus. It would be well for the critic to remember that it was the Founder of Christianity, and no one else, who made the ability to perform these works the test of a man's belief, and consequently of his Christianity.

[J. R. Mosley in *Savannah* (Ga.) *News*.]

Christian Science strongly opposes every effort to influence another mentally against his highest good, whether this is done under the name of hypnotism, mesmerism, animal magnetism, or any other name, or under no name at all. But while Christian Science rightly insists that all wrong thoughts and efforts must be corrected and overcome, it overcomes what is called animal magnetism, or what the psychologists call pernicious mental evil, on the same basis that it overcomes other phases of evil. It teaches that the Christ way of overcoming evil with good is not only the best way, but the only way by which it can be destroyed, and thus made unreal to human experience.

It does not teach that animal magnetism or wrong mental influence and action is real and that sickness is merely imaginary, but it teaches that every phase of error, whether it be sickness, or death, or sin, is unreal in the sense that it is not of God, and is therefore not real in the sense that all that God made, constitutes, and governs is real. In other words, in Christian Science the real, the good, and the Godlike mean one and the same thing. But, as previously indicated, whatever is less than good and healthy and wholesome must be grappled with and overcome, that God and His perfect will, ways, and works may be All-in-all.

While a lie is unreal in the sense that it is untrue, the way to destroy falsehood is through knowing and voicing the truth. While sickness is unreal in the sense that it is not of God, not eternal, not natural, and that it can be overcome, to make it unreal to human experience requires right thinking and right living. In like manner, Christian Science says that while wrong mental influence and action are unreal for similar reasons, it nevertheless insists that they must be resisted and overcome in order to make them unreal on the human plane. In this connection it is only right to recognize that Christian Science, in common with all forms of pure Christianity, teaches that those who put their trust in God and will to do good and only good, are protected against every phase of evil. Only those can be hypnotized by evil who yield to it rather than resist it. No one can be mesmerized against his will.

[Alfred Farlow in *Madison* (Ind.) *Courier*.]

Christian Scientists believe that all reasonable and just things are possible to him who has unbounded faith in God. It is the teaching of Christian Science that all men and all things are in reality upheld by divine Mind, as the Scriptures teach in the text: "In him we live, and move, and have our being." To mortal vision it does not so appear. Material sense does not perceive the "unseen" power which creates and sustains the universe, but attributes the poise and motion of all things to forces apart from God.

When mortals shall have perfected their understanding of and reliance upon God as the only real means of support, there can be no injury to them. The psalmist said, "They shall bear thee up in their hands, lest thou dash thy foot against a stone." Who shall thus be borne? Those who dwell "in the secret place of the most High," those who live in the realization of ever-present Spirit; secret so far as material sense is concerned, but revealed to spiritual consciousness.

Grounded upon the understanding that there is but one infinite Mind, neither Mrs. Eddy nor her students could ascribe omnipotence to human "will." While feats which involve astonishing manifestations of human will prove the general proposition of Christian Science, that even on the mortal plane all supposed causation is mental, such manifestation is wholly apart from the eternal fact of spiritual truth that God, the one infinite Mind, creates and upholds all things.

[From an editorial in *Ithaca* (N. Y.) *Journal*.]

That the Christian Science church is supplying a need that has existed from the beginning of the world is proved by its marvelous growth in the last decade. Statistics collected for the six years previous to and ending with 1906 show that during that period the number of its churches increased from 221 to 638 and its membership from 8,724 to 85,717—a record that is duplicated by no other religious organization in the world. In 1906 the seating capacity of its churches was 81,823. This is surely a wonderful record and it speaks eloquently for the character of those who have embraced its teachings and their devotion to its principles.

The progress of the Christian Science church has been steady, silent, and resistless. Starting from the humblest of beginnings, with only a woman as its protagonist, reviled by the unthinking and opposed by those who did not even take the time to investigate its teachings at first hand, it has come to occupy a commanding position in the religious world.

Its membership is composed of the best class of our citizenship, the men and women who do big things and do them

Digitized by Google

thoroughly. Its prominent workers have been tactful, active, and aggressive. Its power to render aid in the most precious concerns of life has been demonstrated not once, but hundreds of thousands of times. Its opportunities are boundless and its work will not be finished until the thralls of sin and sickness and fear and incapacity have been broken for every individual on the face of the earth.

[*New York* (N. Y.) *Press.*]

"Christian Science has given me one definite advantage, at any rate," said the woman who had tried it. "It has solved the servant problem for me. I no longer cower in the presence of a cook or a housemaid. I usually can adjust any unpleasant situation that may arise, but if not, I am not in the least alarmed at the thought of losing a servant. My life and all my affairs are arranged so simply that I am no longer at the mercy of servants. If they choose to stay and work properly, I can give them a good place. If they fail to appreciate it, I consider that their loss; and I am perfectly adequate myself to all parts of my housework. Of course, I no longer am afraid that I shall be sick or that any member of my family will be. I know that real duties never conflict, and I have learned to drop off so many superfluities that my nerves never are racked with trying to decide what I ought to do next. It is a new kind of independence, and one that I appreciate."

[E. M. Ramsay in *Edinburgh* (Scot.) *Despatch.*]

The readers of Mrs. Eddy's book, Science and Health, are drawn from all classes of society. Among my Christian Science friends I number people who have taken the highest university honors, and people who are unlearned according to the reckoning of this world. The fact that the book appeals to people of such widely different education and upbringing, proves that Christian Science is not a fad, that it has something of real value to give—something so practical and universal that it meets alike the need of rich and poor, of dreamer and doer, of east and west.

The assertion that Christian Scientists only concern themselves with those who can pay, is untrue. If the congregation in the Christian Science church appears to be well-to-do, it is because this Science has shown many the way out of poverty and out of disease, and supplied their temporal as well as their spiritual needs. Our numbers are constantly increasing, therefore we build new churches; but the funds for these churches are found by the Scientists themselves, without the help of concerts and bazaars.

In conclusion, I may say that while I have never known a Christian Science practitioner who made more than a modest competence by his healing, I have known many who have sacrificed good appointments and lucrative occupations in order to devote their whole time and energy to this service of love.

[Editorial in *Portland* (Ore.) *Journal.*]

We do not all agree with the beliefs of Christian Science, but all of us who are in harmony with the spirit of American institutions are going to accord adherents of the cult the liberty of conscience. Who among us is bigot enough to draw his skirts about him and insist that his creed is the correct one and all others wrong? Once, there was refusal to accept even Jesus Christ, and he was spurned. There was a day when followers of Christ were stoned and burned for their beliefs. But since then Christendom has moved, and the great moral lesson that has come down through the ages is that it is wise as well as Christlike to be tolerant of the religious beliefs of others.

[William E. Brown in *Riverside* (Cal.) *Enterprise.*]

It will be helpful to remember that Christian Science is not a new ism or religion, but is the religion of the Bible. Its teaching and practice is wholly in accord with that of Jesus. It is daily striving and succeeding in a large measure to obey the commands of the Master to preach the gospel and to heal the sick.

By the declaration there is no matter, Christian Science does not mean there is no body, no man, no universe, but it asserts that these are not material, as they seem to be to the material senses. Eminent physical scientists are now agreeing with Christian Science on this point, and agree that we live in a thought-world. That Jesus also held this view is shown by his declaration, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

Christian Science is constantly proving, by the healing of the sick and sinful after all other means have failed, that its interpretation of Jesus' teaching is correct; and this proof accounts for its solid, steady growth.

[Abbot Edes Smith in *Elgin* (Minn.) *Monitor.*]

The helpful doctrines of Christian Science are as old as the Bible, for this religion is founded upon the Bible, which is accepted as its final authority. The Bible, and therefore Christian Science, teaches that sin, disease, death, and all evil forces have but a finite and temporal existence and are not the permanent realities of God's creation. "The things which are seen are temporal; but the things which are not seen are eternal."

Christian Science proclaims Jesus Christ as Master and Saviour, and accepts all that he taught, and what his apostles taught concerning him. All creeds professing to be Christian must be tested, not by human theories, but by the Bible. Christian Science recognizes as finite and temporal the belief in the reality of pain, matter, disease, death, and sin; these are "the things which are seen," which the apostle Paul declares to be "temporal;" and not "the things which are not seen," which Paul affirms to be "eternal." Again we read: "Flesh and blood cannot inherit the kingdom of God." To the sick man and the sinner sickness and sin are for the time real, until God's love and power have healed the sick man and reformed the sinner, thus making these evils no longer real to them. Said the psalmist: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

Christian Science accepts the whole Bible. God's Word declares: "I am God, and there is none else." The whole Bible teaches that life comes, not from material organism, but from God, and that there is no form of evil or of limitation (to which mortals believe that they are subject) which God does not remove and nullify. Men need suffer therefrom no longer than until they seek and find God's infinite help against which evil cannot stand, for the prophet Habakkuk tells us that God is "of purer eyes than to behold evil."

[Anne Fawsitt in *Manchester* (Eng.) *Chronicle.*]

It is patent to any earnest student of the fundamental truths of Christian Science that our clerical critic has not even a rudimentary understanding of its meaning, that his denunciations are founded upon a material basis, that he argues and declaims from a material standpoint alone, that he recognizes only the material body of Jesus. He is blind to the birthless and deathless beauty and power of the spiritual Christ.

Out of a jumble of misinterpretation and misstatement he quotes the text-book of Christian Science correctly in

Digitized by Google

one particular; it does deny that death had power over the Christ. It denies the reality of all death, save the death of trespass and sin. Will it help the world, to offer it death, to believe in death, while the people are sickening and sinning and perishing in hopeless misery? Will it help the world, to offer it a Christ at the right hand of God, to come again in some far-away future time, while the whole world is groaning in tribulation now?

Christian Science tells it of life—life abundant and rejoicing, life for evermore; it offers a Christ, ever present, all-powerful, able to save to the uttermost, and a living faith in his own words, "Lo, I am with you alway, even unto the end of the world." One more word: Christian Science does not call its people "healers," it calls them "practitioners." The healing is from God. Let us beware, lest haply we be found fighting against God.

[Eugene R. Cox in *Enterprise*, Dalton, N. Y.]

Christian Scientists plant themselves unreservedly on the declaration of Jesus that "the true worshipers shall worship the Father in spirit and in truth," and the definition of God as above given is spiritual. Further than this, throughout the text-book, Science and Health, are constant admonitions to Christian Scientists to be known by their works rather than their words, and that the responsibility of each one begins with himself, in knowing that he thinks right, acts right, and follows all the commands of Jesus, including those to heal the sick and love our neighbors.

So long as the world can see that in the doing of this we are enabled to live cleaner, better, happier, freer, and more loving lives, we can easily forego the temptation to quote texts or indulge in discussions that are fruitless.

[Nellie M. Johnson in *Omaha* (Neb.) *World-Herald*.]

The "Comforter," as defined by Jesus, is not a person, but the "Spirit of truth," verifying the Master's teaching by repeating his works. So far as understood, Christian Science has proved in the experience of many to be the promised Comforter. Inability to demonstrate this Science denotes a misapprehension of its Principle and rules, but does not prove the teaching to be false.

[Written for the *Sentinel*.]

ANSWER.

RUTH INGRAHAM.

O Love, who didst the want supply
  Of Hagar's famished son,
And in the burning wilderness
  Didst make the streams to run,
In this, the desert of my life,
  Again Thy will be done!

O Thou by whom that mother's prayer—
  Voiceless in her despair—
Was heard and answered in the hour
  That seemed to mock Thy care,
Swift still to hear, for my great need
  Refreshment Thou'lt prepare.

. . . . . .

Forgive, O Love, and thanks receive;
  My woe doth but compel
A lifting up of downcast eyes,
  Blinded by error's spell,
To see, as near me in my need,
  The angel and the well!

AMONG THE CHURCHES.

SAN DIEGO, CAL.

Just as the sun rose over the top of the mountains to the east of San Diego this morning [Oct. 25], the suitably engraved corner-stone of the handsome new First Church of Christ, Scientist, was lowered into position and cemented. The new church is located on the corner of Second and Laurel streets, and when completed will be one of the handsomest in San Diego. The lots upon which the edifice will stand were donated to the congregation by members of the local church organization. They are valued at about fifteen thousand dollars. The church proper will cost, when completed, about fifty thousand dollars. An additional ten thousand dollars will be expended for an organ which, it is said, will be one of the finest instruments of its kind in this section of the state. When completed the church and property will represent a total valuation of about eighty thousand dollars. It is the hope of the building committee to have the church ready for occupancy either late in March or the fore part of April, 1910.

The congregation is now worshiping in an artistic brick edifice on Third street, one of the neatest appearing churches in the city. When it was built it was ample in every respect for the congregation, but as the church grew in membership (and the growth has been rapid), it soon became apparent that another and larger church would have to be erected. The church now being built will have an auditorium with a capacity of about nine hundred. The Sunday School rooms, which are so arranged that by means of sliding doors they can be made a part of the main portion of the edifice, will have a seating capacity of three hundred, making a combined capacity of about twelve hundred.—*San Diego Tribune.*

GLASGOW, SCOTLAND.

Numerically the Christian Scientists in Glasgow are as yet not a large body. The movement began in the city some six years ago. In connection with Christian Science there is a text-book which is used throughout all the churches of the movement. A lady and gentleman who came from London interested their friends in Glasgow by giving readings from the Lessons, and by and by the numbers who expressed a desire to meet together for the purpose of hearing the Lessons were deemed sufficient to warrant taking premises in the Masonic Halls, West Regent street. Subsequently a hall was taken at 141 Bath street, and premises are still retained at that address as a reading-room and for the distribution of literature.

With the continued growth of the movement the Christian Scientists now meet in the mid hall of the St. Andrew's Halls. On Sundays there are two services, and Wednesday evenings are devoted partly to hearing testimony from those who have benefited from the teaching and healing. The average attendance at these meetings is about one hundred and fifty. Through Christian Science, which is a purely spiritual movement, many people testify at these meetings to having been healed from physical and moral troubles. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been placed in all the public libraries of Glasgow, and churches and societies have been formed in many parts of the country. In Edinburgh a church has been in existence for over twelve years. There is also a society in Dunfermline, while in other places in Scotland the movement has taken root.—*Glasgow Herald.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A LETTER BY MRS. EDDY.

Brookline, Mass., Nov. 13, 1909.

To the Board of Trustees, First Church of Christ, Scientist, New York City.

Beloved Brethren:—In consideration of the present momentous question at issue in First Church of Christ, Scientist, New York city, I am constrained to say, if I can settle this church difficulty amicably by a few words, as many students think I can, I herewith cheerfully subscribe these words of love:—

My beloved brethren in First Church of Christ, Scientist, New York city, I advise you with all my soul to support the Directors of The Mother Church, and unite with those in your church who are supporting The Mother Church Directors. Abide in fellowship with and obedience to The Mother Church, and in this way God will bless and prosper you. This I know, for He has proved it to me for forty years in succession.

Lovingly yours,

MARY BAKER EDDY.

"IN CHRIST."

As we study the New Testament in the light of Christian Science, we are deeply impressed by the many evidences of a new order of things which finds expression in the Gospels and epistles, spiritual law and order displacing belief in a material order, on the part of those who had awakened to the truth of being. It is especially interesting to observe that this awakening was not confined to the Jewish people, who had for long centuries regarded themselves (and with some justice) as the custodians of the truth, for we read of a Roman centurion who with deepest reverence sought healing for his servant, and we are told that Jesus granted his request, and marveled at his faith, saying that he had not found any so great, "no, not in Israel."

We also read, in Acts, of Cornelius, another centurion, a devout man who "prayed to God alway." The story of his guidance by the one Mind is beautiful and wonderful, for it shows us how all earnest seekers are led to Christ, Truth, and also to the one best fitted to help them in the working out of their human problems. It was on this occasion that Peter declared to all who were assembled in the house of Cornelius, that "God is no respecter of persons," and that God had "anointed Jesus of Nazareth with the Holy Ghost and with power: who went about doing good, and healing all that were oppressed." Then we read that "the Holy Ghost fell on all them which heard the word."

In Paul's epistles we are often reminded of what it means to be "in Christ." In the sixteenth chapter of Romans he refers to some of his kinsmen, saying that they had been "in Christ" before him. The great significance of this expression may be gathered from his words in the fifteenth chapter of 1 Corinthians: "As in Adam all die, even so in Christ shall all be made alive." Again he says, "Thanks be unto God, which always causeth us to triumph in Christ;" then he speaks of the veil which hides from mortals the truth, and he says that this veil "is done away in Christ." He says further: "If any man be in Christ, he is a new creature;" and in the first chapter of Ephesians we find this remarkable statement: "That in the dispensation of the fulness of times he [God] might gather together in one all things in Christ, both which are in heaven, and which are on earth." Then he prays that the Father "may give unto you the spirit of wisdom and revelation in the knowledge of him," the purpose of this enlightenment being that we might know "what is the exceeding greatness of his power to us-ward who believe."

The whole of this epistle, indeed, is a pean to the triumph of the Christ. It tells of the quickening of those dead in trespasses and sins, so that they are made to "sit together in heavenly places in Christ." And to think that the world should for so long have lost sight of this glorious truth, this spiritual fact, namely, what it means to be "in Christ"! But, thank God, the light has again dawned as in Jesus' day, and again the signs follow which prove what the understanding of the Christ brings to us in Christian Science. In the Master's teachings and works Christ and Truth were inseparable, and St. John says that "we may know him that is true, and we are in him that is true, even in his Son Jesus Christ." If we are "in Christ," then sin has not dominion over us, neither has disease nor death; and this was most surely the distinctive teaching of the early Christians.

Our revered Leader tells us that "spiritual ideas unfold as we advance" (Science and Health, p. 301). This being true, what must it mean to have the fuller, clearer realization of the spiritual fact that all reality is in Christ or Truth. Is not this to dwell safely with ever-present Truth and Love?

ANNIE M. KNOTT.

THE NOBLER THANKSGIVING.

ONCE upon a time there was a small boy who, being given a sugar-plum, proceeded to swallow it without indicating in any way his appreciation of the kindness of the giver; whereupon the latter said, "Well, aren't you thankful for it?" "Yes," he answered; "I be. Gimme another."

This little story serves to illustrate an aspect of asserted human gratitude which we have all noted in others, surely, if not in ourselves. It is that expression of physical satisfaction, together with a longing desire for its repetition, which pertains to the pleasure-seeking world. Such a giving of thanks is recognized as conventionally fitting, and it may be a distinctly better attitude of mind than that of indifference to favors bestowed. True gratitude, however, is an entirely different thing. It is felt and expressed only when wholesome "creature comforts" are recognized as symbols of that spiritual good which comes from God alone.

When aspiration and desire are centered upon the real and divine as the source of all true satisfaction, our gladness over the "hundredfold in this present life" is altogether commendable; but when we are so far content with material things that we think of their increased possession as essential to our happiness, then our thanksgiving is flavored with that "gimme another" quality which is wholly self-centered and unideal.

Human experience brings to the many so much of disappointment and grief, with the consequent tendency to depression, that the coming of any glad-hearted spirit may cheer and help like an outburst of sunlight or song, and one often parts from such a nature with a sense that somehow his load has been greatly lightened. But the true spirit of thanksgiving means vastly more, since it springs

Digitized by Google

from the realization and demonstration of Truth. It is always a rejoicing "in the Lord," to use St. Paul's phrase. It is that heart-response to Truth and Love which enlarges the human area for the divine activity. It heals because it is a Christlike mood and leads to the heights. Said Jesus, "Father, I thank thee that thou hast heard me. . . . I knew that thou hearest me always." His thankfulness was the outgrowth of spiritual perception.

However great our occasions for gratitude that the material garners are filled; that we have homes and comforts, and that so much of peace and prosperity are ours, we cannot long escape the "enforced conviction" that all these things are but temporal, and that as a basis on which to build our hopes for happiness they are to be classified with the things of which the Scripture sage has written, "All is vanity and vexation of spirit." We already know, or must learn through pains unspeakable perchance, that none of these things bring true contentment of mind or heart and that, at their best, they yield a pleasure that is brief and seldom unalloyed.

The nobler thanksgiving is grounded in the satisfaction of a higher sense; it must link itself to God, to the things of Spirit. It must rejoice not in material possessions, or in the prospect of a larger immersion therein, but rather in conscious supremacy over materiality. Indeed the offering of thanks to God for that which does not manifest and glorify His rule, is seen by Christian Scientists to be rather incongruous, and this speaks for that uplift of thought which has come to them through the labor of one who chose the better part, and who was ready to make the sacrifice and put forth the effort necessary to secure that part, the sense of spiritual values in which the true thanksgiving is grounded.

However much or little Christian Scientists have gained for themselves of this higher sense, they can all give thanks today, and they will, that they have found an illumined path, and with clearer vision are honestly seeking to follow it.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Edinburgh, Scotland, Oct. 22, 1909.

Dear Leader:—The board of directors of First Church of Christ, Scientist, Edinburgh, are desirous that you should know of the progress we are making here, so I have been asked to write and tell you about it. We feel sure you will be glad to hear that we are going to build a church. Eight years ago you started our building fund by a very generous gift which came as a great encouragement to us in our work. The gracious words which you wrote to us at the time seemed to bring you very near to us, and gave us a wonderful sense of your loving care for even such a little band as we were, so far across the sea. You have shown us that "space is no separator of hearts" (Miscellaneous Writings, p. 150), and we love to remember that Edinburgh is dear to you as your great-grandfather's home, and that tales of Scotland told you in childhood's days are still fresh in your memory.

We want to thank you again for the *Monitor*, and the grand work it is accomplishing in removing prejudices of all sorts and drawing nations and classes together. I am sure there never was a time when the need for this was more felt than it is now. The work of the *Monitor* will go deeper than any Act of Parliament or Peace Congress; it is a messenger to announce to the world the approach of the millennium, and to prepare men's hearts to receive it.

Lovingly and loyally, your student's student,

C. LILIAS RAMSAY,

For the Board of Directors of First Church of Christ, Scientist, Edinburgh.

MRS. EDDY'S REPLY.

Box G, Brookline, Mass., Nov. 2, 1909.

Miss C. Lilias Ramsay, C.S.B., and Board of Directors, First Church of Christ, Scientist, Edinburgh, Scotland.

Beloved Christian Scientists:—Like the gentle dews of heaven and the refreshing breeze of morn, comes your dear letter to my waiting heart,—waiting in due expectation of just such blessedness, crowning the hope and hour of divine Science, than which nothing can exceed its ministrations of God to man.

I congratulate you on the prospect of erecting a church building, wherein to gather in praise and prayer for the whole human family.

Lovingly yours,

MARY BAKER EDDY.

[Telegram.]

Milwaukee, Wis., Nov. 5, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—We rejoice to inform you that Third Church of Christ, Scientist, has been formed here. At this our initial meeting we wish to send a unanimous expression of our love and greetings to you, the Discoverer of Christian Science, and our heartfelt gratitude for your ceaseless labors in our behalf; and for the loving wisdom which has protected and made possible the growth and prosperity of this most blessed Cause. We pray that the love which you teach may illuminate the life of every member. Your loyal followers,

THIRD CHURCH OF CHRIST, SCIENTIST,
Milwaukee, Wis.

MRS. EDDY'S REPLY.

Third Church of Christ, Scientist, Milwaukee, Wis.

Beloved Christian Scientists:—Accept my love, thanks, and encouragement. MARY BAKER EDDY.

New York, N. Y., Nov. 5, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—As our material festival of thanksgiving approaches, it reminds me of the perpetual thanksgiving which true Christian Scientists are rendering to God for the revelation of Truth which has come to them from your pure and unselfish work in Christian Science. I see more clearly than ever that the Mind which was also in Christ Jesus, the pure reflection of infinite Mind, had no elements of the so-called human mind or will-power. I see also that primarily Christian Science is educational in the broadest sense, leading out the human thought from the darkness of mortal belief, based upon a material concept of life resident in matter, to the spiritual concept of Life as God.

At this time, after ten years' study and demonstration of the truth, I desire to give my thanks to you as the Founder and true interpreter of Christian Science to humanity.

With loving gratitude,

Yours loyally,

ROBERT E. CAREY.

Lexington, Ky., Oct. 19, 1909.

Dearly Beloved Leader:—Recently I had an experience which I believe will cause you to rejoice, for it shows that your students are understanding the control which Love holds over all and proving the viper to be harmless (Science and Health, p. 514), just as Paul did nineteen hundred years ago; and that they also realize "'Tis the same hand unfolds His power, and writes the page" (Christ and Christmas).

In August I spent three weeks at Oil Springs, Ky., and while there went with a party of fourteen to Pilot Knob

Digitized by Google

(one of Daniel Boone's camping-places). On the way down from the Knob, one of the ladies asked me to get her a bunch of mountain pinks, which were growing out of the rocks, and when I reached out to pull them I was bitten by a snake. At first, thinking my finger had been pricked by a thorn, I gave my hand a shake, and reached out again to get the flowers; then I saw the snake, a large copperhead, and I knew what had caused the blood to flow from my finger. The party became greatly alarmed, and looked when I "should have swollen, or fallen down dead suddenly." My hand did swell, but I refused their sympathy, refused to have my finger cut off, to go to the nearest physician, or to send for my wife; but as soon as I reached the hotel (about five o'clock), I telephoned to a Scientist in Lexington for treatment. I ate a good supper, laughed and talked with the guests until half past eight o'clock; then went to my room and studied the Lesson-Sermon; slept all night, and wakened in the morning feeling fine. In thirty-six hours all the swelling had disappeared from my hand. I experienced no suffering in any way, except from a feeling of tightness when my hand was swollen.

From the very depths of my heart, I thank you for showing us how to make this demonstration, for showing us how to prove that nothing shall hurt or destroy. I had been telling my friends that ours was a demonstrable religion, and I had the privilege of proving it.

With gratitude and love,

OSCAR R. KING.

Lexington, Ky., Nov. 3, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dearest Leader:—The day after Mr. King telephoned for treatment, I met the state regent of the D. A. R. (Mrs. C. D. Chenault), and her first question was, "Are you the lady who treated Mr. King yesterday?" She said that two members of their chapter had come from Oil Springs, Ky., that morning and attended their meeting. They were both in the party that went to Pilot Knob, and they told her of Mr. King's experience,—of how he was bitten by the snake, of his refusing all material aid, and of how marvelous his recovery seemed to them. One of the ladies stayed awake all night, expecting him to die. Mr. King is our Second Reader, and a prominent jeweler here. "The grandeur of the word, the power of Truth, is again casting out evils and healing the sick; and it is whispered, 'This is Science'" (Miscellaneous Writings, p. 99).

With deep love and gratitude,

HELEN ROGERS.

Indianapolis, Ind., Nov. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear and Revered Leader:—Among the many thousands of testimonials of gratitude to you for the dear Science that is so helpful and so uplifting, this truly heartfelt expression of mine may not be amiss, in that it tells of Truth's transforming power,—Truth found through the study of your inestimable gift to the race, "Science and Health with Key to the Scriptures." My espousal of the tenets of Christian Science came, not from the healing of physical ills, but because of a hunger for spiritual food, which I could not find in the fold of my former religious affiliation, and out of which I had drifted in my search for truth.

After putting the current cults and isms to the test, and finding them only Dead Sea fruit, which fell to ashes at the test of even slight investigation, it was my good fortune to hear a lecture on Christian Science by the Hon. Clarence A. Buskirk, and it proved to be the turning-point in my career. I began at once to investigate the Science which his masterful logic presented so clearly, and my inquiries soon led me into the presence of a Christian Science practitioner, a high-souled, earnest, conscientious man, who answered my questions carefully, and lovingly withal, and who gave me a *Sentinel* and a few tracts to read. After this I secured a copy of Science and Health and read it through to my dear wife, who agreed with me that herein we had at last found the truth for which we had so long been hungering.

A continued study of this truly wonderful book led me, after a period of six months, to abandon the practice of medicine, in which I had been engaged for ten years, and to resign from the faculty of a medical college in which I had lectured for eight years, since which (now nearly two years) I have been engaged in a wholly different occupation. Some of my friends predicted that I would starve, saying that it was business suicide to abandon a profession which up to that time had been my sole mode of supply; but the result has proven otherwise, and we have realized in very truth that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). We have found a growing joy and satisfaction in the reading and study of the Bible, through having its inspirations made clear by the use of the truly wonderful key you have given us in our text-book, and we are glad beyond expression that we have so priceless a treasure.

We have just passed through a most satisfactory experience in receiving class instruction from one of your own students, and truly feel that we have "enlisted to lessen evil, disease, and death" (Science and Health, p. 450), and find added inspiration from "Miscellaneous Writings," "Unity of Good," the *Journal*, *Sentinel*, and *Monitor*. The absolute and irrefutable logic of your writings appeals to us as nothing else could, and we realize that we are, in the largest conceivable sense, your grateful debtors therefor. Life brightened, its possibilities enhanced through the ability to employ our faculties, capacities, and powers in a wider range of usefulness, gives us a joy beyond words.

I might extend this letter indefinitely and still be unable to portray adequately my sense of gratitude to you, so I will say that my life henceforth shall be devoted to the further acquirement of this inexhaustible Science, and its employment to best ends.

Sincerely yours,

D. H. SNOKE, M.D.

Cambridge, Mass., Nov. 5, 1909.

Mrs. Mary Baker Eddy.

Dearly Beloved Leader:—I have longed for five years to send you my love, gratitude, and appreciation of your loving labors for humanity. Christian Science has indeed made life worth the living. Your book Science and Health is the most precious thing I possess, and the dear Mother Church is always a joy and inspiration. Then comes the monthly blessing from the *Journal;* the weekly encouragement of the *Sentinel;* and, as if that were not enough, the *Monitor* brings us daily cheer. These are but a few of the beautiful manifestations of God's ever-presence which you are so constantly showing us, both by example and teaching. It is my earnest desire to make richer the spoken words of gratitude, by helping to lift mankind out of ignorance.

Lovingly and gratefully yours,

ANNE F. FISKE.

SPECIAL PAMPHLET.

About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 15 cents each, $1.50 a dozen, $12.00 a hundred.

THE LECTURES.

ST. LOUIS, MO.

Christian Scientists representing the four churches in St. Louis and those of Kirkwood and Belleville, and hundreds of strangers to the cult, taxed the capacity of the Odeon yesterday afternoon [Oct. 3] to listen to a lecture by Judge William G. Ewing of Chicago. Long before the hour for the lecture to begin every available seat in the house had been taken, and many stood in the foyer during the address. The meeting was the denomination's contribution to the religious services of the day, marking the opening of the centennial celebration. Judge Ewing was introduced by John D. Johnson, the St. Louis attorney, who said that he was not a Christian Scientist, but that he wanted to be. "I have progressed far enough in the investigation of Christian Science to say that it is one of the greatest discoveries of the last century," said Mr. Johnson. "Christian Scientists are all good citizens, for Christian Science means good citizenship."

St. Louis Globe-Democrat.

RAPID CITY, SO. DAK.

A splendid audience assembled in Library Hall last evening [Oct. 1] to listen to a lecture on Christian Science by Miss Mary Brookins of Minneapolis. The lecturer was introduced by Miss Grace French, who said in part,—

Why are we here? Whence come we? Whither do we go? That the answers to these questions have not satisfied the human mind is evidenced by the many isms, creeds, or lack of creeds. Yet we all have access to the same Bible, and there we find that "God so loved the world, that he gave his only begotten Son; that whosoever believeth in him should not perish, but have everlasting life."

From this we see that God has provided a way of salvation for all, and that He sent Jesus the Christ to show us that way. Why, then, after nineteen centuries, is humanity still struggling on, sinning, suffering, dying? For the reason that we have not understood the way or the Wayshower. Near the end of the nineteenth century arose one of such pure thought and life that she perceived the meaning of the words and works of the Galilean Prophet.

God-directed and sustained, Mrs. Eddy has given to the world this truer understanding of God and man which reveals a full salvation not only from sin but from physical suffering—God's law—the Christ Science.

Rapid City Journal.

PEORIA, ILL.

The semiannual lecture on Christian Science was given by William D. McCrackan, M.A., of Boston, Mass., at the Grand Opera House yesterday afternoon [Oct. 3] to a large and attentive audience. Samuel Paterson Prowse introduced the speaker, saying in part,—

The lessons of history teach us to keep our minds open, cautiously but candidly, for the reception of new truths, which may conflict with systems hoary with age and hallowed by memory. Christian Science has stood severe criticism for over thirty years, and still stands it and withstands it. Its rapid and quiet growth is phenomenal in religious history. It has adapted the philosophy of religion to the practicability of humanity. It has not attempted to make converts and will not enter controversial arenas. It rejoices in the success of all truly religious teachers and deprecates criticism of their methods. It advocates and stands for higher life, personal purity, and civic righteousness.

Those of us who are not identified with this church, founded in love and builded on faith, must bear witness to its practical results and ethical altitudes. A religion that cheers in the darkness and shelters in the storm, that breaks the chain of pain and removes the shackles of enfeebling habit, that transforms unworthy ambition into laudable enterprise, that changes disagreeable characteristics into delightful companionship, that enables the mentally dejected to look up and catch the glory of the sky, that aids the physically despondent to take hope and enjoy the smile of friend and skill of finger and scent of flower and sweep of field, that helps the disheartened to unravel the tangled threads of dull existence and weave them into the beautiful fabric of better and brighter days, ought to receive a fair hearing; and, as a great and additional fact in the world's spiritual advancement, be warmly welcomed by all who believe in the fundamentals of the Christian faith.

Peoria Herald-Transcript.

LECTURES TO BE DELIVERED.

Buffalo, N. Y.—Clarence C. Eaton, Convention Hall, 8:15 p.m., Nov. 22.
Chicago, Ill.—William D. McCrackan, M.A., Seventh Church, 5318 Kenmore avenue, 3:30 p.m., Nov. 21; 8 p.m., Nov. 22.
Fairbury, Ill.—Judge William G. Ewing, Central Opera House, Nov. 23.
Franklin, Ind.—Hon. Clarence A. Buskirk, Opera House, Nov. 25.
Villisca, Ia.—Frank H. Leonard, Opera House, Nov. 25.
Battle Creek, Mich.—Clarence C. Eaton, Independent Church, Maple street, Nov. 26.
Fruitvale, Cal.—Francis J. Fluno, M.D., New Masonic Hall, 3 p.m., Nov. 28.
Pittsfield, Ill.—Prof. Hermann S. Hering, Opera House, Nov. 30.
El Reno, Okla.—Frank H. Leonard, El Reno Theater, Nov. 30.
Vincennes, Ind.—Rev. William P. McKenzie, Court House, Nov. 30.
Palmyra, N. Y.—Hon. Clarence A. Buskirk, Opera House, 8:15 p.m., Dec. 2.
Enid, Okla.—Clarence C. Eaton, Loewen Opera House, Dec. 2.
Elgin, Ill.—Prof. Hermann S. Hering, Universalist Church, 8:15 p.m., Dec. 2.
Yates Center, Kan.—Frank H. Leonard, Dec. 2.

TESTIMONIES OF HEALING.

At this Thanksgiving time, when thought is going out in gratitude for the many blessings received, may I, too, give thanks for this great truth that has come into my life, making the desert to blossom and bring forth fruit, refreshing the parched ground, and causing the springs of life to burst forth anew.

Since early childhood there had always been hidden away in the most sacred place in thought, where none could touch it to shatter it by unbelief, a hope, yea a certainty, that some time the Christ-cure would come to me, even as it came to those who were privileged to walk with Jesus by the Sea of Galilee; that I, too, would feel Truth's healing touch, and the discord which had blighted all my life would be taken from me. I waited many years for its appearing; I knew not in what guise it would come, but I knew that when it came I should recognize it.

And at last it did come, through our inspired text-book, Science and Health, with the healing for which I had waited so long. It has filled my every need, and like all that comes from divine Love, it has given me far more than I had asked. I see now that I did not know how to ask aright. I was only seeking for physical healing; but our heavenly Father knew what I had need of, and that was the spiritual healing. This healing is coming to me daily, as I reach out for it, and as I grasp this uplifting, enfolding truth, the physical externalization follows as a natural consequence, just as the melting of the ice follows the action of the sun's rays, as the bursting of the buds follows the gentle spring rains.

My thought has gone out so much of late to the work of the primitive Christians,—those faithful followers of our dear Master to whom this sacred truth had been revealed, who saw so clearly that it was only by living close to Christ that this healing power could be retained. They knew that if they let this teaching become adulterated with materiality, it would gradually but surely be lost to them and to the world. One by one they suffered martyrdom rather than prove disloyal to their teaching, and as their treasured writings were being destroyed, they may have felt that it would only be a question of time until all would be swept away from the earth. When the last faithful follower saw that hate was soon to seal his lips, his heart must have gone out in a yearning cry, a longing to know who would be called to take up this work again; when, in future ages, this Christ-healing would be taught upon the earth again, and Christ's kingdom be established, even as the Master promised. But divine Love had already provided for the need, and to one in our own day, who was consecrated and loyal to God, this truth has been revealed, and thereby the centuries have clasped hands, the abyss of darkness has been bridged over. Thus is Love seen to be "the master of hate" (Science and Health, p. 44). Christian Science is proving to a long-waiting world that Christ's kingdom is here and now,—a spiritual kingdom which is being built up in consciousness.

The disciples said, "Lord, teach us to pray," and he taught them, "Thy kingdom come." Our Leader says, "Thy kingdom is come" (*Ibid.*, p. 16), and after studying along these lines, and trying to grasp a fuller sense of this great truth, I realized as never before our beloved Leader's mission, her continuance of this work in direct line with that of those loyal witnesses of the early day, and her noble efforts to retain the purity of her God-given message. On studying again in Science and Health I found it glowing with a new meaning, the spiritual sense of its teachings had come to me, and I saw as I had never seen before that the kernel of Jesus' teachings and of our dear Leader's is one and the same, both point to the setting up of a spiritual kingdom.

Mrs. Eddy says, "Let us learn of the real and eternal, and prepare for the reign of Spirit, the kingdom of heaven, —the reign and rule of universal harmony, which cannot be lost nor remain forever unseen" (*Ibid.*, p. 208). Just as fast as belief in matter is laid aside, just so fast are we helping to accomplish this glorious work, and this can only be done through love, meekness, humility; by casting out self and knowing God's allness. An uplifting sense of its beauty and completeness has dawned upon me, I have indeed been taken up on the mountain-top and permitted to obtain a glimpse of the promised land.

MRS. MARY M. BELL, San Diego, Cal.

[Translated from the German.]

About four years ago I first heard of Christian Science, and was very glad to find that the teachings of Jesus do still relate to us. I asked a Christian Science practitioner to treat me, as I was suffering much pain from a rupture with which I had been afflicted since childhood, and to my great joy the truth was demonstrated, and this ailment, as well as others, disappeared. I had an enlarged sinew on the left hand which would often cause considerable pain, so that I had to carry the hand in a sling, but after I had Christian Science treatment, in a short time nothing was to be seen or felt of this ailment. Previous to this I had asked the physician's advice on account of a swelling in my neck, but had found no relief. This trouble completely disappeared in Christian Science. My eyes were often inflamed, which meant great inconvenience in my work; but this condition, too, was soon healed. One day I accidentally drove a needle deep into the wrist. I took fright and ran to a physician, who told me that he could afford no help, it being too dangerous to make an incision in that place. I returned home utterly comfortless, thinking that the most serious results might follow, but the reading of *Der Herold der Christian Science* made me change my mind. I thought that if God is the "great Physician," He would be my helper in this instance. A few days later, while I was thinking again that only God's power could bring the needle out, it became visible at the same place where it had gone in, and worked itself out slowly.

I am unable to express in words my gratitude for the great blessings which I received in the Christian Science meetings, while I was staying for a few weeks in Dresden, as well as for the great love and patience with which help was given me. A still greater blessing than the physical healing has been bestowed upon me in that I have recognized God to be Truth and Love, and received a better understanding of the teachings of Christ Jesus. I am thankful to God with all my heart that He has revealed to us through our beloved Leader, Mrs. Eddy, His great power and love, and that this glorious truth has been bestowed also upon me.

CLARA ROEDIG, Steinbach b. Johanngeorgenstadt, Germany.

It is with a heart full of gratitude that I send this testimony to tell what blessings I have received through Christian Science. I had heard of it five years before, and had laughed about it then; but I now know that I was only laughing at my own ignorance of it, for I had not investigated it, but had simply listened to what other people had said concerning it.

Some time before I was asked to read the Christian Science literature, I had had a desire to take up the reading of the Bible (which for some years previous I had given up, as I could not understand it), but I had a fear of being laughed at by the members of my family. I now thank God, however, that a way was soon made easy for

Digitized by Google

me. I had always been a member of an orthodox church, and of late years a member of the choir, yet many a time while sitting in church I had cried, for I felt sure that there was more peace and happiness offered us in the Bible than what I was then receiving; but a way was being prepared by which I was to be shown how my wants were to be supplied. The feeling of unrest came upon me so strongly in church that I felt out of place—almost like a lost sheep, having no shepherd; but the dawn was soon to appear.

One day, as I was walking in the town, unable to do any work because of a sprained wrist, a lady whom I knew to be a Christian Scientist asked me how my wrist was, and advised me to try Christian Science. I laughed and asked her what good that would do me, but I accepted some of the literature and began to read it. At first some of the statements seemed to me to be quite impossible, but as Science and Health was mentioned by nearly all the writers, I asked for the loan of it, and began to study it. Very soon a new light began to appear, and I began to see in this book the way to gain that peace and happiness for which I had longed. The lady did all she could to help me in every way, by reading the Lesson-Sermons with me. I attended the church service the first Sunday after receiving the *Sentinels* to read, and I felt so impressed with the sense of peace and harmony which attended the service, that I felt quite at rest. I soon purchased a copy of Science and Health; and I was presented with a Bible. I was then able to read the Bible without any fear, as since I have studied "Science and Health with Key to the Scriptures" by Mrs. Eddy, I can understand the Bible and its teaching.

Since coming into Christian Science, I have been healed of a very serious ailment, besides rheumatism, colds, etc.; and also a severe bite from a dog, which was healed almost instantaneously by my own demonstration of the truth. I have also been able to help the members of my family. In the case of the first mentioned ailment I tried to treat myself, but felt I was not equal to it. I then came across the passage in which our Leader advises one who feels unequal to the task to ask for help (Science and Health, p. 420), so I spoke to a lady who had been in Science for several years about the case. She declared the truth for me, and asked if I wanted her to treat me. I told her that I felt the words she had spoken had done the work, for the soreness disappeared at once and the growth, which had been there for years, had also disappeared by the next morning. I should like to say here, that some years before, when I had seen the suffering of people who had such a growth, I said that if I ever had the disease I should destroy myself. Since being in Christian Science, this belief has had to be met and overcome. I used to belong to two benefit societies, but since coming to Christian Science I have found that while relying on them for help I was not relying upon God. It was also shown me very clearly that while I was paying into these clubs I was paying for what I did not want; namely, sickness. I have found in Christian Science that God is an ever-present help at all times and in every need.

I should like to say that I lent a neighbor a copy of our text-book, and some days after he called my attention to a Bible which he had, and which he said a lady had presented to him in 1861. She told him to take great care of it, as some day he would be handed the key to it, so that he could understand it. He said, "I see that the book you have lent me is the key to it, and that I can read it in a very different light to what I used to do." I can only conclude by saying how thankful I am to God, and also to our beloved Leader, Mrs. Eddy, who has been chosen to bring once again this great blessing, the Christ-healing, to mankind. I find Christian Science to be the spiritual revelation of Christ, Truth, to which I must bow and be meek and lowly, and like the Master do my Father's will, full knowing that He wills everything for the best. I pray God that my life may be spent in obeying His commands, —to have "no other gods," and to love my neighbor as myself.—JOHN KENT, Sevenoaks, Kent, England.

I wish to express my gratitude for Christian Science; for what it has done and is doing for me every day. I came into Science not for the physical healing, but for the joy and peace it gives. I have a friend who is a Scientist, and it was through her life that I became interested. She was always so well, so kind and unselfish toward others, that I longed to know this truth, that I might live a better and more useful life.

I had been reading Science and Health, and attending the Christian Science services occasionally, for over a year, when illness came upon me and I suffered with severe pains in my back. I was unable to stand on my feet for any length of time, or to walk any distance. At times it seemed as though my entire body was in pain. I was treated through Christian Science, and at first the healing seemed slow, but after several weeks' treatment I was healed. I have since been healed of many ills, but aside from the physical healing Christian Science means everything to me. It helps me in my music and other studies, and in my home duties; it helps me to be kinder and more considerate of others.

I am thankful to God for my healing, and for the truth that has come to us through Mrs. Eddy.

OZETTA M. BOOTH, Jacksonville, Fla.

It is with the deepest gratitude that I look back on nearly three years of health and harmony, brought to me through the healing of several chronic illnesses from which I had been a sufferer. In the spring of 1906 I had a severe attack of nervous and stomach trouble, also an affection of the heart from which I had suffered since childhood. My case baffled the efforts of a specialist in this malady, and after lying four months without any apparent help, Christian Science was brought to my notice by a friend of my husband. At this period I was willing to try anything, so we informed the attending physician that we had decided to make a trial of Christian Science. He was very much opposed to any such step, and told my mother that as a friend he could not let the stomach and heart difficulty be treated by them; the nervous affection he thought they might help, but if I attempted to get on my feet too soon I might die at once.

It was therefore with fear that my mother and husband decided to call for Science treatment, but it was a last resort. Never shall I forget the joy and sunshine that came into our home with the first visit of the practitioner. In two days' time I was up and down stairs, and on the fifth day had a long automobile ride. I had not slept normally for months, and now I could sleep all night. It is needless to say that we are now members of the Christian Science church, my mother coming in through my healing. My joy and gratitude are beyond all bounds, for today I have perfect health and harmony, and a growing knowledge of God, good.

I wish to tell of a recent demonstration in an obstetrical case. We have an eight-months-old son, born under Science treatment, and he is a beautiful babe. A great many laws of mortal belief were broken in this case, laws laid upon me by several physicians, who said that I could never be a mother on account of the heart affection, but thanks to God these were overcome and proven unreal. I am thankful to God for the healing and knowledge that has come to me, thankful to Mrs. Eddy that through her this practical religion has been demonstrated and proven, and very grateful for the patience and love with which I was guided into health and harmony.

OSSIE E. DALL, Cleveland, O.

Digitized by Google

It is with deep gratitude to God, and to Mrs. Eddy for Christian Science, that I add my testimony of healing. While engaged in school-teaching, I was taken with every symptom of a fever, and it seemed that it would be impossible for me to finish out the term. I could scarcely walk to the building, though it was less than a block away; so I wrote to a Christian Science practitioner, and received treatment immediately. In a few days all trace of the disease had left me, and I successfully completed the year's work.

At another time I was suffering from severe nervous trouble. All seemed dark and confused; I was despondent and almost hopeless; so I called upon the Scientist again, and almost immediately I felt a calm, peaceful sense—a breath from heaven, as it were—pass over me. The light was shining once more! Such mental freedom and spiritual uplifting as then came to me can scarcely be expressed by words. Along with these demonstrations came not only health and peace of mind, but the solution of schoolroom problems, and as a result of this better positions have been opened for me.

I rejoice to know of the wonderful truth taught in Christian Science, and am daily striving to prove it by my life.

Miss E. Grace Cannam, Gayville, S. D.

This testimonial does not tell half the blessings received in Christian Science, but I feel that we should acknowledge the divine goodness when we have been so wonderfully blessed. The reading of the testimonies of healing in the *Sentinel* has been the means of relieving me of a number of ailments.

It was in the latter part of January, 1908, that I first heard of Christian Science through a friend. My attention was called to it on account of a brother who had been given up by physicians, and indeed by all who knew him. A friend advised me to persuade him to try Christian Science, and this he did, and in about eight weeks he was able to do some light work. When he went to take his first treatment I asked him to bring me some literature from the reading-room. He did so, and in less than two weeks nearly all of my troubles had disappeared. The statements of truth contained in two *Sentinels* did the work, for that was all the literature I then had. I did not think of myself when I recommended Christian Science to my brother, but thanks be to God we have both been helped, and it certainly is one of the greatest blessings that has ever come to me. I had been a sufferer for twenty-eight years, but I now feel like a new person.

I cannot express my gratitude for both the physical and spiritual betterment which God has bestowed upon me. I am also very grateful to that dear one who has led us into an understanding of Truth.

Mrs. J. W. Sigel, Germantown, O.

In regard to the healing of my wife through the reading of the *Sentinels*, her testimony is correct and true. Christian Science has also been a great benefit to me.

Jno. W. Sigel, Germantown, O.

In January, 1908, about two months after I became interested in Christian Science, I was driving home one night, when the carriage door was slammed upon my finger, injuring it very severely. Two doctors thought it would be necessary to amputate the finger at the joint, as it would be almost impossible for it to heal otherwise. I, however, refused to have this done, so the decision was left for a few days.

The understanding of Christian Science which I then had helped me wonderfully. At this point my case was taken up by a practitioner, with the result that when the final decision as to whether the operation should take place was to be made, to the doctor's surprise my finger had already begun to heal; so he said it was not absolutely necessary to amputate, but added that the injury was sure to give further trouble and that amputation would possibly have to be done ultimately. I cannot express how Christian Science calmed my fears during this time, replacing them with peace and absolute assurance of this healing truth. The healing went steadily on, until now a new nail has grown, though the doctor's opinion was that I should not again have one; and the finger is almost its normal length. I had also suffered from heart trouble and defective sight, both of which are improving through the knowledge and clearer understanding of divine Love which I have gained in Christian Science.

I cannot express my deep-felt gratitude for the loving and patient work done for me, not only through treatment, but in guiding and directing me along the way on my journey from sense to Soul. I am an art student, and have made much greater progress than usual this year; that is, since I have worked with the help of Christian Science, although part of the time I was unable to work, as the injured finger was on my right hand.

Ethel M. Ilsley, Lee, Kent, England.

Christian Science has indeed been a great help and comfort to me. About two years and a half ago I was suffering from a weak heart and was in a very low state, so that I could not bear the least exertion. A Christian Science practitioner then took my case, and I soon began to feel better, to gain more strength, and to enjoy better health. In deep sorrow and trouble Christian Science helped me more than words can express, therefore I cannot feel thankful enough to God, and also to Mrs. Eddy.

M. A. Dexter, London, Ont.

While still confronted with some problems that seem unsolved, it is a privilege to bear grateful testimony for Christian Science healing. Science and Health says (p. 372), "A just acknowledgment of Truth and of what it has done for us is an effectual help." Through fear of an operation, and the wonderful healing of a relative, I was led to try Christian Science for a bad case of bowel trouble, including rectal growths, and through the faithful efforts of a practitioner these difficulties were overcome. I have had several demonstrations for our little boy. One was the healing of severe earache with one treatment, and he has not been troubled with it since. Whooping-cough, colds, and other ills have also been overcome for him.

Mrs. A. Howdle, Hurley, S. D.

It is now ten years since I first heard of Christian Science. I was then a church-member, but there was a need in my life which my church did not fill. When I heard of this truth I wanted to know more of it, and after studying Science and Health, which was given to me by one who had been healed, I gradually commenced to apply the teachings which I found in it to my life, and soon learned that they were demonstrable. For eight years my husband, little daughter, and myself have depended on Christian Science for healing, for both bodily and spiritual needs. My husband was healed of severe stomach disorder, nervous and liver trouble, besides other complications, such as loss of memory, etc. He was unable to eat solid food without suffering severely, and was greatly reduced in weight; could not sleep without an opiate, and was obliged to give up work.

About five years ago, I was prostrated with a severe attack of fever. A Christian Science practitioner was called, and through her faithful and constant work for me I was delivered from this bondage in about three weeks;

Digitized by Google

which was quite wonderful to me, as we had a friend who was taken with this disease at the same time as I, and under medical treatment he was not well enough to go to work for four months, and even then was not entirely recovered. Through this healing truth our little daughter has been cured of numerous childish complaints which would have filled us with fear in the old thought. Before I heard of Christian Science I was full of fears, indeed it seemed as if fear made up most of my life. As the truth that God is the one and only power commenced to dawn on my consciousness, I saw, faintly at first, that all the terrors I had been holding had only the power I gave them, and gradually, as I took in this new-old truth, these were removed one by one, and in their place came the knowledge that as a child of God I was free; and as I kept my thought free of all that is unlike Him, I was able to help myself and others.

The Bible and Science and Health have become priceless, where before the Bible was to me only one of my many books. May God richly bless the one who has given us the "Key" to our dear new-old Bible!

MRS. CHARLES HOWARD REMMINGTON, E. Providence, R. I.

From the many wonderful instances of healing in our family in the past fifteen years it would be difficult for me to cite any particular one as being the most remarkable, yet I will narrate the following experience. Three years ago, immediately after the birth of a little son, such alarming conditions prevailed that the physician who was present expressed great fear. We had with us an experienced and faithful practitioner of Christian Science, and I believe that the doctor, who was the most magnanimous physician I have ever known, thought it safest to have the case in care of our Christian Science friend, because, after giving us fair warning of impending danger, he withdrew. Almost immediately the thing he so greatly feared came upon me, but the practitioner began at once to declare the truth audibly, and insisted on my doing so too. I began to lose consciousness, but still could hear my friend's voice. I seemed to realize that if I let go my hold on the truth by failing to obey and declare it, I would surely pass away at once; so, while the effort seemed very great, I made the fight, till suddenly I began to grasp that "sense of Life that knows no death," and the victory was won. Never did the blue sky and the green trees seem half so beautiful as when I looked at them once more through my window. There was the sense of peace that "passeth all understanding," and the beautiful words of the psalmist were verified: "Bless the Lord, . . . who redeemeth thy life from destruction."—MRS. BESSIE LARUE, Devils Lake, N. D.

Words can never express the gratitude I feel for Christian Science; I know it is the truth that makes us free. When I came into this truth I was a great sufferer from bowel trouble, and had spent nearly sixteen years of my life traveling about in search of health. I had been unable to eat solid food during this time, without suffering greatly. As *materia medica* failed to give me relief, and it seemed that I could not live much longer, I decided to try Christian Science. After the first treatment I ate heartily, and without any bad effects. I was healed of the bowel disorder at once, I am sure, but I seemed so filled with fear that I continued to take treatment for several weeks.

Christian Science has not only made me well, but has given me a better understanding of God, and of man's relation to Him, and with the psalmist I can exclaim, "Many, O Lord my God, are thy wonderful works which thou hast done, and thy thoughts which are to us-ward: they cannot be reckoned up in order unto thee: if I would declare and speak of them, they are more than can be numbered."—FLORA R. BROWN, Indianapolis, Ind.

[Translated from the German.]

About four years ago I became acquainted with Christian Science through two ladies. We had never heard of it before, but I can joyfully testify to all that I have received through its teachings. For nearly a whole year I suffered with my eyes, so that I was unable to read or to do any kind of needlework by artificial light, as the pain would become severe, a condition which often made me feel very unhappy. I had also an enlargement of the throat, which often caused me much pain. I asked for treatment in Christian Science, and in a short time was healed of both these troubles, as well as of severe headaches.

Three years ago, I accidentally cut two fingers of the right hand very badly. I went to a physician to have them dressed, and he told me I would probably have fever from the wounds, and that he believed the finger-tips would not grow again in the right way. In this instance, too, I sought help in Christian Science, and found it in full measure. Both fingers healed up very quickly without my having fever or pain, and there is now no trace of this injury.

I am sincerely grateful to God, and to our revered Leader, Mrs. Eddy, through whom we have become acquainted with the way to that blessed truth through which we are freed not only of physical errors, but also acquire a deep understanding of God's Word. May these glad tidings of life, peace, and joy come to many, even to all men.

EMMA ROEDIG, Steinbach b. Johanngeorgenstadt, Germany.

I wish to testify to what Christian Science has done for me. Two years ago I was living at Port Arthur, Ont., and one day at dinner I was attacked by terrible pain. My father ran for a doctor, as we were strangers in the place and did not know of any Christian Scientists being there. When the doctor came he said I was too ill to be operated upon and thought that there was no hope for me. We all wanted to have Christian Science treatment, so my father telegraphed to a practitioner in London, and it was not long until I began to improve. I was taken sick on Thursday noon, and was so low Friday and Saturday that I knew nothing of what was going on around me, but on the following Tuesday my father took me downstairs. I was then well, though somewhat weak, but I was strong again in a very short time. I have had no trouble since. Thanks to dear Mrs. Eddy for the understanding of Truth that can heal although one is many miles from the practitioner.—LORNE JOYCE, Renfrew, Ont.

[Written for the *Sentinel*.]

BE MINE.

LAURA GERAHTY.

O LOVE, be mine this day!
And I shall sing—
Like joyous lark speeding on upward wing
To rise above earth's gloom and o'er it ring—
Love's roundelay.

O Love, be mine this night!
And I shall rest—
While angels whisper on the mountain-crest
Hushing earth's tumult to a quiet blest—
Pending the light.

O Love, be mine each breath!
And I shall know—
E'en though the tender morns to evening grow
And summer blooms lie hid in winter snow—
There is no death.

FROM OUR EXCHANGES.

[*Outlook.*]

One of the fatal popular fallacies about happiness is that it lies at the end of a long and exhausting road, with the result that when we arrive at the end we are so spent and worn that the capacity for happiness has died out of us. This is the pathetic history of a great many lives which are commonly called successful: the lives of men who have spent themselves without thought or care to get wealth or position or power, and when the long-sought end has been reached, the far-off goal touched, have found themselves indifferent to or unable to get out of wealth or power or position anything except care and responsibility. The joy escaped by the way: happiness was never other than a receding vision on the horizon. If we are to have happiness at all, we must get it here and now; and we must get it by understanding clearly that it is not at a distance either in time or space, and that it is not in any external conditions; that the capacity for it is easily exhausted; that it is a desire of the soul readily dissipated; a beautiful possibility quickly sacrificed in the haste and tumult and passion of getting and spending, of working or worrying. They who are overanxious, or who mistake the road, or who postpone to the indefinite future, commit the fatal blunder of buying happiness at the price of their capacity for it, and arrive at the end of the journey only to find that they have come alone to a place where no one meets them and that they might have had a companion every step of the way.

[Rev. A. A. Pfanstiehl in *Christian Intelligencer.*]

What then should be one's real object in life? Is it to work to make men churchmen so much as to make churchmen good men? What is the object of being a churchman at all? Is it not to help him be a good man? Zeal is wasted if efforts are put forth to build up the church, when that is made the end. But no zeal is expended wastefully that endeavors to build up the church so that she may stand for and exercise the power of Christianity in the world. The church can be a power only as its members go about to establish true Christianity. For what does this mean other than the establishment of the law of Christ?

[*Congregationalist and Christian World.*]

It is indeed difficult to be patient when we cannot think or look beyond tomorrow. Will that not be even as today, perplexed, weighed down with troubles, full of the weariness of toil and sorrow? Shall we not then be blind, as we are blind today? Yes! if we are creatures of a day. No! if we are the heirs of God and fellow-workmen of His Spirit. For tomorrow we shall have come a little nearer to the joy which He has promised and to the steadfastness in overcoming which brings serenity of soul.

[*Zion's Herald.*]

Real life is a perpetual outreaching and ongoing. We are never quite there, but always going thither. The goal is visioned, yet never completely attained. But this onwarding impulse and tendency of life is a mark of Godlikeness. If we could stay still, we would not be the sons of God. Because we bear His image we are organically subject to a divine discontent, a holy intensity of ambition, which will never let us rest until we rest in God.

[*British Congregationalist.*]

No creed must be allowed to petrify the heart, and least of all that evangelical faith which ranks love as the supreme virtue.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

A new catalogue (Number Sixteen) has recently been issued by the Society. Copies will be mailed to our patrons on application.

In sending in orders for the *Quarterly,* subscribers are requested to state whether large or small size is desired.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE, THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

CHRISTIAN SCIENCE: A RELIGION OF DOING. A Lecture. By JUDGE WILLIAM G. EWING. 26 pages.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type. Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

QUARTERLY COVERS WITH CHANGE POCKETS.—Regular size, $1.50 each or $15.00 a dozen. Pocket size, $1.40 each or $14.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. The arrangement for both high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 27 cents the copy; $2.75 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 27 cents the copy; $2.75 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

Our Catalogue for 1909, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should be made by check, post-office money order, express money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money remittances or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.90.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.50; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

During the past summer lookouts have been posted at fire observation and signal stations on four mountains in the Adirondack region of New York, and in consequence the territory under observation has been free of any dangerous fire, something which has not happened before in years. All forest fires originating this year were discovered in their incipiency by the lookouts, and extinguished by fire rangers before they gained enough headway to be destructive. So successful has been this plan that the forest, fish, and game commission has decided to build and equip about twenty more stations on minor peaks in the Adirondacks and Catskills.

Western Union Telegraph officials in New York city express satisfaction over the work done by the cable quadruplex, which is now being used on the ninety-mile cable line from Key West to Havana, and recently invented by Stephen D. Field of Stockbridge, Mass., a nephew of Cyrus W. Field, who laid the first cable. The quadruplex has long been used on land wires, but Mr. Field is the first to invent an instrument to allow four messages to go over a cable at the same time. Two messages can be sent each way at the same time, but not four from one end, as some have been led to believe.

The American Telephone and Telegraph officials announce that they have obtained control of a substantial minority interest in the shares of the Western Union Telegraph Company. An officer of the company says: "There is much to be gained by the joint construction and maintenance of plant and by its common use to the greatest possible extent, but the greatest advantage will follow the placing of the millions of telephone subscribers in close and reliable connection with the receiving and despatching offices of the telegraph company."

Secretary Ballinger has issued an order withdrawing from entry eight thousand acres of water-power land, located as follows: Six hundred and eighty-four acres on Red Rock Creek, Montana; 1,627 acres on Clark Fork in Montana and Idaho, 3,584 acres on the Gunnison river and tributaries in Colorado and New Mexico, 1,408 acres on the Klicitat river in Washington, 200 acres along the Judith river in Montana, and 712 acres along the Green river and tributaries in Wyoming.

William Arnold Shanklin was inaugurated as president of Wesleyan University last week. President Taft, Vice-President Sherman, Senator Elihu Root of New York, Elmer Ellsworth Brown, commissioner of education of the United States, a score of leading college and university presidents, a dozen bishops of the Methodist Episcopal church were present. Sixteen honorary degrees were awarded.

Intimation of the coming use of oil as a fuel for ships of the navy is contained in the announcement that bids will be opened at the Navy Bureau of Yards and Docks Dec. 4 for the construction at the Boston Navy Yard of a concrete oil-tank storage-house, fifty feet by seventy-five feet and twenty-four feet deep. Similar tanks are to be constructed at other yards on the Atlantic coast.

A speaker before the homestead commission at the State House, Boston, favored organizing a company to raise one million dollars for the purpose of acquiring homes in the rural districts for the poor of the big cities, to cost about three thousand dollars each. He would sell these homes to applicants upon monthly payments equal to what they are paying for rent and insurance.

Thirty-six million dollars for river and harbor improvements throughout the country is recommended for the next fiscal year by Brig.-Gen. W. L. Marshall, chief of engineers of the army, in his annual report.

The American Sugar Refining Company, which was found guilty of weighing frauds at its Williamsburg (N. Y.) plant, announces a reorganization of the entire working force.

The Arbuckle Brothers, large sugar importers of New York, are reported to be arranging for the payment of back duties on underweighed sugar on claims made by the Government.

International.

The budget with its radical, almost revolutionary proposals, which has been agitating England all summer, came before the House of Lords this week, and there is speculation as to what they will do with it. The chief proposals of its author, Mr. Lloyd-George, are: An increase of one per cent in the income tax on all unearned incomes and on earned incomes over fifteen thousand dollars, with a super-tax of two and a half per cent on all incomes exceeding twenty-five thousand dollars; an increase in the inheritance taxes on estates of over twenty-five thousand dollars, so that the maximum rate of fifteen per cent will be reached at five million dollars instead of at fifteen million dollars; a tax on motor cars, ranging from ten dollars for the smallest cars to three hundred dollars on a car of over sixty horse-power; a tax of six cents a gallon on gasoline. The receipts from these last two taxes are to be spent in improving and extending the good roads of the country. A tax of twenty per cent on the unearned increment of land values—that is, that part of the increase in the value of a piece of land which is due not to the labor or improvements put upon the land by its owner, but to agencies outside his control, such as the improvement of neighboring land, the growth of population, and so forth; a duty of ten per cent on the benefit accruing to the owner of leased land at the termination of a lease.

The iron ore deposits of China are immense, and the manufacture of steel bids fair to become a great industry. There are also in China vast quantities of manganese ores that contain from ten to twenty-five per cent of manganese. At Hankow, six hundred miles inland on the Yangtse-Kiang river, are situated works which have manufactured steel since 1894. These works consist of two blast furnaces with a capacity of two hundred and fifty tons per day, and two two hundred and fifty-ton furnaces are now being built. The present rail mill makes two hundred and fifty tons of rails per day. The work performed is said to be excellent, and the steel produced to be of good quality. This Hankow company employs a small army of people, numbering about twenty thousand, common laborers receiving seven cents a day and women five cents. The highest wages paid are those to blacksmiths, some of whom receive twenty dollars a month.

Baron Reys Kanda, the foremost mining engineer of Japan, is touring the mining districts of the United States. He is chiefly interested in the cyanide process, which he is anxious to apply to a number of low-grade propositions in Korea, and his visit means the purchase of the machinery necessary. "We come to America for all our mining machinery," said the baron, "for not only is it the best but it is the latest. We do not make it ourselves, for all we could do would be to copy, and by the time we had finished you Americans would have some improvement which would make ours obsolete."

The fourth of a series of great conferences that are steadily strengthening the bonds between the republics of the western hemisphere is to be held, in Buenos Aires, Argentine Republic, between the 15th and 20th of next July, and already the Argentine government, which is to be the host in this case, has been doing much in preparation for the meeting.

Baron Liang Kwai, an uncle of the Emperor of China and a brother of the Empress, recently arrived in Washington on a special mission for his government, and at the same time, as the active head of the commission, authorized to buy twenty million dollars' worth of naval supplies and ammunition.

The Finnish Diet was dissolved last week because of its refusal to sanction a bill introduced by the Russian government, asking for an appropriation of four million dollars for the defense of the empire.

The Irish land bill was passed in the House of Lords last week with some change in the amendments recently proposed by the Lords, to which the House of Commons on Nov. 5 refused to agree.

King Manuel of Portugal has been paying a royal visit to England the past week.

Industrial and Commercial.

Two professors of the Massachusetts Institute of Technology have perfected a new gauge for determining the depths of diamond drill holes which promises to become of universal use among engineers. It is capable of taking depths to over a thousand feet through a seven-eighths-inch hole, it can withstand almost any normal pressure which will be brought to bear at such a depth, is self-recording, and is independent of all varying temperatures.

Concrete and steel docks to cost more than four million dollars have been planned for Cleveland by engineers of the Pennsylvania Railroad, and work on them will begin early in 1910. The docks are to be built along the lake front and will be for the accommodation of ore shippers whose lake craft are too large to be handled with speed in the Cuyahoga river.

There has been an increase of nearly three hundred million bushels, or fully one sixth, in the production of wheat recently harvested in six countries of the northern hemisphere, which, in 1908, produced practically two thirds of the whole world's supply. These countries embrace the United States, Canada, France, Hungary, Russia, and Roumania.

The production of rice in the United States has grown from an average of less than one hundred million pounds per annum in 1885 at an average of five hundred million pounds per annum in recent years and over six hundred million pounds in 1908.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE FOUNTAIN OF LIVING WATERS."

VIOLET KER SEYMER.

THE straight and narrow way referred to in Scripture is a mental pathway, and Christian Scientists are endeavoring to tread it by abiding in right thinking. They are sometimes looked upon as narrow-minded by those whose broad-mindedness consists in indiscriminate study pursued on the ground that "there's good in everything." Although there is gold in a mine, there is dross as well, and the one to whom pure gold has been presented rarely continues to delve for himself into the dross. Those individuals whose search after truth has been impelled by the "divine discontent" referred to in poetry, call forth one's respect, and their reward is sure.

The Christian Scientist, however, convinced by proofs mental, moral, and physical of the truth of what he is studying, has probably abandoned the random following of fiction or philosophy. His aim in reading is twofold: it is to banish false beliefs and to replace them with true and inspired ideas emanating from the one Mind. Knowing that as a man "thinketh in his heart, so is he," the student of Christian Science is careful not to take into his consciousness such thought as later on will have to be denied and cast out as untrue, materialistic, fated to bring forth fruit after its kind. His aim in reading is to learn what real being is, and to unlearn everything else. Does he want to add to his already ample stock of erroneous thoughts? To do so, would be scarcely more sensible than for a housewife deliberately to bring into the room which she desires to sweep clean, relays of dust and débris. Knowing that only the pure in heart can see God, can perceive reality in all its primal beauty, the student seeks to clear his mental vision of all that is unlike good, of all that is untrue, and to arrive at the reflection of pure Mind by the elimination of wrong thoughts, rather than by their accumulation.

As a general rule, individuals peruse a medley of literature which contradicts itself and confuses the reader in the measure in which it is itself confused. Others study one subject assiduously for a time, then grow weary of it, because that theory fails them in an hour of actual need; so they turn again and again, moving in a mortal circle and finding no outlet into that spiritual reality of which they are in search. These ways of being broad-minded are apt to end in a disheartened sense that all is vanity, or else they culminate in a fallacious hope that death turns the key into heaven; but Christian Scientists learn that the way to heaven is paved for us through right thinking, and, since the human mind does not hold within itself the knowledge of salvation, mortals must needs look for redemption to that Mind which was made manifest in the words and works of Christ Jesus. Reality is not revealed through natural science, philosophy, creed, or dogma. To the spiritual minded it is evident that reality is wholly spiritual, and so the author of Science and Health echoes St. Paul's humility when he said, "My speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power."

The truth may filter through a purified and sanctified human consciousness, but it does not originate in the human mind. An explorer pursues his way up the stream of a river until he finds its source in some clear spring, and it leads him through a fertile country. Probably his name is given to the river, although he is only its discoverer. Explorers in the field of religion have mostly given their names to the religion they have founded; but Mrs. Eddy, recognizing that the Christ, or manifestation of God, is the only source of inspiration which the world has ever had or can ever need, has named her discovery "Christian Science," thus rendering unto God the things that are God's. Here we see again the truth of the inspired verse in Revelation: "And he shewed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the Lamb."

That inspiration should be at hand to uplift humanity is surely not surprising, since Jesus himself said, "The Comforter, which is the Holy Ghost, . . . shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you." That health, regeneration, and pure happiness result from the study of Christian Science is a fact to which many thousands are bearing witness, and which even the opponents of Christian Science are ceasing to deny. One wonders what are the grounds on which objection to present-day revelation could be raised. A materialist might presume to deny the revelation and its results, and this condition of mind is referred to by Paul when he says, "The natural man receiveth not the things of the Spirit of God: . . . because they are spiritually discerned."

An unprogressive Christian might deny the possibility of further revelation, but since prophets and seers have given pause to materialism throughout all time by their startling utterances, so God is not left without His witness today. There can never be a backward step in inspiration, and the revelation is growing clearer at every successive stage. After a long interval the Sermon on the Mount succeeded the teachings of the Mosaic law, and Jesus plainly taught that the one was an advance on the other. Christian Scientists find in Mrs. Eddy's writings a daily renewing of their mind, a clear stream of life-giving, love-giving thoughts which find their way from the Giver of all good, through one who has undeviatingly sought for the springs of knowledge "in spirit and in truth." Christian Scientists have found that they get the greatest good in the shortest time by the study of the Bible, their Leader's writings, and the manifold publications of The Christian Science Publishing Society. They find that in seeking to keep within the currents of truth and out of the maelstrom of human speculation, they are losing nothing that is worth keeping; on the contrary, they are assuaging their thirst at "the fountain of living waters."

A PROGRESSIVE LIFE.

EDWARD EVERETT NORWOOD.

On page 117 of "Miscellaneous Writings" Mrs. Eddy writes, "A progressive life is the reality of Life that unfolds its immortal Principle." That which is worth having is worth striving for; and truth is the pearl of great price for which all material beliefs must be surrendered in order to obtain and retain it. Mental laziness is essentially dishonest, for it rests on the assumption that another can do one's work for him. Thus a belief of vicarious atonement would be cherished which is antipodal to the teaching of Christian Science, and which leads to further wrong mental habits. Indeed, such a fallacy might induce a desire for death, with the thought that it is easier to pass on than to lay hold upon the strength of Mind, and fulfil the duty of reflecting God, who is our Life. Many have been raised from dying beds by exposing the falsity of this error, by showing them that the belief of death is without legitimate foundation, which, if indulged in under such conditions, but adds another error to be finally overcome.

Mental activity must be continuous, because the belief of error seems ever active in the general consciousness of mortals, and at any time may become operative in our thought. It must be forcible, because back of this right thinking is all the power, intelligence, energy, law, and love of the universe. It must be intelligent, because in order to be effective it must know whereof it speaks; and above all, it must be loving, for Love alone heals, and its purpose is to purify and redeem. The argument of error, or mortal mind, seems to confuse and obstruct us in our spiritual growth, and much prayerful consecration to God, with energy, humility, and love, is necessary at all times in order to succeed.

Job says, "Acquaint now thyself with him [God], and be at peace," and the apostle's admonition to "wait upon the Lord," is timely. The knowing and the waiting go hand in hand, bringing their fruits with them, and these are not delayed if we do well our work. Waiting on the Lord may also mean waiting on ourselves, and certainly very patiently on our brother, with loving trust in God.

It is a great thing to be about our Father's business, for if we stand still we stagnate, and we cannot go back, for nothing there is real. The one and only way to gain more understanding and goodness is to use intelligently what we already have, for, as our Leader tells us, "idleness is the foe of progress" (Miscellaneous Writings, p. 206), and we should know that, metaphysically speaking, it is really easier to do right than wrong, for God helps us in it, and evil has no power. Our growth steadily advances as we apprehend the continuity and activity of Truth, and that error has no continuity, no intelligence, no power. Every time the truth is realized, the expression of error is rendered inoperative, and good governs. We cannot afford to be deceived either by what error claims to have done, is doing now, and especially not in what it will in the future try to do. No matter what a lie claims to have done, or is now doing, we should remember it is powerless when it is intelligently opposed by Truth.

From a human sense standpoint there is much in the world to weep for, but from a spiritual standpoint there is very much to be grateful for, and we should be content to let Love wipe all tears away, while we look up to God and count our blessings. The promises are to him who is seemingly afar off from Truth and to him that is nigh, for from everlasting to everlasting God is divine, ever-present Love. It is the taking of the right mental attitude and holding to it until God be found All-in-all, that counts. Error is only an argument, nothing more; and it could not be less if it tried. The good work goes on until the perfect day comes; and did we but know it, that day is here now, and there is no night.

As Christian Scientists we should, above all people, be grateful to God for the many blessings which help us in mind, body, and estate, which show us the way and how to walk in it. In proportion as we are freed from sin, belief in matter, we become the servants of righteousness —clear, intelligent channels, through which good becomes operative. Truly this is a blessed life to live, the only sane and rational one, for all outside of it is based on material sense, which in Science can neither help nor harm, neither give anything nor take it away. And as consciousness is cleared of the outlining and desires of human sense, we yearn for that only which is real, enduring, and true, for it alone brings rest. These are the things which have virtue, the things of which we must think, and which we must bring out in our lives as well as on our lips.

As we do our work well, are honest, loving, and pure, hopefully expectant of the unfoldment of all good, we shall find ourselves emerging from a world of material sensation and environment into a spiritual universe of ideas, of sunshine, health, and joy, the kingdom of Mind on earth, here and now.

RENASCENCE.

AUGUSTA REINSTEIN.

In the early springtime of this year I was very much surprised by what I saw in a garden surrounding a mansion in San Francisco. As a result of the earthquake, three years before, some of the stones of this house had been thrown into the garden, and during the three years of its restoration, the garden has been filled with crates of stone, boxes of marble, scaffolding, and débris. I had occasion to pass this place nearly every day, and know that until the restoration was complete nothing was done to the garden except to clear its surface, and yet one day there were many daffodils in full bloom, a palm that had passed through the cleansing fires was giving evidence of life, and many of the original plants and shrubs were thriving.

Many of the empty lots in the ruined district bear luxurious growths of grass, and I have never seen elsewhere clover so tall and so luxuriant. We are so accustomed to the freshness, the fulness, and the fruitage of spring, summer, and autumn, after the seeming desolation of winter, that we take this procession as a matter of course, but are inclined to be surprised, as I was, to find manifestation of life after several years, although we are told that seeds which were buried with Egyptian mummies long centuries ago, will grow if planted, after lying fallow all that time.

What I saw in this garden has served as a beginning for the realization that the manifestation of Life does not and cannot die. As Mrs. Eddy says, "Though the grass seemeth to wither and the flower to fade, they reappear" (Science and Health, p. 81). One day I nestled a brilliantly colored pansy in the soft dark depths of my furs, from which it showed its piquant face. It faded during the day, and I found it withered and crumpled, on the floor at night; so I threw it out of the window, never expecting to see it again. Imagine my surprise the next morning to find it once again bright and beautiful, looking up to me from the window-sill, revived by the rain to its pristine perfection.

This restoration was a reproach to me, as I knew from past experience that pansies, no matter how dead seemingly, are readily revived. This token of love not only returned good for evil, but it gave me an additional day's delight, and taught me the lesson in Science, that Life and its ideas are indestructible; and again came the words of our text-book (p. 289): "Man, tree, and flower are supposed to die; but the fact remains, that God's universe is spiritual and immortal."

THE BIBLE SPIRITUALLY INTERPRETED.

CHARLES H. S. KING.

EMERSON has said of the Bible: "The Hebrew and Greek Scriptures contain immortal sentences that have been the bread of life to millions. But they have no epical integrity; are fragmentary; are not shown in their order to the intellect. I look for the new teacher that shall follow so far those shining laws that he shall see their rounding complete grace; . . . and shall show that the ought, that duty, is one thing with science, with beauty, and with joy."

To an ever-increasing number the Christian Science text-book is this "new teacher" which explains the seeming contradiction of the Bible in such a way as to show its "epical integrity" and "rounding complete grace" through spiritual interpretation. This spiritual interpretation starts, of course, with certain premises which depend on spiritual sense for their justification and authority. The declarations that there is no matter, that man is wholly spiritual, and that evil has no power, are based on the Scripture statements that God made all; that it was good, and that man was made in the image and likeness of God, Spirit. These Scripture declarations are accepted and honored not only because of their inherent truth, but because they were demonstrated to be true by the world's greatest teacher, Christ Jesus.

The Bible has been loved by millions because it is a guide to life, and if its message is that absolute Life is God, then the lessons of human living point to the attainment of the God-life, or of our living toward God, as the one great end. From Genesis to the Apocalypse, the Bible is a progressive revelation of God the immanent Spirit, and it discloses an ever deepening sense of man's relationship to the All-Father and of his resultant responsibility. Its teaching, when spiritually discerned, is a unit which points to the one God, good, and warns against the one evil, the false claim which opposes this good. The heights of spiritual revelation respecting the nature of God, as infinite Life, Truth, and Love, and His consequent power over all evil, appear like light-crowned peaks of truth, and it is along these shining peaks that spiritual sense travels, "leaping upon the mountains," until it culminates in the Christ-life.

In Deuteronomy we read: "See, I have set before thee this day life and good, death and evil; . . . that thou mayest love the Lord thy God, and that thou mayest obey his voice, and that thou mayest cleave unto him: for he is thy life, and the length of thy days." Here death and evil are closely related if not synonymous terms, and Life is defined as God, whose nature is good. Elsewhere a saintly woman sings: "There is none holy as the Lord; for there is none beside thee: neither is there any rock like our God." Hannah had "cleaved unto" God, and her son Samuel grew up pure enough to hear His voice. Elijah so lived in the consciousness of spiritual power and presence, that he was able to raise the dead. In spite of sore afflictions Job held firmly to the good; his moral sense triumphed, and he was able to say, "I know that thou canst do every thing, and that no thought can be withholden from thee. . . . Wherefore I abhor myself, and repent."

The psalmist exults in a sense of the unswerving goodness (loving-kindness) and integrity of God. His "faithfulness" amounted to a "law" with David, who loved to meditate upon it "day and night" and contrast it with the thoughts of men. He sings: "The Lord bringeth the counsels of the heathen to nought: he maketh the devices of the peoples of none effect. The counsel of the Lord standeth for ever, the thoughts of his heart to all generations." This God of loving-kindness, "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies," is the same God whom Moses served, for David says, "He made known his ways unto Moses, his acts unto the children of Israel."

Moses, David, and Isaiah agree in their conception of the goodness of God and of man's consciousness as a reflection of God. And when Jesus came he said, "There is none good but one, that is, God;" "I and my Father are one." He also claimed spiritual relationship with the prophets; and Peter declared that he was the Christ, "the Son of the living God." Jesus' mission seems to have been to demonstrate the life which is of God and to denounce material living. "Take no thought for your [material] life." "Seek ye first the kingdom of God." "The spirit quickeneth; the flesh profiteth nothing." Of the devil (evil) he said, "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Here "devil" properly means "malicious accuser" and is the New Testament equivalent of the Hebrew Satan or "adversary." Through Jesus' clear perception of life as God and evil as a liar, with "no truth in him," he was enabled to speak with authority of Life, do the mighty works he did, triumph over the grave itself, and promise, "If a man keep my saying, he shall never see death."

Christian Science is identified with all the best that has been in human history, it reasserts the truth that was revealed to the prophets. It is identified with the good that Jesus stood for, and it challenges all that is opposed to that good. It sees beliefs of good and beliefs of evil in human consciousness, and traces the lights and shadows of spiritual experience in the footsteps of the patriarchs. But behind all it sees an absolute good, which is the one God, one Spirit, one Life, one Love, and all evil as the claim of a material opposite, the father of the lie, the adversary, the false accuser. It seeks to unravel the entanglements and snarls of the past and of the present on the basis of the unity and allness of good. Its mentor is spiritual sense. In Science and Health we read (p. 505): "Spiritual sense is the discernment of spiritual good. Understanding is the line of demarcation between the real and the unreal."

To the Christian Scientist his text-book is an educator which ever appeals to spiritual sense, and through its training he learns to discriminate scientifically between God's universe and false material environment. He learns that the All-Father is a God of Love. He learns not only that he must love his brethren, but that the true individuality of every one is lovable, because it is a manifestation of the true idea. He receives a quickened sense of the loathsomeness of evil and of the present necessity of grappling with it and never giving up until it is destroyed.

When one considers the poverty of mortal existence, the noble efforts that are being made to help men solve their problems, and then reflects on the lack of unity among Christian workers in their understanding of life and its laws, should not one rejoice that the "Key to the Scriptures" has been found and be glad to ponder its message? This "little book" disposes of creed and tradition. It introduces us to that Science which answers questions about God, man, and the universe by leading thought to the apprehension of that primitive spiritual good announced by Moses and the prophets, and it thus becomes indeed the "table in the wilderness," and offers the Science of salvation to all who will accept it.

PREVENTION.

HELEN WARD BANKS.

MRS. EDDY tells us in Science and Health (p. 369) that "the prophylactic and therapeutic (that is, the preventive and curative) arts belong emphatically to Christian Science;" and it is well for us to remember often that Christian

Digitized by Google

Science in its common-sense workings can endorse the good old proverb, "An ounce of prevention is worth a pound of cure." Or, as some one has said in a less homely way, if we throw our sentinels far enough out to protect every way of access from the enemy, we do not need to repel an attack on the citadel. It is only when we let the foe slip past our outer guard, that we have to use more strenuous effort to drive him back from the last line of defenses.

On one side of a garden wall squashes had been planted, on the other side lay a loose pile of boards which had been thrown there from time to time until the convenient moment should arrive to have them made into kindling-wood. The squashes started to grow, but no sooner had the vines appeared above ground than they were met by hundreds of squash-bugs, which devoured them. The plants had both mental and manual care, but with no apparent good results. In the fall came the time for cutting up the wood, and as the boards were pulled out, one by one, there, making their winter home, were numberless squash-bugs.

As I turned away, I realized that this same thing had happened more than once. Too many times, mentally, I had let a destroying error breed on one side while I was working for protection on the other. Had I not sometimes left untouched a little hiding-place for fear, and then worked against the resulting inharmony? Had I not allowed discouragement a breeding-place, and then wondered why my courage was not greater? Had I not let sensitiveness creep in and hide, and then tried to heal a resultant misunderstanding? Had I not permitted self-ease, or apathy, or some sense of the material to lurk unseen, and then grieved over the slowness of growth in spiritual understanding? I had allowed error to entrench itself on one side of the fence, while I thought I was honestly working against its results on the other.

If we never allow evil any corner in which to breed, how much future work we may spare ourselves. It is possible to guard effectively, though it is accomplished only by that eternal vigilance which is the price of safety. Jesus' precept was "Watch," and our Leader tells us to "stand porter at the door of thought" (Science and Health, p. 392). If we are so alert in our watch that no germ even of discouragement, or sensitiveness, or anger, or fear, or materiality can get in to find a lodging-place, the evil belief will be destroyed in its first concept, and there will be nothing to multiply inharmony or destroy our peace. It means constant work and an habitually orderly frame of mind; but, after all, the lesser evil is more easily destroyed than the greater, and if it is destroyed in its inception there are no bad results with which to cope.

Our Master did not bid us "Watch!" without showing us in his own living and working the effectual way to do so. Mrs. Eddy says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). Then it will be unchecked growth which will mark our daily experience, and we shall leave no least corner in which evil may conceal itself. Our lives will put forth blossom and fruit, and we shall rejoice in the promise, "They shall not hurt nor destroy in all my holy mountain."

REALIZATION.

D. B. MCDONALD.

THE word realization is used so frequently in our literature that it is of great importance that we understand it thoroughly before we can feel sure of deriving from the study of the literature the unbounded good with which it teems for those prepared to receive it. Taken in its material sense, when we "realize" on a business or property, we convert such business or property into the current medium in which material wealth is exchanged, commonly money, and we then know the extent of our possessions.

In Christian Science, when any phase of untruth confronts us, be it a sense of pain or an untoward circumstance, we realize the truth, as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and this realization of the truth dispels, as light dispels the darkness, the unspiritual and untruthful concept which occupied our consciousness. Realization, therefore, is the knowing of the truth, and is instantaneous or gradual according as our consciousness is free from the mental débris of the false concepts formerly held. If our realization of the truth is slow, or even imperceptible, the thing to do is to be logical and examine ourselves and see what sort of débris it is that is obstructing the full light of truth from our consciousness, for we may be assured that nothing else than the débris of false concepts formerly held can hinder our work, and it can do this only until the law of Spirit be fulfilled.

We have all at some time or another held a false concept of pleasurable sensations in the body. The removal of the débris of this false belief will be gradual, according as the belief is entirely or partially uprooted. When we therefore endeavor to realize instantaneously the truth that pain has no existence in the divine Mind, and consequently no existence in reality, because the divine Mind is infinite, —fills all space,—let us not be impatient if our realization is gradual, but be alert to what this indicates, viz., that there is débris in our consciousness to be removed, and the law to be fulfilled. If we would realize the truth instantaneously, when pain or evil threatens, we may do so only as we are faithful in realizing and living the truth whenever false concepts of pleasure in matter, or of satisfaction in bearing malice and unloving thoughts toward any one, seek to enter our consciousness.

If we are slow to bar our consciousness to that lie which of all erroneous beliefs has been the most relentlessly stripped of its innumerable disguises by the teachings of our text-book, the lie that there is life or power or intelligence in matter or medicine, let us not complain if we are slow to realize the compensating truth when pain or harm will not vanish at our bidding. The degree of our faithfulness in denying reality to any and all the pleasures of the senses, from animosity toward our fellow-being to zeal for personal power, the degree of our faithfulness in realizing the truth in regard to these untruths which beset us at every hour of every day, will determine the degree of realization we may enjoy when sickness or untoward circumstances threaten us. In other words, the degree of our faithfulness to the high ideals of our text-book, to our knowledge of the truth, in the overcoming of sin, determines the degree of realization we may enjoy in the overcoming of disease.

[Written for the *Sentinel*.]

A THOUGHT OF LIFE.

ADA JANE MILLER.

AMID the scenes of that which we call death,
The stronger thought of Life and Truth and Love,
If held through all the clamor and the rush
Of speechless anguish, loss, and sense of pain,
Will keep the heart untroubled, undismayed.
The thought of Life lifts one above earth-mists
Into that realm where light alone holds sway,
And gentlest voice forever speaks of peace
And buoyant hope. 'Tis here alone we see
That Life knows naught of death; it only knows
Love's harmony and Truth's eternal word
That bids the storm of mortal sense be still!

SELECTED ARTICLES.

[Frederick Dixon in *Bristol* (Eng.) *Mercury.*]

To a vast number of people, to the great majority probably of the citizens of the world, Christian Science healing still stands for a purely medical process. The fact, if the world could only realize it, is a severe reflection on the orthodox creeds. It shows how great a gulf has been allowed to widen since the time of the healer of Gennesaret between the healing of sickness and the healing of sorrow and sin, and how completely the churches have surrendered half of their duty to a profession many of the members of which are avowed agnostics and materialists. Yet Jesus said, "Preach the gospel" and "Heal the sick," and himself healed the sick in demonstration of the truth of the gospel he preached.

It is very difficult to understand how anybody can persuade himself to believe that the mere temporary removal of disease can be dignified by the name of healing. To contend that the victory over one microbe, which leaves the patient at the mercy of the next microbe in a microbe-laden world, can be described as healing, even from the world's point of view of science or Christianity, is preposterous. Healing, to be worthy of the name, must destroy the mental germs which produce sin, disease, and death, and which were catalogued by Paul in the appalling list of the works of the flesh, and it must do this by substituting for them in the human consciousness the fruits of the Spirit. It must lead a man away from the fears that surround the belief of life in matter into an understanding of life eternal, and it must do this by showing him that the understanding of eternal life is dependent, as Christ Jesus declared, on a true knowledge of God and His Christ. Then the patient will not get well only to get sick again, but will be able to stand in front of the legions of disease and sin clad in "the whole armor of God," the strength which enabled the psalmist to write: "Because thou hast made the Lord, which is my refuge, even the most High thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

Is it any wonder, then, that Mrs. Eddy writes, on page 366 of Science and Health, "In order to cure his patient, the metaphysician must first cast moral evils out of himself and thus attain the spiritual freedom which will enable him to cast physical evils out of his patient"? Jesus said: "For their sakes I sanctify myself," or, to use a language a little less archaic than that of the King James' version, "For their sakes I consecrate myself, that they also might be truly consecrated." Consecration, translated into practice, is the effort to walk in the footsteps of Jesus Christ, to get that larger sense of love which enables you to work with the same devotion for every patient, irrespective of their relation to yourself, thus showing you have taken to heart the warning, "If ye love them which love you, what reward have ye?" In this case, instead of the narrow provincialism of regarding the sick who come to you for help as your patients, you will begin to heal on the firmer foundation of looking, not so much to the personal gratification of getting these patients well, as of demonstrating the omnipotence of divine Love, and so entering heaven with prayer. Did not Christ Jesus say, "Rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven"?

Mrs. Eddy has defined heaven on page 587 of Science and Health as "government by divine Principle," and this, consequently, is why, as she explains on page 47, "leaning no longer on matter, but on the divine Principle of their work," the disciples became better healers. Man, however, does not succeed in exchanging the government of matter for the government of Principle in a day. It is the result of a long and weary struggle with the carnal mind. The Christian Science treatment, therefore, which heals the sick, is not comprised in a few minutes' realization of the truth by a sick man's bedside, but is the result of months and years of consecration, which brings the healer to the sick with something, however faint, of that knowledge of the power of Truth which raised Jairus' daughter with the words, "Talitha cumi."

To the ordinary man this may seem a great claim to put forward. It must, however, be remembered that it is put forward not in the name of an individual, but in the name of Truth. The healing power of Truth is illimitable, however limited the understanding which endeavors to avail itself of it. It is possible for every mathematician to calculate an eclipse, but it by no means follows that every mathematician can. So, though Christian Scientists may be unable to repeat all the miracles of Jesus, it does not make those miracles supernatural. To argue that it did would simply be to repudiate Jesus' own words, when, speaking not of a particular age, nor to a particular audience, but of the whole world, in all ages to come, he declared, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." In those words Jesus made the power to work what the world terms miracles the test, not of his own divinity, but of the Christianity of those who professed to believe in him. And any one who is inclined to cavil at this would better remember that he also said, "Heaven and earth shall pass away, but my words shall not pass away."

There has never been a moment since those words were spoken when they did not bring hope to the sick to whom they were whispered, but today they are bringing something more than hope, they are bringing fulfilment. There is more sickness in sin than in disease, more anguish in sorrow than in pain, more hopelessness in despair than in death, and it is to those who suffer from all of these alike that Christian Science speaks, in the name of Christ Jesus: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light."

[R. Stanhope Easterday in *Logansport* (Ind.) *Journal.*]

Healing in Christian Science results today, as in our Lord's ministry, from the wholesome, uplifting, vivifying influence upon human minds and bodies of that divine Truth and Love which emanate alone from, and are inherent in, the Mind "which was also in Christ Jesus." He, it will be recalled, was frank to declare: "The Son can do nothing of himself, but what he seeth the Father do;" "My Father worketh hitherto, and I work," etc. Jesus once explained to his disciples their failure to heal the lunatic boy in the significant words, "This kind goeth not out but by prayer and fasting." Repeatedly did our Lord ask, before he essayed effort at healing, "Have ye faith to believe?" Divine Mind is the Principle of Christian Science healing, and Christian Science is preeminently a religion. The healing of sickness is but secondary and inevitable in the face of the high standard of spiritual comprehension striven for.

It must be conceded that all so-called curative systems have their evidences of success, and the most far-fetched theories seem frequently to achieve results, but the world's redeemer, who came to teach "the way of salvation," healed the sick by the "word" of Truth, and on leaving the earth declared, "He that believeth on me, the works that I do shall he do also," and unequivocally affirmed, "These signs shall follow them that believe; In my name . . . they shall lay hands on the sick, and they shall recover." The Scriptures in another place declare, "Ye shall know the truth, and the truth shall make you free." Indeed there is every evidence that there is but one means of actual, effectual healing, and that is a knowledge of God, of infinite Truth.

Digitized by Google

Paul declared unequivocally, "I know whom I have believed," and Christian Scientists today proudly affirm that they "know," in a gratifying degree, their medicine, and that medicine is the "word" of Truth. "He sent his word, and healed them." "A higher power" indeed is the only one available for surcease from pain, but Christian Scientists deduce from the teachings and example of the Master that such power is not supernatural, though of course beyond the pale of the ordinary; that it is possible of approximate understanding and consequent utilization, and in the healing of all diseases, both mental and physical, organic and functional, curable and even the avowedly incurable, they are proving their faith by their works. We are convinced that such a curative system can assuredly rely upon its merits and successfully withstand the attacks of critics whose best knowledge of the system can be but conjectural.

[John M. Henderson in *Spokane* (Wash.) *Spokesman.*]

Our critic would denounce Christian Science as a fake because some who claimed to have been cured have since died of their maladies. Jesus healed many thousands of sick and crippled people, and raised some from the dead, all of whom have long since passed from this plane of existence, and yet the healing accomplished by Jesus is admitted by the world in general to have been genuine. Christian Scientists believe with Paul that "the last enemy that shall be destroyed is death."

In closing, our critic is represented as saying: "While thought power is potent in nervous diseases, it has but little influence over germ diseases, such as scarlet fever, tuberculosis, diphtheria, and cancer. It restores no amputated limbs and sets no bones. In this field Christian Science utterly fails." I have referred to a case of tuberculosis and to another of cancer. Many cases of scarlet fever and diphtheria have been successfully treated in Christian Science, and the honest investigator can readily establish the truth of this assertion. The list of those who have been thus healed of organic and functional diseases contains the names of too many well-known and reputable men and women to admit of their being classed with those who have been afflicted only with "nerve mimicry." Reliable testimony of the healing of broken bones is obtainable, and many limbs have been saved to individuals after they had been ordered taken off by the surgeon. The public is greatly interested in the fact that today Christian Scientists are striving, with a wonderful degree of success, to prove unnecessary the amputation of limbs, knowing that "with God all things are possible."

[Gray Montgomery in *Durango* (Col.) *Herald.*]

The result of Christian Science put into practice is the destruction of lust and sin. No one can be a true Christian Scientist and indulge in sin, for the teachings of Christian Science demand absolute purity of life and holiness of thought. Mrs. Eddy says, "Christian Science commands man to master the propensities,—to hold hatred in abeyance with kindness, to conquer lust with chastity, revenge with charity, and to overcome deceit with honesty" (Science and Health, p. 405).

Christian Science teaches that salvation is reached only by forsaking sin of every sort and claim. It has come, as did the Saviour of old, to save sinners from sin by bringing to their consciousness a higher and purer understanding of God and His infinite presence and love. Christian Science heals the sick by destroying sin. It is efficacious where all other healing systems fail, because it eradicates lust and malicious thoughts and fear. Mrs. Eddy says, "To cure a bodily ailment, every broken moral law should be taken into account and the error be rebuked" (*Ibid.*, p. 392).

The mission of Christian Science is to do only good, to teach mankind how to be pure and righteous. Its demands are exactly those of the Master. By reason of its works—healing the sick and destroying sin—it is gaining its large following and bringing salvation to mankind.

[Abbot Edes Smith in *Minneapolis* (Minn.) *Progress.*]

Mrs. Eddy's religion is in its essential points as old as the Bible, for it was from earnest study of the Bible that Mrs. Eddy found in the lives of the prophets and in the teaching and practice of our Master and of his apostles the truths which had been lost sight of ever since the days of the early Christian church. Christian Science is the primitive Christianity of our Saviour, restored to its original simplicity and purity as taught and practised by Christ Jesus, by his apostles, and by the early Christians. To his command, "Preach the gospel," Jesus always added, "Heal the sick."

As the prophets of old came to lead men up to the beautiful religion of Jesus, so Mrs. Eddy's mission has been to lead men, not to her feet, but to the feet of Christ, and to teach them how to understand his words and to follow in his steps; for he said, "He that believeth on me, the works that I do shall he do also;" and again, "It is enough for the disciple that he be as his master."

The old theory of inspiration is no longer held by intelligent people. Inspiration comes in the form, not of words, but of ideas. Through higher spirituality the one inspired is enabled to see the truth more clearly, as he gazes into that infinite "Light, which lighteth every man that cometh into the world." What is thus seen is then expressed by the seer in words, and a change of words does not necessarily mean a change of ideas. The Principle and ideas of the first edition of Science and Health, published by Mrs. Eddy in 1875, are identical with the Principle and ideas of the latest edition. The same inspiration is found in all the editions, and the changes in the words merely bring out new phases of one and the same truth.

Christian Science, by surrender of self to God, uses as the healing and saving power, not the finite, human mind or will, but the infinite Mind, God, which is "the same yesterday, and to day, and for ever," and "with whom is no variableness, neither shadow of turning." What cannot God do? Any honest seeker for the facts will find in every part of this country, yes, in many foreign lands, conclusive evidence of the healing, in Christian Science, by the power of God, of every kind of disease that flesh is heir to, acute, chronic, functional, and organic.

[Alfred Farlow in *Greenville* (S. C.) *News.*]

If the gentleman believes that sickness could ever be healed by divine power, upon what ground can he assume that it cannot be done in this age? Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

It should be noted that a part of the work which the Master did was to heal the sick. Therefore the healing of the sick is included in the command, and in other parts of the Scripture healing is specifically mentioned. We will agree with our critic that the healing of sin is of greater importance to the sinner than that he shall be rid of his physical suffering, but we would add that physical suffering is due to sin, and that if sin is entirely destroyed, sickness, which is only a consequence of sin, will also disappear. The Master said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" thus indicating that he expected the man whose sins were forgiven to be able to walk, and that he did not expect him to walk until

Digitized by Google

his sins were forgiven. It is well to state here that the term sin in this connection is used in its broad sense, as applied not only to wilful wrongs but to ignorant errors. To sin is to turn away from perfection, to think, speak, or act in a manner not becoming the perfect image and likeness of God. Christian Science proposes to heal mankind by regenerating them, proposes to do away with sickness by making men too good to be sick.

We believe that an individual may be Christian to a certain extent and yet at the same time suffer physical disorders, but we believe that he who is a Christian in the full and complete sense of the word will have attained to that stature of manhood in Christ wherein there is no more pain. Jesus demonstrated what mortals may attain by spiritual growth, while it is the mission of Christian Science to show how mortals may grow spiritually.

[Editorial in *Lebanon Church Herald*, San Francisco, Cal.]

Does it not appear to be contrary to the fundamental principles of Christianity when one or more denominations support and in some cases use their own sacred edifices toward forwarding a movement devoted to "knocking" another religion? No matter how much truth there might be in the so-called "exposure" of Christian Science, the fact is evident that Christian Science has done much good and is growing in spite of unchristianlike attacks. There is good in every religious movement, and that organization will soon die which is not founded on principles that contain truth. If Christ appeared upon earth today, it is possible that he would be received by the Scientists as soon as by any other church. And what would he think of the policy now being carried out by one professed Christian denomination against another?

[Written for the *Sentinel*.]

THE DWELLING-PLACE OF THOUGHT.

HON. CLARENCE A. BUSKIRK.

LARGE and round the golden moon
Moves a lake of clouds aboon,
And the clouds like waves of lace
Drift against the planet's face,
While a lone star shining nigh
Gems a rift of azure sky.

And is mortal man the being
Who the loveliness is seeing
Of the planets in their places,
In the empyrean spaces?
Is it he whose fancy hears
The vast music of the spheres?

What is that which hears and sees
Those celestial mysteries?
Lumps of clay as ears and eyes,
Dust as brain of pygmy size?
Senseless dust, soon dust again,
Shaped as ears and eyes and brain?

Thought unbodied takes its flight
Through the boundless realms of light;
All infinitude can roam
As its birthplace and its home.
God's great universe is sought
For the dwelling-place of thought,
Not its origin and birth
The insensate dust of earth.

AMONG THE CHURCHES.

PORTERSVILLE, CAL.

All debts against First Church of Christ, Scientist, of this city, having been paid, the formal dedication of the church building is to be held on Sunday next [Oct. 24]. The principal feature of the gathering, aside from the regular services of the day, will be a history of the work in this city, which will be given in the form of an address by the First Reader.—*Fresno Republican.*

VICTOR, COL.

After working on the new Christian Science church the last six months, the building has been completed and will be opened to the public Sunday, Oct. 24. The service for the day will be held at eleven o'clock, and the evening service will be at seven forty-five o'clock. The new church edifice is the finest structure of its kind in the city. The building is entirely white, the front being designed after the Greek architecture. In the rear of the auditorium is the Sunday School room, which is twenty-five feet long. The library is located in the second story, over the porch. The improvements have been paid for in full by the Scientists of the town. First Church of Christ, Scientist, of Victor, was organized in 1900. Since its beginning the local church has been greatly prospered.

Cripple Creek Times.

DE KALB, ILL.

The beautiful little Christian Science church building on North Third street was thrown open for worship yesterday [Oct. 24] with quiet and unostentatious exercises. The building is a decided ornament to the list of churches of the city. Although small, every line is in the best taste and the entire structure, which is of Grecian design, is a gem. The building is about sixty-five feet square, the exterior being rough cast cement and the roof of cement tile. The auditorium is about twenty-five by fifty and the seating capacity is about two hundred. The cost of the structure was about seventy-five hundred dollars. The history of the church, read at the service yesterday, is in part as follows:—

It is not known just when the seed of Christian Science was first planted in DeKalb, but we know that several cases of healing attracted the attention and interest of a number of persons, and in 1903 these few people met in the parlor of a private home to study the Christian Science Lesson-Sermon. One year later, in the early spring of 1904, more commodious quarters became a necessity, and it was determined to rent a hall centrally located. Continued interest and individual progress led to the organization, in 1907, of First Church of Christ, Scientist, with nineteen charter members. With the need of a church home of our own, the conviction grew that the time had come when we were ready to take the next forward step and build a church edifice. Many fears beset us, but one by one these enemies were eliminated from consciousness by the light of ever-present Truth, and today our labor and our progress are made manifest in this building. In this retrospective view of our growth individually and as a Christian Science church, it is fitting that we turn in gratitude to our Leader, Mrs. Eddy, and think for a moment upon the steadfastness of purpose, the never failing loyalty to Principle, the calm courage and love which have marked her life. Like Moses of old, she has faithfully and obediently led a people out of the bondage of sin into paths of peace.—*DeKalb Chronicle.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE ELIMINATION OF FEAR.

In reading the testimonies of healing published in the *Sentinel* and *Journal*, one becomes impressed with the large number of cases wherein the fears of the patient and of his friends are plainly disclosed to have been "the procuring cause and foundation" (Science and Health, p. 411) of the sickness from which the patient suffered. In such cases one is forcefully reminded of the passage of Scripture in which Job says, "For the thing which I greatly feared is come upon me, and that which I was afraid of is come unto me."

These testimonies, therefore, may be regarded as present-day proof that fear is not a condition to which one must be tamely submissive, but rather a condition against which he must strive, and from which he must seek earnestly to be emancipated. The necessity for this endeavor to overcome and cast out fear is emphasized by Mrs. Eddy on page 411 of Science and Health, where she writes, "Always begin your treatment by allaying the fear of patients. . . . If you succeed in wholly removing the fear, your patient is healed."

Unfortunately, Christian Scientists sometimes forget to apply this advice to their own problems, and seem to be more or less in bondage to the belief that they can be harmed by the thoughts and desires of others; but this cannot be true if they are constantly awake to the omnipotence and omnipresence of divine Love. The only reality is the reality of good, and this is a fact to be demonstrated by Christian Scientists. That they can do this is made clear in every instance of the healing of sin and sickness, and to the extent that they keep their minds "so filled with Truth and Love that sin, disease, and death cannot enter them" (*Sentinel*, Oct. 6, 1906), to that extent will they be free from the fears and beliefs of evil in any form. There is no room for fear where Love abides; or, in the words of the beloved disciple, "There is no fear in love; but perfect love casteth out fear."

Jesus told his followers to "be of good cheer," and our Leader cites his words, "Be not afraid," as "the keynote of harmony" and the beginning of "Christian scientific practice" (Science and Health, p. 410). When the world really awakens to the fact that evil has neither reality, power, nor intelligence, that it is but an illusion which tempts mortals to their own injury, men will fear no more; they will rise in their God-given might to cast this subtle tempter from their thresholds, and established and entrenched in the freedom thus won, they will truly obey the First Commandment.

ARCHIBALD MCLELLAN.

"FOR THEIR SAKES I SANCTIFY MYSELF."

Much of our Lord's ministry was a voluntary burden-bearing for the accomplishment of a gracious end, viz., the demonstration to men, upon their plane of apprehension, of the power of Truth and Love to solve the human problem. He thus consented to suffer at the hands of his enemies when, as was made manifest on the night of his betrayal, he might have successfully resisted all their plans to injure him by the mere lifting of his hand. Much burden-bearing also came to him as an incident of the fact that he shared our human nature and had to work out his problem as we do ours. He was always actuated, however, by a broader, more inclusive purpose than this. The sense of brotherhood, of vicarious interest, was always to the front, so that instinctively, as one might say, he sought to live so that the life of others might be lessened of struggle and pain.

Not a little of the thought and conduct of professed Christians in all the centuries has presented a saddening contrast to this spirit of the Master. Many men have held their faith in Christ and pursued a given course of religious observance with the manifestly dominating hope and purpose of simply saving their own souls. Self-centeredness, the ascetic type of thought, has been all too plainly apparent in many who have indeed been for the Master rather than against him, but who have failed to apprehend, much less to enter into, that ministering impulse which gave an unselfish quality to all his words and acts. The caste distinctions and exclusiveness which have led "the third estate" so largely to look with reserve and questioning, if not with pronounced contempt, upon Christian profession, have given evidence of the absence of that altruistic aspiration and forethoughtedness which radiated from every facet of the Master's life.

No one can become familiar with the life of the Discoverer of Christian Science without being impressed with this aspect of her conduct also. The persistent purpose to conserve the good which she had won, and to bring its blessings to all who would accept them, has been manifest in all her activities since the light of Truth first fell upon her forehead. And this is one of the many redemptive features of the Christian Science movement, that it awakens and nourishes the desire not only to live for the glory of God in the realization of one's best self, but to live and to do for those about us today, and for those who may bring us their needs tomorrow.

To attain that spiritual understanding, that consciousness of Truth which shall fit us to meet the demands of the human problem in its broadest compass,—this must become the thoughtful and far-reaching purpose of every true Christian Scientist, and one of the most encouraging evidences of the return of the Christ-spirit in this movement is found in the fact that so many young men and women of splendid parts and capacity, who upon the plane of the world's ambition would be looking forward with assurance to the attainment of all that is wholesomely attractive to human sense, are devoting their entire thought and endeavor to the realization of that Christ-consciousness which will make them practically serviceable to suffering humanity. "For their sakes" they are sanctifying themselves, and the realization of a blessed ministry and a great joy can but be theirs.

To be a Christian Scientist is to live for Christ, in the sense that thought of "the world's great need" constantly impels to the attainment of that spiritual-mindedness which fulfils the promise, "We shall be like him," and which is the pledge of great usefulness and great peace and joy.

JOHN B. WILLIS.

CHASTITY.

In the Christian Science text-book we read: "Chastity is the cement of civilization and progress. Without it there is no stability in society, and without it one cannot attain the Science of Life" (Science and Health, p. 57). Mrs. Eddy says, on the preceding page, that "infidelity to the marriage covenant is the social scourge of all races, 'the pestilence that walketh in darkness, . . . the destruction that wasteth at noonday.'" In an article on "Wedlock" she

Digitized by Google

tersely reminds us that at the first publication of Science and Health, in 1875, its teachings exposed the evil belief called "free love," but she adds, "The whole warfare with sensuality was not then ended" (Miscellaneous Writings, p. 285).

Our Leader's teaching on the subject of chastity, her constant insistence upon obedience to the Christly demand for purity, and fidelity to right, have been and are today a tremendous influence in stemming the tide of sensuality with all its attendant misery. Thousands of men and women have learned in Christian Science that there is something far higher than sense gratification and mere personal happiness,—that we must strive to reach the realization of the divine ideal of manhood and womanhood, or we are not living at all in any true sense. To quote Longfellow's familiar lines,—

> Not enjoyment, and not sorrow,
> Is our destined end or way;
> But to act that each tomorrow
> Find us farther than today.

Nothing can be clearer than that it was the spiritual purity of Christ Jesus which enabled him to reflect the light of Truth and Love upon the sick and sinning and thus to heal them, or that it was his dominion over all earthly passions which enabled him to still the tempest and even raise the dead; and for this "we owe him endless homage," to quote again our revered Leader's words (Science and Health, p. 18). It however remains for us to make good our professions of devotion to the Christ-standard by living so that our demonstrations of Christian Science will clear away all doubt and uncertainty as to the religion which we profess. Not only did the great Teacher warn us against the evils which would resist the demands of Truth, but other Scripture writers have pointed out the sins which would be greatly in evidence when the light of Truth rebuked mortal belief. Paul speaks very forcefully of those "without understanding, covenant-breakers," etc. In the prophecy of Malachi we find solemn warnings given to those who violate the marriage covenant, thereby causing many to stumble; and the prophet declares that God will be "a swift witness" against all such.

Perverse and perverting beliefs regarding "affinities" have no place in the sacred teachings of Christian Science. The plea of platonic affection excuses neither man nor woman who forgets the obligations of the marriage covenant and seeks companionship outside of the home circle. We read in the nineteenth chapter of Matthew that the Pharisees tried to entangle Jesus with the question of marriage and divorce, and so high were his moral requirements that his own disciples said, "It is good not to marry." In Science and Health we read, "Matrimony should never be entered into without a full recognition of its enduring obligations on both sides. . . . A mutual understanding should exist before this union and continue ever after, for deception is fatal to happiness" (p. 59).

It is true that human ties at best are very apt to leave the affections unsatisfied. This is often because we do not seek happiness in giving, but demand a great deal for self. No one can long be unhappy who lives for a lofty spiritual ideal and communes much with divine Love. Purity *is* happiness, as chastity is strength. It is not enough to claim outward chastity. In "Miscellaneous Writings" (p. 67), Mrs. Eddy says, "Thou shalt not adulterate Life, Truth, or Love,—mentally, morally, or physically;" and the Master declared, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven."

> So dear to heav'n is saintly chastity,
> That when a soul is found sincerely so,
> A thousand liveried angels lackey her.

ANNIE M. KNOTT.

DROPPED FROM MEMBERSHIP.

A COMPLAINT against Mrs. Augusta E. Stetson of New York city was filed with the Board of Directors of The First Church of Christ, Scientist, in Boston, Massachusetts, on Nov. 6, 1909. She was immediately furnished with a copy of it and a copy of the following orders. It was ordered by said Board that the evidence in support of defense of the complaint should be presented in the form of affidavits or documents, except that any evidence given or statement made by the complainant or the accused should be given or made orally and in the presence of the Directors; that the accused should have the right to the assistance of counsel; and that the case should be heard commencing on Nov. 15, 1909 at 9 o'clock a.m.

The hearing commenced at that time and was concluded on Nov. 17, 1909, at 4 o'clock p.m. Mrs. Stetson was present during the trial with her counsel, Hayne Davis. The evidence in support of the complaint consisted of the affidavits of twenty-seven persons, five letters written by Mrs. Stetson to her students, and a composite letter written by some of her students and approved by her. The evidence in defense of the complaint consisted of one affidavit, two letters, and Mrs. Stetson's personal testimony and statements.

After considering the evidence and Mrs. Stetson's statements made to the Directors, it was their unanimous conclusion that the charges against her had been proved and were true. Mrs. Stetson's name was then dropped from the roll of membership of said church.

The offenses proved against Mrs. Stetson were of two kinds:—

1. Working against the interests of the members of this church who are not her followers and against the interests of this church.

2. Persisting in teachings and practices which are contrary to Christian Science.

LETTERS TO OUR LEADER.

New York, N. Y., Nov. 14, 1909.

Dearly Loved Teacher:—I have such good news for you! I want to tell you that the claims and beliefs which have seemingly held me ever since I withdrew from First Church here, have yielded during the past two weeks, and I am freer than I have been in years! Science and Health is also clearer, and it seems as if something that had been holding me is broken. I am conquering "erring, mortal, material sense" (Science and Health, p. 253), and am so grateful to you for liberating me, and turning me away from personality to Principle! In so doing you have saved me from the pitfalls of material sense and idolatry, revealed the allness of God, Spirit, and the oneness of your teaching with that of Christ Jesus. A great light has broken in upon me, and a stumbling-block to the progress of our beloved Cause is removed; namely, deification of personality rather than Principle, and reliance on aught but Spirit, God.

I see Science as I never saw it before, and know that our beloved Cause will receive fresh impetus from your fearless uplift of the banner of true Christian Science. That your teaching was always Christian, compassionate, and kind, I have always maintained when confronted with evidences of false teaching. With true gratitude to you for exalting Principle and showing me God's salvation,

Your affectionate student,

ANNE DODGE.

New York, N. Y., Nov. 15, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It is with deepest gratitude that we acknowledge and thank you for your earnest letter of the

Digitized by Google

13th inst., with its words of love and benediction. As at all times, this board of trustees cheerfully complies with the advice you give, prompted by the obedience of love, and confidence in the sure guidance of the beloved Leader whom God has so highly honored.

Your letter was read to our church at its meeting today, and all were blessed with its happy and healing influence. In quiet assurance, we await any further leadings that your wisdom may indicate, in view of the importance of the questions involved.

In unswerving loyalty,

Yours faithfully,
E. F. HATFIELD, *Chairman of Trustees.*

New York, N. Y., Nov. 18, 1909.

Beloved Leader:—On last Monday, when your wonderful letter was read at our church meeting, speaking, "Peace, be still," to the waves of mortal thought, there was no opportunity to frame a fitting response to express the deep appreciation of the church and congregation for the great service you had rendered in thus guiding the church through its most serious crisis. At our Wednesday evening meeting last night, however, the enclosed resolution was unanimously adopted by the great congregation that filled our church, and I send it to you with the love of all our people. I can assure you that the members of this branch church are loyal Christian Scientists, and that they will stand like a rock in support of The Mother Church Directors.

Faithfully yours,
VIRGIL O. STRICKLER, *First Reader.*

RESOLUTION.

Whereas, the members of this church, on Monday, Nov. 15, received from our beloved Leader, Mary Baker Eddy, words of advice so potent that not only was a crisis in the history of this church amicably settled, but dissensions in the church were thereby healed; and

Whereas, a proper acknowledgment of the benefits so received by us, and of our gratitude therefor, is most befitting;

Therefore, Be it resolved by this church and congregation here assembled, that we hereby extend to Mary Baker Eddy assurances of profound gratitude and love, and of our intention to follow her advice, both in the letter and in the spirit, to support the Directors of The Mother Church, and unite with those in our church who are supporting The Mother Church Directors; that we pledge anew the devotion of First Church of Christ, Scientist, of New York city, to her as our Leader, and to the church founded and constituted by her, The Mother Church of Christ, Scientist, in Boston.

I hereby certify that the foregoing was unanimously adopted by the members and congregation of First Church of Christ, Scientist, New York, N. Y., at the Wednesday evening meeting, Nov. 17, 1909.

VIRGIL O. STRICKLER, *First Reader.*

[Telegram.]

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Your words, read at the meeting of First Church of Christ, Scientist, yesterday, healed the false beliefs that some had entertained concerning their duty toward The Mother Church Directors and those who stood with them. The instant compliance with your advice proves that the members of the church are loyal to your teachings, and that nothing can swerve them from their steadfast adherence to Principle.

VIRGIL O. STRICKLER, *First Reader,*
ELLA G. YOUNG, *Second Reader.*

[Telegram.]

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

God bless you and Directors. God has blessed you, and will bless those still struggling. With sincere, eternal gratitude,

Lovingly,
EVA STEPHENS WEEK.

Cranford, N. J., Nov. 2, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Our church held its annual meeting on Tuesday, Oct. 19, electing trustees and adopting new by-laws that are in consonance with the laws of the state of New Jersey and with the rules laid down for the government of branch churches in the Manual of The First Church of Christ, Scientist, in Boston, Mass. At this, our first meeting of the new board of trustees, we first and foremost wish to express to you our deep gratitude and love for the blessings that have come to us and to this church as a result of your teachings. It is our desire to strive earnestly at all times to exemplify to the world the Mind that was in Christ Jesus, whose life and words have been made to us a living force through the study of that great blessing to the world, "Science and Health with Key to the Scriptures."

Ever faithfully yours,
CHARLES G. BLISS, *President,*
ETTA D. SMITH, *First Reader,*

CHARLES LACEY PLUMB,	FLORENCE D. FISKE,
WILLIAM GELLATLY,	MRS. ANNIE L. SEE,
BAUMAN L. BELDEN,	BERTHA D. WOODLING,
JOHN E. COOPER,	MRS. MARY A. ARMSTRONG,

CARL H. PIERCE, *Secretary pro tem.*

Franklin, Pa., Nov. 10, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—At the first meeting of those Christian Scientists who form the Christian Science society of Franklin, Pa., it was unanimously voted that, as soon as we should be officially recognized as a society, a letter should be written expressing our loyalty and gratitude to you, as the Founder and Leader of the Christian Science church. This time has now come, and this letter is written to say that as a branch of The Mother Church we yield loving obedience to all the rules set forth in the Manual of The First Church of Christ, Scientist, in Boston, Mass., which are applicable to its branches.

We acknowledge with grateful hearts the debt which we owe to your unswerving devotion to Principle, to the book "Science and Health with Key to the Scriptures" which you have given to mankind, and to you as our Leader. It is our aim to express this gratitude in something more than words, to be a worthy branch of The Mother Church by bearing fruit and giving out the message of love and healing to a weary world.

MYRA FAY GRANT,	NELLIE MOWRY BRECKENRIDGE,
BESS LOUISE BLACK,	H. W. BRECKENRIDGE,
STELLA LOWE COLBURN,	*Committee.*

A NEW PICTURE.

About Dec. 10 the Publishing Society will place on sale a new and desirable photogravure of The Mother Church edifices and the Publishing House, with the proposed parkway in the foreground. Approximate size, 24 by 18 inches.

The price of the picture will be as follows: Artist's proof, bearing remarque, impressed on Japanese vellum, $5.00; from the same plate on India paper, mounted on mat, without remarque, $3.00. Ten per cent discount to Christian Science reading-rooms.

THE LECTURES.

FREMONT, O.

At the Colonial Hall Saturday night [Oct. 2] Bliss Knapp of Boston delivered a fine lecture on Christian Science. The speaker was introduced by C. J. Adams of Toledo, who said,—

If all men were a unit as to what truth is, the problem of life would be solved. But, ever since the serpent in the garden of Eden whispered, "Ye shall be as gods," opinions have differed, and contention, strife, envy, jealousy, and hatred have swayed mankind and caused much discord, distress, and suffering, and mortal thought has been constantly seeking for material means to correct these material conditions.

On the other hand, the purpose of Truth throughout the ages has been to harmonize thought and bring mortals back to the one God, the creator and Father of all good. Moses, Elisha, David, Daniel, and Jesus all taught and demonstrated the power of the eternal, ever-present God, Spirit, to overcome the material with the spiritual. The old, old story is always new, for we daily find additional proof that divine Love is ever ready to help us—yes, and commands us to be not overcome of evil, but to overcome evil with good. It is because the power of divine Love has overcome sin and sickness that we are here tonight to have an authorized representative of the Christian Science board of lectureship tell some of the teachings of Christian Science and explain some questions which have been such stumbling-blocks to the general public.

Fremont News.

PADUCAH, KY.

Mrs. Sue Harper Mims of Atlanta, Ga., lectured on Christian Science at the Kentucky, Sunday afternoon [Oct. 4]. Judge William Marble introduced Mrs. Mims, saying in part,—

When our Lord and Saviour, Jesus Christ, dwelt as a man on earth, he on one occasion delivered an address to his disciples which we now know as the Sermon on the Mount. This sermon contains the very pith and essence of all that Jesus taught, and is regarded and recognized in all Christendom as the most marvelous and wonderful of all addresses, and as setting forth the very highest type of moral and religious philosophy. Many of its teachings are so revolutionary and so at variance with the standards that had been accepted up to that time, and with the actions of mankind since that time, that even now, after two thousand years of training in its doctrines, it is difficult to get men to accept and live up to its high ideals, notwithstanding they admit that it is absolutely perfect and flawless.

But, as he neared the end of this great discourse, Jesus, whose vision of the future was as perfect as his knowledge of the past, saw the necessity for a warning of this character, and hence he said to his disciples through all the ages to come: "Beware of false prophets." He did not stop there, for he went on to give them a sure and certain rule by which they might distinguish between the true and the false prophets that would come after him. He said:

"A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. Every tree that bringeth not forth good fruit is hewn down, and cast into the fire. Wherefore by their fruits ye shall know them." Here we have an infallible rule given by an infallible guide.

Free your minds of all prejudice and test Christian Science by this rule, and if you have never looked into the matter before, or if you have looked into it with preconceived notions and prejudice, you will be forced to the conclusion that whatever else it is, Christian Science is not a false prophet nor the product of a false prophet.

By means of it, through its teachings and aid, the blind receive their sight, the lame walk, the deaf hear, and all manner of diseases are healed. But this is only a part, and really the smallest part of its work, for through its teachings men and women, who before were despondent and miserable, have been made continuously happy and joyous, and many thousands have been uplifted spiritually to live on a higher plane of life than ever before; and to know and have the peaceable fruit of righteousness. With these people thoughts are things, and very real and powerful things, and hence with them it is accounted wholly wrong to think evil or speak evil of other people; on the contrary, they are trained to give only good thoughts to people. These are a few of its fruits, and only a few know them.

I have yet to learn that the teachings of Christian Science have made one single human being worse than he was before, or placed him on a lower plane of life.

News-Democrat.

EAST ST. LOUIS, ILL.

The beautiful Christian Science church on Washington place and Summit avenue was filled last evening [Oct. 4] upon the occasion of the presence of Judge William G. Ewing, who delivered a lecture upon the teachings and beliefs of the Christian Science faith. F. S. Willbur, First Reader of the local church, in introducing the speaker, said,—

Christian Science is not an invention by Mrs. Eddy, a new religion in the sense of a latter-day creation, a giving to the world of a new God. Christian Science is a discovery, not an invention; a discovery of the great truth that God and His Christ—divine Mind and its idea, is in the world today as much as ever before, or ever will be. We would not say that one had invented mathematics, but rather that the principle and rule of mathematics had been discovered, for two times two makes four, always did make four, and always will make four—an eternal fact that no man can invent but which unfolds to our understanding. In like manner God heals and saves, inspires and illumines, blesses and benefits, consoles and comforts, now, yesterday, and forever.

Our revered Leader, Mrs. Eddy, in emphasizing this thought has not given to God a nature, character, attribute, or law that He did not possess from the very beginning—if the eternal can have a beginning; hence the fact that Christian Science, or the true knowledge of God, a knowledge as old as God Himself, described in our text-book "as ancient as 'the Ancient of days,'" living "through all Life," and extending "throughout all space," can never be called an invention. All that is claimed by Mrs. Eddy, all that is claimed for her, is that she is the Discoverer and Founder of Christian Science, and the author of its text-book, "Science and Health with Key to the Scriptures."

East St. Louis Journal.

LOS GATOS, CAL.

Ford's Opera House was filled to almost its entire capacity Tuesday evening [Oct. 19] with people who came to listen to the lecture on Christian Science by Judge Septimus J. Hanna of Colorado Springs, Col. He was introduced by Robert Whitaker, pastor of the Baptist church of this city, who said in part,—

Let me express first of all, my conviction that the time has come when the public, and the Christian public in particular, ought to give Christian Science a candid, kindly, and cordial hearing. It is the faith of from seventy-five to one hundred thousand of our people. In point of character and general intelligence no one pretends that their average is below that of the membership of other churches.

Digitized by Google

They have accepted this faith in the face of much opposition and contemptuous misrepresentation. They believe themselves to have received large benefits both in a physical and a spiritual way. They are anxious to communicate these benefits to others. The least we can give them as fair-minded fellow-citizens and as Christians is a just and generous hearing. The truth has nothing to fear from the fullest and freest discussion. Those who are forever putting forth the timid hand to stay the ark of God lest the trembling of the ox-cart of human opinion overthrow and destroy it, do not really help the truth but only paralyze themselves. Let us cultivate courage with respect to the truth, and kindness with respect to all who differ from us, and let us give to others the thoughtful, careful, appreciative hearing which we ask for ourselves.

SPECIAL PAMPHLET.

About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 15 cents each, $1.50 a dozen, $12.00 a hundred.

TESTIMONIES OF HEALING.

Prior to my acceptance of Christian Science I was skeptical regarding the teachings of the Christian religion as expounded by the different churches. I drifted aimlessly about for a number of years, and had about given up all hope of ever being able to come to a knowledge of the truth as taught by our Master. I had but little use for the Bible and became oblivious to its teachings. While in this frame of mind I seemed to be content with a theory that death ends all our troubles and that the future is a blank.

About four years ago I was led to the study of Christian Science, and very soon after the commencement of this study the infidel props were knocked from under me. This opened my eyes to the realization that I had been on the wrong road. I have since devoted a great portion of my time to the study and investigation of the teaching of Christian Science, also the Bible, and have been not only seeking but striving to become a good and efficient Christian Scientist, worthy of the name. While I realize that I am still in the primary class, words fail to express my sincere gratitude to God for all the blessings bestowed upon me both physically and mentally, and to Mrs. Eddy for what she has done for me through Christian Science. I am also truly grateful for the privilege of becoming a member of a Church of Christ, Scientist.

About two years ago I was engaged in some repairs on a house, and was standing on the top of a step-ladder when it gave way and I fell upon the edge of a board walk. I was soon able to get up, and continued with the work until it was finished, which required about an hour, and then went home. The injury, however, proved to be quite serious; so I called on a practitioner for help, and after a few treatments was entirely healed. It was quite a remarkable demonstration, considering that my age is now eighty years. I am blest with good health and I am indeed very thankful to God, and to our revered Leader, Mrs. Eddy. I trust that I may learn more of this great truth and be able to prove its efficacy.—JAMES A. MILES, Indianapolis, Ind.

I wish to express my gratitude for what Christian Science has done for me. Nine years ago I was an invalid; for seven years I had suffered from stomach trouble. I was confined to my bed half of the time, and had two physicians attending me who had tried everything in a material way that could be thought of, but without any good result. I was also taken with very severe attacks of the heart, when it seemed I would pass on; indeed the physicians warned me that I would probably do so.

My sister, who came from a long distance at this time to visit me, was interested in Christian Science, and she advised me to try it. I was willing to try anything that I thought would do me good, so I sent to a practitioner, and was healed at once. While I am truly thankful to God for the physical healing, I am even more indebted for the joy and peace that have come into my life through the better understanding of Him taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom I am very grateful. I know that only through her teachings am I here today to give this testimony. My prayer is that I may grow in grace and in the knowledge of God.

S. H. BACON, Talbott, Tenn.

I cannot find words to express my gratitude for all that Christian Science has done for me. For many years I suffered from heart disease, but the last eight years I was quite helpless, unable to do anything, and sometimes could scarcely speak. My lungs, too, caused me great trouble,

Digitized by Google

but now I am able to breathe with ease. I also had a goitre which was very painful, but all pain disappeared after the first treatment in Christian Science. My healing was almost instantaneous, and since then I have been able to do anything. As a rule I did not worry about my illness, although my sufferings were sometimes almost unbearable, but occasionally I used to wonder what would become of me. I felt certain that I could never get well by any human means, for the doctors had given me up, but I am happy to know that there are no incurables in Christian Science.

How thankful we all ought to be that God never changes; that He is ever waiting to bless and help us, to heal all our diseases, to guide and protect us from all harm, if we only trust Him. I am most thankful to God, also to Mrs. Eddy for her priceless book, "Science and Health with Key to the Scriptures." To God be all glory and honor for His great love.—EDITH PITKIN, London, England.

[Translated from the German.]

I desire to testify again to what Christian Science has done for me. Last year I cut the thumb of my left hand very badly, but I declared the truth for myself and had no fear. The thumb was bandaged, and I trusted in God, who heals all our ills. Two weeks later I looked at my finger for the first time after the injury, and it had been healed so wonderfully that no trace whatever of the cut was left, neither had I felt the slightest pain in the finger.

I must also give thanks for the rich blessings that have come to me daily on my little farm, for here too I have had encouraging demonstrations of the power of Truth. Since I have known Christian Science, that is, for the past four years, I have come to the conviction that all good comes from God only, and that we can have health, peace, joy, and full satisfaction only in Him. Four years ago I was in Dresden for some time, and last year again, so as to have a better opportunity to study Christian Science; I attended the Sunday services and Wednesday evening meetings, and returned home each time richly blessed. Now I can say with a heart full of love and gratitude to God, and to our beloved Leader, Mrs. Eddy, who has again cleared the way to truth: "The Lord hath done great things for us." Truth has lifted me above worldliness, and has made me happy. My happiest hours are when I can read *Der Herold der Christian Science*, whereby I have been freed of many an error. My wish is, that many people may discern through Christian Science the truth that makes us free.

THERESE ROEDIG, Steinbach b. Johanngeorgenstadt, Germany.

It is over six years since I first became interested in Christian Science, and from the first words which I read in Science and Health I thought it a most wonderful revelation of the truth, and I have never, not for one moment, had the least feeling of criticism toward the one through whom this great revelation has come. Through the reading of Science and Health I was healed of a serious trouble of many years' standing, which our family physician had often relieved, but not cured, as the trouble was sure to return if I did any unusual work. After I had been healed of this condition in Christian Science, however, I did not need to be careful, and there has been no return of the trouble. I could tell of hate and malice overcome in many instances, and my family say that the change for the better in my disposition is wonderful.

I have kept so well during the past six years that I have not had many experiences in the way of overcoming sickness, but the fact that I have kept well is, of course, the best testimony of all. I will, however, tell of one case of healing which took place soon after I became interested in Christian Science. On arising one morning, I found that my throat was quite sore, but I kept on with my household duties. However, I grew rapidly worse, and by the middle of the afternoon I realized that I had a very acute and violent attack of illness. I was in such intense pain that I could not move any part of my body without great suffering, and I also had a very high fever. I was in such a condition, indeed, that I could not do much for myself. When my husband came home that evening, he at once tried to get a Christian Science practitioner; but the one he wanted was out, so he waited for her return. About half past eight I suddenly realized that I was absolutely free from all that seeming discord. I sprang out of bed and called up my husband over the telephone, saying that I was all right. When he came home and saw that I was really free from all pain, and the fever all gone, he was amazed, but I knew that even the little understanding of the truth about God and man which I had gained by reading Science and Health had driven out that old lie called the devil. At that time my husband was not interested in Christian Science, but was willing that I should try it. He thought it might be good for women and children, but now he is reading Science and Health through for the third time, and attends the services. He has found that Christian Science is a good thing also for men.

I thank God every day for Christian Science and for our beloved Leader.

MRS. EVA P. BENEDICT, Pasadena, Cal.

In the Christian Science Hymnal we find these words: "If God is All-in-all, His children cannot fear." This was the rock on which I planted my feet when I began the study of Christian Science. The thought came filled with such fulness, peace, and joy as to bring a sense of having found a rich treasure, and for a time I wished to hold it in secret for my very own. But when the promise was fulfilled, that "whosoever hath, to him shall be given," there came a strong desire to give, not withhold, to share and not hoard; and it is this desire which prompts the writing of this acknowledgment, this too long delayed expression of what Christian Science has been to me. The truth has quieted for me fear and pain, brought peace and supply. A word spoken after the Wednesday evening meeting brought me instant relief from throat discomfort. On another occasion, I experienced instantaneous healing by the word that "God's child cannot be sick," spoken in the reading-room by a lady whose name was unknown to me. This was strong confirmation that "if God is All-in-all, His children cannot fear."

Science and Health, which I once thought it unwise to give to an inquirer, I would now give as a help to any one, knowing it to be the "Key to the Scriptures." The psalmist says: "I will abundantly bless her provision: I will satisfy her poor with bread. I will also clothe her priests with salvation: and her saints shall shout aloud for joy."

MRS. EMMA V. RIDDLEBERGER, Washington, D. C.

In the winter of 1908 I had a severe cold, my head and lungs giving me great distress. One night I asked my wife to help me in Christian Science, and relief came very quickly. I awoke to find that it was morning, and I had no further trouble. Some time before this I had an enlargement on the right side of my body, which was very painful, being much inflamed. It spread rapidly and presented an alarming appearance, but I had no pain after calling my wife's attention to the swelling, and in a few days it was all gone, although I had insisted that it could not be healed without breaking.—Z. RICHEY, Yankton, S. D.

[Translated from the German.]

With a heart full of gratitude I would like to tell of an experience in Christian Science. Last spring our fourteen-year-old boy was taken suddenly ill. The pains grew so severe by the following morning, which was Sunday, that he asked for a physician. When the latter came, he stated that there was peritoneal inflammation and appendicitis. Under the medical treatment the pains would disappear for a while, but the boy kept growing weaker. A few days later a second physician was consulted, and after a thorough examination the physicians declared that an immediate operation would be necessary. To this I could not consent, and I decided that the boy should be treated in Christian Science. The physicians respected my faith in God's help, but said that, in case God should not be willing to help, it might possibly be too late to perform an operation. I, however, held to my decision, and asked a practitioner to treat the boy.

The result was wonderful. After the first few treatments sleep and appetite returned, and the symptoms of the trouble rapidly disappeared. The physician came as before, but did not prescribe anything, only watched the progress of the recovery. When he examined our son a few days later, he pronounced his condition to be "good, beyond expectation." Two weeks later the boy could get up, and his complete recovery followed quickly. This experience has very much strengthened our faith in the power of Truth, and we are sincerely thankful to God, and to our dear Leader, Mrs. Eddy, for the revelation of this glorious truth, which has become a lamp unto our feet and a light unto our path.

FERDINAND STAIB, Cannstadt-Stuttgart, Germany.

I did not come into Christian Science on account of any great physical healing, but was divinely led into this truth through some of my loved ones, for which I am truly grateful. We have had some beautiful demonstrations in our home in the past year, one being in the case of my youngest daughter, who seemed to suffer intensely from a tooth. I called on a Christian Science practitioner for help, and in less than ten minutes my daughter was completely relieved and has never been troubled in that way since. Attacks of hay-fever, a serious throat trouble, and many other ailments have been overcome through the understanding of this healing truth, which blesses, protects, and shelters.

I am truly thankful to God, and to our dear Leader, who is leading us out of darkness into light. I greatly appreciate the *Sentinel*, the *Monitor*, and our other Christian Science literature.

MRS. E. A. OLSMITH, Guthrie, Okla.

My early religious teaching was that God is love, and that all mankind would be saved. I was also taught that God made the laws of health,—material laws,—and that if we violated them we must pay the penalty. This seemed just to me, but there was one point which always caused a great deal of questioning on my part, namely, why little children, who were too young, and the illiterate, who were too ignorant, to know these laws should suffer. Since coming into Christian Science, six years ago, this question has been answered to my entire satisfaction. I now know that God's laws are spiritual; that He did not make laws of disease, and the sooner we realize this fact the sooner will we manifest health and harmony.

In my own family many ailments (some of them very severe) have been overcome by the power of Truth, while disagreeable and aggravating dispositions are gradually being mellowed by this same divine power. Some of these healings have been practically instantaneous, although the greater number have been slow; but how grateful I have been that they were, for through the work and study called for I have learned much. As "he that keepeth Israel shall neither slumber nor sleep," so we must be ever alert to guard our thoughts.

Can we be too grateful that there was, in our age, one who was so spiritual as to discover this new-old truth, our beloved Leader, Mrs. Eddy.

MRS. MINNIE M. EMMONS, Baltimore, Md.

Desiring to acknowledge the healing power of Christian Science, I will relate my experience, which was to me and all of my family proof positive that truth can and does destroy pain and suffering whenever it is properly applied. One night I was awakened with such sharp pains in the abdomen that I could not control my thoughts, and my wife, who had helped me at other times, was by the severity of the attack overcome with fear. We then called upon a local practitioner, and when she came I was suffering intensely. She began to treat me at once; in a few moments the pain became less, and within an hour I was asleep. I slept soundly until seven o'clock, then got up feeling as well as usual, and with no soreness to remind me of the night's experience. A short time after this I was unhitching a spirited horse in the dark, when he became frightened and jumped against me, knocking me down, then stepping on me, and injuring me very seriously. My wife and daughter got me into the house and the practitioner was called. I was in severe pain and breathing with much difficulty, but after getting to bed I became easier and was soon asleep, resting well all night. I felt the effects of the injury for several days, though but one visit from the practitioner was necessary. I have been a student of Christian Science for several years, and know that the truth is powerful to overcome all the false beliefs and fears of mortal sense.—F. D. HYMAN, Yankton, S. D.

I came to Christian Science for the healing of a stomach and bowel difficulty with which I had always been troubled, and which the doctors said was of a serious nature. The pain in my stomach yielded almost instantaneously, and other troubles left me inside of three weeks. We have had several demonstrations in our family over severe headaches, bilious attacks, etc. Our granddaughter, two years old, had an attack of croup which came on suddenly and seemed very serious. The parents telephoned to a Christian Science practitioner, and the attack was overcome in one hour.

I have been greatly benefited, physically, mentally, and morally, but the most important of all is the understanding which I have gained of the power of Truth and Love. It has given me a peace of mind that surpasses all mortal understanding. I am very thankful to God for all these blessings, and grateful to Mrs. Eddy for the God-bestowed power to give to humanity the "Key to the Scriptures."

MRS. SARAH PURRETT, Columbus, O.

Every day I have fresh cause to declare, "Who is so great a God as our God." This truth is clearly shown us by our beloved Leader in all her writings, and I could not tell of the health and all other blessings that have come to me through the study of Christian service.

It was more than four years ago that I took my first treatment, and I can testify to Truth's healing power. All of my life I had been weak and delicate. For seven years previous to my healing through Christian Science I had been a confirmed invalid, a constant sufferer from a complication of diseases. Physicians had told me that there was not a sound organ in my body. They would promise temporary relief, but no one thought I could be

Digitized by Google

permanently healed. With each trial of a different physician hope was followed by disappointment, for not once did I find relief from the suffering. At the time I turned to Christian Science I was under the care of two physicians and attended by a nurse. I had exhausted every material remedy within our means. These physicians told me that if I were under their treatment for twelve months or longer, in a sanitarium, I would be improved but not well.

At this time a friend of my husband urged me to try Christian Science treatment, assuring me of the benefit which others had received. I knew nothing of Christian Science in any way, though after reading a copy of the *Journal* for a week, I sent for a practitioner. After a short talk with her I decided I would try it. With the first treatment I was greatly improved. I dismissed my physicians and nurse, threw all my medicines away, and trusted absolutely to the power of Truth. My healing was not immediate, but for this I am now grateful. As my thought "grew, and waxed strong in spirit," my body responded, and today I am a healthy, happy woman and have been so for several years.

To send this testimony, as a possible help to some sufferer, brings a joy and peace that passes all understanding. My gratitude to our Leader grows greater each day, and as I rise in the consciousness of Truth and Love, I call her blessed.—Mrs. Daisy B. Norred, Memphis, Tenn.

I feel it a duty to express my gratitude for the blessings which Christian Science has brought to me. About a year and a half ago a new light came into my life. It found me in a condition bordering on nervous breakdown. For about three years I had been afflicted with acute stomach trouble, attacks of intense suffering being of almost weekly occurrence; and all that the physicians could do for me was to administer hypodermics, until I felt that I was fast becoming a slave to the opiate. I had become very much discouraged when, through the influence of a dear friend, I was induced to try Christian Science, and I was entirely healed in a few weeks' treatment.

I am truly thankful not only for the healing, but for the spiritual quickening. Christian Science has given me a knowledge of God and of spiritual things which I had never before known. I am very thankful to God, and to Mrs. Eddy, through whom this truth has been revealed to us.—Mrs. Jennie R. Fowler, Redfield, S. D.

It is impossible for me to tell all the blessings which we have received since coming into Christian Science. Like the sands of the sea, they cannot be counted. My son was healed of spinal meningitis through Christian Science. Although at times it seemed as if he would pass out, yet we had the blessed assurance that God is an ever-present help in trouble. Science and Health tells us that "what God cannot do, man need not attempt" (p. 231). These words have been a great help to me many times, and I knew that in this disease mortal man is accredited powerless. I shall never forget the help given us at this time, in Christian Science. Words fail me to express my gratitude to God, and to our dear Leader, who has shown us the way to harmony.

Mary A. Allen, Providence, R. I.

About ten years ago my wife had dreadful pain in both her head and eye. She suffered a great deal and the eye looked very bad. She tried several doctors, but they did her no good. It came to her all at once that she should try Christian Science. The doctors had said she must have an operation; but instead she sent for a practitioner, who came and gave her treatment. She was better right away, and in a short time she was well. After a few treatments in Christian Science her eye, which had been turned up in her head, was in a perfectly natural position, and she has not been troubled with it since. It is now over two years since she was healed. She is very thankful for what the Lord has done for her. I write this for my wife because she cannot write English.

Silas W. Stedman, Pentwater, Mich.

It is now about five years since I began the study of Christian Science, and all this time we have been many miles from any Scientists, but the *Sentinel* comes each week like a dear friend, offering good tidings to all who will read; and what a help it has been! The testimonies are so good, and I realize that God is leading His people out of bondage.

I wish to give my testimony to the truth. My son, eleven years old, was taken with a very high fever. I treated him as best I could, reading often from the Bible and Science and Health to quiet him. My father and mother are not interested in Christian Science, and they thought I should call a doctor, which made it hard for us. We were over a hundred miles from the Christian Science practitioner, but I talked with her over the telephone, and she began to treat him at once. This was about seven o'clock in the evening, and that night the boy slept better. The next day his temperature was much lower; and in a few days he was out at play. This is only one of many proofs to us that God is an ever-present help in time of trouble.

Our dear Leader is surely leading us into the promised land. When I think of what her teachings have done for me, and when I think how many have found the way through these teachings, I feel that God has heard the prayers of His children and sent through her His healing word. Words cannot express my gratitude, but I hope to prove it in a small way by being ever faithful to the Master's teachings.—Elizabeth Edwards, Table Rock, Neb.

[Written for the *Sentinel*.]

PATIENCE.

EVELYN SYLVESTER KNOWLES.

Child, maintain thy full assurance
Of the pulsing power within;
Look not on forbidden objects,
Since to look thus is to sin.

Place thy hand within the Father's,
While thy strength on His relies;
Through life's glare or through its gloaming
Spirit's light shall fill thine eyes.

Soulful light, so pure, so tender,
Naught of darkness can it see.
Humble-hearted, thou shalt render
Service that is ecstasy.

Stand, and murmur not while waiting
For the Father's finished plan;
Envying not, nor fearing, hating,
Love shall fill and be life's span.

Like a messenger stand waiting
For thy King's divine behest;
Then go speed thee with the message
And be numbered with the blest.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*, London.]

The boldest optimist would hardly dare to say that all is going well with religion in the civilized world just now. What is most distressing is that large masses of the people seem able to do without it altogether; the truly earnest, religious minds are but a small minority of the community; other interests to a large extent seem to be crowding it out. There are not a few who think that it has outgrown any usefulness it ever had and had better be relegated to the lumber-room of abandoned superstitions. Religion is still the most divisive force in the world instead of, as the name implies, the force that binds men together. In its organized expressions it has become an eddy in the stream, an excrescence on the body politic, instead of, as it ought to be, the life and soul and inspiration of all we think and do.

[*Christian Work and Evangelist.*]

You can never, never win the world to a theory of religion. The world will neglect you and reject you while you try. The world has its own religion all the time. You may help or hinder its development, as you choose to work on larger or narrower lines. The cry goes forth: Choose ye this day whom ye will serve. And the response must be either the Christ of God or the Cæsar of man. The church spiritual will live; the church less than that shall die. Now have we come to the parting of the ways. For the church reformed and fitted to the new age and the new learning can no more stand in the old definition or the old forms of interpreting the religion of the human race.

[*Universalist Leader.*]

The true attitude of the soul in a world like this in which we live should be one of perpetual anticipation. We should expect some fine surprise at any bend of the road. What we saw yesterday, what we felt in that hour of high exaltation or deep communion, should be a hint of what lies ahead. Neither the world, nor God, nor the soul is exhausted. Yesterday is no more divine than today. Tomorrow will find the infinite on guard. Nothing that others or we have seen or felt should usurp the living present. We speak of living over the old days or the old joys. It is a foolish desire. There are new days and new joys just as desirable.

[*Christian Intelligencer.*]

It is singular how some insist on missing happiness. To them it is always away somewhere. But he who is always looking for happiness somewhere else will not find it when he gets where it is, for he has formed the habit of looking for it somewhere else than where he is. All he will ever find is that which he has cultivated, the craving for happiness. But he who looks for it where he is will find it everywhere, for he carries it with him wherever he goes.

[*Outlook.*]

If God has ever spoken in the world, He speaks today. It is incredible that, in a distant past, the human spirit should have been touched by inspiration, and that today that same spirit should be abandoned to merely human impulse and divination. If God has ever spoken, He is speaking today just as authoritatively through His modern prophets as He spoke through His ancient prophets.

[*Congregationalist and Christian World.*]

To lend a hand that is worth lending, we must have a great heart to work through it. To be a fruitful servant, the Christ-spirit must abound in us. Self-sacrifice is glorious and helpful in proportion to the magnitude and excellence of the individual who sacrifices.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

Correspondents who have sent orders for the Hymnal to the Publishing Society during the past month or two are informed that there has been delay in securing permission to use some copyrighted hymns, and it is necessary to await the completion of arrangements before issuing any Hymnals. To avoid inquiry and correspondence, it may be stated that delivery will be made as soon as it is practicable.

NEW PUBLICATIONS IN GERMAN.—The lecture, "Christian Science, deren Prinzip und Methode" by Bicknell Young, C.S.B., has been printed in pamphlet form and the articles "Kirchenbau in der Christian Science," "Liebe ist Leben," "'Der letzte Feind, der aufgehoben wird,'" "Praktische Religion," "Die unpersönliche Natur des Uebels" have been reprinted from *Der Herold* in leaflet form and are now ready for delivery to the Field.

The new and enlarged edition of the Christian Science Hymnal, containing some fifty new hymns, will be ready for delivery about Dec. 20.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE, THE RESTORATION OF PRIMITIVE CHRISTIANITY. A Lecture. By CLARENCE C. EATON. 29 pages.

CHRISTIAN SCIENCE: A RELIGION OF DOING. A Lecture. By JUDGE WILLIAM G. EWING. 26 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A lecture delivered at Harvard University. This pamphlet is also printed in French. 28 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. This pamphlet is also printed in French. 31 pages.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. A Lecture. By FRANK H. LEONARD. 31 pages.

CHRISTIAN SCIENCE: OR, DELIVERANCE FROM EVIL. A Lecture. By REV. WILLIAM P. MCKENZIE. This pamphlet is also printed in French. 29 pages.

CHRISTIAN SCIENCE: THE CHRISTIANITY OF JESUS. A Lecture. By MRS. SUE HARPER MIMS. 28 pages.

CHRISTIAN SCIENCE: BOTH CHRISTIAN AND SCIENTIFIC. A Lecture. By REV. IRVING C. TOMLINSON. 36 pages.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. A lecture delivered in London. By BICKNELL YOUNG. This pamphlet is also printed in German. 31 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By REV. ARTHUR R. VOSBURGH. 33 pages.

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. A Lecture. By MISS MARY BROOKINS. 37 pages.

PROPHECY: FULFILMENT: REVELATION. By CHARLES ADOLPHUS MURRAY, Seventh Earl of Dunmore. 42 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 80 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the JOURNAL. This pamphlet is also printed in German. 76 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the JOURNAL. This pamphlet is also printed in German. 50 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. 38 pages.

PRICE: One copy or more, six cents; twelve copies to one address, sixty cents; fifty copies to one address, $2.25; one hundred copies, $4.00. Orders for above pamphlets may be assorted as desired.

PRICE: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS

BIBLES. Clarendon Brevier (0148 3 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (0156 1 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

QUARTERLY COVERS WITH CHANGE POCKETS.—Regular size, $1.50 each or $15.00 a dozen. Pocket size, $1.40 each or $14.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Per copy, prepaid, $3.00; twelve or more copies to one address, prepaid, each, $2.50.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. The arrangement for both high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 27 cents the copy; $2.75 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 27 cents the copy; $2.75 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

Our Catalogue for 1909, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should be made by check, post-office money order, express money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money remittances or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.

Ten copies to one address, each, six months, $1.15; one year, $1.90.

Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.

Fifty copies to one address, each, six months, 90 cents; one year, $1.50.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Government has won its suit against the Standard Oil Company and the United States Circuit Court has ordered the corporation dissolved as an illegal corporation. The case is one of the most notable in the history of the nation. Thirty-three of the seventy-odd subsidiary corporations, however, are excepted from the order of dissolution, and the bill is dismissed as against them. The order will take effect in thirty days, unless suspended by an appeal to the Supreme Court, which will doubtless be taken. It is stated that the attorneys of the corporation have no hope that the decision will be reversed, and are now considering what to do, as there must be a reorganization to keep within the law. The proposition to form a big corporation with a capital stock of half a billion, to buy out all of the small companies owned by the Standard and which come within the scope of the court decision, is favored by but a few of the lawyers. A change in the Sherman anti-trust law is advocated.

Barbados, West Indies, has provided a greater number of workmen for the Panama canal than any other country, having sent there, since the United States began work on the canal, more than twenty-two thousand laborers. These men are efficient and thrifty, and in the present year have sent back home six hundred thousand dollars of their savings. These characteristics are largely due to the fact that the inhabitants are obliged to work, because the island is the most densely populated country in the world, there being, in round numbers, twelve hundred people to the square mile.

The interstate commerce commission won an important victory in the matter of the establishment of freight rates when the United States Circuit Court for the eastern district of Pennsylvania sustained the demurrer filed by the commission, asking for the dismissal of the suit brought by the Baltimore and Ohio and other railroads to enjoin the commission from enforcing its order of June 7, 1909, whereby it established a tariff rate on big vein coal carried from the George's creek and Elk river regions in Maryland to Atlantic coast points in other states.

The first results of the magnetic survey of the Atlantic ocean now being made by the Carnegie Institute of Washington on the non-magnetic yacht Carnegie, prove that when a complete survey has been made the masters of transatlantic liners will be able to clip some time off their schedules by following the revised charts of the magnetic survey, and will thus escape the fitful changes of the compass and their regular variations of the earth's magnetism which have been hitherto unrecorded.

Six thousand dollars a year until the population of the city shall have reached one hundred and fifty thousand, after which each of the five commissioners is to receive seventy-five hundred dollars yearly, is the salary recommendation of Mayor Pratt's special committee in reporting upon a new city charter for Spokane, Wash. The commissioners are to be elected at large for these departments: Public safety, public works, public affairs, public utilities, and finance.

A formal and concerted demand by organized labor for an amendment to the Federal Constitution that will make legal the complete enforcement of an employers' liability law was forecasted at New York last week by A. B. Garretson, grand chief conductor of the Order of Railway Conductors, who addressed the National Civic Federation on the topic: "A portion of the federal liability law. Has the railroad man been adequately compensated?"

"Sleeper trunk" frauds, whereby goods brought into this country in trunks with false bottoms to deceive the inspectors, can no longer be carried on successfully under the rules now adopted at the port of New York, where the fraud was mostly practised.

The United States Government has definitely accepted the agreement entered into between China and Japan on Sept. 4, in so far as it relates to mining interests along the South Manchurian and Antung-Mookden railroads.

Higher salaries for the thousands of clerks in the Government service are urged upon Congress in the annual report of the retiring United States treasurer, Charles H. Treat, made public by Secretary MacVeagh.

The collector of the port of New York has announced the removal for cause of eighty-three employees and attachés of the weighing and other divisions of the customs service.

The second convention of the Atlantic Deeper Waterways Association met at Norfolk, Va., a few days ago.

International.

The Russian government, it is stated, intends to close a contract with an American syndicate to develop the trans-Siberian railroad, which will be double-tracked its whole length. At present the distance between the Russian frontier and Vladivostock is spanned by a single track, the cost of the construction of which exceeded two hundred million dollars. The laying of a second track would probably cost less than half that amount, as the road was originally planned for two tracks and the bridge work and tunneling were performed accordingly.

It is reported that a series of wireless telegraph stations are to be installed in Siberia which will enable the war department of Russia to keep in communication with the easternmost parts of the empire. These stations are to be large enough to operate over a radius of a thousand miles.

With the establishment last week of a naval base at the Orkney islands, the North sea now becomes practically a British lake, which on the outbreak of war could be immediately closed to the rest of the world.

The Earl of Crewe, in the House of Lords last week, read the budget drawn by Chancellor of the Exchequer Lloyd-George. Lord Lansdowne moved for its rejection and what will doubtless prove to be an historical debate was begun.

The German budget for 1910 is $665,000,000. The naval budget is $111,000,000, an increase of over six million dollars.

Industrial and Commercial.

Ninety million tons of coal, one fifth of the total production of the country, were consumed by the 51,000 locomotives in the United States in 1906 in hauling freight and passenger trains. It cost the railroad companies $170,500,000. Of this enormous consumption the United States geological survey, through its technologic branch, makes the statement that 10,080,000 tons are lost through the heat in the gases that are discharged from the stacks of the locomotives; 8,040,000 tons are lost through cinders and sparks; 5,040,000 tons are lost through radiation, leakage of steam and water; 2,880,000 tons are lost through unconsumed fuel in the ashes, and 720,000 tons are lost through the incomplete combustion of gases. In addition, 18,000,000 tons are consumed in starting fires, in moving the locomotive to its train, in backing trains into or out of sidings, and in keeping the locomotives hot while standing. "Under ideal conditions of operation," says Professor Goss, "much of the fuel thus wasted could be saved, and it is reasonable to expect that the normal process of evolution in railroad practice will tend gradually to bring about some reduction in the consumption thus accounted for."

The Baldwin Locomotive Works has just completed for the Atchison, Topeka, and Santa Fé Railway the most powerful passenger locomotive now in use. Apart from its tender this locomotive weighs 376,450 pounds, and is sixty-five feet long. The tender, which is forty feet in length, carries twelve thousand gallons of water and four thousand gallons of oil, which will be used as fuel. The tractive power of the locomotive is fifty-three thousand pounds. There are five pairs of driving-wheels, seventy-three inches in diameter.

Contracts on hand by makers of apparatus, rolling stock, rails, and other supplies for electric railroads in North America, are estimated to amount to forty-seven million dollars. The average annual increase in the mileage of electric roads since the first commercially successful lines were built twenty-two years ago, has been one hundred and fifty per cent. The mileage in 1890 was 1,262; today 37,567 miles are in service and they represent an actual physical valuation of $2,250,000,000.

Of the many recent applications of concrete to the building industry of this country, few, if any, have attracted more attention, says *Scientific American*, than the process invented by a Des Moines (Ia.) man for the manufacture of enameled concrete blocks. A machine of gigantic proportions performs the many operations through which the block passes, without the aid of the human hand, turning out forty thousand perfect blocks in each day of ten hours, each one an exact duplicate of every other in form and color.

A cooperative plan for running a shoe factory, which has been conducted for twenty years in Freeport, Me., has been accepted. The employees are given the privilege of buying the preferred stock, amounting to two hundred thousand dollars in the new company, while the owners of the business retain the common stock, one hundred thousand dollars in all.

The railway mileage of North, Central, and South America is 303,000 miles; Europe, 200,000 miles; Asia, 56,200 miles; Africa, 18,500 miles, and Australia, 17,800 miles. The largest percentage of increase since 1903 has been in Africa, where the increase in mileage has approached twenty-five per cent.

It is reported that details, looking to the merging of the street railway, electric, water, and power interests in the city of Quebec and district have about been concluded, and within the next few days a powerful corporation with a capital of ten million dollars will be announced.

It is the expectation of the builders to complete the Cape Cod canal within four years.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DIFFICULTIES NOT HINDRANCES.

SAMUEL GREENWOOD.

JESUS never spoke of the way of salvation as easy for the pilgrim; he pointed out the difficulties and hardships to be encountered and overcome by his disciples in all ages, saying, "The disciple is not above his master." He did teach, however, that these conditions need not be hindrances to the Christian's progress. Although he forewarned mankind of what his followers must meet, and of their inevitable struggle with the world, the flesh, and evil, he did not express the slightest doubt of their ability to prove God's power over all forms of human error.

Neither has Mrs. Eddy, in giving to mankind her discovery of the Science of Christianity, minimized the arduous effort it entails, nor the difficulties to be overcome by its students; but she has plainly shown that the nature of error has not changed, and that for one to be a Christian today in the sense that Christ Jesus was, calls for the same cross-bearing and endurance which were demanded of the Master. The demonstration of Christian Science is certainly not the way of ease and idleness, but the way of toil and struggle and final triumph. It offers no encouragement to those who would enter heaven by virtue of another's labor and sacrifice, but it emphasizes the necessity for each individual to work out his own salvation by his own endeavors and through his own knowledge of truth.

The disinclination of human thought to accept and demonstrate spiritual truth makes the way of Science more or less difficult for the student, but the good results realized more than compensate for the trial and sacrifice. If he learns at the beginning that no difficulty or hardship can be an obstacle to his progress, but is, instead, a call for the better work of which he is capable, then all such experiences will cease to be sources of discouragement, and will become incentives to greater diligence and devotion.

Although one's first experience in Christian Science may have seemed all sunshine and flowers, because of the joy of physical healing, the mental outlook often seems to become bleak and barren when the individual is confronted with the necessity of doing his own work; and, as the significance of this work dawns upon him, he may be tempted to think that the way of Science is too hard for him. But one cannot remain indefinitely in the exalted consciousness to which another's demonstration may for the time have lifted him; he must sooner or later meet the divine requirement to overcome evil for himself. Like the early Israelites, one may feel that he would rather return to his Egyptian bondage than encounter the Red Sea passage and the long journey through the wilderness; but the sincere seeker for truth presses on, to find the divine protection and deliverance his pillar of fire and cloud all the way.

Students of Christian Science should find an inspiring object-lesson in the building of our great railroads, which have laid their iron way from coast to coast. When once the route has been surveyed and the order given, the construction work goes steadily on from day to day and from year to year, until the last spike has been driven. There have been rivers to bridge, ravines to fill up, mountains to climb, and tunnels to bore; but these are regarded only as difficulties to be surmounted, not as obstacles that could defeat the purpose; and on that working basis railroads have been built into every quarter of the globe by the achievement of engineering feats that to the uninitiated might seem impossible. These builders, with unbounded faith in the ability of their engineers and workmen to solve all problems, recognize nothing as an obstacle, and are successful.

In a similar manner, Christian Scientists are working their way through the wilderness of human belief. There are rivers to be crossed, valleys to be "exalted," mountains to be "brought low," and withal there are lions in the way. They likewise need unwavering confidence in the power of right thought to overcome evil, and in their own God-given ability to meet every demand, and they should look upon whatever lies across their path only as a difficulty which may seem to impede but which cannot bar their progress. Thus patiently persevering, their work will be successfully done, until the final goal is reached.

In reality, difficulties are helps to mankind rather than hindrances, for they serve to develop latent capacity and stimulate one's highest endeavors. They also bring out the qualities of patient application so indispensable in the student. Though the railroad seems to be at a standstill while bridges are being constructed and tunnels bored, the workers know that each blow of hammer or blast of rock brings them that much nearer the consummation of their task, despite appearances to the contrary. And though our own progress may seem to cease while we toil, it may be year after year, to overcome some difficulty, perhaps a "mountain of selfishness" or a "valley of sin" (Science and Health, p. 61), we should know that every honest effort, every right thought applied, is surely taking us that much nearer our final attainment, whatever false, material sense may tempt us to think.

We may learn from our Leader's writings that all that can obstruct the student's progress are his own love of sin and sensuality, his apathy concerning the claims of evil, or animal magnetism, and his mental inaction. These are enemies which we have no cause to love, for they are foes to every good impulse and desire, and if allowed to control will effectually hinder our happiness and prosperity. On the other hand, no claim of sin that we desire to forsake, no evil condition that we are willing to overcome, can for one moment close the way to better things. It may, to our sense, require time to do the needed work, but we are making the best progress possible to the degree that we are faithfully working.

The indisposition to work for his reward, or the unwillingness to wait for results to appear, is frequently the greatest difficulty in the way of the student, for it shelters those persistent errors of discouragement, impatience, covetousness, jealousy, and rebellion. What sort of a

Digitized by Google

railroad builder would he be who sat disconsolate on a riverside because he could not take his road across until he had built the bridge? And what kind of Christian Scientists are we—students of demonstrable Science—if we rebel at the demands of the Principle of our work, or sit down to pout because we cannot gain the solution of our problems without working them out by the scientific rule?

Human thought, so long as it clings to its material beliefs, and its false sense of self, may find the way of Science very hard, but to the earnest worker "a bright promise crowns its brow" (Science and Health, p. 558). With so many examples of those who, like their Master, have "endured the cross" and despised "the shame," whatever seems difficult should only spur us on to reach a higher and purer state of thought, for the same joy is awaiting us. Mrs. Eddy has well said: "Whatever we meet that is hard in the Christian warfare we must count as nothing, and must think instead, of our poverty and helplessness without this understanding" (Miscellaneous Writings, p. 281).

If we are faithful in our work today, we need have no fear about the morrow, for in the fulness of time our bridges will be built, the valleys and mountains will have been left behind, and when we reach the lions, like the pilgrim, we shall find them chained. Even though toil and sacrifice are required of us as Christ's disciples, if we are subduing sinful sense in all its phases, we shall find the way one of peace and joy, ever increasing until the day of our perfect attainment.

FIDELITY TO GOD'S WORD.

REV. HENRY M. PERKINS.

Our theme at once suggests a discrimination between the mere letter of the Word and the spiritual teaching therein contained. There is much significance in the words that are read in all Christian Science churches every Sunday: "The Bible and the Christian Science text-book are our only preachers." To those who attend these services from curiosity, or some other common motive, the question arises, Why this contrast with forms used in other churches? At least, why should there not be some address based upon a text of Scripture and relating to the topics of the day or to matters of public interest?

The answer is obvious: When a sermon is made to consist of selections from the Bible and explanations of their spiritual import, the thoughts of the hearer are held closely to Truth, and with corresponding benefit. So also silent prayer, followed by the audible repetition of the Lord's Prayer, brings us much nearer to God than when a variety of themes are uttered in petition, though with good intentions. Mrs. Eddy has said: "Audible prayer is impressive; it gives momentary solemnity and elevation to thought. But does it produce any lasting benefit? Looking deeply into these things, we find that 'a zeal . . . not according to knowledge,' gives occasion for reaction unfavorable to spiritual growth, sober resolve, and wholesome perception of God's requirements. The motives for verbal prayer may embrace too much love of applause to induce or encourage Christian sentiment" (Science and Health, p. 7).

"Preach the word," said Paul. This motto fittingly greets the eye in the beautiful edifice of The Mother Church in Boston. In his letter to Titus the apostle refers to each one who is "holding fast the faithful word as he hath been taught." This does not mean a mere form of words, but the spiritual truth contained in those words. It is for this very purpose that the spiritual import is given by references from Science and Health. "The letter killeth, but the spirit giveth life," was Paul's message to the church in Corinth. Illustrations of this have been seen in the ecclesiastical world and in the experience of individuals.

Much of the bigotry and even persecution of former centuries resulted from a tenacious clinging to certain forms of expression in the Bible, and the overlooking of their spiritual meaning. The worship of the early Christians consisted largely of readings from the Scriptures. A bishop of the venerable Nestorian church in Persia, when on a visit to the United States, was asked the difference between the sermons preached here and those in his own church. He replied, "We take all from the Bible; but here there is one verse from the Bible and all the rest is from America."

A close adherence to the Bible, with its spiritual meaning, is productive of fruits of the Spirit. In proportion as we watch and pray for that Mind to be in us which was in Christ, so shall we be able to discern the true spiritual meaning of God's Word.

"THOU ART A HARD MAN."

GRACE POTTER.

In the parable of the talents the story is told of the man "who called his servants, and delivered unto them his goods," giving "to one five talents, to another two, and to another one; to every man according to his several ability." The servants to whom he entrusted the five talents and the two talents, invested them wisely and were able to render to their master upon his return double increase, and received his commendation accordingly. It is related, however, that he who received but one talent—who manifested a limited sense—"went and digged in the earth and hid his lord's money,"—then sought to justify himself with this explanation: "Lord, I knew thee, that thou art a hard man, reaping where thou has not sown and gathering where thou hast not strawed: And I was afraid, and went and hid thy talent in the earth: lo, there thou hast that is thine."

The "hard man" is ever the tenant of the consciousness whose motive-springs are limitation and fear, and is the creature of its own imaginings, for the very reason that such a mentality is without power or capacity of its own, until released and transformed by the activity of Truth, to escape sufficiently from itself to comprehend the man of God's creating, or to pattern a concept at variance with these perverted tendencies which claim dominion over it. In the article "Love your Enemies," Mrs. Eddy asks, "Can you see an enemy, except you first formulate this enemy and then look upon the object of your own conception?" (Miscellaneous Writings, p. 8). And it may be further asked: Where does the "hard man" dwell save in his self-made locality? It is to be noted in the parable that the two fellow-servants, working from a different viewpoint, received from the same master recognition and reward instead of the condemnation and punishment which fell to the lot of the "unprofitable servant." Paul admonishes: "To whom ye yield yourselves servants to obey, his servants ye are to whom ye obey."

If one has a belief that he has a "hard man" to serve, it may be, in part, because he has a "hard" concept of God and man, because he has a limited appreciation of the nature of infinite Love and its infinite resources, opportunities, and blessings for him who is not "afraid" to use them. His difficulties may not therefore be healed until he finds through experience a better man in his thought of his brother. The way to escape the service of a "hard man" is made plain on page 135 of "Miscellaneous Writings," where we read: "Doing unto others as ye would they should do to you, conquers all opposition, overcomes all obstacles, and secures success."

How often does this belief in a "hard man" stand in the

Digitized by Google

way of the accomplishment of one's work—how often it hinders one from "being faithful over a few things" —how often it stays the opportunity for the increased understanding and growth which comes from loving, selfless service. How often does the fear of censure, a wrong estimate of one's brother or the disposition to regard his errors as real and personal—a lack of true forgiveness of them—and a corresponding sense of injustice, resentment, and discouragement, take possession of the individual to his undoing. Such a false sense, if admitted, may be augmented by the fact that his fellow-workers are making good use of their larger talents. The wholesome admonitions given by our Leader in the articles quoted, and many others, would, if assimilated, be sufficient to banish the belief of a "hard man" forever into that "outer darkness" where it would consign one if continuingly held in thought.

No one can work out his own salvation freely, do his plain duty to God and man, and find joy and satisfaction in his work, trammeled and obstructed by a false belief in his own consciousness. The remedy, fortunately, is at hand, because this intruder can be ejected from our thought as the personification of a defrauding sense, and it will never be found in any other habitation or form, for the reason that falsity does not exist in Spirit or in Truth. Freeing himself from this delusion, the individual is not only himself blessed, but inevitably releases and blesses the one upon whom his thoughts rest.

There is no need for the worker to hide his talent in the earth, cripple his capacities, clamp his activities, lose his God-given opportunities for service and growth, when he can rise with God-given strength to put out every belief in evil, that his one talent may not be taken from him and given to him that hath ten. Each may find through individual experience that "unto every one that hath shall be given, and he shall have abundance;" rather than that "from him that hath not shall be taken away even that which he hath."

OUR DEBT.

F. ISABEL B. NORTON.

LE BARON in a short article, "The World's Big Debt to Thoughts in Books," quotes Emerson as saying, "The world is founded on thoughts and ideas." Books have undoubtedly shaped the careers of some great men. It is said that Lincoln worked hard for three days to buy a "Life of Washington," and read and reread it until he almost knew it by heart. It is also said that the chance possession of a copy of Burns made Whittier a poet. Lord Beaconsfield is said to have declared that "a book may be as great a thing as a battle," but it may well be asked what single battle ever had as lasting and vital an influence upon history as the Bible. It was Charles Lamb who said he felt it incumbent upon him to ask grace before reading rather than before dinner; while Milton has said, that "a good book is the precious life-blood of a master spirit." The world has outgrown the day when the Christians burned the books of the pagans, and *vice versa*. Books have taught us better. There were times when books were hardly procurable, when a man, for a single book had to give a landed estate. Then came the time when, as Sir John Lubbock said, "for the price of a little beer, a little tobacco, we can buy a Shakespeare."

Today without question the one book next to the Bible which is having the greatest influence upon the world's thought is "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with many the Bible would be lacking in influence without this interpretation. Some have worked hard to procure a copy of this inspired and inspiring book, and have read and reread it until they almost know it by heart. Many there are who for a copy of this book would if necessary willingly give a landed estate. Its possession may do even more than make one a poet, for it may make a man of him. The reading of this book may cause many battles with error, but its effect will be the victory of good over evil, and it will hasten that day when there shall be no more wars, but "on earth peace, good will toward men."

We may indeed feel like saying grace before we read this book, and after, too, in gratitude for its teachings; and for this priceless gift we may well thank our Leader, and pay our great debt to her with love.

HELP FROM OTHERS.

WM. HART SPENCER.

WHEN Job was having the argument with his friends, he recognized some of the things that were brought to light as being disagreeably true concerning himself, while many things of which he was accused he could deny with a clear conscience. What effect Job's argument had in solving the difficulties of his friends we do not know, but Job learned one lesson from them which is also of value to us, viz., that he could not measure his spiritual growth by the related experience of others. Their experiences were of worth to Job only as he could apply them in working out his own salvation.

Many times it is necessary to guard against discouragement, when reading or listening to testimonies where the relator has gained a victory along some line of endeavor which we have a sense of its being impossible for us to follow; but it is wrong for us to allow a sense of limitation or self-condemnation to creep in and thus rob us of a helpful lesson. In a general way, the desirability of eradicating all that is unkind, intemperate, and unseemly, is patent to every one, but it is not always clear that in order to do this specifically it is essential that the discordant element be uncovered in our consciousness; and only to the degree that this is made plain can we intelligently do the work necessary in order to overcome.

Not one or many experiences can cover all the phases in the make-up of a listener, and so it is wise, when a testimony appears to us as being helpful, to ponder the circumstances as given, and use our intelligence to see in what way it can prove helpful to us. If we appropriate the truth as it appeals to us, to that extent we are lifted by it. A testimony may help us to see some weak point in ourselves of which we were not conscious, and we may thus find a key to some serious difficulty. Where there is a hearty desire for correction, the making clear of a fault half wins the battle for its elimination.

To one who is honestly desirous of making progress, the rehearsal of the salient points of successful overcoming along the line of some personally interesting phase of spiritual advancement often tends to give the hearer an outline whereby he can work out his own particular problem intelligently, according to his needs, and it assists him as well in formulating a progressive line of thought. Thus it is good for a man to listen to admonition and advice from those who by experience are plainly competent to give it. The act of listening does not necessarily abrogate or bias his own judgment, but the outline of another's experiences may aid him in his own character building. If we are amenable to them, the kindly criticisms of friends assist us to remedy our shortcomings, as loving comments help to give tangible shape to what otherwise might pass unheeded.

That it may not be lost sight of, it is continually being stated that Christian Science stands for the upbuilding of our spiritual nature, and that the bodily healing is a warrant and earnest of our growth in spirituality. This is not to gainsay that many a person is first led into a true sense

Digitized by Google

of spiritual things through the healing of the body, but let us remember that there are also those who, while giving no evidence of physical infirmity, are hungering for the light of the reasonable understanding of their relation to God, who are longing for the rule whereby they may find the surety of their sonship. During the span of human life, there is given us the opportunity to uncover error in ourselves and in others, not that the love of God may flow through us, but that we may spiritually discern that the love of God does flow through us, the love which saves us unto every good thing.

God has given us "richly all things to enjoy," and so our struggle is not with God but with the human self; not struggling "as one that beateth the air," but insistently, persistently, continuously being on watch and ward against the assaults of evil; not fighting personality, but battling against the tendency of mortal mind to hinder the free course of the Spirit in us. While we cannot explain it to the world, nor even formulate it to ourselves, still we know that if we are faithful we shall hear the welcome "Well done," and know the full meaning of the promise, "To him that overcometh will I give to eat of the hidden manna."

THE CLOUDS OF SENSE.

STELLA E. SAXTON.

It was on a high mountain slope in Switzerland, above Lake Geneva. About us was unrolled the marvelous panorama of the Alps, the "long, wide lake below." But it was a gray day; the water was dull and ashen, a gloom rested on earth and sky. Suddenly, as we looked down, a little circle on the water flashed like an opal afloat—a shaft of light had touched the lake. As the eye followed it up through a breaking cloud to a tiny patch of blue sky, we understood the gleaming disc below; and as the clouds broke more and more, as the patch of cleared sky grew wider and wider, the ripples on the lake reflected back the light above them in ever increasing space, the hills took on a vivid green, and soon the whole country was glorious with colorful beauty. Here was our lesson in reflection. When clouds of error are as a veil before our mental vision, everything in life seems dulled by them; but as one shaft after another of spiritual light drives them away, larger and larger grows our consciousness of Truth, there is less and less of obstruction in the way, till finally the whole glorious brightness of the life that reflects God and God only is ours.

A few days later we entered Lucerne to find it wrapped in a blanket of obscurity. To the human eye it seemed but a flat, uninteresting prospect, its boundaries hidden by mist, not one single evidence of the wonderful city it was to be when the clouds lifted. Yet we had been told that travelers wait hours, days, weeks even, for this happy event, and we were willing to linger and trust. It was morning when we reached the place, and suddenly, about three in the afternoon, an emerald slope emerged from the fog, as if thrust through a flimsy curtain; then another and another, each with drifting banners of mist about them, which gradually melted and swirled away, driven by the whip of the sun, till peak after peak stood sculptured against the blue sky, some veiled in purple haze, some snow-crowned; the whole presenting a view so marvelous, and revealing Lucerne such an entrancing jewel of a city, that we fairly trembled to think what we would have missed had we believed the evidence of human sight in that early morning and gone on our way.

Again the lesson was borne to us of how like this the mental journey into Christian Science has been. Truth has always been Truth, the same yesterday, today, and forever. There have been those who have reached the exalted vision and told us of its glory, and some have believed, while others went their way indifferent or incredulous. Through long ages mortal mind has been piling up the dense black clouds which have obscured the City Beautiful—clouds made up of beliefs in other powers, of false religious, false philosophy, false pleasures, and their attendant pains, sin, sickness, death, the endless string of individual errors that make for separation from God—till, as it seemed, the mass was impenetrable. Then in this age came one whose thought was so piercingly pure that it smote through the blackness; the whole mass broke away, and once more the wonderful heights of spiritual attainment were revealed.

Many have journeyed to the gates of the city and have seen the vision. What though the clouds drop down and again seem to obscure it temporarily; one knows it is there. All individual consciousness can possibly do is to get rid of that which obstructs the constant realization of its beauty, get one error after another out of the way, let the sun of Truth drive wrong thoughts into nothingness, knowing that just so sure as the mountains about Lucerne come out from the enveloping fogs, just so sure will the harmony of being be ours, as

> The clouds of sense roll back, and show
> The form divinely fair.

HUMAN DISCIPLINE VS. DIVINE.

PEARL BEMIS PERSONS

In my experience as a mother, even before coming into Christian Science, I always felt, after one of the rare occasions when I seemed driven to the use of any sort of corporal punishment for the little ones, that I had failed, even though obedience had been attained. I felt that if I had been wise enough and patient enough, I would have been able to accomplish the desired result without even the mild chastisement which was all I could ever bring myself to administer. I was sure that it was my lack of wisdom which seemed to make this form of discipline necessary; and yet I used to believe that an all-wise, all-powerful Father scourged His children into obedience to His laws with the many-corded whip of physical suffering!

If the belief that God uses sickness as a means of grace does not mean that omniscience can find no better way than corporal punishment for some of His erring children, what does it mean? Shall the teacher in the public schools and the student of child culture in the home be more just than God? The psalmist prayed, "Keep back thy servant also from presumptuous sins"! May we be forgiven for having dared to think that the infinite Mind rules the universe in ways which we have outgrown.

THE MASTER'S CALL.

MARY LLOYD MC CONNELL.

The storm had passed me, and I lay
Upon the bosom of Life's ocean, derelict;
Far off the thunder echoed, and beyond
I heard the sullen roar of angry surf
Beating a rock-bound shore; nor hope had I
That ever ray of dawn could penetrate the gloom.
At length a star appeared,—and through the night
A tender voice I heard: "Fear not! Thou art
Not all bereft. My child, come thou to Me:
When earthly joys take flight, true peace is born!"
Then from the deeps of my unmeasured woe,
Stretching my empty hands, to Him I cried:
And when from darkness unto light I turned,
Lo! it was day!

SELECTED ARTICLES.

[Percey B. Sovey in *Aberdeen* (Wash.) *World*.]

To what cause may be attributed the growing tendency of men to neglect the church? Why is it that men do not go to church? It was once the case that men manifested much interest in religious work, but now that manifestation is almost exclusively feminine. What's the matter with the men—or the church?

They are trying to find the answer to these questions here in Kansas City, and investigators are not numerically small. Interest in the subject follows the late visit of a noted divine who undertook to discuss the problem, and thereby started a discussion that seems unlikely to end for some time. The investigators concede at the outset that men do not attend church. Of course, conditions are not identical the country over. In some communities one will see many men at church. Generally speaking, however, the average present-day congregation is made up largely of women. Not only is the church relying now on the support of women, but even the theaters, music, art, letters, and philanthropy are actually dependent upon the interest of the gentler sex.

It is not to be denied that the moral condition of men is steadily improving. Drunkenness, for instance, is on the decline. The percentage of criminals is decreasing. Conditions have improved even in the slums. In this city of nearly half a million people the spectacle of a drunken man is indeed uncommon. Drunkards cannot obtain employment! no one has any use for them, and the drunkard is also a loafer. Again, the liquor interests are discouraging drunkenness, which, contrary to orthodox belief, is bad for the saloon. Nowadays a drunken man cannot buy liquor at so-called first-class bars.

Man is morally better than he used to be, if outward appearances may be accepted for it, yet he doesn't attend church as regularly as was formerly the case. Man's evident indifference to religious work is attributed by some really eminent divines to modern business requirements. No less prominent a minister than Dr. Washington Gladden, teacher, preacher, and writer, of Columbus, O., declares that the business man of today finds it necessary to devote all of his time and attention to commercial affairs, to the exclusion of church work. Man's business cares keep him away from church, from the theater, from the higher arts, says Dr. Gladden, who is a man of universal repute. He adds, "The main reason why men do not attend theaters, and aid music, art, letters, and philanthropy in person, is the pressure and rush of business. Business through the ages has deprived man of the higher things of life. The ascendency of woman in the church and in the schools is growing. Men are slaves to things."

There are other investigators who, while agreeing that press of business has much to do with man's religious indifference, declare that ministers themselves are not entirely blameless for the condition. These critics aver that the average man does not care to hear politics discussed from the pulpit; that prohibition discourses in church disgust him; that treatment of local issues by ministers is annoying. What men want it is insisted, is a simple, religious sermon—something that will prove refreshing and invigorating, while at the same time making for the moral uplift.

Few men are so busy that they find it either inconvenient or disagreeable to figure out political considerations for themselves. Those who criticize ministers go farther and declare that the preacher is at best a theorist, and not any too well prepared to discuss civic matters. Such discussions, they conclude, force the word of God into the background, engender animosities (as political discourses usually do), and weaken the church. One critic recently expressed the idea in this language: "The church must utterly abandon vaudeville methods and get back to first principles if the interest of men in the work is to be aroused and held."

When Dr. Gladden said that "men are slaves to things," he expressed a belief that is shared by many other noted students. The man must earn the living for the family, which is no simple matter in these days of sky-high prices. He must clothe his wife and children, and fashion's demands are becoming more and more burdensome. He finds that it requires his best efforts to provide for the members of his family and give them the ordinary comforts, and in his effort to do this he employs all of his time. His wife represents the family in church and philanthropic work, while he slaves to provide means to keep the establishment running. It is little wonder that he does not attend church, that he seldom steps inside a theater, that he manifests no interest in art, science, or letters. Other things, more urgent, more essential, demand his attention. He is a slave indeed.

The statement that men do not attend church is contradicted. Ministers will declare that men are not losing interest in religious work, but that ill-informed persons seek to encourage such belief. It would appear, however, that the statement is quite correct—that women actually support the churches. Dr. Gladden said here the other day: "I am here to call the attention of Christian men to conditions that are intolerable. I refer to the fact that the growth of the church is checked everywhere by the failure of men to go to church. There are twice as many women as men in the congregations. The large proportion of male church members take no part in the work."

That men have become slaves to things has "resulted in the effeminization of the higher things in the communities," adds the doctor. "The great majority of boys at school never come under the direction of a male teacher. Children need the masculine touch as well as the feminine. We must have a religion that appeals to both men and women. The average boy will not go to Sunday School after he is fifteen. He doesn't find men there. He does not believe the church is a man's place. We are able to remedy this, but the best of the men outside won't be won by a woman's religion."

While the tendency of men to forsake the church may apply to the orthodox religions, it would not apply at all to the world's latest religion, Christian Science. Since Christian Science has come to be better understood, it has made astonishing gains, and, what is quite remarkable, has attracted men as well as women. The fundamentals of Christian Science have not been easily comprehended and earnest Scientists are therefore deep students. But the church has recently sent out lecturers of great ability, and now the scientific principles are more simply stated and better understood.

With some friends, I attended a Christian Science lecture a few days ago. Curiosity prompted me to go. What interests one in Science is its calm appeal to a man's reason. The proposition that, if one's mind is as it should be, the body which houses it will likewise be well, is sound logic. Scientists will demonstrate to you that their faith has effected wonderful cures. For an every-day religious belief, one that is practicable and helpful, Christian Science appears to fill the bill. At all events, it is attracting the intellectual element in a striking manner, and man, the slave, is evidently as well represented as his fair helpmate.

Christian Science teaches that a sound mind means a sound body. It is not a new doctrine by any means. Noticeably, Scientists display much happiness; the study appears to have an elevating tendency as affecting one's spirits. Wrongful things are all a mistake, says the Sci-

Digitized by Google

entist. It is taught that it is quite as impossible to mix good and evil as to mix light and darkness. Good holds the upper hand; a clean mind necessarily means a clean body.

The extent to which business men have been attracted to Christian Science is really surprising. Here in Kansas City there are three Christian Science churches, two of them among the most imposing and largest edifices in the city. Their congregations are made up almost entirely of people of intelligence, of men and women who are thinkers. The churches are already too small for their congregations. The men who enter Science appear to be more deeply interested than the women, principally, one finds on investigation, because Science has done for them what could not be—or was not—otherwise accomplished. And the business man who is a Scientist will tell you that, whereas the orthodox religions are losing the support of men, Christian Science is rapidly gaining that support, and will eventually become the world religion.

Perhaps, after all, business cares and lame sermons are not alone responsible for the condition which calls forth the complaint of Dr. Gladden. Perhaps we have entered upon a religious evolution that may solve the problem of man's indifference to church work.

["Altruist" in *St. Joseph* (Mo.) *Gazette.*]

The optimist who believes that the world is getting better every day and that altruism and brotherly love will yet dominate the commercial, social, and religious life of mankind the world over, must have been rudely shocked when he read in a local paper of St. Joseph that the "Ministerial Alliance of St. Joseph" had decided to make a "vigorous attack" on Christian Science. This combination of all the churches to destroy one savors of persecution. It is atavistic—a harking back to the dark ages. It is an unpleasant reminder of the thumb-screw, the rack, and the burning fagots by which religious intolerance and bigotry for twelve centuries tortured to the death many thousands of God-loving Christians who dissented in some particular from the dominant church.

Who are these Christian Scientists upon whom the Ministerial Alliance has declared a war of extermination? A few months ago one of the ablest ministers this city ever had, himself a member of the "Ministerial Alliance of St. Joseph," publicly used the following language: "I wish to say that I respect the peace, humility, sweetness, patience, and the abounding love that characterizes many if not all Christian Scientists. I respect their influence for good and the truth they teach."

All the world knows that these words are true. Never since "the morning stars sang together, and all the sons of God shouted for joy," has there been a religion or system of ethics founded or promulgated by mortal man that effectively heals the sick and sorrowing, regenerates and purifies the heart, and gladdens, enriches, and beautifies the lives of its devotees and followers as Christian Science. Judged by her life-work and its fruits, Mrs. Eddy is the greatest woman in history and one of the greatest benefactors of mankind; and millions yet unborn will speak her name with love and gratitude, long, long years after the "vigorous attacks" of the Ministerial Alliance of St. Joseph have "gone glimmering among the things that were."

In conclusion, the writer deems it proper to state that he is not a Christian Scientist, and this article was written not by the request, or suggestion, or knowledge of any member of that faith, but in a spirit of altruism that deprecates persecution in all its forms and disguises, whether religious or otherwise.

[Translated from an article by F. L. in *Berliner Lokal-Anzeiger.*]

In a recent issue of *Berliner Lokal-Anzeiger* there appeared an article by the Rev. Ernst Klein, bearing the title "Something about Faith-cure," in which he takes a few sentences from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, out of their context in an arbitrary manner.

We quote verbally from this text-book (p. 341): "The strictures on this volume would condemn to oblivion the truth, which is raising up thousands from helplessness to strength and elevating them from a theoretical to a practical Christianity. These criticisms are generally based on detached sentences or clauses separated from their context. Even the Scriptures, which grow in beauty and consistency from one grand root, appear contradictory when subjected to such usage." In another place (p. 354) Mrs. Eddy says: "The opponents of divine Science must be charitable, if they would be Christian. If the letter of Christian Science appears inconsistent, they should gain the spiritual meaning of Christian Science, and then the ambiguity will vanish." Mrs. Eddy also lays down the following rule for her students (p. 444): "Students are advised by the author to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these differing opinions."

Christian Scientists can at least expect from their opponents that they should judge "righteous judgment." What, for instance, would be thought of a man who attempted to criticize the strictly scientific explanations of Kant before a public of non-philosophers, and in such a way as to quote a few disconnected sentences, without giving at the same time the explanation how Kant intended these statements to be understood, and without giving his argument? It surely would be easy then to call Kant's philosophy very paradoxical. The denial of matter, by the way, is nothing new to the student of Kant's philosophy or of modern philosophy in general; but the Rev. Mr. Klein tries to ridicule that part of the teachings of Christian Science.

He is mistaken in believing that First Church of Christ, Scientist, Berlin, has crept into a hiding-place. The services, meetings, and the reading-room of this church are open to everybody, the latter being shown to visitors after every meeting and after every service; also the authorized Christian Science literature can be read or purchased there, so that one positively has no difficulty in securing a copy of the text-book. Moreover, it is erroneous to believe that Christian Science is not Christianity. A more thorough study of the text-book might have convinced the Rev. Mr. Klein that Christian Science declares the existence of an almighty God, and that as a logical sequence it acknowledges no other power besides this one power; that its adherents furthermore look upon the life of Jesus as their life-model, and that they endeavor to draw nearer to it through practical Christianity and by manifesting love toward their fellow-beings.

No Christian Scientist considers eating and drinking unnecessary or sinful at the present time. Jesus himself partook of food and drink, and Christian Scientists do not strive higher than this model of theirs. They have not lost their ability to worship God, but rather have learned anew how to worship Him "in spirit and in truth."

[Frederick Dixon in *Beverley* (Eng.) *Recorder.*]

Jesus did not buy the pardon of the world with his life, and so save the individual sinner from making his own atonement to divine Love; that is to say, from demonstrating his spiritual oneness with the Father, as a child of God. What he really did do, as Mrs. Eddy has so clearly explained, in her noble chapter on Atonement and Eucharist,

Digitized by Google

was to become the Wayshower to humanity, not by doing its work for it, but by showing it how to do its own; and so, as the writer of the epistle to the Hebrews says, in the passage quoted by the canon, "for by one offering he hath perfected for ever them that are sanctified." This does not in the least mean that we are exempted from making every sacrifice which is necessary to overcome our belief in evil, and so, as has been said, demonstrate our spiritual unity with our divine Father. It is necessary for us to go on making sacrifice after sacrifice of our own material beliefs, in our effort to gain the goal of our hopes, the Mind that was in Christ Jesus; and so as Mrs. Eddy has written, in the passage on page 23 of Science and Health which the canon has cut out of its context, "one sacrifice, however great, is insufficient to pay the debt of sin. The atonement requires constant self-immolation on the sinner's part."

It is the effort to bring this about which constitutes the healing mission of Christian Science. People often talk as if Christian Science was a sort of mammoth dispensary. It is nothing of the sort, unless by a mammoth dispensary is meant a religion through the understanding of which sin may be vanquished, sorrow turned into joy, and the sick made whole. These things are all inseparable the one from the other, and that is why Christ Jesus was able to demand from the scribes, by the bed of the man sick of the palsy, at Nazareth, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

[Alfred Farlow in *Boston American.*]

Mrs. Eddy claims certain Scriptural propositions to be true, namely, that God is Mind, Spirit, Life, Truth, Love; that man, in keeping with the scientific proposition that like begets like, is God's image and likeness, and is therefore spiritual. That Mrs. Eddy's interpretation of these premises, as well as the conclusions which she has drawn therefrom, are her discovery, is easily proved by the fact that outside the Bible and those works which are based upon Mrs. Eddy's teaching, the conjoined propositions which she presents are not to be found elsewhere in literature. Mrs. Eddy's position in regard to her discovery is simply her insistence upon the fact that her ideas are not in accord with those Scriptural interpretations which have heretofore been introduced. She is not concerned about her personality, but is simply insistent upon the distinct individuality of Christian Science. Mrs. Eddy claims no honor whatever respecting those things which differ from her teaching, and her affirmation concerning her own teaching is that it is demonstrably true and is therefore the emanation of eternal Truth—is of God.

So he died for his faith. That is fine—
More than most of us do;
But stay, can you add to that line
That he lived for it, too?

It is easy to die. Men have died
For a wish or a whim—
For bravado or passion or pride—
Was it harder for him?

But to live; every day to live out
All the truth that he dreamt,
While his friends met his conduct with doubt,
And the world with contempt—

Was it thus that he plodded ahead,
Never turning aside?
Then we'll talk of the life that he led—
Never mind how he died.

ERNEST CROSBY.

AMONG THE CHURCHES.

SAN DIEGO, CAL.

The corner-stone of the new edifice for First Church of Christ, Scientist, San Diego, Cal., was laid with appropriate services at sunrise, Monday, Oct. 25, in the presence of the Readers, the official board of directors, the building committee, and the clerk of the church. In the hush of the early morning hour, the kingdom of heaven seemed very near to those who listened to the words which were read from the Bible and the works of our beloved Leader. The dawn of Truth, as revealed by the light of Christian Science, had brought to consciousness a clearer, truer understanding of God and man, which understanding unfolds to view the true church, "the structure of Truth and Love" (Science and Health, p. 583), the corner-stone of which is Christ, Truth. This church edifice will stand in this community a monument of gratitude to God, and to the Discoverer of Christian Science. The new church building will occupy a quarter block, the auditorium measuring 66 x 96 feet, and will have a seating capacity of about one thousand. The approximate cost, exclusive of the pipe-organ, will be about fifty thousand dollars. It is hoped to have the building ready for occupancy early in the spring.

Correspondence.

BERLIN, GERMANY.

The first regular Christian Science services in Berlin, Germany, were held in 1898 in the home of a Christian Scientist, and in September, 1900, eleven Scientists organized a branch church. The ministry of clerical affairs and the police headquarters were duly notified of this action, and permission to found our church was granted. The police department requested a list of the names of the members, a statement of our creed, our constitution and by-laws, and in response to this request the names of the members and a printed copy of the tenets of The Mother Church with its German translation was sent, thus becoming a part of the state archives.

Notices of the church services were published in two German newspapers and in one English paper. Very soon the increased attendance made it necessary to move from a private house to a hall. There have been some antagonistic newspaper attacks, but these have resulted in an increase of our attendance. Public opinion has grown more favorable and the church is steadily growing. Since Thanksgiving, 1907, the services have been held in a hall in the center of the city. This hall seats about four hundred and has a fine large pipe-organ, which gives it the appearance of a church auditorium. The overcrowded German testimonial meeting in the evening made it necessary to hold a second service in the afternoon; an English testimonial meeting is also held. On Sundays, beside the German and English services in the morning, a second German service is held in the afternoon, to accommodate those who cannot have a seat at the morning service.

In July, 1909, the reading-room was moved to the church-hall building. It includes two large rooms appropriately furnished, and is well supplied with literature that brightens the home and lifts the burden from many a heavy heart. The Germans greatly appreciate the literature which the Christian Science Publishing Society publishes in their language, and its constant increase is a great source of joy to them. *The Christian Science Monitor* has been placed in the reading-rooms of five of the largest hotels, three steamship companies, one bank, and one department store, and from these places come reports that it is a favorite paper.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

[Republished by request of Mrs. Eddy.]

A LETTER BY MRS. EDDY

Brookline, Mass., Nov. 13, 1909.

To the Board of Trustees, First Church of Christ, Scientist, New York City.

Beloved Brethren:—In consideration of the present momentous question at issue in First Church of Christ, Scientist, New York city, I am constrained to say, if I can settle this church difficulty amicably by a few words, as many students think I can, I herewith cheerfully subscribe these words of love:—

My beloved brethren in First Church of Christ, Scientist, New York city, I advise you with all my soul to support the Directors of The Mother Church, and unite with those in your church who are supporting The Mother Church Directors. Abide in Truth, in fellowship with and obedience to The Mother Church, and in this way God will bless and prosper you. This I know, for He has proved it to me for forty years in succession.

Lovingly yours,
MARY BAKER EDDY.

A RELIGION OF DOING.

SOME young Christian Scientists—as well as some who are old enough to know better—seem to entertain the belief that because God is good, they have nothing to do in shaping their human lives but to sit back and state this fact in a sort of automatic way; or, in other words, they expect to reap a harvest without having done the preliminary planting and watering which are as necessary as the sunshine to produce satisfactory fruitage.

The Master, near the close of that wonderful Sermon on the Mount, warned his disciples against the dangers of mere profession, saying, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Again and again was he insistent upon the necessity of activity—the doing of the will of the Father which filled his own earthly career to the very end with loving ministries to humanity. The apostle Paul added a word of reassurance when he wrote to the Galatians, "And let us not be weary in well doing: for in due season we shall reap, if we faint not." So, too, Mrs. Eddy, in one of her messages writes, "The song of Christian Science is, 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20), and in Science and Health (p. 3) she says, "Who would stand before a blackboard, and pray the principle of mathematics to solve the problem? The rule is already established, and it is our task to work out the solution."

Many who embrace Christian Science and believe in it because it has healed them, do not seem to grasp this idea of the necessity for personal activity, and continue in a state of mere passive receptivity for years. Whenever they are sick or in trouble, they depend upon some practitioner for help, and in so doing they fail to avail themselves of the very greatest benefit that could come to them, namely, the working out of their own salvation.

Christian Science is not simply a panacea for ills of the flesh, to be administered by some practitioner who has taken the place of the family doctor. It is the demonstrable religion of Christ Jesus, the means of salvation so clearly and simply stated and taught as to be demonstrable by every person who has in any manner gained insight to the meaning of the "scientific statement of being" on page 468 of Science and Health.

The Christian Science practitioner has a duty to his patient beyond the healing of his physical ills, the meeting of his temporary need. He must so turn his patient's thought to God, and to the study of the Bible and Science and Health, as to enable him to work out his own salvation. This is the real duty of Christian Scientists, not only to work out their own salvation, but in the process of this evolution to help others to a right start along the same road.

The practitioner who is simply "doctoring" his patients year in and year out is not fulfilling his duty to them, and the patients who are seeking such treatment need to awake to the divine possibilities of Christian Science, and by applying what they know of it to their own ills gain the confidence in its demonstrability which will enable them in turn to go to the relief of others who are in need. In other words, they should seek that understanding of which our Leader speaks in "Miscellaneous Writings," when she says, "To avoid being *subject* to disease, would require the understanding of how you are healed" (p. 39).

ARCHIBALD MCLELLAN.

LETTERS TO OUR LEADER.

Chicago, Ill., Nov. 17, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The committees in conference, representing the nine Christian Science churches in Chicago, recently met to consider ways and means of assisting The Christian Science Publishing Society in promoting the success of the special Thanksgiving edition of *The Christian Science Monitor*. Subsequently, on the recommendation of these committees, business meetings of the congregations of the several churches in Chicago were held, at which the many interesting and helpful features of the *Monitor* were discussed. These meetings will, we feel sure, result in a wide circulation of the Thanksgiving number of the *Monitor* and in an increase of regular subscriptions. The committees are now meeting for the purpose of recommending to the Christian Science churches in this field a plan for active cooperation in securing increased circulation for all of our periodicals and for placing these periodicals wherever they will be kindly received.

We wish at this time to extend to you, and to the faithful workers under you, our thanks for the Christian Science periodicals which you have provided for us, and which your assistants are so ably editing and publishing under your direction. We would like particularly to express our gratitude for the *Monitor*, which is faithfully fulfilling the purpose declared for it by you in the beginning, viz., "To injure no man, but to bless all mankind." Its clean world news, its special features, its thoughtful and constructive editorials, its educational Home Forum articles,—these are all bringing to its readers in every part of the world untold blessings. We await with expectant interest the splendid Thanksgiving edition which is being prepared as a souvenir of the *Monitor's* first anniversary.

Spare us one more moment of your valuable time to read the assurance of our loving loyalty to all that is good. We need not reaffirm our oft-repeated love for you and our great appreciation of your service to us and to all mankind as the revered Leader of the Christian Science

Digitized by Google

movement. Words may be idle and empty,—ofttimes they are so,—but in anticipation of the approaching Thanksgiving season we cannot forego the pleasure of thus sharing our feelings with you. In so doing we realize that we assume an added obligation of making persistent effort to rouse ourselves from the spell of self-ease, self-complacency, and self-righteousness, and to awaken more fully to our God-given privilege, as Christian Scientists, of becoming honest, earnest, consecrated Christian workers, fit to partake of the spirit of your life-purpose, which, as expressed by you in "Miscellaneous Writings" (p. 207) is "to impress humanity with the genuine recognition of practical, operative Christian Science."

Faithfully yours,
THE COMMITTEES IN CONFERENCE.

MRS. EDDY'S REPLY.

The Committees:—God bless the courageous, far-seeing committees in conference for their confidence in His ways and means of reaching the very acme of Christian Science.

MARY BAKER EDDY.

Edinburgh, Scotland, Nov. 11, 1909.

Dear Mrs. Eddy:—I am instructed by the directors of this branch church to send you the following excerpt from the minutes of their meeting held on Nov. 10:—
