"Resolved by the directors to record their warm appreciation of the courageous stand which the Directors of The Mother Church are taking on behalf of the true teaching and pure practice of Christian Science, and their gratitude for the by-laws which make this purification possible.

"Further, to record their devotion and loyalty to the Cause of Christian Science and to its Discoverer and Founder, recognizing that it is impossible to be loyal to their Leader without being loyal to Principle."

E. M. RAMSAY, *President,*
ALICE GRAY, *Clerk.*

New York, N. Y., Nov. 20, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the students of the New York Christian Science Institute (Mrs. Laura Lathrop, C.S.D., President), in annual session, humbly unite in sending to you our warmest expressions of loving gratitude, loyalty, and obedience. Each progressive step made by us in the understanding of Christian Science reveals to us more clearly the inestimable value of your discovery, the great work you have done and are doing for mankind, and the debt the world owes you for the revelation of Truth which shows it the way to universal salvation from sin, disease, and death. We again renew our pledge of devotion and loyalty to you and to the Cause of Christian Science, and promise humbly to strive so to live as to manifest in our lives your teachings and example, that we may, as you have taught us, follow you as you follow Christ.

Lovingly yours,
NEW YORK CHRISTIAN SCIENCE INSTITUTE.

New York, N. Y., Nov. 13, 1909.

Dear Mrs. Eddy:—I want to express gratitude for the light and freedom from fear which has come to me through Christian Science. For months past I have been praying for spiritual sight, by which I might find the right understanding of Christian Science. Though struggling to silence a vague dissatisfaction with certain local teachings regarding Christian Science practice,—an unrest which at times amounted to rebellion,—I could not understand why certain messages you sent, particularly recently, to our branch church, needed such elaborate and subtle explanation, when the by-laws and other communications were so simple and clear. Now I am so grateful to find that these teachings and practices which disturbed me were not true, not Christian Science; to learn that loyalty to Principle, as stated in Science and Health, preached in our periodicals, and exemplified in our Manual, is the beacon-light which will eliminate fear of human opinion and criticism, and bring individuals into right relations with each other.

More than ever do I realize what it means to follow you, as the Leader of Christian Science, to follow selflessly and truly the truth which you have revealed to us. I know God is protecting His own, and realize the need of such knowing. Your call, through the *Sentinel,* for Christian Scientists to work daily on the last sentence on page 442 of Science and Health, has blessed us, protected us, awakened us to individual work in seeking the kingdom as well as in shutting out erroneous thoughts.

Lovingly yours,
NELLIE NEALL TROUT.

St. Joseph, Mo., Nov. 5, 1909.

Dear Leader and Teacher:—In view of the momentous events that are now transpiring, I feel impelled to write you a few lines, assuring you of my loyalty and obedience to the rules and by-laws which have recently been published in the *Journal* and *Sentinel,* wherein a personal and material sense of things is rapidly being eliminated, and thus is unfolded the true government by Principle. I know that my desire for righteousness and obedience illumines my pathway. When the disciples were obedient and cast their nets on the right side, they could scarcely bring the net to shore for the multitude of fishes; then they knew their Master.

The rules and by-laws, with some revisions recently passed, show clearly that you are governed by divine wisdom. Also the editorials that have recently appeared are most excellent; and very much depends upon the faithful observance of these rules in the letter and the spirit, thus being awake and awakening others. We cannot be thankful enough for your faithful example in pointing out the way, and may you be richly rewarded for your self-sacrificing devotion for our good and the uplifting of the race.

Your grateful student,
CHARLES M. HOWE.

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—The instantaneous effect of your "Peace, be still" upon the troubled waters of our church at its business meeting yesterday was a never-to-be-forgotten proof of the love and esteem in which your words are held by the entire membership of our church. The healing balm contained in your message has already dispelled many a mistaken sense, and I know that I am expressing the sentiment of our church in thanking you from the bottom of my heart for having shown us "how good and how pleasant it is for brethren to dwell together in unity!"

Gratefully yours,
RICHARD P. VERRALL.

[Telegram.]

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

God bless you, beloved Leader, for yesterday's message. "And o'er earth's troubled, angry sea," we saw "Christ walk," and come to us and "tenderly, divinely talk" (Miscellaneous Writings, p. 397).

Lovingly and gratefully your follower,
IDA EHRICH.

Digitized by Google

Boston, Mass., Nov. 18, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Every fresh evidence of your wisdom and of your great care for the Cause of Christian Science makes me love you more, if that were possible. Your letter to the trustees of First Church in New York was marvelously brave and loving. "He sent his word, and healed them," and we have God's assurance that this word "shall accomplish that which I please, and it shall prosper in the thing whereto I sent it." There is no law of reversal. When I read in the newspapers of the instantaneous effect of your letter, I remembered another picture. Jesus was asleep in the ship, amid the storm. The tumultuous elements were only mortal mind, externalized. They were real to the material senses of the disciples, but there was no storm in the Christ-mind, only peace. "And his disciples came to him, and awoke him, saying, Lord, save us: we perish. . . . Then he arose, and rebuked the winds and the sea; and there was a great calm."

All Christian Scientists who are awake to the significance of the "signs of the times," will thank God, as I do, for our matchless Leader.

With love,

Faithfully yours,
WILLARD S. MATTOX.

Chicago, Ill., Nov. 17, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—During these weeks of trial and waiting, my heart has overflowed with gratitude to you for what has been accomplished for mankind through your wisdom and love. I am especially grateful just now for our beloved Mother Church, and to those who in the conduct of its affairs are upholding so loyally and fearlessly the perfect Principle of scientific truth which has been revealed through you, and which is stated so clearly in our textbook, "Science and Health with Key to the Scriptures."

These words from the epistle to the Hebrews are comforting: "Now no chastening for the present seemeth to be joyous, but grievous: nevertheless afterward it yieldeth the peaceable fruit of righteousness unto them which are exercised thereby." My earnest prayer is for greater obedience and humility in the service of Principle, and to let my light so shine that the Father only may be glorified.

Loyally and lovingly yours,
ANNIE V. C. DODGSHUN.

Tacoma, Wash., Nov. 9, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—I wish to express to you my gratitude for your wise and unfailing leadership. Your article in a recent *Sentinel* (Oct. 16, 1909), "Take Notice," has been an inspiration to me. As the Discoverer of Christian Science you stand alone, and I thank our heavenly Father that you, His chosen one, stand firm and true to Principle, to Christ, Truth, as revealed to us through your wonderful book, "Science and Health with Key to the Scriptures." The housecleaning process is needed in our consciousness, and may it continue until we are purified and brought closer to God. May the thought of "personal contagion" and leadership be eliminated from the field. As you say, "Stately Science pauses not, but moves before them, a pillar of cloud by day and of fire by night, leading to divine heights" (Science and Health, p. 566).

Gratefully yours,
MINNIE SMITHSON PALMER.

New York, N. Y.

Beloved Leader:—Kindly permit me, a humble student of Science and Health, to thank you from my soul for your letter of the 13th inst., which was read to us on the 15th of November. It came as a white-winged dove, with an olive branch which turned the conditions of chaos into harmony, the peace that passes all understanding. I thank our Father-Mother God for such a brave Leader. My prayer is daily to watch and pray for deliverance from sin.

Lovingly your follower,
FRANCES M. BROWN.

[Telegram.]

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy.

God blesses you for your loving message of peace to us. I can only think of your blessed words: "Heard ye the glad sound? Felt ye the power of the Word?" (Miscellaneous Writings, p. 398).

Yours in humility,
SARA SUSMAN.

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy.

Beloved and Revered Leader:—How can we express our gratitude to God for your glorious reflection of His omnipotence, blended with Christlike humility and dignity, as witnessed by the effect of your letter on the turbulent and troubled conditions at First Church of Christ, Scientist, New York. The answer comes in your own inspired words in "Miscellaneous Writings," "So live that your lives attest your sincerity and resound His praise." In gratitude which obedience, bringing forth the fruits thereof, alone can prove and express,

I remain faithfully,
MRS. ROSE L. DUBOIS.

Lynchburg, Va., Nov. 17, 1909.

Dear Mrs. Eddy:—As of old, Love spoke to us through you to our church Monday. We heard the "Peace, be still. And the wind ceased, and there was a great calm." I am grateful to God for you, His messenger.

Lovingly,
LE ROY B. CRAMER (of New York).

[Telegram.]

Atlantic City, N. J., Nov. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—As the least of your followers I send you my humble thanks for your message to First Church of Christ, Scientist, of New York city, yesterday.

Sincerely,
GOTTFRED BERG.

[Telegram.]

New York, N. Y., Nov. 16, 1909.

Mrs. Mary Baker Eddy.

Thanks be to God, your timely message of wisdom and love has stilled the surging waves of error, even as the Christ dissipated the tempest with the simple edict, "Peace, be still." "How great a God is our God."

ROSALIE ROBERTS,
JOHN L. ROBERTS.

New Bedford, Mass., Nov. 16, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—This morning, while reading of the adjournment of First Church of Christ, Scientist, of New York, after your letter to them had been read, these words came to me: "This day is the Scripture fulfilled in your ears"—"He sent his word [through you, God's chosen messenger], and healed them, and delivered them from their destructions." My prayer each day is to follow you as you follow Christ, and to be more worthy of the name Christian Scientist.

Lovingly, faithfully yours,
ALICE B. TABER.

THE LECTURES.

MOSCOW, IDAHO.

William D. McCrackan, M.A., delivered a lecture on Christian Science in the I. O. O. F. Hall, Oct. 21. He was introduced by C. C. Rice, Ph.D., of the State University of Idaho, who spoke in part as follows:—

Christian Science is a practical philosophy. The Christian Science church is a great and rapidly growing religious denomination devoted to healing the sick and reforming the sinful. The Founder of this denomination, Mary Baker Eddy of New England, declares that she has discovered the Principle by which the miracles of Christ were wrought. Her followers claim that they heal sickness and destroy sin by that divine healing power which their revered Leader discovered, applied in her practice, and promulgated in her remarkable writings. I am not regularly associated with this extensive Christian organization, but I am a Christian Scientist in the sense of knowing and appreciating Mrs. Eddy's life and works, and believing that the activities of her denomination are beneficent. The Christian Science church preaches personal purity and temperance with a sincerity and zeal which place it in the front rank among agencies in Christendom striving to destroy the works of the devil. Christian Science is a force operating against all manner of naughtiness and annihilating the thraldom of sensuality over the vitiated human sense. By turning our thoughts from the petty ills and fleeting pleasures of today to fix our attention on the eternal purposes of God, Christian Scientists are doing a real service to the Christendom of our time.

The watchword of Christian Science is not theological, polemic, or esoteric metaphysics. It is "Heal the sick, cleanse the lepers, raise the dead, cast out demons." Christian Science is known to heal disease. This is done in a way similar to the healing wrought by Jesus and his apostles, as recorded in the New Testament. The doctrinaire critic or skeptical scientist may take this claim of healing disease to be superstitious, but in view of the numerous testimonies of physical healing printed in the periodicals of the sect, I think the claim should be admitted at least by Christians, who as such must acknowledge the truthfulness of the Gospel narratives on which the theory of Christian Science practice plainly rests.

Correspondence.

LINCOLN, ILL.

A magnificent audience, representing every creed and belief, filled the Broadway Theater Sunday afternoon [Oct. 24], when Judge William G. Ewing of Chicago gave his lecture on Christian Science. He was introduced by T. T. Beach of this city, who said in part,—

The claim of Christian Scientists is, as I understand it, that the divine law and Principle by means of which our Saviour when on earth removed all evils and cured all manner of diseases among the people, have been rediscovered and are now being effectively used in practically the same manner and with like results as those obtained by their use nineteen hundred years ago. When we remember that God's laws are inimitable, unchangeable, "the same yesterday, and to day, and for ever," and that divine Principle is eternal, it necessarily follows that the divine law and Principle that existed nineteen hundred years ago are existing today and will be in existence throughout all eternity. This being true, it is not strange that this law and Principle should be rediscovered, nor is it wonderful that when they are used in the same way they yield the same results that they did when used by the great Wayshower.

I want a practical religion; I want a religion that will fill this grand old earth of ours so full of human happiness and joy of life that the tears of sorrow will be dried forever. We all want to know the truth which will make us free, and we are fortunate to have with us this afternoon a gentleman who is splendidly equipped to give us light on this most important subject.—*News-Herald.*

SANTA BARBARA, CAL.

Local interest in Christian Science was attested yesterday afternoon [Oct. 24], when a fair-sized audience gathered in the Potter Theater to hear the Hon. Clarence A. Buskirk lecture. He was introduced by E. W. Dickey, the First Reader of First Church in this city, who said in part,—

The gospel of the Prince of Peace has always been a message of "good news," a message of health, peace, and happiness to thousands all over this earth. More and more is it coming to be seen that the Christ-teaching is practical, and today in Christian Science thousands are proving its practical value. It works through spiritual understanding, and brings to the human consciousness a realization of the allness of God and the unlimited power of Truth. Individual attainment of the spiritual understanding fulfils Jesus' promise: "Ye shall know the truth, and the truth shall make you free."—*Santa Barbara News.*

LECTURES TO BE DELIVERED.

Brainerd, Minn.—Clarence C. Eaton, Opera House, Dec. 10.

NOTICE.

The price of the new pamphlet "Personal Contagion" and "What Our Leader Says" has been reduced from that given in previous notices, and will be as follows: Single copy 10 cents; the dozen $1.00; the hundred $7.50.

Digitized by Google

TESTIMONIES OF HEALING.

About nine years ago one of the popular magazines published an article which held Christian Science up to ridicule and gave a distorted statement of its teachings. At that time I had barely heard of Mrs. Eddy and her noble work, but witnessing the apparent glee of another over this uncharitable attack, a strong sense of indignation at its injustice was aroused within me, and I determined immediately to investigate Christian Science for myself. Thereafter, for two or three years, I had with me a copy of "Science and Health with Key to the Scriptures," either obtained at the public library or borrowed from a friend, till I finally secured one of my own; but I confess that I did not then seem to get much out of it, probably because I was reading everything I could find on oriental philosophy, hypnotism, spiritualism, and the like. In my hunger for something beyond what I had found in the teachings of the orthodox church of which I had been a member all my life, I was reaching out on all sides for spiritual food, unable to formulate any prayer, but trying in a feeble way to cling to God as my only salvation.

About six years ago a frailty which had hampered me for years—the result of childbirth—took on very troublesome proportions, and complications were so multiplied that it was pronounced necessary for me to submit to an operation. Instead of one, four were performed by three of the most skilled surgeons of this city. For a time there seemed to be much improvement, but after two years all the old distressing conditions returned, and the physician stated that another and more serious operation must be performed, after sufficient strength had been gained. To this end a course of osteopathic treatment was arranged for, but this was almost at once given up, for at this point a realization came to me that I had been trying to mingle material methods with Christian Science. Truth led me to cling to the latter and discard the other, and I procured a Christian Science *Quarterly* and began to study in earnest. I had not been able to walk a block without the seeming necessity of lying down for hours after, but it was not many weeks after this before I awakened to the fact of perfect health and strength, ability to walk miles without fatigue, an enthusiasm for life, and a certainty of "God with us" in Christian Science.

Since then progress in understanding has at times seemed slow, but it has been sure, and it has been attended by some very convincing demonstrations of the truth in solving daily problems. It has been proven to me that matter has no power to transmit a tendency to enlarged joints, known as a rheumatic condition. I have proven, when the severest dental work was being done, that there is no sensation in the teeth, and that man is not under any so-called material law. Christian Science has also brought to light the fact that God is our source of supply, and that His storehouse is always full for those who realize man's divine inheritance. Did not Jesus teach a lesson for all time on the shore of Galilee, by supplying also the physical needs of the four thousand while they were hanging on his words for spiritual sustenance? Christian Science is helping me daily to test my thoughts by the standard of Christ, and shows me how much I have to overcome in order to be like the Master.

One can but be filled with the deepest gratitude and unspeakable reverence for the pure consciousness of one who, in following the great Wayshower, was brave enough and obedient enough to probe the suffering and sin of the flesh—to investigate the methods of error in order to raise mankind to a realization of man's divine heritage and oneness with the Father.

MRS. JANE L. VILAS, Seattle, Wash.

For twenty-seven years I suffered from a severe stomach affection. I was under the charge of physicians of national reputation most of that time, taking their remedies and following such hygienic directions as they gave, but I only received temporary relief. My condition made me so cranky and peevish that at times I was not a fit associate for other people. I traveled over Europe and America for years, seeking relief which did not come. I tried the various forms of dieting, such as are customarily recommended for this disorder, but only brief respites came. Finally I was persuaded to try Christian Science, and was completely healed by it after six weeks' treatment. I have had no recurrence of my former troubles, although several years have elapsed since I was cured. My business has been good ever since I accepted the Science.

I no longer have the worries of former days. With the realization that "underneath are the everlasting arms," and with the spiritual uplift that all Christian Scienists know and feel, I am passing through the years happy and serene, with no fear of the future.

WILLIAM F. MARRS, Denver, Col.

About twelve years ago I was an invalid, a severe accident having injured my spine so that I was confined to my bed. At length I was able to walk, but had to wear a plaster jacket. The physicians said that if I lived I could never be strong. I then commenced to attend the Christian Science Sunday School in Denver, and although I received no direct treatment, by applying my slight knowledge of the truth, within two years after entering the Sunday School I regained my health and strength. From that day to this my every ill has been met with Christian Science. I have been healed of colds, headache, fever, a skin disease, besides entire deafness in one ear. In 1904 I had the privilege of class instruction, and that fall I entered college. During the four years of college life many of the problems of the student have been met for me through the application of the truth.

For physical healing I give thanks, but these blessings are not to be compared to the mental, moral, and spiritual aid which I have received. Glimpses of God and His creation have enabled me to cast off the bondage of fear, self-pity, self-love, envy, laziness, deceit. One of my greatest joys is that I have been enabled to help others find man's heritage of health and peace. Overwhelmed by these blessings, I would express my gratitude to God for Christian Science, to Mrs. Eddy for her noble life, and for all those who are making life seem brighter and sweeter each day.

MISS EMILY MARGARET MARRS, Denver, Col.

With loving gratitude do I testify to what Christian Science has done for me. Nearly eleven years ago, after having been in ill health for about twenty years, I had practically exhausted all material remedies, and was no better. I then considered that I was spending my last summer on earth, and had grown very thin and weak, when I was advised to try Christian Science by a friend who loaned me her copy of Science and Health. I made up my mind that I would read the book, regardless of what any one should say about it, and I soon felt that it was a wonderful book. There was a great deal which I did not understand at that time, but my desire was to gain an understanding of it, so I read on until I lost sight of myself, and in four or five weeks, when I did think of myself, I was well. I could not remember when I had last felt an ache or pain, and I began to realize how well I was feeling; that I could eat anything I wished with perfect freedom, and that I rested well at night. No tongue could express the joy and peace I felt; to think that I was a well woman after so many years of ill health! I was healed of heart and stomach trouble, of neuralgia

Digitized by Google

and female trouble, also of a general nervous breakdown. My eyes also were healed, and I have never needed glasses since then.

I am certainly very grateful for Christian Science, and for what it has done and is doing for me every day. It has helped me very much in the overcoming of fear, and in many other ways. Christian Science has not only helped me, but it has enabled me to help others, and I am indeed grateful for many demonstrations of the power of Truth; also for the spiritual awakening which Christian Science has brought to me. I am thankful to God, and also to our dear Leader, who has given us this truth.

CHRISTENA WITT, Knoxville, Tenn.

In reading of Nicodemus, who came to Jesus to know how to gain eternal life, we find the Master's answer to be, "Ye must be born again." In the darkness of mortal belief and suffering, seeking for the light in Christian Science, I had the same answer. For twelve years I had been in the darkness of despair, suffering with heart and stomach trouble, and extreme nervousness, which, with attendant physical ills, compelled me to take rest many times during the day, and I was unable to bear the responsibilities of my family and home. I had been treated by fourteen different doctors, had also osteopathic and electrical treatments, etc., but received no benefit whatever. At this point my sorrows were great, six of my family having passed away. I was a church-member and attended the services regularly, trying to find the help I so much needed; but there also I failed.

At this, the darkest hour of my life, with nothing but death or an insane asylum in prospect, I was asked to try Christian Science. Utterance fails when I try to express the joy, harmony, and peace I experienced the morning after my first treatment (which was absent). I had slept the entire night, and in a short time all my troubles had entirely disappeared. I felt deeply grateful for this wonderful proof of the power of God's love, and for the blessings to be derived from even a slight understanding of Christian Science, but another trouble presented itself in the alarming form assumed by a goitre, which had been growing for twenty years. Feeling that Christian Science had already done much for me, I decided to have treatment for this also. After the fourth treatment I went home with a sweet sense of peace and harmony, and this continued until the room seemed flooded with the presence of God; the light of divine Love filled every thought, and the most glorious realization of the unity and supremacy of the only Mind permeated my whole being. Then, and not until then, did I know something of the new birth, the being born into the consciousness of the Life immortal, the kingdom of heaven here and now. At this moment the goitre passed away without one moment's pain or suffering; every bar had been broken down, and I was free from the bondage of material beliefs.

Glory be to God, and gratitude to our dear Leader, Mrs. Eddy, who has unfolded such a wonderful truth to a weary and sin-sick world. I am deeply thankful for the understanding of God as Love, who giveth eternal life to all who seek Him in spirit and in truth. Truly, we must be born again.—MRS. AMY B. DYE, New York, N. Y.

Having been the recipient of so many blessings from a knowledge of Christian Science, it is my privilege to tell others of the great good which they may obtain from its study. About four and one half years ago I received my first treatment. It was difficult for me to give up my medicine for that first week's treatment, and I expected to go back to it at the end of the week, as I had consented to be treated just to please my husband. I, however, began to read Science and Health, and the little knowledge gained during the week, and the improvement in my health, made me willing to continue, until finally I realized that my ailments were gone. Thus I began a new life. It seemed a great blessing to be well and happy, for I was learning to "be not afraid." The fear of storms had made my life miserable, but that fear vanished with the others.

I am especially grateful for what Christian Science did for me at the birth of my last two children. Every untoward condition was met with the help of a faithful practitioner, and on both occasions less than two hours elapsed from the time that a message was sent asking for help, until another was sent stating that everything was all right and the household ready to retire. Some members of the family were apprehensive of bad results if I did not call a doctor on these occasions, but I had no fear. We have relied upon the "great Physician" for help under all circumstances, and He has never failed us.

How comforting to know God as an ever-present help! It is true that every trial increases our faith. We mothers have much to be thankful for in knowing that our little ones are safe when we are willing to trust them in God's care. There is no fear of results, for we know that all will be harmonious. We are thankful to God for the peace that is ours, to Mrs. Eddy who has made the knowledge of God applicable to all our needs, and to the faithful workers who have helped us along the rugged way.

EFFIE SHAFER, Knob Noster, Mo.

[Translated from the German.]

I want to tell others how great a blessing has come to us through Christian Science. Last summer we became acquainted with this teaching through friends, and liked it so well that we immediately began to attend the services and read *Der Herold der Christian Science* diligently, thereby getting rid of much fear. After the birth of my second child I had been stricken with an abdominal trouble, and had suffered much during the following seven years. I was treated by several physicians, but without success, and the physicians said that it would be impossible for me to have another child. In November of last year, however, a daughter was born to us. We had been very much concerned about it, but with the help of Christian Science the birth was normal and safe. On the fifth day I was able to attend to my housework, and the old trouble has entirely disappeared. The little one also is well developed and grows finely.

For all this I give my heartfelt thanks first to God, then to our beloved Leader, Mrs. Eddy, who has shown us the way to truth and health and harmony. May all seekers after truth receive the health and the blessings which have come to us through Christian Science.

FRAU SANDER, Hannover-Linden, Germany.

It is now over five years since we took up the study of Christian Science, and I wish to bear grateful testimony to the healing power of Truth, and to the spiritual quickening which we have received from it. The first work done for us was the healing from a severe attack of acute lung trouble, which had been running almost a week. It was completely overcome in four days and the child was out at play. We have called for help in rheumatism, smallpox, a malignant growth under one of the children's eyes, heart trouble, and also in childbirth. I especially want to speak of the latter experience. The child was born before the practitioner could get to our home, as she had about three miles to come. When she came, I was resting nicely, and she took care of me and of the baby; then sat in another room until morning. When she brought in my break-

Digitized by Google

fast I asked her to treat me for some discordant feelings. She told me that I need have no pain, as there was no place here or hereafter for pain. Soon I was perfectly free from pain and felt no sense of weakness. I was up all day from the first, attended to three small children, and felt no inconvenience in any way. I was out to church in one week, and have always been strong since then. This was to me indeed wonderful, as with five children born under *materia medica* I was confined to the bed for two or three weeks each time, and was very weak then.

Besides the healing in our own family, I have seen and known of the healing in Christian Science of many diseases, some of them supposed to be incurable. I do indeed feel very grateful for this truth which makes us free, and I thank God every day for what our beloved Leader is doing for mankind.—Mrs. Lillie Graybael, Merrill, Ore.

[Translated from the German.]

In the spring of 1908 measles broke out in this town, and about half of the children in the schools were taken ill. In May our little foster-daughter six years old came home from school feeling ill, and I put her to bed. On the next day the eruption had spread all over her body, attended with very high fever. I immediately wrote to a Christian Science practitioner in Berlin, and waited for the treatment to be given. During that day the fever did not abate, but my firm hope was realized, for with the first treatment the fever disappeared entirely and did not return, and the child was soon able to get up and go out.

This experience has strengthened my faith, and all I can do is to give thanks unto God for the great help which was given us at that time, as well as later on. I also think with gratitude of Mrs. Eddy, who has shown us the way to the truth which delivers us out of the bondage of sin and suffering.—M. Claer, Tapiau, Ostpr., Germany.

I would like to express my gratitude for what Christian Science has done for me, and it has done much since I took up the study four years ago. I was healed of a very delicate condition, following an operation, when the doctors were telling me that I must have another. I, however, read Science and Health and was healed. I have never even had to ask for help, until about two years ago, and also when I was on a trip with my husband.

On this trip we had a drive of thirty miles in a heavy rain and snow-storm. On my way back by train I was taken with pains in my head and all the symptoms of severe illness. I seemingly grew worse, until I could neither read nor help myself, and when I arrived home, at four in the afternoon, I went at once to bed. I was alone in my home for some time, but when a near neighbor came in to see me, and found me suffering so much, she was greatly alarmed and wanted to do something for me. I then asked her to call a Christian Science practitioner by telephone. She did so, and in less than two hours after the Scientist reached my home I was entirely free from pain and the fever had disappeared. The next morning I got up at half past six, after having slept soundly all night, and worked all day, also went down town and walked home (nine blocks), and felt as well as though I had never been ill.

To me Christian Science is wonderful for it teaches us the healing power of God.

Mrs. Anna Osborn Sioux Falls, S. D.

From the time I was a small boy until recently, a period of some ten years, I was subject to attacks of mental depression and overburdening pessimism, supposedly of hereditary origin. They occurred sometimes once or twice a year, often every month or so. After a few hours, or even a day, of black darkness and despair, I would return to my normal condition, and was so ashamed of my subjection to such attacks that I did not speak of them to the family, and made no use of Christian Science in the case. About a year ago an unusually severe attack came to me. Having gone to a practitioner, a dear friend, about another matter, the greater error was brought out. This lady helped me then, and again a few months later, and showed me how to help myself through the understanding of God's government of man, as taught in Christian Science. The sense of mental depression has been overcome, and all fear of its recurrence removed.

I have been helped through many demonstrations in Christian Science over physical troubles, but I am especially thankful to God for the destruction of this error, which at times seemed to deprive me of man's heritage of peace and harmony. I am also grateful to our Leader, who has brought us this healing truth.

George A. Andrews, Lansing, Mich.

[Translated from the German.]

After having been freed, through God's help and the faithful work of a Christian Science practitioner, of severe neuralgic pains which had tortured me for years, I feel impelled to give thanks through these lines. I was treated in Christian Science for several weeks in the summer of 1908; then the pain ceased and I felt like one new born. Shortly before Christmas, however, I had another attack, which was quickly met, thanks to the assistance of a Christian Science practitioner in Dresden.

I read Science and Health as much as my time permits, and understand more and more that divine Love is omnipresent and omnipotent, and that God alone is our help in times of sickness, sorrow, and suffering. Through my daughter, who first told me about Christian Science and the wonderful healing performed through its agency, I also receive the *Herold*, which I read with great interest and which has helped me very much to comprehend and understand Christian Science. May more and more Christian people investigate Christian Science; for they would find help and be comforted.

Freifrau G. Grote (geb. von Retberg), Blankenburg a/Harz, Germany.

Since taking up the study of Christian Science, three years ago, I have received so many benefits that I feel it is a duty as well as a pleasure to tell of a few of them in the *Sentinel*. I was healed of a very painful bladder trouble, also of severe headaches, besides many other ills, but I would like to tell of the recent healing of a more serious disease. Several months ago a growth appeared on my right breast. I at first thought nothing of it, until an offensive discharge was added, and later it became painful. As this continued, and the appearance became more alarming, I was very much frightened, so I telephoned to a Christian Science practitioner for help. The pain was greatly relieved in a short time, but the climax was reached in one week, when another difficulty presented itself. In two days, however, this began to abate, but I noticed two fresh openings besides the original one. I was then thoroughly frightened, for from the first I had feared it was a disease from which an uncle had passed on several years before. But, thanks to God, and to the earnest work done for me in Christian Science, the growth was completely destroyed, and my happiness and gratitude can be imagined when every trace of it was gone.

For this and the many other blessings which I have received I am indeed grateful to God, and to Mrs. Eddy, who has made it possible for such things to be accomplished in this age.—Mrs. Irvine McCauley, Chicago, Ill.

Though we have never before given a testimonial, we have had many proofs of God's loving care, each member of our family having received timely aid and healing in Christian Science. One case stands out especially clear, that of our baby girl, when she was about nine months old. She was seriously ill with what seemed a cold on the lungs with high fever. We battled with this for several days with our small understanding of Truth, and seemed almost to have vanquished it, when suddenly an alarming change took place, and the babe sank into unconsciousness, and there were only slight evidences of life. We hastily sent a message to a Christian Science practitioner, and she took up treatment at once. In a short time the natural color returned, the child began to breathe regularly, and then went to sleep naturally. When she wakened she seemed rested, and took some milk with evident relish. She quickly regained her usual health, for which we are grateful beyond the power of words to express, and thankful to God for the wonderful teachings of Christian Science.

MRS. FRED KLOPPING, Yankton, S. D.

I have a great desire to make public at least a small portion of what Christian Science has done for me and mine in the past fourteen years. A practitioner attended my wife at the birth of our daughter, who is now nearly thirteen years old and has never taken one drop of medicine. She is a healthy, strong, well developed child, and is said to be exceptionally bright. I have had serious heart trouble and other severe illnesses overcome by Christian Science, its help having always been faithfully and lovingly given us.—ED. R. MARSHALL, Antonito, Col.

When Christian Science found me, ten years ago, I was a great sufferer from throat and stomach affections, also rheumatic gout, which medical doctors had said would cripple me. For nine years I used all kinds of material remedies, but they brought no permanent relief. Three of the best doctors in our city, and one specialist from Chicago, pronounced me incurable, but by the study of Science and Health and the help of kind friends in Christian Science I was greatly improved. I thought I was healed, but about two years ago some of these troubles appeared in an aggravated form, so that I walked with great difficulty and was obliged to call for help in Christian Science, with the result that in five weeks every trace of the trouble was gone.

For the physical healing I am very thankful, but more than all I thank God, and our dear Leader, for the understanding, obtained through Christian Science, of Truth, of spiritual being, whereby not only my own feet are planted on the rock, Christ, but this understanding has enabled me to help others who were in sore need.

MRS. SARAH POSTON, Columbus, O.

I started this year with the assurance that I was on the right road to health and harmony. My blessings since I became interested in Christian Science cannot be numbered, but I am most thankful to know that I have been healed of a sinful condition which seemed real and that I had grown to think of as right and excusable. I have also found a real friend in the practitioner who treated me, the only one I have ever known who has not judged and condemned me. I have been healed of bilious attacks, from which I had always suffered, also of malaria, which came every season, and my healing was instantaneous. When nine years of age I had a fever which seemed to affect my throat, and until five years ago I had severe throat trouble for two weeks every winter, but I was healed of this in a few treatments in Christian Science.

LOUISE WHITE, Worcester, Mass.

I wish to express my deep gratitude for what Christian Science has done and is doing daily for me. We have had proofs enough in our family to convince me that it is the truth. I am indeed grateful for the physical healing, but it is not to be compared with the spiritual peace which Christian Science brings,—the peace that "passeth all understanding." I thank God for this blessing, and Mrs. Eddy for the light thrown on Christ's teachings, and my desire is to obtain more of this understanding as set forth in her cherished works.

MRS. TESSIE RECTOR, Omaha, Neb.

I came into Christian Science for the spiritual help which it offered. I had never been able to believe in the commonly accepted view of God as one who loved His children and yet sent affliction upon them. It was with rejoicing that I accepted the Christian Science teaching that God is Love and that He gives us life and peace. I had for several years suffered with my eyes, and had worn glasses over two years, when I decided to go to a Christian Science practitioner for help. My eyes were healed at the first treatment and the glasses laid aside. I have also been able to overcome many ailments for myself and two children, and am learning that as we keep our thoughts right our bodies will manifest health.

The physical healing, however, counts for nothing as compared with the spiritual regeneration which I have experienced. My prayer is, that I may so live as to show thankfulness to God and my gratitude to Mrs. Eddy, and to be worthy of the name Christian Scientist.

MRS. ROSE N. CHADDOCK, Fresno, Cal.

I am indeed grateful for what Christian Science has done for me. Two years ago I went to have some dental work done. The dentist told me my teeth were in a very bad condition, three of them being diseased and one so badly decayed that it had affected the jaw-bone. As a result an abscess had broken through the roof of my mouth, and there was a continual discharge. The dentist said he could do nothing with this tooth then, and that we would have to leave it for a month or two. I immediately called on a Christian Science practitioner for treatments, and in a month's time all soreness and inflammation had disappeared, so that I was able to have the tooth crowned. The cavity in the roof of my mouth is entirely filled in with flesh and the piece of jaw-bone is now nearly in place.

For this healing and many other blessings I am thankful to God, and also to our Leader, Mrs. Eddy.

MABEL E. COHOE, Hurley, S. D.

[Written for the *Sentinel*.]

TRUTH'S DAWN.

FLORENCE HARDIMAN MILLER.

HAD truth not dawned—
There had been in my heart no little shrine
On which the flame of joy burns ceaselessly,
I had not known the way, pure and benign,
Nor soft-lipped peace, nor even hope were mine,
Had truth not dawned!

Had truth not dawned—
I had not understood that Love will keep
The spirit unconfined, the footsteps free
That tread the king's highway; nor known the sweep
Of life unending, changeless, love-crowned, deep,
Had truth not dawned!

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*, London.]

I do not believe Jesus meant to say that he was *not* good when he asked the question, "Why callest thou me good?" I mean that the expression was no acknowledgment of sinfulness. He had another point of view, and was giving to the word "good" a wider connotation than it usually received. By the good he meant the fullest possible life, the highest conceivable excellence in everything, the ideal beauty, the light without shadow, the power that knows neither hindrance nor limitation, the blessedness to which nothing can be added and which has no change to fear. This is the good, and it is obvious at once that in this sense God alone is the good, for God is the one life that is all exhaustive and all inclusive, the infinite and eternal. The good in any other sense is but relative to this absolute ideal. The good in finite human life—either morally speaking or in anything else—is but a partial raying forth of the eternal. No one human being can express it all, even if he were to live a million years; he can but express or bring into manifestation, according to the measure of his opportunities, as many aspects as possible of a reality that knows no limits. In so far as he succeeds in doing this his life is good; in so far as he fails or comes short it is not good. In the absolute sense there is none good but God; in the relative sense all life is good in the degree that it expresses God.

[*Western Christian Advocate.*]

Nothing that man has ever accomplished can equal in significance what a world-wide phenomenal revival of pure and undefiled religion would do for him. Under the leadership of God human beings have accomplished seeming miracles in the material realm. But in the supernatural—in the depths of personality—in the profundities of the inner life, there are possibilities of discovery and revelation which only God can uncover. It is time that we should expect a universal Pentecost, infinitely transcending in scope the first. It is time that we should pray more earnestly for a plenteous baptism of the Spirit on all humanity.

[*Churchman.*]

It is regrettable and deplorable that after nineteen centuries the followers of a universal Saviour, who is God over all, cannot venture upon anything beyond conference; and yet it is the inspiring privilege of this age that Christians are really recovering the consciousness of primitive Christianity and that the necessity of cooperation, of unity, is being felt as both the practical condition of preaching Christ today to the world and as his own condition of their preaching effectively his gospel.

[*British Congregationalist.*]

There is only one thing that will ensure permanence for a church, and that is this: that *God is in it*, that men and women when they come into it consciously feel themselves in touch with the eternal and the divine. It lives as it makes its appeal to the conscience and the soul, and as its constant witness is to the reality of things unseen and eternal.

[*New York Observer.*]

A good man preaches by his character, and is a sort of walking Bible, known and read of all men. He is a living epistle, in whom God has registered His handiwork, and whose views and actions commend Christianity to those who never open a Bible or attend a church. The silent force of example is very great.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

SPECIAL PAMPHLET.—About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 10 cents each, $1.00 a dozen, $7.50 a hundred.

A NEW PICTURE.—About Dec. 10 the Publishing Society will place on sale a new and desirable photogravure of The Mother Church edifices and the Publishing House, with the proposed parkway in the foreground. Approximate size, 24 by 18 inches.

The price of the picture will be as follows: Artist's proof, bearing remarque, impressed on Japanese vellum, $5.00; from the same plate on India paper, mounted on mat, without remarque, $3.00. Ten per cent discount to Christian Science reading-rooms.

NEW EDITION OF THE HYMNAL.—The new and enlarged edition of the Christian Science Hymnal, containing some fifty new hymns, will be ready for delivery about Dec. 20.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, six months, $1.20, one year, $2.00. Quantities TO ONE ADDRESS: ten copies, each, six months, $1.15, yearly, $1.90; twenty-five copies, each, six months, $1.10, yearly, $1.80; fifty copies, each, six months, 95 cents, yearly, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 40 cents for postage on each yearly subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current year or two years previous, cloth, $2.50; half calf or half morocco $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.50 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.80.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Secretary Ballinger of the Interior Department has made public a definite policy which is dependent for its execution upon comprehensive legislation by Congress. He wants enactments by which title to the soil can be separated from the right to mine, and old and obsolete land laws replaced by modern statutes, under which the Government can retain ownership in the vast deposits of coal and oil and the enormous horse-power on streams and rivers, and exercise a more perfect control over timber tracts on the public domain.

President Taft has issued an order prohibiting any bureau officer or division chief, or any officer of the army or navy or the marine corps stationed in Washington, from divulging official information to any committee of the House or Senate, "or any member of Congress," except as authorized by the head of the department in which such officials serve. Senators and representatives declare that it abridges rights and privileges that members of Congress have been conceded for fifty years or more.

Edwin G. Cooley of Boston, formerly superintendent of the public schools of Chicago, as one of the chief speakers at the recent annual meeting of the Massachusetts Teachers' Association, declared his firm belief that the time had come when it was important that political economy and civics should be taught in the public schools, as it would enable the high school youth and girl to look upon the questions of the present era in a much clearer light.

It is stated that the Standard Oil Company when it appeals to the Supreme Court from the decision in the Federal Court ordering its dissolution, will contend that the Federal Government has no jurisdiction over property relations in the manner indicated by the decision of the lower court at St. Louis, which jurisdiction, it will be argued, belongs exclusively to the state. The proposition is of vital interest to every corporation and every large firm in the country.

President Taft has ordered more than three million acres of public petroleum land in California, Wyoming, Utah, and Oregon withdrawn from entry and sale. The Government is not only the largest owner of oil lands, but it is likely to be the largest consumer. The six largest battle-ships in commission or under construction in the American navy are equipped for the use of either oil or coal, and the fourteen largest destroyers use oil exclusively.

The collector of the port of New York believes he has convinced wealthy American travelers that the tariff law was passed to be obeyed by all classes alike. For the month just ended there were twice as many declarations and one hundred and twenty-five per cent increase in collections, as compared with the corresponding month last year, although three thousand fewer passengers entered.

What is known as the "Big Four" Commission, composed of the Boston Transit Commission, the Massachusetts Railroad Commission, the State Harbor and Land Commission and the Metropolitan Park Commission, has completed its public hearings on the transportation questions for Greater Boston, and will later report its findings and recommendations to the Legislature.

The voluminous report prepared by Dr. Cook for the University of Copenhagen, setting forth in detail the explorer's claim to having reached the north pole, was taken on board of the Scandinavian-American liner United States on Thanksgiving day and started on its way to Copenhagen.

The Government corporation tax regulations are complete and ready for the printer. The latest estimates indicate a net revenue under it of approximately twenty-five million dollars annually, and one hundred and twenty-two thousand corporations are likely to have to pay corporation taxes.

At the invitation of Harvard University and the Massachusetts Institute of Technology, the American Association for the Advancement of Science will hold its sixty-first meeting in Boston from Dec. 27, 1909, to Jan. 1, 1910.

The attorney general of Missouri, upon complaints that the Bell Telephone interests are purchasing control of independent companies contrary to the anti-trust laws, is preparing to proceed against such action.

It is understood that Horace G. Knowles, the newly appointed United States minister to Nicaragua, will probably head a commission to investigate political conditions in the Central American states.

All taximeters used in the operation of taxicabs in Massachusetts soon will be officially sealed by the state and the possibilities of discrepancies arising will be eliminated.

The estate of the late E. H. Harriman has been appraised at $149,000,000.

International.

The United States and Chile have reached an agreement as to the terms of the protocol referring to King Edward for a definite settlement the celebrated Alsop claim. This claim, which involves more than one million dollars, is based on concessions made by the Bolivian government to a syndicate of Americans. The concessions covered territory which a quarter of a century ago fell into the hands of Chile by the issues of war. Chile, though binding herself to respect the concessions, has failed to do so.

Premier Asquith's resolution, declaring that the Lords' rejection of the budget constituted a breach of the constitution and a usurpation of the rights of the House of Commons, was carried by a vote of 349 to 134. Tremendous cheering greeted the result. Parliament has been prorogued and active campaigning has already begun.

An agreement has been signed, definitely settling the questions affecting the frontiers of British Uganda, German East Africa, and the Congo Independent State, which have been under discussion for years. The agreement, it is understood, is satisfactory to all concerned.

The Canadian Pacific Irrigation Colonization Company has decided to discontinue its demonstration farm at Strathmore, as the efforts of the settlers to adopt the methods demonstrated at the farm are such as to render its continuance unnecessary.

An American balloon has been officially declared the winner of the race for the *Coupe Internationale des Aeronautes* last October. The pilot, who started from Zurich, Switzerland, landed in Russian Poland, some 650 miles away.

Plans are under consideration for the holding of a great international exhibition at The Hague in 1913, in celebration of the opening of the Palace of Peace.

Industrial and Commercial.

The value of farm products has become so incomprehensibly large that it is merely a row of figures, says Secretary Wilson in his thirteenth annual report. For 1909 it is $8,760,000,000, an increase of $800,000,000 over 1908. The report says: "Eleven years of agriculture, beginning with a production of $4,417,000,000 and ending with $8,760,000,000! A sum of $70,000,000,000 for the period! It has paid off mortgages, it has established banks, it has made better homes, it has helped to make the farmer a citizen of the world and it has provided him with means for improving his soil and making it more productive."

The longest interurban line in western Canada is now being built by the British Columbia Electric Railway Company from New Westminster, B. C., to Chilliwack, a distance of about sixty-four miles, and is expected to be ready for operation in May. It will provide freight and passenger facilities for a section comprising about fifty thousand acres.

"Platinum can be taken from the sands of the Pacific coast, from Cape Flattery to Lompac, in paying qualities by a simple mechanical process at little expense. While the industry is not likely to attract the attention of the big corporations, it will prove of immense interest to the miner in a small way," says a director on Government survey work.

Plans for the $7,500,000 twenty-five story municipal building, five hundred and fifty feet high, have been approved by the board of estimates of New York city. This great structure, which will house most of the city departments, will be erected near the Brooklyn bridge, and will have six hundred and fifty thousand feet of floor space.

The railways have spent this year in construction work in western Canada $28,000,000, and in supplies and materials $20,000,000. Next year's estimates of the three leading railways provide for an expenditure of $75,000,000.

The annual damage and waste by smoke in the United States is placed at five hundred million dollars in the large cities alone, or about six dollars to each man, woman, and child of the population.

The consumption of whisky in Great Britain has been declining for ten years. But last year it fell off as much as in all the previous nine years of the decade—nine million gallons.

The Southern Pacific and the Union Pacific Railway Companies will expend millions of dollars in extending the Harriman lines in Washington and into central Oregon.

More than sixty million dollars' worth of American merchandise was carried by rail across the Isthmuses of Panama and Tehuantepec in the fiscal year 1909.

During the 1908-09 season the largest crop ever harvested from the Hawaii sugar-fields was taken off, the yield being no less than 535,156 tons of sugar.

Charges are being investigated in regard to the existence of a combination to control or advance the price of milk in Greater New York.

Coke production of the Connellsville (Pa.) region has established another new high record, with 458,329 tons for a week.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE KNOWLEDGE OF GOD.

ADAM H. DICKEY.

We read in Science and Health that Jesus defined everlasting life as "a present knowledge of his Father and himself,—the knowledge of Love, Truth, and Life" (p. 410). It follows, then, that what man knows of God constitutes his being: his knowledge of God is his life; hence the individuality and consciousness of man consist of his knowledge of his creator. From this premise we conclude that if his consciousness includes anything which is unlike God, unlike Love, just to that extent he is not reflecting or expressing the true life.

"Josh Billings" is credited with saying, "What's the use of knowing a whole lot, if what you know isn't so?" No use! To fill our thought with that which is untrue is only to burden ourselves with false beliefs that must eventually be discarded—cast out. Sooner or later every individual must eliminate from his consciousness every thought that is unlike God, for these beliefs serve only to retard and hinder the development in his consciousness of the real man, the true image and likeness of God. Paul said: "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey." We must stop admitting to ourselves the presence, power, and reality of so-called material conditions, and keep our minds filled with the truth about God and man.

This knowledge of God is not an intellectual accomplishment; we can know God only as we entertain the right idea of His creation and love our neighbor as ourselves. Love is the divine Principle of the universe, and "the government shall be upon his shoulder." Only as Love is at work in our consciousness, only as we make it the dominating influence of our thoughts and acts, are we Christian Scientists.

THE LETTER AND THE SPIRIT.

FRANK H. SPRAGUE.

The name Christian Science has sometimes elicited unfavorable comment from critics who have not understood the ground for this association of terms. Religion and science were formerly supposed to appertain to elements of experience so unrelated, if not, indeed, antagonistic to each other, as to make a partnership quite out of the question. Even now, in fact, according to academic estimates, the notion of scientific Christianity, or Christian Science, appears more or less incongruous. In ordinary usage the term science had come to be identified so habitually with knowledge acquired through investigation of material or so-called natural phenomena, and the term Christianity with a belief in the supernatural, as to render abortive any attempt to reconcile the two on a common basis without a sacrifice, on the part of one or the other, of considerations that were deemed essential. Consequently, when so-called natural science and dogmatic theology crossed swords during the latter half of the nineteenth century, the religious beliefs of Christendom were shaken to their foundations and traditional theology emerged from the contest *hors de combat*.

While releasing thought in a measure from bondage to theological dogmas of the past, the so-called higher criticism left the religious world dominated by the materialistic ideals and tendencies of natural science. The passing of the belief in supernaturalism and the acceptance of a naturalism which made matter instead of Spirit its starting-point, marked the exchange of one outgrown phase of belief for another phase no less dogmatic.

At this juncture Christian Science entered the arena of affairs, offering a demonstrable knowledge of being in place of the barren, speculative theories of agnosticism and skepticism. It showed that the true knowledge or understanding of God and the universe cannot be reached by following clues obtained in the realm of material phenomena, but must be arrived at by proceeding from the standpoint of Spirit. It showed that all causation is in Spirit; that all genuine, legitimate effects are spiritual; and that only knowledge which appertains to Spirit and spiritual phenomena can, strictly speaking, be classified as scientific, because only such knowledge is unqualifiedly exact. It showed that divine Mind, the only cause, acts according to unvarying spiritual law; that religion, which unfolds man's relation to God, must accord with that law; and hence that Science, rightly conceived, is religious and religion scientific. Christian Science arrives at conclusions which differ from those of the schools because it starts with different premises; and because its premises are different, its modus can be comprehended and its conclusions verified only as investigation is conducted from its standpoint and according to its categories.

Notwithstanding that theologians have sought to enforce the claims of various doctrinal systems by intellectual controversy and argument, religion itself has always been conceived to appertain to the heart—the emotional nature; science, to the head—the intellectual nature. The main incentive of scientific research has been the desire for accurate information about things, knowledge of facts, understanding of causes, laws, processes. Scientific pursuits have been directed to inquiring into the letter of things, the plan and order underlying the cosmos. The motive power of religion, on the other hand, has been the craving for spiritual light, the yearning for communion with the unseen source of goodness, purity, peace, harmony, perfection. Christian Science proclaims to the modern world, as did Paul to the Athenians, "Whom therefore ye ignorantly worship, him declare I unto you."

The term Christian Science expresses the harmony of Science and religion when these are spiritually and not materially conceived. It emphasizes both letter and spirit. We learn from its text-book, Science and Health, that "spiritual sense is a conscious, constant capacity to understand God" (p. 209), and to the extent that we are actuated by this sense, do we realize the orderliness and harmony

Copyright, 1900, by Mary Baker Eddy.

Digitized by Google

of the God-ordained universe. Mrs. Eddy says further (*Ibid.*, p. 109), "For three years after my discovery, I sought the solution of this problem of Mind-healing. . . . I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

A systematic exposition of truth involves not alone accurate observation and clear thinking, but, in so far as is humanly possible, an exact terminology. The "new tongue" can be intelligibly voiced only in terms that are calculated to convey definite views of spiritual truth. The untiring labors of the author of the Christian Science text-book in systematizing the thought and perfecting the statement of this Science should impress upon every learner the importance of accuracy of expression. Right thinking and exact expression go hand-in-hand. Careless or incorrect expression begets loose thinking.

"Order is heaven's first law." In proportion as the order and rhythm of spiritual being are clearly discerned does thought respond in adequate forms of expression. Inasmuch as perfection characterizes the divine order, the standard of expression in Science can be nothing short of perfection itself. Only through constant recognition of this ideal is it possible to acquire the "new tongue," the language of spiritual sense, in which the spirit transfigures the letter, even as the electric current causes the perfectly adjusted filament of an incandescent lamp to glow with light.

In Christian Science spiritual discernment and scientific statement, the spirit of Truth and the letter or right rule and order of Truth's manifestation, must go hand in hand, and to ignore or minimize the value of either of these essentials is to come short both of God's requirements and of humanity's need.

STEADFASTNESS.

ANNA HAY DETRICH.

PAUL said to the Corinthians: "My beloved brethren, be ye steadfast, unmovable;" and Christian Scientists should at all times keep this advice in clear mental view, by recognizing the importance of giving loyal support to our publications. With the advent of *The Christian Science Monitor* we were provided with a valuable addition to our means of active progression as opposed to a merely tentative attitude. In any field of action we must, if effective workers, take a definite stand and be ready to accept all means of strengthening our position. We cannot, with benefit to ourselves, discriminate against any of the means provided, on the plea that we have not the time to use them, but we must lay hold of the help offered and rise to meet it, rejoicing that wisdom has made such provision for us.

To say we have not the time to read the Christian Science publications is to admit limitation, and this admission is the very thing that we should avoid. We all know how much we value the *Journal*, the *Sentinel*, and the *Quarterly*, but when we first came into Science we felt an extreme sense of limitation as to time in which to read and study them. Then, as we gradually worked up to the point where not one issue was neglected, how much strength and light was demonstrated through this source. How the teachings of our text-book, "Science and Health with Key to the Scriptures," the first of this wonderful literature given us by our beloved Leader, Mrs. Eddy, have been more deeply impressed in our consciousness by this system of reading, and now in the *Monitor* we have another help of which we must lay hold and make use.

This publication differs not at all from the others in the spirit of its message. Its only difference is that it brings us together with the news of what our brother man is doing to help on the world's work, and it gives a daily uplifting thought of Truth. It does differ radically from the newspapers to which the world has heretofore been accustomed, in that there is no gossip, no idle talk, no airing of any one's private affairs. Paul's admonition, "Let no corrupt communication proceed out of your mouth, but that which is good to the use of edifying, that it may minister grace unto the hearers," may be applied to the written as well as to the spoken word, and the observance of this wise counsel stands revealed in the *Monitor*. While in the manifold demands upon us we may at first find it something of a problem to devote any time to the reading of this publication, we may rest assured that there is a need for it, else it would not have been supplied, and as loyal Christian Scientists we should give it our unquestioning support, either by an annual or semiannual subscription, or by the daily purchase, as is most convenient. As with our other publications, we shall find that the demonstration of all the time needed for reading it will be made to our spiritual uplifting and our victory over the sense of limitation.

"MEEKNESS AND MIGHT."

ANNE ARCHBOLD MILLER.

PERHAPS no words more fully express what Mrs. Eddy calls the "meekness and might" of Jesus than these: "I can of mine own self do nothing." But what worlds of might the meekness of those words implies. Again, he said, "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works." Thus was there no limit to the power for which Jesus was the channel, because he absolutely renounced material selfhood, thus giving the Father free course "to will and to do of his good pleasure."

In the working out of the problem of erasing belief in material selfhood from our consciousness, it were equally as presumptuous to stand abashed before a problem presenting itself to us for solution, and permitting a sense of inability to govern us, as is the opposite extreme, the extreme which prompts us to assume the credit of an attainment as personal, which permits self-pride to govern us, and which loftily thanks God that we are not as other men. If we but give these words of Jesus an abiding-place in our consciousness, it would seem as if fear or self-pride could find no entrance. The admission of the all-power of Truth brings the beautiful assurance that if fear and pride are forgotten, and the love of our Cause is uppermost, Truth will voice itself; and thus voiced, in the words of our Father, will inevitably be both comforting and convincing, and create a desire for more.

The thought was beautifully brought out in one of our Lesson-Sermons, that as we demonstrate such spiritual understanding as we have, God's messages, "spiritual intuitions" (Science and Health, p. 581), will voice themselves through us, regardless of our previous education, and we shall declare the things of Spirit. We are often placed in a position where a statement of truth is essential for the defense of our Cause, when silence would imply only weakness. Then, if we but forget self, and remember Jesus' words, "And when they bring you unto the synagogues, and unto magistrates, and powers, take ye no thought how or what thing ye shall answer, or what ye shall say: for the Holy Ghost shall teach you in the same hour what ye ought to say,"—then Truth will voice itself, and our words will be not of ourselves, but of the Father. The Master said, "Settle it therefore in your hearts, not to meditate before what ye shall answer: for I will give you a mouth and wisdom, which all your adversaries shall not be able to gainsay nor resist."

THE JOY OF REPENTANCE.

C. M. CARROLL WHITE.

SOME months ago, when I did not know from personal experience that Christian Science is demonstrable, the title of this article would have brought forth a cynical smile. If one had even hinted the possibility of repentance (grief, as I knew it to be) being accepted by any sane person as a joy, I should have met it with a shrug. Today I not only know this seeming contradiction to be an absolute truth, but I actually understand why it cannot be otherwise. The change which an individual consciousness has to undergo ere it willingly accepts repentance as a "fruit of the Spirit," has been experienced by every true Christian Scientist. Most Christians experience joy on conversion; but joy in repentance is an entirely different thing. In my former thought repentance meant a period of grief, the performance of some imposed penance, and often my grief was followed by a fit of melancholy, this being succeeded by a brief period of ecstatic happiness, which in turn, as I sinned again, gave way once more to grief.

Long before Christian Science had been brought to my attention I had reached the conclusion that the human mind is a subtle and peculiar piece of mechanism, and all the more dangerous because of its alleged reality. Often, at revival meetings, I have listened to the testimonies of converts, but while feeling that they were honest in their profession of a complete change of life, I was myself never brought to repentance, nor even to a desire to embrace religion, though I was always willing, and in fact anxious, to procure some means of overcoming sin and sickness.

An incident which memory recalls right here, and one I can never forget, occurred during my attendance at one of these revival meetings in New York city several years ago. I was accompanied by a young clergyman who had left his native church to rid himself of superstition and hypnotism, and had gone over to an entirely different form of faith. During the testimony of a shabbily-dressed but terribly sincere man, the clergyman seemed to be deeply affected, and remarked: "Poor fellow, he little knows how much of his suffering is due to church teaching. If he knew what persecution some innocent men have to endure for doing what they believe to be God's bidding, he would scarcely believe it. My God! I'd exchange positions in life with him this minute. His bitterest grief is a joy compared to the woes I am compelled to bear."

I knew this to be so. I knew how correctly the young clergyman estimated his position, for at that time I myself believed in "minds many." Had I known then that "the reflection, through mental manifestation, of the multitudinous forms of Mind which people the realm of the real is controlled by Mind, is the Principle governing the reflection" (Science and Health, p. 303), I should have been in a position to help that broken-hearted man; I would have been able to raise myself out of the mire of despondency and sin.

Those converted at revival meetings would talk so much about the "blood of Christ," that I often wished I had their simple faith and ardent zeal. Not being an emotionalist, nor a believer in Jesus as anything but a very good man, it is only natural that I took this popular phrase literally and materially. What, I would argue, could the spilling of Jesus' blood do toward the "saving" of mankind. My interpretation of the word "saving" was entirely different from that given by the so-called Christian churches. So, when I attended a revival meeting, what is known as "intellectual pride" barred my way to "salvation."

Never did I question the sincerity of the converts in their recital of how the turning from sin had brought happiness, but the fear of falling again into the abyss out of which they had just been lifted was ever present. They made a terrible reality of evil, and naturally feared it. Job, himself a convert, once cried out from the depths of his soul, "The thing which I greatly feared is come upon me." We know how he persisted in seeking light, however, and how in the exultation of pure joy on having received it, he prayed: "Touching the Almighty, we cannot find him out: he is excellent in power, and in judgment, and in plenty of justice: he will not afflict." And the Lord said to him: "Deck thyself now with majesty and excellency: and array thyself with glory and beauty."

When I learned in Christian Science, that reform was the only true repentance, and that atonement did not mean atoning for sin as is generally believed, but at-one-ment with God—the all-good, all-seeing heavenly Father, I was well-nigh overcome with a sense of gladness. And when finally, after constant perusal of our text-book and continual obedience to its commands, I became less fearful of error's power, understanding to some extent its utter nothingness, I began to rejoice in the true atonement, that at-one-ment of man with God which Christ Jesus came to demonstrate.

Sinning and repenting will never accomplish the at-one-ment. If we are in earnest about reaching heaven (harmony) right here and now, we may do so by "obeying his precious precepts,—following his demonstration so far as we apprehend it." Thus do "we drink of his cup, partake of his bread, are baptized with his purity, and at last we shall rest, sit down with him, in a full understanding of the divine Principle which triumphs over death" (Science and Health, p. 31).

LOOKING ALWAYS FOR GOOD.

STOKES ANTHONY BENNETT.

IN a very brief yet very great epistle, St. Paul writes thus to Titus: "Unto the pure all things are pure: but unto them that are defiled and unbelieving is nothing pure; . . . They profess that they know God; but in works they deny him." In the greatest epistle of modern times, Mrs. Eddy writes thus to the world: "Our proportionate admission of the claims of good or of evil determines the harmony of our existence,—our health, our longevity, and our Christianity" (Science and Health, p. 167). Christian Science teaches that God is good, that God is All; good must therefore be the only power, the only presence in the universe; good must be the sole manifestation of that truth which Jesus of Nazareth brought to suffering humanity nineteen hundred years ago, as he walked and talked among men of earth; that truth which dispels completely the dreams of error and which "shall not pass away."

He who looks for good never sees evil. He who looks for good is a worthy example of ceaseless activity, a tireless worker in the fields which are "white already to harvest." To him good is the manifestation of the one Mind, of the perfect Love, and the real Life. To him good is the parent of spiritual joy, of holy freedom, of boundless dominion. His labors are ever in behalf of that realization, inspiring the saying which is written, "Happy is the man that findeth wisdom, and the man that getteth understanding. . . . Her ways are ways of pleasantness, and all her paths are peace." His thoughts are directly tributary to God himself, "being the brightness of his glory, and the express image of his person." How true, then, that "unto the pure all things are pure"!

Christian Science declares that the belief in the reality of evil is illegitimate, that it is a stupendous mistake, and that weighed in the balance with good it is found so wofully wanting that it at once resolves itself into nothingness. Christian Science, based on naught but good, proves by its

Digitized by Google

works that evil is like the darkness of midnight, or the mist of the morning, which flees away as the sunlight of Truth penetrates human consciousness. Handling, as it does, so clearly and so beautifully the claims of good and of evil, it reiterates constantly and vehemently the words of Christ Jesus and those of the apostle, "No man can serve two masters: . . . Ye cannot serve God and mammon." "Be not overcome of evil, but overcome evil with good."

To look for good and only good is the solemn obligation which rests upon Christian Scientists who conscientiously hold office in the service of the Master. May this obligation never be forgotten, never be violated, but may its sacred purpose be first and foremost in every ambition, every determination, and every striving which crosses our mental threshold! Living up to our highest discernment of good, obtained through a constant and a sincere study of the Bible and our text-book, "Science and Health with Key to the Scriptures," we begin to understand people and things as they are,—the obedient children of God, the eternal handiwork of the great "I AM." "Here a little, and there a little," the omnipotence of good will appear, the illusion of evil will disappear, and the kingdom of harmony will be at hand. "Here a little, and there a little," God's own ideas, revealing "all the glories of earth and heaven and man" (Science and Health, p. 264), will dissolve the clouds of troubled sense, the truth will shine "unto the perfect day."

And come like the benediction
That follows after prayer.

RISING OUT OF ENVIRONMENT.

H. T. KYLE.

THE belief in environment is often a heavy clog upon individual progress; it hangs about the limbs of endeavor and impedes all advancement not circumscribed within its limits. It is as if one were placed at birth within a pliant circle of elastic circumstance, which expands or draws out in any direction in response to struggles, but which can never by any possibility be broken through. The one who accepts this belief may flee to the uttermost parts of the earth, may seek by the most desperate struggles to shake loose the persistent clinging of its folds; but always self drags heavy feet along the chosen plane and the prisoner struggles in vain, until that time when he first attains a glimmering realization of the fact that the way of progress points inexorably upward. Then he finds that environment has but two dimensions, and that the way up is the way out of its enfolding. He learns what it means to begin to demonstrate the truth of being, and to attain the realization that the fetters of mortal man's finite capacity are of his own forging.

Lofty aspiration is the fundamental demand of the Christian Scientist's creed—his daily task to achieve and manifest in ever-increasing degree the God-given dominion over mortal circumstance. Thus by daily, hourly attainment he rises superior to the claims of environment, and gains a constantly broadening spiritual horizon. All the promises in the book of Revelation are "to him that overcometh;" and throughout the Christian Science text-book the admonition to "rise" and "overcome" is insistent. Mrs. Eddy says, "Rise in the conscious strength of the spirit of Truth;" and again, "Rise in the strength of Spirit to resist all that is unlike good;" and we are assured that "we can, and ultimately shall, so rise as to avail ourselves in every direction of the supremacy of Truth over error, Life over death, and good over evil, and this growth will go on until we arrive at the fulness of God's idea, and no more fear that we shall be sick and die" (Science and Health, pp. 390, 393, 406).

The daily life of the Christian Scientist should be a constant, conscious endeavor to emulate, in ever-increasing degree, the spiritual achievements of Jesus the Christ; and as often as we rise up higher, trampling the limitations of environment beneath the footsteps of spiritual advancement, we do show forth and exemplify the truth of being which found such wonderful expression in the ascension of Jesus. Each spiritual achievement is an ascension. Each time, when a higher spiritual basis is permanently attained, a broader horizon appears; and always, as the Christian Scientist presses forward, rising superior to mortal circumstance and environment, he reaffirms, as did Paul, with reason-founded optimism, "I can do all things through Christ which strengtheneth me."

HOME.

BIRDELLA B. HOLTON.

SOME years ago I read a poem with this as its theme, "Home is where the heart is." I had not thought of it since until, in seeking for the reason of a beautiful experience that I recently passed through, this line flashed into memory. In the '90's I spent several years on a farm, an experience which was full to overflowing with misery, both mental and physical. The resulting condition was beautifully healed by Christian Science, but for years any thought of the farm would bring a great wave of resentment and bitter memories, and I dreaded unspeakably any thought of returning there, even for a few hours.

Later, however, I knew that duty plainly called me there for two or three days of hard physical labor, but I found that with the new knowledge of God which I had gained through Christian Science, the dread of the associations connected with the place had perceptibly diminished. I arrived at the farm with my consciousness filled with good will, truth, and love. Our dear Leader tells us, "We cannot fill vessels already full" (Science and Health, p. 201), and consequently I found that the bitter memories were conspicuous only by their absence. Any sort of contentment in that place, for even the shortest time, had always seemed to me to be utterly impossible, hence the happiness and peace which filled my consciousness rather surprised me. When, however, my task was finished and I was journeying homeward, the quotation about home came to me, and I reasoned that home is where the affections are centered; that mine were now centered on the kingdom of God, and Jesus said, "The kingdom of God is within you," consequently I could carry home—contentment, joy, peace, everything the word stands for—with me!

I had learned this lesson, that environment, any externals, really amount to very little when we carry with us the "peace of God, which passeth all understanding."

A little thought and a little care,
A little tenderness now and then,
A gracious speech and a courtly air
May give one rank among gentlemen;
But he who merits the highest place,
Though clad in homespun he be, 'tis true,
Is one who carries a heart of grace,
And is really a nobleman through and through.

The tree is stunted, the vine is spoiled,
There's neither blossom, nor leaf, nor fruit,
When the sap in its upward reach is foiled,
And fettered close in the tangled root.
And there's nothing sound, and there's nothing strong,
There's nothing good, and there's nothing true,
That is not honestly—right along—
Sweet and savory through and through.

JOSEPHINE POLLARD.

SELECTED ARTICLES.

[From "The Growth of Christian Science" by Wilder D. Quint in *New England Magazine.*]

All but one of the tidal waves of religion that we know today have historical perspective, and can simply and easily be accounted for. We are far enough away from the inception of them to recognize the truth. With that important spiritual and moral movement which has arisen within a generation and whose remarkable and ever-increasing power is a part of daily experience, the case is somewhat different. We find difficulty in seeing the forest because of the trees, so that a good many just and otherwise fair-minded observers are prone to lose their usual sense of perspective in the viewing of a new religion. That is why Christian Science, the latest and one of the most astonishing manifestations of mortal awakening, arouses a violence of controversial assault wholly out of proportion to the placidity and poise with which it proceeds on its way.

It is not difficult to find reasons for this bitterness; but the chief and truest of all may justly be said to be, so far as the great masses of the people are concerned, that it is seen very much out of focus by those who will not, or cannot, sanely adjust their mental lenses. But however it is seen, whatever is thought of it, Christian Science is a present-day, active force that must be reckoned with. It is here, and apparently to stay. It is spreading over the whole world. It is drawing to itself thousands upon thousands of the unsatisfied in other denominations and as many more of the altogether unchurched. No longer can jeremiads from the pulpits of older religious institutions drown out its voice; no more is the scorn of the medical profession it is so strongly influencing, sufficient to lessen its daily accessions of converts to any appreciable degree.

One day, when a little more of that highly essential time-perspective has been attained, some historian with a keen sense of the romantic in religion and the just appreciation of a mental concept that appeals to the heart, will write the story of the earlier days of Christian Science as it should be written. That time has not yet come. But even now there is a certain fascination in comparing the slender, tentative, half discouraging beginning with the triumphant facts of 1909.

Consider that only thirty years ago there was only one Christian Science church in all the world—the original organization in Boston. Surely a far cry, an eloquent passage across the gap of time, from those first meetings in a little room with rarely more than a score in attendance, to the customary audience of thousands in the majestic temple that is now the very cathedral of the faith.

Much has been written and pictured of this magnificent church, second to none in America for beauty and dignity, and no further description of its architectural strength or its decorative skill is needed here. It may well be taken to represent Christian Science aspiration, as the smaller edifice in its embrace represents Christian Science faith. And more important than the mere grandeur of the temple, more typical of the Scientists' manner of accomplishing things, are the facts that the great church was built in two years and was free of debt at every stage of its construction. From out ten thousand purses flashed the golden tributes of love and gratitude that made this achievement unique in the world's history.

There is today an impressive total of seven hundred and forty-three churches and four hundred and forty-one societies, making one thousand one hundred and eighty-four organizations holding church services. In almost every important city of the land at least one handsome edifice stands as a monument to a very genuine affection—and in some there are more.

In this connection no one who travels much can fail to note the striving for beauty that seems to actuate Christian Scientists everywhere. They build churches of rare attractiveness; seldom do we find one of bizarre design or tawdry decoration, as too many of the religious homes of other denominations are. By some unexplained subtlety these people, collectively at any rate, are endowed with the great gift of good taste, so that their services for art are very real and worthy of the highest praise. There is education of the best sort in the noble auditorium of the temple in Boston, or in the exquisite lines of the new church in Los Angeles.

It was said in the beginning of this study that Christian Science is world-wide. That statement needs no qualifying, for it is common knowledge. Yet it is surprising to find to what extent it is true. There is hardly a meridian of the globe where a little band of believers intensely in earnest does not gather together on Sundays and Wednesdays to proclaim anew their allegiance to the faith. The stolid Boer of Johannesburg may witness this if he chooses; the slant-eyed Celestial of Hong Kong may listen and marvel; the little brown folk of the Philippines are welcome if they like; the Indian of the Saskatchewan is not debarred; the toilers on the Big Ditch have the opportunity to read and hear; the German "Herr Doctor," the peon of Mexico, the great landed proprietor of England, the peasant of Guernsey, the gold-hunter of Australia, the Welshman, the *boulevardier* of Paris, the piping Swiss shepherd,—all may now know that this extraordinary thing known as Christian Science is in the world, and not a few of them accept it. Is it any wonder that the missionizing branches of the older churches look with amazement on its journeys over the Seven Seas?

It is sometimes asserted that the men and women drawn to this powerfully influencing mode of religious expression come from what are snobbishly called the "upper circles" of society. As a general proposition that is not true. Even a casual investigation of conditions in the vastly outnumbering smaller towns where there are Christian Science churches will show that membership is made up of the good, sound, average body of citizens, the "plain people" that Lincoln held in his great heart. They are well-to-do as a rule, intelligent to a noteworthy degree, companionable friends, good neighbors. It is also true that the churches contain their due proportion—perhaps a bit more—of men of distinction in all walks of life. In Washington, for instance, which may be taken as a highly representative city, in a congregation of a thousand persons there may always be found judges, congressmen, ministers, and men of mark in all professions and occupations. The movement, then, is widely embracing as to the kind of men and women it attracts. But it is particularly to be noted that clergymen and physicians, who might be considered to be most unlikely to be affected, are coming to it in ever-increasing numbers each year.

One of the most significant features of the Christian Science movement, and surely not one of the least influencing, is the maintenance of reading-rooms all over the world. If it be an offense to provide restful, comfortable, tastefully equipped places where men and women may escape for a moment from the uproar of the outside life and are sincerely welcomed, then the other denominations ought to be more guilty of it than they are.

Here is an important element in the strength of Christian Science: It throws itself and its influence straight into the daily existence of people. You may call it a brilliant stroke of policy or the natural outcome of the spirit with which the movement is endowed; in either case you must recognize the vitalizing power that lies in such a course and note that it is accomplishing wonders.

In the face of gigantic strides in all ways that make for better organization and increased numbers, it is not

Digitized by Google

at all strange that the average Christian Scientist will not argue—at least, to the extent of heated controversy—as to the triumphant advance of his church. He prefers to point to self-evident facts; he will correct the sometimes expressed opinion that the movement has ceased to grow, for he knows that during the past three years the rate of increase in churches, resources, and membership has been over thirty per cent. And you must agree with him, because he has or can easily get the facts that will convince you.

Perhaps, as a finishing touch of conviction, he will take you to one of those extraordinary and not long ago utterly undreamed of Wednesday evening "testimony" meetings in the Boston temple, where an audience of four or five thousand persons gathers in an atmosphere of the most intense enthusiasm and listens to the earnest, often eloquent, words of scores who rejoice in the opportunity to tell how sure they are of the blessings of Christian Science, mental, moral, and physical. No man from the outside, not even the most pronounced Philistine and skeptic of them all, can remain wholly unmoved in the spirit of that splendid scene. No man can come out from one of the great church's beautiful doorways and under the stars deny the inherent strength of this new religion.

There is one phase of Christian Science as it affects the lives of men that is not recognized as it should be even by those friendly enough disposed to the movement. That is its absolutely proven power to raise the fallen and put them into paths of decency and right living. How many long-time victims of the alcohol fiend have been fairly lifted from the gutter and made over into self-respecting, successful members of society by this influence no one can begin to compute. But probably all of us know of cases, some of them truly startling in their contrasts. Before—a common drunkard, despised of men, groveling in poverty, hopeless of release; now—a prosperous business man, free from the curse, clean of life, happy in the change. That is a familiar story of what Christian Science can do and is doing in always increasing instances. When liquor and drugs are forced to retire beaten from the fight for a man's soul, the onlooking world owes to itself to ask how it is done. Done it surely is. Scientists in authority can give great numbers of instances of complete and lasting reform in the lives of those who once seemed to have nothing to look forward to—and they might be given here, also, save that facts need cataloguing.

Another very visible and mighty sign of the onrush of the faith is the increase in numbers and circulation of its publications. For years *The Christian Science Journal* was the sole regularly printed representative of the movement, and its circulation was slender. Now there are in addition the *Christian Science Sentinel*, a weekly for the home; the *Christian Science Quarterly*, containing the Lesson-Sermons read at the Sunday services throughout the year; *Der Herold der Christian Science*, printed in German, as its title signifies, and *The Christian Science Monitor*, the daily newspaper whose extraordinary success within the year has been the wonder of the journalistic world. This paper and the periodicals mentioned cross the oceans to every known portion of the globe; the ingenious mailing machines in the fine publication quarters of the society in Boston have quite as keen a knowledge of geography, in their way, as any teacher in the schools. And swiftly as their work is done, there is always more for them to attempt.

One thing more in connection with the extraordinary growth of Christian Science. Just as surely as the spring sun coaxes forth the blade of grass and the budding flowers, so surely is it affecting very materially schools of thought and practice long bitterly opposed to it. Many clergymen are coming under its gentle sway; yes, but more than that, and far more significant for the future, those preachers who remain anchored to their old faith are changing the slant of their sails. One does not need to be an expert in spiritual matters to see that more and more in pulpits of the long-established denominations are heard utterances showing the influence of Christian Science tenets. And what is as fully significant, perhaps, the rasping denunciations of the new spiritual movement are but seldom heard. It is almost fully recognized that Christian Science is not a subversion of Christianity, but a form of Christianity that surely makes its professors better and happier individuals.

No less is the practice of medicine being vitally influenced by this new belief as to the treatment of diseases. Drugging is going out of favor more and more, even by those who once conceived that all physical welfare revolved around ipecac and calomel. With increasing force the mental part of cure is being insisted upon, and the purer elements of materiality, air, sunlight, exercise, cheerful surroundings, are climbing above the older forms of *materia medica*. Eminent professors of medical schools are inveighing against the customary pouring of drugs and poisons down people's throats. Everywhere there is a great reaction against old methods. What has done it? Can any one doubt? Is it a mere coincidence that the new idea has suddenly sprung into being with the rise of Christian Science? If so, it is a happy meeting of chance events.

No one with half a mind for the value of social signs can believe for a moment that Christian Science has even begun to approach the limits of its influence and strength. The constant increase in all of the elements that make it powerful would preclude any such judgment as that. When men and women come to a movement of the sort without proselyting—and that lack is typical of Christian Science—there is shown a vitality that gives no evidence of decadence. "I would not *urge* a single human being to come into the movement," said a prominent Scientist the other day. But they come without urging. Therein lies the secret.

[M. S. Bruen in *Dublin* (Ire.) *Express*.]

Those who endeavor to obey our Master's command to "heal the sick" will understand his works. Of course, every scholar knows that the word translated "miracle" in the Gospels, in its original sense meant simply "marvel" and not an arbitrary setting aside of divine law, as it has since been taken to mean. It has been said that "the age of miracles is past," but the age of marvels is not past, while we can point to flying-machines and wireless telegraphy. We know they are in harmony with law, and in the same way the earnest Bible student knows that the divine power and mercy which healed the sick in the earliest Christian years—it was not confined to the three years of our Master's ministry—is still present and available and heals now, not in a miraculous way, but in a divinely natural way, as it did then.

Christian Science does not heal sickness through the suggestion that one faulty human mind has power over another equally unreliable mind, to make it believe something which is not a fact. Healing comes by the letting go of erroneous human concepts of God and man and the universe, and by having a more scientific knowledge of them, as Jesus had. No one who really studies the New Testament can believe that to Jesus the things he saw around him had the same value or consistency as they had for the multitude. He walked on the water, stilled the storm, fed the famishing, and said: "It is the spirit that quickeneth: the flesh profiteth nothing." Peter walked on the water, too, while he thought of it as Jesus did, but then

Digitized by Google

fear came in and he forgot. The New Testament is full of instances of what has been accomplished by those who let that Mind be in them which was also in Christ Jesus.

We are told that "by their fruits ye shall know them," and the result of studying Christian Science and thereby gaining a clearer and more spiritual outlook is shown in the works that have been accomplished—the sick have been healed, the sorrowing have been comforted, the dissolute and depraved have been reclaimed, for our Master said: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

[Frederick Dixon in *British Medical Journal.*]

Will you, with that courtesy which has hitherto been as unfailing as your disagreement with me, permit me to protest against the suggestion contained in Dr. Mansell-Jones' letter, that Christian Science healing is nothing but a form of hypnotism. Christian Science healing is the effort to give back to the world that supreme consciousness of God which made the first century of the Christian era the age of miracles. Now a miracle is that manifestation of the power of Truth which, though supremely natural to a man conscious of the availability of this power, is supernatural to one who regards physical laws as the expression of divine intelligence, and even preposterous to one who regards those laws as the expression of forces inherent in matter. Healing in Christian Science is, in the words of Mrs. Eddy, "the reality of all things brought to light" (Science and Health, p. 505). Hypnotic suggestion is the claim of one human mind to dominate another, and, as no one has ever maintained that the action of the human mind is wholly beneficent, this would entail the corollary that evil is power—a statement which in Christian Science is strenuously denied.

[William J. Bonnin in *Manchester* (Eng.) *Dispatch.*]

The clerical gentleman's desire to save the public from "the danger of Christian Science," no doubt springs from some theory, however mistaken, of doing good. But the extremely slender acquaintance with his subject with which he has equipped himself, is leading him to make, not the promised examination of the subject, but merely the ordinary misrepresentation of it that every one has heard before, and of which people are growing just a little weary.

To say that Christian Science teaches that there are no angels, or that it has altered the Lord's Prayer, is to say what is directly contrary to fact: and if Christian Scientists do prefer to offer silent rather than audible prayers, they are at any rate saved thereby from one phase of pharisaism, and where is the "danger"? The fact is that Christian Science comes to substitute a plan of present salvation, practical and efficacious, for incomprehensible and speculative theology, and to announce boldly that faith without works is dead.

I ask for zeal, the zeal of God,
Not my own will or way.
My thought at one with His will rest;
My life in Life is under sway
Of God's great law, and Truth doth test.
If I but stand and never swerve,
Trust in His love when sore oppressed:
Then am I named with those who serve.

ELIZABETH A. MALLORY.

AMONG THE CHURCHES.

CHICAGO, ILL.

The Christian Science churches of Chicago yesterday [Nov. 28] raised $2,038 for the Red Cross fund for the relief of Cherry, Ill., at morning services, and this amount will be turned over to Orson Smith of the Merchants' Loan and Trust Company today. Numerous other churches also took up collections yesterday and many private donations were sent to collection centers.

All the Christian Science churches, with the exception of First, which made its contribution a week ago, and Ninth, which will make its donation next Sunday, took up special collections yesterday. The amounts raised were: Second, $500; Third, $360; Fourth, $276; Fifth, $716; Sixth, $35; Seventh, $120, and Eighth, $30. Last Sunday First Church raised $372. Second, Third, Fourth, and Seventh churches took up second collections at the evening services last night, and these are to be counted today and added to the morning contributions.

Chicago Record-Herald.

SACRAMENTO, CAL.

By signing the contract for the construction of the new edifice of First Church of Christ, Scientist, and breaking ground for the structure within two days this week, a determination is manifested by the members of the Christian Science flock in this city to have a new church as soon as possible. On last Tuesday afternoon [Nov. 2] the contract was signed by the representatives of the church and the company which is to build it, and on last Thursday ground was broken for the foundations. The new church will be erected on the property recently purchased on Twenty-third street, K and L streets. When complete, the structure will cost twenty-five thousand dollars and will have a seating capacity of four hundred. The edifice will be one of the most attractive in the city.

Sacramento Bee.

WATERTOWN, S. D.

The congregation of Second Church of Christ, Scientist, has commenced the work of excavation at the corner of Third avenue N. and Oak street, for the purpose of erecting thereon a new house of worship. The site was recently purchased at a cost, it is said, of two thousand dollars for sixty feet frontage on Oak street, and extending one hundred and sixty-five feet on Third avenue. It is exceptionally well located. The building will be forty-four by sixty feet, with a full basement, and is to cost in the neighborhood of four thousand dollars. It will be a frame affair in Colonial design. It is expected that the building will be ready for occupancy by Jan. 1.

Watertown Public Opinion.

FORTUNA, CAL.

The Fortuna Church of Christ, Scientist, have plans drawn for a neat and attractive building, to be used as a public reading-room, which will be built on the lot the church recently bought in the Haight tract. The plans call for a structure fourteen feet wide with a depth of thirty feet. A five-foot front porch will extend the entire width of the building. Work on the structure will probably start next week.—*Humboldt* (Cal.) *Beacon.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

[Republished with permission of the author.]

THE MOTHER'S EVENING PRAYER.*

MARY BAKER EDDY.

O GENTLE presence, peace and joy and power;
  O Life divine, that owns each waiting hour,
Thou Love that guards the nestling's faltering flight!
  Keep Thou my child on upward wing tonight.

Love is our refuge; only with mine eye
  Can I behold the snare, the pit, the fall:
His habitation high is here, and nigh,
  His arm encircles me, and mine, and all.

O make me glad for every scalding tear,
  For hope deferred, ingratitude, disdain!
Wait, and love more for every hate, and fear
  No ill,—since God is good, and loss is gain.

Beneath the shadow of His mighty wing:
  In that sweet secret of the narrow way,
Seeking and finding, with the angels sing:
  "Lo, I am with you alway,"—watch and pray.

No snare, no fowler, pestilence or pain,
  No night drops down upon the troubled breast,
When heaven's aftersmile earth's tear-drops gain,
  And mother finds her home and far-off rest.

AN IMPORTANT WORK.

SOME of the good work that is being done by the committee on publication is in the line of correcting misstatements of fact which have gone out over the wires as news, and on this basis have found space in the newspapers of the country. As an example of this work by the committee, we quote from the *Sacramento* (Cal.) *Star* as follows:—

Editor Star:—I desire to correct the report which was sent to the papers from Santa Cruz last Sunday, stating that Thomas Wolfing died while speaking in a Christian Science meeting in that city. I have word from Santa Cruz to the effect that the gentleman in question was not a Christian Scientist, and that the meeting at which he was speaking was one of another religious faith.

OLCOTT HASKELL,
Christian Science Publication Committee.

San Francisco, Nov. 18, 1909.

We find from other clippings received, that the original "news" item was freely copied in the papers of the middle and far West, and one of these clippings shows that it was seized upon by an opponent of Christian Science and used as the basis of a sermon against the teachings of this religion. Those who make use of such items as this without exercising due care as to verification, have little ground for complaint if they find themselves in an embarrassing situation when the untruthfulness of the statements thus sent broadcast is subsequently made known.

But the embarrassment of these people is not the aim of the committee; rather do they seek to impress upon those who are responsible for the first appearance of such items the necessity for greater care in ascertaining the truthfulness of a report before putting it into circulation. The comparative infrequency of such misstatements in late years shows that good work along this line has been done, and that the tendency to classify as Christian Science everything supposed to be unorthodox, is gradually lessening. This is a hopeful sign of the times, and the diligence and efficiency of the members of the committee on publication in obtaining the actual facts in such cases and placing them before the public in a courteous way, has been a prominent factor in bringing about this change. Nor should it be overlooked that this part of the committee's work is of quite as much moment as is the correction of the theoretical or doctrinal misrepresentations of the teachings of Christian Science which are so widely exploited.

The work of this committee is of such importance that it calls for and should have the active and loyal support of all the branch churches, and in providing for the yearly expenditures of a church the support of the committee on publication should be considered as necessary as the support of any other department of the work which is done for our Cause, and thus for humanity.

ARCHIBALD MCLELLAN.

THE SURVIVAL OF THE FITTEST.

ONE of the doctrines of physical science which seems to find support in natural history is that which declares for the survival of the fittest, and which is often taken to mean the survival of the strongest. Even the stoutest defenders of this theory are ready to admit that it is a merciless law, whether it be applied to animals or men, but they contend that it represents a stern necessity in that it tends to the elimination of the physically and mentally imperfect. It is not necessary to enquire whether this theory is supported by facts, so far as physical existence is concerned, but that it does represent the operation of law in the mental realm there can be no question. What is more, it is easily seen that when rightly understood it represents the operation of a law which is both merciful and just, in that it works toward the entire elimination from human consciousness of all that does not represent God, infinite Mind.

In the Christian Science text-book we are told that "the foundation of mortal discord is a false sense of man's origin" (Science and Health, p. 262). This points to the fact that in the spiritual creation there is no element of evil, nothing which can result in discord, hence nothing which must be eliminated, or which deserves to perish. This, however, cannot be said of the mortal belief of existence in which good and evil seem to coexist and the evil actually to predominate. It is therefore self-evident that one of these opposites must sooner or later disappear, as they are mutually antagonistic. Paul says that the flesh and the Spirit "are contrary the one to the other: so that ye cannot do the things that ye would." If one of these must go, which should it be? Unfortunately mankind has too long believed that materiality, or "the flesh," is essential to our existence, here at least, and that it is a part of the divine creation, a belief which Christian Science holds to be a mistake. Paul insisted that the fleshly man must be "put off," in order that the spiritual man of God's creating might be understood and realized by humanity as the real man. This man is by no means the product of asceticism, or the resultant of the struggles of the carnal mind to attain to goodness; rather does he express the ceaseless activity of divine Mind which ever impels man and the universe toward perfection.

Digitized by Google

When spiritual law is understood and its operation recognized in human consciousness, the survival of the fittest in the one spiritually awakened becomes an assured fact. That which does not express the divine Mind never is real to spiritual sense, and the sooner it disappears the better for all concerned. Thus does disease vanish, and sin as well, at the touch of divine Truth, for they are no part of man's being, though it has long been believed that they are; in fact it has been very generally held that a certain amount of evil and a large percentage of materiality give force to character, but Mrs. Eddy points out the absurdity of such an assumption, when she reminds us that "through spiritual ascendency our Lord and Master healed the sick, raised the dead, and commanded even the winds and waves to obey him" (*Ibid.*, p. 67).

Long ago the wise man said that "the race is not to the swift, nor the battle to the strong," and it is surely self-evident that something other than physical force is needed to outlast the stress and strain of mortal existence. Christian Science shows that the spiritual does this, for it is never submerged in materiality nor subject to any of its changing conditions. Did not the great Teacher reveal this truth when he said, "Destroy this temple, and in three days I will raise it up," and when he demonstrated the science of his statement? We are at present witnessing the passing of many things which were once considered essential to human existence, but better things are taking their places, and every material concept must at length give place to the spiritual and perfect. It is therefore well for us to give up gladly the false for the true, the material for the spiritual, knowing that the divine ideas will survive the mortal dream, because they are no part of it, but are instead the changeless realities of that "kingdom which cannot be moved."

ANNIE M. KNOTT.

SILENT EFFECTIVENESS.

ONE of the most lasting impressions gained from a visit to any great industrial mart is that of the racket and roar which characterizes human mechanism and movement, even at its best. The clatter and clang of a manufacturing plant has come to be accepted as an inseparable incident of the bringing of things to pass, and for the reason that we have grown into the belief that nothing can be done without that friction which tells of a waste of energy.

And yet even the material universe witnesses to the silent working of the greater forces. When one goes out under the stars, and looking up at the planets undertakes to compass in thought the vastness of the worlds which are so silently speeding upon their courses, there comes to him a new and awe-inspiring sense of the silent effectiveness of the forces which give impulse to these mighty orbs, while holding them in safest leash. So, too, when wandering among the giants of Mariposa, overwhelmed with the tremendous height and bigness of the trees about him, one's wonder is yet increased when he remembers that these towering trunks have all been lifted into the air by attractions which have accomplished this stupendous result without marring the stillness of an evening's hush. The electric train which thunders by our door tells of miracles being wrought for us today which would have simply astounded our immediate forbears, and yet the one impelling fact which makes possible all this wonderful phenomena is neither more nor less than the silent pull of the magnet upon its armature. Without either strain or frictional reaction, it speaks, and the work is done.

All these illustrations may direct attention to a tremendous fact which through Christian Science is determining human thought today as never before, namely, "the unlabored motion of the divine energy" (Science and Health p. 445). One of the most striking things respecting our Lord's mighty achievements was the ease, the quiet, with which they were done; and yet this becomes perfectly explicable when we remember that his works were the natural manifestation of Spirit. Belief in matter has involved humanity in the paradoxical situation of dependence upon friction, that which wastes and retards force, in order to profit by force; and when the thrall of this belief in materiality is escaped from, when we begin to realize that all real accomplishment is effected precisely as light dispels darkness, that it is simply the conquest and effacement of error by Truth,—then the material sense of the naturalness and necessity of friction, with all its noise and breakdown, loses its hold upon us, and we begin to recognize, if we do not yet understand, something of the silent effectiveness of right ideas, the forces of Spirit.

The enslaving sense of the need and value of friction, of doing something materially in order to attain our end, is disastrously manifest in the world's dependence upon drugs, its seeming incapacity really to believe that "the word of God is quick and powerful," and can bring about practical and immediate results in human life. This indisposition to honor any power that is not identified with matter has become so self-complacent and self-contented, even with professed Christians, that when one came in our age declaring for the sovereignty of the spiritual, the freedom of the sons of God, they were ready to stone her!

Christian Science is demonstrating that all things are subject unto him that is in league with Truth, that all real force is Mind-force, and that something of the harmony and peace of heaven may find expression in the redoing of those mighty works which glorified the earthly career of the great Wayshower. It is preparing men for effective doing, both for self and for others, by bringing them an understanding of the truth that spiritual overcoming, the accomplishment of God's will, is not attained by the stress and struggle of material methods, but by knowing divine Truth and becoming an inspired channel for its silent conquests.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Belmont, Mass., Nov. 25, 1909.

Dear Leader:—I want to send you a token of recognition and grateful appreciation of your word that gave to us *The Christian Science Monitor*. Our Lesson-Sermon reaches a great multitude each week, but the *Monitor* reaches other thousands daily who do not attend our services and who are not direct followers of this teaching, and they are attracted to this paper because it is clean in its make-up, kindly in its sentiment, and wise and helpful in its counsel. It has been well described as printing all the news that is fit to read, and as an expression of every-day righteousness, and it has called forth favorable comment from the editors of other newspapers who, while having no leaning toward Christian Science, still have recognized that a new and welcome standard has been raised in the field of journalism. A good newspaper is a modern wonder, and in the rapidity of thought and action in present-day affairs and the unprecedented and unexplainable phases of error they present, —whatever is neither good nor true,—the clear plain truth found in the *Monitor* becomes doubly welcome, and as the advance herald of a new and better order of things is certainly doing a grand work. I know that all this was foreseen by you.

In love,

JAMES OTIS SIMONDS.

MRS. EDDY'S REPLY.

Stick to your text, and you will stick to your newspaper, and text and paper will carry you onward and upward.

MARY BAKER EDDY.

Boston, Mass., Nov. 24, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—One year ago today I sent you the first number of the *Monitor*, which we considered an achievement. Today I send you the first completed copy of our Thanksgiving number. We all send you love, and all are very thankful for our small part in presenting Christian Science to the world. Please accept this first copy of the Thanksgiving number as a renewal of a pledge of loyalty to you by the entire *Monitor* staff.

Sincerely yours,

ALEXANDER DODDS, *Managing Editor.*

Postscript. We do not expect you to take time to read all of the ninety-six pages.—A. D.

Beloved Leader:—I am more than glad to add my loving thanks to you for your guiding hand and helpful words and works. ARCHIBALD MCLELLAN.

Rock Island, Ill., Nov. 2, 1909.

Dearly Beloved Leader:—There is a longing in my heart this morning to express my love and gratitude to you for the truths contained in Science and Health, although we know that the best way to express gratitude is to strive each day to reflect more of the Mind that was in Christ Jesus, and to live each day as unto the Lord.

I have in thought an experience that followed my first reading of the "little book," about fourteen years ago. I did not know that the truth it contained would heal the sick, and I could not remember anything I had read, but I had taken only a few treatments from a Christian Science practitioner when one morning I became very ill, suffering great pain. My thought was to get word to the practitioner, when these words from Science and Health (p. 495) seemed to stand out before me as though they were illumined: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought." I tried to push them from me, wishing I might get to the practitioner, when they came the second time. Then I arose perfectly healed. I did not then know what did the work, but many times since those words have been very dear to me when tempted to sin or be sick.

My heart goes out to you with increasing love and gratitude for teaching us, through your life and writings, how to cling to the thought of "perfect God and perfect man" in every hour of trial.

With dearest love,

MOLLIE E. SHAFFER.

New Orleans, La., Nov. 20, 1900.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—I thank you for writing the chapter on "Animal Magnetism" in Science and Health. For nearly seventeen years I have made a daily study of our textbook, but must confess that I did not enjoy reading this chapter as much as other portions of the book. A few days ago, reading carefully and prayerfully this chapter, every word seemed illuminated, and I can now see that one has nothing to fear from error if his thoughts, words, and deeds are right. I knew this theoretically, but your recent work, and the heroic work of our Christian Science Board of Directors in Boston, have so purified the mental atmosphere for every earnest Christian Scientist that to "the people which sat in darkness . . . light is sprung up." For this, and for all that you have done and are doing to restore Christianity to its primitive purity and to preserve Christian Science "uncontaminated and unfettered by human hypotheses" (*Christian Science Quarterly*) I say, God bless you. As the Discoverer and Founder of Christian Science you alone realize the absolute nothingness of error, but there is a vast multitude following in your footsteps, learning of you the powerlessness of error to harm those who trust God. I am happy to count myself one, though perhaps "one of the least of these," and for every step I ascend "o'er the hillside steep" (Miscellaneous Writings, p. 397), I praise God, and gratefully blend my voice with those who arise up and call you blessed.

Faithfully your follower,

M. ELIZABETH LENGSFIELD.

Leeds, England, Oct. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the churches and societies of Yorkshire, assembled in Leeds tonight, under the provisions of Article XXIII., sect. 1, of our church Manual, for the purpose of furthering the work of our county publication and distribution of literature, send you most loving and respectful greeting. We wish to tell you how happy we are over a newly-awakened sense of the vast importance to mankind of *The Christian Science Monitor*. We now fully realize that this missionary is going out into all the world in obedience to the Master's command, "Feed my sheep," and we feel sure that this meeting will result in inducing many more to subscribe to the *Monitor* who hitherto have not seen the necessity for so doing. Several of us are sending subscriptions for the four extra copies to place in public libraries and reading-rooms.

We have reason to rejoice daily over the growth of our Cause in this county, and we realize that this growth is the result of loyalty and obedience, with a loving appreciation of your life-work for humanity.

Your loving followers,

THE YORKSHIRE CHRISTIAN SCIENCE CHURCHES AND SOCIETIES.

Council Bluffs, Ia., Nov. 1, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Last evening I read in Science and Health the chapters on Prayer, and Marriage, and though I have read them many times before, they never seemed to me so beautiful nor so full of the very essence of pure devotion and exalted love. The spirit in them drew out a deep sense of devotion to you, and I said to myself that no one who has read those chapters can lay at the door of that pure thinker any charge of voluntary evil-doing in any form whatever. The grand and noble sentiment recently expressed by you through our periodicals has been of the greatest comfort and help to me in more than one emergency, and I thank you so much for the glowing words: "When these things cease to bless, they will cease to occur" (*Sentinel*, June 12, 1909). It sounds like a clarion call to battle against fear, for "we know that all things work together for good to them that love God. . . . What shall we then say to these things? If God be for us, who can be against us?" This is surely enough.

Faithfully and lovingly your follower,

HELEN C. MONTGOMERY.

Springfield, Mo., Nov. 14, 1909.

Beloved Leader:—I feel I cannot keep still any longer, but must do my part in scattering the precious seed by the wayside. It is now more than a year since I was healed from stomach trouble and nervousness by reading "Science and Health with Key to the Scriptures." When Science was first voiced to me, it seemed so beautiful that I accepted it as a little child, and it grows more beautiful to me each day. Every trial, and every cross I have to bear, only brings me nearer to God. I am very happy in this wonderful truth, and my earnest desire is that I may be a true and loving worker in the vineyard of the Lord.

Lovingly your follower,

MRS. A. J. JOHNSTON.

THE LECTURES.

BROOKLYN, N. Y.

An audience which filled the large auditorium of the Brooklyn Academy of Music listened most intently to a lecture delivered by the Rev. William P. McKenzie on Sunday afternoon, Oct. 24. He was introduced by Harvey M. Ferris, First Reader of First Church of Christ, Scientist, of Brooklyn, under whose auspices the lecture was given. Among other things Mr. Ferris said:—

Hundreds of years ago the false belief that the earth was flat was met by a few bold scholars, who had learned that mind must control the evidence of the physical senses; but it remained for Columbus to prove to the masses the truths which these scholars had discerned. The greatest blessing which attends any discovery is the liberation of thought and the discernment of a law hitherto unknown. Mind has forever whispered to mortals the existence of a supreme controlling power. As a Christian nation, we have accepted the Bible theoretically, and the records show that the greatest works were done by those who seemed to possess the greatest knowledge of this power. In Christ Jesus we find a man intensely practical. He said, "I and my Father are one." "The works which the Father hath given me to finish, the same works that I do, bear witness of me, that the Father hath sent me." Although the world was not ready to go on with the work he commenced, yet the record of what he did, and of what his disciples did through following his teaching, has stood through all these years the strongest magnet of the centuries.

Jesus declared that the "Spirit of truth" would again be made manifest, and he called it "the Comforter." It remained for Mrs. Eddy to realize the healing presence of that Comforter, that Spirit of truth, and through a consecration most devout she has given her discovery to mankind in the name of Christian Science. The words of Gamaliel stand in judgment on this age and on this subject: "Ye men of Israel, take heed to yourselves . . . for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." Paul writes: "Prove all things; hold fast that which is good."—*Correspondence.*

INDEPENDENCE, IA.

Mrs. Sue Harper Mims lectured on Christian Science at the Gedney Opera House, Oct. 12. She was introduced by Edwin Dukes, superintendent of the Independence schools, who said in part,—

One of the very difficult things in our lives is to preserve an open-mindedness to the truth. We are apt, even quite early in life, to become intellectually inhospitable, closing the door of our minds to all except our own most intimate acquaintances, or even to all except those of our own intellectual household. To new ideas, particularly along the lines that do not admit of ocular demonstration, we are not at home; and, behind the bulwark of our own ignorance, we bid defiance to the great and grand army of truths that, nevertheless, go marching on to ultimate and final conquest. We double-lock the door of our minds and, blissfully smoking our pipes of clay, rest in comfortable assurance that we know the truth, the whole truth, and nothing but the truth. Such a one, whether he be an old man who wears the silver crown of four score years, or a mere youth in his teens, is an old fogy. Whoever would retain the receptivity and elasticity of a youthful mind must, at all hazard, preserve for himself an open vision, a view unobstructed by prejudice or passion. He must be ever ready to receive the truth from whatever source and however out of harmony with previously conceived notions or destructive to his already acquired mental furniture. The presence of this audience is not only a compliment to the speaker of the evening, but proof *prima facie* that in the city of Independence there are many young-old people who, though never having bathed in the much sought for fountain of youth, are preserved in youthfulness of mind by a desire to know the truth.—*Bulletin-Journal.*

MEDFORD, ORE.

The lecture on Christian Science given Tuesday evening [Nov. 2] at the Medford Theater by Judge Septimus J. Hanna of Colorado Springs, was heard by a large audience. Attorney Porter J. Neff introduced the speaker, and said in part,—

We read and hear a good deal these days about how the religious or spiritual element in our modern life is dying out. Those who think they see any such thing have looked neither far nor deep. The spiritual element in life is not dying out. Old institutions and old beliefs will, perhaps, pass away, because they are no longer rich enough and full enough and large enough to hold and satisfy the larger spiritual and religious conceptions of men and women. Their passing is not an evidence of the decay of the spiritual and religious in life but, on the contrary, of its growth. When we contemplate the thousands and hundreds of thousands of men and women who have found comfort and health and strength and soul satisfaction in Christian Science and its teachings, we may be sure that its teachings are richly freighted with truth—that it has much to give that humanity needs. We may be sure, too, that it will be worth our time to listen and learn the nature of this truth, and to seek out, if we can, what it has for us.

Correspondence.

NEEDHAM, MASS.

An audience that filled every seat on the ground floor and overflowed into the gallery of Needham's capacious town hall greeted Frank H. Leonard last Sunday [Oct. 17]. Rev. J. A. Puffer, pastor of the Unitarian church, introduced the speaker, saying in part,—

I am very glad of this privilege of coming here to introduce the speaker of the afternoon, because I believe that one of the best things that can happen in our communities is to cultivate the spirit of good will between all forms of organizations which are trying to do good. It has been the history of organizations, as you all know, that we have had endless divisions, and in those divisions we have oftentimes cultivated a spirit of lack of charity for one another. Some of that spirit prevails in every community, and wherever an opportunity is given of showing good will between the different organizations, which in their different ways are trying to do good, I regard it as a very important thing. In that spirit I am glad to come here this afternoon.—*Needham Chronicle.*

LECTURES TO BE DELIVERED.

New Britain, Conn.—Miss Mary Brookins, Ruswin Lyceum, 3:30 p.m., Dec. 12.

Grand Forks, N. D.—Clarence C. Eaton, Metropolitan Opera House, 3 p.m., Dec. 19.

Baltimore, Md.—Rev. Arthur R. Vosburgh, Academy of Music, 3:30 p.m., Dec. 19.

Terre Haute, Ind.—Frank H. Leonard, Grand Opera House, 3 p.m., Dec. 26.

Creston, Ia.—Frank H. Leonard, Temple Grand Opera House, Dec. 31 (note change of date and hall).

Digitized by Google

TESTIMONIES OF HEALING.

Christian Science was first brought to my notice about twenty-four years ago, under circumstances which prejudiced me against it for a time. A few of the believers in its teachings had organized a society in the city where I lived (Kansas City, Mo.), and were so enthusiastic in their faith, and what it was accomplishing, that they wanted the whole world to know of it. A young man from this society on several occasions attended the mid-week prayer and testimony meeting of a church wherein I was a member, and tried to tell of the new religion of which Mrs. Eddy was the Founder, and of her wonderful success as a healer of sickness, etc., until the minister ordered him to sit down, forbidding him to speak on that subject, saying that such talk was blasphemy. We of his congregation acquiesced in his judgment.

About ten years later two members of my family turned to Christian Science for healing, after the doctors had given up hope of affording them more than temporary relief. Their healing caused me to investigate, and finally with my whole family to accept the new-found faith. Divine Truth as revealed in Christian Science has been our only healer since then. I wish to tell of a demonstration which has proven to me that "the angel of the Lord encampeth round about them that fear him, and delivereth them."

Some time ago I had occasion to make certain changes in the electric wires at the bottom of an elevator shaft. After cautioning the operator in the car not to drop below the first floor, I proceeded to my work, under the car, while he made several trips above me. Then he thoughtlessly took on a passenger at the first floor for the basement, and quickly descended, the car knocking me off the ladder on which I had been working to some iron piping at the bottom. I cried out as I fell, and the car was stopped ere it quite reached the bottom, thus preventing my being crushed; but the fall bruised and lamed me considerably. When I emerged from under the car I was quickly surrounded by anxious fellow-employees, but I walked unassisted to my workroom on the same floor, declaring the truth on the way and declining all material assistance.

I asked them to leave me alone for a few minutes, and said I would be all right. In half an hour I was able to resume and finish the work on which I had been engaged, and remained on duty in the store until the closing hour, a period of about three hours. My wife gave me treatment that evening, and after a quiet, peaceful night, I arose in the morning almost entirely free from pain. Divine Love had preserved me, quickly healed me of my bruises, and except for a slight discoloration on the side of my neck, no visible marks of my experience remained. My companions said it was a "lucky escape;" but I declared it was not "luck," only a demonstration of the power of Truth.

I endeavor to do my Science work each morning before entering on my daily secular duties, and to know that God is not forgetful of me, but protects me every moment.

WM. HARRISON WOODRING, Council Bluffs, Ia.

I feel it a duty to express my heartfelt gratitude for the great blessing that has come to me through Christian Science. Last September, while in a place where I had been staying through the summer, I fell and injured my right arm. A resident physician was called in, who telephoned immediately to a place twelve miles distant for a surgeon, who came and bandaged my arm, saying that the bone would not knit, on account of my advanced age (eighty years), that complications might set in, and if I lived, I would never be able to use my arm again, farther than the elbow, and that many months must elapse before I could do even that. My sister immediately wrote to a Christian Science practitioner in New York for absent treatment, and when the doctor called three days after the accident, to tighten the bandages, I had removed them. I then told him of the Christian Science treatment which I was receiving, and when he asked me how I was going to keep the bone in place, without support, I replied that God would see to that. After four weeks' treatment I had the full use of my arm, walked a distance of nearly two miles, and continued to do so, until my return to the city.

Another blessing which I have received is the cure of asthma, from which I had suffered nearly twenty years. In my heart there is a constant song of thanksgiving for Christian Science, and I can truly say, "Praise God from whom all blessings flow."

MARY A. PITT, New York, N. Y.

My own experience within the past year has proven conclusively to me the truth of Christian Science. I have been greatly benefited spiritually and morally, and I have also experienced the physical healing. During the summer of 1908 I was confined to the house for more than two months with a very stubborn case of illness. Medicine gave me little or no relief from suffering. At last I began to realize that my condition was such that, unless I received help from some source, my days were numbered. Then, as many others have done before, I turned to Christian Science for relief. I got it, and that quickly! I took my first treatment on Saturday, Sept. 5, and improvement began at once. The following day I was much better, and on Monday I found that my strength had returned. I went to my place of business, did a good day's work on that day, and have done so every day since.

I do not mean to leave the impression that within a few days I was restored to the same physical state as before my sickness, but I do affirm that within twenty-four hours all the painful and disagreeable effects of the disease had disappeared, one of which was a severe stomach affection. I had been living on very light diet, most of the time had no appetite, and any solid food caused great distress, but within twenty-four hours of my first treatment I began, with a good appetite, to eat anything that was set before me, and without any disagreeable consequences whatever. Improvement has been steady, and today I am fully restored to my usual good health.

FRANK I. CHURCH, Texarkana, Tex.

It was about the time of our dear Leader's discovery of the Science of Christianity that I, then a lad of twelve or thirteen years of age, attended with my mother, all one winter, the weekly prayer-meetings of an orthodox church in the city where we lived. At the end of that winter I asked my dear mother what there was in her belief, telling her that I could not accept this religion on faith, because I had no faith. Her reply was that it would come to me some time. It was forty years in coming, and in the mean while I was wandering through the wilderness of materiality; but faith in God came to me through my wonderful healing by Christian Science. This was about four years ago.

Up to that time I had always been a very discordant mortal, mentally and physically, always running to the doctor with some ache or pain, until finally he tried to practise what he thought was a little Christian Science upon me, by telling me that there was nothing the matter with me. I was then suffering from a stomach disorder, and this remark of my doctor only discouraged me, and for some time I dropped medical treatment, until my wife,

Digitized by Google.

becoming alarmed, persuaded me to call upon another physician. This gentleman and his son, who had recently graduated from Johns Hopkins university, gave me a thorough examination, followed by treatment. This seemed somewhat beneficial, physically; but mentally I was in a bad condition, despondent and discouraged. Then I took a trip to Europe and was gone two or three months, but returned no better.

One of my neighbors then told me about Christian Science and asked me to try it, and at ten o'clock that morning I was at a practitioner's house, telling her about my condition. She asked me if I wanted treatment, and my reply was that I wanted relief. She gave me treatment, and from that time my improvement began. It was slow but sure, and today I am completely well, contented, and happy. I was also healed, in three days' absent treatment, of rheumatism; and in one week of an ailment for which I had worn a truss about one year and a bandage thirty years. When Christian Science found me I was in the wholesale liquor business and had been for thirty-one years. The business was very prosperous financially, but after I had gained a knowledge of this most wonderful healing truth I could no longer sell whisky, so gave it up and the place is now closed from this traffic.

For three years I have been upon the mountain-top. To express in any adequate manner my gratitude for the knowledge of God gained in Christian Science, is beyond my ability. My chief desire is that I may show my appreciation by right living. I thank God for Christian Science, also Mrs. Eddy.

GEORGE H. SMITH, Utica, N. Y.

I feel it a duty as well as a pleasure to testify to the wonderful power of Christian Science. It is several years since I first had treatment, and I feel very grateful for what understanding of the truth I have gained, as it helps us out of a good many trials. I will give one of these experiences. My son was working in the hay-field, and stuck the tine of the fork into his foot. He did not pay much attention to it, but came home and went in bathing as usual. In the night, however, he came to my room with great pain in the foot. My first thought was, What shall we do? I could not reach a practitioner in the night, so I went to work in earnest, with the help of Science and Health, and in a short time he was sleeping. I had so much fear that I felt the need of a practitioner's help in the morning, as the foot was very painful, but he got up about noon and was back at his work the next day. He had no further trouble with his foot.

This, with many other demonstrations of a similar nature, makes me very grateful to Mrs. Eddy for the gift of Science and Health to suffering humanity. I also enjoy the *Sentinel* and *Journal* very much.

HATTIE MCMAHON, Stowe, Vt.

Six years ago I was healed through the teachings of Christian Science. A friend who knew of my prolonged illness, and that I had been under the constant care of good physicians for three or four years, told me of the healing efficacy of Christian Science. Until that time I had known nothing in its favor; I had heard it ridiculed from the pulpit by ministers, who even said that it was of the devil.

Two days after my friend talked to me about it, I went to see a practitioner, who gave me treatment and loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and as soon as I began to read this book, I knew it was the most heavenly message which had ever come to me. I showed marked improvement from the first week's treatment, but it was about five months before I was entirely healed of all my ailments, a spinal trouble being the most stubborn to overcome. I was, however, entirely healed, and since that time I have had no other physician nor taken medicine; neither have I wanted any other, for the few attacks of illness which I have had have been much more quickly overcome than at the first. Severe colds have been overcome with two or three treatments, whereas under medical methods, if I took a cold in the fall I did not get well of it till spring.

I will mention one thing of recent occurrence that was another proof to me of Mind's control of the body. I injured my ankle about three o'clock in the afternoon. I began to treat it myself, but had, perhaps, too much fear about it. At any rate I failed to help myself, for in an hour I could not walk and the ankle was swelling rapidly. I then called on a practitioner for help, and by six o'clock I could walk, though I still limped somewhat. The next morning my ankle was perfectly well.

Not only have I been blessed with physical healing, but the spiritual healing has been a greater blessing to me. Words are insufficient to express my gratitude to Mrs. Eddy for giving this truth to the world.

MRS. RHODA B. GRAFTON, Chattanooga, Tenn.

I wish to tell as simply as I can of the heavenly light that has come into my life from one year's study of Mrs. Eddy's "Science and Health with Key to the Scriptures." I had wanted to do right, to follow Christ all of my life, but I now know that error was present most of the time for many years. Still, I knew that some day God would satisfy my hunger after righteousness, so I drifted on, not knowing how to serve Him until I was led "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226). Do I love the hand that led me? Could I love God, the Giver of all good, and not love her who says, "Follow your Leader only so far as she follows Christ"? The long black night of doubt and fear is ended, I know I have found my guide.

After the birth of my second child, I struggled for almost two years with distressing illness, trying to shake off the fear of hereditary tubercular disease by taking medicine continually, only to be pulled down again after every seeming uplift. My physicians were the best in the drug line, and good men, too. All of my life I had suffered from a bowel trouble and the disorders resulting therefrom. I had one operation, three and a half years ago, and was considering another when Christian Science found me. After one week's treatment I knew that it was God's power manifested, and the great truth of His perfect creation began to dawn upon me. I prayed then, if this truth was for me, that the desire to study would be given, and the answer came.

I was and am happier in studying Christian Science than in doing anything else, and I have studied every day this year. I have not realized perfect harmony every day, for old errors seemed to have a firm hold on me; but divine Principle is showing me how to forsake my sins, and slowly but surely I know I am overcoming evil with good. My greatest joy is in anticipating that day when divine sense shall bid every shadow flee. I realize that I must bring every thought into captivity to Christ. Thoughts of subtle sins often seem to glide serpentlike into my consciousness, before I know it, and then evil seems to say, "I am power;" but as soon as I realize the falsity of error, by close, earnest, honest study of the Bible and Science and Health I can distinguish the wheat from the tares.

This is truly the straight and narrow way of working out our own salvation. My husband sees my efforts to overcome error, and helps me. Although he is not ready to study yet, he says he would not have me give it up for anything on earth, for it has made me happy. I used to

Digitized by Google

have miserable spells, and would try to make every one else miserable by complaining about everything. I now have proved to myself that by studying the Lesson-Sermon early each day, the Master's promise, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," is fulfilled, and the day is a peaceful march toward home. We all can commune with God by striving to forsake error and to have no other consciousness than God, good.

FANNIE SLOANE TOWLE, Potosi, Mo.

About three years ago I had considerable trouble with a crowned tooth, which I tried to overcome for a whole year. I then went to see a dentist about some other work, and when he saw the condition of this tooth, he advised me to let him attend to it. I reluctantly yielded, but in attempting to get rid of the abscess, he at last extracted the tooth. The trouble then seemed to be over, but only for a week, when it broke out again. We were traveling at this time, and I did not work as I should in Christian Science, so this condition lasted for two and a half months. After returning home, I began to treat myself again, and the healing was completed in a short time, for which I am very thankful.

Christian Science has brought me many blessings in many ways, and I am indeed grateful for the peace of mind and the joy that have been mine. Christian Science has been my only healer for twenty-two years, and it has without doubt saved me from a great deal of sickness. It has taught me to love the right, and obedience to its teachings has made me successful in every way. I am very grateful to Mrs. Eddy for giving this truth to the world.

MRS. HANSINE MADSON, Vermillion, S. D.

[Translated from the German.]

It is with a heart full of gratitude that I tell what Christian Science has been to me for years. Owing to my vocation I am obliged to stand on my feet almost constantly, and my thoughts must be turned to many different sorts of things. The Wednesday evening meeting is the only hour when I can gather peace and strength, but I formerly believed I could not find the time even for this single hour. I am now, however, a regular and eager listener to the wonderful teachings of Christian Science. Before I knew anything about this truth I was very ill. My nerves were in a serious condition, and my strength had failed after twenty-two years of work, and the physician predicted alarming results.

At that time a noble-hearted lady presented to me the subject of Christian Science. After this the attacks of pain were less and less frequent, and with joy I became aware that I was feeling better that winter than I ever had before. I had no fear that something evil would happen to me, but was always cheerful, even when I seemingly had reason to be troubled. This makes it easier for those around me, who express admiration for my indefatigable delight in working, and I am often asked as to the cause. I then try to explain the blessings which I have received through Christian Science, and I experience much joy when after some time I see how trust in God, health, and happiness come to others also.

For these blessings I cannot thank God enough, and also those who have taught me to understand the truth.

FRAU ANNA LANGE, Dresden, Germany.

Nearly three years ago I was healed of a desperate case of heart trouble. When Christian Science found me, I was a physical wreck, with no hope of ever being any better, as I had grown steadily worse under the care of good physicians. I was so utterly wretched and unhappy, and suffered so terribly, that I even thought of suicide. After worse attacks than usual, I decided to try Christian Science, which I did with the result that I was so greatly helped in the first treatment that when I got home I went to work, and have never had a sick day since. I had three weeks' treatment, and the precious words of truth spoken by the one who helped me, fed my famished heart. My weary body responded to the word of God, and I was made a strong and healthy woman. I cannot find words to express my gratitude for Christian Science.

MRS. MATTIE TREMAINE, Colorado Springs, Col.

Christ Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." For many years I had been earnestly seeking for the true origin of man. I had been a sincere worker in both church and Sunday School, always a student of any and all writers who had good to give to the world, yet I had only reached a point of much dissatisfaction. My life seemed a failure, although I had all that was necessary to make me happy, but I was most miserable.

At this time, having heard somewhat of Christian Science, I began the study of the Bible, together with "Science and Health with Key to the Scriptures" by Mrs. Eddy. During this study I was healed of severe headaches and a bowel disorder. I began to understand and see life in an entirely different light. I therefore began to devote my time and thought to the demonstration of this healing truth taught and demonstrated by Christ Jesus. For six years I enjoyed perfect health and harmony, but after the birth of our son I was seized with an illness—called an abnormal growth, with other complications. The healing of this trouble was very slow, covering a period of over two years and a half. At times I could not raise my foot from the floor without pain.

Through the kind help of Christian Science practitioners, I was never absent from church on this account, nor compelled to discontinue any of my regular duties, knowing, as I could not help but know, that "patience must have her perfect work," and that "divine Love always has met and always will meet every human need" (Science and Health, pp. 454, 494). It was but the consuming of the dross and the refining of the gold. About this time we planned a trip to the Kootenai mountains for two weeks. Among those beauties of nature, and while earnestly working for another's good, my books became my only companions. In this uplifting thought and necessary consecration my own healing was completed.

For this healing I am most grateful, but each day I realize more and more the love and reverence I owe to Mrs. Eddy, who so gloriously fought the good fight and has given to mankind this old-new truth, whereby we can unlock the wonderful truths of the Bible, the half of which have never been told.

MRS. MAIE B. HILLIS, Portland, Ore.

Ever since Christian Science lifted me out of hopeless suffering, I have endeavored to express my gratitude, in word and deed, though I have not till now tried to do it through our periodicals. As a result of a sickly infancy, and too rapid growth, I was a victim of female trouble, and physicians told me that there was no medical record of any help for the particular phase it had assumed in my case. I was very nervous, and for a number of years I had no consciousness of sleeping; my first waking thought was of being tired.

The morning after my first treatment in Christian Science I awoke rested and had breakfast with the family, eating what they did without discomfort. I had three

Digitized by Google

weeks' absent treatment, but all I knew of Christian Science was that it was the work which Jesus did. I knew no other practitioner than the one to whom I wrote for help, I had only those who were just beginning the study for themselves to talk with, and in trying to fit my experience to theirs it seemed to bring me only confusion. I am very glad my healing seemed slow, for it gave me time to prove each upward step, through the study of the Bible, of which I had been a student, together with the writings of our dear Leader and the authorized Christian Science literature.

Since then my one desire has been to express in daily living the benefit of following closely the one who has zealously labored to give us the fruit of her unselfed love for God and man. To Mrs. Eddy, the loved Leader of Christian Scientists, the world owes a debt of gratitude which can only be acknowledged by following in her footsteps.—ERNIE E. RICHEY, Yankton, S. D.

It is with joy, and with thanks to God, that I wish to tell of my healing in Christian Science. A little over two years ago I was invited by a friend who had been healed by Christian Science, to attend church with him one Sunday evening. I wanted to see what the service was like, so out of curiosity I went to Second Church in this city. Through my first experience of silent prayer I became a Christian Scientist, and I was healed of stomach trouble of over twenty years' standing. I had been treated by several schools of medicine, and had taken all kinds of remedies, but got only temporary relief. Through the study of the literature, together with two or three treatments and following the service, I have been absolutely healed; but the physical healing I count as secondary, for it is the purification of thought which follows a constant study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, that makes Christian Science of the greatest value.

The truth has freed me in a measure, and I rejoice in that freedom and also because my understanding has enabled me to help others in seeking that truth. Mrs. Eddy says (Science and Health, p. 538), "Radiant with mercy and justice, the sword of Truth gleams afar and indicates the infinite distance between Truth and error, between the material and spiritual,—the unreal and the real."—LAURENCE J. CLINTON, New York, N. Y.

I am thankful that when Christian Science was presented to me I was ready to receive it, and that I did not stop to resist that which I did not understand, but tried to apply each truth as I saw it, proving by small difficulties overcome at once that the greater problems could be solved. In January, 1906, I began to read the Christian Science literature, and since that time have had many proofs of the power of its Principle over all kinds of discord. It has met every need when faithfully applied.

Among the physical ailments overcome in myself were a bowel disorder and smallpox. In the latter case help from a practitioner was called for, and though the early symptoms appeared, each was overcome and the disease destroyed in two days. At the birth of our baby all dread and fear was overcome, and my recovery was very rapid under Christian Science treatment. The truth has been the baby's only medicine, and it has done wonderful things, both as a protection and cure for her.

I cannot express the value to me, in a spiritual way, of Christian Science, but I am trying to testify to this in my life.—MRS. GRACE ALEXANDER, Redfield, S. D.

It is with very deep gratitude that I acknowledge the joy which Christian Science has brought to me. About two years ago I was suddenly taken with severe pain one Sunday morning, and continued in this condition until evening, growing gradually worse, until I felt I could endure it no longer. I then asked for Christian Science help, and was entirely healed in four treatments, so that I returned to the office the following Wednesday. This was an attack of appendicitis, and I was glad to escape the operation usually resorted to in such cases.

I am very grateful to God for my healing, also to Mrs. Eddy, who was able and willing to make known to us the power of Christ, Truth, in time of trouble. I have had many proofs of Truth's wonderful power, and have found that it is all sufficient and never failing. I am a business woman, and in my work Christian Science helps me to see clearly through what seem to be dark places,—to know that each one of God's children has a place in divine Love, and that there is no power in error to take it from us. I am so very grateful for everything that Christian Science has brought me.—HELEN E. COKER, Omaha, Neb.

I feel that I have been slow in telling what Christian Science has done for me. It would be impossible to tell all, but I can safely say that Christian Science comforts in sorrow and trials and lifts us above them. A few years ago, while I was staying with my daughter in London, Ont., her little son, then seven years old, was taken suddenly ill, and suffered greatly till we sent for a Christian Science practitioner, who lived a mile away. She came immediately, and as soon as she treated him he got relief, and was well that night. I will also tell of the child's mother, who was expecting to be confined about that time. She became ill, and we sent for a Scientist, and also for a doctor. The doctor stayed a while and left some medicine, but she never took it. There seemed to be serious complications, and the trouble was found to be with the kidneys. On Sunday her right side became powerless; but the practitioner worked faithfully, and by Tuesday she was better and the following day got out of bed. Two weeks after this the child was born without pain.

MRS. MAYHEW, Renfrew, Ont.

[Written for the *Sentinel*.]

THE LIGHT OF TRUTH.

ALICE MC GUIGAN.

COUNT not the years, eternity
Is ours, age hath no pow'r to mar:
Our God is Life and Love and Truth;
There is no age, there is no youth;
No limitation on man placed,
God's attributes in him are traced.
The glorious Principle of all
Is Love divine, our God, all good:
And man in His own image made,—
His thought divine, who ne'er has strayed,
But still continues perfect man,
According to the Father's plan.
In God, we live and move and breathe;
And till this glorious truth we know,
The seeds of sin and death we sow:
We forge the chains that hold us down,
We bear the cross, but miss the crown.
In God, one Father and one Mind,
The brotherhood of man we find.
The Mind our Master well confessed,
In acts and deeds is still expressed.
We grow in grace, we grow in pow'r,
For He is with us every hour.

FROM OUR EXCHANGES.

[Rev. D. M. Steele in *Churchman.*]

Shall I not do what I will with mine own? Yes, provided it is your own. Whether it is your own depends on how you got it. Whether you shall do what you please with it depends on whether the thing that you please or wish or will to do with it is the right thing. Whether it is the right thing depends on whether it is the best thing that can be done with it; *i.e.*, best for the thing in itself, best for you who have it, and best for your fellows who have it not. First, I say, wealth is or is not one's own, depending upon how he got it. I have no thought of raising the question, Can a man make a million dollars honestly? I make no doubt that he can, maybe many of them. But whether he have a million or a merest modicum is not the point. The point is, that whatever he has, if he did not get it honestly he does not have it in any legitimate sense. He may not do what he will with it, even though he should will to do the best of things, merely because it is not his to do with. It is not his to keep, not his even to give away, save to give back, to restore, to those from whom it has been taken.

[*Christian Work and Evangelist.*]

A sentiment toward international brotherhood as the only Christian and rational relationship of nations is growing by great leaps and bounds. It is manifested every day. All the papers are full of it; all speeches and congresses reflect it. It is becoming an irresistible spirit. Let it become a little more the common sentiment of the world, and the work is done. So progress in all great reform is measured. Fret not because of a recrudescence of the old ways, or an occasional reversion to past things, or a day's triumph of the evil; if the sentiment is growing, and the protest is apparent and the new spirit is spreading, and the prophets are everywhere proclaiming the new time, all is ultimately well.

[Rev. John Haynes Holmes as reported in *Boston Transcript.*]

All around us we find a general discontent with things as they are and an aspiration for things as they ought to be. This discontent is manifest in education and politics, and it is a significant characteristic of the industrial field, where the situation is one of almost open combat. Everywhere there is the same turmoil and agitation—a seething unrest, a suspicion of impending change. But behind it all there is a great ethical and spiritual unrest. One of the most alarming characteristics of our age in the face of this unrest is that so large a part of the people regard this movement with suspicion and fear and are doing all they can to suppress the feeling.

[*British Congregationalist.*]

Christ came so to order the spiritual world and our relations thereto that those who seek to make their home there need no more feel themselves to be moving round and round a wide circle with a center they cannot find, but may realize that their steps are set on a straight path. The quest of goodness is under him redeemed from uncertainty; and the aspiring spirit may know that it does not spend itself in vain.

[*Pacific Baptist.*]

When once a man learns how to get and forgets how to give, the doom of his soul is sealed. Unless development in liberality advances by equal pace with growth in possessions, the man's moral fiber soon weakens; the getting is not limited by moral considerations, and with the first stress of a great temptation the house of the man's character falls, for it is built upon the sand.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

SPECIAL PAMPHLET.—About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 10 cents each, $1.00 a dozen, $7.50 a hundred.

A NEW PICTURE.—About Dec. 10 the Publishing Society will place on sale a new and desirable photogravure of The Mother Church edifices and the Publishing House, with the proposed parkway in the foreground. Approximate size, 24 by 18 inches.

The price of the picture will be as follows: Artist's proof, bearing remarque, impressed on Japanese vellum, $5.00; from the same plate on India paper, mounted on mat, without remarque, $3.00. Ten per cent discount to Christian Science reading-rooms.

NEW EDITION OF THE HYMNAL.—The new and enlarged edition of the Christian Science Hymnal, containing some fifty new hymns, will be ready for delivery about Dec. 20.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, six months, $1.20; one year, $2.00.
Ten copies to one address, each, six months, $1.15; one year, $1.80.
Twenty-five copies to one address, each, six months, $1.10; one year, $1.80.
Fifty copies to one address, each, six months, 90 cents; one year, $1.50.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid, to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, six cents a copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The sixth annual convention of the national rivers and harbors congress, the largest assemblage of representative men interested in the development of waterways ever held in this country, took place in Washington last week. President Taft announced himself in favor of securing a declaration from Congress for improvements of the Mississippi, Missouri, and Ohio rivers as outlined by the army engineers, and the beginning of work on the projects with appropriations from the current national revenue, leaving the question of a bond issue for a later time. Among those who spoke were Secretary Nagel of the department of commerce and labor; Senator Burton, chairman of the national waterways commission; President Cameron of the farmers' national congress; Representative Rodenberg of Illinois; ex-Governor McMillan of Tennessee, Frank Gates Allen, and Count Von Bernstorff, German ambassador to the United States.

President Taft, in his address to Congress, favors a ship subsidy, a civil pension, postal savings banks, suppression of the "white slave" traffic, higher postage rate on magazines and periodicals, statehood for Arizona and New Mexico, commission to expedite legal procedure, civil control of the lighthouse board, celebration in 1913 of the semicentennial of negro emancipation, artificial island and fort at Chesapeake bay entrance. He opposes congressional action on the sugar import frauds in New York custom-houses on grounds that possible immunity would balk convictions; any further revision of the tariff bill at present, and the issuance of judicial injunctions without notice in labor controversies.

The national monetary commission has just made public the tabulated results of an investigation of the condition of all the various classes of incorporated banks throughout the country, as of the close of business on April 28, 1909. The institutions reporting to the commission include 6,893 national, 11,319 state, 1,703 mutual and stock savings, and 1,497 private banks, and 1,070 loan and trust companies. The total resources of all these establishments reach the stupendous total of $21,100,000,000.

Realizing the importance of utilizing the ranges within the national forests for forage purposes because of the rapidly decreasing territory otherwise available in the West, the forest service is intending to open hitherto inaccessible ranges in high altitudes by the construction of trails and bridges and to develop unused arid land. The finer grass in the higher altitudes and the more rigorous climate produce a better quality of beef.

Judge Grosscup of the United States court of appeals, in the *North American Review* announces his readiness to ally himself with a new party that will have for its object the curbing of corporate greed and the equitable division among all men of the prosperity of the country. The article advocates the sharing of the profits of large corporations with employees, not as a present, but as a matter of right.

"Not a man shall remain in this service who accepts a tip from a passenger," was the statement of Collector Loeb, uttered as he dismissed a customs inspector who has been in the service since 1886. "I am determined to break up this practice, and I want the public to know that not a cent need be paid to any employee of this port for any service the Government pays its agents to perform."

Indications are that the investigation of the so-called milk trust in New York city will extend to the up-state milk interests, for the purpose of determining the causes for the apparently wide discrepancy indicated by currently published quotations between the price paid the producer and that paid by the consumer.

A recommendation by the Massachusetts board of bar examiners, that applicants for admission to the bar in that state, not college or high school graduates, be examined as to their general education as well as their legal knowledge, is now being considered by the supreme judicial court.

The so-called water-power trust will in all probability be investigated at the coming session of Congress by the House committee on interstate and foreign commerce.

The total appropriations of Congress for the fiscal year beginning next July amount to $978,125,769.

International.

King Gustav of Sweden has inaugurated a new departure for sovereigns. Disguised as a stevedore, he spent most of a day carrying sacks of coal from a lighter. The King says he intends to mix in this way with all classes of laborers, so that he may ascertain their opinions and wishes. Already, he added, he had obtained many valuable hints from the men with whom he worked. His determination to learn the conditions of the working man resulted from the stagnation of business by the recent strike. The King intervened last August in an endeavor for a compromise, but without avail. A national fund was raised by subscription to provide loans to the working classes. Homesteads have already been apportioned among the unemployed, but conditions remained such as to cause his majesty and his government grave anxiety. The King found difficulty in ascertaining the facts, and has taken this way to discover them.

The rejection of the budget by the House of Lords, says Frederic Harrison, opens the door to grave possibilities, among which even the very existence of the monarchical form of government in England is included. By its challenge to the House of Commons the House of Lords has invited reprisals which might extend to its actual demolition, and in his opinion the demolition of the House of Lords might be only a forerunner to the pulling down of the throne itself into the melting-pot. Even King Edward is said to have been impressed by his words and used every means within his power to avert action which he considered fraught with such possibilities.

The annual report of the British postmaster-general for the twelve months ending March 31 last, states that during that period no fewer than $80,325 worth of cash and bank notes and other securities to the value of $3,031,625 were found in letters which the postoffice was unable to deliver, and these figures do not include the value of remittances which were returned unopened to the senders. Packets posted without any address and articles found loose in the post amounted to 427,824. There were in all 30,509,000 undelivered packets.

The data of Dr. Cook's trip to the north pole have arrived at Copenhagen and will be considered at once.

Industrial and Commercial.

Within the next few months more than two million acres of land will be sold in Oklahoma. More than a million acres of it belongs to Indians, the greatest part to the Osages, while another million acres in the northwest corner of the state belongs to the state college fund. The Osages, who are worth on an average forty thousand dollars apiece in cash and lands, and are by far the richest nation on earth, have each 657 acres of land which is either fine farming land or rich in oil, coal, and gas. The Government will permit each Indian to sell 497 acres and to lease the other 160, but he cannot entirely dispose of his homestead rights for twenty-five years.

There will be no reduction in the wages paid operatives in the Fall River, Mass., cotton mills during the next six months, as the manufacturers have waived their right to cut wages. Under the provisions of the sliding scale agreement they were entitled to reduce wages eight per cent, their margin of profit during the past six months having decreased in that proportion.

It is said that there were 2,300,000 telephones in the whole of Europe at the commencement of the year, as against 7,000,000 in the United States. In the whole of France there are, it appears, only 194,150 telephones, while in the city of New York alone there are 334,186. In Austria there are not more than 80,975, while in Chicago there are 184,022, or nearly as many as in the whole of France.

"There is just as much need that a woman should be taught how to cook and sew, make her own hats and darn her husband's socks, if she has a husband, or expects to get one, as there is to teach a man how to farm," said Senator Smoot in announcing that he would introduce a bill making appropriations of ten thousand dollars each to agricultural colleges, to be used in the teaching of domestic craft.

The newly seeded area of winter wheat in the United States is estimated to be 7.9 per cent greater than the revised estimated area sown in the fall of 1908, equivalent to an increase of 2,449,000 acres, the indicated total area being 33,483,000 acres.

That both the producers of cotton and the dealers in that commodity are the victims of the system of trading in vogue on the cotton exchanges of the country, is the purport of a report by Commissioner of Corporations Herbert Knox Smith on the conduct of such exchanges.

Every person in the United States would have $34.98 if the money in circulation on Dec. 1 were evenly divided. This is based on the treasury's estimate that the population of the United States is now 89,524,000.

Forests of the United States contributed ninety million dollars for the exports of the country during the fiscal year 1908, an increase of twenty fold since 1851.

Pig iron production was at the rate of 31,600,000 tons a year Dec. 1, including charcoal iron, or 600,000 tons more than on Nov. 1.

The net receipts from the estate of the late Marshall Field from March 1, 1907, to June 30, 1909, were $34,922,349.

On Nov. 24 the total surplus of cars in the United States and Canada stood at 39,528.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THINGS THAT HELP.

WILLIS F. GROSS.

In all the walks of life men and women are looking for things which will help them along the way. Few persons would be content to remain just where they are. The desire for better things is almost if not quite universal. The desire to do better work, to be more successful in one's life-mission, to improve one's condition and surroundings, is a worthy ambition; and if all efforts in that direction are in accordance with the spirit of the golden rule, the endeavor is praiseworthy.

The Christian religion is quite generally regarded as one of the things which have contributed most largely to humanity's good, and is in no small degree responsible for the material prosperity that is today enjoyed, as well as for the moral and spiritual freedom which has been attained. Moreover, it is believed that if Christianity entered more largely into human activities,—business and social, as well as religious,—still greater good would result. Those of us who know something of Christian Science, because we have experienced in various ways the healing and saving power of Truth, know that Christianity is practical and that it is effectual.

Inasmuch as men have recognized this practical worth of Christianity they have looked for that which would help them to attain it. They have devoted themselves more or less earnestly to the study of the Bible. This book is considered the only reliable source of religious instruction. The Bible declares that "holy men of God spake as they were moved by the Holy Ghost;" and again, "All scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness: that the man of God may be perfect, thoroughly furnished unto all good works."

Here is Scriptural authority for accepting the Bible as the foundation for all religious instruction. When this viewpoint was reached, the need of helps to understand the Bible was at once felt. To meet this need commentaries and numerous other books, sermons and lectures, articles on Bible texts and various religious subjects, have been supplied. No doubt personal opinion and ofttimes misapprehension have entered into this work, but nevertheless much good has been accomplished in this way. There has been a gradual uplifting of thought and a preparation for something better.

The student of the Bible has been inclined to interpret the inspired word, so far as he was able to do so, from the standpoint of his own experience, and without doubt his concept of God and man has been the basis of that interpretation. The Christian Science text-book, Science and Health, has become to thousands the "Key to the Scriptures;" not because it has added anything to the sacred teachings, but because it reveals the divine Principle of those teachings from Genesis to Revelation. It presents such a practical, definite, and scientific concept of God, and of man as created in the divine image and likeness, that the Bible is read as a new book. The deeper and more spiritual meaning thereof is brought to light, and the teachings of prophets and apostles have a more practical application to humanity's present needs.

The Christian Scientist knows that Science and Health has been and is to him the greatest help in gaining an understanding of the Bible. The results he is able to accomplish are proof that his faith is right, and he is persuaded that the greater good he desires will come in due season, when through spiritual understanding he is able to meet the divine requirements. If the blessing is not received today, he realizes that it is because he is not ready for it.

The constant study of the Bible and Science and Health is necessary to the Christian Scientist, because from these books he learns what is required of him and how he may be able to perform that which is good. Other things may contribute to his well-being, but nothing can take the place of the Bible and Science and Health. From them alone can he learn the Principle and rule of Christian Science practice, and his progress will depend upon the faithfulness with which he puts into practice what he learns. It is impossible to know from experience the possibilities of Christian Science, unless its teachings are to some extent received into one's daily life. The mere intellectual grasp of the letter of this Science is not sufficient. Without an intelligent comprehension of its teachings there cannot be a reasonable and consistent application of these teachings in solving the various problems of human experience. Christian Science must be understood spiritually, and this understanding is gained only as the student finds in his own experience the proof of what he learns from the study of the Bible and Science and Health.

One is also helped by the experiences of others. The Scriptural teaching that "God is no respecter of persons" encourages the student to work for and expect the good another has gained. If the testimony of those who have gained their freedom from some forms of error is received in the right spirit, it inspires hope and courage and there is a greater willingness to work and wait for the reward. Paul wrote, "Bear ye one another's burdens, and so fulfil the law of Christ." We are all helped by words of encouragement, and occasionally we need a helping hand. It is right for us to have these helps, and we should show our appreciation of what we receive by giving to others according to our ability. In Christian Science it is learned that the blessing of receiving includes the privilege of giving, and thrice blest is he who recognizes his opportunity and rejoices to improve it.

In the upward journey there are many things to help us along the way, but the thing that helps us most, after all, is the grateful recognition of what God has done for us. The blessings we have received, be they few or many, are our proof of "God with us," and it is to this end that we are striving; namely, that we may have the abiding consciousness that nothing can separate us from God, the source of all good. If there is a sense of discouragement

Copyright, 1900, by Mary Baker Eddy.

Digitized by Google

because the triumph over error comes slowly, nothing will help us more than to stop and consider what we have accomplished, what God has already done for us. It is not the thought of what God has not done for us that helps us, but the recognition of what He has done. Mortal, material sense would limit God in all His ways and works, but Christian Science teaches that God is infinite and there is no good thing which He has not freely bestowed upon His children. Jesus said, "What things soever ye desire, when ye pray, believe [understand] that ye receive them, and ye shall have them." It is evident that one could not understand that he receives a thing unless that thing had already been bestowed. All good belongs to man now, and all that is necessary to gain the desired good is to awaken to this fact.

In Science and Health we read (p. 260), "Science reveals the possibility of achieving all good, and sets mortals at work to discover what God has already done." To begin one's work by recognizing what has already been accomplished in human experience, is to start with the assurance of the divine presence and help. Work begun in this way and continued along Christianly scientific lines must of necessity be successful, for if one works in harmony with good, who or what can hinder him? The sense of discouragement or impatience cannot find an entrance, much less an abiding-place, in that consciousness wherein are found the continued proofs of God's power and love.

To know no other presence or power than divine Love is to realize perfect and eternal harmony. The realization of the oneness and allness of God comes not suddenly in the present or the future. It is a gradual unfoldment in human consciousness, and the recognition of blessings received helps one to find the kingdom of heaven within. This most effectual help is within the reach of all, and no one should fail to appreciate this opportunity to bring himself into harmony with the divine Principle of all good.

VERIFICATION.

HELEN ANDREWS NIXON.

THE student of Christian Science who watches the workings of the truth in his own life, sees verified its teaching, viz., that divine Principle is ever operative, ever imperative, ever loving. The Discoverer of Christian Science and the author of its text-book, "Science and Health with Key to the Scriptures," has aroused human consciousness to acknowledge the paramount necessity of obeying the First Commandment, "Thou shalt have no other gods before me." Facing this unequivocal command, one may well rejoice that through Christian Science has come also the understanding that it is no mere arbitrary requirement, but the all-impelling, and joy-bestowing Science of God and man in His image and likeness. The revelation to Mrs. Eddy of God as the only Mind, laid bare the false belief of mortals in an evil mind, a mind opposed to good. Upon the acceptance of the finality of this revelation concerning the allness of good and the supposititious character of evil, an intelligible and progressive life begins to unfold, for this revelation constitutes a working basis. Spiritual facts are thenceforth to be declared, material beliefs are to be contradicted. The verification of statements made in Science and Health is a daily experience with the obedient student of Christian Science. If at a given point scientific growth away from old habits of thinking is imperative to insure one's advance, experience is sure to prove a thorough teacher. The end of an experience will often bring to mind a right scientific thought which passed unheeded prior to the experience.

Among many others the three following statements in Science and Health are continually proven true, viz., "He [Jesus] taught mortals the opposite of themselves:" "Love will force you to accept what best promotes your growth;" and "Divine Love always has met and always will meet every human need" (pp. 20, 266, 494). Throughout all of Mrs. Eddy's writings it is taught that the kingdom of God is within reach of the purified consciousness. The process of purification, in which God "worketh in you," includes for each one conscientious study and application of the rules laid down in Science and Health, and a constant effort to divest himself day by day of erroneous material thinking and to exercise the sense of gratitude and praise to God. The kingdom of God appears in fairer proportions with every forsaking of error.

No work for ourselves and others equals in importance the demonstration of our divinely-bestowed ability to free our own thought from evil and the fear of evil. The healing of the sick through Mind is the first step toward this liberation. To attempt the control of another's thought, or to be influenced by another's thought, is not Christian Science practice. The legitimate task to be undertaken is the demonstration of man's spiritual individuality. This task admits of no self-deception, but calls for clear-sighted vision. If we are becoming even slightly acquainted with the selfhood derived from God, it is not difficult to appreciate the divine right of our neighbor to self-government. Remove the wrongs, the cruel enactments against mankind, and human lives flow naturally toward God. The utmost respect for our own and for our neighbor's ability to reflect the divine intelligence should be granted. One point in the working out of life's problems which demands careful guarding is this, that one need not adopt another's *modus operandi*, though tempted to do so by the satisfaction of being consulted and by the sympathy of human friendship. One should seek first the divine guidance, and follow his own upward individual convictions, ever keeping in the light reflected upon his own pathway.

BUILDING THE TEMPLE.

RICHARD P. VERRALL.

AMONG the mural decorations in the Congressional Library at Washington there is an epigram by the German mystic, Novalis, who held that religion without a church was impossible, which reads, "There is but one temple in the universe, and that temple is the body of man." Commenting on this statement, but apparently overlooking the fact that if "there is but one temple" there can be but one man, Carlyle writes: "I would bow to every man. . . . Is he not a temple, then; the visible manifestation and impersonation of the divinity? And yet, alas, such indiscriminate bowing serves not. For there is a devil dwells in man, as well as a divinity; and too often the bow is but pocketed by the former" (Sartor Resartus, Chap. 6). Perceiving the false pretensions of mortal man, but knowing not how to handle the insidious claim of finite personality, Carlyle sees the impracticability of obeying his first impulse, and says, "Therefore we must withhold it."

Mrs. Eddy, armed with the sword of the Spirit and protected by the breastplate of righteousness, has at last prevailed against this beast, or false prophet, of animal magnetism, and has taught her students how to cast out the devil or false belief that dwells in mortal man, thus revealing "the visible manifestation and impersonation of the divinity."

Cruden defines the word "temple" as "a house or dwelling of God, a building erected and set apart for the worship of the true God." The Latin derivation of the term was *templum*, meaning "an open space, the circuit of the heavens, a place from which one can survey, a prospect, or range of vision." It thus appears that in the original meaning the word did not suggest a material structure, but rather stood for discernment, wisdom, or "the place of understanding."

Digitized by Google

In the early days of primitive religion, when the patriarchs sought to reverence God through prayer and sacrifice, they offered up their oblations on improvised altars in the open fields, and needed no temple save the canopy of heaven. When Jacob was at Bethel, a stranger in a strange land, he saw in his vision the angels of God ascending and descending about him, and said, "This is none other but the house of God, and this is the gate of heaven." Five centuries later, when the descendants of Jacob had become largely materialized by their long stay in Egypt, their religion took on the form of the ceremonial law and the Levitical priesthood. Then came the ark of the covenant, and the tabernacle in the wilderness, and finally King Solomon erected the magnificent temple at Jerusalem. All these symbolic forms, however, but prefigured the long-looked-for Messiah, whom the prophets had foretold and who was eventually made manifest in Christ Jesus.

When Jesus was but a boy, he confounded the doctors in the temple by "his understanding and answers." And when he became a man, he purged the temple of the traffic of the merchants and money-changers, saying, "Take these things hence: make not my Father's house an house of merchandise." When asked for a sign to prove his authority, Jesus, speaking of his body, said, "Destroy this temple, and in three days I will raise it up." At another time, when reproving the Pharisees for their persistent misunderstanding of his teachings, he declared, "I say unto you, That in this place is one greater than the temple. But if ye had known what this meaneth, I will have mercy, and not sacrifice, ye would not have condemned the guiltless."

Through practice and precept, the great Teacher brought out the fact that the only acceptable sanctuary that man can construct for the Spirit to dwell in is that living temple, or state of mind, on whose altar self has been sacrificed, and whose capabilities have been dedicated to the service of the only true God. Paul reechoed the teachings of Jesus when, writing to the church at Corinth, he said, "Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?"

In his vision on Patmos, St. John "saw the holy city, new Jerusalem, coming down from God out of heaven, prepared as a bride adorned for her husband." And he "heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God." And he saw no material temple there, "for the Lord God Almighty and the Lamb are the temple of it." In process of time the apocalyptic vision has come to fulfilment in the teaching of Christian Science. As "a minister of the sanctuary, and of the true tabernacle, which the Lord pitched, and not man," Mrs. Eddy has taught us how to offer a more perfect sacrifice, not only of all material things but of all material thoughts. Having patiently severed all worldly connections, she has succeeded in stating the Science of being by which we may break every "law of a carnal commandment," and obtain the "power of an endless life."

Like Moses when he was about to build the tabernacle, our Leader has been divinely guided. Speaking to Moses on Mount Sinai, God said, "See . . . that thou make all things according to the pattern shewed to thee in the mount." To our Leader, as the great metaphysical architect and "wise master builder" of this age, belongs the credit for having again made known to mankind that indestructible temple "whose builder and maker is God." This is "the living church," "a building of God, an house not made with hands, eternal in the heavens," which rests upon a wholly spiritual foundation. The "lively stones" of which this building is composed have been quarried from the solid rock of spiritual consciousness, and have been drawn by divine Love from the four corners of the earth. As in the case of Solomon's temple, the stones for this spiritual house were all dressed before they were brought thither, so that the building has arisen noiselessly, without the sound of ax or hammer. Every true idea that ever has been or ever will be brought forth or conceived of, has its home in this temple, which is "all glorious within." Without beginning of years or end of days, this temple has never been absent from the world; as exemplified by Melchisedec, as taught by Christ Jesus, or as fulfilled in Christian Science, it is one; in a word, it is the divine idea made manifest.

As the human race, since the days of Adam, has believed itself to be multiplying and subdividing, so surely must the order be reversed through the simplifying and unifying action of Christian Science. As the heathen conception of many deities has given place to the understanding of the only true God, so must the belief in personalities many give place to the recognition of the one perfect man, "who being the brightness of his glory, and the express image of his person," reflects every attribute of Deity.

In Isaiah's vision of the gathering together of all nations into one holy church, he heard the voice of God, saying, "The heaven is my throne, and the earth is my footstool: where is the house that ye build unto me? and where is the place of my rest? For . . . it shall come, that I will gather all nations and tongues; and they shall come, and see my glory." Then "shall all flesh come to worship before me, saith the Lord." In response to this call, our beloved Leader has for over forty years been engaged in erecting a spiritual house founded upon the rock Christ, and large enough for all men to come and worship the one Father "in spirit and in truth." "That there should be no schism in the body; but that the members should have the same care one for another," she has taught her students how to have one Mind and how to love one another. "Thus," she says, "we may establish in truth the temple, or body, 'whose builder and maker is God'" (Science and Health, p. 428).

So, when every thought has been brought into obedience to that Mind "which was also in Christ Jesus," and the body of Christian Scientists has been thoroughly consecrated and purified through obedience and suffering, then the prophecy of Malachi will be fulfilled. "The Lord, whom ye seek, shall suddenly come to his temple, even the messenger of the covenant, whom ye delight in: behold, he shall come, saith the Lord of hosts."

FULFILMENT.

A. W. HEBER PERCY.

THE writer has often wondered over the cry of our Master while he hung on the cross, as recorded by Matthew: "My God, my God, why hast thou forsaken me?" Jesus could never have doubted for a single moment the omnipresence and omnipotence of God, Love, as is pointed out by Mrs. Eddy in Science and Health. She says (p. 50), "Had Life, Truth, and Love forsaken him in his highest demonstration? This was a startling question. No! They must abide in him and he in them, or that hour would be shorn of its mighty blessing for the human race."

A light seemed to be thrown on this subject during the study of one of the Lesson-Sermons, and on comparing Psalm xxii., of which these words are the beginning, with the account of the crucifixion in Matthew xxvii., it was seen how several of the prophecies in this psalm were fulfilled; namely, "All they that see me laugh me to scorn: they shoot out the lip, they shake the head, saying, He trusted on the Lord that he would deliver him: let him deliver him, seeing he delighted in him." In Matthew we read: "Likewise also the chief priests mocking him, with the scribes and elders, said, . . . He trusted in God;

Digitized by Google

let him deliver him now, if he will have him: for he said, I am the Son of God." Again, in this psalm we find these words: "They part my garments among them, and cast lots upon my vesture;" while Matthew says, "And they . . . parted his garments, casting lots: that it might be fulfilled which was spoken by the prophet."

It seems then that Jesus must have been dwelling on the words of this psalm as he hung on the cross, watching and noting how their fulfilment was being carried out before his eyes; and that, in this crucial experience, he began to repeat the first lines, "My God, my God, why hast thou forsaken me," not in any doubt of ever-present Love, but in the absolute recognition of the fulfilment of Truth's purpose. This cry must have been one of true prayer and victory, springing from the knowledge that all the prophecies concerning the Christ-mission had been fulfilled up to that point, and in the absolute certainty that the remainder would also be fulfilled, that the triumph of Truth and the universal acknowledgment of God, into which this psalm so grandly rises, would certainly come to pass in due time, as foretold by the prophetic Scripture: "All the ends of the world shall remember and turn unto the Lord: and all the kindreds of the nations shall worship before thee. For the kingdom is the Lord's: and he is the governor among the nations. . . . A seed shall serve him; it shall be accounted to the Lord for a generation. They shall come, and shall declare his righteousness unto a people that shall be born, that he hath done this."

"BE STILL, AND KNOW."

VERNA B. BELL.

WHILE silently pondering the psalmist's words, "Be still, and know that I am God," which become more beautiful through the spiritual understanding gained from the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, a great sense of happiness came to my consciousness, with a loving and longing desire to be able to express it to others.

To understand even in a degree what God is, we must first silence the material senses and allow the sweet ever-flowing currents of good and true thoughts to penetrate our consciousness. It is always by right thinking that we gain more and more of the understanding of God, who is then known to us as ever-present good, "which changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140). Through communion with the divine Mind, we are enabled to overcome all that is unlike good. Sin and disease are quickly mastered if we at once "be still;" that is, allow nothing to prevent the voice of Truth from having our undivided attention.

Christian Scientists have many opportunities to prove the healing power of Truth. It was when the writer was a small child that Christian Science was first brought to her home, and it has been the only remedy since that time. On one occasion, when called upon to bring the power of Truth before the consciousness of one of the members of the household, who was moaning in pain, the "still small voice" was heard in this message from the Psalms: "The young lion and the dragon shalt thou trample under feet." This declaration of the truth silenced the disturbed senses and showed that the divine intelligence is reflected by those who are willing to cast their net "on the right side" and to understand that Truth destroys all discord.

Through the realization that God is unchanging good, relief came in a few minutes, bringing to that dear sufferer the proof of these words from Science and Health (p. 494), "Divine Love always has met and always will meet every human need," and awakening fresh gratitude to our beloved Leader, Mrs. Eddy, for her love and unselfishness in giving to this age a Science which makes all those who are willing to study and practise it better men and women, physically and spiritually.

OUR SURROUNDINGS.

LOUISA K. PRENTICE.

IN thinking over the spurious laws by which we have believed ourselves to be governed, one is surprised to see how much is conceded to one's surroundings, how many times they are made the scapegoat for the troubles, difficulties, tastes and habits of the human family. Health and wealth are often made to bow down to this belief; as the saying goes, "One man is born with a silver spoon in his mouth, another with a wooden ladle." The study of Mrs. Eddy's writings soon makes it clear, however, that environment is not in material surroundings, but in mental conditions.

In the scientific elucidation of the Scriptures, we may find the solution for all difficulties that beset human beings in working out their salvation. Let us take, for instance, the experience of Paul and Silas in prison, their feet made fast in the stocks. Their surroundings were anything but pleasant, but they did not grieve or worry about it. When things seemed darkest—at midnight—they prayed, realized the allness of God, and sang praises to Him. These declarations of the presence and power of God were heard by the others, who were also in prison and bound by material thoughts, "and suddenly," the narrative says, "there was a great earthquake, so that the foundations of the prison were shaken." The belief in matter was surely shaken to its very foundation. The prison, or that which held them prisoners, was found to have nothing to support it; therefore its nothingness was exposed and its powerlessness shown, the prison doors were opened, their bands were loosed and they were freed from bondage.

As we, like Paul and Silas, look away from our material surroundings to God, knowing that we are not influenced, controlled, or governed by them; and rise into higher, holier thought, we shall find that unpleasant, disagreeable, or unhealthy surroundings vanish like mist before the morning sun.

MENTAL HABIT.

ABBIE W. GRIFFIN.

THE mental habit of attributing power to evil and to matter is the foundation of many discords, including sickness. It perpetuates the very suffering which mortals deplore the while they indulge it. Our great Exemplar, Christ Jesus, of whom the Scriptures say he "was in all points tempted like as we are, yet without sin," never for an instant admitted that evil had power or that matter had power. He proved them powerless. He knew they proceeded not from infinite intelligence, God, good, the All-in-all. "They who sin must suffer," says Science and Health (p. 37). Mortals must learn that to admit that evil and matter have power, and to obey their supposed laws, is the sin of the world which Jesus came to take away.

The healing truth practised by Christ Jesus, and rediscovered by Mrs. Eddy, is revealed to this age in Christian Science. The "still small voice" of Spirit, Love, corrects the bad habit of wrong thinking which makes humanity its slave and brings untold and needless suffering. Even a slight understanding of the almightiness of the divine power is freeing millions from the slavery of their own mistaken beliefs, giving them practical proof of man's God-given dominion wherewith to work out their human problems in the way Jesus taught, when he said, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

SELECTED ARTICLES.

[Editorial in *Salinas* (Cal.) *Democrat.*]

The great queens of the world were recently named in *The Christian Science Monitor* published in Boston. America has no queens to make account of, except as it is sometimes said that "every American woman is a queen in her own right." That many American women might be as worthy of the station of queens of history, is proved by the work that has been accomplished and the high recognition won by women among us who had not the prestige of royalty, nor armies and navies to carry out their will, nor court and courtiers to demand of them nobility and high deeds. Of course the great illustration of what woman single-handed and alone can accomplish is presented in the work of Mary Baker Eddy, the Founder of Christian Science. Today she is recognized as having done more to prove the practicability of the brotherhood of man than any other woman named in history.

[Editorial in *Regina* (Sask.) *Standard.*]

Of Christian Science as a religious system the *Standard* knows very little. Like Premier Scott on the navy question—we have not had time to look carefully into it. Nevertheless, the letter of A. W. Mainland, published in this paper a few days ago, contains some points that appeal to us as particularly strong and perfectly orthodox.

Our present purpose is not to uphold Christian Science, but rather to show how improper it is to cast aspersion and ridicule upon anything of which the critic has but superficial knowledge. It seems to us that the trial judge in the recent Williams case went out of his way to do that, and we therefore the more cheerfully give prominence to Mr. Mainland's arguments.

No religious system is wholly wrong and none seems to be perfect. The aim, therefore, of men and women who are big enough for the undertaking, should be to harmonize as far as possible the different systems, rather than to breed ignorance and promulgate hatred by misrepresentation. Mr. Mainland writes: "To ridicule Christian Science as a means of alleviating suffering is to ridicule prayer, the most sacred ordinance of all the Christian churches. To deny that the 'prayer of faith' will heal any known disease is to deny God's omnipotence and His love for His own creatures."

This seems unanswerable, in the light of Biblical revelation and Christ's commission to his disciples. When Paul and his entire company escaped from the totally wrecked ship and landed on Melita, he healed the father of the "chief man of the island." He also healed many others, and had honors heaped upon him, although he was still a prisoner bound for Rome. Is it any wonder that he thanked God and took courage?

Do we believe these things, or are we just pretending? Cyprus, Crete, Melita, and Sicily are all there yet. The methods by which they got safe ashore are well understood and practised by navigators along the Atlantic. "The barbarous people showed us no little kindness," wrote Paul; but today supposedly intelligent people are so barbarous as to class divine healing with witchcraft and the beating of tom-toms. Is it consistent to punish divine healers because occasionally they lose a patient, while doctors who lose hundreds of patients go free! What about the unseemly squabbles of medical men—the standing upon dignity (?) and formalities before hospital admission, etc., the while patients lan[illegible]!

A Sunday or two ago, Rev. J. H. Oliver touched upon Christian Science with kindly allusion and showed his belief in the influence of mind over matter. Every medical doctor of any note believes in that influence. He knows that the patient who loses heart and gives up is hopeless as compared with one whose mentality is in harmony with his skill. And what could be better calculated to give the patient hope and confidence than the prayer of intelligent faith, inspired by the promise: "And, lo, I am with you alway."

["A Reader" in *Pantagraph*, Bloomington, Ill.]

Where "Observer" refers to Christ in speaking of the present means of checking diphtheria, we are once more forced to conclude that, in his opinion, if Christ were living today, he would find it wholly unnecessary to heal the sick, as he would find the present means of cure and prevention so wonderful and so effective in keeping well the entire population, that he would not only fail to find any sick people, but would have to acknowledge that the present scientific method of cure and prevention had him bested in anything he could offer in the way of relief for disease and suffering.

Now I am not a Christian Scientist, and have made insufficient investigation of its teachings and beliefs to be able to uphold, criticize, or condemn it, but let me ask the writer this question: Did he ever pray, with whole-souled sincerity and humbleness—with an unshakable belief that his prayer would be granted, and fail to receive that for which he asked? I am not saying that his prayers were answered without means or agencies; but that we must accept the means and agencies forced upon us by a certain clique or cult, as being God's means or agencies, I do very indignantly repudiate and deny.

When you fail to find a single case of "operation for appendicitis" among the multitude of Christian Scientists, does that prove that Christian Science is more dangerous to society than that modern science (?) of healing which claims it is absolutely necessary in these cases to use their means and a [illegible] (operation) to save the life of the patient, and does operate on possibly from one thousand to ten thousand of every million who accept their scientific theory (not facts) as the best agency of cure and prevention? Or is it possible that Christian Science, of the two, offers the greatest blessings to society and humanity? I, too, submit my opinions and criticisms to thinking people.

[Arthur E. Jennings in *Northern Echo*, Darlington, Eng.]

Our critic's lecture, like his book, is full of misunderstanding; not all his own, but the errors of many ill-advised critics before him, who like himself have never demonstrated Christian Science. Christian Scientists do not believe that God makes man a sinner and then punishes him for sinning. Sin punishes itself. "Whatsoever a man soweth, that shall he also reap." The critic also falls into the common theological error about "evil." The quotation "evil is but an illusion" (Science and Health, p. 480) is only part of a sentence, and it requires the whole paragraph to get the proper meaning. The Bible tells us that "the Son of God was manifested, that he might destroy the works of the devil." These evils are summed up in three things, namely, sin, sickness, and death.

Mrs. Eddy does not teach that these evils are imagination, but that they can be destroyed because they are unreal. The word "unreal" means that which can be destroyed. It was not an "act of imbecility" for Jesus to cast out devils (illusions—unreal images presented to the senses), and he healed functional and organic disease in the same way. He said to his followers, "Heal the sick, cleanse the lepers, raise the dead, cast out devils."

Let this critic begin to prove the truth that "God is Love," and he will at once improve the health, strength, and morals of his followers, and learn that the belief in evil, or faith in evil, is the "only delusion and snare."

[E. M. Ramsay in *Glasgow* (Scot.) *Herald.*]

On reading Mr. Paget's address on Christian Science before the Congregational Union at Sheffield, as reported in your columns, I was pleased to note that he pays a just tribute to the power of Christian Science when he acknowledges that "it has healed or is healing many invalids," that it has "enabled many people to give up smoking, alcohol, cocaine, or morphia; has made the restless more quiet, the subjects of this or that functional disorder more active, happy, and healthy." If Christian Science can do all this, surely it deserves the gratitude of the human race. Every doctor knows what a large percentage of the suffering and crime in the country is directly attributable to alcoholism. If Christian Science is able to heal this deadly habit, for that alone it deserves to be reckoned among the benefactors of the race.

The Rev. D. Horton, who follows, admits that Christian Science "makes for purity, happiness, and love, that it is on the side of virtue as against vice, and that however the movement may be criticized, it is impossible to make a crusade against anything which produces results of that kind." Surely all fair-minded people will agree with Mr. Horton, and stop abusing a system which is productive of so much good. Christian Science is the outcome of Mrs. Eddy's life and experience; those who have had the privilege of speaking with her face to face can never forget the strength and the sweetness, the dignity and the simplicity which told of a life consecrated to God.

[Frederick Dixon in *Morning Light*, London.]

For centuries Christendom has read that often repeated saying of Jesus Christ to the woman of Samaria, "God is a Spirit: and they that worship him must worship him in spirit and in truth," and has gone on its way, insisting that God made the material universe, without apparently heeding the confusion to which this leads. It means that Spirit is the father of matter; that divine wisdom has created something that "profiteth nothing"—that the creation of God will one day pass away; and so it ends by admitting unconsciously that matter is temporal after all. Now that which is temporal cannot possibly be eternal, and that which is not eternal cannot logically be described as real. Therefore the Christian Scientist takes his stand on the fact that nothing can be described as real which is not the creation of the divine Mind, and that as this Mind is Spirit, the spiritual alone can be defined as real. This fact that all causation is spiritual is the knowledge of the truth which Jesus Christ said would make men free, and it makes them free by showing them that there is no material law capable of binding them, for the simple reason that the only reality matter has is the supposititious reality with which they themselves endow it, when they mistake it for the creation of Principle.

This being so, the Christian Scientist does not say the age of miracles is departed, on the ground that the miracle was a supernatural interference with the physical laws instituted by God for the government of the world. He says that the miracle is the divinely natural result of the knowledge of the truth which Jesus said would make men free, and that this knowledge of the truth includes a realization of the fact that physical law and material phenomena are the counterfeits of the spiritual law and spiritual universe which are the real and only creation of the divine Mind. The way, consequently, to worship God, who is Spirit, "in spirit and in truth," is to strive to walk in the footsteps of Christ Jesus, and by divorcing, as far as possible, from your consciousness any belief in the reality of matter, to be able to set aside its supposititious laws as Jesus did in the so-called miracles. If these laws had been really God's laws, the miracles would have been not merely supernatural, as supernatural is commonly construed, but superspiritual; for Jesus could no more have reversed an effect of divine causation than omniscience could forget something it already knew.

The miracle was the object-lesson in proof of the truth of the theology of Jesus Christ. Those, he said, who understood the one would be able to perform the other. The healing of the sick, consequently, in Christian Science, becomes something of far vaster significance than the mere overcoming of disease, important as that is. It is the proof which has already brought to hundreds of thousands of sick and sorrowing men and women the assurance that the promises of Christ Jesus are as realizable by the world today as they were by the sick and sorrowing through whose streets he walked well-nigh two thousand years ago.

[Editorial in *Norwich* (Conn.) *Bulletin.*]

The Ministerial Alliance of Kansas City ventured upon a united assault on Christian Science, and invited among others the Rev. L. G. Morony to join them in conflict, and he is quoted as having said: "We have not the time to be tearing down some other man's religion. It's not a Christian act to attack the belief of another. I would not join in this movement were it against the Jews. If there is nothing in the belief of the Christian Scientist, it will come to nothing; and if it is true only in part, that part which is true will remain. I do not believe in encouraging an attack on any denomination and will not join in this one."

This is a manly and Christian attitude. The truth need not marshal antagonism and prejudices to promote it, for it is the greatest known force and needs no other accompaniment except love. There is no reason why Christians should war upon one another because of their difference of opinion upon religious doctrinal points. Such a conflict cannot be carried on without injury to the promoters of it and to the cause they represent. The Rev. Mr. Morony realizes that violence may subdue, but that only love wins followers. Irrational opposition has made its record for building up that which it has sought to tear down. If divine law is what it is declared to be, error cannot live in the light of intelligence. As this preacher points out, if there is nothing in a cult, it will amount to nothing; if it is true, that which is true will remain. The world knows that truth does not disappear when its devotees are put to the sword or burned at the stake. It is the truth which persists, and the more practical the truth the more popular it becomes and the larger following it attracts.

[George Shaw Cook in *Daily Republican*, Kankakee, Ill.]

A recent issue of your paper contained a despatch dated Mobile, in which the statement was made that J. C. Wilson, a Christian Scientist, had stepped in front of a moving trolley-car to "test his faith" in the power of Christian Science, with the result that he had to be taken to the hospital to be treated for injuries received. Careful inquiry develops the fact that Mr. Wilson is not a member of any Christian Science church. Investigation also appears to confirm the suspicion which one would naturally have gained by reading the despatch published in your paper, that the man is mentally unbalanced. However that may be, the fact remains that there is nothing in the teaching of Christian Science which could possibly be construed to justify such a foolhardy act as that of Mr. Wilson. Christian Scientists do not go about looking up ways of testing their faith. They have ample opportunity in the ordinary course of human events to test and prove their faith in the power of God. Therefore they believe that such performances as the one described in your columns are in the nature of "tempting God," and are not right.

[William E. Brown in *Long Beach* (Cal.) *Press.*]

In a book review which appeared in your issue of Sept. 22, an opinion is expressed that Christian Science cures are accomplished by suggestion. As this is altogether wrong and misleading, it calls for correction.

Much of the misunderstanding regarding Christian Science and its methods will be obviated if it is remembered that Christian Science stands for the religion of Jesus—no more, no less. It essays to accomplish its works in the same manner as that employed by the Master and his disciples; namely, a spiritual understanding of God, and an intelligent application of His laws. Christian Science has absolutely nothing in common with hypnotism, suggestion, mental science, new thought, or any other method of the human mind.

This Science relies wholly on the divine Mind for the healing of the sick and sinful, and its success in making healthful Christians goes to show that its belief is the kind that Jesus said would be accompanied with signs following.

[*Vermont Phœnix*, Brattleboro.]

Leon Castine, thirteen, son of Mr. and Mrs. Napoleon Castine of Myrtle street, is able to walk, talk, and enjoy himself generally, after being in a state of almost complete paralysis nearly a year. Within the past few weeks he had been much worse than in the preceding months of his illness, but on Oct. 5 he experienced a sudden change, arose from his bed and walked about normally. His case had attracted the attention of several Brattleboro physicians, but nothing appeared to help him. A few weeks ago the family decided to see if Christian Science would help him, and accordingly they called in a well-known Brattleboro woman, who gave the boy Christian Science treatment. For the first week or two after she began treating him he did not improve, but on Oct. 4 he startled his parents by calling out to them from his room, and when they went in to ask him what the matter was he said that he could walk. He arose from the bed unassisted and walked about the house, a little later going out into the yard in his night clothes and running about. He was taken back into the house and dressed, and since then he has been going about as he did before his illness. It was about a year ago that he first complained of pains over his eyes, but at that time an eye specialist could find nothing the matter with his eyes. Later he became almost paralyzed, losing all use of his body except that he could move his right hand a little. He could eat, but he was unable to talk and did not recognize the people about him. At one time he was taken to the Farren Memorial hospital in Montague for treatment, but without any improvement in his condition. Since his recovery it is apparent that his mind was a blank during his illness. He has greeted his child companions as though it were only a day or two ago that they last saw each other.

NEW PAMPHLETS.

The articles "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball have been combined in one pamphlet of our standard size, and this is now ready for distribution in the Field.

The lecture "Christian Science: A Religion of Progress" by Mr. W. D. McCrackan has also been reprinted from the *Journal* in pamphlet form.

The Publishing Society is now prepared to fill orders for these pamphlets.

"But how, then, is my brother's unkindness to be cured?"

"Bring him to me, and I will tell him; but I have nothing to say to you about his unkindness."—*Epictetus.*

AMONG THE CHURCHES.

BUTTE, MONT.

Quiet changes have been taking place in the status of the Christian Science church here. The Scientists of the city have drawn closer together. To obtain better results and greater strength, Second Church of Christ, Scientist, has abrogated its charter and gone out of existence, and amalgamated with First Church. The two congregations became one, with new Readers and a board of trustees, elected from the members of the former Second and First churches. The new church meeting-place is splendidly suited to the needs of the body, and of larger dimension than any formerly used.

The larger First Church begins life on the foundation laid by the two organizations, with the full approval and benediction of Mrs. Eddy, who writes, through her secretary, in commendation of the change made, as follows:—

First Church of Christ, Scientist, Butte, Mont.

Dear Brethren:—Your letter to Mrs. Eddy, advising her of the unity of the two churches in Butte, was received and read by her with much pleasure. It is always a source of joy to our beloved Leader to hear of churches uniting in the true spirit of brotherliness. She sends her love to the members of the united body, and trusts that its growth may be continuous and harmonious.

Sincerely yours,

ADAM H. DICKEY, *Secretary.*

Butte Inter Mountain.

DALLAS, TEX.

In 1908 a movement for the distribution of free Christian Science literature at the Texas state fair, held at Dallas, was inaugurated, and in view of the fact that it proved successful, similar work was undertaken this year. The churches of the state united in giving their financial support to this work, which was in charge of a committee of four ladies appointed by the Dallas church. Abundant space was provided, and in all 8,364 pieces of Christian Science literature, *Journals, Sentinels, Monitors*, pamphlets, etc., were given out. The literature was received with an increased readiness over last year, evidencing a receptivity of thought that we were glad to notice. Even doctors and ministers, along with representatives from other professions, gladly accepted such pamphlets as "Why I Became a Christian Scientist" by Dr. Edmund F. Burton, "Christian Science: A Religion of Doing" by Judge William G. Ewing, and "Christian Science: The Religion of the Bible" by Judge Septimus J. Hanna. Many of the country people are at a distance from the reading-rooms and Christian Science centers, and we were glad to see the literature carefully put in their grips and pockets, to be taken to their homes.

Reports as to the fruitage of last year's work were most encouraging to the committee. Of these we note two. A gentleman stated that some time after the fair was over last year, upon cleaning out his desk he found the literature that had been given him. He read it, threw away his medicine, of which he said he had taken a great deal, and has since been a well man. A lady reported that she came last year to the case, just as they were closing, and was given a *Sentinel*. The reading of this led her into Christian Science, and she reported a beautiful case of healing in her home. This literature was given out with the thought that it would heal the sick and bring comfort to the sorrowing. We feel that this work has met a present need in our state, and that many have been led to rejoice in the understanding of an infinite God, divine Love.

Correspondence.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A LETTER BY MRS. EDDY.

Brookline. Mass., Dec. 11, 1909.

Miss Marion E. Stephens, 112 West 78th street,
New York City.

My Dear Student:—Your favor of the 10th instant is at hand. God is above your teacher, your healer, or any earthly friend. Follow the directions of God as simplified in Christian Science, and though it be through deserts He will direct you into the paths of peace.

I do not presume to give you personal instruction as to your relations with other students. All I say is stated in Christian Science to be used as a model. Please find it there, and do not bring your Leader into a personal conflict.

I have not seen Mrs. Stetson for over a year, and have not written to her since Aug. 30, 1909.

Sincerely yours,
MARY BAKER EDDY.

[Republished from *Sentinel* of Sept. 12, 1903, with permission of the author.]

MENTAL DIGESTION.

MARY BAKER EDDY.

WILL those beloved students whose growth is taking in the Ten Commandments and scaling the steep ascent of Christ's Sermon in the Mount, accept profound thanks for their swift messages of rejoicing over the Twentieth Century Church Manual? Heaps upon heaps of praise confront me, and for what? That of which I said in my heart, It will never be needed; namely, laws of limitation for a Christian Scientist. "Thy ways are not as ours." Thou knowest best what we need most; hence my disappointed hope and grateful joy. The redeemed should be happier than the elect. Truth is strong with destiny; it takes life profoundly, it measures the infinite against the finite. Notwithstanding the sacrilegious moth of time, eternity awaits our Church Manual, which will maintain its rank as in the past, midst ministries aggressive and active, and will stand when those have passed to rest.

Scientific pathology illustrates the digestion of spiritual nutriment as both sweet and bitter. Sweet in expectancy and bitter in experience, or the senses' assimilation thereof, and digested only when Soul silences the dyspepsia of sense. This church is impartial; its rules apply not to one member only, but to one and all equally. Of this I am sure, that each rule and by-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner.

Pleasant View, Concord, N. H., Sept. 7, 1903.

[Republished from *Sentinel* of Dec. 16, 1905, with permission of the author.]

CHRISTMAS AS IN CHRISTIAN SCIENCE.

MARY BAKER EDDY.

CERTAIN occasions, considered collectively, individually, and observed properly, tend to give the activity of man infinite scope; but mere merry making or needless gift giving is not that wherein human capacities find the most appropriate and proper exercise. Christmas respects the Christ too much to submerge itself in merely temporary means and ends. It represents the eternal informing Soul recognized only in harmony, in the beauty and bounty of Life everlasting,—the truth that is Life,—the Life that heals and saves mankind. An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind. The despotism of material sense, or the flesh, would flee before such reality to make room for substance, and the shadow of frivolity and inaccuracy of material sense would disappear.

Christmas, in Christian Science, stands for the real, the absolute and eternal,—the things of Spirit, not matter. Science is divine; it hath no partnership with human means and ends, no half-way stations, nothing conditional or material belongs to it. Human reason and philosophy may pursue paths devious, the line of liquids, the lure of gold, the doubtful sense that falls short of substance—the things hoped for and evidence unseen.

The basis of Christmas is the Rock, Christ Jesus; its fruits, inspiration and spiritual understanding of joy and rejoicing; not because of tradition, usage, or corporeal pleasures, but because of fundamental and demonstrable truth, the heaven within us. It is love loving its enemies, returning good for evil, that suffereth long and is kind. It elevates medicine to Mind, it casts out evils, heals the sick, raises the dormant faculties, appeals to all conditions, and supplies every need of man. It leaves hygiene, medicine, ethics, and religion to God and His Christ, to that which is the Way, in word and in deed,—the Way, the Truth, and the Life.

Hitherto there is but one Christ Jesus on record. Christ is incorporeal. Neither the you nor the I in the flesh can be or is Christ.

Pleasant View, Concord, N. H.

AN EXPLANATION.

WRITERS in general would be very glad if they might always express themselves in a way which would interdict the possibility of being misunderstood. This, however, calls not only for the mastery of a fine art, and a common understanding of the meaning of the terms and phrases used, but also for that comprehensive consideration of every aspect of their subject which space limitations often render quite impossible.

An editorial which appeared in our columns recently under the heading, "Let him deny himself," was designed to emphasize the teaching of Christian Science that mortal sense is a false claim, and not God's idea, and that the identification of the mortal sense of personality with man is carefully to be avoided. It was not designed to teach that it is wrong or unscientific for us as individuals to recognize and declare the truth of being, that man is God's perfect child now, and that the "I" of spiritual selfhood is this man. Science is absolute, and without the understanding that man is the idea of God, hence perfect, we would have no Principle to demonstrate and no rule for its demonstration.

Christian Science teaches us boldly to declare the oracles of God, and at the same time we are counseled not to cast pearls before swine. Freedom or reserve in making statements of absolute Science should therefore be determined by a wise consideration for circumstances, and for the scientific apprehension of our hearers.

JOHN B. WILLIS.

HEALTHFUL READING.

THERE is no denying that people in general—children and adults alike—have a keen appetite for mental nutriment as well as for physical food. At a very early date

Digitized by Google

the little child begins to lisp his requests for "stories," and well is it if his need be lovingly and wisely supplied. Not so very long ago it was considered quite proper to tell tales of terror to the little ones,—anything in fact which would rivet their attention,—the narrators being themselves quite ignorant of the effect of this form of entertainment; unaware that it might in many cases tend to induce attacks of disease, and that it was almost sure in after years to create a demand for exciting literature, to say nothing of undesirable results in other directions.

Christian Science has shown us that to think and talk about disease, or any evil, is both harmful and foolish, and that we cannot too earnestly heed the Scriptural injunction, "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, . . . think on these things." There are today thousands who are deeply grateful for the tremendous service rendered by *The Christian Science Monitor*, which is supplying the reading public with a great amount of interesting information on so many subjects,—information hitherto crowded out of the daily press by sensational articles, or found perchance in such close proximity to undesirable matter that its reading by either young or old was hazardous. What is not good for a child cannot be good for the adult; and according to the great Teacher we must all become childlike if we would "enter into the kingdom of heaven." Conversely, what is good for the adult, and interesting to him, will be no less interesting to the child if rightly presented.

The wonderful development of nature's resources at this period is indeed "stranger than fiction," and no less interesting, especially when we remember that but a few years ago the fear of exhausted supplies was pressing hard upon thoughtful people, who forgot that the kingdom of God was to come down to men with its infinite provision for all human need. As this fact dawns upon human sense we find our supplies everywhere, and we also see them as symbols of spiritual ideas, types of unfailing substance. We read of the alpine snows coming down in torrents and being utilized for lighting and heating the cities, and these streams are termed "white coal." In the *Monitor* of Dec. 4 is a wonderfully interesting article on the artesian wells of South Dakota. Perhaps the most impressive statement to the average reader would be that which tells of tremendous subterranean pressure that sends up water sufficient for irrigation purposes and also for mill-power, this pressure supposedly coming from the Great Lakes.

On perusing this article, one reader of the *Monitor* was reminded of Mrs. Eddy's words, to the effect that all human knowledge "must give place to the spiritual fact by the translation of man and the universe back into Spirit" (Science and Health, p. 209). Thought was at once lifted from material conditions to the scientific processes by which truth works in the mental realm, and this in turn recalled Isaiah's words: "With joy shall ye draw water out of the wells of salvation."

It sometimes seems that the task of reaching the "living water" promised by the Master is hard and toilsome. The solidified beliefs of mortals, in the reality of sin, disease, and death, are deep down in human consciousness, but when they are pierced by the truth the healing current flows forth, for behind it lie the mighty streams which poured from the revelations of prophets and seers and from the redemptive ministry of Christ Jesus, these all coming from the infinite ocean of Truth. It is surely clear that if our need is yet unsupplied, we must go deeper down to reach spiritual reality, and when we do reach the living water our feeble efforts will no longer be needed. Till then, even "a cup of cold water" in Christ's name—any sound and healthful sentiment which tells the truth—will in no wise lose its reward.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Riverside, Cal., Dec. 9, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—When my eyes fell upon your letter to the board of trustees of First Church of Christ, Scientist, New York city, as republished in the *Sentinel* Dec. 4, this thought came, "Prepare ye the way of the Lord, make straight in the desert a highway for our God." When, in subsequent columns, I tasted of "firstfruits," I said in my heart, "Fear ye not, stand still, and see the salvation of the Lord, which he will show to you today."

Nothing has strengthened me like the recently published by-laws, the letters passing between The Mother Church Directors and the trustees in First Church, New York, and your trumpet-call of Nov. 13, above referred to. When I tell you that the past three years have striven to fill my experiences with bitterness and defeat because of "personal contagion," because of a seeming endeavor to exalt and worship personality rather than Principle, you will understand why I am so relieved and renewed today; why I praise God for a fearless, wise, and loving Leader,—the apostle of Truth in this age,—who joys in pointing to the straight and narrow way in which she has walked for forty years and has been blessed.

How befitting that right below your republished letter should appear Mr. McLellan's editorial, "A Religion of Doing," where is beautifully emphasized that holy affirmation, found on page 20 of "Messages to The Mother Church," "The song of Christian Science is, 'Work—work—work—watch and pray' "! The writer can testify that these very words have done much to sustain him as he has labored to see the right and to stand unflinchingly for it, no matter what the temporary cost. Verily does he realize, more and more, that each mortal must work out his own salvation, and that the sooner he begins the better. His friends, his practitioner, his teacher can only point to Principle after all, and it is this Principle which must be used by him as an individual in order that his problems may be solved. When ambushed by error; when opposed and dynamically denounced by humans; when to sense all was "chaos and old night," I held to the Bible and our text-book, Science and Health, working with all my power to understand the letter and to drink in its spirit. As I did so, striving to return good for evil, to forgive as I would be forgiven, and to follow you because you are proving constantly that you *are* following Christ, I have been lifted above the beating waves of discord, of woe, and have "glorified the God of Israel." My daily prayer is that I may be faithful and obedient to the demands of Principle, sowing seeds of kindness, love, and good will, that the harvest may be plenteous.

Loyally yours,

STOKES ANTHONY BENNETT.

MRS. EDDY'S COMMENT.

The spirit of the above letter indicates that its author is armed and equipped as the Lord directs.

MARY BAKER EDDY.

Concord, N. H., Dec. 6, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Our annual lecture was given in the church edifice last evening by the Hon. Clarence A. Buskirk to the largest audience we have had and which just about filled the church. Mr. Buskirk was introduced in a gracious manner by Judge James W. Remick of Concord, whose remarks I enclose herewith, thinking you might be pleased to see them. Slowly, perhaps, but certainly, the ecclesiastically hidebound are being released from their bondage.

Gratefully and lovingly yours,

CHARLES B. JAMIESON.

Digitized by Google

Boston, Mass., Nov. 5, 1909.

Beloved Leader:—Since coming here to the *Monitor*, I have longed to thank you, and now the understanding of you and of your work that has come this week is so wonderful that I must try to tell you how I love you, how I pray to be found worthy to call you Leader. The sword of the Spirit is separating us from material sense, opening the blind eyes to behold God. To begin so to see your heroism, love, and victory is to pledge ourselves anew to the work you open to us—the work in which we gain a thousand times more than we can give. I am being healed here of self-will, pride, earthliness—with all the joy of this beautiful work, besides. They let me write a little article about you,—what the world would understand; but an angel must write what has been shown me since of the meaning of your world-mission, and an angel is writing it in the hearts of men.

How can we fail to heed your lightest word—we who could be nothing in the service of our fellow-men but for the opportunity your work gives; and now the least and humblest of us may serve. I pray constantly to be found worthy. God bless you—dearly beloved. May He enable me to be faithful. Yours,

M. Louise Baum.

Excelsior Springs, Mo., Nov. 30, 1909.

Mrs. Mary Baker Eddy.

Dearly Beloved Leader:—Our little band of less than twenty members, who form the Excelsior Springs Christian Science Society, have requested me to inform you of their abiding love, loyalty, and gratitude to you for your teachings and for "Science and Health with Key to the Scriptures," which has given them health and happiness and shown them the most efficient way in which not only to help themselves but to benefit all mankind. Being located in a health resort, where so many who are afflicted come for relief, we have an unusual opportunity for sowing the seed of healing where it is most needed, and to this end we have recently taken larger quarters in a better location, and our services are well attended.

We are indeed grateful to you for each new manifestation of your careful watch over our Cause, and especially for a recent evidence of unswerving allegiance to Principle over personality, in whatever quarter. Knowing that God has blessed you supremely, and that His love is unfailing, we shall continue to follow your guidance with the deepest love and affection. Loyally yours,

Mrs. M. D. Capps.

For the Excelsior Springs, Mo., Christian Science Society.

Hyde Park, Cincinnati, O., Nov. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—No longer can I delay in thanking you for your purity and earnestness, through which the Word of God is proclaimed to this age. Love has truly given you the wisdom "to plant and water His vineyard" (Science and Health, Pref. p. xi.). I have recently returned from class instruction, and feel wondrously uplifted and grateful to God for His many blessings. Humbly am I thankful that man can know and love his Father, can be awake, can desire and expect the fulness of His presence.

Lovingly, gratefully yours,

Emma Kinney.

Sheffield, England, Oct. 27, 1909.

Beloved Leader:—We, the members of First Church of Christ, Scientist, Sheffield, England, just organized, wish to express our gratitude to you for the truth you have revealed, which alone has made possible the formation of this branch church. We realize that the growth of our Cause and its permanent usefulness are absolutely dependent upon the recognition of government by divine Principle, and not by person, which government is best expressed through our text-book, the teachings of which enable all to demonstrate that God is no respecter of persons.

We also desire to yield faithful obedience and loyalty to the Manual of The Mother Church, which we appreciate as the fruit of unique experience of and overcoming by the faithful followers of Christ.

Yours in truth and love for the members,

Alfred E. Grindrod, *Clerk.*

[Telegram.]

Detroit, Mich., Nov. 27, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—Over two hundred attendants at a meeting called by the state publication committee to promote the growth of Christian Science through the greater and wiser circulation of its authorized literature in Michigan, send you greetings of love and assurances of unswerving loyalty. We are grateful for the presence of Mr. Mattox and his wise counsel. We are striving in Christ's name to carry to the weary wanderers athirst in the desert the saving truth which you have given us. Our hearts are full of gratitude for your inspiring leadership and for your immeasurable service in restoring to the world the healing and saving religion of Jesus the Christ.

Committee for the Meeting.

New York, N. Y., Dec. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Never before has the spirit of Christian Science seemed so clear and near to me as it does today, and I feel impelled to write you of it. It has always seemed most natural for you, the Discoverer of Christian Science, to manifest its spirit in every way, but to me at least it was a big thing to strive for, gain, and demonstrate. During the last month, when there seemed to be in our church—well—a little lack of love toward those who have been and are upholding the Directors of The Mother Church, I have found more than usual pleasure in studying your "Miscellaneous Writings," and the fearlessness and strength of character, the sweetness, gentleness, selflessness, and purity of your nature expressed in your works, are indeed powerful healing forces. They have uncovered and laid low a number of obstructions in my consciousness, and raised up in my heart a broader, deeper, purer love, which is proving your teaching in better and quicker healing of those who seek my help. May the spirit of Love quicken me more and more each day, and may I prove its presence and power in more patience, forbearance, and compassion toward those who are struggling also to know and reflect God.

Dear Leader, I love you, and I shall try harder than ever before to serve you in my daily living and work.

Earnestly your follower,

Margaret Beecher White.

"CHRISTIAN SCIENCE AND LEGISLATION."

A second edition of "Christian Science and Legislation" will be on sale by the time this notice reaches the Field. The former pamphlet has been revised throughout and enlarged into a book of 128 pages, in substantial paper covers. In order to give the widest circulation to this important work, the price remains the same, viz.: one copy 10 cents; 12 copies $1.00; 25 copies $1.85; 50 copies $3.50.

THE LECTURES.

MONTREAL, QUEBEC.

Frank H. Leonard lectured on Christian Science in the New Windsor Hall on Oct. 24, before a very large audience. The lecturer was introduced by Henry Hamlet, who spoke in part as follows:—

The Bible tells us that centuries ago the Galilean Prophet, in giving his commands to his disciples and to those who should follow him, said: "Go ye into all the world, and preach the gospel," "Heal the sick, . . . raise the dead." We confess this afternoon that for centuries the churches have been largely occupied in preaching the gospel, and while they have undoubtedly done good work in that field, we are reminded that they have only partly fulfilled their mission. During the last generation a loving woman has brought to the world a clearer knowledge of the gospel, and has shown us that health should accompany true religion. This afternoon we shall hear more of this subject, which has brought to many of us a living knowledge of Truth.

Correspondence.

SPRINGFIELD, MASS.

Miss Mary Brookins, who lectured on Christian Science at the Court Square Theater, Nov. 6, was introduced as follows by Atty. Clinton Gowdy:—

It is due to those who are, to say I am not a Christian Scientist. I am in harmony with its teachings, so far as I am informed. Would that a thorough understanding of the depth and height and length and breadth of this Science could be had for the mere desire, but this is not to be. The old modes of thought must be reversed. The old man and his deeds must be put off before the sunlight in its pure effulgence can shine in. So I, in common with many others, am waiting for the light. In the laboratory of universal mind, it is our privilege to wax and grow. Some postulates we must permit, no matter though we see the path but one step ahead. For instance, we deny that decay, sickness, and death are in the natural program of our existence; that any destiny but happiness and health, life and love, is ordained by infinite plan for the image and likeness of divine perfection. So, also, must we forever disbelieve the fallacy that "as individual atoms, seeing monads, we appropriate a momentary consciousness of the whole, of the unchangeable, and then disappear."

To say that this play of faculties and intelligence is "but the senseless jangle of empty noise," and that "the grandiose apparatus of life is to be put back, piece by piece, into the box, when the aimless game is done," is to miss the harmony of creation. To realize that life, in its every manifestation, its active striving toward the beautiful, the great, the good, is but the vehicle of a higher spiritual power, is to strive for nearer touch,—for a more harmonious response to the invisible yet ruling hand that guides for good the universal scheme. The Christian Scientist distrusts the sense of mortal mind and leans for grace and truth upon the infinite. He offers voice and will to aid the mighty plan, but effaces all the carnal thought, so none but highest thought may touch the hem of destiny.—*Correspondence.*

SOUTHSEA, ENGLAND.

There was a large attendance at the Town Hall on Sunday afternoon [Nov. 7] when an illuminating lecture was given, under the auspices of the Southsea Christian Science Society, by the Rev. Arthur R. Vosburgh. The lecturer was introduced by the chairman, Commander John G. Heugh, D.S.O., R.N., who remarked that he felt a double pleasure in presiding that afternoon. In the first place, he felt it a very great honor to be associated publicly with the subject of Christian Science, and to introduce the lecturer, the Rev. Arthur R. Vosburgh. Secondly, he had the privilege of publicly stating his great gratitude for what Christian Science had done for him. It was about eight years ago that he heard of Christian Science, and at that time he was in a deplorable condition, both morally and physically. For many years he had suffered from gout, which eventually took the form of rheumatic gout, as well as from malarial fever, and he had become a slave to drugs, alcohol, smoking, and many other things. He was induced, while in London, to go to one of the Christian Science Wednesday evening testimony meetings, and at the time he knew nothing about the subject. When he saw so many well-known people getting up and testifying to the freedom they had obtained through the knowledge of God, he thought it was something wonderful, and he could not understand it. He analyzed what it meant, and it was unthinkable to him that people so well known should publicly make such statements if they were not true. He consulted a Christian Science practitioner, and asked him for help. He said to him, "Let's have no nonsense. I don't understand this, for it is something beyond my grasp." The result was that he was instantaneously healed. He had obtained this freedom through Christian Science, which was indeed a practical religion—a religion of right thinking. One great point, which impressed him very much, was that it did not teach one to become better than anybody else, but how to become better than oneself. He was very grateful to God that he had been able, in different parts of the world, to prove the truth of Christian Science.

Portsmouth Times.

BRIGHTON, ENGLAND.

On Nov. 8 the Rev. Arthur R. Vosburgh lectured on Christian Science at the Dome. He was introduced as follows by Algernon Hervey Bathurst:—

We are here tonight to learn something of Christian Science, which I do not hesitate to describe as the most important and momentous question of the day. Mankind have wrestled during all these centuries in the endeavor to overcome sin, sickness, and death. Less than fifty years ago Mrs. Eddy, the Discoverer and Founder of Christian Science, proved through her love for and earnest study of the Bible, that the commands of the Master apply to all mankind for all time, and are therefore applicable to us and to the conditions of today. The humble Nazarene declared in unmistakable language that we were to heal ourselves and others of sin, sickness, sorrow, and all discord. Christian Science is teaching us how to do this, and I gladly say that I know this to be true from my own experience. Further, Christian Science has brought to the world such a message of peace, joy, and health or holiness, as has not been heard since the angels sang "Glory to God in the highest, and on earth peace, good will toward men." It is sometimes considered incredible that Christian Science can heal sickness; yet the sick were healed, and the sinner reformed, through the understanding and application of the teachings of Jesus the Christ, for some three centuries after the ascension, and there is today an ever-increasing army of men and women throughout the world, who stand as living witnesses that these same teachings are being understood and practised in this twentieth century.

TESTIMONIES OF HEALING.

"Is there no balm in Gilead; is there no physician there?" Is life worth living? These are some of the questions that confronted me when the pains of false material sense were pressing hard, increasing as time wore on, until *materia medica* pronounced me incurable. When I was quite young a Christian Science practitioner came to the place where we then lived. She had not been there long when a pastor in that place prepared a special sermon, wherein he thought he proved from the Bible that Christian Science is a false doctrine. Having been reared in the orthodox faith, I was taught that clergymen are ordained of God, and that they therefore preach only the truth. This sermon made such a strong impression on me that I turned away from Christian Science, after having had a few treatments with some good results.

After the practitioner left I again lived in bondage to drugs, disease, and other beliefs of mortal mind, for several years longer. I had attacks of illness in the spring and fall, each attack more prolonged than the previous one. At this time physicians called the disease a catarrhal affection of the stomach, and after I had been treated by them for several years and was growing much worse, it was given a new name. I followed the doctor's directions faithfully, but constantly grew thinner. In the fall of 1902 he advised me to go south for the winter, which I did. (He had said to others that I had tuberculosis of the stomach and could not possibly recover.) The last remedies prescribed were very strong drugs, and their use was followed by a physical collapse.

In addition to the stomach trouble I suffered from a disease of the foot. At a convention of noted physicians in the eastern states, this condition was discussed, and it was agreed that the only relief obtainable would be to remove the metatarsal joint. The operation, however, was deferred. I realize that my friends in the medical profession did all in their power to relieve me, but all material remedies were doomed to failure. It may be proper to state that I had used many local applications, also osteopathy and electricity for this difficulty, but all were ineffectual. After living in Texas for some time, I broke down again, feeling worse than ever before. I had now suffered for eight long weary years, and the hope of ever being well had fled. I was always hungry, but was afraid to eat, and afraid to drink, as I had not taken a cold drink for over two years. I was literally starving in the midst of plenty, but my greatest need was the bread from heaven.

At this time I met a lady from Chicago, who told me she knew of a man in her home city who could help me. I did not know he was a Christian Scientist, I knew only that he gave no medicine, but prayed for the sick. I wrote for treatment, with the result that I improved rapidly the first week, and in two weeks felt well enough to return to my home in Iowa. I left that sunny clime in June, but when I reached the north the weather was cold and I became worse than at any previous time. I continued to take treatments, but the fear all around me and in myself seemed to shut out the light. My healing was therefore slow. I grew even thinner, but at the end of three months I began to eat like other people and gained steadily in health and weight. It was then that I met the practitioner and learned that it was Christian Science which had healed me. After my healing I began the study of Science and Health in connection with the Bible, and not until then did I learn how the truth makes free. I can see better each day the truth of Mrs. Eddy's statement, "God's preparations for the sick are potions of His own qualities". (Miscellaneous Writings, p. 268). I am glad this is true, for thus we may become like Him.

It was because of a feeling of unworthiness that I deferred giving my testimony, thinking that I ought to wait until I had overcome all discords, but I now see that we are benefited by recounting our blessings. I am so thankful to God for Christian Science, for though the way often seemed dark as I stood alone in a country town without any Scientists, and even my parents were opposed to my taking up this new teaching, yet Love was leading the way. Now all but two of a large family are interested in this wonderful truth. At first, I was grateful for physical healing, now it is for the spiritual sense gained, wherein love displaces hate, good destroys evil, truth vanquishes error, and Spirit overcomes the flesh. I am now willing to sit at the feet of Christ, to learn the way and obey his commands. I have had a number of beautiful demonstrations for others, as well as for myself, having seen many ailments yield to the supremacy of Truth. I feel that I have found in Christian Science my life-work. Last fall I was privileged to take class instruction, and since then I have joined The Mother Church.

My question is answered,—I have found the balm in Gilead and life is worth living, for says Mrs. Eddy, "Life is divine Mind" (Science and Health, p. 469). In finding Christian Science, I have found all, and if suffering was necessary to bring me to Christ, Truth, I am thankful even for that, and humbly bow to kiss the cross, for through it I have received a crown of rejoicing.

MISS ELIZABETH WAGNER, Gladbrook, Ia.

When I was about ten years of age I was severely injured from jumping off a spring-board while in swimming, and for over twenty years I suffered greatly from pain in the back, so that it was almost impossible for me to sit for five minutes in one position. About eight years ago I was healed in Christian Science, and the pain left me entirely in a few minutes. There has never been any recurrence of the suffering, and my back is sound and well.

W. H. BARLOW, Conejos, Col.

With thanksgiving do I testify to what Christian Science has done for me and mine. I wish to speak of one beautiful demonstration we had in our home. Our daughter, who was away at school, in February, 1908, slipped and fell on an icy sidewalk. She thought little of it at the time, but one morning, a few days later, she found that she was unable to go downstairs. The superintendent was sent for, and she in turn sent for the doctor who attended the pupils; he made an examination and said that there had been a serious injury. He insisted upon putting a plaster on her back, and also stated that she must be kept very quiet. She received every care and attention that could be given her, but grew steadily weaker and more nervous. She could neither sleep nor eat.

On March 24 we telephoned to know if our daughter was able to come home (the trip was about one hundred miles). The superintendent thought she would not be strong enough to do so, but I had some knowledge of Christian Science and at once declared the truth that God was her strength, and realized that she was able to come home; which she did, on the evening train. The next morning she telephoned to a practitioner, who told her to come to her at once for treatment. After she returned she ate a hearty meal, and from that time improved rapidly, until in about a week every symptom of the injury had disappeared and she was doing her share of the housework.

I am thankful to God, and to dear Mrs. Eddy for this healing truth which makes us free from sin, sickness, and error of every nature. I also wish to express my gratitude to the Publishing Society for the food which we daily

Digitized by Google

and weekly receive through the *Sentinel, Journal,* and *Quarterly*, and now for that splendid paper, *The Christian Science Monitor.*—MRS. ADDIE E. DOW, Redfield, S. D.

I want to tell others something of what Christian Science has done for me. I had not been strong since childhood, had coughed incessantly, so that people said I had lung trouble. I had many other ailments, among which were gall-stones, piles, and heart trouble. *Materia medica* had failed to relieve me, so we turned in our extremity to Christian Science. I was helped for a time, but as I kept a grocery store I felt I had not the leisure to read and study Christian Science as I should, so I decided not to trouble about it any longer. Finally, however, my health failed entirely and I was forced to sell the store. I turned to the doctors again, and was told that I must have an operation for a bowel trouble, but on examination it was decided that the heart action was too weak to allow of an anesthetic. With all the other ailments there was now added an acute attack of lung trouble, and as a last resort we again turned to the one "great Physician," I was relieved at the first treatment, and called for something to eat. It was then five weeks since I had eaten any solid food. In five treatments I was thoroughly healed.

Another blessing was the healing of my son, who smoked cigarettes and drank. I had begged him time after time to quit, but it seemed that he could not, try as hard as he would. After I began to take Christian Science treatment he was healed of these habits, also of a very sore throat. He did not take treatment, but was healed by the truth being demonstrated in the home, thus verifying the words of Mrs. Eddy, "All whom your thoughts rest upon are thereby benefited" (*Sentinel,* Oct. 6, 1906). I feel that I cannot say enough for that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I thank her for it. Its teachings have saved my life. It makes the Bible plain and makes us better men and better women—better physically and morally. I thank God for His great goodness to the children of men, and I thank the one who was willing to give me a cup of cold water in Christ's name. Let all mothers who may read this take up Christian Science. It will help them and their families and make them happy and healthy.

Today I rejoice that I have been healed through Christian Science, and that I have the proof that "God is a very present help."—MARY A. ARMSTRONG, Omaha, Neb.

In grateful acknowledgment of benefits received in Christian Science, I wish to give my testimony, hoping it may be the means of helping others as I so often have been helped. My understanding of the truth taught by our dear Leader has helped and uplifted me many times in the darkest hours of physical and mental distresses. About five years ago I was suffering with a fever, uremic poisoning, and acute stomach trouble. For nearly two weeks I had been confined to my bed, suffering the most intense pain, and unable to sleep even with the use of material remedies. My physician said the medicines which I required were too strong for my constitution. One day, after I had taken an opiate, the physician and nurse worked over me for hours to save my life, for in five or ten minutes after taking the drug I became delirious and remained so for about seven hours. The medicine also seemed to affect the heart, and left me in a critical state.

Man's extremity is often God's opportunity, and it was at this time suggested by my husband that we try Christian Science. A practitioner was called, and after the second treatment I was relieved, so that I slept soundly, and a complete restoration to health followed the third day's treatment. I was able to eat anything I wished, which I would not have dared do while under medical treatment. Since then Christian Science has been our only physician, and through the understanding I have gained I have been able to heal myself of many physical ailments and also to help others. I have been enabled to overcome chronic colds and cough, also the wearing of glasses, which I had used since childhood, my eyes having been left very weak from temporary loss of sight, resulting from whooping-cough.

It is with a heart full of love to God, and to our Leader, Mrs. Eddy, who has worked untiringly for us and has shown us the way that we may help others, that I send this testimony. I also wish to express my gratitude for the *Sentinel* and *Journal,* as they have proved to me many times that God does prepare a table before me "in the presence of mine enemies." I am also very grateful for our daily paper, the *Monitor.* Christian Science has indeed been to me the pearl of great price.

ANNIE B. BRINKLEY, Kansas City, Mo.

God has been very good to me in many ways, and I never can be thankful enough. I have found that He is an ever-present help in trouble, if only we understand His loving care over us. Divine Mind has all knowledge and wisdom, and we as God's children reflect His wisdom. This was made very clear to me in an examination for teachers which I took in October, 1908. Through the help of Science I was able to meet the requirements successfully. God is always ready, if we can give up our mortal beliefs and leave all for Truth. It was so good and loving of Mrs. Eddy to show us the way.

MAY ROBERTS, Hitchcock, S. D.

Two and a half years ago I was operated upon for an internal growth. Before the operation I had been treated by Christian Science, but the physician had said that if the operation were not performed I would probably die, so fear took possession of me and I submitted to the knife. In July, 1908, I felt the same symptoms returning. In October I came East to place my daughter in school, and on the first of November put myself under the care of a Christian Science practitioner in New York city. At the beginning of the third week I felt, during the treatment, the queerest sensation, as if something was being snatched from me; such a stir within that I felt as though I must ask the practitioner to stop the treatment. In less than half an hour after leaving the office, the growth passed away. At first I was seized with fear, then I realized the truth of Paul's declaration, that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

I give this testimony in appreciation of the blessings received, and to express my gratitude to the one chosen to give this wonderful truth to the world, dear Mrs. Eddy. By following her teaching we learn that love "rejoiceth not in iniquity, but rejoiceth in the truth."

MRS. JENNIE HASBROUCK, Seattle, Wash.

[Translated from the German.]

I am very thankful to God for all that I have learned through Christian Science, and for the blessings it has brought me, and it is with great joy that I speak of my experiences. For years I had suffered with a severe uterine disorder, for which I was treated by various physicians. Two years ago I became so weak through constant illness that I had to remain in bed continually and could not attend to my household duties. I was advised to go to a specialist for women's diseases, which I did. He stated that the trouble could only be removed by an opera-

Digitized by Google

tion, to which I consented, believing that after four weeks' stay in a clinique I would become well again. Half a year had scarcely elapsed, however, when the old trouble appeared again, and nearly as bad as formerly, so that the same physician told me he would have to perform another operation; but I could not make up my mind on that day.

Friends then drew my attention to Christian Science; I took treatment from a practitioner in Hannover, and was completely healed, so that I can do all my work again, even hard labor in the field. The improvement began with the first treatment and continued steadily. I thank God for the grace which He has bestowed upon me through Christian Science.

FRAU AUGUSTE LUESSMANN, Wietze Prov., Hannover, Germany.

This testimony comes from the depths of a mother's heart, who wishes to testify to the healing power of Christian Science, and tell what it has done for her children. When we moved to this farm I was an entire stranger to Christian Science, but soon after, when three of my children were taken with chills and fever, I asked for Christian Science treatment for them, and they were healed, and we did not have to give them drugs.

In the latter part of January, with my five children, three men, and a thousand pounds of freight in a two-horse wagon, we started from town to the farm, and when about three miles from town my four-year-old boy fell out of the wagon, the hind wheel passing over his body. He was picked up seemingly lifeless; but one of the men was a student of Science and Health, and instead of returning to town for a surgeon I asked him to give the child treatment, and we proceeded home, nine miles away, over a rough road. For three or four days afterward the child did not play with the other children, but after that time no one could tell by his actions that he had been hurt, and every time that any one would ask him how he was getting along he would invariably say that he was all right.

Some wonderful demonstrations have been made here, which have caused inquiries about this new-old doctrine, and several copies of the Bible and Science and Health have found their way here. In more than one home has the dust been brushed off the Bible, and it is being read with more interest than ever before. In the last few months three families have come here in wagons over fifty miles for treatment, and some of them have been healed of maladies of twenty years' standing. I am studying Science and Health with the Bible, and am trying to learn more of this truth which Christ Jesus taught.

I can only say that words fail to express my thanks to the Giver of all good for bestowing on us our dear Leader, and for "Science and Health with Key to the Scriptures."

MRS. ADDIE GREEN, Cotulla, Tex.

Last spring I was healed of what the doctors called an incurable disease. I had suffered for three years, and at times the pain seemed unbearable, but that was nothing compared to the thought that I was going to die, and did not know where I was going or what was before me. I had spent a great deal of money in going from one doctor to another, only to hear the same verdict.

The testimony of a Christian Science friend made me decide to try this treatment, and I went to see a practitioner who had been recommended to me. She told me a great many good things, and I seemed to receive new life from the thought that "in him [God] we live, and move, and have our being." I had been in a depressed mental state for a long time, but on my way home the peace "which passeth all understanding" seemed to come to me. I was so happy! I kept on saying, God is good, and in a few more treatments all trace of this dreadful disease had disappeared. Before I took up Christian Science I had not been able to do my work, but the very next week we had to move, and I did all the work of packing and getting settled alone. I found that God is my strength.

My mother was very low at this time with chronic stomach trouble, and was opposed to Christian Science, but I knew that God would give me words to explain the truth to her. He did, and she was healed with a few absent treatments. My sister also was healed of the same trouble in a lighter form. My sister-in-law had had several attacks of appendicitis, and the doctor had said that one more attack would be fatal, but not long after this a message was received asking me to come to her. Instead of going myself, I sent to a Christian Science practitioner to help her, and two hours later she was asleep and free from all pain. The joy in that family can be imagined.

The understanding that God is our Life and strength keeps us free from sin and sickness. I rejoice every day of my life that we have found the true way, and I am deeply thankful to God, and to Mrs. Eddy for this healing truth.—MRS. A. E. JOY, Aberdeen, S. D.

[Translated from the German.]

I do not hesitate to testify to the fact that over two years ago I was healed within a short time of a severe abdominal trouble of long standing, and that I have not felt any such trouble since. My wife and children have repeatedly experienced the beneficent effect of Christian Science, and I therefore gladly remember the Discoverer and Founder of this healing truth.

CHRISTIAN MEIER, Schaffhausen, Switzerland.

The blessings which Christian Science has brought and is bringing to me are many. I have been healed of troublesome colds and headaches, of many ailments not diagnosed, besides fatigue and various other discords. I am being healed of all sorts of erroneous mental qualities,—selfishness, impatience, resentment, apathy toward mankind, that dismal triad of self-love, self-pity, and self-righteousness, envy, dishonesty (I am beginning to see how much that includes), procrastination, and the like. Besides, I feel sure that Christian Science has prevented many diseases from manifesting themselves in my body, and I know that a true sense of health is being established. I am becoming more capable in my daily work, and have a sweet sense of security in the knowledge that the source of my strength is always present and available for every need.

Christian Science has taught me that there is no happiness apart from righteousness, and I understand now what it is to have "confidence toward God," as the apostle John expressed it. I am thankful for a growing appreciation of the wonderful work of our Leader, and in my heart is a song of praise for her inspiring example and unfailing wisdom. The periodicals and church services likewise bring me great joy. I feel richly blessed, and earnestly hope to work more persistently and understandingly for the overcoming of sin in myself and to render better service to others.

EDITH A. FRIES, Washington, D. C.

During the summer of 1906 I had occasion to call a Christian Science practitioner to treat our little son, as he was cutting teeth and I had some fear of the medical belief respecting the "second summer." I was very young in Science, my husband was away, and the only other adult member of the family was not a believer in Christian

Digitized by Google

Science, and consequently filled with fear. On coming into my room one day, the practitioner found me holding the baby, who was in an alarming condition. She immediately said that we must deny the physical evidence, which she did most emphatically. This was the last convulsion he had, although it was some days before he walked, as he had lost flesh and seemed very weak; but the Scientist encouraged me to realize the nothingness of matter and the allness of God.

When this child was about two years of age he very suddenly began to stammer. I treated him to the best of my understanding and within a short time the error seemed to be met and he spoke naturally; but some time afterward it manifested itself again, and was apparently even worse than at first. The little fellow became conscious of his difficulty in speaking, as his playmates mocked and laughed at him, and to human view it was a serious and distressing situation. I realized that I was not meeting the "adversary," so I spoke to a practitioner, who helped me to see more clearly how to meet and master the error. It was not long before the sentence of *materia medica* was declared null and void, and this was over two years ago.

The latter part of the year 1906 my husband was taken with a severe cold and fever. A Christian Science practitioner was called, and the disease was overcome within a short time. Last winter an epidemic was said to be very prevalent here, and I fell into line with other unfortunates. Help was asked for in Christian Science, and I was able to dress every day, and the illness was overcome in a most gratifying way. We are truly thankful to God, also to Mrs. Eddy, for the truth which has helped us on this journey from sense to Soul.

MRS. LILLIE M. BRYANT, Salt Lake City, Utah.

I wish to tell of the healing of our little daughter from three different troubles. In the first place, when she was three years and nine months old, she had never walked or got on her knees, except when in a walking machine. I became discouraged, even though our doctor and friends told me that she would walk when she got ready. However, in April, 1908, a relative who is not a Scientist but has faith in its healing, advised us to try it, saying it might help her, and anyway it would not harm her. In a very doubting frame of mind, but with a sincere hope that she might be helped, I took her to see a practitioner. When I was told that I was holding the child in bondage by my fear, I did not understand how that could be, for I had always tried to do my duty in taking the best of care of her. I decided to try a week's treatment, and at once bought a copy of Science and Health and began to read it. I tried to do my part, and was told not to watch her every movement, but to leave her to God's care. That first day the child got up from the chair and seemed to have the desire to walk, but I was so full of fear that I jumped to catch her in case she should fall. The practitioner said that just as soon as I could get rid of my fear the child would walk, and though I could not believe such a statement then, it was proved to me as time passed; for when, instead of having fear, I trusted in God, the child walked as well as any one.

The second difficulty overcome was a very bad case of bowel trouble, but it was cured in less than a week by absent treatment. The other ailment was non-control of the bladder, especially at night. This healing was a little slow, but it was complete. When I look back and think of the discomfort which both the child and myself suffered, and for so long, and then think of her being cured by a few treatments, it seems indeed wonderful; but I have learned that all things are possible with God, and all His works are good. I cannot express the thanks I feel for all His goodness, not only in the healing of our dear little daughter, but in the renewing of my own faith from day to day. Whereas before I rarely opened the Bible, now, through the interest I have taken in the study of Science and Health by Mrs. Eddy, I love to read it. I have found out that God is ever present, instead of a being who is afar off and to be found only after we die.

My earnest desire is to live the truth, and to have Love rule where fear once seemed to be. If any mother who reads these lines wishes to know more about this healing, I shall be glad at any time to write her more fully. It is now nearly two years since the child received her first treatment, and she has never had medicine of any kind since then.—MRS. ISABEL GASPARO, Lombard, Ill.

About eighteen months ago, in a runaway, I was violently thrown to the ground and severely hurt internally. I did not send for a physician, but tried to treat myself in Christian Science. The pain, however, seemed very great, and I did not get relief, so I applied to a Christian Science practitioner. For eleven days there was no action of the bowels. I received treatment three weeks in all, and during the time employed two different practitioners, but was cured from the Christian Science treatment alone. I am today in the best of health, and my firm belief is that I owe my life to Christian Science. My heart overflows with gratitude and love to Mrs. Eddy for what she has done for all mankind.—W. A. BENTON, Dallas, Tex.

As I read the testimonies which come to us weekly in the *Sentinel*, my thought is filled with gratitude to our Leader, Mrs. Eddy, who has brought the understanding of this healing truth to all who will listen to the message. I think my interest was first awakened by hearing a relative, whom I was visiting, say that had he known a banquet to which he had accepted an invitation, was to occur on Wednesday evening, he would have refused, as he preferred to go to church. This was amazing to me, and although I did not at once begin the study of the Christian Science text-book, a few months later, when this same relative was a visitor in my home, I asked if he would sell me his book, as I did not wish to wait to send for a copy.

The Bible had been a sealed book to me, and I had never enjoyed church-going, but I am grateful that through the study of the Christian Science text-book the Bible is becoming a new book, and that the church services are a source of delight. I have been healed in Christian Science of excessive fear, and of catarrh, from which I had suffered since childhood, and I have learned that life is not merely a pastime but that each one has a work to do.

FRENELLA BARNHART, Independence, Ia.

All through the tangled wilderness
Of human hopes and fears
We wander idly, dreaming
For many weary years.
At last we clamber upward
And find the mount of peace
Where God's own word is spoken,
That makes the tumult cease.

ELIZABETH MALLORY.

CORRECTION.

The testimony on page 256 of the Nov. 27 *Sentinel* signed F. D. Hyman, should have been F. D. Wyman.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

Religion, then, is relationship, not creed. Christianity is friendship with God and man. How simple it all is! Now, to be a Christian is simply to accept God's offer of His friendship and extend one's own friendship throughout all human relationships till one has good will to all men. To be a Christian is to walk all one's way in company with the great companion, the good comrade, the unchanging lover of our souls, who is nearer than nearest friend, who inspires our noblest impulses and smiles upon our heroic endeavor. To be a Christian is to have the same friendship toward him he has to us, to be in harmony with all his purposes, to make his will our own, to take every new step in conscious fellowship with him. How simple, but how divine. Can any one feel that religion to Jesus was anything but this, this friendship with his Father? Turning to the manward side, to be a Christian is to be friends with everybody and undertake every human relationship in the spirit of friendship. We are greatly hoping that the churches are going to return soon to this simple conception of religion given it by its Founder, as friendship between God and man, and man and man. We see signs of it everywhere.

[*Churchman.*]

Masses of Christian people, perhaps more outside of organized Christianity than in it, are demanding something deeper than a formal application of the principle of self-sacrifice for the good of others in the lives of professing Christians. They are asking, apart from any prejudices for or against paternalism or socialism, that Christians shall act together in following the social teaching of our Lord who, despite the stress he laid on individual religion, showed just as clearly that the progress of the individual soul depended on the right discharge of all human and social relationships.

[*Congregationalist and Christian World.*]

What is often called Christianity, the formal assertion of creedal beliefs, may not be adapted to oriental races. But the spirit of love and reverence toward God as the Father of all mankind, and of human brotherhood in all His children, commends itself to every race. It is becoming more potent in all the nations. And that is the spirit and teaching of Jesus Christ. Whoever spreads that spirit so far as his influence goes is doing something worthy to restrain the nations from war to promote the peace of the world.

[*Christian World*, London.]

Truly this human life of ours is no petty campaign. It is a warfare against forces visible and invisible, a great fight with infinite issues. Yet humble, earnest souls may go into it without fear. They are on the winning side. They that are for us are more than they that are against us. The kingdom of light will outlast the kingdom of darkness. Good is mightier than evil. For the weapons of our warfare are not carnal but spiritual, mighty to the pulling down of strongholds.

[Rev. Frank Oliver Hall, D.D., in *Universalist Leader.*]

Our time is characterized by a "passion for reality." Men have the idea that religion belongs to the realm of the unreal and the unverifiable, that the church is dealing with uncertainties and unrealities. Whether this opinion is just or not, it is certainly widely prevalent. And if the church is to regain the respect and loyalty of men, it must be shown how to deal with real things in a real way and to play a practical and important function in human life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

SPECIAL PAMPHLET.—About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 10 cents each, $1.00 a dozen, $7.50 a hundred.

A NEW PICTURE.—About Dec. 10 the Publishing Society will place on sale a new and desirable photogravure of The Mother Church edifices and the Publishing House, with the proposed parkway in the foreground. Approximate size, 24 by 18 inches.

The price of the picture will be as follows: Artist's proof, bearing remarque, impressed on Japanese vellum, $5.00; from the same plate on India paper, mounted on mat, without remarque, $3.00. Ten per cent discount to Christian Science reading-rooms.

NEW EDITION OF THE HYMNAL.—The new and enlarged edition of the Christian Science Hymnal, containing some fifty new hymns, will be ready for delivery about Dec. 20.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15: twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type. Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.
Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Each, 10 cents; one dozen, $1.00.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5.00; on India paper without remarque, each, $3.00. Ten per cent discount to Reading Rooms. Picture of The Mother Church only, size, 12 x 15, each, 50 cents; one dozen, $4.50. Souvenir Post Cards of The Mother Church, 25 cents a dozen.

QUARTERLY COVERS, in black seal leather. Regular size, 5 1-4 x 7 3-4, $1.25 each or $12.50 a dozen. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11.00 a dozen.

QUARTERLY COVERS WITH CHANGE POCKETS.—Regular size, $1.50 each or $15.00 a dozen. Pocket size, $1.40 each or $14.00 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9.00; half dozen, $5.00. Half morocco, single copy, $1.40; one dozen, $12.00; half dozen, $6.50. Full morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3.00; one dozen, $30.00.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music, as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in the same copy. 75 cents the copy; $7.00 the dozen.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. 75 cents the copy; $7.00 the dozen.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. 50 cents the copy; $5.00 the dozen.

"BLEST CHRISTMAS MORN." By Frederick W. Root. Published in two keys, for high and low voice. 27 cents the copy; $2.75 the dozen.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederick W. Root. Published in two keys for high and low voice. 27 cents the copy; $2.75 the dozen.

Please state when ordering any of the three last named whether high or low key is desired.

Our Catalogue for 1909, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.
Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A letter has been received from Yukio Ozaki, the mayor of Tokio, Japan, in regard to the two thousand cherry-trees which were presented by that city to Washington, and which are now at Seattle, Wash., awaiting shipment. "Cherry-trees are extensively cultivated in this country," he says, "and are the most admired of our flowering trees. There are several hundred different varieties, but for the purpose of this shipment ten of the most representative kinds have been selected, and I beg to assure you that it will remain to the citizens of Tokio a pleasing memory as well as a matter of civic pride to know that their small offering will be permitted to contribute to the advancement of the beautiful capital of the great republic which they all admire." Most of the trees will be set out in Potomac park, along the new drive which skirts the river for a distance of a mile and a half, the remainder will be planted in clusters in the various parks of the city.

More than twenty-five million deposit accounts are carried on the books of the banks of all classes of the United States and its insular possessions, according to statements contained in the annual report of the comptroller of the currency. Banks in the New England states held, in round amount, $88,300,000 in actual cash, those in the Eastern states $716,200,000, in the Southern states $105,800,000, in the middle Western states $373,400,000, in the Western states $71,000,000, in the Pacific states $89,600,000, and the banks of the island possesions $7,700,000.

Arbuckle Brothers, the strongest competitors of the American Sugar Refining Company, paid into the United States treasury last week $895,573.19 in reliquidation of back duties following the disclosure of irregularities in the weighing of sugar cargoes on the docks. This action does not affect the criminal standing of the officers of the company. It is reported that the American Sugar Refining Company is ready to pay $700,000 of evaded duties.

The intention on the part of Senator Crawford of South Dakota to press the commerce and labor department for a report on the increased prices in the cost of living, even to the extent of presenting a resolution in Congress to bring forth the desired information, has aroused interest throughout the country. There is a suspicion abroad that monopolistic control of commodities is unduly affecting the supply.

Legislation to create a department of the Government which would do for the whole country what the bureau of corporations has been doing in specific instances, and compel complete publicity in the management of interstate corporations, is one of the leading recommendations contained in the annual report of Secretary of Commerce and Labor Charles Nagel.

National aid for permanent roads, a system of national highways connecting the capitals of the various states and of state highways connecting the various county seats, use of Federal prisoners for building roads, and the establishment of road-making on a strictly business basis, are some of the suggestions made at the sessions of the tenth national good roads convention at Topeka, Kan.

Four hundred thousand dollars, in the judgment of Secretary Wilson of the department of agriculture, will be necessary to administer properly the twenty-five million acres of public lands added to the national forests by President Roosevelt during the closing weeks of his administration. The bulk of these lands is in Alaska.

The declaration relative to the laws of maritime war, embodied in sixty-four rules, has been made public by the Senate. This declaration was signed by the delegates of the United States to the international naval conference held in London, Eng., last winter, which dealt with ten major topics, unanimity being secured on eight.

A bill has been introduced in the House which provides that the President, Vice-President, senators and representatives, and party committees shall file statements of their campaign expenditures, and that failure to comply shall be punishable by imprisonment of not less than six months and removal from office.

The United States Government has not yet called upon Cuba to reimburse it for the five or six million dollars of expense incurred by the military occupation of the island, but the claim will be pressed whenever it seems that the Cuban treasury can stand such a draft.

In a report by the war department to the House, the eight-million-dollar project for a canal to connect Lake Superior and the Mississippi river by way of St. Croix river is pronounced commercially impracticable and inadvisable, though practicable from an engineering point of view.

A bill requiring common carriers engaged in interstate and foreign commerce to make full reports monthly to the interstate commerce commission of all accidents, and authorizing the commission to investigate such accidents, has been passed by the House.

No action respecting a gypsy and brown tail moth appropriation will be taken by the committee on agriculture until after the holidays. Secretary Wilson has recommended an appropriation of three hundred thousand dollars.

As a result of the prosecution of the sugar-weighing frauds in New York city, there is now a confident expectation that indictments will be found against officials "higher up."

President Taft has sent to the Senate the name of Horace H. Lurton, a native of Tennessee, in nomination for associate justice of the United States supreme court.

The postmaster-general is determined to put a stop to the abuse of the franking privileges by members of Congress.

International.

The general assembly of the International Institute of Agriculture, numbering more than one hundred delegates and representing forty-six states and colonies, met in Rome last week. Of the objects to be undertaken by this body, two were deemed of supreme importance, and constituted the chief aims of its promoters. These were: To collect, study, and publish as promptly as possible statistical, technical, and economic information concerning farming, the commerce in agricultural products, and the prices prevailing in the various markets; to communicate, as quickly as possible, all such information to the parties interested. The object of the aims is to prevent the evils which arise from speculation in agricultural products.

The British Congo sections of the Cape-to-Cairo Railway have been formally opened and linked up. This completes a continuous British line of 2,147 miles from Cape Town. The section now opened is 134 miles from the chartered company's terminus at Broken Hill to the southern frontier of the Congo Independent State. Work is already in progress across the frontier on 160 miles of Congo line into Kantanga, which it is expected will be completed in the autumn of 1910.

Another telephone switchboard order from the Far East has been placed with an American firm of manufacturers. The Japanese department of communications is the purchaser, the equipment being used to extend the service in the capital city of Tokio. The Chinese government recently installed two modern telephone exchanges in the city of Peking.

The first railway to connect the Atlantic with the Pacific coast of South America between Buenos Aires and Valparaiso will probably be completed next year. The tunnel through the Andes, which will abolish the gap of fifteen miles that now exists, has been broken through, and it should be possible to run a train through by the end of March.

The estimates for the ensuing fiscal year in Canada provide for an expenditure of $2,358,700 upon the canals. Fifteen canals are to be affected by the work outlined in the year's estimates, nearly all of which are directly connected with the Great Lakes and St. Lawrence river route.

In the Egyptian budget for 1910 the revenue is put down at £15,350,000 and the expenditure, ordinary at £14,088,000 and special at £1,062,000, leaving a surplus of £200,000. There is a gradual improvement in the resources of the Sudan.

China is unobtrusively but extensively giving up its archaic system of education and adopting that of the western world.

Industrial and Commercial.

The Vulcan Match Company of Sweden has just completed negotiations with the Barking district council near London, for the acquisition of some acres of land upon which they intend to build a factory that will give employment to more than one thousand East London workers.

Plans for a subway around New York city, estimated to cost one hundred and thirty million dollars, have been submitted to the public service commission and are creating considerable interest among citizens and officials. The belief is expressed that the Pennsylvania railroad is back of the proposition.

Imports of paper and products into the United States have increased from $3,000,000 in 1880 to $12,000,000 in 1909, while exports of paper and manufactures thereof increased from $5,500,000 in 1880 to practically $8,000,000 in 1909.

In a report just received by the state department it is disclosed that the total American investments in Canada now reach the sum of $226,800,000.

A company capitalized at five hundred thousand dollars has been organized to develop extensive coal-fields in the Province of Alberta.

The United States in 1908 turned out twenty-seven per cent of the entire world's output of lead.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE TALKING HABIT.

CLARENCE W. CHADWICK.

WHEN thrilled with a new idea, the tendency of human nature is to talk about it. It has, however, been said, that "the less men think, the more they talk." This is especially true when it comes to religion. People will even pass over the weather to engage in a controversy upon religious topics.

The Cause of Christian Science has not wholly escaped the "talking-much-and-saying-nothing" habit. Many people who have become interested in Christian Science had for years allowed themselves to be prejudiced as the result of senseless or careless statements by some who called themselves Christian Scientists. Idle talk upon such subjects as the unreality of evil and the nothingness of matter is not calculated to attract to the teachings of the Master people who allow themselves to judge by what seems patent to the outward senses. The best time to talk upon such subjects is after some tangible proof of healing has been given to these people that their thinking is along wrong lines, and even then the premature declarations of absolute scientific truths are not conducive to favorable results. The neophyte in Science is too apt to be possessed with a zeal which is "not according to knowledge." His intentions are humane, but he lacks the wisdom and discretion necessary to convey the right thought at the right time to those whom he would bless. Without these virtues he is very liable to fall an unconscious victim to the talking habit.

A very earnest young student was once invited to spend an evening with a minister of his acquaintance to discuss Christian Science. The invitation was accepted. Passages of Scripture were of course freely quoted, some of which the minister assented to, while others he vehemently opposed. This student had proven very little of the teachings of Science and Health, having read the book through once or twice only, and was none too familiar with the Bible. His was a zeal without knowledge. During the course of the argument,—for that is really what it was,—the student cited this quotation from the Bible: "They which are the children of the flesh, these are not the children of God;" which was immediately contradicted, upon the ground that no such passage occurred in the Bible. The Bible was called for, and the quotation found and read aloud to the minister. He still doubted, and asked to see for himself. He found the text just as it had been quoted, and became so confounded and apparently angered that he literally threatened to dismiss in a very forcible manner the student whom he had invited to his house, if he persisted in explaining any such "pernicious doctrine." The student knew just enough to keep calm, and this saved him, but did not convert his host. The conversation continued until after midnight, and the visitor departed. The lesson was a valuable one to the student; but some eighteen years have passed and there is still no evidence of his preacher friend having become interested in Christian Science.

Many others interested in Christian Science have no doubt had similar experiences before learning to keep a seal upon their lips. Practitioners frequently meet with people who tell of their erroneous views of Christian Science gleaned from the thoughtless expressions of some neophyte student. One lady asked this question: "Can you assure me that God will forgive me for all the dreadful things I have had to say about Christian Science? I have recently read just a little upon the subject, and I find that I am entirely wrong." She went on to say that she had heard different ones talk upon the subject of Christian Science, and had come to the conclusion that it was anything but Christian, and being herself a victim of the talking habit, she had been free to tell others what she thought of Christian Science. The woman was quickly healed, which settled the thought of God's forgiveness in her case, and she is now daily proving her faith by her works and talking a great deal less. Many others are likewise doing far less talking than they did on first becoming interested in the Science.

In some instances young students of Science and Health have held meetings for the purpose of exchanging views upon different passages from the Bible and Science and Health, as found in the Lesson-Sermons. Such efforts would indicate a certain amount of zeal and earnestness, but experience has proven that the best results cannot be obtained in this way, and through the columns of the *Christian Science Sentinel* the Field has been advised that it is not wise for Christian Scientists to meet promiscuously to read and to exchange thoughts upon the Lesson-Sermons, but to leave these Lessons for the one Mind to unfold to them in their own individual study of them or when hearing them read without comment by the Readers at our Sunday services.

Christian Science lays all stress upon doing, and Christian Scientists may agree with Shakespeare that "talkers are not good doers." First impressions of this Science are not always scientific; hence the danger of conveying the wrong thought to those who will receive it as fact instead of mere belief or opinion. The most satisfactory way of presenting Christian Science to people is to prove to them the healing power of divine Love. Our Leader is striving in every way possible to safeguard the letter of Science from the marauding tendencies of the human intellect in its persistent attempts to drag the inspired statements of Science and Health down into the mire of human belief. If the human intellect could explain Christian Science, there might be some excuse for more talk and less work; but such is not the case. Demonstration alone can impart the spiritual animus of its text-book as well as of the Bible.

Centuries of preaching have failed to reveal and to reinstate the gospel of healing. Talking has had its day, and has signally failed to reveal the kingdom of heaven on earth. Proof, practice, and not profession, is now demanded of Christ's followers, and those who have grasped the spirit of Christian Science must see to it that no stumbling-

Digitized by Google

blocks are placed in the way of honest seekers of the truth through careless talking upon a subject that can best be explained and assimilated through quiet systematic study and living of the precepts which it teaches. Christian Science is too sacred a subject to have either its theory or practice dragged into the by-paths of erring human belief. "The song of Christian Science is, 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20). When this sentiment is put into practice, the talking habit will have disappeared.

THE TRUE CONCEPT.

ANNE ELIZABETH JENKINS.

CHRISTIAN SCIENTISTS are sometimes asked, "How can you worship a God who is not personal?" If they, in turn, are asked how they can worship one who is, they have really no answer at all, for they cannot describe this person whom they adore. If the Scientist were to inquire, "Is he an old man with a beard, or a young man with a beautiful face?" they would be shocked at such sacrilegious remarks. But how can we worship an impersonal God?

If one were coming home alone some dark night, and were suddenly set upon by a robber, what concept of God would be of most service to him? Would it be that of a great personality seated upon a throne, somewhere in the heavens, whence He looked pityingly down upon the victim, but from which position He might not in any case come to his rescue; or the Christian Science concept of God as Love, Truth, intelligence, strength? Suppose a Scientist to be in any kind of danger: he would naturally turn at once to God as divine Love, knowing that if God is ever present, then Love is ever present; and that where Love is there can be no reality in hate, hence no one to rob or to kill, and no fear that would paralyze one's faculties. He would know that God is also intelligence, and if God is ever present then the Scientist, claiming man's reflection of God, would act intelligently,—must do so, if divine intelligence governs him. He would know what to do and how to do it. He would also rely upon God as his strength, knowing that God, good, alone has power, and that evil has no power. This would apply equally to all the attributes of God, and would be equally available whatever the belief of danger, whether in case of disease, accident, or the kind of attack above mentioned.

It may here be asked, "Which concept of God brings us nearest to the source of all true help?" Is it that of the one who prays in fear and holds a belief in the impossibility of his personal God's ever coming down to rescue him; or that of the one who turns with perfect confidence to divine Love, intelligence, strength, to come to his aid? Is there any reason why Love should not be everywhere, at all times, and possess all power? Any reason why intelligence should not? Surely there is no understanding of God which brings omnipotence so near, as that which acquaints us with God as being infinitely more than a personal form like our own. Mrs. Eddy says, "If we pray to God as a corporeal person, this will prevent us from relinquishing the human doubts and fears which attend such a belief, and so we cannot grasp the wonders wrought by infinite, incorporeal Love, to whom all things are possible" (Science and Health, p. 13). Is it not the mental and spiritual qualities of our friends which appeal to us and which draw us near them, and give us the true sense of companionship and communion? Why should it not be the same with that Friend who is of all others so necessary, and with whom a perfect communion and companionship is possible—yes, absolutely necessary for every one of us. We cannot deny that it is material sense which limits and mars our human ties, and why should we seek to apply this sense to our relation to God?

Christian Scientists are proving daily and hourly that they are much nearer to God now than when they believed Him to be a corporeal personality, and more than ever do they love and reverence Him as the infinite Father, divine Mind.

GOD GLORIFIED.

J. ALLEN BARRIS.

As we listen to the testimonies given at our Wednesday evening meetings and hear the expressions of gratitude to friends and practitioners, we are reminded that Christian Science honors God supremely. We are told in our textbook that "the one Mind only is entitled to honor," and that we should "give to Mind the glory, honor, . . . everlastingly due its holy name" (Science and Health, pp. 183, 143).

In the seventh chapter of Luke's Gospel, we have the story of Jesus' raising of the widow's son from the dead, in which we are told that when the multitude saw this deed performed "they glorified God," and in the selfsame hour Jesus was able to heal many of their infirmities and plagues, which would imply that their willingness and ability to glorify God and to recognize Him as the source of the wonderful power displayed by Jesus, enabled them to receive the benefits of the healing power. It is noticeable that they "glorified God," rather than Jesus, the one who apparently was performing the so-called miracle; and we see throughout the whole career of Jesus the effort on his part to turn the thought of the people away from himself to God. He said, "I can of mine own self do nothing;" and again, "Why callest thou me good? there is none good but one, that is, God," and again he said, "The servant is not greater than his lord."

So is it with those who practise the Science of Christianity today: the desire is to turn thought away from human personality to the true source and Giver of all good—to God, to whom be "glory and majesty, dominion and power." This does not mean that we should not be grateful to those who have helped us, but there is a distinction to be made between the source of the stream and its channel, between the master and the servant. We may be grateful to the one, but we should glorify the other; and according to Webster, "to glorify" means "to place first." In expressing our gratitude, therefore, it is well that while we "render unto Cæsar the things that are Cæsar's," we should not forget to "render unto God the things that are God's."

As a bright and shining example of this Christlike spirit we have the life of Mrs. Eddy, the Discoverer and Founder of Christian Science. There is today no one of any prominence whatever whose personality is so little known, except through her writings, as that of our beloved Leader, who during the forty-five years of her ministry has been pointing her followers away from herself to God and endeavoring gently and lovingly to lead this present generation into a knowledge of the impersonal Truth. There has been no seeking for popularity, no striving for effects, and at the same time no faltering of steps; and today, as she herself has said, she still finds herself "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix.). During periods of persecution, like the great Master, she has opened not her mouth, but meekly and quietly gone on her appointed way, "clad in the panoply of Love" (*Ibid.*, p. 571); and so successfully has she demonstrated the truth which she has been teaching, that every attack has fallen by the way, and the wrath of man has been made to praise God so effectually that today Christian Science stands out in bolder relief than ever before upon the consciousness of mankind. And this solely as the result of demonstration. Day after day, in comparative seclu-

Digitized by Google

sion, she devotes her time to the establishment of this great truth so that it can never again be lost, but that we of today and those of future generations may have the true guidance which will enable us to work out our own salvation, and to come into a realization that the kingdom of heaven is indeed at hand. Could there be a nobler work, and could a greater gift be given to a sinful and sorrowful world?

SAFETY.

WALTER LINCOLN COLBY.

FROM the time of Moses until now, humanity has ever been seeking to avoid the evil consequences of sin and to escape calamity. The book of Leviticus is full of minute details concerning the precautions necessary to prevent disease by the cleansing and purification of both person and dwelling whenever contagious maladies overtook the people. Jesus so far recognized this order of things as to command the ten lepers whom he healed to show themselves to the priests, in compliance with the law of Moses; yet it is significant that to the one who returned to give thanks, a Samaritan, he said, "Go thy way: thy faith hath made thee whole." It may have seemed to the Jews that Jesus sometimes disregarded the Levitical law, but there is no evidence that he was ever careless or indifferent concerning the welfare of those about him. His obedience to law and his observation of certain ceremonies were marked. His mission was to offer to all the surest way to escape from harm, namely, by putting entire dependence upon God.

Despite the many adherents of Christian Science, most of whom testify to having been healed through divine help from some kind of disease, and often after all medical help had failed, honest doubt concerning the advisability of placing their entire dependence upon spiritual healing keeps many others from accepting its teachings. This makes it apparent that the one prevailing thought today is the avoidance of danger. Consciously or unconsciously a large proportion of our time is spent in the endeavor to prevent calamities, and it is of course entirely right to protect ourselves from unnecessary hazard. Carelessness and neglect are never warrantable, and Christian Science teaches this most emphatically, but the great question at issue is, What constitutes true safety, the highest good?

The ascetic who perched himself upon a column and remained there many years, in order to insure purity and abstinence from temptation, may have accomplished his object, but he failed to benefit mankind. Christ Jesus pursued no such selfish course, but rather one that to human sense was fraught with danger. He fearlessly faced the mobs, the persecution and ridicule of his enemies, that he might insure the safety of his brother men.

Let us consider some of the teachings of Christian Science which will certainly conduce to our real safety. First, we may mention its inculcation that we earnestly study the Scriptures and endeavor to understand more fully their application to our own lives, that the truths of the Bible are as potent today as in the past. Further, to accept the postulate of Christian Science that God is omniscient, omnipresent, and omnipotent, one to whose keeping we have a perfect right to trust our welfare, can but contribute to our present and future safety. Religious history is full of proofs that God is all powerful and an ever-ready help in time of trouble. "I cried unto the Lord with my voice, and he heard me," says the psalmist, who believed that God was within reach of his cry. Christ Jesus' demonstrations over the elements, over sickness, hunger, and "the last enemy," were in evidence of his awakening to a spiritual consciousness of the divine Life. We cannot fully apprehend that God is indeed "our Father" without being impelled to depend upon Him for safety in every emergency. In our exalted moments of spiritual sense we all feel sure that we can safely trust our lives to the divine keeping, but to reach this plane requires much spiritual thought and purity of action on our part.

Yet again, we can safely follow the teaching of Christian Science in maintaining an attitude of thought which will exclude the anticipation of ills and all that tends to hinder spiritual growth; in thinking only good thoughts for those about us; in manifesting cheerfulness and in turning away from all hatred, envy, and passion. If we accept the teachings of the Master in his divinely helpful Sermon on the Mount, we have a right to claim for ourselves the rewards there offered to those who are faithful and true though "persecuted for righteousness' sake." It requires the self-poise that comes as a result of fellowship with Christ to maintain under all circumstances the standard of love therein set forth. To love our enemies; to pray for our persecutors and those who say all manner of evil against us falsely, is to acquire the understanding that hate, envy, and malice can be destroyed by Love, and as time after time the practice of our Lord's teachings results in greater spiritual power and victory over sin and sickness, we learn that Love is the only source of true healing and protection, whether physical or mental.

Moral healing is sure to be followed by physical benefits. Not only in nervous diseases, but in the so-called organic troubles there is need to rely upon spiritual means for safety. Christian Science demonstrations of healing cover every form of known disease, and a careful investigation of these demonstrations will satisfy the most incredulous that divine Mind is able to save unto the uttermost. In view of the unnumbered cures effected in Christian Science, why may not all safely place their physical well-being in the hands of omnipotent Love? No one is called on thus to commit himself to the divine keeping until he has made a thorough and careful investigation for himself and been convinced that divine Science is adequate to his needs. This inquiry, however, should be made without prejudice, if truth is to be discerned.

That general best protects his forces who most carefully reconnoiters and ascertains where he can proceed against the enemy with greatest safety. To close one's eyes to danger would be folly of the grossest sort, and to declare that we are safe without reaching for the outstretched hand of the Saviour, would be equally foolish. By the discernment of error and the knowledge of Truth's power to destroy it, we can realize our greatest safety from sin and sickness. Christian Science holds aloft a banner which leads the way to safety. To the storm-tossed it offers a haven of refuge; to the weary and heavy laden, the yoke that is easy and the burden that is light; to the sick and suffering, healing and comfort, and to those lost in sin a way of escape and eternal salvation.

COURTESY.

WINIFRED STANTON.

ST. PAUL admonishes us: "Let your speech be always with grace, seasoned with salt, that ye may know how ye ought to answer every man." In studying the life and works of our Master, we can but notice in all his acts the extreme courtesy shown to all with whom he came in contact. Now this word courtesy has a much broader meaning than many imagine; kindness, goodness, tenderness, gentleness, are all synonyms for courtesy. Webster describes it as "a desire to please others by studiously avoiding whatever might give them pain;" in other words, it is the putting into practice of the golden rule.

Our Master never forgot the human need of those around him. In the fourth chapter of Mark's Gospel we read that, notwithstanding the fact that Jesus had been teaching his disciples all day, when even was come and a storm arose they were afraid; but the Master first calmed their fear,

Digitized by Google

by stilling the tempest, before he rebuked their want of faith. Again, in the cleansing of the leper, we know that no physical touch was necessary to heal the disease, but in that way the Master showed his sympathy for the man, who because of his uncleanness was debarred from all contact with others.

In the feeding of the multitude, in the hand stretched out to Peter when he was sinking beneath the wave; in fact, all through the Gospels, we see how quick our Master was to meet the smallest need of those around him, and should not we, as Christian Scientists, strive in our daily life to show those little acts of courtesy and kindness for which humanity is hungering. Thus we shall let our "speech be always with grace," and perceive just how we "ought to answer every man."

Are we tempted sometimes to think we are too busy to show some little courtesy, or to perform some little act of kindness and consideration, which would perhaps be the means of helping a struggling brother to realize that we are trying to do unto others as we would have them do to us? We all know that Christian Scientists seldom have time for hospitality in the ordinary sense of the word, but the genuine Christian Scientist is never too busy to offer the word of explanation and of loving helpful interest.

If we turn to the tenth chapter of Luke's Gospel, we find a very forcible lesson on this subject in the parable of the good Samaritan, and again, in the eleventh chapter, in the story of the man who went to his friend at midnight to borrow bread. It were well for us to remember hourly the words of the church tenet which bid us "watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

THE ANGEL GUARDIAN.

ADA J. MILLER.

WATCHMEN, guards, policemen, safes, safety deposit boxes, locks that defy the intruder, laws to protect, courts, lawyers, judges, justices of the supreme court,—all these suggest the care with which mortal mind protects its varied treasures, and rightly protects them, so long as universal brotherhood is an abstract idea rather than a demonstrated fact; so long as mankind believe in power and good apart from omnipotent power and impartial good.

This care in regard to material treasure stands in marked contrast to the general lack of care in regard to the protection of the real treasure-house—our consciousness. Blashfield's famous picture, "The Angel with the Flaming Sword," comes before thought with a deep significance, in view of the scientific interpretation of angel and of sword. This angel that challenges all which seeks entrance, and thus protects our consciousness, is the idea of Love's allness and omnipotence. With this guardian we are safe and our treasure-house is undisturbed. But without this protection, with door unguarded, our consciousness may be desecrated and despoiled of its treasures of peace, joy, and harmony. We then have needless work in restoring and cleansing—work that might easily have been avoided had we but steadfastly kept at the door of thought this angel with the flaming sword.

When the full tide sank back into the sea,
Leaving the beach so white and clear and free,
'Twas then I saw the way to find heart-rest
From all the ills that doth so sorely test!
In quietness I turn, dear Christ, to thee
To ask what is the Father's law for me.

ELIZABETH MALLORY.

SELECTED ARTICLES.

[Alfred Farlow in *Boston Transcript.*]

In an article entitled "Religion and Riches," which appeared in your issue of Nov. 29, I find the following statement: "The vast accumulation of money and power in the hands of the controllers of The Mother Church must offer a constant temptation to the selfish, ambitious, and worldly-minded inside and outside of the organization." This declaration has no special application to the Christian Science church. It could be applied with equal propriety to any other institution, religious or secular. The Christian conduct of any religious body must depend upon the moral stamina of its individual members. In the business world it is generally understood that the stability of a corporation depends upon the honesty of its officials. The Christian Science church, like all other denominations, will be conducted in a wise and Christian manner so long as those in charge of its affairs are willing to be Christian, willing to be governed by divine wisdom.

While the financial power of the Christian Science church has been largely exaggerated, it is nevertheless true that the members of this denomination are liberal givers. This is not abnormal, for even in the religious world one naturally desires to have value received, to place his money where it will really accomplish something. Every beneficiary of Christian Science is firmly convinced that the money spent in the promulgation and propagation of his religion is not spent in vain. He is also convinced that, since Christian Science has afforded him added health and strength, and the consequent ability to earn money, one of his first duties is to take good care of the Cause which has so abundantly cared for him.

It is said that Christian Scientists "have abolished the camel and the needle's eye from their ritual. Poverty is an 'error' for which men can be treated; and we are told that 'demonstrations' of its curability are abundant." It is not the teaching of Christian Science that every individual may be made rich through Christian Science treatment, although it is expected that under divine provision one will have what he really needs for his spiritual welfare, and that his actual wants in the material will be supplied as a consequence. Christian Science is in strict accord with the Scriptural teaching. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Mortals in their limited understanding of their own needs may desire riches, although in the sight of supreme intelligence it may be better that they should have even less than they now have.

Divine Providence cares primarily for our spiritual wants and never mistakes in judgment. A Christian Scientist cannot consistently ask for specific material things. It is his duty to seek first the kingdom of God, and then to take whatever follows in the material as a legitimate consequence. Christian Science clarifies the mentality of the individual. It gives him keener foresight and better judgment, and thus enhances his business capacity. Whatsoever we do in the light and under the guidance of Truth and Love will be rightly done, and we shall be entitled to prosperity in return therefor. No benefits can come through Christian Science except as a result of improved spirituality. Thus our readers may note that poverty is not always considered an "error" by a Christian Scientist. It may be just what the individual needs. On the other hand, riches may not always be a God-ordained benefit. Neither may the fact that one does not become rich always be taken as evidence of a lack of "demonstration."

We are very kindly and generously admonished that we "should remember that the special apostle who acted as treasurer for the little band has not borne a very good financial reputation." This is quite true, but the point is

Digitized by Google

quite beside the question. There is no more authority for affirming that it was unchristian for the disciples to have a bag of money because Judas was its bearer, than there is to suppose that it was improper for Jesus Christ to have a following because Judas was one of the company. The fact still remains that the plan was our Lord's, and that he and the apostles had money for their own use and money to spare. Furthermore, the Master declared, "The laborer is worthy of his hire." He advised his disciples that it was not necessary for them to wait until they were financially strong before venturing out upon their mission, but that they might go out empty-handed, and would receive sufficient provision. He afterward required them to give a report, inquiring, "Lacked ye any thing?" and they replied in the negative. They probably did not become rich, but they evidently had plenty. However, riches are oftentimes helpful if obtained in a legitimate manner and rightfully used.

With the question as to what may happen to the Christian Science church if perchance something else should happen to it, we have no interest. The Christian Science church is well cared for today, and it confidently rests on the Scriptural admonition, "Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof." While Mrs. Eddy has shown herself to be a leader of marked wisdom and executive ability, one of her most important duties is to help her church to such an advanced position as will dispense with the necessity of personal leadership.

[W. E. Fell in *Yorkshire* (Eng.) *Post.*]

Christian Scientists know that matter is a thing of thought wrongly conceived, and as such is under the control of right thinking, in the exact ratio of our spiritual understanding of this momentous fact. Jesus taught and demonstrated his understanding of this Science when he turned water into wine, walked on the waves, multiplied the loaves and fishes, healed the sick and raised the dead.

Christians should be alert to every fresh unfoldment of truth. Since Jesus did these things, and, moreover, declared that "he that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," his followers should not treat the Christian Science attitude lightly, since it is a matter of the gravest import that so momentous a truth should again be manifest in the demonstration of healing and reformation. Christian Science in the course of time must infallibly destroy all sin, sickness, and disease, and will finally vanquish that "last enemy to be overcome," otherwise the promises of the Bible are not worth the paper they are written upon.

"Verily I say unto you, If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you." That was Jesus' concept of matter.

[William E. Brown in *Salinas* (Cal.) *Journal.*]

The conclusion that God must have a face in order to "see him face to face" is an illustration of literal interpretation. The Bible Encyclopedia makes the following interesting statement regarding the word "face": "When applied to the Almighty it denotes such a complete manifestation of the divine presence . . . as was equivalent, in the vividness of the impression, to the seeing of a fellow-creature 'face to face.' The 'face of God' therefore, denotes in Scripture, any thing or manner by which God is wont to manifest himself to man." In view of this explanation it will be seen that to "see him face to face" is to become conscious of His presence and power.

It was Jesus whose hands bore the prints of the nails. Our questioner has confounded God with Jesus, who declared that he was not God but the Son of God. It will be recalled that when the rich young man addressed Jesus as "Good Master," he was rebuked in the words, "Why callest thou me good? there is none good but one, that is, God." In one of his discourses with his disciples Jesus said, "I go unto the Father: for my Father is greater than I."

At this juncture it may be asked what is meant by Jesus' statement, "I and my Father are one." By this Jesus declared that he was in perfect accord with the Father, forever executing His will. In one of Paul's epistles it is recorded that "all Scripture is given by inspiration of God." Consequently it requires inspiration to understand it spiritually. When the Bible is so interpreted, the ambiguity caused by literal interpretation disappears.

[Olcott Haskell in *Oakland* (Cal.) *Enquirer.*]

In order to answer the question as to why Christian Science treatment cannot be used to injure as well as to bless, it will first be necessary to define in what this treatment consists. It is a turning to God for help with a pure desire to see all things as He made them and sees them —to reflect in thought and deed only the wholly good will of our heavenly Father. It is prayer in which the thought of petition has, through a consciousness of God's ever-presence, been replaced by the joy of realization. Such being its nature, it is evident that Christian Science treatment (or "prayer"), whether for those who are present or those who are absent, cannot do harm.

Every Christian believes in the goodness and omnipotence of God, also that prayer to God is a potent factor in bringing good into human experience. Then it should not be thought extravagant or dangerous to claim that God is as potent and willing to save from sickness and sin now as He was in the days of Jesus and his disciples. Christian Science is the science of living which was taught and practised by Christ Jesus, and if in our day the sinful thoughts of the human mind are uncovered and cast out by its teaching, it should be remembered that this was also the Master's method of purifying human consciousness.

Should a Christian Scientist desire to accomplish evil, he could not effect such a purpose through prayer to God, and would therefore at the outset have to relinquish his hold upon omnipotence. Thus shorn of power he would fall to the level of those who seek to use erring human will, which use is condemned in the teachings of Christian Science. By explaining right action and instructing men how to recognize the divine Mind as the only power, this Science frees men from the supposed influence of other human minds, from hypnotic suggestion, and from all that would oppose their individuality and rightful freedom of action.

Every Christian Scientist appreciates the generous motives which prompt men to give liberally. He also recognizes that the most efficient preaching of the gospel is not accomplished by sermons or the distribution of books but by the illustration of its power in his life.

[Editorial in *Porterville* (Cal.) *Messenger.*]

There has been much adverse criticism of late in the public press relating to Christian Science. Admitting at the outset that we are not Scientists, we have small sympathy with the greater part of the criticism which has been brought to bear in recent discussion against the tenets of the faith. We must admit that, theoretically at least, the Scientists have all the best of the argument. Every individual church sect believes firmly in the efficiency of prayer. "Ask, and ye shall receive," that is the basic teaching in every Christian religion. Why then should

Digitized by Google

we deny that if we ask to be freed from disease, there is a certainty that we will be relieved, if the petition be voiced with sincerity? If we are Christians, we believe in the miracles. What reason have we for believing that the day of miracles is past? Villification and misrepresentation never yet injured any individual or any belief. There is nothing in the world which pays better interest on the investment than open-minded generosity toward those who believe and act a little differently than in accord with our own preconceived ideas as to right and wrong. Crying "bosh" and "humbug" is merely a lazy way of getting out of honest investigation.

[Frederick Dixon in *Jersey* (Channel Islands) *Leader.*]

As a matter of fact the use of will-power is absolutely antithetical to all Christian Science treatment. Will-power is in the nature of things an exercise of the human will, and as it is obvious that the human will may be exerted either for good or evil, it follows that the only healing which could result from the exercise of it would be in the nature of that which is described in Genesis as the fruit of the tree of knowledge of good and evil.

Jesus himself put the same lesson somewhat differently: A house, he said, divided against itself cannot stand. Now will-power is just such a house, and the moment the will is weakened by suffering or sin the effects proceeding from it fail to stand. "But," continued Jesus, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God, and with it the peace of God which passeth all understanding, never came to any man by an exercise of will-power. They come in proportion as the human will is laid down, exactly in proportion as the carnal mind dies and man lets that Mind be in him which was also in Christ Jesus. It is this which Jesus described as the effort to know the truth which would free the world, and it is because this truth is absolute that the demonstration of it is necessarily scientific. The miracle was the demonstration to humanity of the truth contained in the gospel, and that this truth could be demonstrated by those who grasped it, in any age, is proved by the fact that Jesus himself declared, "He that believeth on me, the works that I do shall he do also."

To gain this knowledge of the truth it is necessary to walk as closely as possible in the footsteps of Christ. This is why Mrs. Eddy has written, on page 366 of Science and Health, "In order to cure his patient, the metaphysician must first cast moral evils out of himself and thus attain the spiritual freedom which will enable him to cast physical evils out of his patient."

[Robert G. Henderson in *Lake Charles* (La.) *American.*]

Our critic is mistaken in his assertion that "Christian Scientists need no Saviour, for they do not sin, according to their belief." No one knows better than the Christian Scientist that all humanity needs a Saviour. Mrs. Eddy says in Science and Health (p. 345), "Anybody, who is able to perceive the incongruity between God's idea and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam." Christian Scientists do not claim that they, as mortals, do not belong to the "sinning race of Adam," needing salvation from sin and sickness.

Again, our critic says, "Christian Science is not the good work of God, for it does not take sinners from sin and lead them to the eternal light of God." Yet this is just what Christian Science is doing. He also says, "The adherents of Christian Science believe in an impersonal God." The fact is that they believe in an incorporeal God. They accept the Bible teaching that "God is a Spirit: and they that worship him must worship him in spirit and in truth." This does not deprive them of "a God to pray to." On the contrary, Christian Scientists are taught to "pray without ceasing."

This clergyman further says, "They do not know what Mrs. Eddy is teaching, or they would turn down Christian Science and go to the church of God to be saved." Does his "church of God" save from sickness as well as from sin, as Jesus commanded his followers to do? There are judges, lawyers, teachers, doctors, college professors, and clergymen in the ranks of Christian Science, who have given careful and prayerful study to its teachings; who have been healed of all manner of sickness and helped morally and spiritually; and who have left the orthodox churches of which they were members only after being thoroughly convinced that Christian Science is the religion of Christ Jesus. Does our critic think they were all so ignorant or careless as not to know "what Mrs. Eddy is teaching"? "By their fruits ye shall know them."

[R. Stanhope Easterday in *Logansport* (Ind.) *Pharos.*]

Had our critic quoted in full what Mrs. Eddy actually says about "natural science," an entirely different view would have been deduced. The quotation should have read, "*Natural science,* as it is commonly called," etc., and if her full statement, with the correct setting of the context, had been given, it would have made clear her legitimate protest against "mere inferences drawn from material premises" (Science and Health, p. 274). Our Lord's utter eschewing of so-called material laws and physical forces, in the face of his insistence, "I am not come to destroy [the law], but to fulfil;" "I do always the things that please Him [the Father]," and his sweeping declaration that "the flesh profiteth nothing," substantiate the Christian Science insistence that so-called material science, or so-called knowledge, based only upon such an unstable foundation as "profitless matter," does not express the Science of true being.

Your readers will now be interested to know just what Christian Science does teach on the subject of scientific research and general education, and that it conduces in no sense to a "semi-comatose condition." Briefly stated and far more forcefully than in any paraphrase by the writer, Mrs. Eddy's conception of "useful knowledge" is in these words on page 195 of Science and Health: "Through astronomy, natural history, chemistry, music, mathematics, thought passes naturally from effect back to cause. Academics of the right sort are requisite. Observation, invention, study, and original thought are expansive and should promote the growth of mortal mind out of itself, out of all that is mortal. It is the tangled barbarisms of learning which we deplore,—the mere dogma, the speculative theory, the nauseous fiction."

[James Phelps in *La Crosse* (Wis.) *Leader-Press.*]

The basic truth of Christian Science is that God is Spirit, and that man is made in His image and likeness; that God, Spirit, created all; therefore, all is Spirit and spiritual. This, as one can readily see, involves the reversal of the testimony of the physical senses. The Christian religion has no basis whatever if the testimony of the physical senses is valid, for if this testimony is to be depended upon, the immaculate conception is ruled out of the question, the marvelous works of Christ Jesus, the apostles and prophets, are fiction, the resurrection and ascension mere figments of a disordered brain, and immortality a myth. Christ Jesus said, "Whosoever liveth and believeth in me shall never die," and St. Paul declares that Christ Jesus "hath abolished death, and hath brought life and immortality to light;" yet the apostles and St. Paul are dead, according to the testimony of the physical senses, and it cannot be disputed that the eleven apostles and St. Paul believed in the name of Jesus of Nazareth.

[Editorial in *Daily Chronicle*, London, England.]

G. R. Sims has often—in the intervals of complaining of his liver and his work—complained of the horrors of the morning paper. You prop up the paper against the toast rack and read of murders, disasters, shipwrecks, volcanic explosions, bankruptcies. The paper is full of other people's failures. And you turn the page only to find the dreadful things that may happen to you if you feel a pain in—ah! of course! You feel that pain. The man with a liver who has to live through the day wants the cheerful paper, though he cannot keep off the horrors that are set in front of him.

Well, here comes the paper that steadfastly sets its face to the aspect of cheerfulness. Boston (Mass.) sends us the daily newspaper that contains all the best news of the world, under the title of *The Christian Science Monitor*. And none of the bad news. No hint of disease or failure. Not an advertisement that suggests an ache. A paper that mirrors only the bright side of things. A very good paper to read at breakfast.

[J. M. Jackson in *Toronto* (Ont.) *News*.]

Nowhere does Christian Science teach that sin can be ignored, as your correspondent again infers, and a more careful reading of the text-book would have shown him (p. 29) that Christians "must grapple with sin in themselves and others, and continue this warfare until they have finished their course." To the Christian Scientist, sin exists much in the same manner as darkness does—not as an actual entity, but as the absence, in the one case of light, and in the other of that which is good and true. If sin exists as a positive entity, then it must have been made by God, who made all that was made and declared it good, which places us in the ridiculous position of asserting that sin is good. On the other hand, if sin is God-made, hence eternal, what is the use in a man's trying to overcome it?

As the critic has read the text-book, it will be sufficient to remind him that, far from ignoring the subject of the atonement, Mrs. Eddy has devoted an entire chapter to the elucidation of this subject. With regard to the meaning of the word "atonement," it is possible your correspondent may not be aware that the present generally accepted meaning of this word is by no means its original or true meaning. According to *The Christian Science Monitor* of Jan. 8, 1909. "The verb 'to atone' is simply a later form of the old English 'to one' or 'to unite.' The substantive was originally 'onement,' and was used by Wyclif in this form. In the days of Tyndale and of Coverdale, it still retained its original meaning, as may be seen by a reference to Shakespeare, to Spenser, or to Bishop Hall, nor was it until the year 1611 that its meaning began to be changed to that of propitiation and expiation, in which last sense it is used by Dryden." Mrs. Eddy uses the word in its strictly correct meaning.

[C. R. in London, England, *Daily Chronicle*.]

ON SENTRY.

"Stand porter at the door of thought,"*
No matter how the world is fraught
With evil—thinking makes it so—
And so the world of wrong is wrought.

Out in the wilds I long have fought
With thew and muscle—come to naught—
Disease and sin—thought makes them so—
"Stand porter at the door of thought."

* Science and Health, p. 392.

AMONG THE CHURCHES.

WATERTOWN, S. D.

First Church of Christ, Scientist, of Watertown, has raised the amount necessary to meet all obligations incurred in the building and furnishing of a new church home, and is now ready to dedicate the building free of debt. Nearly $20,000 has been raised for this purpose. The dedication day has not been set, as the church is awaiting the arrival of the pews. These will be here in a short time, and as soon as they arrive and are installed, the dedication plans will be perfected. The Watertown edifice is one of the best church edifices owned by the denomination in the Northwest.—*Public Opinion.*

SALT LAKE CITY, UTAH.

Disincorporation of Second Church of Christ, Scientist, in this city, which has been holding services at the Ladies' Literary Club Building, 20 South Third East street, has been decided upon by its members. At a meeting of the members of First Church held last night [Oct. 28], at its edifice on South Third East street, it was decided to ask the members of First Church living north of First South street, 134 in number, to withdraw from First Church and, uniting with the members of Second Church living north of First South street, to incorporate a new Second Church.

This step was deemed necessary by both churches to provide adequate accommodations for the growing congregations. And it is proposed to make the changes as soon as the necessary thirty days' notice of this incorporation can be given. This is an entirely harmonious arrangement by the two churches. The intention is to build a modern Christian Science church for the new Second Church in the near future, both churches working together for this purpose. First Church started a building fund at its meeting last night for the purchase of a site for the new church.

Evening Telegram.

KIRKWOOD, MO.

Twenty members of First Church of Christ, Scientist, in St. Louis, withdrew from that church in October, 1906, and organized First Church of Christ, Scientist, in Kirkwood, to meet the growing needs of the western suburbs of St. Louis. Choral Hall was leased temporarily until a church could be built, a lot (150 x 314 feet) having been purchased and plans made for a brick structure to cost about thirty-five thousand dollars. Ground was broken July 22, 1909, and the corner-stone was laid Sept. 11. The first floor, consisting of Sunday School room, reading-rooms, and parlors, has been completed and furnished at a cost of about sixteen thousand five hundred dollars. The first service was held in the Sunday School room Sunday Dec. 5, and was followed by a lecture in the afternoon by Bliss Knapp. The present seating capacity is four hundred. A temporary roof has been put on, so constructed that the main auditorium can be built without interfering with the use of the rooms now completed. It is expected that work will be begun upon the main auditorium during the year 1910.—*Correspondence.*

A man who loves and serves his neighbor, let him speak ever so many words against the Son of man, is not sinning against the Holy Ghost. He is still open to the sacred influence—the virtue which is ever going forth from God to heal.—GEORGE MACDONALD.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TRUE GRATITUDE.

TRUE gratitude has been well styled the natural response of the heart to kindness, and carries with it a desire to show appreciation for the favor received by requital if possible. Indeed we are apt to be severe in our condemnation of those who are always ready to accept a favor, but calmly ignore any obligation thereby incurred. The nine lepers who went their way unmindful of the wonderful gift that they had received, are often cited as typical of the worst sort of ingratitude. It is right and commendable, therefore, that those who have been healed in Christian Science of their sicknesses or sins should be truly grateful for the favor thus bestowed upon them.

It sometimes happens, however, that the gratitude of the person healed through Christian Science finds expression in an expensive gift to the one through whom the healing power of Truth has been demonstrated, and later, if the relationship of practitioner and patient is merged into that of teacher and student, further favors are tendered and accepted, thus laying the foundation for an abnormal and undesirable relationship built upon the shifting sands of personality, instead of the rock, Christ.

Probably no temptation which comes to the practitioner and teacher of Christian Science is more subtle than is this one, because it comes in the guise of good, and in a most flattering and pleasant form; but it is not in the history of human nature that such a relationship can continue without interruption, or that the recipient will cease to expect these favors to continue and the giver to expect some special consideration in return. If the recipient fully succumbs to this temptation, he soon will find himself not only expecting to receive gifts, more or less expensive, from his patients and students, but practically to demand them, in his own thought at least, as a right.

All this comes about because the one who has been healed has failed to recognize, or the practitioner has neglected to direct his attention to, the true source of his healing. St. James says, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights." It is to God that the glory and honor are due; the practitioner is but the channel for the healing stream that ever flows from the divine source. The Master always sought to turn the thought of those whom he healed away from himself to the divine power of which he declared himself but the instrument: "The Father that dwelleth in me, he doeth the works."

The really sensible Christian Scientist will not be the victim of this temptation, because he will not start on the road which leads to it, neither will he be the victim of the kindred temptation to do business with his patients. The law rightfully looks with suspicion upon business transactions between persons in such confidential relationship, and no honest or sensible man will allow himself to be placed in a position in which his motives and acts can reasonably be questioned.

The duty of Christian Science practitioners is to heal the sick and sinful who apply to them for help, and the duty of a teacher is so to equip his students that they will be able to do this. The fees for both these services are reasonable, and at the same time ample, and those who are engaged in either branch of work will do well to let the lawful compensation suffice. Nor need the patient or student feel that he is thereby cut off from a proper and practical outlet for the gratitude with which at times his heart seems to overflow. If practitioner and teacher have dealt faithfully by him, he in turn is able to minister to others, and he has but to look about him to find numberless opportunities to lead the sick and the sinning to the healing fountain that is made free to all in Christian Science. So doing, he will be seeking Christ, Truth, as our wise Leader advises, "from the summit of devout consecration, with the oil of gladness and the perfume of *gratitude*" (Science and Health, p. 367).

ARCHIBALD MCLELLAN.

OUR EXPERIENCE MEETINGS.

IN Mark's Gospel we read that Jesus said to a man who had been wonderfully healed by him, "Go home to thy friends, and tell them how great things the Lord hath done for thee, and hath had compassion on thee." Those who are healed at the present time through divine power, as made known in Christian Science, are usually ready to tell their friends of their healing, but they find it a much more difficult matter to speak of it at the Wednesday evening meeting where others are assembled, yet this very thing is a part of our services in which all are expected to participate. A number of years ago our revered Leader distinctly stated that no collections were to be taken at the experience meetings, but that instead all were to give and to take of the spiritual blessings dispensed at "this feast and flow of Soul." She added: "Ask them to bring what they possess of love and light to help leaven your loaf and replenish your scanty store. Then, after presenting the various offerings, and one after another has opened his lips to discourse and distribute what God has given him of experience, hope, faith, and understanding, gather up the fragments, and count the baskets full of accessions to your love, and see that nothing has been lost" (Miscellaneous Writings, p. 149).

This message to The Mother Church was of inestimable value to all its branches, and it would help us as individual members if we were to study it betimes. There can be no question that the first duty of each is to give of what he has; his next is to receive with thankfulness what others have to offer, and it may be just as difficult to do the one thing as the other. Most of us know by experience how hard it seemed at first to express at all adequately our sense of the blessings we had received, and we usually resumed our seats with a feeling that we had failed to tell the very things which we most desired to say. A lady who had been wonderfully healed had for months desired to tell of this at the meeting, but lacked courage to speak in public. Finally, she rose one night and said, "I am very thankful for Christian Science;" then sat down, wiping away the tears which came because her offering was so small. But the channel had been opened, and later her gratitude flowed forth freely.

Another lady once brought some friends who were strangers to Christian Science to a Wednesday evening meeting at The Mother Church. This was before the extension was built, and she could not get a seat with these friends, and did not find them at the close of the meeting, which she had thought less interesting than usual. Some weeks later, she was called up by one of these friends, who said she had not missed a service since, and was studying Science and Health and demonstrating the healing power of Truth.

It is true that each testimony should be an offering of thankfulness to divine Love, and it should be neither "blind" nor "lame" (to quote from Malachi), but it is also

Digitized by Google

true that the listener has something to do. Christ Jesus once said, "Take heed therefore how ye hear: for whosoever hath, to him shall be given." We can ourselves conform to a high standard of directness, simplicity, and sincerity in our remarks, and we should expect no less in return. If one strays into forbidden paths by giving out mere theories, or misstatements of Science, the Reader may kindly and tactfully call him back to the strait and narrow path of scientific demonstration,—perchance the giving of thanks "for victory over a single sin" (Science and Health, p. 568), and who can tell how great may be its influence in cheering some other on the way to complete triumph over all that is unlike God!

ANNIE M. KNOTT.

ERROR'S EFFECT AND END.

IT has been very constantly preached, and very generally believed, that the suffering which follows wrong-doing is a divine provision, an expression of what the Old Testament writers called "the vengeance of the Lord." Present-day theology would name it the means by which God is trying to make plain to men the unvarying authority of law and to establish in them those elements of character which only the heroic endurance of pain secures.

Christian Science presents an altogether different view, in its teaching that the infinite good does not legislate for evil; that Truth has no use for error, and that the assumption that God has called sin and sorrow, suffering and death into being, for the consummation of a gracious purpose, is entirely out of keeping with the divine nature and with the teaching of Christ Jesus. It declares that distress is the invariable and inevitable outcome of disobedience to the demands of spiritual being, and that the only word Truth has for error is the word of annihilation: "Thou shalt surely die."

The anthropomorphic sense of Deity to which the Old Testament writers give frequent expression in their report of God's asserted smiting of evil-doers hip and thigh, still holds place in Christian thought. Thus, as the averred agent of divine justice, Elijah is excused for his slaughter of the priests of Baal, and Peter's assertedly death-dealing words to Ananias and Sapphira are looked upon as in keeping with his authority as the exponent of divine law. This philosophy finds a place in its scheme of divine government for the catastrophes of flood and earthquake, of heredity and contagion, and it therefore lends itself with little protest to militant means for the enforcement of law and the achievement of good ends.

Jesus unequivocally rebuked this teaching, in his counsel that when one cheek had been smitten, his followers were to turn the other; that they were to love their enemies and do good to them that hated them and despitefully used them. In Christian Science it is seen that while Truth alone destroys error, error is nevertheless self-destructive. To human sense the *self* of evil is its objectification as personality, material substance, order, etc., in all of which means of expression it is constantly precipitating change, decay, disease, and death. The mortal-sense self of evil (and there is no other), every person and every thing evil dominates, becomes subject to disease and death; while evil itself, the lie and liar, is annihilated by Truth and Love. "God with us," the Christ-coming in human consciousness, is its forever end.

From this point of view it is seen that Elijah in his revengeful act allied himself in so far with a false sense of the divine nature and government, and that he immediately began to feel the penalty pertaining to his false belief. There may be those who think of Peter in the same way in connection with the incident of Ananias and Sapphira, but it must be noted that, as in the case of Paul and Elymas the sorcerer, Peter simply uncovered the colossal offense of these two, and showed them that they had not "lied unto men, but unto God." It would seem that this sudden awakening to the enormity of his evil resulted in Ananias' falling down and giving up the ghost, an event that proved the self-destructiveness of evil; that brought "fear upon all," and that may have startled and astonished Peter himself. In any case, it seems to have given ground for the apostle's anticipation of the same experience for Sapphira, when he found that she was an equal sharer in the offense.

Thus interpreted the incident is a striking illustration of the power of Truth to uncover the exceeding sinfulness of sin, and of the tendency of evil to bring disaster and death upon all that is identified with it. In Science and Health (pp. 186, 542), Mrs. Eddy has said: "The only power of evil is to destroy itself." "Let Truth uncover and destroy error in God's own way."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

New York, N. Y., Dec. 11, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dearly Beloved Leader:—Let me thank you deeply for the irresistible progress of our beloved Cause. It has been realized that naught can check the orderly and harmonious establishment of the stately operations of this world-movement, nor prevent the inevitable recognition and acceptance of the true, pure teachings of Christian Science as revealed to this age by you. The latest sign is one which has moved the world to revise favorably its estimate of Christian Science and its divine mission. It has been moved to note more earnestly its perfect ideals, its righteous government, its just administration, its enduring vitality, its unexampled prosperity, and its universal adoption, and thought seems now prepared for the next larger unfoldment.

Christian Scientists in this field are particularly indebted to you and to our brave, consecrated Board of Directors, and expressions of perfect confidence and love are heard on all sides. Never have the prospects and opportunities for large accomplishment through united work been so near the laborers in this field, and we pray that our long-cherished desires may now soon be realized in practical results which will obliterate an unfavorable showing in the past. As of the Magdalen of old, it may be said that much has been forgiven, therefore much should be our love; and as to this test, our fruits must prove our sincerity.

Humbly your student,

JOHN C. LATHROP.

Brooklyn, N. Y., Dec. 8, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Friend:—The thought of trespassing upon your time has deterred me for many months from telling you of my deep and reverent appreciation of the great and glorious work you have done and are doing for mankind. The thousands who have been healed in Christian Science evidence the fact that "Science and Health with Key to the Scriptures" is a revelation of divine Mind, speaking through your illumined thought, and not a creation of the human mind. The dominant tone which reverberates throughout this text-book, and which has directed and protected you in your self-imposed task of liberating mankind from the bondage of material beliefs, is Love; and how beautiful and wondrous was the manifestation of its omnipotence, as shown in your letter to a branch church in New York, several weeks ago,—beautiful in its simplicity and wondrous as a demonstration unheard of since the days of Jesus. For the past two years, as First Reader of one of our branch churches, I have had many opportunities for proving the immanence of divine Love

Digitized by Google

in stilling "the troubled waters," and my heart goes out to you in loving gratitude for the enlarged understanding of God as a "very present help in trouble."

Lovingly your student's student,

HARVEY M. FERRIS.

Boston, Mass., Dec. 13, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It would be a great pleasure to write you often, but pressing duties seem to render this difficult and I know that you expect of each one of us faithfulness in serving the Cause of Christian Science above all else. I need hardly say that I have thought of you very often of late. Next to yourself I love your students,—those whom I came to know in your classes and the meetings of your College Association, and I have always been saddened when any one of these has failed to meet the high demands of Christian Science. I have, however, seen very clearly that the teachings of Christian Science must be kept pure from any taint of personal opinion and high above the dictates of the human will, and each disciplinary experience has recalled to me the Master's words, "Watch ye therefore"!

For one thing I am deeply thankful, and that is for the privilege of knowing well the men whose duty it is to watch over the interests of our church and Cause, and I am certain that "neither animosity nor mere personal attachment" could influence their decisions on any question. Not only are they men of the highest Christian character, but also of sound judgment and ethical clear-sightedness, with broad tolerance on every issue which does not affect the absolute demands of Principle. All this you know, but you may be pleased to know that one of your older students esteems highly those whom you have chosen to serve our Cause.

Many times each day do I pause for a moment to thank God with a full heart for what He is doing for humanity through Christian Science, especially as I read the testimonies of healing. I thank Him, too, that you have been sustained up to this hour, when the world is surely awaking to the truth which you have been declaring for long years, and when the best everywhere are stretching out their hands for what divine Love offers through your teachings.

With devoted affection and gratitude,

Your student,

ANNIE M. KNOTT.

Richmond, Va., Dec. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It would have brought joy to your heart, I am sure, if you could have heard the many beautiful testimonies given in our little church Thanksgiving day. There were fifty-two testimonies in the thirty minutes allowed, all breathing forth praise and thanksgiving to God for the many blessings received through Christian Science. St. John's prophecy is coming to pass,—the earth is helping the woman and "the great red dragon" is being destroyed "by the word of their testimony." Thanks be to God, and to you His messenger, for the "pearl of great price"—Christian Science.

Reverently and lovingly yours,

HELEN L. YOUNGER.

New York, N. Y., Dec. 7, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—No oasis in the desert of Sahara ever provided more relief to the weary traveler than has come to many of your followers through the establishment of a Christian Science reading-room in the heart of the financial district of New York. I take it upon myself to voice the sentiment of those who daily enjoy the opportunity to study here the Lesson-Sermon or read the literature provided, that for this one feature alone we owe you boundless gratitude. Christian Scientists who have their respective vocations to follow between the Battery and City Hall have found the reading-room at Fulton street and Broadway a resting-place where materialism would insist upon and acquire supreme command, but for the fact that the leavening influence of your love and labor has made it possible to know that divine inspiration is the only power.

Within a few steps of where thousands of people daily reach this city from other points,—the immense Hudson Terminal,—to many a traveler this reading-room must have given comfort and understanding. The wisdom of your every move—*The Christian Science Monitor* assuredly a telling example of enterprise and foresight—is benefiting us daily and hourly. And then, above it all, the text-book, which everywhere and at all times supplies the spiritual need if we but seek it earnestly. As I write, undoubtedly on trains leading to suburban homes Christian Scientists are delving into that beloved volume, and as the shadow of a day's activities hover all around, the brightness of that illuminated book makes ready for another day, strengthened in advance through that immortal sentence which says that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii.).

In grateful acknowledgment,

JULIUS MORITZEN.

New Rochelle, N. Y., Dec. 8, 1909.

Beloved Leader:—At the semiannual business meeting of Second Church of Christ, Scientist, of New Rochelle, N. Y., held last night, the following resolution was adopted:—

"*Resolved:* That we, the members of Second Church of Christ, Scientist, of New Rochelle, N. Y., dissolve our church organization, as we believe that by so doing, at this time, the Cause of Christian Science will be benefited in this field of work."

The firm, just, yet kindly stand taken by the Board of Directors of our Mother Church, in correcting false teachings and practices, together with the loving advice contained in your letter of Nov. 13 to First Church of Christ, Scientist, of New York, and the effect it produced, have impelled us to take this step. Our congregation will, without an exception I believe, attend services at First Church of Christ, Scientist, of New Rochelle, thus bringing out unity among the workers in this field. Your words in "No and Yes" (p. 7), "Every loving sacrifice for the good of others is known to God, and the wrath of man cannot hide it from Him," have been with me for several days.

I hope this evidence of growth on the part of some of your followers may rejoice your heart.

Gratefully yours,

W. C. CROSIER.

San Luis Obispo, Cal., Dec. 2, 1909.

Mrs. Mary Baker Eddy.

Dear Leader:—We rejoice to inform you that a little band of your followers gathered on the evening of Nov. 24 and organized the Christian Science Society of San Luis Obispo, Cal. We unanimously send our expression of love and greetings to you, the Discoverer of Christian Science, and our heartfelt gratitude for your ceaseless labor in behalf of mankind, and for the loving wisdom which has protected and made possible the growth and prosperity of this most blessed Cause. We shall strive to follow you,—to serve divine Love as you have followed Christ, and to let that Mind be in us which was in our Lord Jesus Christ; and may we be worthy of the name Christian Scientists, by sowing the seed and proclaiming this blessed truth to the world. We are grateful to divine Love for leading us "in the paths of righteousness," and to you, beloved Leader, for giving us the privilege of forming this society.

Your loyal followers,

Christian Science Society, San Luis Obispo, Cal.

A. BAUER, *Clerk.*

THE LECTURES.

CONCORD, N. H.

The Christian Science church was well filled Sunday evening [Dec. 5] for the lecture by the Hon. Clarence A. Buskirk of St. Louis, Mo., among Mr. Buskirk's hearers being several Christian Scientists from Manchester and Boston. The speaker gave a clear exposition of the teachings of Christian Science and his words were given close attention. Judge James W. Remick introduced Mr. Buskirk in these words:—

I am glad to stand here this evening in this beautiful temple, the gift of one of the world's most remarkable women to the Cause to which she has devoted her life and in a sense to the city she loves, and standing here present a distinguished exponent of the religious philosophy known as Christian Science. Whatever may be said for or against this philosophy, it has been accepted by hosts of men and women of the highest character and intelligence, and the sweetness of their lives is the best tribute to their religion. Certainly the ideal, that to be spiritually perfect is to be physically well cannot but make for a nobler humanity and a better and happier world.

We do not like to contemplate what the condition of society would be without the influence of the church in the various forms in which it is appealing to the human heart, but from the church as an institution and from religion in its dogmatic aspect we are ever turning to the noble and inspiring example of the Christ. To think as he thought; to feel as he felt; to love as he loved; to pity as he pitied; to forgive as he forgave,—in short, to live as he lived and if necessary to die as he died for truth and justice, is the sum total of religion, and that church, whatever its name and whatever its teaching, which does the most in the years to come to make men in thought and deed like the Master, will be the best church.

The gentleman who will address you is a distinguished member of the profession, to which I happen to belong, and was at one time attorney general of the great state of Indiana. It is with pleasure that I now present the Hon. Clarence A. Buskirk of St. Louis, Mo.

Concord Monitor.

DENVER, COL.

William D. McCrackan, M.A., lectured at the church edifice of First Church of Christ, Scientist, on Thursday and Friday evenings, Nov. 11 and 12. The first evening he was introduced by Judge Morton S. Bailey, associate justice state supreme court, who spoke as follows:—

It is worth noting that we live probably in the most practical age of which there is any history. Such may safely be assumed to be the fact, in so far at least as material matters are concerned. Along commercial, industrial, professional, and educational lines an urgent demand universally obtains for results. Indeed the insistent, uppermost, and prevailing inquiry seems to be, "To what end and to what purpose?"

In a large measure, to this disposition and tendency, which demands practical results generally, doubtless is due the fact that discontent and unrest have arisen respecting religious and spiritual things. The need of a religion, a belief, and a practice which gives immediate returns, and which is not based upon promises, dependent upon death for fulfilment, is noticeably apparent in this practical age and to this practical people. As a people we want, need, and must have a religion, a faith, and a practice which ignores forms and creeds and looks only to the substance of things and brings tangible returns. We need a religion of hope and love and cheer and life, not one of despair and sorrow and doubt and death. We need a faith and practice which makes the bright face, the happy heart, and the contented mind. We need a religion which dispels fear, sickness, and sin, and brings joy, health, and mental repose. We need a faith and practice that puts aside all belief in the existence of evil, that indulges no impure or selfish thought. Then it follows, as a demonstration, that our happiness, our health, our love, and our life is boundless, even as is that of the infinite. Which simply means, that we have found and know the truth, and it has made us free.

By the testimony, oral and written, of thousands of men and women all over the land, whose word on any other subject would be accepted as final, it is declared, and through the example of their lives it is measurably established, that just this sort and kind of religion, faith, and practice has been found and disclosed to the world in Christian Science. Or rather, as I view it, there has been a practical return by this school to the teachings and practices of the lowly Nazarene, so wondrously exemplified by him more than nineteen hundred years ago. From personal observation, and from intimate association with those who in a degree embrace and practise this faith, I am persuaded that the claim is in a large sense true. In any event, the whole subject is worthy the most thoughtful and considerate investigation of those who seek after truth.

On the second evening the lecturer was introduced by Gray Montgomery, state committee on publication, who said in part,—

You have been invited to hear a lecture on Christian Science, a subject of paramount importance to all humanity. Its revival of Christian healing has awakened much public interest and aroused throughout the world a desire to understand its teachings. Founded by a woman with no material means, but possessed of great faith and a magnificent trust in God, Christian Science was first accepted by only a few of the "poor in spirit," the receptive ones in search of healing. Today it has spread over the greater part of the civilized world. The poet, the scholar, the brusque business man and the quiet little mother, have found this truth to be the "balm of Gilead," freeing them from the bondage of sickness, sin, and fear and bringing to them a better understanding of God's unceasing care and love for His children.—*Correspondence.*

LECTURES TO BE DELIVERED.

Beatrice, Neb.—Frank H. Leonard, Paddock Opera House, Dec. 27.
Pasadena, Cal.—William D. McCrackan, M.A., Christian Science Chapel, 8 p.m., Jan. 2.
Eagle Pass, Tex.—William D. McCrackan, M.A., Mesquite Club, 8:30 p.m., Jan. 7.
De Kalb, Ill.—Prof. Hermann S. Hering, Church Edifice, 3rd and Oak streets, 3 p.m., Jan. 9.
Meriden, Conn.—Bliss Knapp, the Auditorium, 3 p.m., Jan. 9.
Beloit, Wis.—Frank H. Leonard, Opera House, 3:15 p.m., Jan. 9.
Galveston, Tex.—William D. McCrackan, M.A., Scottish Rite Cathedral, 3:30 p.m., Jan. 9.
Morrison, Ill.—Prof. Hermann S. Hering, Auditorium, Jan. 10.
Dubuque, Ia.—Prof. Hermann S. Hering, Grand Opera House, Jan. 11.

There is a little trembling prayer,
Which often comes to me;
And winds itself about my heart,
In happy ecstasy—
It is a prayer of gratitude,
For love, and work, and Thee!

GERTRUDE ROGERS.

Digitized by Google

TESTIMONIES OF HEALING.

About six years ago I was compelled, by reason of nervous breakdown, to give up my legal studies and law office work, to both of which I was devoted. I was advised by the physician whom I consulted (one of the best in Edinburgh, Scotland) to try constant change of scene, which I did. This went on for about a year, when—no improvement being manifest in my condition—I was advised to try outdoor work. This advice was followed, and I spent my evenings in the pursuit of my favorite studies. The best in literature were my constant companions, my reading being deep and thoughtful rather than extensive; my favorite authors then occupying the place in my regard which the greatest of all books, the Bible and Science and Health, now hold.

My efforts at this time were rewarded in a degree, but as it seemed I would not be able to undertake office work again, I decided, about four years ago, to go to Canada. I did so, and engaged in farm work, quietly pursuing my studies in the very limited time at my disposal. Three winters ago, after a summer of hard work and the strenuous work of the threshing season, I went to stay with a friend who since early boyhood had been my bosom companion, remaining there the greater part of the winter, and in February, 1907, went down to Winnipeg to begin work in a law office. I found, however, I had not yet overcome my fears, and thought it wise not to go on with this work when I felt that eventually I would have to give it up.

One day I met a friend from my native town in one of the city banks, where he was employed. After this we met frequently, and together attended an orthodox church, where I heard what seemed to me the best sermons I had ever listened to. In one of these sermons the preacher dealt mainly with Christian Science, and while he had much to say in favor of it, he somewhat illogically did not extend his eulogy to its Discoverer and Founder, Mrs. Eddy. A few days after hearing this particular sermon, I came across a copy of the *Christian Science Sentinel* in the free library of the city, and it struck me as being the purest, clearest, and most helpful literature I had ever read. Later on I became acquainted with the *Journal*, and these I literally devoured, although I sedulously tried not to let any one see what I was reading. I felt sure that I had found the truth, but I wanted to prove what I could of it in a quiet way before saying anything about it.

Noticing the frequent references to the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I proceeded on a voyage of discovery through the most of the bookstores in the city; but the assistants in the various stores could not provide what I wanted. I returned to the library, to get the address of the Christian Science reading-room, and immediately went there. The words of the attendant impressed me very much, and I could see that she had something she was quite sure about. I procured a copy of Science and Health, and that same day returned West to a situation which had been offered me. On the train I opened the text-book of Christian Science for the first time, and I shall never forget the light and the harmony that flooded my consciousness. The stanza from "The Lost Chord" which our Leader quotes on page 18 of her Message to The Mother Church in June, 1900, exactly expresses how I felt:—

> It flooded the crimson twilight
> Like the close of an angel's psalm,
> And it lay on my fevered spirit
> With a touch of infinite calm.

I lived more in a few hours than I had done during half my lifetime—nay, during the whole of it, because the reading of this book gave me an inspiration I never had before. Every hymn, psalm, or piece of poetry that I had ever learned or heard seemed to come back to memory. I could not help thinking, "Truly it is good to be here," but I have since found that after we thus behold the glories in the mount of revelation we have to come down into the valley and prove up; "for, See, saith he, that thou make all things according to the pattern shewed to thee in the mount."

I continued to study Science and Health as well as I could, and the lady in Winnipeg sent me a *Quarterly* and numerous periodicals and helpful letters. She wrote me of a lecture which was to be delivered in Virden, and my friend (before mentioned) and I drove in and heard it. I may here say that he embraced Science as soon as it was presented to him, and thus we are bound by a stronger tie than ever. In fact, we are now living in the same house, working in the same office, and seeking daily to know more of the same God. The next day after the Christian Science lecture, we met the resident Scientists. In a short time I came to Virden to stay. My physical condition at the time I took up Christian Science was very low, and my weight greatly reduced. I had three weeks' treatment, and within the next seven months I gained wonderfully. Living in the atmosphere of clear scientific thought, my initial steps were carefully watched, and I realize gratefully how much I owe to this fortunate beginning.

At a recent business meeting of the local church I was appointed Second Reader, and rejoice in being able thus to express the gratitude I feel. About six months ago I obtained a situation as bookkeeper with a legal firm here, and I owe my position and progress in my work entirely to Christian Science. I have not yet read Science and Health from cover to cover, but I find in it—particularly in the chapter on Genesis—the solution to my daily problems. I have just had a substantial increase in my salary, and conditions have been so far changed as to enable me to give more time to a better class of work. I prize all this, not on account of the material increase, but as one of many demonstrations of the unfailing and ever-operative divine Principle that Christian Science has revealed to me, and as proof of the fact that "growth is the eternal mandate of Mind" (Science and Health, p. 520). Only a life of consecration to Truth can repay the debt of gratitude I owe to God, of whose ever-presence I daily become more conscious, and to our dear Leader, through whom Truth has again been revealed.—PETER B. BIGGINS, Virden, Man.

I am glad to tell what Christian Science has done for me, and I hope that this testimony may meet the eye of some one who has been similarly afflicted (if there be any such), that they may learn there is relief and health even when physicians say there is no hope. About six years ago I had several attacks of severe headache, which culminated in an illness diagnosed by our physician as a serious spinal disease. I was unconscious for many days and the convulsions were very severe. After I began to recover somewhat from this disease, I still suffered from stomach trouble, nervous twitchings, chills, etc. Finally I could not retain even a spoonful of water, although the quantity of different drugs I took each day was appalling.

A change of physicians brought the alarming news that I was in the last stages of a disease of the kidneys. This doctor said that I had but a short time to live, and it was with apparently great reluctance that he took the case. After three weeks' treatment, and consultation with other physicians, he told my father that if there was any special course of treatment he would like to try, he was willing and anxious that it should be resorted to, as his medicine was not helping me. A certain remedy had been recommended to us, and it was decided to try it under this doctor's direction. At first it did help me, and I thought I

Digitized by Google

would be cured, but for three years I had varying degrees of health. Periods when I was able to be about alternated with spells of the most agonizing headaches, followed by convulsions and heart failure. Finally the medicine affected me so seriously that I could no longer take it. My nervous troubles were most peculiar and distressing, as well as the difficulty with my heart. All this time there was bowel trouble to contend with, and often extreme measures had to be employed for relief.

In the spring of 1906 I began to lose strength rapidly. I could neither eat nor sleep and had nervous attacks continually. A friend who had been healed by Christian Science induced me to try it. I yielded only after great persuasion, as I had no faith in it and thought I had grown tired of the struggle for life; but after the first treatment I was able to sit at the table and eat with the family, and that night I slept well. In two weeks' time I was able to go to the home of the practitioner in Oakland for treatment. I continued to improve until the time of the earthquake in April, when my treatment was interrupted for a while; but I have since taken it at intervals, whenever any sign of trouble appeared. I cannot tell how grateful I am for this great healing. I am cured of all kidney trouble; I eat whatever I desire, and no ill effect follows; the bowel trouble has vanished; I sleep peacefully all night; there are no more nervous spells, no heart trouble, no backache. The past years seem like a hideous dream, although I feel that I owe a great debt to the kind physician who cared for me so faithfully on the many occasions when it seemed that I could not live; but I owe a greater debt to Christian Science, which has brought me not only into health, but into the knowledge of Truth and an understanding of the power of divine Love.

ALICE DESIREE MARLIAVE, Berkeley, Cal.

When Christian Science came to my home I was laboring under a heavy burden, one which only those can know who have had a loved one stricken with a terrible affliction—blindness. My husband was rendered perfectly helpless for nearly one year, and his case was considered entirely hopeless from the material standpoint. He began treatment in Christian Science in November, 1901, and was almost entirely healed in one week, although he continued to take treatment for several months.

At this time I did not open wide my door to "this angel visitant" (Science and Health, p. 224). Two years later, I called on *materia medica* for myself. I do not know the name of the disease, but I heard the physician say to the nurse that I was very sick; that he had lost a case similar to mine two weeks before, but as he had been called in time he could bring me out all right. This physician could not, however, even relieve me of pain, so I ventured to try Christian Science as the last resort. I was under its treatment six weeks, as mine proved to be a stubborn case. To mortal sense I continued to fail. One morning when I was alone in my room, the fear of death, with its alarming symptoms, crept into my consciousness. I became speechless and motionless, and was wholly unable to make my condition known to any one.

A few days previous to this experience, the kind practitioner had spoken aloud against the fear of death, etc., and I then wondered what it all meant. It was annoying to me, but something seemed to whisper, "Listen, you will need it all!" The words, "Work out your own salvation," pursued me. I pondered this thought or message of Love, and finally caught the true meaning. At first I whispered the same statements which I had heard the practitioner utter, but it seemed of no avail. When, however, faith became spiritual understanding, its language was plain, and I declared, as did Jacob, "I will not let thee go, except thou bless me." After a struggle for over two hours, I got up, gave thanks to God and called Mrs. Eddy "blessed." When the practitioner came, she found me rejoicing.

My heart is filled with thankfulness too deep for words, for the benefits which have come into my experience through the study and application of Christian Science. I can unhesitatingly say that every statement in "Science and Health with Key to the Scriptures," when earnestly tested, will be found to be verifiable. I pray continually for an understanding heart to carry this offering of love to my people (the negro race). Isaiah says, "And all nations shall flow unto it [the holy mountain]." I give thanks to God, and to our dear Leader, that I have come to know this healing truth.—MRS. PAULINE L. WEBB, Denver, Col.

It is with a heart full of love and gratitude that I give my testimony, trusting that it may help some one else. Both my mother and myself have had many beautiful proofs of how Christian Science, when used as set forth in our text-book, "Science and Health with Key to the Scriptures," will heal not only physical disease, but discord of any kind.

About the first of August, 1908, my right hand was injured. A Christian Science practitioner was called, but still conditions seemed to become worse. After a night of seeming darkness, because of the fear of losing my hand, yet clinging to God as the only power, and knowing that Truth would destroy all that is unlike good, the demonstration was made. In two weeks' time I was able to do my regular duties, and my hand is now perfectly restored. This experience was a great proof to all who knew of the case, that Christian Science does heal.

The spiritual quickening that was gained while going through this experience means a great deal to me. It is such a comfort to know we have something to help in every kind of trouble. It is often the little troubles which annoy us most,—the worries, the unkind and thoughtless words that give us pain and heartaches; but, thanks to Christian Science, a way has been opened by which to overcome all these. I would express my love and gratitude to our Father for this healing truth, and to our beloved and wise Leader, Mrs. Eddy, for giving us the books which help us to understand it.—FLOSSY M. STEVENS, Cincinnati, O.

[Translated from the German.]

I cannot help expressing my gratitude through our periodicals. For many years I suffered with rheumatism, along with other diseases, and various physicians whom I consulted could not help me. Some eight years ago I became acquainted with Christian Science, immediately took treatment, and was healed in a short time of liver complaint of many years' standing, as well as of bilious attacks. At that time I had no special treatment for the rheumatism, and yet the pains grew less. A short time ago I was suddenly taken with a trouble in the joints; I suffered severely with the pain, and was unable to walk. As it seemed difficult for me to overcome the pain, I asked a Christian Scientist to treat me, which request was complied with most willingly. In three days' time I had so far recovered as to be able to attend to my housework. From that moment the disease kept yielding every hour, and now I am in good health, as if nothing had ever ailed me.

I am fifty-eight years old, and must say that since I came to Christian Science I feel much healthier physically and mentally than I did before, for which I cannot be grateful enough, as I seemed to be in great extremity, both physically and mentally. My family and I are grateful with all our hearts to God, and also to our beloved Leader, Mrs. Eddy, for having been shown the right way in this great truth.

FRAU SOPHIE DRAEGER, Berlin, W., Germany.

Digitized by Google

I wish to acknowledge the many benefits I have received through Christian Science. During thirteen years this truth alone has been my reliance, and it has healed me in a number of instances. At the age of twelve years I suffered greatly from a tooth which seemingly was in a very bad condition. I was healed in one treatment, and the pain left at once and the tooth never troubled me again. I feel that this was a remarkable demonstration of the power of Truth. Six years later I was healed of extreme nervousness; and since then I have been healed of heart and lung trouble.

I am also very grateful for another demonstration. At one time all my fingers were covered with warts, which were painful, besides being so ugly that I felt much embarrassed whenever I had to take a music lesson. I kept on with Christian Science a long time (for they were so apparent and seemed so real), but at last every one of them disappeared, leaving no scars whatever. A little over a year ago my baby was born prematurely, and was very small, indeed the doctor in attendance did not expect the child to live. For over a week he seemed to be losing ground, and took very little food; but through Christian Science treatments all this was overcome, and he gradually improved, so that he ate very heartily. He is now a plump, healthy child of fifteen months, and has been kept well and strong through the help of Christian Science. I wish to add that in September, 1908, I was healed of severe uterine trouble in one month's treatment. I am now well, and very grateful for Christian Science. I receive great help from all our publications, and daily read and enjoy the *Monitor*.—Mrs. Elsie Wessel, Chicago, Ill.

Before coming into Christian Science I was subject to severe bronchial trouble, had a cough most of the time, and at one time was in bed five weeks with acute lung trouble. My husband's two sisters were doctors in Kansas City, and one of them always attended our family in any illness. After this long period of illness, I finally was able to be up, and went to my mother's home in Omaha. I stopped taking medicine entirely, and my friends were very much afraid that my condition was most serious. I was ill for about a year, and four years later I was taken with another severe cold. My friends were alarmed, on account of my former experience, and persuaded me to try Christian Science.

My mother, who had been in Science several years, called a practitioner, who came to the house for a week; then I went to her for another week. In about four weeks the cough had left me. Before coming into Science I was much reduced in weight, but now I am quite normal in this respect, and scarcely ever have a cold. I am grateful for the help I have received in Christian Science.

Mrs. E. M. Cline, Kansas City, Mo.

I wish to corroborate the testimony of my daughter, Mrs. Cline, as to what Christian Science did for her, and I have also for some time wished to express my own gratitude for the help which I have had in Christian Science. My healing was slow, for which I am thankful now, as it has made me see that by studying the Bible and Science and Health, and putting into practice the healing truths revealed to us, we are greatly benefited. Words cannot express the love and gratitude I have for Christian Science.

Mrs Mary E. Pratt, Kansas City, Mo.

[Translated from the German.]

In October, 1908, before we knew anything about Christian Science, my mother was taken to a clinique for the amputation of her hand. I had my little daughter, then about two years old, examined at the same time, as her spine was somewhat curved. The physician told me that the ailment was due to hereditary conditions, that we should try special baths for her, and that if the curvature should increase, we ought to apply to a specialist. We followed his advice as to the baths, but the condition became much worse, and we were greatly troubled. We then heard of Christian Science, and asked for treatment for the child, who was then suffering from a fever, as we believed, on account of her teeth. One night she had a severe attack, and early in the morning I sent a telegram to the practitioner, asking for absent treatment. Two hours later the child asked for something to eat, and after two days she was entirely well, neither has she had a return of the trouble. Formerly, when she had an attack of fever, she would be ill for several days. The spine has improved, and we are in hopes that it will become quite straight.

Toward the end of December my mother suffered greatly with violent pains in the head. Early in January I again went to see the practitioner, and asked for absent treatment for my mother. When I came home that night, I immediately asked her how she was, and she said that the pains had suddenly left her toward evening. We see more clearly every day that there is but one source of supply which meets all our needs, and while doing our daily work we may feel God's blessing and how He leads us. I am very thankful to God, that He has revealed to us the power of Love and Truth, and also grateful to our dear Leader, Mrs. Eddy, for accomplishing such a great work.

Frau Anna Assmann, Kremmen, Brandenburg, Deutschland.

In November, 1908, when Christian Science found me, I was confined to my bed. I had been ailing for some time: then was taken very sick. My husband called a doctor, and he pronounced it a serious case. He said he would do all he could for me, but had not much hope. I had none for myself and thought my time had come.

A friend then told me of Christian Science, and I decided to try it, as medicine seemed to distress me very much. We sent for a practitioner, and after the first treatment I was able to sit up in bed. The second day I was up and dressed and walked about the house, and after a few more treatments I ate and slept well, which I had not been doing for some time. I had many other physical ills besides the hemorrhage, among them being heart disease from childhood, also a bowel disorder with which I had been troubled for years: but these, too, are disappearing.

I hope this testimony will help some poor sufferer as others have helped me. I thank God, and dear Mrs. Eddy, for the understanding of Truth which I have gained, as well as for my healing, and I am striving to learn more every day of this blessed truth.

Mrs. Jennie Davis, Beloit, Wis.

It is with pleasure that I give a brief acknowledgment of benefits derived from an understanding of Christian Science. About four years ago I took up Christian Science for the physical healing, having been ill for a long time and under medical treatment. I was advised that an operation was necessary, but I dreaded the ordeal and friends advised me to give Christian Science a trial, saying that it had helped others and it might help me. It was largely an experiment with me, but I bought a copy of Science and Health and began treatment with a practitioner in Chicago. After the first treatment I felt a great spiritual uplifting, and at the end of the week the pain left and I was convinced that I need never undergo the operation. The happiness and peace that I experienced cannot be described. My healing was not entirely accomplished at this time, and for three years I worked faithfully, reading very

Digitized by Google

little but Science and Health and our other Christian Science literature, with the result that I was healed and raised up from a useless life to one of helpfulness. A bowel disorder also was entirely cured through Christian Science.

The practical side of Christian Science appealed to me, and I found it a demonstrable religion, purifying and elevating thought.

E. LOUISE D. PAYNE, Chicago, Ill.

[Translated from the German.]

It was four years ago that I first heard of Christian Science, and I have had ample opportunity since then to prove by experience that it is this understanding, as given us by Mrs. Eddy, which constitutes true Christianity, and that it is as effective today as it was in the time of Jesus and the apostles. For twenty years I had been a great sufferer, to sense, with severe nervous illness, besides a disease for which I had to undergo an operation that brought relief, but did not cure the trouble. When this condition grew worse again, the last physician whom I consulted declared that sooner or later a dangerous disease would develop, if I did not submit to a very serious operation (though he could not guarantee a successful issue), and he depicted dreadful images to me, which I fortunately did not entertain. As I felt better without any medical treatment, I decided to drop it entirely, but looked forward to a hopeless future.

At that time dear friends brought me help through Christian Science, which I at first accepted with great reluctance, as the thought often would come up that it might be a false doctrine. It was very hard for me to give up faith in so-called medical laws, theories, and methods, and to recognize firmly and unswervingly God's law of life and perfection, as for fifteen years I had been active as a nurse of the order of Malta in the service of the poor and of the sick, and loved my vocation above everything. However, with the growing understanding of spiritual being, and supported by the loving and indefatigable work of a Christian Science practitioner, the trouble gradually disappeared, the general condition improved rapidly, and I became healthier and stronger than I had ever been before. Whereas I formerly used to feel that every draft was injurious to my health, I now have been defying for years every inclemency of the weather. As a result of the nervous trouble a functional disorder of the nerves in both feet had manifested itself for seven years. Medical treatment had brought relief, but no permanent cure. This disorder disappeared instantly through a flash of understanding that God created all that was made, and that all reality is good; that God does not create disease, and that therefore it has no scientific basis and is but the result of false concepts.

Last year I was greatly depressed and troubled because of the seemingly severe illness of a friend whom I would have loved to help, but who does not want to hear anything about Christian Science. The fear and grief which I suffered on this account induced the reappearance of a nervous heart trouble which had formerly tormented me for years. I had to ask for help, as I felt unable to work and my thoughts were constantly circling round the erroneous belief. Thanks to Christian Science, I was enabled to attend to my present vocation as a teacher and to overcome the exertion caused by the constant trips to and from the clinique, where my friend was under treatment. Several times, however, I have had the joy of affording help to others in threatening cases of disease, for which I am especially grateful.

I myself have had a few experiences this year which clearly prove the truth of the teachings given to us by Mrs. Eddy. One of my toes had been frozen, and a small sore appeared. That evening I was taken with an ague which lasted several hours. The foot, which was very much inflamed, gave me severe pain, and the upper part of the leg appeared to be involved. This time I did not ask for treatment, but worked in Christian Science as best I knew how; neither did I have the slightest fear, for I knew that truth gets the victory over error. It took about two weeks for the foot to be healed, as I had to go out nearly every day, and the wound was chafed, but with the exception of two days I could attend to all my duties. A short time ago I accidentally poured some boiling water over my hand, but at that moment I had a clear realization that all is Mind, and that man is not material, but spiritual; therefore nothing could harm me. I felt the heat on my hand, but experienced no pain, neither did the skin become red, although the water had been boiling hard enough to lift the cover.

For all these proofs of healing I am grateful with all my heart to our revered Leader, Mrs. Eddy; but Christian Science has given me more. The old theology had taught me that God is our Father and Christ our redeemer, but I did not gain the true understanding of God's love and omnipotence, or the true apprehension of the redeeming work of Christ. It brought me comfort and submission during the long years of suffering, but no deliverance from evil, no Christian joyfulness, and I gained self-knowledge only in a slight measure. Much of what I believed to be unselfish love I have recognized in the light of Christian Science to be selfishness, but where there is comprehension there is also the way toward deliverance from error. The old theology removed the fulfilment of the Biblical promises mostly into the world to come, but I have come to see with Paul that "now is the accepted time; behold, now is the day of salvation." I used to think that I believed in God's omnipotence, and yet I depended on material means. I professed to believe that God is Love, and yet I held that He had inflicted upon me disease and sorrow through His inscrutable decrees. Now I know that God is good only, and that there is no power outside of Him. This apprehension, which I owe to the better understanding of the Bible gained from the writings of Mrs. Eddy, is an ever-present help in all the exigencies of human existence.

MARTHA KRUG, Schandau, Sachsen, Germany.

About eight years ago I had been suffering greatly from rheumatic trouble for over two years. I was in a well-known hospital of this city for a short time, and then went to England to try to get well; but returned to New York in very much the same condition. Christian Science was mentioned to me, and I attended some services, though I did not get a very clear understanding of the truth at that time; but, as I did not get better, a Christian Science practitioner was called in. In the morning I was entirely helpless and in bed. In the afternoon treatment was given me, and I was instantaneously healed. I dressed myself soon after, went shopping that evening with my wife, went to church on the following day, Sunday, and the next Thursday morning returned to my laborious work.

This healing was so wonderful to me that it was beyond my comprehension, and I even said many hard words about Christian Science at that time. Since then, and until three years ago, I have been through deep waters of material sense. I now realize it was at this time that I was spiritually born into the kingdom of heaven, and I now know that infinite Truth is not beyond the comprehension of any one who is honest and true. As I write this testimony, with one of our children on either side of me, both of them testimonies of Truth's healing power, the thought comes to me, What cannot God do? For even my slight understanding of Christian Science I am deeply grateful to its Discoverer, Mrs. Eddy, and appreciative of the goodness which has watched over me all these years. These words are often remembered: "For this my son was dead, and is alive again; he was lost, and is found."

ERNEST GRAINGER, New York, N. Y.

FROM OUR EXCHANGES.

[*Harper's Weekly.*]

So long as the dull and the ignorant, the suffering and the diseased, look up to great possessions, to comfortable surroundings and irresponsibility, and fancy that joy lives there, and that if they captured the means they would capture the prize, so long poor exiled joy can do no more than drop at odd seconds upon a quiescent frame of mind here and there. It cannot come to earth to dwell, to turn life into paradise, until it comes equally to all. It would seem that only spiritual gifts could be equal. Matter is unmanageable; it heaps itself up in spots, and draws away in others; it is eternal restless motion; it is the changing, floating unreality in which for the moment we are set. But the spirit is changeless, immovable, permeating all space. And at odd corners, here and there, through life, eyes are opened and the spirit joins the spirit, and joy is born.

[*Advance.*]

We talk of broad men. Paul was the broadest man that ever preached the gospel. His breadth reached from Jerusalem to the least and last hut of the heathen world. And he had depth and height, without which breadth is a swamp, a miasma of theological error and deception. He knew the deepest things in the belief of a human soul and the highest things in spiritual aspiration. To say Paul had more power over an audience than any other preacher would be an exaggeration. But he had more power over the ages than any other man of any time. He so preached that no man since his day has been able to preach the gospel of Christ without echoing the declarations of his great mind or the sentiment of his loving heart.

[Frank M. Goodchild in *Examiner.*]

In the wide universe there is not a square foot of space where sin can be committed and the punishment not be exacted. Science is as emphatic in teaching that as the Bible is. Huxley's dictum seems like an echo of the Bible verse that says God "will by no means clear the guilty." The great truth that is written everywhere is, that there sits on the throne of the universe a judge who forgets nothing and forgives nothing. If it were possible for God to treat sin as lightly as some preachers think He can, the whole universe would be disordered and the throne of heaven would topple to its fall. Our fathers were right when they insisted that mercy cannot be exercised at the expense of justice.

[*New York Observer.*]

What the world needs is Biblical teaching, not dreamy transcendentalism or petty poetizing. It is God's word, and not man's witticisms, that will settle life's questions as they ought to be settled. "Thus saith the Lord"! That is the uncompromising affirmation which alone can serve as a regulative principle for life. If this principle of procedure is surrendered, all is surrendered. While we keep the Bible the Bible keeps us, but if we give up the Book of books we yield our theologic citadel and lose our power of appeal with men.

[*Interior.*]

The world knows Jesus was brave—that he did not fear the face of man. It wants that courage now, and it hopes to find it in Christ's followers. Jesus would stand for the right, no matter what it cost. Amid the hesitations and fears and evasions of many who do not want righteousness enough to pay the price, the world realizes that free and fearless self-sacrifice, equal to the emergency, is going to be found only among such as Christ has touched with his spirit. Hence it waits for the church.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

SPECIAL PAMPHLET.—About Dec. 1 the Publishing Society will reprint from the *Sentinel* in pamphlet form two well known articles by Mrs. Eddy: "Personal Contagion" and "What Our Leader Says."

This new pamphlet will be printed in large French old style type on special paper, silk sewed, with overhang cover, and will conform in size to other pamphlets.

Price, 10 cents each, $1.00 a dozen, $7.50 a hundred.

A NEW PICTURE.—About Dec. 10 the Publishing Society will place on sale a new and desirable photogravure of The Mother Church edifices and the Publishing House, with the proposed parkway in the foreground. Approximate size, 24 by 18 inches.

The price of the picture will be as follows: Artist's proof, bearing remarque, impressed on Japanese vellum, $5.00; from the same plate on India paper, mounted on mat, without remarque, $3.00. Ten per cent discount to Christian Science reading-rooms.

NEW EDITION OF THE HYMNAL.—The new and enlarged edition of the Christian Science Hymnal, containing some fifty new hymns, will be ready for delivery about Dec. 20.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE, THE RESTORATION OF PRIMITIVE CHRISTIANITY. By CLARENCE C. EATON.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI. 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Vigorous recommendations for changes in the present law regulating transportation companies are contained in the twenty-third annual report of the interstate commerce commission, just transmitted to Congress. The proposed amendments provide that a physical valuation be made of the interstate railroads of the country; that the commission be given power to prevent advances in rates or changes in regulations or practices to the disadvantage of the shipper, pending an investigation into the reasonableness of the proposed change; that the commission be authorized to establish a joint rate and through route wherever, upon investigation, it is found that the public necessity and convenience require such action; that in certain instances the shipper be permitted to direct the intermediate routing of his traffic; that the law be so amended as to give the commission undoubted authority to enter a corrective order as the result of an investigation instituted by the commission upon its own motion.

The United States supreme court, reversing the decision of a lower court, has found for a plaintiff who sued a whisky concern for libel in using her photograph for advertising purposes, although used under another name. The court says: "If the advertisement obviously would hurt the plaintiff in the estimation of an important and respectable part of the community, liability is not a question of a majority vote. . . . No conduct is hated by all. That it will be known by a large number and will lead an appreciable fraction of that number to regard plaintiff with contempt, is enough to do her practical harm."

Acting as an arbitrator, Judge Tayler of the United States court has fixed a value of $21,127,140 upon the property of the Cleveland Railway Company. Upon this sum the company will be allowed an earning of six per cent under a proposed twenty-five-year franchise. All excess earnings are to go toward betterments of the service. At a special meeting of the council recently the franchise ordinance was passed. It will provide for a rate of fare not to exceed three cents at first, and never to exceed four cents cash and one cent for a transfer.

A million-dollar present has been voted by the finance committee of the United States Steel Corporation to its employees. It is the annual bonus for efficiency. The gift will not be in cash, but in the corporation's common or preferred stock. There are one hundred and ninety thousand employees of the corporation, of whom more than forty thousand are stockholders. They hold 208,811 shares, and with those offered they will control over 250,000 shares with a par value of $25,000,000.

The national waterways commission has not reached a unanimous agreement on the questions which it will report to Congress early in January, as differences have arisen in the commission as to several questions, among them the following: The relations between the railroads and the rivers; the remedies for the decadence of river traffic; the right to construct dams across navigable streams.

The secretary of war has transmitted to the House, with his comments, the recommendations of the committee appointed January, 1907, to report on preserving the scenic beauty of Niagara Falls. Both he and the committee recommend the establishment of a national park on the American side of the falls, in order that no encroachments may be made in the future on the natural features of the great cascade.

Director Durand has set Saturday, Feb. 5, as the date for the test for applicants for the position of census enumerators. He says any one with good judgment and an ordinary school education can pass it. At least sixty-eight thousand places are to be filled by the middle of March and all applications for examination must be filed with the supervisors not later than Jan. 25.

The jury in the trial at New York city of the six former employees of the American Sugar Refining Company, on charges of conspiracy to defraud the Government out of customs duties, announced a disagreement as to one, an ex-cashier, and guilty as charged, with recommendations to mercy, as to the former dock superintendent and the four former checkers.

Fifteen bills, providing for an increase in the pay of rural free delivery carriers, have already been introduced in the House of Representatives. The postoffice department is unfriendly to this proposed legislation, as it is trying to keep appropriations down, in harmony with the President's economy program, and is moving slowly in the matter of establishing new routes and increasing pay.

American warships probably will soon be fitted with the largest and most powerful naval gun in the world. The new fourteen-inch rifle has been tested at Indian Head, Md., and, according to experts, did all that was expected of it. The projectiles, weighing fourteen hundred pounds, traveled about nine miles down the Potomac with the gun elevated seven degrees.

The attorney general of Illinois has appeared before the judges of the supreme court in a suit to compel the Illinois Central Railroad to account for seven per cent of its gross receipts from charter lines, through which the state of Illinois seeks to recover an amount approximately estimated at twenty million dollars from the railroad company.

An anti-trust bill, giving United States circuit courts authority to dissolve combinations convicted of monopolizing, or attempting to monopolize, any part of trade or commerce between the states and with foreign countries, and to appoint receivers for them, has been introduced in the House.

The Pilgrim monument on Town Hill, Provincetown, Mass., where, at the laying of the corner-stone on Aug. 20, 1907, President Roosevelt made a speech, awaits its dedication at the hands of President Taft next August. It is planned to have President Eliot deliver the historical address.

The Governor of Kansas has been cast out of the Topeka Club, because he insisted that the club should obey the prohibition law of the state, and had ordered suit to be brought against the directors for allowing liquor to be kept on the premises.

The Illinois state law, which landlords and their attorneys had laughed at, declaring it unconstitutional and class legislation to prohibit their turning away tenants with children, has been upheld as constitutional by Municipal Judge Himes of Chicago.

Industrial education, what it has accomplished and its present condition, in all probability will be made the subject of a general investigation under the supervision of the bureau of labor.

Counsel for the Government and the Standard Oil Company have agreed on the date to be fixed for the hearing of its appeal from the district court, which, it is said unofficially, is for early in March.

The United States Agricultural and Industrial Exposition Company has been incorporated under the laws of Delaware with a capital of one million dollars.

Springfield, Mass., is now receiving water from its new Little river system. The work, which was begun about two years ago, cost two million dollars.

The incoming Legislature of Rhode Island will be asked to pass a law authorizing cities and towns to regulate outdoor advertising.

A United States geological survey of one of the principal islands of the Hawaiian group has been ordered.

International.

It is announced that the government of Transvaal, influenced by the excellent record of progress recounted in the report of the Central African railways, will immediately proceed with the construction of an additional five hundred miles of railway, of which four hundred and forty miles are to be built in the Transvaal and sixty in the Orange River Colony. The total amount to be expended upon these works is £1,230,000.

As a result of the encroachments made by the Russian government on the independence of the Finnish people, it is expected that the emigration of farmers and laborers to Canada and the western United States will assume large proportions in the spring. Three hundred have already sailed from the port of Hango.

The Japanese budget estimate for 1910-1911, as given out, inaugurates a readjustment of taxation, thereby decreasing the estimated receipts five million dollars. The estimated expenditures are announced as two hundred and sixty-seven million dollars. The receipts are estimated at an equal amount.

The government statistician of New South Wales estimates a wheat yield of 25,500,000 bushels for the year, which exceeds last year's production by 10,000,000. This leaves between 13,000,000 and 14,000,000 bushels available for export.

The consistory of the University of Copenhagen has formally declared that Dr. Frederick A. Cook, whom it was first to honor as the discoverer of the north pole, fails to prove his claim by the data submitted.

A representative of a group of British, French, and American telephone companies has completed arrangements for establishing a telephone system in Constantinople and its suburbs.

Prince Albert has been enthroned as King of Belgium, to succeed his late uncle, King Leopold.

Industrial and Commercial.

The gross operating revenues of all railroads in the United States for the fiscal year ended June 30, 1909, was $2,494,115,589, and the operating income $742,987,191. The average number of miles operated in 1909 was 233,002.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

REFORM.

M. G. KAINS, M.S.

THE most important reforms that have marked the history of the human race have always had their inception in individual recognition of and tenacious adherence to right, to Principle. They have made progress solely along the line of individual right thinking upon this basis, and the only barrier they have had to surmount has been the momentum of individual incorrect thinking. In the last analysis the conflict has been between correct and incorrect thinking in individual consciousness. Since right thinking is fatal to wrong thinking, the outcome has invariably been the same: right thinking always has triumphed and always will. Such, in the abstract, is the past, present, and future of reform, whether the subject be confined to the individual or extended to the human race.

If these statements are true,—and they are,—it is evident that individual reform, or rather individual conformation to the demands of Principle, is of fundamental importance. It can come only as the individual recognizes and acts upon the necessity of bringing his thoughts and deeds into harmony with the basic law of improvement in whatsoever direction that law may dictate, even though it may insist upon a right-about-face and the apparent loss of position, prestige, power, and perquisites. Fear to comply with such a demand must be met and mastered, or one cannot retain his own self-respect and the esteem of others. It is characteristic of the noble-minded to act in this way; to seek, rather than be forced into, a rectification of errors. To ignore the mandate is to reveal laxness; to spurn it is to uncover arrogance; to defy it is to proclaim one's self a foe to right thinking; deliberately to misinterpret it for the purpose of erroneously influencing others, reveals a condition of turpitude which verges upon moral idiocy.

All these and many other forms of silencing conscience have their basis in ignorance or in fear. Ignorance can be readily dispelled, but the person who refuses to reform always does so because of cowardice. Whatever may be the course that fear prompts, whether erroneous action or erroneous inaction, the very result feared is manifested sooner or later. There is no use in temporizing, no use in trying to strangle truth; the downfall of erroneous thinking and its votaries and the ultimate establishment of correct thinking and its adherents is inevitable. Reform deals primarily not with persons but with Principle. With equal impartiality, it rewards those who adhere to it and punishes those who reject it.

Does history not supply countless instances to prove these statements? Was it King John's mildness, equity, and general goodness that prompted the signing of the Magna Charta? Did the King exhibit indefatigable zeal in seeking to enforce the provisions of this famous document? Did he regain the power the barons forced him to sign away? Have the intervening centuries justified John's position, or that of the barons? Then which may be considered as thinking along right lines? What of the *habeas corpus* act, the Declaration of Independence, the abolition of slavery, and a score of other documents and movements, their sponsors and their opponents?

Is not present-day liberty among all English-speaking peoples, indeed among all civilized nations, founded (or influenced for the better) at least in part upon the reforms that brought them about? Has any organization upon a false basis been able successfully to stand against a popular uprising to establish a higher or better régime? In every case has not reform resulted because, in the establishment of a better order of things, abuses had to be abolished, even when the movement necessitated the removal of kings from their thrones, or in some cases even the construction of a new form of government? When the public conscience has become thoroughly aroused and has bred a determination to establish righteousness, has not all opposition ultimately gone down before it? Then why not answer at once to the call of Principle or conscience, and hasten the advent of the rule of righteousness?

Evils have only one means of existence; namely, their being mistaken for good. When their nature is recognized, their power is weakened; they are destroyed by the acceptance and maintenance of good. When an individual becomes awake to the nature of the deception called evil, the necessity of reforming his methods of thinking is borne in upon him. He will probably find old ways of thinking very tenacious, especially if he is associated with others who think in the same way. Those who still cling to erroneous ways—the enemies of reform—are often very resourceful, tactful, alert, and adroit in their use of specious argument and misinterpretation, and for a time may be apparently successful; but if the awakened individual is sincere, earnest, and determined to reform, nothing can stop him, and his influence for good cannot be overestimated.

The same is true with any body of individuals intent upon reform of abuses, and honest reformers may therefore take good courage, because integrity of purpose based on the right idea is exhilarating, buoyant with the confidence of ultimate victory; and conversely, because erroneous thinking depends for its temporary existence upon deception and is foredoomed on account of its very nature. Furthermore, those who adhere to fundamental truths in their thinking know that those who think erroneously tremble because of their recognized insecure footing and the knowledge that their defeat is certain, even though they may present a brazen front to their opponents; or, to quote a stanza from the old missionary hymn,—

> The advocates of error foresee the glorious morn,
> And hear in shrinking terror the watchword of reform.
> It rings from hill and valley, it breaks oppression's chain;
> A thousand freemen rally, and swell the mighty strain.

Reforms in the past have frequently been characterized by force and even bloodshed. Modern reforms are becoming less marked by such characteristics, not so much because mankind has been consulting or profiting by history's teaching, but because of the moral awakening that has been taking place throughout the world. In this no

other agency has been so potent as Christianity, especially its modern restatement, Christian Science. According to the teachings of Jesus of Nazareth, Truth is the great reformer. Mrs. Eddy says (Science and Health, p. 225), "Love is the liberator." This teaches that there is little use in trying to compel people to accept better ways, because the moment that the force is relaxed there is a return to the old way. Love effects its reformation by gentleness, by appealing to the highest good already present in individual consciousness, and by leading the mistaken out of their errors. If any one prefers to persist in wrong thinking and acting, Truth waits with ever-open arms until the falsity has run its course and the wanderer is glad to part with his false god, and "Love never faileth."

"MY PRESENCE SHALL GO WITH THEE."

MARY WHEELER.

WALKING down the street the other day, I found myself suddenly stopping short in the path. Before I had time to think or reason, some movement, flashing dimly upon my sight a few feet at one side, had caused me to come instantly to a halt, and the next second a rapidly driven bicycle dashed across the walk just before my face. The physical instinct of self-preservation, so called, had instantaneously responded to the unexpected warning, and saved me from the impending danger.

As I walked on, drawing a long breath of thankfulness, I fell to pondering the incident. Human philosophy declares that "self-preservation is the first law of nature." Mortal belief would say that an age-long attitude of fear and watchfulness in the midst of adverse conditions, on the part of my material ancestry, had bequeathed to me the unconscious habit of being always on guard against possible harm to the body, and that this habit had been my protection in the unforeseen moment of peril. Viewed in the light of Christian Science, however, such an experience has a profounder significance, and brings out the possibility and importance of another kind of watchfulness, namely, that of being always mentally and spiritually on guard. It becomes a summons to be as alert in the intuitive faculties as in the so-called physical, to the presence or approach of evil of any kind, and as ready in its destruction or avoidance.

Not indeed through fear, but rather through steadfast practice in the assured consciousness of good, should the Christian Scientist become so alert to recognize all that is unlike good, that his detection of it will be instinctive and instantaneous. He should so persistently cultivate the habit of meeting every suggestion of evil with the mental act of self-defense, that no previous deliberation or process of reasoning will be necessary. Christian Science shows us that all error, even physical harm or danger, is really mental in its nature and origin, and we should accustom ourselves so to regard it.

This fact made our own, the halting of consciousness before the impact of evil should be as spontaneous and immediate as the withdrawing of the body before the onrush of the material object; it should be as natural and as easy to prevent or destroy the sense of evil by the instant uplifting of thought, as to ward off a physical blow by the raising of the arm. Nay, more, our aim should be to become so strong in the sense of the forever presence and power of God, good, and the consequent nothingness and powerlessness of evil, that we should be safeguarded in advance from its attack or approach. Even as the athlete, highly developed in physical manhood, is not liable to assault from dwarf or pigmy, as a fortress of stone is no target for puny arrows of wood, so to the scientifically educated thought that has made spiritual sense its habitation, no evil shall befall, neither shall any plague come nigh.

The psalmist sang: "For he shall give his angels charge over thee, to keep thee in all thy ways;" and Mrs. Eddy tells us that angels are "pure thoughts from God," "spiritual intuitions, pure and perfect; the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality" (Science and Health, pp. 298, 581). These guardian angels are ever ready to respond to our call; and we should be ever conscious of their nearness. We should so dwell "in the secret place of the most High," so live in the realization of good, that we "shall abide under the shadow of the Almighty,"—remain forever at peace under omnipotent protection.

AN AGNOSTIC'S PROGRESS.

MALCOLM BRUCE MILNE.

BEYOND the immunity from physical disease which Christian Science confers, there is another aspect which raises it to a much higher point of importance in the benefits it brings to mankind, and that is in its unfolding to us the possibility, nay the duty, of being happy ourselves and of bringing happiness to others. In reading the works of even our greatest thinkers one cannot but be impressed with the note of sadness which runs through their helpless, hopeless strivings to solve "the riddle of life" and to fit a key which will unlock the gates of that heaven which every one of them in his heart feels sure must somewhere exist. Taking the case, say, of the men who followed Darwin and helped to work out his theory, one is forced into acquiescence with their conclusions by the quiet, unanswerable logic of their thought, although everything that is best in human nature is rebelling against the sentence which these conclusions pronounce.

Starting with Darwin's premises, it is impossible to arrive, honestly, at any other conclusions, and the horror of the logical consequence of doctrines such as "the survival of the fittest," drives one deeper and deeper into the despair of impotence against so irresistible and implacable a doom. Happily for us, we know now that there is an error in his premises, and that an error in the premise inevitably carries an error into the conclusion. This error Mrs. Eddy has exposed in her statement of Christian Science in "Science and Health with Key to the Scriptures," where she enunciates a hypothesis which at once satisfies the reason and reconciles our ideas of justice with the code of ethics taught by Jesus of Nazareth nineteen hundred years ago.

In the old thought, if one thinks at all and is not satisfied to accept things on the authority of some one else, one is inevitably and inexorably forced into a dilemma from which there is no possible hope of escape. Stated baldly the situation is this: If God is good, He cannot be omnipotent; and if omnipotent, He cannot be wholly good, for He appears to permit evil. The numerous explanations which have been offered to us, with a view of reconciling God's goodness with the existence and reality of evil, will none of them bear analysis from the standpoint of reason or justice. To say that God afflicts us in His inscrutable wisdom, simply begs the question, so far as we are concerned, for how can we hope to understand anything which depends for its sanction upon something which is inscrutable? To say that God sends evil to chasten us is unjust, since the reason for the chastening is not made known to us, and how can we hope to be better in the future when we are left in ignorance of the crime for which we are being chastened?

The contention that our afflictions are for our good should necessarily carry with it an injunction against our trying to overcome evil. If evil is for our good, the more we have of it the better. But who among all those who stand for this doctrine would hesitate for an instant to

Digitized by Google

get rid of the evil as quickly as possible? The doctrine that evil is good in solution is nothing more than a piece of sophistry, for if evil is good in solution then it is not evil at all, but good; a mere juggling with terms and a proposition which successfully robs us of every means of distinguishing good from evil.

Now Christian Science starts with the postulate that God is not only good but also omnipotent, and with this as a working hypothesis it deduces the fact that evil is no part of God's creation; hence it cannot affect man injuriously, since from God alone we derive all life and being. Here we are at once confronted with a crux round which more controversy and misunderstanding has centered than round any other—the unreality of evil. The testimony of the physical senses, in which for generations we have trusted and believed, must be thrown over as untrustworthy if God is to be maintained as good and omnipotent.

The proposition at first sounds absurdly wild and almost too foolish to command a moment's thought, but it is deduced by exactly the same process of reasoning as the conclusions which impaled us on the horns of the dilemma mentioned above. But because a thing is outside the range of our previous experience, are we to condemn it as impossible? What does it mean if we do? In the first place it means that we are condemning and hampering all progress, and in the second that we are behaving in the way in which the opponents of every important discovery which has ever been made throughout the whole course of the world's history have behaved. Copernicus, Galileo, Robert Boyle, Columbus, Sir Isaac Newton, Stephenson, Lesseps, Brunel; Volta, Morse, Edison, Marconi,—every one of these enunciated propositions which partially or wholly set at naught the accepted testimony of the physical senses, and every one of them met with the same violent opposition and derision from those who had not risen to the same height of thought. But which of them was right? Did the ignorance of the many affect the truth of the discoveries of the few? Did the ignorance of the many make untrue the truths which these men enunciated? And so the question we have to ask ourselves is not, Does this proposition compel us to deny the testimony of the physical senses? but rather, Can any evidence be adduced to justify such a departure from our accepted beliefs?

It is here that we must depart from the realm of speculative theory and continue the argument by means of actual ascertained facts. What those facts are may be learned from the testimonies of healing in Christian Science which are now being given throughout the civilized world. Every month some are published in *The Christian Science Journal*, and every week others appear in the *Christian Science Sentinel*, while a still greater number are being voiced every Wednesday evening in some hundreds of churches throughout the five continents. The weight of evidence thus accumulated and accumulating removes from the thinking of any fair-minded person every doubt as to the ability of Christian Science to do what it claims to do, and thus raises the working hypothesis with which it started to the solid position of an eminently practical demonstrable science. By science I mean what is meant by the dictionary definition, viz., "Knowledge systematized, truth ascertained."

Now Christian Science differs essentially from every other code of ethics in this respect, that it must be imported into every action of every-day life and lived. It cannot be kept locked away in the inner recesses of our mind, a beautiful theory of high ideals, so high in fact as to be entirely beyond any hope of realization and so impracticable that it can only be used as a subject for academic discussion. Mere intellectual assent to its truth is of no value; it must be lived and used and understood. And we find that in proportion as it is used and demonstrated, so our understanding of it grows. In proportion as we cling to the idea of God as good and as having no knowledge of evil nor of permitting it for any purpose whatsoever, in this proportion evil loses its power to dominate and hurt us.

As we begin to see that our mortal ideas of sin, disease, disaster, hate, malice, and revenge have no sanction in this divine Mind, and as we allow our thought to be filled with nothing but thoughts of good, of charity, of loving-kindness, of honesty, of rightness, so we begin to manifest the products of these thoughts in the place of the inharmonious products of our former mode of thinking. To have discovered that we are not the creatures of inevitable circumstance, that we are not dominated by our environment, that right can and does outweigh wrong, that evil has no more power to hurt us than we give it in our own consciousness, brings a peace of mind, a happiness, and a sense of freedom which it is impossible to exaggerate.

WORKING AND PRAYING.

EDWARD EVERETT NORWOOD.

CHRISTIAN SCIENTISTS are not primarily working to build up a large following with churches and the things which go therewith. They are striving to regenerate human consciousness with the truth of being—to get men to think correctly, from a basis of Principle and law and not that of personal sense and fear; and they well know that individual spiritual living, the scientific understanding and reflection of the one Mind, alone meets the demand. This is what our Master meant by letting our light shine—the patient, persistent spiritualization of thought and purpose until the resultant action will be harmony established and God glorified.

Human sense, ignorant of Truth, is like the illustration once given by Lorenzo Dow, the famous Methodist preacher of the last century. He said that in the middle western states he noticed the farmers raised immense quantities of corn, much more than they could use, and the markets were quite distant. Upon asking why this was done, the answer was, "To fatten cattle and sell them." "What for?" "To raise more corn." "Why more corn?" "To fatten and sell more cattle, in order to buy more land, to raise more corn," etc. Mortal mind is just as unreasonable in heaping up riches,—of matter or of material beliefs about it, and the truth of being alone educates them out of such an unfortunate condition. It needs to know that true riches consist in a conscious possession of this understanding which cannot be taken away. Thus to know God is to awaken to that true consciousness which is the pearl of great price, and all material beliefs must be exchanged for it.

Moreover, as reflection of divine Mind, man is governed by God, and so escapes the corruption that is in the world through lust, the beliefs of intelligent matter. In such a consciousness error gradually loses its power to become operative, for it has no mind, no intelligence, continuity, nor activity. All reality belongs to God. The truth about anything is all there is to it, and this shuts out the falsity or belief about it. The truth is the spiritual sense—all there is, for it is real and good. All that we can honestly have or hope for is already existent in divine Mind, was always there, and nothing but our ignorance of God,—what He is and what He does for man,—our fear of error and faith in it, together with ignorance of how it seems to become operative in thought, can shut us out from a clear and joyous realization of the truth of it all.

We must know that Truth and Love are much nearer than any claim of error which sense would try to fasten upon us, so we can nullify the argument of evil suggestion. In proportion as every assault of error called disease is kept in the mental realm, instead of being reckoned as bodily, will it be met. The time to be healed, to rise in joyous serenity,

Digitized by Google

harmony, and love of God and man, is now; and we are privileged to enter into it, or at least a gracious foretaste of it, if we are faithful to our highest sense of good. To use rightly our one talent, if we have no more, always adds to our stock in trade, and our good God will surely give the increase. Thus we are disposing of error all the time and gaining Truth, fearing not to pay the price, the suffering out of sin,—and every agony of torment is a long step out, yea, with seven-league boots.

The same truth which we have seen and heard and felt from the beginning is here, now and always, healing, uplifting, and regenerating humanity with a peace never known before. God is good, and no man cometh unto Him but through the Christ-idea, the understanding of their sonship with Him. And this is done as we identify ourselves with all that is real and good and true; individualize it in our consciousness until it becomes our real selfhood, and God is found All-in-all. Every honest effort to gain more of Truth and Love, which demands a sacrifice of self, is a means of grace and growth out of matter and the mists of material sense.

Error wants to be let alone, but we are not going to let it alone. Rather will we continue our efforts at right thinking, until the absurd and illegitimate argument that man is flesh and bones, organized matter, is met, and the idea of God manifested. Mrs. Eddy writes: "This time-world flutters in my thought as an unreal shadow, and I can only solace the sore ills of mankind by a lively battle with 'the world, the flesh, and the devil,' in which Love is the liberator and gives man the victory over himself" (*Sentinel*, March 11, 1905).

It is a blessed privilege to know the truth, and to do it. This it is that sets us free—free from outside limitation and inside fears, and establishes peace. We no longer have a remorseful looking backward nor a fearful looking forward, but live in the ever-present now, pregnant with promise and proof, and succeed far better than human sense ever deemed possible.

LIFE AS AN ART.

HARRY FRANKLIN PORTER.

It has been well said that "there is art in everything." Webster defines art as "applied knowledge." In the highest and best sense, art is that which makes for perfection: it is sign and seal of the infinite, made manifest in the realm of effect through human skill and effort. It is the ripe fruit of patience and persistence along right lines, the tangible attestment of perpetual striving for truer and nobler ways of externalizing ideas. There must be, and is, a right way of doing all things, a Principle back of and governing all human activity.

The reaching up continually for this right way in all things one attempts, be it writing or digging, throwing a baseball or painting a picture, kneading dough or managing a business, constitutes the art of it. Thus the art of living is to bring out harmony in every detail of life and in every relation with one's fellow-men. It is to be well and happy, able and efficient. Life completely ordered by divine Principle would be entirely harmonious. In other words, its art would be perfect, and its possibilities of expressing perfection limitless. This is the sense of Life into which we should all strive unceasingly to enter. The knowledge of Life is in truth an art: it is the art of arts, to attain the mastery of which requires, as Mrs. Eddy tells us, "absolute consecration of thought, energy, and desire" (Science and Health, p. 3).

If God writes "opportunity" on one side of open doors, he writes "responsibility" on the other side.

J. T. GRACEY, D.D.

SELECTED ARTICLES

[Frederick Dixon in *London* (Eng.) *Express.*]

Mr. Rhodes' position is a frankly indefensible one. It consists of the contention that spiritual healing should be employed only for nervous or functional disease—in other words, that it is useless to rely on God to heal organic disease. Dr. McComb has stated this with engaging frankness in the declaration that there were two kinds of leprosy in the East, one infectious and the other not, and that Jesus was careful only to touch the uninfectious kind.

Imagine the man who raised the dead, stilled the tempest, and walked on the sea, drawing the line at organic disease or hesitating to subject himself to infection. I have pointed out to these critics before that the logical sequence of their argument would be that if there were two kinds if leprosy in the East, there must have been two kinds of Eastern water, on one of which you could walk while in the other you would sink. As a matter of fact, Peter did sink in what I suppose Mr. Rhodes would describe as the walkable kind.

The disciples, indeed, did not by any manner of means always succeed in healing the sick, a failure which, in Mr. Rhodes' estimation, would have prevented him from trusting the sick to them. I am afraid that Mr. Rhodes' demand for a qualification of absolute healing would have the immediate result of closing not only the doors of the Church and Medical Union, but of all the physicians and clergymen in the world. Logic manifestly is not Mr. Rhodes' strong point.

[John E. G. Sandford in *Times and Mirror*, Bristol, Eng.]

Let me first say, in passing, that there is nothing whatever that can justly be called curious in the faith of Christian Science, which is, indeed, the practical application to our daily lives of the commandments and teachings of the greatest teacher of truth that the world has ever known. Next, let me correct what is a very common misapprehension, namely, that the healing power of Christian Science is in some way dependent upon the exercise of the human will. In "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy says, "The exercise of will brings on a hypnotic state, detrimental to health and integrity of thought" (p. 446). In another passage of the text-book she condemns hypnotism in these words: "Animal magnetism or hypnotism is the specific term for error, or mortal mind;" and she adds, "This belief has not one quality of Truth" (p. 103).

Quite unwittingly, no doubt, you have once more given currency to the hoary misstatement that Christian Science is neither Christianity nor science. I suppose that Christianity needs no definition; and that Christian Scientists are entitled as much to the name of Christian as any other denomination of Christians, will be amply attested by all who have been present at any of their Sunday or Wednesday evening services, or who have any acquaintance with their labors of love among the sick, the suffering, and the sin-burdened wayfarers of this world. Mrs. Eddy teaches her followers to seek the Christ at all times, and she has bidden them to follow her only in so far as she follows Christ. Again, Webster's Dictionary defines science as "the comprehension and understanding of truth or facts." Christian Science claims to teach mankind the true facts about God and man as revealed by the Prophet of Galilee, of whom all Christians alike are followers. How can it, therefore, be otherwise than scientific?

It is delightful to notice the more tolerant tone toward Christian Science which is now being observed by the enlightened press of this country, and especially by your

Digitized by Google

valuable paper; but it may not be out of place to express the hope that such venerable fallacies with regard to Christian Science as those which I have asked leave to correct above, will now find the oblivion that they deserve.

[Gray Montgomery in *Rocky Mountain News*, Denver, Col.]

Formulas are not used by genuine Christian Scientists, and there is a by-law in The Mother Church Manual which prohibits the use of formulas. The healing work is only accomplished by reason of a continuous life of purity and consecration, in accordance with the teachings of the Saviour when he healed the epileptic, saying, "This kind can come forth by nothing, but by prayer and fasting." Only in proportion to his own purity, goodness, and correct understanding of God is the Christian Scientist able to realize God's healing power and presence, which displaces the fears, the sick and sinful mind-pictures, with the good and true, with thoughts of holiness, health, and harmony.

Christian Scientists acknowledge and recognize God as the only healing power, and they do not limit God's healing potency merely to "functional disorders." They have proven with scientific accuracy God's healing law in the destruction of all forms of disease known to mankind. In our own city of Denver are hundreds who have been healed of both functional and organic diseases. There are instances of the complete healing of tuberculosis in its last stages, cases which the honest investigator can readily authenticate.

Christian Science does not teach dogmas. "On the other hand," writes Mrs. Eddy, "the Christian opponents of Christian Science neither give nor offer any proofs that their Master's religion can heal the sick. Surely it is not enough to cleave to barren and desultory dogmas, derived from the traditions of the elders who have thereunto set their seals" (Science and Health, p. 354).

[Jesse Pickard in *Troy* (N. Y.) *Budget.*]

Christian Science is almost unique in its Christian declaration that it is man's prerogative to know God aright and to overcome all evil through this understanding. It sets one immediately at work to gain this proper sense of the presence and power of the All-good, and demonstrates that individual man gains physical as well as spiritual freedom proportionately to his success in this endeavor.

[Martin Sindell in *Sabbath Recorder.*]

The lowly Nazarene is and must ever continue to be our example—our Wayshower. Whatever was necessary for him to overcome, that he might thus show his sonship with God, is also our duty to overcome. What he accomplished by his understanding of truth, we are to accomplish some time, some where. If Jesus "increased in wisdom . . . and in favor with God and man," it is ours to do likewise. Of Jesus it is true, as of other good and wise men, that he struggled to overcome the world, for he was "in all points tempted like as we are." His splendid victories over sin, disease, death, and "the flesh" will some time have counterparts in every individual life. In our human experiences we are ever dissatisfied with our present attainments. With great zeal we endeavor to accomplish our desires; to better ourselves mentally and financially. Shall not the same be true of our religious experiences? If a faith which is attended by material symbols and ceremonies fails to satisfy us, is it not our privilege, nay, our duty, to seek a wholly spiritual worship? In this search and attainment we are following the Master, for he taught that "neither in this mountain, nor yet at Jerusalem," were men to worship the Father, but "in spirit and in truth." That is, place and form were not essential to true worship, but an understanding of God was. This understanding came to Jesus gradually; and as it increased, his words and deeds became more wonderful. "They were astonished at his doctrine: for his word was with power."

He was reared by a devout Jewish mother, who doubtless gave him the "precept upon precept; line upon line," of the Moses-taught beliefs; but as he "increased in wisdom" he rose above the material concept of religion, and by his pure helpful life gave to the world a faith for which it had been longing, but which, sad to relate, is still unacquired. The heights to which Jesus led a few followers were at length lost to view, the night of the "dark ages" having gradually settled down upon them. But in the midst of that darkness there was a Luther who caught a faint gleam, a gleam on whose glittering length was written the significant words: "The just shall live by faith." This transcendent thought dispelled somewhat the appalling darkness, and hope was renewed. Luther rose above many of the beliefs which had beclouded his spiritual vision, and gladly accepted the light thus revealed. The truth which Jesus understood and demonstrated, which a few centuries later Luther longed for and partially grasped, was the same truth, changeless, beautiful, practical. Shorn of human vestments, it lifted men into "the secret place of the most High," the consciousness of the ever-presence and helpfulness of God.

No period of the world's history has a special claim on truth. Since God is "no respecter of persons," neither is He a respecter of times. His truth is revealed to any person in any age who is sufficiently pure of heart to receive it. Then the "still small voice" whispers to the individual consciousness the wisdom of which Jesus spoke when he said to Peter, "Flesh and blood hath not revealed it unto thee." Thus we may see that a godly thinker in the nineteenth or twentieth centuries may receive the God-given truth in equal measure with a person of the twentieth century before Christ.

[W. E. Fell in *Bradford* (Eng.) *Telegraph.*]

Apart from what Mrs. Eddy has done for her immediate followers, she has proved to the world the present availability of the healing Christ, the tangible benefits that accrue from the spiritual life, and the cause of temperance has received an impetus from her teachings that will carry it triumphantly through to the utter destruction of the drink and drug habit. Let those who doubt, wait and see.

Certainly our critic's views of the atonement are not those of Christian Science. Christian Scientists know that God did not place man on earth under such a stress of circumstances that the All-knowing must have recognized that sooner or later he must keel over. And they do not believe that, having accomplished man's fall, He then demanded the sacrifice of a living and dutiful Son to appease or satiate a sense of revenge or hatred. If one half of what is attributed to our loving Father, God, was attributed to a man, a Nero or a Herod would be declared better than such an one. But, "Shall man be more just than God?" When Christendom understands that the blood of Christ signifies the life of Christ, it will have gone a long way on the road to the understanding of that truth which Jesus declared would "make you free." In the chapter in Science and Health on the atonement, Christian Science explains how we are saved by the life and love of God and His Christ, and it is so clearly enunciated that those who run may read.

[From *Success Magazine.*]

When one feels that his hand is gripped by the omnipotent hand, he knows that no harm can come to him from any finite source. To feel that we are held always, every-

Digitized by Google

where, by this divine hand, protected by omnipotent wisdom, steadies the life wonderfully and gives a poise and confidence that nothing else can possibly give.

When we become fully conscious of a real, vital connection between God and man, we shall be self-assured, calm, confident of protection from all possible harm. No financial storms or domestic tempests, no trials or temptations or difficulties that can come into our lives, will disturb our poise. When we are conscious of the union of our true selfhood with the divine, all fear will go out of our lives, because we shall know that we are God-protected, God-defended. When we realize our oneness with God, we cannot be weak or unhappy.

Every time we do wrong, every time we depart from the truth, every time we commit a dishonest, unworthy act, do a mean, contemptible thing, we become a prey to all sorts of fears, apprehensions, dreads, and doubts. Separated from the divine power, we feel as helpless as a little child left alone in the dark.

[Editorial in *New Bern* (N. C.) *Journal.*]

The world today is exercised throughout on tuberculosis. Municipal cleanliness is being taught and enforced. Filth is held as sinful, and the prize goes where there is the least infection. But that which is equally a health tonic, that which can help materially in warding off disease, is cheerful and profitable talk, conversation that goes above the low things of the day and partakes of the things that make for righteousness. The usual conversation of the day is of petty things. The personal goes into details of individual aches and pains, branching off, perhaps, into the scandals, deaths, casualties, and various horrors recorded all too carefully in the newspapers.

The world needs the spread of healthy conversation coming from healthy minds. The disagreeable ought to be relegated to the silent background, while everything promoting cheerfulness, therefore healthfulness, should be thrust forward to be talked and discussed. Books of dark deeds, the tragic drama, have few readers and followers, and yet every day men and women will discuss in detail aches and pains, gossip and scandal, which are real tragedies that pull down and distort a world that is capable of better and more gracious things. All these idle words make the world a huge ill-smelling place for the family circle, for society, for business, for the church. Just reverse the order, and why might not the world be filled with an atmosphere transferring healthy germs, and destroying the germs of foulness and all unwholesomeness through a contagious conversation looking toward pure things?

[Charles K. Skinner in *Detroit* (Mich.)' *Free Press.*]

Your last Sunday's editorial on the recent incident in New York, while exceptionally fair in its review of the case, seems to entertain a pessimistic view of the future of the Christian Science church as an organization. The earnest Christian Scientist has, however, no foreboding for the future of his faith. His confidence in divine Principle, God, and his understanding of Christian Science and its rules, which enables him to apply them successfully in his daily work, supports him in his belief that no problem can arise which cannot be harmoniously settled by the application of this teaching.

Christian Science as a practical religion is not founded upon any personality. Had such been the case, it would long since have ceased to be. No one has labored more strenuously to bring this fact to his followers, than has Mrs. Eddy to Christian Scientists. Her words to them are, "Follow your Leader only so far as she follows Christ" (Messages to The Mother Church, p. 78). Her message to the New York church, and the action of the Board of Directors of The Mother Church, were but the voice of the Manual of that church, which has been provided to cover all cases of misdoing. The rules of this Manual will speak again and again, if occasion demands, for government and discipline, and all who are Christian Scientists in spirit and in deed will cheerfully obey. The defections of others may come, as the *Free Press* states, but they will be those who either do not understand the rules, or are unwilling to meet the demands of their teachings. This will by no means cause a new Christian Science church, for no organization can prove its right to this name except it is bringing out the fruits of Christian Science teaching and practice.

The *Free Press* refers to the "Christian Science Bible" and says, "It will remain in the pages of Science and Health." This is impossible, for it has never been there. I may say without fear of truthful contradiction, that the Authorized Version of the Bible is read and studied as much, if not more closely, by Christian Scientists as a body of Christians, than by any other denomination. Its use in the Christian Science church services is more general, and the individual study of it is greater, than of any other book. I do not say this boastfully, but in refutation of the statement which is sometimes foolishly made, that the Christian Scientists have a different Bible. The text-book, Science and Health, is the commentary by which its students gain the spiritual understanding of the Scriptures, and the teachings of Jesus of which he said, "It is the spirit that quickeneth; the flesh profiteth nothing; the words that I speak unto you, they are spirit, and they are life."

[Alfred Farlow in *Oakland* (Cal.) *Examiner.*]

In a late issue of the *Examiner* there appeared an article by Henry Smith Williams, LL.D., M.D., entitled, "A Scientific Explanation of Malicious Animal Magnetism." Dr. Williams declares, "Now, let me say that in these cases of malicious animal magnetism I believe we are in the presence of hypnotic phenomena, and of phenomena similar to those involved in medieval witchcraft, in the sorcery of savages at the present day," etc. He adds, "Hypnotism in some form will be found to account for nearly all of these marvels. The persons alleged to have been affected by 'malicious animal magnetism' were in most instances, in my opinion, in a state of partial hypnosis."

We believe this statement properly describes the supposed influence under discussion, provided hypnotism is used in its broad sense, as applied to every condition of the human mind wherein it is in any degree hampered in its freedom; and since ignorance, false belief, false thought are the only means of limiting the freedom of consciousness, it follows that as mortals, all persons are in a great or small degree in the state which Dr. Williams has described as subject to mental malpractice, until through spiritual understanding they awaken to a realization of the all-power of God and cease to give power to evil. Witchcraft, sorcery, and all other forms of superstition which have existed during the history of the world, have been no more than varied forms of magnetism or hypnotism, and their supposed but false powers are destroyed by the power of Truth, God.

It is quite true that the "fear of an inanimate object," as well as the fear of persons, may have the effect of disturbing an individual who is taken unaware, but ignorance lies at the bottom of all evil and all discord, and the remedy is the understanding of Truth. We may safely admit that the form of mental phenomena called "telepathic impressions" or "hypnotic suggestions" cannot be received except by those who are more or less in a state of expectancy; but we would ask, Is not any individual, in the ratio of his lack of understanding that good is the only power, and consequently in the belief that he is capable of receiving "impressions," in at least a mild degree of "ex-

Digitized by Google

pectancy" and "fear." He has a false belief in the power of evil because the "carnal mind" naturally entertains such a false belief, and because the individual has not yet, through an understanding of God as the only real power, lost this belief; and this false belief constitutes the basis of "expectancy," a condition which Dr. Williams names as the weakness which renders one susceptible to evil mental impressions; but we are thankful to note that Christian Science furnishes an effectual remedy therefor. It destroys all fear, not by an "attitude of strained attention," but by an enlarged and confident trust in divine Love as the only real power.

It is not necessary to adopt any belief in witches, sorcery, or any subtle power of evil in order to have one's eyes opened to the mental counterfeit of the spiritual influence that heals the sick, and it is a mistake to suppose that malicious animal magnetism is "recognized by the Christian Science church as a power." It is the mission of Christian Science to uncover the deception called malicious animal magnetism, and to destroy any influence it might have over those who are deceived thereby. Christian Science does not plead in behalf of any form of superstition or irrationality, but it effects a scientific uncovering of these and a demonstrable method of destroying them. We must not mistake the uncovering of evil's false pretensions for an endorsement of these pretensions.

Moreover, the blind, futile, and unchristian effort to exert evil mental influence is not a product nor a consequent of Christian Science. It is its counterfeit. It is simply a more aggressive form of the latent falsity of the supposed "carnal mind" which Christian Science exposes, and which seeks to maintain its position in self-defense as it writhes under the doom of divine Science. Christian Science is uncovering and destroying evil's hidden forms and is establishing the peace and harmony of omnipotent good. In Christian Science it is understood that malicious animal magnetism has no power. It is at most only deception, and can only affect the unwary, those who fail to understand the eternal, spiritual truth.

[George A. Law in *New Haven* (Conn.) *Union.*]

Christian Science teaches the recognition of the need of practically and effectually coping with sin, sickness, and death, the disturbers of the peace and harmony of mankind. In Christian Science these disturbances are necessarily regarded differently than in other systems of healing, because of the fact that Christian Science is a religion.

The Principle of Christian Science is God. And as God is Spirit, Christian Science healing is therefore in no sense material, but is spiritual. It results from compliance with God's spiritual laws. It is therefore in no way governed or affected by any so-called material laws. The marvelous instantaneous healing works which Jesus accomplished by means of this same omnipotence of God, were performed in accordance with spiritual laws and in direct opposition to asserted laws of matter.

There is abundant available evidence to satisfy the most skeptical that Christian Science has repeatedly healed every disease to which flesh is heir. Christian Scientists are perfectly willing that the record of Christian Science as a healing agency should be compared with that of any other healing system.

The peace which stills the summer sea
And gently rocks the quiet tide,
Is not an empty lethargy
Where senses in oblivion slide;
But life and strength it doth express
In radiant joy and tenderness.

R. E. KEY.

AMONG THE CHURCHES.

SEATTLE, WASH.

For the best good of the Cause of Christian Science, Third Church of Christ, Scientist, Seattle, Wash., at a regular business meeting, Dec. 9, was formally disincorporated, leaving its members free to identify themselves with any organization they may desire.—*Correspondence.*

OGDEN, UTAH.

First Church of Christ, Scientist, of this city has purchased a lot seventy-four feet by one hundred and ten feet on the northwest corner of Twenty-fourth street and Monroe avenue, and will in the near future erect a suitable church edifice. The location is one of the best in the city. These steps are the result of the growth of Christian Science in Ogden, and are taken to provide for the steadily increasing congregations of this church, which now holds its services in the Masonic Temple.—*Ogden Standard.*

FORT WORTH, TEX.

While as yet First Church of Christ, Scientist, has taken no steps toward raising the money for a new church building, we expect to do so at the annual meeting of the church, Jan. 7. The church owns a very desirable lot, 100 x 145 feet, on a residence street close in town, the corner of Fourth and Lamar. The last payment was made on this property in September, a year before it was due. At present we are holding services in the dwelling which was on this lot, but as our congregation is increasing rapidly, it will be necessary for us to have more room. We hope to build in the near future a church which will cost from thirty thousand to fifty thousand dollars.—*Correspondence.*

HARRISBURG, PA.

The congregation of First Church of Christ, Scientist, at an adjourned special meeting last evening took final action for the purchase of a piece of ground at the southwest corner of Second and Woodbine streets. It is the intention of the Christian Scientists to erect thereon a handsome church edifice. The property fronts one hundred feet on Second street and one hundred and ten feet on Woodbine, and, being in the midst of one of the best of the newer residence sections of the city, it makes an ideal site for a church. The local Christian Science congregation was organized about five years ago.—*Harrisburg Patriot.*

NEWARK, O.

The members of First Church of Christ, Scientist, took possession of their new church Sunday [Oct. 10], and the first services were held at 10:30 o'clock. The new building is the former residence of Charles Follett, on Hudson avenue, and the architecture is such that it is admirably suited to the purpose for which it is intended. The front room is fitted up for a reading-room, and the result is delightful. A partition has been removed between two of the larger rooms, and this is used as the service room, the seating capacity being for about seventy-five. This meets the requirements for the present, and the other part of the building will remain the same until more room is demanded. The usual services were held Sunday, and no special features marked the occasion. Nevertheless, much interest was felt on this day and every chair was filled.

Mary Baker Eddy.

PRACTITIONERS' CHARGES.

Brookline, Mass., Dec. 24, 1909.

Dear Mr. McLellan:—Christian Science practitioners should make their charges for treatment equal to those of reputable physicians in their respective localities.

Sincerely yours,
MARY BAKER EDDY.

[MOST practitioners of Christian Science have been in doubt at times as to the proper amount to charge those who sought their services, and some few have felt embarrassed because they had to make any charge at all, therefore all will be glad to have this question so definitely, wisely, and authoritatively settled as it is in the above letter from our Leader, which we are much pleased to have her permission to publish.—EDITOR.]

CLIMBING THE LADDER.

THE sentiment involved in Jacob's undertaking, and the hopes that must have filled his heart, may have given interpretation as well as form to his wondrous dream, but whatever else the vision may have signified, it must have spoken to him as to us of the possibility of ascension, and indicated the way thereto; namely, by taking the successive steps of sincere and honest effort, by the progressive escape from a "low-vaulted past" through the attainment of a higher, more heavenly sense. It thus illustrates that order of spiritual progress which Christian Science has recognized as the way of improved belief, and respecting which Mrs. Eddy has said, "When Christ changes a belief of sin or of sickness into a better belief, then belief melts into spiritual understanding." "Mortals should so improve material belief by thought tending spiritually upward as to destroy materiality" (Science and Health, pp. 442, 545).

This teaching of Christian Science was overlooked by one who wrote recently: "I can understand how a consciousness of the infinitely perfect power and presence of God does eliminate the sensuous concept of matter,—even physical science leads to this conclusion,—but I cannot understand how a realization of the infinite can in any way dissipate a diseased condition of the body, any more than a normal one, when they are both in the same category, matter and non-existent. It would seem to me that even the slightest consciousness of the infinite would tend to annihilate the whole material structure, and I cannot understand how any one can enlist the divine power to dissipate arbitrarily a part of the material concept and not the whole."

This brother was entirely right in his thought that the belief of physical health is no less opposed to the spiritual concept of being than the belief of physical sickness. "It is as necessary for a health-illusion, as for an illusion of sickness, to be instructed out of itself into the understanding of what constitutes health" (*Ibid.*, p. 297). Nevertheless, of these two it is manifest that the belief of sickness is lower, the more unideal, and hence to be made well physically is a first step out of materiality. Physical health usually presents many more suggestions of that beauty of form, color, etc., which belongs wholly to the manifestations of Mind. Nevertheless, coincident with this health there is the prevailing belief that it pertains to a condition of matter, and escape from this belief becomes the next step up the ladder.

The realization of the power and presence of God does indeed tend to dissipate the whole material structure or sense, and the attainment of health is the first and easiest step in the process, in view of the fact that people do not enjoy sickness, and hence are willing to leave it behind, while the possession of health often means contentment in materiality. To the impotent man Christ Jesus said, "Wilt thou be made whole?" Beyond question this man wanted to be well, but to "be made whole" in the sense which Christian Science attaches to this phrase is not desired by mortals as a class. Christ Jesus helped many, but he lifted no one at once into an ideal state. This comes about only as we are willing to put our feet upon the successive rungs of the ladder, and so ascend every day by the conscious and assertive choice of Truth, by our successive demonstrations over the belief of material selfhood.

Jacob's ladder was noted for its descending as well as its ascending angels, and this points to the fact that the in-

Digitized by Google

spirations of Truth are ready to meet us at every stage of our advance. They give right interpretation to experience, and bring us ever increasing assurance and good cheer as we continue to climb. This is one of the perennial joys of all true Christian Scientists, that as they pass from one improved belief to another the way grows ever more luminous, their discernment more clear, because of the unnumbered angels "of his presence" which become their abiding companions.

JOHN B. WILLIS.

"THOU SHALT NOT STEAL."

IT is an interesting fact that the more grossly material mortals are, the fainter is their concept of moral obligation, while with an advance in spirituality this obligation takes definite form as statutes which have their root in a divine necessity. To the spiritually minded, obedience to God's law can never bring a sense of bondage; rather does it confer freedom, because, as Mrs. Eddy tells us, "When the Lawgiver was the only law of creation, freedom reigned" (Miscellaneous Writings, p. 259). We could never conceive of the divine nature as being fettered by divine law, but instead as finding in this law the fullest scope and expression; and this must be true of man, if he reflects God. We are reminded of the protection and privilege connected with the understanding of law when Christian Scientists are counseled by their Leader to be a law unto themselves. (See Science and Health, p. 442.)

It is very interesting to study the unfolding of the human sense of moral responsibility which is expressed in the book of Exodus, and which follows the giving of the Ten Commandments by Moses. If we take the eighth commandment, "Thou shalt not steal," we find it hedged about with such extraordinary precautions that theft would be supreme folly. Thus we read that if a man stole an ox he had to restore five oxen, and in the case of a sheep four sheep. In some other cases the restitution was to be double the value of the thing taken, and it was evident that this law was no dead letter, for we read that when the prophet brought David's sin home to him by a parable, which assumed the theft of a lamb, the king said without hesitation that the one who was guilty should be made to restore fourfold.

When we come down to the days of the great Teacher we find that with him honesty was ever at a premium. We read that Jesus invited himself to the house of Zaccheus, a rich publican, who assured him that he gave half of his goods to the poor, and who also said, "If I have taken any thing from any man by false accusation, I restore him fourfold." Jesus called him "a son of Abraham," and gave in his house that wonderful parable of "the pounds." We also read that when the rich young man came to Jesus, inquiring the way to eternal life, the Master told him that he should keep the commandments, and he repeated them to this Truth-seeker, who declared that he had kept them from his youth up. Then we read that Jesus loved the young man (evidently because of his purity and honesty), although he was not yet ready to forsake all earthly riches for the things of Spirit.

Later Jesus gave a broader characterization of the eighth commandment when he said, "All that ever came before me are thieves and robbers: . . . The thief cometh not, but for to steal, and to kill, and to destroy: I am come that they might have life, and that they might have it more abundantly." If one is robbed of the truth of being, he thereby loses the true sense of Life, the sense of Soul, and the Master said that the "whole world" would not compensate for this loss. Obedience to God's law up to the highest point of one's present understanding is the surest protection against the aggressions of evil. It is axiomatic that honesty is the best policy. Mrs. Eddy goes farther than this in saying that "honesty is spiritual power" (Science and Health, p. 453). It means entire reliance upon God, whatever the circumstances, and an absolute assurance that right is forever triumphant because God is divine Principle. "Thou shalt not steal" typifies the sword which guards the tree of life. Every divine statute, when understood, protects us from sinning and also from being sinned against, and by obedience to God's law we learn that knowledge is power.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Omaha, Neb., Dec. 14, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—Ever since I have understood the meaning of Christian Science, I have marveled that there should have been even one person in the world pure enough to discern the eternal, omnipresent good through the mists of error and materialism which covered the "whole face of the ground;" and how sure you must have been that this light was from above, to enable you to hold to it with such unflinching faith, when all the rest of the world was believing in its opposite. How much more sure you must be now, since God has sustained you through so many trials, and surrounded you with an army of faithful workers, ready to help you and to obey your slightest wish —not from any sordid motive, not because of any demand made by you, but because of the deep gratitude they feel for you and for your gigantic labors for mankind, which no man can measure.

It was my great privilege to study with your beloved student, Mr. Kimball, and through his instruction I gained an understanding of this truth, the value of which cannot be estimated. His loyalty to you was always paramount, and he warned us to beware of anything which would alienate us from you, our Leader. You have taught us that when we are thinking of personality we are not thinking of Principle; you have admonished us to be great only as good, and to let our lives attest our sincerity,—and this is my constant desire.

With deepest love and gratitude to you for our textbook, and for your other writings, which (though I have been studying constantly for twenty years) I never before appreciated as I do now, I am striving to be

Your faithful follower,

MRS. CLARA B. MACMILLAN.

MRS. EDDY'S REPLY.

I thank you deeply.

MARY BAKER EDDY.

Glasgow, Scotland, Dec. 9, 1909.

Dear Mrs. Eddy:—We wish at this time to express to you our gratitude for the guidance and direction of the Manual of The Mother Church which you have given us, and we pledge our loyalty and obedience to its by-laws. Under its wise provisions this church was formed, has been protected and guided, and continues to grow "in the nurture and admonition of the Lord." Without it we might have felt as a handful of sheep in the wilderness; with it we have a plain path for our feet to tread. We recognize in it a reflection of that Love which is "impartial and universal in its adaptation and bestowals" (Science and Health, p. 13).

We are grateful for the faithful work done by the Board of Directors of The Mother Church, and are resolved to support them in their demonstration of the government of

Digitized by Google

Principle. Above all, dear Leader, we wish to offer you our loving loyalty and reverence for your wisdom and patience in pointing the way in Christian Science.

THE BOARD OF DIRECTORS,
First Church of Christ, Scientist, Glasgow, Scotland.

MRS. EDDY'S REPLY.

Beloved brethren, your letter cheers me—it is *par excellence.*

MARY BAKER EDDY.

Cambridge, England.

Beloved Leader:—At our meeting this afternoon we are impelled to send you these few lines to express our deep gratitude to you for your recent action in bringing about a speedy demonstration of peace and unanimity in First Church of Christ, Scientist, New York. We are unspeakably thankful to feel that the organization of The Mother Church is an effective safeguard of the purity and unity of Christian Science teaching throughout the world.

Lovingly and loyally yours,

AGNATA F. BUTLER, ELEANOR M. SEARLE,
PATTIE EGAN, ANNIE CHARLES SMITH,
EVELINE M. FIELD, P. RAMSAY LAIRD,
Board of Directors,
Christian Science Society of Cambridge, England.

MRS. EDDY'S REPLY.

Thanks to God, and to you, His followers.

MARY BAKER EDDY.

Utica, N. Y., Dec. 15, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—Rejoicing in the priceless benefits received through Christian Science, our hearts unite in this message of love and gratitude to you, its Discoverer and Founder, and its highest demonstrator in these times. We love you because you love God and mankind, and daily exemplify in Christly living the love described by you in "Miscellaneous Writings" (p. 312) as "consistent, uniform, sympathetic, self-sacrificing, unutterably kind."

We are truly grateful to God for giving to hungering, thirsting, suffering humanity, through your illumined consciousness, the Science of Christianity, the understanding and practice of which is dispelling the mists of sin, sickness, and sorrow, destroying false concepts and annulling every false material law. We are grateful for all your writings, and for the grand work the Publishing Society is doing in supplying the world with reading-matter so inspiring and purifying in its character. We know that in following you as you follow Christ we shall depend upon divine guidance and seek to be governed in every detail of our lives by divine wisdom, Truth and Love, resulting in clearer perception of good, its unfolding and its reflection. For this achievement we promise to work, watch, and pray.

Lovingly,
First Church of Christ, Scientist,
MRS. ELLEN L. PERCY, *Clerk.*

Dallas, Tex., Dec. 10, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Christian Science, the true religion of Christ, as revealed through you by your pure and consecrated life, has brought so many blessings to me and mine, since taking up the study and entering this broad and glorious field of Love, that I no longer can refrain from giving expression to my deep sense of gratitude to you for this priceless revelation to poor suffering humanity. I will not attempt to enumerate the great blessings that I have derived from this blessed truth, as it would take a volume filled to overflowing to express it; but suffice it to say that my whole life has been transformed, and in every way do I feel and know that I have been completely regenerated, having been healed of many ills, besides a dislocated limb of several years' standing, and a severe hernia, which to mortal sense I had had for the past twenty years.

For these, and the many other blessings which have come through the study and reading of our blessed text-book, "Science and Health with Key to the Scriptures,"—your gift to the world, which could not be greater,—I am deeply grateful, and I am endeavoring daily to prove the sincerity of my gratitude by following in the footsteps of you, our dear Leader, ever bearing in mind your loving admonition to follow you only so far as you follow Christ.

Your grateful follower,
MRS. L. E. SPANN.

Hyde Park, Mass., Dec. 12, 1909.

Dear Mrs. Eddy:—It made me very happy when the new rule was passed admitting those under the age of twenty to the Sunday School classes. After attending Sunday School twice I was entirely healed of severe headache, from which I had suffered nearly every day for about two years. The pain seemed to meet me every day as I was coming home from school. The Sunday before my demonstration I had received a very helpful thought in class. It was that matter had no intelligence and could not experience pain. I held close to this thought while I was coming home the next day, and before I had gone half the length of the street the headache had entirely disappeared and has not returned.

For this and many other beautiful demonstrations I have experienced I am truly thankful.

Very respectfully,
IRENE TALBOT.

Framingham, Mass., Dec. 7, 1909.

Dear Mrs. Eddy:—For several years now I have been blessed with the peace and plenty which come with the understanding of God as revealed by you. While I think I can be of most value to you by trying to make the Manual you have given us a handbook of daily living, yet a word, at least, of acknowledgment to you for your unselfish life and untiring work, and their benefit to the world and to me as a small portion thereof, is incumbent upon me,—is my duty, my privilege, my joy and desire,—and has been so for some time past. Now, when the world is about to celebrate again God's great gift to men in the birth of Jesus, so let it be an opportune time for grateful hearts to sing a song of praise and thanksgiving to Him for the gift of one who has revealed to them His idea—the glorious truth of an ever-living spirit of Christ!

God does bless you and lead you on, and I am His and your grateful follower.

KATHARINE M. TUCKERMAN.

IMPORTANT ANNOUNCEMENT.

The Christian Science Monitor of January 1, 1910, will contain a complete index of the important events of 1909 as noted in the *Monitor*, and an index of the Christian Science articles appearing on the Home Forum pages during the past year. This feature will be found of great value to the general reader, and of especial value to those who have kept a file of the year's *Monitors*. Price, two cents a copy; in quantity, $1.25 a hundred. All orders should be addressed to the Circulation Department, *The Christian Science Monitor*, Boston, Mass.

THE LECTURES.

NASHUA, N. H.

Frank H. Leonard delivered a lecture on Christian Science in City Hall, Oct. 28, to an audience of several hundred. The lecturer was introduced by the Rev. W. H. Morrison, pastor of the First Universalist church, who spoke as follows:—

I am here this evening to a meeting of the Christian Science sisters and brothers. What shall we do with Christian Science? Why, give it fair play—just fair play. If it is a splendid truth, certainly that is what is going to bring it out; and if it isn't, surely what will find that out is to give it fair play. That is what we all want. We all have our ideals. We can't all be alike; I am glad we can't. It would be a funny world if we were.—*Correspondence.*

WINCHESTER, MASS.

First Church of Christ, Scientist, in Winchester, held its annual lecture in the Town Hall Monday evening [Nov. 8] at 8 o'clock. Ralph E. Joslin, who introduced the lecturer, Prof. Hermann S. Hering, said in part,—

The Christian Scientist declares that life is spiritual only, and that with this thought once grasped and retained, all physical suffering and ailment may be vanquished. The rapid spread and growth of this idea has been phenomenal. Whether one assents or dissents, if he be fair and unprejudiced he must admit that it has been accepted by a large and constantly increasing number of intelligent and refined people. He must go farther, and admit also that among those who have embraced this teaching there exists a serenity of mind and contentment unlike that to be found in any other body of Christians. Whether right or wrong in theory, in fact great peace of mind and comfort have come into the lives of those who constitute the Christian Science membership.

Again, the methods employed by the workers in this church in many respects compel our admiration. If the theory of Christian Science is wrong, or has in it any weakness, certainly those who uphold it do not fear to have it stated and discussed. Utilizing all modern methods of publicity by written and spoken word, they everywhere seek to bring their views to the attention of intelligent and thinking people. From the pulpit, the public platform, and in the press they give out their thought and challenge the attention of the world.—*Winchester Star.*

LIVERPOOL, ENGLAND.

The following introductory remarks were made by Bertram Hawker, Esq., M.A., who was chairman at the Rev. Arthur R. Vosburgh's lecture at Hope Hall, Liverpool, on Tuesday, Nov. 2:—

The subject of tonight's lecture is one that is more and more engaging the mind of the public and the attention of thoughtful men, and if in the process opposition is provoked, it need be no more than a sign of its vitality. All efforts to arrive at the truth have been opposed by those satisfied that they already possess it. History is not silent. Nor is it only the revealers of spiritual truth, but also the Galileos and Darwins who have by their reversal of accepted ideas felt this onslaught of hostility. And a point to notice in the nature of this hostility is that it frequently does not know what it is opposing. It opposes before it investigates. Tonight is given an opportunity, to those who wish for information before forming a judgment, of hearing from an accredited exponent of the subject what Christian Science really is. I have much pleasure in introducing to you the Rev. Arthur R. Vosburgh.

Correspondence.

ATLANTA, GA.

Frank H. Leonard lectured Nov. 14 at the Grand on the subject of Christian Science. He was introduced by Mrs. Sue Harper Mims, who said in part,—

It is significant and beautiful to me that so large an audidence is gathered here this afternoon to listen to a lecture on Christian Science. It means that in this hour which seems a culminating one in materialism,—a Babylon of splendor and brilliancy (fleeting though it be),—that "above the harsh noises of the day" you must have caught the tones of the "low sweet prelude" of the advancing spiritual era, awakening an interest in the spiritual and eternal verities of being. We all know that in coming to a Christian Science lecture it is not to hear of persons or events, nor things, but to hear of God, and His wondrous ways to the children of men. It is to learn that Spirit alone is force, presence, and power. Spirit is God; therefore Spirit is the creator, the sustaining and governing power, the Mind of man and the universe; hence, all true force or power must be and is spiritual, not material. Best of all, we learn that this power is Love, the divine Principle of being,—beneficent, eternal, universal.

Should it seem strange that this healing Christ-power has come from the Mother-heart of divine Love, thus to heal and bless, through a woman? Indeed, fairest of all earth's miracles today is this woman, Mary Baker Eddy,—humble, patient, meek, enduring, strong with the strength which God supplies, wise with the "wisdom that cometh from above," knowing that "the Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea [the turbulence of material thought]." In sweet serenity of soul, and absolute faith in God and the supremacy of good, she is leading the church triumphant to a glorious establishment on earth.—*Correspondence.*

SALT LAKE CITY, UTAH.

Judge William G. Ewing of Chicago delivered an address last night [Nov. 14] at the Salt Lake Theater. He was introduced by Frank B. Stephens, who said in part,—

The perpetuation of the teachings of Jesus Christ was confided to erring mortals. The truths he taught became obscured in a mist of creeds and dogmas, and within the present generation men claiming to be ministers of God sincerely and honestly taught that there was a heaven of everlasting bliss for the few and eternal torment of annihilation for the many. Such a doctrine as this, and many others which now seem to us equally unbelievable, brought about a revolt, and these came upon what was called a wave of infidelity and agnosticism. Iconoclasts almost brutally dashed to pieces many of the cherished idols of the Christian church, even denied the existence of a God, and seemed to stand like a colossus in the midst of irretrievable ruin. Thousands who had formerly been firm believers were not sure even of immortality.

But while these men were tearing away the husks which covered the kernels of truth, and other great men were trying to get their bearings as they stood amid a chaos of shattered beliefs, a gentle woman, with a marvelous perception of truth and with a heart full of love for humanity, began, lovingly and gently, to lead people back to the simple truths taught by Jesus Christ; and today hundreds of thousands of men and women, by reason of her teachings, have been healed of sickness, sorrow, suffering, and sin, and are earnestly trying to lead better lives. This splendid audience, many times greater than the number of all of the members of the Christian Science churches in this city, attests the fact that the people are seeking for truth, and I welcome you to hear the distinguished speaker of the evening. The fundamental

Digitized by Google

truths upon which the religion called Christian Science is founded are such that they appeal to the trained mind. Men of the highest intelligence acknowledge the truth of these fundamental truths, just as they acknowledge the fundamental truths of mathematics, or things that are brought to light by scientific research.—*Telegram.*

SHERMAN, TEXAS.

About four hundred people attended the lecture delivered last night [Nov. 15] at the Opera House by Bliss Knapp of Boston. Louis A. Gregory of Lincoln, Neb., who introduced the speaker, said in part,—

I was drawn to Christian Science when it healed my father of locomotor ataxia and Bright's disease at such advanced stages that physicians pronounced his case incurable. In more than ten years' study of this Science and its votaries I have become acquainted with hundreds of excellent, well-informed people, who declare that they have been remarkably healed through this form of treatment alone, and their various ailments almost run the gamut of physical, mental, and moral disease. With remarkable unanimity, too, they accord first place to the spiritual teachings of Christian Science rather than to its seemingly marvelous physical healing.

From the twilight vista of unrecorded ages comes the chant of the prophet Isaiah, "How beautiful upon the mountains are the feet of him that bringeth good tidings." Yet the nails that transfixed the feet of Jesus upon the Calvarian cross indicate to how few people of his own time were the feet of the Messiah beautiful upon the mountains of Judea. The prerequisite of regeneration was and ever will be the assimilation of truth. The truth expressed here tonight must be grasped and pondered by you to become beneficial to you. No matter how much of good is offered, it cannot help you unless you take of it and make it your own.—*Sherman Democrat.*

LECTURES TO BE DELIVERED.

Freeport, Ill.—Frank H. Leonard, Masonic Temple, Jan. 10.
Plymouth, Wis.—Frank H. Leonard, Turner Hall, Jan. 11.

CORRECTION.

In the Lesson for Feb. 20, 1910, subject "Mind," the third Science and Health reference in Section 1 should be 303 instead of 503.

TESTIMONIES OF HEALING.

I feel that the time has come when I am able to give my testimony to the truth and healing power of Christian Science. It is over five years since I was first told of it by a relative who came to visit us and who had herself been greatly helped through Christian Science. We talked on the subject the whole of the first afternoon that she was here, and before evening I was thoroughly convinced that it was the truth for which I had been feebly groping for many years. For the next few days I read some of the books she had lent me until I could get some of my own. On the third day of her visit I had my first proof of the healing power of Christian Science in the following manner. It was bitterly cold weather and the ground was a sheet of ice. I was stepping hurriedly into the garden, when my foot slipped, doubled over, and was very badly injured. The sense of pain made me feel faint, and I remembered that once before I had been laid up for six weeks from the same cause. I, however, realized almost at once that Christian Science could help me, and hopping back into the room, I sat down and began to think over all that I had been told and had read in the last three days. My relative was in the room, and she helped me also. In seven minutes the worst part of the pain subsided, and in three more minutes I stood up, saying, "My foot is quite well." One hour later I went for a two-mile walk and felt no pain or discomfort whatever. The 11th and 12th verses of the 91st Psalm seemed to possess my thought the whole time I was out, and my feet were kept from slipping or stumbling again on those icy roads.

My gratitude and rejoicing over this proof of the healing power of divine Mind, and also for the sense of safety and protection which I experienced, were more than words can express. A day or two later my relative went away, and I continued to study by myself. Three weeks after this I was healed, through the reading of Science and Health, of a very serious internal trouble, which had kept me in almost incessant pain for nearly ten years, and for which I had always to wear a surgical appliance. The doctors had said that I would have to wear this appliance for the rest of my life, as whenever I tried to do without it the pain became intolerable. During the three weeks I had been trying to apply my small understanding of Christian Science to the overcoming of this difficulty, but the pain seemed worse than usual. I then wrote to make an appointment for present treatment from an experienced practitioner. The next day, however, as I was studying Science and Health, I suddenly realized that it was only my own want of faith and understanding which was hindering me from knowing that I was healed there and then. I put the book down, thought it over, and asked God to give me a clearer understanding of this truth. I then went to my room and removed the appliance, and the pain vanished. From that moment I was free! I was healed, and I have had no return of the suffering. At that time I was also liable to very bad attacks of throat trouble, which used to make me ill and weak for weeks at a time. This trouble has also practically vanished; very rarely now do I ever feel even a slight soreness, and I am able to overcome this in a very short time through my understanding of Christian Science. Sometimes my voice remains husky, but this causes no pain or distress as it did formerly, and I regain a normal tone much sooner. I know, too, that as I work on faithfully, this apparent weakness will vanish. I have also been freed from severe headaches, from which I used to suffer almost daily; and many other ailments which were a constant annoyance have disappeared.

On one occasion, when sitting with a friend in her bedroom, the front of a very heavy wardrobe fell forward,

Digitized by Google

the full weight coming on my head, which was hit by the carving at the top. I just had time to declare mentally that evil could not harm me as the front fell. Two friends who were present raised it off me, expecting to find me stunned; but I was not hurt in the smallest degree. I felt just as well as if nothing had happened, and so intensely grateful and happy that such a proof of God's goodness should be given before these friends, who were not interested in Christian Science. On another occasion I was awakened in the middle of the night by the falling of a picture. The corner of the frame struck me close to the right eye, on the edge of the temple, and made a deep cut, which bled profusely; but in a few minutes, through the realization of God's presence and allness, the bleeding stopped, and the severe pain was allayed. In half an hour I was asleep again, and when I woke in the morning the swelling had nearly disappeared, the cut was healed over and looked only like a scratch, and in the afternoon of that day I was able to do some very fine lace-work without any distress to eye or head.

These are only a very few out of the many wonderful proofs I have had of the truth and power of Christian Science, both for myself and in being able to help others. My great desire is to understand more and more of this wonderful truth, and to work faithfully to prove my gratitude to God, to Mrs. Eddy, and to all those who have so lovingly helped me on toward a better understanding of our God, who is Truth, Life, and Love.

L. M. GRACE, Eltham, England.

The fact has been brought very forcibly to my mind that, thanks to Christian Science and its application to my needs, ten years have been allowed me for repentance and good works. It is a little more than that time since a Scientist came to my bedside and delivered the message which lifted me out of the dark "valley of the shadow of death," where I had so long lingered; but it then seemed that my staying powers were over, and I was fast drifting into the darkness of night. *Materia medica* had sentenced me to die, and I was so tired of pain untold and weariness unspeakable, that I was ready to give up a struggle which had already lasted for years. Then like an angel came the message of Truth, and I was free. Gone was the pain, gone forever the weariness and dread of day, gone the long nights of terror; and again I walked the earth among my fellow-creatures.

Time is all too short to tell even briefly of the countless blessings that have since been mine. I had lost all faith and belief in a God; now, thanks to Christian Science, I can say with Job, "I know that my redeemer liveth." The Bible, long a closed book, conveying no meaning, is now my daily study. Happiness, then a stranger, is now a frequent guest. Fear, then my constant companion, has been relegated to its native nothingness. In mind, body, and estate I have been made new. My daily prayer is that I may be enabled to complete the work which I must do in order to show a small part of my gratitude to God for our beloved Leader's faithful work, and for the courage and love that braved my ignorance and brought to me the blessed truth that made me free.

I desire to return thanks for the help of Christian Science in the recovery of our little daughter from a severe illness. This child, seven and a half years old, was seized with a supposedly contagious throat trouble. I thought I could master it, and did my best, but the next morning the condition seemed so real that I asked help from a practitioner. Then the symptoms changed, and a severe case of fever manifested itself. I telegraphed to another Scientist, and the help was immediate, the cure instantaneous. From an advanced condition of this fever, the child was completely free and ready to get up and play; she had no tedious recovery, but was well as soon as the nothingness of our fear was realized. For this manifestation of ever-present Love I am profoundly grateful, and to our dear Leader enough praise can never be given. I can only say that I hope this new-old truth will ere long be everywhere acknowledged.

I also wish to tell of a recent experience. One day I went to a neighboring town on business and got into a street bus to go to my destination. The driver alighted to let some passengers off, leaving the horses alone and unhitched. A boy passed them on a bicycle, and they instantly started to run. In a moment they were beyond control, and immediately I began to declare the truth for all of us (there were eight persons, including two children, in the bus). The horses ran two blocks, turned into a livery barn, went through it, and as far out of the rear door as they could go. When they were stopped the vehicle was badly wrecked, the bottom and the heavy sides below the glass being all that was left, but no one was hurt. Even the horses were not injured. This experience satisfied me of the protecting power of God, and the trust we may all gain through Christian Science. I can never sufficiently thank our dear Leader, who made it possible for all who will to know the power of Truth to give courage and also protection in danger of every kind.

MILLIE MORTON MORGAN, Amarillo, Tex.

For more than ten years it has been a great pleasure to me to tell of the many instances wherein I have received relief from physical ills through Christian Science. My wife, two of our children, and I have each been on the very verge of the grave, as it seemed, and through Christian Science we were speedily and permanently restored to health. Besides this there have been many instances in which we have had almost instant relief from various minor ills. A little more than a year ago I was relieved of a severe attack of acute lung trouble.

After receiving the last-mentioned help, we organized a Christian Science society, holding the meetings in our own residence. The attendance soon increased so much that we secured permanent quarters in the business district of Amarillo, where we now hold three services each week, sometimes with an attendance of as many as thirty-five persons. I am very grateful to Christ Jesus, our Wayshower, for demonstrating to his followers how to live. I am likewise grateful to our beloved Leader, Mrs. Eddy, for her devotion to the truth, and the consecration of her life to promulgating the rule by which we are to reach perfect harmony.—ROBERT W. MORGAN, Amarillo, Tex.

I would like to relate how I became interested in Christian Science. Nearly a year and a half ago I received a letter from a very dear friend, requesting me to attend a lecture on Christian Science which was to be given in Madison on June 28, and saying that, as he knew of my poor health at this time, I would have reason to be grateful for this advice. I attended the lecture, and was deeply interested in what the speaker had to say. I also noted that he had been healed of heart trouble, which at that time was causing me much suffering.

I resolved that night to take no more drugs, but to attend the Christian Science meetings and learn more of this teaching. At the very first meeting I attended I was impressed greatly by the simplicity of the service, the brotherly affection shown, the genuine harmony that existed among the members, and the courtesy extended to me. I attended the meetings for about four weeks, intending every day to take treatment, but I put it off from day to day until July 29. On that day I became very ill, as the effect of the drugs which I had taken previously had left me a

Digitized by Google

physical wreck. After a few hours of rest I started for home from business, and reached there feeling as though I might pass out at any minute. After resting for two hours, I told my wife I would go down to the meeting and ask for treatment, as a last resort. My wife tried to persuade me to have the doctor, saying that I could not suffer that way much longer. I however said, "No more drugs for me. I am going to try Christian Science." I started for the meeting in a very weakened condition, and after the service I talked with a friend who had been cured of heart and lung trouble. I asked him if he thought I could be healed or receive relief from such suffering as I was then enduring. He said, "There is a practitioner right here. Go to him right now, state your case, and trust in God."

I stated my case to the practitioner, who assured me that there is nothing impossible to God, divine Mind. He said I must cast out of my consciousness all jealous, malicious, and erroneous thoughts of every kind, and trust in God. He told me to go home and forget that I had ever been sick. I did go home, and I did forget my fear of the disease. I never awakened until I was called at six o'clock. It was the first all-night sleep in thirty years, having had in that time no more than two or three hours a night. I ate such a hearty breakfast that my wife said I had better go to the Christian Science meeting again. To think of all the months that I had suffered, and to be absolutely healed in one night; to take treatment at a quarter past nine and get up a well man at six o'clock the next morning, fully restored to health and vigor, seemed indeed marvelous to me; but it was no dream, it was instead remarkable evidence of the reality of the divine Mind, through the understanding and demonstration of Christian Science, which shows us clearly that there is nothing impossible to God, if we only obey Him and have faith in His power, as Mrs. Eddy explains to us in that wonderful book "Science and Health with Key to the Scriptures."

Did I thank my dear friend for advising me to attend the lecture? Yes, I did; and I thank God for the thought, as it was a banner bit of advice to me. I can say that the time which has elapsed since my healing has been the happiest of my life, so thoroughly contented am I with my surroundings. I feel grateful for all the blessings I have received through Christian Science and I thank God for my restoration to perfect health.

J. R. QUINNE, Madison, N. J.

I was brought up to read the Bible and to search it for spiritual guidance. When I was a young girl I read it through word for word twice, as a matter of duty, besides many other readings, not as a whole. One verse which I heard sung in church when I was eight years old, stayed with me. It was from Psalms: "One thing have I desired of the Lord, that will I seek after; that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to enquire in his temple." The words and their accompanying melody entered into my consciousness, never to leave. My longings for that "one thing" were indefinite, though earnest, and my prayers were blind pleadings to a monarch in some far-off place in the skies. My life did not unfold as I longed for it to do; I wanted to be kind, and thoughtful of others, patient, gentle, sincere. I wanted my home to be clear of the little frictions of anger and fret, but my faults seemed so many to me and so big. I made a list of them and magnified them into terrible realities. I also made a list of beautiful things to do each day, and for a time I faithfully carried them through, and though I did not look to self quite so much, I was still not satisfied—that "one thing" was not attained.

My health became poor,—a stomach disorder, sleeplessness, and worn-out nerves. I am a teacher, and in seeking a cure, I found healing in Christian Science. Then that faint light which came to the child, the desire to "dwell in the house of the Lord," expanded into the understanding of what the "one thing" is, what heaven and God are; and I am beginning "to behold the beauties of the Lord" and learning what it means "to enquire in his temple." I am glad I learned the stories of the Bible in youth, and read its pages later for comfort, even though I had to wait for the golden key that opens its meaning, thus transmuting to my dulled sense its words into letters of fire. The Bible has become, indeed, the Book of Life, and I am grateful to her who, catching its practical import, has courageously given it to humankind through "Science and Health with Key to the Scriptures."

LUCY HOLTZCLAW, Chattanooga, Tenn.

I am deeply grateful for Christian Science, and for its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have been wonderfully healed in many ways, one ailment being a long-standing case of diseased tear-ducts. For fourteen years there had been a constant discharge from the eyes, and my vision had become so dim that I could not see anything without glasses. It was not, however, the healing of this trouble which led me into Christian Science, but escape from an extreme nervous illness, said to result from an incurable disease.

I had practically exhausted every material means when a friend, finding me in this condition, asked me to try Christian Science. I knew nothing of its teaching, and was therefore rather unwilling to try it, but after a few days I called on this friend and asked her where and how I could get Christian Science. She then went with me to a practitioner. When this Scientist told me that God is man's Life, that Truth and Love govern man, I left her office with a hope such as I had never known before. On my way home I purchased a copy of Science and Health and began to ponder its meaning. The next day, while the practitioner was silently treating me, the truth so dawned on me that I could see why I had been sick, and all pain left me. After reading a few days in Science and Health I turned to the page where Mrs. Eddy writes of a man whom she had wonderfully healed. (Science and Health, p. 192.)

Then came the healing of my eyes. I removed my glasses to wipe my eyes, and had read for some time when I discovered the glasses in my lap and thus knew that I was healed. The next day, on turning to Science and Health to read I could not see even the print, to say nothing of reading. I could then understand how true it is that mortal sense does deceive us, but I had no desire to put on my glasses. I had my children read for me, with the result that in less than a week this diseased condition was healed. I am indeed grateful for this healing, but more grateful for the spiritual healing, and to know that God, Truth and Love, governs man.

MRS. BERTHA KINDLER, San Diego, Cal.

For a number of years I suffered very great pain and inconvenience with my feet. At one time they had been badly frost-bitten, and were disfigured by extremely large and painful bunions. In severe weather the conditions were so much aggravated that I could not keep my shoes on, and had to seek relief by putting my feet in snow or icy water, but this relief was only temporary. The bunions were at times so painful that walking was positive torture.

Something over a year ago, when I had heard of Christian Science and been greatly attracted to its teachings, I resolved to take treatment for my feet. I was then unable to walk without limping. I had two weeks' treatment, and though at the end of that time I was greatly uplifted

Digitized by Google

spiritually, I was disappointed that my feet seemed no better. The practitioner encouraged me to go on studying and to know that the healing would come. I followed her directions faithfully, and some weeks later was utterly amazed to discover that the bunions could be removed easily without the use of any instrument. In a day or so my toes were smooth and unscarred, and the joints which had been swollen and apparently malformed, became perfectly normal.

This, as I have said, was over a year ago. I have never experienced any of the old trouble since, going through last winter without a return of the former conditions, and being able to purchase new footwear without painful apprehensions. This is only one of many Christian Science demonstrations that have come into my experience, and it is needless to say that I am grateful.

MRS. ELDO STEDFELD, Indianapolis, Ind.

During November, 1908, I was afflicted with a severe and painful throat trouble, which affected my voice so that I was unable to speak above a whisper. Daily visits to a specialist failed to afford me relief or restore my voice. I had occasionally attended the Christian Science church, and the advice of a friend that I try this treatment with the assistance of a practitioner, was somewhat fearfully adopted. So effective was this treatment that within two days my voice was fully restored and my general health normal. I deeply appreciate the help thus received, and tender my sincerest thanks for the same to the Giver of all good.—MRS. H. D. MCBRIDE, Dallas, Tex.

[Translated from the German.]

It is with a grateful heart that I tell how I was healed through Christian Science. Two years ago I became seriously ill. Medical skill relieved me somewhat from the trouble which had brought me near death, but could not remove it completely. After some time I had another attack, which robbed me of all my strength. At that time I became acquainted with a Christian Scientist, and heard that many people were being healed in a wonderful way. I attended the meetings, which greatly inspired me. I also secured *Der Herold der Christian Science*, and read it diligently, believing that I would get well; but I found I lacked the necessary understanding, and therefore applied to a practitioner. With a few treatments I was completely restored, and know now that God is the "great Physician" who frees us from all disease and misery, for which I am thankful to Him. I am also grateful to our Leader, with all my heart.

FRAU HARM, Wannsee b. Berlin, Germany.

Words can never express the gratitude I owe to Christian Science. I know it is the truth that makes us free. It has been about nineteen years since my first healing in Christian Science of a number of severe ailments. Medicine did not seem to have any effect upon me, and I had been sick for two years. When I heard of Christian Science, and saw some healing work done through it, I decided at once to take treatment. I applied to a Christian Science practitioner for help, and was completely healed in one week's time.

The understanding of God, as taught in Christian Science, was my only physician when I had an attack of smallpox, nine years ago, and also when my baby was born. For many years I have found that God is an ever-present help in time of trouble. It is my aim in life to reflect Love as I move among my fellow-men. May God bless Mrs. Eddy, who has taught how to understand the Word which is "the light of the world."

MRS. ANNA J. LEONARD, Sturgis, S. Dak.

I desire to express my gratitude for the benefit I have received from Christian Science, hoping my experience may encourage some one who is looking for help. From childhood I had always been called delicate; my parents never thought I would reach womanhood, for there was always something the matter with me. The physicians called my trouble nervous, with a liver disorder which seemed to affect the entire organism. I was dosed with drugs constantly, and in this way I struggled on until suddenly my eyes failed me. My feelings may be imagined when I was told by a specialist that he feared there was no hope for me, and that in a short time I would be entirely blind. Seeing my distress, he promised to do all in his power for me, but the blow was more than I could stand, and a complete collapse, both physical and mental, was the consequence. I went to his sanitarium, took his treatment, was under his care for about three months, and at the end of that time I came home only to find myself in a short time as despondent as ever. I then sought the aid of my old family physician, but failed to get relief.

This extremity, however, proved to be God's opportunity. I was induced, through the kindly interest of a friend, to try Christian Science, and I think I must have been healed at the very first treatment, for I was able to walk home, a distance of eight or nine blocks, with no thought of being weary, and in four or five weeks I went to work in a Christian Science family. This healing took place over eight years ago, and since then I have been able to do heavy work and endure hardships that before would have been impossible. I have also been able to lay aside glasses, which I had worn steadily for twenty years. I am grateful for these proofs of God's loving care, and for the joy and peace that have come to our home.

I can never cease to be thankful for "Science and Health with Key to the Scriptures" by Mrs. Eddy, and for her consecrated life.—SUSAN ELSWORTH, E. Los Angeles, Cal.

About nine years ago I was healed in Christian Science of what the physician pronounced organic heart trouble and a chronic stomach disorder. Now, with the desire to encourage others, I relate the healing of an abnormal growth. For ten years this growth had been in evidence to the material senses, but it was entirely overcome through the understanding, gained in Christian Science, that it was no part of my true being, and that when the belief in it was destroyed in consciousness there would be no more of the false "evidence." This healing occurred two years ago. Another very troublesome disease, catarrh of twenty-five years' standing, entirely disappeared nearly a year ago. It is with sincere gratitude to God, and to Mrs. Eddy, His messenger to us, that this testimony is given.

SUSIE M. ABBOTT, Lancaster, N. H.

Let me but live my life from year to year,
With forward face and unreluctant soul,
Not hastening to, nor turning from, the goal;
Not mourning for the things that disappear
In the dim past, nor holding back in fear
From what the future veils, but with a whole
And happy heart that pays its toll
To youth and age, and travels on with cheer.

So let the way wind up the hill or down,
Through rough or smooth, the journey will be joy;
Still seeking what I sought when but a boy,
New friendships, high adventure, and a crown.
I shall grow old, but never lose life's zest,
Because the road's last turn will be the best.

HENRY VAN DYKE.

Digitized by Google

FROM OUR EXCHANGES.

[*Western Christian Advocate.*]

If, in truth, "a man's life consisteth not in the abundance of the things which he possesseth;" if, in truth, it shall be found far from profitable to gain the whole world, were it possible, and lose one's soul—one's true life; if our main endeavor here should be to lay up treasure in the heaven of a spiritualized character and the record of kind deeds; if there is a distinct danger that the deceitfulness of riches shall choke the Word; if swift doom threatens him who grossly says to his uncultivated soul, "Thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry"!—then why, when we worship this peasant-born Saviour, who lived all his days the simple life, who uncovered the sources of pure joy, who laid stress on righteousness rather than riches and on holiness rather than holdings, should we so inconsistently and so furiously pursue the things that perish in the using, that make not necessarily for happiness or composure of mind, and that belong not to the spirit or to eternity?

[*Universalist Leader.*]

There is nothing the world needs so much today as the man who can say, "I know." The preacher who knows only a little, but who knows that little, and knows he knows it, will get a following, when the man who doubts a great deal, has suspicions about everything, and deals only in suppositions and possibilities, and raises questions instead of answering them, will flock all by himself! Happy is the minister who at least can say, "This one thing I know," and people will seek him for that one thing. Lonely is the minister who has only his doubts and speculations with which to feed hungry minds and hearts and souls. Pitiful the man who has lived even a score of years, who has not come to a conclusion about something, who cannot speak at least one confident word.

[*Christian World.*]

Philosophy is the endeavor to make the world wiser. The gospel is the bold attempt to make the world better. Philosophy is an appeal to the intellect. Religion in its highest form captures the heart. We are told today that the modern cultivated intellect is leaving the church; is giving up the Christian dogma. Perhaps it is. But let us clearly understand what is happening. What men are giving up is not the fact, but old-world, medieval explanations of the fact. When they reject the Ptolemaic astronomy they are not rejecting the stars. Christianity in itself can never be given up, because it is here,—a fact that has happened.

[*Examiner.*]

In the struggle with unbelief faith is strengthened; through the clenched antagonisms of life we win our souls. The word of the Lord is assimilated in the very effort to hold fast to it, and the faithful man is a king before the crown is put on his head. It is to a great destiny that we are called. If the exceeding greatness of the promises of God challenges our souls to an heroic faith and to a bold adventure, let us rejoice at the prospect. No life is worth anything which has no unfulfilled hopes, and no fine hopes are fulfilled except to the man who picks up the gage God flings at his feet.

[*Christian Register.*]

The world sadly needs just the kind of leaven that Jesus meant,—the destructive principle to the caste spirit, the leaven of religious and moral democracy for the accomplishment of noble things for the higher good of the race.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in French old style type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falnouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE. PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The state investigation of the price of milk in New York city, shows that one well-known company, controlling twenty-eight per cent of the milk trade in the city, credits seventy-five per cent of its twenty million dollars of capital to "trade-marks and good-will." On this capitalization six per cent was paid on the preferred stock and ten per cent on the common. Another company, capitalized at half a million, which figured "good-will" at three hundred thousand dollars, paid fifteen per cent dividends last year, twenty-two per cent this year. Still another company paid twenty-six per cent. These companies sold milk at eight cents a quart and desire to increase the price, claiming they cannot make a fair profit at that figure.

Of the total net indebtedness of the 158 cities in the United States which, in 1907, had an estimated population of over thirty thousand each, 30.2 per cent is credited to New York city, which has more than seven times the indebtedness of any other city, and more than one half of the total of the twenty-seven largest cities of the country. The per capita net debt of New York city is $142.52; and the only other cities having a per capita net indebtedness of over one hundred dollars were: Cincinnati, O., $123.85; Boston, Mass., $120.37; Galveston, Tex., $115.78; Pueblo, Col., $108.23, and Newton, Mass., $105.83.

Every person in America, practically, sustained a fire loss of $2.58 in 1907, whereas the per capita loss in Europe for the same year was only forty-eight cents. The total fire loss in America in 1907 was $215,000,000 and, including the cost of up-keep of fire departments, the loss in this country might be estimated at $500,000,000. If safety devices were used here as generally as in Europe, there would be an annual saving of $300,000,000, enough "to build a Panama canal every year."

Early development of the great coal-fields of Alaska, in order that states on the Pacific slope may be furnished with high-grade coal at less cost than the product now brought half way round the world, and that the warships of the United States navy in the Pacific may be provided with a first-class fuel of American production, is advocated by Governor Hoggatt of Alaska in his annual report.

The Governor of Kansas is credited with saying to a representative of the Missouri Pacific: "I demand to know how much money the financiers will get for floating this proposed nineteen-million-dollar bond issue for the Missouri Pacific, and I demand to know how much of the money realized from the sale of these bonds is to go into improvements of the Kansas property of the road."

The Half Moon and the Clermont, reproductions of the ships sailed by Hudson in his search for the northwest passage and by Fulton in his first trip up the Hudson, are to be permanent attractions for sightseers in New York, and according to present plans will be kept in a basin near what is to be named Hudson-Fulton park.

President Taft is preparing recommendations for the enactment of a national incorporation act. He has been thinking of advocating only voluntary national incorporation, but he may go farther and advise that after a given period all corporations having capital of magnitude be required to take out a federal license.

Several thousand damage suits against the Standard Oil Company of New Jersey are to be instituted by the independent oil refiners if the United States Supreme Court upholds the decision of the Circuit Court for the Minnesota district, ordering the corporation dissolved.

With the completion by the Government of a siphon fourteen feet in diameter under the Colorado river, water will be diverted from the Yuma dam fourteen miles away to irrigate fifty-five thousand acres of land in the Yuma (Ariz.) valley.

A special joint committee is to be appointed by Congress to investigate the forest service. This action is the result of the so-called "Ballinger-Pinchot" controversy, which charges remissness in the conservation policy.

Government officials are investigating the recent action of Chicago milk dealers in raising the retail price of milk from seven cents a quart to eight and from four cents a pint to five.

The total public benefactions in the United States during the past twelve months was $141,250,000, an amount greater by $40,000,000 than for any previous year in the history of the country.

More than a thousand scientists attended the various meetings held in Boston and Cambridge last week, under the auspices of the American Association for the Advancement of Science.

Provision for a thirty-million-dollar revolving fund, to be used in the completion of Government irrigation projects, is made in a bill introduced in Congress by Senator Borah.

The total cash receipts from the sales of public lands, including fees and commissions on both original and final entries, for the year ended June 30 last, were $9,235,227.

It is expected that President Taft will send a special message to Congress on the question of conservation of the natural resources of the country.

More than thirty-six per cent of the United States has now been mapped by the topographers of the United States geological survey.

International.

A syndicate of Canadian capitalists has acquired the charters of the companies known as the Northern Railway Company and the Manitoba and British Columbia Railroad Company, and it is said an early beginning will be made on the construction of these roads. The northern road is to be built from Cardston on the international boundary, through Lethbridge to Calgary and Edmonton, from thence on to Ft. McMurray and westward to the Peace river country, thence through the Rockies by the most feasible route into Dawson City. The other line will start from Winnipeg and run to Lethridge in southern Alberta, and from thence to Pilot bay on Kootenay lake in British Columbia. These roads will open up for exploitation and settlement extensive tracts of new country in northern Alberta, British Columbia, and the Yukon territory, which are known to be rich in natural resources as well as in agricultural possibilities.

At the recent convention of the Conservative Association at Victoria, B. C., the premier outlined the policy of his administration during the coming term, which includes the generous construction of new roads and trails and other facilities for the settlers now coming into the country, and the making of the agricultural land easily available for settlement. The question of government ownership of the telephone service came before the Conservative convention, and a resolution was unanimously adopted calling upon the present government to acquire the telephone systems of the province and operate them as a government institution.

The French Chamber of Deputies has voted authorization to the Paris municipality to contract for a loan of nine hundred million francs (one hundred and eighty million dollars) for an elaborate scheme of improvements, including the demolition of unsanitary quarters, the construction of new streets, gardens, and schools, and for other changes in public works.

The English political situation, resulting from the rejection of the budget by the House of Lords, is so uncertain that of the 668 aspirants, either already nominated or yet to be chosen for seats in the next Parliament, not more than seventeen are considered absolutely certain of election.

The Chilean minister at Washington has notified the international bureau of the American republics of an international exposition of fine arts applied to industry which will be opened in Santiago, Chile, Sept. 18, 1910, in celebration of the first centennial of Chilean independence.

A great Pan-American irrigation congress, to be held in Mexico City either in 1910 or 1911, is being considered by the National Irrigation Congress of the United States.

Twenty-six Moslems have suffered capital punishment at Adana for their participation in the April massacres.

Industrial and Commercial.

Current generated at the Big Bend station of the Great Western Power Company in Plumas county in the Sierras, lights the incandescent lamps of Oakland, Cal., one hundred and sixty-five miles away. The turbine wheels of the plant, rated at twenty thousand horse-power, are operated under the highest head of water of any plant in the world. The greatest development undertaken by the company will be at a point near Big Meadows, some miles above Big Bend. By the erection of a comparatively small dam an artificial lake, covering an area of approximately forty square miles, will be formed, and the amount of water impounded will reach the stupendous figure of forty-two billion cubic feet. This will be ample to operate the company's plants at their maximum capacity throughout two seasons of extraordinary drought. In addition to the dam, a tunnel will be driven through the mountain, as in the case at Big Bend, to a point overlooking the power-house site, where the water will have a sheer fall of over two thousand feet. The maximum head at Niagara is two hundred feet and the most powerful turbine rates thirteen thousand horse-power.

The world's production of gold and silver for the calendar year 1908 is estimated by the Bureau of the Mint, based upon official and unofficial information, to have been: Gold, 21,378,480 fine ounces of the value of $441,932,200; silver, 203,186,370 fine ounces of the commercial value of $108,684,400.

Ninety million dollars was the contribution of the forests to the exports of the United States during the fiscal year of 1908, an increase of twentyfold since 1851.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CHURCH OF CHRIST, SCIENTIST.

GEORGE SHAW COOK.

IT is very desirable that all who join the Church of Christ, Scientist, whether it be The Mother Church or one of its branches, should be thoroughly familiar with the object for which this church was founded, as set forth in the "Historical Sketch" in the Manual; namely, "To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (p. 17). The precise purpose for which the Christian Science Church was formed, and which is here so definitely stated, should be ever uppermost in the thought of the members of The Mother Church and of the branch churches. The nature of the church, as it is understood in Christian Science, is further defined by Mrs. Eddy in Science and Health, (p. 583), as "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

The foregoing brief quotations from our Church Manual and our text-book should be enough to remind us that we, as members of the Christian Science church, are identified with the most important religious movement since the early Christian era, and are engaged in the most splendid undertaking in which it can possibly be our privilege to participate. Having once fully realized this fact, we should not lack inspiration for faithful, persistent, consecrated activity. We should be able to see that in the work of Christian Science there can be no idleness, apathy, self-ease, self-complacency, or any other form of selfishness which might creep in and delay if possible the coming of Christ's kingdom to individual and universal humanity. We should understand that in the institution which "is found elevating the race" there can be no place for personal ambition, self-seeking, love of leadership, or desire to control, dominate, and manage the affairs of others.

"Whosoever of you will be the chiefest, shall be servant of all," said Jesus: and we, as professed followers of the Master, should make certain that his "Father's business" is not obstructed, hindered, or confounded by wrangling, friction, hatred, envy, jealousy, criticism, and misjudgment of the motives of others. We should be ever on guard against the subtle suggestions of evil which seek to find their way into the "house of prayer" and which would turn it into "a den of thieves." We should be faithful and vigilant in protecting ourselves from the serpentlike sins which, if unnoticed, would crawl into consciousness and defile our moral nature with their stupefying poison. We should avoid even the "appearance of evil." By our alertness we shall be better fitted to "rouse the dormant understanding" of others "to the apprehension of spiritual ideas" and shall thereby prove ourselves to be in deed as well as in name, Christian Scientists.

The organization of the Christian Science churches is simple in form, and their government is democratic in the extreme. Inasmuch as the Readers who conduct the services, and the trustees or directors who are entrusted with the spiritual and temporal affairs of these churches, are elected at stated intervals by vote of the members, it is of the highest importance to the welfare of the churches that the members thereof take an active and intelligent interest in the business meetings at which these officers are elected, as well as in other regular and special meetings. When officers are to be elected, the members should be prepared to vote wisely for those of their number who are best qualified metaphysically, morally, spiritually, educationally, and by experience, to fill acceptably the respective offices. The members should not be prejudiced or biased in their choice by personal considerations. They should not be unduly influenced by human opinion. They should not be limited in their selection of officers to the students of one teacher, but should be free to vote for those best adapted to serve the Cause, even if they are not class students at all. They should go to these elections with the utmost freedom of thought, willing to be guided by divine Love and knowing that they cannot be influenced erroneously nor swayed by animosity or "mere personal attachment" (Church Manual, p. 40).

One who has freed his thought by demonstration will not be likely to listen to idle rumor, slander, or gossip. Because he is conscious of being governed by the Mind which is God, he will have the wisdom to know what to do and the intelligence to know when and how to do it. It is obvious that if every member is thus governed, the action of the church as a whole will be right and the result harmonious. Having made their choice of officers, it becomes the duty of the members to support them in every right way, and officers thus supported will give the church better service than they could possibly give if hampered by criticism and opposition. When officers have been elected, they should assume the administration of the affairs of the church as a sacred trust from the members. If they prove faithful to the trust reposed in them, they are entitled to cordial support. If not, they should be removed. If they make mistakes, they should be treated charitably, for they do not claim to be perfect and in most instances have not sought election. Church officers who have been wisely chosen will always be found seeking divine guidance and serving humbly and considerately those who have chosen them. They will not assume proprietorship or superiority, although they will strive to carry on the work of the church with dignity and decorum.

Thus between members and officers there should prevail mutual sympathy, cordial cooperation, and an unselfish desire for the welfare of the church and for the prosperity of the Cause. In this way will the Christ-idea be lifted up in our churches and draw all men unto it. The lives of all Christian Scientists, each word and deed, should point to the fulfilment of that desire so finely expressed by Samuel Longfellow:—

O living Church, thine errand speed,
Fulfil thy task sublime;
With bread of life earth's hunger feed,
Redeem the evil time.

CONFESSING OUR FAULTS.

REV. CHARLES D. REYNOLDS.

THE Scriptures enjoin upon all seekers of righteousness the necessity of confessing their errors and sins; not as an arbitrary formality to be observed as ritual, but because the acknowledgment of our faults and mistakes is one of the most effectual means of correcting them, and of removing their effects on ourselves and others.

It cannot be denied that the major portion of all the contentions or divisions which arise among brethren could be and would be prevented if there had been at the very beginning of the difficulty a willingness to make proper acknowledgment of mistakes and faults. The benefits accruing from the honest admission of our faults and failures is twofold: it is needed to bring about the necessary correction or overcoming of the fault itself, in the one who is honest enough to make the confession; and it is necessary to the healing of the discords produced by these errors and mistakes. It is absolutely necessary for the student who desires to advance spiritually to be willing to make proper confession to the person injured for every mistaken act. This implies and impels a mental state of humility, without which the requisite honesty necessary to insure further spiritual growth is lacking. After all, it is but the subjugation of self to what is just and right.

If we have cause, or think we have, to believe that a brother has wronged us, or is not leading a consistent life; or if we waken to the realization that another has received wrong at our hands, the master Metaphysician has left us specific directions for our guidance. Picture what would be the result if these words from the Sermon on the Mount were carefully followed in that spirit of love in which they were meant to be applied: "If thou bring thy gift to the altar, and there rememberest that thy brother hath aught against thee; leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift." Virtually this teaching declares that, as compared with the practical duty of seeking to cancel our differences with our neighbor, and particularly those who are of the same fellowship with us, public professions and confessions are secondary and invalid, or nearly so.

But one may ask, What if my brother will not receive me, or I fail to receive him? Here also the Master left us very specific directions respecting the course to be followed, and how, if not successful, the matter may eventuate in the excommunication and disfellowship of such as are not willing to see and confess their shortcomings, but resist correction: "If he will not hear thee, then take with thee one or two more, . . And if he shall neglect to hear them, tell it unto the church: but if he neglect to hear the church, let him be unto thee as an heathen man and a publican." Such a course forces the issue and makes clear the dividing line between those who obstinately refuse to acknowledge their faults and express sorrow therefor,—who are unwilling to make the needed correction,—and those who consistently honor their professions. All must admit that one who habitually maintains an attitude of mind such as is above described is thereby disqualified from belonging in the same fellowship with those who are obedient to the rules upon which human brotherhood rests and without which its unity and integrity cannot be preserved. Nay, more, it ought not to be expected that such a one would desire to continue to belong to a fellowship the teachings of which he does not practise, for by his own deliberate choice he has disfellowshiped himself.

The spontaneous confession of our faults to the party wronged, or to his authorized representative, is not obsolete in Christian Science, but receives complete explanation and enforcement therein. The by-laws in the Manual of The Mother Church recognize the Scriptural teachings on this subject, and aim at their practical enforcement, that Christian brotherhood may preserve its original meaning and stand unbroken. Nothing but pride, which is but another word for selfishness, can cause us to feel offended or wronged by the kindly criticism of those who observe us and wish to help us. When told that we are in error in any matter, the first point to which we should give heed is this, Is it true? and am I willing to listen patiently to and weigh impersonally what has been said? Second, if it is true, do I feel grateful for this uncovering, and do I stand ready to acknowledge my mistake and by pledge and conduct show that I am ready to take up the task of correcting whatever needs correction? Third, am I expressing gratitude to the one through whom all this has come to me?

There is no greater proof of sincerity than the free spontaneous uprising of that mental attitude of love and gratitude toward the one who is brave enough to risk our displeasure and the possible taking of offense for the sake of doing us a needed service. Let us listen, not to talebearers or busybodies with other people's business, but to any brother or sister who comes to us in a kindly, loving spirit, to call our attention to any mistake or fault of which we may or may not be conscious. If we refuse to hear them in the same spirit of kindness and love, it must stand as an evidence against us, as a proof that upon our part there is need of increased humility. A true Christian Scientist is always humble; his attitude toward his own faults is just the same as his attitude toward the faults of others.

"AND HE . . . BLESSED THEM."

STOKES ANTHONY BENNETT.

IT would seem that Thackeray was looking directly at little children and was endeavoring to paint a picture of their happy, beaming faces when he wrote, "What indeed does not that word cheerfulness imply? It means a contented spirit, it means a pure heart, it means a kind and loving disposition, it means humility and charity, it means a generous appreciation of others and a modest opinion of self." A better allusion to this picture could not be found than the one afforded by Montaigne, "The most magnificent sign of wisdom is continual cheerfulness."

Ever since I was one of them, children have been accorded first place in my love for humankind. They have been little guides along the highways of experience, little wayshowers in my journey from sense to Soul. Their radiant smiles and their simple faith have ever caused me to look upward and onward, away from the disappointing conventionality of the adult, away from blighting, gross materialism. To me the child at his best has been and is an inspiration, so remote are his thoughts from self, so pure and beautiful, while his impulses are glorious in goodness, his actions nobly sincere. Such a child gives a splendid suggestion of the Father's own image and likeness; and "of such," said Jesus, "is the kingdom of heaven."

My hours have never been too occupied to pay attention to this little teacher. If we meet on the street, or elsewhere in the open, we do not fail to exchange smiles or verbal greetings, or to stop for a moment to engage in conversation. If he comes to my study, he is a most welcome guest, a meek, unconscious helper, as he instructs me with his joys, his loves, his ambitions, and his hopes. He gives me so much that I, poor mortal, am at a loss to repay him for his cheer, his confidence, his uplift, and his loving-kindness. He is my best neighbor, my most loyal friend, and I delight in him more than I can tell. As I walk and talk with him, I long to be admitted to his realm of true happiness, to his heaven of peace and purity; but with this desire comes a recollection of the unequivocal condition

Digitized by Google

declared by the Master, when he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

It would require a volume even to touch upon the lessons which children have taught me, lessons attempted by their elders but left unfinished because of stern and sacrificing demands. As I look back and behold the ease, the naturalness with which the child impressed these lessons upon my thought, and brought me into a more firm and practical understanding of the order and reality of things, I am thankful indeed for the little folk, and say with the psalmist, "Instead of thy fathers shall be thy children, whom thou mayest make princes in all the earth."

Not long ago, a sweet, cheerful, and alert little girl of seven summers was the means of teaching a lesson which is too beautiful for words. Catching the import of Truth's requirements, she voiced her thoughts in a manner which revived a lethargic consciousness and bade it bestir itself for freedom and redemption. The father of this little maid had been led to see the efficacy of Christian Science in the healing which had come to his wife. He was moved to a lip-praise of divine Principle and its saving efficacy, but farther than this his interest had failed to go. He was usually quick to admit that Science had accomplished much good in the general world and for one at his own hearthstone, but he was not inclined to use it rightly in obtaining the salvation which he himself greatly needed. He was a hearer of the word, but not a doer. He was a casual observer of good, an admirer on special occasions, imagining, and hoping surely, that through some remarkable manifestation Truth would at length enter into his life and effect the desired regeneration.

One day the father, who is a traveling salesman, returned from a long trip through another state. The subject of Christian Science, particularly its requirements, had been uppermost in his thoughts for some time, but as he neared his destination, mortal mind eased itself by persuading him to shift these personal obligations to another,—one small of stature, but great in generosity, good will, and the possession of good. The little daughter was the first to greet the homecoming father. Childlike, she had stored away a lot of interesting things to tell him, among which was the account of a Christian Science demonstration, recently made by a boy playmate across the street. Here was an unexpected opportunity for the father to yield to the influence of the moment, and he did so in these words: "I have been thinking, my dear, how nice it would be for you to go to a Christian Science Sunday School and learn about God, who is doing such wonderful things all around us. Papa would indeed be pleased and helped if he knew you were in Sunday School every Sunday morning."

The child was face to face with the most vital condition that had yet come into her life. All was silence. The "still small voice" of Truth was revealing to her what our beloved Leader expresses on page 18 of our text-book, Science and Health, as she speaks of Christ Jesus, the perfect demonstrator: "He did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility." Looking up, then, into the eyes of her father with an earnestness, a straightforwardness which he can never forget, she gave a reply which shook the very foundations of his being: "Papa, what's the use for me to go to Sunday School when you won't even read Science and Health or pray to God? If I go to Sunday School, will that make you good and keep you well?"

What a world of wisdom that answer contained! What an illustration of the words of Jesus the Christ: "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes." Did ever a child more lovingly rebuke a parent than did this little girl? Was ever a lesson driven home more forcibly, more pointedly, than this she taught? Was ever more emphasis laid upon working out one's own salvation than in this instance? Verily, "a little child shall lead them."

My readers will be uplifted in knowing that the father in question says he learned his greatest lesson at the feet of his seven-year-old daughter on that memorable homecoming day. He asserts that it was she who first taught him the necessity of individual effort, and proved to him that "there is no excellence without labor in a direct line" (*Ibid.*, p. 457). He lost no time in purchasing a copy of Science and Health, and in a few hours after his awakening he was poring over the Preface and the chapter on Prayer. As he pondered these lines on page 1, "Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind," an understanding, clear and glorious, came to him.

Today this father is a loyal student of Christian Science, and his study of its text-book, during but a very few weeks, has relieved him of the enslaving drink and tobacco habits, rendering him "a new creature," who "rejoiceth as a strong man to run a race." His little girl is a regular attendant at Sunday School, and her progress is not only an inspiration to her father, but to all with whom she is associated. Not a day passes without bringing into these two lives some new experience, some new enlightenment, some new happiness and joy. Not a day passes that the father fails to realize something of what Lowell meant when he wrote,

> Children are God's apostles, day by day
> Sent forth to preach of love and hope and peace.

As my thought constantly reverts to this little maid and the transformation her heart provided, I rejoice "in the beauty of holiness," manifested so impressively in children. Understanding much better now why Jesus blessed them, I long to be more and more considerate of these little teachers, to profit more by their words of wisdom, to love their activities more, and to be as nearly childlike as I can.

THE SPIRITUAL LIGHTHOUSE.

CARRIE F. LYMAN.

THE spiritual analogies suggested by a lighthouse have appealed to many minds—its rock foundation, the great strength needed in its construction, the means used that the light shall be always of the best obtainable strength and quality, the reliability of character necessary for a lighthouse keeper,—these, and other facts, are of more than ordinary interest from a mental standpoint.

The following extract from an article in the *Technical World* illustrates what may be to many readers a new phase of this subject. The writer says,—

"On a sunken reef three hundred and fifty feet distant from Stornaway lighthouse, off the Scottish coast, is a remarkable beacon that warns mariners with the help of a light which is only apparent. The beacon is a cone of cast-iron plates, surmounted with a lantern containing a glass prism. The prism derives its light from refracting the rays emitted from the lighthouse, and the optical illusion is marvelous. Mariners naturally suppose that there is a lighted lamp on the beacon itself, and many of them refuse to believe otherwise. But the object of the beacon is attained when the navigator sees the reflected light, which indicates the perilous rock below. This beacon has been in use more than half a century, and since it was fixed in position others have been placed in other neighborhoods to make clear points of danger."

Digitized by Google

Pondering upon the lesson taught by this reflecting beacon, the writer has found it profitable to study the one hundred and forty-two references in "Science and Health with Key to the Scriptures" by Mrs. Eddy, upon the subject of reflection, and the necessity of a clear understanding of this teaching, if one would begin to lay aside the human sense of personality for the true spiritual individuality. The Christian Scientist finds these reminders at every turn in his daily life. Sometimes it is the brilliant reflection of some skylight or photographer's window; often a pool of water but a few inches in diameter, or a dewy lawn, or a rainbow, or even a bit of tin or glass in the road,—all teach the same lesson, that a right mental attitude or relationship toward the light is the "one thing needful."

When it was announced to the American people that the French nation desired to present them, through their sculptor Bartholdi, with the symbolic statue, "Liberty Enlightening the World," the project of building a suitable foundation and pedestal for the statue met with only an apathetic reception, although every one was desirous of having so imposing a figure as this statue in New York harbor. How often do we long for all possible spiritual light and liberty, and yet, when it is ready and waiting to be given us, how many times have we been tardy and indolent, so far as our part was concerned, in preparing a suitable foundation work.

It has been found necessary, through the laws of our country, to inflict a heavy punishment upon any one who purposely extinguishes any beacon-light, or who holds out a false light with malicious intent. Our Leader's long-continued efforts to keep all "false lights" or erroneous human interpretations out of Christian Science, and to impress upon Scientists that their every thought should be brought into obedience to or become a faithful reflection of the Mind of Christ, is outlined in her essay in "Miscellaneous Writings" called "The Way." As it is no effort for the ocean to reflect the light above it; and it requires no exertion for the Stornaway beacon to reflect the light near by, so it is but necessary for the human mentality to keep thought turned toward God, the "Sun of righteousness," and free from the mental fogs of materiality; to become both a voluntary and unconscious spiritual life-saving agency.

The metaphysical definition of "Sun" as "the symbol of Soul governing man,—of Truth, Life, and Love" (Science and Health, p. 595), and the following extract from another of Mrs. Eddy's books, have been of inestimable value to many a wanderer who sought to find that celestial light which would guide to the shelter "not made with hands, eternal in the heavens." In "Retrospection and Introspection" (p. 93) she writes: "The best spiritual type of Christly method for uplifting human thought and imparting divine Truth, is stationary power, stillness, and strength; and when this spiritual ideal is made our own, it becomes the model for human action."

Our Master bade us let our light shine for others, and Christian Scientists are indeed thankful for the brave Leader who these many years has held high the torch of hope to warn the weary wanderers from treacherous rocks and shoals,—a spiritual lighthouse in a waste of waters, one of those true lights of whom a poet has said:—

A few there are whose lives are sweet;
  There is no shadow in their eyes;
Their arms are strong to bear us up,
  To toil and spend—for they are wise.

A few there are who shine serene
  Above our cloudland, wan and dim;
God's lamps hung high to show the way—
  For whom we all give thanks to Him.

The best help is not to bear the troubles of others for them, but to inspire them with courage and energy to bear their burdens for themselves and meet the difficulties of life bravely.—LUBBOCK.

SELECTED ARTICLES.

[Alfred Farlow in *Greensburg* (Ind.) *Graphic.*]

Christian Science has no kinship whatever with hypnotic suggestion. "Suggestion" depends entirely upon the exercise of the human will, while the practice of Christian Science is in accord with the Scriptural teaching, "Not as I will, but as thou wilt." It is a Christian and scientific method of yielding to the influence of the divine Mind.

Every effort of a Christian Scientist is based upon the understanding that God, good, is the only real power, and that consequently evil is not power. To do evil, one is obliged to make an immediate and complete departure from Christian Science, and resort to an evil subterfuge. So long as one adheres consistently to the practice of legitimate Christian Science, he can never do wrong or evil.

[John C. Higinbotham in *Illinois Illustrated Review.*]

There are two points in connection with the Christian Science movement regarding which there is no controversy, viz., its good temper and its growth. By viewing the first as a contributory factor to the second, I find warrant for speaking of it in an article concerning the growth of Christian Science in Illinois.

I imagine that if a sage like Solomon were presented with a double array of arguments diametrically opposed, and asked to decide the merits of the case under discussion, he would struggle in vain to balance claim against denial for awhile, and finally ask, "Which one was angry?" and decide that the one who lost his temper had the weaker side of the argument. Now the Christian Scientists have, as a body, kept their temper. They have provided means for correcting misstatements or misunderstandings of their teachings, and these corrections find expression through the press by means of various publication committees, from the platform by means of lectures, and from headquarters by means of authorized publications. Although each of these modes of expression differs widely from the others, they have one characteristic in common in that they never lose their temper. As a natural result, their communications, whether written or spoken, always receive a respectful hearing from the investigator. Much of this calmness is due to the fact that Christian Science is a religion which has not been acquired by inheritance. Its followers have often fought hard to retain their old beliefs. When they surrendered, the whole fortress capitulated. A religion that one has obtained by the sweat of his brow is more appreciated than an inherited belief, just as an earned dollar is more valued than an inherited dollar. A man who has earned his point of view has more patience with the honest disputant than the disputant has with himself. Hence the absence of rancor in presenting the subject.

Now, as to the growth of Christian Science in Illinois, the figures themselves tell the story. The motive in presenting them is not one of self-glorification. If a man dipping water out of Lake Michigan were ever tempted to exult over the quantity extracted, all he would need to do to calm himself would be to give a glance at the amount remaining in the lake. So in Illinois, while large growth has been accomplished, the figures themselves are not so significant, considering the size of the field, as is the fact that growth has been and is being made in the face of a generally admitted lethargy in things spiritual.

The Christian Science movement was started in Chicago during 1883, but it received its real impetus from the work of Mrs. Eddy, who personally taught a class there. In other respects its infancy did not differ greatly from that of similar organizations in small communities today. They all seem to move along lines as definite as the formation of worlds from star-dust—except where human fingers are inserted to "regulate" the machinery. A man

Digitized by Google

or woman buys the text-book, "Science and Health with Key to the Scriptures." Its logic is convincing, once the premises are understood and admitted. Or else, he or she is sick, and as a last resort visits a neighboring city to consult a Christian Science practitioner. The patient recovers and wants to know the *modus operandi*. Whatever the impetus, one or two or three people begin to investigate and believe. At first they are disposed to be aggressive, but soon settle down into the real work of Christian Science, viz., living it. Husband, wife, or neighbors notice an all-pervading change in the student of Christian Science. He is not only stronger physically, he is better morally and much easier to get along with. A few inquiries are made. Sometimes the patient becomes a practitioner. Services are held at the homes of the investigators. A church is organized. It meets in a hall. A building fund is started. An edifice is erected.

All of these processes were followed in Chicago. In 1886 a church was organized, and for eleven years it moved like the "chambered nautilus" from hall to hall, ever requiring "more stately mansions," until in 1896 a church building was proposed. Chicago Scientists had contributed liberally in 1894 to the building of The Mother Church in Boston. I was just becoming interested in Christian Science at the time, and I felt that I had gone down pretty deep into my pocket for a building a thousand miles away, but an incident connected with the raising of the funds for The Mother Church impressed me greatly. I went to a Sunday morning service in the hall on Wabash avenue then used by the Christian Scientists. I noted in climbing up the stairs that they were narrow and tortuous. I thought of the impossibility of emptying the crowded auditorium in case of fire. You may easily guess that I was not a full-fledged Christian Scientist, or my thoughts would have been in better business. Near the close of the service a collection was announced in aid of The Mother Church building fund. Some gentlemen started down the aisles with baskets. At that instant a cloud of smoke poured into the rear windows. No one moved. The collection continued; the smoke ceased. No, gentle reader, it was not a Christian Science "demonstration" in the sense of extinguishing the fire. There had been no conflagration. The janitor was burning some accumulated waste in the furnace. All of the elements of a panic were there except fear. That was one of the silent arguments that has stuck in my mind for thirteen years. I have forgotten what the preacher said, or even how much I put into the basket, but I shall never forget the absolute calm of that audience in the presence of all the symptoms of a fire, plus a contribution plate.

Shortly afterward the world was notified that no more money was needed for The Mother Church, and the Chicagoans started the movement to build First Church on Drexel boulevard. This building and the ground on which it stands cost one hundred and eight thousand dollars, and the money was raised before the edifice was finished without resorting to any of the usual stimuli such as bazaars, etc. No criticism of bazaars is meant. I simply emphasize the spontaneity of the subscribers, many of whom lived twenty miles from the proposed site.

In November, 1897, First Church of Christ, Scientist, of Chicago, was dedicated without debt. It had taken eleven years since the formation of that first congregation to accomplish a church edifice. In the ensuing eleven years eight healthy organizations have been formed by a process similar to what horticulturists call "budding." They have built five handsome church edifices at a cost of about one hundred thousand dollars each. The membership is approximately fifty-one hundred, and the attendance may be conservatively estimated at ten thousand. There are three hundred and twenty practitioners of Christian Science in Chicago. The reading-rooms, established in 1892, now do a business of four thousand dollars per month. It may surprise some readers to know that this large business is done at a loss, and the deficit is supplied by an assessment of the several Chicago churches, prorated according to membership. Twice the reading-rooms have been moved to larger quarters. In addition to the down-town rooms, each Chicago church maintains reading-rooms in or near the church edifice. The attendance and sales at these local rooms show a steady increase.

The publication committee of Illinois is similarly financed by all of the churches in the state. It is the business of this committee to correct misstatements, intentional or otherwise, that appear in the public press. The admirable manner in which the various gentlemen who from time to time have been entrusted with this duty, have maintained their poise, has won for this branch of the work the respect and esteem of the editors and publishers of the state, and seldom is difficulty experienced in obtaining a hearing.

Perhaps as good a barometer as any of the growth of the movement in Chicago may be found in the lectures. The board of lectureship is one of the activities of The Mother Church. It was instituted not as a proselyting proposition, but as a means of self-defense. Proselyting in Christian Science is about as thankless a labor as could well be imagined. Until a man gets the right point of view, you might as well try to explain the nature of tropical sunshine to an Eskimo. After he gets the right point of view, fortified by some healing experience, he does not need to be "converted" to Christian Science. The purpose of the lecturer is as near absolute altruism as we get in this age. His compensation and expenses are paid by the church which gives the lecture. Rent, advertising, and other matters are handled in the same way. The public is invited to come. Christian Scientists are urged to come late and give the public a chance. The lectures are free. No collections are taken.

Formerly there were two or three lectures a year in Chicago. Then each church gave two a year. It was found that single lectures would not accommodate the numbers who desired to attend. The practice of giving each lecture twice was adopted. Now they are commencing to give them three times on three consecutive afternoons or evenings. Recently two Chicago churches gave lectures on the same nights and both auditoriums were filled on each occasion. Down-town lectures are given annually under the auspices of all of the Chicago churches. When Judge Hanna lectured in Orchestra Hall last February, Sunday afternoon and Monday evening, two thousand people were turned away on Sunday afternoon.

There are between forty and fifty copies of "Science and Health with Key to the Scriptures" in the public library, and Christian Science publications and periodicals may be found in the libraries or reading-rooms of nearly all of the principal clubs and in the University of Chicago library.

I think enough has been written to show that Christian Science has made good sturdy growth in Chicago since its introduction less than a generation ago, and that wise provision has been made for holding the ground won and continuing the progress. In comparing this growth with that of older religions, let us bear in mind that Christian Science is not an inherited religion, that it is not even an inheritable one. Neither has it the attractive power that is given by mere mass. Of all religions on earth it is individual in its operation; a man cannot successfully practise it in his wife's name. While it is true that it does "spread" through families, that fact is attributable to its effect on the life of its converts and not to any arguments put forth. Arguing Christian Science is a sheer waste of time for both sides. Answering questions asked in a spirit of honest investigation is proper.

How then do we account for the growth of Christian Science? In estimating the effect of any religion or philosophy upon its adherents, it is a great mistake to try to do

Digitized by Google

so from the standpoint of its opponents. It does not make any difference what A, B, or C believes that D believes. Its effect on D is wholly due to what D believes. Now the Christian Scientist believes that sin is self-destructive in its nature, that its pleasures always react and that one does not have to wait until he dies to be punished. That belief saps the satisfaction from sin, not immediately, but the process begins immediately. The Christian Scientist obtains no satisfaction from hoodwinking his neighbor. He cannot hoodwink his regenerated self. Per contra, he finds his reward for well-doing bestowed just in proportion as he does well. He does not need to die to get to heaven. He finds health, plenty, and mental satisfaction when he tries to live in harmony with God.

There is no question as to the effect of that belief on the man who believes it. He is born again. His wife, his children, his neighbors, and business associates notice it, inquire the cause, investigate, and some of them believe. So that, after all, it is to the silent influence of Christian Science, regenerating the mind, body, and character of its followers, that we must attribute its growth in Illinois and throughout the world.

[From *Boston Transcript*.]

At Mount Holly, N. J., Dec. 16, by request of the public prosecutor, the Burlington county court entered a *nolle proscqui* in the case of Edwin M. Watson and his wife, who were convicted on a charge of manslaughter in May, 1908, for refusing to summon a physician for their seven-year-old son, who was ill with pneumonia, preferring to rely upon Christian Science methods. Following their conviction the case was carried to the state supreme court, which ordered a new trial on the ground that the trial judge had erred in his charge to the jury. In making the motion for the *nolle proscqui*, the prosecutor said he was convinced that it would be impossible to secure a conviction that would be sustained if the accused parents were tried a second time. The case excited great interest among Christian Scientists throughout the country, and many of them attended the trial and aided the defendants financially and otherwise.

[Frederick Dixon in *Baptist*, London, England.]

It is surely about time that intelligent men and women gave up repeating the catch-phrase that Christian Science is neither Christian nor scientific; and if they will not, that ably conducted papers gave up reporting them. No religious sect surely knows better than the Baptists the amount of misrepresentation it is possible to subject a new movement to, or has enjoyed a more striking experience of the futility of that misrepresentation. Two and a half centuries ago, in the era of the Test and the Corporation Acts, when no non-conformist could hold office under the crown, Jeffreys was reviling Baxter as a sniveling Kidderminster bishop; today a Baptist holds one of the highest positions in the state.

The fact is that for centuries the various Christian bodies have been disputing each other's title to be regarded as Christian, in anything but a Christian spirit. Less than forty years ago a well-known church newspaper politely described the welcome extended to the non-conformist members of the revision committee of the Authorized Version of the Bible to the sacrament, at Westminster, as casting pearls before swine, an expression which echoes a medieval ecclesiastic's tribute to Wyclif. Now, there is in the Bible a definition of a believer, and consequently of a Christian, by the Founder of Christianity, which might make the Bishop of Birmingham pause. It is this: "He that believeth on me, the works that I do shall he do also." It is strange that Dr. Gore should choose for exclusion from Christendom the very people who, no matter in what other respect they may happen to differ from him, are at least striving to do this.

The use of the expression "unscientific" is equally unfortunate. It is just as easy to arrive at an orthodox view of science, with its Test and Corporation Acts, as at one of Christianity. Fortunately, perhaps, an authority so acceptable to all thinkers as Huxley has left a definition of the word it would be difficult to improve upon. Science, he says, is the answer a man makes to the question, What do I know? The miracles of Christ Jesus were the answer to such a demand on the part of the Jews. Christian healing in all the ages since has been just such an answer; and it is the answer of Christian Science today to the charge of Dr. Gore and others that it is not scientific.

[M. S. Bruen in *Dublin* (Ire.) *Express*.]

The sense in which Christian Science maintains and proves that our sense perceptions are unreal is in the sense of their being unreliable, passing, and unenduring; not that they do not seem real to us. They do not originate from the creator—the infinite, All-wise, All-loving—nor is He the author of the "nature, red in tooth and claw," to which our material senses introduce us; nor of the hurricanes which destroy and the waves that drown; nor of any discordant thing. It would be pantheism to see all these things in God. God's laws which govern the universe are laws of harmony, as David knew when he wrote the 19th Psalm. Men who have dominion over the so-called forces of nature are coming in some degree into harmony with these laws. Marconi did not "invent" wireless telegraphy in order to use it, but his more exact knowledge gave him the mastery over electricity.

All down the ages mortals have imagined that there are two minds—one good, the other capable of every sort of wickedness. All theories of philosophy and idealism except Christian Science start from the assumption of two minds, two powers governing man and the universe; that there is something more than God, something besides Spirit, to make conditions for mankind. Christian Science declares that there is one Mind,—"one God, and one mediator between God and men, the man Christ Jesus."

Ever since the time of Adam the supposed human mind has been accepting the philosophy of some one else, and, from mere inertness and dislike to thinking for himself, the ordinary mortal has taken his opinions ready-made. But history and experience teach us that the people who have been of use and have lifted the race a step higher in the scale of being—such as Abraham, Moses, David, the prophets and preachers, the leaders of men, the discoverers and the pioneers—have all been original in their thoughts, inspired by a genius outside themselves. They have not lived in a groove and accepted the authority of their forbears without understanding it, but have made a new departure. Every real advance has been toward spirituality and away from materialism. The departure which the author of Science and Health has made, has startled the human mind to its base, for it has poured a flood of light on its inaccuracies, inconsistencies, and iniquities, which is most disquieting to it. The perception is dawning on humanity that "my thoughts are not your thoughts, neither are your ways my ways, saith the Lord." The supposed thoughts which depend on sense perception are giving way before the more reasonable view revealed to us that all which is really worth having or being does not depend on materialism, but is comprised in the idealism of Jesus. He gave the culminating proof to humanity that man is not material, when his real self ascended out of their sight, neither taking his body away with him nor leaving it behind, for "flesh and blood cannot inherit the kingdom of God." He said, "I ascend unto my Father, and your Father; and to my God, and your God."

[E. M. Ramsay in *Bridge of Allan Gazette*, Scotland.]

As we write these words there rises before the mental vision a long line of seers, reformers, discoverers, who were regarded as madmen by one generation, and hailed as saints and heroes by the next. The learned professors of Salamanca saw in Columbus but a visionary or adventurer, and it does not surprise us, therefore, that the claims of Christian Science should arouse so much opposition and be received with so much incredulity.

Mrs. Eddy points out a wider sphere of possibility than that of which Columbus dreamed,—a broader horizon, a purer atmosphere, a land more fair and free. She is showing to men and women of today how to lead lives of greater health and happiness; purer, truer, more courageous than the lives they had led before; lives of greater usefulness, of greater brotherliness, of greater humility, serenity, and power; lives spent in closer communion with God. Christian Science teaches that the supreme governing law of the universe is God, divine Life; that this Life is now available to man, and that it is as possible today as of yore to carry out the Saviour's commands and to heal the sick as he enjoined, since that which was in the beginning is now and ever shall be. "Science and Health with Key to the Scriptures," the text-book of this Science, shows how the healing work can be done; it presents the student with a definite system by which the wrong thinking, which it regards as the cause of all the sin, sorrow, and suffering in the world, may be corrected. The processes it institutes are as definite as those of mathematics, and when fully understood can be fully demonstrated.

While the students of Christian Science admit in all humility how far short they fall of accomplishing all the good they desire to do, yet they know well that it is not the occasional failures which may be laid at their door, but the large measure of success attendant on their practice which has aroused so much opposition in certain quarters. We have no quarrel with the clergy or with the doctors; we do not grudge them their manses, stipends or fees, nor desire in any way to interfere with their honest efforts for the welfare of the race. If the clergy find that their prayers are more powerful when accompanied by medicine, by all means let them combine the two. For ourselves we are convinced that Christian Science has nothing to gain from any such combination, that it is both safer and more efficacious than any other healing system known on earth today, and that time will prove this to the satisfaction of all men.

[Written for the *Sentinel*.]

I DO NOT FEAR.

BENJAMIN KEECH.

WHAT is this message from the spheres of silence—
This Spirit-music which I, waiting, hear?
What is it calms earth's sense of sin and violence?
'Tis God now speaking, and I do not fear.

I do not fear, for Truth divine hath found me;
Sufficient, then, to know that God is near.
That ever-present Love and care surround me;
There is no ill to dread. I do not fear.

What though the past held error, pain, and sadness?
All things I now behold with vision clear:
Today is rich with promise, peace, and gladness;
Tomorrow, too, is fair. I do not fear.

While once I dreaded all the misty future,
And all the days held prospects sad and drear,
I now, in growing up to Christ's full stature,
Greet bravely every day. I do not fear.

AMONG THE CHURCHES.

STOCKTON, CAL.

Encouraged by the monthly subscriptions to the building fund of the Christian Science church of Stockton, the members are arranging to place contracts for a suitable assembly edifice. The lots belonging to the association are on the northwest corner of Flora and Center streets. The price stipulated for the real estate has been met to within fifteen hundred dollars, and the board of trustees feels justified in pushing the building project to completion.

San Francisco Chronicle.

CAMDEN, N. J.

First Church of Christ, Scientist, has moved to 209 Cooper street, the old Dr. Schenck home and later occupied by Carteret Club. The building has been refurnished throughout. In a few months the exterior of the building will be remodeled. Additional chairs have been procured to accommodate the growing congregation. The west parlor of the house will seat about one hundred and will be used as the church, while the other side will be occupied by the reading-rooms.—*Camden Post-Telegram.*

PORTERSVILLE, CAL.

The Christian Science society in this city dedicated its edifice yesterday [Oct. 24], with simple ceremonies in keeping with the tenets of the church, all the debt incurred in building it having been met. The history of the Christian Science movement in Portersville began in 1898. On Oct. 30, 1904, a society was organized with twenty members. Later the lot on which the present edifice stands was purchased, and with borrowed money the building of the church was begun. The first services were held in it April 8, 1906. In her address Mrs. Ida M. L. Partridge, First Reader, said in part,—

It is nearly nineteen hundred years since St. Paul said, "Now is the accepted time; behold, now is the day of salvation," and yet people still believe that salvation is for a future state beyond the grave. What we need is to be saved now—saved from sickness, from poverty, from care and anxiety, that make life a burden. We want to be saved from sin,—our own, and the effects of others' sins,—and it is not very comforting to be told we will get it in the next world; we want it now, in this life, and that is why Christian Science appeals to us. It offers us salvation now, its fulness depending on our own efforts. In the degree that we appropriate the truth it teaches, in that degree are we saved from disease and sin.

We feel, in paying for our church and dedicating it to the purpose for which it was built, that we have entered into a new period, when we shall more constantly prove that there are no burdens that truth will not remove, and no trouble or disease that truth will not destroy. For we have not only built a house, but we have builded a structure of Truth and Love; for we have read that "other foundation can no man lay than that is laid, which is Jesus Christ;" and "Except the Lord build the house, they labor in vain that build it." In dedicating this house to Christian Science, we dedicate it to the amelioration of the woes of mankind, and renew the promise given in our last tenet "to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).—*Portersville Recorder.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

EXTEMPORE.

Jan. 1, 1910.

I.

O BLESSINGS infinite!
O glad New Year!
Sweet sign and substance
Of God's presence here.

II.

Give us not only angels' songs,
But Science vast, to which belongs
The tongue of angels
And the song of songs.

MARY BAKER EDDY.

* [The above lines were composed by Mrs. Eddy on New Year morning, in about ten minutes. The members of her household were with her at the time, and it was gratifying to them, as it will be to the Field, to see in her spiritualized thought and mental vigor a symbol of the glad New Year on which we have just entered.—EDITOR.]

MRS. EDDY'S GENEROUS CONTRIBUTION.

[The following letters are self-explanatory, and tell the story of our Leader's generous gift for the further enlargement of the publishing house, and also of the gift from the church at San Jose for the same purpose. The Directors of The Mother Church, as well as the trustees of the Publishing Society and all others interested, are most grateful for these gifts, which will do so much toward extending the efficiency and scope of our publications, and particularly of the *Monitor*.—EDITOR.]

Chestnut Hill, Mass., Jan. 2, 1910.

Archibald McLellan, Boston.

Dear Mr. McLellan:—Mrs. Eddy has just read the enclosed letter from Mr. Eustace, advising her of the subscription ($2,235.70) of First Church of Christ, Scientist, San Jose, Cal., for enlargement of the publishing house.

Our Leader was much impressed by the fact that the gift was spontaneous, and that no solicitation of funds for this purpose has been made at any time. Understanding that the new building is already crowded, and that more room will soon be necessary to take care of the growing business, she has decided to make a personal subscription of twenty-two hundred and fifty dollars for building an extension, and directs me so to inform you.

Sincerely yours,
WM. R. RATHVON, *Corresponding Secretary.*

San Jose, Cal., Dec. 26, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I believe it will please you to know that First Church of Christ, Scientist, San Jose, Cal., has forwarded to the treasurer of The Mother Church a check for two thousand two hundred and thirty-five dollars and seventy cents, of which amount the Sunday School contributed one hundred and thirty dollars, for the enlarging of the publishing house. It will interest you also, I am sure, to hear that this was the spontaneous result of reports given at the annual meeting of this church in October by a number of its members who had been in Boston during the past summer, to the effect that it was plainly evident that there was both an immediate and a growing need for much larger accommodations at the publishing house in order that our Christian Science publications, especially our great world-metropolitan daily newspaper, *The Christian Science Monitor*, be not hampered by lack of space or facilities. On hearing this, the church unanimously ordered a committee appointed to arrange for a contribution, which was promptly and joyously responded to.

Beloved Leader, our hearts will never cease to thank you for urging us all to be more and more impersonal: to look to divine Principle, and not to person; and to work for our Cause and not for locality.

With sincere love and gratitude,

Faithfully yours,
HERBERT W. EUSTACE.

NEW YEAR RESOLUTIONS.

WITH the beginning of each year there comes to many persons an impulse to "turn over a new leaf," and they go through the form of making resolutions which they believe will aid them in reaching a higher standard of living. In and of itself this impulse toward and desire for better things is good, and if the resolutions thus made are lived up to, there is reason to rejoice; but in too many instances, unfortunately, performance has fallen so far short of promise that New Year resolutions have become a byword to most people, and a standing joke with the newspaper paragrapher. Just why the element of failure should so frequently enter in, when there is an honest desire to better one's morals, is a problem which to many may seem difficult of solution, and the explanation most often advanced by those who are not Christian Scientists, is that to do right requires constant effort, while to do wrong is the easiest thing in the world.

Is not this a strange commentary upon the centuries of preaching to which men have listened,—a preaching which has declared that God is good, and that man is made in His image and likeness? What has been the matter with this preaching that, while men are hopeful of their ability to do right, they have so often and miserably failed in the realization of their hope? To the thoughtful Christian Scientist the explanation of this failure is very simple, and it should be equally plain to all who accept the doctrine of divine omnipotence, unless their acceptance of this doctrine includes a belief that God is the author and creator of sin and all evil, a belief which Christian Scientists realize is self-contradictory and illogical.

The reason why men so often fail to stick to their purpose to do better is because human will-power has been the basis on which most of these resolutions have been formed, the broken reed upon which mortals have depended in their efforts to put them into effect; whereas the true basis for every effort toward good must be the absolute knowledge that divine Mind alone reigns. Wise King Solomon had found this out when he wrote, "He that trusteth in his own heart is a fool: but whoso walketh wisely, he shall be delivered."

Men need to know that God is not the creator of evil; therefore, as there is no other creator, there can be no reality in evil. When this is known to all mankind, when, as Christian Science teaches, thought has been emptied of "the false stimulus and reaction of will-power," and filled with "the divine energies of Truth" (Science and Health,

Digitized by Google

p. 186),—then men will be free from the fallacy that evil is more natural than good, and will know that it is possible to carry into effect their resolutions to walk uprightly, whether they make them at the beginning of a year or at any other time.

ARCHIBALD MCLELLAN.

THE NEW YEAR.

MRS. EDDY says: "Time is a mortal thought, the divisor of which is the solar year. Eternity is God's measurement of Soul-filled years" (Science and Health, p. 598). She also says (p. 584), "Mind measures time according to the good that is unfolded." The past year has been an eventful one for the human family in respect to the overcoming of certain beliefs in limitation, and in offering definite evidence that the birth-throes of our advancing civilization are destined to bring forth a larger sense of liberty than the world has yet known, and this because men are getting into closer touch with reality. That in the past year men have made some great strides toward better conditions, or rather toward the ultimate good, is due to the fact that a vital change in human thinking has been going on, almost imperceptibly yet irresistibly, for many years, and no one can deny that the tide of public opinion has at last turned in the right direction.

All true discoverers have been consciously or unconsciously guided by the light of inspiration, for not otherwise could they have endured "unto the end,"—to the final overcoming of the great difficulties which to human sense opposed their progress: but when Spirit moves upon the face of the waters, to bring forth better conditions for the race, the one most ready for the call of intelligence responds to that call, sees the need, sees also the divine idea which will meet the need, and is sustained in the arduous efforts required in giving it to the world. The pity is that so many brave, adventurous spirits miss their way by losing sight of the goal through the intrusion of self-interest. God's ideas cannot fail, but they must be brought forth in human consciousness under the protection of divine law expressed in justice, intelligence, and integrity, or we are likely to lose sight of them.

Of old the prophet prayed: "O Lord, revive thy work in the midst of the years." This prayer has been answered in the coming of Christian Science. There can be no question as to what constitutes the "work" here mentioned, for Christ Jesus, who did the Father's work and had much to say about it, showed men how they could avail themselves of the infinite provisions of divine Love and wisdom. In bringing these to them as remedial, he healed them,—made them whole,—and Christian Science is again carrying forward this blessed ministry "in the midst of the years."

As mankind throw off the burdens of belief in sin and disease through the understanding of Truth, they are ready to work out all the problems of life without fear of failure, knowing that the perfect Mind directs and strengthens each true worker, or, to use Paul's words, "It is God which worketh in you both to will and to do of his good pleasure." Men have hazarded their lives and endured untold hardships in exploring the arctic regions, their courage almost equaling that of the early Christians whose devotion to their faith has challenged the admiration of the centuries. Shall we, then, to whom have been given the chart and compass of Truth, shrink from the call to press forward into the home-land of spiritual being, whatever the cost to mortal sense? True, we must "lay aside every weight," if we would go onward; but the Christ-word is, "My reward is with me, to give every man according as his work shall be." How much of good the year 1910 may unfold to each of us, will depend upon our devotion to Truth.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Tacoma, Wash., Nov. 1, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I wish to express to you my gratitude and love for the good that has come into my life through the study of Science and Health. Christian Science came to me and lifted me out of many physical ills when they seemed too great to be borne. Several years before my own healing through Christian Science, my little son, eight years old, bought a copy of Science and Health and gave it to me on my birthday. He had heard some ladies in the hotel where we were staying, talking about this wonderful book, so he asked his father to go with him to get one for me. Truly "a little child shall lead them." I read the book for a while, seeing in it only a beautiful religion, but I did not see that it was practical for physical ills.

Science and Health was then placed in the bookcase, to be brought forth some six years later. After having been on an operating-table three times and treated by many physicians with only a little if any benefit, my husband urged me to have Christian Science treatment. I consented, and in seven treatments I was "transformed," as Paul said, by the renewing of the mind. For this and many other blessings I am thankful to God, and also to you. I am indeed grateful for the assurance of the constant presence of God, and the peace which "passeth all understanding" that comes to me through the study of the Bible and Science and Health. Truly this gift of "Science and Health with Key to the Scriptures" is invaluable. The *Sentinel*, *Journal*, and *Monitor* are "tidings of great joy" in our home. Surely divine Love has poured us out a great blessing.

Yours sincerely in love,

LEORA M. FRENCH.

Boston, Mass., Dec. 27, 1909.

Beloved Friend:—I have just finished reading some of your letters of encouragement to my first efforts on the lecture platform, and I have been deeply touched by this evidence of your watchful care for my success,—the same that a mother might have over the first efforts of the child to walk. I have a great appreciation of the help this has been to me. There has been some progress, I am sure, based upon the quiet, dignified, and restful attention given to the lecture, and also upon reports of healing derived from the lecture. Increased attendance over the previous lecture is also a source of much encouragement, and this we find nearly everywhere.

It may interest you to know that students in seven of our universities have availed themselves of the privilege, provided by The Mother Church Manual, of organizing Christian Science societies and giving an annual lecture. These organizations seem to fill a need that neither the local church nor individuals could supply. What is more, the work done by these organizations is of great benefit not only to the students, but to the local church. I have had the pleasure of meeting with each of these seven organizations, and they offer a refreshing contrast to the more material pursuits of college life.

It has been my great privilege just recently to lecture for the Christian Science church in Mexico City. The vigorous work of the Scientists there has built up a church that is said to be the largest Protestant church in the Republic, as regards both membership and attendance at the services.

Thanking you for your Christmas message in today's *Monitor*, I am

Lovingly your student,

BLISS KNAPP.

Digitized by Google

Boston, Mass., Nov. 21, 1909.

Beloved Teacher and Leader:—Just a word to express my constant gratitude for the teaching received in your class of 1898. Through what you reflected of God to me, a new sense of Life came, and courage to work in the Science which you had discovered and founded. The great privilege of attending to your room in the church, and the years of service in the Christian Science reading-room, have brought to me experiences of good which I am using in my continuous work for the bringing in of the kingdom of heaven on earth.

Dear teacher, what words can express what I owe to you, or my appreciation of the wondrous, Godlike character you have manifested through these many years in the wilderness. I rejoice in the understanding that "the eternal God is thy refuge, and underneath are the everlasting arms;" and that infinite Love guides and guards your every footstep. With heartfelt gratitude and love,

Your student,

ALICE S. BROWN.

Wynnewood, Pa., Nov. 9, 1909.

Beloved Leader:—Just a few words of loving gratitude to you today. Christian Science has healed me beautifully and wonderfully, and for this and for the great change that has come into my life through the study and spiritual understanding of God as revealed in "Science and Health with Key to the Scriptures," I want to thank you deeply.

Devotedly your student's student,

CAROLINE CLOTHIER.

Elmhurst, Ill., Nov. 22, 1909.

Dear Mrs. Eddy:—As the New England festival approaches, I desire to send you a letter of thanksgiving. For over twenty years I have been struggling toward Christian Science. Many times the struggle seemed hopeless, but, thanks be to God, who forgives all our iniquities and heals all our diseases, at last I am on the rock, Christ, Truth, and all those weary years seem—what in reality they were—only a sad dream. A New England woman by birth, I give thanks that God guided the hand of one of its women to light the beacon which when followed will make of any land a "sweet land of liberty." Your obedience to that beacon-light is the example we need. Though the path be narrow and the hillside steep, if we pray from the heart, "Shepherd, show me how to go," we can sing, as we journey from "sense to Soul," the dear old hymn, "Praise God from whom all blessings flow."

With gratitude deeper than words can express,

Humbly and lovingly a student of Christian Science,

MARY FLINT NOYES.

Memphis, Tenn., Nov. 9, 1909.

Dear Mrs. Eddy:—For your loving and true leadership we are more grateful today than ever before. Each new by-law of our church Manual, in its uncovering of subtle error, enables us better to understand and appreciate the place you hold in our work as our Leader, lovingly and surely leading us on, showing us that our warfare is not with flesh and blood, but with impersonal error, the counterfeit of Truth, and showing us that God is our strength and Love the only power. We know that we are more obedient because you have shown us true obedience. Our purer, higher, stronger love goes out to you in our clearer concept of unity, true brotherhood, and of man's dominion over evil through unselfed love.

With renewed gratitude and thanks for our church Manual, I am

Your humble and obedient student's student,

EMMA GALLOWAY CRAFT.

Mexico, D. F., Nov. 5, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of this church, in meeting assembled, deem the time fitting to express to you our loyalty to the Cause for which our church stands. Through the help of your consecrated work and patient effort, our present stage of progress has been reached. We realize more than ever before the need of watchfulness, that we keep in the true path, as we seek more of wisdom, truth, and love. In our allegiance to you as our Leader, we are not governed by "mere personal attachment." Paul bids us "prove all things; hold fast that which is good." In time of testing we have tried the teachings of our text-book, and found them "good."

Yours in sincerity,

First Church of Christ, Scientist, City of Mexico.

Cambridge, Mass., Nov. 30, 1909.

Dear Friend and Guide:—Because it is only just that you should know of all the happiness which has come into our human life, through your unselfed labors, I write these words. To begin with, I was healed in Christian Science, and for more than twenty years have been free from *materia medica*. Ordinarily this would seem cause enough for joy, but this was only the preliminary to real and more lasting joys. It has been my privilege to study Christian Science with one of your loyal students, who has certainly reflected divine wisdom, to help in The Mother Church at former communion seasons, to serve three years with the Publishing Society, and to fill various positions in our little church, which I know you love. While all these experiences have been enjoyed to the full, for there are unseen spiritual blessings which attend every duty cheerfully performed for our beloved Cause, still the happiness of helping others out of seeming trials, sickness, and sin is a step farther along the path of joy. That, too, has come into my life. Today I am feeling particularly grateful for the Sunday Lessons, which, with every hour of earnest study, unfold more and more clearly and indisputably the truth discovered by you, and through you given to humanity.

What is life without some understanding of God? Mere existence. With this, it is a perpetual joy. With all my heart, I thank you.

J. LOUISE CARTER.

Reno, Nev., Dec. 2, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—With hearts overflowing with thanksgiving, and impelled by an abiding sense of harmony and oneness of thought, we, the members of First Church of Christ, Scientist, Reno, Nev., in annual meeting assembled, desire to express to you our love and loyalty. We feel unbounded gratitude that we have a Leader who is divinely inspired, and who is guiding us daily "through the Red Sea, the dark ebbing and flowing tides of human fear" (Science and Health, p. 566), into the promised land.

Our daily effort is so to express this love and loyalty through faithful obedience to your teachings, as found in Science and Health and also in the church Manual, as to recognize in some measure that condition wherein the "children and grandchildren to the latest generations, inevitably love one another with that love wherewith Christ loveth us: a love unselfish, unambitious, impartial, universal,—that loves only because it *is* Love. Moreover, they love their enemies, even those that hate them. This we all must do to be Christian Scientists in spirit and in truth" (Pulpit and Press, p. 21).

Lovingly and obediently yours,

MRS. LUCY R. G. BRANAN, *President*,
MRS. MARY E. TURLEY, *First Reader*,
MRS. MARGARET A. CORSER, *Second Reader*.

THE LECTURES.

PARIS, TEXAS.

Bliss Knapp delivered a lecture on Christian Science at the Peterson Theater Nov. 13. He was introduced by the Hon. A. P. Park, who said in part,—

Whatever may have been our motives in coming to this lecture, I feel sure that when we shall have heard the lecturer for the evening, we shall all of us be gratified and delighted to know that the religion he presents is but the doctrine taught and exemplified by our Lord and Master, Christ Jesus,—a religion which has for its object and purpose the betterment of mankind; a religion which teaches love not hate, charity and peace not envy and strife; a religion which teaches and impels its followers to observe right thinking, right living, and right practice; a religion which reforms, purifies, which builds churches and which has attracted to it and now numbers among its followers thousands of intelligent, strong, healthy, and cheerful men and women, who are ever looking upward and not downward. Such results are strong if not convincing evidence that there must be some substantial basis for the Christian Science belief.—*Correspondence.*

SEATTLE, WASH.

Judge Septimus J. Hanna delivered a lecture on Christian Science for First Church at the Dreamland Rink, Nov. 14. He was introduced by Judge Mitchell Gilliam of the superior court, who said in part,—

We have met today for the purpose of listening to a lecture on Christian Science. This magnificent audience is sufficient in itself to demonstrate the deep interest this subject arouses in the minds of thoughtful people. I use the term thoughtful advisedly, for it is not a subject which appeals to the thoughtless or careless; it appeals only to those who earnestly and perseveringly seek after truth. I am not a Christian Scientist myself, and know little of its basic truths, but I am firmly convinced that most of the opposition to it arises from ignorance of its teachings. To the careless mind it suggests impossibilities, and is made the brunt of idle witticisms; it is ever so with new discoveries. If Christian Science is the truth, it will prevail in the face of all the opposition and ridicule that can be heaped upon it; and if it is not the truth, it will in time meet the fate of all false doctrines.—*Correspondence.*

PASADENA, CAL.

The Rev. William P. McKenzie of Cambridge, Mass., repeated at the Chapel last night [Nov. 19] the lecture which he gave on the night before. In introducing the speaker, C. P. McAlaster of Pasadena said,—

The sixteenth day of March next will mark just twenty-five years since Mary Baker Eddy, the Discoverer and Founder of Christian Science, was graciously allowed just ten minutes in which to answer, from his own platform, a brilliant Boston orator and lecturer who had seen fit to attack her teachings, and who had, in the course of his attack, coined the now famous phrase, "Christian Science is neither Christian nor scientific;" ten minutes in which to elucidate a spiritual philosophy which is today, whether we acknowledge it or not, slowly but surely revolutionizing the thought of the Christian world.

Looking back over this brief span of years from the vantage-ground of today's achievement, what a revolution has been wrought in the position of that Leader and in the attitude of the public generally toward Christian Science. Instead of humbly and, all too often, vainly seeking for an opportunity for a hearing, Mrs. Eddy is today the acknowledged Leader of hundreds of thousands of disciples and followers; the system of teaching which was branded as "neither Christian nor scientific" has been proven, by the test of years, to be both Christian and scientific; while the question with Christian Scientists at large is not how to secure a hearing, but how wisely and kindly to meet the inquiries of the ever-increasing numbers who are seeking to know the truth regarding Christian Science.

Pasadena Star.

BIRMINGHAM, ALA.

Jefferson Theater was comfortably filled last night [Nov. 18] to hear the lecture on Christian Science by Judge Clarence A. Buskirk of Indiana. The lecturer was introduced by Col. John W. Tomlinson, who said,—

The marvelous growth of Christian Science challenges the attention of the world. Naturally the people look for the causes which have contributed to this remarkable success. Does it lie in the fact that this science-religion responds to the demands of the age in producing practical results? Is the explanation to be found in the effects on the every-day lives of those who follow its teachings? We have the pleasure tonight of hearing this important subject discussed by one of the distinguished men of the nation, a former attorney-general of Indiana.

Birmingham Age Herald.

READING, ENG.

The Rev. Arthur R. Vosburgh gave a lecture on Christian Science in the large Town Hall, Reading, on Friday evening in last week [Nov. 19]. P. H. Martineau of Hurst Court, Hurst, presided, and a large audience included Viscount and Viscountess Maitland, Bicknell Young, Mr. and Mrs. Thornton, Mrs. Mackenzie, Mr. and Mrs. Frederick Dixon, Colonel Suart, Major and Mrs. Tomlin, Captain and Mrs. Gildowney, the Hon. Cunningham Denison and Mrs. Denison, Admiral and Mrs. Dunlop, Colonel Welldon, Captain Heugh, Mr. and Mrs. Hodgson, Miss Evelyn Suart, John Heelas, Mr. Bailey, and Mr. Macnab. The chairman, in introducing the Rev. Arthur R. Vosburgh, said:—

It has not only given me great pleasure to come here for this purpose, but as a resident in Berkshire I consider it an honor and a privilege to have been asked to preside at the first lecture given in Reading on this all-absorbing subject. Although it is more than forty years since Mary Baker Eddy, the Founder of this movement, made her discovery and named it Christian Science, it is only during the past ten or fifteen years that Christian Science has spread abroad all over the world, and has become a subject of deep interest to many thousands of earnest people. I do not think it is difficult to account for this when one knows, as I do, the actual practical regenerative work which Christian Science has accomplished in that short space of time.

I have been interested in Christian Science for more than nine years. I came to it for physical healing and obtained it, and, after being healed, I naturally wished to find out for myself why and how I had been healed, and I studied the subject for myself. I can only say that that study has more than repaid me, and I am very grateful for the many benefits I and my family have received during the past nine years. I found that Christian Science was practical and logical, that it had nothing to do with hypnotism, mesmerism, or spiritualism, but was just the simple Christianity which the great Master taught on the shores of the Galilean lake nineteen hundred years ago. During those nine years I had opportunities of meeting many earnest workers in the movement, and many who have been healed

Digitized by Google

both physically and morally, and when one sees for oneself and knows what Christian Science has done for these people, it is impossible to doubt the truth of their healing. There are those in this hall tonight who, if there were time, could tell some of the plain, unvarnished facts of their healing. These people are not fanatical, not hysterical, but just sane, intelligent men and women, strong in their convictions, and with a full sense of their obligations to each other and their responsibilities and duty to their country. This experience has forced me to the conclusion—and I should not stand on this platform if it were not so—that where Christian Science is honestly and conscientiously lived and practised, it is silently, quietly, but surely, doing a great work of regeneration, not only in the individual, but in the whole body-politic, and it stands for all that is highest and best and noblest in life.—*Reading Observer.*

INDIANAPOLIS, IND.

William D. McCrackan, M.A., lectured here on Christian Science Nov. 23. He was introduced by Dudley H. Jackson, who said in part.—

The evolution of sects for the past nineteen hundred years, with their creeds, has been as a rule the work of men. It has remained for that wonderful woman, Mrs Mary Baker Eddy, to discover and publish to the world the fact that Christianity is a science and capable of demonstration. Christian Science is a religion of love and truth, acknowledging that all good comes from God and that good and evil cannot spring from the same source. Its students are taught not to judge others, but to live such a life of love and truth that others will be so impressed by the health and happiness obtained thereby that they will be anxious to know and follow the teachings of Christian Science.—*Correspondence.*

TESTIMONIES OF HEALING.

With heartfelt gratitude I wish to acknowledge some of the blessings which Christian Science has brought into my life. Two years ago I was practically an invalid; I had exhausted material remedies in struggling for relief from very serious physical and mental suffering. After many months of rigid dieting, and almost constant attendance of a trained nurse, besides taking the usual amount of medicine to be expected under the circumstances, my condition was worse than ever, and I had lost all hope of regaining my health. In utter desperation, I decided to go to the seashore, and engaged apartments for myself and a dear friend who had kindly consented to go with me, at a hotel with a sanitarium in connection. Fortunately (although I then thought otherwise), there was a misunderstanding as to the date for which I had reserved rooms, and I was notified by the hotel on the eve of my departure that my arrival must be delayed. I decided, however, to go at once, and engaged quarters at another hotel, entirely unfitted to accommodate one in my condition expecting to move in a few days to the hotel sanitarium. At the end of three miserable days and sleepless nights I felt that I had reached the limit of my endurance.

While waiting for my friend in the reading-room of the hotel where I was staying, on this memorable morning, I picked up a widely-read magazine, and opened it aimlessly. I began to read an article which proved to be a very bitter criticism of Christian Science, a subject about which I knew nothing; but when I found that it claimed a healing power, I determined to investigate, as I knew of nothing else to try. In half an hour my friend and I were in consultation with a Christian Science practitioner. Would that I could express the peace which came into my heart when the good woman to whom I had been led, told me that God could and would heal me, if I would only trust Him implicitly. Then and there I found what I thought had been lost forever.

After the first treatment I was healed of several of the most distressing conditions; and immediately began to eat anything I desired without suffering the slightest inconvenience, and to sleep soundly every night; whereas for many months my diet had been confined to liquids and my nights were only hours of suffering. In three weeks I came home happier, healthier, and stronger than I had been in years. In a reasonable time my healing was complete, and some very annoying conditions from which I had suffered since childhood had been entirely corrected. For nearly two years I have been blessed with perfect health. Thankful as I am to God for this proof of His omnipotence, I feel a yet deeper gratitude for the spiritual awakening which has revealed divine Love as ever present and ever sufficient, and which has taught me that God does not send—but instead heals—our diseases.

My heart goes out in loving thanks to Mrs. Eddy, as the one through whom God has given this glorious truth to the world, and who has so faithfully pointed out the straight and narrow way that leads to our loving Father.

MRS. ELIZABETH D. MILES, Richmond, Va.

I wish to express my gratitude to God for what Christian Science has done for me. About two years ago I found myself in a very bad condition from what the physician diagnosed as a disease of the bladder. At a consultation of prominent doctors, including a very skilful surgeon, it was decided to operate, and a room was at once engaged at the hospital and the day set for the operation. After I returned home from this consultation, my wife suggested that we try Christian Science. She then began to read to me from "Science and Health with Key to the Scriptures" by

Digitized by Google

Mrs. Eddy, and from the first of her reading there came to me a little understanding of this wonderful truth. Two days later a practitioner took my case, and I was completely healed in a few treatments.

Prior to my healing I had been very skeptical regarding Christian Science, so much so that I looked upon it as a delusion, but when my own healing took place I was convinced that this power came from God, and that it was the same blessed truth which enabled Jesus to heal the sick, cast out devils, and raise the dead. The spiritual uplift that came with this healing, words fail me to describe! I had worn glasses for thirteen years, but I had grasped enough of the truth through my healing to lay them aside, and I have never worn them since. Through this same truth I have also been healed of another trouble, of seven years' standing. This last healing was instantaneous.

During this time (covering nearly two years), neither my wife, myself, nor any of our four children have taken any medicine or used material treatment of any nature whatever, depending wholly upon our better understanding of man's relation to God as revealed to us through Christian Science. The health and happiness of our family have been increased, and we have been privileged to see and know of many evidences of healing, both moral and physical. I wish to say that, though I had been a student of the Bible for many years, I had no conception of its glorious promises and wonderful worth until these were revealed to me through Christian Science. My heart is full of gratitude to Mrs. Eddy, and I am filled with wonder when I think of the great work she has accomplished in so short a time. Such work can only be done when one's thought is attuned to the divine Mind.

FRANK L. THURBER, Cleveland, O.

I first heard of Christian Science in Sydney and in Melbourne, Australia, and though I grasped little of its meaning in the one or two interviews I had with the Scientists there, the earnestness and love which they manifested attracted me as I had not been for years and led me almost to hope that Christian Science was at any rate part of all they claimed it to be, and that it would reward honest investigation. I accordingly bought a copy of "Science and Health with Key to the Scriptures," and being then on my way home to England from New Zealand, I read it on the boat, at first suspiciously and cautiously, but with a growing perception of its truth, till on my arrival in London I recognized that here, for the first time in my life, I had found something worth living for—something that not only was worth doing, but also could be done and must be done, and that by me; where effort to do good, instead of being futile, was sure of lasting and ever-increasing fruition.

I had tried several kinds of occupation, hoping to do good and that my life would not be altogether wasted, but the fact that I accomplished so little where I hoped for so much, and a suspicion that things would have probably been just as well if I had left them alone, were most discouraging, and at the time when Christian Science found me words cannot express the utter emptiness of my interests. Religion, too, had failed me, for from girlhood I had been quite at a loss to understand the teachings of the orthodox churches. From the time when I first read Science and Health I knew that all this was ended, that never again need I be lonely, inactive, without guidance, or lacking a keen incentive in life. I saw that my work was before me, clear and distinct; that I need never again be prayerless, nor at a loss for both good and joy-bringing mental food.

From that time I loved Christian Science with the strongest love I am yet capable of feeling, and with a gratitude which I know can never be satisfied with just saying so. I have also received physical help over and over again from Christian Science, but the unspeakable blessings I have just mentioned are what I most needed when Science found me, and every day is increasing them. Some time ago, when walking with a friend who is also a Christian Scientist, I fell and at once realized that something serious had happened to my ankle. I however managed to scramble up on my uninjured foot, and for a moment or two we both stood there in a silent effort to realize the completeness of God's protection and the consequent impossibility of any injury to His child. Leaning on my friend's arm, I walked for about a hundred yards to where another Scientist lived. We had, however, not more than two or three minutes to spare, as the friend who was with me had to catch a train, and I meant to see her off. I was able to go up and down the station steps, with ease and rapidity too, and I then walked home, the best part of a mile. On my arrival, though I found that the foot presented an alarming appearance, I was delighted to be able to go about the house all the evening. I experienced some pain during the night, but I used all the understanding of Christian Science which I had, and at about four o'clock in the morning I went to sleep, feeling that divine Love had met my need. Next day, although both foot and ankle still gave evidence of the injury, I was on my feet with comfort all day long; whereas I know, from former experience, that without Science it would have meant at least three or four weeks' complete inactivity, besides giving much trouble to other people.

I am thankful to God for Christian Science, and I know that He is daily blessing our beloved Cause and our revered Leader, whose service to humanity is so great that my thought is incapable of taking it in. I can only say, with countless others and with all posterity, "God bless her!" Though one of the very least of the band of laborers in Christ's vineyard who are known as Christian Scientists, it is my greatest joy, today and for all time, that I am one of them, and my greatest desire is to bring the fact home to others that all these blessings, and numberless others, are for them too,—now, without any further waiting.

KATHARINE T. PORTER, Beechwood Glen, Harrogate, Eng.

In looking over the half score of years since I first heard of Christian Science, I can now see that its beneficent influence upon my life began even then, though it was years afterward that I came to accept its teachings. When about fourteen years of age, I went to live with an aunt who, after nearly twelve years of invalidism, had been healed through the ministry of Christian Science and had become an earnest student. Coming under this influence, as I did, with my thoughts filled with self-will and conceit of knowledge, my attitude was one of criticism and ridicule. But my criticism never started the argument for which I hoped, nor did the jibes evoke any angry replies. Such a reception soon silenced my efforts, and my attitude began to be one of interest. I wondered how such kindness could be shown in return for so much unkindness, but I realized that my aunt had found a religion which was real and vital.

I had been raised by a mother who was a devout worker in an orthodox church, but her religion had never appealed to me. As far as I could see, the members of the church, despite their frequent and fervent prayers, had more trouble and suffering than those outside it, so I turned away from it. Nevertheless, in my heart there was a longing for a religion which would give a satisfying concept of God, hence I began to look into Christian Science. What little I learned of its teaching was so satisfying, it was evident that should I ever accept a religion, it would be this. I was, however, willing to let the matter rest there and continue to give my whole attention to the search for what the world calls pleasure.

Some of the Christian demands of this Science were

Digitized by Google

becoming evident to me, and I was not ready to meet them; but a few months' experience convinced me of the folly of seeking pleasure, and the necessity of complying with these demands as well as the blessing to be gained thereby. As I now know, it was that little of the truth which I had learned from Christian Science, that brought this early awakening. I then took up the study more earnestly. From almost a child I had been subject to frequent attacks which affected my breathing, often so severe that I was compelled to sit up in a chair all night. With my more earnest study of Christian Science these attacks became much less frequent and severe, but another lesson was still to be learned before my healing was complete, an experience which was to teach me the inadequacy and falsity of those systems often said to be "like Christian Science" or "along the same line as Christian Science."

I began to talk Christian Science to a friend, but soon this friend was talking to me of so-called "mental science," and the like, and the time formerly devoted to the study of Christian Science was now all spent in reading upon these subjects. A trip to the West and my entrance in a California university obliged me to give up even this reading, but at the end of three months I was so ill that it was necessary to drop my college work entirely. The examining physician pronounced the trouble a serious lung affection, and advised a change to Arizona for the climate. Instead of following this advice, I started to reread a work on "new thought," but my condition grew rapidly worse. In desperation I threw the book aside, and went to see a Christian Science practitioner. Needless to say, the book has never been reopened. I had had one taste of the fruits of this thought, and under no conditions would I have desired another, especially since I was finding in Christian Science the healing and the comfort so much desired.

The kindness and patience with which I was led out of my fear and suffering was marvelous to my thought, which had been so filled with self-will and selfishness. In two weeks I was back in college. During the remainder of the year I carried more work and with less sense of being burdened than had ever been possible before. During the two years that have followed my healing, the continual study of Science and Health, with an effort to follow its teachings, has brought very many blessings. Not only have I continued in excellent health, but with the healing of my physical ills also came healing from worry, sensitiveness, and frequent attacks of depression which often made life seem a burden instead of a joy.

To our Leader, Mrs. Eddy, whose patient continuance in well-doing has made possible the enjoyment of such freedom and such blessings, there can be only continual thankfulness and a constant effort to follow joyfully toward those higher ideals of manhood and living to which she is ever leading and guiding.

HARRY C. BURBRIDGE, Tonopah, Nev.

I desire to acknowledge the many blessings which have come to me through Christian Science. I was brought up in the Christian faith, and had read the Bible a great deal, but with little understanding until five years ago, when I began to read the text-book of Christian Science, which is indeed a "Key to the Scriptures." The daily study of the Lesson-Sermon is a great joy to me. After I had read our text-book for a few days, fear of storms was completely overcome. Later, I had one treatment for an ingrowing toe-nail, and all pain at once ceased. I have had no inconvenience from it since then, although I had suffered for twenty years from that toe, and twice in the five years before coming into Christian Science, I had an operation performed while under an anesthetic, and each time was unable to wear my shoe for weeks.

If space permitted, I could tell of many more beautiful demonstrations of the truth, and my heart is full of love for God and for our dear Leader. I am trying to live this truth, and every hour to know that God is All.

MRS. RAE BAY, Minneapolis, Kan.

[Translated from the German.]

Some time ago both of my children were taken ill with a fever. With the eleven-year-old boy the disease manifested itself with pain in the lungs and abdomen. We asked a Christian Science practitioner for help, which was lovingly given, and the healing came about quickly. The boy was out in the garden on the fifth day, and the following week he was engaged in a snowball game with the others. The truth was held for the little girl, two and a half years old, who was also taken down, although for three days only, and the result was excellent. For these proofs of Truth's power, as well as for the blessings which have come to us in various ways through Christian Science, I give sincere and heartfelt thanks to God, and also to our noble Leader, Mrs. Eddy, through whom the truth has again been revealed to us.—M. GRIMM, Dresden, Germany.

It would be impossible for me to tell of all the blessings which Christian Science has brought me in the past few years. I can speak of the physical healing that has come to me, but the peace, quietness, and happiness that is mine can be expressed only in striving daily to live so near to the Master in thought and deed that others may see the reflection and ask whence it comes. Then I can answer gladly in the words of our dear Leader, " 'Go and take the little book.' . . . Take divine Science. Read this book from beginning to end. Study it, ponder it" (Science and Health, p. 559). There is no subject of which we now need to know, that this book does not illuminate, and no ill which it will not cure, if we but follow its teaching faithfully.

To me Christian Science has opened up a treasure, rich and rare, in the study of the Bible, which constantly yields me new jewels as I seek; and these discoveries have always been with "signs following," mentally, morally, physically, and financially. I had been an invalid for twenty years or more, from so-called organic disease of the heart, nervous breakdown, headaches, etc., and after several years of medical treatment for abdominal trouble, four surgical operations left me a physical wreck. I was in three different hospitals for more than a year, leaving them a misery to myself and my friends. I was then told of Christian Science, and went to a practitioner and had a few treatments. I was greatly benefited thereby, but I left the city soon after, and gradually drifted back into *materia medica*. Once more I tried everything I could hear of, as well as osteopathy, hot springs, and change of climate. The final verdict was that I was likely to die at any moment. Then, like the prodigal son, I again turned my face toward the Father's house; not that I really believed I could be healed, but there was nothing else to do, and I thought Christian Science would prepare me for the change so soon to take place.

Wonderful to relate, the dear practitioner told me that Christian Science would show me how to live, not die; that all things are possible to God, and that I could be healed. After two weeks' treatment I could scarcely believe I was the same woman; the discord had melted away like vapor in the sunshine, except the heart trouble. A sister and brother had passed on under this disease, and it seemed inevitable that I should follow. This condition continued nearly four years, until the search-light of Truth was turned within, and there I found sensitiveness, pride, fear, self-pity, self-condemnation, etc., and I knew this was not the reflection

Digitized by Google

of that Mind which was in Christ Jesus. I saw that to have a healthful body I must have right thoughts. Into the darkness a great light had shone; my earnest desire to be better reached the great heart of ever-present Love, and I was instantly healed.

It was then proven to me that "whatever purifies, sanctifies, and consecrates human life, is not an enemy, however much we suffer in the process" (Miscellaneous Writings, p. 8). That I may keep to the one consciousness, love my neighbor as myself, and be found worthy to follow our Leader in the mighty Cause of Christian Science, is my daily prayer.—JENNIE FLEMING WING, Los Angeles, Cal.

I came to Christian Science for healing, and since then I have gained a better understanding of what God is, and what He does for mankind, if we rely on Truth's power and hold to the allness of good. I wish to tell of the healing of one of my children from an attack of measles. He had been very sick for a couple of days, and we were unable to arouse him from a seeming stupor, until a practitioner, with only the thought of love and a desire to do good, came to us under the protection of divine law, and the child was restored to consciousness. In a half hour he was sitting up, reading "the scientific statement of being" in Science and Health (p. 468).

It is with great thankfulness that I witness to this case of healing, and to the fact that I am able to understand this truth which is gained through the study of Christian Science.—MRS. M. R. WILLIAMS, Milford, Utah.

In 1904 I was taken ill with what was pronounced by the physicians to be a serious disease of the bladder. After the expenditure of a great deal of money, I was told by the physicians, of whom I had four, that I would have to go to the hospital for treatment; but about that time I heard of Christian Science, and wrote to a lady whom I knew to be a practitioner. By the time I received her first letter a change for the better had taken place, and in less than ten months I was entirely healed. I am very grateful for the blessings which I have received through Christian Science.

L. M. WALL, Ridgeland, S. C.

[Translated from the German.]

It is three years since I came to Christian Science and began to take treatment. I complained about many things and advanced but slowly, as I had much prejudice to overcome. Christian Science seemed to me to be too austere, but by and by it became clear to me that if one is obedient to Truth he is blessed thereby. The proof is right here, for I have been healed of a diseased lung, of enlarged veins, and of an illness which had made me an unhappy woman. One of the most memorable days during my healing and while I was being treated, unquestionably was when I attended a lecture on Christian Science. The turning-point in my life dates from that time, and the influence was a very wholesome one, especially on my character, as it freed me of many a fault. That night I was thankful to God with all my heart for Christian Science. I also wish to express my sincere gratitude to our revered Leader, Mrs. Eddy.

ANNA ERMOLD, Frankfurt, a/M., Germany.

Only through the torturing fear of having to undergo another operation, did I follow the advice of one who knew just a little of Christian Science, and so turn to it for help instead of to physicians. I had undergone two severe operations within a few months, being gone from home almost nine months, and upon my return I was still in bondage. I therefore went as a last resort to Christian Science for help. I knew comparatively little of this new yet old religion when I began treatment. I had been taught thoroughly in an orthodox belief and had been a faithful adherent of that church. Many times, as I lay on my sick-bed, I pondered these words of our Master, "Heal the sick," and wondered why I could not be healed now as were the helpless ones then.

From the very first I realized that Christian Science is the truth. To me it was "the second coming of Christ," and slowly but surely theology, with its creeds, doctrines, and material worship, gave place to spiritual understanding. The asserted laws of *materia medica* were broken and proved null and void. I realized the truth of Paul's saying, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." During the time when I was receiving treatment, I studied Christian Science diligently and very earnestly. While my strength came at once, I could not see why my complete healing was not manifested. Having, however, the hope of success always before me, I worked more willingly and waited more patiently. Sense testimony often seemed to discourage me, but I had learned to "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." This gave me encouragement and showed me that every child of God is perfect, spiritual, and harmonious.

One evening, in conversing with my husband, sense testimony strove to make itself heard above all else, but immediately I declared that there was nothing in this material structure or body which could tell me that I was sick, and I quoted the words of our text-book, "All that really exists is the divine Mind and its idea, and in this Mind the entire being is found harmonious and eternal" (Science and Health, p. 151). Then I began to realize what it means to be a child of God, made in His image and likeness, reflecting the one Mind, and knowing that all being is perfect and harmonious. I soon retired, and the next morning found that I was healed. The results of a grave mistake which the surgeons had made had been eradicated. The same day my complete healing took place; I had the actual proof that mental surgery had been performed on me, and for this I am indeed grateful.

I have also experienced the healing of a sorrow which came to me a few months ago. Christian Science has been my Comforter, divine Love my all. My heart overflows with gratitude and love to God, and to our dear Leader, who has been so spiritual as to reveal to us in this age the Science of Christianity. She has also shown us by her example how to be patient and loving.

MRS. HELEN K. CHRISTIANSON, Memphis, Tenn.

I am deeply grateful for the many benefits I have received through Christian Science. Last winter I was taken with a fever, and called on a Christian Science practitioner for help. She treated me absently one week, and that was all I needed. I was healed. Words cannot express my gratitude for what Christian Science has done for me in the last thirteen years.—ANNA HULL, Colfax, Wash.

Love grows when it is put to use, and becomes robust only in unselfishly laboring for the good of others. Does any one then want to know the way into the possession of perfect love? Let him be told plainly that it will not come to him simply by waiting inactively in any vacant and receptive mood. It will not come solely by petitioning for it, nor by any act of faith alone. Faith must unite itself with works and be fused in a glowing ardor which flames out in deeds of sympathy and kindness to one's needy fellows. It was thus that the good Samaritan came into this grace. It was thus by going about "doing good" that Jesus exemplified it.—ANON.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

When we read the story of the baptism by John, the retreat to the wilderness, the controversy with the Pharisees, the trial before Pilate, the agony of Gethsemane, the martyrdom of Calvary, what are we to think of these? It all looks very real. The central figure appears like a real man. He seems to be tried and tempted as we are. The simple greatness of his gentle, heroic life looks like the dream of our soul of what a true, Godlike man might be. But is it real, or is it a piece of acting? Is this central figure of flesh and blood, or is he a puppet show, a manikin manipulated from some unseen somewhere? If he is only a brave show, an actor whose past was all arranged for him, a metaphysical mystery of the trinity going through the motions of a piece prepared for him, then he cannot be interpreted to us in the terms of our own experience.

[*Christian World.*]

Our period is one of doubt and of disintegration. Everywhere we perceive momentous changes, the molding of old beliefs, the emergence into the sphere of thought of vast, revolutionary ideas. Timid spirits regard the movement with dismay, as though God were withdrawing His presence from us; as though the world were being given up to atheism and irreligion. Such a view is not merely a faithless impatience; it is the denial of the whole verdict of history. Can we imagine that our present condition is an unforeseen, an unguided one? Are we to suppose that the rise of the historical, the scientific, the critical mind is one outside the divine law of development; that the decay of one system of ideas can be anything else than the preparation for a higher and a better?

[*Church Militant.*]

A mild infusion of Christianity makes a people immune to Christianity in any thoroughgoing way. Any man today will resent it if you say that he is not a Christian; and if he says that he is, many a person means little more by it than that he is considered respectable. And so respectability is the hardest armor the Spirit of God is ever called upon to penetrate. The reason is that the respectable person sins regularly and constantly without losing his respectability. And the man who sins in ways which do not make him forfeit his standing in good society is in an extremely dangerous state.

[*Living Church.*]

The fact is, a church is on dangerous ground when it offers social privileges for sale, whatever be the nature of those privileges and however limited be the conditions under which they are offered. We do not maintain that money-making devices in connection with church work are essentially wrong, though we are quite convinced they are to be classed as evils, and if they are used as substitutes for free-will offerings by people who are in condition to make such offerings, they are almost an insult to Almighty God.

[*Christian Commonwealth.*]

The truth that is rising slowly but majestically is the truth of the solidarity of the human race. This is the "resistless issue" ordained of God, but whose coming we can greatly facilitate by thinking the right thought and speaking the right word, always in harmony with the great gospel of reconciliation.

[*New York Observer.*]

It would be difficult to think of Christmas without Christ, and yet it is to be feared that in actual practice many are degrading the festival into a mere merry-making over a conventional custom, rather than celebrating it as the recognition of the wonderful spiritual joy of the advent.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in French old style type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falnouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.50, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

"We have already discovered that the farmer is not getting the exorbitant profits out of the beef he raises," says Secretary Wilson of the Department of Agriculture in discussing the high prices of food supplies. "I have no doubt in the world," he continues, "that the same conditions will be found to prevail in most of the other lines of farm products. There is ample excuse for some of the increase in the cost of living over what it was years ago. The farm area is not keeping pace with the demands for foodstuff. The cities seem to have more attractions for the laboring man than do the rural communities. The horde of immigration, as well as the ever-increasing native population, must be fed, and the farm is expected to furnish the food."

Mrs. E. H. Harriman has offered to the state of New York for park purposes one third of the thirty thousand acres included in the famous Harriman estate in Orange county. The acceptance of the gift will probably mean the beginning of a great public reservation which will take in the Hudson river country with its magnificent palisades from Cornwall, eight miles north of West Point, to a point in New Jersey about opposite 130th street, New York city.

By a majority of seven thousand in a total vote of thirty thousand, Kansas City, Mo., has refused to grant a forty-two-year franchise to the Metropolitan Street Railway Company of that city. The result was a decisive victory for civic decency and for the principle of the referendum in city affairs. It indicates the growing tendency of American cities to retain control of their streets and to refuse to make long-term franchise grants.

The American Federation of Labor, through a committee headed by Samuel Gompers and other union leaders, last week presented to President Taft a formal paper in which they set forth fourteen different charges of illegality against the United States Steel Corporation and asked for an immediate investigation of the so-called trust, which they claim is operating in defiance of the United States statutes.

The fourth link between Manhattan island and Brooklyn has been opened to public traffic by foot and vehicle. Exclusive of condemnation expenses for land aproaches, the new Manhattan bridge, as it has been named, will have cost in all fifteen million dollars. The dedication ceremonies formed one of the last official acts of Mayor McClellan.

The increased cost of living for common people was the subject of a concurrent resolution offered in the House of Representatives. It provides for a joint committee of the House and Senate to investigate conditions and to report remedies through legislation.

A motion has been made to advance the hearing of the case of the Government *vs.* the Standard Oil Company, which involves an effort on the part of the Government to have the company dissolved as a trust under the Sherman anti-trust law.

State Superintendent of Public Instruction Nathan C. Schaeffer of Pennsylvania, caused a stir at the high school department of the State Educational Association recently by declaring for public high schools free from college domination.

Representative Humphrey of Washington has introduced a bill in the House providing for ship subsidy by the United States Government, which is understood to have the approval of President Taft and the Administration.

Song-birds are actually increasing in New Jersey, where laws have been enacted to protect them. The public school children have been taught the usefulness of the birds and the farmers have been shown their value.

A bill making sweeping changes in the interstate commerce laws for the regulation of railroads has been introduced in the House. It differs from the one known as the "Administration railroad bill."

A bill has been passed in Congress appointing a joint committee to investigate the Ballinger-Pinchot controversy in regard to forestry and conservation.

Judge Horace H. Lurton, the new associate justice of the supreme court of the United States, took his seat last week.

Judge William J. Gaynor was installed as mayor of New York city on Jan. 1, succeeding George B. McClellan.

International.

In the report of the results of the mineral survey in Nyassaland, it is stated that the coal from Mt. Waller is for the most part an excellent bituminous coal, of service as fuel for any purpose, and also of value for the production of coke and gas. The seams, which are often several feet thick, occur close to the Lake Nyassa, and the beds probably extend under the lake.

In the provincial Legislature of Saskatchewan two important railway bills have been put through to authorize the guarantee of securities for the Canadian Northern and the Grand Trunk Pacific branch lines. The former company is to build 575 miles, beginning with 175 during the coming year. The Grand Trunk Pacific is to construct 375 miles, fifty to be built next year.

Five American war vessels will take part in the celebration of the first centennial of the independence of the Argentine Republic at Buenos Ayres, about May 20 next. This special service squadron will be composed of the armored cruisers Tennessee, Washington, Montana, and North Carolina and the scout cruiser Chester.

Jan. 10 the writs were issued for the elections in England. A list of candidates so far prepared shows no fewer than fifty three-cornered contests. The Liberals made efforts to avoid such contests, which would likely give seats to the Conservatives, but the Labor candidates apparently had no disposition to yield.

The Chilean government has under construction sixteen different railway lines and extensions at a total cost of $25,665,595, of which eight are being built under contract at a cost of $20,487,188.

The financial statement of the Canadian Pacific railroad shows that its gross earnings were expected to reach the one hundred million dollar mark at the close of the year 1909.

The Canadian bureau of census estimates the population of Canada at the close of the year at 7,350,000. The province of Ontario leads with 2,619,025.

With the new year Chile adopted a system of eastern standard time, corresponding with that of the eastern time division of the United States.

Industrial and Commercial.

There has been an increase of American railway mileage during the past ten years of about forty-four thousand miles, not including secondary and auxiliary trackage. The mile of track now in operation are 228,285 as compared with 184,618 in 1898. Counting the secondary and auxiliary trackage the number of miles is now 328,000 as compared with 245,000. In 1898 the revenues from passenger traffic were $266,070,000; in 1908 the revenues were $575,246,576. Freight revenues in 1898 were $870,727,719; in 1908 they were $1,560,089,052. In 1898 the revenue per passenger per mile was 1.973 cents; in 1908 it was 1.95 cents. Freight revenues per ton per mile in 1898 were .753 of a cent, and in 1908 they were .765.

An important feature in Southern cotton milling is the adoption of electricity for power, and many of the new mills are equipped for its use, while a number of the existing plants have changed their power equipment to the electrical drive. A year ago one hydro-electric power company of North Carolina was furnishing electricity for power in more than one hundred cotton factories in North and South Carolina, some eighty per cent of the company's present supply of electricity (over one hundred thousand horse-power) being used by cotton mills. The facilities include eight hundred miles of transmission lines and more than fifty substations.

J. Pierpont Morgan, Thomas F. Ryan, and Levi P. Morton have joined interests in New York in a trust company merger which unites resources of one hundred and fifty million dollars. It is a triple combination, bringing the Guaranty Trust Company, the Morton Trust Company, and the Fifth Avenue Trust Company under one head with the title of the Guaranty Trust Company. The merger is perhaps the largest of its kind in the United States.

After a thorough test of two new electric locomotives for service on the New York terminal division, the Pennsylvania Railroad has notified the Westinghouse Electric and Manufacturing Company that it may proceed with the construction of fifty of them. The new machines will be equal to three of the steam locomotives of the largest freight type. They will have a train-load speed of eighty miles an hour.

The narcissi flowers exposed for sale in Covent Garden market in London are grown entirely in the open in the Scilly islands, lying off the southeast coast of England. There are at least one thousand acres of daffodils and narcissi under cultivation there. When the season is at its height as many as seventy to eighty tons per week are shipped to London.

To about thirty-five hundred of its employees who have performed satisfactory service during the year the Boston Elevated Railway Company on Jan. 1 gave seventy-five thousand dollars in gold as a New Year gift.

The construction engineers of the New York, New Haven, and Hartford Railroad are said to be actually working on plans for a tunnel between the north and south terminal stations, Boston.

The Lackawanna railroad has plans under consideration for the electrification of its various suburban lines.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OUR NEWSPAPER.

IDA G. STEWART.

ALL fair-minded people who are alert to the needs of the human family, as well as to means for its betterment, should be interested in the success of *The Christian Science Monitor*. For twenty-five years our Leader has patiently nursed the hope that such a newspaper as the *Monitor* might come into the arena of the Christian Science movement. Time has brought certain changes in human thought, and the *Monitor* has come as the natural result of mental preparation and unfoldment. While it is not a religious organ, in the sense in which that term is commonly used, it stands for right-mindedness, purity of thought, and a broad grasp upon daily happenings at home and abroad, which make for righteousness.

It requires no labored analysis to convince the thoughtful that the daily perusal of a newspaper which refuses to cater to the sensational, criminal, and sickly tendencies in human thought, will in time cultivate a desire for that which is clean and true, and a corresponding aversion for the sensational or merely emotional. Such a current of clean thought impulse is needed, and the *Monitor* is an avenue through which this regenerating and transforming thought will be transmitted.

Graphic accounts of crime, calamity, or accident do not constitute news. That which tends to excite fear, curiosity, and a morbid desire for the perusal and contemplation of evil cannot be legitimately classed as news. Recital of fact is news, and, in that facts are forever new, interesting, and instructive, the *Monitor*, with its well-freighted columns of real news, is never in danger of becoming stale reading, even if it should reach its destination several days after the date of issue.

The Christian Scientist is dealing with the universal problems included and involved in human life and its activity,—living.—therefore it is highly important that he possess some knowledge at least of events which are influencing and shaping the general human thought and the conditions growing therefrom. If he possesses a big enough understanding of conditions to enable him to put himself in the other man's place, in some measure, he can look out upon the world, the human family, their doings in private, national, and international affairs, with a breadth of view that means genuine helpfulness to such as may be disheartened or overcome by the turmoil and tumult of commercial competition, political strife, social ferment, or family contention. One who is unread and therefore more or less unacquainted with the claims growing out of such conditions and environment is in large degree unable to grasp the intricacies of such situations, and so to place himself in the attitude of a brother who is equipped and able to meet a brother's needs. Habitual reading of the *Monitor* will be of great service to this end.

The Christian Science Monitor is an instrument for good to the world, through its cleansing influence with the casual reader, and the broadening influence it is sure to have on the Christian Scientist, therefore a lofty scorn of good newspapers and the readers thereof shuts one away from an expansive and progressive knowledge of things and dwarfs one's metaphysical endeavor. In order to be a well-rounded and altogether useful person, one needs to know somewhat of the nature and character of the conditions from which he is called upon to assist in extricating another, and the one who closes thought against a knowledge of the current issues of the day which are stirring and fashioning the human mind, will not make a wholesome adviser or a helpful friend.

The nature of evil is to resist the activities of Truth in the work of bringing about "on earth peace, good will toward men." Herein may be set forth a possible hint why some are apathetic on the subject of the *Monitor*. Is it not possible that a persistent failure to embrace a privilege to encourage the spread of righteousness, for which the *Monitor* stands, may count as work against the Cause of Christian Science? Even though much work and study make imperative demands upon our time, is it in accord with the golden rule to give weight to such argument when the issue at hand is the maintenance of an enterprise whose sole object is the betterment of the world?

All should recognize that the *Monitor* is a factor in the educational work of Christian Science; that it takes its place, in the line of progressive endeavor, by the side of the board of lectureship, the Lesson-Sermon, and the distinctively religious periodicals issued by our Publishing Society. The Lesson-Sermons and the periodicals are intended more especially for the use of Christian Scientists and such persons as desire to acquaint themselves with the teachings of Christian Science. The board of lectureship and the *Monitor* have a wider field, in that the non-Scientist is included in their endeavor.

Because of the underlying metaphysical purpose of the *Monitor*, it behooves all who love righteousness and desire its reign to come on earth as in heaven, to see to it that each has his or her part in the support of this instrument for good. There is not a conscientious Christian Scientist on earth whose gratitude does not spring into activity with a desire to help when it becomes apparent that united effort along any particular line will result in good to the human race. It is the privilege of all who profess to be followers of the teachings of Christian Science to become vitally and actively interested in the support and maintenance of every avenue through which human thought is to be elevated to a final acceptance of God as the only Mind. The *Monitor* is such an avenue, and no one can measure the scope of its mission, nor is it possible for the finite mind to estimate the benefits that must surely come to the world through this most recent manifestation of our Leader's long-cherished hope and patient waiting on God.

Some may argue that the *Monitor* deals with "material and worldly" things, even to the extent of printing stock reports and theatrical news. In this connection we may be permitted to ask, Are Christian Scientists, in their human relationships, dealing with anything other than the claims of "material and worldly" things, and is it not wise

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

to give mortals the best and most accurate record of so-called "material and worldly" things while they are being guided into a recognition of spiritual things?

The *Monitor* rests upon a metaphysical basis, therefore it cannot fail to accomplish its great and praiseworthy mission, to wit, the broadening of the mental horizon of the student of Christian Science along lines that will insure his success in leading his brother out of worldly-mindedness; and our brethren, the non-Scientists, who are not yet ready to sit through a lecture on Christian Science or to read our strictly denominational periodicals at any length, will, through reading the *Monitor*, imbibe a keener and more practical sense of things enduring and true.

THROUGH CONFLICT TO VICTORY.

M. G. KAINS, M.S.

NOTHING cheers the true soldier so much as the knowledge that he is striving for a just cause. Neither the astuteness of the hostile officers, nor the valor, the strength, the entrenchments of the opposing army, nor the enemy's advantages of position, training, or experience can disconcert him. Never does he forget the rightness of his cause, never does he quail upon the eve of conflict, never does he falter when ordered to advance, never does he take flight when the battle is joined. His is a fight for nothing less than victory, not of personal prowess, but of right, of Principle. Neither defeat nor delay is possible; victory is inevitable.

The fact that a cause is just, that the leaders of a movement are honest in their efforts to establish rectitude, that they face opposition from established wrong, that they gladly make sacrifices of personal comfort, friends, emoluments, that they would rather have the approval of their own consciences, even though they must stand alone,—these all provoke enmity from the self-satisfied and the self-interested, but attract friends from all who love rectitude. Thus every cause based upon right, upon Principle, has produced its champion, and every champion has drawn his army; for whether the struggle has been fought with sword and bayonet or with tongue and pen, it has called for a clash between right and wrong, and right must inevitably prevail, for right is inexorable in its demands.

Turn back the pages of history and say whether the leaders of the still existent struggle for rectitude have not shown a disregard for their own comfort in their efforts to place humanity upon a higher plane of living. Were Moses, Daniel, Socrates, Cromwell, Washington, Lincoln, and a hundred other men who stood and who led for Principle popular with those whose ways of thinking and acting they disturbed? Did their opponents prevail? Did not these men have to fight verbally and often muscularly in order to benefit succeeding generations rather than themselves and their own generations? Were their labors, therefore, not philanthropic despite what their opponents claimed? And are they not now recognized as benefactors of the human race, though declared to be enemies by their opponents? It is impossible that any one of these questions can be answered otherwise than affirmatively.

In our own day a great battle has begun. Though not a battle of blood, it is none the less severe, none the less certain that right will prevail. The Discoverer and Founder of Christian Science is the Leader on the side of Principle. Though at first she stood alone, her army is daily increasing in numbers and in power. Her purpose is to establish the reign of righteousness, when every one shall know and do right naturally, when there will be no need for men to teach their neighbors about God, because great and small will all know Him, whom to know aright is life eternal. To attain this goal she insists upon individual right thinking upon the basis of Principle. She points out in Science and Health that the great battle-field is in one's own consciousness, that the contestants are right and wrong thinking. To cope with the enemy one must arouse himself from the lethargy and indolence induced by false thinking, and conquer this foe to morals, health, and life. Every one must sooner or later heed the call to eliminate wrong thinking, and must struggle to free himself. Everywhere upon the battle-line is heard,—

"To arms! To arms!" What means this call "To arms"?
Am I awake, and have I heard aright?
Here all is peace. No foe I see in sight.
Then why this noisy sounding of alarms?
Can there be danger where each prospect charms?
Aye, here it lurks! I am aroused to fight
Tyrannic self. To conquer through God's might
The subtle enemy that smiling harms.

Awake at last, and panoplied in Truth
I take the double-edged sword in hand
Alert to fight whate'er assaileth me:
With ne'er a thought of quarter or of ruth
To strike, and strike, and strike till free I stand,
False self destroyed and lost in victory.

Those, whoever they may be, that heed this call and that are honestly striving to conquer their false self, are worthy soldiers in proportion to their steadfastness, their loyalty to Principle. Only as we adhere to Principle can we be certain of victory, and only so can we be of service to others. Like our Leader, we must cast aside personal preferences, dislike of conflict, the selfishness that would enthrall us in indolent ease, and we must enlist in the campaign to extend and establish still more firmly the cause of individual right thinking and utter reliance upon God. It is our duty as loyal followers to aid every movement which aims to establish her teachings in their purity and entirety, for these are the iterated teachings of Jesus of Nazareth, and if adhered to are necessarily characterized by "signs following." What though the established régime oppose? What though the battle bid fair to be severe? What though the enemy seem to be astute and resourceful? What though failure seem imminent? In the words of a thinker,—

Say not: The struggle naught availeth,
The labor and the wounds are vain,
The enemy faints not nor faileth,
And as things have been they remain!

If hopes were dupes, fears may be liars;
It may be, in yon smoke concealed,
Your comrades chase e'en now the fliers,
And but for you possess the field.

HOW GOD SPEAKS TO MEN.

E. D. DALE.

IT is claimed by many religious teachers that the Scriptures are the only revelation of God to humanity; that the divine Mind is expressed only through the book which we call the Bible. This teaching has been and is a stumbling-block to many students who are sincere seekers after truth. No one, however, claims that those who determined the canonicity of the Scriptures were in any special way inspired, hence their decisions cannot be held to fix the bounds of inspiration. The central purpose of the Bible is to give men a revelation of God, to help them in the attainment of a knowledge of Him whom, as we are taught in Christian Science, "to know aright is Life eternal" (Science and Health, Pref., p. vii.). Divine provision is made for this admitted need by a continuous unfolding of God's spiritual creation, which those who are spiritually alert are able to comprehend and interpret correctly, though to many "the light shineth in darkness; and the darkness comprehended it not."

In the epistle to the Hebrews we read: "God, who at sundry times and in divers manners spake in time past unto the fathers by the prophets, hath in these last days spoken

Digitized by Google

unto us by his Son." God had spoken not alone through the human Jesus, but through the Christ, the spiritual idea, of whom Jesus said, "Before Abraham was, I am." Before the canon of Scripture began to be written, God had spoken to men. He spoke to Moses "face to face," on delivering the tables of stone, and all who read those wonderful commandments with the new understanding gained by the study of the Bible and of Science and Health, will testify that, like the disciples on the way to Emmaus, their hearts have burned within them as they listened to the voice from heaven that talked with them.

God and His Christ are "the same yesterday, and to day, and for ever." Divine Truth is speaking to us now through the "still small voice," but too often our dull ears fail to catch the harmony of the heavenly voice. God speaks to us through His creation. The flowers teach us of His love, the stars instruct us in His wisdom. The message of the hills, the rivers, the sky, should not be meaningless to us. In the blade of grass is revealed the law that governs the universe; the harvest-fields testify to His bounty, and the tree that "bringeth forth his fruit in his season." The psalmist says: "The heavens declare the glory of God; and the firmament sheweth his handywork. Day unto day uttereth speech, and night unto night sheweth knowledge;" and Job declared that the beasts of the field, the fowls of the air, the fishes in the sea,—all the earth,—testify "that the hand of the Lord hath wrought this."

God's word is always open for all to read. It comes as did the heavenly manna to the children of Israel, each day bringing adequate supply for that day's need. That which was needed by the ancients was revealed to them, and that which is necessary for our advancement is revealed to receptive hearts today. The revelation in Christian Science of God as All,—infinite Life, Truth, and Love,—as divine Principle, has come to this age to satisfy our great need of the Christ-healing, and was given to humanity through the inspired thought of Mary Baker Eddy, whose book, "Science and Health with Key to the Scriptures," is its own proof that God speaks today to the one who is ready to hear and obey. There are some who seem to gain a greater degree of understanding than do others, but Truth gives to all a new and enlarged understanding of God, and man as God's reflection; and when we awake to the regenerating power of this revelation, we are eager that all whom we love shall share it with us, and we joyfully bear testimony to the wonderful things which we ourselves have seen and heard.

Do we ask how we shall know that it is the voice of God which speaks to us? We are commanded to "try the spirits;" to "prove all things," and to "hold fast that which is good." Jesus said that the sheep follow the shepherd because they "know his voice." We must silence the material senses if we would hear God speak to us, and when we listen for God's voice we shall be divinely helped to understand. When God spoke to Jesus, some who stood by thought it thundered: while others who were more spiritual, hence more receptive, declared it was an angel which spake to Jesus. Thus it is ever with us. If we listen to the testimony of the material senses, we hear only the thunder: but in communing with God, and His Christ, the spiritual idea, through spiritual sense, we hear the voices of angels.

Oh, that we might all say, as did the psalmist, "I will hear what God the Lord will speak: for he will speak peace unto his people."

THE SABBATH DAY.

HELEN L. YOUNG.

THE revelation of the Sabbath as a day of rest seems to be the first law of conduct unfolded to human thought, for in the second chapter of Genesis we read that "God blessed the seventh day, and sanctified it;" showing that the consecration of the Sabbath seems to go back to the dawn of human consciousness, for when the Bible was written men were already observing the Sabbath, and it was not a new institution. Noah observed an interval of seven days when sending the birds out of the ark. When the commandments were written "with the finger of God," the fourth commandment read: "Remember the sabbath day, to keep it holy," which implies a recalling of what had already been established.

The Sabbath was intended to be a period of joyful rest and recreation in communion with God, who Himself, according to Scripture, rested on the seventh day. There were several festivals connected with the Sabbath during the early history of the Hebrew people. The seventh day was to be observed not only in the sanctuary, but in all their dwellings. The seventh or Sabbatic month was ushered in by the blowing of trumpets, and was called the feast of trumpets. The seventh day was holy, the seventh month was holy, and the seventh or Sabbatical year was one of rest. The people were taught that the land belonged to God, and it kept its Sabbath to Him, when it was not planted or sown. During the Sabbatical year creditors were bound to release poor debtors, and the Hebrew slaves were freed. The non-observance of the Sabbatical year was one of the sins which caused the Jews to be taken captive by Babylon.

Every seven times seven or forty-nine or fifty years was a year of jubilee. It began on the day of atonement, and was kept for seven days. The trumpet of jubilee proclaimed "liberty to the captives, and the opening of the prison to them that are bound." It was believed that God had granted to each family a portion of land; and owners who had been compelled to part with any of their possessions had them restored this year. The design was to prevent such unjust social conditions as produce arrogant wealth and squalid poverty. This benevolent tendency of the Mosaic law is worthy of a divine origin. The children of Israel were forbidden to gather manna on the Sabbath, because it was already known as a day of rest; but its observance had perhaps been neglected during the sojourn in Egypt. The people were doubtless especially joyous on the Sabbath, because it was to them a memorial of their deliverance from Egypt. The prophets always recognized the Sabbath as a vital feature of their religion, and after the Babylonian captivity it was more firmly established.

The New Testament lays great stress on the Sabbath, and the hypocritical Pharisees criticized and condemned Jesus for healing on the Sabbath, but the Master proclaimed, "It is lawful to do good on the sabbath days." We can never forget how Jesus "came unto his own, and his own received him not," on that Sabbath day when Nazareth rejected the truth, as he stood in the synagogue and read from Isaiah, "The Spirit of the Lord is upon me," etc.; and then added, "This day is this Scripture fulfilled in your ears." It was indeed a memorable Sabbath when Jesus cast out the devil from the demoniac in the synagogue; and his fame spread so that in the evening after he had healed Peter's wife's mother of a fever "all the city was gathered together at the door." Nor can we forget the Sabbath when the cripple, lying at the pool of Bethesda, who had been paralyzed for thirty-eight years, "took up his bed, and walked," at Jesus' command; but when the Jews persecuted Jesus for breaking the Sabbath, he replied, "My Father worketh hitherto, and I work."

The disciples were accused of Sabbath-breaking on that journey through the corn-fields, when they plucked the ripe ears of corn to appease their hunger. Jesus rebuked their critics by telling them that had they known the meaning of "I will have mercy, and not sacrifice," they "would not have condemned the guiltless." He then said, "The sabbath was made for man, and not man for the sabbath:

Digitized by Google

therefore the Son of man is Lord also of the sabbath." It was on the Sabbath, too, when the man with the withered hand had it "restored whole, like as the other."

The day on which Christ Jesus arose from the dead became the great day of Christianity, so that the apostles called it the "Lord's day," and gradually the first day of the week supplanted the seventh as a day of rest and spiritual culture. It is possible for each of us to "rest in the Lord," and have a Sabbath consciousness or peaceful state of mind every day in the week, as we grow into the "stature of the fulness of Christ," and have that Mind in us "which was also in Christ Jesus." Then our days will all be filled with the good works which must result from right thinking; and we shall keep the Sabbath by doing the works of the Master.

GRATITUDE.

GRACE FULLER FITZGERALD.

LIKE many other words in common use, the word "gratitude," so often used by Christian Scientists, has a broader meaning than is generally conceived. Christian Science throws a strong light upon its definition in giving a test which probably was never formulated in any other religious system. On page 3 of Science and Health, Mrs. Eddy says, "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have." This test adds a very important feature to the common thought pertaining to gratitude. It includes more than a knowledge or recognition of blessings; there must be a conscious thankfulness for and a utilization of these tokens of a loving Father's care.

In the story of the prodigal son, it is quite certain that the young man knew of his father's house and the bounty which it afforded; and doubtless, if questioned while in a far country, he would have expressed some sort of satisfaction that there was a place of comfort to which he would be welcomed if he chose to return. Such knowledge, however, but make his ingratitude and disobedience seem the more pronounced.

"The blessings we have"! What are they? What has God given to all His children? Every quality and attribute of the divine Mind belongs to man as God's likeness —by reflection. "God with us"! Life, Truth, Love,—all good,—with us! All wisdom, knowledge, intelligence, harmony, ability, opportunity, strength, energy, freedom,—all the manifestations of Mind,—with us! Do we act as though we knew it to be true? Do we strive to be willing channels through which these qualities may be expressed? Do we watch the "ifs" and "buts" of sense testimony, that would ever tempt us with negative suggestions of limitation? To act as though Truth alone is true, is gratitude. To act as though error were true, is ingratitude, no matter how emphatically our words may declare the opposite.

Our Leader's statement in "Miscellaneous Writings" (p. 183), "Whatever is possible to God, is possible to man *as God's reflection*," should so awaken thought that pride, egotism, and self-righteousness can be ruled out of consciousness, and the actual utilization and expression of the God-qualities shall confirm the declaration, "I am grateful!"

The grandest operations, both in nature and in grace, are the most silent and imperceptible. The shallow brook babbles on its passage and is heard by every one; but the coming on of the seasons is silent and unseen. The storm rages and alarms, but its fury is soon exhausted, and its effects are partial and soon remedied; but the dew, though gentle and unheard, is immense in quantity and the very life of large portions of the earth. And these are pictures of the operations of grace in the church and in the soul.

RICHARD CECIL.

SELECTED ARTICLES.

[Alfred Farlow in *St. Louis* (Mo.) *Republic*.]

Christian Science does not plead in behalf of any form of superstition or irrationality, but it affords a scientific method for uncovering these and a demonstrable method for destroying them. We must not mistake the uncovering of evil's false pretenses for an indorsement of those pretenses. Moreover, the blind, futile, and unchristian effort to exert evil mental influence is not a product nor a consequence of Christian Science. It is its counterfeit. It is simply a more aggressive form of the latent falsity of the supposed "carnal mind" which Christian Science exposes, and which seeks to maintain its position in self-defense as it writhes under the doom of divine Science.

Christian Science is uncovering and destroying evil's hidden forms and is establishing the peace and harmony of omnipotent good. In Christian Science it is understood that malicious animal magnetism has no power. It is at most only deception, and can only affect the unwary, those who fail to understand the eternal spiritual truth. Mrs. Eddy does not believe that malicious mental malpractice is a power. She has discovered that certain persons do believe in such a power and seek to exercise it, and she has taught her students how to defend themselves against such deception by keeping their thought filled with that which is pure and good. To do evil one is obliged to make a complete departure from the teachings of Christian Science and resort to unchristian subterfuge, and he thus becomes the victim of deception, not a practitioner of Christian Science. Every thought, word, and deed of the consistent Christian Scientist is an effort in behalf of good as the only exterminator of evil.

Christian Science teaches that there is in reality but one power or force: that is, God, Spirit, Mind, Truth, Love; and that, therefore, the Christian warfare is the human effort to become subject to the Mind which was in Christ—to become submissive to the divine Mind and thus silence human will, which the Scriptures denominate the "carnal mind." St. Paul describes this warfare in the following words: "For the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." Science always settles the battle on the side of Spirit, because Spirit is the "real and eternal" and "matter [flesh] is the unreal and temporal" (Science and Health, p. 468). Since Science has introduced the proposition that God is the only real Mind, the "carnal mind" in all its varied manifestations is naturally, in the interest of self-preservation, arrayed against it. Therefore, every wilful phase of the supposed human opposition which is aroused by the introduction of Science is malicious. Hence the use of the term "malicious animal magnetism." It is called magnetism because it refers to a supposed power independent of God; and malicious in keeping with the Scriptural declaration, "The carnal mind is enmity against God."

Mrs. Eddy refers to it as the "human antipode of divine Science" (*Ibid.*, p. 484). It is a term which is broad enough to include all that is opposed to God. It includes every phase of evil, every phase of the human antagonism to Truth. In combating evil, Christian Science does not regard it as a person, but as a supposititious force which dominates false sense and which, in view of its false pretense of intelligence, is denominated "mortal mind." St. Paul called it "carnal mind," evidently because all its promptings or inducements are based upon fleshly desires.

The subtle arguments of malicious animal magnetism can have no effect upon those who are aware of its presence and who understand that God is the only real Mind or power. Malicious animal magnetism is that which the evil-minded, through mental malpractice, seek to use in opposition to the good influence of the divine Mind. I submit that

Digitized by Google

no man has a moral right to formulate or influence the acts of another except when invited to do so, though he has a right to entertain the sweeping impersonal thought that God shall ordain all things and guide all men.

Jesus said on one occasion, "The prince of this world cometh, and hath nothing in me." One who is perfect in consciousness destroys evil by the very aroma of his thought; evil cannot come near him or have any influence over him. Evil suggestion finds no response in such an one, for there is no evil in the consciousness of the individual which may be magnified. Human suggestions find no response in the consciousness of the individual who does not believe in the basis of such arguments, but on the contrary understands that God is the only real power.

[From an editorial in *Stanley Republican*, Stanley, Wis.]

A leading Wisconsin newspaper, which occasionally lifts up its voice in defense of virtue, which has been known to disparage editorially the influence of light literature on the youth, to decry the white slave traffic, etc., last Sunday gave the most prominent places in its news columns to three revolting tragedies or to the revolting details of testimony connected with them.

Newspapers which on their editorial pages profess to stand for morality and education in right living, give the lie to their professions when they give space to such matter in their news columns. The publication of the mere announcement of a crime committed is perhaps justified, for it often assists in apprehending criminals and bringing them to justice. But no purpose is served by publishing the immoral stories of murder and other court trials, in all their gruesome details, except to satisfy the morbid curiosity of an unhealthy public sentiment. The *Republican* would warn parents against allowing this sort of reading to come into the home, for its tendency is degrading.

A year ago, the Christian Science church embarked on a journalistic experiment which has been watched with much interest, the issuing at Boston of a daily newspaper which eschews the publication of all immoral, unsavory, or degrading news matter. In keeping with their other teachings, the Christian Scientists believe that if there be crime, sin, and debauchery in the world, it were better for the great mass of humanity that they never hear of it. This is certainly true as it applies to the youth. *The Christian Science Monitor* has rounded out the first year of its existence a financial success, which speaks volumes for the high character of the clean-minded people who are its patrons and supporters. And if the Christian Science church does no more than make a success of this newspaper, it will have justified its existence a thousand times.

[Frederick Dixon in *Jersey* (Channel Islands) *Times*.]

There are in the New Testament three Greek words translated, at one time or another, miracle. That the translation is purely arbitrary is proved by the fact that these words are just as frequently translated differently. The word miracle is itself of Latin origin, and was an ordinary philosophic term of the pagan writers. It was never used in a supernatural sense until it had been adopted by Jerome, at a period subsequent to the compilation of the Vulgate.

Christ Jesus, preaching his gospel in the towns and villages of Palestine, made use of the miracle as an object-lesson. When, that is to say, the dense material sense of the people failed to grasp the spiritual signification of his words, he healed the sick and raised the dead, bidding his listeners, if they could believe for nothing else, believe for the very works' sake. He never, however, suggested that the working of miracles was to be limited to a particular time or place. Speaking of the whole world and of all time, he declared, "These signs shall follow them that believe." Now the word translated signs in this passage is a word translated over and over again, elsewhere in the Gospels, miracles. It might, therefore, every whit as well, have been translated miracle, and made to read, "These miracles shall follow them that believe." Now, the signs which were to follow included the casting out of devils, the speaking with new tongues, the handling of serpents, the drinking of poison unharmed, and the healing of the sick. The Founder of the Christian religion, therefore, obviously made the power to perform these miracles the test of belief.

Again in the Gospel of John, he is represented as distinctly saying that those who believed on him should do the works he did, and greater works than these. He was once more speaking not of himself, nor of his followers, but of believers in general, without any specification of time or place; and so for a second time we have the power to work miracles made by him the test of belief. A third time, and on this occasion in the concluding verses of the first Gospel, in the last earthly words of his recorded, he made a similar declaration. "Go ye therefore," he said, "and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you." If the healing of sickness was not one of these commands to the apostles, it would be difficult to say what was.

Now, to jump to the conclusion that Christian Science teaches that spiritual healing is effected by an effort of will-power is quite as great a mistake as to maintain that the healing of sickness was confined to Jesus and the apostles. To claim the power to influence another person by an effort of will, is really to claim dominion over your neighbor from a mental standpoint. Such a belief is not only repugnant but antithetical to the teachings of Christian Science. If the power of the human will can be exerted for good, it can obviously be exerted for evil; and as nobody has ever yet maintained that the human mind is devoid of evil, it is clear that the claim to heal through will-power is nothing more nor less than a reassertion of the theory of evil as the concomitant of good.

[John E. G. Sandford in *Times and Mirror*, Bristol, Eng.]

Our critic seems to be inclined to find fault with me because in my former letter I said that Christianity needs no definition, and he supplies one himself which is purely doctrinal, and would exclude a very large number of sincere followers of the Christ, and I gather that he would deny to Christian Scientists the right to call themselves Christians. To the Christian Scientist, Christianity is a question of demonstration, rather than of definition or profession, for was it not the Founder of Christianity himself who said, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven"? Moreover, when John sent his disciples to Jesus to know if he were indeed the Christ, they were bidden to recount to John, in answer to his question, the works of which they had been witnesses, and in the Gospel narratives we find some very clear and definite statements by the Master himself, indicating how his followers should be known. Here are a few of them: "He that believeth on me, the works that I do shall he do also;" "Whosoever doth not bear his cross, and come after me, cannot be my disciple;" "By this shall all men know that ye are my disciples, if ye have love one to another." Let these signs attest the Christian Scientist, and he can well afford to let them also be the evidence of his title to the name of Christian, for, as Mrs. Eddy says on page 342 of Science and Health, "Who would be the first to disown the Christliness of good works, when our Master says, 'By their fruits ye shall know them'?"

It would seem that our critic would like to know exactly how Christian Scientists regard Christ Jesus. Let it be said, then, that they follow certain illustrious examples.

Digitized by Google

With Simon Peter, they acknowledge him as "the Christ, the Son of the living God," "endowed," as the Christian Science text-book says, "with the Christ, the divine Spirit, without measure" (p. 30); and they remember the Master's approval of Peter's answer in the blessing bestowed upon him, "Blessed art thou, Simon Bar-jona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven." With Paul they would say, "Yea, though we have known Christ after the flesh, yet now henceforth know we him no more;" and with Mrs. Eddy (Miscellaneous Writings, p. 399):—

Thou the Christ, and not the creed;
Thou the Truth in thought and deed.

They acknowledge him as "the only begotten of the Father," and as "the firstborn among many brethren," and they love to sing of him in Whittier's immortal verse:—

Our Friend, our Brother, and our Lord,
What may thy service be?
Nor name, nor form, nor ritual word,
But simply following thee.

Thus, leaving the doctrines of men, they go on to demonstrate, in some degree at least, the kingdom of heaven on earth, worshiping the Father "in spirit and in truth," knowing, as our Master said, that "the Father seeketh such to worship him."

[John L. Rendall in *Nonpareil*, Council Bluffs, Ia.]

To the Christian Scientist animal magnetism means merely "the specific term for error" (Science and Health, p. 103). It is a technical term, including all there is of evil. It is clearly recognized in Christian Science that all evil is necessarily mental, and must therefore be overcome through a right-thought process. Mrs. Eddy states in Science and Health: "In Christian Science, man can do no harm, for scientific thoughts are true thoughts, passing from God to man (p. 103). And again: "You will also learn that in Science there is no transfer of evil suggestions from one mortal to another, for there is but one Mind, and this ever-present omnipotent Mind is reflected by man and governs the entire universe" (p. 496).

From the above quotations it is readily seen that Christian Science denies the possibility of a transference of evil thought in such a way as to injure another; in fact, the Christian Scientist's protection consists in knowing for himself and for all mankind that these phases of erroneous mortal belief have no elements of truth in them, and consequently no intelligence or power to operate in any way whatsoever. It is the earnest, steadfast, consistent endeavor of every Christian Scientist to "overcome evil with good" and to practise in its completeness all that the golden rule includes and implies, to deal justly and righteously with his fellow-men.

It is impossible to ignore the fact that to ordinary experience evil claims to be and seems to be real, and that to appearance and in belief mankind seem under certain circumstances to be susceptible to erroneous mental influence. Instead, however, of accepting this as fixed law, Christian Science is teaching mankind how to protect themselves, how to deny and repudiate every suggestion of evil, how to nullify every discordant thought, how to overcome sin and disease. It recognizes but one Mind, but one intelligent activity, one law, one power, one Principle, governing the universe, even "God with us." Christian Science, therefore, cannot be used for any purpose other than good and for the establishment within the consciousness of each individual of the highest ideals of morality and righteousness.

Only that which is emphatically Christian, only that which embodies and includes purity and goodness, can be found in the ranks of true Christian Scientists. It is the steadfast endeavor of every one who is entitled to bear this name to repudiate and eliminate from thought all that which "worketh abomination, or maketh a lie," and to prove to humanity that God alone governs.

[Olcott Haskell in *Oakland* (Cal.) *Examiner*.]

The teachings of Christian Science do not warrant the statement in a symposium article that "the influence of one person's mind over the mind of another person for good is one of the cardinal principles of the Christian Science faith," for Mrs. Eddy writes: "Human will-power is not Science. . . . It produces evil continually, and is not a factor in the realism of being" (Science and Health, p. 144). "Before this book was published, other books were in circulation, which discussed 'mental medicine' and 'mind-cure,' operating through the power of the earth's magnetic currents to regulate life and health. . . . Such theories have no relationship to Christian Science, which rests on the conception of God as the only Life, substance, and intelligence, and excludes the human mind as a spiritual factor in the healing work" (*Ibid.*, p. 185). "They [other works] regard the human mind as a healing agent, whereas this mind is not a factor in the Principle of Christian Science" (*Ibid.*, Pref., p. x.).

From this it is evident that in Christian Science God, the divine Principle of man, is regarded as the only source of health. When the human mind turns to God it is saved from its errors, just as when a mathematician turns from his mistaken concepts to the basic law of numbers and is saved from the errors his misconceptions had introduced. It is not logical to argue from the fact that the human mind, aided by a perception of divine Principle, can correct mistakes, that the unaided mind has an equal power for evil: for in the latter case it has no principle to work with, and all unprincipled action sooner or later destroys itself. This mind is not a creator. It may follow Principle and see the truth, but it cannot unmake or destroy that which is true.

While it is not my purpose to discuss how much of evil it would be possible for a mistaken human mind to imagine, yet the point must be clear to every one acquainted with the teachings of Christian Science, that its practice can no more be made to serve the ends of evil than can the science of numbers be made to lend itself to the commission of mathematical error. When James and John suggested that they attempt to bring evil upon those who rejected them, Jesus rebuked them and said, "Ye know not what manner of spirit ye are of." Again, in his warning to his disciples not to harbor sinful thoughts, Jesus defined evil desire as adultery, and hate as murder.

[R. Stanhope Easterday in *Portland* (Ind.) *Commercial-Review*.]

The appreciation of Mrs. Eddy's unquestionable and legitimate place among the world's reformers and benefactors, on the part of her world-wide following, is untinctured by any so-called "grains of salt," but is boldly attested and generally recognized.

Christian Science is nothing more nor less than a recapitulation of the teachings of Jesus, and its healings of sin and disease are achieved upon the same basis as were our Lord's. The "great Physician" and his disciples did not have recourse to "manipulation," mental or bodily, neither did they require any form of "concentration" on the part of the patient; and no more do Christian Scientists in their efforts to heal. Jesus, on the other hand, argued in substance, that the Father doeth the works. The sick are healed today in Christian Science practice by the influence upon human minds and bodies of uplifting, vivifying Truth and Love, and neither drugs nor poultices, manipulation nor will-power, play any part in the process. No considerable percentage of even the minor ills "that flesh is heir to" could reasonably be "forgotten" into oblivion.

[Jesse Pickard in *Newburgh* (N. Y.) *Journal*.]

Mrs. Eddy's discovery of the present willingness, power, and practical availability of God to heal through prayer

Digitized by Google

every disease, as well as to eliminate all sin, is a true revelation to this age, and if she has been careful to prevent adulteration of Science and Health by copyrighting this work, her wisdom and motives in so doing should be unquestioned, particularly so in view of her helpful and philanthropic life. This discovery has absolutely nothing in common with mesmerism or any action of the human mind, nor does Mrs. Eddy claim to teach any such personal control.

Christian Science also takes issue with our critic's statement that this Science denies the existence of absolute facts. On the contrary, Christian Science positively declares that the universe exists, and that all created things exist, but it denies that the five physical senses are the ultimate authority as to their nature. It denies evil, because it knows God to be the only creator and wholly good. It does not deny good nor individual existence. The chief end and aim of Christian Science is to overcome sin, and this is the chief benefit to which Christian Scientists testify. The healing of disease is a necessary accompaniment in overcoming evil with good. Christian Science is not complex. On the contrary, complexity arises from misconception of the subject, as in this case. Truth is ever a simple thing. Christian Science has one Principle, one infinite God, Lord, the creator of all, and a logical deduction from this premise as to the nature and character of created things, is Christianly scientific.

According to Scripture, the human or carnal mind cannot discern the things of God. Sooner or later men must decide between a belief in and subservience to this human mind and the spiritual understanding of absolute truth which is contrary thereto. Christian Science declares that this spiritual sense is sufficient to heal physically as well as to save morally.

[C. R. Munro in *Toronto* (Ont.) *Mail and Empire.*]

There is only one way in which the opponents of Christian Science can successfully combat its steady growth, and that way has never yet been tried. It is to give to the world something as satisfying as Christian Science, something that will not only heal the sick, comfort the sorrowing, and reform the sinner, but that will make all who come within its influence better and the world a better place to live in. This is the kind of work that Christian Science is quietly doing day by day, and it explains why it is gaining in numbers and strength.

[Elizabeth Tavel Bell in *Charleston* (S.C.) *News and Courier.*]

In a recent issue your book reviewer makes the statement that "the Christian Science literature abounds in sentences that no human being can understand and in phrases susceptible of various interpretations." Permit me to say that many thousand human beings are daily proving their understanding of these sentences by healing and reforming themselves and others. Every statement in the Christian Science text-book is in accord with the fact that God is Spirit, and in the degree that human thought is spiritualized these statements are grasped, and the fruits of the Spirit appear. Every Wednesday evening, in many hundred meetings, testimonies of gratitude find expression —gratitude for the revelation of the God who "forgiveth all thine iniquities; who healeth all thy diseases."

As to the Christian Science literature being "susceptible of various interpretations," it is not easy to express spiritual truth in material terms, but as every statement in the Christian Science text-book is based upon Principle, a correct interpretation of its statements will bring unfailing results. A scientific text-book is not for mere reading, but for close study and demonstration. Only those who fulfil these requirements are equipped to pass judgment.

AMONG THE CHURCHES.

MUSCATINE, IA.

The church here is nicely housed and has just been fitted out with comfortable opera chairs as a Christmas gift. It is not a large church as yet, but it is obedient and loyal to our Leader's admonitions and to The Mother Church in Boston.—*Correspondence.*

BROOKLYN, N. Y.

Third Church of Christ, Scientist, Brooklyn, N. Y., desire to announce that, seeing the necessity of the demonstration of more loving unity in the great Cause of Christian Science, they have disorganized Third Church of Christ, Scientist, and united with First Church of Christ, Scientist, Brooklyn, N. Y., to meet together as one organization from and after Jan. 9.—*Correspondence.*

MANSFIELD, O.

First Church of Christ, Scientist, occupied their new church quarters at 46 West Third street for the first time Sunday morning [Jan. 12]. The new church building, formerly the Ditwiler residence, has undergone extensive remodeling and repairs, to render it suitable for church purposes, partitions having been removed and rooms thrown together, so that there is now a commodious auditorium.—*Mansfield News.*

DETROIT, MICH.

The Detroit Christian Scientists will in the next six months establish two and possibly three new churches in the city. The local followers of Mary Baker Eddy have given up the idea of building a big cathedral, and instead will distribute their strength over the city. "We think that it is more feasible and an altogether better proposition," said one of the board of directors this morning. "The present church on Alexandrine avenue is overcrowded, and at the Thanksgiving service many were forced to stand." The first of the new churches will begin services shortly after the beginning of the new year in temporary quarters. It will be in the East Jefferson avenue district and will be supported by many of the wealthiest of the church's members. A number of Grosse Pointe dwellers will be numbered among the members. It is proposed to establish a second new church on the west side of the city, and in time a third in the extreme northern district. All the churches will be independent, but firmly affiliated with First Church on Alexandrine avenue. It is very probable that the Jefferson avenue congregation will erect an edifice before the close of 1910.—*Detroit News.*

DOMINION.

AGNES FLORIDA CHALMERS.

LET all the earth keep silence! Love reigns now
Supreme o'er all. O heart of mine, be still
And know God's allness. Father-Mother, Thou
Canst meet my need in teaching me Thy will.

Let all the earth keep silence! I am free,
And claim today my heritage, God-giv'n.
Earth's pain and woe can never fetter me,
For I have all,—health, holiness, and heav'n.

Let all the earth keep silence! Love's own hour
Is now; forever war and hate shall cease.
Thine, Truth, is the majesty and power,
The earth is filled with righteousness and peace.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

DEMOCRACY IN CHURCH GOVERNMENT.

[The following letter from Mrs. Eddy's secretary is self-explanatory, and the subject is so clearly stated that editorial comment seems entirely unnecessary, other than to say that we are glad to publish this statement of our Leader's views, and to call the attention of our readers to the importance of this declaration, which, as it is heeded, will bring about greater unity in every branch church and closer fellowship between branch churches.—Editor.]

Chestnut Hill, Mass., Jan. 10, 1910.

Dear Mr. McLellan:—Our Leader is desirous that all branch churches of Christ, Scientist, shall follow the growing tendency to adopt a truly democratic form of church government. She believes that all branch churches that have been more or less controlled by any one teacher, or the students of any one teacher, will find it greatly to their advantage to change to a broader and more liberal form of government. Mrs. Eddy is impressed with the wisdom of this movement, and would like you to call attention to the benefit the Field may derive from such action.

Sincerely yours,

Adam H. Dickey, *Secretary.*

THE LECTURES.

We have been asked by one of the members of the board of lectureship to remind the Field that the requests made by this board in its annual circular, which was mailed last summer to the clerks of all the churches and societies advertised in *The Christian Science Journal*, are based upon the experience of its members, and that strict attention to these requests will greatly simplify the work of the lecturers and save much needless correspondence.

The circular referred to was prepared with much care, and the intention was that it should be kept on file by the clerks of churches and societies, so that there might be an orderly procedure both in the securing of the services of a lecturer and in the making of all arrangements in connection with the delivery of the lecture. It would seem, however, according to the statements made by this representative of the board, that the requests courteously preferred in the circular have either been forgotten or ignored in quite a number of instances; notably in the extension of hospitality to the lecturers, and in regard to the musical part of the program.

Much as the lecturers would like to meet all the Christian Scientists, and to accept the hospitality which is so courteously and generously tendered them, it is manifestly impossible for them to do so. As a matter of fact, the greatest kindness that can be shown a lecturer is to see that he is comfortably cared for in a good hotel, where he will have ample and uninterrupted time for study and whatever other preparation he may need for his work. As to the custom of providing music for the entertainment of the audience, preliminary to the lecture, the members of the board seem to be unanimous in their desire that this should not be done. It is, of course, unobjectionable that a simple organ voluntary should be played during the assembling of the audience, if the lecture is to be delivered in a church, but an elaborate or pretentious musical program is to be avoided. In the opinion of the board, an audience which has been induced to attend the lecture because of their expectation and desire for this kind of an entertainment, is not well prepared for the serious consideration of so important a subject as a lecture on Christian Science.

Another matter which calls for careful attention is the introduction of the lecturer. There should be a definite arrangement with the person who is to make the introductory speech, that he will not take too much time in performing this courtesy. Experience has proved that but a little over an hour and a quarter is as much time as an audience is inclined to devote to an occasion of this kind, and if a long introduction precedes the lecture, it is usually found that, unless the lecture is correspondingly shortened, the attention of the audience is not held until the close. It is for this reason that the lecturers have agreed with the Directors of The Mother Church that they will confine their remarks to the space of an hour and a quarter, notwithstanding the obvious impossibility of saying in that time all or even a tenth part of all that could be said on a subject so vast and vital in its scope and interest as is Christian Science.

The lecturers believe that if the instructions given in the circular are carefully heeded, not only will much greater success attend their efforts, but such occasions for a misunderstanding as sometimes present themselves in this work, will be largely eliminated.

Archibald McLellan.

"HERE A LITTLE, AND THERE A LITTLE."

Many questions are asked by earnest seekers after Truth, as to how they can best gain a practical understanding of Christian Science themselves, and impart it to children, either in their homes or in the Sunday School. All do not at once see that the trend of thought is changed when we come into Christian Science; they are apt to forget Paul's statement, that to the follower of Christ "old things are passed away; behold, all things are become new. And all things are of God," which most surely means that only spiritual things are now to be regarded as real. It does not take the honest inquirer long to find out that this is no vague theoretical teaching; that, on the contrary, when we begin to think somewhat as God thinks, we work with a definite purpose and with a certainty of accomplishing our purpose, which cannot be other than a good one if we reflect God's thought. Mortals learn by hard experiences that disappointment and failure follow so long as materiality is made the goal, when it ought to be spiritual reality.

The eager, curious thought of childhood would often ply the parent or teacher with puzzling questions as to who is who in some Bible story, but this is because the child has not yet learned to look away from the material to the spiritual in order to have an answer that is worth while. It is true that, if we endeavor to answer these questions on a historical basis, we should set the children a good example in accuracy and in the careful study of the topic involved. For example, a child once asked how it came about that Cain had a son who was so good that he overcame death. A little study of the earlier chapters of Genesis shows that, although Cain had a son who was named Enoch, according to the record, the Enoch who "walked with God," and was "translated," was a descendant of Seth, a younger brother of Cain. The all-important point, however, is to show the child what it means to walk with God,—what it did for Enoch, and what it will do today for every man, woman, and child who walks in the light of Truth.

The teacher may not always be ready to explain a ques-

Digitized by Google

tion literally; indeed this is not always possible or desirable, since many of the Bible statements are allegorical or figurative, but we should always be ready to lift thought to the spiritual fact which is the bread of life, and which is the one thing needful for child and adult alike. What is more, the spiritual fact, if rightly apprehended, will clarify and quicken the human mind and do wonders in enabling each one to work out the daily problems, so that there shall be no room for low aims, but, as Mrs. Browning says,—

> Cup, column, or candlestick,
> All patterns of what shall be in the mount.

Some one asks why the Lesson-Sermon is divided into sections; why there are always six sections; and whether the whole Lesson or only one section should be studied each day. To this it may be answered that these subjects, selected by our revered Leader, deal with the most vital problems which can be considered, and that the different sections aim to present different aspects of the truth discussed. There are very many who could not easily find time each morning for the study of the whole Lesson, who take one section as the "morning meal" at which they meet Christ, Truth, "in the dawn of a new light" (Science and Health, p. 351); then, with thought illumined by divine Science, they go forth in the strength of Truth to the duties of the day, and

> All the lowly vale grows bright,
> Transfigured with remembered light;
> While in untiring souls we bear
> The freshness of the upper air.

With our present capacities we may gain from the Lesson "here a little, and there a little" only, but even so do we prove true the Master's saying, "The words that I speak unto you, they are spirit, and they are life."

ANNIE M. KNOTT.

"LET THE DEAD BURY THEIR DEAD."

THE gain attending the spiritual interpretation which Christian Science brings to the Scripture is never more apparent than when one comes to the study of the epigrammatic sayings of Christ Jesus, and a good illustrative instance is found in his seemingly severe rebuke to one who had craved the privilege of delaying his spiritual activity until he had buried his father. In the light of Christian Science it is seen that his words do not condemn any worthy human affection or impulse, but that they rebuke one of the most subtle and enslaving forms of self-mesmerism.

The number of those who are subject to periods of depression, as the result of some fruitless regret or self-condemnation, the reliving of some unhappy experience, the nursing of some sadness or sorrow, is very great, and it includes many professed Christians who apart from this mania would be cheery, wholesome, and helpful people. They are not content to abide in the living present, but are ever allying themselves with some dead issue or event over whose unburied unreality they insistently sigh.

Christian Science teaches that all life is of God, the undying, and that so-called dead things never had a real life to lose, and when this is apprehended we perceive that our persistent mental pilgrimages to a mesmeric necropolis of our own making, are not authorized by either sense or sentiment; that they are utterly foolish and worse, since they make real to mortal sense that which is not, and has no right to be—no, not even to be buried. Christian Science further teaches us to leave dead issues alone, and that emphatically and all the time, since there is no congruity between life and death and hence they should be given no companionship in our thought. All this the earnest student soon learns, or ought to, and in so far as he clings to or coddles the remembrances of materiality's defeats, the failure of its promised satisfactions, the blight of its assured joys, the unnumbered dooms and disasters with which it intensifies human fear, in so far he himself is not alive, and the call of God to him, then and there, is, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee life." Dwell not for one moment on the discomfiting memories of material belief, but turn to Truth, to the things that live and that cannot die.

When one remembers how general is the habit of cherishing resentment, of living over past griefs, feuds, and misunderstandings, of recalling the humiliations to our pride of station and of intellect, etc., he begins to understand what it would mean for the cause of Christ, for the comfort of those with whom we have to do, and for our own peace of mind and spiritual advance, were we to obey this single injunction of the Master and zealously leave "the dead," the falsities of mortal sense, alone. It is apparent that retentive belief in the claims of materiality constitutes the substance of things not hoped for, and yet how frequently we are tempted to cling to their unseemly remains in a way which insures the indefinite continuance of their depressing influence.

We are counseled in Christian Science to look away from all this body of death "into Truth" (Science and Health, p. 261), to escape from the gruesome enslavement of the belief in death-experiencing and death-begetting things, whether they be concepts, creedal traditions, asserted laws, grievous experiences, or what not. It enables us to see that the only way to bury, to get rid of, these things is to put them out of consciousness, even as did St. Paul when he wrote the Philippians of his habit of "forgetting those things which are behind." Manifestly we cannot separate ourselves from that which we retain in consciousness, and the one way therefore to escape from every dead or dying thing, is to unknow it, leave it in the keeping of that nothingness to which it belongs. "Let the dead bury their dead."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Sydney, Australia, Nov. 21, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—Permit us to express our deep gratitude to you for your wonderful unselfish labors of love for suffering and sinning humanity. The golden bell that you have sounded throughout the world, telling us "there is no death," has sent us on our way rejoicing, the news having just reached our home in the Antipodes. As far as we know, we are the only students in Australia who went through any course conducted by Edward A. Kimball in the Massachusetts Metaphysical College, Boston. His clear teaching was indeed an inspiration. When we learned that he had passed on it caused for the moment a deep sense of shock and separation, but your beautiful soul-inspiring article lifted the gloom as the morning sunshine melts the dark fog, and showed us clearer than we had seen before that death is an illusion, and that our dear teacher is as much alive today as when he expounded the great truths of Christian Science to us some years ago, always pointing us to Science and Health and expressing unwavering trust and loyalty in you as our faithful Leader.

The best way we can express our gratitude to God, and to you, is to remain steadfast on the rock of Truth, looking away from personal sense and ambition and keeping close to Principle; then we may prove more the meaning of the words of the Master, "If a man keep my saying, he shall never see death." It is a great privilege to obey your commands, which are indeed finger-posts to life eternal. With much love and devotion,

Ever your loyal students,

CHARLES H. GIBBS,
ALEXANDRINA C. G. GIBBS.

Digitized by Google

[Telegram.]

Kansas City, Mo., Dec. 29, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—It is our high privilege, with all Christian Scientists, to love you for the great good which you have wrought for mankind. We thank you deeply for your kindness in excusing from his duties in your service our teacher, Adam Dickey, that he might gather his students together in this association meeting. As an association we profoundly appreciate the privilege of following you as you follow Christ, and we unanimously send you our gratitude and love.

MARTHA H. GISH, WILLIAM C. OFF,
ANNAH T. NORTON, *Committee.*

Canon City, Col., Dec. 30, 1909.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Leader:—We feel sure that you will be interested in an account of successful penitentiary work, and I am sending with it the word of love which for years I have desired to send. About nine years ago our church began to hold regular Christian Science services in the Colorado State Penitentiary, on the first Sunday of each month. At the present time there are about three hundred of the seven hundred and fifty inmates who voluntarily attend, and there is courteous attention given by Mexicans, Negroes, Chinese, Japanese, and Indians, as well as by American bankers and professional men.

At the present time there are in the prison library thirty-two copies of Science and Health and three copies of "Miscellaneous Writings." Of our regular periodicals there are twenty-five *Sentinels*, two *Journals*, one *Der Herold*, and twelve *Quarterlies*. Four copies of the *Monitor* are received daily, one for each cell-house, this being the only daily newspaper allowed inside the walls. It is first read by some of the officers and the chaplain, and the librarian told Mr. Avery this week that if at any time the *Monitor* was delayed, there were inquiries immediately from the officers and the prisoners. The chaplain said he had not thought it posssible for any denomination to edit such a good paper. After the *Monitors* are read by the officers, the librarian, who has full charge of the distribution of our literature, says he places numbers (each prisoner has a registered number by which he is known) all across the top of the first page and down the side, and the paper then goes to each number in turn. By the time it gets back it is worn out.

The "Life of Mary Baker Eddy" by Sibyl Wilbur, which was recently placed in the library by Mr. Montgomery (state publication committee), has been read seventy-five times. The librarian is a prisoner who has a life sentence. He has been interested in Science for several years, and his systematic plan for the distribution of our literature has greatly lessened our work. We endeavor to do our work in an impersonal way, for we have learned by experience that our literature does the needed work. The generous contributions from our state associations abundantly supply us with funds to carry on this work. We have our Hymnals in the chapel, and the prison choir select and practise the hymns for our service. One day our Second Reader, Mrs. Bessie Smith, received a telephone message from the prison, saying a negro was being dismissed that day whose only request was to be permitted to take with him a Christian Science Hymnal. It is needless to say the permission was gladly given.

The different wardens and officers of the penitentiary have always been very kind to us, and they have only good words to say for our work. This is becoming a model penitentiary, and is the only one which places men on their honor at work outside the institution. The prisoners are building an automobile road between Canon City and Colorado Springs which when completed will be as fine a piece of work of its kind as can be found. They have built a scenic drive in Canon City known as the "Sky-line Drive," views of which I have sent to Mr. Rathvon.

We were very grateful for the sweet message you recently sent to our dear little Howard, and may I tell you that his favorite prayer is your dear verse beginning, "My prayer some daily good to do." Mr. Avery joins me in tender gratitude and love for all that your books and noble life-work have done for us.

Your student's student,
MRS. MINNIE S. AVERY.

Cambridge, Mass., Jan. 2, 1910.

Beloved Leader and Friend:—If all who cherish daily love were to send you a yearly letter, it would tax your time to read, hence I have long refrained from writing. At this turn of the year, however, I see so much in retrospect that I must send a few words of loving gratitude.

In the dozen years during which the Publishing Society has been in trusteeship for The Mother Church, the business has had wonderful expansion, and many unique problems have arisen; and yet in every case a solution has been discovered. Your guidance has been given at crucial points without our bringing to you the details of the business, and we see how as a whole the progress of the movement represents an unfolding of obedience to the divine Mind,—and in this obedience you are example and guide.

Our daily *Monitor* is proving itself a most genial persuader of men, teaching the people broadly to understand the sanity and kindness of Christianly scientific thinking. Recently I visited the Pacific coast, and was delighted to find great appreciation of the daily representative, although it came after five or six days of travel; and this was among business men, for example, who did not think they favored our religion. They understood and were enthusiastic over the demonstration of the ideal in journalism.

The example of Mr. Kimball, our dear friend,—"nature's nobleman" as he was, is not forgotten. It was his continual effort as chairman of the board of lectureship to have the work of the board accomplished in such a way as would keep from you troubling problems, and bring to you blessings in accomplished results. This spirit animates those to whom you have entrusted the labors which are intended to be serviceable to the Field, and indeed to the world. I for one owe you so much gratitude that these past years of industry have hardly begun to express my desire to assist your labors, and if possible lighten your toil. But this clarification of thought has come, namely, that as you have accomplished your world-wide benevolence through obedience to God, the power to do good for any one of us is in proportion to similar obedience. If it is proper to express New Year wishes—then may you have this year many new helpers in your work, laborers coming to the harvest-field in obedience to a divine impulse.

Our dear boy remembers his visit with you, and your blessing, and with his mother joins me in tenderest affection for you. With grateful love.

Yours faithfully,
WM. P. MCKENZIE.

Boston, Mass., Dec. 30, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The copy of the new Hymnal which we are sending you carries with it much love from all the workers in the publishing house. Thank you for the helpful change of words from "far off" to "heavenly" rest in Hymn 197, "The Mother's Evening Prayer."

Gratefully and lovingly yours,
DAVID B. OGDEN, *Manager.*

THE LECTURES.

SAN MATEO, CAL.

The Rev. William P. McKenzie of Cambridge, Mass., delivered an address at Hart's Theater on Thursday evening [Nov. 11] on the subject, "Christian Science, or Deliverance from Evil." He was introduced by City Engineer Davenport Bromfield, who spoke in part as follows:—

It seems strange that the world's attitude toward religion should differ so much from its attitude toward so-called secular affairs. To all the different branches of engineering, to all branches of transportation, the world looks expectantly for advancement and improvement and hails the same with delight, but in matters concerning the creator and His creation there is a prevalent idea that nothing more is to be discovered or learned. Christian Science has come to the world to offer a reasonable interpretation of the Scriptures and an avenue of escape from sin, sickness, and disease. There are some, however, who have prejudged Christian Science and its import and mission to the world, and to endeavor to remove this prejudice is the purpose of these lectures.—*San Mateo Times.*

PITTSBURG, PA.

Prof. Hermann S. Hering lectured for First Church of Christ, Scientist, on Christian Science at the Nixon Theater Nov. 21. He was introduced by the Hon. Jos. A. Langfit, who said in part,—

Christian Science has been launched as a great gift to man. If it survives, it must stand the world's neglect and endure the test of time,—time that tries all things in its crucible, tries them and proves them pure, or else discloses them to be base metal, dross, and useless to mankind.

The votaries of this new science do not teach that God has changed or that Christ's teachings should be revised or the Bible rewritten. They aver that its mission is to bring the activities of righteousness into daily use, and to prove to the world that right thinking is the only practical solution of every human problem.

I have no quarrel with such a proposition in the abstract, nor do I think you have, and you and I together will listen to the proofs and to the evidence adduced to support them. I believe more and more that the church of the future will be built on deeds instead of creeds—at least on more of deeds and less of creeds—deeds of humanity, fraternity, benevolence, deeds of kindness, of gentleness, and of love. Deeds such as these will elevate mankind and make the whole world better. They will root out selfishness, develop the common brotherhood, and glorify all our lives.

Correspondence.

BERLIN, GERMANY.

Nearly one thousand people assembled on Tuesday afternoon, Nov. 23, at five o'clock in the Beethoven Saal to listen to the lecture on "Man's Dominion in Christ," delivered by the Rev. Arthur R. Vosburgh of Rochester, N. Y., U.S.A. He was introduced by Capt. Franz Kübel, retired, who, speaking in German, said:—

The honor of presenting to you the speaker of this evening has fallen to me, although it is only a short time since I have been interested in the study of Christian Science; but this study has taught me to know God as that ever-present divine Spirit which is Soul, Principle, Life, Truth, and Love. The author of Science and Health, Mrs. Mary Baker Eddy, says in the preface of this text-book: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away."

These sentences are being strengthened by recorded facts. The results which have matured since the rediscovery, through Mrs. Eddy, of the right comprehension of God, of the power of Truth, during more than forty years, and her work in the treating of disease and sin, prove to every intelligent person that the teaching and methods of Christian Science can only contribute toward creating a better humanity, both morally and physically. Were this teaching and these methods false, they surely would not have reached the age of over forty years and constantly attracted an ever-increasing number of adherents. This teaching declares the universe and its phenomena to be spiritual, and Christian Science as the Science of absolute Truth and Life. It teaches us to apprehend the logical facts of being, to come nearer to the perception of spiritual perfection and through this perception to overcome the difficulties of life in proportion to our understanding. Christian Science is therefore a revival of primitive Christianity.

Continental Times.

JOPLIN, MO.

Judge William G. Ewing lectured on Christian Science at the Joplin Theater Nov. 28. He was introduced by R. A. Pearson, a leading lawyer of Missouri, who said,—

This large presence here this afternoon, and this intelligent hearing, are signs of the times; a sign, too, of all times, for the question which Pilate asked is the oldest as well as the newest, and always the greatest of questions, "What is truth?" The enigma of the ages, and a personal problem to which every intelligence must address itself to some purpose, whether it would or not. Throughout the past the interpretations thereof have been many and various,—inept because of ignorance, and garish or grotesque because of the vanities and selfishness of men; nor are we yet free from the bigotries of our kind. But the times are more tolerant. It is now quite possible for any candid person to discuss any phase of the Christian religion from any platform in Christendom, without incurring a charge of heresy or being persecuted or prosecuted and burned at the stake; and this is a measure of progress. Certainly we are on the verge of a freer and bolder thought. There is today an accounting with authority and dogma, and it increasingly appears that the bowing down to wood and stone is not essentially different from the blind and unreasoning devotion to a mere verbal convention,—the one the worship of a form, and the other of a formula, and both alike idolatrous. We are in the age of unlearning, if indeed the danger be that we unlearn more rapidly than we learn.

The genius of this trend, we must [illegible] is scientific. The exact and exacting methods that have prevailed during the last century in physical investigation to such unprecedented achievement, are being marshaled before the phenomena of the superphysical; and in the realm of mind and morals is the new continent of modern discovery, big with attainment beyond the world of Vespucci or Columbus. The time will yet be, and is even now at the doors, when ethical and right living will be as definite and exact a science as is that of hygiene or chemistry, and when the dynamics of faith will be as much a verity as the parallelogram of forces or the laws of gravitation. Christian Science,—one of the most significant, suggestive, and prophetic terms of our modern-day thought!—*Correspondence.*

CARBONDALE, ILL.

The Hon. Clarence A. Buskirk of St. Louis delivered a lecture on Christian Science before a fair-sized audience at the Opera House Sunday afternoon [Nov. 28]. The

Digitized by Google

speaker was introduced by Prof. James Kirk [head of the mathematical department Southern Illinois Normal University], who spoke in part as follows:—

The doctrine about which we shall hear has had a most wonderful growth in the last fifteen years. I think that since the early days of Christianity this growth in number and wealth is without parallel. Certainly it has an adequate cause, and students of the world's movements, and those even who simply wish to understand the influences which control their fellow-men, will seek to know the cause of this growth as it is understood by its followers. Some who do not accept and endorse this doctrine ascribe its power to a reaction against the gross materialism of the age—a materialism which is seen as well in the worldly methods of many religious bodies as in the world outside of religion; but, whatever may be its cause, we are ready to give a respectful and an appreciative hearing to its duly authorized and eminent lecturer.—*Free Press.*

LECTURES TO BE DELIVERED.

Lyndonville, Vt.—Frank H. Leonard, Music Hall, Feb. 1.

O trustless heart, that finds
The ghostly phantom evil in thy way,
Lift up thine eyes to see
Love's glorious sunshine play
Around the terror grim,—
And lo, it is not! It was never there,
For all that is is Love divine,
Love infinite,—the clear
Light of thy life,—
God's love is everywhere.

FANNIE G. HOPKINS.

TESTIMONIES OF HEALING.

That organic disease is being met and destroyed by Christian Science treatment, has been demonstrated to my satisfaction by the prompt and permanent healing, in my own family, of a desperate condition of the eyes; and hoping the story may bring encouragement to some who may be laboring under similar conditions,—as so many of the testimonials in our periodicals have brought and are bringing encouragement and comfort to me,—I am pleased to give particulars of this healing.

At the time I first began seriously to investigate Christian Science, nearly five years since, a daughter, then thirteen and a half years of age, was suffering from an affection of the eyes which had deprived her entirely of the use of those organs, so that she could not even get about the house without assistance. About two years previous to this time one of her eyes had been affected, and the trouble was diagnosed by one of the prominent oculists of Los Angeles and treated by him, after some time, successfully. So, when the second attack appeared, in the other eye, recognizing the symptoms to be like those attending the first attack, the child was hurried to this same specialist, who stated that the difficulty was similar to the previous one, and directed that she be taken out of school. All reading or other use of her eyes was prohibited, and the usual treatment was commenced, the patient being taken to his office daily, or as often as he required. The doctor's instructions were implicitly followed, the remedies being administered and all accessory measures attended to in compliance with his directions; but in about one week after the treatment was begun, the other eye became involved, and as time passed both eyes gradually grew worse. The case was continuously treated by this specialist for six months, at the end of which time our daughter was in a desperate condition, her vision being so obscured that it was impossible for her to recognize any one or anything, and it was necessary to exclude the light from her eyes.

It was at this time that she accidentally learned of Christian Science,—a chance acquaintance having told her that Christian Science would heal her eyes,—and she was naturally anxious to have the treatment. But my wife and I, being skeptical, at first would not consider the matter of taking so desperate a case of acute illness out of the hands of the doctors and depending upon something so uncertain and intangible as Christian Science then seemed to us. In time, however, the pleading of the suffering child, together with the waning, on our part, of the confidence previously reposed in the ability of the specialist to handle the case successfully, prevailed, and a Christian Science practitioner was consulted, who made us very happy by assuring us our daughter could be healed. Among other encouraging information we were reminded that the Lord "healeth all thy diseases," and that "with God nothing is impossible."

Our daughter had received nine Christian Science treatments from this practitioner, when, to our great astonishment and joy, we found that her eyes had cleared up and returned to their normal color and condition, whereas previously they had presented a dreadful appearance. Her eyes were absolutely healed and her vision was perfectly clear; in fact, her sight was better than it had been previous to the attack, for she had before found it necessary to wear glasses to enable her to do her school work. After her healing in Christian Science, however, she did not require the glasses,—in fact, could not use them,—so they were discarded and have never been used since. Her vision has remained normal and she has never experienced any difficulty whatever with her eyes, while her general health is perfect, an attendant ear and throat trouble having disappeared promptly and entirely.

Digitized by Google

I deem it a great privilege to state in this public manner that I am indeed thankful for Christian Science,—thankful for the great good it is bringing to humanity in general, and especially thankful for the numberless benefits which have come and are coming daily to my family and myself through the small understanding we have gained of this saving truth. Since Christian Science first became a factor in our family of six, four of whom are growing children, no material remedies whatever have been resorted to for relief from illness or other form of discord, Christian Science having successfully and promptly met every emergency, while previous to that time the doctor was a frequent visitor to our home.

In behalf of my family and myself I am indeed grateful to all who have contributed, either directly or indirectly, to the many blessings received through the ministrations of Christian Science, above all to our revered Leader, Mrs. Eddy, who by consecrating her life to the cause of humanity has, through her spiritual insight and selfless devotion, brought to mankind in so practical a way a rational understanding of God and a demonstrable knowledge of man's relation to God, in this new-old beautiful religion, Christian Science. My gratitude is beyond the power of words to express, but my purpose is to manifest it, in a measure at least, by striving to live in accordance with the tenets of Christian Science, as given on page 497 of "Science and Health with Key to the Scriptures," and to have in me that Mind "which was also in Christ Jesus."

WILLIAM D. CAMPBELL, Hollywood, Cal.

I have asked myself, as did the psalmist, "What shall I render unto the Lord for all his benefits toward me?" Mrs. Eddy tells us in Science and Health (p. 372) that "a just acknowledgment of Truth and of what it has done for us is an effectual help." Christian Science has done and is doing everything for me, and it has saved me from the surgeon's knife. It has helped me of a chronic stomach disorder, also of chronic headaches. I am truly thankful to God for all His goodness to me, to Christ Jesus the Wayshower, and to our dear Leader, Mrs. Eddy, for her wisdom, faithfulness, and patience in bringing this new-old truth to the comprehension of mankind.

MRS. A. L. SMITH, Somerville, Mass.

I feel it my duty to acknowledge what Christian Science has done for me, as I had suffered nearly all my life with stomach trouble, and although I had medical treatment for years, I received no relief until I came into Christian Science.

In July, 1908, I was taken seriously ill, and a physician was called who gave me a thorough examination. He pronounced the case appendicitis, and also stated that I had a complication of diseases which had become chronic. He did not give me any encouragement that I would ever get well, but said that an operation would be necessary right away. Instead of this we sent for a Christian Science practitioner. When she arrived in the evening she gave me treatment, and by morning vomiting had ceased. By the second day normal action had been established, and in two weeks' time I was entirely free from that trouble. The chronic ailment is also gradually disappearing.

In October of the same year my youngest son, now eight years old, was also healed of appendicitis in less than two weeks' treatment. I know that I owe my life to Christian Science, and I cannot express in words how grateful I am to God for this truth, and to Mrs. Eddy for giving us this spiritual understanding.

MRS. STELLA BIXBY, Shopiere, Wis.

With a thankful heart, more than words can express, I corroborate the statement made by my daughter, Mrs. Stella Bixby. I was with her during the whole time of her illness. To say that I am grateful would be but a mild expression of what I feel for what Christian Science has done for us. We owe her life to God, who healeth all our diseases, and to our dear Leader, Mrs. Eddy, for the discovery of this truth. By having Christian Science treatment the operation was not needed in either case, and our loved ones have been restored to health through the power of Truth alone.—MRS. K. A. UEHLING, Shopiere, Wis.

It is with a grateful heart that I give this testimony of benefits received during fourteen years in Christian Science. To tell of all would take too long, but before receiving treatment in Christian Science I was in poor health, with frequent and severe attacks of headache and a trouble in my side which one doctor who attended me diagnosed as liver complaint. He said that I would probably always have it, but this and the headaches, besides some other ailments, disappeared after I received treatment in Christian Science, and after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, she who was living close enough to God to receive His message and give it to a needy world. For the healing from sickness I am thankful, but for the healing from sin no words can tell what that means to me! I rejoice to know a God who is Love and who is always at hand.

I wish I could tell as I ought of my healing from a very severe attack of lung trouble in December, 1907. I was at that time living with my daughter in Cripple Creek, Col., and it was during a term of severe cold and storm that I was taken with symptoms of illness which did not seem to yield to the statements of truth that I tried to realize for myself. So I sent for the First Reader of the church, who had helped me at another time. She responded, and as soon as possible came to see me and gave me present treatment. For a while I was better and was helping about the house, but from exposure to the cold my case seemed to grow worse. The practitioner came and stayed by me faithfully, day and night, quieting my fears and giving me care as well as treatments. I can never forget her encouraging words, her loving patience, and that of my daughters, also a dear neighbor who was very kind. One night I seemed to be in a very critical condition, though faithfully the dear ones watched and declared the truth; but, even when it seemed that the end was near, I revived, and asked for some refreshment. How their dear faces lighted up, and how tenderly they cared for me! From that hour I began to mend, and soon was able to walk and had a good appetite.

One of my daughters, who had been summoned from Denver, wished me to return with her to stay the rest of the winter, which I did. I gradually gained strength, and I know I can never fully pay the debt I owe to God, who sustained me through that trying experience, but I hope to prove my gratitude by being helpful to others and striving to shed some light on their pathway.

MRS. CHARLOTTE LANDON, Lebanon, Ore.

I am the daughter referred to in the above testimonial, and can verify its statements as to both cases of healing. My mother was in my home at the time when the demonstration was made over acute lung trouble. Both my mother (who has since moved to Oregon) and myself are glad to acknowledge the good work done in our home, and I know of a great many healings and much good accomplished through Christian Science.

MRS. LENA WATERS, Cripple Creek, Col.

I wish to add my testimony to the many which I have been reading, and I hope it will help some one, even as I have been helped by reading the experiences of others. I wish to express my gratitude for what Christian Science has done for myself and family,—gratitude to God, and to our dear Leader for the sincere and faithful way in which

Digitized by Google

she has placed this understanding before the world. I have been reading Christian Science literature only about a year and a half, and at first I was not interested very much. I had then been afflicted for about two and a half years, with an illness which the medical profession called blood-poisoning, and during that time I had changed doctors five or six times. My hands were badly affected, the finger-nails having come off several times, and instead of getting any relief, I continued to grow worse.

While away from home, in the winter of 1907–1908, I received a letter from my wife, who had been practically an invalid for a number of years, stating that she was so much improved that she could almost declare herself well, and that she had given up doctors and medicine. This was something of a surprise, but nothing to compare with what I beheld with my own eyes when I returned home early the following June. My wife was a picture of health, and a changed person entirely. I was not, however, ready as yet for Christian Science. I went to so-called health springs for two or three weeks, but received no relief. I then went to the seashore, to get what benefit I could from the salt water, and became so much better that I returned home; but the relief was only temporary, and I soon began to go backward again.

I then started in to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did not, however, gain the understanding at once; so I went to see a practitioner, but more to satisfy my wife than with any thought of my own benefit. To my astonishment, I soon found myself rapidly growing better; in other words, I was being healed. I became much more interested, and know now that I am on a clear road. I went through a class in November, 1908, and can say that I have been truly and wonderfully healed, not only physically, but morally. I know I have a great many obstacles yet to overcome, but I am demonstrating constantly and seeing them disappear one by one. I never before felt the import of the usual greeting at this season, as I do now. Happy New Year! This is my wish for all mankind.

W. O. Hays, Louisville, Ky.

It is now nine years since I first became interested in Christian Science. Unlike many others of whom I know, I did not come to it for the healing, but for spiritual help and guidance. I was advised to investigate other religious beliefs, which I did to please some members of the family, but through this the truth of Christian Science was proved to me. I was taken with a physical trouble to which I had been a victim several years before. Still I did not yield for some time, till in desperation I gave up the study of everything else and turned to Christian Science, knowing that there was nothing else for me, as from previous experience I had found that doctors and medicine could do but little for me. I was not healed at once, indeed my healing was very slow; but for this I have been grateful and acknowledge that divine wisdom was guiding, for in no other way would I have held to Truth and progressed in the understanding of Christian Science as I did.

We are told that man's extremity is God's opportunity, and that His strength is made perfect in our weakness. It proved to be so in this case. Only through utter reliance on God was I able in many other instances to see and demonstrate the power of Truth. I feel that I cannot be grateful enough that there was one who was spiritually minded enough to receive this message of Life and Truth for the benefit of mankind. We can best show our gratitude by our willingness to follow our dear Leader in the Christ-way, and my daily prayer is that I may so live as to bring at least a little of this hope and cheer and strength to others.—Mrs. Birdie Lee, Provo, Utah.

Looking back over the years since I came to know Christian Science, one demonstration stands out with greater clearness than any other, because a great fear was overcome in a short time with a slight knowledge of Truth. It was by clinging to and declaring the little I did know, that the work was done.

At that time I was at the head of the money-order department in the Des Moines post-office. It was near Christmas, when the work was very heavy, and our force was much reduced on account of an epidemic which was then prevalent. I had managed to keep it at bay, but on this particular day I went home completely prostrated, as it seemed. I was too sick to think correctly, yet my responsibility was such that I felt I could not give up; I must be there when the office opened in the morning, and the only other person who could have taken my place was down sick. These were the thoughts with which I went home, and I was feeling very ill. I then knew only a little of Christian Science, and my family, having no faith in it at all, of course wished to do something for me in a material way. I could not reach a practitioner by telephone, but I would not be tempted by medicine. I clung persistently to the fact that God, good, never made anything unlike Himself, and that He is Love, Life, and Truth; that my true self must reflect God; and clinging to this truth, I went to sleep. I arose in the morning well, and went to work with a grateful heart, thanking God for my freedom.

I am daily learning more and more of this truth that makes men free, and I am very grateful to the noble woman who is making plain to the world the practicability of the Christ-healing.

Cora A. Bartholomew, Cedar Rapids, Ia.

It is over a year ago since I heard of Christian Science and began to take an interest in it. I went to see a practitioner who lived in the neighborhood of my sister, as I thought I would like to try Christian Science for my children, my little girl eight years old being troubled with a stomach disorder. The practitioner said I should let her eat whatever food she wanted, and she has done so ever since, without pain. My baby had a very obstinate bowel trouble, but after I became interested in Christian Science I did not give her any more medicine. She was healed when her sister was treated. She was also healed later of an eruption.

I thank Mrs. Eddy for her unselfish labor of love for all mankind. Through her perception of the truth and her teaching we are able to see more clearly and to know "what is that good, and acceptable, and perfect, will of God."—Mrs. Corda Story, Chattanooga, Tenn.

I would like to express my gratitude to God for the benefits I have received through Christian Science, as given to us in "Science and Health with Key to the Scriptures." I was a total wreck physically when, in September, 1907, I called on a Christian Science practitioner for help, having been given up by several doctors as incurable. I had suffered for several years with what were said to be stomach, liver, and bowel ailments. I was almost without hope, and it was only as a last resort that I decided to try Christian Science. I was better of the intestinal disorders from the first treatment, and I have also demonstrated the truth for my eyes so that I have laid aside glasses, which I had worn for several years, and can read even small print.

I have also had several demonstrations in my family and for neighbors, for which I thank God, and also our beloved Leader, Mrs. Eddy. Although I am the only Scientist here, so far as I know, and have some opposition to contend with, yet I know that Truth will prevail, for the Master said, "Lo, I am with you alway, even unto the end of the world."—James Jaynes, Sidney, Mich.

Digitized by Google

Christian Science was presented to me a little over five years ago by a perfect stranger, who told me of this wonderful truth which heals all disease and fills our consciousness with love to God and to all mankind. I had then been suffering for years with a complication of diseases. I had employed different doctors, and followed their directions faithfully, but had received no permanent relief; indeed different doctors had told me that I would never be well again. So, when this truth was explained to me, I was ready to receive it, and the stranger kindly sent a practitioner to see me, who gave me treatment. There was a great improvement in my condition right away, and in a few weeks I was restored to health.

Since then my son and daughter have been healed, and my husband also has taken up Christian Science. A dear sister has accepted it and is leading others to this truth which heals sickness, sorrow, and sin. I am indeed thankful to God, and to our Leader for this truth which has helped us. I cannot find words to express the gratitude I feel for all that Christian Science has brought to me and mine.—NELLIE CHATFIELD, Los Angeles, Cal.

Christian Science has done so much for me and mine, that I wish to express a little of the gratitude I feel. I came not through bodily healing, though I was healed unwittingly of a so-called fatal malady; but the renewing of the mind, the change in thought, has created for me a veritable new heaven and new earth. I was lost in a sea of doubt and fear,—doubt of God's willingness to help us, and fear that I should not be among the few who find the strait and narrow way that leads to life eternal. But I rejoice to know that the way was found, and that all may enter and there attain the knowledge of God which is life eternal. This great truth is applicable to all the needs of men, and I have never found it wanting. I am daily striving to have more humility and love, that I may have the same Mind "which was also in Christ Jesus."

LUTIE W. PRUTSMAN, Danville, Ill.

I came to Christian Science in February, 1906, a physical wreck, with absolutely no knowledge of what this Science was; without any faith, and I might say without any hope of benefit. I was healed in one treatment of a stomach disorder of thirteen years' standing, with all its attendant miseries, and of the need for eye-glasses, which I had used for about seven years. I feel that my gratitude for this relief can best be expressed in earnest endeavor to know God aright.

Since my own healing we have been blessed in many ways. A few months ago my daughter, seventeen years of age, had a severe attack of appendicitis. The symptoms first appeared on Friday night; I was able to help her through the night. On Saturday night a more severe attack came on. It grew gradually worse, and at ten o'clock on Sunday morning a Christian Science practitioner was called in. The suffering at that time was intense, but late in the afternoon all the pain disappeared; she rested well that night, and was out the next day, slightly weak from the suffering, otherwise in perfect health.

For three years God has been our only physician. We feel very grateful to Mrs. Eddy for showing us the way to health and holiness.—ROBT. G. SMITH, Newark, N. J.

In June, 1905, my health began to fail. I was greatly reduced in flesh, and alarming symptoms of a serious kidney and bladder disease developed. Necessary examinations were made by a resident physician, the verdict being that I had a deep-seated disease which would soon end my life. Tests were made by a chemist and physician, who pronounced my case chronic and said that there was no permanent help for me. I had been a nurse many years, had cared for dear ones who had suffered all the tortures of this so-called incurable ailment, and I had no faith in any material remedies. I therefore gladly yielded to the entreaties of my husband and children, to trust my case to God through Christian Science. As there was no practitioner here, I wrote to a dear friend in another city, in December, 1905, and even before a reply came, the healing power was felt. At the close of three weeks of absent treatment I was perfectly whole. The freedom from bondage of both body and mind caused a thanksgiving to God—even audible praises to the Giver of every good and perfect gift.

I date my healing from January, 1906, and although in my sixty-seventh year I am able to do more work than for several years before. My husband, seventy-four years of age, began to read Science and Health while I was being treated, and after having been a member of a church for fifty years, he has found a more spiritual light shining from the Bible through his study of the Lesson-Sermons and all of Mrs. Eddy's writings. He has been healed of rheumatism of many years' standing. We are both very grateful to God for all of these blessings, and to Mrs. Eddy, our Leader, for her steadfast research for the life-giving Principle and for pointing the way to the kingdom of God, here and now.—MRS. FLETCHER MASSEE, Menomonie, Wis.

Divine Love has healed me of many physical ailments, and of one pronounced an organic trouble, for which the best medical skill could do no more. I had been told that I would be an invalid the remainder of my days, and I was therefore ready and receptive for anything that would relieve my suffering. I had often asked why, if God could heal sin, could He not heal sickness. I turned to God as my physician, and was healed. I knew very little then of Christian Science, but at the time of my dire distress I read "Science and Health with Key to the Scriptures." After the healing, not realizing that I should keep on working and learning the truth about God,—that He is all powerful and ever present,—I found myself in a very discordant condition, but Truth led me to a Christian Science Wednesday evening meeting. I kept feeling more and more of a spiritual uplift, each time I attended the services: I was willing to give up any social engagement for these meetings, which afforded me far more pleasure. As I gained in spiritual understanding the discordant condition left me, and it was followed by that peace which passes all human understanding and that sense of Truth which makes free.

Through the study of Christian Science, my belief that God is watching me, to punish me for every mistake I make, has been changed to an understanding of Him as ever-present Love, as a God who is all good. I am realizing more and more of the truth of Paul's teaching, "Be not deceived: God is not mocked: for whatsoever a man soweth, that shall he also reap." I have learned from experience, that if I always entertain only kind, good, right thoughts for everything and everybody, and obey the First Commandment, the kingdom of God is right here, and my cup is full and running over.

With the practical understanding I have of Jesus' teaching, which I have gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have helped others to see the truth of Christian Science, which has given me unbounded blessings; and my prayer is to be able to show my gratitude in every thought, word, and deed.—DORA M. KLEPFER, Indianapolis, Ind.

The best fruit is for him who climbs rather than for him who shakes the tree. The man who lies at his ease in the shade, waiting for ripe fruit to fall into his mouth, is apt to go a long time hungry.—ANON.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

Let the preacher and pietist and moralist take courage. Man, individual man, is coming to a moral consciousness of himself as a part of one stupendous whole. He is feeling his corporate responsibility. He is reaching after that ideal which is at the bottom of the gospel. The kingdom is the growing burden of his hope; his citizenship is in that redeemed society which the Master anticipated in his loftier ideal. He no longer thinks of saving himself alone. If the acuteness of his own sense of guilt is passing, it is passing into that larger life and grander consummation where he feels a common guilt, and rejoices in a common dream of humanity's beatification. If sometimes we miss the single, solitary voice of a perturbed and tormented soul breathing its tragic grief into the heart of God, let us not miss that far-reaching, rhythmic music of world-hope and world-hunger for honor and justice and righteousness which swells like the mighty anthems of "*Dies iræ*" and "*Laus Deo*" over the surging tides of the world's vast energies. The consciousness of sin which stirs the mass of eighty millions of people with the repentant travail of a new and better life is a grander spectacle to angels and men than the guilty cry of the old days when men fled in terror from the threatened wrath of an angry god. What the world has lost in this or that individual cry for deliverance, it has more than regained in that wider, higher, deeper sense of our common need of a better, truer, kindlier life together in the world.

[*Churchman.*]

The Son of God was sent to reveal to men the meaning of the fatherhood of God and to show them by the object-lesson of a life lived under human conditions exactly how their life ought to be lived. This coming of Christ and the result of it, which is summed up briefly in the word Christianity, has already brought peace and good will to men. More and more will there be of it, until that day becomes a reality when the songs that were sung by the angels in Bethlehem shall find on earth a universal chorus.

[*Advance.*]

The "wise men" were men of the humble spirit, of the hungry heart and the upward look, with eyes of the understanding which scanned the heavens, which peered into mystery and sought for signs of God. They were men of a class which have been found in all ages and in all lands, penitent and believing, whose inquiring souls have made an open door for prophets and apostles and welcomed the message of salvation. They came to seek, to rejoice and worship.

[*Zion's Herald.*]

Christmas goes back to Christ, and unless its observance is conducted as Christ would have it, it is no Christmas at all. Yet many today are trying to observe Christmas without Christ—not having yet received the Messiah into their hearts, and making no effort to express the spirit of the Master through the forms of a holiday merrymaking.

[*New York Observer.*]

Let it be remembered, we repeat, that Christmas is not the carnival of a mythical Santa Claus, but the feast of an historic Christ. It is emphatically the celebration of God's good will to men, phrased and fashioned in the incarnation and the advent. Unless a similar good will pervades all holiday observances, we make a mock of the whole thing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in French old style type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: Its Religious Philosophy" a lecture by Hon. Clarence A. Buskirk.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of the First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE. PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

National.

The Southern Pacific Terminal Company controls valuable docks and wharves at Galveston, Tex., nearly all the stock of which is owned by the Southern Pacific Company. In 1905 the terminal company leased to an importer of cotton-seed cake and meal, for five years, for $15,000, a pier 1,370 feet long. Within the enclosure were erected facilities for packing fifteen hundred tons of cake a day, and for grinding and sacking two hundred tons of meal daily. The importer was exempt from demurrage charges. There was a practical monopoly, and the complaint against the Southern Pacific Company was decided in favor of the plaintiff. It is understood that, as a result of this decision, upholding the Hepburn rate law, the interstate commission will now proceed to investigate alleged terminal discriminations which, it is said, extend to New York city, and an effort will be made to break up the practice of certain carriers which, by contracts made in the name of subsidiary corporations, have granted exclusive terminal privileges to selected shippers and thus imposed a hardship upon all others. In some instances the effect of these discriminations has been to give the favored shipper a practical monopoly of export trade.

Urging that Congress proceed immediately to dispose of the Taft-Ballinger conservation program, without awaiting the outcome of the congressional investigation of the Ballinger-Pinchot dispute, President Taft, on the 14th day, transmitted his special message to Congress on the conservation of natural resources. He recommends laws providing for the conservation of the public lands; the safeguarding of power sites along rivers in the public domain; the validating of the withdrawals from entry made by the secretary of the interior under the disputed "supervisory power;" a detailed classification of public lands according to their use; the disposition of the agricultural and mineral resources of the same portions of the public lands separately; the rapid completion of the reclamation projects now under way and a thirty-million-dollar bond issue to finish and extend these projects; the extension of the activities of the forest service; the conservation of the soil, and the carrying out of an extensive program of land and waterways improvement.

In his recent speech before the Pennsylvania Society in New York city, Mr. Knox, secretary of state, made a plea for the establishment of a genuinely judicial tribunal for the adjudication of differences among the Powers. At present the court of arbitration of The Hague is not permanent. It is nothing but a panel or list of judges designated by the signatory Powers for a term of six years. Secretary Knox concludes that, as the Hague conference has established an international prize court, that court might be invested with the jurisdiction and functions of a court of arbitral justice, and that the United States, as the originator of this project, might look forward to its expansion so as to adjudicate cases arising in peace as well as controversies incident to war. In pursuance of this Mr. Knox has sent out circular notes to the governments signatory to The Hague convention.

President Taft, in his special message relative to amendments to the interstate commerce law and legislation supplementary to the Sherman anti-trust law, recommends a United States court of commerce; the prosecution and defense of cases brought against the inter-state commerce commission by the department of justice, instead of by special attorneys; a provision forbidding railroads to acquire capital stock in competing lines; a provision forbidding the issuance of capital stock without payment of the par value, or unless it is founded on *bona fide* physical valuation of property; and voluntary incorporation for concerns engaged in interstate commerce.

The Boston Elevated desires through a holding company to enter into closer traffic arrangements with its connecting lines. The total assets of corporations that would be affected amount to $53,700,000; the total mileage of track is 1,050 miles. The number of new cars to be operated would be 2,273 and 4,828 employees would be added to the payroll of the system. The number of passengers carried annually by the combined outside lines is one hundred and seventy-six millions.

"Long-distance transmission of electricity has changed water-power from a private to a public utility. Hydro-electric power transmitted over a great area becomes a common source of energy just as railroads become common carriers. Water-powers, therefore, should be subject to public regulation," says Marshall O. Leighton, chief hydrographer for geological survey, in a paper at the meeting of the New England Water Works Association in Boston.

A decrease of more than one third in the deficiency of the postoffice department is shown for the quarter ended Sept. 30, 1909, as compared with the corresponding quarter of the previous year. As the deficiency for the entire fiscal year ended June 30 last was approximately seventeen million dollars, the saving of the first quarter of this year is highly gratifying.

The supreme court of the United States has decided the various cases before it involving the power of the interstate commerce commission to regulate the distribution of railroad cars among coal companies, upholding the commission's power, but deciding the various cases on their individual merits.

On account of the growing importance of American interests in the Far East and the difficulty of administering the whole fleet as now constituted, the navy department has decided to divide the Pacific fleet into two separate fleets, to be known as the Asiatic fleet and the Pacific fleet.

Secretary of State Knox proposes to the Powers the neutralizing of the Manchurian railways. The official attitude of the interested Powers, Japan, Russia, France, and Great Britain, is not yet known.

Four former employees of the American Sugar Refining Company, convicted of underweighing frauds have been sentenced to one year's imprisonment in the penitentiary.

The total benefactions for charitable purposes in the United States reported in the public press in the last seventeen years sum up not less than $1,000,150,000.

International.

Harbor improvement is receiving a great deal of attention both from the Brazilian national government and from the individual states, and large sums of money are being expended by the Brazilian people to make their roadsteads worthy of and suitable for the great commerce that they feel should be theirs with the nations of the world. The aggregate cost of the harbor works at Rio de Janeiro, at Santos, Para, and Rio Grande do Sul amounts to more than the United States now spends on all its coastwise harbors, and is greater than the expenditure of most of the European nations for similar purposes.

Should the changes voted for by the Russian majority of the Russo-Finnish committee be embodied into law, the Finnish constitution will be practically annulled and Finland be reduced to the status of a province of Russia. In the deliberations of the committee the Russian members maintained there never was a constitution granted to Finland binding on Russia as a sovereign power, and that therefore a new order of procedure could be established independently of the Finnish authorities by an act of legislation passed by the Russian Legislature alone.

Dr. Luis Anderson, representing Costa Rica, and Dr. Belisario Porres of Panama, are in Washington for the purpose of adjusting the boundary dispute between the two countries. They will lay their respective claims before Chief Justice Fuller, who has been named as arbitrator.

A French economist figures that the wealth of France increased during 1909 by one billion two hundred million dollars. French foreign investments at the end of the year totaled seven billion six hundred million dollars.

There are at present in England and Wales 3,639 miles of used waterways, including rivers and canals.

Industrial and Commercial.

The Standard Oil Company, through the People's Gas Company of Pittsburg, its principal gas company, is now planning to pipe natural gas from the fields of West Virginia and western Pennsylvania into Greater New York, to be sold there at fifty cents per thousand feet, the same fuel costing Pittsburg twenty-seven and a half cents per thousand feet. The Standard figures on spending fifteen million dollars in piping gas over the mountains and to New York.

Under the New Haven (Conn.) Gas Light Company's profit-sharing plan, under which stock is credited to the employees to the extent of eight per cent of their wages, a quarterly distribution of seventy-eight shares of stock having a par value of $25 each, has been made. Thus far 607 shares, having a market value of approximately $26,000, have been transferred to about 225 employees.

The American Oil Fields Company of California has been incorporated with twenty-five million dollars capital stock, of which seven hundred thousand dollars is subscribed. The Company will consolidate interests controlling thousands of acres of oil land in the Coalinga district.

Pittsburg car building companies have booked more than fifty-five million dollars of orders for cars during the year 1910. During the past year orders were placed for 181,360 freight cars, 4,414 passenger cars, and 3,359 locomotives. Many of these orders are yet to be filled.

The proposed eighteen-million-dollar merger of street railway, power, gas, and electric lighting concerns in Michigan will be known as the Commonwealth Power, Railway and Light Company. Of the total capital stock six million dollars will be preferred and the balance common. No bonds will be issued.

The total wheat crop of Canada last year was 166,744,000 bushels, which at an average price of 84 4-5 cents per bushel would yield a total value of $141,320,000. The yield per acre averages 21¼ bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LINCOLN DAY LESSON-SERMON.

[IT is the custom of the Governor of Massachusetts annually to issue a proclamation calling upon the people of the commonwealth to assemble in their churches for the observance of Lincoln day, and in accordance with this proclamation The Mother Church and the branch churches in Massachusetts hold a service on that day. As it has also become the custom of some of the churches of this denomination in other states to do likewise, for the convenience of such churches as wish to hold a service on Feb. 12 next, we publish the Lesson-Sermon which has been compiled for this service by the lesson committee. —EDITOR.]

February 12, 1910.

Subject: LIBERATION.

Golden Text: "Being then made free from sin, ye became the servants of righteousness." Romans 6 : 18.

Responsive Reading:—Isaiah 58 : 1–8.

1. Cry aloud, spare not, lift up thy voice like a trumpet, and shew my people their transgression, and the house of Jacob their sins.

2 Yet they seek me daily, and delight to know my ways, as a nation that did righteousness, and forsook not the ordinance of their God: they ask of me the ordinances of justice; they take delight in approaching to God.

3 Wherefore have we fasted, say they, and thou seest not? wherefore have we afflicted our soul, and thou takest no knowledge? Behold, in the day of your fast ye find pleasure, and exact all your labors.

4. Behold, ye fast for strife and debate, and to smite with the fist of wickedness: ye shall not fast as ye do this day, to make your voice to be heard on high.

5 Is it such a fast that I have chosen? a day for a man to afflict his soul? is it to bow down his head as a bulrush, and to spread sackcloth and ashes under him? wilt thou call this a fast, and an acceptable day to the Lord?

6 Is not this the fast that I have chosen? to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke?

7 Is it not to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house? when thou seest the naked, that thou cover him; and that thou hide not thyself from thine own flesh?

8 Then shall thy light break forth as the morning, and thine health shall spring forth speedily: and thy righteousness shall go before thee; the glory of the Lord shall be thy rereward.

ELISHA'S SERVANT.

BLANCHE HERSEY HOGUE.

"FEAR not;" answered Elisha to his servant's cry, "Alas, my master! how shall we do?" "Fear not: for they that be with us are more than they that be with them." And the narrative continues: "And Elisha prayed, and said, Lord, I pray thee, open his eyes, that he may see. And the Lord opened the eyes of the young man; and he saw: and, behold, the mountain was full of horses and chariots of fire round about Elisha."

The servant of Elisha is not alone in his query "How shall we do?" Human perplexity is ever seeking, ever needing, a way out of trouble, and humanity must change its point of view as did Gehazi if it would discover the help at hand. To the material senses the "hosts of the King of Syria," in the form of temptation and pain and disaster, may sorely beset him who is striving for right. Because Christian Science is in the world, however, to make plain and to establish the spiritual point of view, because it is here to repeat and to spread abroad Christ's glorious "Fear not," heavy eyes may by its means be opened and lifted to see the chariots of the Lord on the mountain-side, and to fear the hosts of evil not at all.

The material senses register only the evidence of matter. Mortals see, hear, feel, taste, and smell matter, in one form or another, continually. On the other hand, all that men know of hope, of love, of aspiration, of unselfishness and goodness, comes to them mentally, from an entirely different source and by an entirely different route than matter offers. Were there no love for righteousness in the world, no affection, no kindly fellowship, mortals could still feel and see and hear and otherwise know matter through the senses which cognize it; and when mortal man

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

wants to know something other than the senses tell him, when he wants to experience things apart from matter,—things spiritual and mental,—he must look away from sense evidence to that which comes to him by the way of spiritual understanding.

What is it that promises deliverance from trouble, that stimulates hope, that fosters courage and patience and loving-kindness? Surely nothing that we see or hear about matter, for matter by its own so-called laws falls sooner or later into a despairing organic decay which gives every evidence of the destruction of individuality. If our knowledge of existence stopped with what we see happening to matter, we should know nothing of God nor of spiritual life, nor even of human feeling of the better sort. All that mankind knows, in fact, beyond matter, is gained from spiritual view-points and mental processes beyond and outside of matter. All discovery and all invention which defeat the limitations of material belief come by way of revelation and reason and from a direction mentally opposite to that of the testimony concerning matter. And surely all spiritual knowledge must originate in a source entirely unknown to the material senses.

This much granted, as it can be by every thinker, it follows logically that to open one's eyes to the spiritual point of view brings spiritual experiences within the individual's mental range. With no evidence before his physical senses but a host of Syrians bearing down upon him and his helpless servant, Elisha could exclaim, "They that be with us are more than they that be with them." The basis for his confidence lay in something unseen to the physical eye, something at the moment unseen by his servant; and Elisha's trust in God lifted the thoughts of his servant with his own, until both could know the presence of their deliverer and rely upon spiritual power. In like manner the Christian of today must rest his faith beyond his sight.

Whatever may have been the detail of Elisha's experience, the lesson learned by his servant is the thing which comes home to the Christian Scientist. Christian Science demands a continuous outlook upon the mountain-side whereon God's chariots assemble; an unshaken faith that help will be always at hand in the hour of need. Until the servant knew the nearness of divine resources, his terror prevailed; when he saw as did Elisha, new courage upheld him. So, too, the one who would be saved from believing in evil must spiritualize his point of view, until the heavenly hosts become real and abiding to him; then, in every encounter with his own temptations, the myriad wheels of evil roll back into the darkness from whence they came, and are no more.

On page 298 of her book "Science and Health with Key to the Scriptures," Mrs. Eddy writes concerning angels, that they are "pure thoughts from God;" and on page 581 she writes again that they are "God's thoughts passing to man; spiritual intuitions, pure and perfect." She makes it clear, furthermore, that such righteous thinking offsets the evil thinking of the human mind; and it may be said in passing that this one statement alone proves Mrs. Eddy's right to call her book a "Key to the Scriptures," for such interpretation of the experiences of prophets and disciples shows to the modern disciple his angels, his horsemen and chariots, waiting upon the mountain-side, and teaches him what the vision meant to the Christian of old. If "pure and perfect" "spiritual intuitions" are angels to the awakened thought, then every individual who cherishes spiritual thoughts is assembling a host of helpers, and the multitude of them increases with every effort better to understand and love God. The lesson is logical. Every one, whether or not a Christian Scientist, will admit that the more his mind is filled with good thoughts the more good he has with him and about him. And every one, surely, sees the value of seeking and cherishing such a glorious company of gracious assistants.

Christian Science calls upon every one to see in this connection, however, that human goodness, even though it be a good belief, is not "the angel of his presence:" and that good beliefs must give place to the spiritual understanding of God's presence and power, as revealed by Christian Science, to bring about that quality of right thinking which really saves and heals. One readily grants that an amiable disposition, a generous nature, or a self-sacrificing life-habit, although they are traits which promote happiness, are not equal to healing the sick or destroying the vices of the sinner; and that fear and discouragement assail at times the innocent as well as the wilful human being, showing that human goodness alone and unaided cannot wholly resist evil. This being true, a kind of thinking which is higher than the human is needed, in order to subdue ills of human making. This spiritual thinking, or understanding, which rescued Elisha, which animated Christ Jesus at all times, and which St. Paul urged upon the early Christians, has been recognized by Mrs. Eddy as the reflection by spiritual man of divine Mind, omnipresent Love.

To think rightly means to think righteously; it means to think like Christ. Mankind may seem far away from such thinking, and indeed they are. They can begin, however, with just one Christlike thought to counteract one evil suggestion; and from this beginning their "angels" will multiply and eventually turn back the whole evil army. Elisha's servant saw more than the divine chariots; he saw that Elisha's point of view had been spiritual during the time his had been material; that the help is always at hand, only awaiting discovery by a spiritualized consciousness; and that in the same situation where he had seen disaster and would have had it, Elisha saw and had deliverance. Surely this experience is explained by Mrs. Eddy's statement on page 265 of Science and Health: "The truth of being is perennial, and the error is seen only when we look from wrong points of observation;" also to remember and to understand the rescue of Elisha and his servant quickens the heart of the twentieth-century Christian to a better understanding of the lines in Faber's hymn:—

> Oh, blest is he to whom is giv'n
> The instinct that can tell
> That God is on the field, when He
> Is most invisible.

LESSONS IN GRATITUDE.

W. LUETCHFORD.

As I went about my work one morning, the thought of gratitude came to me with great force. It was bright and sunny, and every one I met seemed to be grateful for the lovely spring day, for the opening bud and the unfolding leaf. It reminded me that Christian Scientists, too, are grateful for the unfolding of the truth as explained in their text-book. Mrs. Eddy tells us that if we are grateful for the blessings already received, we shall receive to the overflowing,—even as David said, "My cup runneth over." It seemed to me on this morning that the unfolding of the beauties of nature on every side had silenced the murmurings of mortals, and that praise and thanksgiving had taken their rightful place. It seemed as if all knew that the Lord was in His holy temple, and that the ingratitude of mortal mind was once and forever silenced before the presence of Truth, Life, and Love.

It is easy to be grateful when all is sunny and bright, but to me one of the most beautiful songs of thanksgiving which we find in the Scriptures is that expressed by the prophet Habakkuk, who says, "Although the fig-tree shall not blossom, neither shall fruit be in the vines; the labor of the olive shall fail, and the fields shall yield no meat; the flock shall be cut off from the fold, and there shall be no herd in the stalls: yet I will rejoice in the Lord, I will

Digitized by Google

joy in the God of my salvation." If the prophet could rejoice and be grateful under such apparently straitened circumstances, was it not because he recognized man's spiritual sonship and realized that Life is God, Spirit, and not in matter; thus bringing home to us the truth taught in Christian Science. Paul urges us to set our affections "on things above, not on things on the earth;" that our life "is hid with Christ in God."

Our beloved Leader tells in Science and Health (p. 511) that the birds, those beautiful creatures "which fly above the earth in the open firmament of heaven, correspond to aspirations soaring above and beyond corporeality to the understanding of incorporeality and divine Principle, Love." These tiny objects, proofs of the heavenly Father's care for His creatures, teach us lessons of gratitude even in the dull days of winter. The redbreast cheers us with his merry little song of praise for the few morsels scattered by a loving hand on the snow, and there are many more ready to return us a song for the care and kindly thought toward them in time of need. The song-thrush, perched high up in the leafless elm or oak, may often be heard singing his morning or evening song of praise. Does not this remind us of the psalmist, who said, "I will bless the Lord at all times: his praise shall continually be in my mouth." One of the most beautiful of these songsters is the skylark, who is seldom seen except when he is soaring far above the earth, so that all which we know of him is his sweet song.

How beautifully does nature bring home to us our duty as true Christian Scientists to reflect gratefully "the sweet amenities of Love" (Manual of The Mother Church, p. 40). As we do this, we most certainly rise in the realm of spiritual consciousness, and realize that the kingdom of heaven is here and now revealing Truth, Life, and Love, and here and now we experience peace on earth and good will toward men, while our song shall ever be, "Glory to God in the highest."

"ARISE, SHINE; FOR THY LIGHT IS COME."

EUGENIA P. GODFREY.

A LITTLE over two years ago, while lying in the hospital, trying to decide whether to submit to a very critical operation which *materia medica* said was my only hope for relief, or to turn to Christian Science, I awakened one morning with these beautiful words from Isaiah's prophecy coming to me over and over again: "Arise, shine; for thy light is come." The clarion call was unmistakable, and I knew with the psalmist that "our help is in the name of the Lord." I turned to Christian Science, left the hospital, and in a few weeks I had "touched the hem of his garment." I knew instantly that I was healed, and I have been in absolutely perfect health every day since.

"Arise, shine." What wonderful words are these when illumined by Christian Science! "Arise"—ascend in consciousness from the material to the spiritual. The prophet says, "For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts," and this surely means that we should arise to a higher plane of thought if we would be like God. We must arise if we would shine,—reflect God,—and after we have arisen we are bound to shine. When Jesus went up into the high mountain and was transfigured, we read that "his face did shine as the sun." Likewise, all who follow him to the high mountain of scientific understanding, and are transfigured with the spiritual illumination, will "shine as the sun."

"Thy light is come,"—the knowledge that we are not material beings, bound down by the weight of mortal beliefs, but that we have ascended into the realm of the real—the spiritual. This light floods us from all the pages of the Bible: "The people that walked in darkness have seen a great light." "And they need no candle, neither light of the sun; for the Lord God giveth them light." "Thy light is come." Now—this day—"is salvation come to this house."

The words quoted from Isaiah, at the beginning of this article, are followed by the statement: "For the glory of the Lord is risen upon thee." "The glory of the Lord." Does not this mean a spiritual awakening to the power of God—to the knowledge that there is no power opposed to Him, that He is all-power? It means also a spiritual awakening to the love of God, and our relationship to Him as sons and daughters. No wonder the beloved disciple exclaimed, "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God." In Christian Science we awaken to the fact that God is Principle; that His laws are immutable, and that as His children we have a right to understand this Principle and work in accordance with its demands. When we understand and obey spiritual law, we have dominion. This is self-evident, for in reality there is no matter to resist the dominion of Spirit.

"Is risen upon thee." The risen thought lifts us into a recognition of man's inheritance, and we realize that all things the Father hath are ours now, to take possession of and use. God is manifested through His children, and the more we understand Him the more we reflect Mind, Principle, Life, Truth, and Love, as made known to us through the teachings of "Science and Health with Key to the Scriptures" by our revered Leader, Mrs. Eddy. When the glory of the Lord is risen upon us and we begin to realize the infinitude of God, belief fades into understanding, fear is destroyed by courage, weakness is displaced by power; instead of subjection, we have dominion, and we are able to obey the command, "Arise, shine, for thy light is come."

THE TRUE REFLECTION.

ELLEN JEWETT.

ANY one who has caught a glimpse of himself in an imperfect mirror, will remember the blurred and disfigured representation therein presented. If he were to contrast such a reflection with the one obtained when looking into a flawless plate-glass mirror, he would hardly believe that two reflections of the one original could be so different.

Let us suppose, further, that some one had all his life been used to the defective mirror,—that he had never seen a perfect one; then he would have become accustomed to the disfigured reflection, and would believe it to be the true image of himself. But suppose that one day he should suddenly be invited to see his reflection in a perfect mirror, which would show his features as they really were; he would probably have difficulty in recognizing himself, and would be greatly astonished to find that his features were symmetrical. Yet the man himself was the same in both cases, and as soon as he learned which was the true reflection, he would know that the other one was all wrong, and he would reject it as unworthy of any further notice. He would doubtless throw away the defective glass, and think of himself only as he was reflected in the perfect mirror.

Now, in the mortal concept of man, have we not all been looking upon the distorted reflection given off by the mirror of material opinions, fears, and prejudices, where the outlines are very imperfect indeed,—the morals twisted and the intellect warped, manifesting on every side sickness, sin, and sorrow? We have been taught that man is the image and likeness of God; but in this mortal reflection what is there to suggest the beauty and symmetry of the immortal idea of God, good? As we, however, come to know and recognize the true self in the mirror of Christian Science, we find it very different from what we had sup-

Digitized by Google

posed it to be. We find that the reflection of God, when seen in the perfect mirror of divine Science, is truly the image and likeness of Life, Truth, Love, and that it expresses goodness, wisdom, health, and strength. At first it may seem difficult to give up our old concept. We have been so used to seeing ourselves and others reflected in the false mirror of human beliefs that at first we can hardly recognize the true reflection, yet God is "the same yesterday, and to day, and for ever," and so His reflection, man, must be the same also.

Mrs. Eddy tells us (Science and Health, p. 301) that the true reflection "seems to mortal sense transcendental, because the spiritual man's substantiality transcends mortal vision and is revealed only through divine Science." We must be willing to cast aside our old concept of man, and cling to the true one thus revealed. Even if at times the true image seems lost to view, we must learn to discard the seeming reflection and know that the real man in the image of God cannot be affected in any way by the delusions and flaws of mere human conjecture. And so, we shall at last see God's man, not as in "a glass, darkly; but then face to face."

LOVE UPLIFTED.

ELIZABETH PICKRILL.

ONE evening, as I sat quietly pondering on the subject of human personality, a beautiful incident recorded in the twentieth chapter of St. John's Gospel came to my thought. We read that with the dawning of the resurrection morn Mary, sad at heart, stood by the sepulcher in the garden, weeping for the Master whom she had lost, as it then seemed. Then we are told that one whom she supposed to be the gardener called her by her name, and as she turned to him she was filled with the sense of a great love, and a joyful cry of recognition rose to her lips. But Jesus, with what seemed a gentle rebuke, said to her, "Touch me not; for I am not yet ascended to my Father: but go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God."

It seemed to me that when, in the Christ-understanding, we go to the Father, our sense of love will be so purified and uplifted that our personal affections will no longer hinder or harm our brothers, but we shall hold each true selfhood dear as God's own child. With hearts filled with gratitude and love to God, we shall rise daily to a higher sense of affection, and so learn to obey the command of Christ Jesus, "That ye love one another, as I have loved you."

Christian Science sets before us a very high ideal, and we are indeed grateful to our dear Leader for the wise and loving counsel and guidance which come to us in Science and Health, and in the Christian Science periodicals, to help us detect the more subtle forms of error, and enable us to "follow this daystar of divine Science, lighting the way to eternal harmony" (Science and Health, Pref., p. vii.).

The faith that somehow, in ways we cannot see and understand, this external life is not all of it; that we are not the victims, but in the end the masters, of material forces; that "life is just a stuff to try the soul's strength on;" and that that soul is at home in God's universe not less when beyond than when within our ken, truth still its aim, beauty still its atmosphere, goodness still the law of its being,—this faith, how it is strengthened, how it is broadened, how it is deepened, by the reflection that it is expressive of the natural yearning of every human heart!

FREDERIC A. HINCKLEY.

SELECTED ARTICLES.

[J. R. Mosley in *Atlanta* (Ga.) *Journal.*]

Christian Science does not deny the material universe, sin, and the evils of life in the way that Dr. Hull seems to think it does. Its ideal and effort are to deny self and sin as Jesus said all must do in order to enter into life, peace, and dominion over evil. Instead of doing away with the necessity of a Saviour, it makes Christ the present and forever Saviour from all the ills that flesh is heir to. It makes the atonement mean unity with all that God is and separation from all that He is not. It reveals a healing as well as a saving Christ. It teaches that God is just as willing and able to save, heal, and meet every human need today as He ever was. It makes clear that it is as necessary and possible for us to deny and overcome the world, the flesh, and the devil as it has ever been.

In referring to the Christ as the divine ideal, God's ideal, and by teaching that this ideal is vital, practical, and real, it honors Christ and heals and blesses those who look away from imperfect human models or ideals and look to this perfect one. It teaches that, since we become like our ideals, since we become like that which we look upon with admiration and affection, nothing is more important than right ideas and ideals. It also teaches that we should have for our highest ideal and Saviour nothing less perfect than the Christ.

[Willard S. Mattox in *New Orleans* (La.) *Item.*]

The writer in *American Medicine*, whose remarks on Christian Science are quoted in a recent issue of a New Orleans newspaper, gives himself unnecessary anguish when he assumes that his readers need to be warned against Christian Science. As a rule the public is intelligently informed as to what Christian Science really is and what it is doing. Christian Science is healing thousands of all manner of disease. This statement is so susceptible of proof that it is not open to contradiction or argument. Christian Science never killed anybody, and it is not a menace to public health.

Your readers may not entirely enjoy the criticism leveled at them by the writer of that article, when he declares that the human race is subject to "psychic depravity." There are hundreds of intelligent men and women in New Orleans who have tested the efficacy of Christian Science, and who know that its mission is entirely benevolent, and that it has to its credit sundry healings of mind and body which medicine made unavailing attempts to cure. If a man who has been rescued from hopeless disease, or from chronic sin, is a psychic degenerate; if to believe in the power of God to redeem the human race from all the ills to which it is heir, is an indication of "psychic depravity," then the editor of *American Medicine* is welcome to make the most of that phrase in its application to Christian Scientists.

The writer of that article makes the mistake of supposing that the phrase "malicious animal magnetism," and the mental phenomena which it designates, are the inventions of Mrs. Eddy. A little historical research would have saved him from this mistake. Even the phrase "malicious animal magnetism" is not novel to Christian Science, but was in current use before Mrs. Eddy's book was written. Christian Science does not teach that animal magnetism is a reality, a force, or a baneful influence. On the contrary, Christian Science is at great pains to expose the fallacy of this belief, and to equip man to protect himself from the false claims of evil. Christian Science calls the belief in animal magnetism sheer superstition, and warns its students against the ignorance which would ascribe intelligence and power to something besides God.

With respect to the direful prophecy of the editor of *American Medicine*, to the effect that the attitude of Chris-

tian Scientists in the presence of an epidemic would result in a "calamity such as the world has never seen," I need only refer to the history of Christian Science to set at rest these unfounded fears. During the forty years that Christian Science has been practised in all parts of this country and abroad, many epidemics of more or less virulence have raged in different localities where Christian Scientists were to be found. Has the editor of *American Medicine* any record of an epidemic which has been spread by Christian Scientists? Unless he has such proof he should not make such a grave charge. The fact is that Christian Scientists are scrupulous in the matter of obeying the law with respect to reporting contagious diseases. We have the testimony of such good authority as Dr. Ernest Lederle, formerly president of the health department of New York city, who said in a published statement: "Since I have been at the head of the department I have received no proof of any violation of the rules and regulations of the sanitary code by a Christian Scientist. I know they are reporting their cases of contagion, as required by law, and are taking necessary precautions for proper isolation and disinfection."

The medical writer quoted in your paper says that "helpless children have been the victims" of Christian Science. Christian Scientists would be more patient with a statement of this kind respecting the relatively small number of failures in the case of children, provided the medical profession would admit that all of the hundreds of thousands of children who die annually under the most careful and expert medical attention are "victims of *materia medica*."

If the editor of *American Medicine* is, or has been, a practising physican, he ought to know, better than does the layman, that medicine is not a science. He should know, as well as does the layman, that many of the most eminent physicians of the world have frankly acknowledged that medicine is not a precise or exact body of knowledge. Recognizing the leniency with which the world regards the failures of medical practitioners, he should be tolerant of every conscientious and earnest effort to alleviate human suffering. That Christian Science is such a conscientious and earnest effort, no one can deny who is acquainted with it in the least.

[Rex G. White in *Kansas City (Mo.) Spirit.*]

The fundamental statement of Christian Science is this: "God is the sole creator. All that God has made is good; therefore, everything is good. Sin, sickness, and death, being not good, are not real." The idea is very clear, though apparently quite at variance with things as they are: in fact, so at opposites with the sin-filled and pain-racked world as to appear absurd. It is not, however, so wild a statement as it seems.

It is surprising and hardly creditable that our lawmakers should pass judgment upon a case in which the divinity of God is a question of dispute. Yet, such is the fact when Christian Scientists are prosecuted. The world has been under the domination of *materia medica* for so long a time that it needs but a hint from the doctors' trust to cause some one to rush into court or legislative hall with pleas or bills that, in many cases, are plain denials of the power —hence, the divinity—of God.

Why should a man be fined, imprisoned, or otherwise punished because he believes that his creator is able to heal him? The Methodist, Catholic, Episcopalian, or Presbyterian doctor unhesitatingly admits that God made his body, as well as his soul; he also admits, readily enough, that God can do all things. Going more deeply into the subject, we find the admission that God is the sole creator. Now, be careful, here; understand what is meant by creation. Man can make combinations and bring forth new results, but can you think of a color that you never saw, or of a sound that you never heard? To do so would require creative ability, and that is restricted to God alone. With these admissions, we arrive at the conclusion that God either sends the pain, suffering, and sin, or that, being a witness of the untold agonies of His children, He refuses to alleviate their sufferings. In either case, there is presented a spectacle of the source of all good creating His own opposites; of light creating darkness; heat creating cold; good creating evil,—a divine paradox that is insulting to our intelligence as well as revolting to one possessed with human sympathy, to say nothing of divine Love. As to His sending misery as a punishment for certain misdeeds, it is the weakest argument of all. What would one think of a father who would calmly watch the speechless agony of his loved ones, without a thought to help them. Such callousness on the part of a God who is Love is beyond comprehension; but if, for the sake of argument, we assume that God sent sickness into the world as chastisement, what right have you, Mr. Physician, to dare to oppose the will of God? To grant that God creates sickness is to admit that *materia medica*, with its pills and powders, is trying to stand between the wrath of God and the puny creature who has outraged His laws. The ministers declare that none are perfect; that even the Sunday School teachers do not live a single day without committing some sins,—minor ones, perhaps, but sins, nevertheless. They teach that every one will either be punished for his transgressions or be forgiven and allowed to enter upon eternal happiness without a true balance of books; that is, by repentance one cancels all obligations to his God.

"You cannot drive potato bugs from a plant by mental efforts, nor can you drive germs from the body by the same process," said a well-known surgeon, recently. He was making the point that a germ, being a living organism, capable of reproduction and movement, was not susceptible to mental influence. The Scientist's teaching is that germs have no real existence, and even though their existence were a fact, they could have no power to harm. Suppose you dreamed that while walking in the woods, a lion sprang out to attack you. You saw him, heard him, possibly felt him. All the physical senses gave testimony to the reality of the experience; but you awakened, and the lion was gone. With him had departed all fear and pain, for fear is pain; but you say that it was a dream, not a reality. What is reality? What would be the difference between the dream-lion and a real one? You could see, hear, and feel the latter, possibly be wounded or killed by it. Again, it is the difference in degree. The real lion caused the fear-pain to such an extent that you were killed. A germ is capable of being seen and felt and of producing fear and pain, but when one recognizes the fact that only the good is real, the germ goes back whence it came—to nothingness. Assuming that it had an existence, its mission would not be to cause pain or sickness. Fear, mortal belief, and ignorance, alone, could give it that power.

If an elaborately carved chair were cast upon the shore of an island peopled by savages who had never seen such an article, and because of its strange shape they should decide that it was a god or an idol, the chair would, in the minds of its worshipers, become a divinity invested with strength to bring good or evil to its possessors; then, if a civilized person should land on the island and explain to the inhabitants just what that chair was, it would at once lose its supposed power. If a chair can be converted into a god, why cannot a germ, through fear, ignorance, and suggestion? It is not reasonable to suppose that God would create us, His children, and fill our bodies with other life for the purpose of its destruction. As the work of God, man is eternal, for God's creations are good, and good is eternal. With the knowledge that man is the reflection of God, comes also the knowledge that false or mortal-mind creation is impotent.

[Lloyd B. Coate in *Dayton* (O.) *Herald.*]

In replying to the queries propounded by Dr. W. E. Allaman, it is necessary for any student to distinguish in Christian Science whether a given statement refers to the spiritual or the material. This is true in the study of the teachings of Christ Jesus, and as Christian Science is founded upon the Bible, it is necessary to understand the view-point from which a given statement is made.

When John the Baptist declared that Jesus would baptize "with the Holy Ghost, and with fire," we believe that most Bible students will admit that the word "fire" should not be given a literal interpretation, but refers to spiritual truth found in the teachings of the great Master, which would burn up or destroy all sin. Jesus said, "Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you." To take this statement in a literal sense would be impossible, but in its spiritual sense it is beautiful and grand.

When Mrs. Eddy says (Science and Health, p. 475), "Man is incapable of sin, sickness, and death," she does not refer to a man of flesh, blood, bones, brain, and nerves. She refers to the man spoken of in the first chapter of the Bible: "And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth." There is a vast difference between this man and a man of dust or flesh.

Jesus said, "God is a Spirit." Then, if man is the likeness and image of God, the real man must be spiritual, and not material. However, to the human sense of things, everything seems material, and no doubt will so continue until we gain the spiritual consciousness of existence. A so-called man, who steals, lies, gets drunk, uses profanity, and makes his home miserable, who bears false witness against his neighbor, covets that which belongs to another, and breaks all the commandments, surely such an one is not the likeness and image of God. Not avoirdupois, not height, not complexion, describe the likeness and image of God; but honesty, truthfulness, sobriety, goodness, kindness, virtue, industry—these qualities give us a glimpse of the real man. While Jesus' teachings may seem transcendental to the materialist, they are practical in every-day life when understood in Christian Science.

[Frederick Dixon in *Dundee* (Scot.) *Advertiser.*]

The paragraph headed "Payment for Prayer," in your issue of the 15th inst., is a remarkable instance of what prejudice can do in the way of making the ordinary man hopelessly illogical. In the case in question a Christian Scientist was paid five shillings a week by a relative, who could perfectly well afford it, of a sick woman for his services in attempting to heal her. To say that it is unchristian to accept money for attempting to heal the sick by spiritual instead of by physical means, is to place one's self in direct contradiction to the teaching both of Christ Jesus and of Paul. This is perfectly evident to anybody who will stay to think for a moment. Absolutely apart from the direct authorization of the Bible on the subject, lies the fact that the clergy are paid for their spiritual ministrations, and the medical profession for their material ministrations. The consequence is that the jury have arrived at the extraordinary conclusion that it is only wrong to accept payment when the attempt is made to combine the efforts of clergy and doctor, in accordance with the distinct command of the Founder of Christianity to preach the gospel and to heal the sick.

[Alfred Farlow in *Winnipeg* (Man.) *Free Press News Bulletin.*]

Statistics show that in some localities more than one hundred, out of every thousand persons born, die in childhood, and this occurs among classes who do not believe in Christian Science and who have nothing whatever to do with it. It may be natural, but it is nevertheless unfair, to demand perfection of a new remedy, while old remedies are accepted though conceded to be fallible. It is stated that the founder of homeopathy was obliged to flee for his life when he lost his first patient. Nevertheless in these days a homeopathist may lose as many patients as an allopathist and without public censure, but this state of affairs does not justify an unreasonable discrimination against the practice of Christian Science. However much or little the general public may know about Christian Science, the fact remains that Christian Science heals, that it is quite as efficacious in the treatment of children as in the treatment of adults, and that the lives of many children have been saved by Christian Science after other remedies had failed. Thus the comparative results of the practice of Christian Science justify the choice of this remedy for the sick.

The Dominion law provides that "parents, or guardians, or heads of families shall provide necessaries for any child under the age of sixteen years," and that "he shall not omit such provision without lawful excuse." The law does not undertake to state what constitutes "necessaries," but is broad, liberal, and sensible, and leaves the question open to the equitable decision of the court in respect to any particular case. Therefore, it becomes the duty of the court to use extreme care when it undertakes to decide as to "necessaries" in any given case. Since the use of medicine in the treatment of the sick has in times past been regarded among the "necessaries" of life, it is natural that when a new remedy is adopted, in lieu of drugs, it should be regarded with skepticism and doubt by those who know little or nothing about the efficacy of the new remedy; but ignorance is no excuse for prejudice, and it therefore becomes the duty of the doubter to make thorough investigation of the results of Christian Science practice. Though it may not be necessary to consider the question of comparative value, it is certainly within the bounds of reason and justice that the result of Christian Science practice in general should be considered, in order that the doubt may be removed and that it may be noted that while drugs have been dispensed with there has been adopted a reasonable substitute therefor, and that thus the "necessities" of the child have been provided for, although in a manner differing from that which is generally accepted. Such action is not only within the bounds of justice, but within the jurisdiction of the law. Even if drugs were used the question might arise in the courts as to whether the right drug is being administered, and it is well known that doctors disagree.

These are the facts needed by the members of a jury in the decision of a case, and if perchance they may not be well informed on the subject, they are utterly incapable of arriving at an unbiased decision without a knowledge of what Christian Science accomplishes. If, on the contrary, they are told by the court that "witchcraft has been practised," they cannot be expected to form an unbiased opinion, if indeed they have any respect whatever for the instruction which is to be given to them. If the members of a jury are erroneously instructed by the court that Christian Science consists of the "beating of tom-toms," it cannot arrive at a proper decision unless it disbelieves the instruction given. If the members of a jury are taught, contrary to Scriptural instruction, that prayers are not effectual in the treatment of the sick, they cannot be expected to remain unbiased, unless they utterly disregard their instruction. If perchance a Christian Scientist should fail to make clear to a jury or a judge how the sick are healed in Christian Science, he would not fall short of the failure of a medical doctor who cannot give a specific and definite explanation of the smallest change in nature.

The main question is, Does Christian Science heal? It is not our purpose to question the disbelief of any individual

Digitized by Google

in the efficacy of prayer. We would not insist upon the institution of any particular method of caring for the sick, merely because it is a religious belief. It is our opinion that Christian Science should stand upon its merits, and that its right to pose as a guardian of the public health should be founded upon its efficacy. On the other hand, we insist that it should not be brushed lightly aside, because of prejudice or ignorance, because it happens to be new and not generally understood. We have a right to expect that those who undertake to decide so important a question as the guilt or innocence of one who depends upon God instead of drugs, shall thoroughly inform themselves and shall be governed by intelligence and justice. We believe that the rights of children should be safeguarded. We think the law that provides for young children is just, notwithstanding that a misapplication of the law is unjust, but we also insist that Christian Science is at least a reasonable substitute for drugs and that its right of adoption is assured by the very law under which it is accused.

[From an editorial in *Baltimore* (Md.) *Sun*.]

The fact is that too few persons have entered into that moral expectancy which gives the highest uplift to life and which is expressed by the apostle in the words: "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." Every man who lives that life is promised a crown, and the warning is given those who are not alert to their opportunities, "Let no man take thy crown." Again, the apostle holds out the "crown of rejoicing" which the Lord has for them that love Him. Multitudes of references are made to the regality of those who are set forth in the book of Revelation as kings and priests before God the Father.

What is the crown? It is, after all, the symbol of the democracy of heaven, the absolute impartiality of the spiritual life, the bestowment of righteous rewards for moral living, absolutely with impartiality. One does not need to project the spiritual life, the kingdom of heaven, into another world, for, as Jesus declared, "The kingdom of heaven is within you." One does not need to refer to culmination in order to discover progress. Here in this life are the awards of the crowns that never fade away, that are more substantial than those crests of earthly rulers which glitter with priceless stones. Animate will may accomplish wonders on Mars, but regenerated will accomplishes the wonders on the earth. It is this kind of will that is docile and teachable by divine truth; it fits men and women for the crown of fidelity, of probity, of faithfulness, of integrity, of abounding faith, of energetic good works, of broad charity, of exuberant inspiration, of keen responsibility to their day and generation. They furnish the martyrs of heroic ages; they supply the ranks of those who watch and pray; those who, leaving the attractions of the world, give themselves up to the communion with God that enriches the world. These are they who give to the earth the testimony that Spirit is superior to matter by that best of all evidence—the subjugation of sin and the establishment of virtue. They purify the stream of life at all points; they give courage and high purpose to life; they win its genuine conquests and promote its real progress.

There is nothing absolute in life but the absolute necessity for man to rise above his mortal limitations to the realization of his spiritual destiny. Many good persons worry themselves over the enigmas of life, of thought, of experience. They do not reflect that if many things were explained life would cease to interest. Explanation is impossible, because truth cannot conceivably be stated in a definition. The crown of life is at the disposal of the higher will that enlarges the human will to match the divine purpose. The subordination of a will to a purpose is the line of progress all the world over, and the bringing of the human will to divine direction is the line of progress toward supremacy over earthly conditions. Here, then, is the crown for every man. It is the crown of happiness, of conquest, of power, of privilege, of rationality and felicity. After all, goodness is the great preserving force and principle of progress, and goodness simply means God active in the lives of His creatures.

[Jesse Pickard in *Rochester* (N. Y.) *Democrat and Chronicle*.]

From a Christian standpoint I find it difficult to agree with your recent article prescribing the limitations of Christian Science practice. It is noteworthy that the Christian religion is founded upon the superiority of the spiritual over the material and can only thrive when demonstrating this superiority. The miracle of yesterday is the commonplace of today, and yet the materialistic thought is ever ready with a bland incredulity to resist the very progress which raises it from self-imposed limitation.

Christ Jesus taught and demonstrated that a right knowledge of truth, a correct mental state or communion with God, a proper prayer, would save the sinner, heal the sick, and raise the dead. If Christian Scientists are endeavoring to follow his precept and example with apparently increasing success, it means much to humanity. From a Christian standpoint, "Why should it be thought a thing incredible with you, that God should raise the dead?"

[George A. Law in *New Haven* (Conn.) *Leader*.]

Jesus, by living in accord with God's true spiritual law, founded Christianity, and the basis of his life (the spiritual law) has been taken by all Christian denominations as a basis for their religious faith. Since the life of Jesus upon which Christianity is founded was based on a knowledge of the true spiritual law (certain knowledge, the perfect Science of God) then Christianity to be Christian must be scientific and Science to be Science must be Christian. Therefore the combining of the words "Christian" and "Science" is not only justifiable but consistent, logical, and natural.

Christian Science does not deny the phenomena of the material universe or that mankind in this material existence does not experience suffering, sickness, and death. But Christian Science teaches how to claim "dominion over all the earth," which is the birthright of every child of God. The exercise of this dominion banishes these abnormal conditions, brings freedom from the ills of the flesh, and reveals the true status of man made in the image and likeness of God and governed by the law of his Maker. This is in accord with Jesus' teaching and healing work. He taught men how to live in accord with God's law and be submissive to the will of God, and thus to nullify the "works of the flesh" or the "carnal mind."

Stand bold for peace, for love and truth,
For these against the world contend;
But be thou careful not to lose
What thou art zealous to defend.

While thou dost plead for peace and love,
Let peace and love thy life control;
While valiant in defense of truth,
Make truth the armor of thy soul.

Yea, for the worthy cause of truth
Stand firmly, 'mid reproach and shame;
Yet calmly state thine argument,
And let thy practice teach the same.

JONATHAN ROGERS, a Quaker minister, in 1854.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

NOT APPROVED BY MRS. EDDY.

[Telegram.]

Jan. 17, 1910.

Charles D. Holcombe, 8 Arlington Place,
Buffalo, N. Y.

I am authorized by Mrs. Eddy to say that the by-laws of First Church of Christ, Scientist, Buffalo, were never prepared or approved under her direction.

ADAM H. DICKEY, *Secretary.*

[THE above telegram was sent by Mrs. Eddy's direction, because of a statement made in an anonymous circular sent to members of First Church of Christ, Scientist, Buffalo, N. Y., by certain persons who were opposed to the adoption of new by-laws for that church. The statement was as follows: "The by-laws under which we are now operating, we are informed, were prepared under the direction of and had the distinct approval of Mrs. Mary Baker Eddy."—EDITOR.]

"AND I, IF I BE LIFTED UP."

IF Christ Jesus had not proved the truth of all he claimed himself to be, he would have gone down to history as the supreme egoist, for in all the centuries none other has shown such a daring of spiritual assumption. Having verified his genuineness, however, having identified himself as the ideal man, he was able to reveal to the world the full splendor and compass of the spiritual ego. This was the line of his redemptive work for humanity. He attained to that spiritual consciousness which enabled him to say with uncovered face, "I and my Father are one," and he then opened the door of this realization to all men, by declaring that, at their best, all are the children of the one Father, God. We thus come to understand his saying, "They are not of the world, even as I am not of the world," as well as his constant longing and labor that they might all be one, even as he and his Father were one.

Our Lord's supreme venture in thus appealing to and laying hold upon the true spiritual individuality, the better self, and demonstrating its at-one-ment with God, is the great theme and enterprise of Christian Science. Here all soon learn that the true selfhood is the God-man, an expression of Life, Truth, and Love, and it is the exaltation of this "I" in thought and in activity which fulfils the condition of the Master's wonderful prophecy, "And I, if I be lifted up from the earth, will draw all men unto me."

The world's thought of the ego is and ever has been material, and for the most part even the followers of Christ Jesus have not only conceded, but insisted, that man is in part of the earth. They have taught that God made this composite mind-and-matter man, and that conversion and death work together to make him over into a wholly spiritual being, an angel. This thought readily lends itself to the assumption that spirituality may be attained by idealizing material personality, and naming it God's man.

Christian Science pronounces upon and parts company with the material sense of personality, in the apprehension and affirmation of the falsity of its every claim. It centers thought upon the Christ-man, the spiritual ego, as the only real man, and teaches and demonstrates that as the realization of this true selfhood is attained the dominion of false mortal sense is escaped from. The philosophy of the spiritual healing which Christ Jesus instituted, and which Christian Science has reestablished, thus becomes perfectly intelligible. So long as human thought is submerged in the belief of the reality of the unideal, the so-called material man, so long is there no ground of hope, no possibility of spiritual progress; but let the Christ-man be "lifted up" in consciousness, let the perfection of the true selfhood dawn upon thought, and let this assertion and realization be found to effect one's escape from the serfdom of sickness and sin,—let this come about, as it has in ten thousand instances through the ministry of our Leader, the prophet of this age, and an entirely new and altogether glorious possibility of advance is at once presented to mankind.

So long as one links self to materiality, he can but accept the legitimacy of that material law which decrees his subjection to disease and death; but let him, with that daring which supremely signalized the attitude of the Nazarene, know and declare man's spiritual nature and sovereignty, let him come to understand that in the measure of his demonstration of truth the "I" of consciousness is a manifestation of Mind, a child of God, and let him furthermore prove for himself, scientifically, as all must, that this high and holy realization heals the sick and sunders the shackles of sin,—let him do all this, and he has indeed entered into a new life, upon his face there has fallen the dawning light of God's eternal day.

JOHN B. WILLIS.

"TODAY IF YE WILL HEAR HIS VOICE."

MOST students of the Bible are familiar with the warning words quoted from the Psalms, in the third chapter of Paul's epistle to the Hebrews: "Today if ye will hear his voice, harden not your hearts." The writer of this epistle draws some wonderful lessons from the early experiences of his race, when they were slowly emerging from the mental bondage which had come with them from Egypt. He sought to show the people of his own time that their lessons were the same as those of their forefathers,—that their worst enemies were not any outward trials or privations, but "the deceitfulness of sin," and "an evil heart of unbelief, in departing from the living God." It may be safely said that the problems of Christian Scientists are the same as those to whom the warning was addressed, for to the infinite Mind it is always "today;" yes, and our problems are always the problems of today.

In the last analysis, the sin of the Hebrew people in Moses' time, and also in the time of Christ Jesus, was that they gave the material priority over the spiritual. What, then, is to be said of all the nations who have lived since that time and of those who are here today? Those who turn away from the spiritual to the material, harden their hearts against the appeal of divine Love, and of such it was said in the olden time that "they should not enter into my [God's] rest." We know how applicable this is to every one of us, for there is no rest or peace to be found in the pursuit of materiality. It matters little whether it be pursuit of pleasure or the effort to escape from the sufferings of mortal belief by material means, there is ever the same unsatisfied longing, until we are ready to pause, to hear God's voice, and begin to prove at each step of the way that not a single need is forgotten or unprovided for,—whether it be health, strength, guidance, or daily bread,—since, to quote our revered Leader's words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Without doubt the children of Israel had some trials and privations in their wilderness journey, as mortals have today, but they had the glorious symbols of the divine presence,—the pillar of cloud and of fire,—and we have no less, for the Christ-presence is with us as in the time of Christ Jesus, healing us of all sickness and sin, if only

Digitized by Google

we listen for God's voice and harden not our hearts. When the Israelites listened for the divine voice, their thirst was quenched by the stream which flowed from the rock and their hunger was satisfied by the manna which fell from the sky. Their sin was that they so often failed to hear or heed. And what is ours? We have not even the excuse of not knowing that as God is Spirit His help must be spiritual and reach us through the channels of spiritual sense.

God's law is now revealed in accordance with the Master's promises, and if we are truly "partakers of the heavenly calling," we shall "hold fast the confidence and the rejoicing of the hope firm unto the end;" but we must remember to do this "today,"—not tomorrow, next week, or next year. After his resurrection, Jesus upbraided his disciples for their "unbelief and hardness of heart,"—because they rejected spiritual evidence and accepted the material. A quick response to each call of the divine voice will do wonders for all the work of today, and enable us to find in it not toil, but rest. ANNIE M. KNOTT.

LOYALTY TO THE MOTHER CHURCH.

THE following telegram to The Mother Church from the clerk of First Church of Christ, Scientist, Buffalo, N. Y., as well as the action taken by First Church of Christ, Scientist, New York city, in electing trustees, clerk, treasurer, and superintendent of the Sunday School, upon the platform of "Loyalty to The Mother Church, democratic government, rotation in office," are indicative of a practical application of our Leader's advice to branch churches, quoted in our last week's issue and on previous occasions.

Buffalo, N. Y., Jan. 18, 1910.

Board of Directors, The First Church of Christ, Scientist:—First Church of Christ, Scientist, in Buffalo, assembled in the church in annual meeting, send grateful greetings. Awakened to new life, we have adopted by-laws insuring democratic government, and have gained a fuller appreciation of our mission as a loyal branch of The Mother Church. We start the new year with new inspiration and avowed determination to cooperate enthusiastically with your Board and with our brethren here and elsewhere in promoting our glorious Cause and supporting all the institutions identified with it and founded by our beloved Leader, the value of whose patience and wisdom is realized now more than ever before.

WILLIAM E. ARMSTRONG, *Clerk.*

THE MONITOR TO HELP THE UNEMPLOYED.

WITHIN a few days *The Christian Science Monitor* will begin the publication, free of charge, of advertisements for situations wanted or offered. It desires to aid the unemployed to secure positions, and will place its wide circulation at their service. There are thousands throughout the country who are competent and willing to work, who are yet unable to get employment because there may not be a demand for labor in their particular line in the city or town where they are living. Elsewhere there may be urgent need for just such workers, but they are unaware of the opening.

The *Monitor* hopes to remedy these conditions by its proposed free labor bulletins. It aims to bring the man and the need of the man together, and as this would prove an advantage to the employers as well as to those seeking employment, the cooperation of the two classes is requested and confidently expected, as the results cannot help being beneficial to those directly concerned and also to the industrial interests of the land. The *Monitor* wishes to make this feature representative of the whole country, and trusts that the opportunity to use its columns will be warmly welcomed.

Advertisements to insure insertion must be written on the blank form found on page 2 of the *Monitor*.

LETTERS TO OUR LEADER.

[WE are glad to publish in this place, by Mrs. Eddy's request, the following words of appreciation to all who write her.—EDITOR.]

TO WHOM IT DOES CONCERN.

Jan. 17, 1910.

My Beloved Students:—Your frank, free, cordial praise and appreciation cheer my advancing years, even as the clarion sound of the bugle-note calls to battle and to conquest.

MARY BAKER EDDY.

Boston, Mass., Jan. 11, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Teacher and Leader:—I trust it may not be out of place for me to express my loving gratitude to you in the way that Christian Science has revealed it to me. Ever since the time when I first began the study of Christian Science under your instruction, I have never ceased to realize sincere gratitude to our heavenly Father, and to you for your rediscovery of the lost faith in the demonstrations of Jesus Christ, and your great discovery of the Science of those Christly demonstrations of healing. This second appearing of the Christ-idea to the "lost sheep of the house of Israel" and to all mankind, is significant of the holy promise of Jesus Christ, and must be fulfilled according to St. John's vision in the book of Revelation.

When the woman anointed Jesus' head with the precious ointment, he must have seen a sign beyond the human vision to place a memorial upon that event as enduring as the gospel teachings. Is it not very significant that Christian Science has already "wrought a good work" on the foundation laid by Jesus Christ? And your discovery of the "scientific statement of being" has come to dispose of the body of matter in the Christian and scientific way, under the inspiration of the precious and costly anointing of the "Spirit of truth,"—the holy Comforter.

It seems to me that without Christian Science mankind would be without hope and without God in this world of woe. How then can we begin to measure the worth of God's great gift to mankind through your self-sacrifice and obedience to divine revelation? As Jesus' life was inseparable from his teachings and demonstrations of truth and love, so must your life be inseparable from the spiritual teachings and demonstrations of divine Science. Blessed are they who see these signs and are not offended with the poor and meek humanity, waiting and praying for full redemption from the unreal and the untrue.

Reverently your student,

IRA O. KNAPP.

Galesburg, Ill., Jan. 10, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—I wish to thank you for the Manual of The Mother Church as it stands today. Clothed in its revisions and additions, it is unquestionably the richest gift and greatest blessing the world has received in the year nineteen hundred and nine. May we who have named the name of Christian Science realize the above fact and earnestly set to work to prove to you "that heavy lids are opening, even wider than before, to the light of Love—and by-laws" (Miscellaneous Writings, p. 132). If every Reader in our branch churches, if every church director, every superintendent and teacher in our Sunday Schools, will possess himself or herself with one of the latest copies of our Manual and daily study it, they will rejoice your heart and aid very materially the growth and usefulness of our branch churches along all lines. Can we afford to do less, when we stop to consider how great you have sac-

Digitized by Google

rificed, how impersonally you have loved, and how wisely and fearlessly you have protected us from dangers seen and unseen, through these by-laws?

I have recently been reelected First Reader of our church here. I shall consider it my duty, in preparation of the Sunday and Wednesday evening services, to study faithfully the Manual as well as the Bible and Science and Health. With grateful love,

Your student's student,
J. NEWTON CONGER.

MRS. EDDY'S COMMENT.

Wise as a serpent and harmless as a dove.

MARY BAKER EDDY.

Amsterdam, Holland, Dec. 18, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It is with deep gratitude we inform you that on Sept. 9 a Christian Science society was organized in Amsterdam, Holland, by five members of The Mother Church. We are increasing in numbers and strength, and many are learning English so as to be able to read your wonderful text-book, "Science and Health with Key to the Scriptures." This month we had our first Wednesday evening meeting, and many testified that health and happiness had been restored to them. The growth of our Sunday School is equally gratifying.

We rejoice in the blessings that have come to us through your inspired teachings, and our earnest prayer is that we may become more worthy of the name Christian Scientists.

Lovingly yours,
The Members of the Christian Science Society.
E. FENNEMA, *President*,
GERARD J. KRÜSEMANN, *Clerk*.

Guatemala, Central America, Dec. 21, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—Thinking you will be glad to know that your torchlight has been seen in Guatemala by one at least who is striving to be guided by your inspired teaching of divine Science, the wonderful understanding of Life, Truth, and Love, taught us in "Science and Health with Key to the Scriptures," I write these words. My heart goes out to you in love and gratitude for your untiring work for the good of humanity. Since I commenced the study of your works and the Bible, I have been healed of many maladies. I have only had help once from a practitioner who resides in Los Angeles, Cal. (absent treatment). Truly your light so shines that others, seeing your good work, glorify your Father which is in heaven. I know that God will "preserve thy going out and thy coming in from this time forth, and even for evermore." Innumerable evils compassed me about, until I commenced the study of the truth as taught by you in Science and Health, and now I can say, "Thy tender mercies . . . and thy truth continually preserve me." May God continually bless you is my fond desire. May His choicest blessings ever be yours. With a heart full of gratitude and dearest love,

Yours,
MRS. ANNA E. CALDWELL.

Bromley, Kent, England, Dec. 23, 1909.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—Knowing that you will be glad to hear of further progress made in this field, it gives us great pleasure to be able to inform you that we have just taken a house having a commanding frontage in one of the principal thoroughfares for our new reading-room. Directly this was accomplished, the way was opened out to us to secure the Town Hall of Bromley for our Sunday and Wednesday services. This hall, which is situated right in the center of the town, will be most suitable for our requirements, and thus our present needs have been met in a remarkable way. We feel sure that these forward steps will be a great help in furthering the activity of our Cause and strengthening the seed sown at the time of our last lecture, given by the Rev. Arthur R. Vosburgh on Nov. 9, when it must have been evident to all present that the subject of Christian Science was arousing great interest in the neighborhood, for the hall was well filled and the lecture much appreciated.

With hearts full of gratitude to God for Christian Science, and to you, our Leader, for your devotion to Principle in providing new by-laws to meet our every need, we are Your loving followers,

FIRST CHURCH OF CHRIST, SCIENTIST, BROMLEY.

Anderson, Ind., Jan. 10, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—First Church of Christ, Scientist, of Anderson desires to express to its honored Leader its sincere gratitude to God for Christian Science. More and more, as this great truth unfolds, do we realize how your life is reflecting "the brightness of his coming," and how truly safe are we when we try to follow where you lead. As you walk "in Christly paths apart," we are able to see and separate more clearly the true idealism of Spirit from all other ideality. We pray to manifest that purity, courage, and love you have ever shown us, teaching us to repudiate the false while holding "fast that which is good," as revealed in Christian Science. Following your Master and ours, may we refute "all opponents with his healing power" (Science and Health, p. 18).

Lovingly yours, MRS. ELLA PENCE ELLIS,
MRS. LILLIAN E. DENNY,
MRS. LAURA E. BENNETT.

Salem, Mass., Jan. 6, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—We, the members of First Church of Christ, Scientist, Salem, Mass., unanimously wish to express anew to you our loving loyalty, and that our earnest efforts are so to impersonalize all thought, all service, that our love shall ever reflect the divine Love in which, through the understanding of your teaching, we gratefully rest. We desire that our church should be one of Christ's cities "set on an hill," whose light "cannot be hid." With thousands of others, our gratitude rises to the Giver of all good, for your unceasing and unselfish labor of love for mankind. Through your untiring watchfulness and overflowing love we are learning "to keep the unity of the Spirit in the bond of peace." The clarion call of the hour is, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light;" and through your inspired writings you are continually calling us all to arise from our "false consciousness into the true sense of Love" (Science and Health, p. 575). We are watchfully and prayerfully endeavoring to do this: to turn constantly from personality to Principle, from sense to Soul, and in so doing show our gratitude by our works.

With love and loyalty,
WM. C. KEITH, *Clerk*.

Golden, Col., Jan. 4, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—May I thank you for your loving message, which I first received many years ago in the form of Science and Health, the study of which prepares one to partake of the true Christ-spirit, or Christ-mass, every hour! My constant desire, the past three years, is "to follow this daystar of divine Science" (Science and Health, Pref., p. vii.), as revealed in the illumined pages of Science and Health. Gratefully your follower,

MRS. FANNIE LAVINA PIKE.

THE LECTURES.

LONG BEACH, CAL.

A lecture was given by the Rev. William P. McKenzie in Long Beach Auditorium Sunday afternoon, Nov. 21. The lecturer was introduced by Attorney Herbert M. Haskell, who spoke in part as follows:—

I believe that nearly every person in this audience is here by reason of a desire to know more of truth, to know more of God and man. Christian Scientists sincerely believe that Christian Science has the answer to this longing in your heart, that it has something to offer which will lift the heavy load of care, of sin, of suffering; something that will banish earth's miasma of worry, doubt, and fear. Christian Scientists do not ask, do not wish you to believe its message, unless that message be true; they only desire a fair, unprejudiced hearing; that you accept it only so far as you feel it will meet your individual need,—only so far as it can prove itself true, step by step. I believe I am beginning to recognize and appreciate the good, the beautiful, and the true in every religion; to be thankful for the truth and willing to look for it regardless of any particular church, dogma, or creed. I regret, however, that in the past, and not far distant past either, I allowed my prejudice to cause me to say harsh things of Christian Science, or rather of what I then erroneously believed it to be. Since then, in my own home, we have experienced the kindly touch of its truth in the healing of sickness and suffering, at a time when it was greatly needed. I have since personally seen and investigated its healing of all manner of sickness and sin, with proofs thereof so plain and positive as to convince any fair-minded person.

Christian Science is today commanding the attention of the thinking world. It has no apology to offer. I have been in its churches and reading-rooms in some of the large cities, and was pleased to note the high character of the men and women one meets there,—judges, lawyers, bankers, men of large affairs, men and women from all stations in life, all sincere searchers for truth. A leading Denver minister told me that he was greatly impressed by the large number of men it was attracting to its meetings. Others tell you that the happy faces seen within its membership attest to the fact that its followers have found a peace and satisfaction in life that many have failed to find. To these people the teachings of Christian Science have rolled away the stone of doubt and fear from the sepulcher where, as to their lives and consciousness, had been buried so many beautiful truths of God's merciful, loving care for His children. I am sure that the speaker of the afternoon has a message of good cheer, of health, happiness, and holiness; a message of God's true relationship to man and of man to God.—*Correspondence.*

PARIS, FRANCE.

A lecture on Christian Science was delivered in the Washington Palace on Nov. 26 by the Rev. Arthur R. Vosburgh. He was introduced by W. H. Norledge, who spoke as follows:—

Perhaps the most universal demand of the present age is for science in the place of mere theory, fact as opposed to speculation. In every branch of work investigation proceeds on scientific principles and methods, and all thinking men and women today demand the application of these same principles in solving the problem of life itself. Sooner or later we all come face to face with this problem, and we ask ourselves: What is life? What is God? What is man's relation to God? Is there a law governing mankind, and if so, what is that law? And to these questions we demand, and rightly demand, definite and scientific answers.

Christian Science claims to answer these questions satisfactorily. It claims to explain the truth about God and man, and it tells us that this truth is the same that Jesus referred to when he said: "Ye shall know the truth, and the truth shall make you free." Christian Science defines in exact terms God's law by which man and the universe are governed, and it tells us that this is the same law by which Jesus performed all his wonderful works. It explains how we can, individually, apply this law to meet every human need, and it tells us that a right understanding of this same law will relieve sick and suffering humanity of all its burdens.—*Correspondence.*

MUSKOGEE, OKLA.

Second Church of Christ, Scientist, gave its first annual lecture Sunday [Dec. 5] in the Hinton Theater, Clarence C. Eaton of Tacoma, Wash., being the speaker. The lecture drew an audience of five hundred, who listened attentively to the speaker for more than an hour. Mr. Eaton was introduced by D. N. Fink of the Commercial National Bank, who spoke in part as follows:—

This is a privilege that I have never before enjoyed—that of introducing a speaker of this kind or a lecture of this nature. I am sure there are many doubting Thomases and many unfriendly criticisms of Christian Science and Christian Scientists, yet, when I look out into the world and behold their bright faces and see their smiling countenances, I know that there must be a reason for the faith which is within them. It is conceded that every man who is honest in his convictions is entitled to be heard, and I am very much pleased to know that there are many followers of Christian Science in Muskogee.—*Times-Democrat.*

CLAREMONT, N. H.

There was an attendance of between three and four hundred at the Town Hall Thursday evening [Dec. 9], to listen to the lecture on Christian Science by the Hon. Clarence A. Buskirk of St. Louis. The speaker was introduced by W. E. Kinney, who said in part,—

Undoubtedly true it is that human nature holds in light esteem the things that it does not understand—the beauties of music, the pleasures of the classics, the invaluable wisdom of the inventor are all laughed at by him who does not understand them. When this Christian Science movement was started, the great mass of humanity were doubters or even open scoffers. They did not understand it. But as they have watched this movement spread from the borders of our neighboring city even to the farthermost ends of the globe, with its strongholds in the larger cities and in the smaller villages and towns its little bands of devoted workers, drawn from the solid reflecting body of the people, and have watched the influence of Christian Science on the individual lives of its adherents, the scoffers have become less strenuous in their declarations, and all who judge with a righteous judgment (in the light of the precept, "By their fruits ye shall know them") are willing to admit that there is something wonderfully efficient in Christian Science. It is the purpose of this lecture to give us a better understanding of what this something is, for our Christian Science friends, strong in the faith that all that is necessary for a wide and universal appreciation of their faith and works is a wide and universal understanding of them, are endeavoring to bring home to the whole people this understanding. And I am sure that we all appreciate this opportunity to know more of this movement, this light which has illumined the pathway of so many earnest men and women all over this broad land.

National Eagle.

LOWELL, MASS.

An audience which nearly filled the Lowell Opera House heard Prof. Hermann S. Hering of the Christian Science board of lectureship yesterday afternoon [Dec. 5]. F. Arthur Spence of Lowell presented the lecturer, and said in part,—

Is it not true, was it not inevitable, that, hand in hand with the rapid march of invention and discovery in things material during the century just passed, equal strides should have been made in our interpretation of spiritual things? Is salvation receiving a new interpretation? Do we not all need a little more of it—in our bodies and minds and in our social relations—as we go before our classes and congregations, as we buy and sell, as we gather around the family table? Astronomers tell us that Halley's comet is just returning to our sight after an absence of seventy-five years. Great human lights in history have come when the world needed them. It is the belief of her followers that the Founder of Christian Science is such a light, and that in her teachings a great truth has returned to us after an absence of many centuries.

You have been invited to a lecture on that new, or possibly new-old truth this afternoon. I have often regretted that the practice of our Christian churches should be the monopolizing of their best preaching talent by the prosperous churches of our largest cities. I am not sure but the practice of the Christian Scientists is a wise one. In all the churches, the largest and the smallest, the poorest and the wealthiest, the Bible and an authorized text-book are their only preachers, while their wisest and best trained men, as lecturers at large, are at the call of every church and community that desires to hear them.

Lowell Courier-Citizen.

LECTURES TO BE DELIVERED.

Monmouth, Ill.—William D. McCrackan, M.A., Pattee Opera House, Jan. 24.

Marshalltown, Ia.—Prof. Hermann S. Hering, New Odeon Theater, Jan. 28.

Key West, Fla.—Francis J. Fluno, M.D., San Carlos Opera House, 3:30 p.m., Jan. 30.

Bethlehem, Pa.—Rev. Arthur R. Vosburgh, Opera House, South Bethlehem, 3 p.m., Jan. 30.

Cocoanut Grove, Fla.—Francis J. Fluno, M.D., Fair Building, Miami, Feb. 1.

Wausau, Wis.—Prof. Hermann S. Hering, Church Edifice, 8:15 p.m., Feb. 3.

Westerly, R. I.—Frank H. Leonard, Bliven Opera House, Feb. 3.

Marinette, Wis.—William D. McCrackan, M.A., Church Edifice, Stephenson and Liberty streets, Feb. 3.

Grand Rapids, Wis.—Prof. Hermann S. Hering, Opera House, Feb. 4.

Minneapolis, Minn.—Prof. Hermann S. Hering, Metropolitan Opera House, 3 p.m., Feb. 6.

Minneapolis, Minn.—Frank H. Leonard, Auditorium, 8 p.m., Feb. 6.

Los Angeles, Cal.—Miss Mary Brookins, Second Church, Adams and Hoover streets, 3 p.m., Feb. 6; 8 p.m., Feb. 7.

Alma, Mich.—William D. McCrackan, M.A., Opera House, Feb. 7.

Flandreau, S. D.—Frank H. Leonard, Flandreau Opera House, 8:15 p.m., Feb. 8.

Jesus' life, outwardly, was one of the most troubled lives that was ever lived. Tempest and tumult: tumult and tempest—the waves breaking over it all the time. But the inner life was a sea of glass. The great calm was always there. At any moment you might have gone to him and found rest.—HENRY DRUMMOND.

TESTIMONIES OF HEALING.

At Christmas time I behold, though but dimly, the illumination which comes to all true followers of our beloved Leader, who has given us, through her untiring labor and boundless love, our text-book, "Science and Health with Key to the Scriptures." For these blessings I thank God, and for Christian Science, which shows us the living Christ, the light of Truth which shines into our hearts and homes, changing our whole lives from chaos and darkness into harmony and understanding. My heart is so filled with love and gratitude for the great blessings which have come to me and mine during the last three years, that I cannot let this season pass without making a public acknowledgment of them.

When a child, eighteen years ago, I had a fever which left me with a complication of ills, my heart troubling me the most. About eight years ago this had reached the point where I was taking very strong drugs and other stimulants constantly with no benefit. This ailment was believed to be inherited as my mother and other near relatives had died from it. Two years later I had reached such a condition that the doctors feared for my life. I suffered greatly, at times becoming unconscious, and nothing short of hypodermics would give me any relief. I also suffered greatly with my eyes; this condition becoming worse, until one of the specialists who had been treating them for nearly three years, said that the sight of one eye was nearly gone. I also suffered a great deal from a form of spinal trouble.

In this condition Christian Science was brought to my attention in a letter from a friend whom I had last seen in a state of almost hopeless invalidism, and who through Christian Science had been restored to health. A copy of Science and Health was soon loaned me, and that night as I began to read the chapter on Prayer I felt that I had found the truth; but when my husband came home and found me reading it, he became very angry, and I then put the book away. I however had a great longing to know this truth, for it seemed very beautiful to me, but I felt that this would not be for me, as my husband was then a druggist and had been for nearly twenty years.

Six months later I realized the great power of divine Love in the saving of my little boy's life. He was two years old, and had had two serious attacks of bowel trouble prior to this. The doctor worked faithfully and did everything possible, but with no result, and for two days and a night the child could not retain anything on his stomach. After the second day the doctor stopped all treatment. The child was lying unconscious, and the doctor, as he and my husband passed out of the room, said that he would have to operate the next morning, as the child could not live in that condition, but that there was very little hope if he did. I sat for a few moments with the baby on my lap, and all at once the thought came to me to go and get Science and Health and read, as my faith in mortal man was gone. Laying the child down, I went into the next room and found the book. Returning and sitting down by my little one, I turned to God for guidance and prayed most earnestly. I knew practically nothing of Christian Science or of the book, except the Lord's Prayer, the 23rd Psalm, and the statements on page 283. I read these over and over, and then became so interested in the book that I read for nearly two hours. I seemed to forget that the child was sick, and I put him in his bed. I then undressed and went to bed myself, and when my husband returned two hours later, he was disturbed to find me sleeping so soundly that he could hardly awaken me. When we went to the child we found that the bowel obstruction was removed and he was better. The next morning the child was up and dressed and at his play as usual; that afternoon he ran and romped about, perfectly well. The doctor, seeing him so well and happy, was surprised, and said he did not expect that.

Digitized by Google

The child is now over four years old and has never had another attack of this kind.

When this healing took place I felt in my heart that it was God's work, but I put it aside and did not give the glory to God. For six months longer I went on in this condition, growing worse each day. Again Christian Science was offered to me, and I very reluctantly promised to attend a Wednesday night meeting. The following Wednesday evening I went again, and during the service I seemed to hear a thousand voices saying, "God is Love." This awakening to the consciousness of the wonders of God's love seemed to stay with me for nearly three weeks. During this time I had two treatments for the headaches, and was entirely healed. In a few weeks' time the change in my looks and also in my disposition became so apparent that my husband had to marvel at it, and in trying to find out what had caused the wonderful healing of all my troubles, he himself became a devout student and a firm believer in Christian Science. It is now over two years since I attended my first service, and I am today in nearly perfect health. My eyes are in better condition than they have been since I was a child. I can read or do any kind of fine needlework at night. In some respects my healing has seemed to be slow, while in others I have had almost instant relief.

I am very grateful for what understanding we now have, and I know that more is in store for us when we are fitted to receive it. The Bible and our text-book, Science and Health, are now our only guide and teacher.

MRS. MAUDE GREEN, Tampa, Fla.

In October, 1907, after having "suffered many things of many physicians," I was almost discouraged. I had a severe case of female trouble, which had lasted in an acute form for two years, besides other ills too numerous to mention. At that time the pain in my left side was so severe that I could not stand erect, and when a friend advised Christian Science treatment I finally decided to try it, as all else had failed. After reading "Science and Health with Key to the Scriptures" for a few days, I called on a practitioner for help. In one week's treatment I was perfectly healed. Fear came back a few times, but each time all evidence of trouble vanished at the application of truth. I am now able to help myself most of the time, and enjoy every minute of existence, through understanding that man is God's idea.

In the winter of 1907 my little daughter had a severe attack of throat trouble. As I was young in Science I called on a practitioner for help. In two or three hours the conditions were overcome and there was no return of the ailment during the whole winter.

MRS. F. D. TYSON, Amarillo, Tex.

While at dinner one Sunday, during the winter of 1904, I attempted to swallow a piece of meat, and it became lodged in the lower part of the passage to the stomach. I had experienced some slight difficulty of this kind before, but had been able to overcome it. I had learned through the study of Christian Science, as taught by Mrs. Eddy, something of the power of Truth, and I worked as well as I knew how during the remainder of the day and the following night, endeavoring to realize my freedom. In the morning I wrote to a practitioner who lives some fifty miles away, and was given absent treatment; but, as relief was not experienced, she came to see me, arriving a little before noon on Wednesday. I had not swallowed anything since Sunday at one o'clock, but after a short time spent in reading and silent prayer, we were called to the dinner-table, and I was able to drink, and also ate a light dinner, experiencing no difficulty in swallowing except a slight sensation of soreness. What would have been my situation under material treatment I know not, but my thankfulness and gratitude to God, who heals all our diseases, is beyond expression.

I am very grateful also for the help and freedom which Christian Science has brought to us in many other ways. Our oldest daughter laid aside glasses which she had long worn for a severe case of eye trouble, and this she did through reading the text-book, "Science and Health with Key to the Scriptures." Every member of the family has experienced more or less of Truth's healing power. We have had no occasion to use any medicine in our house for over six years, and this is indeed a great boon in a family of eight children.—HATTIE WEBSTER, Whiting, Vt.

We thank God for the quick healing of our little girl's eye through Christian Science treatment, and we feel very grateful for the quick results gained through the work of a Christian Science practitioner. Our little girl had suffered almost from infancy with a very bad eye, and at times it seemed as if she could not see with it. After trying several different physicians and specialists for more than four years, and only occasionally receiving temporary relief, we had almost given up hope of her eye ever being well. We were then asked to investigate Christian Science, and we never have regretted doing so. After three weeks' treatment the little girl's eye is sound and well, and we are truly glad to know of this wonderful healing truth. We thank Mrs. Eddy for giving to the world the knowledge of such a redemptive power.

We are trying to learn more about Christian Science every day, and feel that we can fully rely upon God for our health and happiness.

W. S. and EMMA GLENN, Portsmouth, Va.

I first heard of Christian Science when I was about thirteen years of age. I had never been well, and at that time I suffered from eye trouble, toothache, headache, besides other ailments, some of which were supposed to be inherited. A friend had given my father some copies of the *Sentinel* and after reading them I made up my mind that I would be a Christian Scientist when I was grown. A few months afterward my father bought me a copy of Science and Health, and I had read it every chance I could get, for a year or more, before I realized that I was healed. I do not know how soon I was healed after I first began to read Science and Health, because I did not then know such a thing was possible, but I do not remember of my eyes giving me any trouble during that time. I have not used any medicine since I have been old enough to choose for myself.

I scalded my hand one evening, and the pain was overcome in one night. About a week afterward the skin came off of the back of my hand, but I held firmly to the truth of being, and in exactly two weeks from the time of the accident, there was no sign of a scar left. I had always felt that it was natural for me to be in need, as most of my people (the colored race) were, so it was a long time before I even tried to master any of the many financial difficulties that came to me. I was forced to ask for help along this line, when it seemed that I would have to leave school, and this error was met so completely that I have not had any trouble in that way since. I am now teaching in a school for colored children about thirty miles from here. I feel very thankful to Mrs. Eddy for Christian Science.

CHERRIE MILDRED PRICE, Montgomery, Ala.

With loving gratitude do I testify to what Christian Science has done for me. It has healed me of nervous breakdown, heart failure, bladder and stomach trouble, also rheumatism in my arm. Those ills brought on a state of

Digitized by Google

great depression, from which I suffered very much. I now enjoy perfect health and happiness, and am deeply grateful to God, also to Mrs. Eddy for this healing truth that sets us free.—H. E. HAMILTON, Duluth, Minn.

For thirteen years I was a great sufferer from what was called a neuralgic affection of the bowels, with an abnormal growth. This latter trouble became so much worse that I had to submit to an operation at least once a week, besides taking medicine daily. I also suffered from stomach trouble in its worst form, being able to eat but very little solid food. During all this time I was under the care of physicians, none of whom gave me any hope of getting well; even the relief was very slight. As I suffered constantly in body and mind, I felt that I had not much to live for.

About four years ago a friend asked me to try Christian Science, telling me of the great help she had received through it for her children, and that she thought I could get relief. She told me of a practitioner who had benefited them, and finally I was persuaded to try the treatment. The morning after my first treatment I found that neither medicine nor surgery was necessary, for normal action of the bowels was established. I decided to take a week's treatment, however, and on the third day the growth which had so long troubled me came away, much to my surprise. I was also completely healed of the stomach and bowel trouble. Later on, anxiety and worry over domestic affairs caused me again to call on the practitioner, and divine Love enabled me to rise above it all. There has been no return of these ailments, and I feel very thankful to God, also to Mrs. Eddy for this blessed truth which indeed does heal all our diseases.

I want to mention one other demonstration of the truth which was a great blessing to me. It seemed necessary I should have my teeth extracted, but I was in great fear of the pain and suffering, so, after making an appointment with the dentist, I went to a practitioner and asked for treatment. I was treated absently, and all fear left me, so that I was able to have nine teeth extracted at one sitting; and the rest of the twenty-three were removed at the second sitting without any pain or suffering. I felt happy and well when I arose from the chair, and the dentist said, "This is wonderful."

I have continued the study of this healing truth, and in my own immediate family there have been many beautiful demonstrations, all of which I owe to Christian Science as given to the world through "Science and Health with Key to the Scriptures" by Mrs. Eddy.

MRS. ANNA B. MILLER, E. San Jose, Cal.

I have for a long time wished to send a few words to express my gratitude for the many blessings I have received through Christian Science. I had eight weeks of treatment and was healed of heart trouble. I would also like to tell of a demonstration which I had for my husband in July, 1908. At four o'clock one morning he asked for help for a very sore throat, and he was perfectly healed in three days of the throat trouble and also of the tobacco habit of thirty years' standing. He had not smoked for many years, but was seldom without a cigar in his mouth. I did not think of the tobacco habit when I was declaring the truth for him, but he said that in two days the desire was entirely destroyed. I have had many beautiful demonstrations for my daughter, now twenty years old, and also for my son of seven.

Words cannot express my gratitude to God, and to our dear Leader for all the blessings I have received. I have learned that there are no failures when we look away from matter to Mind for our supply.

MRS. LUCY RINGLEP, Maquoketa, Ia.

With a feeling of devout thankfulness to God, I wish to tell what Christian Science has done and is doing for me; and it is with great joy that this testimony is given. I had always hoped and prayed that God would take care of me, and cure me of a disease that seemed to grow worse all the time, but not until I learned of the truth as taught in Christian Science did I find what I had hoped for. I sought it first for the physical healing, not then knowing that I would receive such great spiritual help. It is over three years since I took my first treatment, and in that time Truth has met all my needs. I have been healed of many ills of the flesh, and a catarrhal disease has vanished into its native nothingness. I am now well, and happier than ever before in my life, as I have the abiding consciousness of ever-present Love, who meets my every need. A little over a year ago, I had the privilege of class instruction, and my heart is filled with gratitude for the spiritual light that came to me during those two weeks. I feel that I can best express my appreciation of the truth by demonstrating it in my daily life.

God bless Mrs. Eddy for bringing the understanding of divine Truth to humanity, and for leading us in the straight and narrow way.—VIRGILIA A. PETTIT, Savannah, Tenn.

A little more than three years ago I began the study of Christian Science. From early childhood I was a constant user of medicine, and scarcely a month passed without finding me confined to the house for a part of the time. As soon as the weather turned cold I would begin to suffer from severe throat trouble and cold in the head. For about eight years I was troubled with weak ankles, being scarcely able to walk. I wore braces which weighed five pounds each, and these made me very uncomfortable. I could get no encouragement as to a cure; experts said I would never be able to get along without braces. I was also a sufferer from a stomach disorder and headaches, and I wore glasses; but I was healed of all these troubles through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature.

I certainly feel that I have been lifted out of the greatest bondage. I have been healed of kidney trouble, rheumatism, etc., with very few treatments. Other members of my family also have been greatly benefited through the study of Christian Science. For all of these blessings I am deeply grateful to God, and to Mrs. Eddy for giving us Science and Health. This little verse from 2 Samuel has been a great help to me: "God is my strength and power: and he maketh my way perfect."

CONSTANCE M. REED, Kansas City, Mo.

In October, 1908, I was taken with a severe attack of neuralgia in its worst form, and seeing that I could not master it myself, my husband called a Christian Science practitioner by telephone. In less than thirty minutes after he had talked to her I was perfectly easy and went to sleep, which I had not been able to do for three or four days and nights. I have never had any return of the illness since that hour; and in a few days I was again attending to my work. I am very grateful to Mrs. Eddy for the truth taught in our text-book, "Science and Health with Key to the Scriptures," the truth which makes for the enlightenment of the whole world. I am ever striving to prove my gratitude by living, as best I can, in obedience to Truth.

MRS. HULDAH A. GORDON, Colfax, Wash.

About seven years ago Christian Science found me in a critical condition. I was seemingly held down by poverty as well as by everything else. I was then healed of what the doctors called a serious eruptive disease, from which I had always in previous attacks suffered all kinds of pain;

Digitized by Google

but when I called on a Christian Science practitioner for help, I was in a very short time in perfect ease, and was soon out at work again. I praise God for this blessed healing truth. I know that if it had not been for this truth I would have been a long way from what even the world would call a Christian. I am very thankful to Mrs. Eddy for bringing this blessed truth to us, and I praise God, the Giver of all good, for these blessings.

W. J. HALL, Canyon City, Tex.

In November, 1908, when Christian Science found me, I had been very sick and confined to my bed for over a week, and I had been ailing for some time. My husband called a doctor, and he pronounced it a serious case. He said he would do all he could, but did not have much hope for me; and I had none for myself, thinking that my time had come. A friend then told me of Christian Science, and I made up my mind to try it. The medicine prescribed by the doctor seemed to distress me, so I decided that I would not take any more of it. We sent for a Christian Science practitioner, and with the first treatment I was able to sit up in bed; the second day I was up and dressed, and after a few more treatments I ate and slept well, which I had not been doing for some time. Many other ailments from which I had suffered have also been gradually disappearing, among them a bowel disorder with which I had been troubled for years.

I hope this testimony will help some other poor sufferer, as I have been helped by those which I have read. I am thankful to God, and to dear Mrs. Eddy for the understanding I have gained in Christian Science, as well as for my healing, and I shall strive to learn more every day of this blessed truth.—MRS. JENNIE DAVIS, Beloit, Wis.

It is with gratitude that I send this testimony to the efficacy of the healing and peace-giving power of Christian Science. Through the patient efforts of a practitioner I was healed of much physical distress and mental unrest. Through the systematic teaching which our dear Leader has provided for us, a great measure of good has come into my life, crowding out the inharmony and discord of former years. I have thereby become a healthy, happy, and a more useful individual.

It has meant much to me to learn how to live outside of self and for something other than self. It is teaching me to seek my own "in another's good," as Mrs. Eddy so beautifully expresses it in Science and Health (p. 518). This healing and teaching in Christian Science has brought God to me as a positive reality in whom I can trust, of whom I can ask, and of whom I do receive. I know our gratitude can be shown best to God, and to the dear one through whom it pleased Him to send us this light, by daily living it.—FRANCES M. REAM, Richmond, Va.

In grateful acknowledgment of help received through Christian Science I lovingly submit the following testimony: About a year ago, I was awakened very early one morning with the most acute suffering in my arm, and found that I could not raise it at all. Several members of my family were expected to arrive next day to spend the holidays with us, and it seemed an utter impossibility to entertain them under the circumstances, for although the truth had never failed me in times past, yet in this instance the suffering was so great that it seemed I could hardly expect a rapid recovery.

Truth, however, did its work most beautifully and effectively, and help was received instantaneously. By five o'clock of the same day I was able to go to the home of a practitioner, and she advised me to let my plans remain unchanged. From that very moment all doubt and fear left my perturbed thought, and peace and joy were in their stead. The experience was no longer a physical difficulty to be overcome, but was rather the dawning in my consciousness of a new sense of Christmas morn, the Christ-idea had indeed been born there anew! In twenty-four hours the healing was practically accomplished, the uplifting having been such that no evil suggestion could thereafter make me afraid. The arm which had been useless was restored to its normal activity in a very few days, and this in spite of the fact that during the process of healing I had two bad falls, which resulted each time in seeming injury to the arm, but which were overcome by immediate help from the practitioner. It was necessary for me to assume certain duties during the stay of my visitors, yet I state with gratitude that I was enabled to do this, and the slight inconvenience to me was far outbalanced by the joyful consciousness that divine Love had indeed met my need.

I am deeply grateful for the help received during this experience, and I can only hope that these lines may go forth as a testimonial of grateful love to her whose purity of character made the revelation of Christian Science comprehensible to this age. She alone, since the days of Christ Jesus, has been able to proclaim to a sick and sinning world—with confidence undaunted,

Joy to the world, the Lord is come.

JANE G. ROEBER, Richmond, Va.

I was healed in five days of a severe attack of an eruption. A kind practitioner helped me each day to bear the irritation, until it was overcome. These attacks used to last from ten days to three weeks and often returned, but I am healed and have no fear for the future. When our little girl was fourteen months old she had only one tooth, and no signs of any others coming. A physician assured us that she would have a serious illness unless she cut them, as she was very nervous. We took her to a Christian Science practitioner, who treated her faithfully, and in a few weeks the teeth began to come through. She was perfectly well, although some of them came during the warmest weather. She had one attack of bowel trouble and was very sick and weak for a day and night, but the next morning I telephoned to the practitioner, who treated her at once and she was healed before the day was over. She is now a bright, happy little girl and we are more than grateful for Christian Science, which has healed our baby and others in the family. Our little girl was healed in one half hour of croup.

I am growing little by little to the understanding of this great truth, and my desire is to know more and so to live that I may prove worthy of the blessings I receive daily. I thank God for sending us Christian Science through our Leader. Every member of our immediate family has been healed and helped spiritually by it.

MRS. BESSIE LE D. WUNDER, Edge Hill, Pa.

When you hear of good in people—tell it.
When you hear a tale of evil—quell it.
Let the goodness have the light,
Put the evil out of sight,
Make the world we live in bright,
Like to heaven above.

Have you any wrong to right? Right it.
Do you have a sin to fight? Fight it.
God Himself will help you win,
Let His Spirit enter in,
Making right the heart within,
Fit for heaven above.

JOHN STERLING.

FROM OUR EXCHANGES.

[William Henry Lyon, D.D., in *Christian Register.*]

His countrymen could not believe that there was anything divine in Jesus, because they knew him too well. He was the carpenter's son: they were acquainted with his mother and sisters and brothers. Faith was paralyzed by familiarity, but now, since nineteen centuries have rolled in between those days and ours, we see Jesus, not as one whom we have known, boy and man, for thirty years in the commonplaces of his home life and surroundings; we see him as a dim and spectral, almost unreal, person in that far-off land, among those strange surroundings. It is easier for us to believe in his divine nature and mission than it was for his fellow-citizens who were so close to him. The ideal loves distance and the mists of the long past.

[*Pacific Baptist.*]

The universe is God's ceaseless conversation with His creatures; "the heavens declare the glory of God: and the firmament showeth his handywork." It is little to admit that the ancient ethnic faiths have in them echoes of God's voice. The prophets of Israel were forth-tellers of the divine message, but fragmentarily and diversely—in portions differing as widely in value as Esther and Obadiah from Isaiah or Jeremiah, in manners as diverse as dreams, symbols, theophanies, history, type, and parable. In all these partial ways our God has spoken through the ages. His full and final word—the Word—is through His Son. Christ is the complete unveiling of the Father and "the messenger now has become the message."

[*Examiner.*]

The Bible is an inexhaustible fountain of truth, which no man and no generation can hope to drink dry. Diligently studied, in dependence upon the Holy Spirit, ever new and fresh truths reward the earnest student, while old truths take on new aspects of beauty and power. But this is a different thing from claiming that the Word of God is an incomplete revelation, and needs to be added to by fresh revelations through science and philosophy. Philosophies come and go; science is continually shifting its ground; the only stable thing is the Word of God, which lives and abides forever.

[*Outlook.*]

The gospel is for the poor and needy, and there are none so poor and needy as those who reject it because they think they have outgrown it intellectually. It is often revealed to the obscure and lowly because it reveals itself through the vital experiences of life and proves its reality by fulfilling its promises of light and help in the great crises of life.

[*Living Church.*]

The six water-pots in the Gospel may be likened unto souls emptied of self and hungering and thirsting after the grace of God. As the capacity limited the amount each one held, so the capacity of the soul limits the amount of grace one can receive. God cannot—we say it reverently—bestow His grace if there is no desire for it or capacity to receive it.

[*Advance.*]

The "wise men" went home by another way. All destructive purposes arrayed against the gospel of salvation will fail, and men will find some other way to go home to God than by the destructive way of the critics. That heaven-born King whom the "wise men" sought will always be "the way, the truth, and the life."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in French old style type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: Its Religious Philosophy" a lecture by Hon. Clarence A. Buskirk.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.80, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00: In the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $2.60 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.70; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The National Civic Federation was in session last week in Washington. Present at the opening session were a number of state Governors, who were later to attend a conference of their own, and delegates from all parts of the United States, representing various commercial, labor, and social associations, among them the American Federation of Labor, the National Grange, the Farmers' National Congress, the National Association of Life Insurance Presidents, and the National Association of State Boards of Arbitration. At its final session it adopted several resolutions recommending to the Governors uniform laws for the protection of children employed in industries; a uniform insurance code among the several states; uniform legislation on gathering and preserving vital statistics, and the conservation of American forests, which were all referred to the committee on uniform state laws. Other resolutions recommended that workmen's compensation acts, fair to the employer and to the employee and just to the state, be uniformly substituted for the present system of employers' liability for injuries received in and arising out of the course of employment; also consideration of the development of water-power and the regulation of non-navigable streams, with a view to bringing about uniformity of state regulation, looking to uniform cooperation between each state and the Federal Government in the development and control of water-powers.

The Government's brief, in its suit brought in April, 1907, to break up the alleged anthracite coal trust, has been filed in the United States circuit court. The Government contends that all the defendants have long been parties to a general combination and conspiracy which stifles competition and obstructs trade and commerce among the states in anthracite coal, and that they have monopolized the trade. It asks the court to restrain and enjoin the alleged monopoly and further to enjoin the defendants from carrying out the contract with the so-called independent companies by which the latter turn over their product to the larger companies for sixty-five per cent of the tidewater selling price.

According to a report to be filed at Albany by the state inspector of weights and measures, milk consumers of New York city have been paying annually for more than fourteen million quarts of milk which they did not receive. "Half of the two million milk bottles in daily use in New York are short by an average amount of 3.9 per cent," the inspector is quoted as saying. "That means that New York city has not been receiving, although paying for, sufficient milk to fill thirty-nine thousand bottles daily, or more than fourteen million quart bottles in a year."

Thirty state Governors at Washington last week discussed problems of state and national interest. "States rights" was the burden of most of the addresses delivered at the first session, with particular reference to the conservation of resources and the regulation and supervision of public service corporations. Ambassador Bryce in a speech said he believed the conference would emphasize the importance of governorships and that the chief executive of each state is coming more and more to be looked upon as the personal representative of the people of his state.

Efforts are being put forth to bring about a great conference of the commercial bodies of New York state at Syracuse in March or April to ascertain if possible the real cause for the high prices of food products. Representation will include business men, transportation men, farmers, country editors, and others interested. Representatives will also be invited from the fruit sections of Oregon, California, and Washington, and men from the middle West, the far West, and the South.

Executive officers of the principal life insurance companies of the United States, representing twenty million policy-holders and nearly four billion dollars in assets, were in conference at Washington last week at the third annual meeting of the Association of Life Insurance Presidents. In all about one hundred companies were represented. The association was formed for the promotion of the welfare of policy-holders, soon after the revision of insurance laws in the state of New York.

State boards of arbitration and mediation from twenty-five states met in Washington last week at the first international arbitration conference between capital and labor. Some of the Governors sent personal representatives to the conference, and several foreign nations also were represented. The object of this first conference is to form a permanent organization. The possibilities of governmental boards in dealing with industrial disputes, and like subjects were taken up.

"The East and South have a right to ask the same attention to the development of the forests on the watersheds of the Appalachians at the hands of the national government, as has already been given to the West," declared ex-Governor Guild of Massachusetts, president of the American Forestry Association at its annual dinner. Not one state of the old thirteen, he said, is benefited directly by the national forest reserves established heretofore exclusively in the West.

Attorney-General Major announces that he will soon call a conference of the attorney-generals of Illinois, Iowa, Nebraska, Kansas, Oklahoma, Arkansas, and Texas to discuss the high prices of meat and if possible induce them to unite in a concerted action against the so-called meat trust.

The boycott on meat, started by a few Cleveland workmen because of the high prices, has grown to large proportions and has already reached Baltimore, St. Louis, Pittsburgh, Omaha, Milwaukee, Kansas City, Chicago, and many other cities.

During the past year the total increase in deposits in Massachusetts savings-banks has been $33,581,751.45, being the largest total increase of any year in the history of savings-banks in this commonwealth.

One of the men alleged to be "higher up," the secretary and treasurer of the American Sugar Refining Company, has been named by the Federal grand jury at New York city, which is investigating the sugar frauds.

The twentieth annual conference of commissioners on uniform state laws will be held at Chattanooga, Tenn., Aug. 25, 26, 27, and 28, preceding the annual meeting of the American Bar Association.

The supreme court of the United States has granted the motion of the Government for the advancement on the docket of the Standard Oil case and set the hearing for March 14 next.

International.

Japan has notified China informally, through the Japanese legation at Peking, that she and Russia, with concerted action, will decline the proposal made through Secretary Knox of the United States for the neutralization of the Manchurian railways. Japan charges China with having been responsible for the proposal and thus of having commited an act unfriendly to the former.

Considering that Germany supplies twenty per cent of Italy's total imports, her slowness in taking active measures to participate in the international exhibition to be held in Turin in 1911 is quite marked. The space reserved for her amounts to 135,000 square feet, as compared with 267,000 square feet at Brussels.

The Canadian minister of trade and commerce will meet a deputation from the Manitoba, Saskatchewan, and Alberta grain growers' associations in Ottawa to discuss the question of federal ownership or control of terminal elevators.

Holland, it is announced, will strongly support the American proposal for a permanent sitting court of arbitration.

Industrial and Commercial.

A graduate of the class of 1877 of the Massachusetts Institute of Technology, civil engineering department, has perfected an invention for the manufacture of linen which promises to revolutionize the whole trade. It is possible to manufacture linen from the flax straw by the new process in about twelve hours, thus doing in one day what the European manufacturers obtain only after sixteen weeks or more of preparation. The plant as it comes from the field is fed into a rippler machine that removes the seed and passes the straw to a set of fluted rollers, which break it and discharge into a rapidly revolving drum with "scutching" and "hacking" mechanism inside. It is there beaten and pulled, the "shive" being loosened and shaken away from the fiber and drawn out through a sieve by an exhaust fan. The fiber, now well cleared of the wood, is automatically transferred to a second drum equipped with a finer mechanism, which removes all remaining "shive" and completes the mechanical preparation. The fiber is next placed automatically in new containers for the chemical treatment, which by a special invention dissolves the gums and fats, and then passes it to a second chemical bath, where it is bleached. At the end of this process the product passes to the drying machine and the operation is over, a fine grade of linen being produced, equal, it is said, to the best imported fabrics.

Plans of the United States Government, when completed in regard to the Etowah river, Ga., will furnish one of the finest and most economical power sites in the South. The dam will be used to hold in check the waters of the Etowah during spring freshets, to make possible the navigation of the Coosa river in dry seasons, and will also furnish power for manufacturing enterprises.

Russia exports to the United States from one to three million dollars' worth of platinum every year. In the United States platinum is produced only as a by-product of placer mining in Oregon and California.

The virgin forest area of the Philippines is approximately forty thousand square miles, or one third of the total area. The stand of merchantable timber is more than two hundred billion feet, board measure.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SELF SUBORDINATE TO SCIENCE.

JOHN V. DITTEMORE.

WHEN Jesus came down into the valley of human experience, after that wonderful spiritual exaltation and illumination described by the apostles as his transfiguration, he found some of his disciples surrounded by a great multitude, in a tumult which was occasioned through the failure of the disciples to heal an epileptic boy, who had been brought to them by his father. These disciples had been with their Master continually for many months, but though they had enjoyed the unspeakable privilege of his teaching and example, they were not able in this instance to prove their faith by their works and restore the boy to his rightful condition of health.

Jesus rebuked their dulness and unbelief, their lack of spiritual understanding, and pointed out to them that only through "prayer and fasting" could they follow his example and do the works which he declared would prove their discipleship,—even those "greater works" which those who believed on him should accomplish when he had returned to the Father.

Notwithstanding this rebuke, which should have spurred the disciples on to greater effort to emulate the works of their Master, they were found almost immediately disputing among themselves as to which of them should be greatest. When questioned as to the occasion of their dispute, "they held their peace;" but Jesus, "perceiving the thought of their heart," as Luke tells us, checked this strife for place and position with the emphatic declaration: "If any man desire to be first, the same shall be last of all, and servant of all." He further taught them the Christliness of humility and love, and gave indubitable proofs of his greatness, when he took in his arms a little child and said: "Whosoever shall receive one of such children in my name, receiveth me: and whosoever shall receive me, receiveth not me, but him that sent me."

In our work in the Cause of Christian Science this same desire for human greatness, the craving of ambition, manifested by the disciples, is sometimes the channel through which evil would try to disinherit us. If we yield to the temptation, our normal growth in the understanding of God is seriously interfered with. The arguments of human belief would try to make us believe that our church organizations, with their elections, business government, and purely temporal affairs, are the chief part of Christian Science, instead of being merely incidental to the great mission of our Cause,—the healing of the sick, the regeneration of the sinful, and the bringing about of a realization of God's kingdom "on earth, as it is in heaven."

For Christian Scientists to seek place and power by the ordinary expedients of human experience is dishonest, since the real intent behind all such efforts is the desire "to be seen of men." Forgetting the Master's declaration, "No man cometh unto the Father, but by me," they would maintain a false position, secured after a way of their own devising. Our Leader calls attention to this danger when she reminds us that "there is but one way to heaven, harmony, and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection, and to rise superior to the so-called pain and pleasure of the senses" (Science and Health, p. 242). This is the rule; there is no other way by which Christian Science can be demonstrated. When we subordinate our human wills to the divine, we shall find ourselves always in our right place.

Let us strive for the demonstration in our lives of the ideal pointed out to us by our Leader: "To live and let live, without clamor for distinction or recognition; to wait on divine Love; to write truth first on the tablet of one's own heart,—this is the sanity and perfection of living, and my human ideal" (Messages to The Mother Church, p. 76). In whatever measure we succeed in demonstrating this ideal, in that measure will our path grow brighter "unto the perfect day."

STEPS TOWARD UNITY.

ANNIE LOUISE ROBERTSON.

IT is safe to assume that whatever differences there may be in the states and stages of growth among Christian Scientists, they are united in their love for the Cause, in their desire for its prosperity, and in unswerving loyalty to its wise and beloved Leader. Whether they are young students just beginning to understand the Science of being, or whether they have had years of experience in Christian Science work, they are all anxious to learn how to work more intelligently. The subject is so great and the field is so vast that every sincere student can but desire and welcome that enlightenment which will enable him to prove his usefulness in an ever-increasing measure.

As we gain a broader view of the grandeur of the work that Christian Science will accomplish, and even of its present achievements for the human race, it is to be expected that the longing to be of service to the Cause should outweigh any personal considerations and eliminate in a great measure the error of "mere personal attachment" (Manual, p. 40), and this desire for increased usefulness will make us wise in availing ourselves of every avenue and means that may be presented. At the present time we have a splendid opportunity to bless humanity through our daily newspaper, the *Monitor*. No one can estimate the good which this splendid paper is accomplishing in the way of uniting all men on a right basis of thought; and whenever we aid in sending out this clean, wide-awake messenger, we are directly contributing to the betterment and unification of public thought.

Unity will also be advanced as each student proves his usefulness by working out his own problem intelligently, which means being diligent and keen in detecting and quick and faithful in correcting his own errors, while giving his neighbor the same privilege, thus bringing out in his own

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

life the fruits of harmony. These fruits speak effectively when words and arguments may not be heard at all. We are learning that what others think about us is of small consequence. What we really are is all that counts, and in the end will be recognized and given its proper place. Different temperaments naturally work out their life-problems in different ways. Some make too much of error, and others wish to ignore it. Some strive unwisely to abandon the material, while others scarcely abandon it at all. Although it is as disastrous to go too fast as it is to go too slow, will it not be wiser for each one to allow the other to work out his life-problem according to his own light?

Obedience is a prime requisite in a Christian Scientist, and if our church Manual is carefully studied and its instructions heeded, the goal for which we are all yearning will be much nearer, for we shall find in its provisions a marvelously wise guide and loving counselor for our daily conduct, and these teachings of Christian Science will be found equally valuable whether applied in our home circle, in the business world, or in healing sickness and sin.

While realizing the necessity for personal and continuous improvement, there is great cause to rejoice in that Christian Scientists are coming more and more closely together, and are learning to unite more definitely in the one purpose that makes life worth living; viz., to prove man's at-one-ment with God, to demonstrate that God does indeed dwell with men, and that we may find here and now a refuge from the discords of material existence. The desire and determination to prove the allness of God, good, will unite all Christendom in one grand brotherhood. Christian Scientists are committed to a wonderful enterprise, even the bringing of immortality to light, the revelation of the perfect man of God's creating, the demonstration that the kingdom of heaven is at hand. This task may often appear laborious, but wisdom teaches us not to choose ways simply because they seem easy. The one thing to be considered is whether it is right, and in the end the right way will be proven to be the easiest way. The right way is also the most loving way, and the world is awakening to the fact that the greatest necessity of human existence, and the essential step toward unity, is to learn how to love.

Is there any desire more universal in the human consciousness than the desire to be loved? To be loved necessitates first the knowledge of how to love, which has been termed "the art of all arts." Though somewhat slow in mastering this art, since love includes all other virtues, it is possible for all who will, to learn how to express this greatest of all qualities. The question of personality is the first one to be met in learning to reflect divine Love. Perhaps no false theory has been so pernicious or gotten such a hold upon human life as the belief that love is altogether a personal affair. The Bible teaches us that God is Spirit and God is Love, so all the true love there is or ever can be, comes from God and must be spiritual, and when we look to God for love, then we shall find ourselves surrounded by it, for in God (divine Love) "we live, and move, and have our being."

Of what avail is it to criticize others for not loving us? Does this not have its root in self-love and a desire for human love and approbation? These never satisfy, but when we know love for what it is, a reflection of the divine nature, we shall be entirely satisfied. Even a glimpse of this glorious fact that love is spiritual, ever present, and all powerful, apart from and above all personality, feeds the "famished affections" (Science and Health, p. 17), lifts a great burden from the individual, makes it not only possible but natural to love one's neighbor as oneself, and leaves one free to bring out a greater degree of usefulness.

Christian Science is now before the whole world. Its larger hope and richer promises are attracting all thinking people. They are looking to us to verify these promises, and as our thought is illumined by spiritual love, we rise above the belief that the problems of life are personal and unite in the glorious endeavor daily and hourly to prove to a waiting and watching world that there is now present and manifest, as one of our hymns so beautifully expresses it,—

One holy church, one army strong,
One steadfast high intent,
One working hand, one harvest song,
One King omnipotent.

THE ATMOSPHERE OF LOVE.

ADA J. MILLER.

We need no other proof that we are not consciously dwelling in the realm of Mind than the feeling that we are disturbed by some phase of error. The two atmospheres, that of mortal mind and that of Love, are distinct: one is the realm of dreams and illusions; the other, the realm of realities.

As Scientists we know that nothing exists but God and His idea; we know that Life is forever and unchangeably harmonious. Then it follows that if we have much to meet, if our harmony is frequently disturbed, we have voluntarily gone where there are material beliefs, and if we are "hit," it is because we have placed ourselves, unprotected, within range of the enemy's fire. We know absolutely that sense testimony to the reality of evil is false; from its inception we know it has no foundation in Truth; then, why not say with Paul, "I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God which is in Christ Jesus our Lord."

If we abide in this atmosphere of Love, then truly are we dwelling "in the secret place of the most High," where the shafts of malice, envy, anger, and hatred cannot enter —they but strike at an invincible defense.

CHURCH BUILDING.

W. WILLARD ROOKS.

True church building is the daily unfoldment of Life, Truth, and Love in human consciousness. It is the spiritual awakening or understanding by which mortal thought is divested of its error. The walls of this church are seen to appear wherever impersonal and compassionate love is found softening and removing hatred and its effects; wherever spiritual sense is enlightening away the barrenness of material sense; wherever truth is found uncovering the deception and nothingness of an error; wherever there is responsiveness to divine revelation.

Thus the church is neither material nor finite. It is limited to no particular time and to no particular place. The true church is wholly mental, and is seen only in the fruits of Spirit—in demonstration. This church, or spiritual consciousness, has opened in our time the doors that will never again be closed. Its gates are open by day and by night as a refuge and shelter. This is the "house beautiful," because it is made without hands, eternal in the heavens. Its walls declare man's salvation accomplished. Its pillars signify the beauty and permanency of things immortal. It is impersonal and impartial. It recognizes neither sex nor person. It is the open fount which cries: "Ho, every one that thirsteth, come ye to the waters;" ho, every one that is an hungered, come ye to the prepared table!

Into this church the sinner is impelled to come, for thus only can he escape the misery of sinning. Here he beholds man God's child, sinless, harmonious, and free. The

Digitized by Google

diseased and pain-racked sufferer, wishing to escape the misery of his bondage, is impelled to come hither, since here God is revealing Himself in spiritual and perfect manhood. The despairing and hopeless enter the sunshine and radiance of immortality and freedom within its borders. The poor man seeks it out, because here he beholds the infinitude and abundance of divine good. Spirit alone is seen to be substance, and all things spiritually substantial. Thus his inheritance is imperishable and is at hand. The rich man makes it his home, because here he recognizes the folly of hoarding matter; here his affections are enlarged and purified, and he comes to reckon his treasures by his power to demonstrate life, strength, and dominion. The business man seeks it, because here he learns that integrity is the law of justice to all, the golden rule—the only way to an assured success.

A Christian Science edifice is but the material embodiment and expression of this true church—the church invisible; the purified and uplifted consciousness of true and faithful believers.

LIGHT AND LAW.

GEORGE C. PALMER.

THE writer has found it helpful to realize the analogy which exists between the light of the moon shining on a dark night and the light of Love as presented to the students of Christian Science, turning them from the contemplation of a seemingly dark and sin-smitten world. In itself the moon gives forth not one ray of light wherewith to make glorious the "stilly night" or to charm the nightingale from his repose to sing the sweetest melodies. Were it not that the moon is in the sunlight beyond the reach of the earth's shadow, it would never be seen; and thus we may remember that if we voice human opinions of Truth, seek self-aggrandizement or popularity, we may seem to self to exist, but we emit no spark of light to darkened mortals who are often seeking and rejecting Truth at the same time.

If, on the other hand, we strive to see ourselves only as God sees all things, to speak when divine Principle requires, and always to act as the reflection of the Divine, we shall be led to perceive the meaning of Jesus' words, "If I bear witness of myself, my witness is not true. . . . The same works that I do, bear witness of me, that the Father hath sent me;" also of our Leader, who likens the manifestation of God through mortals to light shining through a window-pane, and says, "The mortal mind through which Truth appears most vividly is that one which has lost much materiality—much error—in order to become a better transparency for Truth" (Science and Health, p. 295).

While speaking of light and shadow, a thought is presented which helps me to understand St. Paul's words in Romans: "I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members." To mortal sense the earth is always half dark and half light. Darkness seems to roll round and round, o'er each continent, ocean, and island, on an endless journey, although we know this is but a false sense of the actual condition. The sunlight also seems to travel round and round with unending regularity. It would be absurd to argue that because of the aggressive nature of the darkness the sunlight is compelled to shift its position in order to maintain its existence; but we may affirm, that the sunlight dispels the darkness and thus represents to us law, in that it expresses the outgoing or reflection of Principle.

Evil is not law nor the effect of any cause whereby conditions may be made for us; it can only seem to exist, and then only where it is admitted to be real. Therefore it behooves us to be alert to detect the slightest appearance of the counterfeit, and to watch, "till he hath put all enemies under his feet." The apostle acknowledges the non-intelligence of this asserted law when he speaks of it as "warring against the law of my mind." It must be apparent to all that law can only proceed from Mind, therefore by the words "another law" must be understood the resistance, for the time being, of certain phases of error which do not at once yield to Truth. We read in the Bible that death is to be the last foe to yield, but each hour presents opportunities for Christian activity and the consequent weakening of what has been regarded as law. As the light of Truth dawns upon us, "the law of the Spirit of life" is seen to be the only real activity.

THE ACCEPTABLE FAST.

MAY BELCHER.

THE wonderful illumination which Christian Science gives to our study of the Bible was recently brought home very forcibly to the writer when reading the 58th chapter of Isaiah. In our former thought fasting meant mortification of the flesh by the temporary suppression of our own physical desires, regardless of our duty to our fellowman. Frequently the result of this fasting was made very manifest to all around in our dejected faces, gloomy outlook on life, and sometimes also in our sense of diminished strength and usefulness. Not understanding that our strength and sustenance are from God alone, and not in any way dependent upon material conditions, the abstinence from food (and other similar attempts to mortify the flesh) often seemed to have a very harmful effect on our bodies, and also on our tempers, so much so that the peace and harmony of those around us was seriously interfered with.

Our Master's condemnation of this material method of fasting is brought out very clearly in Matthew's Gospel, where he speaks to his disciples of the fasting of the Pharisees: "Moreover when ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may appear unto men to fast. Verily I say unto you, They have their reward." He then goes on to tell his disciples how they are to fast: "But thou, when thou fastest, anoint thine head, and wash thy face; that thou appear not unto men to fast, but unto thy Father which is in secret: and thy Father, which seeth in secret, shall reward thee openly." This shows us very clearly how the material view of fasting, in that it is a selfish and limited one, since it includes only a personal and material view of the subject,—dealing as it does with the mortification and denial of the flesh,—is of no avail, either for ourselves or others.

In this wonderful chapter in Isaiah, however, we are shown what the true spiritual fast is. To me it means that the only fast acceptable to God must include and help our brother as well as ourselves; that we must abstain from condemnation or criticism of him by thought, word, or deed. We must not only strive to break down our own false beliefs and desires, but help to free all mankind; to break every yoke of materialism, no matter whether it be the belief of sin, sickness, or death; to fast or abstain from any belief in evil, and to realize always, both for ourselves and all mankind, the harmony of God's kingdom, which is here and now. I feel that by putting this spiritual understanding of fasting into practice we fulfil the law of Sinai and the law of Jesus: "Thou shalt have no other gods before me;" and "Thou shalt love thy neighbor as thyself."

In thinking of all men and all creation as spiritually the perfect reflection of the perfect Mind, we are bringing out the true idea of both prayer and fasting: prayer, which is the affirmation and realization of the truth, brings us into harmony with God's law of omnipotent, omnipresent good; and fasting, the denial of all reality or power in

Digitized by Google

evil, means abstinence from all that is unreal and false. When the disciples failed to heal the boy who was said to be possessed with a deaf and dumb spirit, and questioned Jesus as to the reason of their failure, our Master said, "This kind goeth not out but by prayer and fasting." So when any demonstration seems difficult to us, and the material conditions to be overcome seem well-nigh overwhelming, then we must apply these words of the Master to our own need, and pray—affirm the truth—more earnestly; also fast—deny the seeming power of error—more steadfastly. Then the glorious result of our fast will be apparent, and the harmony of God's kingdom made manifest both in ourselves and all around us. Then we know indeed that our fast is acceptable to God.

We can never be grateful enough to Mrs. Eddy for our "Key to the Scriptures," which unlocks for us the hidden wonder and beauty of the Bible and teaches us how to make all that wonder and beauty practical. Christian Science shows us how we can "break every yoke," how we can free the oppressed, bind up the broken-hearted, and truly bear one another's burdens, and so fulfil the law of Christ —that perfect spiritual law of love and liberty which governs and rules the whole universe.

PRUDENCE.

JOHN E. FELLERS.

PRUDENCE in statement and action, like the index of a book, discloses that in people which is best, of the most importance. Prudence hears and sees more than it believes; knows more than it tells, and prefers to do more than it promises. It is self-poise, temperance and frugality, looking for the road over which wisdom has passed. It asks God's blessing on every "anticipated performance, and gives Him the glory for every success." It is as "thankful for the daily rod as for the daily bread." As the flower follows the sun, even in cloudy as in fair weather, so prudence turns to Truth, though beset with doubt and urged to speak.

Prudence waits until an idea has passed from the summer of experiment into the winter of test; until precedent, long-sanctioned, has become secure. It is the Sabbath-pause of men, in which they take account of what has been and measure it against what ought to be and is to be. It is the fruit ripening latest under the autumn sun, and sometimes, perhaps, barely escaping the winter's frost, but happy is he who feeds upon its sweetness at any time of life. If the eyes of prudence are occasionally filled with tears of regret for what it did not do, it rarely sighs over anything it did do.

The Discoverer and Founder of Christian Science has given the word prudence a higher place in the thought of many than it ever occupied before. She has taught them how to heal the sick and reform the sinner, but she counsels modesty of statement and insists that prudence should temper zeal at all times. She stands at the door of the open sepulcher of false beliefs, from which a dead race is rising with regeneration and newness of life; but nothing she says or does would indicate that this wonderful resurrection is anything more than divinely natural. She is therefore serene in thought, prudent in word, calm in action, and she patiently awaits the larger fruition of half a century of prayer.

LINCOLN DAY LESSON-SERMON.

The Society is prepared to furnish leaflets of the Lincoln Day Lesson at the following prices, postage prepaid: 10 copies, 25 cents; 25 copies, 40 cents; 50 copies, 65 cents; 100 copies, $1.00.

SELECTED ARTICLES.

[Editorial in *World-Herald*, Omaha, Neb.]

A burglar can arouse us, if our house is on fire and we are asleep in it, and we are very thankful to him. We never inspect the moral record of the profane sea-captain who pilots us safely across the stormy sea. We do not look a gift-horse in the mouth, unless it be out of sight of the donor, and then we do it merely to gratify the propensity of curiosity. We never scrutinize the pedigree of the mathematician who has worked out rules that assist us in many ways through life, and we say nothing against the spots on the sun while enjoying the many blessings resulting from its light. But let any one offer us a political or religious truth that will benefit us, and the first and the last thing we do to him is to search for the weak points in his life and history and then talk and write about them until our benefactor, unless he is thoroughly on to his job, hunts his hole.

A writer in the *Boston Transcript*, reviewing another book launched against Mrs. Mary Baker Eddy, Leader of Christian Science, joins the army of critics who for years have been bombarding the personal character of this great woman. The old charge that she is a plagiarist is taken up with renewed enthusiasm. A whole column is devoted to the personality of Mrs. Eddy, and not a line to the Principle which she teaches. If we should only pay attention to the words of those who have wings, we wonder how far this critic could fly into the public confidence.

This raising of our persecuting quills against political and religious benefactors, while accepting the favors of all other philanthropists with thanks, has long been one of the peculiarities of human nature. If we are manufacturing stage-coaches when a railroad is invented, we do not get mad and fight the inventor, but we take stock in the improved service and adjust ourselves to the new order of things. Yet we assassinate the statesman and crucify the prophet.

Behind this ignorance or ingratitude, or both, can be seen and felt the rivalry for leadership, that greatest of small social absurdities. To have power over the minds and acts of others, to be considered the king of beasts, to be the authoritative "it" and be looked up to, not for the purpose of the exemplification of truth and right, but for the purpose of self-glorification—this, seemingly, is one of the largest obstacles in the path of human progress.

[Editorial in *Kansas City* (Mo.) *Spirit*.]

Humanity loves liberty, rejoices in religious freedom, nourishes the enlightenment which best promotes health and happiness, and cherishes the hope that some day universal harmony will reign supreme among men. Mankind, however, today seems enveloped in a state of unrest. The indomitable spirit of personal control, power, greed, selfishness, has taken possession of men in various professions and occupations of life; noble aspirations, implanted in the minds of promising young men, have been poisoned in legislative halls where these malign influences do its bidding, ostensibly in the interest of public good, and unless some turn in the affairs of nation-building corrects this evil tendency, the spread of its power will sooner or later destroy the sacred rights and privileges guaranteed all citizens by the constitution of American government.

Is there no escape from this sea of troubled waters, where man, tottering in the balance, seems searching, grasping, crying out into limitless space for help? In all the walks and stages of earthly existence since creation, individuals, everywhere, have grappled with the problems of life, to some degree, for progress, for advancement, for a greater peace of mind—for a brighter future. A few realize their hopes, others struggle on without success,

Digitized by Google

and many who apparently cling to the guide-posts set by their ancestors, live by faith alone.

If there be a Science of being, the understanding of which gives birth to a new life, and it be applicable to all the ills of humanity, for the complete restoration of health and happiness to God's creatures on earth, in the name of His supreme wisdom and of human justice, allow men the freedom—unrestricted by material law—to employ this corrective force in the rehabilitation of both soul and body. The Christian Scientists have been proclaiming to the world for nearly half a century that the Science of being—a demonstrable Science—is Christian Science, and the one infallible law of cure for disease, sickness, and sin; that God is the "great Physician;" and that the thousands of cures of disease effected through Christian Science practitioners bear unmistakable evidences of this truth.

Taking the Scientists' definition of Christian Science, "A system of religious teachings based on the Scriptures,—Christian knowledge, Christian understanding;" "a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing," it is obvious to the unbiased mind that any attempt to invoke legislation against its practice is in direct violation to God's commands.

[Editorial in *Detroit* (Mich.) *News.*]

It is a curious exercise to look back through the years and see how many great minds have agreed that the golden age is only the Christmas spirit carried into all the months. Not the buying and selling, the giving of trinkets and toys, for that is not the biggest thing in even the most ordinary Christmas, but the spirit of good will to men, the spirit that will not be party to the offending of the poorest child, the spirit that seeks out the unfortunates so that Christmas, of all the days of the year, will not be marred like other days by having our plenty spell the want of others. That is the spirit which is going to complete this world and make it the finest habitation in God's universe. And when the day of consummation is fully come, not a company of angels, but a whole race, will chant the Gloria of the first Christmas, and the whirring wheels of factories and the hum of stores and the business of banks and the various activities of the workaday world will be but the diapason of the song.

It is coming—the Christmas spirit three hundred and sixty-five days in the year! Men are groping after it in all sorts of ways, wise and unwise. The human family is straitened until the new relation between men be accomplished. Men who say the philosophy of the Christ is impracticable are ofttimes the very ones who are doing most to make it practicable. Men who scout the story of the miracles, are today devoting themselves, mind and body, to doing work in the spirit which wrought the miracles. Men who balk at the hard saying of the cloak and the added mile, are giving greater gifts than these to a people that does not always appreciate them, and in an hundred thousand ways the spirit of the Christ is becoming regnant in the lives of men. If you despair of the world, this is true of you—you are out of touch with the best things in it. If you say the world is cold, you have not by your charity brought yourself in touch with the staggering amount of unselfishness displayed every day by persons who wear no tags and belong to no societies. If you say religion is dying out as a moving force, be sure of this—you are not in a position to know anything about it. No man who stands near the heart of things can doubt the widening of the frontier of the kingdom of kindness. One of the surprises that await the careful observer is the almost unbelievable increase of true religion in the world, and he who decries the indifference of the people has need to look to his own condition. The Christ has walked through our churches and emptied some of them, because he has sent his people into the highways and byways on the missions he loved best to fulfil.

This is the Christmas spirit that has found its way into all the months. If it continues to grow as it has been growing, it will be difficult to tell when the festival rolls around, for Christ will be born in some divine passion for humanity every day. Not so very many decades ago a lowly stable held every person in the world who loved the little Jewish babe. Today a world does him homage,—the wise men of the west along with the wise men of the east, the artisan of America as well as the shepherds on night watch in Palestine, all the mothers of men as well as she who was so inexpressibly exalted among women. There is no theology in this homage, any more than there is anatomy in your friendship for your friend. It is the human spirit answering unto the master of the human spirit, and acknowledging the authority of Jesus as the supreme teacher of rational, serene, and happy life; for as far as the race has followed his teachings, that far have the rough places been made smooth and the drear places pleasant.

[Editorial in *Evening Standard*, London.]

We have received a copy of the "Thanksgiving Number" of *The Christian Science Monitor*, a daily paper published in Boston. It consists of eight twelve-page sections, or ninety-six pages of news, editorial articles, illustrations, and advertisements. It seems, therefore, that this paper, which first appeared a year ago, is already a valuable property. The purpose of the paper, we are told, has been purely educational. It does not consider the question "What do the readers desire to know?" but what they should know, what will contribute to their lasting advantage.

Thus a writer in this anniversary number explains that "the time and energy consumed in the reading of unimportant literature, of the follies or strifes of men, is quite as surely wasted as is that which is devoted to gossip and trivial conversation. It is of no lasting benefit, and when the general public loses its thirst for such news and learns to read and appreciate better things, the conditions will have greatly improved. Whatever is written on the subject of war and contention should be written in advocacy of peace; with a view of preventing or ending war."

[W. C. Williams in *Baltimore* (Md.) *American.*]

In a recent issue a critic gives his idea of Christian Science. If his idea were correct, we should add our condemnation to his. Our critic stated that "Christ is the same yesterday, today, and forever; and is just as able to heal today as when he said to the leper, 'Be thou clean.'" He must also believe Jesus said that all those who followed him could do his works and greater works, and commanded that they heal the sick as well as preach the gospel. Because Mrs. Eddy has made prominent this neglected command and obeyed it, she is maligned and denounced by those who do not obey it. It is because Mrs. Eddy teaches that the Christ-doctrines are the only doctrines, that Jesus' personality, his atonement, his miracles, and his resurrection are true and for our example, and because she glorifies his works, that hundreds of thousands all over the world are Christian Scientists, helping to prove that Christ is the same today, and the majority have been healed of all manner of diseases. Is it belittling divine truth to acknowledge it as the only truth and to endeavor to live up to it as far as it is conceived? Is it belittling to endeavor to understand it and to prove your understanding by the fruits? We read in the Bible, "Knock, and it shall be opened unto you." Mystery is not truth.

Christian Science states that as God is Spirit, man, the child of God, is spiritual. This does not mean that man as he appears is not very material to those who believe

Digitized by Google

that materiality is reality; nor does it mean that spiritual man will be realized as the only man at the present time, and the nothingness of matter proved now as Jesus proved it. Disease, like materiality, does not exist in reality, but the lie of disease, like all lies, is very real to us until we know and prove that it is a lie; then we know it is not the truth and did not emanate from Truth.

The claim is made that Christian Science is inconsistent, because it heals diseases that do not exist. If disease did really exist,—was God-ordained.—Christian Science could not, nor could any science, cure it; but the apparent disease is healed, and though this is generally understood, in common usage the word "apparent" is left out. Reality to Christian Scientists is that which is eternal, never-changing, made in the image of God. All that is temporal, therefore, in this sense is unreal. It is the misconception of this distinction that causes much unthinking criticism of Christian Science.

[Marie H. Crockett in *Troy* (N. Y.) *Times*.]

Only in the spirit of a little child should one seek the Christmas meaning—a meaning so simple that even the child may understand, and yet so profound that neither height nor depth nor length nor breadth can compass it. It is the morning dawn after the night whose shadows have threatened us, whose hateful unrealities have deceived us. It is the glorious sunrise which unfolds to our astonished vision the wondrous beauties in whose very midst we stand. We see light answering to light, color to color, and graceful forms and softened shadows finding their true adjustment and meaning; we put out our hands and touch the very treasures which in the darkness had seemed lost to us forever.

It is "the dayspring from on high," the dawning of "the light that never was, on sea or land," the sunrise of truth which annihilates time and unites past and future, prophecy and fulfilment, in the wondrous now. Starting with the sweet story of John's Gospel, "In the beginning was the Word," it sweeps from our horizon all the gloom and misery and pain of the ages, and reaches back to the first chapter of Genesis, when "in the beginning God created the heaven and the earth" and looked upon His work and saw that "it was very good." It reaches forward also, to Revelation and, verifying the later words of the Bethlehem babe, "I am the door," it brings into our present experience the vision of St. John, "Behold, a door was opened in heaven." This is the Christmas meaning, this the Christ.

Only one discordant note sounds amid this harmony, "Light is come into the world, and men loved darkness rather than light,"—loved the darkness and the dreaming rather than the dawn and the awakening. To all the Christmas message rings loud and clear, "Awake, awake: . . . put on thy beautiful garments." "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

[Frederick Dixon in *Somerset and West of England Advertiser*.]

The nominal object of our critic's address was to explain to his listeners how best to oppose Christian Science, and the curious part of the matter is that he omitted all mention of the only method by which Christian Science could possibly be successfully opposed. That method would be to give the world a faith so far more satisfying, accompanied by works so far more practical, that those to whom they were offered could have no hesitation in accepting them. So long as all he has to offer is the most violent criticism of his neighbors, he is not likely to make much headway. If Christian Science and Christian Scientists were all this critic paints them, it is perfectly obvious that instead of their influence having grown steadily and persistently during the last forty-two years, it would have perished of inanition long ago.

Humanity is not quite so foolish as he seems to imagine. It is quite capable of judging what it is that is meeting its need, what it is that is most successful in helping it to escape not merely from its sickness, but from its sorrow and sin. Christian Science is growing because it is meeting this need of humanity, and so long as Christian Scientists are faithful to the teachings of their Leader, so long, that is to say, as they strive to walk in the footsteps of Christ Jesus, and to heal as he bade them to heal, their church will be founded upon a rock, and the rain of invective and the floods of persecution will beat against it in vain.

[George A. Law in *Winsted* (Conn.) *Citizen*.]

Our medical friend seems to have some difficulty in understanding Christian Science because of a failure to appreciate the fact that it is a religion and that the healing which it is accomplishing is incidental to and a natural result of an endeavor to live in accord with God's law as taught and practised by Jesus.

God did not people the earth and neglect to provide man with the means to cope positively and effectually with the ills of the flesh and the problems of life. On the contrary, God, infinite good, established for man, whom He made in His image and likeness, a sure way to obtain freedom from all abnormal conditions. Jesus' mission was to show us this way, and he taught how to live in accord with God's unchanging law and so secure this freedom. If it had been in accord with God's law to use drugs, Jesus would have used them, but he eschewed drugs and all material means. He made no diagnosis and took no account of material conditions, but by the power of God alone he repeatedly healed all manner of diseases. It is therefore conclusive that Jesus' healing work was on an absolutely spiritual basis.

As followers of Jesus and in compliance with his command, "Preach the gospel," "Heal the sick" (not one command, but two), Christian Scientists are relieving the sufferings of humanity. That they are successful is evidenced by the willing testimony of thousands who have experienced this spiritual healing. The healing of Christian Science is no more confined to a limited class of disorders than was Jesus' healing. Christian Science has to its credit thousands of cases of healing from so-called incurable diseases. Many and many of these individual cases were diagnosed by several eminent specialists, so that all chance of the disease being classed as a delusion is eliminated.

[Royal D. Stearns in *Lincoln* (Neb.) *Star*.]

There seems to be much misapprehension in the mind of many as to the Christian Science belief concerning "disease." The Bible informs us that all things were made by God, and "God saw every thing that he had made, and, behold, it was very good." Christian Scientists claim that sickness is not a part of the "very good" things that God made. Christian Scientists believe that sickness or "disease" is not real in the sense alone that it is not God-created. But they do not for that reason ignore it. They realize that as a human experience it must be grappled with and overcome through the proper application of the divine Principle as taught by Mrs. Eddy in Science and Health.

When Jesus healed one who was blind and dumb, he said, "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works. Believe me that I am in the Father, and the Father in me: or else believe me for the very works' sake. Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." This is a clear statement that Jesus did his healing works through the power of God, the one infinite Spirit, and said that those who believed should do the same works. When Jesus sent the disciples

Digitized by Google

forth on their mission, "he sent them to preach the kingdom of God, and to heal the sick," and it is recorded that "they departed, and went through the towns, preaching the gospel, and healing every where." Christian Scientists follow this method of the Master, and depend upon the power of God, rightly understood, for the healing of every kind of sickness and disease; and they are graciously rewarded in every civilized country on the globe.

[Alfred Farlow in *St. John* (N. B.) *Standard.*]

A Christian Scientist readily recognizes that the critic has not discovered what Christian Science gives in place of that which it repudiates. As a matter of fact Christian Science increases one's interest in nature and one's thirst for knowledge, and it emphasizes in the strongest manner possible the importance of old-fashioned Christian virtues. If Christian Science tends to make one look away from pain to God, Dr. Paget should not complain, if indeed he believes the Scriptures which teach, "Look unto me, and be ye saved, all the ends of the earth."

Christian Science is in strict accord with the Scriptural teaching concerning the Lord's Supper, and in respect to all the ordinances, although it may differ from the critic in regard to their significance. The doctor is rather late in his criticism of the reported cures of Christian Science, when we consider the fact that it is known to even the most casual observer that Christian Science really heals, and there is scarcely an individual who does not know some friend who has been healed by its ministry.

[Lloyd B. Coate in *Dayton* (O.) *Herald.*]

Our friend asks, "If disease exists only in the mind, why recognize disease, quarantine, or board of health?" The Christian Scientist has no fear of spreading disease, but inasmuch as there are many people who do believe that certain diseases are contagious, out of respect to this class it is right and proper, in order to allay their fear, to report contagious diseases to the board of health. The practitioner of medicine and the Christian Science practitioner are aware of the baneful effects of fear, especially of a contagious disease; therefore everything should be done to allay one of the great foes of the human race, namely, fear. For this reason most people in our country believe in quarantine. If the body experiences no pain where there is no mind, and does suffer when conscious of having a mind, then the mental condition must enter largely into what is called human suffering.

The statement, "There is no physical science," is only part of a sentence. (See Science and Health, p. 127.) If our friend had carefully read the entire paragraph in which it occurs, he would have found that it explains itself. The word "Science" used in this paragraph has reference to "divine Mind," or "Truth," and truth is spiritual and not physical. There is a Principle to be understood in Christian Science, and until one does understand this Principle it would be better not to attempt an explanation of the subject. The phenomena of sin, sickness, suffering, and death are very real to the human sense of things, but will disappear when man is governed by the Science of God's unalterable law as taught and demonstrated by Christ Jesus.

Hundreds of thousands of people who have been healed through Christian Science had first given the laws of health and rules of hygiene a trial, but failing to regain their health thereby, they turned to Christian Science and were healed through a correct understanding of Jesus' words, "Ye shall know the truth, and the truth shall make you free." In reply to another inquiry, we desire to say that many eminent judges, lawyers, business men, some regularly graduated physicians and ordained ministers of the gospel, testify that the teachings of Christian Science are both consistent and Christian when rightly understood.

[Howard C. Van Meter in *Salem* (Ore.) *Statesman.*]

As to Mrs. Eddy's discovery, it should be said that she claims certain Scriptural propositions to be true, namely, that God is Mind, Spirit, Life, Truth, Love; that man, in keeping with the scientific proposition that like begets like, is God's image and likeness, and is therefore spiritual. That her interpretation of these premises, as well as the conclusions which she has drawn therefrom, are her discovery, is easily proved by the fact that outside the Bible and those works based upon her teachings, the conjoined propositions which she presents are not to be found elsewhere in literature. Mrs. Eddy's position in regard to her discovery is simply her insistence upon the fact that her ideas are not in accord with those Scriptural interpretations which have been heretofore introduced. Berkeley's metaphysics do not hint at such a basis and method as that declared by Mrs. Eddy.

If the gentleman were better acquainted with Christian Science, he would withhold the doubtful criticism embodied in his statement that "Mrs. Eddy is said to deny the resurrection of Jesus." If he wishes his views to be taken seriously, he should establish them on better than hearsay evidence. Mrs. Eddy's clear analysis of the distinction between the eternal Christ and the human Jesus ought to make it clear as to what was crucified and resurrected.

The attempt to make the physical senses responsible for the origin or maintenance of a science, the conclusions of which are directly opposed to what the senses would seem to indicate, is rather strange reasoning. If astronomical science caused a complete change in the ideas entertained by the world as to the relationship between the sun and earth as based on sense testimony, it can scarcely be said that these senses caused the change or the science which produced it. If such testimony is found doubtful in one instance, its reliability is questionable as to anything. It is impossible to credit God with endowing man with two opposing means of determining the truth of things. The same fountain cannot send forth both sweet and bitter waters. The only rational conclusion is that what God is responsible for in the way of man's endowment is a spiritual sense, whereby His creation can be understood, and man's relationship with all of the other ideas of His creation is one of harmony, and not fraught with discord, as it seems to material sense.

The attitude of the Christian Scientist, in maintaining a consistent relation between cause and effect, is proved to be helpful by the results it brings.

[Editorial in *Little Falls* (Minn.) *Transcript.*]

The *Transcript* is in receipt of a copy of *The Christian Science Monitor's* Thanksgiving number, published in Boston, and consisting of ninety-six pages. *The Christian Science Monitor* is a daily paper, and enjoys the distinction of having the largest paid-in-advance circulation of any daily published. The paper was launched just twelve months ago, and its wonderful strides in circulation building have caused many to inquire as to the reason.

I want the books that help me out of the vacancy and despair of a frivolous mind, out of the tangle and confusion of a society that is buried in bric-a-brac, out of the meanness of unfeeling mockery and the heaviness of incessant mirth, into a loftier and serener region, where, through the clear air of serious thoughts, I can learn to look soberly and bravely upon the mingled misery and splendor of human existence, and then go down with a cheerful courage to play a man's part in the life which Christ has forever ennobled by his divine presence.

HENRY VAN DYKE.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A TELEGRAM AND MRS. EDDY'S REPLY.

[Telegram.]

New York, N. Y., Jan. 19, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—We rejoice that our church has promptly made its demonstration by action at its annual meeting in accordance with your desire for a truly democratic and liberal government.

BOARD OF TRUSTEES,
First Church of Christ, Scientist, New York, N. Y.
CHARLES DEAN, *Chairman*,
ARTHUR O. PROBST, *Clerk*.

MRS. EDDY'S REPLY.

Chestnut Hill, Mass., Jan. 20, 1910.

Charles A. Dean, Chairman Board of Trustees,
First Church of Christ, Scientist, New York City.

Beloved Brethren:—I rejoice with you in the victory of right over wrong, of Truth over error.

MARY BAKER EDDY.

"NO RESPECT OF PERSONS."

RECENTLY the Board of Directors and the Clerk of The Mother Church have received a number of letters of inquiry in regard to the matter of democratic government in branch churches, and more particularly asking whether the recent utterances of our Leader, the changes in the by-laws, and the articles on this subject which have appeared in the *Sentinel* from time to time were not intended for the correction of erroneous conditions in one particular field. The following excerpt from the answer of the Board of Directors to one of these letters of inquiry will be useful, we believe, not only to those who have inquired, but also to others who may be in doubt as to the general application of these pronouncements.

In the answer referred to the Directors wrote in part as follows:—

"We are able to state definitely that the advice from our Leader contained in Mr. Dickey's letter in the *Christian Science Sentinel* of Jan. 15, and the recommendations in George Shaw Cook's article in the *Sentinel* of Jan. 8, as well as the various editorials which have appeared in the *Sentinel* in reference to democratic government in branch churches, have not been intended for any one organization, but are equally applicable wherever undesirable conditions obtain.

"These articles are not mandatory, but may be considered as authoritative advice which will be followed in an orderly way in every field whenever the Scientists awake to the full import of the advice."

Mrs. Eddy has said: "In founding a pathological system of Christianity, the author has labored to expound divine Principle, and not to exalt personality" (Science and Health, p. 464). So, too, the work in which Christian Scientists are engaged is not a work of personality, but of Principle, and this work is the correction of all conditions unlike Principle. The law of right is inflexible, and there is no law of wrong. This law of right is the law of God, and it is precisely the same for all as it is for one, for, as Paul has said, "there is no respect of persons with God."

ARCHIBALD MCLELLAN.

THE THIRD COMMANDMENT.

THE third commandment reads: "Thou shalt not take the name of the Lord thy God in vain: for the Lord will not hold him guiltless that taketh his name in vain." The reason for obedience to the commandments is given in their prelude. "I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage." It is therefore evident that, in order to escape further bondage, the freedom-bestowing power of divine law should be recognized; it is also evident that obedience thereto is "for our good always." To this end Paul admonishes us: "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage." To this he adds, "Walk in the Spirit, and ye shall not fulfil the lust of the flesh;" which surely means that if we walk in the Spirit we shall fulfil God's law, for not otherwise can we do so.

In Christian Science we have an ever-broadening sense of the meaning of the commandments, and their application to all the problems of life. Time was when the third commandment was regarded by many as mainly a prohibition of profanity, and thus viewed its deeper significance was overlooked. People who did not swear were apt to justify themselves on the ground that they did not take God's name in vain, and thus they missed the blessing which intelligent and whole-hearted obedience invariably brings. Moses warned the Israelites against the tendency to cling to the errors which hindered their progress. He said, "Ye shall not go after other gods, of the gods of the people which are round about you." He then explained to them that these people had been driven out because of idolatry, and that the Israelites need not expect to possess the land unless they loved and served God with all their heart and soul and might. It therefore rests with us to do this and no less,—to do nothing which would make us "forget" even momentarily our obligation to serve God, not mammon.

As Christian Scientists we have covenanted with Truth to turn away from materiality, its false pleasures and allurements,—"to abandon as fast as practical the material, and to work out the spiritual which determines the outward and actual" (Science and Health, p. 254). If we do less than this, can we honestly claim that we are obeying the third commandment? If we are living upon the same plane of worldliness that we did before the truth came to us, what proof can we offer to the enquirer that our religion is a purely spiritual one? Our revered Leader says, "Better the suffering which awakens mortal mind from its fleshly dream, than the false pleasures which tend to perpetuate it" (*Ibid.*, p. 1060). The pursuit of worldly pleasure has been the chief hindrance to the advance of spiritual religion, and while its votaries may claim to be followers of Christ, it may be asked whether they are not serving false gods and thus taking God's name in vain. It surely needs all the spirituality we can attain to heal ourselves and others, and to gain perfect freedom from the bondage of sin, disease, and death. This being true, it is well to ask ourselves if a divided allegiance is worth while; if we can claim loyalty to God by seeking the aid of Spirit in our sickness, while we seek our happiness in material things?

In the well-known picture called "Diana or Christ," we have a splendid portrayal of unswerving devotion to Truth. A woman stands beside the altar of Diana, surrounded by friends and enemies, her fate trembling in the balance, for unless she consents to throw some incense upon the altar

Digitized by Google

of the goddess her life must pay the forfeit; but the look on her face tells the sequel, tells us that she counts all earthly things less than nothing, that she may "win Christ, and be found in him." One cannot decide for another what he should give up, nor when he should drop each weight, but we should all remember oft that "the Lord will not hold him guiltless that taketh his name in vain."

ANNIE M. KNOTT.

LOSS AND GAIN.

"I CANNOT pray as I used to, and I am almost frightened when I think of it. I seem to have lost my God, and my heart is echoing the cry of Mary, 'They have taken away my Lord, and I know not where they have laid him.'" The speaker was a noble fellow, who had been sufficiently illumined through Christian Science to perceive the unworthiness of his inherited concept of Deity, and who thus found himself in the toils of that revolt from the old which prepares the way for the new. He came to open his heart respecting a matter which he rightly deemed of the deepest significance, and his surprise was no less marked than his seriousness when his friend looked at him for a moment, and then said, "Well, brother, unless your thought of God has been more exalted than that of many, this experience may prove a great blessing."

The conversation which followed covered ground that many good people would do well to think over; first of all, for the reason that an incongruous sense of God manifestly introduces an unsound timber into the very foundation of the temple of thought, and the more splendid the superstructure built thereon, the more disastrous and pitiful will seem its fall. Furthermore, the average person, even though earnest and Christian, has given little consideration to the question of the identity of his concept of God with that presented by Christ Jesus, or to the imperative need of maintaining the integrity of the divine nature in thought, quite regardless of creedal beliefs and material sense testimony.

Prevailing ideas about the nature of God are for the most part the outgrowth of the statements of Old Testament writers respecting His judgments and acts. Many of these writers evidently thought of God under the semblance of a king. They attached to His word that unquestionable authority, with the kingly exercise of which they were all too familiar. They thought of His might and majesty as superregal, of His jealousy as implacable, and of His vengeance as terrible and unsparing. Thus yielding their meditations to the mold of human experience, they acquired that anthropomorphic sense of Deity which still dominates the thought of many, and which mars in some degree the thought of all.

Far more significant, however, in shaping the world's present concept of God, is the belief in the reality of the material order, and the consequent necessity of making Him responsible for conditions which beget unspeakable pain and injustice. He who has been educated to think of God as having provided for the transmission and multiplication of evil, so that saintliness and innocence are called to suffer penalties which are suited only to the criminal, is likely to find himself embarrassed in his effort to worship a Being whose doings he instinctively condemns, and it is apparent that the sooner he loses this false God the sooner he may hope to gain a knowledge of the true.

It is well to remember that while an unworthy concept in no way changes the nature of the Supreme Being, the reflex influence of our consent to the sovereignty of the unideal is inevitably debasing. In an important sense we worship and are subject to the idea of deity which we entertain, and as this is understood we begin to realize the importance of the service which Christian Science has rendered in insisting upon the absolute perfectness of the divine nature, and in refusing to accept any statement respecting the divine law and manifestation which is out of keeping therewith.

In a Christian Science home a small boy was once asked what it meant to be a Christian Scientist, and his answer is well worth remembering. Said he, "To be a Christian Scientist is to have a good God, and always stand by Him." Today many people are finding that they can no longer be content with the thought of God which their fathers entertained, much as they revere their memory; and to these the teaching of Christian Science about the infinite Life, Truth, and Love brings a new morning's light, in whose radiance the glad cry is again heard, "Rabboni."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

London, N. W., England, Jan. 4, 1910.

Beloved Leader:—I am directed by the committee of management to inform you that it is with the greatest joy they are able to tell you that on Jan. 1 a reading-room, under the auspices of First and Second Churches of Christ, Scientist, was opened in the very heart of the business center of the city of London, where there is no resident population. For some time past it has been felt that a reading-room in this locality would benefit a great number of people, and the members of both churches are confident that it will be the means of bringing to thousands a knowledge of the fact that Christian Science is the most practical good obtainable and holds the solution of all the problems of mortal existence. To business men and women these rooms will afford an opportunity, hitherto unavailable, of quiet study, if only for a few moments, in the midst of busy surroundings. We know that you will be glad to hear about this. With love and gratitude.

The Committee of Management.
J. S. BRAITHWAITE, *Secretary.*

MRS. EDDY'S REPLY.

Thank God and take courage.

Lovingly yours,
MARY BAKER EDDY.

Cambridge, Mass., Jan. 11, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—In bringing to a close another year of activity as a branch of The Mother Church, we have renewed cause to be grateful in reviewing the progress which has been made by our church and by its individual members. Through the understanding gained from our text-book we have come to know that God is Love, and have been enabled to follow the admonition of the apostle John that we "love one another." As a result, every part of our church work has prospered. We are encouraged and inspired to continue rejoicingly in our "passage from sense to Soul," with the knowledge that we shall reap what we sow and that by constantly endeavoring to have in us the Mind "which was also in Christ Jesus," the harvest of good will be bountiful.

To you, our revered Leader, who have so faithfully stood on the watch-tower, and so patiently and wisely guided the Cause of Christian Science, which is bringing the kingdom of heaven into human consciousness, we pledge anew our loyalty, and desire above all things to express our love by renewed consecration in the service of the Master.

FIRST CHURCH OF CHRIST, SCIENTIST, Cambridge, Mass.

Chicago, Ill., Jan. 9, 1910.

Dear Mrs. Eddy:—I wish to say Thank you, for your Christmas and New Year messages, with their loving call to leave behind the times and seasons of Adam's dream

Digitized by Google

and "come up higher" to the immutable things of God. Today again there came to me so definitely the absolute confidence we can place in everything that you give us,—whether in the Manual or your frequent messages,—because that which you give us is not the dictum of a personal leader, as mortal belief would have us think, but the utterance of the one omnipotent Mind, which never mistakes. With what joy, then, we can drop all self, mere opinion, quibbling, and fear, and obey not only every by-law and specific request, but also those sweeter, higher calls which material ears cannot even hear, but which Love reveals to us. For the privilege of obedience I am grateful.

Lovingly your follower,
VERNA M. RAYNOR.

Roxbury, Mass., Jan. 11, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—At the annual meeting of First Church of Christ, Scientist, Roxbury, Mass., held tonight, it was unanimously voted that an expression of love and loyalty be sent to you. We noted your suggestion in the *Christian Science Sentinel* of Jan. 8, 1910, respecting the need for further enlargement of the publishing house, and we consider it a privilege to contribute toward that need. Recognizing the value of this suggestion, this church voted to give the Roxbury church building fund collection of Sunday, Feb. 6, 1910, to the Directors of The Mother Church for the above-mentioned purpose.

Lovingly and obediently,
KATHERINE L. VIALL, SARAH C. LINSCOTT,
LOUIS N. BENNETT, *Committee.*

Kokomo, Ind., Jan. 13, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dearly Beloved Leader:—The members of the Christian Science society of Kokomo, Ind.: at their first annual meeting, are moved by a deep sense of love and loyalty to send to you an expression of their gratitude for the unselfish love which led you to seek until you found, and to give anew to a weary, waiting world the wonderful demonstration of the healing power of Christ, Truth, as taught by our Master, Christ Jesus. Today we would be, with you, willing disciples "at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix.).

MRS. HARRIET C. STANLEY, *President,*
MRS. ROSA W. HILLIS, *Clerk.*

London, W., England, Jan. 4, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—When one's heart is full of gratitude, it overflows and must express in this way thanks unbounded and love beyond expression for all you have done and are still doing for mankind. Your example of absolute devotion to Principle through all things, inspires your followers to ever greater effort. May each day enable me, as one of the humblest of those privileged to follow in your footsteps, to realize more of your selfless love. For our wonderful text-book, and all your other writings, I thank you. They are indeed a help and guide. Words are inadequate to express thanks, but that my deeds may prove I am worthy to call you Leader, is the earnest prayer of,

Gratefully, lovingly yours,
MOLLY T. ALLURED.

Reading, England, Dec. 8, 1909.

Beloved and Revered Leader:—On this, the eve of our Thanksgiving, our hearts naturally go out to you, to whom we owe so much of the happiness which is ours. Knowing that our joy is yours, we write to tell you how during the last few weeks we have organized a society, opened a pleasant reading-room, and have had the privilege of a lecture from Mr. Vosburgh. This lecture was listened to by nearly seven hundred people, "with rapt attention," as one of the papers put it, and aroused much interest, being well and fully reported by several of them. The Christian Science literature we find gladly accepted by clubs, institutions, hotels, and shops. The public library has recently purchased a copy of Science and Health, and the *Monitor, Sentinel,* and *Journal* are to be found there. The story of your life, as written by Sibyl Wilbur, is in constant demand, and on the rare occasions when it is in, may be seen, open at your portrait, in a glass case.

Christian Science started about two years ago in Reading, when three people met on Wednesdays to read the Lesson-Sermon, and last November we took a room for Sunday services, which are much appreciated, people gladly coming long distances to attend. The work seemed to progress slowly, but each suggestion from the Directors was to us as binding as if it were already embodied in the by-laws of the Manual and we were an organized society, and though such steps seemed at the time perhaps retrogressive, they were taken in full confidence of the wisdom which prompted them. Far from being retrogressive, they were in reality the turning of the sod in our field, and now we are seeing the fruit of patient husbandry. Our little band of workers, united and harmonious, is animated by feelings of intense gratitude to you, and loyalty to your faithful Directors. We shall endeavor to show forth the glory of God by faithful practice, and that we may grow in grace and prove ourselves worthy to call you Leader, is our earnest wish.

ALICE M. MARTINEAU, *First Reader,*
BLANCHE E. LESTER, *Second Reader,*
JOHN WHITTEN, *Clerk.*

[Telegram.]

Cleveland, O., Jan. 16, 1910.

Mrs. Mary Baker Eddy.

We express appreciation and love to our Leader for her watchful care which has brought forth the timely request for democratic church government as contained in the *Sentinel* of Jan. 15.

Lovingly obedient,
Her loyal followers,
BOARD OF TRUSTEES,
First Church of Christ, Scientist, Cleveland, O.
B. R. DEMING, *Chairman.*

Munich, Germany, Dec. 22, 1909.

Dear Mrs. Eddy:—The day after I was at your home and had the great honor and privilege of singing for you, I left for Europe. Since arriving here I have been plunged into all manner of activity, and the days have flown by on wings. I have often wanted to write to you, but have felt that I ought not to take even one moment of your time and attention, unless in that moment I could do something for you. Now I realize that not to have sent you a written acknowledgment of the treasure you sent me,—the dear copy of Science and Health,—was an unintentional rudeness on my part, though I feel you must have known the joy it brought to me, and the gratitude and appreciation which daily rise from my heart to you. That you should have thought of me is an honor never to be forgotten; that I could give you a moment's pleasure is a joy treasured in memory. To try to reflect in my small sphere the love which you have so richly poured out to all, is a deep desire in my heart, born of gratitude to you for your life in its nobility and greatness, in its simplicity and strength and calm, exalted love.

Please accept at this late day my dear and loving gratitude for the book and for the love it brought to me.

Ever lovingly yours,
MARCIA CRAFT.

THE LECTURES.

CHICAGO, ILL.

A lecture was given by William D. McCrackan, M.A., of Boston, in the church edifice of Third Church of Christ, Scientist, Chicago, Nov. 26 and Nov. 27, before large and appreciative audiences. Nov. 26 the lecturer was introduced by Fred A. Bangs, who said in part,—

Knowing the power of Love to heal and to cleanse from sin and all iniquity, Christian Scientists, in obedience to Christ's injunction, "As ye would that men should do to you, do ye also to them likewise," and his command, "Thou shalt love thy neighbor as thyself," endeavor in all legitimate ways to give unto their fellow-men the opportunity of receiving this immortal truth, though they proselyte not. In this spirit of love and obedience this lecture is given, understanding that God, good, is omnipotent and overcomes evil in all its seemingly varied manifestations.

Correspondence.

CENTRAL CITY, NEB.

At the Opera House last Saturday evening [Nov. 27] a representative gathering of our citizens greeted the Rev. William P. McKenzie of Boston, who lectured here on the subject of Christian Science. He was introduced to the audience by Judge W. H. C. Rice, who said in part:—

I am not a Christian Scientist, and yet I would fall far short of my duty did I not bear faithful witness to the peaceful, happy lives and the charitable, orderly conduct and good citizenship of the little band of workers who have so loyally upheld the standard of their faith in our midst these many years. From their testimony we have gained some perception of the character of the movement which has built and maintained great temples in the centers of learning and culture and sent forth healers and teachers to all parts of the earth.—*Central City Republican.*

DULUTH, MINN.

Frank H. Leonard lectured on Christian Science at the Lyceum Theater, Dec. 12, for First Church of Christ, Scientist. He was introduced by Gideon Schelin, First Reader, who said in part,—

During the last half of the nineteenth century, the "Spirit of truth," the coming of which was foretold by Jesus, has slowly but surely been taking possession of the consciousness of men, heralding their ultimate, universal liberation from all the limitations and ills that flesh is heir to; and like a great, invincible giant, men are at last awakening out of their age-long dream into the conscious realization of infinite possibilities, and to man's God-given birthright of "dominion over all."

Regarding the manner of the second appearing of the Christ, Truth, Jesus said: "Take heed that no man deceive you. For many shall come in my name, saying, I am the Christ; and shall deceive many. . . . Then if any man shall say unto you, Lo, here is Christ, or there; believe it not. . . . For as the lightning cometh out of the east, and shineth even unto the west; so shall also the coming of the Son of man be." This second coming, then, is not to be looked for in the limited form of a particular personal appearing, but rather as a great, universal revelation of Truth in the consciousness of men, bringing to each the Christ-idea as the true individuality of every child of God; and it is this universal teacher, the "Spirit of truth," the great revealer and interpreter of all Truth, that is today, in ever-increasing degree, pervading and dominating the social, moral, religious, and political atmosphere of the world, impelling scientific investigation on every hand, to the end that demonstrable Truth may be established where blind belief or fragmentary and unproven theories had previously held sway. Nowhere is this "Spirit of truth" more prevalent, and nowhere is it enforcing more rigid investigation today, than in the realm of religion; and, as a result, altars erected to the ignorant worship of an unknown God are crumbling away on every hand, for we are beginning to grasp the import of the apostolic statement that he (the Son of God) "hath given us an understanding, that we may know him that is true,"—"the only true God." And through the acquisition and application of this understanding, the God who has heretofore been ignorantly worshiped is now being scientifically demonstrated as an immanent, omniscient, omnipotent, omniactive, infinite consciousness; the underlying, overlying, encompassing, and all-pervading divine Principle of all true existence, "in whom we live, and move, and have our being;" and who is an ever-present, intelligent help in the solution of every problem of life.

Correspondence.

NEW BRITAIN, CONN.

There was a large audience at the Christian Science lecture at the Lyceum yesterday afternoon [Dec. 12], when Miss Mary Brookins of Minneapolis lectured on Christian Science. Theodore A. Stanley introduced the speaker, and said in part.—

I assure you that it is with a feeling of some trepidation that I have consented to appear before you and make a few brief remarks introductory to the speaker of the afternoon. For, if I would speak at all, it must be upon a subject that is nearest your hearts, and yet one upon which I am not very well informed. It is unnecessary for me at this time to trace the history of the Christian religion; suffice it to say that no religious order or sect has ever grown to any great importance without meeting with more or less strong opposition, and Christian Science, as known today, is no exception to this rule. In spite of the strong and persistent opposition that has met this religious philosophy, it has made a sure and steady growth and today commands the attention and the respect of some of the most enlightened minds of the age. I must be frank, however, and tell you that I am not a Christian Scientist, but I am willing to testify to the great good that has come to those people who have embraced its doctrine, and I have come to believe that no man living in this twentieth century can afford to shut his eyes to the possible truths contained in the teaching and practice of this body of religious thinkers

New Britain Record.

LECTURES TO BE DELIVERED.

Ann Arbor, Mich.—William D. McCrackan, M.A., Whitney Theater, Sunday afternoon, Jan. 30.

Hartford, Conn.—Judge William G. Ewing, Parsons Theater, 3 p.m., Feb. 6.

Palm Beach (West), Fla.—Francis J. Fluno, M.D., Dixie Theater, 3:30 p.m., Feb. 6.

Denver, Col.—Judge Septimus J. Hanna, Woman's Club Building, 1437 Glenarm Place, 3 p.m., Feb. 6.

Grand Rapids, Mich.—William D. McCrackan, M.A., Powers Opera House, 3 p.m., Feb. 6.

Fairmont, Minn.—Prof. Hermann S. Hering, Opera House, Feb. 8.

Austin, Minn.—Prof. Hermann S. Hering, Auditorium, Hirsh Block, Feb. 10.

Youngstown, O.—William D. McCrackan, M.A., Church Edifice, Spring and Bryson streets, Feb. 10 and 11.

New York, N. Y.—Judge William G. Ewing, Third Church, 125th street between Fifth and Madison avenues, Feb. 11.

Lime Springs, Ia.—Prof. Hermann S. Hering, Opera House, Feb. 11.

Albert Lea, Minn.—Prof. Hermann S. Hering, Library Hall, 3:30 p.m., Feb. 13.

Mason City, Ia.—Prof. Hermann S. Hering, Feb. 14.

TESTIMONIES OF HEALING.

Christian Science came to me through a lady's lending me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I spent a great deal of time reading it, for I was then very unhappy, being bound by a great many material beliefs. I had concentrated my thought on them so much that they were very tenacious and real to me, and although I knew that Christian Science was the truth, yet I could not rise above the mental state of despondency and fear that had been with me ever since I can remember. It is now over two years since I seemingly passed through a great trouble and sense of separation, but through the steadfastness of a faithful practitioner I was enabled to rise above it. I was greatly comforted in pondering over the story of Abraham and Isaac, and as I turned to Genesis (chapter 22) I saw that his answer to God was, "Here I am," as though he was dwelling in the belief of material separation; but farther on his reply is, "Here am I," which to me seemed to imply that he had risen above the material belief and that his consciousness was in Spirit, Mind. Knowing that God and His thoughts cannot be separated, this ray of light was a great help to me. Since then I have passed through deep waters, but whenever things have failed, I know the fault has been always with myself and not with the Principle I long to demonstrate.

I should like to tell of a recent demonstration. I was trying to get something from a large refrigerator, and had my arm inside when the heavy lid fell forward on it. For the moment I felt I could not move it, but I immediately repeated the scientific statement of being, and then the thought from our text-book came to me, "Your Mind-remedy is safe and sure" (p. 384), and I felt relief at once. I was able to return to the tea-table without any one's knowing of the incident, but later in the evening, when alone, I had to work against the evidence of stiffness and discoloration, and by the following day this was entirely overcome.

Last winter I had a very painful foot, and in addition to the pain it became very much swollen. I tried to overcome the condition by working to the best of my understanding in Christian Science, but it seemed to get worse and I began to be full of fear. I knew then that I needed help from one who was in the opposite condition of thought, so I wrote to a practitioner for treatment. The trouble did not yield at once, but after a few weeks the pain was very much less, and with about three weeks' more treatment the pain and swelling had entirely disappeared, though one of the nails was quite discolored. Last September, while on my holidays, my daughter and I took a walking tour round the Isle of Wight, and while on this tour the toe-nail dropped off, and a new one has now appeared. While having treatment for my foot I was able to follow my usual occupation, which is that of housekeeper in a large business house, and no one in the house knew of my condition.

Christian Science has also eliminated the sense of separation in my family, and it has made known to me the way of Life wherein is no sin, disease, nor death. For all the unmistakable proofs I have had of Love's omnipresence, omnipotence, and omniscience, I am truly grateful to God, and to our fearless Leader, Mrs. Eddy. This truth has strengthened my ofttimes faltering footsteps, and helped me to a better understanding of God as Principle, Life, Truth, Love. I am very grateful for the understanding I have gained through the study of Science and Health, and also for such a wise and courageous Leader. It can truly be said of her, "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever."—Mrs. L. M. Weygang, London, England.

Over two years ago I met with a severe injury to my shoulder, which disabled me so that I could not use my arm for hard labor for over a year, and it was very painful at night. I employed a Christian Science practitioner, and in three weeks' treatment was entirely healed. I also suffered from heart disease, which was healed by the same truth, and the trouble has never returned. I am very thankful for the understanding which I have gained, as well as for the healing.—Jay White, Kenosha, Wis.

In gratitude for the many blessings which Christian Science has brought to me, and with the hope that it may meet the need of some seeker after Truth, I send this testimony. I began the study of "Science and Health with Key to the Scriptures" more from a desire to become acquainted with its teachings than with the thought of physical healing. I became completely absorbed in my search for the truth, and in an effort to put into daily practice what I read I soon proved that "right thoughts are reality and power; wrong thoughts are unreality and powerless, possessing the nature of dreams" (Miscellaneous Writings, p. 252). For two years previous to taking up the study of Christian Science, I had suffered from hemorrhoids and had not been able to gain permanent relief. I had a great fear of this trouble, and was constantly seeking some remedy. My healing in Christian Science from this disease was slow but very sure, and for two years I have been entirely free from this trouble.

I am indeed grateful for the physical healing, but more grateful for the spiritual help and understanding that have come through study of the Lesson-Sermons. I have daily cause to be thankful for my understanding of Christian Science, and earnestly desire to live obedient to its teachings, following our Leader even as she follows Christ.

Mary J. Howes, Omaha, Neb.

I feel impelled by divine Love to acknowledge my heartfelt gratitude to our heavenly Father for the light Christian Science has brought to me. I feel that I cannot do enough for all that divine Love has done for me. I am yet in swaddling-clothes, so to speak, in Science, but the sweet peace and comfort it has brought and the physical benefits I have had through reading Science and Health, by our beloved Leader, Mrs. Eddy, cannot be described. My life is a strenuous one and my environment anything but pleasant at times, but I am enabled to rise above the many disagreeable things that are continually cropping up, to know they are unreal, and to realize in a measure the powerlessness of evil and put them under my feet by the help of Christ, Truth. The psalmist said, "It is God that girdeth me with strength, and maketh my way perfect." My earnest desire and prayer is that infinite Love, Truth, and wisdom may keep me safe.

Words cannot express the delight I experience in reading the Bible and "Science and Health with Key to the Scriptures." I know more about the Bible and have a better understanding of God than I ever did before. My heart is full of love and good wishes for our noble Leader, who has done so much to uplift and bring us into the light that never faileth.

Mrs. E. P. Mustin, Philadelphia, Pa.

About three years ago my arm was seriously injured. I went to see a doctor, who dressed it for about a week, but the arm grew worse all the while. The doctor said he would have to cut the arm open, as the bone was affected, and if that did not prove a success, he would be obliged to take the arm off at the elbow. I then gave up the doctor and tried Christian Science. In about two weeks the arm was well, and it has never troubled me since. I am grateful to God for this healing, and also to Mrs. Eddy.

Lorenzo Ellis, Randolph, Vt.

Digitized by Google

I live on a farm, and two years ago I had a colt that was very sick, but thinking that perhaps the trouble would disappear, I did not call for Christian Science help until the animal was so bad that I even went out one night to see if it was still alive, and I do not think it could have lived if it had not been for Christian Science treatment, under which it was healed. This proves to me that the power of Truth heals animals as well as men. I am thankful to God for the revelation of this healing truth, and to our Leader for her loving ministry.

MAURICE L. ELLIS, Randolph, Vt.

I wish to express my deep gratitude for what Christian Science has done for me. By its means I have been entirely cured of four serious ailments, also melancholy, and an affection of the heart said to be organic. On account of the latter I was doomed by the doctors to the life of an invalid. Previous to this I had been operated on five times; twice without any anesthetic on account of extreme weakness of the heart. I suffered intensely, and after each attack had increased weakness.

Last winter I was cured in Christian Science of a severe attack of illness, and felt no ill effect from the heart as I had in previous illnesses. This brought to me the happy realization of the statement in Science and Health (p. 494), "Divine Love always has met and always will meet every human need." My little son was cured of serious throat trouble in two treatments; and my little daughter of severe bilious attack and a badly injured leg. Our entire family have received not only physical benefits, but also a great spiritual uplifting which has brought health, peace, and happiness where before there was constant sickness and worriment.

Words are inadequate to express my deep and heartfelt gratitude for all the blessings received. I never can be grateful enough to God, and to Mrs. Eddy, the Discoverer and Founder of Christian Science. This truth has brought healing, peace, and joy to this age. It has brought me into the truer sense of life and a deeper and higher understanding of God and His creation. I realize that the truth can be understood and demonstrated here and now. It is my earnest prayer to live and act so as to be worthy of the name Christian Scientist.

ANNA M. PURKE, New York, N. Y.

I feel grateful for the benefits, both spiritual and physical, which I have received from our loving Father through the ministry of Christian Science. I was rendered unfit for my occupation (that of traveling salesman) by a severe attack of rheumatism, which caused me much suffering. I tried all the means prescribed by the medical profession to get relief, but nothing did me any permanent good, and for six or seven years I was subject to intermittent attacks of this distressing malady.

My wife and friends finally prevailed on me to try Christian Science. When I went to a practitioner I was so lame that I had to use sticks, but after the first treatment I went out walking as well as I had ever done, and was without pain or any lameness. The trouble returned, but I kept on with the treatment for three weeks, besides reading Science and Health. I have never felt a symptom of pain since that time. I commenced this reading and treatment in May, 1908, and I am still a student, trying to learn more of God's ways as expressed in the Bible and defined and elucidated by our revered Leader, Mrs. Eddy, in her book, "Science and Health with Key to the Scriptures."

Surely the light of Christianity which shone upon the Judean hills and plains when our loved Wayshower was on earth, has again been kindled by our dear Leader's exposition of God's word and of our Saviour's life.

M. D. PATTERSON, Memphis, Tenn.

More than three years ago I was healed of a stomach disorder, from which I had been suffering for many weeks. It was brought on by the use of very powerful medicines which for several years my physician had ordered me to take for another ailment. The doctor gave me medicine to relieve the stomach trouble, but its effect was only temporary. I grew rapidly worse, becoming greatly wasted and very weak, so that at times it seemed as if I could not live through the attacks.

A relative then advised me to try Christian Science, and no persuasion was required, for I simply could not endure the suffering any longer. I called upon a practitioner when the pain was most severe, and after the first treatment I left the room free from pain. In the evening (the usual time for trouble), the pain returned, though much less severe. I at once telephoned to the practitioner, who gave me absent treatment, after which I immediately fell asleep, and slept all night for the first time in weeks. I continued the treatment for one week, then returned to my work, visiting the practitioner every two or three days for a week or two, until I felt established, and have been in the best of health ever since. I never knew what it was to have perfect health until I found Christian Science, having been a semiinvalid all my life, but since I took God for my physician I have needed no other, and have used no material medicine.

I immediately began the study of Christian Science, and have been a constant student. I have had many beautiful demonstrations for myself, and I thank God for what this truth has done for me, and the joy and comfort it has brought to others through my efforts. What a blessing it is to know that God is an ever-present help in time of need! My gratitude to our dear Leader, Mrs. Eddy, for her wonderful work, "Science and Health with Key to the Scriptures," is beyond words.

G. R. HUESTED, San Francisco, Cal.

It was over six years ago that I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and since then I have not used any medicine or material remedy. I will try to outline what Christian Science has done for me: I have been healed of catarrh of many years' standing, and also of a disease which is said to be incurable. A great sense of fear has been overcome, and I have received many other blessings through Christian Science, for all of which I am thankful.

MRS. ELISA HOXL, Springfield, Minn.

[Translated from the German.]

Sincere gratitude impels me to testify to what I owe to Christian Science. It has healed me thoroughly of stomach and throat affection of many years' standing. Besides this, I suffered with a nervous trouble which affected the heart, and the physician told me that it might lead to very serious conditions. Often I would be unable to think clearly and had no strength whatever. A year ago I was treated in Christian Science, and improved greatly in three weeks' time. Today I feel perfectly well, for which I am deeply grateful to God. I am also most thankful to dear Mrs. Eddy.

FRAU BERTHA WUNDERLI, Staefa Ct. Zuerich, Switzerland.

About two years ago I was shown the power of Truth to heal, as taught in Christian Science. I had been suffering for several days with a severe cold, which did not yield to any of the usual remedies, but became worse from day to day, until I was compelled to leave my work. After being at home for two days, my wife and I decided I should try Christian Science, as we were occupying rooms in the home of a Christian Science practitioner. She was called in that evening, and the next morning I was so much

Digitized by Google

improved that I was able to go back to my work, although the treatment was continued for several days. At the end of this time I was entirely cured of the cold, also of a chronic bowel disorder for which I had taken medicine regularly for over ten years.

The fact of my being entirely healed in less than one week, impelled us to investigate this grand truth, and Christian Science has been a blessing to us in many ways since that time. For this I am truly thankful, and hope to prove my gratitude to God, and to the Leader of Christian Science, by faithful and daily work.

CHARLES D. BELL, Denver, Col.

I thank God for the blessings I have received from Him through Christian Science as taught by Mrs. Eddy. We do give God all the glory for what He does for us through Christian Science, but this world was full of people in utter darkness, weary wanderers in a wilderness of doubt, looking everywhere for the help of God; but no one could show them the way until our Leader saw the light of Truth, and cleared away a lot of brush and timber, so that we could get through. She listened to the voice of Truth, and then she saw clearly how to lead the people in the Christ-way up to God, and when we turn to Christian Science we are turning to God, for He talks to us through its teachings.

I am a member of The Mother Church, and also of First Church of Christ, Scientist, of Kirksville, Mo. I have been healed of an eye difficulty of several years' standing, and of a weakness which dated back to childhood. It is over nine years since I was healed.

MRS. MARY FRIEND WADE, Kirksville, Mo.

After trying a number of doctors, many different kinds of medicine, and undergoing several operations, but finding no cure, I tried Christian Science. For four years or longer I had done nothing but try material remedies, and for several years previous as well I had spent much money in this way. I felt that I must go back to school work again, but was so ill that I could hardly walk across the floor.

A Christian Science friend came to see me one evening. Her coming just at that time seemed providential, and when I told her of my trouble she advised me to let medicine alone and see what God would do. She then gave me treatment for three weeks. This was over five years ago, and I have never felt the need of material help since. The healing came to me slowly, but when I read the Bible and Science and Health thoughtfully and applied their teachings, it was made plain to me that the truth is the only remedy. The more I read and apply it to the overcoming of my faults, the clearer the Bible readings become. My work is done better when I read the whole Lesson-Sermon every day, and there is an inward feeling that I am gaining a clearer sense of Principle. I am thankful to Mrs. Eddy, who has made known to us this practical Christianity, and above all to God, who is all-power.

LIZZIE WATSON, Parker, S. D.

This seems a fitting time to express my gratitude for the blessing of Christian Science, which has supplied my every want. For several years Truth has been my only physician, healing me of all the illness or distress that has presented itself. The most serious trouble was in connection with my eyes. Headache and pain were constant, but through Christian Science I was entirely cured. Acute illness has been quickly overcome, with no bad after-effects remaining. Besides the physical healing Christian Science is the source of "many thanksgivings unto God." The more vital meaning of the sacrament has quickened my love and appreciation of the ministry of Christ Jesus, and brought me nearer to God than I ever thought possible.

For all the good that has come to me, I am indebted to Mrs. Eddy, through whose faithfulness this revelation has come, and I am deeply grateful for the *Sentinel* and *Journal* with their never-failing messages of comfort and instruction.—KATHARINE L. JALONICK, Dallas, Tex.

After two years' study of Christian Science I feel it my duty to tell of some of the many benefits received. Some friends asked me to read the *Sentinel*, and told me of the good their family had obtained, since knowing my need of help, they wanted me to be a sharer in their good fortune. My general health has so improved that now it never gets a thought except of thankfulness. Headaches used to come quite often, but I have had only one to overcome in the two years. Before knowing of Science I was much given to worry, and, like many others in business, I thought that this showed a good business spirit, and therefore was proud of it. Since knowing, however, that God is the source of our supply, and that to entertain doubt or worry is really a lack of trust in God, I have ceased to yield to this temptation, and as all Scientists know, I find that I thus have nothing to trouble me.

Words fail to express my thanks for this truth which all may know and apply.

HERMAN MAYER, Chicago, Ill.

Each day I feel more grateful for what Christian Science has done for me. For many years I was a great sufferer from a complication of diseases, and from the age of six years I was troubled with a diseased throat. I was under a specialist's care almost five years for stomach, liver, and kidney trouble, and I tried every remedy that I could hear of in the effort to restore my health. One doctor gave me not over six months to live, and I was compelled to give up my business. All these years I was trying to live a devoted Christian life. I often asked God to restore me to health, and could not understand why He did not.

About two years ago I had a very bad fall and injured my knee severely. In the midst of my suffering, a kind friend and neighbor, who was a Christian Scientist, assured me that there was a way to be healed. I told her that I knew I was sick, and I could not believe as she did, but she still persisted in advising me to take treatment. My husband could not leave home, but he asked this friend to take me to a practitioner, the nearest being at Anderson, Ind. I was then on crutches; I had fallen on the 13th of May, and it was then the 25th of July. We went to see the practitioner, and thanks be to God for that day, and for the joy that has come to our home by taking up Christian Science and trying to live as God wants us to live. We have had many beautiful demonstrations since then. I took three weeks' treatment, and it was the best investment I ever made. My husband is trusting God and working with me, and many ailments have been overcome by our earnest efforts, but the best is the spiritual uplift. I do thank God that our stubborn wills were broken and that we were led into the light of Truth. My daily prayer is that we may live to be of much and lasting good to others. We read the Lesson-Sermon every Sunday and take the *Sentinel*. The Bible and Science and Health are our daily companions.

My heart goes out in love to our dear Leader, Mrs. Eddy, for her great work in lifting up fallen humanity. Our earnest desire is to be worthy to be known as true Christian Scientists. My husband was not driven into Christian Science by affliction, but he is a sincere believer in the truth. In our daily living I pray that the consciousness of Truth and Love may so abound in our lives that other hearts may be made glad. We united with First Church

Digitized by Google

of Christ, Scientist, at Anderson in January, 1909, and we desire to be ever found true to God and to the teaching of Christian Science. We rejoice that we are in the fold.

MRS. SARAH E. WRIGHT, Lapel, Ind.

[Translated from the German.]

Christian Science was brought to my attention by a friend, and it healed me of stomach trouble and a skin disease. After attending the meetings for several weeks, I was filled with a sense of kindness and I had confidence that I might be healed through Christian Science. For years I had sought help with physicians, but in vain; but with two treatments in Christian Science I was healed. I am filled with gratitude to God that the truth which makes us free has again been brought to the world through Mrs. Eddy.—RICHARD KULAV, Berlin S., Germany.

Is it any wonder that Christian Scientists think the physical healing the least part of their religion, when through the reading and understanding of Science and Health by Mrs. Eddy, the Bible is illumined and proves to them that they have indeed a "Key" by which it can be opened? And, just in proportion to our understanding of the truth that Jesus taught, are we freed from the disease and sin in which we once believed. As the belief in sickness, disease, or sin is removed, its effect is removed from the body. I find it difficult to express in words my gratitude to our dear Leader, Mrs. Eddy, for having through her understanding of the truth brought to the world at this time such marvelous results.

Six years ago, through witnessing the laying off of glasses on the part of a sister-in-law who was visiting me, and seeing her live daily the life of a Christian Scientist, I began to attend church with her, to find out what this religion was; and when I heard that God is good, and that He is divine Principle, this gave me a different understanding of Him, and showed me how such a God could be omnipresent, omnipotent, and omniscient, which I had not been able to understand before. I told my husband that I thought it would be wise to send our children to the Christian Science Sunday School. He did not oppose it, and in a very short time began to attend the church services himself, and we have all continued to do so ever since. About five years ago, our last baby was born under Christian Science treatment, and the difference between that and similar experiences under *materia medica* was wonderful. Since his birth, only once have we had to call for outside help in Science, all the ailments which came to either of us or to the children having been overcome through our understanding of this truth that makes free.

I wish I could enumerate the many wonderful proofs of the power of Truth to reduce all error to the nothingness from which it sprang. One of my old opinions to which I held in a sort of unconscious way, was the doctrine of predestination, and my thought was not wholly cleared up until last winter. In going over one of the Lesson-Sermons, the eighth chapter of Romans brought back the thought, and for a few minutes it seemed to be a stumbling-block; but as I read the context, "And we know that all things work together for good to them that love God," like a flash of light came the thought, Why, that proves clearly that only good was predestined, and not both good and evil, and that I now believed in the doctrine of predestination in the truest way. I not only believed that good alone is predestined, but I knew it. To me, it is wonderful and beautiful that through spiritual discernment we can prove this truth, and reject all false beliefs.

I rejoice that when our Leader, Mrs. Eddy, was healed in a seemingly unusual way, she, like Moses at the burning bush, turned aside, and through her searching of the Scriptures discerned their spiritual interpretation and was able to give to the world the result of her wonderful discovery, to prove that it was then and is now demonstrable. Since coming into some understanding of the truth, as shown to us through Christian Science, we have had many beautiful demonstrations, but my deepest gratitude is for the spiritual awakening and uplift which I have had. I am also very grateful for the Sunday School, and the literature, which help children and adults alike to understand this healing truth.

KATHARINE L. MILSTEAD BURNS, Baltimore, Md.

For several years I suffered from a severe pain in my side, the attacks becoming more painful and frequent as time went on, until I was obliged to take to my bed, from which I could not even lift a foot without great suffering. I had just about come to the conclusion that it was my misfortune to suffer on without any permanent relief, when Christian Science was brought to my attention through a dear friend, who treated me for three days. The fourth morning I was able to get out of bed, and by nightfall I felt as well as ever. From that time (which is over six years ago) to the present I have never suffered a recurrence of the attacks, nor have I ever had the least symptom of one. Through Christian Science and its application I have been healed of many minor ailments, such as throat trouble, headaches, and ills common to womankind.

It is needless to say that for these blessings I am more than grateful, and words cannot express the happiness I feel in the knowledge that there is a balm for every wound, physical or mental.

ROSE M. EARLY, Washington, D. C.

The Bible says, "A little child shall lead them." This has been our experience, as our little son, eight years old, has been the means of bringing both of us into Christian Science. From his infancy our little one was frail and sickly, until June, 1908, when he had a week's treatment in Christian Science, after which he became well. He is now healthy and strong, never missing a day from school; and he, as well as his parents, are overjoyed at what this truth has done for him. We send this testimony with the hope that it may encourage some father and mother with a sick child to turn to God, and cling to Christian Science.

MR. AND MRS. W. A. YARWOOD, San Bernardino, Cal.

[Written for the *Sentinel*.]

MY COMMUNION.

SUSAN E. BARR.

In silence deep there comes to me
A sweet assurance of God's care;
Life, Truth, and Love encompass me,
I know that He is everywhere.

God's sheltering arms are ever near,
His wondrous light is never dim;
Safe in His love, I know no fear,
Because I am at-one with Him.

With thought attuned to hear and know
The still small voice that maketh free;
The hidden manna's spread, and lo,
I sup with Him and He with me!

In this communion Love hath laid
Its healing touch upon my soul;
In conscious oneness Christ hath made
My sense in Truth divinely whole.

FROM OUR EXCHANGES.

[Rev. Harry Westbrook Reed in *Universalist Leader.*]

The popular belief has made it difficult for man to understand the true relation between heaven and true religion. The conception has been based on the old idea that religion is of this world and heaven the next. Those who have made religion a part of their human experience will not question the heaven of love, the heaven of faith, and the heaven of true piety. If a generous impulse or a noble thought come to a man, and he gives some expression to them, he asks for no "better hold on heaven" for having done this; but realizes that they have made for themselves a heaven in his own soul, and the more he contemplates it the more he knows that he has given nothing and has received much. This strikes at the heart of the compensation of Christian service, which is inevitably and vitally connected with the service itself. Heaven is our reward not for our righteousness, but by our righteousness.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Observe the careful use of the impersonal term "the Son of man." This seems to have been a favorite self-designation of Jesus, and scholars are not yet agreed as to what he precisely meant by it. My own opinion, which I put forward with some diffidence, is that he did not employ it in any exclusive sense. To him the Son of man was not only himself, but the true humanity, the humanity unmanifest or only partly manifest in the flesh, the foundation of all being, the ideal man as God sees him. This Son of man is therefore latent in us all, and our task on earth is to lift him up from the things that are of the earth, earthy, and show him forth in his divine greatness and eternal splendor.

[Rev. Simon Blocker in *Christian Intelligencer.*]

The past generation has been an era of criticism in the field of Biblical research. Much of this has been destructive. Established views have not only been questioned but bitterly assailed. Out of the labyrinth of conflicting deductions has issued a spirit of skepticism with reference to much that was erstwhile precious, and this spirit has been a strong current to bear men away from their faith in Christ. Those who have done battle in this great war against conservatism may still lay claim to a religious faith which must be left to them to define, but the effect on the masses has been to rob many of all the content of their faith.

[*Interior.*]

Whoever arrives at the wholesome wisdom of really preferring for himself the ownership of lasting riches, must have a care to cultivate, as year comes in and year goes out, those better values that no year may alter or affect—loving fidelity to his home, ungrudging usefulness to his neighbors, honest response to civic duty, loyal allegiance to the kingdom of God, sacred honesty toward his own conscience, passionate friendship for Jesus Christ, flinchless integrity, white purity, foursquare nobility of life.

[Rev. Theodore D. Bacon in *Christian Register.*]

Instead of setting himself forth as unique, Christ Jesus stands always as the champion of the poor and the outcast of Israel, claiming for them, as for himself, the right to the spiritual inheritance of Israel, which the scribes and Pharisees had denied to them,—the right to be sons of God. It is not for himself alone that he claims this great title, but also for the "babes" to whom has been revealed that which has been hidden "from the wise and prudent."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in French old style type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: Its Religious Philosophy" a lecture by Hon. Clarence A. Buskirk.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the ***Sentinel, Journal,*** and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falnouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; In the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal Districts), Canada, Mexico, and Cuba, $5.00 a year, $2.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 93 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $2.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.36; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Some time ago a fire insurance exchange was formed in New Jersey, its membership including all the fire insurance companies of consequence and their representatives, and an agreement was entered into which provided that rates should be fixed for the entire territory covered by the exchange; that these rates should be binding upon all members, and that only brokers who had obtained the certificate of the exchange could do business with the companies in question on the regular brokerage basis. It shortly became impossible to mortgage any piece of property without submitting to the terms of the exchange as to fire insurance. The exchange then raised its rates for the territory about sixty per cent, and its members laughed at protests; but the attorney-general stepped in with a suit in equity, asking that the contract between the companies in the exchange be voided as representing an act *ultra vires* the companies. The defense of the companies was that they were merely business corporations whose doings did not touch the public interest. The court of errors on appeal declared that "if a corporation engaged in a business that is affected with a public interest, contracts to enter into a line of conduct in respect to such business that tends to affect such public interest injuriously and is contrary to public policy, such contract is *ultra vires* such corporation and may be restrained in equity at the suit of the attorney-general without regard to whether actual injury has resulted to the public;" that fire insurance corporations are corporations "affected with a public interest" because of the fact that such insurance has become an essential to the management of real property.

A postal savings bank bill, reported to the Senate last week, provides that there shall be established a system of postal savings depositories under the supervision and direction of the secretary of the treasury, the postmaster-general, and the attorney-general. Accounts may be opened at any postal bank by any person of the age of ten years or more, and by married women in their own names and free from any control or interference by their husbands. No person will be permitted to have more than one account. An account cannot be opened for less than one dollar and no more than one hundred dollars can be deposited in any one calendar month. All deposits must be multiples of one dollar, but in order that small amounts may be accumulated for deposit, savings cards will be issued and ten-cent postal savings stamps sold. When these cards with attached stamps show an investment of one dollar or multiple thereof, they will be received as deposits. Deposits in postal savings banks will draw two per cent interest, credited to the books of depositors once in each year. No person will be allowed to have a balance in a postal bank in excess of $500, exclusive of accumulated interest. Funds received by postal savings banks are to be deposited in any solvent bank, subject to public supervision and examination, in the state or territory and as near as practicable to the immediate neighborhood in which the funds are received. The deposits are to be distributed among banks on the basis of their capital and surplus, and the banks may give indemnity bonds to insure the safety and prompt repayment of deposits, or at its option may deposit satisfactory collateral security.

The National Waterways Commission, in its preliminary report to Congress, recommends, among other things, a general plan of conservation of water-power with the shaping of projects in the light of future needs of streams; resort to federal and state legislation rather than to unnecessary channel improvement merely to enforce reduction of railroad freight rates, with inhibition on the other hand of manipulation of such rates to freeze out water competition; a uniform system of distribution of cost of waterway improvement between federal, state, and local government; avoidance of multiplication of ports; restriction of dam construction permits; inauguration of such waterway projects only as can be completed within a reasonable time; a federal tax on power furnished to consumers; reservation by the Government of power to alter or repeal power rights.

It was the consensus of opinion, at the recent meeting of the state Governors at Washington, that hereafter they should meet in the various state capitals rather than at Washington, where the spirit of centralization of power in the Government is strong. They evinced a sensitiveness toward the question of a proper regard for states rights, which they believed could be most surely preserved by uniformity in state laws. They arranged for a practical program to be presented at the next conference, which is to be held early in the coming December, in ample time to give the Governors opportunity to lay the results of the conference before their Legislatures, most of which will meet in January following.

One of the largest individual property owners in Alaska has proposed to the Senate committee on territories to pay the Government a royalty of fifty cents a ton on coal mined for the lease of five thousand acres of some of the choicest coal lands in Alaska. It is estimated that such a royalty would net to the Government as high as two million dollars a hundred acres. This proposal is made in opposition to another proposition embodied in a bill which has been prepared, but not yet introduced, designed to permit the sale or lease of such lands at ten dollars an acre.

Postmaster-General Hitchcock expects to effect a saving to the Government of approximately two hundred thousand dollars a year by the order that requires postmasters to account for the excess revenue derived from the sale of stamped envelopes and newspaper wrappers, which hitherto have been charged to postmasters at a specific sum per thousand. In sales of lots, however, a few cents were gained over the fixed charges, and the profit, or excess, was retained by the postmasters.

International.

The desire of Secretary Knox in his recent proposal to neutralize the Manchurian railways was to eliminate the troublesome "railway zones," the administration of which has given rise to seemingly endless discussion between China and Japan, and China and Russia. It was proposed by Secretary Knox that Russia hand over the Chinese Eastern, and Japan the South Manchurian railroad, to China, under an agreement which should keep those railroads open to international commerce. The administration of the railroads, likewise that of the municipalities within the railroad zones, and the policing of the lines, would be in the hands of the Chinese imperial authorities, to be delegated as the Peking government saw fit, so that the terms of the agreement regarding neutrality and equal opportunities for all nations, were respected.

The new imperial legislative council, through which the natives will be afforded a larger share in the administration of the affairs of British India, met for the first time last week. Lord Minto, the governor-general, who presided, described the event as "a great historical occasion opening a new era with the inauguration of broader principles of government." Under the new arrangement the viceroy's council has three hundred and seventy members instead of one hundred and twenty-six as formerly, of whom a total of one hundred and thirty-five are elected as against thirty-nine elected heretofore. The council will take an active part in budget construction and new legislation. All religious and special interests may elect representatives to the viceroy's and provincial councils.

According to the accounts of the detailed proceedings of the first session of the assembly of Kiang-su province, the Chinese provincials are displaying, in exercising the limited consultative functions permitted them, a degree of efficiency that may well occasion speculations as to whether the much needed reform in Chinese national administration may not work upward from the provinces instead of downward from the central government.

The Japanese Emperor has issued a rescript authorizing the South Manchurian Railway Company to borrow a sum of money equal to double its paid-in capital, but not exceeding the total capital, which is one hundred million dollars. It is understood that twenty million dollars will be borrowed immediately and devoted to the rapid development of the Antung-Mukden line and the improvement of Port Arthur as a great commercial port.

Great Britain, the United States, Japan, and Russia are said to be moving toward an agreement for the abolition of pelagic sealing. Statistics have been published purporting to show that the seal herd has diminished from about three hundred and sixty thousand in 1900, when an official survey was made by the United States Fish Commission, to an estimated thirty thousand in 1909.

Transatlantic passenger travel for 1909 shows improvement over that for 1908. During 1909 all steamship companies operating from New York carried approximately 1,730,000 passengers, of whom 1,247,244 were inbound and 482,756 outbound.

Both France and Great Britain have decided to conform their answers to Secretary Knox's Manchurian proposition to those of Russia and Japan, both of which declined the proposal for the neutralization of the Manchurian railways.

Industrial and Commercial.

The interstate commerce commission has decided in the case of the Asparagus Growers' Association of Charleston county, S. C., against the Atlantic Coast Line railroad and other carriers, that the charges of sixty-five cents a crate from Charleston, S. C., to New York, Philadelphia, Baltimore, and Washington, and of ninety cents a crate to Boston, are unreasonable. The rates are ordered reduced to sixty cents to New York, fifty-eight cents to Philadelphia, fifty-six cents to Baltimore and Washington, and seventy cents to Boston.

Statistics show that with the beginning of the new year one hundred and sixty-five thousand railroad employees have been added to the half million in this country to whom pension plans already apply, owing to the adoption of the system by the New York Central and the Rock Island lines.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE STUDY OF CHRISTIAN SCIENCE.

SAMUEL GREENWOOD.

It need hardly be said at this day that the only correct method of studying Christian Science is that given in its text-book, Science and Health, and that any deviation therefrom will surely lead to misconceptions of the subject. Mistaken conclusions regarding the teaching and practice of Christian Science, keeping, as they do, to the line of matter and the so-called human mind, are incapable of grasping or demonstrating the spiritual facts of being upon which this Science rests. Hence the only safe course for the student is to avoid whatever does not find its authority in the published writings of Mrs. Eddy, the Discoverer of Christian Science and the Founder and Leader of the movement.

The statement that one is studying Christian Science often means no more than that he is perusing its literature, whereas to understand this Science requires much more attention than ordinary study implies. While it is highly interesting to read Science and Health from a literary point of view, or from the pure love of good literature, the heart of the subject is reached only through its spiritual apprehension, a result which mere intellectual proficiency does not of itself forward. A text-book is a manual of instruction, a means toward an end, and it is studied solely for the purpose of enabling one to reach that end. It is possible to memorize an entire text-book and yet not know the first practical thing about the subject it elucidates; and in like manner, one's familiarity with the letter of Christian Science does not necessarily indicate the ability to present its proofs, and should not be mistaken therefor either by its possessor or by others.

A thorough knowledge of the letter of Christian Science is essential for the student, but he also needs his own personal demonstration, not only to test his understanding but in order to realize the practical benefits of this teaching. Thus doing he will fulfil the apostle's injunction to "prove his own work," and be enabled to rejoice in his own knowledge of the truth. It may be that some who name themselves Christian Scientists do not fully recognize this necessity, believing that the regular perusal of its literature and periodicals, and the taking of treatment for their ills, constitute them students of Christian Science, although they may be making little or no attempt to demonstrate its teachings for themselves.

The genuine student of Christian Science, so far as he apprehends it, endeavors to conform his life and practice to its teachings. Our Leader says, "Whoever would demonstrate the healing of Christian Science must abide strictly by its rules, heed every statement, and advance from the rudiments laid down" (Science and Health, p. 462). If one is not willing to do this he has no just claim to the name of Christian Scientist, for a true student or disciple is one who strives to follow where his Master has led the way. To obey only when it is convenient, to do only what is pleasant and easy, is simply playing with the question, and will prove a frail support in time of need. A proper study of Christian Science tends to reform the student, to make him a more loving and lovable member of his family and community, healthier, happier, and holier than he was before; and unless these results are appearing, he is not studying Christian Science in altogether the right way.

While it is not demanded that one be a Christian before taking up the study of Christian Science, it is rightly required that he be sincere in his motive and earnest in his effort. Dishonesty and hypocrisy may pass undetected by mortals, but they do not deceive the divine Principle of Science, for this Principle can be demonstrated only as its law is obeyed and evil cast out of thought. It should be evident also that Christian Science cannot be studied aright while in an antagonistic attitude toward its Discoverer, for this state of thought hides from them the true idea which she has presented, the discernment of which is indispensable to the student's understanding.

Christian Science is the demonstrable knowledge of God, of His creation and laws, and of man's at-one-ment with his divine Principle, which Christ Jesus demonstrated for mankind, and the student who would understand even a portion of it must work as well as read, he must give effect to his discernment of truth by correcting his own errors of belief and by bringing out the fruits of his higher concept of God. All who seek the understanding of Christian Science, whether scholarly critic or humblest inquirer, must come under the same rule, for they are dealing with that which infinitely transcends the highest measure of human wisdom and attainment, the path to which lies not through worldly knowledge, but through meekness, unselfishness, and love. Even the avowed Christian Scientist has no advantage or privilege over others, except in so far as he has already obeyed its rule and assimilated its teachings in his own experience.

Christian Science makes man active not only in resisting evil, but in all forms of positive goodness, in unselfish devotion and loyalty to our Cause, and in bringing out the true spiritual ideal in consciousness. The opposite to this spiritual activity is apathetic contentment with the letter of Science and with the healing results obtained from a practitioner's work. Of all people, students of Christian Science need to be most watchful and energetic if they would keep step with the movement which is in the van of human progress. They must vigorously bestir themselves against the besetments of false material sense in order to maintain their freedom from its delusions. They must not only declare for man's heritage of harmony and holiness, but must work for it day and night, a work which involves the transformation of thought, and not pardon for wrong work or for work not done.

Christian Scientists must not forget that they are students of divine Science and not of a human philosophy, of a Christian practice and not a religious theory, and that only as they fulfil God's demands can they realize progress and success. Hence it should be a most vital question with them whether they are achieving the best results possible from their study, and whether they are bringing to bear upon their work, in the highest degree of which they are

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

capable, that "self-denial, sincerity, Christianity, and persistence" which our Leader says "alone win the prize" (*Ibid.*). Even the most advanced students are only beginning their demonstration of spiritual being, and should be modest in their claims, patiently working for a higher sense of truth, and striving, not against each other, but for the Mind of Christ.

Christian Science draws the line definitely between what is truth and what is error, between the spiritual right way and the material wrong way, and the student must abide thereby,—he cannot accept material law or testimony and expect to understand the spiritual teachings of Christian Science. Human thought, rebelling against the spiritual demands of Science, may attempt to provide a system of mind-healing wherein matter is retained and absolute reliance upon God is not required, but such methods are not the divine way of Christian Science and should not be confounded therewith.

Christian Science is the Science of being, the Science of Mind, and can be understood and utilized only through right thinking and right living. If we are not actively alive to this necessity, it must be because we are not fully aware of what evil claims to be and its tenacious grasp upon human thought, nor of the inevitableness of the suffering that follows mortals' allegiance to it. It is the mission of Christian Scientists to awaken mankind from the belief or dream of life in matter, but they must ensure their own awakening by rising out of its illusions through the realization of the omnipresence of God.

The object of the Christian Science student is not to add to his store of learning or to increase his literary culture, but to gain a working knowledge of the truth which makes free. To that end he cannot rigidly discriminate between physical and moral need, but must do with his might whatever comes to his hand to do, striving as earnestly to overcome sin as he does to overcome sickness. It must be his unceasing effort to replace erroneous thoughts, desires, and habits with the true idea of man as God's likeness; and only as he is doing this is he studying Christian Science as our Leader teaches it should be studied, and as his own salvation demands.

NEITHER LAPSE NOR RELAPSE.

VIOLET KER SEYMER.

A CURE in Christian Science is based upon the scientific fact that since true health is spiritual and eternal, there has never been a lapse from this genuine health, never any cessation of harmony nor any interference with God's government; so that man is amply justified in looking upon God as the health of his countenance. From this it logically follows that disease and discord have never been created, that they have no law to support them and that they have never come into real being for an instant. It further follows, that since there has never been any lapse from harmony, so there can be no relapse, for a lapse necessarily precedes a relapse. Mrs. Eddy tells us that "Science knows no lapse from nor return to harmony" (Science and Health, p. 471).

"But," says the average reader, "what about all the sick people one sees, do you ignore them?" Christian Scientists are very far from ignoring suffering, and the lives of practitioners are devoted to the relief of the sick. Their plea that God did not create disease nor ordain suffering, has the authority of Truth, and consequently the patient's fears and symptoms commence to abate as he takes in right ideas and gains quietness of mind and reassurance. When spirituality, transcending the evidence of the five physical senses, gives us a glimpse of creation as it really is, spiritual and perfect, we are faced with the fact that it is not so much a disease that has to be healed as a false belief to be obliterated and a dark fear to be dispelled.

Truth and Love are the only healing agents the world can ever need or ever have. Some may argue that the fact of suffering remains, whether the invalid is made sick from a physical or a mental cause. True, and to say that a person is merely suffering from the effects of fear and to leave the matter there would not go far toward healing him; but truth drives the lie from its hiding-place in declaring that neither fear nor false belief was ever created by God for the torment of His creation, and that if He is in no way discordant, neither can His creation or reflection be so. In the words of our Leader, "Science saith to fear, '. . . . You do not exist, and have no right to exist, for "perfect Love casteth out fear"'" (Retrospection and Introspection, p. 61). Thus, speaking from the spiritual standpoint, which is the only absolutely true one, sickness has no true cause, whether moral or physical. That disease will continue in human experience so long as sin remains, is indicated by the utterances of Jesus, but sin has no origin in God, since He is of too pure eyes to behold evil; and His omniscience includes no consciousness of this human invention.

Thus Science leads us again and again to the primal fact of harmony, which fact has been hidden by a maze of mistaken beliefs and theories, though all the while creation has lain intact and unsullied as the snow-capped mountain at which mortals gaze from distant valleys. Infinite good, however, is not distant from any one, nor is Truth remote; and mistaken fears have only the density which we ourselves accord to them. It is well to remember always that evil is a nonentity which never had any action of its own, nor ever suspended or accelerated the action of the one infinite and all-inclusive divine Mind. Some may suggest that even although the falsity of one's view-point has been recognized, this recognition carries with it no remedy for the existing state of things. It should not, however, be forgotten, by students of this Science, that a false claim is no claim at all; indeed Mrs. Eddy strongly emphasizes the fact that "to say there *is* a false claim, called *sickness*, is to admit all there is of sickness; for it is nothing but a false claim. To be healed, one must lose sight of a false claim. . . . As it is with sickness, so is it with sin" (Unity of Good, p. 54).

The honest student of Christian Science is endeavoring to gain dominion over the belief that there is any evil power, or any power in evil, or even any claim to such power. In this way Truth drives out error and all its false claims. Jesus maintained scientific facts so faithfully and dwelt upon them so constantly that he performed miracles such as the world had not witnessed before. Christ Jesus has given to humanity evidences of the true, sinless, deathless, spiritual creation, free from all that is material and perishable; he has shown us glimpses of a mountain-peak lying serene above the clouds of mortal belief, accessible to all, and each glimpse of which should heal some traveler in the valley, besides giving joy and buoyancy to the mental footsteps of the explorer in this spiritual realm. Our gaze should remain fixed upon the summit, so that the eternal light may stream through a consciousness that refuses longer to harbor darkness. The reflection of light alone includes no shadows. When the one creation stretches before us, more and more clearly outlined in peace and harmony, our health and happiness will cease even to appear liable to lapse or relapse.

NO BARRIERS IN TRUTH.

MARY GALAHER.

SOME time ago, along with my husband and two children, I spent a delightful holiday in exploring the ruins of Crookston Castle, situated near Paisley, Scotland, which is said to be eighteen hundred years old. The old caretaker declared that we should not go away until we had

Digitized by Google

climbed to the highest pinnacle and explored the deepest dungeon. Finally he took us to what seemed a dark recess in the wall, and said he was going to show us a historic chamber. Placing me first, and the others in Indian file behind me, he came last, and called directions to me. Following his orders, I entered the recess, and at the end I found a flight of stone steps. As the place was pitch dark, the caretaker called to me to shut my eyes and mount the steps. This I refused to do, and so keeping my eyes wide open, and my hands outstretched, I began to climb. Up I went, step after step, in the dense darkness, until at last I reached a place where the way seemed to be blocked.

I felt all around, but my hands only came in contact with a rough overhanging wall, and I called out that I could not go any farther. "Why?" asked the caretaker. "Because the way is blocked up," I replied. I heard the old man laugh quietly. "It can't be blocked," he answered: "try again." I began to grope again, toward my left, as the steps I had climbed had all wound in that direction, but only rough stone met my hands. Then our guide understood my difficulty. "Take a few steps to the right," he shouted, "and you will find yourself in the daylight." Without any hesitation I took three steps to the right, and saw a faint glimmer of light; then a few more steps and I entered a narrow doorway and found myself in the room which we had been seeking. The others were soon beside me, and we all had a hearty laugh at what I had supposed to be an impassable barrier.

A few days after this experience, certain circumstances came up in our household which threatened to engulf us in a sea of difficulties. One night I lay awake, thinking and planning as to what was best to be done. I thought of the many testimonies in the *Sentinel*, from others who had been helped in a wonderful manner, when everything seemed dark and discordant around them. "Ah, but," I thought to myself, "I know so little of Christian Science, I am utterly unable to undertake the solution of this big problem." Then I remembered my experience in the old castle, and the knowledge came home to me quite clearly that, as I had found daylight by obeying my guide promptly, so now I knew I must do what would bring me nearest to God, and thus to right, and leave the result to Him.

Next day we acted on this thought, and in two days a letter came which completely took away every one of our difficulties. I had to read it twice before I could believe the good news. Since this demonstration, I have resolved that for me there shall be no more barriers to progress, but that, with my consciousness filled with the wonderful, ever-present, ever-available guidance of divine Love, I will go straight on to the clearer light.

OUR CHURCH MANUAL.

FREDERICK MANN.

THE prefatory quotation from "Miscellaneous Writings" inserted in the Manual of The Mother Church is full of meaning in its explanation of the purpose of our by-laws: "They sprang from necessity, . . . hence their simple, scientific basis, and detail requisite to demonstrate genuine Christian Science." These by-laws are the guide-posts of our spiritual advancement, given to us as the need appeared, to help and instruct us; and we may well ask ourselves if we really understand their mission,—if we are sufficiently acquainted with the Manual to profit by it and to obey in every detail the commands of right whereto it directs the way. Do we all read and study it well, that we may avail ourselves of its blessings?

These rules and by-laws concern not only church officers, but many sections apply directly to each and every one of us. We read further that they were put there not as "arbitrary opinions nor dictatorial demands, such as one person might impose on another. They were impelled by a power not one's own,"—by a wisdom we are all trying to obey; and if they are rightly understood and carried out in our lives, they will help us in working out our problems day by day. Many of the rules, too, are intended to facilitate the work at headquarters, and when a few essential rules are disregarded, there results much needless labor, and oftentimes unnecessary expenditure of money, both of which could be used in more profitable ways.

By a more thoughtful study of the Manual we shall arrive at a clearer sense of those rules which pertain to our duties. For example (Art. VIII., Sect. 14, regarding the periodicals): "It shall be the privilege and duty of every member, who can afford it, to subscribe for the periodicals which are the organs of this church." There are few of us who cannot afford to support the work which has given us, and is continually giving us, all that we have and all that we are. If we ever seem to lack the means to have what helps us, it is because we limit God's power to supply our need. In not obeying this rule, we lose the great benefit to be derived from the study of all our periodicals; and unless we ponder the rules and admonitions of our Manual, we shall not clearly know the great privileges awaiting us.

Again, in regard to the per capita tax (*Ibid.*, Sect. 13), some of us are very careless, and perhaps are not awake to the fact that this tax shall not be less than one dollar, and that it may be, if we wish, two, ten, or more dollars each year. When one sends only one dollar, the treasurer must expend part of it to return a receipt, and thus he actually receives not a dollar but less. Oftentimes, too, he is obliged to spend more of it, in order to find out something which should have been stated by the sender in making his remittance: the church accounts, therefore, suffer for his thoughtlessness. A little carelessness on the part of each member makes a large difference in the added accounts of many thousands, and even if only a small percentage of these require extra time and attention, the treasurer's labors are materially increased.

We can all readily see how much each of us can do, either by regarding or ignoring these small things, to help or hinder the work at "headquarters." A closer study of the Manual, especially in regard to those sections which bear directly upon our personal obligations, will help us all to appreciate our duty and privilege. Article VIII., Section 1, is very helpful to guard and guide us in our daily work. Section 4 of the same article, regarding daily prayer, also gives an invaluable suggestion. We should study each page of the Manual, that we may not lose one word of advice there found. These rules and by-laws have been given to us because we need them; let us therefore give them careful study, to the end that they may daily become more practical, more helpful to us.

[Written for the *Sentinel*.]

MY WORK IS AT HAND.

HELEN E. STUDLEY.

WHY should I wish to face some problem great,
As though to reach the sooner heaven's gate?
For, close at hand, I see there lie in wait
Small problems still unsolved, which hide the way
That leads to larger tasks and brighter day.
Why long for foreign fields and victory,
When yet I have not faced the surging sea
Of stormy thoughts at home? Why vainly try
To push these back, thus to make place
For problems which as yet I cannot face?
Henceforth my work shall be to watch within,
To drive away each erring thought of sin,
And let no thought of evil enter in.
For thus shall I make strong the sword and spear
To vanquish every foe, both far and near.

SELECTED ARTICLES.

[J. R. Mosley in *Atlanta* (Ga.) *Journal.*]

To say that the practice of Christian Science endangers the health of the community is to say that it is not safe to trust God as the "great Physician" for body, mind, and soul, for this is just what Christian Science does. The Bible not only teaches that this is safe, but that to trust anything less than God is not safe, and experience has convinced thousands of intelligent and good people that it is safest to trust God and spiritual means only. Christian Scientists claim: First, that many cases which were pronounced hopeless by other systems have been healed through the understanding and practice of Christian Science; second, that Christian Science literature, wherever it is studied and its teachings reduced to practice, has a decided tendency and power to improve morals as well as health. Christian Science takes away the desire for whisky and tobacco and awakens a hunger and thirst after righteousness and all the fruit of the Spirit. Its whole motive and effort is to do good and only good. It would bless all and injure none. It prays for its enemies, and does good to them that despitefully use and misrepresent it.

Even such a critical and scholarly physician and psychologist as Professor Munsterburg of Harvard generously recognizes that Christian Science has healed thousands, and he credits a case of almost instantaneous healing of tuberculosis to its treatment. To say that Christian Science does not heal organic diseases because it is impossible to heal organic diseases by spiritual means, is to argue in a circle. Those who believe this, when they encounter those who are confident that they have been cured of such diseases by the means of Christian Science (and there are thousands of such cases), naturally say that these are cases of mistaken diagnosis. Now of all the incompetent people in the world to sit in judgment upon Christian Science it is these. Theirs is the attitude of the skeptic and prosecuting attorney, and not the attitude of the fair and open-minded investigator, juror, or judge. The state of mind that works in this limited as well as vicious circle, in Jesus' time first denied his power, and when forced to acknowledge it said, "He casteth out devils by Beelzebub." In our own time a similar state of mind says that Jesus either did not perform the works attributed to him, or that if he did it was by the means of suggestion, will-power, or hypnotism. It goes without saying that this state of mind cannot deal justly and adequately with Christian Science or anything that claims to work by the power of faith, the power of Love, the power of Truth, the power of God.

[Alfred Farlow in *Greenville* (S. C.) *News.*]

Our clerical friend affirms, in substance, that Christian Science heals by suggestion, which is not essentially a religion, and not according to divine power as the Christian Scientists believe. He does not state in so many words that Jesus and the apostles healed by this same irreligious method, but as in the course of his discussion he declared that "only those who are not hampered by serious organic troubles" can be healed by mental suggestion, we are left to conjecture whether or not he believes that Jesus and the apostles healed by mental suggestion or by divine power, or if indeed they healed organic cases at all. If the gentleman believes that sickness could ever be healed by divine power, upon what ground can he assume that it cannot be done in this age? Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

It should be noted that a part of the work which the Master did was to heal the sick. The healing of the sick is therefore included in the command, and in other parts of the Scripture it is specifically mentioned. We will agree with our critic that the healing of sin is of greater importance to the sinner than that he shall be rid of his physical suffering, but we would add that physical suffering is due to sin, and that if sin is entirely destroyed, sickness, which is only a consequence of sin, will also disappear. The Master said: "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" thus indicating that he expected the man whose sins were forgiven to be able to walk, and that he did not expect him to walk until his sins were forgiven. It is well to state here that the term sin in this connection is used in its broad sense as applied not only to wilful wrongs but to ignorant errors. To sin is to depart from perfection, to think, speak, or act in a manner not becoming the perfect image and likeness of God. Christian Science proposes to heal a man by regenerating him, proposes to do away with sickness by making the man too good to be sick.

We believe that an individual may be Christian to a certain extent and yet at the same time suffer physical disorders, but we believe that he who is a Christian in the full and complete sense of the word will have attained to that stature of manhood in Christ wherein there is no more pain. Jesus demonstrated what mortals may attain by spiritual growth, while it is the mission of Christian Science to show how mortals may grow spiritually.

While Christian Science differs from some other theories in respect to the nature of sin, it recognizes that sin and sickness exist in erring mortal experience and must therefore be grappled with and overcome by divine power. Christian Science calls disease and sin by the same names that others employ, although it differs in its teaching as to their nature and causation and consequently as to what constitutes the proper remedy for them. Christian Science is in strict accord with the Scriptural teaching in respect to the atonement and also in respect to marriage. It is nothing but a misrepresentation of Christian Science to say that Mrs. Eddy's writings declare against marriage. She teaches that marriage is the only legitimate method of propagating the human species. True, she agrees with the Scriptural teaching, "But they which shall be accounted worthy to obtain that world, and the resurrection from the dead, neither marry, nor are given in marriage;" that is, she believes that the world will eventually have attained to such a degree of perfection that mortality will have been put off for immortality and all will have passed beyond the necessity for marriage as well as the possibility of it.

[William E. Brown in *Salinas* (Cal.) *Journal.*]

Our critic takes us to task for believing in an impersonal God. It may be of interest to know that the Christian Science concept of God is very admirably set forth in the Westminster Confession of Faith which has been substantially adopted by all evangelical Christian churches. This definition of God is, "There is one living and true God, who is infinite in being and perfection, a most pure spirit, invisible, without body, parts, or passions, immutable, immense, eternal, incomprehensible, almighty, most wise, most holy, most free, most absolute, most loving, gracious, long-suffering, abundant in goodness and truth, forgiving iniquity, transgression, and sin." So, then, if the Christian Scientists worship the God of the orthodox church, there is no ground for criticism.

Christian Science does not teach that man is a part of God, but agrees with John that "now are we the sons of God;" which great fact was established by Jesus, who said, "I ascend unto my Father, and your Father; and to my God, and your God." Christian Science is Christian in foundation, structure, and practice. Mrs. Eddy has not founded a new religion, but has simply awakened the world to the fact that Christianity has lost none of its power and that it is just as available today in the healing of disease as it was in Jesus' time.

Digitized by Google

The first tenet of the Christian Science church reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." When Christian Science denies the reality of sin, it does so in the sense that it is not of God and therefore is temporal, unreal. Mrs. Eddy says on page 327 of Science and Health, "The way to escape the misery of sin is to cease sinning. There is no other way."

To sum up, Christian Science believes in the God of the Scriptures; believes in the divinity of Christ; believes that Jesus was the son of a virgin; believes in the inspired Word of the Bible; believes in the redemption of mankind from sin, sickness, and death.

[John H. Wheeler in *Nodaway* (Maryville, Mo.) *Forum.*]

Gibbon's "History of Rome" recites the fact that for three hundred years after the crucifixion primitive Christians healed the sick and raised the dead through their spiritual understanding of God's power over human error. Unfortunately this precious gift was early lost, but almost half a century ago, in the hour of direst need, a godly woman, through unfaltering faith in our Saviour's promises and consecrated prayer, experienced the healing power of God, and was made every whit whole. Guided by this realization of God's loving care, and more than ever convinced of His active living presence, she was led step by step to see and understand more fully His way of undoing the heavy burdens of suffering humanity. In holy humility she consecrated her life to the discovery of a spiritual rule possible for mortals to obey and practise; the missing link between God and man which insures the peace that passeth understanding, and with unerring wisdom she found it, and named this sacred discovery Christian Science.

For years this noble woman, Mary Baker Eddy, traveled about, teaching her fellow-men this revelation of God's active law, demonstrating her discovery by healing the afflicted and preaching the gospel of "on earth peace, good will toward men," "without money and without price." Her discovery occurred at the most opportune time, just when man's span of life had reached the lowest ebb, the shortest average length of life known in the history of the world; for according to accurate statistics the average life of men was then less than thirty-five years. Dating from that period, longevity has increased perceptibly and Christian Science is found to be the stone which the builders rejected, and which has become "the head of the corner." As a religion it has manifold proofs that its teachings regenerate men, sweeten life, soften nature with divine compassion, and turn thought resolutely to our divine Exemplar and Saviour for instruction and spiritual growth.

Mrs. Eddy writes: "I had learned that thought must be spiritualized, in order to apprehend Spirit. It must become honest, unselfish, and pure, in order to have the least understanding of God in divine Science" (Retrospection and Introspection, p. 28). Herein lies the test of our sincerity and the endurance of our new-found faith to support us in the hour of trial against the overwhelming fears common to human experience, that we may be able, in Bible language, to endure to the end.

[John L. Rendall in *Dubuque* (Ia.) *Herald.*]

Christian Science depends not upon personal magnetism, hypnotism, mesmerism, or any other phase of so-called human mind-force, but it depends for its results absolutely upon the manifestation of God's power to heal the sick and sinful in accordance with the teachings of Scripture. It is entirely spiritual in its activity or operation, having no element of materiality, human will, mysticism, etc., connected with it. The psalmist said: "He sent his word, and healed them, and delivered them from their destructions." Christian Scientists are daily proving this statement to be true.

[John Ashcroft in *St. Louis* (Mo.) *Republic.*]

The statement that Mrs. Eddy "can modify the faith of Christian Science, and has repeatedly done so during the past twenty years," is not supported by the experience of those who adhere to its teachings. In fact, it would be impossible for any one to modify the faith of Christian Science without first modifying the teachings of Christ Jesus, and of the Scriptures generally, on which it is based.

An examination of the tenets of The Mother Church, to which all Christian Scientists subscribe, reveals no modification of their earlier platform. They still declare our faith in the Bible, as "our sufficient guide to eternal life;" they affirm our belief in one infinite God; in his Son, one Christ, and reiterate our pledge to "watch, and pray for that Mind to be in us which was also in Christ Jesus: . . . and to be merciful, just, and pure" (Science and Health, p. 497).

[James D. Sherwood in *Denison* (Tex.) *Herald.*]

Mrs. Eddy tells us in the Christian Science text-book that the Bible was her only guide in the straight and narrow way when she was engaged in writing "Science and Health with Key to the Scriptures." Mrs. Eddy only claims to be the Discoverer of the method of Christian healing, which Christ Jesus taught and practised, and which his disciples followed up to the fourth century. She has named her discovery Christian Science, and it elucidates the Science of being. Superstition is not Science, and it has no kinship with Christian Science practice.

Science and Health may seem difficult of comprehension to the mind of our critic, because of prejudice; while to another, an unbiased thinker, an understanding of God can be gained by a study of its contents that will enable him to heal the sick as Jesus commanded. Instead of belittling the healing work of Christian Science by unjust comparisons, our Christian brother should remember the frequent mention of healing recorded in the Holy Bible, and that the same accusation he makes was brought against the works of the Master. It was then said that Jesus accomplished his healing work through Beelzebub, the prince of devils, whereas Jesus himself declared it was with the finger of God he cast out devils and healed the sick, and that his method brought the kingdom of heaven to the apprehension of men. In like manner the healing work is being repeated today; and it is a notable fact and one generally acknowledged, that when Christian Science heals the sick it simultaneously lifts the thought of the afflicted, and in doing this makes them better men and women. This kind of healing is spiritual. It is Christian, and through it is coming salvation to the children of men on earth.

Mere words are of but little value. In this age works are demanded and proof is essential. Our critic, if wise, will refrain from an ineffectual attempt to oppose religious sentiment with calumny and abuse. He should recall the struggles of Alexander Campbell and his early followers, and remember how hostility to Campbell only strengthened his purpose and aided him in establishing the church in which our critic now serves and in turn misrepresents a reformer whose only purpose and intent is to lighten the burdens of humanity. It might seem that modesty would suggest to him a forbearance sufficient to allow the Christian Scientists to make proof of their profession. The fact is that Christian Science is furnishing this proof, and persecution is in consequence of the proof given. This is history repeating itself. In the days of the early church persecution came from the Pharisees; and, we find human nature has not changed unto this day. Knowing this to be so, and understanding what is opposing, we may feel justified in being patient with those who oppose us, and say in the language of our Master, "Father, forgive them; for they know not what they do."

[Arthur E. Jennings in *Northern Echo*, Darlington, Eng.]

Mrs. Eddy's discovery of the Christ-principle and rule in divine metaphysics, which heals the sick and reforms the sinner, does not exalt her personality. On the contrary, Mrs. Eddy has labored to keep personality out of Christian Science, and as a protection, she ordained the Bible and the Christian Science text-book to be the pastor of her church. Mrs. Eddy's teaching has been accepted by intelligent men and women in all parts of the world.

It is reported that Dr. Ballard read from our text-book, "Science and Health with Key to the Scriptures," at his lecture. If that is so, then the quotations he used are a sufficient answer to his criticisms and denunciations, provided he left out his erroneous comment and allowed his hearers to think for themselves. It is impossible for our critic to interpret Mrs. Eddy's teaching in his present state of mind. If he will inquire more closely into the teachings of Christian Science, he will find that our best thinkers are agreeing with Mrs. Eddy as fast as they can. The late Lord Kelvin came nearest, perhaps, to her teaching, when he declared that matter was made up of thought-forces.

Dr. Horton, an eminent thinker in the Nonconformist ministry, disagrees with Dr. Ballard on the subject of Christian Science. Dr. Horton declared a few days ago that "the impetus of Christian Science is served from two truths which have been rediscovered and brought into practical prominence." These truths he defines as follows: "The omnipresence of God, and the overwhelmingly determinating fact of His character as perfect wisdom and love." The other truth, Dr. Horton said, was "a practical application of Christianity as recognized by the early church. The Bible is full of the idea—'who forgiveth all thine iniquities; who healeth all thy diseases.' With the growth of medicine the church gradually slipped into the mistake that while Christ deals with spiritual disease, he leaves physical disease to medicine."

These are historical facts, and a sufficient answer to our critic; but we have a greater authority, the Bible. Mrs. Eddy has not departed in any way from the Bible. We get our concept of God from the Bible, and not from a doctrinal belief. We accept unreservedly what the Bible teaches about Jesus the Christ, his death and resurrection. Moreover, we understand that what humanity needs is the truth Jesus taught, to enable them to put his teaching into practice.

The teaching of Christian Science has been most effectual in the healing of sin. Obedience to physical laws has not lessened disease, but obedience to spiritual laws does. Christian Science declares that Christianity is scientific, and the followers of Christian Science have demonstrated to their satisfaction that Christ is the best and safest healer. "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls." Let us all do this, and our reward is sure and now.

[Howard C. Van Meter in *Medford* (Ore.) *Mail Tribune*.]

Christian Science yields to no other religion greater recognition of the value to humanity of the experience of the Nazarene, and the effort of Mrs. Eddy has been to help mankind to understand it from the standpoint that he was applying an understanding of God as ever present and all powerful. This knowledge of God is Science in the true sense of the word, and explains the operation of His law of good. It is most important, in fact it is necessary, to understand a science in order to demonstrate it, and this involves naturally a consideration of the principal as well as the minor features indicated in Jesus' experience. The Science of salvation is set forth in the Bible, and the object of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is to help the individual to understand the Bible better, and thus prove for himself that God is ever present and all powerful. Good intentions are all right as far as they go, and it is good to emphasize the necessity of right living, but what has been lacking, and what is supplied through Christian Science, is the spiritual understanding of God's law and its operation, so that the good we desire is made available.

["Investigator" in *Columbus* (O.) *Dispatch*.]

I noticed by the morning papers that the Rev. T. L. Lowe, in a speech before the Central Ministers' Association, made a number of statements concerning Christian Science and Christian Scientists on which I am certain he must be misinformed. I have investigated the subject superficially, and think the Rev. Mr. Lowe is mistaken in saying that Christian Science is silent in face of the question, What shall I do to be saved? If I am not mistaken, the "Science" is predicated on the supposition that to be a Christian —that is, to be clean morally and to have one's life fashioned as much as possible after the life of the great Master —is the first requisite of health, or of the power to heal. He also says that Christian Science has no missionaries, but it is a well-known fact that the sect has grown both rapidly and remarkably, and that even Mark Twain, attacking Christian Science, said that if it continued to grow in the future as it had in the past, in fifty years there would be no churches except Christian Science. Isn't it possible, then, that Christian Scientists have taken to themselves personally, more seriously than have members of other churches, the injunction to go into the world and preach the gospel—in short, that they are doing more individual work, and that by their works their Cause has come to be known and has grown?

May it not also be true that they do their philanthropic work personally instead of collectively? How does the number of tithers among Christian Scientists compare with the number in other sects? Do Christian Scientists have church raffles, church fairs, strawberry socials, and send their children out to pester the neighbors to buy tickets, or do they support their own churches?

What do Christian Scientists do for the poor? I don't know. Will some Christian Scientist please answer these questions? Did Mr. Lowe speak after investigating carefully, or did he take a great deal for granted?

[S. Glenn Brown in *Kansas City* (Mo.) *Spirit*.]

Does the state of Missouri intend, through its laws, to create a monopoly of the medical profession, and grant to the members of that profession the sole and exclusive right to cure the sick? Or has the individual the right to choose which method he will employ in relieving his suffering? From time immemorial men have differed in their opinion as to which of the many ways was best. There are failures in all, and successes in all. The object of each patient is to be rid of his particular ailment. The object of the practitioner is to cure him. Are we, the patients, to be deprived of our right to health and happiness merely because one set of men have an idea that their method of curing is the only one?

The administering of medicine is the most uncertain and dangerous of professions. Any one pretending to know the use of poisons, and holding himself out to the public as one competent to administer them, should certainly be examined most thoroughly as to his qualifications. But why should one who does not profess to be a medical doctor be required to qualify as such? It would be a foolish law which required a carpenter to pass a plumber's examination; still they both have the same object in view—both are building a complete house, each one doing his part. A law requiring a non-medical doctor to learn medicine is just as absurd, and to debar them from the practice of their profession on that account is

Digitized by Google

creating a monopoly of medical doctors—a monopoly not only detrimental to the public interests, but actually inhuman in its operation.

It may be that the medical treatment is the best method of healing. The writer is not defending or advocating other methods. Neither is he censuring the M.D.'s as such. He is merely asserting that the lawmaking body has no authority to forbid one man to practise a profession or calling for the benefit or profit of another. The law cannot prescribe what method must be employed in the treatment of disease. This is a question that must be decided by the individual, and by him alone. If he can secure relief from some means other than medical, it would be depriving him of his right to think and act for his own good, to say that under the law he could not use those means.

Medicine is not an exact science, but is changing from year to year. If the members of the medical profession admit their faults of yesterday by administering different drugs today, how can they hold that theirs is the only method of treatment? Are we to follow them through their researches, accepting all their discoveries as true and correct to the exclusion of all others? If there are new treatments in medicine, there are new treatments without. Surely, all the learning and all the power and ability of research are not confined to the M.D.'s—still, they would have us believe that our lives depend upon taking their pills.

Dr. Oliver Wendell Holmes once said, "If the whole *materia medica* were sunk in the bottom of the sea, it would be all the better for mankind and all the worse for the fishes." Still, we must pass an examination upon *materia medica* before we are allowed to administer a massage. Before a Christian Scientist could administer divine treatment, he must be familiar with anatomy. The law has the right to say who shall be allowed to use dangerous drugs, or operate with the knife; but must we have an expert knowledge of gynecology before administering a bath?

The object of law is to protect humanity—not to rob the people of their right of self-protection. Laws are properly passed for the benefit of all, and not to make one class rich at the expense of the masses. The Legislature has no more right to establish a state system of healing than it has to establish a state church. If we can decide upon the manner and means of saving our souls, why cannot we have the same right in regard to our bodies? The state church is not, and never has been, an institution of the American Republic. Church monopoly is a thing foreign to our ideas of free government, and medical monopoly will never exist in the state of Missouri.

Every man has the right to live his life in his own way, and do as he pleases, so long as he does not interfere with the rights of others. There is room for every means by which the pains of mankind may be relieved. There is room—and to spare, for every man who can cure the sick. He should be restricted in the use of dangerous methods, but should an aching brow be made to suffer for the want of a tender hand? Christ, the divine healer, when told that other than his disciples were curing diseases and casting out devils, said: "Forbid them not." Can we do more?

THE MANUAL.

The 85th edition of The Mother Church Manual, containing all of the recent changes, has been issued and is now on sale.

Subsequent editions of the Manual will be issued when new by-laws are made or when important changes are made in by-laws already in effect; and due notice of each new edition will appear in the *Sentinel*.

Address all orders to Allison V. Stewart, Publisher, Falmouth and St. Paul streets, Boston.

AMONG THE CHURCHES.

CEDAR RAPIDS, IA.

From now on there will be but one Christian Science church in Cedar Rapids. Last evening [Jan. 6] First and Second churches effected a union which will be an entirely new organization. Each church formally disorganized for the purpose of uniting as one; and all money, property, and belongings of each was made over to the new church, which will be called First Church of Christ, Scientist.

Following the disorganization of both churches a union meeting was held, a new charter and new by-laws being adopted and a complete set of new officers elected. On Sunday morning next the new First Church of Christ, Scientist, will hold services at the Majestic at eleven o'clock; and both former congregations will be united as one, with the addition of a number who were not members of either of the old organizations.—*Cedar Rapids Gazette.*

HAMILTON, O.

The edifice of First Church of Christ, Scientist, was opened for the first time Sunday morning [Jan. 2]. On this memorable occasion every seat in the neat little church was taken, and the services were very appropriate. The home of the Hamilton Christian Scientists is situated on North Second street, between High and Dayton streets, and was previously known as the Cornell property. Recently the building has been reconstructed into a handsome church edifice. The congregation on Sunday was composed of the members of the church, many of their friends, and some visitors from other cities. All were delighted with the church and predict a wonderful success for the Christian Science organization in this city.

Hamilton Journal.

GENEVA, SWITZERLAND.

The following resolution was offered, and approved by the members of the Christian Science society of Geneva, Switzerland, at their regular business meeting held Jan. 6.

Whereas, at the last business meeting held by the members of the Christian Science society of Geneva, Switzerland, it was decided to discontinue the translation into the French language of their services, and

Whereas, the consequent enforcement of said decision, by holding their services in strict accordance with the order of services contained in the Manual of The Mother Church in Boston and in the *Christian Science Quarterly*, has given cause for satisfaction; be it therefore

Resolved: To express through The Christian Science Publishing Society of Boston their joy and thankfulness for having become, to some extent, beneficiaries of the "privilege" specifically pointed out and promulgated to mankind by our beloved Leader, the Rev. Mary Baker Eddy, in her immortal address to First Church of Christ, Scientist of Chicago, namely: "Christianity and Science, being contingent on nothing written, and based on the divine Principle of being, must be, are, irrefutable and eternal. We are indeed privileged in having the untranslated revelations of Christian Science" (*The Christian Science Journal*, December, 1897).

These statements, which alone elucidate and certify the origin and originality of the Bible, have shown us in this hour how and why no language is comparable to the language of "Science and Health with Key to the Scriptures" by Mrs. Eddy, for the purpose of elucidating its unique idealism, which rests entirely on the spiritual discernment of divine Principle or the "new tongue."

Respectfully submitted,

Christian Science Society of Geneva, Switzerland.
By the Committee.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

A WORD TO OUR HELPERS.

An important factor in the advancement of the Cause of Christian Science is its publications, and the progress which has been made along this line, in the way of development, owes its success, in large measure, to those loyal workers, all over the field, who are mindful of our Leader's longtime request that they not only subscribe for the periodicals issued by the Publishing Society, but read them and write for them. In the early days when workers were comparatively few and mere tyros in divine Science, the editorial staff must have been hard pressed sometimes for the requisite "copy;" but with the years not only the corps but the supplies have been recruited, and the editorial function must now be exercised not only to the end that the integrity of the teachings of Christian Science be preserved, but that the high standard of literary excellence set by our Leader be maintained.

Everywhere the loyal and grateful recipients of the blessings of Christian Science are eager to help spread abroad the gospel of the divine healing, and day after day, from all quarters of the globe, come articles, poems, testimonies, news from the churches and the lecture field, reports of the work done by the various committees, etc., —and right welcome they are at headquarters. Every communication is given thoughtful consideration, and while they do not all bear the hall-mark of the scholarly thinker, no one who has a helpful thought for mankind, a vital experience which has made clearer some Scriptural or metaphysical truth, need hesitate to offer his contribution for the general good, even though he feels he can express himself but crudely.

There is one way, however, in which many contributors, unthinkingly perhaps, add to the editor's duties, *i.e.*, in their indiscriminate use of quotations. An established rule is that all quotations from the Scriptures and the writings of Mrs. Eddy must be verified, and in the latter case the place where the passage is found must be stated. This has seemed necessary, because so many otherwise careful writers quote from memory, in which case the passage is seldom verbally correct. This is particularly noticeable when citations are made from Mrs. Eddy's writings, and quite frequently, too, the quotation is introduced with no hint as to its context. When the passage is from Science and Health it can usually be easily found through the Concordance to that volume, but those who are familiar with the extent of our Leader's writings, both in book form and in our periodicals, will understand the task imposed when a single phrase or even a sentence must be located with no other help than is afforded by a thorough familiarity with the text. Again, there must be constant alertness to recognize the phrasing which should be accredited to another, that, unconsciously perhaps, has been incorporated by the writer as his own thinking.

Occasionally a contribution is submitted which proves to be practically a compilation, sometimes of Scriptural passages or extracts from Mrs. Eddy's writings, sometimes of both. These writers are doubtless unaware that in this wholesale appropriation of another's thoughts, even though they be duly accredited, they are offending against the canon of good taste in the first instance, and in the second against the direct wish of our Leader. Quotations have their use—we like to strengthen our own phrases with

> precious thoughts
> That shall not die, and cannot be destroyed;

but unless this is sparingly done we only weaken our individuality of expression.

One cannot fail to be impressed, in studying Mrs. Eddy's writings, with the fact that, while in their brilliancy and forcefulness they bear the unmistakable impress of their source of inspiration, they are nevertheless worked out on original lines, and a quotation is never used except with that fine sense of fitness and appropriateness which drives home and clinches the argument advanced. Can we in our own work do better than pattern after her wise course? It is undoubtedly true that there is no phase of divine Science which she has not elucidated with far more clearness than we may ever hope to do, and that however cleverly or learnedly we voice our thinking we are only giving a new dress to something she has already ably said; nevertheless, if we read and ponder, carefully, prayerfully, and persistently, the Bible and the inspired teachings of Christian Science as set forth in Mrs. Eddy's writings, the fruit of our study and experience will eventually evidence a growth out of error into grace that may well go forth in winged thoughts for the help and encouragement of those who are just entering on the heavenly quest.

Archibald McLellan.

"I WILL ARISE AND GO TO MY FATHER."

One of the most significant features of the story of the prodigal is this, that when understood it is found to be not a far-away Oriental tale, but a near-by experience. We are all prodigals, in a way, for we have turned our backs many a time upon our highest ideals, and sought satisfaction in response to the seductions of material sense; and we have all found, or are sure to find, that this course means rapid expenditure and fleeting joy. It means a deep sense of unworthiness and degradation, of enslavement and shame, all the heart-hunger, humiliation, and despair which filled the swine-feeder's cup with bitterness to the brim.

The experience of all this has been so keen in many a noble nature as to beget a splendidly sincere effort to gain the peace and joy which pertains, as he is sure, to true living. Too often, however, though the endeavor to "arise" has been genuine, he has not gone to his Father, for he has not understood that, if there is no reconciliation with Truth and Love, there can be no home-coming, no entrance into the inheritance of good. In his ignorance and desperation he has tried to find the homeward path in ascetic vigils, in conformities, and in prayers that were mingled with tears. His struggle has been an honest one, but he has utterly missed the way because he has not understood the import of the Master's teaching, that freedom is gained by Truth-knowing, by the right understanding of God and His law, and by this alone.

This has been most clearly instanced in the case of those for whom the penalty of material sense has assumed the form of physical suffering. Prompted by pain, they have arisen, and have bravely tried to find escape from their miseries; but instead of going to the Father, instead of looking to the apprehension of that divine law which was effective in Christ Jesus for the healing of all diseases, they have entered the devious and labyrinthine paths of *materia medica*. This has been the place of stumbling for the great body of Christian people, and in the hour when they knew that no earthly arm could save they have proved again that to be without God is to be without hope.

Human experience and Christian Science are at one in teaching that the most heroic effort to "arise" is forever futile unless it preludes a going to the Father. To this

Digitized by Google

Christ Jesus gave persistent emphasis. Indeed his whole history might be epitomized as a continuous endeavor to show wanderers the way home, the way of return to the acceptance and realization of Love's legitimate and eternal rule. So, too, Christian Science teaching is always theocentric. Whatever the prodigal's stage of advance, whatever the nature of his need, its counsel is ever the same: Go to thy Father, and be reconciled. Divine Life is thy only strength, divine Truth thy only refuge. The Christian Scientist seeks ever to define God to his own consciousness, as Mrs. Eddy has said, "by feeling and applying the nature and practical possibilities of divine Love" (Messages to The Mother Church, p. 37). This is the one way home, and happy are they whose feet are following it.

The promise and possibility of the prodigal's redemption lay in his realization that he was his loving father's son, and in his determination to arise and go to him. The moment these were given the scepter, that moment his problem was practically solved, and he had a right to begin his home-coming song. And this is just as true for us as for him. To apprehend God, the undying Life, the omnipresent Truth, the eternal Love, as our Father, is to have immediate and perennial occasion for rejoicing. We have not completed our demonstration, and perchance are still a long way from home; nevertheless, if in every hour we are thus remembering God, and if in every crisis and determination we are arising and going to Him, it is fitting that the days of our mourning should cease, for (so the story reads), when the prodigal "was yet a great way off, his father saw him, and had compassion."

JOHN B. WILLIS.

THE RIGHT ATTITUDE.

IN a recent Lesson-Sermon there was a very telling instance of the relation between certain truths. The familiar and oft-quoted statement, that God is "of purer eyes than to behold evil," was immediately followed by this text from Psalms: "If I regard iniquity in my heart, the Lord will not hear me." If any one is at all in doubt as to the practical value of Christian Science in overcoming the trials and difficulties of human experience, he can always prove this for himself by clearing his own thought of all belief in evil. We may not be able to prove that God does not know evil, but if we take on trust the prophet's words, that God is of purer eyes than to behold it, and from this basis strive to rid our own consciousness of the belief that evil has reality, place, or power, we shall be amazed at the results attained in the overcoming of sin and disease.

As the belief in evil vanishes, the light of Truth pours in, and the mental illumination which follows shows that the divine Life is indeed "the light of men." It gives health for disease, joy for sorrow, strength for weakness, and purity for defilement. It only remains for each individual to conform to the divine requirement, to maintain continually the right mental attitude, in order to become a recipient of the blessings which all desire. It cannot be otherwise if the promises of the Bible count for anything, and if our hopes are not all delusions.

Would not every sincere seeker after Truth prefer to think that he himself was in the wrong (with a chance of being set right), than to believe that God either cared not to help him or could not do so? Unhappily too many do think this, and so wrong God and themselves. They believe that the Almighty has instituted a material order with entailed pains and penalties, and, as an eminent writer has said, calmly looks down from a height above, "seeing it go." It is not likely that any professed Christian would challenge the Christian Science concept of God as omnipresent Love and wisdom; but to stand by this concept, live by it, through the strain and stress of mortal experience, is the all-important thing.

There are some who seek in Christian Science the healing of some tenacious form of disease, and who are greatly puzzled if it be long delayed. The tendency in such cases usually is to dwell upon the symptoms, talk them over, recount the history of "the case," and then wonder why the healing has not been brought about as quickly as in the experience of others. They quite forget the psalmist's admonition, "If I regard iniquity [either sin or disease] in my heart, the Lord will not hear me." Mrs. Eddy says, "Suffer no claim of sin or sickness to grow upon the thought. Dismiss it with an abiding conviction that it is illegitimate, because you know that God is no more the author of sickness than He is of sin" (Science and Health, p. 390).

There are some who seem to need the help of those more advanced than themselves, but all may prove the powerlessness of evil if they are only faithful in keeping their mental gaze turned steadily toward the light, and refuse to allow the mirror of their consciousness to reflect aught unlike God. All who do this may assuredly say, as did the psalmist, "But verily God hath heard me; he hath attended unto the voice of my prayer." "Blessed be God, which hath not turned away my prayer, nor his mercy from me."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Bucyrus, O., Jan. 17, 1910.

Mrs. Mary Baker Eddy,

Beloved Leader:—We, the members of First Church of Christ, Scientist, Bucyrus, O., in annual meeting assembled, wish to assure you of our love and loyalty, of our gratitude for every rule and every word of guidance you have given, and more than all for the example of infinite love and patience you have shown to all your followers.

Lovingly and obediently yours,

STELLA D. CARY,
CARRIE F. ROEHR,
Committee.

Auburn, N. Y., Jan. 22, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—The members of this branch church, assembled in annual meeting, unanimously voted to send you a message of love and gratitude for the priceless blessing which has come to mankind through your teaching and example of following Christ. We are grateful for The Mother Church, which has made possible the many branches, and realize that the branch must "abide in the vine" to bear much fruit. With the guidance of the Manual, and obedience to its by-laws, daily watchfulness, and consecration to God, we renew our pledge of loyalty.

Faithfully yours,

MRS. EUGENIA L. MASON, *First Reader,*
ORLANDO B. CUDEBAC, *Second Reader,*
HERBERT A. MORGAN, *Clerk.*
First Church of Christ, Scientist.

Detroit, Mich., Jan. 24, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—You will be rejoiced to know that the Cause of Christian Science in Detroit has reached the point where it is necessary to expand by the formation of Second Church. About sixty members from First Church are taking this step, leaving the old church with the loving God-speed of their fellow-workers, and knowing that divine Love is pointing the way. Every step has been an unfoldment of the bounty and love of God. A temporary place of meeting was desired, and when the proprietor of a large establishment was approached for the renting of

Digitized by Google

a desirable hall in his building, this was given, and no remuneration would be accepted. First Church has generously and unanimously voted to start the sister church financially by an even division of funds on hand.

We rejoice in the democracy you so wisely enjoin. There will be students of at least five teachers in our charter membership. We are mindful of the beautiful message you sent, in the words of Isaiah, when First Church, Detroit, was dedicated: "Arise, shine; for thy light is come;" and we trust that our light may so shine before men, that they may see our good works, and glorify our Father which is in heaven.

In loving loyalty and obedience to the spirit and law of The Mother Church, it will be our endeavor to follow the example it has set, by following the wise Leader who has inaugurated and directed this great movement for the uplifting of humanity from sin, sickness, and death to the "recognition of practical, operative Christian Science."

Lovingly and obediently yours,
Second Church of Christ, Scientist, of Detroit, Mich.
ALICE CHENEY SMITH, ALICE THRALL NEBE,
MINNIE S. MUNSON, *Committee.*

New York, N. Y., Jan. 23, 1910.

Dear Mrs. Eddy:—Allow me to tell you, dear Leader, how we of First Church felt the power of your thought in the morning service of Jan. 23, when your telegram was read to the congregation. We rejoiced with gladness because we knew that the stand taken was blessed with your approval. God bless you for your loving thought.

Loyally yours,
PHILIP PETER MAJOR.

Sacramento, Cal., Nov. 25, 1909.

Mrs. Mary Baker Eddy.

Beloved Leader:—I am truly thankful to God, and to you, for your gift to mankind of "Science and Health with Key to the Scriptures." This is the first year in my life, since I was sixteen years of age (and I am now forty-seven), that I have been able to pass through without a desire to drink or smoke; and that I have not taken a drop of medicine, is something to be very thankful for. One year ago today I was able for the first time to acknowledge what Christian Science had done for me, and this year has been one of happiness for me. I was healed through the perusal of your writings, and my heart is full of praise to God, and of thankfulness to you, who have done so much for humanity through your inspired writings. That I may live my gratitude is my desire.

Your faithful follower,
THOMAS H. SMITH.

Albany, N. Y., Jan. 18, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—It is indeed a privilege for us at the beginning of a new church year again to offer our tribute of gratitude to God for the revelation of divine Science which has come to us through your inspiration. We acknowledge that all of good which we possess is the direct result of our increased spiritual understanding, made possible through the study of the inspired Word of God, unlocked to us, dear Leader, by your blessed "Key to the Scriptures." Your untiring efforts for the uplifting of mankind inspire us to a renewed activity; "and we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

Your loyal followers,
First Church of Christ, Scientist, Albany, N. Y.
MARGARET RIGGS COX, MARGARET DUNDEE GIBB,
Committee.

New York, N. Y., Jan. 21, 1910.

Beloved Leader:—With deep draughts of grateful love I thank you for our text-book, "Science and Health with Key to the Scriptures," and your lesser writings, for they have enabled me to find and to adhere to the straight and narrow way during these months of testing. I want to acknowledge and to express my gratitude to the Directors of the dear Mother Church, and for our inspiring publications; particularly the *Sentinel*, and for the loving cooperation of all loyal Christian Scientists all over the field. God's loving support through all these channels has enabled me to stand unflinchingly at my post as Second Reader of First Church of Christ, Scientist, of New York city, and for this I extend my appreciation and gratitude.

Lovingly and faithfully your follower,
ELLA GARRISON YOUNG.

Buffalo, N. Y., Jan. 19, 1910.

Dear Mrs. Eddy:—I love you so much for the wonderful change which has taken place in the Buffalo church. The stone at last is being rolled away from our church door, and will be more like the open book of the Christian Science text-book, which unfolds freedom on every page. We read in Science and Health (p. 223), "Spiritual rationality and free thought accompany approaching Science, and cannot be put down." I cannot express myself or thank you enough for your wonderful text-book, whose Principle is Love, and which works out all harmony.

Lovingly,
MRS. L. M. BARBER.

Portland, Me., Jan. 20, 1910.

Beloved Teacher and Leader:—Today has been a momentous one to the Christian Scientists of Portland, for this morning, with simple but impressive services, the corner-stone of our church edifice was put into place. With hearts filled with gratitude, we, the members of this church, would express loyalty and love to you, our loving, patient guide, knowing that you will be made glad at this indication of the onward steps we are taking. Day by day our consciousness is rising to a clearer apprehension of the church of Christ. We are learning that the stability, strength, and power of the church rests alone on purity of thought, unselfed love, and willing obedience to the divine demands. Reaching far beyond and above this material symbol, we sincerely and earnestly desire to bring forth the fruits of Christliness, that our church may be in deed and in truth, a worthy tribute to Christian Science.

Your loving student,
JENNIE J. CHURCHILL,
In behalf of First Church of Christ, Scientist, Portland, Me.

Twin Falls, Ida., Jan. 6, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—We, the members of the Christian Science Society of Twin Falls, Idaho, assembled at our first annual business meeting, wish to express our deep gratitude for the privilege we have enjoyed in uniting to hold regular services in accordance with the rules in the Manual of The Mother Church. We desire to pledge our love and loyalty to the Cause of Christian Science, and to you our Leader, and earnestly pray that both individually and as an organization we may so progress in the understanding and demonstration of the divine Principle which your faithful work has pointed out to us, that our lives may prove the sincerity of our devotion and serve to help others in their progress heavenward.

Lovingly and loyally yours,
Christian Science Society of Twin Falls, Ida.
MRS. ELIZA L. JONES, *Clerk.*

THE LECTURES.

MARQUETTE, MICH.

Frank H. Leonard lectured on Christian Science at the Opera House Dec. 11. He was introduced by James Russell of the *Mining Journal,* who said in part.—

We live in a tolerant age, when men have come to believe it wise for each to allow the other to think out the problems of life for himself, and to determine for himself, according to his own judgment and the dictates of his conscience, what he shall accept as truth and what reject as error. We have with us yet those who believe this spirit of tolerance to be but another name for laxity of belief in the truth, who maintain that the world has grown indifferent in religious matters. And yet it seems to me that never before in the history of the race have the teachings of Christ been so universally applied in the every-day affairs of life in all civilized countries as they are today.

From thousands of pulpits tomorrow there will be thundered forth denunciations of the lack of faith among men which is alleged to be characteristic of the world in our day. But is there such a lack? I for one do not believe it. We are making a more direct application to human needs of the gospel of Christ, it appears to me, though we may not mouth professions of faith as much as was done in former days. The preachers of the gospel tell us that it is difficult to attract people to the churches. That may be true, but it is because the people are doing their own thinking to a greater extent than ever before, and deciding for themselves, with minds illumined by gospel truth, what their duty is to God, to their fellow-men, and to themselves. If their independent thinking leads to more correct living, is not that proof that in their own way they are applying the truths of Christian teaching to the problems of life as Christ intended they should when he came on earth to give them his law?—*Correspondence.*

HOUSTON, TEX.

An audience that filled the Beach Auditorium gathered last night [Dec. 13] to hear Prof. Hermann S. Hering expound the doctrines of Christian Science. He was introduced by County Judge Amerman, who in presenting the lecturer said in part,—

I cannot claim to be numbered among that rapidly growing army of earnest men and women who by their daily demeanor appear to have made happiness a business and trouble a lost art, but I do claim that you have in your number certain men and women whose love I have known since infancy and whose hearts are as free from guile as an infant's laughter; therefore, when these people tell me that they know the rock on which their faith is builded, I am convinced that they have set their feet in the trails of everlasting truth. But, even though my slight observation of Christian Science has been through the eyes of biased loved ones, I cannot fail to see the happiness that seems to go with its teaching, and the trouble and worry that seem to fly forever wherever it takes up its abode.

My friends, when we learn that thousands and thousands of thinking men and women are yearly accepting a plan of life and work that fifty years ago was unknown, content to live by it and to die by it, sure in the belief that it is the best that the ages have produced, is it not time for us to consider what this belief is?

Houston Chronicle.

ST. JOSEPH, MO.

An audience which filled the first floor and part of the first balcony of the Tootle Theater, gathered last night [Dec. 2] to hear the Rev. William P. McKenzie deliver an instructive talk on Christian Science. The speaker was introduced by R. H. Abercombie, a member of the state board of charities and corrections, who said:—

To your humble servant has been assigned the honor and pleasure of introducing the orator of the evening. Before doing so, I desire to relate a portion of my observations in relation to the organization and fast growing power of Christian Science. My first observation occurred in 1901. At that time, I was fortunately or unfortunately a member of the Missouri Legislature. During that session, the medical fraternity of Missouri decided that an amendment to the laws governing the practice of medicine was necessary, which resulted in the introduction of what was known as the "Hall medical bill," introduced in the House by the Hon. M. W. Hall of Saline county. A great storm of protest against the passage of the bill resulted in its adoption, the members of both bodies paying but little attention to the protests. Upon the roll-call for the final passage of that bill I had the honor to cast the first vote, and it was recorded "No."

During the year 1909 I again witnessed a scene that occurred in the Missouri Legislature. Another bill had been introduced to regulate the practice of medicine, and certain sections of the bill were regarded as objectionable and infringing upon the constitutional rights of the individual. Representatives of the Christian Scientists were again in Jefferson City to protest: this time not in vain, in fact those in charge of the bill mutually agreed with the protestors that the objectionable sections should be modified or eliminated from the bill. Note the change in eight years. What will be the strength in eight years more I can only predict.—*St. Joseph Gazette.*

LECTURES TO BE DELIVERED.

Muskegon, Mich.—William D. McCrackan, M.A., Woman's Club Building, Feb. 8.

Albert Lea, Minn.—Prof. Hermann S. Hering, Firemen's Auditorium, 3:30 p.m., Feb. 13.

Hamilton, Ont.—Frank H. Leonard, Bennet's Theater, 3:30 p.m., Feb. 13.

Knoxville, Tenn.—William D. McCrackan, M.A., Auditorium, Sunday afternoon, Feb. 13.

San Francisco, Cal.—Miss Mary Brookins, Christian Science Hall, afternoon, Feb. 13; evening, Feb. 14.

Jacksonville, Fla.—Francis J. Fluno, M.D., Duval Theater, Feb. 14.

Caro, Mich.—Frank H. Leonard, Church Edifice, 7:30 p.m., Feb. 15.

Montgomery, Ala.—Francis J. Fluno, M.D., Grand Theater, 3 p.m., Feb. 20.

Bridgeport, Conn.—Bliss Knapp, Hotel Stratfield, Feb. 18.

Maryville, Mo.—Prof. Hermann S. Hering, Empire Theater, 3 p.m., Feb. 20.

Tampa, Fla.—Mrs. Sue Harper Mims, Tampa Bay Casino, 3 p.m., Feb. 20.

Springville, N. Y.—Rev. Arthur Reeves Vosburgh, Goddard Hall, 4 p.m., Feb. 20.

Moline, Ill.—Frank H. Leonard, The Barrymore, 8:15 p.m., Feb. 21.

I would be true, for there are those who trust me;
I would be pure, for there are those who care;
I would be strong, for there is much to suffer;
I would be brave, for there is much to dare.

I would be friend of all—the foe—the friendless;
I would be giving, and forget the gift;
I would be humble, for I know my weakness:
I would look up—and laugh—and love—and lift.

HOWARD ARNOLD WALTERS.

TESTIMONIES OF HEALING.

I feel impelled to write a brief acknowledgment of the debt I owe to Christian Science, but words seem so hopelessly inadequate to express the thoughts of which the heart is full, that I am almost ashamed to send so cold and brief a report. I owe everything I have, and everything I hope for, to Christian Science. I have the honor to be a member of The Mother Church, also of our branch church here. I also had the great privilege of being a helper at the exhibit of the Publishing Society at the Edinburgh exhibition. I am more grateful than I can say for the *Monitor*. For more than twenty years this was the great reform for which I most longed,—that some one should arise who would be powerful enough to purify the newspapers of the world. I thank God for the answer to this prayer!

It is now more than three years since I first heard of Christian Science, during which time I have been steadily benefited. I have had relief from many physical ailments, but the thing for which I am most grateful is the gradual change of thought which the study of the truth has brought to me. I am indeed grateful for Mrs. Eddy's work, which has brought a knowledge of Life to so many—and has shown me the way "out of darkness into his marvelous light."—AIMEE HOCHSTETTER, Edinburgh, Scotland.

In October, 1908, I was watching my football team, when the ball suddenly flew out of bounds and both teams rushed after it. I dodged one boy, but several others coming up together struck me in such a way as to push my feet from under me. My first thought was that I would not be able to rise, but I denied the wrong thought, sprang to my feet, and walked and ran about freely the remainder of the day.

When I arrived home in the evening I told my wife of the accident, and thought no more of it until, on attempting to rise, I found that my knee was becoming stiff and also very painful. My wife wanted me to telephone to a Christian Science practitioner, but I told her that we ought to be able to overcome the trouble ourselves. The pain, however, increased till it seemed almost unbearable and I could not move my leg, even while lying down, much less could I stand. Finally I consented to let my wife telephone the practitioner, and in a few minutes I walked out to supper by holding on to some supports. Within an hour all pain had ceased, and I could not only walk without difficulty, but could even raise myself on that foot. After that, not even the closest observer could notice any evidence of lameness. There were several who had seen me when I was in such great distress and who watched the change as I got better, and they marveled greatly at the demonstration.

We have been students of Science and Health for about eleven years, and feel very grateful for the many proofs of divine Love which we have experienced. We cannot express enough gratitude to Mrs. Eddy.

A. D. GRIFFIN, Superintendent of Public Schools, Park City, Utah.

Freely I have received, and freely do I give my testimony, trusting that others may derive as much benefit therefrom as has come to me. On the 25th of May, 1907, I was instantaneously healed of blood-poisoning. *Materia medica* had been tried to its uttermost, and only as a last resort did I turn to God, but He was both ready and willing to receive and to heal me! We called a Christian Science practitioner, and before she reached me—in fact, in about ten minutes—I knew that I was healed, for such a sense of peace and rest came to me. The doctors had said I had only about two hours to live, but instead of being arrayed in my grave-clothes, I got up within that time and dressed myself, and never felt better in my life. About this time I began to feel hungry, and on being told by the Christian Science practitioner that I might have anything to eat that I wanted, I ate a hearty meal, although for three weeks I had only been able to take liquids.

While I am truly thankful for this healing, for having been spared to my husband and little ones, it seems almost nothing compared with the spiritual uplifting which has come to me, and of which I am obtaining more and more by overcoming the belief in evil, and through the study of that dear book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Another thing for which I feel very grateful is that I have been led to Truth in the babyhood of my children. Ever since I have been a mother I have prayed more earnestly for God's guidance in rearing my little ones than for any other one thing; prayed that I might bring them up in the way they should go, but I never knew "the way" until Christian Science revealed it to me.

Christian Science is bringing added blessings to me and mine daily, and I do feel very thankful to God, and to all who have helped me in word or deed. I feel that we can never be grateful enough to dear Mrs. Eddy for her purity and for the life of unselfed love which she has given to the world. God bless her, and help us to follow faithfully as she directs.—HATTIE L. TAYLOR, Dallas, Tex.

One day in the summer of 1908, I scalded my left arm very badly, but by steadily declaring that God is the only power, I suffered very little from the injury after the first few minutes. At another time I burned my fingers severely, but the same declaration that God is the only power so freed me from the usual results of a burn that I was able to use my needle in sewing with no difficulty or suffering whatever. Every winter I used to have very severe colds that would last late into the spring, and three times the condition of my lungs was such that the physicians considered me in great danger; but since my healing, eight years ago, through Christian Science, when no one supposed I could live much longer, I have not had more than two or three attacks and they were of short duration.

The testimonies in the *Sentinel* and *Journal* are very encouraging and helpful, and the other contributions often give me a clearer idea of how to work. I am very grateful for Christian Science.

MRS. FRANK ROLLINS, New York, N. Y.

About four years ago some disagreeable growths began to make their appearance on my hands, until both of them were almost covered, some of these excrescences being very large. I was ashamed to let any one look at my hands, and one day my mother, who is a Christian Scientist, said that we must try to get rid of these warts, for God never made them, and matter had no power to produce anything. She told me not to count them, but to realize every time I looked at my hands that discordant conditions did not belong to me. My mother and I together declared the truth, and the result was wonderful. Every trace of the ailment disappeared inside of a few weeks. My hands are smooth and natural again. I have been healed from other ailments under the treatment of Christian Science. For this I am very thankful to God, and grateful to our Leader, Mrs. Eddy. I attend the Christian Science Sunday School.—BERTHA JULIA CHRISTENSEN, Troy, N. Y.

About three years ago I first heard of Christian Science through being healed of a stomach trouble of long standing. I had been treated by a physician, and while I would feel better for a time, I would soon become worse again; and I never knew what it was to feel entirely well until I was treated in Christian Science. Since that time I have had no recurrence of the trouble, and I want to express my

Digitized by Google

gratitude for the blessings received through this truth. I purchased a copy of "Science and Health with Key to the Scriptures" and have studied it ever since, and have received help in many ways besides the physical healing.

I have often desired to testify as to the blessings I have received through Christian Science, and am glad to have this opportunity to do so, and perhaps of helping some one else. I thank God, and I am very grateful to our Leader for Science and Health.

LUCILLE HAMILTON, Denver, Col.

[Translated from the German.]

It is with a feeling of deepest gratitude for the help which I have received through Christian Science that I would tell about my healing. Two years ago I suffered terribly with headaches. As they became unbearable, I finally consulted a physician of high repute in Charlottenburg, who declared that growths in the nose were the cause of the malady, and that he could but urge me to submit immediately to an operation. As I was suffering greatly, I submitted to a most serious operation, after which I stayed for three weeks and a half at the private clinique of the physician in question. During that time I suffered dreadfully, as the dressing had to be done twice a day. After I was dismissed I remained under constant treatment for two years, without any prospect of getting better. There was an open wound in the jaw, and further surgical treatment was given frequently, this being extremely painful, as it was done without an anesthetic.

After I had undergone thirteen such treatments, I heard of Christian Science, but could not make up my mind to seek help in it. I did, however, attend a Wednesday evening meeting, and the impression which I got was such a favorable one that I immediately asked for treatment. I at once removed an appliance which the surgeon had deemed necessary, something I never would have dared to do otherwise, but after the third treatment the wound began to close gradually. After the sixth or seventh treatment it closed completely, and has not caused me pain again. I am now a healthy girl of twenty-two, and cannot say how grateful I am to God, and also to our dear Leader, Mrs. Eddy, who has brought us this great Science.

MARTHA THIELOW, Berlin W., Germany.

In reading a testimony in the *Sentinel* I was led to see the mistake I had been making in not expressing gratitude for the good already received. In October, 1904, divine Love led me to take Christian Science treatment for a so-called incurable disease, from which I had suffered severely for twenty years. All that the attending physicians had been able to do was to give an opiate to relieve me, and in this way the habit of using it was formed. This afterward made me its slave. I often tried to quit its use, yet was never able to do so. Today, with a heart filled with gratitude for what Christian Science has done for me, and in the hope that this testimony may help some others to gain their freedom, I can say that in one treatment all desire for the drug was destroyed. This was proof to me that Christian Science is indeed the Christ-healing.

Since then I have passed through some great trials, but always depended on Truth to deliver me, and I have never found it wanting. Although part of my healing has to mortal sense seemed slow, even for this am I learning to be thankful. It is teaching me each day something new about Truth, Life, and Love, which brings the peace that passes mortal man's understanding. I wish to express the great love and gratitude I feel for all the kindly help I have had on my journey from sense to Soul; also for the *Journal* and *Sentinel*, each copy of which brings such help and comfort, especially to those who live in the country, away from all Scientists (as do I), and they are truly appreciated. These are only a very few of the many reasons which I have for gratitude to God, and to Mrs. Eddy for this way of Truth which is revealed through the Bible and the Christian Science text-book.

MRS. EMMA POOL, Hendley, Neb.

It is with gratitude and love that I give the following testimony. Christian Science has done so much for me that I scarcely know what to say. Having been told over two years ago that I could never be a well woman, in my despair I was led through the wish of a cousin to try Christian Science. For eighteen years I had been a constant and intense sufferer with headaches, besides stomach, kidney, and abdominal troubles. I had tried various doctors, some of the best that could be employed, but none of them could give me any permanent relief. After four weeks' treatment in Christian Science, I can truthfully say that I am well, and stronger than I have been for more than eighteen years.

I had always tried to look to God for help, but my spiritual vision had been dimmed. I could not understand how He could be a God of love, and yet permit me to go through such deep waters of affliction. The physical healing is naturally a great deal to me, but far greater is the better understanding of a God who is good, one who does not send sickness and pain. Only the Giver of "every good gift and every perfect gift" could have provided Christian Science for our healing. I gladly join with other Scientists in trying to realize the day when all shall know God and Christian Science; when heaven will have come, and God's will be done on earth as in heaven. The light of Life now guides and illumines my path each day. I feel that I cannot be grateful enough to God, and to Mrs. Eddy; and that each thought as it enters my mental door should be one of love and thanksgiving. If we try to follow our Leader's example, and live up to our highest understanding of good, we can help all those whom our lives touch.

I am indeed grateful to the Publishing Society, and also for our Lesson-Sermons and for every thought that has helped me to find the truth.

MRS. ALVIN A. BRAY, Mt. Vernon, Wash.

I have long felt it a duty to express through our periodicals my gratitude for the many benefits that Christian Science has brought to me and mine, as I have much to be thankful for. The first demonstration made in my family without the help of a practitioner was six years ago. While I was standing on a fence I lost my balance and fell heavily, injuring myself severely. I at once declared the truth to the best of my understanding, and when I reached the house I read Science and Health. I had no other help, and was well in a few weeks. Since then I have relied upon Christian Science for help, and have not found it wanting when faithfully applied. Coughs, fevers, etc., have been overcome in my family.

The most remarkable cases of healing were during 1908. One was that of my little boy. He stepped on a thorn in July, but it did not trouble him much for over a week and then he began to complain. I dressed and attended to his foot, but could not find the thorn. I then had a doctor open it. He also had absent treatment in Christian Science, but at the end of two weeks his foot seemed to be worse and he was in a bad condition, as it then seemed, in every way. He had no rest and was so thin that I was almost afraid to start with him to a practitioner, but as soon as I could get the consent of my husband we took the child to the home of the practitioner and remained four days. We returned home on Sunday, and on Monday he could bear some weight on his foot, and the following day he could walk. He improved from that time, and in less than two months was well.

Digitized by Google

The other case was the healing of our little girl in September of what seemed to be a congestive attack. One morning early, she had a spasm. At first I was not much alarmed, but as she did not get over it, I was so overcome with fear that I telephoned for a practitioner, who, as she could not come, gave her absent treatment. The child could not speak until midnight and then she only answered when spoken to. The next morning she appeared to be better, but did not seem quite rational for a few days. She was, however, healed entirely in a very short time. For all this, and much more that I could tell, I am thankful to God, also to Mrs. Eddy, who has brought to us this truth.—MRS. ROSA JONES, Lewisville, Tex.

After having been treated under *materia medica* for several years without any permanent benefit, I at last turned to Christian Science and was healed of severe catarrhal trouble in less than one week, although I took treatment for three weeks before I was thoroughly convinced that I was permanently healed. In realizing that God is no respecter of persons, I felt that I, too, could learn to help myself and others. I then began the study of Christian Science in earnest, and have been studying it for eleven years.

I have found this truth an ever-present help, not only in the healing of physical disease, but in destroying every erroneous thought. "Science and Health with Key to the Scriptures" has taught me that the indulgence of evil thoughts is sin; that such thinking engenders disease, induces sickness, and leads to death; while the persistent thinking of good thoughts, and the doing of good deeds, destroys sin and disease, heals us, and leads to immortality, through the renewing of the mind. I am indeed grateful to God, who has given to us our dear Leader, Mrs. Eddy, and the blessings of this healing truth.

ELIZABETH KNIGHT MELVIN, Memphis, Tenn.

Four years ago Christian Science came into our home, and joy, peace, prosperity, and health was the result. My companion was first healed, and a few months after this I was willing to try it myself. Mine was a case of instantaneous healing. I believe I was healed because I wanted to be, and not because I knew anything about Christian Science, for I did not. Nearly all that I had ever heard of it was from its enemies, but I had seen a number of people who asserted that they had been healed by it. Furthermore, I was far from being satisfied with the religion which I had been trying to live for a number of years. My complaint was heart and stomach trouble, also an attack of lung trouble; but, as stated above, I was healed so quickly that I was certainly surprised.

I found that this great light which had come to me so beautifully was the light for me to walk in, and that it is also free to every one. The earnest seeker can know that these things come from God by their results. Praises be to His name that Mrs. Eddy has given to the world the "Key to the Scriptures."

GREENLIEF SNOW, Hartford, Conn.

I joyfully bear witness to the healing power of Christian Science. From my earliest recollection I never knew what it was to be free from some ill, and it does seem as if I must have had all that flesh is heir to. I was supposed to have inherited lung trouble, also another ailment which manifested itself in an eruption. I suffered untold agony for many years, the eruption at times appearing all over the body. The lung disease was manifested in many forms, and finally, after years of suffering and medical treatment, a council of doctors pronounced it tuberculosis, and said that no more could be done for me. I did, however, get relief through change of climate.

Then I met with an accident, and had an arm severely hurt, besides sustaining injuries which kept me in a hospital most of the time for over two years. I underwent two operations with only partial relief, and my arm gradually became useless. The physicians were advising a more critical operation; but just at this point some of my friends were so anxious to have me try Christian Science treatment that I reluctantly consented. I was discouraged, and felt that death was my only hope of relief; yet in a way I was willing to try anything which offered release from pain. I applied to a Christian Science practitioner, and received relief at once. At the time it seemed to me that my healing was very slow, yet in six months I was perfectly healed of all these discordant conditions, also of many other ailments which I have not mentioned.

This healing was in 1904, and I have rejoiced in good health ever since. My one aim is to live Christian Science, not in words only but in deeds; to love God supremely, and to be loyal to our dear Leader.

MRS. SUSAN E. ARMITAGE, Brainerd, Minn.

I wish to add my testimony, in the hope of helping others. I was a member of an orthodox church and tried hard to be a Christian, but I did not find the help and comfort which religion should bring to one hungering for righteousness. In March, 1905, after seeking relief for physical ills for several years, an aunt sent me two *Christian Science Sentinels*, which were eagerly read. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, was soon purchased, and through reading this wonderful book, stomach trouble and several other ailments disappeared. A very obstinate bowel difficulty soon vanished with a little help from a practitioner, and much fear has been destroyed. My daughter came into Science about the same time, and we are both striving to understand more of this truth that makes free.

While the physical help is wonderful, it cannot be compared with the spiritual uplifting, the comfort and peace which come through the study of our text-book and our other literature. I wish to add that when the Lesson-Sermons seem difficult to understand, the words in Matthew 7 : 7, 8 bring the light to my darkened sense. There would not be room to tell of the many demonstrations of the power of Truth, but my daily prayer is to live near to God and to show others the way. Words cannot express my love and gratitude to Mrs. Eddy for Science and Health. I am very thankful to be a member of The Mother Church and for the help it is in our journey from sense to Soul. I am striving to be worthy to be known as a Christian Scientist.

MRS. GERTRUDE QUINER, Manderson, Wyo.

For thirty years I was a great sufferer from chronic rheumatism. I could hardly walk and the pain was most excruciating. I believe I have tried almost every well-known remedy, including a course of baths at a celebrated hydropathic resort. This relieved me for a short time, but I was soon as ill as ever. In August, 1907, I witnessed the most wonderful healing of my dear grandchild through Christian Science, and I thought that what God could do for this little one He could do for me; so I sent for a Christian Science practitioner and had a wonderfully helpful talk, and finally decided to take treatment. In six weeks I was healed. I am over seventy years of age and have recently been able to nurse a sick friend through a very severe illness. I feel most grateful for this wondrous freedom from bondage, and for the new light and true understanding of the Bible, so beautifully explained by Mrs. Eddy.

MRS. E. POOLEY, Rochdale, Lancashire, England.

Do we realize the opportunity, the blessed privilege given to us when the pages of our priceless periodicals are open for our benefit, that we may give as well as receive? With great joy and thanksgiving I wish to relate some of the many blessings that have been mine since this religion of Love, named by Mrs. Eddy Christian Science, came into my life. It appealed to me as practical as well as beautiful, therefore a necessity; so I listened to all I heard said of it, and read also. Not until a year had passed did I call for help, when a disease, which had seemed a part of me through a number of years but which had been silent for some time, loudly screamed for recognition. This was a distressing bowel trouble and supposed to be hereditary. I was healed of it in three treatments through the understanding of a dear Scientist. This was in 1898, and since that time many proofs of God's loving and protecting care have been mine.

Within the past year, this healing Principle, as made known to us by our Leader, has again been proved in the overcoming of doubt, darkness, and fear, attended by mental and physical pain. Many times, when I could not see a step before me and there seemed nothing to do but bow the head and let the waves roll over, the patient practitioner led and helped me over the rough places until the darkness was dispelled and the practicability of Christian Science demonstrated. Sin has been uncovered and cast out, and I have been set free. In this time I have beheld the whirlwind of anger, the earthquake of hate, and the fire of revenge commanded to be still by the voice of Love, which was obeyed and there was a great calm. I rejoice that Mrs. Eddy listened to the voice when it came to her, and that she wrote down for us what she heard and saw; that her vision of Truth was keen and her hearing of its message acute. Through this same alertness and love of humanity, she has given us today the *Monitor*, whose power for good we do not as yet fully realize. I thank Mrs. Eddy deeply for all she has done for me and mine.—Mrs. Mable I. Gilkey, Dallas, Tex.

It is now more than four years since I sought and found help in Christian Science. I was healed in one treatment of a bowel difficulty of fifteen years' standing. Since that time I have taken no medicine and have had no return of the complaint. Although my progress has not been all that I desired, the following demonstration proves to me that I have some understanding of Christian Science. One night after retiring, I was suddenly taken very ill. I was awake the greater part of the night and constantly declared the truth of being, that man is God's child, and that God's child cannot be ill. About four o'clock I lost consciousness, and two hours later I awakened perfectly healed. I immediately arose, dressed myself, and performed my household duties as usual. I have had other demonstrations, all of which are proofs to me of the power of Truth.

I am trying to gain a better understanding of Christian Science, and am indeed grateful to God, and to Mrs. Eddy for this healing truth.

Lizzie Huntoon, Boston, Mass.

I am not a Christian Scientist, but claim the privilege of giving a little testimony respecting an accident I experienced in February, 1907, and the good result derived from Christian Science treatment. I went to feed my horse early one morning, and unintentionally startled him. He suddenly jumped, and his foot struck my ankle-joint. The pain I felt was so intense that I had to sit down for a while, and when I recovered, I got up and went to the house. After a while my foot felt easy, and I went about my business as usual, but later in the day my limb became very painful and I found that I could not walk without assistance.

I deliberated in regard to calling a physician, and reasoned with myself that in all probability he would bandage my limb and prescribe a week or ten days' rest; so I decided to try Christian Science treatment and called for the assistance of a practitioner, whose prescription was that I should read in "Science and Health with Key to the Scriptures" by Mrs. Eddy, a book I had often seen about the house (other members of my family having been healed through Christian Science), but I had never looked into it. I opened it and read a page or two, then fell asleep; and when I awoke I felt quite peaceful, the limb being heavy, but with no pain. I remained quiet until supper-time, and then got up and with the assistance of a cane walked to the dining-room. I ate my supper, then sat up until bedtime. The next morning I got up as usual, and experienced no pain during that day, nor has there been any since. In appreciation of the good and speedy recovery, I have since that time taken much interest in Science and Health, and I intend to absorb as much of its teachings as possible.—I. Maxtoux, Dallas, Tex.

Nearly two years ago I became interested in Christian Science, and since that time I have not enlisted the services of a physician, or depended upon *materia medica* to overcome physical discord. A short time ago, when my little daughter and son were suffering from an attack of whooping-cough (my little daughter very severely, as it seemed), I asked help from a Christian Science practitioner, who is also a friend, and was very grateful to see how wonderfully the power of Truth was made manifest in overcoming the severe paroxysms of coughing and in entirely curing the child in two treatments. The other little one was very much helped by the first treatment and in a few days was also well. It is with sincere gratitude to God that I give this testimony.

Mrs. Marie Lawrence, Park City, Utah.

One day last winter, while hurrying down a steep street, I had a bad fall, and in a short time my back began to pain me. The next day I was so ill that I could not even turn in bed, and there were other evidences of severe injury. A friend of ours, a Christian Scientist, came at my request; she treated me and talked to me for a short time, and after she had been gone a few minutes I tried to get up, and found that I could do so without the least pain and could even stoop and lace my shoes. From that time I never felt any sense of pain.

Emelynn G. Prisk, Park City, Utah.

[Written for the *Sentinel*.]

THE INCOMING TIDE.

MARIE RUSSELL.

When evening steeps the world in rest,
A sigh steals from the sea's deep breast
Like echo of an ocean's roar.
What means this sound from far-off shore,
Brought home by the incoming tide?

Can it be grief for words unsaid?
Is it the pain of tears unshed?
The longed-for truth we never knew?
The ghost of dreams that proved untrue?

The murmur borne across the sea
Is faith that lives eternally,
The hope of things that are to be.—
'Tis Love, unbounded, wide, and free,
Brought home by the incoming tide.

FROM OUR EXCHANGES.

[*Christian Register.*]

The revelations which had made the spiritual fortunes of prophets and apostles, of saviors and martyrs, of heroes and forerunners of the kingdom of God, were the precious and wonderful things, while the writings in which some of these experiences were recorded were only hints, signs, and symbols of that which passes all understanding and is beyond the wit of any man to record in perfection and transcribe with accuracy. The signs and wonders that attended the lives of holy men and women, and which still puzzle and confound a worldly and gainsaying generation, were and are only outward signs of an inner grace, of an invisible life, of a wonder-working power which resides in the hearts and consciences of those who submit themselves to the divine guidance.

[Pres. Emory W. Hunt in *Standard.*]

It is of prime importance that the Christian thinker, representing the attitude of the Christian church, should be open minded. The church must keep a delicate and keen scent for truth. If the world gets the impression that the church is indifferent to truth, or is not willing to know all it can, it will turn from the church in distrust and despair. We can afford it. If we really believe the truth we shall not be nervous about it. Nothing that is true can shut us out from fellowship with God. God is truth. If it is true, no matter who says it, we want to know it and believe it; for it will bring us into closer relation with Him. There is only one thing to do with a fact, and that is to open our eyes frankly to it.

[Rev. A. H. Alcott in *Universalist Leader.*]

Take Jesus out of the theological clouds which have enveloped and obscured him, let him walk on the solid, man-inhabited earth as a truly divine man, and as teacher and interpreter, exemplar and Saviour, he is multiplied to us many, many fold. He is not diminished. He is infinitely increased. He truly becomes our immortal hope. We may become like him, for we can see him and shall see him as he is. We may not be able, all alone, to interpret self to self truly, in order to live wisely, strongly, purely, happily. Jesus thus meets a need of our life and becomes to us "the way, the truth and the life," becomes our truest, greatest interpreter of self to self.

[*Watchman.*]

The prolonged, repeated, and persistent character of temptation is illustrated in the experience of Jesus. It was continued until its uselessness became evident. The temptations of Jesus were severe and greater than those of common human experience, but they were of the same character with the same elements of subtlety and power. The success of Jesus was due to his use of just those means of protection which are available for every human being. He won by employment of the weapons which are in our armory.

[*Congregationalist and Christian World.*]

The trouble with too many of us is that we want both to be guided and to determine our own way. We do not wholly trust, or wholly doubt. Now we are following on without question; now we are disputing with the guide. In such half-hearted confidence is neither rest of soul nor swift advancement in the way. God is not rightly trusted until He is trusted altogether.

[*Zion's Herald.*]

No man can long continue to do rightly who has consciously allowed himself to believe wrongly. Religion cannot be phrased wholly in emotional experiences; the intellectualistic terms have their place, and must cooperate in its evolution.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

RECENT PUBLICATIONS OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy "Personal Contagion" and "What Our Leader Says" in large type on special paper, silk-sewed with overhang cover.

The pamphlet comprising "Answers to Questions" and "Compassionate Appeal" by Mr. Edward A. Kimball.

The pamphlet "Christian Science: Its Religious Philosophy" a lecture by Hon. Clarence A. Buskirk.

The pamphlet "Christian Science: The Religion of Progress" a lecture by Mr. W. D. McCrackan.

"Christian Science and Legislation" revised and enlarged, containing articles by Mr. Edward A. Kimball, Judge Clifford P. Smith and Judge Septimus J. Hanna. 128 pages.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House, with proposed parkway in the foreground. Size 18 x 24 inches.

For price of above publications see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falnouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; better bindings, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 10 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A horticulturist has been engaged by the educational authorities of the Canal Zone to give instruction in gardening in the schools for colored children. The effort for the present will be confined to cultivating vegetables that have been raised successfully in the zone. Corn, okra, cowpeas, peanuts, cucumbers, and squash have been planted, and tomatoes, pepper, lettuce, and eggplants will be started in seed-beds, and beans and radishes will be put out. Bananas and papayas will be set out about the school buildings and gardens, and small decorative plants along the fences. It is believed that the bananas and papayas can be made to yield sufficient income to pay the salary of a professional horticulturist. Two one-hour periods each week will be devoted to gardening work, and more time if proper care of the gardens makes it necessary.

Suggesting the creation of a committee on budget to determine at the beginning of each session of Congress the limit of appropriations by each committee of the House in view of the prospective revenues of the Government, Representative Douglas of Ohio insisted that only by such a method could expenditures for preparations for war be kept down in the interest of larger allowances for the advancement of agriculture. In appropriating seventy-one per cent of the revenues for warlike purposes and only two per cent for agriculture, Mr. Douglas declared Congress was not acting for the best interests of the people.

The bureau of American republics has been making special efforts to interest the manufacturers and merchants of the country in the forthcoming centennial celebration and Pan-American conference to be held at Buenos Aires, and has in its bulletin been urging from month to month those interested in South American trade to take up space and arrange for exhibits. English, French, German, Spanish, and other European manufacturers are awake to the advantages of such an opportunity, and have not only appropriated all the space allotted to them, but have been endeavoring to secure increased room for their exhibitors.

The Government has begun an innovation in printing its own postal cards at the Government printing office. Until all of the new presses are installed, the issue will be approximately 1,500,000 a day; afterward it will aggregate 3,500,000 a day. As soon as the special equipment for printing has been established, a new card, to be known as the index or library card, will be issued. This card will be of an excellent quality of paper, flexible, of good inking surface, of attractive design, and will be suitable for use in card-filing index systems.

Errors, amounting in some cases to two or three degrees, in navigation charts which are of importance to all shipping interests on the Atlantic ocean, have been discovered between Madeira and Bermuda by the scientific staff of the yacht Carnegie, which is making a magnetic survey of the ocean for the Carnegie Institution of Washington. The errors are even greater than those found on the yacht's trip from New York to England, systematic in nature, and continuous in the same direction for considerable distances.

As the expansion of the business streets of Seattle, Wash., was interfered with by the presence of hills three or four hundred feet in elevation, a plan has been adopted by which they are being shaved off into the tide flats. The amount of earth removed would cover to a depth of three feet an area one mile by three and a half miles, or a one hundred and sixty acre farm a depth of forty-two feet.

United States District Court Judge Hanford decided last week that title to ten hundred and twenty-four acres of valuable coal lands in Lewis county, Wash., claimed by several parties, should revert to the Government. This is land referred to by L. R. Glavis in his testimony before the Ballinger-Pinchot commission.

The forest, fish, and game commission of New York state is conducting near Utica a farm for raising game birds and distributing them to the farmers throughout the state. Quail, partridge, grouse, and pheasants will be raised. Illinois has conducted successfully such a farm, as have also many private parties.

An agreement is understood to have been reached between the National Sugar Company and the federal prosecutors by which the company will shortly refund six hundred and fifty thousand dollars to the Government as settlement in full of back customs dues on importations scaled short of the actual weight.

The National Educational Association, it is stated, will accept the rate arrangement offered by the Grand Trunk Railway Company and the New England Passenger Association for holding its next convention in Boston, probably the first week of July.

Dr. Wiley, the Government pure food chemist, wants the District of Columbia to get a uniform loaf of bread for a nickel. He has announced that he will appear before the district commissioners and ask for the recommendation of a law to compel it.

The supreme court of the United States has set March 14 as the date for the hearing of the test case on the constitutionality of the corporation tax provisions of the Payne tariff act. Six other cases on the docket were advanced for hearing as one case.

Not gunnery alone, but general all-round seamanship,—engineering, signaling, and other qualifications,—are hereafter to form the basis of the award of naval trophies for battle efficiency, according to an announcement by Secretary Meyers.

A bridge across the Hudson river from West One Hundred and Seventy-ninth street to the Palisades in New Jersey, to cost ten million dollars, is recommended in the report of the interstate bridge commission.

The Panama bond bill, carrying thirty million dollars, has passed the House.

International.

Consequent upon a recent treaty between the two countries, Brazil places the sum of ten million dollars at the disposal of Bolivia, to be expended on internal improvements, and also undertakes to build the Madeira-Mamore railroad, which, when completed, will open up for settlement the great valley of the Mamore with its millions of productive but hitherto not easily accessible acres. For 1,000 miles from the sea navigation is possible along the Amazon and its tributary, Madeira. Here, however, rapids and falls obstruct further progress. This railroad will pass around these and give access to the Mamore valley.

The draft of the proposed reforms in the Prussian suffrage has been signed by the Emperor, as King of Prussia. In Prussia, at present, the voters are divided into three classes, according to the amount of taxes paid. Thus the first class, a comparatively small number, through paying the highest taxes, controls as many votes as the third class, which outnumbers the former class some hundreds of times. As a result of this system the poorer voters are a negligible quantity in the Diet elections.

An imperial edict issued at Peking approves the plans of the constitutional bureau for abolishing the traffic in human beings. Another edict denies the petition recently submitted by the representatives of the provincial assemblies asking for the early establishment of a Parliament. The throne adheres to the original plan of an imperial Assembly now and the establishment of a Parliament at the end of nine years, according to the constitutional scheme.

Final election totals in England give the Unionist tariff reformers 230 seats, the Liberals and Laborites combined 227, or a Unionist party majority of twelve, compared with a Liberal-Labor majority of 211 received in 1906. In Great Britain the Liberals and Laborites have 314 seats, against the Unionists' 274, or a Liberal majority of 40. With the 82 Irish Nationalists the Liberals have a majority of 122.

A final understanding between the United States and Germany on the tariff issue has been reached. The practical inhibition of the importation of American live cattle into Germany, and the very rigid microscopic inspection of American fresh meats by the German authorities, have furnished most of the difficulties which have been encountered, and these questions will be adjusted.

At the recent convention of Alberta, Canada, farmers, held at Edmonton, there was a unanimous demand for cooperation in everything relating to the farming industry. The delegates took a stand for government ownership of elevators, pork packing and chilled meat plants, and consolidation of rural schools.

The Campanile of St. Mark's, Venice, after seven years' work, is now approaching completion. The shaft is finished, and only lacks the belfry, the separate pieces of which are ready to be set in place.

Industrial and Commercial.

Another large motor car concern has been acquired by the United States Motor Company, the recently organized sixteen-million-dollar corporation. The latest acquisition is the Columbia Motor Car Company of Hartford, Conn., one of the oldest builders of automobiles in this country. An important feature of the deal is that the royalties accruing from the Selden patent, which is controlled by the Columbia Motor Car Company, will be paid to the old stockholders of the Columbia concern. The Columbia Motor Car Company, which up to about a year ago was known as the Electric Vehicle Company, enjoys a unique position in the motor car industry, as it not only controls the basic Selden patent, but one hundred and twenty-eight other patents fundamental to the structural features of automobiles.

It is expected that a civil suit to dissolve the National Packing Company, on the charge that it is a trust, will be filed by United States District Attorney Sims, as a result of disclosures made before the Federal grand jury investigating the alleged beef trust.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE FOUNTAINHEAD.

CLARENCE W. CHADWICK.

ALONG nearly every line of human research and investigation the first point to consider is the source of the information desired, and it is very generally acknowledged that the only feasible and consistent course to pursue is to go direct to the fountainhead of information. In the purchase of many of the world's commodities one of the first points of consideration is their origin. If they are of standard make, they are accepted as reliable. Through honest dealing with the public and the handling of goods of recognized worth, the name of many a business house has become a sufficient guarantee of any product that it may offer for sale. The "just as good" article placed upon the market by other dealers is slow in finding recognition until the genuineness of its source has been thoroughly established. When it comes to the subject of religion, however, we witness a most radical departure from general commercial habit. There seems to be an inherent tendency in the human mind to look in all directions except the right one for authentic information upon the subject of the Christian religion. Upon no other is human opinion more eagerly sought and accepted as authority.

Mrs. Eddy, the Discoverer and Founder of Christian Science, has set the Christian world a most commendable example, one that may well be heeded by professing Christians. She knew that the Bible was the recognized text-book of Christianity, and from its inspired pages she sought an explanation of the spiritual light that had been revealed to her. She did not reach out for any human theory or opinion upon so sacred a subject. She confined her research to the sacred word of the Bible; she went to the fountainhead for a scientific explanation of Jesus' healing works, and she found it in its pristine purity and simplicity. She knew that she had found it because she was enabled to prove it in demonstration. To her enlightened thought it was a discovery of the lost art of Christian healing.

This statement may be questioned by those who do not distinguish between faith and the spiritual understanding which alone is able to heal in the way that Jesus taught and practised. The fact of Mrs. Eddy's discovery will, however, remain to be acknowledged by every honest thinker who touches the hem of Christ's garment. As Mrs. Eddy has said: "Truth is revealed. It needs only to be practised" (Science and Health, p. 174); but it would not be revealed without the understanding of how to heal the sick through Mind alone, unaided by the employment of any so-called material means. Had she not gone to the fountainhead for instruction in the deep things of God, she would have failed to grasp the scientific import of Christ's healing, and would have been misled by the opinions of men. Who that has been healed of sickness or sin through Christian Science can express in words his gratitude for what has been given to the world as the result of her having confined her researches to the Book of books!

At this juncture it is well to stop and answer an argument that often presents itself. Why is it necessary to study "Science and Health with Key to the Scriptures,"—why cannot one confine himself to the Bible and learn from it all there is to be known about Christian Science? As its title implies, Science and Health is a key to the sacred Scriptures, in that it unlocks the hitherto hidden meaning of Jesus' words and enables the honest truth-seeker to prove to his own satisfaction that God does "in very deed dwell with men" and that He "healeth all thy diseases." No other book can lay claim to any such title. By virtue of the fact that it is a key to the Scriptures it becomes an inseparable companion to the Bible. A key always belongs to the lock that it is made to fit. Science and Health was not written from a merely intellectual standpoint. Mrs. Eddy spent several years in testing and proving the verity and practicability of her discovery before giving it to the world in Science and Health. This equipped her with a spiritual understanding of her subject and clothed her with the only possible authority vouchsafed to a human being to voice the Word of God with power. The hand of God was with her, leading the way. She was not the exponent of human will-power in giving expression to the great truth of spiritual being which heals, saves, and regenerates humankind.

It will thus be seen that the Christian Science text-book was written from the standpoint of spiritual inspiration, and this proves beyond cavil its intimate relationship to the Bible. No honest heart has ever partaken of its spiritual illumination without having gained a deeper insight into the spiritual meaning of the Bible. If the reading of this book takes one back to the Bible, unlocks its hidden treasures of truth, and revives the spirit of research and prayerful study of the sacred Word, it is reasonable and rational to recognize it as a "Key to the Scriptures." This book could not exist without the teaching of the Bible, and until Science and Health was given to the world scholars and theologians quite failed to gain from their Bible study the secret of Christian healing. What more practical proof does one require of the importance of this book? As a spiritual commentary, penetrating into the great deep of divine truth, it has already accomplished wonders in the way of Scriptural exegesis, and to this fact thousands of scholars and students of the Bible have borne witness.

Still stronger evidence of intimate relationship between the Bible and Science and Health, is the fact that through the study of the latter many infidels and agnostics have become reverential believers in the Scriptures. These would say, Go to the fountainhead for information; study the Bible in connection with Science and Health, and you will find the truth that heals, blesses, and satisfies. Too many there are who are content to read about everything that is opposed to Christian Science, and then to think that they are "posted" as to what it teaches. If it is anything worthy of prayerful study and contemplation, —and there is evidence on all sides to prove that it is,— it certainly has a text-book which presents its claims in a

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

dignified, comprehensive, and scientific manner, uncontaminated with the material opinions of those who have not proven the truth of its teaching.

Some of the best people are caught napping on this point, and allow themselves to "look into" all manner of "isms" and "ologies" purporting to be scientific or in "advance" of Christian Science, when they should at once inquire concerning the head waters of the stream to which they are opening their thought. Persistently to ignore Science and Health and imagine that one is advancing in the understanding of divine metaphysics while studying suggestive therapeutics,—"mental science," so called, etc.,—which are in no manner related to nor associated with Christian Science,—is unwise, unfair to oneself. It may be that people have been lured into thinking that they can reach the goal by some shorter route, one that will require less self-denial and permit more intellectual indulgence; or, though they may have seen the handwriting on the wall, they are not yet ready to enlist under the Christian Science standard. Not until all such people learn to look the situation squarely in the face and to go to the fountainhead for a comprehensive explanation of Christian Science, will they begin to understand the subtle working of the error which is keeping them as far away as possible from the authoritative statement of Christian Science, while suggesting that they read various human-mind productions, the most of which are opposed to Christian Science. When the awakening comes they will marvel at the subtle nature of the evil by which they were influenced to travel in devious paths before being willing to study the one and only textbook upon the subject.

The unenlightened human mind, if left to follow its own inclinations, would always be satisfied with the "just as good" or counterfeit article in the world of religion. This is not to be wondered at, since the acquisition of spiritual truth involves the putting off or overcoming of that which is human or mortal. There is no "just as good" substitute for truth or good. There is no "just as good" substitute for Christian Science. There is no human concept that is "just like" the divine idea. The Science of being does not enter into competition with anything; it has no compeer. It is made manifest only through its own ideas, not through human opinions. It can be approached only through demonstration, through the overcoming of that which disputes the presence and power of Spirit; hence the imperative need of getting into touch with demonstrated thought or spiritual concepts if one would acquire an exact or demonstrable understanding of the Science and truth of being.

The Discoverer of Christian Science went to the fountainhead, to God Himself, for the wisdom and understanding which have found expression in her writings, and the true value of her statements of spiritual truth will appear to the honest seeker when he learns to think of Mrs. Eddy as a spiritual channel for revealed truth, and not as an uninspired mortal giving expression to her own human opinions. It is apparent that she rose to a mental height where the divine found its normal expression in awakened human consciousness, and it thus became her duty and privilege to voice the healing truth to others, in terms suited to their present apprehension. Science and Health is an open book to all who are honestly seeking for Truth. When studied in connection with the Bible it is a trusted friend and loving companion, ever ready to save us from the pitfalls along the road from sense to Soul, and to lift thought to behold the angel visitant which says, "This is the way, walk ye in it." To this is added the promise that then "the light of the sun shall be sevenfold" when God binds up the wounds of His people and heals them. Thrice blessed is he who meekly and humbly goes to this fountainhead of Truth for a scientific explanation of the inspired Word, and who is striving to think and to live in accord with the divine requirements of that Word.

THE STATUTES OF TRUTH.

HENRIETTA A. FIELD.

WITH each new by-law that our wise Leader gives to the Field, there must well up in the heart of every loyal student a great sense of love and gratitude, as he joyfully exclaims with the psalmist, "The statutes of the Lord are right, rejoicing the heart: the commandment of the Lord is pure, enlightening the eyes: . . . the judgments of the Lord are true and righteous altogether. More to be desired are they than gold, yea, than much fine gold: . . . Moreover by them is thy servant warned: and in keeping of them is great reward."

David realized that right rules for living—statutes of Truth—were a most necessary and valuable possession for the man who was seeking to know God and follow in His ways. Neither did he leave one in doubt as to wherein lay their value when applied to daily life, but pointed out their effectiveness in "enlightening the eyes," "making wise the simple," and serving as a warning against hidden danger. And surely in close accord with this thought is our Leader's statement in "Miscellaneous Writings" (p. 148), regarding the origin of the rules and by-laws of The Mother Church, that "they were impelled by a power not one's own;" "they sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our Cause."

The basic laws and rules governing the expression of the truth have been given to the world in Science and Health, but the specific application must come by degrees; and so day by day our eyes are opened to some special phase of the truth which at this particular stage of growth must be emphasized and applied to human thought to make wise the simple and warn the unwary. In a degree, at least, every by-law for the members is such an application of the truth. It is a divine Magna Charta of individual liberty and true self-government, a boon of priceless worth, assuring protection in the right and defense against the wrong and involving also the most solemn obligations as to its careful observance.

Too often the new by-law is read and then, in effect, laid on the shelf with a sense of "Well, that is over with;" instead of being accepted in the clear realization that the counsel of the Lord is to us, "Lay up these my words in your heart and in your soul, and bind them for a sign upon your hand, that they may be as frontlets between your eyes. . . . speaking of them when thou sittest in thine house, and when thou walkest by the way, when thou liest down, and when thou risest up."

So far as the Field is concerned, the conscious activity of any particular truth may have just begun, and its effectiveness is now dependent upon the earnest endeavor of the individual member, whose duty it is to study carefully each new word of guidance, discern its deeper meaning, and see that it becomes operative in his own consciousness and within the radius of his influence. Instead of leaving its enforcement to the efforts of the so-called "workers," or to some special class of members which the by-law mentions, he should remember that all are "members one of another," and that each must do his part in the establishment of the reign of righteousness.

Regarding those things against which "thy servant" is warned, we are given this comprehensive declaration (*Ibid.*, p. 208): "This is the law of Truth to error, 'Thou shalt surely die,'" and every by-law which contains a "Thou shalt not," is but an uncovering to the Field of some error now at work, upon which this sentence of Truth is to be pronounced. Upon each student, therefore, devolves the obligation to become a faithful administrator of justice, and see that this sentence is executed, by keeping the necessary truth actively in mind, until the error has been annihilated by that divine energy which eliminates sin and its effects.

Digitized by Google

In studying the by-laws which relate to any given subject, it is helpful to observe how wonderfully they fit into each other as parts of one great whole. For instance, in one by-law is a specific command that the members of The Mother Church shall daily watch and pray; on the following page is given that comprehensive prayer for self and the world, and on the next page a clear statement of the error against which one must watch, and with it the gentle warning lest forgetfulness or neglect creep in unawares. A few lines farther down the page is indicated the blessed result which would inevitably accompany such watching and praying, even the fulfilment of the golden rule. And so on through the Manual, one may find the silken thread of continuity of thought which binds together these wise statutes, which were framed as the need demanded, proving them to be the expressions of spiritual wisdom.

Divine Love is never content with the mere negative bestowal of good, and we therefore find that not only are His statutes and judgments valuable for enlightenment and defense, but, "in keeping of them there is great reward." "If ye hearken to these judgments, and keep, and do them, that the Lord thy God . . . will love thee, and bless thee, and multiply thee: . . . Thou shalt be blessed above all people: . . . And the Lord will take away from thee all sickness." To the obedient thought shall come the reward of love and peace and health, and the possibility of increased achievements as the truth is more intelligently accepted and applied, for "it shall be our righteousness, if we observe to do all these commandments before the Lord our God, as he hath commanded us."

PROBLEMS.

LR. EDMUND F. BURTON.

THE word problem usually has a hard sound to our ears, and suggests difficulties and perhaps possibility of failure. In truth a problem is neither a Gordian knot nor a snarl to hinder and puzzle the seeker after truth and success. It consists of a plain question, connected by a certain straight path to a definite answer, the whole forming an illustration of and testimony to the truth of a basic law. Moreover, apparent involvement in the statement of the question can never affect in any way the truth that a complete and harmonious answer exists. In fact a question is often but a statement of a truth in interrogative form. The seeming complication therein may be but a manifestation of ignorance in the one looking at it; not something present in the problem, but in the mind perceiving it.

We learn in our school days that the problems in our books are not unanswerable riddles, impossible of solution, put there to exasperate and annoy us; and it is only the suspicious, distrustful pupil who finds in them the "catch questions" believed to be designed to bring to him failure and chagrin instead of enlightenment, development, and increased power. The open-minded, intelligent student knows that they are set down not because there is no answer, but because there is one; and that he who has set down the question has already seen the answer. Such a student sees in these so-called "examples" illustrations of a fundamental law, and follows step after step with alert and expectant mind, until his reason is delighted by the rounding out of the logical conclusion reached. Thus hunger and thirst after truth, together with faith in the honesty and intelligence of the teacher, have led him from the question, by the unfailing route of scientific prayer, to the answer which is eternally harmonious and coexistent therewith.

Jesus taught that when the eye is single the whole body is full of light, and his Science proves to us that when one refuses to see anything but the truth, the problem of being is seen as a harmonious whole, and it is faced with calm and open-eyed fearlessness, based upon the knowledge that wherever there is a question there is an answer in Mind. Such was Paul's mental attitude when he rejoiced in trials, knowing that every test makes more firm and abiding the conviction of the truth of omnipresent harmony and establishes the student more firmly on the rock of the allness of the one Mind whose power and activity is good. Mrs. Eddy's teaching that "every trial of our faith in God makes us stronger" (Science and Health, p. 410), is in harmony with this attitude.

Such living and working is the prayer of faith whose answer is salvation, worked out through the working of God in us: the self-government which reflects the government of divine Mind.

TRUTH'S LOVELINESS.

JESSIE WOOD.

TRUTH illumines mortal consciousness as light dispels darkness, radiating with its beams divine the darkened chambers of the human heart and permeating the musty corners with the sweet odors of frankincense and myrrh. Christ Jesus said: "Ye shall know the truth, and the truth shall make you free." If Pontius Pilate had realized the inherent power of this statement, it would have inspired him with the courage of his convictions in that crucial moment when he washed his hands but not his conscience. Truth understood would have put to flight the Jewish rabble, for error is always a coward in the presence of Truth. "One man of you [one statement of Truth] shall chase a thousand [mortal beliefs]," "and an hundred of you shall put ten thousand to flight."

Truth demonstrates the ideal home. Within its walls, Love entertains the stranger, washes the feet of the pilgrim, and feeds from its sumptuous board those who are hungering and thirsting after righteousness. Truth inspires in man confidence, not only in himself but in his brother. Truth enables woman to find her true womanhood, and man to realize his true manhood. Truth brings to its possessor the innate charm of loveliness and beauty, outshining and transcending all material or physical adornment.

A young lady in conversation with a Christian Scientist was bemoaning her plain face and lack of personal charms. The Scientist said, "I think I can help you along that line. I have a recipe for beauty at home that I use myself and have never known it to fail. I will mail it to you." The next day the young lady received the following: "For the lips, truth; for the eyes, pity; for the voice, prayer; for the hands, charity; for the heart, love; for the figure, uprightness. Apply freely and faithfully."

Such advice, if persistently followed, could not fail to be successful in its results, for it would bring a realization of the truth of our Leader's words: "The embellishments of the person are poor substitutes for the charms of being, shining resplendent and eternal over age and decay. The recipe for beauty is to have less illusion and more Soul, to retreat from the belief of pain or pleasure in the body into the unchanging calm and glorious freedom of spiritual harmony" (Science and Health, p. 247).

THE TRUE VIEW OF MAN.

EDWARD C. BUTLER.

SIR FRANCIS BACON, who flourished in the sixteenth century, was a mental giant but a moral pigmy, and "pigmies are pigmies still, though perched on Alps," says Pope. The stupendous so-called intellect of Bacon, which elevated him to the distinction of father of inductive philosophy, did not save him from moral recklessness and wreckage. Had Bacon deduced man from God, instead of reasoning from a part to the whole, he would not have entertained the erroneous premise upon which he built wrong con-

Digitized by Google

clusions. For instance, he said that there were three ways of looking at a man: the way God looks at him, the way his neighbors look at him, and the way he looks at himself. As a matter of fact, Christian Science shows us but one way of looking at a man: the way God looks at him.

In the Christian Science text-book Mrs. Eddy urges the true deductive philosophy that must sooner or later revolutionize the thought of the world, the thought said to be born in the human brain. Mortals may have a big belief of brain, but, according to Christian Science, the claim that somebody thinks blinds men to the fact that there is but one Mind, God, and consequently only one real thinker and thought, the unique, all-inclusive "infinite Mind and its infinite manifestation," because "the allness of Deity is His oneness" (Science and Health, pp. 468, 267). The manifest fact is that matter cannot think, and this disposes of the human brain, except as a belief of a thinking machine. Such being the case, one mortal cannot have an original thought about another, nor can he have an original thought about himself.

Since God, Mind, does all the real thinking, there is but one way of looking at a man, namely, the way God looks at man; and Mrs. Eddy explains that it was by looking away from mortal evidence that Jesus healed the sick and the sinning. It follows, then, that if we would pattern after our divine Exemplar, if we would break the yoke of bondage and lift the heavy burdens from the sinning and suffering ones of earth, we must do so in the reflection of the divine, and only the divine understanding. As God understands man, so he is,—like Himself,—perfect, despite the errors of human belief. Sin, sickness, and death may seem to pertain to man, but God is never conscious of evil in His creation. Christian Science constantly urges us to accept and be governed by the divine sense, to separate error from our concept of man, our true selfhood. When tempted to personalize evil, let us pray to God for grace to grasp the divine understanding,—the tender touch of pardoning Love.

[Written for the *Sentinel*.]

"CAST THY BREAD UPON THE WATERS."

EDITH C. CARTER.

ONE little seed of Life outsped
Into earth's death-filled thought,
And the roots will strengthen, and grow, and spread,
Till the tree springs up, and the leaves o'erhead
Their healing balm on the nations shed,
Who freedom from fear have sought.

A little leaven of Truth pressed deep
Into earth's stubborn thought,
And dreamers will wake from lethargic sleep;
The persistent leaven will upward creep
Till resistance yields to its tireless sweep,
And Truth its desire hath wrought.

One tiny drop from the ocean of Love
Shed on earth's barren breast,
And the steepest stretch of earth's road will prove
A blossoming lane, a refreshing grove,
Where toilworn travelers the dust may remove,
And climbing may still find rest.

Then speak Love's word, Truth's leaven hide,
And sow the seed of Life,
And though all the world thy faith may deride,
Still helping thy brother, thou shalt abide
In a knowledge of peace so deep and wide
That it drowns earth's phantom strife.

SELECTED ARTICLES.

[James D. Sherwood in *Fort Worth* (Tex.) *Record*.]

Christian Scientists accept unreservedly the teaching of the Scriptures: "In the beginning was the Word, and the Word was with God, and the Word was God. . . . All things were made by him; and without him was not any thing made that was made."

Christian Science reforms the sinner by destroying his love of sin, by overcoming his belief of pleasure in sinning, and thus putting a stop to his indulgence in sin. Thus it incidentally heals disease, and in like manner prevents disease. Christian Science has succeeded in healing thousands of cases of sickness that had been given up by the regular practitioners. Sin and disease have been declared associated as cause and effect. Since "all things were made by him; and without him was not any thing made that was made;" and, since "God saw every thing that he had made, and, behold, it was very good," it might be asked whence came sin and disease. Are there two creators? Is there more than one God? "Hear, O Israel; The Lord our God is one Lord." "Thou shalt have no other gods before me." In denying the reality of sin and disease Christian Scientists do this on the basis of the allness of God and the understanding that sin and disease are not a part of God's creation. There is no mention made of sin and disease in the account of Elohistic creation in the first chapter of Genesis, where it is declared that God finished His work and pronounced it very good. Christian Scientists realize that there is all about us evidence of much sorrow and suffering, of poverty and mourning; and they are daily engaged in lifting the burdens of humanity, in relieving distress and in healing the sick. More than a million living witnesses are today giving thanks unto God for their deliverance through Christian Science practice from all manner of disease and sin.

One of the great Texas dailies in a recent issue says editorially: "Men are coming to admit shamefacedly that disease is more of a penalty than a divine visitation. Society is beginning to learn what is usually meant by the dictum that health is the normal and illness the abnormal condition, which thought, when it grows stronger, will lead to the confession that illness is more of a sin than a misfortune." This clearer view of sickness indicates its remedy, and prophesies its final extirpation through reformation and spiritual regeneration and accords with the teaching of Christian Science on this subject. The only radical cure for sin and disease is the way Christ Jesus taught and demonstrated. It is the way known among Christian Scientists, who are furnishing the proof that our Master required of his followers.

[Royal D. Stearns in *Hastings* (Neb.) *Republican*.]

In practising under the rules given in "Science and Health with Key to the Scriptures," Christian Scientists are healing thousands afflicted with all the ills that flesh is heir to, in accordance with the system instituted by Jesus and successfully practised by him during his earthly ministry. It is simply Christianity applied to human affairs: it is the practical realization of the Bible truth that the "effectual fervent prayer of the righteous man availeth much," and is a sole dependence upon the redemptive power of God, readily available now to suffering humanity through the medium of right thinking and right living.

Your critic declared the constant factor in all healing to be suggestion. This is wholly inaccurate so far as Christian Science is concerned. It is, however, a very common assumption with those who have no practical understanding of Christian Science. All Christian Scientists who have a sufficient understanding of its Principle

Digitized by Google

and rules to practise it with any degree of success, know that it has nothing to do with suggestion. The redemptive results achieved through the ministrations of Christian Science come naturally from the practice of primitive Christianity as taught in the Bible. Christian Scientists claim that Jesus healed the sick and raised the dead by the same power, and certainly your critic will not claim that he raised Lazarus and the widow's son by suggestion, or that he healed the daughter of Jairus or the nobleman's son by suggestion.

Christian Science is not merely a healing system. It constitutes an ideal religion. It holds to God, who is Life, Truth, Love, ever-present Spirit, wholly apart from materiality; and its ideal man is spiritual, created in the image and likeness of God as the Bible teaches, and this teaching is made practical here and now in the reformation of the sinner, the healing of the sick, and the amelioration and destruction of every form of misery and evil.

[James Phelps in *La Crosse* (Wis.) *Leader-Press.*]

Our critic's sermon shows the fallacy of trying to explain an exact science without first having demonstrated it. One might read through times without number a text-book on higher mathematics and not gain an understanding thereof. In order to comprehend it, it would be necessary to begin at the beginning and work out the problems according to principle and rule.

Our critic speaks of a "gullible public," evidently meaning thereby those who do not agree with his interpretation of things. If he is at all well informed he knows full well that men and women of the highest mental attainments in many professions—clergymen, physicians, lawyers, authors, educators, editors, artists, and actors—have espoused the Cause of Christian Science, have been convinced of the truthfulness of its teachings, and have borne glad testimony to a surcease from pain and an enlightened and satisfying understanding of God and His Christ through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Christian Science is as certainly a religion as were the teachings of Jesus the Christ, who spent a great deal of his time in going about and healing all manner of diseases. What distinguishes Mrs. Eddy's system of metaphysical healing from all others is the fact that it not only cures disease without the use of drugs or medicine, but without the use of hypnotism, the exertion of will-power, or the action of erring human mind on mind or body. It teaches its students to strive for that Mind "which was also in Christ Jesus," and that only by gaining the true understanding of God, and of man made in His image and likeness, can they heal the sick.

Christ Jesus gave this test of true belief or faith, viz., "These signs shall follow them that believe; In my name shall they cast out devils: they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." It is no valid impeachment of Christian Science to show that its practitioners fail to heal disease in certain cases. Judged by that standard what would become of the profession of the clergyman, the doctor, or the lawyer? Has our critic never failed in his attempt to convert a sinner? Is he successful in all his efforts at well-doing? One must compare the number of failures with the number of successes.

Our critic cites a number of sentences from the Christian Science text-book, torn from their context, and endeavors by this means to show that it is not scientific. Let us examine a few of these. For instance: "Man is never sick" (p. 393). This refers to man made in God's image and likeness. Jesus said: "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and St. John assured his followers: "Now are we the sons of God." When any one has attained the exalted consciousness indicated by these quotations, will he be sick? Another: "There can be no hereditary disease" (p. 412). The belief that any disease is hereditary is only a theory, not a fact or a science. When Mrs. Eddy first taught that consumption is not hereditary, and that the belief that it is is erroneous, who agreed with her? How many laughed her to scorn? The medical fraternity now agree with her on this point, as I am told by a physician of good standing. Who can say that the world will not soon agree with Science and Health on every point mentioned by this critic.

[Alfred Farlow in *Boston American.*]

Christianity has quite generally accepted the Scriptural teaching that healing the sick as well as the sinful should attend the Christian ministry, and there is an earnest searching to discover the gospel which heals the sick, and thus reinstate primitive Christian healing.

Jesus said: "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works." He also said: "He that believeth on me, the works that I do shall he do also." The two texts considered together convey the important lesson that he who understands what the Master understood and deports himself accordingly, will be able to utilize the power of God in the overcoming of everything that is not Godlike; namely, sin and all its consequences. Since a correct understanding of truth is the means of freedom from the bondage of evil, as is stated in our Master's words, "Ye shall know the truth, and the truth shall make you free," it is a logical conclusion that a lack of understanding, a want of truth, is the cause of disorder.

We oftentimes hear it said that sickness is occasioned by violation of the laws of health. With this proposition we agree, and would invite our readers to a thoughtful consideration of the fact that above and beyond the violation of a so-called mortal law, the prime cause of all disorder is a belief in a power apart from God, the infinite Mind. What are the laws of health? What are the laws which govern the health of mankind? We may answer, Nothing more nor less than those conditions of thought which are essential to health, and to which Isaiah referred when he counseled men "to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke;" adding, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily: and thy righteousness shall go before thee: the glory of the Lord shall be thy rereward. Then shalt thou call, and the Lord shall answer; thou shalt cry, and he shall say, Here I am."

Here the prophet clearly teaches that wickedness constitutes the "heavy burden," the "yoke" of oppression which needs to be broken in order that health may be established or restored. He makes plain the fact that righteousness becomes a protection to the individual and places him where his desire for relief may be answered, not because of much asking but because he has found the light which darkness cannot penetrate, and he has won divine protection by the scientific demonstration of truth over error. Christ Jesus taught the same lesson when he said: "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk;" and again when he said, "Sin no more, lest a worse thing come unto thee." The Master did not teach that sickness is occasioned by wilful wrong. He was aware that many good persons are afflicted, but he knew that this is not because of their goodness, but because in spite of a degree of goodness they are still identified with humanity and subject to mortal law.

Jesus understood the word "sin" in its broad sense, as applying to all the errors of life, whether wilful or ignorant. He knew that the requirement of health is a perfect life,

Digitized by Google

an existence which is free from sin, in fulfilment of his declaration, "Be ye therefore perfect, even as your Father which is in heaven is perfect." He even knew that carelessness in respect to the material care of one's self was due to a state of consciousness that was unbecoming the wide-awake Godlike man. It is evident to all that the man who is improving his moral condition and is striving for the full stature of manhood in Christ is on the way to health and harmony, though he may not yet have reached it; and it is equally evident that the man who is doing wrong, and is wandering from the path of rectitude, is on the way to discord, even though he may not yet have found it.

It is the mission of Christian Science to awaken the world to spiritual truth, to show man what he has to do in order to be the image and likeness of God, a state which is not subject to suffering. If there is something to do by way of improvement, in order that we may measure up to the standard of divine requirement, that something of necessity involves primarily a better understanding of God, and secondarily a better understanding of man as His image. Such knowledge, though not in accord with the testimony of material sense, must of necessity be true, and therefore scientific and justly entitled to the name Science. Hence the propriety of the term Christian Science. It is the mission of Christian Science to awaken mortals to what constitutes God's likeness, and thus make them too wise and too good to be sick. The psalmist seems to have had a glimpse of this idea when he said: "I shall be satisfied, when I awake, with thy likeness." Man only needs to advance spiritually, until he finally becomes awake in the likeness of God, to reach that individuality which within itself affords all that is necessary to make a perfect, healthy, righteous, and satisfied man.

[Nellie M. Johnson in *Omaha* (Neb.) *World Herald.*]

Mrs. Eddy has presented scientific Christianity to this age. This religion is demonstrable and is available in the degree it is understood. The movement she has so wisely founded and ably guided by her counsel is not controlled personally, but governed through by-laws officially administered. In the past the world has been slow to recognize the worth and work of its reformers, but surely this enlightened age will in gratitude and justice accord to Mrs. Eddy her proper place.

[Gray Montgomery in *Denver* (Col.) *Post.*]

Most cases offered as evidence of failure on the part of Christian Science are found upon investigation to be either fictitious or they are of those who turned to Christian Science as a last resort after all material means had failed. The large majority of those who turn to Christian Science are healed by its divine means, and with the proof of thousands of cases healed by Christian Science after medical aid had failed, it seems reasonable to believe that many die under medical treatment who might have been saved through Christian Science. Many reputable physicians will admit that medicine is not an exact system of healing, but empirical; and that it merely aids in the recovery of the sick.

Christian Science brings health to the sick person, and at the same time it destroys his fears and sins. It has saved many from an early grave, and banished the discordant conditions of sin and sickness from their lives. It has given them a better understanding of God, making their lives happier and more harmonious. It has not only advanced their years of life, but it has taught them to hold steadfastly to high ideals, to think and live purely, thereby bringing an increase of strength, wisdom, love, peace, and happiness. "Thy days shall be multiplied, and the years of thy life shall be increased."

[Frederick Dixon in the *Sunday School Chronicle*, London, England.]

I am sure you will permit me to refer to the lecture given by Dr. Saleeby for the purpose of explaining that Christian Scientists absolutely repudiate any connection between Christian Science healing and mental suggestion.

The ministry of Jesus was to an enormous extent a ministry of physical healing, but that physical healing, though it demonstrated the power of the Christ to destroy disease and pain, was only a means to a far greater end, of attesting, as Mrs. Eddy has written on page 150 of Science and Health, "the higher mission of the Christ-power to take away the sins of the world." Jesus himself made this perfectly clear. "Believe me," he said, "that I am in the Father, and the Father in me: or else believe me for the very works' sake."

It is obvious that healing established on such a basis can only operate by destroying the cause, the belief of evil as a power in the human consciousness. This is something very different from the mere diversion of human thought into another channel, which would be accomplished without affecting the belief of the patient in the power of sin or evil, and so still leave him a prey to all the resultants of such a belief.

[Charles W. J. Tennant in *Glasgow* (Scot.) *Citizen.*]

If there is one thing that Christian Science is doing, it is lifting people out of the quicksands of superstition and ignorance, and placing them on the firm ground of understanding. Christian Science, which is the teaching and practice of Christianity, as exemplified by Christ Jesus, never produced mental aberration. The suicide of Judas in no way reflected on the teaching of Jesus. Our Master said, "Ye shall know the truth, and the truth shall make you free." How few people stop for a moment to consider what this saying really means, and yet it contains the key to the solution of every problem that confronts mankind. The understanding of it includes the overcoming of sin, disease, anxiety, fear, and despair, in fact, everything that keeps man in bondage and deprives him of his rightful dominion as a son of God.

Christian Science, as explained in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, reveals the divine Principle of spiritual truth, with the rules for demonstrating it, and, when obeyed, the results are as certain and good as when the basic law and rule of mathematics are obeyed and demonstrated.

[R. A. Magly in *Columbus* (O.) *Journal.*]

Christian Science claims that the teachings of Jesus are applicable not only to the time in which he lived, but to all time, as he indicated by his declaration: "My words shall not pass away." Christian Science claims that Jesus healed the sick and the sinning through a realization of the ever-presence and all-power of God and the use of divine Principle, which, when understood and properly applied, will always produce the same results, viz., the healing of sin and all manner of disease, even to the raising of the dead. We have the words of Jesus to the effect that all those who believe on him (understand his teachings) shall be able to do the works that he did. No healing is performed through the understanding of the teachings of Jesus, as explained by Christian Science, without at the same time raising the moral standard and uplifting one spiritually.

Is Christian Science to be condemned for claiming that not through blind faith, but through a proper understanding of God, as taught by Jesus, and the acquiring of more of that Mind in us which was in Christ Jesus, all can produce the works which Jesus demanded as proofs of discipleship? Christian Science, through its interpretation of the Scriptures and understanding of the teachings of Jesus, enables

Digitized by Google

us to cast sin and sickness out of our own consciousness, whereby we remove the beam from our own eye, so that we may see clearly when called upon to help our brother remove the mote from his eye. Does Christian Science claim too much?

[Olcott Haskell in *Oakland* (Cal.) *Enquirer.*]

Our clerical critic, as reported in your columns, took exception in a recent sermon to what he assumed were the teachings of Christian Science; but the fact is that Christian Scientists would heartily condemn the very things this gentleman condemns, for they have no place in the teachings or practice of Christian Science. We agree with this pastor that "there is absolutely no suggestion in any word of Jesus that material and physical well-being is man's chief good," also that neither are "poverty and suffering . . . man's chief ills." Jesus taught, "Seek ye first the kingdom of God, and his righteousness; and all these things [supply for physical needs] shall be added unto you." Scientists are learning to accept this promise and to apply it in their lives, paying special heed to the fulfilling of the conditions specified by Jesus. Should they then be condemned because the promise is to them in some measure fulfilled?

Christian Science helps the poor man more than any other teaching, for it not only relieves his present ills, but gives him health and hope, and such an understanding as will enable him to rise above the conditions which brought him into poverty.

[William E. Brown in *Fresno* (Cal.) *Herald.*]

In regard to diagnosis it may be said that Christian Science is most searching. It has proven that all disease has a mental origin, no matter how remote, and with its knowledge of mental analysis it is competent to make accurate and thorough diagnosis. This accounts for many cures after other methods have failed. Statistics show that Christian Science is the most successful healing agency. No Christian Scientist could expect less of the religion of Christ Jesus. By this means Jesus cured all those who came, and that without asking whether their diseases were functional or organic.

The Master said, "He that believeth on me, the works that I do shall he do also." That this promise was not intended for the disciples only is shown by his instructions to the disciples, who were commanded, "Go ye therefore, and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you."

Christian Science is not a new belief. It is the religion of the Bible. It teaches and proves that the Christian religion has lost none of its efficacy in redeeming mankind from the bondage of the flesh. Christian Scientists reiterate the words of the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 3, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk.*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

AMONG THE CHURCHES.

JOPLIN, MO.

First Church of Christ, Scientist, at Sixteenth and Wall streets, will be formally dedicated at this morning's services [Jan. 2], the last dollar of indebtedness against the building having been paid within the past week.

The church was completed and the first services held on March 5, 1906. Prior to that date the congregation, which was organized in December, 1897, has slowly but surely grown. They first held their services on the second floor at 620 Main street. In 1899 a state charter was granted to the organization, which had increased in numbers until its original accommodations were inadequate. For the next two years services were held at Odd Fellows' hall, corner of Seventh and Main streets, after which the church home was established in the Windsor building. In 1904 the necessity for a permanent church home was recognized, and lots at Sixteenth and Wall streets were purchased and the work of construction begun. Eighteen months later the building was finished at a cost of thirty-five thousand dollars.—*Joplin Globe.*

PORTLAND, ME.

The corner-stone of the new Christian Science church edifice on Neal street was laid this morning [Jan. 20], the ceremony being brief and simple. The building is to be a modern fire-proof structure of granite and Bedford stone, with an interior finish of oak. The foundation is of concrete; steel is to be used extensively in the superstructure. The floor of the auditorium is at such an elevation as to allow for a roomy and well lighted Sunday School room in the basement. Coat-rooms are provided on each side of the entrance and above the entrance is the balcony. The boiler room is unique, it being so constructed that it is entirely outside the building proper, under the sidewalk approach, a design in accordance with the laws of Massachusetts for the safety of public gatherings.

The building is so designed that it may be built and finished off for use in sections. The front portion, which is being erected at the present time, will have a seating capacity of four hundred and fifty and will cost about forty-five thousand dollars, exclusive of the land. The rear portion, including the dome, which will be built when needed, will give a total seating capacity of about eight hundred. The erection of this building is a result of the labors of Mrs. Eddy in behalf of suffering humanity, and the edifice will stand as a testimony of gratitude for the benefits received as a result of her explanation of the Scriptures. The building is on the easterly side of Neal street, between Pine and Carroll. This site is regarded as a particularly good one, since it is in the center of the best residential quarter of the city.

In the copper box in the corner-stone were deposited a copy of the records of the incorporation of the church; a copy of the present church by-laws; several copies of Mrs. Eddy's published works, including "Science and Health with Key to the Scriptures," "Miscellaneous Writings," "Unity of Good," and the church Manual, also copies of all the Christian Science periodicals.

Portland Express and Advertiser.

CORRECTION.

In the Lesson for Feb. 20, 1910, subject "Mind," the third Science and Health reference in Section 1 should be 303 instead of 503.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

MEN IN OUR RANKS.

A LETTER from a student in the field says there is a grave need for more men in Christian Science practice.

I have not infrequently hinted at this. However, if the occasion demands it, I will repeat that men are very important factors in our field of labor for Christian Science. The male element is a strong supporting arm to religion as well as to politics, and we need in our ranks of divine energy, the strong, the faithful, the untiring spiritual armament.

MARY BAKER EDDY.

Chestnut Hill, Mass., Feb. 7, 1910.

"EVERY WHIT WHOLE."

A PECULIARITY that has long been noticed by Christian Scientists is that those who have criticized their faith from a theological standpoint, frequently have been willing to grant the possibility or even certainty of its value as a healing agency, while many of those who have criticized it from the view-point of a physician have been equally ready to admit that its theology is productive of good results. They have also noticed that the present-day layman critic is distinctly inclined to admit that Christian Science both heals and saves, although he undertakes to attribute this healing and regenerating power to the use of suggestion, rather than as resulting from the operation of divine Mind.

These criticisms represent a house divided against itself; therefore, according to Scriptural authority, a house which cannot stand. Criticism such as this is representative of that which would explain rather than understand, forgetting that understanding must precede lucid and convincing explanation. The one class of persons who can explain Christian Science is composed of those who can demonstrate it, and fortunately for mankind the number of those who can and do demonstrate this revivification of the Christ-healing is constantly increasing. Most persons become acquainted with Christian Science through healing experienced by themselves or by members of their family, after which there is usually an effort to understand how the healing is done. Gratitude, too, plays an important part in the spread of this healing, saving gospel, for those who have been rescued from the depths of despair, whether of sickness or sin, are eager to stretch out a helping hand to their brothers who are still struggling with evil. The healing of other persons through the knowledge thus gained follows; and so the good news spreads, in ever-widening circles.

The thousands of testimonies which have been published in our periodicals show that along with the healing of disease a spiritual regeneration of wasted lives is brought about by Christian Science, and though gratitude for relief from physical stress may at first predominate, there is sooner or later a recognition of the profound truth that the physical healing is only a concomitant of the greater work of spiritual transformation. They also show that suggestion has nothing whatever to do with this work, and that the divine Mind alone is depended upon for the healing, as well as for the moral regeneration. As a matter of fact, the results obtained through Christian Science prove that mortals must be healed of both moral and physical defects, in order to be made "every whit whole."

Such is the grand work that Christian Science is doing today, and those who are in touch with the movement know that not only is the world indebted to Mrs. Eddy for the primary discovery of the Principle and rule through which Christ Jesus wrought his healing works, but that its wonderful progress is due to the persistence with which our Leader has called upon her followers to become true Christians in every sense of the word,—to obey Jesus' command both to preach the gospel and to heal the sick. They recognize the obligation which rests upon every Christian Scientist to do this work for himself and for others, and that only to the extent that one does this work, is he worthy to be called a Christian Scientist.

ARCHIBALD MCLELLAN.

SCIENCE AND PROGRESS.

WITHIN the past fifty years the world has undoubtedly made its greatest progress, and this because men have at last come to see that all truth is knowable and that even the quest for truth contributes greatly to the progress of the individual as well as that of the race. The next step taken is the related admission that all good is possible, and with these two propositions as a working basis one has the advantage of a fair start in the journey of life. The Christian Scientist would insist upon adding to the first the sequent statement that as one comes to realize the truth about anything, all false beliefs respecting it must be given up; and to the second, that as all good is seen to be possible, evil can no longer be regarded as possible—as an actuality.

Mrs. Eddy says (Science and Health, p. 492), "For right reasoning there should be but one fact before the thought, namely, spiritual existence." Until this is admitted the propositions already named are scarcely tenable, for only the spiritual man can know all truth, and to him alone is all good possible. Truth *is*, whether we know it or not; but until we do, our progress is at best uncertain, ebbing and flowing in response to the varying phases of material belief. When, however, one comes to "know the truth," to understand the unchangeableness of Principle, for him there is "no more sea," and the new heaven and the new earth, forever known to God, dawn upon his consciousness. When one knows Truth as divine Principle, his knowing is scientific, and he cannot fail to recognize the demand for absolute truth in all things, that thus he may know as God knows.

In Science and Health we read (p. 495), "All of Truth is not understood; hence its healing power is not fully demonstrated." The student of Christian Science does not claim to know all the truth at this period, but if he applies his understanding of Principle to each problem, he will know the difference between truth and error, and this will be a tremendous factor in his progress. We should note that the statement quoted does not limit the knowableness of the truth, it simply states the fact of present human experience. The practical side of the question is this, that at each step of the way we must know God, divine Principle, better. This will enable us to know man better, and thus we shall in turn better understand ourselves and others. Can any doubt that we shall then be in the direct line of scientific progression?

Mrs. Eddy once asked a student if a stone wall transmitted light equally well with a window. She then referred to the passage in Science and Health which points to the necessity for giving up much materiality in order to be "a better transparency for Truth" (p. 295). This query may surely appeal to each sincere seeker after Truth, especially to those who seek the Christ-healing either for themselves or others. On the mount of transfiguration

Digitized by Google

the light of Truth shone through the consciousness of Christ Jesus to such a degree that even his garments reflected its radiant purity. Not so with the dull and doubting disciples, who, at the foot of the mountain, were struggling with the problem of an afflicted boy and his distressed parent, in addition to the cold criticism of the scribes. When their Master returned to them, he said to the sorrowful father, "All things are possible to him that believeth," and the truth that Jesus knew healed the lad. So, too, it is our knowledge of the truth that will measure our understanding of Science and our progress.

ANNIE M. KNOTT.

THE STATURE OF A MAN.

IN the kindly and unselfish "Mr. Greatheart," who labored and fought so faithfully for Christiana and her little company of pilgrims, Bunyan has embodied that spirit of brave affection and self-giving which we all feel to be the truest earthly expression of the divine nature. Men instinctively recognize that, above every other presentment of human greatness, there must be ranked that largeness of heart which every one may possess, and which in its activities reveals the impulse and efficiency of divine Love. The one thing that is unfailingly winsome and successful is that grace of goodness which qualifies its possessor for membership in the Greatheart Guild, an order which Christ Jesus established and of which he is universally regarded the supreme head. He who is earnestly seeking to have Truth and goodness rule in him, that he may contribute thereby to their government in all the earth,—this man is of the Greatheart mold, and he is sure to find his place in public estimate as a representative of the Christ-ideal.

Today the American people are honoring the memory of one in whom the tides of this great-heartedness were phenomenally strong. However unique and remarkable Mr. Lincoln may have been as a statesman and political leader, his distinctive greatness, that which when perceived endears him to his political antagonists no less than to his friends, is found in his largeness, simplicity, and gentleness of nature, that compassion by which he won and will ever retain his undisputed place in the veneration and love of humanity. He proved that the sovereignty of loving-kindness cannot be successfully resisted by political bias, social prestige, or race prejudice. It renders its subject great for all time and in the eyes of all men, and this for the reason that it speaks at once for the nature and present manifestation of God. It is the radiation of Truth and Love through the channels of human affection, and its appeal is both world-wide and irresistible. This explains the fact that side by side among venerated Americans stand today the two men who in their antecedents, their social status, their education, and their political convictions represented the greatest possible divergence,—Lincoln and Lee. For these there is now no North, no South, so great have they both come to be known, in their kindliness, their true nobility of character.

In the introduction to the chapter on Christian Science Practice in Science and Health, Mrs. Eddy has given a recognition to the value of this great-heart instinct which Christian Scientists do well to remember. Her words bring a new and inspiring significance to St. Paul's declaration that "love never faileth." True love is Truth's almoner. It knows no caste, and in its all-compassionate insistence to do good as well as be good it smiles at asserted limitations. This explains the universality of its conquest, the continuance of its reward. It leads men to see that "heaven is the perpetual ministry of one soul to another;" and in the years they learn to love him who has given himself thereto, quite regardless of his pedigree, his social position, or his politics.

The world's "Greathearts" have always been called to suffer, and for the reason that, following the Master, they too, with large-visioned interest, have entered into humanity's problem, and willingly yielded their shoulders to that vicarious burden which he so bravely bore. Thus do they prove that love's ministry hath no boundaries either of space or time; and though they be smitten and fall, it will be said of them in the aftertime, as the poet has said of Stephen,—

He heeded not reviling tones,
Nor sold his heart to idle moans,
Tho' cursed and scorned, and bruised with stones:

But, looking upward full of grace,
He pray'd: and from a happy place
God's glory smote him on the face.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

[Telegram.]

New York, N. Y., Feb. 5, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Revered Leader, Counselor, and Friend:—The trustees and readers of all the Christian Science churches and societies of Greater New York, for the first time gathered in one place with one accord, to confer harmoniously and unitedly in promoting and enlarging the activities of the Cause of Christian Science in this community, as their first act send you their loving greetings. With hearts filled with gratitude to God, we rejoice in your inspired leadership, in your wise counseling. We revere and cherish your friendship, and assure you that it is our intention to take such action as will unite the churches and societies in this field in the bonds of Christian love and fellowship, thus demonstrating practical Christianity.

FIRST CHURCH OF CHRIST, SCIENTIST,
SECOND CHURCH OF CHRIST, SCIENTIST,
THIRD CHURCH OF CHRIST, SCIENTIST,
FOURTH CHURCH OF CHRIST, SCIENTIST,
FIFTH CHURCH OF CHRIST, SCIENTIST,
SIXTH CHURCH OF CHRIST, SCIENTIST,
FIRST CHURCH OF CHRIST, SCIENTIST, Brooklyn,
FOURTH CHURCH OF CHRIST, SCIENTIST, Brooklyn,
FIRST CHURCH OF CHRIST, SCIENTIST, Staten Island,
CHRISTIAN SCIENCE SOCIETY, Bronx,
CHRISTIAN SCIENCE SOCIETY, Flushing, L. I.,
By the Committee.

MRS. EDDY'S REPLY.

This proof that sanity and Science govern the Christian Science churches in Greater New York is soul inspiring.

MARY BAKER EDDY.

London, England, Jan. 24, 1910.

Beloved Leader:—Your letter has come to me as a great encouragement in the attempt to do my share of the work in England. That you approve of the arrangements which have been made for the distribution of literature, is the best proof to me that some reflection of divine wisdom, however faint, has been manifested in them.

One thing in particular that is being impressed upon me, more and more, in the attempt to make this branch of the work a success, is the incalculable possibilities for good which you have placed in our hands by giving us the *Monitor*. It is destined to be not merely a great paper, but the greatest of papers. Circulating as it does throughout the world, it has already achieved a unique record. It only remains for us all, by our united and unwavering effort and support, to convert the success of the first year into a permanent and increasing one.

I cannot express in words the gratitude and love I feel for what you have taught me of Christian Science. That can only be shown in the attempt to express it in my life.

Your loving follower,

FREDERICK DIXON.

Digitized by Google

Joplin, Mo., Jan. 27, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Many times have I felt a desire to write and thank you for your invaluable gift to mankind, "Science and Health with Key to the Scriptures," but have never been able, until today, to yield to the impulse. Words can never express how grateful I am for the good this "little book" is accomplishing in my daily life, leading me out of the by-paths of worldliness into a haven of understanding that gives me strength sufficient for the day in my journey from sense to Soul.

Ever since I began the study of Christian Science, five years ago, I have endeavored to be found worthy of the name of Christian Scientist, and in my efforts have resorted to the habitual study of The Mother Church Manual, together with your other works, besides the Bible. It has always been clear to me that true progress could result only from such efforts, and now that I have recently been elected First Reader of First Church of Christ, Scientist, in this city, I feel that my success in filling this office will be commensurate with my study and application in daily life of the rules laid down in the Manual, together with the Bible and Science and Health, and in the preparation of the Wednesday evening and Sunday services.

That I may prove my faith by my works, and ever be found active in "the wide channels of The Mother Church" (Manual, p. 45) provided by Love, in helping you with your life-purpose—"to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207), is the prayer of one who has begun this work early in life, and who humbly subscribes himself,

Your grateful follower,

ERNEST C. PRICE.

Urbana, Ill., Jan. 23, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I am glad to report that four lectures have now been given at the University of Illinois under the auspices of the Christian Science Society of the University of Illinois, the last by William D. McCrackan, M.A., today. It is a source of satisfaction that here in a great institution of learning something is being said about the great subject which is the foundation and sum of all learning, the absolute truth about God.

There is increasing interest in Christian Science at the university, and our lectures are seemingly very welcome. Our members are more and more grateful for this pearl without price, and often express their gratitude and love.

Faithfully yours,

A. PHELPS WYMAN, *President*,
Christian Science Society of the University of Illinois.

Kansas City, Mo., Jan. 29, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Teacher:—First, I want to thank you, so far as words may serve, for the "eternal vigilance" with which, in loving kindness and fearless power, you are guiding and safeguarding the movements of our great Cause. I shall further express my gratitude in constant watchfulness and quick obedience to divine Love's behests, as made known in your teachings. Let me specially thank you for that priceless paragraph added to page 442 in Science and Health. It has brought such a sense of refuge and defense; and now, in its restatement, it is even more emphatic and protecting. Again and again, it has been to me "the shadow of a great rock."

Some months ago, I met an English gentleman who had shortly before visited his own country, and he spoke of the wonderful growth of its interest in Christian Science. He says the English people are eager to demonstrate the truth, in working out their own problems, as soon as they have even a little of the true understanding, instead of leaning upon others to do their work. Surely this, to a great extent, accounts for the rapid growth of the movement in that field.

While visiting Seattle, during the recent exposition, I was unexpectedly invited by First Church of that city to lecture for them, and did so just a week from the day the decision was made. They secured their largest and best theater (a thing which before was apparently impossible to do), and it was packed. The closest attention prevailed. I was told of a man who came to the lecture on two crutches and required help in getting comfortably seated. They said that at the close he walked out normally, carrying the crutches in one hand. I was so thankful for this quick proof of the power of the truth uttered.

With tender love and unceasing gratitude,

Your student,

MARY BROOKINS.

Pittsfield, Mass., Jan. 21, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the undersigned, committee on behalf of and in accordance with a vote of First Church of Christ, Scientist, of Pittsfield, Mass., in annual meeting assembled, hereby express to you our increased and increasing love, loyalty, and allegiance, and our hearty appreciation of your recent remarkable demonstration of wisdom, fitness, and God-given right to leadership.

Gratefully and lovingly yours,

GEO. H. COOPER,	H. B. DUTTON,
ELLEN N. VAN OSTRAND	C. C. COOK,
JESSIE C. ADAMS,	W. R. THOMAS.

Committee.

New York, N. Y., Jan. 26, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved and Revered Leader:—It remained, after all the hungry years, for you to found a religion wherein the much criticized theatrical profession might rest and find peace and hope unspoiled by the hand of condescension that is so often held out in welcome. That the immortal Shakespeare was a player did not hinder his vision, but his vast mirror did not reflect the real universe as offered us by you. You have given us the greatest art, that of revealing harmonious, immortal individuality. As you have reflected to us substance, encouragement, strength, love, so may our greatest desire be to reflect them on to minds chastened and ready.

For the churches, reading-rooms, publications, and our ever-present home "Science and Health with Key to the Scriptures," hundreds upon hundreds in the dramatic profession are prayerfully, daily grateful. It is our joy to know that your uplifted consciousness enters seasons of peace as yet not reached by any in this age.

Permit me humbly and happily to subscribe myself,

Your servant in the ranks of Truth,

G. H. TRADER.

Peoria, Ill., Jan. 14, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—At our annual meeting, by a unanimous vote of the members of this church, we send you an expression of our love and of our appreciation of your untiring service to us. Science and Health, which you have given us, guarded on every side by the Manual and our periodicals, has put health and happiness within the reach of all. Your life, devoted to the redemption of mankind, your unselfishness and unworldliness, are a constant inspiration to us. We thank you for this in words, but know that we can best thank you by being true Christian Scientists. It is our constant desire to be loyal to you and to your teachings, and to let our loyalty be attested by our lives. We stand ready to serve you in any way you may direct.

FIRST CHURCH OF CHRIST, SCIENTIST, Peoria, Ill.

THE LECTURES.

LONDON, ENGLAND.

The Rev. Arthur R. Vosburgh of Rochester, N. Y., lectured on Christian Science in Queen's Hall, London, last Thursday and Friday [Nov. 11 and 12]. Philip Martineau, who presided at the lecture, said:—

I have been interested in Christian Science for over nine years. I came to it for physical healing, and obtained it. I was not content to leave matters there. I wanted to find out for myself why and how I had been healed, and I determined to study the subject for myself. I can only tell you that I was well repaid, and am very grateful for the help I received through that study. In those nine years I have had opportunities of meeting many earnest workers in this movement, and many who have been healed both physically and morally; and, when one sees for oneself and knows what Christian Science has done for these people, it is impossible to doubt the truth of their healing. There are many here tonight in this hall who, if there were time, could tell you the plain unvarnished facts of their healing. These people are not fanatical, not hysterical, but sane, intelligent men and women, strong in their convictions and with a full sense of their obligations to each other and their responsibilities to their country. This experience has forced me to the conclusion—and I should not be standing on this platform if it were not so—that where Christian Science is honestly and conscientiously lived and practised, it is silently, quietly, and surely doing a great work of regeneration, not only in the individual, but in the whole body politic, for it stands for all that is best and highest and noblest in life. But all great movements for reform have, all down the ages, evoked opposition, and Christian Science is no exception to this rule. There has been bitter and hostile criticism of it, much misrepresentation and misunderstanding, sometimes wilful, but more often, I believe, through ignorance of its teachings and purpose. Christian Science does not fear honest investigation; it courts it.—*Christian Commonwealth.*

GRAND FORKS, N. D.

The lecture on Christian Science at the Metropolitan Opera House in Grand Forks Sunday afternoon [Dec. 19] was delivered by Clarence C. Eaton. He was introduced by Dean A. A. Bruce of the law school, who said:—

Though a member of another church, I deem it a great privilege to be allowed to preside on this occasion. I always welcome, and am grateful to, the man or the institution that will honestly seek the truth and honestly present to us the truth as they see it. The Christian Science church has been noted for its dignity of discussion, its intellectual charity, and its lack of sensationalism, backbiting, and vindictiveness, and whether we believe in its teachings or not, we can have no criticism on its educational methods. I had the honor of presiding two years ago, on the occasion when Judge Ewing of Chicago addressed the people of Grand Forks. I did not agree with, perhaps could not bring my mind to follow and to understand, all that he said. I was, however, never more inspired. I have heard many sermons and many addresses, but I have heard none which were loftier, more spiritual, and more uplifting. Why, indeed, any Christian church or any Christian man should feel a hostility toward the Christian Science church is more than I can understand. We all of us see through a glass darkly, none of us see face to face. We all have our own interpretation of the Scriptures. Some of us emphasize some of the reported teachings of Christ, some others. The Christian Scientist, perhaps more than any other Christian, seeks to emphasize all. All of us must admit that, whether that belief is justified or not, it has, somehow or other, brought peace and tranquillity and bodily health to thousands of human souls.

Grand Rapids Times.

EAGLE PASS, TEX.

William D. McCrackan, M.A., delivered a lecture on Christian Science at the Mesquite Club last night [Jan. 7] to one of the largest and most refined audiences ever gathered in that hall. The lecture was a treat to all thinking people. Capt. John N. Shafter introduced the speaker, saying in part,—

Last year a little band of your townspeople formed themselves into a Christian Science society, and by their life, example, and teachings have at least demonstrated that one can live in peace and harmony, granting to all the privilege of seeking Christ according to the dictates of their own conscience. They opened a reading-room and held weekly meetings, where all have been welcome to attend. There are no people better able to tell what the conditions of society are without the influence of the church in its various forms, than many of those within the sound of my voice, who have spent a goodly portion of their lives on the frontier. The church appeals to the human heart, and its religious aspect should always point to the teachings and practices of the lowly Nazarene. To live and love, feel and forgive, as he lived, loved, felt, and forgave, is the sum total of religion; and the church which teaches and helps the coming generations to do this, teaching men to do in thought and deed like the Master, will be the best church.—*Eagle Pass News-Guide.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

St. Thomas, Ont.—Frank H. Leonard, Feb. 14.
Columbus, O.—Prof. Hermann S. Hering, Board of Trade, Feb. 17.
Cadillac, Mich.—Frank H. Leonard, Opera House, Feb. 17.
Tacoma, Wash.—Clarence C. Eaton, Tacoma Theater, 3 p.m., Feb. 20.
Chester, Pa.—Bliss Knapp, Opera House, 3:30 p.m., Feb. 20.
Lafayette, Ind.—Frank H. Leonard, Dryfus Opera House, 3 p.m., Feb. 20.
Memphis, Tenn.—William D. McCrackan, M.A., Lyceum Theater, 3 p.m., Feb. 20.
Cornell University, Ithaca, N. Y.—Rev. William P. McKenzie, Barnes Hall, Feb. 20.
Orange, N. J.—Prof. Hermann S. Hering, Woman's Club, East Orange, Feb. 24.
Lancaster, O.—Bliss Knapp, Auditorium, City Building, 7:30 p.m., Feb. 24.
London, England (First Church).—Bicknell Young, Town Hall, Battersea, March 3.
Meridian, Miss.—Hon. Clarence A. Buskirk, Grand Opera House, Feb. 25.
Norwalk, Conn.—Prof. Hermann S. Hering, Lockwood's Hall, Feb. 25.
Indianapolis, Ind.—Frank H. Leonard, Tomlinson Hall, Feb. 25.
Macon, Ga.—Hon. Clarence A. Buskirk, Grand Opera House, 3 p.m., Feb. 27.
Danbury, Conn.—Prof. Hermann S. Hering, Sunday afternoon, Feb. 27.
Ottawa, Kan.—Bliss Knapp, Robaugh Opera House, 2:30 p.m., Feb. 27.
Augusta, Me.—Prof. Hermann S. Hering, Unitarian Church, Feb. 28.

TESTIMONIES OF HEALING.

Christian Science has been such a great help to me in business that perhaps my experience may encourage some other woman, who, like myself, goes out daily into the workaday world, feeling often like a mere atom among the toiling thousands in our big cities. Naturally timid and retiring, it was very hard for me to go out into the business world; but I wished not only to be self-supporting, instead of a burden on my brothers, but to be able to help others. I decided to learn stenography, although in the opinion of my family and friends I was not strong enough for a business life, as I had always been rather delicate and easily tired out, with backaches, headaches, and severe attacks of throat trouble almost every winter.

When I completed my course and took my first position (we were then living in Chicago), it was about as terrifying to me to go into an office as if it were an ogre's castle, and although that feeling wore off, and I got along nicely, I really stayed in this position very much longer than I should,—after having advanced as far as I could go there,—through the dread of starting out to find another place and encounter new work and new people. I then knew nothing of Christian Science, but while there heard of it, came across some literature, met one or two who were interested in it, and finally got a copy of Science and Health and began to read it. Much of it I did not understand, and I would often lay it aside for some time; but I could not get away from it, and parts of it would interest me greatly, especially the possibilities that it held out to me of growing stronger, of being all that I desired to be, of conquering faults in disposition, of banishing fear, and of gaining a better understanding of God. I began to realize that because God is omnipresent, good is all present and there is in reality no evil, and that was a wonderful relief: also to know that omnipotence really means all-power and nothing less. So I came into Science, not through direct healing, but by growing more and more interested in it, and by finding that it was gradually making me stronger and happier and helping me in every way.

It was finally decided at home that I should leave my position and take up the study of designing, which I had always wanted to do, and I did so, spending some time in this way, until circumstances changed so that I was confronted with the problem of which was the better thing to do, go on with my studies or return to business. I could not decide, and going down town one morning with a friend who was a Scientist, I mentioned my perplexity to her. She said, "Don't try to decide. God knows what you should do. Leave it to Him, and He will show you." That seemed rather strange to me, as I had always thought I had to make the decision, even when asking for wisdom and help. But the advice seemed so restful that I decided to try it, and every time the perplexity would come up I would put it aside with the thought that God knew and would show me. Later on, when it was about time for the decision, I was offered a very desirable position in an office, so I took that as the answer to my problem, and found the place very pleasant.

I had been in this position for several years when the brother who had assumed the responsibilities of the home after my father's death, was offered what seemed a very fine position in New York city and decided to go there. As my other brother was going to Manila, and as still another brother was already living in New York, and my mother, sister, and myself would be alone in Chicago, we debated the question of remaining or going also. It seemed best in many ways to go, and we would be happier together; but mortal mind asserted that if I went I would be giving up a good position and might have great difficulty in getting another; that I was going to a strange city, knowing no one, etc.; but I thought this was a good time in which to demonstrate over such fears and assert my freedom, as there was no reason why we should not go if we preferred to be together. Divine Love had given me my present position, and could give me another just as easily, if only I trusted. We decided to go, and I resigned my position, and the week before we left for New York, by what would seem the veriest chance,—only we know there is no chance in the infinite Mind,—I was shown an advertisement for a stenographer to go to New York. I went to the address, was given the position at a higher salary than I was then getting, came down to New York, and went right to work, our loving Father finding the place for me in this big city, so that I was spared the trial of hunting for one. My work was very hard and technical, and my employers seemed inconsiderate in regard to the amount they expected me to do; but through the help of a kind practitioner whom I found in a neighboring office building, I was enabled to hold fast to the truth regarding both the work and my employers. I was able to fill the position very satisfactorily, and things became very pleasant and harmonious all around.

I remained in this position three years, when, owing to financial difficulties, the firm found themselves where they could no longer afford to keep me, and told me so the Friday before Christmas, 1908. It certainly did seem hard to be out of a position at the holiday season, and for a little while, in spite of the wonderful demonstration I had had before, I am ashamed to confess I did feel discouraged at the thought of having to start anew. But the study of the Lesson-Sermon for that week brought new confidence and strength, and my brother, who had become a Scientist, and who was the only one of the family to whom I told this problem, helped me in knowing and declaring the truth, that as God's child, His idea, I had my own right place in Mind and nothing could keep me from finding it; also a dear friend, a practitioner, whom I told on Sunday, said she would help me. On Monday, while still at my old place, I began to make some effort toward finding a new position, but was told that everything was very dull, that there would be no openings until after the first of the year, perhaps not until March, especially in high-salaried positions, and in fact there had been little call for such for the past year, owing to the panic. I, however, knew that these laws and beliefs could not govern God's child; that there is but one law, the law of God, good. My employer kindly wrote some letters of recommendation to various men in business, and on Wednesday there came word for me to call the next day at the office of a big corporation. I did so, had an interview with the president, and was given a position in his private office, to commence work the following Monday. This was the day before Christmas, and that was certainly a very happy Christmas day for me, for it was such a wonderful proof of God's care for His children, and of the help Christian Science affords in the solution of all our problems. The position was much better in every way than the previous one, in fact just the kind I had always desired, and I am very grateful indeed for this blessing. The work is important and often comes with a rush, but the thought that man reflects infinite wisdom, takes away the anxiety and gives me confidence and quietude.

Christian Science is the greatest help that a business woman can have. It has enabled me to do a great amount of work and to grow stronger, instead of breaking down under it, as so many in my profession have done. I have been helped in very many other ways, healed of quite a few physical ills, and every member of our family has been healed of some trouble. I am very thankful for each and every demonstration, but realizing my natural disposition, it seems to me that, aside from the thought of supply, the help in the daily business life, the banishing of fear and worry, the understanding that God, as infinite Love, wisdom, strength, is always at hand, is what

I am most thankful for, and I hope that every girl or woman who goes out to work for her daily bread in any way, will be led to Christian Science, that they may avail themselves of this comforting truth. I also wish to express my deep gratitude to Mrs. Eddy for bringing to us this truth and proving it for us, and for all her bravery in standing alone so many years, through ridicule and abuse, that we might be blessed.—CARRIE E. BOLLER, Bronxville, N. Y.

[Translated from the German.]

I, too, would like to give thanks for all the blessings which have come to me through Christian Science. In May, 1904, I became ill and had to consult a physician. He stated that I had gall-stones and liver complaint, and that I must submit to an operation. I therefore went to the hospital and was operated upon. After the operation, however, the physicians stated that my case was hopeless, that I had a disease which was fatal. They informed my husband and daughter of this, and said that four months would be about the longest I could live. My daughter then heard of Christian Science, and went to see a practitioner, who gave me absent treatment during four weeks. I improved, and was able to leave the hospital, and after four more weeks' treatment I was perfectly well and have remained so. Although I am sixty-two years of age, I can attend to all my housework.

I cannot thank God enough, and I am grateful to Mrs. Eddy, that she has brought to the world this wonderful truth, as explained in "Science and Health with Key to the Scriptures." We gladly look for the *Herold*, as for the coming of a welcome guest.

ELISE LEHMPUHL, Chicago, Ill.

[The above testimony was signed before a notary.—EDITOR.]

I have been healed of rheumatism, catarrh, stomach trouble, and the tobacco habit. Like many others, I came to Christian Science through suffering, after having exhausted all material remedies, having had numerous doctors in this and in many southern cities; besides taking a course of treatment at some celebrated hot springs, with little benefit and no permanent relief. I finally resorted to Christian Science, and while I did not know anything about it or have any faith in it at the time, I have learned to know that it is the truth, and have felt for some time that I wanted to add my testimonial, hoping that it may stimulate and strengthen some weary searcher for health and happiness.—W. P. ADKINS, Richmond, Va.

For the past three years Christian Science has been my only help in sickness and trouble, and I have found it a panacea for every ill. Truly "another Comforter" has come, as the Master promised, and will abide with us forever. I became convinced of the value of Christian Science after my husband was healed of illness of years' standing. He even resorted to the "gold-cure" without avail, and his life seemed not worth living. As a last resort he was persuaded to try Christian Science, but having little or no confidence in its power to heal, he reluctantly read "Science and Health with Key to the Scriptures" by our Leader. Man's extremity is, however, God's opportunity, and his healing came with his regeneration; old things have passed away and the habits of a lifetime no longer find place in his consciousness. Along with his physical healing the tobacco habit left him and his nature was transformed. Now, his most constant companion is Science and Health, which has taught us all the power of Truth, and enabled us to understand the Bible better, for which we can never express half the gratitude we feel. On Christmas morning (1908) I had arranged a visit to my home people at a nearby city, but I waked up with a severe headache, that grew in intensity as the day advanced. On my arrival I was so ill I had to retire and call over the long distance telephone a Christian Science practitioner. I received instant relief; dropped off to sleep, and later enjoyed a delightful evening with my family, not a trace of illness left. I felt no ill effects afterward, as I had formerly done on such occasions. My mother was present, and as she had never quite forgiven Christian Science for supplanting the orthodox church in our regard, she had an opportunity to see what Christian Science does in illness.

Since we came into Christian Science my daughter has become a Scientist and my son is deeply interested, having been healed of a fever. For these and countless other blessings I owe a debt of gratitude, and my desire is to live so that I may be accounted a worthy follower of our dear Leader, who tells us to follow her "only so far as she follows Christ" (Messages to The Mother Church, p. 78). I cannot thank her enough for so living that through her this revelation has come as promised in the Bible,—that the whole world will be led into this truth when human sense has been sufficiently leavened to apprehend it.

MRS. M. S. G. ADKINS, Richmond, Va.

I give my testimony with great pleasure and a very thankful heart, that others may know what the truth has done for me. It is over three years since I first heard of Christian Science and began to study it. At that time I was exceedingly unhappy from a great sorrow that had come to us, but Christian Science brought me such peace and comfort as I never dreamed would be possible in this world. I belonged to an orthodox church, and thought I was a Christian, but my prayers had availed nothing. At last, after months of illness and bereavement, a dear sister and brother led me to Christian Science. I got a copy of Science and Health, and read it almost day and night; then the light came, and I knew I had found the truth that makes us free.

Christian Science has brought to me perfect health and happiness, and the knowledge that Love wipes away all our tears; that now, here on this earth, God binds up the broken heart, giving us peace and comfort. For this blessing I praise His holy name. A short time after I began the study of Science and Health I was taken down with intermittent chills. I felt that I needed help to meet this trouble, as every attack seemed to be harder, attended with high fever and severe pain. A Christian Science practitioner was telephoned to, and she commenced to treat me at once. After the first treatment I slept like a child and enjoyed my rest. In a short time I was entirely healed of this disease, and many other ailments went with it,—headache and stomach trouble, also heart disease from which I had suffered many years.

Since then I have had many beautiful demonstrations. With a little understanding and much faith in God's power, I was enabled to heal a serious stomach disease for a friend, and with this healing came a great desire to know more of this glorious Principle. I learned that only as we become workers in this truth can we reach a higher understanding of the First Commandment, "Thou shalt have no other gods before me," and "Thou shalt love thy neighbor as thyself."

Every day and every hour I shall endeavor to watch and pray for that Mind to be in me "which was also in Christ Jesus;" that I may be "merciful, just, and pure" (Science and Health, p. 497). I know that God is guiding me each day, and it is my daily prayer that I may follow more closely the teachings of our Master. My heart goes out in gratitude to God, and to our Leader, who has led us into this pure path of truth. I should also like to say how grateful I am for having been admitted as a member of The Mother Church.

MRS. SIXIE J. SCHMICK, Eastland, Tex.

Christian Science found me in a hopeless condition, so far as *materia medica* was concerned. I have often thought of my case in connection with the Scriptural record of the woman who had "suffered many things of many physicians, . . . and was nothing bettered, but rather grew worse." Since my healing in Christian Science, over seven years ago, my blessings have been many, and I would like to tell a part of what I have received.

I had been studying Christian Science about one year when I was seized with an attack of illness. At that time I did not feel able to work out the problem myself, so a practitioner was called in, who began treatment at once. All pain and suffering were soon gone; then I fell asleep. I slept about two days and nights, and I could scarcely be roused, but the third day brought such an awakening as I had never known before. I was not only awake physically, but spiritually. It seemed as though I was in a new world; and indeed I was in a new world of thought, where everything was bright and beautiful, and I had such a sweet sense of God's power and presence, greater than I had thought possible in this world.

Another demonstration which I would like to give was in the case of some dental work. I had lost several teeth prior to coming into Christian Science, and desired to have the rest of them taken out that I might have a new set; but as I had always held great fear, I hesitated for some time. Finally, however, I made up my mind to have the work done, so I called on the same practitioner for help. She went with me to the dentist's office, and treated me with very favorable results. The teeth were taken out with very little pain and not even a sense of nervousness. When I returned to the dentist's office to have my teeth fitted, the day after my first visit, he seemed greatly surprised to find neither swelling nor soreness, and after the work was finished he declared he had never had so little trouble with any one in all his practice. In three days I was wearing my new teeth, and have worn them ever since with very little inconvenience.

For seven years Christian Science has been our only remedy, and it has not been found wanting. Every member of the family (five in number) has been healed by this truth. I am very thankful for having all the family with me in Science, and not only am I grateful for benefits received in my own family, but I am also thankful that I can be a help to others. While the physical healings have been many, they are as nothing compared with the spiritual uplifting—the peace and rest of mind we have gained in this truth. I am thankful to every one who has helped me by word, deed, or pen, and especially am I thankful to God, and to our beloved Leader, Mrs. Eddy, for this truth.—Mrs. Ava R. Hall, Canyon City, Tex.

I have long felt a desire to express my love and gratitude for the many blessings and privileges I have had through even the slight understanding of Christian Science which I have attained. Instead of being unhappy, discontented, and in constant fear, also in very poor health, because of a complication of diseases from which I had suffered for about twenty-five years, I now understand what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free."

I now have a sense of peace, happiness, and contentment, and I enjoy good health. I am indeed grateful to God, and to our dear Leader, Mrs. Eddy, and my desire is to live this truth so fully that I may be worthy to bear the name of Christian Scientist.—Emma Brown, Conneaut, O.

I give my testimony with a very grateful heart, hoping it may help others. It is over a year since I received my first treatment in Christian Science. I had suffered from severe lung trouble for many years, and the doctors told me that medicine would do me no good, but advised plenty of fresh air and to take a sea voyage. I did so, but was much worse after the voyage and had an alarming attack. I was then ordered into a hospital, where I was attended by seven resident physicians, besides two others. These doctors did their best for me, but told me frankly they could not help me, as my lungs were so seriously affected. At this stage I was advised to try Christian Science, which I did, and I can say with deepest gratitude that all the trouble has disappeared. Christian Science has been a very great help in every way, spiritually and mentally as well as physically, for which I give thanks to God, also to Mrs. Eddy for discovering and showing us the way.

Mary E. Chadwick, Rochdale, Lancashire, England.

We desire to express our gratitude for what Christian Science has done for us. We have not had any material remedies in our home for seven years; we lean wholly upon God. We have found that Truth is the only true and firm foundation to build upon, and Love supplies our every need. We have had many proofs of God's protecting care in stilling of the angry elements, also in overcoming the supposed effect of frost over vegetation, and after weeks of drought and heat grain and vegetation yielded abundantly. Many unpleasant things that the mortal child is heir to, such as disobedience, forgetfulness, heedlessness, and anger, have been overcome.

My parents, also my sister and I, are members of a Christian Science society in this state. We are at present living between sixty and seventy miles from any Christian Science church or society, but we study the Lesson-Sermon daily. Our home is full of joy and happiness, and as we grow in the knowledge of this truth, we rise above every material law, and so fulfil the law of God, which brings health, purity, love, and power. We are thankful to God, and to dear Mrs. Eddy for Christian Science.

Miss Lavina Woock, Griffin, N. Dak.

Every morning a new sense of gratitude leaps in my heart for the blessings I have received through Christian Science. Even freedom from long and seemingly hopeless invalidism is but the smallest part of that wonderful manifestation which Love has brought to me, and will bring to all who faithfully follow in the footsteps of Christ Jesus, "obeying his precious precepts,—following his demonstration so far as we apprehend it" (Science and Health, p. 31). Mrs. Eddy has pointed out the way, and deep is my gratitude to God and to her, for the help given me to find and follow it.—Grace Chaibourne, New York, N. Y.

On the 11th of January, 1909, I was taken with a very severe illness. The pain in my lungs became so intense that I called a Christian Science practitioner at two o'clock in the morning. I was able to go to work that day as usual, and in three days the trouble was all overcome. Usually, with an attack of that kind, I would suffer intensely from ten days to two weeks. This time I did not lose an hour's work.—C. W. Titus, Everett, Wash.

I wish to express my gratitude for Christian Science. I was led to investigate this wonderful truth by the need of physical healing. I had been suffering from throat and stomach ailments for fifteen years, and had tried the best physicians of this city; in fact, I had tried everything I could hear of, with no relief. I was growing worse and was very much discouraged when I called in a Christian Science practitioner. Mrs. Eddy's book, "Science and Health with Key to the Scriptures," was placed in my hands to read when treatment was given. I was completely healed in twenty-four hours. The old trouble has never returned, and it is over three years since God, good, healed me. Divine Love has ever since been my only

Digitized by Google

physician. I have had many proofs of the power of Truth over error in overcoming attacks of rheumatism, etc., and for the help received I am indeed thankful.

I am grateful to God, and to our dear Leader, Mrs. Eddy, for all that has assisted me in finding this truth which sets us free from every phase of error. My desire is that I may do much for the Cause of Christian Science, and that by living and reflecting the truth I may bring others to know God.—Miss Addie L. Lewis, St. Joseph, Mo.

Three years ago I was in a state bordering on despair. I had suffered for years with stomach, bowel, and liver affections, also with terrible headaches, which were becoming worse and more frequent, and was so weak and miserable that life seemed not worth the living. One doctor whom I consulted thought there was no help for me. Another told me he thought he could help me, and I did recover somewhat and seemed to sleep a little better, but continued to suffer from the headaches and was obliged to confine myself to a very limited diet, although I remained under his care over a year and a half.

In May, 1909, a kind friend placed in my hands some Christian Science literature. I had heard of this teaching before, but had no faith in it for myself. In fact, I felt somewhat prejudiced against it, as do many others who have formed their opinions from the statements of those who know little or nothing about it. I, however, became interested at once in the literature. The testimonies inspired me with hope, and that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, how eagerly I devoured its pages, never questioning or doubting even where I could not understand. I read and reread, always finding some new truth or gaining a clearer understanding of one already recognized. This book is indeed a "Key to the Scriptures," and I read the Bible with a new vision, realizing that its promises are for us here and now, and the words of an old hymn came to me,—

God Himself shall loose thy hands.

In a short time I went to see a practitioner and commenced to take treatment. Slowly at first, but surely, the old errors were overcome: weakness has given place to strength; I can now work and enjoy it. The other troubles are gone, even the headaches; I have gained greatly in weight. I can eat anything I want, and I enjoy a sense of freedom such as I have never known before. There are errors yet to be overcome, but as I look back over the way which I have come, and to the miry pit from which I was rescued, words cannot express my gratitude to God, to His dear Son who trod the way before us, and to our Leader, Mrs. Eddy, who has discovered this truth and given it to the world. I do not wonder that Christian Scientists love their religion. Aside from the physical healing, it appealed to me from the first as something tangible and practical, something satisfying to the hungry soul reaching out after God. I can truly say, "Bless the Lord, O my soul: and all that is within me, bless his holy name."

Mrs. S. A. Jack, Lisbon, Me.

Words are inadequate to express my gratitude for what Christian Science has done and is doing for me. I became deeply interested in Science through seeing and hearing of its healing power from a dear friend, and I knew it was what I needed. Although at the time when this new-old religion was presented I was recovering from an illness in which I had received the kind help and attention of doctors, for whose earnest effort I am grateful, I have now learned that God is our true and only physician. I wanted a comforter, and it came.

In the following December I had an attack of an old complaint (a kidney disease), with alarming symptoms, but I was in no way disturbed and asked for absent treatment from a Christian Science practitioner. During this trial my family firmly insisted on my having medical attention, as they held strong opposition and would not in any way be persuaded to wait a little while; but after this I absolutely refused any more material aid, as I wanted to give Christian Science a trial. With some help and my own study I gradually began to improve. I have never had a return of the trouble, and my health has never been better, as I had always suffered a great deal previous to this time with several serious complaints. In the summer of 1908 I had a bad cold and nearly lost my voice. I was able now to meet this with my own understanding of Truth, and the difficulty disappeared like mist before the morning sun. Also an abscess was overcome and disappeared within three weeks' time. This healing was a strong proof and a great victory won. I am grateful for the help received in many ways, and it has made plain the right road. Though the way seemed dark at times, yet I pressed on, cheered by our Leader's encouraging words, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii.). There are still many obstacles to be overcome, but I know that "God is our refuge and strength," and that "perfect love casteth out fear."

The spiritual uplifting is more than I can explain, and while I return sincere thanks for the physical healing, the former is more wonderful, as the glorious facts of God's creation appear in their true light. I am also thankful to say that several errors, such as temper, irritation, worry, etc., are being overcome, even if slowly. What I owe to our dear Leader for her great love and labor for mankind, words can never tell. It is my desire that in both words and deeds I may show my appreciation.

Miss Gretta Powell, Breconshire, Great Britain.

[Translated from the German.]

I am very happy to have found the way to truth. It has proved a great help to me, especially in my business, as I am the matron of a servants' home. When I began this work I used to get so excited by every small incident that for days I would suffer physically in consequence, but now I manage to remain quiet whatever may occur, for I know that God is omnipresent, that He is Love, and that I have nothing to fear. I thank God with all my heart for the blessings which I have received, and also our revered Leader, Mrs. Eddy, for her great love in clearing the way for us to Truth.

Anna Joeckel, Frankfort on the Main, Germany.

As the years go by, the one passage of Scripture my mother repeated oftener than any other, has a deeper meaning to me, because I see it fulfilled: "Whatsoever a man soweth, that shall he also reap." Give your best and you get the best; give your poorest and it comes back to you, not always in the same coin, but you get paid. If you live long enough, you get where you see how things come out. Do you know, I think that in many minds, at this time when the Sermon on the Mount seems at last to be coming to the front, there are grave doubts whether we have been Christians after all? It seems to me we have hardly touched the outer edge of the glorious truth that we can do all things as if we did them for the Christ. Oh, what a revelation will take place in this world when the Sermon on the Mount is lived out, and the forward movement is simply taking that road! "Whatsoever ye would that men should do to you, do ye even so to them." Nothing less than the Christ-spirit will at all avail for bringing this world back to God.—Margaret Bottome.

FROM OUR EXCHANGES.

[*Congregationalist.*]

Christians providentially organized in different groups which have already rendered creditable service to the world, need, from time to time, and we believe never more seriously than today, to ask, Does the maintenance of our separate organizations accrue to the advantage or disadvantage of our community? Does it speed forward the kingdom of God as rapidly at it might be expected to move were some new alignments made? But Christian people have a still higher duty than that to the community. They owe it to their Master to ask whether the existing order satisfies the deep desire of his heart when he prayed, "That they all may be one; as thou, Father, art in me, and I in thee;" to ask also whether the world is day by day receiving the convincing token that they are Christ's disciples because of the love they bear one another and the sacrifices they are ready to make for his sake.

[*Watchman.*]

The Magi showed a simplicity of faith and an earnestness of spirit in prosecuting their inquiries which were totally absent from the hearts of the learned rabbis. It was moral earnestness that carried those travelers on their way. They were not disobedient to the heavenly vision given them. The light which they had they followed, and it led them to the supreme event of their age. They illustrate how it is that men of few opportunities may enter the kingdom of light and truth where others at the very door of divine knowledge fail to use their great advantage. This is a truth that often appears upon the page of Scripture, and is emphasized by Christ himself in saying that they shall come from the east and west and sit down in the kingdom of heaven, while the sons of the kingdom are cast into outer darkness.

[*Christian Register.*]

Take it altogether, our country is today not only stronger as a nation, richer in all its component parts as an assemblage of people, but it is also on a higher plane morally and religiously than ever before. Things that fifty years ago existed and were not spoken of, today have been revealed and condemned. There is more criticism, more fault-finding, and more punishment of evil-doers, but not because the evils have increased so mightily in proportion to the increase of our population, but because the people have become in a new way conscious of their rights, duties, and mutual obligations. Therefore we do not hesitate to say that the twentieth century is the best and brightest that ever dawned upon the world just coming to a knowledge of its possibilities and the glory of its future.

[*Christian World.*]

If Jesus was the true democrat, and if Christianity consists in carrying on his spirit and teaching, it follows that its own government and internal regulations should exemplify in the best form the democratic idea. How far in practice the church has departed from it, history offers the sad and shameful record. The condemnation of splendid hierarchies, of the separation of the clergy from the laity, of theological and spiritual despotisms of all kinds, lies most in this, that they are one and all a betrayal of democracy. The church of the past has separated men, instead of bringing them together; has created castes, instead of abolishing them; worst of all, it has governed by force instead of by reason and persuasion.

[*Examiner.*]

We believe in mixing religion with business; but the mixing of business with religion is another matter.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy, "Personal Contagion" and "What Our Leader Says," in large type on special paper, silk-sewed with overhang cover.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House.

For prices see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Representatives of the Farmers' Union appeared before the House committee on agriculture last week to urge the enactment into law of a bill which will put an end to cotton "futures" in the cotton exchanges. A speaker for the Farmers' Union declared that twenty-nine states are interested in legislation prohibiting future dealing. The Farmers' Union, he said, was not prepared to express itself in favor of any particular bill, so long as prohibitory legislation of some kind is enacted. He characterized the dealers on the New York Cotton Exchange as "hedgers and speculators," and said that as a result of their manipulation of the market the cotton producers not only had to stand for the losses which followed a slump in the market, but that the people throughout the entire world had to pay increased prices for cotton goods when the market manipulators succeeded in keeping the market at a high level.

Mayor Gaynor has suggested to the tax department that the present plan of levying taxes on personal property in New York city be abolished and that a system be adopted whereby practically all of the city's revenue would be derived from assessments on real estate. His proposal is a slight modification of the Henry George single tax theory. It would eliminate from the tax-book all assessments now levied on estates, resident and non-resident personal property, and resident and non-resident corporations. Officials estimate that the change would add about six points to the tax rate. Whereas the tax last year was $1.67 a hundred it would have been about $1.73 had the amount raised from personal assessment been dropped. The assessment on a residence valued at twenty thousand dollars would have been about twelve dollars more than it was.

Sixty-four defendants in alleged coal land frauds against the Government appeared before the United States land office at Lander, Wyo., last week in cases which have been brought by the Government for the cancellation of their titles to coal lands which are said to be the most valuable in the state. The cases involve ninety-five hundred acres of land, lying in the mineral district north of Lander, and have been appraised by Government experts at $1,500,000. The Government alleges that these lands were filed upon by "dummy" entrymen for the benefit of the Owl Creek Coal Company and the Northwestern Coal Company.

A bill intended to aid the peaceful settlement of labor disputes, has just been presented to the Massachusetts Legislature. The bill provides for the application of the Canadian law to Massachusetts. It provides at the outset for replacing the present board of conciliation and arbitration by a state board of labor, whose duty it shall be "to aid in securing industrial peace" by investigation or arbitration, as the disputants may elect. To that end it is to be unlawful for employers to lock out their men, or for employees to strike before the dispute has been investigated.

Secretary of the Interior Ballinger has withdrawn from public entry more lands supposed to possess valuable water-power sites or deposits of minerals. More than sixteen thousand acres along the Brenan river in Idaho, and about twenty-eight thousand acres along the Salmon river in Idaho and Nevada were withdrawn temporarily in aid of proposed legislation to effect water-power sites. The secretary also withdrew more than a half million acres in Wyoming, supposed to contain valuable coal deposits.

San Francisco expects to open perhaps the largest dry dock in the world about the time that the Panama canal is completed. It will be located at Hunter's point, and will afford commodious berths for any two of the largest liners, merchantmen, or battle-ships of the Pacific. The proposed dimensions of the new marine basin are 1,050 feet over all length, 144 feet beam from rim to rim, and 92 feet across the floor of the dry dock, which will be 40 feet in depth.

Commissioner of Corporations Herbert Knox Smith, in his annual report to the secretary of commerce and labor just issued, declares that the greatest possible check on corporate evils is publicity, and to that end he indorses a system of reports by interstate industries to a federal agency in a rational way. The report is a sharp contrast to the Administration's federal incorporation bill just presented to both houses of Congress.

The necessity for the passage by the present session of Congress of good laws for the protection of the natural resources of the United States, is the key-note of a report just made to the National Conservation Association by Gifford Pinchot, the recently chosen president.

The House committee on foreign affairs has decided to report favorably the Lowden bill providing for the expenditure annually of a sum not exceeding five hundred thousand dollars for the erection of American embassies abroad.

The National Sugar Refining Company has turned over to the United States treasury the sum of $604,304, due the Government for shortage in importations of sugar between 1907 and 1908.

International.

Bolivia east of the Andes is one of the richest regions of the world in timber, rubber, and minerals, and it has some fine agricultural lands, says the *Engineering Magazine*. It has no outlet on the Pacific coast. Its only outlet is through the Amazon and Para, and since peace was made with Brazil, railroad activity in this direction has taken possession of the whole republic. East of Bolivia is the great Brazilian state of Malto Grosso, a territory nearly three times the size of Texas or France. A dozen large navigable rivers pour northeastward out of this state into the Amazon, and its agricultural, mining, and grazing possibilities are very great. It is said that a great deal of this territory will grow as fine long-staple cotton as Mississippi or Alabama. The Brazilian government has matured a plan to connect by canal one of the tributaries of the Amazon with one of the tributaries of the La Plata, thus opening an all-inland water route from Para to Buenos Aires, a distance of nearly six thousand miles. This extensive route would reach the whole interior of the continent.

The fact that the United States and Canada are engaged in a cooperative scheme for the establishment of an international park of about five thousand square miles in extent along the backbone of the continent in the two countries was developed in the Senate last week. It came to the surface in connection with the consideration of a bill looking to the creation of the "glacier national park" in northern Montana. It was stated that negotiations were in progress looking to the establishment of a similar park on the Canadian side of the international line, which, it is intended, shall connect with the proposed American reservation.

The governments of China and Japan have signed a postal working agreement on the basis of the postal union rules, to become effective April 1. The agreement affects Manchuria chiefly. China, by its terms, recovers its monopoly of mail carrying on its own railway, together with equal rights over the Japanese railroad. China recognizes all the Japanese treaty port post-offices and also six exchange offices in the treaty marts of Manchuria.

The press bill designed to suppress the dissemination of anarchistic literature, has just been passed by the imperial council at Calcutta. It requires the proprietors of newspapers and job presses to deposit with the government a sum of money which will be forfeited if the depositor is convicted of an attempt to incite to murder or sedition or to influence the public against law and order.

In Edmonton, Alberta, every lot of equal value with its neighbors, which is held vacant and non-productive by its owner, is taxed at the same rate as the surrounding "improved land." Lands held out of use for speculative purposes are thus made to bear the share of the cost of improvements which are making them steadily more valuable.

A narrow gauge railway is to be constructed to the Harilah district, about one hundred and fifty-five miles north of Bagdad. The spot is an oasis situated in the center of a vast desolate plain which is traversed by four arms of the Euphrates.

Following the complete defeat of the pro-Russian party in the Finnish elections, the Czar has decided to dissolve the Finnish Diet immediately, preparatory to the suspension of the Finnish constitution.

The great Heliopolis, Egypt, aviation meeting occurred last week. Prizes to the value of fifty-four thousand dollars were contested for.

Industrial and Commercial.

A hearing of great importance to mill owners and lumber men of New England will be held before the interstate commerce commission, Feb. 23, for the purpose of determining what abuses exist in the operation of the "milling and transit" privileges extended by authority of the commission. Under the present arrangement a lumberman in Maine can load his logs on a car in that state, send them to a sawmill and forward them in a finished state to final destination on the same bill of lading. Many complaints have been made to the commission that shippers have abused this privilege.

A large aggregation of capital has been formed in Minneapolis and St. Paul to handle American farm lands, particularly the lands of the Northwest. Divided into two companies, the syndicate just formed has a capital of three million dollars, and the combination represents seventeen different land corporations which have been in business in the twin cities.

With the payments of judgments in condemnation proceedings aggregating $1,234,697.71, the way is open for the beginning of work on the new union station for Kansas City, which is to cost thirty million dollars.

Gold and diamonds have been discovered in Liberia, about thirty miles from the coast.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LINCOLN DAY SERVICE AT THE MOTHER CHURCH.

LINCOLN day was observed in The Mother Church, The First Church of Christ, Scientist, in Boston, at noon Feb. 12. Judge Clifford P. Smith, the First Reader, presided. After the opening service, Judge Smith introduced the special speaker of the day, Col. L. A. Watres of Scranton, former lieutenant-governor of Pennsylvania, who said in part.—

It is said that for three hundred years after the battle of Thermopylæ every child in the public schools of Greece was required to recite from memory each day the names of the three hundred immortal martyrs who fell in the defense of that pass. It is appropriate that a free people should assemble one day in the year to speak the name and to draw inspiration from the life and character of one of the most impressive, commanding, widely-recognized, and best-beloved figures in our nation's history. It has been well said that "the best teachers of humanity are the lives of great men," and we might add, of great women.

The history and the life of Abraham Lincoln belong to the whole world. His marvelous growth and development from obscurity to the exalted position which gave him control of the government can only be accounted for and understood when looked at, not from a material, but from a spiritual point of view. His great heart beat true to the real things of life, and he stamped himself upon the hearts and consciences of men for all time. He loved righteousness, hated iniquity, and was anointed above his fellows. He was as gentle as a child, but as brave as a lion; calm and trusting in greatest trials, and modest and magnanimous in mighty conquests. He was one of God's children who never finished his education, but kept an open mind for truth whencesoever it came.

Lincoln pierced the veil and saw what others failed to see. He knew that some things which were legally right were morally wrong, and he was morally great enough to say so. He knew how "vain are our bulwarks and our towers, but for God's protecting arm." He said, "It is not our frowning battlements, our bristling seacoast, our army and our navy—these are not our reliance against tyranny. Our reliance is in the liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men in all lands everywhere."

He knew that real knowledge could not be separate and apart from righteousness—from God's law—and that God's law must be written on the heart and stamped upon the forehead. For nearly half a century statesmen and orators have sought to explain and account for his greatness. Some have urged that it was because he had to so great a degree common sense; others, that he had a logical and analytical mind; still others, that he understood himself so well. But all these reasons are superficial. Behind these qualities was the one great truth that he imaged and reflected the God whom he knew and trusted.

From Lincoln's life and deeds the world should note that the incarnation was not an isolated fact, and that the spirit which moved him differed not in kind, but in degree, from that which filled the incarnate One, the Lord and Master of us all. Christian Scientists, under one of the world's greatest leaders, are engaged in the mighty work of setting people free. They know that, as Mrs. Eddy has said, "Love is the liberator" [Science and Health, p. 225], and they accept as authoritative the words of the Master, "Ye shall know the truth, and the truth shall make you free."

[We have received reports of numerous Lincoln day services held in Christian Science churches throughout the country, to which lack of space interdicts further reference.—EDITOR.]

SPEECH AND SILENCE.

HON. CLARENCE A. BUSKIRK.

THE faculty of speech has ever been considered one of the chief distinguishing characteristics of the human race. It is true that it is claimed that a few animals possess the ability to communicate somewhat to their fellow-creatures, but they have nothing like the human articulate speech, and the few sounds which they are able to make, to say the most we can for them, are very restricted in their scope and power of expression. It is inferable that, because of its superiority as a faculty, human speech is intended for noble uses and capable of such uses, and it has been put to such noble use in many ways and in innumerable instances.

During many centuries before the art of writing was invented, speech preserved the traditions and legends which afterward made written and printed history. It thus preserved, likewise, mainly in poetical compositions which were handed down from one generation to another through the wonderful memories of the bards, the religious beliefs and hopes, the emotions and passions, the social, tribal, and national environment and conditions of many primitive peoples, which otherwise would have been utterly forgotten and lost. During innumerable ages, the faculty of speech has been put to the noble uses of inculcating higher standards of conduct, of communicating useful knowledge, of conveying words of affection, of sympathy, of encouragement, of help in numerous ways. It has often assumed the heaven-seeking wings of hymn and ode and psalm.

Such are a few of the noble uses of speech; but it appears to have always been put, as it is now, to opposite uses which have worked immeasurable harm to mankind. These evil employments of human speech are too obvious to need description. They have assisted in making humankind in too many instances more ignoble than the brutes. It is clear, therefore, that it is every person's unescapable duty to watch his speech with the utmost vigilance, in that it is a priceless possession, and yet a constant source of peril. The recognition of this fact has led to many wise and useful counselings. Such counselings are to be found throughout all good literature, and they properly hold a

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

conspicuous place in current magazines and newspapers. All good people encourage them in the home-circle and in all public and private speech.

And yet are we not, all of us, far too negligent in this matter? Do we guard our tongues against evil speaking as we need to do? Do we remember, as we ought to, that the angry word first spoken, or afterward spoken, usually begets other angry words? that the kind and wise word may help and brighten another's life; that words of scandal, of suspicion, of discouragement, of malice, etc., are always harmful in varying degrees?

To speak the right word in the right way and at the right time, calls for a good mind as well as a good heart, and we can all improve in this respect, if we earnestly try to do so. Christian Science has been very useful to its students along this line. It is our duty as Christian Scientists to watch our utterances, and to see to it that our tongues shall never become the instruments of hate, anger, envy, slander, or any form of sin or folly. Each owes this to himself no less than to his fellows.

Silence has its uses and abuses as well as speech. There are times when it is a sin to keep silent, and times when it is a sin not to do so. It also takes a good mind and a good heart always to know when and how to preserve silence. It is the duty of Christian Scientists to study the uses of silence as well as the uses of speech. It is unnecessary to enlarge upon the uses of silence in prayer, and in the overcoming of sickness and other phases of evil. It is only necessary to refer to them, since the whole subject is elaborately explained in the writings of our Leader. It is well, however, to emphasize the need of studying most carefully what Mrs. Eddy has written on this subject.

It is not necessary, furthermore, to dwell on the well-known admonitions in respect to the golden value of silence in times of anger and other excited conditions. Silence often affirmatively affects both ourselves and others quite as powerfully as speech, and sometimes more so. Often do we see exemplified the wise saying, "Speech is silvern, but silence is golden." To be able to speak wisely, one first needs to have meditated wisely in his times of silence; for the incubation of our highest wisdom is in silence, and the end of one's tongue is not a good place for the process.

When error seeks to assert itself, either in others or in ourselves, we may find it difficult to talk it down, for it usually is fond of quarreling; nevertheless it will quail and shrink away before the might and majesty of that silence which comes to him who has first accomplished the harder task of conquering himself before he seeks to conquer elsewhere. Often it is shown that the greater our silence the greater is our dominion over error. All of us have seen anger in others die before silence like a fire unsupplied with fuel. And if we have watched ourselves patiently and without prejudice, we have often witnessed our own foolish anger, self-pitying, envying, hatred, or longing to do what we know to be wrong, encouraged into perilous vigor by the mischievous wagging of our own tongues; whereas, a meditative silence would speedily have annihilated them.

The silent power of a noble example or a fine deed affects all who are within the sphere of its influence; while the noblest and finest words make too often but a vain show. In the presence of truth silence is more precious than speech. Silence offers receptivity to the truth. When we maintain silence, all the mysterious and mighty energies of truth may work within us unhindered; while wisdom often flees before a garrulous tongue. It is the quiet listener who gets the most benefit out of what he hears. The babbler may seem to be as receptive as a contribution-basket, but if he will count up afterward he will find that he has received nothing but coppers.

"AWAKE THOU THAT SLEEPEST."

ELIZABETH EARL JONES.

THE old-time message of Christianity is repeated in Christian Science: "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." It is an immense relief to the majority of us to learn, through the teachings of this restatement of Christianity, that human existence, with all its struggles and its woes, is but a passing dream, and that the real God-given life is ideal,—all that is noble, desirable, and lasting; yes, that which satisfies our longings as nothing else can.

After all, it is of small moment whether the dream be pleasant or unpleasant; the main thing is to wake up. The awakening consists of overcoming evil of every kind with good, of patiently and persistently putting the truth in the place of the lie; thus putting off mortality and putting on immortality, putting off corruption and putting on incorruption, until man is seen to be perfect, even as our "Father which is in heaven is perfect." It matters little what our difficulties are or seem to be; the important thing, and the only thing worth remembering, is how to overcome them and gain those glorious glimpses of reality which are like the angels that came and ministered unto Christ Jesus, who, as our beloved Leader tells us, "triumphed in furnace fires" (Messages to The Mother Church, p. 93).

Christianly scientific awakening requires first an understanding of the nature of God and man, and second that we demonstrate this understanding according to the golden rule. Then our eyes begin to open to the joyous realization that there is but one God and universal good,—our good, our brother's good, everybody's good, impartial, universal, impersonal. We begin to comprehend that whatsoever is not our brother's good is not our good, and *vice versa*. Also that there is but one Love, which is reflected in our love, our brother's love, everybody's love,—divine, unchanging, never failing; but one Mind, and that we may all be equally guided, protected, and governed by the same divine unerring Mind, may all desire, think, and act in loving unity and accord. Those who are awakening, like St. John, begin to see about them a glorious "new heaven and a new earth," in place of the old-time struggle and strife, and life takes on new inspiration and activity.

Half the world's ills today come from lack of inspiration and want of confidence that all things really are working together for good to those who love God. Christian Science comes to renew and invigorate weary hope with something better than mere optimism or theorizing; it comes laden with proofs, with salvation from disease, sorrow, care, failure,—all evil. The practitioner of Christian Science, looking away from the dream-shadows of material sense, into the harmonious and unchanging reality of Life, sees in a measure the utter unreality of his patient's difficulty, and sets to work, not to put him at ease in the dream, and thereby prolong his journey out of sinning sense, but rather to waken him to the truth of being that man is the image of God, healthy, holy, immortal. Thus a Christian Science treatment is seen to be thorough and genuine only in so far as it rouses the dreamer out of his dream of pain and pleasure in matter. A Christian Science church, in the same way, is a vital saving power in a community only as it is awakening the community out of the lethargy and mesmerism of lust, malice, mad ambition, dishonesty, devotion to personality, injustice, etc., and these much needed results follow in proportion as the individual members of the church succeed in escaping through Science from these unnatural incumbrances.

It is with the greatest sense of freedom and gratitude that the awakening one looks out upon this new world and exclaims, "In truth every one loves me, and I love every living thing. I do not desire to injure any brother

Digitized by Google

man, nor does he wish to injure me. I long to bless and help and comfort every one, and I cannot lend myself as a tool of evil to distress, discourage, harm, mislead, or hinder any fellow-being, neither can any person, thing, or circumstance become a channel through which evil can distress, discourage, harm, allure, or hinder me." Fear, doubt, and hate are attributes of the "carnal mind" which is "enmity against God," as the apostle tells us. Love, mercy, justice, patience, and long-suffering are the heavenly hues with which the Sun of righteousness illumines the heart of humanity and transfigures it.

We read that "Enoch walked with God: and he was not; for God took him." So at-one with divine Love is it possible for us to become, so at-one with all God's creatures, and so ever-present with God, that the dream, with all its claims of limitation of time, place, outline, etc., fades away from thought, leaving man free, as the poet foresaw, to "walk transparent, like some holy thing." The dream is at best a fleeting fancy, and at its worst it is fleeting still, and we should treat it as a dissolving view, which we rejoice to see replaced by the dawning sense, in Christian Science, of the magnitude, infinitude of God, the all-embracing, all-satisfying presence and substance of Truth and its manifestation.

THE ONE THING NEEDFUL.

MATHER ALMON ABBOTT.

WHEN the light of Truth strikes upon a man's consciousness for the first time, showing up in evil's own colors the belief in the attractiveness of sin, a strong revulsion occurs, and the abhorrence of all unlike itself which Truth engenders is so intense that a general purification of character necessarily results. Under the action of Truth, sins and errors that have been lifelong companions fall of their own weight; temptation vanishes before the knowledge of the nothingness of that to which temptation directs its efforts, and a man finds himself in a greater, larger world with perfect freedom in sight.

The contrast between this glorious present, full of untold possibilities, and the past, hopeless on account of its failures and sins, is so tremendous that a certain self-admiration is likely to result, unless a man's defenses are kept strong and well guarded. For the battle has been fought and won, self-indulgence has been throttled and cast out, the myriad forms of sensuality have lost their power, and the victor, filled with the glory and the happiness of it all, keeps it not to himself, but starts out to help his fellows. In his contact with these, as he listens daily to stories of sin, disease, and death, the contrast between the present and the past becomes still further marked, and there is danger lest, forgetting that to which he owes his freedom, forgetting that "none is good, save one, that is, God," almost without knowing it this man is thanking God that he is "not as other men are." Conscious of the vantage-point which he has won, forgetting that he in reality owes all of his victories to divine wisdom and goodness, he thinks that his own purity and grace entitle him to pass criticism, to judge and condemn.

Because of the astonishing success over the so-called laws of materiality which Truth achieves, one may be tempted to feel that his inward goodness is gaining its reward, and that his advance is rapid and sure. Thinking too much of his own virtue, a certain sense of pity for and criticism of others may spring up. Such an one is not content with the knowledge that the Christ is come, he is not content to rejoice that his name is written in heaven, but with too great a personal joy he exults that the devils are subject unto him, demands that others shall see it to applaud, and feels that a certain amount of reverence and respect is due from them. Once there is a breach in his spiritual defense, the step to criticism, jealousy, and doubt of those more successful than himself is likely to follow. The sense of personality has come in, the consequence of which is to bring wide-reaching disaster to himself and others. Let personality gain a foothold, and then jealousy, suspicion, false criticism, slander, with their countless attendant evils, present themselves.

Jesus said: "Many will say to me in that day, Lord, Lord, have we not prophesied in thy name? and in thy name have cast out devils? and in thy name done many wonderful works? and then will I profess unto them, I never knew you." And St. Paul humbly admitted, "Though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing." Martha, the busy housewife, was "troubled about many things," and at last, when her self-righteousness had attained the mastery, she broke forth into words and requested that Mary should be made to see her duty as Martha saw it for her. But Martha found, to her sorrow, that what Mary expressed was the "one thing needful." What was it? Love; *agape*, St. Paul calls it, which literally translated means brotherly love.

Have we ever thought what it would mean if each one should carry out strictly the injunction given by St. Paul, "Let love be without dissimulation. . . . Be kindly affectioned one to another with brotherly love; in honor preferring one another." If each one should obey this command, would there be any existence of jealousy, false criticism, gossip, slander? Would there be any room for self-love? any desire that others should think us more advanced than themselves? any wish for adulation or personal aggrandizement? "In honor preferring one another"! Save for a few exceptional individual instances, has history any examples of the carrying out of this command? Has any sect or church thus far accomplished it? Yet is it not the foundation of that brotherly love lacking which St. Paul says we are nothing.

Moreover, to exercise brotherly love means never to think an unkind thought; never to thank God that we are "not as other men are;" never to attach evil to any one or to scorn those who are laboring under conditions involving difficulties of which we know nothing, though in our own case it would seem easy to overcome them. In no case should we speak evil of any one behind his back, but rather —if it is an offense with which we must deal—face to face and lovingly; and if it is not our business, as in most cases it is not, we can at least know that the true man is in Science the child of an all-loving God. Have we thought what it would mean to those great men and women who are on the firing-line, if we of the rank and file should carry out strictly these commands? Under their shadow we find our own work comparatively easy and light, while they for our sakes and the world's are enduring a conflict whose magnitude we can only conjecture.

Finally, have we thought what a hastening of that time there would be, the time when "the last enemy" shall be destroyed, if love were now "without dissimulation"? It is "perfect love" that casts out fear, it is at "perfect love" that we should aim; and we have St. Paul's authority for the statement that all the preaching and the good works in the world are as nothing if we have not *agape*, brotherly love.

MAN AS REFLECTION.

COUNTESS FANNY VON MOLTKE.

IN Christian Science we learn that there is one Principle and one idea; one cause, and one creation as effect of this cause; that God, good, is Principle or cause, and that the universe and man are the idea or creation of Spirit, Life, Truth, Love, Mind. We also learn that man and the uni-

Digitized by Google

verse are reflections of God,—the "I AM,"—and that this reflection is man as God's idea, not physique.

As the "I AM" was, is, and will be the same forever, so man as God's reflection was, is, and will be the same forever, because he reflects God. We therefore see that as the real man can only express or reflect what God is, he must ever reflect Life, Love, Truth, intelligence, etc., for the reflection must always give back the original. Reflecting Life, man cannot die; reflecting Truth, he cannot err; reflecting Love, he cannot hate, but must see in his brother God's image. Reflecting intelligence, he understands and cannot misunderstand, nor can he be misunderstood.

For the real man there is neither transformation, regeneration, nor resurrection. Formed by his Maker, he cannot be transformed into another being, for as God is one and the same throughout eternity, His ideas are as eternal as He is, therefore unchangeable. Nor can this man be regenerated, for he is created by God, he is an idea of divine Principle. He is, because his creator is. He therefore needs no resurrection, for he knows no sin, no death, being the offspring of good, in which there is no evil. He is forever intact, the child of the Father-Mother God, reflecting the fatherhood and motherhood of God.

Strictly speaking, mortal man cannot be transformed, for he is not man; he is nothing but the counterfeit of God's man, which disappears as soon as reality is perceived, but through the unfoldment of the spiritual facts of being mortal man is,—to human sense,—transformed, regenerated, resurrected. This is not, however, a development from the material into the spiritual. As matter does not exist in reality, it cannot for this very reason ever be spiritualized; but the false concept of man (mortal man or mortal mind) must be put aside for the true concept —immortal man, the idea of immortal Mind.

Christian Science shows that the counterfeit must be seen as a counterfeit (distinguished from reality) so that the image of God may appear to our human sense. Error must be seen for what it is, in order to prove its native nothingness. This is done through unfoldment, and this process must go on "until the material, transformed with the ideal, disappears" (Science and Health, p. 442). In this way mortal man is transformed by what Paul calls "the renewing" of his mind. Like Jacob, when wrestling with the angel, we must not loosen our hold upon the glorious truth of divine Science until our nature has become transformed. "Thus the whole earth will be transformed by Truth on its pinions of light, chasing away the darkness of error" (*Ibid.*, p. 191).

Through this unfoldment, which to human sense seems transformation, regeneration, resurrection, the false concept (mortal man or intelligent matter) is put aside for the true concept (immortal man or reflection of intelligence). Then the dream of life, intelligence, and substance in matter vanishes, and God's creation is seen to be intact and perfect. The veil which animal magnetism seemingly throws over this creation is rent, and the "holy place" open for all to enter in.

Animal magnetism is the so-called attraction of matter, and from belief in it result all the "isms," "ologies," "osophies," etc., which have to be done away by the truth. They are to be overcome by knowing that they possess neither life, truth, substance, nor intelligence, because God, good, is All-in-all, and "there is none beside him;" hence there is no other law but His law, the law of Life, of Truth and Love.

In the hour of vision there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of truth and right, and calms itself with knowing that all things go well.—EMERSON.

SELECTED ARTICLES.

[From an editorial in *Salem* (Ore.) *Journal.*]

If the Christian Scientists can find a better way to escape the ills the flesh has been heir to from time immemorial, why not let them do it? If they can save drunkards and victims of drugs and patent medicines by a new application of theology, and by striving for a higher plane of mentality elevate the individual into better bodily health and a more joyous spiritual state, let them do it.

The ordinary observer is struck by some peculiarities of these people that differ from the orthodox churches, and if they are good things why rail at them? Their churches conduct few funerals, do not conduct sociables, nor have much business for the divorce court lawyers. They are getting new results out of Christianity which some of the most progressive orthodox churches are beginning to strive after.

[Frederick Dixon in *Central Somerset* (Glastonbury, Eng.) *Gazette.*]

It happens that there is in the New Testament a definition of a Christian upon which all can agree and concerning which none can dispute, since it is the definition given by the Founder of the Christian religion. "He that believeth on me," Jesus said, "the works that I do shall he do also;" and so he made the power to heal the sick a test of a man's Christianity. It is a little remarkable that we have arrived at the time when the very body of people which has accepted the natural meaning of these words is the body chosen for exclusion from the Christian faith.

The miracle was the object-lesson in demonstration of the truth of the gospel Jesus preached. Any one who will refer to the Greek words translated "miracle" will perceive that they have not, and never have had, any supernatural meaning. Jesus himself came preaching the gospel in Galilee and Judea, and when the material instincts of his listeners rebelled against the strangeness of the spirituality of the new teaching, he fell back on the miracle, or object-lesson, with the declaration that if they could not believe for the words' sake, they must believe for the very works' sake. This is why the miracles of healing played so important a part in the spread of Christianity in the first century, and this is exactly why they are playing so important a part in the spread of Christian Science today. The actual healing of sickness is a comparatively minor object. "Today," Mrs. Eddy writes, on page 150 of Science and Health, "the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition;" and she goes on to say: "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world." A great natural scientist of the last century defined science as the answer a man makes to the question, What do I know? The miracles of Jesus were the answers Jesus made to the demand as to what he knew of the truth which makes men free; and the healing of Christian Science is the effort of Christian Scientists to answer that question today in accordance with Jesus' requirements and his teaching.

Christian Science is the idealism Jesus preached—not halting half-way as in the theories of orthodoxy, but pushed, as Jesus pushed it, to its logical and extreme conclusion. Idealism from the point of view of natural science is the theory that physical nature is the expression of mind or force; in plain English—that matter is a mere phenomenon, and as such has no independent existence, but is, in the words of Professor Ostwald, something unreal, or only a thing imagined, which we have created for ourselves. Christian Science accepts this definition so far as it goes,

Digitized by Google

and demands that it shall be pushed to its logical conclusion, which is this: that sickness and disease—to take them for an instance, though material in their expression—that these are the result of mental causes, and to be healed must be healed not by searching for microbes in matter, but by the destruction of the mental germs taking expression in a sick or diseased body. A Christian Science practitioner does not, consequently, take the temperature of a phenomenon or amputate a symptom. He searches for the mental cause and attempts to destroy it by implanting in the human consciousness not a belief in the operation of physical law, but an understanding of divine law, of the truth that makes men free. To say, as our critic claims, that he does nothing for his patient, is simply to be guilty of talking nonsense. He makes a most searching diagnosis, but it is a diagnosis which has for its object the finding of the mental causes which are producing the physical results.

Now, though Christian Science goes so far with the idealism of natural science, at this point it completely severs its connection with it, and in severing its connection with it shakes itself free from every suspicion of connection with mental suggestion under any of its innumerable aliases. If the theory of the idealism of natural science were true, hypnotism would be the key to the situation, and humanity would lie a prey to the mesmerist, as it once lay a prey to the power of the sword. Christian Science has come to explain that, whatever power may seem to attach to hypnotic suggestion, it is only the power which attaches to a relative human fact until the absolute spiritual law is understood and practised. The claim of hypnotic suggestion comes simply to this: that one human mind is able to suggest to another thoughts of health, and so of sickness, of good, and likewise of evil. It is the old story of the fruit of the tree of knowledge of good and evil, which the writer of the allegory in Genesis explains must inevitably end in death. But death, the Bible says, entered the world through sin. It follows, therefore, that a belief in good and evil, as alike constituting power, is itself sin, as such a belief must necessarily destroy in theory the omnipotence of God, of good. Jesus put the same view, only from a different standpoint, in the declaration that a house divided against itself could not stand, and in so doing placed the practice of mental suggestion forever outside the pale of Christian teaching. "But," he said, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God never came, and never could come, to any man by means of human suggestion. It comes exactly in proportion as the supposititious power of human suggestion fades away and there comes instead to humanity the Mind of Christ. The dominating fact is this: that evil is not power. The only power it can ever even seem to exercise is the temporary sense of power which exists so long as a lie is successful in deceiving.

The logical result of all this is that causation is placed on a spiritual instead of a material basis. "Spiritual causation," Mrs. Eddy writes, on page 170 of Science and Health, "is the one question to be considered, for more than all others spiritual causation relates to human progress." Healing, in Christian Science, is based on an understanding of spiritual causation, and is worked out in accordance with spiritual law. Now law is that in which no variation can ever take place. Consequently, as Huxley has shown with invincible logic, the miracle, when it takes place, so far from predicating a breach of law, predicates the operation of a hitherto unsuspected law. In the pages of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy has explained the operation of the spiritual law as learned by her from the study of the Bible, the only text-book, she has said, she had to work by. Instead, therefore, of terming Christian Science unchristian and unscientific because it seems to conflict with certain preconceived views of dogma and law, it would be wiser to make a patient study of its teaching, remembering the psalmist's declaration, "Great peace have they which love thy law."

[George A. Law in *Winsted* (Conn.) *Citizen.*]

Spiritual things must of necessity be considered wholly from a spiritual basis, for since the material, corporeal, mortal, or temporal have no part in the spiritual and can in no way express Spirit, it is at once obvious that a discussion of the spiritual cannot involve a consideration of the material. This is explained perfectly by St. Paul, who said, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

Jesus said to the woman of Samaria: "God is a Spirit: and they that worship him must worship him in spirit and in truth." This quotation also shows that since Christian Science gives to man a knowledge of God, His universe and His laws governing the same, Christian Science cannot deal with the material, but must deal entirely with the spiritual.

In the first chapter of Genesis we read that God created the completed universe and that it was good; also that He created man in His own image and likeness and gave him dominion over all the earth. As God was first and therefore the only creator, and as He created all, it follows that He is the one and only power, omnipotence, and that therefore He had this dominion to bestow on man. It then must be true that, if man claims and exercises this God-given dominion (this all-power, omnipotence) understandingly according to spiritual law, surely he will experience that immunity so beautifully expressed by David in the 91st Psalm, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." It must also be plain that, since this power is infinite, the only limitation there can be as to what one can accomplish by exercising this dominion which is his heritage, necessarily arises from one's own lack of understanding and the application of this omnipotence.

It was Jesus' mission to teach men how to exercise this dominion and thereby obtain freedom from the ills of the flesh. Jesus proved not only the possibility of utilizing this God-power, but the practicality of it, by repeatedly healing "all manner of disease." He did not confine his work to specific disorders, but healed all disease. He never refused to heal any one, but the Scripture states that he healed all them that believed on him. Jesus' healing was not miraculous in the sense that it was in violation of law; on the contrary it was in strict accordance with and a natural consequence of compliance with God's true spiritual law. He taught others how to heal disease, and said, "The works that I do shall he do also; and greater works." He also said, "Go ye into all the world, and preach the gospel;" "Heal the sick." There is nothing to prove that this healing work was to be confined to a particular period or time.

History records that for about three hundred years after Jesus' ascension the primitive Christians healed the sick and in many instances even raised the dead. After that time the world became so material that this healing Principle was practically lost sight of, though we find it recorded that down through the centuries occasionally there was one who caught a gleam of spiritual light sufficient to perform some healing work. It remained, however, for Mrs. Eddy to rediscover this lost healing Principle, and she has given this discovery to the world in her book entitled "Science and Health with Key to the Scriptures," the text-book of Christian Science. This book elucidates the Scriptures and gives one an understanding of this healing Principle which enables him to demonstrate it and obtain results for himself and others.

A further proof that Christian Science has a spiritual

Digitized by Google

basis is the fact that the simple reading of this text-book has healed thousands of cases of sickness, including acute, chronic, functional, and organic disease. The reading of this book also eliminates the greatest of all promoters of discord and disease, that greatest disturber of the peace, harmony, and happiness of mankind, namely, fear. It also destroys vices and heals morally. No other healing system has been known to heal morally and destroy fear, and nothing but a spiritual healing could accomplish this.

[William J. Bonnin in *Blackpool* (Eng.) *Herald.*]

The Archbishop of York a few weeks ago contributed to a discussion on Christian Science the results of his own observation and experience. He said, with characteristic straightforwardness, that he had rarely met with people better able to comprehend the deeper aspects of truth than Christian Scientists he had had to do with. He added that the critic's task was to account for the results achieved by Christian Science in the shape of transformed lives.

The Christian Science text-book, "Science and Health with Key to the Scriptures," may be read in two widely differing ways. A man may read it with the conviction that there are not more things in heaven and earth than are known to his own private philosophy, and hence with no more than a gracious and condescending intent to correct what does not square with his preconceived ideas. Another, with a livelier sense of the virtue of humanity, may embark upon the study of that book with, firstly, a recognition of the impossibility of there being no good thing in a book claimed by hundreds of thousands to contain a message of practical salvation; and, secondly, with an honest determination to find that good thing. This man invariably gains from his reading some degree of moral or physical healing. The other unfortunately will often gain no more than an incentive to hold forth upon the subject in a spirit of unfriendly criticism.

[Charles K. Skinner in *Harbor Springs* (Mich.) *Graphic.*]

During the past decade, some members of the medical and clerical professions have found in Christian Science a favorite subject for their oratorical knives, regardless of the fact that in the end the edge of their weapons might be turned. One curious thing, however, in connection with their intellectual efforts, is this, that the two professions do not agree in a diagnosis of the case. One well-known physician has been heard to say ofttimes, "Christian Science is a beautiful religion, bringing peace and quiet and a sense of harmony quite unexplainable to all who accept its help; but it can't heal, never did, and it is perfect nonsense to claim such a thing." On the other hand, numerous clergymen have said to their friends, "Oh, yes, Christian Science heals sickness. I have known marvelous cases which have been brought out through its application, but it has not the slightest element of religion in it."

Let me say here, that not all of the clergy or physicians hold these views, for among our friends in this city I call to mind one splendid Christian minister of the orthodox faith, who said in conversation with me, "I know that Christian Science is doing a great amount of good in uplifting and regenerating mankind. I have experienced its beneficence in my own healing; I have learned that true holiness means wholeness. I have a number of people in my church who believe in Christian Science, and I wish there were more of them."

Really there is but one way to test anything, and that is by results. The Master said, "Ye shall know them by their fruits." If Christian Science finds a man at the bottom of the moral ladder,—a total wreck,—and regenerates him into a good Christian, who turns from bad habits to good, becomes sober and industrious, and would scorn to do a mean act, who becomes kind and loving to his family, would it not be fair to assert that Christian Science was a Christian religion, when it wrought such changes? Again, if Christian Science found a man who had wasted years of life in sickness and suffering, after having run the gamut of material remedies with no relief, and it had restored him to perfect health and strength through the understanding of God's power to heal now as of olden times, can it be wrong to assert that Christian Science does heal the sick? There is no disputing of either of these points, for every city and almost every village has its proofs which any sincere investigator can find for himself.

Perhaps the most beautiful thing about Christian Science is the fact that it exemplifies the Scripture, "God is no respecter of persons." None is so poor or simple, none so rich or intellectual, that he cannot receive the token of God's love to man if, as Jesus said to the Jews, he "become as a little child" in his receptivity.

[Alfred Farlow in *Knoxville* (Tenn.) *Journal and Tribune.*]

In a late issue there appeared the following from a critic: "Christian Science does not publish failures. So I wrote to some doctors and other friends, asking them to tell me cases of the harm that it has done. I got back a long list."

The doctor forgot to mention that the most of the persons on his "list" had failed to obtain benefit under medical treatment before they applied to Christian Science. Here is another point too, which the doctor seems to have forgotten, that on this globe every year fifty millions of people die, more than one hundred and forty thousand each day, the most of them under the same sort of treatment which the doctor recommends. In view of such an array of failures, what can be the significance of the doctor's list of Christian Science failures? Is the doctor dissatisfied because a few persons have tried to find health under Christian Science after having failed elsewhere? Does he think it would be more to the credit of this class of persons for them to omit a possible chance of being healed by Christian Science and die in the first instance in the good old-fashioned way, or does he expect that Christian Science, which he declares is not science at all, should succeed better than his method, which he denominates scientific?

Here is another thing which the public should note in regard to the doctor's so-called list, that it gives no names and dates; and this is rather an inconsistent thing in a man who twits Christian Scientists because of the brevity of their description of cures. If the doctor would apply the same criticism to the results of his own kind of practice that he has to the Christian Scientists, and accordingly publish such a list of medical failures as he may be able to procure from the same doctors who have given him the list of Christian Science failures, he would draw an interesting picture for the public. What the public want is the comparative value of Christian Science. It has never been claimed, even by the most sanguine Christian Scientist, that he has had no failures, although those who are at present interested in Christian Science are grateful that they have fared better with Christian Science than they formerly did without it.

The doctor says that Christian Scientists let babies die in pain. There are thousands of Christian Science mothers who will testify that their babies have fared better both in time of health and in time of sickness under Christian Science influence than they did before they had its teaching. He also makes the charge that Christian Scientists allow persons to die slowly. He does not explain why he endeavors to make a distinction between the departure of those who die under medical treatment and those who die under Christian Science. Surely when he makes the charge that some persons die under Christian Science treatment he does not expect his readers to overlook the fact that over a hundred thou-

Digitized by Google

sand persons die every day under medical treatment, and that some of them die slowly and some of them rapidly. All this reminds us of the old adage concerning glass houses.

[William E. Brown in *Fresno (Cal.) Mirror.*]

To those who understand the Principle of Christian Science there is absolutely nothing inconsistent or fanciful in its teachings. The fact that these teachings enable those who live and practise them to reform the sinner and heal the sick, proves them to be entirely consistent with the teachings of Jesus, who said: "He that believeth on me, the works that I do shall he do also;" and, "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover."

Our critic's conclusion that these commands were intended for the disciples only, is shown to be erroneous by Jesus' instruction to them: "Go ye therefore, and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you." This clearly shows that all Christians, everywhere and in every age, are commanded to preach the gospel and heal the sick. If, as indicated by Jesus, true belief is to be accompanied by the ability to heal the sick, it is self-evident that there is something lacking in a belief shorn of this ability.

When Christian Science says that miracles are impossible, it is referring to the word miracle as it is commonly understood—namely, wonder-working in contravention of law. In this connection, Mrs. Eddy says on page 135 of "Science and Health with Key to the Scriptures:" "The miracle introduces no disorder, but unfolds the primal order, establishing the Science of God's unchangeable law."

If your critic will gain an understanding of Christian Science, he will be able to prove for himself that it is the exact science or knowledge of the religion of Jesus, bringing forth the fruits promised to "them that believe."

[Rev. G. A. King in *Wichita* (Kan.) *Beacon.*]

Of Mrs. Eddy I have only this to say: I consider her a most wonderful woman, and that would be possible looking at her from any conceivable view-point. For her followers I have this to say: I have only the highest regard for the most of them I have met, and consider them to be on a par with if not above the average members of other churches spiritually and intellectually. It seems to me that some are not very broad-minded in viewing other churches and forms of healing, but that may be because I have been somewhat unfortunate in my acquaintance.

With the idea that God heals the body I have no quarrel, as I most firmly believe there is no good thing which is not of God, and that what we call evil is in most instances good misapplied; or, as darkness is only the absence of light, so evil is the absence of good.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 3, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk.*

Falmouth, Norway, and St. Paul streets, Boston, Mass.

AMONG THE CHURCHES.

MANCHESTER, ENGLAND.

A Thanksgiving service was held jointly by First and Second Churches of Christ, Scientist, Manchester, England, on Saturday Dec. 18, 1909, at First Church. At this service one Reader from each church officiated. After the reading of the Thanksgiving Lesson many testimonies were given, appropriate to the occasion, and at the conclusion of the meeting the following message from our Leader, through her secretary, to the members of Second Church was read. This message was in reply to a letter from the members of Second Church, informing her of the organization of that church.

MESSAGE FROM MRS. EDDY.

Dear Friends:—Your letter of recent date addressed to Mrs. Eddy has been received and read with interest. On behalf of our Leader, permit me to express to you her loving appreciation of your assurances of loyalty and gratitude, and further to inform you of her pleasure in learning that you have established a new branch in the vineyard whereon is to grow the fruits of healing and regeneration. Second Church of Christ, Scientist, of Manchester, thus starting as the outgrowth of multiplication and not division, is moving forward in accord with the "eternal mandate of Mind" (Science and Health, p. 520).

Sincerely yours,

WM. R. RATHVON, *Associate Secretary.*

Correspondence.

MICHIGAN CITY, IND.

First Church of Christ, Scientist, of Michigan City, Ind., held a service in their new church, corner of Seventh and Cedar streets, on Nov. 14. The property purchased was a private residence, and in remodeling the building an addition of twenty-seven feet was built, which makes the auditorium forty by thirty-one feet, and provides a seating capacity of over one hundred.—*Correspondence.*

KNOXVILLE, TENN.

First Church of Christ, Scientist, will hold its first service in the new auditorium of the Lyceum and Art Building this morning [Jan. 9]. The attendance has been steadily growing for some months, and the hall which they are leaving is too small for the accommodation of the congregation. The new hall will seat about four hundred. The Christian Science Society, which was organized last February, disbanded in October, and many of its members are now attending services with First Church congregation.

Journal and Tribune.

ATLANTA, GA.

At a cost of between fifty thousand and seventy-five thousand dollars, the members of First Church of Christ, Scientist, are to erect one of the handsomest churches in the South at the junction of Peachtree and Peachtree circle. The building lot in question is fanlike in its cut, having a frontage of one hundred feet on Peachtree and one hundred and eighty feet on Peachtree circle on the curve, and running back on one side two hundred and thirty feet and two hundred and twenty-five feet on the other. This lot, in the heart of Atlanta's residential section, is one of the most desirable to be found on the north side. Its location affords ample room for a church one hundred feet square, leaving ample space all around for lawns and other improvements.—*Atlanta Constitution.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"SEEK YE FIRST."

One of the necessary conditions for the success of a Christian Science church is harmony, and in order to bring about this condition or to maintain it, it is important to know what constitutes true harmony. The oft-quoted saying that in harmony is strength, inculcates a precept which is generally admitted to be true; yet few seem to understand that harmony in and of itself is not a power, but is rather a condition which expresses power or makes power operative in human affairs; in other words, they fail to see that there can be no real harmony with or between erroneous beliefs, or that there can be no harmonious action if the action taken or to be taken is not a right one.

Strength of numbers is not always an expression of harmony, nor is lack of numbers always an expression of inharmony or an evidence of wrong action. The one point to be kept in view is that the only real harmony there is or can be rests in association with good, and that in this sense and in this sense alone can there be strength in harmony.

For a Christian Science church to be truly harmonious, there must be a condition of union or at-one-ment with divine Principle, and the strongest proof that this oneness, this union with divine Principle, exists, is manifested through those qualities which Mrs. Eddy, on page 465 of Science and Health, denominates "the attributes of God," namely, "justice, mercy, wisdom, goodness, and so on."

In Christian Science we learn that there is no question that can come up in the affairs of any church which cannot be settled in peace and love, and there certainly is no call for a quarrel over differences in opinion. In church affairs as well as in personal matters help can be found in the Master's admonition that we are to seek "first the kingdom of God, and his righteousness."

Some one has sagely said that they who are wise think twice to their once speaking, and along the same line we have the adage that speech is silvern and silence is golden. We might add to these precepts, for the especial benefit of Christian Scientists, that to pray twice and speak once will do more to promote harmony in church affairs than will any other course.

Christian Scientists, under the leadership of Mrs. Eddy, are engaged in a mighty work, no less an achievement than the eradication of all discord and inharmony; and in this work they must march shoulder to shoulder, a united army whose strength is in the brotherhood of man and whose weapons are love and justice.

Archibald McLellan.

"BEFORE ABRAHAM WAS, I AM."

In Christian Science faith grows out of an understood Principle, while the world's philosophies and sciences have all begun with the phenomena of experience and reasoned therefrom. In very large measure Christian belief also has found its beginning not in a demonstrable apprehension of the spiritual meaning of Scripture statement, but in that literalism of verbal interpretation which has given birth to the many conflicting creeds of Christendom.

As defined in our text-book (p. 579), the term Abraham stands for "fidelity; faith in the divine Life," and when this meaning is substituted in Christ Jesus' declaration, "Verily, I say unto you, Before Abraham was, I am," the identity of the teaching of Christian Science with the teaching of Christ Jesus is made clear, and the significance of these words of the Master begins to grow apace for all who meditate upon them.

The unfoldment of truth in consciousness must follow that divine order which gives precedence to Principle, the eternal Truth upon which right thought never for one moment loses its hold. Says the psalmist, "Even from everlasting to everlasting, thou art God," and this recognition of God and His idea as the all of being, and as wholly unaffected by the presentments and phenomena of material belief, is logically antecedent to true faith and its achievements. Thus Mrs. Eddy parallels Christ Jesus' exaltation of his Father as the explanation of all his works, with her declaration that "from the infinite One in Christian Science comes one Principle and its infinite idea, and with this infinitude come spiritual rules, laws, and their demonstration" (Science and Health, p. 112). A clear understanding that the spiritual realization which heals is a sequent of the perception and declaration of the truth of being, greatly illumines the way in Christian Science, since we may know that God is, that His right doing is constant and unfailing, quite regardless of human conditions; and our ability mentally to voice and maintain our position upon this "rock" remains, though everything else may seem intangible and beyond our grasp.

Realization is the personal embrace and utilization of an apprehended truth, and it is manifestly reached not by that straining and striving of wilful endeavor which so easily degenerates into self-mesmerism, but by looking unto Christ, the source and completion of our faith. In the desert of human sense that immortal truth is lifted up which was symbolized by the serpent in the wilderness, and by the cross, the supreme self-giving of Calvary; and the consecration and continuity of our gaze upon it, the clearness of our truth-knowing, opens the door to freedom.

The Scriptural statement of divine truth is definite and complete regarding all that is essential to our present need, and being undisturbed by mortal beliefs it is, or may become, our eternal refuge, our unfailing joy. Upon hearing Christ Jesus' voice, this unchanging eternality of Truth, the Jews, as St. John tells us, would have cast stones at him! This recalls the Master's saying, "I came not to send peace, but a sword," and Christian Scientists can witness that nothing is so sure to uncover and seemingly excite error as the calm knowing and undisturbed declaration of the right idea. The creedal phrase, "He descended into hell," speaks for that vicarious impulse which led Christ Jesus to enter the arena of human life and there meet the wild beasts of material sense, that he might prove for us the sovereignty of Truth and Love; and for this same overcoming, in the sight of all men, every Christian Scientist is enlisted. This is "the tribulation of the saints," and it calls for a firm hold upon that ground of faith which is revealed in the Master's words, "Before Abraham was, I am."

John B. Willis.

"DESPISE NOT PROPHESYINGS."

In the seventeenth chapter of Acts we read of Paul's visit to Thessalonica, and of the awakening to truth of many "devout Greeks," among them prominent women; as also at Berea. Paul's ministry has been characterized as "entreating, exhorting, rebuking," and while his success in this work was wonderful, we read that he also met with the bitterest opposition from those of his own nation, who claimed that he had "turned the world upside down," as indeed every one must do who declares for the spiritual

Digitized by Google

in the face of deep-seated belief in materiality. Paul himself says of his work in Thessalonica: "Our gospel came not unto you in word only, but also in power, and in the Holy Ghost, and in much assurance,"—a splendid model for the Christian worker of today. It was to this church that he wrote, "Despise not prophesyings;" "He therefore that despiseth, despiseth not man, but God, who hath also given unto us his holy Spirit."

At the present time most Christian people claim to accept, not despise, the prophecies found in the Scriptures, but in most cases they place the fulfilment of these prophecies in a more or less remote future, and thus lessen their value with an element of uncertainty. In Science and Health, prophet is thus defined: "A spiritual seer; disappearance of material sense before the conscious facts of spiritual Truth" (p. 593). It is, then, the spiritual fact which we must not despise; and yet, according to Christ Jesus, we shall do this very thing if we choose materiality as our master. He said plainly that no man could serve two masters, for he would surely "hold to the one, and despise the other." Which shall it be with ourselves?

Christ Jesus assuredly declared (prophesied) that the Comforter would come, and with the "signs" which followed the acceptance of Truth in the earlier days; yet we have all witnessed the joyless mirth with which a declaration of the Christ-healing as a present fact is sometimes received. The Master and his work were "despised and rejected" when he was on earth, while the "works" which he demanded of all his followers are today despised by some who profess to adore his name—a strange inconsistency, whose only explanation lies in the fact that material things are so generally regarded as realities, while spiritual things are accorded second place where they are thought upon at all. Yet, who would dare to despise truth and honor and justice? Who would not rather despise the character from which these were lacking, and who can deny that these—yes, and all high and noble qualities—are spiritual, and not material!

Christian Science has come to declare for the grandeur, the stability, the power of the spiritual in healing and sustaining manhood, womanhood, childhood. In its redemptive ministry it stands unwaveringly by Paul's statement in I Corinthians, that God hath chosen "things which are despised, . . . yea, and things which are not, to bring to nought things that are." Long ago Elihu said, "Behold, God is mighty, and despiseth not any." Shall any despise that which God is doing for humanity at this hour, when prophecy is being fulfilled as foretold,—God wiping away all tears, Christ, Truth, healing the sick and sinful?

Thy touch has still its ancient power:
No word from Thee can fruitless fall;
Hear in this solemn evening hour,
And in Thy mercy heal us all.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

New York, N. Y., Feb. 9, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—I know it will gladden your heart to hear of the growing bonds of unity in the New York field. During the last few weeks, several of the testimonies in Second Church closed with "greetings from First Church of Christ, Scientist, New York city," an expression never heard before. Then came another new message of love, a most cordial invitation from First Church to attend a lecture in their edifice, and last Saturday we had such a beautiful love feast, the first of its kind, namely, that meeting of the readers and trustees of all the Christian Science churches and societies in Greater New York, of which you have already been advised.

Among the first fruits of this meeting was the formation of a central committee, and to it were referred a number of subjects for joint consideration. That this will result in greatly furthering the Cause in this city, there can be no doubt. May we always remember the sweet admonition of the beloved disciple, "Little children, love one another."

Very gratefully,

J. F. MÜLLER.

Boston, Mass., Feb. 5, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—All that I have and am and can be, I owe directly to Christian Science and therefore to you. The glory of this day brings me such a deep and grateful sense of this debt that, in addition to living the gratitude, it must also be expressed. If you had helped no other child of man, what you have done for me only would surely entitle you to the dearest blessings that Love owns. Then what must be your reward when I am but one of millions whom you have raised from worthlessness to worthiness.

In earnest gratitude,

EDWARD THOMAS BARKER.

Pittsburg, Pa., Jan. 26, 1910.

Mrs. Mary Baker Eddy,

Revered Leader:—The events of the last few months have aroused me to a clearer understanding than ever before of your remarkable leadership. You, who might have had the adulation of thousands, chose rather to turn us to "adore one supreme and infinite God." With unparalleled patience have you pointed the way, unwearyingly saying, "Not my personality, but infinite Principle." Because I am a Christian Science practitioner I am beginning to understand what it costs and how it blesses to follow no one and to permit no one to follow; to turn with unswerving fidelity to Principle and to turn all others there. Because I am beginning to learn this, I am beginning—only beginning—to appreciate what your leadership means to us all. God alone could have kept you clear of the rocks and shoals. Only infinite Love could have been your inspiration. I thank God that you have kept the faith, and I pray that all of us may follow to victory, sinking all personality in the one glorious Cause.

I used to think that the awakening of the world was too stupendous a task even for Christian Science, but as I realize how the constant study of Science and Health has broadened me, how it has changed my view-point toward every problem of life, I see that it will educate, cultivate, and redeem the most illiterate or the most hardened of sinners. It rests with us to help and not hinder you in your God-appointed task, and this I know we can only do by fidelity and obedience.

Since the first week that I began the study of Science and Health, it has been my practitioner, and I have never failed to find in it, and the Bible when interpreted by it, admonition, exhortation, and encouragement, clearer than personality could ever have given me. I have turned many who came to me to the text-book, knowing that earnest study would give them what they sought; and all who went have been healed. I thank you that in your wise mother-love which has come to you from the most High, you have been willing to let us have our experiences that we might learn to stand alone.

Earnestly your student's student,

FLORENCE CLERIHEW BOYD.

Johannesburg, South Africa, Jan. 3, 1910.

Mrs. Mary Baker Eddy.

Dear Leader:—Because of the help received through your words, in a time of great stress and trial, I desire to send you my hearty thanks. The words were these: "All true

Digitized by Google

thoughts revolve in God's orbits: they come from God and return to Him,—and untruths belong not to His creation, therefore these are null and void" (Miscellaneous Writings, p. 22). They conveyed to me some idea of His mighty increase—His thoughts returning to Him with unlimited thanksgiving, praise, and glory; my fear vanished, and I saw quite clearly what it was my duty to do.

I thank God with all my being for the glorious light you have revealed through Christian Science.

Your loving follower,
MARY WELLMAN.

Los Angeles, Cal., Jan. 27, 1910.

Beloved Teacher and Leader:—How can I better cheer you in the consecrated life you are leading, than by recounting to you with joyful gratitude the wonderful growth of our Cause on the Pacific coast. My husband, daughter, and myself left Chicago three months ago, stopping first at Portland, Ore., where the growth in Christian Science since our last visit, six years ago, is a marvel. Then, in San Francisco, we were again filled with gratitude because of the large attendance and the spirit of loving unity. In Santa Barbara, where twenty-five years ago we purchased our first copy of Science and Health, there is a dear little white temple with an attendance of over two hundred earnest people. And now, here in Los Angeles, there is further evidence of a marvelous growth. Last Sunday the new Second Church was opened for service. It is a beautiful structure, uplifting and inspiring as exquisite music, a fitting symbol of the definition of church, as you have given it to us in Science and Health (p. 587).

Last night, at the Wednesday evening meeting of Third Church here, there was an audience of at least two thousand persons; and all this is the result of your consecrated life and inspiring leadership. May each and every one who has named the name of Christ as understood in Christian Science, be awakened to appreciate all that you are to the world this day. As a family we join with hearts full of tenderest love.

Most reverently your student,
MRS. MARY A. PACKARD.

Vancouver, Wash., Jan. 27, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—At a recent meeting of our society it was decided by unanimous vote to express our appreciation of your wonderful example of patience, wisdom, and love, which is reaching and healing many in all lands. Also, to express in action our gratitude, by securing a more suitable place for services, which is also to be used for the Christian Science reading-room as soon as literature arrives.

Our first service in the new home, which will accommodate about two hundred, was held Jan. 23, amid general rejoicing over the upward step. We know the reading-room will be an open fountain where all may share with us the blessings flowing into our thoughts and lives through your inspired writings and our helpful periodicals, and our effort and desire is to be more helpful to each other and the world by learning how to obey.

Reverently yours,
EMILE E. CHARPIOT,
MATTIE WHEELER,
Committee.

[Telegram.]

Buffalo, N. Y., Jan. 19, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—First Church of Christ, Scientist, Buffalo, N. Y., assembled in the church, in annual meeting, sends loving greetings. In accordance with your wise counsel we have adopted new by-laws insuring a democratic form of government. We pledge to you devoted support and loyalty in carrying forward the glorious Cause which you have founded and continue so wonderfully to direct toward the ultimate blessing of all mankind.

WILLIAM E. ARMSTRONG, *Clerk.*

Concord, N. H., Jan. 6, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—Dwelling among the people of your former home city and the state of your nativity, the people whom you love so well and who love and honor you, we, the members of your beloved church in Concord, in annual meeting assembled, desire to express our love and loyalty to you, and our gratitude and thanks for what you have done and are doing for us.

You have launched this branch Church of Christ, Scientist, "upon the ever-agitated but healthful waters of Truth;" you have encountered "storms;" your good has been "evil spoken of;" but you have—under divine Love, wisdom, guidance, and protection—labored, endured, and achieved. You have taught us "Peace, be still! Our Father's at the helm." You have made plain Christ's way through the revelations of Truth and Love which you have given us in Science and Health, in The Mother Church Manual, and in your example. Through the truth which you teach you have seen the lame made to walk, the deaf to hear, the blind to see, the dumb to speak, and the gospel preached to the poor. You have seen stolid indifference, envy, ingratitude, greed, malice, and revenge give way under the redeeming influence of divine Love. You have given us a spiritual and practical interpretation of the Scriptures. You have awakened us to perceive the living and healing Christ, ever loving, ever present. Your recompense "is assured in the elevation of existence above mortal discord and in the gift of divine Love."

Dear Leader, we love you, and consecrate our lives anew in the endeavor to follow you as you have followed Christ. Only sin in ourselves can separate us from you.

Abiding in increasing love, unity of thought, and harmony, we are,

First Church of Christ, Scientist, Concord, N. H.
CHARLES B. JAMIESON, WILLIAM W. CRITCHETT,
HELEN E. MOORE, *Committee.*

Council Bluffs, Ia., Jan. 28, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—This week, when the *Sentinel* came to my door, I thought how grateful I ought to be for the Christian Science literature, and how much benefit I have received from these messages that come from headquarters daily, weekly, and monthly. Then my thought turned with a wave of gratitude to you for giving us these periodicals, and through them we see the advancement of our Cause all over the land. I love Science and Health, and am beginning to study it in earnest, also your other writings. For more than ten years I have read them, but now I study them, and I thank God as Love, and you as a pure reflector of Love, for this book which teaches us how to be faithful over the few things. By the daily study of the Bible and our text-book we are made rulers over many things,—over wrong thoughts and errors of all kinds.

I am asking myself daily, Why am I studying? why am I reading? what is the motive back of this? I am sure that until recently it has been to benefit myself. Now I see the real need of helping others, and I am learning how. Your life is a beautiful example, and I thank you for the privilege of expressing it in this way.

Your loving follower,
LAURA COVALT.

THE LECTURES.

PITTSFIELD, ILL.

A large audience assembled at the K. P. Opera House on Nov. 30 to hear a lecture delivered by Prof. Hermann S. Hering of Concord, N. H. He was introduced by Judge Edward Doocy, who said in part.—

I wish to express my conviction that the time has come when the public, and the Christian public in particular, ought to give Christian Science a candid, kindly, and cordial hearing. It is the faith of a million of people, and the members of this church average high in intelligence and character. They have accepted this faith in the face of much opposition and misrepresentation. They believe they have received large benefits both physically and spiritually. The least we, as fair-minded citizens and as Christians, can give them, is a just and generous hearing. The truth has nothing to fear from the fullest and freest discussion. Let us cultivate courage with respect to the truth, and kindness with respect to all who differ from us, and let us give to others the thoughtful, careful, appreciative hearing which we ask for ourselves.

Correspondence.

VIRDEN, MAN.

The lecture on Christian Science by Clarence C. Eaton in the Opera House on Tuesday evening [Dec. 14] was listened to by an appreciative audience. Peter Biggins introduced the speaker, saying in part,—

With the birth of Jesus the Christ came the glad announcement, "On earth peace, good will toward men." The life of the great Master stands unparalleled in history. He presented to the world the highest standard of righteous living, and he taught men the possibility of attaining that standard, and the necessity of beginning, here and now, to take the first steps toward it. In this practical age there is an insistent demand for a practical religion, and Christian Science is responding to this demand. It has entered and is daily entering into the lives of thousands of the sin-burdened, grief-stricken, sickly ones of earth, bringing them regeneration, comfort, and healing. It is essentially a religion of peace and good will, and it calls forth and encourages a broad, all-inclusive spirit of brotherhood among men.—*Empire-Advance.*

MOBILE, ALA.

Nearly three hundred and fifty people were present yesterday afternoon [Dec. 19] at the Battle House Auditorium and heard Prof. Hermann S. Hering lecture on "Christian Science: The Science of Salvation." John T. Schley, a well-known Mobilian, who introduced the lecturer, said.—

My only regret on this occasion is that in addressing you I cannot include myself as a fellow-member of the Christian Science church, for although my knowledge of its teachings is limited, yet sufficient light has been revealed by occasionally reading the text-book, Science and Health, to disclose to my mind the beautiful lessons of truth therein taught. I have, too, been driven to serious thought by the many living examples of Christian Science healing which have come under my observation. I have been greatly impressed by the strong faith exhibited by members of the Christian Science church, and also by their loyalty to church and church duties.

Love—how beautiful is this teaching! Love, the divine Principle of Christian Science. And it is just this love that its followers possess and display in their Christian duties which is required to soften the hearts of many of us, and ultimately to fill the hearts of all men with that brotherly kindness which must be established throughout the world before it can be said for the Christian religion that it has conquered sin. Love toward one another, pure, true, and sincere, the banishment of evil and envy from your hearts and the substitution of love therefor—this is the beautiful lesson taught humanity by Christian Science, and from my observation practised by its followers.

Mobile Item.

GALVESTON, TEX.

A lecture outlining faithfully the beliefs and work of the Christian Science church was delivered Sunday [Jan. 9] at the Scottish Rite Auditorium by William D. McCrackan, M.A. The speaker was introduced by J. H. W. Steele of Galveston, who said.—

You are here today by invitation to hear a lecture on Christian Science, a subject so important that to be well informed no one can afford to remain ignorant and not investigate what it teaches, what it practises, and what it is daily accomplishing in healing the afflicted.

Christian Scientists, from my personal observation, are the most kindly disposed, the most considerate of people toward the beliefs of others. Whether one believes in Christian Science or not, any close observer cannot fail to be deeply impressed with the fact that this beautiful religion, which is founded on the Bible, does elevate, does teach brotherly love, and make for a better and higher citizenship by refining and raising the standard of mankind. It is an extremely practical every-day religion; it is a power for good, both morally, socially, and spiritually. It has often been said, and truly, that Christian Science, instead of rearranging or altering your Bible for you, helps you to study and read it understandingly; and thus the imperishable truth it inculcates becomes clearer, nearer, and dearer to all.—*Galveston News.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Tulsa, Okla.—Judge William G. Ewing, Grand Opera House, 3 p.m., Feb. 27.
St. Augustine, Fla.—Hon. Clarence A. Buskirk, Jefferson Theater, March 1.
Galena, Kan.—Bliss Knapp, Sapp's Opera House, March 1.
Shawnee, Okla.—Frank H. Leonard, Becker Opera House, 7:30 p.m., March 1.
Americus, Ga.—Hon. Clarence A. Buskirk, Miss Bell's Piano School, 8:15 p.m., March 3.
McAlester, Okla.—Frank H. Leonard, Busby Theater, March 3.
Lexington, Mo.—Frank H. Leonard, City Hall, March 4.
Augusta, Ga.—Hon. Clarence A. Buskirk, Grand Opera House, 4 p.m., March 6.
Minneapolis, Minn.—Prof. Hermann S. Hering, Metropolitan Opera House, 3 p.m., March 6 (postponed from Feb. 6).
Lincoln, Neb.—Bliss Knapp, Oliver Theater, March 6.
Dayton, O.—Frank H. Leonard, Memorial Building, 3 p.m., March 6.
Neligh, Neb.—Bliss Knapp, I.O.O.F. Auditorium, March 7.

So did I learn
The first great lessons; mark ye them, my sons.
Obedience is nobility; and meek
Humility is glory; self alone
Is base; and pride is pain; patience is power;
Beneficence is bliss.

EMMA TATHAM.

TESTIMONIES OF HEALING.

It is with the deepest gratitude that I send my testimony to the *Sentinel*. When I read our periodicals I feel that I have as much to be grateful for as any one whose testimony I have ever read. All my life I had been very delicate, and as a girl at school I had the sympathy of my teachers and friends because of repeated attacks of illness, three of which lasted from one to six months. Each time there was little hope of my recovery, but I managed to struggle back and resume my studies. At the time of the birth of my little daughter, in June, 1905, there were employed two of the best physicians in Madison and one of the best surgeons in the Northwest. They were agreed that I would not live through the ordeal, but again I struggled back so as to be up and around. After examinations and tests which covered a period of five months, the doctor in charge said that with the greatest care I might live two or three years longer. I was then twenty-one years old.

At this time Christian Science was suggested to me by my mother, who had been visiting an aunt in Chicago who was a Scientist, and had become interested; but I refused even to hear it mentioned, as I was under the impression that Scientists were fanatics. Just a few days after this, however, the extremity which proved to be God's opportunity came. At noon on this day I was taken with great pain, and after trying to reach several doctors by telephone and not succeeding, my mother asked if she might telephone a Christian Science practitioner. I consented, and in fifteen minutes I was able to leave my bed and do some work. Knowing nothing of Christian Science, I allowed false sense to tell me that the pain would have left any way; nevertheless, my curiosity was aroused to such an extent that I would go to my mother's room and read in "Science and Health with Key to the Scriptures," when no one was there.

In August, 1906, I had an attack of throat trouble. I went to a doctor, who burned my throat, after which I became very much worse, until I was unable to speak or take any nourishment. Another doctor was sent for, and upon his arrival he did all he could for me, but without any benefit. The next day he told my mother that what was to be done must be done immediately, as there was no time to spare. He left the house about three o'clock, and as soon as he had gone my mother treated me according to her understanding of Christian Science. Very soon I fell asleep, and when I awoke I called my mother, asking her for something to eat. I had been unable to eat for two days and a half, while I had been unable to speak for one day and a half.

I was given the nourishment, and then my mother told me what the doctor had said and how she felt that she must immediately apply what she knew of the truth. Her explanation of how perfectly she had felt the presence of God and the absence of anything unlike God, brought the truth to my consciousness, and as I lay there looking back over the past, a great light burst upon me. I then saw that the first and only treatment I had in Science, ten months before, had dispelled the terrible belief I had in disease, and made it possible for me to go ten months without needing to consult a doctor, something I never remember having done before. More than this, it gave me a new spiritual birth, and I soon began the study of Science and Health in earnest. I am now in the best of health. I am glad Science has come to me early in life, as it has fitted me for being a better wife and mother than I could possibly have been in the old belief. Our little daughter, though very tiny as a baby, has had the best of health, and is now well grown and much happier than many children.

I want to express my gratitude to God, and to our revered Leader, Mrs. Eddy, and I strive each day to reflect more of the divine truth which she has so lovingly taught us.—Mrs. Amy Ross Hickman, Madison, Wis.

Although I have previously given expression to gratitude for help in Christian Science, through the pages of the *Journal*, I now take pleasure in supplementing that brief statement with a fuller account of benefits received. It was in the year 1899 that I first heard of Christian Science, and some interest was thereby awakened, although I did not consider the subject seriously until three years later. I had been afflicted for five years with an eye trouble which three leading oculists of Texas had failed to relieve. One of these specialists performed several operations on my eyes, and also prescribed the use of glasses; the other two agreeing with him that these were necessary.

With the first Christian Science treatment I put off my glasses, and have not used them since. I was treated about ten days, and my eyes showed marked improvement. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read and studied it, my eyes continuing to grow stronger, until finally after a year or more they were permanently cured. In the mean time I was a pupil in one of the Texas state normal schools, and found that the use of my eyes incident to this work was followed by no ill results.

A few years later a great sorrow came into my life. This, together with the trying responsibilities of my profession, culminated in a stubborn case of nervous illness. I was alone in the Christian Science thought, and still retained my membership in an orthodox church, where I found little encouragement to press on to a fuller knowledge of demonstrable truth. I yielded to the influence of my friends, and for a time tried material remedies as prescribed by some leading physicians. No relief coming to me from this source, I turned unreservedly to Christian Science, and in the course of a year was able to return to my work.

After this experience, I took a decided stand for Christian Science. I became a member of a branch church in a neighboring town (there being no organization in the town in which I then lived) and also, a year or so later, was accepted as a member of The Mother Church. Through class instruction my faith was anchored more firmly on the rock, and now I am striving in Christian Science to live up to the Christ-standard. Just acknowledgment and appreciation are due our Leader, and I can truly say, "Who is so great a God as our God?"

Brigman C. Odom, Dallas, Tex.

[Translated from the German.]

Christian Science was brought into our home a few years ago through a dear friend of my childhood days. Neither I nor my family had ever heard of this teaching before; it therefore made a strange impression upon us, and our attitude at first was not favorable to it. I, however, complied with a request to attend a Wednesday evening meeting, and this service proved a greater inspiration to me than I had ever received before in our own church. I soon attended the meetings regularly, and the Christian Science literature, too, became dear to me. A short time after, my husband also became interested in Mrs. Eddy's wondrous teachings, and today my family is convinced with me that this Science is the truth which makes us free. Innumerable blessings have come to us during the past few years. Our children have been healed within a few days of severe colds accompanied by high fever, and we have been enabled to free other members of the family from troublesome complaints of years' standing. We know now that we need not worry about things material, for God is our infinite source of supply, and He gives us everything we need in His good time.

We are indeed deeply grateful for all the blessings which we have received, and above all for the spiritual enlightenment and harmony which Christian Science has brought us.—E. Richter, Dresden, Germany.

Digitized by Google

I am so grateful for Christian Science that I cannot express it adequately in a few words. What used to seem a life filled with darkness and disappointment is now all changed, and I begin to see the eternal harmony and the "light of Life."

As the majority of people are drawn to Christian Science for the physical healing at first, so I was led to try it for slight ailments which at times came up, but I did not begin the study of it until the time came when earthly peace and happiness failed me. I went home from the office one evening tired, discouraged, filled with hatred, and feeling there was no place for me. I picked up "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to read. I do not know how long I read, but I know that before I stopped, hatred had given place to love, discouragement and weariness to peace and joy, and I knew I had found the truth that makes free. Since that evening I have never doubted the truth contained in our text-book, and although many problems have arisen, and continue to arise, yet I know there is not one that cannot be solved through Christian Science.

I wish to express my gratitude for the Lesson-Sermons prepared for us in the *Christian Science Quarterly*. They help me day by day, and through their study and application I am enabled to abide in the joy and freedom of life in God.

MYRTLE F. STRINGFIELD, Garden City, Kan.

I gladly testify to the efficacy of Christian Science in healing, as I have been relieved of rheumatism and other ailments. Some of these troubles were met instantaneously, but more recently I had an attack of an eruptive disease, the left side of my face, including my eye, being very painful, swollen, and inflamed. Some time before this a friend had told me of having been given up by physicians, and then being cured by Christian Science. I thought of this, and concluded that I now had a chance to test in a more serious case this new-old doctrine; so I wrote to a friend who is a Christian Science practitioner, that I wanted to come to her for treatment. An appointment was made and I went to her. In a few days the pain was all gone, and in about a week the eruption had disappeared. On another occasion, while visiting a friend, I had a serious cold, with throat trouble, so that I was unable to swallow. The Christian Science friend came and treated me, and I soon felt able to go home; so we started, and made the trip safely. I continued to improve, and in a few days was well.

I thank God for restoring me to health. I am also grateful to Mrs. Eddy, the inspired messenger to this age. I thank her for "Science and Health with Key to the Scriptures," and for making this Science clear to the world.—JENNIE CONGDON, Roxbury, Mass.

Because I desired physical healing so earnestly, I became willing to be interested in Christian Science, but it was perhaps three months before any meaning came to me from my reading. When I became humble, and willing to stand alone if need be, to give up the beliefs of the past and endure temporary separation from friends, then I began to gain spiritual insight, and was able to prove in small ways the power of Truth. To do this I was placed under stress of circumstances with no help but my new concept of God. It was not, however, until five years later that I was healed, though studying and working earnestly and faithfully.

These eight years of work and their ultimate healing —correction—have been an inestimable temperamental discipline; the blessing has been rich, and each day I wonder anew at the sublime wisdom of God's law of good and its gentle leading. I am most reverently grateful for the mental and physical regeneration which this truth has brought me, for I owe to it all the happiness and health I have ever known, and I am even more grateful for knowing this, that Christian Science is the open fount for all, where each may drink and be satisfied, and that nothing can divert the healing stream from its beneficent course.

BEATRICE ENOS, Milwaukee, Wis.

I am nearly seventy-seven years old and have known of Christian Science about twenty-five years, but did not accept it until a little over a year ago. I then began to study the Lesson-Sermon every day, but did not care to take treatment. Later on I decided to ask help for rheumatism, which had troubled me for more than two years, and I was healed in a few treatments. During the time since this experience I have enjoyed better health than for years. Some time ago I fell on a slippery sidewalk. I at once had the beautiful thought that God is Love, and I did not feel the slightest pain but got up and walked up four flights of stairs and washed away the traces of the injury. As my nose appeared to be badly hurt, I took treatment over a week. The injury was entirely overcome, and my teeth which had projected were pushed into place by this fall. I have laid aside my glasses, and am writing this testimony without them.

I am very thankful to Mrs. Eddy for Science and Health, and I study the Lesson twice every day. I hope to join The Mother Church.—ANNA ALLOWAY, Boston, Mass.

In 1902 I was healed of an aggravated case of bladder trouble. It was a return of the affliction, and on the former occasion of its appearance I was under a doctor's treatment in Chicago for a period of between nine and ten months. On the recurrence of the trouble I was advised to seek help from Christian Science; which I did, and within a period of six weeks was completely healed. I afterward passed two medical examinations by two separate doctors, and both pronounced me well, after knowing all the conditions of my case. These examinations were for the purpose of life insurance, and a policy was granted me without difficulty by a well-known insurance company of Milwaukee. I have given verbal testimony to my healing on several occasions, but declined to give one in writing without the consent of the insurance company, which I obtained by asking.

The physical healing does not tell half the story of the benefit which I derived from the study of this glorious truth. My life is much happier because of the different view of existence gained through the healing and in reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is a great pleasure to be of assistance to others who may be suffering as I was, and who do not know what I learned then and now know of the efficacy of this healing truth. Words cannot express my sincere gratitude to God for the blessings received, nor to the workers in Christian Science for pointing out the way.

GEO. D. BOW, Hudson, Mich.

[Translated from the German.]

I have known about Christian Science for several years, and for the past two years I have studied its teachings closely. I can hardly imagine what would have become of me, had Christian Science not come to me, revealing the truth about God and man. It has lifted me out of an aimless, unhappy, and sickly life, without God, to the wonderful recognition of man's vital oneness with eternal Spirit; and this has led me to health and activity.

On the way thereto I have gone through some hard battles with the mortal sense of things and with inharmonious conditions, but I was able to overcome them, because divine Love was guiding me. A kind practitioner helped me to get over many difficulties, and this cleared my vision

Digitized by Google

for the discernment of the truth. Never before had I felt that there was an unselfish, compassionate love which would meet my heart's desire and bring me happiness, but now I have found it in such measure that at times I am overwhelmed. Without this wonderful experience I would not yet have recognized that there is such a thing as divine Love. Through Christian Science treatment I was helped to overcome a phase of error which had weighed on my mind during all the years previous. It was with a feeling of deep gratitude that I realized the importance of Christian Science, when I became aware that I was free from this sense of wrong-doing. I have been improved morally, mentally, and physically through Christian Science.

A short time ago, when my father became very seriously ill, and his illness was pronounced most dangerous by the physician in attendance, the power of Truth was visibly manifest, the thought being held for him, although without special treatment, that in God all life is harmonious, and in Him there is no death. The illness lasted one week only, and my father attended to his professional duties after three weeks, to the great astonishment of the physician.

These are some of the most important experiences which I have had in Christian Science. Mrs. Eddy's discovery of the divine Principle of being, and her wonderful self-sacrificing activity in making it comprehensible and practical for the deliverance of humanity from sin, disease, and death, is of eternal import for the world. I long to be able to follow her teaching in the true spirit, and to express my gratitude to her by deeds.

LYDIA JACOBY, Berlin W., Germany.

It will be very gratifying to me if I, through the columns of the *Sentinel*, may add a word of the wonderful help which has come to me and mine through the study of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and of my longing to know more of the great truth of the Scriptures which is unfolded to me by reading this priceless book. I asked myself this morning if I had given as freely as I have received; and so I should like to add my mite to the great storehouse of love, first by saying that my physical healing was nothing to compare with the mental healing. Medical doctors were ready to consign me to some sanitarium; but, thanks to God, and to our dear Leader, who brought to us this great revelation that sickness and all ills do not belong to man, I can now say, that where once I was blind, now I see; where once I was sick, now I am well.

I experience great benefit through the study of our Lesson-Sermons. A Christian Scientist can be found in the early morning searching the Scriptures, and in all his getting, he gets wisdom. There is no miracle in truth, but we find many marvelous things through the understanding of it, and we, as Christian Scientists, seeking more and more the undivided garment, find also that fountain which sends forth the cooling waters by which we are refreshed daily. I am glad now all the day long that I have found the pearl of great price and the "friend that sticketh closer than a brother," the Bible and Science and Health.

All who are sick and in despair may come to this great fountain, and drink and live. They have nothing to lose, but everything to find.

ANNA O'NEAL MILLER, Omaha, Neb.

I wish to express my gratitude to God for what Christian Science has done for me. To say that I am grateful is putting it very mildly. Christian Science found me in Hades mentally, one day drinking, the next paying my saloon debts; and a peculiar fact was, that the saloonkeeper got his money before the grocer did.

On Thanksgiving day I was able to express my gratitude to God, and to Mrs. Eddy, for the understanding I now have of heaven here on earth. It is over four years since I began the study of our beloved Leader's work, and the knowledge and spiritual understanding of the Bible obtained through the study of our text-book, "Science and Health with Key to the Scriptures," has given me the sense of peace that passeth all understanding. Besides this, drinking, smoking, swearing, and many of the evils that flesh is heir to have been overcome. I enjoy the privilege of expressing my gratitude to our Leader, in doing and living to the best of my ability the way that Jesus requested,—to do unto others as we would have them do unto us.

A year ago some concentrated lye was accidentally thrown into my face, some of it entering one of my eyes. The pain seemed unbearable, and the thought immediately came that I would lose my eyesight. I requested one of my assistants to lead me to my private office and leave me. I commenced to declare that in God was my sight, and within five minutes from the time of the accident the pain ceased and I opened my eyes. I then telephoned a practitioner to help me to overcome the outside thought. I did not lose any time from my business. In five days I looked for the first time into a mirror and examined my face and eye. The physical evidence was still very unpleasant, but on the following Wednesday, which was nine days after the accident, I was able to testify in church that the face and eye were perfectly healed in every way.

I am indeed grateful to God for the many blessings received. With my dear wife and daughters I am daily standing porter at the door of thought, watching and praying for that Mind to be in us "which was also in Christ Jesus."—C. FREDERIC WINDER, Johnstown, Pa.

Nothing but the hope that some one else may be benefited by my experience, would induce me to recall the dark hours of sickness and discouragement which I endured before I was healed in Christian Science. For four years I was a sufferer from stomach trouble, nervousness, and other complications, resulting from an abnormal growth, for the removal of which an operation was being planned. Owing to the aggravated state of the stomach I would retire many nights without supper, and sometimes my husband would spend the greater part of the night applying remedies which the physicians had recommended. I had become such a slave to medicine that we thought it unsafe to be without certain kinds in the house.

I had been a member of an orthodox church for many years, and was trying to live a Christian life. I prayed that God would spare my life, that I might have the privilege of caring for my two children, then very young; but as material remedies were fast losing their power to relieve me, even temporarily, it seemed that I must soon leave my family. No one but a mother can realize what my feelings were at that time, but, thank God, I was spared, and the healing was accomplished in three treatments in Christian Science. That was nearly eleven years ago, and no medicine has been taken, nor any material remedies used since that time, and I can truthfully say that my health is perfect.

Upon returning home, after the healing, like many others I met with a disappointment. I had thought that my friends would rejoice with me in the good news, as I am sure they would have done had the healing been accomplished in *materia medica*. As they did not understand Christian Science, I was bitterly opposed by my dearest friends, but I have since seen prejudice removed and now some of those same friends are loyal Scientists.

The Bible and Science and Health, with the *Sentinel*, *Journal*, and *Quarterly*, are my daily companions. The religious teaching of Christian Science is beautiful; it indeed "lifts the veil of mystery from Soul and body" (Science and Health, p. 114). I take this opportunity to thank God, and to express my gratitude to Mrs. Eddy for the help received in Christian Science.

MRS. NETTIE B. SCOTCHBROOK, Wessington, S. D.

Digitized by Google

I have so much to be grateful for that I am at a loss where to begin. First, I am thankful for every tear that brought me to seek the light of Truth. I can now see that God was leading me. I first heard of Christian Science over seven years ago, in Macon, Ga., through my teacher in a business college. I was wearing glasses and had been for seven years. A specialist had said I would require them always, but I went to see a Christian Science practitioner, and my eyes were healed in two weeks' treatment. At another time I had treatment for a tooth which was causing me much suffering, and was healed instantaneously. After a few months I went to my home in Mississippi, where Christian Science had not been heard of. I understood practically nothing about it at that time, and I was shamed away from the truth, although I knew I had been healed of these two ailments through its ministrations.

I had never been considered strong, and in trying to work for my living I seemingly suffered from almost every ill that mortal flesh is heir to. Two and a half years ago I came West for my health, and again God led me. I did not set out for this town, but I finally came here after I had been to several other places and seemed to be growing worse all the time. I had been here only a few months when I was married, and in a short time our doctor told me I would have to be operated upon for a trouble I had had for years. I very reluctantly consented, but the operation was not a success, and I found myself in the same condition that I was before. I had a good husband and a happy home, but I did not know it. I was miserable and sick, and I made others unhappy; but Truth spoke to me again, and I turned to Christian Science as the last resort.

Man's extremity was again God's opportunity, and what God has lifted me out of, through Christian Science treatment, is more than I can put into words. I am now well and happy, and my home as a whole has been lifted up into a purer and more healthful mental atmosphere. I am truly thankful for this Science which is teaching me how to live and to know that all men have one Father-Mother God.

MRS. MARGARET E. BROWN, Bisbee, Ariz.

I should like to add my testimony to that of the many I read each week in our *Sentinel*. For three years I was a great sufferer from a kidney disease, together with many other ailments. I had reached the point where I had given up all hope of ever being well again; but when I turned to the blessed truth which heals all disease, I received such great help from the first treatment that I took up the study of the "little book" (Science and Health with Key to the Scriptures), and it brought me great peace and comfort. I was not healed at once of the kidney trouble, and it took five years to overcome all the diseases from which I suffered. I was, however, so thankful for each day's help that I pressed on, more and more each day, until all was well.

It is now over nineteen years since I was first healed. I am striving to grow more in the understanding of this truth which has enabled me to cast out many old mortal beliefs, to learn to love my fellow-men more, and to see Christ, Truth, as the source of all good. I have indeed much for which to thank God, and also our dear Leader, Mrs. Eddy, for her wonderful works, especially Science and Health. Words fail to express my gratitude for all that Christian Science has done for me in helping me to obtain this freedom.

MRS. JENNIE SAUER, Austin, Tex.

In love and gratitude to God I desire to express my deep thanks for all the blessings He has bestowed on me and my family. By a deep study of the Christian Science textbook, "Science and Health with Key to the Scriptures," and by putting into practice what I have learned therein, I have gained abiding joy and peace, such as I never before knew, a clearer understanding of the omnipotence of God, His nearness, willingness to help, guide, and protect us in time of trouble. One morning, while preparing breakfast, I had a trying experience with the oil-stove, the tank catching fire. For an instant I was much frightened, though the fear left as quickly as it came. I declared the truth, then proceeded to extinguish the flames. In doing so my hand was burned very badly, but in a few moments all sense of pain was gone. The next morning I could not realize my hand had been burned.

My heart overflows with love to our dear Leader for reestablishing this religion of the Master, which destroys fear and brings a clear realization of his gracious promise, "Lo, I am with you alway."

MRS. L. H. MILLIKEN, Levant, Me.

Words fail me when I attempt to express my gratitude to God, and to our dear Leader for Christian Science. Last July, in coming down stairs I fell and seriously injured my leg. At the time there was no one in the house but the servants, and they were in a part of the house entirely separate. As I could not stand or walk, I was obliged to crawl up the stairs to my room, and managed to get on the lounge, where I rested very comfortably until help came. I read in Science and Health, realizing all the time the omnipotence and omnipresence of God. My son was the first to come to me, and he telephoned for a surgeon; also, at my request, to a Christian Science practitioner for treatment. When the limb had been set, the doctor said he feared I would not have much rest that night, as such a fall was a great shock; but despite his prediction I did sleep most of the night. After the first night I had no sense of the injury, although I wore the plaster as directed by the doctor, which seemed best, as none of my family are Scientists. I never lost a night's rest, had no pain, ate well, was cheerful and happy, and gained in flesh. All the treatment was absent. For a few days the nurse telephoned conditions, then I wrote daily to the practitioner. I did not use crutches, and I am now using the limb as usual and am very thankful for the help received in Christian Science.

MRS. IDA L. P. JANES, Baltimore, Md.

[Written for the *Sentinel*.]

THE CRUSE OF PLENTY.

STOKES ANTHONY BENNETT.

I HAVE learned a helpful lesson
Which a sweet assurance brings,—
Just a lesson to be thankful
For the gift of little things.
It has taught me to be patient,
And each day to understand
That to have the cruse of plenty
I must use the best at hand.

I have learned that little blessings
Tell of greater ones in store,
And that he who joys in few things
Always gets full many more.
I have found that small beginnings
Are most often just the ways
Which lead up to high successes
And to happiest of days.

I am sure that richest blessings
Are right here within our reach,
And that I shall not be lacking
If I practise as I preach.
So I'd fain be up and doing,
Lest I fail to understand
That the one whose cruse is fullest
Has used well the things at hand.

FROM OUR EXCHANGES.

[*Watchman.*]

The church of this twentieth century needs a more profound and pervading assimilation of the peaceful spirit of Jesus. Before it is fully fitted to bear his name, it must come to sing, with the spirit and the understanding also, the song the angels sang at his birth. Before it can complete the work which he began, and which he left to his church to finish, it must be saturated with this world peace. When the kingdoms of this world shall become the kingdoms of our Lord and of His Christ, the glorious victory will be won by a united host of God, in peace and good will bearing throughout the world the banner of the Prince of Peace.

[Rev. John Hunter, D.D., in *Universalist Leader.*]

There was nothing exclusive about the one Master of Christians. To men who, on the strength of their pedigree, arrogated to themselves the position of God's favorites, and claimed the heavenly blessings as exclusively their own, he said, "Many shall come from the east, and west, and shall sit down with Abraham, and Isaac, and Jacob, in the kingdom of heaven." God is the Father of all men, not merely of chosen men. The true succession from Abraham was not hereditary, not a tie of blood or descent, but a moral relationship, a kindred spirit and character.

[*Christian Register.*]

The secret springs of the spiritual life are primarily to make us happy. A happy nature, happy not through febrile excitements, but through deep inward content, is one of the best gifts to the world. It spreads its glow not by fussing about to accomplish the impossible, but by being so lovable, so beautiful, that its influence cannot be resisted. The religion of the future must be the religion of happiness, as that of the old Puritan past was, in great part, the religion of gloom. We are not wholly out of the shadow as yet, but we are tending that way.

[*Outlook.*]

A great revival of righteousness has been going on in this country for the past ten years; and those who regard the unrest and disturbance which have characterized those years as mere expressions of discontent with material conditions, are blind to a deep stirring of the conscience of the country, demanding integrity and justice between man and man.

[*British Congregationalist.*]

Whensoever we find ourselves holding back any part of the price of spiritual growth and perfecting, we should take alarm. God's kingdom in this world is His rule in men's hearts and lives, and that rule can endure no veto from the lower self. "Life is just a stuff to try the soul's strength on."

[*Christian Register.*]

More infidels, so called, are made by reaction from the preaching of a personal devil, a literal hell-fire, eternal punishment, and the like, than by the teaching of any of even the most liberal exponents of religion.

[*Universalist Leader.*]

Slowly yet surely, from the wreck of systems and the collapse of ancient formulas, the spirit of man is emerging into a new realm of faith far vaster, infinitely more potent than any narrow, spiritual monopoly of antiquity.

[*Examiner.*]

Prayer is not put on and off like a garment. Prayer is inseparable from love and faith and service. It partakes of penitence and necessitates personal consecration. Prayer involves character.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy, "Personal Contagion" and "What Our Leader Says," in large type on special paper, silk-sewed with overhang cover.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House.

For prices see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Construction of the entire tri-borough subway system of Greater New York with city money was agreed upon last week by the board of estimate and the public service commission as the transit program to be worked out by the new administration. The cost of the new system will be about one hundred and ten million dollars. One system, to provide for Manhattan, the Bronx, and Brooklyn, has been agreed upon, and will be built in its entirety instead of piecemeal. It is estimated the city will be ready with its contracts in about two months and that the actual construction will be started in the early summer. There is no question as to the ability of the city to finance the proposition, the officials stated yesterday. The expenditure will cover several years, and the total appropriation needed for one year probably will not exceed fifteen million dollars.

Notwithstanding the discontinuance of payment by the Government of the expenses involved in the collegiate education of the forest rangers, about sixty pupils have continued their courses at their own expense. This represents the proportion of a total of approximately two hundred who were attending the schools when the order to discontinue the Government payment, which involves the loss of salary, was made. All the rangers who were at the schools when the recent order of discontinuance of allowances by the Government went into effect, have been given salary increases of one hundred dollars by the Secretary of Agriculture.

The aqueduct commission of four, which had been in existence since 1883, has just been abolished by Mayor Gaynor of New York city. The mayor said: "The work which the commission was created to do was substantially completed a good many years ago, and there has been no excuse since that time for the commissioners not so reporting and ending their official existence. Meanwhile they have been costing the city the useless expense of about three hundred thousand dollars annually for high office rents, their own salaries and those of their entourage of engineers, secretaries, etc. Such expense was even $224,273.53 last year.

It is claimed that the lighthouse establishment of the United States Government is the most complete and efficient in the world. On June 30, 1909, the service included no less than 1,643 lighthouse keepers; and during the fiscal year of 1910 sixty-one additional lights, requiring the services of forty-seven keepers, will be established. Legislation is being sought for the establishment of three additional lighthouse districts, covering Alaska, Porto Rico, and the naval station at Guantanamo and the Hawaiian Islands. The cost of the establishment last year was $5,357,000.

Assurance has been given by President Mellen of the New York, New Haven, and Hartford railroad, one of the big factors in the transportation service of the country, that electrification of the steam railroads is bound to come speedily, and that Boston will shortly enjoy the advantages of this type of service.

Mayor Busse of Chicago has appointed a committee of nineteen men to lay plans for the first national convention of city officials and engineers for the purpose of standardizing paving specification. The convention meets this week, and it is expected that forty cities will be represented at the gathering.

Ex-President Roosevelt on his African trip reached Gondokoro, Soudan, last week. He will take two weeks or more in making the trip from there down the Nile by easy stages to Khartoum. Here Mrs. Roosevelt and her daughter Ethel, who have just sailed from New York, will meet him.

The financial report of the city of Boston shows that during the second year of Mayor Hibbard's administration the treasury was enriched by $914,602. This makes nearly two million dollars saved to the city during Mayor Hibbard's two years in office.

Headquarters for the arrangements for the welcome to ex-President Roosevelt have been shifted from the White House to the New York custom house, President Taft having turned over to Collector Loeb all of the details of the affair.

Governor Hughes has ordered a thorough investigation into the management and affairs of the state forest, fish, and game commission and the purchases of land made by the state within the forest preserve.

International.

M. Velain, professor of physical geography at the Sorbonne, has drawn up a report on the causes of the French floods, which he attributes, in the first place, to exceptional rainfall during the last six months, and secondly, to the wholesale destruction of forests. In this respect M. Velain voices the unanimous opinions of French scientists. The three most important affluents of the Seine above Paris are the Yonne, the Upper Seine, and the Marne. During the last thirty years the forests have been cut down to a most alarming extent on the plateaus where these three affluents of the Seine arise. The pastures and cultivated soil, which have replaced the forests, no longer retain the rainfall, which is now sluiced off, as if from the roof of a house, directly into the rivers. The forests until recently absorbed the rainfall and diverted the greater part of it into the soil, whence it percolated gradually into the great natural subterranean sheets of water. Most of the forests have now disappeared. Their destruction is thus a national calamity, the consequences of which have just been demonstrated by the recent floods.

On Nov. 27, 1909, workmen on the Transandian railway, approaching from opposite sides, broke through the heart of the Andes mountains in tunneling the rock which separates Chile from the Argentine Republic. The concession was obtained twenty-seven years ago through Clark Brothers of Chile from the Argentine Republic to connect Buenos Aires with the Chilean frontier. Later a construction company secured a concession extending from Los Andres on the Chilean side to the boundary line of the two countries. The two sections between Valparaiso and Buenos Aires now form a complete transcontinental line of 888 miles. The old pack route over the Cumbre pass was 12,576 feet above the sea level, but the engineers have brought this down 2,500 feet lower by tunneling the mountains. The Transandian railway tunnel is the same size as the Simplon in the Alps. The line is nearly straight. Regular communication will be established, it is expected, by May 25, 1910. The practical advantage of the tunnel lies in the reduction of time between Valparaiso and Buenos Aires to thirty-five hours.

The Japanese minister at Peking has notified China and the United States that Japan withdraws her objection to the Chinchow-Fu railway conditional upon Japanese participation in financing it, and also in the construction of the work to such extent as all who are interested may agree. China must engage to build at some future date a connecting link between the Chinchow-Fu line and the South Manchurian, the points of connection to be hereafter determined.

It is reported that more than four hundred and thirty thousand dollars were paid by the government last year in payment of damage or loss to the luggage of tourists traveling in Italy. A general investigation as to the causes of this damage or loss of luggage has been ordered by the minister of the interior, and, from the results already obtained, it is believed that a very much more satisfactory condition of affairs will hereafter prevail.

According to the statistics issued by the government statistician, the total area of the state of Victoria is 56,246,760 acres, of which 27,053,071 acres are held privately. After excluding state forests, reserves, roads, etc., the area of crown lands available for selection is 12,647,010 acres, including 6,412,500 acres of mallee land, held mainly on annual grazing licenses.

Britons are ceasing to look to the United States for their beef and are turning more and more to Argentina for their meats and cattle. Prominent English shipowners and Argentine cattle raisers have organized a company which will undertake to ship supplies of chilled meat regularly each week from the River La Plata to London and Manchester.

Congressman Manuel Calere expects at the spring session of the Mexican Congress to bring up a bill that will prohibit bull fighting. Half a dozen states of the Mexican union, in reply to letters sent their governors by the Mexican Society for the Prevention of Cruelty to Animals, have advised that the fight is forbidden within their limits.

A report has been issued by the department of lands on forestry in New Zealand, from which it appears that about 17,047,000 acres of the total 66,568,867 acres in New Zealand are still covered with forest.

Industrial and Commercial.

The first practical use of the new Edison storage battery is to be made on a line of electric cars to run from Port Jefferson across Long Island and through Medford to Patchogue over a loop route, according to plans of Long Island capitalists. The company to run the line is already financed and incorporation papers have been applied for. It is intended to start the operation of the line early in the summer. Five cars are to be put into service at first.

The stern frame, rudder, and brackets for the new White Star liner Olympic, which were recently supplied by the Darlington Forge Company, are the heaviest ever cast for a steamship. Their total weight is 280 tons, made up as follows: Stern frame, 70 tons; after boss arms, 74 tons; forward boss arms, 45 tons, and rudder, 100 tons. The total weight of the same parts as cast for the Mauretania was 220 tons.

The Baltimore and Ohio railroad will begin work directly on plans for advancing the operating efficiency of the road. The expenditures sanctioned amount to more than eight million dollars, of which five million dollars is to be used upon the roadway and for the improvement of points where congestion is likely to occur.

Manila electric street cars carried 10,701,859 passengers in the last fiscal year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE BLAZED TRAIL.

REV. WILLIAM P. MC KENZIE.

OUT in Colorado lived a woman whose people had been pioneers, so she loved the mountains and found delight in wandering through the pine forests that clothed their sides. On one occasion she had, with a company of friends, been enjoying the seclusion of a camp built among the pines and reached by a trail traveled only by those who were seeking this particular lodging-place. Hence it was not a beaten track, to be followed with eyes downcast upon the earth, but a blazed trail, to be followed only by observation of the marks deeply bitten into the pines by the axe of the explorer who had first marked out the way—not for the feet of those who might follow, but for their minds.

This group of friends had been for a visit at some distance from their camp, and were returning home in the stillness of the late afternoon, when one person turned aside into an easier path, and the rest of the party followed in the way, with some congratulation over the fact that it was a well defined and beaten path. Thus they let their feet guide them until, as the golden dusk of evening glorified the spires of the trees, the path became more and more indistinct, and finally faded out in a glade among the trees. Then fear came upon the party, for they knew now that they had been following the track of grazing animals seeking pasture, and were lost in the forest, where they had no protection or shelter for the night. At first there was bewilderment, but the daughter of pioneers quickly reminded herself of the only thing to be done, which was to follow back carefully the path made by the animals, until the place was discovered at which they had left the trail made by the intelligence of man. At last they found the blazed trail, and with care followed the course indicated by the incisions in the trees, though it was difficult walking and rough underfoot, and at last they gained the shelter of their camp. When the tale was told to an old-timer, he smiled and said, "It is strange to think of the daughter of a pioneer forgetting to follow the blazed trail."

Through a hitherto unexplored region, a way for man's escape has been found by the pioneer discoverer of Christian Science. Carefully she has marked the trail for those who, following, are seeking the peace and refuge of home. The way once opened, none other need open it. The directions once recorded, what have others to do but be guided by them. Some who walk the way thoughtlessly talk of themselves as pioneers, and bid for sympathy as they tell of their toils; but in the nature of the case there can only be one pioneer, and if the way is rough for those who follow it, then let their gratitude be the deeper for the bravery of the one who first found it, and with love for mankind made it a blazed trail to be followed by the mind, so that every man in earnest may avoid the misleading beaten path of custom, error, and animalism. It is the way of hope for the bewildered and lost, for the weary and homeless, and one more incident will illustrate this.

This woman of the West, who had remembered what she had been taught in time to lead her friends into the right path ere night overwhelmed them in the forest, was once waiting to receive inquirers in one of our reading-rooms. She was enjoying the peace of fellowship with the goodness of God, and the joy of gratitude, when into the room came a young woman storm-tossed and despairing. She had come from a consultation of physicians, the verdict of which had been that she was the victim of a cruel disease. For this cruel disease there was no bland remedy, no soothing, no comfort; only the dreaded prescription of an operation. Even this merciless remedy did not promise a cure; it might of itself prove as quickly fatal as the unchecked disease was predicted to be in time.

It was no wonder that the young woman was as one who had lost the trail. She had a home to keep and children to think about, and in the face of this trouble which darkened her life, she was as one bewildered, stretching out her hand for guidance. Thus, frantic with fear, she came into the presence of one whom she had never seen before, yet one who was indeed her friend for the reason that she had learned to be the friend of God. She said that she had heard of healing as being in some way connected with Christian Science, and asked if there was any hope for one in her case. Her new-found friend looked steadfastly in her face and assured her there was both hope and certainty of healing. She said she knew this because she herself had been healed of the very same cruel disease which now affrighted her visitor. Then she testified concerning "the very God of peace," until divine comfort brought peace instead of tumult, and the visitor began to desire to find for herself "the way of peace."

She was directed to the chart and guide for life which the Christian Science text-book explains and illumines, and before leaving she procured a copy of Science and Health. By means of this book, and with occasional help from the friend who had already found the way, the distressed sufferer received healing and renewal of life, and so escaped the pain and danger of the proposed operation which had so terrified her. She found that for every distress there is a remedy bland and comforting, even that divine Love which comes "to revive the spirit of the humble, and to revive the heart of the contrite ones." Through understanding aright the Scripture testimony concerning God, she was able to realize the promise, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily."

Think how many people have already been brought through Christian Science to the path which leads out of darkness toward the light of home! Not by mere numbers can you estimate the multitude of those who have found the blazed trail, nor is it possible to measure the gratitude of the people who walk in the way once found and first explored by the Discoverer and Founder of Christian Science. Mrs. Eddy is indeed the pioneer of this movement, and "the restorer of paths to dwell in." She writes in the Preface to Science and Health: "It is the task of the sturdy pioneer to hew the tall oak and to cut the rough

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

granite. Future ages must declare what the pioneer has accomplished." Through obstructions apparently inflexible and adamantine, the way has now been opened. Are we to leave to future times the due appreciation, and to men who shall be, the joy of gratitude? Rather let us now be happy in giving our grateful love to the one who found the right path and blazed the trail for all who come after, seeking the way of peace and finding it. In "The Mother's Evening Prayer" (Miscellaneous Writings, p. 389) our Leader has beautifully referred to this way and the happiness therein:—

Beneath the shadow of His mighty wing:
In that sweet secret of the narrow way,
Seeking and finding, with the angels sing:
"Lo, I am with you alway,"—watch and pray.

THE ELIMINATION OF PERSONALITY.

FRANK H. SPRAGUE.

It is sometimes assumed by persons who observe the workings of the Christian Science organization from a standpoint outside the ranks, that the form of government provided in the church Manual tends to hamper individual growth; that any system of external regulation interferes with spiritual progress; and that dependence on organization is contrary to the teachings of Jesus. As with every great institution, the Church of Christ, Scientist, must be viewed in its proper perspective and historical setting before the meaning and utility of the relative measures employed for its furtherance can be rightly estimated. It is essential, in this connection, to consider not alone the absolute end contemplated in the movement, but the exigencies to be met in attaining that end as well.

The avowed standard of Christian Science practice is the ideal of God and man presented by Christ Jesus. The Mosaic law, which was the dominant influence in shaping the character and destiny of the Jewish people, was designed to confirm and conserve the sense of divine presence and power gradually unfolded to the awakening consciousness of the "peculiar people." Without the aid of this code, crude and materialistic as were many of its ceremonial features, the Messianic ideal would have been lost to the world, swallowed up amid the superstitions and abominations of the age. Paul declares: "The law was our schoolmaster to bring us unto Christ." In other words, the exactions of the Judaic code were necessary, at that period, to awaken and perpetuate a moral and religious sense which should lead the way to the later manifestation of the spiritual idea or Christ. The coming of Christ Jesus was in itself, however, but a preliminary step in the redemption of humanity.

So little prepared was the world, even then, for the Galilean prophet's absolute teaching and demonstration, that the understanding and realization of the truth he proclaimed disappeared from the lives of his professed followers after a comparatively brief period. Yet once implanted in human consciousness, the leaven of truth continued to work, enlarging and purifying experience until centuries later, as promised by Jesus, the Christ, or spiritual idea, was again revealed. What, then, was the essential truth brought to light in the career of Christ Jesus, and elucidated in the works of the Discoverer of Christian Science? Nothing less than this, that man is the reflection of divine Mind—is spiritual idea governed by divine Principle.

From the earliest times the problem of government has engaged the attention of mortals. Since the awakening of the world from medieval darkness, the trend of social, political, and religious forces has been toward democracy —"the government of the people, by the people, for the people." The democratic ideal, developed as it has been primarily along the lines of material experience, does not take into account the requirements of man as the spiritual idea of divine Mind. It represents human interest as revolving around personal sense. No order of society is fundamental, none offers a right and permanent solution of the deeper problems of humanity, which does not proceed from an understanding of the Principle of man's being. Any attempt to harmonize a multitude of independent minds, view-points, interests, so that each unit shall find its proper relation and adjustment to the whole, is sure to fail in the long run, because it springs from a misapprehension of the factors to be dealt with—a misunderstanding of man's nature, needs, capacities, destiny. Though the radii of a circle be multiplied indefinitely, no two conflict, since the relative position of each line is determined by the principle of geometry. But let us attempt a harmonious adjustment of the lines within the circle on any other basis, and we soon become involved in difficulties. So is it with ideals and schemes which ignore the Principle of man's being and accept mortal man, human personality, as the unit or basis of society. Spiritually understood, the brotherhood of man stands in the relation of a corollary to the fatherhood of God, as Mrs. Eddy has tersely pointed out on page 340 of Science and Health.

Peter's discernment of the Christ, or ideal man, "the Son of the living God," led his Master to define the true order of society as based on this unit, the spiritual idea tributary to divine Principle. "Upon this rock," declared Jesus, "I will build my church." The underlying bond in the association of individuals indicated in this reference is imperceptible to "flesh and blood," personal sense. This ideal is theocratic rather than democratic in its outlines. Throughout the history of the Jewish race, the impelling force of this ideal had been felt, though imperfectly understood, by spiritually-minded prophets who sought to turn the thought and affections of the people to Jehovah as their rightful sovereign.

This ideal is the incentive of the Christian Science movement. The accessories employed in the work are calculated to aid the receptive thought in gaining and retaining the standpoint of Principle, which alone makes a realization of this ideal possible. In order that spiritual understanding may obtain a secure and permanent foothold in human consciousness, it is essential that the steps leading to this end shall be so taken that the good already attained shall be conserved and converted into the channels of scientific demonstration. Hence the mission of the Manual. On page 359 of "Miscellaneous Writings" Mrs. Eddy says: "Material organization is requisite in the beginning; but when it has done its work, the purely Christly method of teaching and preaching must be adopted. . . . Growth is restricted by forcing humanity out of the proper channels for development, or by holding it in fetters." The by-laws are the temporary staging which wisdom has placed around the visible manifestation of the church while it is taking form in human consciousness and rising to the proportions of the spiritual model. The intent of their counsel and admonition is to enthrone Principle in human thought and affection, and thereby eliminate personality, which is but a false sense of man's individuality. Personal influence and domination, on the one hand, and the apotheosis and reliance on personality, on the other, tend to retard spiritual progress by interfering with a realization of man's relation to his divine Principle.

After making known her discovery to the world and establishing the necessary means for safeguarding and perpetuating an understanding of the truth thus presented, the Discoverer and Founder of Christian Science withdrew from the scene of outward activities to devote attention to the higher spiritual interests of the Cause, and each successive step in the unfolding of the church polity has made for the exaltation of Principle above personal sense. Among these mile-stones of progress may be mentioned the

Digitized by Google

substitution of the Bible and Science and Health for personal preaching; the limitation of the Readers' terms; the discontinuance of the pilgrimages of Christian Scientists to the home of their Leader at the Communion season, and later the doing away altogether with the Communion in The Mother Church; the closing of the room of the pastor emeritus in the church edifice; and numerous recent changes in the by-laws relative to personal following, church fellowship, etc. In following the spirit as well as the letter of these rules, the student finds his thought and affection unclasping little by little their hold on personality and inclining more and more toward Principle. As spiritual sense gains ascendency, personal sense wanes.

The New Testament accounts give no intimation that the risen Lord was seen by any save his own followers—those whose thought had been attuned in some degree to recognize and respond to the impersonal truth he inculcated. Clearly, as indicated in these records, it was his spiritual presence rather than his personality that enabled his disciples to identify him after the resurrection. The writer to the Hebrews declares that "unto them that look for him shall he appear the second time without sin [*amartia*, error] unto salvation." In other words, the second coming is fulfilled in the individual apprehension of the Christ, or spiritual idea, apart from the limitations of personality.

TRUTH NEVER FAILS.

MAUDE M. GREENE.

A CERTAIN experience brought the writer face to face with the question, Has Christian Science failed to heal? After considerable meditation and prayer, the answer came in an illumination of consciousness which made applicable this passage in Science and Health (p. 513): "To material sense this divine universe is dim and distant, gray in the somber hues of twilight; but anon the veil is lifted, and the scene shifts into light." This pointed to the fact that the work of Christian Science is salvation. Full and complete salvation is the attainment of perfect spiritual consciousness, made up of divine ideas, and this consciousness we know is only reached by the disappearing of the false material beliefs which make up the mortal or supposititious consciousness. What conditions or experiences these material beliefs may require before they yield themselves to the divine ideas, depend upon the nature of the beliefs.

The efficacy of a Christian Science treatment is determined by the measure of the attainment of this spiritual consciousness. It heals because its thoughts are God's thoughts; God is their Principle and power; God invests them with authority. A God-invested thought cannot fail, it must be the annihilation of the supposititious opposing material concept. A material belief of disease may have a hundred different names from the one it calls itself; it may even try to conceal its self-ascribed name and nature. There are grades of human belief, and a better belief yields itself more readily to the divine idea. This better belief indeed is the first evidence of the recognition of its own falsity, and the first step in that betterment process which means its ultimate disappearance. Physical healing is often the first manifestation of an improved belief, but not always; it may even sometimes seem to be the last. This physical healing, for which suffering mortal sense cries out, may be deferred until many other beliefs have been "improved" and brought into subjection.

The answer to the question why some people are healed more quickly than others is, then, that they are not healed more quickly; it is only that the nature of the belief has made its first improvement manifest in physical healing. The deferred manifestation of healing may mean that when it does appear the belief is so bettered that it is at the very doors of heaven. Our work in Christian Science is to reach heaven,—immortality, eternal peace and joy; to attain to the perfect consciousness wherein nothing can enter that defileth or maketh a lie, wherein is no concept of sin, disease, or death. Physical healing is only an incident in this work, and if it be our only aim, the work is incomplete and falls far short of being our Father's business.

Suppose, in this betterment process, this turning from sense to Soul, the human consciousness seems to pass through the shadow it calls death before the improvement in belief named physical healing is manifested, have we, as Christian Scientists, any right to be discouraged or depressed with the sense of failure? No! This human consciousness is that much nearer healing, that much nearer heaven, that much nearer God, than if it had never felt the touch of Truth. Have we any right to say that Christian Science failed to heal? Death is but one phase of the belief of life in matter, and while it is of itself an error which must and will be finally overcome, and is not in any sense to be considered "a stepping-stone to Life, immortality, and bliss" (Science and Health, p. 203), it may, like many another human experience, be the very circumstance which will lift this human consciousness to the realization of the allness of God and His creation, and the consequent nothingness of the very belief which has seemed to result in death; and it can be said, "Surely the wrath of men shall praise thee: the remainder of wrath shalt thou restrain."

Our work in Christian Science is for eternity. No matter what material sense may declare, no matter what evidences it may seem to present, our work is to know that it only presents evidence to itself, not to Truth—not to Spirit—not to God, nor to God's man. Our work is to know the truth, and to know that the fruit of this knowing must be healing. Time is a mortal standard and is no measure or part of eternity. There is no "quick" or "slow" in the processes of Spirit; there is only the eternal now. We must know the truth now, and leave the increase to God; the work is in our own consciousness, and we must begin to enter the kingdom of heaven now. If we have aught against our brother, any belief in the reality of his disease or death, we must first cast out this beam from our own eye, and gain the true idea of man as God's child, perfect and pure, sinless and deathless, before we can bring our gift of healing to the altar. Mortal mind dare not impute failure to divine Mind.

[Written for the *Sentinel*.]

THE SUM OF MANHOOD

KATHARINE J. SMITH.

A SEER of Teman counseled one in woe,
  Whose cup of blight and banishment severe
But seasoned faith to bide the bitter flow
  Till tale of loss should ring with saintly cheer,—
Man, like a leaf unnurtured, shall not stay,
But quaking, seek his doom of sodden clay.

Eternity's serene undialed hours
  Prove vain the time-fixed riddles of the wise;
Doth mortal glory range above the flowers?
  The helmsman's answer is the seas that rise;
And woodsman, by his evening ember, marks
The destiny of upward-going sparks.

Not as the destiny of drifting leaves,
  That flutter down to russet autumn's web;
Nor doom of floodtide shock, that shoreward heaves
  And by recession's instant law doth ebb;
Nor quick-quenched spark is manhood's holy sum;
For man, with Being blent, hath death undone.

SELECTED ARTICLES.

[Frederick Dixon in *Weekly Mercury*, Birmingham, Eng.]

It is fair, I think, to say that our friendly critic has based his objections on the idea that Christian Science accepts the theory of verbal inspiration so literally that, like a certain famous lady, it would not spare a letter of that blessed word Mesopotamia, and that on this basis it has erected a scientific castle in the air. As a matter of fact no conception could be more mistaken. The idealism of Jesus was not the idealism of a dreamer, and the ideal of Christian Science is the idealism of Jesus. The world is apt to picture idealism as a thing of "shreds and patches," the dreams and fancies of those who live tilting at windmills, or burying their heads in the sand lest they should catch sight of the facts of existence.

Christ Jesus, it has been finely said by a Christian Science lecturer, "brought the vision of the mountain down into the experience of the valley," and showed by healing the sick and feeding the multitude that he was no dreamer, but, as Mrs. Eddy has said, on page 313 of Science and Health, "the most scientific man that ever trod the globe." Idealism, from a scientific standpoint, is the antithesis of materialism, it has been defined by Huxley as the theory that "nothing exists beyond the facts of consciousness and the substance of mind." Jesus, Mrs. Eddy has written, in the paragraph just quoted, "plunged beneath the material surface of things, and found the spiritual cause," and so, on page 123, she has explained the idealism of Christian Science as the teaching which "excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas." The miracles of Jesus and the healings effected by Christian Science are the object-lessons in demonstration of the truth of the theory that all causation is spiritual. In the latter case that theory is founded on the teaching of the Bible as explained by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," a book which is the Christian Science commentary on the Bible.

The question therefore arises as to whether the Bible is really a sort of *olla podrida* of myth, magic, and morals, or whether, as Mrs. Eddy insists, the world has commonly misread it, owing to its failure to grasp the fact that the text, whether in its figurative, historical, or ethical phases, is never anything but a vehicle for the conveyance of spiritual ideas. Every great book must be considered from the point of view of its own unity. In no case is this more true than in that of the Bible, the very name of which signifies that it is not the product of a single author or a single epoch, but a collection of writings gathered together to illustrate the evolution of an idea, which in this case is the spiritual progress of humanity, on what Mrs. Eddy has described as "their passage from sense to Soul" (Science and Health, p. 566). Now the fact is that the Oriental thinks and writes in metaphors as naturally as the Westerner avoids them; and as it is apparently beyond human reason to be consistent in the use of metaphor, he mixes his metaphors with an indifference which could not have been surpassed by Sir Boyle Roche himself.

The Bible is full of these mixed metaphors, which the reader scarcely notices because he has grown so familiar with them. The writers, writing for another people, in another age, crowded their text so thickly with metaphors, that it has been truly said, by a great scholar, that they never opened their mouths without emitting one and never conceived it even necessary to indicate the fact. Especially true as this is of the Old Testament, it is also in a less degree true of the New; the hands which wrote it may have been the hands of a Greek; but the mind which conceived it was the mind of Israel. It never even occurred to these writers when they said that the sun was turned to blood that the banal unimaginativeness of the west would see in this "a violation of a law of nature by an interposition of the Deity," instead of a simple picture of an eclipse. It never dawned upon them when they wrote of evil as a serpent, or personified it as the devil or Satan, that untold millions of western people would one day portray this literally in a man with cloven hoofs and a spiked tail.

These statements, which are the truisms of the Biblical criticism of today, Mrs. Eddy has been contending for, in the face of the most violent and unreasoning opposition, for the last forty years. The difference, however, between Mrs. Eddy and the scholars is this, that whereas the latter have only found in the Bible another expression of the human folk-lore which has enveloped the earth with the meshes of a net, Mrs. Eddy has found in it, as she has explained in "Science and Health with Key to the Scriptures," the secret of the idealism of Jesus, as demonstrated practically by him in the object-lessons or miracles.

Christian Science may be described as the idealism of Jesus preached no longer as a theory, but again reduced to practice. It is exactly as mystical as the writings of the New Testament are mystical. That is to say, it seeks the spiritual fact behind the mist of physical phenomena. It insists that there is a spiritual law, and that the knowledge of this spiritual law constitutes the truth which Jesus said would free the world from the fetters of the purely relative reality of sin, disease, and death. The opponents of this teaching attempt to deny the science of it by confining the term science to the study of what they describe as material phenomena or secondary facts. Now to place primary facts outside the range of science, on the ground that they are unknowable, is to succeed in being not only entirely unscientific, but in begging the question on the most comprehensive scale.

Huxley, criticizing Hume's theory of miracles, pointed out the hopeless absence of science in describing a hitherto unobserved phenomenon as a violation of natural law. "If," he said, "a lump of lead is observed suspended in the air without any apparent support, instead of describing it as supernatural, it would be at once more intelligent and more scientific to accept it as a phenomenon hitherto unobserved and unexplained, and to devote your energies to solving the problem." The miracles of Christian Science healing are, from the point of view of natural science, just such a phenomenon: and to insist that, because they are professedly based on a grasp of primary facts, they are outside the range of science, is to be guilty of the very error Huxley exposed in the reasoning of Hume.

[Charles M. Shaw in *Blackpool* (Eng.) *Times*.]

It is absolutely incorrect to say, as our critic does, that "the therapeutic side of Christian Science dominated everything else." Christian Science healing is based upon the knowledge of God as divine Principle, Love; attained by the spiritual faculties and applied to every problem. It asserts that this was the Principle by which Jesus did his mighty works. His works of healing were not manifestations of supernatural power, but were "signs" of his spiritual understanding, for when explaining to his disciples their failure to heal the lad afflicted with epilepsy he said, "This kind can come forth by nothing, but by prayer and fasting," clearly intimating that their power to heal was not a supernatural gift but a spiritual acquirement. Consequently it is a fundamental article of the Christian Science faith that true healing power is dependent upon spirituality, and the text-book, "Science and Health with Key to the Scriptures," is full of such injunctions as these: "Man's moral mercury, rising or falling, registers his healing ability and fitness to teach" (p. 449): "Love for God and man is the true incentive in both healing and teaching" (p. 454): "The Christian Scientist . . . must prove, through living as well as healing and teaching, that Christ's

Digitized by Google

way is the only one by which mortals are radically saved from sin and sickness" (p. 458). If, as is freely admitted, the healing works seem more prominent, that is not to say they are regarded in Christian Science as more important. It is to be remembered also that men are far more sensible of pain and disease than of sin, and therefore rather disposed to seek help on physical grounds than on spiritual.

But of supreme public interest is the question: Is this claim of Christian Science valid? Does it really heal? Our critic has no doubts; he implies that Christian Science is "all quackery," yet with strange inconsistency he admits that "in a certain rather restricted class of cases benefit might be derived from Christian Science treatment." In support of his case he tries to impeach the evidence of Christian Science healing. First of all, he implies that the persons who give testimony are not to be relied on, for various reasons. It is quite amusing to picture to one's self the sort of person our critic imagines Christian Scientists to be. If he were to meet them, I am sure he would find them to be fairly sensible and estimable people. Indeed, if he is anxious to be fair-minded in his investigations, I should be willing to introduce him to a few people who have been healed of serious diseases, diagnosed not by practitioners, but by medical men of good standing. And afterward I am sure he would smile at himself for having entertained the thought that they had not the necessary knowledge to say whether the improvement was real.

[Frank Bell in *Norristown* (Pa.) *Times.*]

On page 345 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "Anybody, who is able to perceive the incongruity between God's idea and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam."

Since the distinction is made by Christian Science, it must be made by those who would attain an understanding of this teaching. To attempt to apply to human beings and to the conditions of material existence Mrs. Eddy's definition of immortal man and spiritual creation would be productive of conclusions most absurd. The fact that some persons still undertake to apprehend Christian Science from this utterly erroneous standpoint accounts for their belief that it is confusing and contradictory.

Christian Science does not now and never did contend that evil does not exist as a belief in the human mind and the material world, but it does offer what thousands have found to be a practical method for overcoming evil, whether manifest as sin or sickness. No claim is made that Christian Scientists are perfect. On the contrary, the effect of Christian Science often is to awaken its disciples to a livelier sense of the evil in themselves that is to be overcome.

[Charles W. J. Tennant in *Glasgow* (Scot.) *News.*]

Our critic refers to Christian Science as though it came under the category of systems, devised by the human mind, for the attempted removal of the discords of its own production. The human or "carnal mind" contains the source of all its suffering, but it does not contain the remedy for such suffering. The remedy must come from without, from the divine Mind, God. Christian Science has nothing in common with suggestion, for it acts through the operation of the Mind which was in Christ Jesus, bringing to the consciousness of the patient a knowledge of the truth that makes man free. It brings with it a spiritual awakening which gives one an insight into the kingdom of heaven, and an understanding of the method by which Jesus healed the sick. When the Pharisees accused Jesus of casting out devils through Beelzebub, he told them quite plainly that evil cannot cast out evil, and added: "But if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." This is the method by which Christian Science heals the sick and sinning.

[James Phelps in *Beloit* (Wis.) *News.*]

God means more to Christian Scientists than to other denominations; so also does Jesus and every event of his career and every word of his teaching. Thousands upon thousands of earnest men and women who were honored members in the older churches are bearing insistent testimony to these facts. Most of these have been won over from a state of opposition quite as intense as that of our friend, and they now have the advantage of having examined the subject from both sides and are therefore more competent to judge.

[George Shaw Cook in *Centralia* (Ill.) *Democrat.*]

While Christian Science claims to be a reinstatement of primitive Christianity, and submits as one proof of this claim the healing works which are similar to those performed by the early Christians, physical healing is not the fundamental purpose of Christian Science, and is not therefore, as our critic seems to believe, the only proof offered of its truth or of its Scriptural basis. Mrs. Eddy says on page 150 of Science and Health that "the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

The purification of thought which results from the study of Christian Science naturally leads to increased demand for increased cleanliness and improved surroundings. Christian Scientists, while less dependent than they formerly were on material conditions, and believing that righteous living is the paramount necessity, are nevertheless in favor of all ordinary means of sanitation. As a denomination they do not maintain hospitals and other institutions of a similar nature. Their work is with the individual and is essentially spiritual, and it is obvious that such work may be generally carried on more satisfactorily in the home than in a public institution. Sufficient means are provided, however, for those seeking help from Christian Science to find it easily, and to receive it freely, if necessary.

Christian Scientists do not, as some believe, regard their text-book, Science and Health, as a substitute for the Bible. On the contrary, they understand that it is a Bible commentary, as its secondary title, "Key to the Scriptures," implies. The careful student of this book will, I think, find no lack of conviction on the part of its author that she was inspired by God in the discovery and revelation to this age of Christian Science.

The statement that Christian Science encourages one to believe he may sin with impunity, is unjust, because Christian Science teaches that while sin is unreal in the sense that it is unlike God and foreign to the man made in the image and likeness of God, it is to the human sense something which must be contended with and overcome. It teaches mortals how to overcome sin; that they must forsake it in all its forms, and that the punishment for sin will last until they are willing to give up all for Christ.

Our critic's fear that some one of his fold "may go after these things" (in Christian Science), "and lose his Lord," is not well founded. In Christian Science we find that the Lord Christ cannot be lost, for, according to Christian Science, Christ is the universal, indestructible, eternal, spiritual idea of God which is ever present with men and ever ready to deliver them from the sin, disease, sorrow, and suffering of mortal existence. Mrs. Eddy's writings point invariably to Christ Jesus as the master

Digitized by Google

Christian, the Wayshower to mankind, whose example, if followed in thought and deed, will inevitably lead to unity or at-one-ment with God, who is the sole cause and creator of all that really exists. In this manner the kingdom of heaven, or harmony, is being established within men, here and now; thus verifying the words of Jesus, who said, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." This would seem to be good Christian authority for the teaching that heaven is not a place, but a state of mind or condition of conscious harmony.

[Alfred Farlow in *Middleton* (N. S.) *Outlook.*]

I agree with the writer of this article that mental treatment of the sick, as it is ordinarily understood, and which deals exclusively with the carnal will, is not in accord with the practice of Jesus Christ, who said, "The Father that dwelleth in me, he doeth the works." Christian Science recognizes no power but God, and relies exclusively upon divine power in its ministrations. The teaching of Christian Science concerning the nature of matter is not a fundamental "principle," but a conclusion. The major premise of the Christian Science syllogism is the Scriptural declaration that God is Spirit; the minor premise is this, that God is the only creator, that everything He made is very good, and that man was made in God's own image and likeness. The conclusion is that sin and sickness, being no part of the very good things which God created, have only a mythical existence.

In regard to the constituency of matter, Christian Science also agrees with the Scriptural teaching as given in the Master's words: "It is the spirit that quickeneth; the flesh profiteth nothing." Here we have a plain declaration that Spirit only gives life and existence to its creation, that flesh (matter) is altogether unprofitable. This declaration of the allness of Spirit and the nothingness of matter is as sweeping as any declaration which Mrs. Eddy has made in her text-book, "Science and Health with Key to the Scriptures." However, Christian Science recognizes that sin and sickness have existence in what Solomon calls the errors of life, and calls these evils by the same name that is used by others and recognizes that they must be grappled with and overcome by divine power. No one will admit that a ghost is anything but an apparition, but it is not considered "silly" to explain it away to the untutored who believe it to be a reality. A false charge in court must have attention; witnesses must be heard *pro* and *con* before the judge is ready to say, "There is no cause for action;" and this proceeding is looked upon as reasonable. So disease and sin have a hearing at the bar of Truth, and must be disposed of according to Truth's verdict.

[Royal D. Stearns in *Hastings* (Neb.) *Republican.*]

Our critic says, "I cannot believe the method of Christian Scientists and that of Jesus the same." That is true quite generally among the critics of Christian Science, and quite naturally they do not have a demonstrable knowledge of Christian Science and consequently cannot know what the healing process involves. But certainly the Christian Scientists—at least those who are able to practise Christian Science successfully—do know what the *modus operandi* is; they do know that suggestion, hypnotism, etc. is wholly eliminated from the metaphysical operation, and an inexperienced person can hardly advise them intelligently as to what they actually do or do not do.

[W. E. Fell in *Bradford* (Eng.) *Telegraph.*]

I have just laid down a newspaper where I read the following words, written by a non-conforming minister, the Rev. L. G. Morony: "We have not the time to be tearing down some other man's religion. It is not a Christian act to attack the belief of another. I would not join in this movement were it against the Jews. If there is nothing in the belief of the Christian Scientist, it will come to nothing; and if it is true only in part, that part which is true will remain. I do not believe in encouraging an attack on any denomination, and will not join in this one." The broadness of this reverend gentleman's view is certainly justified by the teaching of the Master himself. On more than one occasion Jesus deprecated, I may say condemned, the tendency to attack the religious beliefs of others. "Judge not," said he, "that ye be not judged." There was only one legitimate basis for judgment, he declared; it was not creeds, dogmas, nor doctrines, but "fruits." "By their fruits ye shall know them." Whatever may have been the opinion in the past, when people were less well informed as to what Christian Science is doing for humanity, there can be no doubt that to-day its beneficent results on the human being are universally acknowledged. On one occasion his disciples approached our Lord and told him they had forbidden a man to cast out devils in his (Christ's) name, "because he followeth not us." Did our Lord commend this officious zeal? By no means. Jesus said: "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." Christian Science names no other name than God and His Christ when casting out sin and sickness.

Let our religion be constructive. Let us give those who wait upon our words, our example, and our works something that will satisfy, something in the nature of that which Jesus gave to his followers, a gospel that heals both sin and sickness, a gospel that preaches a kingdom of heaven "at hand," here and now. Let there be the widest religious freedom, for only in such an atmosphere can the flowers of truth unfold in sweetness, beauty, and innocence. There should be no difficulty whatever in understanding the Science of Christianity. There will be no difficulty when people cease to try to force things spiritual to the tribunal of a so-called material law. Mrs. Eddy says, "If there is any mystery in Christian healing, it is the mystery which godliness always presents to the ungodly" (Science and Health, p. 145). Mrs. Eddy's reasoning is consistent throughout; the rationale of her teaching is unescapable.

[W. C. Williams in *Baltimore* (Md.) *News.*]

Christian Scientists believe in the omnipotence of God; that He has as much power to replace sickness and disease with health as He has to replace darkness with light, and that He is no more a respecter of diseases than He is of persons. The editor of the *New York Times*, in commenting on a certain movement, said: "The founders of great religions have never discriminated between the 'functional' and the 'organic' in healing the sick, and for the follower of one of them to do so involves, in some opinions, a curious inconsistency." Another writer in the same paper made the statement that "either divine healing is a fact, or it is not. If it is, then setting selective limitations to omnipotence by restricting its operation to a short list picked from the myriad ills the flesh is heir to, constitutes such a contradiction of logic and of Bible history that it is surprising to see pious and learned ecclesiastics advocating it." An irrational theology is not one that brings good results, nor is a false science capable of being proved, but Christian Science is ready to be judged by its fruits, and it gives daily proofs to those who practise it that it is based on demonstrable Truth.

Our critic makes the statement that "change of thought invariably produces a corresponding change of body." Literally true is it that as a man "thinketh in his heart, so is he." Where is the limitation to nervous diseases or to any disease in this? Yet he scores Christian Scientists for not limiting their treatments to certain diseases, for not limiting

Digitized by Google

the "very present help" of God. Yet he is right when he states that his above-quoted words are not Christian Science unless coupled with the understanding that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning;" but he is wrong in stating that Christian Scientists base their work on human suggestion, as that is exactly what they are working to overcome.

When Science and Health is earnestly, honestly studied, its "religious thought" is not vague or baffling, but "clear and convincing;" and when understood it is not crude, for its teachings bring undreamed-of regeneration to its students; and it is not superstitious, for its whole basis is the Word of God.

[William J. Bonnin in *Blackpool* (Eng.) *Herald*.]

Christian Scientists do not boast that "Christian Science has turned Christianity upside down." What this scientific Christianity shows to be in need of straightening is a Christianity which disregards the very test that its Founder imposed, the test of works and demonstration. Jesus was constantly demonstrating the truth of his teaching by those manifestations of God's perfect law of harmony and love that we call miracles, and which we have been taught to look upon as supernatural and impossible for man, instead of as divinely natural and the legitimate outcome of a knowledge of the truth. Jesus implicitly promised that whoever believed on him, or, in other words, accepted and understood the truth he taught about God and His creation, should do the works that he did. There is no question what those works are. They were set out by Jesus himself to John's disciples who came asking for proof that the Messiah was come. "By their fruits ye shall know them," becomes in Christian Science a declaration of the utmost significance.

The reverend gentleman says that Christian Science is based on a false conception of reality. Now it is just the Christian Science concept of reality that one gains from a meditation upon the understanding of Paul's words to the Corinthians, "While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." Which are real? Both cannot be. If the preacher insists that the materialistic view of reality is the correct one, we must agree to differ. It is, however, by the raising of his consciousness above the mere materialism of sense testimony into some measure of an understanding of the immutable love of the ever-present God, that the Christian Scientist is enabled to that degree to accomplish the healing of sin and sickness in obedience to the Master's mandate. And in ever-increasing numbers men of all ranks and classes, rich and poor, professional and artisan, Christian and agnostic, are today gaining an understanding of this teaching reality, are proving it to be true, and are rejoicing for the blessings that follow in its train.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 3, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*.

Falmouth, Norway, and St. Paul streets, Boston, Mass.

AMONG THE CHURCHES.

NEW HAVEN, CONN.

Plans have been drawn and contracts awarded for the erection of a church edifice for First Church of Christ, Scientist, on the lot owned by that church, corner of Winthrop and Derby avenues. The contractors will begin work at once. The plan calls for a structure of classic Grecian design, eighty-five feet long by sixty-two feet wide. The auditorium will seat five hundred and fifty people, although the seating capacity can be increased to six hundred.

The site is considered ideal, as it faces Monitor park, presenting a beautiful and picturesque outlook. This building is considered only a temporary structure, to provide immediate accommodation for the fast growing congregation of this church and so fill the need until a permanent edifice is built. The building complete will cost approximately fifteen thousand dollars.—*New Haven Journal-Courier*.

LOS ANGELES, CAL.

The new Second Christian Science church will be opened for the first time tomorrow morning [Jan. 23], and will be formally dedicated as soon as all the debt incurred in its construction is paid. This elegant and artistic structure has just been completed on West Adams street, near Hoover, at a cost of over three hundred thousand dollars. It occupies a ground space of 100 x 150 feet, and stands on a lot 220 x 250 feet. The main auditorium has a seating capacity of twelve hundred, without galleries or obstructions of any kind. There is a Sunday School room, with seatings for eight hundred scholars.—*Los Angeles Times*.

In an editorial the *Los Angeles Herald* says,—

A handsome new church edifice has been added to the architectural attractions of Los Angeles. One of the most important and costly Christian Science buildings west of New York has been opened, and the Scientists, with characteristic frankness, say it will be dedicated "as soon as the debt is paid off." We do not think its formal dedication will be long deferred, because the Christian Scientists are enthusiasts and they do not procrastinate. The older Christian churches cannot withhold admiration of the spirit of absolute confidence, of demonstrated, trustful dependence upon the heavenly will in which our Christian Science friends go forward from triumph to triumph.

Great is their faith, and it is exhibited in their works, for the Christian Scientists act not only as if they believe every word of the gospel message is as true and as vital today as ever it was, but as if they realize thoroughly that "faith without works is dead," and that by their fruits we must know them. No matter what personal opinions may be held regarding the great new movement for a revival of the first principles of Christianity, there can be only one opinion as to the earnestness, the sincerity, the devotion, the piety, and the success of all those engaged in it. Great is their faith. Those who cannot share it admire it.

What a difference it makes when one begins to realize that one is not striving for mere self, or family even, or country, or race, but for the supremacy of good! When one realizes that God, not mankind, is one's employer, His interest one's own, His standard the common standard, His truth an unfailing guide for all, His wisdom free to men, His love the only power in the universe, His glory one's own salvation; when one sees that the only real service is the service of humanity, and that what serves all best, serves ourselves best also, he knows that there is only one service worth while,—the service divine!

H. F. PORTER.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"SERVANT OF ALL."

We have recently been asked by a member of a branch church to state whether it is proper and in line with good practice to designate and regard some one member of a branch church as its "head," and we have answered that there is no warrant in the teachings of Christian Science or in the by-laws of The Mother Church for anything of the kind.

In theory at least, each member of a branch church is on precisely the same footing as every other member. In practice, however, the members of the church elect from their own number such officers as are necessary to a proper carrying on of the work of the organization, these officers to perform those duties which manifestly cannot be performed by the entire membership. The persons so elected thereupon become the servants of the church; that is, they are thereby set apart to do certain acts or perform certain services for the church. They are delegated such authority as they must possess in order to do these acts and perform these services, but no more. They do not through their election become masters of those who have elected them, nor do they become proprietors of the church which it is their duty to serve.

Nor have we far to seek to find the precedent for this ruling. When the sons of Zebedee besought the Master that he would promise them the chief places when he should come into his kingdom, the rebuke to their self-seeking was prompt: "Whosoever of you will be the chiefest, shall be servant of all. For even the Son of man came not to be ministered unto, but to minister." In "Miscellaneous Writings" Mrs. Eddy says: "The true leader of a true cause is the unacknowledged servant of mankind" (p. 260); and again (p. 303), "We are brethren in the fullest sense of that word; therefore no queries should arise as to 'who shall be greatest.' Let us serve instead of rule, knock instead of push at the door of human hearts, and allow to each and every one the same rights and privileges that we claim for ourselves."

The repository of all authority in the affairs of a branch church is the membership and those (if any) who are given the right, by state law, to vote at church meetings. It is their will and pleasure which is to be exercised in the management of the church affairs, and not the will and pleasure of those whom they have elected to act only in a representative capacity. The by-laws of The Mother Church enjoin upon all branch churches that their government shall be democratic; therefore for some person to arrogate to himself the title and supposed authority of "head" of the church, would be for him to violate the spirit of these by-laws. For a branch church to permit such a condition to exist would be to violate directly Section 10 of Article XXIII. of the Manual.

That there should be occasion for an inquiry such as the one above referred to simply indicates that Christian Scientists are still more or less in bondage to the beliefs of mortal sense, and still have much to do before they arrive at that state of spiritual understanding which will enable them to perceive the church which Mrs. Eddy defines on page 583 of Science and Health as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle. The church is that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

ARCHIBALD MCLELLAN.

WHEN GOD SPEAKS.

In the 33d chapter of the book of Job, that wonderful drama of human suffering, hope, and aspiration, we read that "God speaketh once, yea twice, yet man perceiveth it not." Then comes the discipline of suffering,—the necessary resultant of the belief of life in matter,—and there follow the days and nights of pain and unrest, until the sufferer turns with abhorrence from the once craved dainties, for he can no longer eat even the food which is supposed to sustain his life; his flesh consumes away and he draws near unto the grave. This dreary picture did not cease to repeat itself with Job's time, it has been alas, too familiar in all mortal experience, but the inspired writer did not leave its gloomy outlines before his readers. He tells us what divine Love says, and the word is, "Deliver him from going down to the pit; I have found a ransom."

At this point we have presented a contingency which is of peculiar interest to the student of Christian Science, namely, "If there be . . . an interpreter, one among a thousand, to show unto man his uprightness" (the revised version has it, "to show unto man what is right for him"). All at once, after the coming of this interpreter, the vision changes, the erstwhile sufferer awakens from his dream, he sees God's face with joy; the wasted flesh is "fresher than a child's; he shall return to the days of his youth: . . . and his life shall see the light."

This experience, told in the language of a bygone day, has been the experience of unnumbered thousands to whom Christian Science has come as the "interpreter" of God and His ways, of His infinite compassion and mercy, and His no less infinite power to save from sin, disease, and death, all who accept His omnipotent aid. No longer does a dense wall of material belief shut out the voice that calls and calls, not once or twice but ever, till the wanderer is safe within the walls of the city where is neither sin, sorrow, pain, nor death. The pity is that so few listen when God speaks. They think that God does not hear their prayers for help, when instead they do not hear when God says, as to ancient Israel, "In me is thine help." Jesus said to his Father and ours, "I knew that thou hearest me always." He also said, "The Father hath not left me alone; for I do always those things that please him." His work was the establishment of God's kingdom, with its laws of health, holiness, happiness, and its wholesome atmosphere of truth and love, and if we are truly his followers this should be the business to which we devote our lives.

Our revered Leader tells us that "the Soul-inspired patriarchs heard the voice of Truth, and talked with God as consciously as man talks with man" (Science and Health, p. 308). St. John heard "a loud voice saying in heaven, Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ." That same loud voice may be heard in all the years—the question is only how many hear and heed. The voice of Truth said to the church at Laodicea, "As many as I love, I rebuke and chasten: be zealous therefore, and repent." Those who never fail to heed Love's rebuke will have an ever larger realization of "salvation and strength;" of the power of God and His Christ. This being true, we may well ponder the words of our favorite hymn (Miscellaneous Writings, p. 398).—

I will listen for Thy voice,
Lest my footsteps stray.

ANNIE M. KNOTT.

Digitized by Google

"THIS IS LIFE ETERNAL."

THAT fine, high living is impossible to those entertaining a false concept of life is so manifest as to be a truism. Equally manifest is it that, with respect to origin, governing Principle, and moral obligation, there can be but one true life for all to know and live: and yet, if mortal thought and conduct were looked to for the definition of life, few human terms would be found to have been given so great a variety of meanings.

In the thought of the multitude life is indissolubly associated with matter, in which it finds embodiment and expression. It is believed to be both the cause and the consequence of normal physical conditions, and if the senses are satisfied, and the customary course of experience is run, life is thought to have been completed, and death is accepted as a legitimate part of its history. In addition to all this, life means for many the satisfaction of ambitions for social distinction, public preferment, the gain and exercise of money power, artistic or professional rank and success, etc. Thus through the entire gamut of human experience the aspirations and doings of men are witnessing to the unnumbered concepts of what life means.

Christ Jesus expressed the purpose of his earthly ministry in his statement, "I am come that they might have life," and his every wondrous word and work may be said to have contributed to the enrichment of the content of this statement. He came to separate the thought of life from every flavor of imperfection and unideality,—to make it appear in all the beauty and tenderness, the strength and sovereignty of a divine idea, and Christian Science is redefining and redemonstrating the meaning which he gave to it.

Mortals have insisted that life springs from a seed or cell. They have identified its beginnings with material procreation, and have refused to recognize it apart from a matrix of matter. Christ Jesus said, however, that the life of man is a truth-knowing, a state of spiritual consciousness, and Christian Science reiterates this teaching in declaring that it is the reflection of infinite Mind, the expression of an omnipresent and omniactive intelligence, and as independent of matter as is the life of God: and though wholly opposed to the "common sense" of humanity, this point of view is fully supported by the prevailing religious belief in a future life which is purely spiritual.

Furthermore, mortal thought links life to organization, asserting that it cannot survive its disruption or breakdown, and this belief rules with a rod of iron in human experience today. But the science demonstrated by Jesus stood for the supremacy of life over every claim of mortal sense, and the healing of organic disease through Christian Science is the reaffirmation and exemplification of this eternal truth. The logic of life's divine origin points to its sufficiency in God. It witnesses that the asserted subjection of the divine idea to material form and order is utterly false and incongruous.

Yet again mortal thought has denied the unity and continuity of life. It has practically insisted that human consciousness cannot embrace the "life eternal:" hence the teaching of Christian Science that the spiritually awakened have already entered upon it is a strange doctrine to many, and yet Christ Jesus' word is that we enter upon "life eternal" in the measure of our demonstrable consciousness of Truth, which consciousness is to free us from every human fetter. Christian Scientists are rejoicing in this new-old truth, that "now is the day of salvation:" that in so far as they can prove the healing efficiency of their understanding of the divine nature and presence, in so far they have entered upon the life everlasting, and in this they have attained to an inspiring sense of the greatness, the dignity, and the dominion of man.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Kansas City, Mo., Jan. 26, 1910.

Beloved Leader:—I want to express to you a renewed sense of gratitude for your recent messages to the Field, touching on church government. They have given me a new and broader sense of freedom to worship God.

Thankfully,

ELMORE W. MURRAY.

Chicago, Ill., Feb. 14, 1910.

Rev. Mary Baker Eddy, Pastor Emeritus.

Beloved Leader and Friend:—I know you must be happy to see what a fine response your church throughout the country is making to the noble example set by The Mother Church, in celebrating the birth of Lincoln by paying a meed of respect to his memory. All Chicago did it justice! I enclose a sentence from a preacher, showing what Lincoln would do were he here today, religiously. How his great heart would rejoice at the founding of that church which has the Sermon on the Mount and the Lord's Prayer for its creed. Perhaps he does know that you have founded exactly so. God grant he may.

Faithfully yours,

GEORGE H. KINTER.

Paris, France, Jan. 30, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass., U. S. A.

Beloved Leader:—Your timely word to the troubled waters of New York city gladdened the hearts of all of your loyal followers here. The same thought in another part of the state brought forth, through your secretary, further words of wisdom and counsel that will be of important value to the Field—even abroad. The Cause of Christian Science in Paris now stands firmly for your advanced ideas on democratic church government, and we hope you will continue to direct and lead us, as you alone can.

With sincere gratitude and love,

THOMAS R. CONGDON, *Second Reader.*

Columbus, O., Feb. 14, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—Your letter encouraging men to enter the ranks of workers in Christian Science, is most welcome. Many men in Ohio give largely of time and means to advance the Cause, who are prevented from embarking wholly in its work owing to restrictive legislation, which makes the practice of Christian Science for a livelihood a crime in this state. These men are with you heart and soul, "save these bonds," which divine Love will surely loosen.

With great respect, and deep regard,

Your student's student,

E. HOWARD GILKEY.

Ashtabula, O., Feb. 10, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The members of First Church of Christ, Scientist, of Ashtabula, O., while assembled in annual meeting, unanimously voted to send loving greetings and express their loyalty and gratitude to you for the wisdom and loving guidance manifested through the recent new by-laws in the Manual, which are proving an ark of safety from the waves of personal sense and the tempests of mortal mind which would have engulfed them; also for the request for more democratic government in branch churches,—losing sight of personality in the greater love for the Cause. That the members of this little branch of the Vine may prove their love to you by their growth and unfoldment in this direction, is their sincere desire.

First Church of Christ, Scientist, Ashtabula, O.

SOPHA CHURCH HALL, *Clerk.*

Digitized by Google

Milford, Utah, Feb. 3, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—At our regular monthly meeting, we all felt so uplifted and free that the clerk was asked to send an expression of grateful acknowledgment for the new by-laws and the article by George Shaw Cook in the *Sentinel* of Jan. 8. Unity and peace reigned supreme at this meeting, and we all saw how the uncovering had been made. Realizing that the advice given for democratic government in branch churches is not intended for any one organization alone, the help and strength we have gained from this source yet impels us to acknowledge the benefits, express our gratitude, and after hearing and receiving, to follow in obedience. The "daily strength for daily needs," which we are all receiving, is bringing to this little field much peace and prosperity, and is opening up avenues for us to help other seekers for Truth.

MRS. ANNIE JONES ATKIN, *Clerk.*

Newburgh, N. Y., Feb. 4, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Newburgh, N. Y., desire to send you assurances of our love and loyalty. We especially thank you for the events of the past year and the steps you have shown us. We are striving to bring out the purest form of democracy, in accordance with your advice to the churches. We always find success and happiness in following your precepts as you give them to us. Our love must be a constant prayer for your well-being and success.

Sincerely your followers,
First Church of Christ, Scientist, Newburgh, N. Y.
MISS ALIDA PHILLIPS, *Clerk.*

Moline, Ill., Jan. 31, 1910.

Dear Leader:—Permit us to express our deep gratitude to you for your unselfish labor of love in leading sinning and suffering humanity into a higher plane of thought, where we may see and realize the value of obedience to the divine Mind—that Mind which "is the source and condition of all existence" (Science and Health, p. 181). As a church we are trying to show our sincerity and our loyalty to you, not by personal adoration, but by devotion to the Cause of Truth and Love, whereby we may overcome sin, sickness, and death in proportion to our understanding. Our unity of thought and purpose is made manifest in the growing interest and larger attendance at our services.

First Church of Christ, Scientist, of Moline, through their committee, send loving greetings to you from their annual meeting.

Loyally and lovingly your followers,
ALICE C. WALKER,
EDITH BAYNE GAINES,
Committee.

Chicago, Ill., Feb. 18, 1910.

Revered and Beloved Leader:—Having left Boston a few days ago, after a very helpful visit of nearly twenty days, my thoughts return to it so often with deepest gratitude, that it is my great desire to send you a few words. It makes me so happy to have seen the great work which is being accomplished in the publishing house. It is an inspiration to see the activity, harmony, quietness, peace, and brotherly love expressed through your faithful followers. Coming from a foreign city, I felt at home in our church and our publishing house. I felt it proven, that the truth is uniting all nations. For the past three years it has constantly become clearer to me that "Science and Health with Key to the Scriptures" is solving all questions and that it has to be understood in the way it was revealed to you. Translation into another language would mean a division.

I know it will be a joy for you to hear that more and more the German people are taking up the study of the English language, and I rejoice whenever I hear a testimony given in English from a German who did not know one word of English two or three years ago. What do a few years of hard work mean, in comparison to the infinite blessings that we receive?

Inexpressible gratitude and love to you, dear Mrs. Eddy, who have shown us anew the way to salvation.

Obediently yours,
LOUISE HERGENHAHN.
From Berlin, Germany.

Amsterdam, N. Y., Feb. 8, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Leader:—First Church of Christ, Scientist, Amsterdam, N. Y., at its annual meeting, Feb. 7, unanimously adopted the following resolution:—

Resolved, That this branch church, at its yearly business meeting, does hereby declare its unswerving loyalty, devotion, and love: First, to our revered Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science. We recognize and gratefully acknowledge her matchless leadership in the promulgation of the truth, and fully appreciate the fact that, although meeting with so much opposition, misrepresentation, and persecution from the carnal mind, she has never yielded to adversity or error, but has ever remained the one true guardian of this great Cause. Second, to the Board of Directors of The Mother Church. All the work of upbuilding and disseminating Christian Science, and all the activities of said Board during the past year in the elimination of erroneous conditions in the branch churches, we most heartily approve and support. We realize and rejoice that, because of the work already accomplished, there has come to all Christian Scientists a renewed inspiration to be more alert and more active in all good works, and to strive more and more to incorporate love into their lives and into the church.

Lovingly yours,
CARRIE QUIRI QUANT, *Clerk.*

Denver, Col., Jan. 1, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Dearly Beloved Leader:—I cannot tell you with what reverence and love I write you this letter, nor how great a privilege it seems to me. During recent events, the great scope of the usefulness of the Christian Science Board of Directors has been brought to the attention of the entire country, and all have surely felt grateful for the work they have done, and to you for appointing such capable, conscientious men. The result of their work is felt far and near. At the very time they had many momentous questions to solve, our branch church here felt obliged to call upon them to help us with a grave problem. In our darkest hour, we were helped, encouraged, and enlightened, and I thank God, as one of the Readers of this organization, that we have been upheld by His outstretched arm, in our answer to your prayer, "Enable us to know" (Science and Health, p. 17). We are now starting with glad hearts upon a year which will undoubtedly show the greatest growth in the history of Christian Science.

Just a word in closing, that I may tell you of my deep appreciation of the privilege of being a student of one of your early students, who has proven her faithfulness and loyalty for twenty-three years.

Humbly your follower,
MRS. GRACE O. GIVEN.

THE LECTURES.

JACKSON, MISS.

Prof. Hermann S. Hering lectured on the subject of Christian Science Dec. 20. He was introduced by Judge Edward Mayes, who said,—

It is now somewhat more than forty years since Mrs. Eddy promulgated that view of religion which is known as Christian Science. Since that time it has progressed. It has encountered much opposition, and has confronted many enemies—a fact which in itself means nothing, since I believe that to have been the history of all new religious movements. However that may be, it has so far recommended itself that its doctrines have met the hearty approval and the zealous advocacy of a vast multitude of the best and most cultivated people in this country and in Europe.

Whether one accepts the special views of its adherents or not, it cannot be denied that their plane is sure and lofty, and their aims most praiseworthy. To make men happier, to make them healthier in body and mind, is a splendid mission: and when this end is sought by the dissemination of a religious philosophy which is consistent with our accepted ideas of the true God and of Christianity, most certainly its teacher is entitled to the careful attention, and will receive the serious thought, of all right feeling and right thinking people.—*Correspondence.*

EAST ST. LOUIS, ILL.

The Christian Science church edifice on Washington place and Summit avenue was filled to overflowing yesterday afternoon [Jan. 23] half a hundred or more standing, to hear Miss Mary Brookins of Minneapolis, who spoke for an hour and a quarter on "Christianity is Science, and Science is Demonstrable." She was introduced by Mrs. Laura E. Milleson, a former Second Reader of the local church, who said in part.—

Mankind has ever felt an impulse to rise to the consciousness of better things, and whenever that impulse has broadened into an honest desire and a receptive thought, there is then an opportunity for God's answering message of truth and love which is ever ready to bless mankind. From out the distant scenes of unrecorded ages comes the song of the prophet Isaiah: "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace." Centuries later, over the hills of Judea came that angel message: "Behold, I bring you good tidings of great joy." And that heavenly message was one of "on earth peace, good will toward men." "For unto you is born this day in the city of David a Saviour, which is Christ the Lord." To this heavenly messenger was entrusted the God-given mission of bringing to a weary world peace, and a knowledge of the measureless love of God and His infinite goodness and power.

Christian Science is bringing to the world today the same message of life and love which Jesus taught and practised, and there are thousands who are bearing grateful testimony that this same old sweet story has come to them, in the light of understanding which Christian Science gives, and lifted them from sorrow and sickness and sin into brighter and better lives.

When we remember that God's law is unchangeable and eternal—"the same yesterday, and to day, and for ever"—we see that the same law which existed nineteen hundred years ago exists to day, and will exist throughout all eternity. It is but a natural consequence that, if this law is understood and practised, it will bring the same results as when used by the great Wayshower. Through Christian Science we are learning that divine Principle is available here and now to meet our every need.

East St. Louis Journal.

GIRARD, KAN.

Mrs. Sue Harper Mims addressed a large audience in Girard on the evening of Jan. 18. The introduction by Mrs. Elizabeth Vincent, First Reader, was in part as follows:—

It is the open mind and the receptive heart that has brought the world its measure of progress. The seeker for Truth learns to hear with ears of the soul and to know that he dare not disobey the command "Forward." The master Christian, Jesus of Nazareth, when he lived his span of years upon earth, enunciated a working rule through which the scroll of time might be unrolled in beauty and harmony; a rule so simple the veriest babe may lisp it, and yet so pregnant with meaning that the sage and seer bow in reverence before it. "A new commandment I give unto you," said the Wayshower, "that ye love one another;" and wherever he went he healed disease and comforted distress through the understanding that eternal Life and Love are omnipresent, omnipotent, omniscient. To this age and to this generation comes Christian Science, walking in the footsteps of the master Christian, reiterating his command, and proving its truth by works.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Muskogee, Okla.—Frank H. Leonard, Hinton Opera House, Feb. 28.

Galesburg, Ill.—Bliss Knapp, Universalist Church, March 3.

Denver, Col. (First Church).—Judge Septimus J. Hanna, Church Edifice, 14th avenue and Logan street, March 3 and 4.

Chicago, Ill. (Nine Churches).—Prof. Hermann S. Hering, The Auditorium, Congress street and Wabash avenue, March 3 and 4.

Columbus, O. (First Church).—Frank H. Leonard, Memorial Hall, March 7.

McPherson, Kan.—Judge Septimus J. Hanna, Opera House, March 8.

Altoona, Pa.—Frank H. Leonard, Mishler Theater, March 8.

Chicago, Ill.—Judge Septimus J. Hanna, at Seventh Church, 5318 Kenmore avenue, March 10 and 11.

Grangeville, Idaho.—Prof. Hermann S. Hering, I. O. O. F. Opera House, 8:30 p.m., March 10.

Kokomo, Ind.—Bliss Knapp, Sipe Opera House, March 11.

Harvard University, Cambridge, Mass.—Frank H. Leonard, Emerson Hall, March 10 (For members of the University only).

Savannah, Ga.—William D. McCrackan, M.A., Lawton Memorial, 8:30 p.m., March 11.

Forth Worth, Tex.—Miss Mary Brookins, Byers Opera House, 3 p.m., March 13.

Wilmington, N. C.—Hon. Clarence A. Buskirk, Academy of Music, 3:30 p.m., March 13.

Vancouver, B. C.—Prof. Hermann S. Hering, Vancouver Opera House, Sunday, March 13.

Conneaut, O.—Bliss Knapp, Republic Opera House, 3 p.m., March 13.

Baltimore, Md. (First and Second Churches).—Frank H. Leonard, The Lyric, 3:30 p.m., March 13.

Charleston, S. C.—William D. McCrackan, M.A., Hibernian Hall, 4:30 p.m., March 13.

Bellingham, Wash.—Prof. Hermann S. Hering, Aftermath Club House, Broadway and Holly streets, March 14.

Kinston, N. C.—William D. McCrackan, M.A., March 14.

Grand Island, Neb.—Frank H. Leonard, Bartenbach Opera House, March 15.

TESTIMONIES OF HEALING.

The gratitude I feel for Christian Science can never be expressed in words, but I give my testimony with the hope it may reach some one who is in need of this healing truth. For twelve years before I found Christian Science, I was a sufferer not from one disease only, but many,—severe bowel and also heart trouble, besides nervousness, being among them. I would frequently have attacks of the heart trouble so severe that hypodermic injections had to be administered and I would be helpless for hours. The physician told me there could be no cure, that the attacks would come on when I least expected, and that I would die in one of them, as they were becoming more and more severe. I was very sad, and spent most of my time crying, because the suffering was so great that life seemed a burden to me, and I felt as though I was a burden to every one around me.

A dear friend who was interested in Christian Science, seeing my great need of help, spoke of it to me, and I am so thankful that when I first knew of it I heard it in the right way. The word of Truth came to me when I had lost faith in medicine and had given up hope of ever being well again, and I grasped it eagerly, for it gave me hope, and I thought it the most beautiful thing I had ever heard. I purchased a copy of Science and Health and commenced to read, and within a week I was overjoyed to find myself healed of the bowel trouble. I saw that Christian Science was the truth, for it had made me free. I kept on reading and studying, and was also healed of the heart trouble and nervousness.

I was lifted out of all those troubles simply through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it is now over a year and a half since I have taken any medicine. I disposed of all drugs two weeks after I began to read the text-book. I have had some beautiful demonstrations since coming into Christian Science, both for myself and in my family, for all of which I am grateful. I thank God for the trials I have gone through, for each overcoming has made me so much stronger. I know that of myself I can do nothing; it is God, Truth, working through me, and I am indeed thankful to know that I can work with God and that divine Principle solves all problems. I do strive each day for that Mind which was also in Christ Jesus, that through my daily living I may show my gratitude to God and also to our dear Leader, Mrs. Eddy, for all I am and all I ever expect to be I owe to Christian Science.

MRS. L. W. JONES, Harrisburg, Pa.

I have received so much help from Christian Science that I feel it a pleasant task to give my testimony to the readers of the *Sentinel*. In November, 1904, I began to have trouble with one of my eyes. It grew worse all the time, until I could not see with it at all, and was forbidden by the oculist whom I consulted, to use the other eye. The conditions were very distressing, and one doctor said that a cataract was forming and that there was also a growth which caused the eye to protrude.

After trying various doctors and specialists, and receiving no benefit, I at last, in October, 1905, went to a Christian Science practitioner, and in five days I was at work in my studio, designing and painting china, and have never had to favor my eyes in any way since that time. The affected eye began to change and be less inflamed with the first treatment, so that I was fully convinced that Christian Science healed me. I then purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study it, and gradually various other troubles of years' standing let go their hold and left me rejoicing. Among these were gall-stones, catarrh, asthma, etc., and my health is now better than ever before in my sixty-three years. I am thankful to divine Love, the only power, and to Mrs. Eddy, who has shown us how to avail ourselves of man's spiritual inheritance and prove what it means to be really the children of God.

To add one more testimony to the value of absent treatment in Christian Science, I will relate a personal experience. After my own wonderful healing, I soon found that I could demonstrate the truth and help myself to overcome the various discordant conditions which so often beset this mortal life. From this it was an easy step to the helping of others, and results would seem to show success in absent treatment for my own loved ones. At one o'clock, on the afternoon of Nov. 24, 1908, I received a telegram from my son in a far western state, saying that his only child, a daughter twelve years old, was dangerously sick with acute lung trouble. I canceled various engagements by telephone, and taking with me the Bible and Science and Health, I went to my studio, where I remained during the afternoon, using all the understanding of Christian Science I had gained in those three years in treating the sick girl. I realized the infinite power of divine Truth and Love, and when I rejoined the family I felt sure that the child would live.

The next morning I received another telegram, which told me she was much better, and her mother telegraphed, "I understand Christian Science now." Then I waited for the letter to explain this telegram. The child had been sick for five days, had high temperature all the time, and after the third day there seemed no hope. The day the first telegram was sent she was in a very alarming condition, but at three o'clock that afternoon there was a sudden change and she grew quiet. It was feared that the end was near, but a half hour later she smiled and opened her eyes, perfectly rational. She seemed very low all night, the delirium gone and the fever abating fast, but by morning the gain was so apparent that the second telegram was sent. There was no more trouble from that afternoon, and the gain was rapid. There was no setback, and she is better, stronger, and fleshier than ever before.

What a joy that through Christian Science space is annihilated, and we can help our loved ones thousands of miles away, as well as if we were with them.

MARY F. CUMMINS, Montpelier, Vt.

About four years ago, while coasting with children at school, my little son was thrown from a sled and injured more seriously than we realized at the time. As he continued to suffer, a doctor was called, who, after an examination, pronounced the case one of rupture and said he would always have to wear a truss and would be a sufferer for life. Soon after the injury severe nervous attacks began to develop, for which medicine brought no relief. The boy was placed under the care of a doctor in another city, but as he continued to grow worse we brought him home again.

At this time we knew very little of Christian Science, but after a family consultation we decided to give it a trial, and a practitioner was telephoned for. In half an hour after her arrival the child fell into the only peaceful sleep he had had for six months. When he awoke he called for something to eat—the first meal in a week. The next morning he was up and dressed, and remained up most of the day. In one week the truss was left off, and in two weeks he was entirely healed of the rupture. The nervous trouble gradually yielded, and in a few weeks he was as well as a child can be, and has remained so for over a year.

The condition of our child was so well known that his perfect healing has caused many who were opposed to Christian Science to think more favorably of it. I am

Digitized by Google

slowly gaining in the understanding of how divine Truth heals, and I am more grateful than I can express for the good that Christian Science has done for me and my family.—Mrs. C. R. Sterrett, West La Fayette, Ind.

[Translated from the German.]

It is with a heart filled with gratitude that I am writing down what Christian Science has done for me. About twenty years ago I had some trouble with my leg, and had to submit to an operation. After that I suffered greatly with it; there was also a stiff feeling, and I limped. From time to time I had to seek medical help, and about three years ago this ailment grew so much worse that I was unable to walk, and became bedridden. The pain was unbearable, and though the physician who had been recommended to us did all he could, I grew worse all the time, and he was at his wits' end. High fever as well as fainting-spells were added, and I became greatly wasted. This was a short time before Christmas, and things seemed hopeless in our home.

My sister then heard of Christian Science, and without my knowledge went to a Scientist, asking for help. The lady gave me treatment immediately, and the excruciating pain and discharge grew less. On the following day the lady came to see me, gave me a treatment, and I felt freer. She kindly explained it all to me, and I gained confidence and hope in God, and that night I slept for the first time in six weeks, and continued to improve daily. In January, 1906, I had so far recovered as to be able to ride to the practitioner's home, although the leg was still stiff and swollen; but after a few weeks it became more supple and normal. Treatment was then stopped, as the lady went on a journey. After some time indications of the trouble appeared again, and though I worked against this as best I knew how, it was without success. I therefore turned again to Christian Science, and a practitioner kindly took care of me. The condition improved slowly, but the lady treated me faithfully and patiently for a long time, and since last summer everything has been overcome. I can walk farther now than I ever could before.

I recognize that as God is the only power, in His presence all error must disappear. Next to God, I thank Mrs. Eddy from the depths of my heart for the wonderful truth which she has brought to humanity.

Toni Enzmann, Dresden-Gruna, Germany.

I should like to tell of a case of instantaneous healing through Christian Science. I had accidentally scalded both of my hands and arms, and the pain was so great that I at once put them under the cold water tap. When I looked at them the conditions were such that fear at once whispered I would have to give up work. Then these beautiful words from Science and Health came to me, "Banish the belief that you can possibly entertain a single intruding pain which cannot be ruled out by the might of Mind" (p. 391). While my fellow-employees were trying to procure some remedy, I managed to get away by myself and declare the truth. Then Truth bade me handle the error, which I did, and when I looked again at my hands and arms they were perfectly healed,—every trace of burn and blister was gone, and all sense of pain. I am very grateful for this demonstration, and I know that my help came so quickly because I turned resolutely away from error and looked steadfastly to Truth.

Christian Science came to me several years ago through a dear friend. I was healed of a severe heart affection, nervousness, and stammering, also of an eye trouble of over twenty years' standing, which used to keep me confined to a dark room all through the beautiful summer days, suffering untold pain. I have been in nearly all the hospitals in London, and was sent out of them all as incurable, being given but a short time to live. I have also been freed from poverty and lack. I have often heard it said that Christian Science is a religion only for the rich, but when this truth first came to me I was very poor, being unable to work for my living. Now, through obedience to the teachings of Christian Science, I have enough for all my needs. Having proved Christian Science, I can say that in this truth the poor have much to be grateful for. Through its teachings they may gain freedom from worry and anxiety, health, strength, peace, and supply. Christian Science is for both rich and poor; it is for every heart that seeks to know and do the will of God; it is for every one who is weary and heavy laden and is seeking rest.

I am truly thankful to God, and it is only when a little of the smoke of the battle has cleared away that we can really see how much we have to be grateful for to our beloved Leader, Mrs. Eddy.

Amelia Becker, Upton Park, Essex, England.

The psalmist says, "He sent his word, and healed them, and delivered them from their destructions." I am glad to testify that the glory of God has been made manifest to me, through my healing of acute lung trouble one year ago; and I am more grateful than words can express for this healing, which I consider the greatest proof I have had in my three years' experience of Christian Science. These experiences serve to prove the ever-present power of Truth to heal the sick; and through Christian Science I have been able to prove this not only for myself, but also for others. My first healing, over three years ago, was of severe nervous illness, besides stomach and other troubles. I received class instruction, and later, when taken with the attack first mentioned, I relied upon the Science for help and was healed without a doctor and without medicine.

I am thankful to God that Mrs. Eddy was able to write a book which gives us such an understanding of the promises of the Bible and through which so many have been healed and saved.

Mrs. Mary E. Brown, Washington, D. C.

I have been helped so many times by Christian Science, and so many are the blessings that have come to me through its teachings, that I wish to express my deep and sincere gratitude. The following incident of healing, which occurred in 1897, was the first of several which have been effected by absent treatment. I had been examined by a physician for an attack of throat trouble. The case seemed serious and I was told to go to bed. I then telegraphed the condition of affairs to a Scientist, and later, when the doctor returned and made a second examination, he pronounced the case entirely cured. Although the day was cold and disagreeable, I took a trip on the train of eighty-six miles and felt no inconvenience. All the above transpired in less than one half day. Christian Science has also been most beneficial in business matters. For all these blessings I am truly thankful to God, and also to Mrs. Eddy, through whose unselfish life all this good has come to me.—Sarah A. Alloway, New Haven, Conn.

Christian Science was brought to my notice nearly two years ago, while looking for a good physician, whom I wished to consult with the hope of being relieved of severe backaches, apparently caused by kidney trouble. Some one then advised that I try Christian Science, and although I had no faith in it I consented to give it a trial. An appointment was made with a practitioner, and strange to say, that which had caused me continual trouble for a year at least, left me with the first treatment and has not troubled me since.

My boy, then three years old, was suffering with a rupture on the left side. We had taken him to different doctors, who told us that he would have to undergo an

Digitized by Google

operation. We, however, decided to try Christian Science for him, and in ten days, with about seven treatments, the trouble disappeared. Naturally, relatives and neighbors insisted that it could not have been a rupture, since it was healed in this manner, so that we began to doubt it ourselves to some extent. In October, 1908, while playing with other children, he fell from a fence and received an injury on the right side, much more severe than the first one, so that he was in great pain, unable to walk, and slept very little. The same practitioner advised us to take him to a physician, presumably for the purpose that we might have more faith in Christian Science this time, and appreciate what it had done and was doing for us. At any rate, we called on a physician, and he pronounced it a case of severe rupture. At his request another physician was called, and he made the same statement. We were asked to keep the child as quiet as possible, which we did, and the doctor said he would call the following morning and advise what should be done. That same morning the practitioner happened to call, and in her presence the doctor stated that he could do nothing for the child except to operate. He was promptly told that we would not consent to that, so he gladly turned the case over to the practitioner, and asked to be kept informed as to the outcome. The second day after treatment was begun, we had the pleasure of telling the doctor that the child was completely healed. He at once called to examine him, and said it was the most wonderful thing he had ever heard of or seen. Since then the boy has been well, and we are certainly more than thankful for what Christian Science has done for us.—A. Bekins, Oakland, Cal.

[We are glad to append the following statement, courteously given by the physician, who, however, does not wish his name to be published.—Editor.]

This is to certify that I saw and carefully examined the little son of Mr. Bekins on the occasion of his second rupture. I diagnosed a femoral omental hernia, and advised operation, as I could not reduce it. I have examined the child since, and the hernia is undoubtedly healed.

About four years ago I became interested in Christian Science through attending First Church of Christ, Scientist, of Oakland, one Sabbath morning just out of curiosity. I was cordially received, and was deeply impressed with the services. What appealed to me most was the Lord's Prayer, and its spiritual interpretation (Science and Health, p. 16). The silent prayer was impressive also, and the thought came to me, while listening to these services, that Christian Science was just what I needed; and I have found it so.

I bought a copy of Science and Health and commenced to read and study it. Some three months after this I was afflicted with a carbuncle which was angry and of large proportions. I decided at once to try Christian Science treatment, and went to a practitioner. I was treated twice, and the whole thing passed away in five days. I worked every day and suffered very little inconvenience. I have also been healed of the tobacco habit through Christian Science. I used to smoke a great deal and chewed tobacco between times. For thirty years I was in bondage to this habit, but Christian Science healed me instantaneously. I was also a slave to the liquor habit, used strong liquors for a great many years, often to excess, but I was healed of this habit also by Christian Science in a very short time.

I have been healed of sin and sickness and my whole life has been changed. Evil has disappeared, and in its place have come health and a spiritual uplifting, with peace, happiness, and prosperity. I am indeed thankful to God, and also grateful to our beloved Leader, Mrs. Eddy, who has given us this beautiful religion. I was healed in the months of September and October, 1905.

Franklin P. Kimball, Oakland, Cal.

Through the study and application of Christian Science, many blessings have come to me, and in grateful acknowledgment I gladly give the following testimony, trusting that it may prove helpful to some who perhaps are standing where I stood before coming into this healing truth. Over two years ago, my son was healed in a very short while of tuberculosis, through Christian Science treatment, after *materia medica* had done all for him that could be done, his case having been pronounced incurable.

I have also been successfully treated, through Christian Science, for many ills that were quickly met and entirely overcome, such as prostrating headache, lameness of over fifteen years' standing, from a severely injured limb, also catarrh. Worry, fear concerning supply, the desire to criticize and gossip, and an ugly, complaining, exacting disposition, with many other evils, are gradually going out of my life, and in their stead the understanding of God, good, is entering. My health is much better, my business more lucrative, and the problems with which I am confronted in my daily life are growing less difficult, for I realize that as God is my strength, my source of supply, and after all my only employer, I cannot fail to be equal to any and all emergencies.

For all these blessings, and many others, I thank God. I thank Him for our dear Leader, through whose loving efforts this understanding of Truth has been given the entire world, and whose beautiful life—her patience, gentleness, wisdom, and love for all humanity—is laid before us as an example to all mankind that God is Love.

Mrs. L. E. Spann, Dallas, Tex.

I am very grateful to God, also to Mrs. Eddy for the many blessings I have received from Christian Science. Several years ago I took a severe cold, which developed into bronchial trouble. I consulted a physician, took several kinds of medicine, but continually grew worse. I was obliged to discontinue singing in the church choir, of which I was a member at the time, and occasionally was unable to speak above a whisper. I was in this condition nearly all winter. My physician then told me that he had one thing more to give me, and if that failed he could do nothing more. I took the medicine he prescribed, but there was no improvement and I coughed continually.

I then turned to Christian Science, and was completely healed in a short time. At the same time I was healed of another serious ailment, for which, a specialist had told me a short time before this, I must undergo an operation. The Christian Science practitioner knew nothing about this trouble, as I did not mention it to her until I was healed. This healing took place several years ago, and I am now perfectly well. I was also healed in one night of a very severely injured ankle, and was able to be on my feet all the next day in a store. For these and many other blessings I am truly grateful.

Hattie L. Arthur, Marinette, Wis.

With a heart full of gratitude for the many blessings which have come to me through Christian Science, I am sending this testimony. From early childhood a deep longing to know God, and a love for the Bible, comforted me in spite of an intensely melancholy and discontented disposition. About twelve years ago I had reached that stage of experience where the desire for a satisfying religion culminated in a restless search for that which I felt must exist somewhere. Isaiah's words, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee;" and the many beautiful promises in Psalms, assured me that a life of peace and joy was to be obtained, here and now, if one could understand how to live near to God.

Having been for some time a member of an orthodox church, I began to study the creeds of other churches, at

Digitized by Google

the same time attending each for several weeks, and some Bible readings as well. Just at this time Christian Science was offered me as a possible remedy for a trouble with my eyes. I went to a practitioner and had two treatments, and "Science and Health with Key to the Scriptures" was given me to read; but I received no help from the treatments, and had read only a few pages of Science and Health when I laid it aside. I remember that, after talking with the practitioner, I had the feeling that if I were healed my conscience would compel me to become a Christian Scientist, and I rebelled at the thought of leaving my friends and joining these seemingly peculiar people. Not yet had the discipline of suffering reached that point which would enable me to discern the truth in Mrs. Eddy's book.

Finding nothing satisfying in all the other religions I had investigated, and in a short time being unable to attend church because of ill health, I dropped my search for God, though still clinging to a vague hope of finding Him some time. Thus I drifted along for six years, in a maze of physical suffering and mental unrest. The search for happiness in various material ways only brought renewed disappointment and unhappiness, while the continual taking of medicines and seeking the advice of physicians, with only partial relief, added to my distress.

Having dropped into the depths of despair, Science and Health was again placed in my hands, and the deep experiences of the past had prepared me to receive the truth it contained. "As watchers placed in the depths of a well observe the stars which are obscure to those who live in the effulgence of noon," so I was dwelling in the well, and as I lifted my eyes I saw the star of hope and promise, and a new joy came to me. From the moment I opened Science and Health, its pages seemed illumined with the truth about God, man, and the universe! Here was the God for whom I had been searching, here the way to live near to Him. I saw that the kingdom of heaven is within, and attained by gaining the true understanding of God which Mrs. Eddy has given to the world in Science and Health and her other writings.

After reading Science and Health almost constantly for three days, I was healed of a severe stomach disorder which had caused great suffering and necessitated a strict diet. I was now able to eat anything I wished, which seemed wonderful to me. A few months after this, severe throat trouble, from which I always suffered in the winter, was overcome through my slight understanding of the fact that "there is no power apart from God" (Science and Health, p. 228). I suffered for three days, but declared this truth constantly, and tried to fill my consciousness with its meaning, and I was healed so perfectly that no symptom of the disease has ever returned. Later on a life-long ailment was healed, after receiving a week's treatment from a practitioner.

During the almost six years spent in the study of this Science, many other physical benefits have been mine. For these blessings I am indeed grateful, but to have attained in a measure the understanding of our premise, perfect God, perfect man, and perfect universe, is far more. The allness of God and the nothingness of evil, the ability to become more and more conscious of that which really is here, namely, love, joy, peace, harmony, the abundance of good which God is constantly imparting to His image, man,—this is cause for gratitude too deep for expression, to God, and to our Leader, through whom this wonderful message has come to us.

EDITH L. PARSONS, Burlington, Ia.

When reading the testimonies I have often wished I might be able to give to some hungry heart a word of hope, and as I have received so much good from these testimonies I will endeavor to tell of one of the many blessings I have received through Christian Science. Last summer I fell and injured my ankle. My first thought was that the injury was very serious, but, although I at once declared the truth, I was unable to overcome the pain. Five hours later my husband came home and I told him what had occurred. He asked why I did not call a practitioner to help me. I immediately did so, and in a few hours I was healed and had no further trouble. This healing meant much more to me than I can express in words, for my suffering was great; but I can show my thankfulness to God, and to Mrs. Eddy, by walking in the truth that has been revealed to us.—MRS. GEO. SOLOMON, Everett, Wash.

Christian Science was to me an unknown quantity, in fact something only to be ridiculed, until the following experience befell me. I had of course heard of its wonderful cures, but I did not realize that it was meant for me. I had been in bed for ten days with an acute attack of illness, said to be appendicitis. I was under a strict diet, had an ice-bag constantly on my side, in fact every known art of medical science was used to save me from an operation, but to no avail. After the ten days' treatment the doctor said an operation was imperative and advised immediate action. Through a visit from a Christian Science friend a practitioner was recommended. I consulted my husband, and we decided that I could put off the operation a day or so without danger and that a trial of Christian Science at least could do no harm. I received my first treatment in the morning, and a couple of hours afterward I got out of bed for the first time in ten days, went down stairs, and ate a light luncheon. When the practitioner called the next morning, I was up and attending to my household duties, strong and well as before.

I am thankful to Christian Science for this demonstration, also for the good it has done me, mentally, physically, and spiritually, in the six months that I have studied it.

MRS. ROGER D. LEVY, Everett, Wash.

On March 4, 1908, our baby, two years old, was very sick with croup and a severe cold on his lungs. Not being able to get a doctor, as we had always done before, I telephoned to a Christian Science practitioner, who said he would do all he could for the baby, and he certainly did wonderfully. We have had many experiences with such ailments, but never before has one been broken up so quickly. It was about noon when I called the practitioner, and by evening the baby was playing as if he never had been sick at all. The attack was completely broken, and the fever all gone. I was more thankful than I ever could tell, for I had great fear of these attacks. Jesus said, "Suffer little children, and forbid them not, to come unto me: for of such is the kingdom of heaven." Why should they be forbidden, in the case of illness, the protecting care of divine Love.

MRS. CELESTIA J. BUNKER, Kalkaska, Mich.

[Written for the *Sentinel*.]

THE LIGHT.

SAM DAWES.

WHEN Love along our pathway leads,
We take no thought for daily needs,—
But stroll along in pastures green
Which hitherto we have not seen;
And tho' the day turns into night,
Love leads us onward toward the light.

And when, at last, we learn to give
Our all to Him in whom we live
And move and breathe, and when we see
Disease and sin and error flee
Before the truth's enduring might,
We've won the crown—we've reached the light.

FROM OUR EXCHANGES.

[Rev. John C. Ager in *New-Church Messenger.*]

The truth is to come, not merely to our spiritual vision as a truth seen, but to our spiritual hearing as a truth heard, and heard as a great voice out of the new heaven, in that our affections as well as our thought will be moved and quickened by the limitless love that is revealed in that supreme truth. For when we spiritually hear this truth, we not only see but also feel that God is our heavenly Father, yearning to make us veritably His children by making us spiritually partakers of His life, and consequently partakers of all the joys and delights which spring from that life. And no voice that ever entered human ear can compare with the fulness and sweetness of that voice, when it is heard. It is the voice which saith, "These things have I spoken unto you, that my joy may be in you, and that your joy may be full."

[Rev. John Hunter, D.D., in *Universalist Leader.*]

To nothing did Jesus seem more indifferent than to theory and opinion. Even differences of opinion concerning himself were no barrier to his sympathy. Saying "Lord, Lord," raised no one in his regard. For verbal and other formal honors he cared nothing. He cared chiefly that the spirit of the Son—the spirit of filial trust and obedience, love and sacrifice—should be in men and prevail. The faith which he regarded as essential to discipleship is something quite distinct from speculative and critical theories; it is not a correct opinion, an assent to propositions; it is more akin to what we mean by fidelity—a moral temper, a spiritual affection, the surrender of the heart, the submission of the will, the devotion of the life to God.

[*Christian Register.*]

The religion that does not bring happiness to its possessor is a misnomer and not worth having. The world is impressed with a deep distrust of what religion can do for it in this respect. Many in our day boast that they have no religion because they wish to lead the natural, normal life, as if religion were something unnatural and abnormal. How can the world be taught that all life save that which is the deepening of the spiritual nature, the life in God, is a poor, misshapen, shrunken thing? The inward spring of happiness is what the world needs more than it needs most of the patent remedies for the cure of unfaith and despair that are hawked about. As we are spiritual beings, we must live by the spirit or suffer from inanition.

[*Christian World.*]

It is only in the recognition of himself as a spiritual being, that man can arrive at his true wealth; then only does he enjoy this world, when he finds himself above and beyond it; then only does he reach his ultimate height, when he finds himself united by intimate personal ties to that unseen but gracious power which guides the universe and is revealed in the soul; to the God who made the world for man's habitation, but who is Himself his only and final rest.

[Rev. William McKinley, D.D., in *Western Christian Advocate.*]

The spirit of brotherhood is everywhere growing, and the new passion for peace is taking the place of the old passion for war. Nations are no more aliens and enemies, but neighbors and friends. Science, art, philosophy, literature, industry, commerce, and civil government are becoming more just, humane, and merciful. Religion is becoming more reasonable, more practical, more spiritual, and more powerful.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy, "Personal Contagion" and "What Our Leader Says," in large type on special paper, silk-sewed with overhang cover.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House.

For prices see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

The heavy collective fine of seventy-four thousand dollars has been assessed in Hartford, Conn., by a jury in the United States circuit court against about two hundred trade union members who had tried by boycott to destroy the business of a manufacturing hatter, Mr. Loewe of Danbury. The action was brought under the Sherman or anti-trust law. In 1902 the employees of Mr. Loewe's firm went on strike, with the main object of making the shop a closed or union shop. To carry their point the strikers and their friends not only refused to buy the goods (a thing they had a perfect right to do), but they systematically instigated boycotts against firms everywhere which sold these goods. The supreme court properly held that there was a wrongful restriction of interstate traffic, that individuals acting in and through a union could violate the law as truly as could corporations. Such a combination as a secondary boycott might be, under the common law, a conspiracy to injure, and under the Sherman law it became a combination to restrict interstate commerce. The decision affirms the individual responsibility of every member of a union, though an unincorporated body, for the acts of its officers and agents in furtherance of its purposes.

At the hearing before the House agricultural committee on the bill to create a forest reserve in the White Mountains and the southern Appalachians, it was stated that all the streams in this country which are benefited to any very large degree by forest reserves supply less than ten per cent of the water-power of the country. The acquisition of two hundred million acres has improved only the tiniest fraction of the water-power used by the nation. If the White Mountain reserve is acquired, it will benefit thirty-seven per cent of the water-power of the country, for that is the fraction which is supplied by the rivers rising in the proposed reserve. No single reserve which has ever been acquired has affected the commercial prosperity of the country to such a degree as the White Mountain reserve will affect it.

The post-office appropriation bill contains a proviso making it necessary after June 30, 1911, for every city residence to be equipped with an outside mail-box to receive mail. After many experiments, it was found that the average mail-carrier loses about thirty seconds in ringing each door-bell and awaiting response. It is expected that this provision will greatly increase the efficiency of the service and possibly reduce the number of carriers required. A saving of four hundred thousand dollars is estimated.

The milk trust, so called, has been indicted in New York. After a grand jury investigation, lasting weeks, a blanket indictment has been handed down in the criminal branch of the state supreme court naming eight of seventeen directors of the Consolidated Milk Exchange, a New Jersey corporation, and charging that they met and "conspired together and with others to fix the wholesale price of milk."

For the first time there is a prospect that every subway passenger in New York will have a seat—at least during the dull hours. The Public Service Commission has given the Interborough Rapid Transit Company positive orders to furnish the maximum possible service during the rush hours and sufficient cars during the non-rush hours to afford every passenger a seat.

Speaking of the guaranty fund provision of the Oklahoma state banks, Senator Owen of that state says: "The effect of this law has been to bring out of hiding many millions of dollars. To apply a like system to the national banks would give them stability by reassuring depositors in times of financial distress. It would also bring to them a great amount of money that is not now deposited in any bank."

There is a possibility of a general reorganization of the post-office department along lines similar to those recommended by the report of the postal commission about a year ago. The purpose is to place the department on a strictly business basis, with a continuous administration of its machinery. Bills having that purpose in view have been introduced in both houses of Congress.

The executive committee of the National Civic Federation met in New York March 3 at the call of its president, Seth Low, to consider national incorporation of companies doing interstate business, and related questions, and to determine what action shall be taken by the federation.

The crusade of the bureau of Indian affairs against the sale of whisky to Indians has resulted in more than one thousand convictions in the past eighteen months. Most of those against whom a verdict of guilty was rendered received jail sentences as well as fines.

"Immunity baths" will be a thing of the past if the Senate concurs in the bill passed by the House repealing that section of the revised statutes which has allowed witnesses who testified in certain cases to escape prosecution in those cases.

After weeks of investigation a grand jury in Hudson county, N. J., has found fifteen indictments against the packing interests of the country maintaining cold storage plants in Jersey City.

President Taft has given full official indorsement to the court injunction bill, presented in the House by Representative Moon of Pennsylvania, chairman of the House committee on revision of laws.

The Indian appropriation bill, carrying as finally disposed an aggregate of over $8,250,000 exclusive of $300,000 payable from trust funds, has been passed by the House.

Edward Payson Weston, the veteran pedestrian, who walked last year from New York to San Francisco, has just begun his return trip.

International.

Dr. Schwartz, editor of *Petroleum*, a German trade paper, is in the United States and announces that Germany has declared war on the Standard Oil Company and intends, if a sufficient supply from independent sources can be obtained, to start a government monopoly, driving out the Standard. Dr. Schwartz says that he will investigate the conditions in this country and in Mexico, meeting representatives of all the independent producers, with a view to making a report to his government. "The methods adopted by the Standard in meeting competition are entirely at variance," he says, "with those to which European business men are accustomed, and it is in the hope of finding a way of stopping this competition that I am about to explore the American and Mexican fields."

Lord Curzon of Kedleston has resigned the rectorship of Glasgow University. A few weeks ago the university students held a meeting and adopted a resolution of censure against Lord Curzon for postponing his installation ceremony in favor of his political engagements during the recent election. Lord Curzon then sent a letter of explanation, whereupon the students met again and adopted for the second time a vote of censure. Lord Curzon was elected rector of the University of Glasgow in October, 1908, receiving 947 votes as compared with 935 received by David Lloyd-George, chancellor of the exchequer.

The House of Lords has decided to place its own plan of reformation before the country. Lord Rosebery has given notice that he will move on March 14 that the House resolve itself into a committee of the whole to consider the best means of reforming the existing organization so as to constitute itself a strong and efficient second chamber.

After several months' consideration the British foreign office has returned a reply to the United States that in general terms is unfavorable to Secretary Knox's proposition to clothe the high court to be created as the result of the international maritime conference at London with power to arbitrate signatory to the Hague convention.

In a suit brought by the De Beers Company against the British South Africa Company, alleging that by specific agreements it had the right to work all diamond-bearing ground in Rhodesia, South Africa, judgment was given in favor of the defendant.

The Turkish war minister says that Abdul Hamid, the former Sultan, has refunded to the Turkish exchequer his entire fortune of about seventy-five million dollars, retaining only a small sum for his personal use.

Premier Asquith states that the government does not intend to introduce an Irish home rule bill at this session, but will deal only with the question of the veto of the House of Lords and the budget.

Industrial and Commercial.

The Pennsylvania Railroad Company now has in service 245 coaches, ten dining cars, twenty-one combination passenger and baggage cars, twenty-nine baggage cars, eighteen postal cars, and one company car of all-steel construction. The Pullman company has been building for the railroad during the past four years some all-steel parlor and sleeping cars, and about five hundred of these will shortly be placed in service. With the present steel equipment and some two hundred and fifty cars to be ordered during the present year, the Pennsylvania railroad will in a short while have in service nine hundred of its own steel passenger cars and about five hundred steel Pullman cars.

It is reported that the Hamburg-American Line is about to build two huge steamers which will rival the White Star liners Olympic and Titanic, which are to be in service during 1911. The reported dimensions are: Length, 850 feet; beam, 92 feet, and depth, 66 feet. Reciprocating engines of 48,000 horse-power will drive the ships at a speed of twenty-one knots.

The Lake Shore and Michigan Southern railroad announces that the breaking of ground for locomotive and car shops to cost three million dollars will be started immediately in Elkhart, Ind. The shops will employ three thousand men, it is said.

The eight-year traction war has just been settled in Cleveland in favor of a three-cent fare.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FULFILLING THE LAW.

WILLIS F. GROSS.

AMONG the hard sayings of the Master was that seemingly impossible command to love the neighbor as one's self. The great importance of this command is evident when it is remembered that on this word and one other: namely, to love God with all the heart, soul, strength, and mind, "hang all the law and the prophets." Jesus declared that he came not to destroy but to fulfil, and he demonstrated the possibility of keeping these two commandments. He also revealed the great good that comes into human experience as the result of living in harmony with the law of God. He taught others to strive earnestly for the consciousness of good which he had attained, and he assured his followers that greater works than he had accomplished were possible to all who gained the understanding of Truth.

All will admit that if humanity had learned obedience to these two commandments, no one would be the loser but all would gain infinitely more than can at this time be realized. But mortal existence is so exceedingly selfish and so inclined to the consideration of little else than its own interests, and the possibility of ever reaching the desired goal seems so remote, that there is little to inspire effort in this direction. Then, too, there is the fear that if one were to attempt a practical application of this rule of conduct and order the affairs of this life according thereto, he would suffer greatly on account of the selfish consideration of others. The import of the Scriptural word, "It is more blessed to give than to receive," is not fully realized, and the possibility of individual gain in ways that are considered no part of material success, is not duly appreciated.

The Master told his disciples that they would find the kingdom of heaven, the reign and rule of eternal harmony, within the consciousness of true being, and this could be attained only through obedience to the law of God. It is the desire of humanity to be so situated that they will not be disturbed by the discordant conditions of a material world, but they too often make the mistake of expecting the consciousness of harmony to come with the outward manifestation of material possessions and environment. Herein lies the cause of selfishness which prevents obedience to divine law.

The limitations of material sense induce the belief that what one gains others are deprived of, hence the struggle for place, power, and possessions. Human experience will continue to repeat itself until a new view-point is gained and the toilers of this world are inspired to strive for that good which it is possible for all men to attain. In this field of honest endeavor the success of one is a blessing to all, and every man reaps the harvest of his sowing and is rewarded according to his deserving.

Christian Science is correcting the errors of mortal thought. It not only reveals the possibility of keeping the commandments and attaining all good, but it teaches how to take the first steps in the straight and narrow way which leads to harmony. Although the goal has not yet been reached, a start has been made in the right direction and satisfying results are attained. Mortal man has tried to justify himself in not loving his neighbor, and to do this he has argued that his neighbor is unworthy the love he is asked to bestow upon him, hence it is unreasonable that he should bestow upon others more than they deserve. It is evident that he considers the matter from the wrong point of view. It is not the one who receives, but the one who gives that gains the larger sense of good. If the Master had bestowed upon the multitudes no more than they deserved, he could not have revealed to humanity the reality and power of divine Love. John wrote, "Herein is love, not that we loved God, but that he loved us." Love is the truth of real being. It is born of God, and the real man must love because he is the reflection of God; this is the divinely natural state of harmonious existence.

God is Love. To realize the presence and power of God is to love in the truest sense of the word. Paul said, "Love worketh no ill to his neighbor: therefore love is the fulfilling of the law." Wherein could one harm another, either directly or indirectly, if he realized that divine Love is the only intelligence, power, and presence? The realization of this great truth of being is in no sense dependent upon the fitness or unfitness of the human beings with whom one comes in daily contact. The source of true love is within, and it requires nothing from without to call it into being. The Master said, "The water that I shall give . . . shall be . . . a well of water springing up into everlasting life." The love which fulfils the law is from within, and blesses all upon whom it rests.

The realization that God is Love casts out everything unlike itself, just as the light dispels the darkness. Self is the false sense of man's being, and this false sense must be denied, even as the Scripture teaches, if one would gain the true consciousness of existence. So long as one considers his own material selfhood, or that of his neighbor, it seems impossible ever to reach the point where he could love his neighbor as himself. The end to be attained is desirable, but the starting-point makes defeat certain. Let him deny himself and start right, and he will perceive that success is possible. In Christian Science it is learned that one must start from Principle. No problem of life can be solved in any other way.

What then is God? God is Love, and Love is the source of all true consciousness. In proportion as humanity forsakes its mortal and material beliefs and knows only that which emanates from divine Love, the law of eternal, harmonious being is fulfilled and deliverance from the discordant things of earth is accomplished. If love alone is the inspiration of human activity (and there should be no other), the effort is always toward the universal good, and only the wrongs and never the rights of mortals are taken away. When the ever-presence of Love is realized, the sunshine of joy and prosperity drives away the dark clouds of human experience and clearer and brighter views are gained.

One of the reasons why humanity fails to keep this great

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

commandment is because the effort has been to love a mortal man; and because there was in this mortal so much that was undeserving of love, the task was hopeless. When humanity learns that to love in the true sense of the word is to reflect Love, God, it will be seen that it is indeed possible to love even though another hates. Such love returns good for evil and blesses those who curse it. Man should love because love is the reality of his being, and what another says or does should not cause him to forsake the real for the unreal. If he strives at all times and under all circumstances to bring out the best within himself, and do this because he desires the good more than all else, he will not allow the imperfections or shortcomings of others to make him less of a man than he is. He will not be satisfied to reach the place where he can say, "I do not hate;" rather will he strive for that higher and truer sense of being where he can truthfully say, "I love."

Christian Science reveals the perfect model and shows the necessity of keeping that model before the thought continually. It teaches that one must strive to reach the desired end, but he must not be deceived into thinking that a life-work can be accomplished in a day. Failures and defeats should spur one on to greater efforts, and each day should record some progress made and some victory won. The realization that God is Love, and that true being reflects Love just as it manifests intelligence and Life, because it cannot do otherwise, lifts one above the imperfections of mortal thought and fulfils the law of eternal Life, Truth, and Love.

SOWING THE SEED.

M. LOUISE BAUM.

THE beneficiary of Christian Science has only to look back to his own beginnings in this Science to understand the point of view of the newcomer. He knows that secretly, under all the restless seeking for earthly comfort and joy, there was in himself an unsatisfied heart that wanted to understand the real meaning of life. He was brought to Truth by this impulse to find out what life was and what it was worth, what it held for him, why he was put under certain conditions, and how he could reach that state of peace and satisfaction which he instinctively knew to be the normal and right thing for man. At that time he might not have phrased this to himself just so: he might have denied it had any one so interpreted his desires to him: but his more mature sense of himself shows him what was at work in the infancy of his search for God. The babe crying for food does not know what, humanly speaking, that cry involves,—the impulse to grow and to have his share in the great human experience. So the nascent thought, turning to something outside matter for relief and healing, may not know it is God for which it cries, but afterward it understands.

A patient in Christian Science, a man of the people who seemed not to have much capacity for spiritual understanding, once insisted on seeking a different practitioner, rather against the advice of his friends. Afterward he explained his attitude thus: "The other practitioner never talked to me about anything but politics; this man talks to me about God. That is what I go to him for. I cannot talk about such things myself, and perhaps because I am silent he may think I do not hear; but I do. I understand much that is said to me, and it is what I wish to hear." It is this "cup of cold water," given in the spirit of Love, that Christian Scientists everywhere are offering to the people, who are often more grateful than one can dream. Even if there is no outward expression of gratitude, nearly every man is inwardly proud to have another assume that he cares for spiritual things, for something better than materialism.

A lady on her way to a little Christian Science meeting in a foreign city, met another lady, who stopped to chat and incidentally mentioned the trouble she was having with her throat. The first one was meantime seeking to know if she might properly speak to her friend of Christian Science,—for if one asks for leading at such moments, one is given the right thing to say. She found herself replying that she had herself been used to have a like trouble, but had been free from it for five years. The sufferer cried, "Tell me what you did for it." Then the answer was easy. The healing work of Science was declared, the speaker told her friend that she was on her way to a Science service, and the invitation to go with her was eagerly accepted. The visitor was deeply impressed with the love and peace she felt in this little gathering in an "upper room" of the strange city. She put herself at once under treatment, and two weeks later was entirely free from a throat trouble of months' standing, for which she had had the best efforts of specialists. She had also become a beamingly happy student of Christian Science. Here is another illustration of how receptive hearts are everywhere waiting for the word of Truth.

The writer recalls an incident when, on a crowded street-car, the young conductor, confused by his struggle to keep all going smooth and right, gave her ten cents too much in change. She handed it back as soon as she could catch his attention, and when she afterward stepped off the car he thanked her again, seemingly more impressed by her thought of kindness and sympathy than by the simple act of restitution. She smiled over his thanks, however, thinking, "It is a poor compliment for him to assume that I might have kept that money. I merely gave him back what belonged to him." Now this is what every Christian Scientist may do for others. He may restore to them that which they, through ignorance or carelessness, seem to have lost,—may give back that which is their own. A friend, knowing that another has in reality never lost his piece of silver, that he cannot lose it, may by a single word prompt him to look in the right place for it. It may have been the understanding that the knowledge of man's relation to God as His beloved child belongs to all the world, which prompted the wonderful summons from our Leader that we cease numbering the people. Jesus saw these things when he said, "The fields are white already to harvest," and "The hour is at hand."

Now this restoration, or this sowing, or this reaping, is not necessarily done with audible words. Wisdom will guide him who truly loves and truly seeks to be used for good to others. Yet we are not to lament too much if a word seems to have been spoken "out of season," as Paul said. If love was there, and not self-righteousness, it was not spoken in vain, for it is the seed of Truth that springs up and bears abundant fruitage. It is better to sow "out of season" than to fail to take advantage of the moment when the time is ripe. Just as some seed is sown in the autumn, to lie under the frozen surface till the spring sunlight summons forth the green blades, so the out-of-season sowing will have its fruitage some day, some where. Many persons, happy today in Christian Science, can now recall the unheeded, perhaps even the resisted, words of others who would have led them to the light, and gratefully realize that these were indeed the promptings of divine Love. The seed found lodgment in consciousness, and had its fruitage there, all unseen and unacknowledged.

While we pray with our Leader that God will show us "how to sow" (Miscellaneous Writings, p. 397), let us not overlook the petition that precedes this, "how to gather." It is out of our own gathered stores that we are able to scatter the seed of Truth and Love.

"GIVE, AND IT SHALL BE GIVEN UNTO YOU."

JAMES A. HEMINGWAY.

MANY of those who accept the teachings of Christian Science are apt to think, in their early experience in the study of the subject, that the first thing they should use

Digitized by Google

their slight knowledge of Science for is to help them acquire an abundance of material things,—this world's needs, so called. Quite frequently a young student is heard to say, "I must demonstrate more money," etc.; whereas the truth of the matter is that material things cannot be demonstrated. To demonstrate means "to prove," and we cannot prove, through the power of Christian Science, that which Christian Science proves to be unreal, viz., the material, or matter. Christian Science follows the teaching of the Master, and bids us seek "first the kingdom of God and his righteousness;" then, and not until then, will the other things be added unto us. Seeking for the "loaves and fishes" will never help us to acquire that demonstrable knowledge of God which Jesus said is life eternal, and this knowledge must be acquired before we can claim the right to sonship. Only as we arise and go to the Father in understanding, can we realize that all that the Father hath is ours.

The student will solve the problem of overcoming his sense of lack or limitation far more readily if, instead of cultivating a desire for more, he will overcome the disposition to hoard, and give of what he already has. As a rule, we are apt to feel that there is no obligation to give until it becomes evident to the senses that we can afford to do so; whereas we should give first, even though the senses would have us believe that we cannot afford it and that it would be foolish for us to do so. The giving always precedes the receiving. Jesus did not tell us to give after we felt that we could afford to do so. He said, "Give, and it shall be given unto you."

A certain author has said that he could best retain what he learned by giving it to others. One of the English poets said, in enumerating the virtues of an ideal character, "The more he gave away, the more he had." Back of these statements is the scientific fact that we can have only in proportion as we give. The closed hand cannot receive anything, neither can the closed (the withholding) mentality which is evidenced thereby. On the other hand, giving makes us receptive; it is reflecting Love, and loving never fails of its reward. The writer knows of cases of so-called incurable diseases which were completely healed when the patient learned to give of his material means, and "take no thought for the morrow."

Withholding is due to fear that either our present or our future needs will not be met, and we overcome this fear only as we learn that God is the only substance, the source of all our supply, the only cause and creator; that all things were made by and belong to Him and are His to give; that He is "the same yesterday, and to day, and for ever," and that He will therefore be our available, unfailing source of supply fifty years hence just as He is today. Why, then, should we hoard? It is only when we turn away from the Father and feed on the husks of materiality that we come to want, and we have only to return to the Father, the giver of "every good gift and every perfect gift," in order to have every need supplied. Selfishness is a barrier that must be removed before we can be healed of all our diseases, before we can awake in His likeness, and one of the best ways to remove this barrier is to educate ourselves up to the point where we can give ungrudgingly. Sometimes it requires a struggle, a mighty struggle with self, before we can part with that which we are pleased to call ours; but the reward never fails to come as the result of giving, for "God loveth a cheerful giver."

Christian Science does not, however, teach or advise indiscriminate giving, which is in itself erroneous and apt to encourage selfishness in the recipient; nor does it teach that the material is all that we have to give. But until the student is capable of wisely discriminating, there are many ways in which he can give, the wisdom of which cannot be doubted, and the result of which is a blessing to himself and to his fellow-men. Christian Scientists cannot make a mistake in giving of their time, their thought, and their material means toward the support and advancement of the Cause of Christian Science in its every department.

In paying our church dues and per capita tax, we do not have to confine ourselves to the giving of the minimum amount specified, but are at liberty to give as the Lord hath prospered us. Branch churches are constantly being erected, and we have the opportunity of giving for this purpose, thereby defeating the suggestion of the evil one, that there are plenty of churches and that we need the money more than does the church. The periodicals issued by The Christian Science Publishing Society are doing more for humanity than we are capable of estimating, and we have the privilege of giving to the support of the Society by subscribing for the *Journal, Herold, Sentinel, Monitor,* etc., thereby obeying our Leader, who says, "It shall be the privilege and duty of every member, who can afford it, to subscribe for the periodicals which are the organs of this church" (Manual, p. 44). At our Sunday services, we have the privilege of giving not only to the collection, but we can and should give our mental support to the services and the Readers. We can closely follow the Readers and let our thought go out with the truths voiced from the Bible and the Christian Science text-book, thus doing our part in the healing work that should be and is done at our services. So, too, at the Wednesday evening meeting, it is our privilege and duty to give others the benefit of our experience, by testifying as to our healing in Christian Science, or otherwise contributing to the helpfulness of the meeting, and with our thought we can help to uphold and encourage others who testify.

Indeed the opportunities for giving wisely and judiciously are unlimited, and if we take advantage of these opportunities, we shall soon learn that it is indeed "more blessed to give than to receive." If it is our desire to give all we can of our time, our thought, and our material means to help advance the Cause of Christian Science, and then put that desire into practice, we shall have no occasion to complain either that our needs are not being met or that we are not gaining in understanding, because his promise will never fail who said, "Give, and it shall be given unto you." In Malachi we read: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." Christian Scientists are learning to bring all the tithes—their time, their thought, and their material means—into the storehouse, and in proportion as they do this are they able to realize that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

"A GARDEN OF LOVE."

DAISY WOODWARD.

Some little time ago the writer received a letter from a friend, who said she wished to form a "garden of friendship," in which all her friends were to be represented, and requesting her to send a flower or plant of some kind. Each friend was left free to send the flower of her choice, that there might be an almost unending variety to please and to charm. It has not yet been the privilege of the writer to see that garden, but she has many times thought of it and mentally pictured it. What a profusion of beauty would be there! What wealth of form and color, what sweet fragrance would greet the approach of a visitor.

The beauty and pleasure of such a garden as this would, however, be incomplete if the work of the gardener had been neglected in either its preparation or care. The ground would need careful digging, much useless rubbish would have to be removed before the flowers could be

Digitized by Google

planted, and a vigilant watch must be kept to prevent the intrusion of weeds which might usurp the place of the flowers. The gardener has indeed much work to do, and it must be faithfully done in order that the plants under his care may receive the full blessing of sun and shower.

What garden may we as Christian Scientists prepare and tend, to remind us of that greatest of all friends, our loving Father? Surely we may call this a garden of love, and in this garden (our own consciousness) we may strive to collect all those sweet flowers of thought which will speak for the presence of our Father. The ground must be carefully prepared; all hard thoughts, selfish hopes, impure desires, material cares must be uprooted, that our consciousness may be fresh and clear and pure; every thought must be watched, lest the weeds of error spring up and choke the tender seed of Truth.

Then, if the gardener's work is faithfully done, if it reflects in varied forms the infinite Mind and is watered with the dew of our Father's blessing, we may hope to see with joy and rapture the humility of the violet, the modesty of the evening primrose, the strength and sturdiness of the hollyhock, the brightness and happy freedom of the poppy, the tender sweetness of the rose, and all united in exhaling the fragrance of that charm which pertains to every divine idea. The study of Christian Science can but awaken in every earnest heart a desire to prepare, to tend and cherish such a garden.

MEMBERS OF THE SAME BODY.

ELFIE M. MILES.

A SHORT-time ago one of my fingers in some way became injured, and as I had for a long time been used to the harmonious working together of my members, the inconvenience caused by this finger's inability to do my will without giving pain, set me to thinking. It came somewhat as a surprise that so small a member could cause so much trouble, and I was made to realize how important it is for the best work of the whole that the parts express perfection. Then the truth as given by Paul, regarding the body of Christ, came to thought: "For as we have many members in one body, and all members have not the same office: so we, being many, are one body in Christ, and every one members one of another."

The sacredness of this truth seemed to grow upon me. Then, in the midst of these exalted thoughts came the temptation to condemn severely some one for what seemed to be inexcusable actions. But, naturally, in the presence of my clear sense of the truth the temptation could not stand, and immediately came the redeeming thought, We are members of the same body. I then thought, What would be the result if we always worked as diligently to think of our brother as a member of the one body, as I did to realize the perfection of the true man and all his members? How much more love would be manifested, and how much more harmony would reign! Mrs. Eddy tells us in Science and Health (p. 113) that the "vital part, the heart and soul of Christian Science, is Love;" and Paul, in the thirteenth chapter of 1 Corinthians, makes us feel that without love other things amount to nothing.

Christian Scientists have learned something of the impersonal nature of evil, and with this knowledge comes a duty, viz., to put this truth into practice. If we are not faithful in the discharge of this duty, we need not wonder when criticism finds its way to us through those who have no knowledge of the truth.

The noblest wishes are not noble deeds,
And he does least who seeks to do the whole;
Who works the best, his simplest duties heeds;
Who moves the world, first moves a single soul.

C. F. RICHARDSON.

SELECTED ARTICLES.

[Frederick Dixon in *Bradford* (Eng.) *Telegraph.*]

Your correspondent's ideas on the subject of what constitutes biography are not, it is to be feared, altogether commendable. They consist of taking a few statements which seem to fit in with a preconceived conception, and advancing them without a solitary atom of proof or the slightest regard for the logic of the conclusions. He tells us that Mrs. Eddy was the daughter of a farmer. *Absit omen!* There have been a vast number of historical farmers from Cincinnatus to Cromwell, and from Cromwell to Louis Botha. When, however, your correspondent goes on to explain that Mrs. Eddy did not receive any education, or else a very elementary one, he explains not only that he does not know what sort of an education she received, but that he is apparently ignorant that some of the world's greatest men have received quite indifferent educations without the fact ever in any way detracting from their success. To give a single instance, it is only necessary to mention Mrs. Eddy's great compatriot Abraham Lincoln. As a matter of fact, Mrs. Eddy received a very good education, including the study of natural philosophy, logic, and moral science, as well as Latin, Greek, and Hebrew. Spiritual things, however, are spiritually discerned, and it is the spiritual perception of Mrs. Eddy, and not her intellectual training, which has made Science and Health more read than any other book during the lifetime of its author. A single one of the great Biblical commentators possesses more scholarship than all the men who wrote the Bible joined together, and compared with the spiritual understanding of the writers of the books in the Bible, what does their learning amount to? A couple of fishermen, a tent-maker, a publican, and a physician who had deserted medicine practically wrote the New Testament between them. It is very much to be feared that they all received, at the best, "a very elementary" education.

The mistake into which your correspondent has stumbled is not a new one. It was made some nineteen hundred years ago in Palestine in the confusion which arose in the minds of the Jews between the supposed power of the human mind and the power by which Jesus healed the sick, and was framed by them in the accusation, "He casteth out devils through Beelzebub the chief of the devils." The Jewish people knew all about the claims of mental manipulation. For centuries their prophets had waged relentless war against the whole race of wonder-workers, and only a few years later Paul came in violent conflict with certain of their tribe, in Ephesus. Jesus saw with perfect clearness the implication, and his answer contains the repudiation of mental suggestion as a factor in Christian healing for all time. "A house," he said, "divided against a house falleth." The wonder-worker had claimed not only to cast out devils, but to conjure them up, and so, today, the claim to remove an impression from the consciousness by mental manipulation necessitates the claim to be able to imprint an impression by the same means. This is exactly what the writer of the Jehovistic document, in the book of Genesis, describes as the fruit of the tree of knowledge of good and evil, the eating of which, as he went on to explain, obviously must end in death. Jesus' words constituted at once a commentary on and an amplification of those of the Jehovist. Relatively speaking, that writer had expressed a great truth, but besides and beyond the relative there was the absolute, and the absolute was expressed in the omnipotence of God, with its corollary of the unity of good. Therefore, he continued, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God, and with it the peace of God, never came to any man through mental suggestion. The human mind, even at its best, is torn with

Digitized by Google

conflicting passions, and is in consequence, no matter in how lessening a degree, always the corrupt tree bringing forth more or less corrupt fruit.

Fortunately for humanity, evil is not power. It is precisely what Jesus called it—a lie. Personifying it, after the manner of the East, he said, "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him." A Western people, unaccustomed to the imagery of the East, accepted this literally. It invested an evil spirit with a tail and horns, and endowed the Christian religion with a devil as real as its God. In spite of this, Jesus' words have not passed away. Evil remains a lie, and the only power and reality a lie can ever seem to possess is that which appears to attach to it so long as it is unexposed.

Just as light banishes darkness, just as harmony sweeps away discord, so a lie disappears before the truth which frees man from its supposititious effects. The knowledge of Truth is necessarily knowledge of God, that full, exact, and consequently scientific knowledge expressed in the epistles in the phrase "*epignosis tou theou.*" It was this knowledge which constituted the Mind which was in Christ Jesus, and it is the struggle to gain this, to let it "be in you," as Paul puts it,—to "keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them," as Mrs. Eddy has written [*Christian Science Sentinel* Oct. 6, 1906],—which constitutes all there is of the ability of the Christian Scientist to "reestablish the function of healing as a purely spiritual one." The Christian Scientist does not suggest to the sick man that he is well, he explains to the sick man the truth that makes him free, and so touches him with the finger of God, that the kingdom of God may come upon him. "The prayer," writes Mrs. Eddy, on page 1 of Science and Health, "that reforms the sinner and heals the sick is an absolute faith that all things are possible to God—a spiritual understanding of Him, an unselfed love." This is the prayer of Christian Science.

[Willard S. Mattox in *Skandia*, Jamestown, N. Y. (original English.)]

It would not be right if the Swedish public were permitted to gain their impressions of Christian Science from articles appearing of late in the Swedish press. Without in the least wishing to engage in a theological controversy, I would appreciate the courtesy of enough of your space in which to correct some of the misstatements. It is said that the Christian Science text-book, Science and Health, "is the Bible of the Scientists." Christian Scientists have the same Bible that all Christendom unites in using. The King James translation, which is used in all Christian churches where the English language is spoken, is used in the Christian Science church. Science and Health is exactly what it purports to be, a key to the Scriptures. It is a commentary, and inasmuch as other denominations have their commentaries, it is difficult to understand why Christian Scientists should be criticized for having one of their own.

Christian Science is not "impossible to understand." The gospel message of salvation, as contained in Christian Science, is no more mysterious than were the teachings of Jesus, although today, as in his time, there are many who do not understand this message for one reason or another. The message itself is simple, and the fact that hundreds of thousands of men and women in all walks of life, in varying degrees of mental culture, understand and demonstrate the truth of Christian Science, seems to be satisfactory proof that it is not impossible to understand. Nothing is farther from the fact than the statement which has appeared, that Science and Health says "the Bible is full of mistakes, and can be rightly understood only when interpreted by Science and Health, which is the only book that is infallible." Science and Health makes no such statement about the Bible, and no one has ever claimed that Science and Health is infallible.

It is a mistake to suppose that the primary object of Christian Science is the healing of the body. Salvation, according to Christian Science, necessarily includes a whole mind and a whole body. Much of Jesus' ministry was devoted to the healing of disease no less than to the overcoming of sin, but he plainly regarded physical discord as the work of the devil, because when he healed one patient he referred to her as one "whom Satan hath bound, lo, these eighteen years." With the moral and spiritual improvement which comes from a better understanding of God, there goes naturally an improved physical condition.

A very wrong impression is conveyed in the statement that the "Christian Science churches have on their walls quotations from Mary Baker Eddy, St. Paul, and Christ, which persons are considered authorities in the order named. Those who understand Christian Science know that it teaches there is but one Christ, one Saviour. It is preposterous to pretend that the Founder of the Christian Science church, Mrs. Eddy, exalts herself above Christ, and no informed person believes this.

One writer freely admits that Christ's church should heal the sick, that the command to heal the sick is still in force, and that the gift or ability to heal has not been taken away from the church by God, and he regrets that this gift of healing is not found, as he expresses himself, "within our congregations." Admitting this much, it ought not to be difficult for him at least to be willing to believe that Christian Science may perhaps be fulfilling this Christly command to heal the sick. If the ability to heal still remains for men to demonstrate, why is it so difficult to acknowledge that Mrs. Eddy has called attention to this ever-present healing force, and that those who study the Bible in the light of her teachings are actually able to heal the sick? There is nothing supernatural about the Christian ability to overcome evil in all its forms, because for nearly three hundred years after Jesus' personal teaching, his followers healed the sick and even raised the dead, and this was done in many instances by disciples who had never seen Jesus or come under his personal instruction. Even if members of other denominations cannot agree that Christian Science is not all that it claims for itself, would it not be more Christlike mercifully to withhold the harsh criticism and bitter invective? Calling hard names is not argument, and convinces nobody of the truth or justice of one's cause. Would it not be well to remember the common-sense advice of Gamaliel, "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it."

["Justice" in *Christian Register.*]

I have read with interest the article by the Rev. John Snyder on Christian Science, and I ask for enough space to express a few thoughts concerning the matter. The denomination Mr. Snyder opposes makes it imperative to put out at the front every Christian practice and virtue the Unitarians have ever done or at present do. I think I am warranted in saying they advocate a strictly correct life, constantly and strictly adhered to. All their representative people, when judged by the standards of a good daily life, do not suffer in the least by an examination.

As regards the existence and cure of diseases, they have their opinions and views. So do we. If they differ from us, it is no more than we do from them. They think they have good and satisfactory views, and, as Mr. Snyder says, every Wednesday evening at their great meeting they give testimony and what they consider to be proof of cures. He cannot refrain, and so he ventures to attempt the belittlement of their work by charging them with having assumed they can cure cholera in hogs and blind staggers

Digitized by Google

in horses. Later on, though, he says, "It is superfluous to say that the great body of Christian Scientists are honest, devoted, and sincere people." As though he had said a little too much in favor of them, he adds, "But so were the people of Salem who were bitten by the tarantula of witchcraft." Mr. Snyder has at times for many years attempted an enlightenment of these people. As named, in the year 1910 these people assemble in audiences numbering thousands weekly, and tell of cures of themselves and friends. They surely are not all of the bewildered persons and fools. Whether the cures are actual or imaginary, it matters not. As a man "thinketh in his heart, so is he." There is many a person troubled with rheumatism and kindred diseases who would consider it a blessing direct from the Almighty, and would be thankful beyond expression, if he could but imagine all pains had left him and he be permitted to continue thus till his spirit should go out of the body.

Mr. Snyder's solicitation is hardly needed. Christian Scientists do not need nor require the aid of such medical supervision as Mr. Snyder in his solicitation would, as a Christian service, provide for them. They are not unmindful of the fact that in turn scientific men have investigated and found allopathy, homeopathy, hydropathy, etc., and even mind-cure, true. Mr. Snyder's solicitation may be well meant, but I think the new denomination should not be condemned because they in turn have other methods. They should not be condemned because they think mesmerism at times has threatened to usurp authority. The Unitarians would in like manner defend themselves did they anticipate a like danger. Mr. Snyder quotes the opinion of Mrs. Eddy as long ago as 1889, more than twenty years ago. Probably she has seen no reason to change her mind up to now. Neither have we Unitarians. They appreciate the advice of Longfellow, to be "up and doing, with a heart for any fate."

Every Sunday, twice, between four and five thousand persons assemble and do their work. Remember what I said at first as regards their tenets of action and life. Take any fifteen of our societies in and around Boston, and the aggregate of worshipers does not outnumber those of a single meeting that same day of the Christian Scientists. I repeat, I am an out and out Unitarian, and so I feel to bid these fellow-Christians a "Godspeed." We cannot afford to speak lightly and hold them up to ridicule. Every person has a right to his or her own views, but we do not well when we arraign and denounce others and try to make them appear to disadvantage. We produce best results only when we do unto others as we would have them do unto us. That does not prevent any one from "being persuaded in his own mind."

[Frank C. Barrett in *Eastern Argus*, Portland, Me.]

Our critic asks, "When the church and science are arrayed against Christian Science, it certainly is worth while to ask, Why is this so?" The only reason why the churches are opposed to Christian Science is that it takes Jesus at his word. He said: "He that believeth on me, the works that I do shall he do also." His works included preaching the gospel and healing the sick. The churches at the present time interpret this to mean that his followers shall only preach, leaving the healing undone. Jesus said: "These ought ye to have done, and not to leave the other undone." However, the signs of the times indicate that the churches will soon fall into line. Unfortunately for the churches, some of them have tried to do the works of Christian Science by means of hypnotism, suggestion, etc., but they have not succeeded. They can turn to Christian Science and find the true way to divine healing, however.

Mrs. Eddy has said: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name" [Pulpit and Press, p. 22]. It is encouraging to note that many clergymen are now of the opinion that the healing of the sick ought to be done in the churches. Christian Science has been opposed by material science because it is so spiritual. Christian Science holds that God, Spirit, is All. Accordingly it is maintained that Spirit is the only real substance. The discovery of radium has caused even the material scientists to admit, more generally than before, the unreality of matter. So scientists are coming to the same conclusion that Mrs. Eddy has held in regard to the nature of matter. The belief in the reality of matter, the substratum of mortal mind, is the cause of sin, sickness, and death—all evil. It must be apparent that there can be no evil in Spirit, God.

With the material scientists' admission that matter is unreal, material science comes to a stop. It cannot proceed without investigating what is to it the "great unknown," that is, Life, Truth, Love,—Spirit. What would be left without Life, Truth, and Love? Nothing! Life, Truth, Love, then, are the realities and are all that can be really known. A knowledge of Life, Truth, and Love,—God, can only be obtained through an understanding of the Science of God, —divine Science. Thus all real Science is of God, not man, and must be Christian; hence, Christian Science. It is on this basis that science and religion are reconciled. How much longer can the churches and sciences get along without the Science of God? All true Science is Christian Science. Should not this "commend itself to the Christian church"?

Christian Science is neither faith-cure nor mental suggestion, nor a combination of both of them, as is alleged in the sermon under consideration. The thought of the practitioner is not the primary factor in Christian Science healing. The consciousness or thought of the practitioner is simply a transparency for Truth, just as it is not the window-pane that lights the room, but the light which shines through it. It is the truth that heals, makes free, in Christian Science; not man. This fact distinguishes Christian Science from every form of hypnotism, suggestion, etc., in which the thought of the manipulator is the primary factor always. It is not faith in Christian Science which heals. It is not necessary for the patient to know anything about the teachings of Christian Science in the first instance in order to be healed. But after one has been healed he has more faith in God than before. Every one who is healed physically in Christian Science is always improved spiritually and morally.

The assertion is made that two thirds of those who are treated by doctors of medicine or by Christian Scientists would get well without any sort of treatment. This is hardly true in the case of Christian Science. Most of those who go to Christian Scientists would never have done so if medicine had healed them in the first instance. It is a fact that a large proportion of those who have been healed in Christian Science had reached the stage "when nature failed to respond and the case was desperate and hopeless."

[Alfred Farlow in *Marinette* (Wis.) *Eagle-Star*.]

In a recent issue the Rev. John Lloyd is credited with having said, "Professor Ramsay, one of the ablest historians and critics of this period, thinks Paul met with Luke at Troas, where he was practising medicine, and that Paul converted him to Christianity." He expresses the strange opinion that "Luke then gave himself up with zeal to the cause of Christ, and felt that he could not advance that cause better than by accompanying Paul, helping him in his work, and ministering to him as a doctor, the apostle having probably consulted him at first regarding a severe nervous disease from which he suffered."

Evidently, Professor Ramsay has arrived at this unique opinion through nothing more than a vivid imagination,

Digitized by Google

since there is no evidence whatever to establish such a claim and no such conclusion could be logically drawn from a true knowledge of Christianity and its consistent practice. Would it not seem a little strange to Bible students that Paul, who restored the young man who fell out of the window and was "taken up dead," and who healed all manner of disease, was put to the shift of resorting to medical treatment for a "nervous disease"? This surmise on the part of Professor Ramsay may seem ingenious at first sight, but it will scarcely stand the test of a careful examination. It is certainly an inefficient method of proving that Christianity demands the coalition of spiritual power and material remedies. Moreover, if Paul advocated any sort of medicine, it was the kind which was in vogue in his day. He knew no other, and Mr. Lloyd would probably not admit that there was any efficacy in the superstitious material remedies of Paul's age, nor would he recommend them. We assume that your readers are all familiar with the peculiar remedies which were used in the treatment of the sick in the days of Luke, therefore we refrain from describing them.

It may be that some of the primitive followers of Jesus, because of their immature faith, divided the power between God and material remedies in their treatment of the sick, but there is no evidence that Jesus himself ever resorted to such means or that his near apostles employed any material remedies whatever.

Mr. Lloyd says that "it was felt by certain great physicians that a social, religious, and psychological work was needed for a class of sufferers from what the medical profession had defined as functional nervous disorders." As one reads this statement, he can but wonder what Mr. Lloyd proposes to do to relieve the millions of persons who are suffering from something more than mere nervous disorders, who are suffering from organic diseases which are not being relieved by medical practice, nor by "the clergymen's closer contact with patients." Is there no remedy for this class? Persons with nervous disorders can worry along some way, but what about those who are afflicted with more serious disorders? Mr. Lloyd's argument, if accepted, destroys all hope on the part of the class who are most in need of help. It amounts to an argument that even in the days of primitive Christianity God could not be depended upon as a means of healing the sick, nor can He be depended upon at this day; that He has provided a means of comforting the hypochondriac, but the person who is really sick is not only without efficient medicine, but without the hope of divine aid.

Thanks to Mrs. Eddy, there has been discovered a purely spiritual means of relief from the most stubborn diseases to which mortals are heir, and we are of the opinion that nothing is more shameful to Christendom than the effort on the part of some clergymen to explain away this great boon which has come to humanity, and who, as a means of checking the growth of the Christian Science movement, are seeking to convince poor suffering humanity that there is no relief from their sufferings except what they may obtain through the administration of drugs and the exercise of the "carnal mind."

In the days of our Lord, the ignorant fishermen could evoke the divine power and wonderful results followed their efforts; but in these days, according to the Rev. Mr. Lloyd, we must depend upon a "psychological" complication, which only "trained psychologists" can handle with safety. What is this strange power or influence which, like dynamite, can be handled safely only by experts? This is no idle question, and it is well enough for the public to stop long enough to obtain an answer thereto. The soothing, healing, regenerating influence of God is entirely safe not only in the hands of the college professor, the trained psychologist, and the experienced diagnostician, but it is also safe in the hands of the frailest and most ignorant of humanity, and is available even to a little child.

By the way, Mr. Lloyd has not explained to us exactly what he means by nervous disorders. Many of the most eminent medical authorities affirm that there is no such thing as a nervous disease which is not "organic at the bottom."

[S. Gorst in *Manchester* (Eng.) *Chronicle*.]

As an onlooker, being neither Christian Scientist nor Presbyterian, I ask your indulgence in the discussion between the Rev. W. Rigby-Murray and the Christian Scientist, Mr. Bonnin. Whatever Christian Science is or is not, I think it is carrying out much nearer the teachings of Christ than are the Christian churches in general, if only in the matter of healing the sick. Now the Christian churches cannot get away from the emphasis that Christ laid upon the act of healing. I think that Christian Science puts the Christian Trinitarian churches to shame, for why are they not going forth, in their boasted gospel preaching, and healing the sick, which is the greatest object they, as Christ's followers, could be engaged in? He that offends in one point of the law is guilty of all, was the teaching of the apostle James: then the churches are guilty, and weighed in the balance are found wanting.

If the churches paid more attention to healing the sick than they do, they would be nearer the mark as Christ's followers. But what can be expected from Christians who have lost faith in the power of healing, who maintain that it was only transmitted to the then apostles, and died with them? If Christian Science is a departure from the faith once delivered to the saints, what of the Trinitarian believers, who all along the line have fallen away from their Master's pathway?

[F. K. Butterworth in *Manchester* (Eng.) *Chronicle*.]

I have no brief for the Scientists, but love and admire them for their work and the glorious results obtaining in their midst in relieving humanity of its woes by healing their diseases and purifying their hearts through faith in the unchanging laws of truth contained in the Word of God. Is Dr. Wilding to be arraigned for becoming a Scientist when he proved the truth of its statements by that glorious healing of his crippled child? Again, four incurable—according to *materia medica*—cases under his charge were introduced to this faith, and all recovered. And what of the judges, ministers, and educated people, lecturing the world over in the truths of this cult, every one of whom have been healed of their diseases. The preacher did not also mention Professor Maclagan, of Edinburgh University, the great medical authority, who denounced medicine and surgery before an assembly of professors and students when he was over eighty years of age. As to the charge for treating a patient, that is not worth mentioning; Scientists have to live—so had the apostles, but mainly by gifts and not fixed salaries.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 3, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*.

Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE SIMPLE GOSPEL.

It sometimes happens that Christian Scientists become so engrossed in the various activities in which their churches are engaged, that they lose the right perspective of these activities, and thus are apt to exaggerate the importance of some and dwarf the importance of others. While it is true that everything which pertains to the conduct of the affairs of the Christian Science church should be done in the best possible manner, it is not always true that the most elaborate, most expensive, or most showy way is the best. The one and only reason for the existence of a Christian Science church is that the gospel of Christ Jesus may be preached in the most effective and convincing manner, and remembering the simplicity which characterized his method of teaching, it goes without saying that this manner should be neither sensational nor ostentatious.

Jesus' preaching of the gospel of salvation from sin was coincident with his healing of the sick, and when he was asked to establish his claim to the Messiahship he unhesitatingly pointed to the works which he had done, in proof of his divine sonship, rather than to creed, dogma, or ritual. Again, when he had nearly closed his earthly ministry, he impressed upon his followers that these same works, the healing of the sick and suffering ones of earth, should also be done by those who believed on him. When he instructed his followers to preach the gospel and heal the sick, he did not lay greater stress upon one than the other, but rather coupled the two in such a manner as would indicate that they were to be regarded as concurrent and inseparable. The Master's works and words were in entire harmony, and the New Testament is as much a record of the healing of the lame, the halt, the blind, and those who suffered from all manner of diseases, as it is a compilation of his sayings.

That which needs to be brought out in a Christian Science service is that the gospel which is there preached is the same gospel which Jesus preached; that the same signs of healing follow the preaching of this gospel as followed his preaching, and that Christian Scientists, in emulation of his example, are healing the sick today as he healed them almost twenty centuries ago. The fact that the same Lesson-Sermon is read in every Christian Science church at the same time, whether that church be large or small, whether the congregation be in the city or the country, is significant of the simplicity which should rightly distinguish the present-day preaching of our Master's gospel. But even this simplicity is not all that is required. There should also result, through the ministry of these services, the healing of the sick, the reform of the sinner, and the restoration of comfort and joy to those who mourn.

How and why the healing of the sick became a lost element of Christianity, is a mooted point which need not be considered for the present purpose; but the fact that is has been restored through the discovery of Christian Science by Mrs. Eddy is of vital importance to humanity. That the healing works of the primitive Christians are today being accomplished through Christian Science is no longer denied, and to cite a present instance of its efficacy, we would call attention to the letter to our Leader from Judge Hanna, which appears on the opposite page. We should ever be mindful that the great mission of Christian Science and the great work to which all Christian Scientists must devote themselves, is the making practical of the gospel of Jesus, including the healing of the sick; and just to the extent that lack of simplicity in all church affairs interferes with this healing work, it should be discarded.

ARCHIBALD MCLELLAN.

TRUTH UNBOUND.

It is quite impossible to dissociate Christianity from the thought of sympathetic consideration for the afflicted, and hence it was not at all surprising that a vigorous protest was entered by Christian physicians and ministers throughout the country, when an eminent medical lecturer recently suggested it would be a wise and kind thing to allow the hopelessly incurable "to go the way of nature." The right of every aspiring thought to life, and that in the deepest and best sense of the term, is universally recognized, and whenever the question is raised, the heart of humanity invariably says, No! the sick should not be "mercifully permitted to die;" they should be healed.

When, however, one comes to consider the situation, he wonders much that this protest should have been so long delayed. Why should those who have declared their faith in a gospel that healed disease in the first century accept the asserted incurability of disease, and mentally give judgment against the sick, in the twentieth century, and in what sense can any be said to believe in "the law of the spirit of life" who practically deny its present efficiency? Regardless of the Scriptural assurance that "the prayer of faith shall save the sick," the insistence that there is "no hope" has been positive and practically universal among Christian believers, the moment *materia medica* has rendered its verdict, and this condemnatory vote is often cast despite the fact that the illness was traceable to exposure while ministering in a Christlike way to the need of others!

Surely no more pitiful evidence of the decadence of Christian faith could be adduced than this, that in the hour of a sufferer's exigency of need those most near and most loving are found to be against him, in that they practically pronounce his death sentence by declaring for the hopelessness of his struggle; and all this, perchance, while believing in the verity of a once effective gospel. Surely the Christ-appointed means of saving life should at least be tried before Christian love is content to abide by the dictum of medical law, and yet Christian people are consenting today to the inevitability of the death of their dear ones without having made any effort whatever to help them by resort to "the prayer of faith" commended by St. James; and this, too, when it is known in all the world that the prayers of Christian Scientists have proved effective in thousands of cases which were "nigh to death."

There is yet another consideration affecting the case, namely, the fact that most Christian people believe that death frees the spiritually aspiring from all material encumbrances and ushers them immediately into a life of perfect freedom and joy. If this be true, what of the "kindness" which would deny to such a sufferer here, the privilege of entering into that rest? All this contradictoriness of thought would indicate that the faith of many is without "substance" or consistency. They believe that once humble fishermen could heal the sick, but that now even the most spiritually minded and highly cultured are wholly impotent, because, as they aver, the divine law which Christ Jesus and his disciples utilized is no longer available! Under such circumstances it is not surprising, surely, that men are led to say, "If divine law is not able to cure the 'incurable' today, it never was able to cure them."

Like a morning's dawn upon a darkened world Chris-

Digitized by Google

tian Science has come through the ministry of our Leader, to protest not only against the suggestion that "incurables," be allowed "to go the way of nature," but against the claim of incurability, against every flavor of skepticism respecting the present and eternal power of the Christ-idea to heal and save. It is uncovering the inherent tangle and twistiness of the theological belief which would excuse its own inadequacy by declaring for the limitation of Christian healing to a specific time and place. It is proving that Truth is ever present and unbound.

JOHN B. WILLIS.

PRESSING TOWARD THE MARK.

THERE are many who recognize the beauty of the Christian life and would enter upon it, who do not count the cost nor see the necessity for absolute faithfulness at every step of the way until the goal is reached. Christ Jesus told his would-be followers of the steps which had to be taken, saying, "Which of you, intending to build a tower, sitteth not down first, and counteth the cost, whether he have sufficient to finish it." To this he added, "Whosoever he be of you that forsaketh not all that he hath, he cannot be my disciple." Again he said, "He that shall endure unto the end, the same shall be saved." Mrs. Eddy tells us that all who are healed in Christian Science find it "sweet at its first taste," but she goes on to say that when the "digestion" of the truth comes it may be similar to the experience of the Israelites who partook of the "bitter herbs" with their passover. (See Science and Health, p. 559.) It is very evident that the great Teacher did not warn people with any intention of hindering them from starting on the journey from sense to Soul, but instead to prepare them so that each seeming barrier in the way would but call forth new energies wherewith to surmount it.

In his epistle to the Philippians Paul hints at some of the trials which beset him on his way to the goal, but he triumphantly assures us that he counts the loss of all earthly things as less than nothing compared with "the excellency of the knowledge of Christ Jesus;" and he goes on, "I press toward the mark for the prize of the high calling of God in Christ Jesus." This epistle was written when Paul was a prisoner in Rome, awaiting trial under Nero. He was chained to a soldier (usually a member of the imperial guard), and these men had to listen to his teaching, probably witness his healing work. History makes it very clear that they carried back to the palace the message of the life-giving truth, and that some of the inmates came to Paul's "hired house" to hear it for themselves, for at the close of the epistle we read the astonishing statement that the "saints . . . of Cæsar's household" sent greetings to the Christians at Philippi. It is noteworthy that joy was ever with him while he was pressing on toward the mark, and that he never paused to measure his pains, but only his progress, for he meekly tells us that he had not yet attained to the final victory.

It is surely clear that all must be tested at each stage of their progress by the demands of divine Principle, and that each test will require more of the student than has the preceding one, but this should occasion no more fear than it would on the part of a scholar who is gaining in understanding as he advances. He who faints or falters has not his gaze fixed on the goal, for that must be nearer each day to the one who is truly following Christ. The burdens of sense must also be lighter each day if we are forsaking the material for the spiritual, and the strength be infinitely greater. Paul said that he could do all things "through Christ which strengtheneth."

We are told that one of those who fled from Sodom "looked back" and perished, and Christ Jesus in warning his disciples said, "Remember Lot's wife." That which is left behind is not worth a sigh, but concerning the realities of Spirit which invite us forward we are told that "the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." Not merely *to* us, but "in us," when Truth shall have forever dispelled all that obscures the divine likeness! Who would not, then, press toward the mark for the prize of which the poet sings,—

> That prize, with peerless glories bright,
> Which shall new luster boast
> When victors' wreaths and monarchs' gems
> Shall blend in common dust.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Colorado Springs, Feb. 15, 1910.

Beloved Leader:—Your last message of love reached us while on the Pacific coast, and, as you well know, was read with deep interest and gratitude. Your very kind words, "I want you to inform me of yourself, your family, and your work. . . . I dip my pen in my heart when I say this," struck deep into our hearts; and you may be sure that we dip our pen deep in our hearts in response. We are busy in our work, very busy, but our only regret is that we have not time to be busier.

I have often thought of sending you an epitome of my lecture work, but I fear it would trespass too much on your time. I cannot forego the temptation to enclose copies of two remarkable results of the lectures. The letter from Taunton impressed me more because of the unselfishness of the writer than the wonderful physical healing. Was it not that very unselfishness that made the listener receptive to the healing word? The case in England is surely a sufficient refutation of the hackneyed saying that the days of miracles have passed. I have written to Mrs. Playfair for a supplemental report of the case, and shall be pleased to advise you when I hear from her, if you wish.

What but spiritual understanding or the understanding of Spirit could have produced such a result? And who, in the face of such evidence of divine power, can doubt? Moreover, how could the truth which can do such works have been understood and applied without a teacher?

Rejoice and be exceeding glad, for God is yet manifest in the flesh.

With deepest love from us both,

Your student,

SEPTIMUS J. HANNA.

Belvedere, Cal., Feb. 9, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—We, the members of Belvedere Christian Science Society, desire to express to you our love and gratitude for all that Christian Science means to us, individually and collectively, and for your great wisdom, love, and patience, through which you are continually guiding and protecting us. We are a society of nineteen members only, in a small community, but zealous in our desire to forward the Cause. We organized nearly three years ago, and obtained a proper public location for our services, which have been regularly conducted and well attended. It has been our great privilege to have had two lectures, and to send our building fund to the Publishing Society, which is constantly sending us so much through its publications.

Nicodemus said to the Master in the third chapter of St. John's Gospel: "Rabbi, we know that thou art a teacher come from God: for no man can do these miracles that thou doest, except God be with him." So we know that it is your nearness to God which enables you in this age to repeat the miracles and teachings of the Master. We are

Digitized by Google

grateful to God for your life of pure devotion; for our text-book, "Science and Health with Key to the Scriptures," and your other writings, and we are most grateful for the Manual of The Mother Church, with its many rules for our guidance, and for each new by-law, which comes just when most needed.

It is our prayer that we may be found alert, loyal, and lovingly obedient to each one of these calls to "go up higher."

On behalf of Belvedere Christian Science Society,
MISS EMILY RUTH BECKER, *First Reader,*
MRS. W. M. BENJAMIN, *S. S. Supt.,*
MRS. M. A. SWINERTON, *President,*
Committee.

Atlanta, Ga., Feb. 16, 1910.

Beloved Leader and Teacher:—In reading in one of our progressive magazines a quotation from the great Italian, Mazzini, which seems a wonderful prophecy of your grand work,—"Whoever first makes a religion out of democracy will save the world,"—I saw clearly that this is just what you are doing and have done. It is sometimes a grand joy to sit still and see how marvelously the democratic idea, the "leaven" which the divinely appointed woman has put in the "three measures of meal," is working both in the universal as well as in individual consciousness, turning and overturning all that resists the onward heavenly current of this spiritual force leading to the "federation of the worlds" in one holy church. This spiritual democracy is the only true democracy. In that splendid move, the rotation in office, made some years ago, I caught this vision and it was published in the *Sentinel*, and each by-law is but another unfolding of this grand and holy purpose. Before this mighty unselfed love or force the mountains of selfishness are laid low and the good of all becomes the dominant impulse. Each day renewed love, tenderness, and wonder fill our consciousness as we think of your leadership of so stupendous a Cause, and each day we see demonstrated more absolutely the omnipotence of Love, of good, in its resistless tide sweeping away the false. We know that this sublime movement is of God, and you, its Leader, are sustained by the irresistible forces of good.

I thank you, beloved Leader, for having given me even a small part in this great work, which I think of most reverently each day. God has greatly blessed my work, and I am deeply grateful. We have sold our dear little church, which we had outgrown both numerically and locally, and we have purchased the most beautiful lot on Peachtree street for our new church, in a very lovely and most desirable part of our rapidly growing city. Our little church did a grand work as the first strong, emphatic declaration to this section that Christian Science is here to stay, and it has passed into the hands of a noble body of women. With tenderest love,

Your devoted student,
SUE MIMS.

Orange, N. J., Feb. 23, 1910.

Mrs. Mary Baker Eddy.

Beloved Leader:—Looking over the latest edition of the Christian Science Hymnal, I was delighted to find your beautiful hymn, "The Mother's Evening Prayer," in its appropriate musical setting. In the years of striving to overcome self and selfishness and to reach some sense of divine Love, this hymn has meant much to me, lifting thought above the rugged way through the wilderness to the harmony of Soul. I have often repeated the blessed words of this prayer to others, and they have brought comfort to the sorrowing, hope to the hopeless, health to the sick, and the peace of God to the dying. The lines are sublime in their dignity and exquisite tenderness; akin in their purity to the prophet's exalted declaration, "The Lord is in his holy temple: let all the earth keep silence before him."

Dear mother in Israel, only a life consecrated by works of truth and love and of self-abnegation can express my gratitude to you and for you.

Humbly and tenderly,

Your loving student,
NEMI ROBERTSON.

Cleveland, O., Feb. 16, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Brookline, Mass.

Beloved Leader:—On Lincoln day services were held in Second Church of Christ, Scientist, to which First and Third churches were invited. Both churches lovingly accepted this invitation, and the union services were well attended and thoroughly enjoyed. We wish to express our gratitude to you, dear Leader, for your loving guidance and wise leadership. We are glad to follow in the way which you point out, knowing that your counsel, if heeded, will lead to the "house not made with hands, eternal in the heavens."

Gratefully and lovingly yours,
Second Church of Christ, Scientist,
JOHN A. WEBSTER, *Clerk.*

Boston, Mass., Feb. 17, 1910.

Mrs. Mary Baker Eddy, Chestnut Hill, Mass.

Beloved Leader:—We send you herewith, with very much love, the new picture which shows The Mother Church, the publishing house, and the proposed parkway in the foreground. The parkway at present is in the process of making, but we expect it to appear as shown in the picture a little later in the year. This photogravure picture is produced for the Publishing Society by Littig & Company of New York city, and they were much pleased to prepare this special artist's proof on parchment for us to send to you.

With grateful love from us all,
The Christian Science Publishing Society,
DAVID B. OGDEN, *Manager.*

Elgin, Ill., Feb. 9, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Dear Mrs. Eddy:—Recognizing that obedience to Principle demands unity of action, former First and Second Churches of Christ, Scientist, Elgin, Ill., have reorganized as one church. Lovingly,

MARY THORN,
FLORENCE BECKER,
Committee.

San Rafael, Cal., Feb. 19, 1910.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—At a special meeting of our church last Sunday, for the purpose of discussing plans to increase our own building fund, it was lovingly voted that we first give a part of our savings to the Mother Vine which sustains the many branches. Realizing that *The Christian Science Monitor* is one of our most active missionaries, and that the need of more space is apparent, we are sending to Mr. Chase, for the enlargement of the publishing house, one tenth of our present funds, and will continue to send the same proportion monthly so long as we see this as one of the paramount needs. We know that our mite will result in blessings, for you have taught us that giving enriches to the extent that unselfish love underlies the act.

We are deeply grateful for the harmony which has always prevailed in our little church, and we trust that we may be awake to the importance of consecrated individual activity.

Sincerely and gratefully your followers,
First Church of Christ, Scientist,
MRS. NELLIE PAULL-CARROLL, *Clerk.*

THE LECTURES.

CANTON, O.

Miss Mary Brookins of Minneapolis delivered a lecture on Christian Science at the Auditorium Sunday afternoon [Jan. 16] under the auspices of Second Church of Christ, Scientist. She was introduced by Mrs. Evanstein Barrie, who said in part,—

One of our modern writers says, "The sole motive for every action of man is a desire for happiness;" and as the majority of people believe that happiness comes through the possession of many worldly things, our lives are spent in the pursuit of gain. As we ascend toward success, our horizon widens, and we see before us more and greater needs than we have ever dreamed of. Our ideas of necessity are only relative after all, for what seemed yesterday to be affluence and power, today are but poverty and defeat. So there seems to be no fixed place whereon mortal man may stand and say, "I have attained to this position;" or, "I have acquired so much, now I am happy." In the face of these failures to reach the goal, the mind turns to the within, and there becomes conscious of the fact that true happiness comes from the development of the spiritual man. Along with that development comes the understanding that it is not the seemingly adverse condition which annoys us, but it is the attitude of mind which we assume toward that condition that makes us miserable or otherwise. We are here today, hoping to learn something about the acquiring of that spiritual development which brings the happiness that abides under all conditions.

Correspondence.

DENVER, COL.

Judge Septimus J. Hanna delivered a lecture [Feb. 6] on "Christian Science, the Religion of the Bible," to one of the largest audiences ever gathered in the auditorum of the Woman's Club Building, under the auspices of Third Church of Christ, Scientist, of Denver. Judge Hanna was introduced by Gov. John F. Shafroth, who spoke as follows:—

I esteem it a great privilege and pleasure to be here and introduce the distinguished speaker who will follow me. I am glad to see this magnificent audience and am glad to see so many taking this interest in Christian Science. No person, no matter what his belief, can fail to recognize the great good which is being done by Christian Science. No movement which has for its purpose the betterment of humanity, the uplifting of mankind, and the advancement of good morals and good government, but merits the earnest attention of all fair-minded people.

The man whom I am about to introduce is one of the same profession as myself, and after he had studied and investigated and examined Christian Science, he became convinced that he could do more good for humanity by taking up the active work than on the bench or in the practice of law. He early became identified with the Christian Science movement, was pastor and reader of The First Church of Christ, Scientist, in Boston, and through years of association with Mrs. Mary Baker Eddy has come to have a knowledge of the actual development and progress of Christian Science attained by but few, and is able to speak authoritatively of Mrs. Eddy and the Christian Science movement.—*Daily News.*

KEY WEST, FLA.

A lecture on Christian Science was delivered at the San Carlos Opera House, Jan. 30, by Francis J. Fluno, M.D. He was introduced by State Senator W. Hunt Harris, who said in part,—

The average man of today, in his conceit, believes that he knows everything; that the present generation is the wisest, and he looks with pity upon those of bygone ages. It is true that electricity has opened up to the world vast channels of usefulness and pleasure. From the brass key suspended from a kite-string we have the telegraph, the telephone, wireless telegraphy, the phonograph, motive power and thousands of useful and beneficial appliances. All these things have been accomplished by close application of thought and study. While it is true that the ancients may not have known anything of electricity, yet they were possessed of a knowledge of astronomy and the domestic sciences, architecture and sculpture had attained with them a high degree of perfection, and certain secrets and science in the manufacture of steel have never been equaled, because their secret processes have been lost to the world.

This is an age of discovery, and it behooves the thoughtful to pause and give ear to the sounds that are knocking at the door of his intelligence. One of the great discoveries of this age is what is termed Christian Science. Just exactly what this means I am not in a position to set forth, but I have seen some of the effects upon those who follow its teachings, and the wonderful peace of mind, the freedom from care and worry, the apparent immunity from sickness and disease which is enjoyed by the followers of Christian Science, are certainly sufficient to entitle it to a respectful hearing.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

El Paso, Tex. (Second Church).—Miss Mary Brookins, Texas Theater, 3 p.m., March 6.
Lewiston, Idaho.—Prof. Hermann S. Hering, new Methodist Episcopal Church Auditorium, March 11.
Vancouver, B. C. (Second Church).—Prof. Hermann S. Hering, Vancouver Opera House, 4 p.m., March 13.
Auburn, N. Y.—Rev. William P. McKenzie, New Jefferson Theater, 3:30 p.m., March 13.
Aberdeen, Wash.—Prof. Hermann S. Hering, Grand Theater, March 15.
New Bern, N. C.—William D. McCrackan, M.A., Church Edifice, Middle street, 8:15 p.m., March 15.
Glenwood Springs, Col.—Frank H. Leonard, Odd Fellows Hall, March 17.
Woburn, Mass.—Hon. Clarence A. Buskirk, Lyceum Hall, March 18.
Toronto, Ont.—Hon. Clarence A. Buskirk, Royal Alexander Theater, 3:30 p.m., March 20.
Los Angeles, Cal. (Third Church).—Prof. Hermann S. Hering, Temple Auditorium, 3 p.m., March 20.
Wellesley, Mass.—Bliss Knapp, Wellesley Town Hall, 3 p.m., March 20.
Durango, Col.—Frank H. Leonard, Red Men Hall, 3 p.m., March 20.
St. Joseph, Mo.—William D. McCrackan, M.A., Tootle Theater, 3 p.m., March 20.
Cambridge, Mass.—Rev. Arthur R. Vosburgh, Scenic Theater, Temple street, 3 p.m., March 20.

Pitch thy behavior low, thy projects high:
So shalt thou humble and magnanimous be;
Sink not in spirit; who aimeth at the sky
Shoots higher much than he that means a tree.
A grain of glory mixed with humbleness
Cures both a fever and lethargickness.

HERBERT.

TESTIMONIES OF HEALING.

I did not come to Science for physical healing, although I was a great sufferer from childhood. I was far more interested in that sublime chapter, "Atonement and Eucharist," in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I may say that this chapter cleared away forever my doubts on a very difficult subject.

Then came the thought, If others get healed, why not I? So I decided to call in a practitioner. At his first visit I did not like the treatment at all, and wished he would go away, but later I felt much better. At the second visit, the same thing occurred.—I felt quite sick, and heartily wished the good man elsewhere. It was, however, the meeting of error with the truth. At the third visit, the terrible illusion of belief in the law of heredity was dispelled, and I was healed of a serious affection of the stomach. I do not know how I was healed, but this I do know, that, whereas I was once almost constantly sick, now, even in the midst of much seeming discord, I am neither sick nor sorry.

I am very grateful to Almighty God for the revelation He has given to us, in these latter days, through Mrs. Eddy, of the great saving and healing truths, as taught by our "elder brother," Jesus the Christ. Take heart, discouraged ones! "Greater works than these shall he do"—thus spake the one who is declared to be the brightness of the Father's glory; the express image of His person; and who "proved Life to be deathless and Love to be the master of hate" (Science and Health, p. 44).

A. GRANT-SMITH, Portobello, Scotland.

In the spring of 1901 I became afflicted with a disease which was diagnosed as an ovarian trouble. I began treatment with our family physician in January of the following year, but although the doctor did all he could for me, I received only temporary relief. For a year and a half I suffered constant pain, and after a time complications set in, among which were stomach, bowel, and bladder trouble. I was under medical treatment five years, and at last the doctor told me that an operation was the only thing which would do me any good; but to this I would not consent.

My attention was first called to Christian Science in the fall of 1906, but I was not ready for it at that time. In January of 1907 I decided to give up medicine and try Christian Science, through the influence of my parents, who were becoming interested in it. I read Science and Health, but was taking medicine at the same time and was very antagonistic to what I thought Christian Science to be, so of course I received little benefit. Later, I decided to have help from a practitioner, and I was healed in two weeks; nor has there been any return of the trouble. I have not been antagonistic since taking the first treatment, and I have found Christian Science an ever available help in overcoming impatience, worry, and many other sins.

While I am very thankful for the physical healing, the spiritual uplifting is to me more wonderful, as I had always longed for something better than the orthodox teachings could give. I have had the privilege of class instruction, for which I am very grateful. I am deeply thankful to God for the many blessings I have received, also to our beloved Leader, Mrs. Eddy, whose faithful example is a constant help to me. I desire so to live that my life will prove my gratitude.

MISS BESSIE JONES, La Fayette, Ind.

For two years I was a miserable sufferer from appendicitis and nervousness caused by overwork. I spent two months on a ranch in New Mexico, thinking that a carefree and open-air life would restore my nerves at least, but I was no better when I returned; so with my mother I went to Colorado and spent the summer, hoping I would be benefited and able to resume my neglected school work, but alas I was able to attend only three days. All the following winter and spring I was in a condition of suffering which made existence miserable, both to myself and my people.

At last it was suggested by a stranger who called one day, that I try Christian Science. Much to my displeasure, my sister and mother acted upon the advice, and called a practitioner to see me. I was awaiting an operation, which was to occur the following week, and I told the practitioner if he could do anything it must be done that week. I was benefited by the treatment but not cured, so a friend advised me to try another practitioner. I did so, and in less than two weeks' time I was healed.

MILDRED HIATT, Amarillo, Tex.

[Translated from the German.]

I have been an adherent of Christian Science for the past eight years, and have had many opportunities to experience its beneficent influence. It was brought to my attention through a friend who had been healed by it of illness of many years' standing. I gladly attended the services and meetings, and although I did not understand much of this blessed teaching, I nevertheless always felt drawn to it, because of the joy and happiness which the congregation reflected in word and in appearance. It took but a very short time for me to be made happy by the wondrous truth which I had been seeking unconsciously up to that time.

Although I did not find my way to Christian Science through suffering, I have been freed from many a physical ailment during these years. I cannot thank God enough for having been restored to health, but I am still more grateful for the spiritual gain, for the recognition of the power of Truth. When I was younger I found but little joy in living, and my light was darkened by worry and by gloomy meditation. Since I have become acquainted with Christian Science, I enjoy a sense of activity and a desire to work which I had not known before. Now I know that divine Love and omnipotence helps us daily to overcome all false inclinations, to discern the power of good and to demonstrate it more and more; evil gradually loses its seeming power over us, and we advance joyfully and with a sense of security. Even if to mortal sense the way seems dark, we know that the light will keep growing more bright. I cannot be thankful enough that through Christian Science I have come to a better understanding of the Giver of all good.

I wish to offer heartfelt thanks to our dear Leader, Mrs. Eddy, for the wonderful truth which has been revealed to us through her. In my former church I used to anticipate the Pentecostal sermon with great joy, but now we have Pentecost constantly, for we have learned that "the Spirit of truth" is always with us.

SOPHIE HENZE, Hannover, Germany.

For many years Christian Science has been our only physician, and I want to express my gratitude to Mrs. Eddy for bringing to humanity this healing and protecting truth. Our little boy, now six years old, has never known any other remedy than Christian Science, and we have had many occasions to test its efficacy. Some time ago he was taken with a cough, and before that was overcome measles appeared. The latter yielded almost immediately to the treatments, so that in three days there was no sign of the disease, and the child never realized that he had been sick. He played about the house as usual, but we kept him in because of the fear of others in cases of contagion. The cough was also soon destroyed. Not long after this

Digitized by Google

experience he jumped out of a swing when at its height, injuring his ankle badly. The swollen and painful condition, and the fears expressed by persons who saw him jump, tempted me to have a surgeon examine his ankle, but a Christian Science practitioner quickly conquered this thought and the demonstration was made, leaving no weakness in the ankle and thus proving Truth to be omnipotent.

The physical healing in Christian Science is beautiful, but its preventive power appeals to me strongly, and for this I am very grateful.

MRS. JULIA HAWKINS EDWARDS, Los Angeles, Cal.

A little over a year ago, I had a very severe attack of bowel trouble, lasting about thirty-six hours before I decided on what course to pursue. At last the pain became so severe that I felt I could bear it no longer, and my husband said that something had to be done. He asked if I wanted a doctor. I told him I did not, but requested him to call up a Christian Science practitioner at Ogden. He did so, and I was greatly helped at once. In less than ten minutes the pain had all left me, and I was able to go to sleep with comfort. I rested perfectly that night, and arose next morning feeling perfectly well, and have never had any trouble of the kind since. I am glad to be able to express my gratitude for Christian Science.

MRS. MORGAN, Evanston, Wyo.

I have long felt that it was time to express in some way my gratitude for Christian Science and all that it has done for me and mine, but it has always seemed hard to find words that would even in a small way show what I feel. The physical healing I have received has been truly wonderful, as all my life I had been in bondage to ills of all kinds; but now, as I am able to prove the truth of being for myself, after seeing my little girl of three years exposed to different contagious diseases and not being touched by them, I realize that we are each and every one of us protected by our loving Father-Mother God.

Fear has always been for me, as I think it is for many, the most stubborn enemy to be overcome; but I am learning daily that to put our trust wholly and unreservedly in divine Principle, in our God who is all good and never sends evil on us, is bringing us nearer each day to all that we should be as Christian Scientists. While there is seemingly in my experience much to be overcome, I am learning hourly to rejoice always in ever-present Love, and in this I feel I am doing much. To prove my gratitude to God, and to Mrs. Eddy for this truth, I pray always that I may be faithful to the Cause of Christian Science.

MRS. ZOLA M. ZORBAUGH, Harlan, Ia.

I have sometimes heard it said by non-Scientists that Christian Science can be of no use in cases of injury to bones, so I am anxious to express my gratitude for what it has done for me in this respect. I am thankful to say that I have been blessed all my life with excellent health; it is therefore chiefly in regard to the overcoming of accidents that I have reason to acknowledge the power of Truth.

More than a year ago I had a fall when out hunting, injuring my right arm severely by coming in contact with a large tree root. By the time I got home the arm was extremely stiff and swollen, while the point of the elbow seemed to have got inside the arm, and it was a most misshapen and distorted thing to look upon. Christian Science was new to me at that time, and as the pain seemed very real the next day, I wrote for help, for it appeared almost incredible that such a deformity could resume its proper shape without even a bandage as material aid (I used nothing whatever). The letter was received on Sunday; and that morning the arm was badly discolored and quite immovable. It was also to sense extremely painful. About eleven o'clock the pain began to lessen, and by night the whole of the bruise and discoloration had disappeared and the swelling had considerably abated, though the arm was still quite useless. The next day, Monday, I was hunting again! At the end of four days I could straighten my arm, but it was about ten days before I could raise my hand to my head, the delay being due, I feel sure, to fear, for I could not at once overcome the dread of permanent stiffness,—not then realizing that "with God all things are possible." The arm has never troubled me since, and it is perfectly normal.

Only a few weeks ago, I had another instance of the all-power and presence of Truth. In taking a fence my horse fell heavily on its head, rolling completely over, but I escaped with only a blow on the shin-bone and the knee. With the stupid apathy of mortal mind, I did not at once "meet the adversary," and in consequence, at night I found all the signs of a severe bruise on the shin and swelling of the knee. Then I set to work in earnest; but I had to pay for my indolence, for the enemy, having once found entrance, was not to be driven out in a hurry, and it was nearly three o'clock before it was finally overcome and banished. I then fell quietly asleep, and when I awoke in the morning all traces of the bruise had vanished. Though the knee was still rather stiff, I was able to walk and ride as usual, and from that time I never felt any further ill effects from it. Under the old thought I am sure I should have been hobbling around for several days.

These are only two of many instances in which I have proved the protecting care of divine Love, and it is impossible for me to express in words my gratitude to God, and my feeling of loyalty to our Leader for her beautiful and courageous unfolding and upholding of this great truth which "maketh all things new," and opens out such immense vistas of thought as fill one almost with awe.

(LADY) MILDRED BOYNTON, Beverley, England.

I received many benefits in Christian Science before I entered the church. The first was a demonstration over an unnatural and protracted parturition. On this occasion, through the power of Truth, the conditions were almost instantaneously changed from inharmony to normality, rendering the birth safe and natural. In another case, one of my boys had treatment for an accident, his hand having been severely injured in a revolving pulley. He experienced no pain after the first treatment, and in a short time the hand was fully restored without drugs or bandage. If I were to give an account of all the good that I have received, and the errors that have been overcome for us in Christian Science, it would fill many pages. With the help of the same practitioner, I have had more recently two wonderful demonstrations over an attack of heart failure, and for this blessing alone I would like to tell the whole world about Christian Science, and in such simple words that the smallest child might read and understand.

I did not come into Christian Science very gracefully, for being in tolerably good health I thought I did not need it, and I studied the books only because I enjoyed good reading. But the time came when I was forced to acknowledge the truth of every word I had read, and was thankful for having read them. I had to study Christian Science to show me how truly ignorant I was, and now I would not give up the knowledge of it for all the other literature and sciences extant. As to our beloved Leader, "the toiler tireless for Truth's new birth" (Miscellaneous Writings, p. 386), I am trying to abide close to her loving message, to follow her so far as she follows Christ.

JULIA A. SMITHSON, Milford, Utah.

We wish to tell of the healing of our baby through Christian Science in November, 1908. Words can never express our gratitude and happiness, for they were more than could be told when he began to gain and continued to improve. He certainly had the most severe attack of throat trouble which we have ever known to be cured, but he is now as well as ever.

MR. and MRS. GLENN PUTNEY, Galveston, Tex.

I wish to express publicly my gratitude for the many blessings I am receiving each day through the study and application of Christian Science. It was not from any physical need that I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but I wished to know something of this Science which made me feel so joyful when in company with Christian Scientists or when attending their services, as I occasionally did. It was not long before I found this truth to be a religion so practical that, when earnestly applied, it would meet every physical, financial, and mental need, and I have tested it to that end.

Christian Science is established in our home and is our remedy for every discord. A few months ago our son was born, and through all perfect harmony reigned. My husband and I did our own work in Science to within six weeks of the birth, when we asked help from a practitioner who was at that time in Maine. As the law required a physician, one was called a few hours before the birth, but conditions were perfectly natural and I did not suffer at all, notwithstanding the fact that it was my first child.

I feel very grateful to our revered Leader for giving to the world this new-old religion, and I am striving more earnestly each day to live more good, to manifest more of Truth and Love.—TAYLORA KALBACH-JONES, Toledo, O.

Hoping that this testimony will help some one who is suffering, and yet seeking the truth, I will give my experience. For about six months I suffered so much with stomach trouble that I was afraid to eat anything, and the doctor did not seem to do me any good. I had almost given up hope of ever getting well, when Christian Science was recommended to me, and while I had little faith in it, I thought what was told me sounded good, and decided to try it. By the reading of Science and Health and a few treatments from a practitioner I got well. I can now eat anything that I wish without the least pain.

MRS. EMMA DICE, Tacoma, Wash.

[Translated from the German.]

It is with a grateful heart that I want to give thanks for the blessings which have come to me through Christian Science. For several years I suffered from a severe inflammation in the abdomen. This trouble kept growing worse, although I tried everything, and sought healing in famous watering-places, but without any success whatever. In the following November I had again a severe attack of this trouble and was bedfast for ten weeks. The physician gave no encouragement, but rather said that when I could get up I must submit to an operation, for the trouble would become more aggravated.

I then heard of Christian Science, but did not feel that I could accept its teachings, as I believed that God sends us suffering, and that we must bear it patiently. The fear of the operation, however, robbed me of my rest, and as I could not help thinking about Christian Science, I decided to turn to it. I applied to a practitioner, who lovingly gave me treatment. I also attended the services and meetings, and improved daily. I learned that God is Love and infinite good, that He does not send us suffering. I am also firmly convinced that if I strive diligently after the truth, and hold fast unto it, the error will not return. I have gained spiritual understanding in Christian Science, as well as health and happiness, for which I am thankful to God with all my heart. I am also very grateful to Mrs. Eddy for having shown us the way to Truth.

FRAU EMMA SUCKERT, Rixdorf, Germany.

It is more than twelve years since I first became interested in Christian Science. I did not at the time call myself really ill, but as I had been a soldier in the Civil War I had contracted several diseases, among them rheumatism with severe headaches, and at times the former was so painful that I was obliged to use crutches for five or six weeks at a time.

Through the influence of a friend I was induced to try Christian Science, which I did with very good results. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and for some time I read the Christian Science literature, but after a while I became negligent in my reading. In fact I seemed dull and did not gain in understanding, and finally turned to drugs again. This was my condition in August, 1906, when I was stricken with entire helplessness of my left hand and arm, the stroke being somewhat lighter in my face and lower limb. I immediately made application to a Christian Science practitioner for help, with the result that after six treatments I could use my hand quite well, and in a short time (without further treatments) could use it as well as ever. At the same time there was an abnormal growth back of my ear, which had been very annoying and for which a doctor had recommended a local application, saying that if it did not disappear with this treatment an operation would be necessary. Through the work of a Christian Science practitioner, however, the growth disappeared after the second treatment.

As the world counts time I am now seventy-five years old. For over sixty years I had used tobacco, and although not a heavy drinker I did use liquor, and sometimes language which was not creditable. I can now say I am thoroughly healed of all these habits, and the same habits are distasteful to me. I have been in better health the last three years than at any time during the last thirty years. I give God the honor for this healing, through Christian Science as taught by Mrs. Eddy.

WM. R. WICKHAM, Battle Creek, Mich.

It is often a help to others to know that some one was really healed through Christian Science, and I can truthfully and gratefully say that I am one among the many who have been thus restored to a life of usefulness and a growing knowledge of God. I had suffered for years from female and stomach trouble, besides a general nervous breakdown. I was treated by two of the best doctors in our town, also by a prominent physician in Washington, D. C. I, however, received but little help or encouragement from any of them, and I had given up all hope of ever being well when a Christian Scientist happened to visit a friend of mine, who asked me to have a talk with her. I shall never forget the joy I experienced when the Scientist explained to me that God is our Life; that "in him we live, and move, and have our being." I took treatment from her, and with her help, in addition to the study of Science and Health, "Miscellaneous Writings," and our other Christian Science literature, I was healed. My friends all think that I can now do as much work as any two ordinary women. We have had many other beautiful demonstrations in our home.

It is great cause for rejoicing to know that our help is always with us; that, as Mrs. Eddy tells us, "divine Love always has met and always will meet every human need" (Science and Health, p. 494). The spiritual uplifting is,

Digitized by Google

however, far more significant than the physical healing. The Bible has become a new book to me. I shall never cease to be thankful for this healing truth. My heart goes out to Mrs. Eddy for her labor of love, and I am truly grateful that through her spiritual perception of the truth we are able more clearly to see and know "that good, and acceptable, and perfect, will of God."

MRS. JOHN C. SPARROW, Cadiz, O.

Christian Science has brought to me the spiritual understanding of man's oneness with God. Words are inadequate to express the joy that has come to me through its teachings; it arouses the sense of love, peace, and friendship among our fellow-men, and these we need so much in our earthly career. Its healing power is indeed glorious. In July, 1908, I was taken with a severe illness which, according to mortal mind, would have confined me to bed for a week or more; but I tried to know the nothingness of the apparent condition, which, however, seemed so real to me that I did not make much headway. As I did not know very much then of the truth that makes free, a practitioner was sent for when the symptoms became somewhat alarming. She came at once, gave me treatment, and had been gone from the house only a few minutes when the power of Truth manifested itself. In all this seeming trouble I attended to my household duties, having even more than usual to see after. The worst attack was on a Wednesday, but the practitioner (the instrument in God's omnipotent hand) held me up in my time of need. I went to the meeting that night, knowing it would not harm me to do so, and was much benefited through the many helpful thoughts which were given out. In less than a week I was myself again and quite a wonder to those not in Christian Science when they heard what the trouble was.

For this, and for other blessings too numerous to mention, I am very grateful to God, and to our beloved Leader, Mrs. Eddy. Christian Science has indeed been a blessing in my home.—MRS. B. A. SIRES, Charleston, S. C.

I wish to express my heartfelt gratitude to God for the great blessings I have received in Christian Science. Through the reading of Science and Health by Mrs. Eddy, I was led to read the Bible more, to believe God's promises, and apply the truth as Mrs. Eddy teaches. Like many others, I came to Christian Science for healing, after I had tried several physicians and had lost all faith in them because they did not help me, although I felt sure they had done their best. My healing was slow, but I can truthfully say I am glad that it was, for had it not been so, I would not have striven to understand this inspiring truth, which has set me free and changed me from a melancholy, unhappy woman into a cheerful, hopeful one.

I give thanks to God, and to our dear Leader, Mrs. Eddy, that I have been so wonderfully helped, both spiritually and physically.—MRS. ANNIE BROWN, St. Albans, Vt.

I was healed about two years ago, through Christian Science, of neuralgia, acute lung trouble, and rheumatism. I could hardly believe it was possible that I had been healed in one treatment, and for all time, although I felt perfectly well. I asked the practitioner to give me further treatment, but she said I was completely healed. I then asked her to show me how to study the Science, which she cheerfully did. The most significant part of this wonderful truth is the spiritual uplifting. It brings with it peace and joy, and molds one into a cheerful and happy being. I am indeed thankful for having been directed to Mrs. Eddy's teachings, which show us the way to know God as Life and Truth.—MRS. MARGARET WALES, Salt Lake, Utah.

I am glad to give the following testimony for our periodicals. Words are inadequate to express my gratitude for all the blessings I have received through Christian Science, but I would like to tell of a recent demonstration. It became my duty to play in public with a few friends, but a sense of fear and limitation seemed to prevail. However, with the understanding I had gained of Christian Science, and one treatment, I played with entire ease, and my teacher even remarked how perfectly calm I was. In another instance, in my business life, discord has been replaced by harmony.—M. E. MEACHAM, S. Medford, Mass.

In August, 1908, I was taken with intense pain in my side, which continued for several hours. About midnight I called a practitioner; but, as relief did not come quickly, some members of the family became alarmed and a physician was sent for, who administered an opiate. The next day at noon he came with another doctor to take me to a hospital, saying that an operation was all that could save me. To this I objected, but the physician, who was a friend of the family, said I had better go at once. I did not, however, consent, but said I would let him know. Later I telephoned him that he need not come, and again I sent for the Christian Science practitioner. Relief was slow in coming, but the truth finally overcame the error and I was relieved. After this experience, other diseases seemed to reappear, but they were met and healed; also the tobacco habit was destroyed. (I had requested the Scientist to treat me for this.) Even my father, who came to see me, said, "Well, if Christian Science heals him, I will never take any more medicine; but he will never get out of that bed." I was healed, however, and my father was as good as his word, and has given up medicine.

Several months later, the physician mentioned asked a member of the household how I was, and was told that I had never been better and that I weighed thirty pounds more than usual. He replied, "Well, he can get down on his knees and thank God that he is alive." He also said there was every evidence that my disease had reached the stage usually considered fatal. Surely Christian Science does heal "all manner of disease," and I thank God for this evidence of His ever-presence and power. I also thank dear Mrs. Eddy, who has heard His voice and given this understanding to humanity so long burdened with sin and sickness.—HOSEA W. ROWELL, Marinette, Wis.

Out of a heart filled with gratitude to God I gladly give my testimony in behalf of Christian Science. I had been a sufferer for over fourteen years with a very painful and troublesome ear difficulty. I had consulted several doctors and done what they prescribed, but failed to gain relief. I was told by one doctor that the only hope was in an operation, and even that he feared would be the death of me. After this, through the advice of a relative, my wife was helped by Christian Science, so much so that I decided to investigate. The result was that I took up Science, and after a few weeks of treatment the old trouble disappeared and I have been entirely healed. It is now over a year since I have found that God is All-in-all and able to heal all who seek Him through divine Science.

RICHARD HAWKINS, Kenosha, Wis.

The spiritual Christ is born wherever love unfeigned is found; born into every heart that sincerely and tenderly suffers and labors for humanity; born in every peacemaker's spirit; born in every soul that rises above the power of selfishness and worldly greed, and uses its means and powers to promote the good of mankind; born where humility, gentleness, purity of body and soul, trust and submission, faith, hope, and charity are seen to dwell.

HENRY W. BELLOWS.

FROM OUR EXCHANGES.

[*Churchman.*]

When one looks at the temper of the present age, the possibilities are small for making mere intellectual propositions engines for accomplishing reunion. Reunion, even when championed by commonplace men and supported by imperfect methods, is better than the most consistent scheme of disunion. It may take the energy of a Calvin or the patient labor of a Laud to divide Christians; but the master hand of genius is not necessary to teach men the meaning of fellowship and love. Fraternity in practice is worth more than the dialectics of one who would show that all churches but his own are wrong, or that his own has a vein of golden ore which none other possesses.

[*Christian Register.*]

A happy soul, drawing its happiness from the deeps and not the shallows of life, feeling the pulse of divineness that throbs through the universe, makes discontent and ingratitude heinous, not because evil and sin are overlooked or ignored, but simply because, if we live in the sense of inner peace, our service is more effective, our love of charity more human and sincere. We see that the heights of life where the sunlight is resting bid us rejoice, and we believe that in time the golden rays of pity and service will reach the dark valleys and make them glow with effective help.

[Rev. Charles F. Aked in *Standard.*]

We are to clear our minds of the idea that the kingdom of heaven is to be in heaven, or everywhere else than in our homes, our cities, and our world. And we must relegate to the limbo of dreams the idea that the kingdom has to be ushered in by a spectacular judgment-day, a dramatic assize, a celestial jury, and a glorified Christ, throned and crowned as judge and king for ever more. The kingdom of God is the kingdom of good, of goodness, and it is found wherever men and women live in love of God and one another.

[*Zion's Herald.*]

The supreme test of systems of religion is their power to alter human lives, to destroy the dominion of sin, and to promote the reign of love divine. The guiding question to ask is: Will this produce the highest results in the purification of the soul, will it beget an all-consuming zeal to do good, will it best transform a sinning, suffering, dying world, filling it with a peace and virtue and joy not of earth? Here is the chief touchstone for creeds and their teachers.

[*Examiner.*]

The appeal to us is continually to apprehend and embody Christianity more perfectly, especially as men are practically taking the samples we present to them as their standard of judgment, and are accepting or rejecting it, according as they find in us a logic commending it or discrediting its reality and blessedness. Every human individual and social interest urges upon us the utmost faithfulness in all services of love and helpfulness.

[C. A. S. Dwight in *Christian Intelligencer.*]

The spirit of the age is pragmatic; we pride ourselves on our ability to do things. Now this is all very well if, while we are doing so very many things, we do not neglect to do the thing which above all others needs attention—the perfection of the moral life in obedience to the will of God.

[*Interior.*]

And still men have not learned what Jesus was so anxious to impress upon his hearers—that soul healing does not come as a result of physical betterment, but physical betterment as a result of soul healing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

A special pamphlet, comprising the two well-known articles by Mrs. Eddy, "Personal Contagion" and "What Our Leader Says," in large type on special paper, silk-sewed with overhang cover.

The Christian Science Hymnal, revised and enlarged, containing some fifty new hymns.

A new and desirable photogravure of The Mother Church edifices and the Publishing House.

For prices see opposite page.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, should be addressed to the editor, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES. Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science Movement It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: Single copy, one year, $2.00, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; twenty-five copies, each, one year, $1.80, six months, $1.10; fifty copies, each, one year, $1.60, six months, 95 cents. These rates apply in the United States, Canada, Mexico, and Cuba. To all other countries, add 40 cents yearly for postage on each subscription.

TERMS OF SALE: Postpaid to any address: Per copy, twenty cents. Ten copies, to ONE ADDRESS, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Ten copies, ONE ADDRESS, $2.10; twenty-five copies $5.00; fifty copies, $9.00.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3.00. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5.00 a year, $3.00 for six months. In all other countries additional postage at the rate of $3.00 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE, POSTPAID: One or more copies, 50 cents, each, yearly. Foreign subscriptions, 60 cents. Yearly subscriptions only received.

TERMS OF SALE: One or more copies, postpaid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postpaid.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, 10 cents a copy, 60 cents for six months, $1.00 a year; all other countries, 12 cents a copy, 75 cents for six months, $1.25 a year.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 93 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.56; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A remonstrance against further increase of the navy, signed by five hundred ministers of Boston and vicinity, has been forwarded to Washington. The remonstrance declares: "The fact that the United States, which has no enemies but is on friendly terms with all nations, is spending more than thirty per cent of its revenues, postal receipts not included, on preparations for war and nearly seventy per cent for war purposes, if the expenses of past wars be included, or nearly four hundred million dollars a year, should in our judgment cause the Government to take immediate action for the reduction of military and naval appropriations. We believe that the legal system already embodied in The Hague conventions is adequate to meet the requirements of international justice, on an honorable, equitable, and economic basis."

The committee on naval affairs of the House will recommend to the House the following vessels: Two battleships to cost about eleven million dollars each; two fleet colliers at one million dollars each; one repair ship to cost one million dollars; four submarines costing about five hundred thousand dollars each. The naval appropriation bill, as now practically completed, carries about one hundred and twenty-eight million dollars, as compared with one hundred and thirty-six million dollars last year.

The bank guaranty fund law of Oklahoma had its first severe test last summer when the Columbia Bank and Trust Company failed, and the depositors were paid dollar for dollar claims amounting to $2,800,000. This depleted the state's supply fund to such an extent that under the law another assessment was levied on the other banks. The state's action was fought by the banks on the ground that the law was unconstitutional, and was decided for the state in the state courts. It was appealed and is now to be adjudicated in the United States supreme court.

That John D. Rockefeller plans to spend his millions on a still greater scale than ever in the cause of education, charity, and other beneficent objects, was made clear last week, when Senator Gallinger introduced a bill to incorporate "The Rockefeller Foundation," which will have headquarters in Washington. Behind the incorporation is hidden the greatest plan for the systematization of charity in the history of the world.

"Cosmopolitan clubs" composed of foreign students enrolled in American colleges, exist at present in twenty-three educational institutions. They result in bringing together the picked men of various countries of the globe, in developing a mutual understanding, admiration, and love among men who are probably destined to be prominent in their own countries in coming years, and point happily toward a future world unity.

All over the country on March 1 corporations hastened to file with internal revenue collectors the reports of their business called for by the new corporation tax law. Many thousands of corporations, however, did not file reports and so have become liable to penalties. Many of the returns that were sent had protests attached to them. Iowa is the only state in which complete returns were made.

The Senate has passed the bill authorizing the issuance of thirty million dollars' worth of certificates of indebtedness for the completion of irrigation projects of the Government already under way. The bill is intended to supply sufficient money to finish these works, and it is contemplated that the certificates will be redeemed by money derived from the sale of the lands redeemed by the improvements.

The Western Union Telegraph Company has promulgated orders to accept messages over the telephone from any regular subscriber of the American Telephone Company, to be transmitted as telegrams. This order makes it possible for every subscriber throughout the entire country to send a telegram without leaving his residence or his office.

At a conference held at the White House, attended by Attorney-general Wickersham and Senators Aldrich and Crane and Speaker Cannon, it was decided that the railroad, the postal savings bank, and two conservation bills should be pressed for passage with all the power at the command of the Administration party.

The second meeting of the New Jersey mayors' conference has been held at the State House. The legislative committee, appointed at the first meeting several weeks ago, has completed drafts of bills for uniform accounts in municipalities and limited bond issues for cities. The committee also favors a short ballot bill.

A minority report of the committee on interstate commerce on the Administration's interstate commerce bill condemns the measure unsparingly. It makes the statement that the bill prevents neither the combination nor the overcapitalization of railroads, and is declared to be ineffective for these evils.

The House committee on interstate commerce, by a majority of two, has voted to create the interstate commerce court, the provision for which the President and the attorney-general have been working.

The Senate, after debate, disapproved of the bill giving legislative authority for future appropriations to purchase sites for the construction of buildings as residences for diplomatic officials abroad.

International.

The Dalai Lama, the religious head of Tibet, has left Lhasa, because of the approach of Chinese soldiers, and has fled to Darjeeling, India. That the trouble in Tibet is the direct result of arbitrary British interference is asserted by Sir Henry Cotton, whose long years of official service have made him an authority on Far Eastern affairs. He says: "The present crisis at Lhasa is the aftermath of the British expedition under Colonel Younghusband [ostensibly to impress the necessity of respecting treaty obligations] into Tibet seven years ago. At that time I vigorously protested against the unwarrantable assumption of Lord Curzon that the suzerainty of China over Tibet was 'a constitutional fiction.' The truth is that for about two hundred years that suzerainty has existed and was never disputed. The only result that could ensue has happened. It was inevitable that China would assert her authority by drastic measures, aiming at the establishment of effective power in Tibet. The situation is a direct consequence of our interference in Tibet, and is very embarrassing for the British government, upon which are now forced most delicate and tactful negotiations with China regarding Tibetan affairs in which we have no real concern." The Chinese government has replied to an inquiry by Great Britain, setting forth her intentions in Tibet, and the reply is regarded as satisfactory by the British foreign office. China declares that the interior administration of Tibet will not be changed. Japan declares that China has made a grave political mistake in degrading the Dalai Lama, and that its action in disregard of the interests of the Powers concerned should not have been taken without consultation with Great Britain, Russia, and Japan.

The Smithsonian African expedition of Colonel Roosevelt broke up at Gondokoro, Sudan, last week, all of the porters and half of the servants returning to Kampala and Nairobi. The former President of the United States will arrive in Berlin May 10, and the authorities of the Berlin University are arranging for a cordial reception. Emperor William has also indicated his intention to entertain him. It is understood that, acting on the precedent in the case of ex-President Grant in June, 1877, when on a tour of the world, the London Corporation intends to offer to Theodore Roosevelt a public reception in the Guildhall, London. Paris also will entertain him fittingly.

Reports made to the Mexican government for the fiscal year 1908-1909 by the oil-producing concerns show that the oil yield of the republic for that year had an aggregate value of approximately $2,400,000. The oil refining business is at present confined to the Pearson interests, which operate a large plant at Minatitlan, on the Isthmus of Tehuantepec, and the Waters-Pierce Oil Company, whose plant is at Tampico. The Mexican Petroleum Company has a small refinery at Ebano.

President Fallières has personally called on Prince von Radolin, the German ambassador to France, to express condolences on the recent demise of the ambassador's son. As this is the first visit a President of the republic has paid to the German embassy since the Franco-Prussian war, it has created much comment.

The official reports of the flood damage in eighteen out of the eighty-six departments of France show monetary losses of $14,000,000. This includes the $10,000,000 damages done in Paris, but here as elsewhere no account is made of the indirect losses, which are incalculable.

An anticipated deficit of $42,000,000 in the Russian income has disappeared, and the budget for the first time in twenty-two years shows a surplus of $1,850,000.

Industrial and Commercial.

The annual peanut crop of the United States is about twelve million bushels, worth seven million dollars, but the production is now far below the demand. The cultivation of peanuts has proved a profitable industry for Japan, from which country the United States imported over fifty-five hundred thousand pounds in the first ten months of last year.

Three-cent street railway fare with municipal supervision of the car lines has become a reality in Cleveland. The receivership of the local traction lines which has existed since Nov. 12, 1908, is lifted and the Cleveland Railway Company has taken over the property under an ordinance recently approved at a referendum.

More than $13,500,000 is to be spent in 1910 for new equipment for the Great Northern and Northern Pacific railroads, the line of James J. Hill.

The geological survey estimates that there are 15,104,500,000 tons of coal in the known coal areas of Alaska.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WHAT CONSTITUTES HEALING.

CLARENCE W. CHADWICK.

HEALING and reformation go hand in hand in Christian Science. Where one is found, the other is sure to be. They can never be separated without losing sight of God as divine Principle. What is called health without morality is simply a blind belief without understanding. The healing of physical conditions necessarily involves the correction of the moral fault that is often responsible for the physical disorder.

Jesus' teachings clearly reveal the mental cause of so-called physical conditions, and the mental remedy for such conditions; but until Christian Science was given to the world, even the professed believers in Jesus' doctrine were trying in every way possible to reverse the law of cause and effect and to make mind subordinate to matter. As a result of over forty years of application of the Principle of Christian Science, the world is rapidly awakening to the simple but profound truth that thought is first in everything, and that mental causation is therefore the one important question for consideration. Much valuable time has been spent in the vain endeavor to build up a philosophy of life upon the changing foundation of material effects. *Materia medica* has witnessed the ravaging effects of wrong thinking upon the human body, and instead of working upon the mental and moral plane to correct the difficulty, has unwittingly admitted the superiority of matter over mind. With the moral sense uncorrected, human belief has thus been left to subsist upon its own subjective conditions of thought without the health-giving inspiration of enlightened understanding. The clay has been given power over the potter, and matter and health regarded as inseparable. In short, the thought of matter has been first and the thought of Spirit regarded as of secondary importance. This has left the true understanding of health to be revealed to the world through Christian Science.

In Christian Science the order of thinking is reversed and cause and effect are vested in Spirit or Mind. Health is found in Mind and not in matter. Intelligence assumes its natural place as causation and power, while non-intelligent matter is proven to be but a subjective state of human consciousness. The barriers of sense are thus torn down and thought is set free to grasp the hitherto unknown realities of Spirit. Christian healing becomes a tangible and practical reality, an every-day essential in the life of the progressive Christian worker. It means to him the overcoming of all that is unlike good. It is vastly more than the experience of temporary surcease from aches and pains,—it is the correction and subjugation of that which caused the so-called physical suffering. It is primarily the forsaking and overcoming of sin. It is the conquest over every degrading and obnoxious habit or practice, a radical forsaking of all that pertains to the so-called animal nature of mortals. The Christian Scientist knows that Truth and its idea cannot be separated in the right metaphysical practice. If this important fact is lost sight of, the so-called practitioner becomes merely a mental quack, doctor, or manipulator, and can no longer utilize the power of divine Mind to heal and to bless mankind. Right practice is the exercise of right thought, and right thought will correct sin as readily as it corrects disease. It is therefore a moral impossibility to heal disease and at the same time leave sin uncorrected. If sin is ignored or smoothed over, mental causation and true mental practice are misunderstood.

True Christian healing—and there is no other—embodies the essentials of repentance and reformation; in other words, a scientific correction of thought, and this correction will be made manifest in daily living, in genuine honesty, in sobriety, and in purified affections. If the outward evidence of disease or suffering has been removed as the natural result of seeking "first the kingdom of God, and his righteousness," the signs of true healing are in evidence. To get relief in any other way involves reliance upon some form of erring human belief, and the relief thus obtained falls far short of the Christ-healing. There is evidence on all sides to prove the influence of erring human thought and belief in removing the symptoms of disease, but in a majority of such cases it can truthfully be said that "the last state of that man is worse than the first." This is not Christian healing. It is but a change of belief and not the acquisition of true health or happiness. It is simply a mortal mind-cure in which there is no purification, resurrection, or correction of thought; the belief in the reality of matter and disease is left intact.

It is this kind of cure that the Christian Scientist is striving to have eliminated from the realm of mental practice. He knows that there is no warrant for any such practice, either in the Bible or in "Science and Health with Key to the Scriptures." Despite the ignorant assumption of those who insist that he is working through human will-power or suggestion, he adheres rigidly and understandingly to the one Mind as being the sole healing power in the universe. He knows that the law of God or Mind is just as operative to destroy sin as it is to destroy disease, and consequently that the healing of one includes the healing of the other. First, last, and always it must be understood that true healing is inseparable from purity of thought. Regardless of all appearances to the contrary, no genuine healing can come through an impure channel. The individual who becomes engrossed with the demoralizing allurements of material sense has lost sight of the healing Principle which "thinketh no evil," and his so-called treatment becomes nothing more nor less than a mental argument based wholly upon false premises.

The close student of Science and Health will always look for improved moral conditions as the one satisfying evidence of corrected thought which always accompanies true healing. Demonstration in Christian Science is synonymous with overcoming, and this fundamental fact must not be lost sight of in considering its healing work. Good and evil do not proceed from the same source, nor do they flow through the same channels. In corroboration of what has

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

been said upon this point it is well to ponder seriously and understandingly Mrs. Eddy's words in "Rudimental Divine Science" (p. 8), where she says, "Heal through Truth and Love; there is no other healer."

CHRISTIAN SCIENCE THE SCRIPTURAL HEALING.

MYRA EMMONS.

IN the seventeenth chapter of the first book of Kings is related the healing, by the prophet Elijah, of the son of the widow of Zarephath. Studying this story in the light of Christian Science, its spiritual signification is found to be much greater than the mere words at first seem to indicate, for the spiritual understanding of the text confirms fully the fact that the healing which is today being wrought through Christian Science is identical with that which was performed by Jesus and occasionally by the prophets, when they, as Mrs. Eddy writes in Science and Health (p. 333), "caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love."

The account says that Elijah said to the widow, "Give me thy son. And he took him out of her bosom, and carried him up into a loft, where he abode, and laid him upon his own bed." The words, "And he took him out of her bosom," clearly indicate that Elijah perceived, through spiritual consciousness, the separation between the spiritual concept of man, in the image and likeness of God, perfect and immortal, and the false belief of a mortal origin; and that he in thought separated the child's spiritual identity from the material sense of the mother. He recognized the divine fatherhood and motherhood of God, instead of a material sense of parentage. Mrs. Eddy says, "Entirely separate from the belief and dream of material living, is the Life divine" (*Ibid.*, p. 14), and this separation Elijah made in understanding.

Elijah then took the child up: that is, realized the exalted identity of the spiritual idea; and the loft where Elijah abode, to which he carried the child, was synonymous with that upper chamber where Jesus took his disciples when he broke for them the bread of life. We next read that "The Lord heard the voice of Elijah," and that the child was awakened from the dream of death. When Elijah delivered the child to his mother, as the Bible expresses the action, the healing was made manifest in the flesh. The fact of the indestructibility of Life and of man as the idea of Life, was made fully apparent, even to the so-called material senses. Job says, "Though . . . worms destroy this body, yet in my flesh shall I see God." Well might this mother say to Elijah, "Now by this I know that thou art a man of God, and that the word of the Lord in thy mouth is truth."

The healing of so-called physical disease and the raising of the dead was then, as now, indisputable proof of the action of Truth. The chapter of which this specific account is a part is full of spiritual beauty and instruction for Christian Scientists, who have received through "Science and Health with Key to the Scriptures" the understanding to interpret it. When Elijah said, "Give me thy son," he asked the widow to surrender her material sense of motherhood to the higher spiritual sense of the infinite, divine motherhood, and when she had done this her son was restored to her, not dead, but alive through the power of Truth. We also see in this chapter that before this healing and awakening from the dead took place, many footsteps in scientific unfoldment had been taken both by Elijah and the widow.

Elijah had warned King Ahab of the drought that should come upon him and his people because of their disobedience, and in this punishment of material sense Elijah himself had to share, as the Christian Science practitioner must sometimes share the experiences of others in putting off the beliefs of material sense, for the brook Cherith, which was for a time his supply, "dried up, because there had been no rain in the land;" but Elijah's implicit obedience to the commands of God preceded each of his demonstrations. When told that the brook Cherith should supply him with drink and that the ravens should feed him, he went unquestioningly to the place to which God sent him; he allowed no mortal sense to lead him to reject the perception of the fact that Love was able to sustain him, even in the wilderness. He was, therefore, supplied with the water of life, and the birds of the air—representing messages of Truth and Love—brought him spiritual sustenance, which also was made manifest in the flesh.

When the brook failed, it was a call to higher demonstration. Every material source of supply was gone. It is not recorded that Elijah made complaint or expressed doubt or fear. He was not left to do so. We read that "the word of the Lord came unto him," and Elijah heard and obeyed the dictate of divine guidance, even though it led him into Zidon, the country of his enemies, where one of his greatest works was to be done. It led him to a woman whose need was greater than his own, for she was not only without sufficient supply herself, but was unable to meet the need of her son, who was dependent, as far as she knew, on her. Elijah was compelled to prove for her and her son, as well as for himself, that Spirit alone is the full and abundant and unfailing source of supply for all.

It is noticeable, also, that the woman's thought was receptive and obedient. She did not condemn God. She asked but one question—if it was for her sin that her son had been taken from her. She did not insist on an explanation, when Elijah said, "Give me thy son;" she surrendered, without complaint, her maternal grief to faith in God. Elijah has been called "the gospel prophet," and this great work which he performed shows how thoroughly he understood the nature of the Messiah, Christ, Truth, as the eternal Saviour of mankind. Christian Science is the again appearing of Truth, connecting all ages, past, present, and future, and proving the present immortality of man.

THE LENS OF CHRISTIAN SCIENCE.

EDITH BINGHAM BITTEMORE.

WHILE walking along a country road one day, I came to a small bridge stretching across a dark, swamplike place, where the water was scarcely visible on account of a thick green covering, over the surface of which insects of every description were briskly running. At first glance the place seemed most repellent, and I would have turned away at once had I not discovered something which suggested a deep lesson. In the midst of the mire, untouched by their sordid surroundings, a cluster of pure white lilies were opening their fresh faces, close set in a mass of sturdy green foliage. As the sun shone upon them, their strength, beauty, and purity were intensified, and even the unpleasant surroundings seemed subdued by their sweet presence.

A few years before this picture would not have awakened any thought other than that of admiration for the flowers; but I had recently come to the dawn of a new light, and was now looking through a spiritual lens called Christian Science, that enabled me, as it has many others, to perceive symbols of spiritual truth which had not come within the range of my vision before. In the light of Science, the picture became profoundly significant. It symbolized the world of sin, disease, and woe in which mankind is seemingly enveloped; nevertheless, with the aid of this wonderful lens, we are enabled to look through the veil of material sense and see God's pure and perfect man in all his beauty, while the objects of sin and disease disappear in proportion to our perception of the truth of being.

When its serviceability is understood, this lens of Chris-

Digitized by Google

tian Science can but be desired by all the world, for with it the spiritual universe of God's creating is clearly seen, the reality of being appears. It is turning human thought away from its disheartening beliefs in a God who either sends or permits sickness, sorrow, and death, or who provides for His suffering children only such material remedies as sooner or later lose their asserted healing power. In thus removing deplorable conditions of thought, Christian Science is lessening the manifestations of evil and multiplying the manifestations of good. It enables us to prove that the sick as well as the sinful can be healed here and now of the diseased and sinful thoughts which have caused inharmony and suffering, and be brought into a realization of that perfect love which casteth out fear through the saving knowledge of the only true God, infinite Life, Truth, and Love. Moreover, it gives us proof of the spiritual man whom God created "in his own image," and who is revealed through Christian Science as having remained perfect and Godlike. We learn that even as the lilies bloomed unspotted, despite their repulsive environment, so mankind may rise above repellent mortal conditions and find freedom in the service of Truth. What a glorious inheritance is this,—to realize our God-given right to dominion, our right to manifest health, strength, peace, and purity!

For many centuries, until the discovery of Christian Science, men were taught that sin and sickness are real and that they cannot be avoided on this plane of experience, though they were still encouraged to believe in a good and omnipotent God! As the fruit of these beliefs, sin and disease have been manifested in their worst form, though prayers and drugs have been freely employed in the effort to dissipate them. Mortal belief in God has not been sufficient to bring relief to suffering humanity, and this for the reason, as Mrs. Eddy has written, that "more than profession is requisite for Christian demonstration" (Science and Health, p. 141).

The great Wayshower used this same spiritual lens. He declared that he had come to "destroy the works of the devil,"—sin, sickness, and death; and he commanded all of his followers to go and do likewise. He instructed his followers not only to "preach the gospel," but to "heal the sick, cleanse the lepers, raise the dead, cast out devils;" and he declared that "these signs" would follow them that believed (understood) his way. He even said that greater results would be accomplished, if only we had the necessary faith (understanding); and he also said, "Heaven and earth shall pass away: but my words shall not pass away." Thanks to the Discoverer of Christian Science, these words of the master Metaphysician are being fulfilled today, and the world may well rejoice that there has been one who so closely walked and talked with God, who has been such a transparency for the Christ-mind, that she has been able to rediscover the Science of Life which Christ Jesus so perfectly understood and demonstrated, but of which he left no definite rule. Today the word of Truth is revealed to the world through the inspired pages of "Science and Health with Key to the Scriptures."

Through our Leader's great discovery we perceive and are able to prove, in the measure of our spiritual apprehension, the truth of her words, "The divine Love, which made harmless the poisonous viper, which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion, can heal the sick in every age and triumph over sin and death" (*Ibid.*, p. 243); and all who endeavor to see and prove the truth of this message are being awakened into newness of life, being blessed, comforted, and healed through the knowledge of God, divine Mind. It is a glorious and enduring fact that honest seekers for Truth have found and will continue to find in Christian Science that which they have long desired yet little hoped for,—a present salvation, a means of freedom from the thraldom of sin and suffering, here and now.

Surely all the beneficiaries of Christian Science, all who have felt the power of the living God, have an ever-increasing sense of gratitude toward the consecrated woman who is pointing the way to all, and who is leading those who are spiritually-minded and responsive ever nearer to God.

As down in the sunless retreats of the ocean
Sweet flowers are springing no mortal can see,
So deep in (her) soul the still prayer of devotion,
Unheard by the world, rises silent to Thee.

CHURCH WORK.

HORACE H. THAYER, JR.

THE Christian Science text-book defines the church as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (p. 583). The church is, therefore, the universe as God made it and as He sees it; and every activity which helps to bring this universe to conscious realization might well be called church work. In our daily activities we can do much to bring about God's kingdom on earth, but how much of our time can we consider as truly devoted to work for God when measured by the Master's rule: "Take no thought for your life, what ye shall eat; neither for the body, what ye shall put on. . . . But rather seek ye the kingdom of God; and all these things shall be added unto you."

Church work is the definite support of that which declares and proves the one God, and man as His image and likeness. To the Christian Scientist it is the support of all Christian Science activities in which he is privileged to share, chief among which is his local church or society. Every such church or society is an organized effort to see and realize God's universe—the structure of Truth and Love—and to unsee materiality and its contradictory sense testimony. To do this demands earnest work on the part of its members,—work prompted by love of God and of one's fellow-man, by gratitude for the fruits of the labors of others in this same vineyard, and gratitude for the consciousness of one's ability through Christian Science to assist in bringing God's kingdom to earth in the healing of the sick, sinning, and sorrowing.

However important our daily tasks, they are largely of and for the day. Even the most stupendous achievements of engineering have their end; while church work is a work for all eternity, and the fruit of this work cannot be measured, but must continue to multiply on and on in endless progression. In his second epistle to Timothy Paul writes: "The husbandman that laboreth must be first partaker of the fruits. Consider what I say; and the Lord give thee understanding in all things." In Malachi we read: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." This opening of the windows of heaven is the inevitable result of the realization of God's universe. God created everything and pronounced everything good, and this truth has but to be realized to be brought home to us in all its fulness. Every overthrowing of the falsehoods which influence and govern mankind helps in this realization and is a tithe brought into the storehouse.

The growth of the organized Christian Science church work in any community is a measure of the realization there of God's kingdom. It measures the unfolding of heaven to the husbandman that laboreth, to the whole community, and to the world. It measures the substitution of the love and fellowship of God for sin, of joy for sorrow, of health for disease; in short, of life for death. Christ Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

THE PRESENT POSSIBILITY OF PERFECTION.

GORHAM H. WOOD.

WE admit that God is infinite good, but how seldom we actually apply the thought of infinity to the present moment. Infinity seems to have a suggestion of futurity for many of us, and the apparent lack of perfection in our consciousness at the present moment waits for development to work its gradual improvement.

Is this the best possible? Must we wait for growth to lead us from present limitation into future freedom? What is the future? Truth recognizes only the eternal now, and whispers in the listening ear, "Now is the accepted time; behold, now is the day of salvation." If "procrastination is the thief of time," it is even more the thief of spirituality. It would beguile us into the belief that whatever seems at hand today is all we may expect; it would clip our pinions, and keep us from the soaring thoughts that otherwise would wing their way to heaven.

Life is not a span of preparation for some different experience under different conditions. Life is continuous, perfect—now and always. Conditions do not bind us. Man is free. His only need is the realization of this great fact, and realization or the perception of reality will never come except in some present moment. Postponed, it is for all the time of postponement absolutely lost. Accepted as present, it is to some extent understood and demonstrated; and, as practice in all good thoughts is the one and only road to perfection, some present day we shall find ourselves free.

Early training in limitation of all kinds must be overcome through the enlarged understanding of eternal perfection. The evidences of the material senses must be disregarded; the spiritual, the eternal, the only perfect, must be our present goal, if evil in its many forms is to be successfully relegated to the forgotten haze of a dead past. Too much consideration of the past and future has led to the temporary oversight of the glorious present, and in his own consciousness man's capacities for present attainment have been dwarfed. In the perfect consciousness of God man is today perfect, and Truth is ever ready to reveal this fact to him who in consecration and humility listens for Truth's voice.

Christ Jesus has already demonstrated the science of perfection under conditions inconceivably harder to human sense than any which we are called upon to meet. The way has been shown us, and the footsteps in that way are so clearly set forth through the discipleship and teachings of our revered Leader, Mrs. Eddy, that the opportunity is presented each one of us to take the path from earth to heaven. In this path the sun is ever shining, now and always. Accomplishment today is open to us. We are free. "For this glorious result Christian Science lights the torch of spiritual understanding" (Science and Health, p. 202).

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 3, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1909, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk.*

Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Frederick Dixon in *Electrical Industries*, London.]

What is described as "the policy of telling a deluded patient that he is really in the best of health," is about the biggest nonsense that could be repeated of Christian Science; it is about on a par with the statement that Christian Scientists tell their patients that they do not exist. I have heard critics make such statements several times, but I always thought it was their idea of humor, or else an indication of a little leaning toward malice. I never dreamed that anybody seriously believed them.

What Christian Science does teach, of course, is that sickness is a mental phenomenon, and that this being so, it has to be overcome by destroying the mental germ. In plain English, that the doctor deals with symptoms, while the Christian Scientist deals with causes. Inasmuch as matter, according to Christian Science, is a phenomenon, it is not, absolutely speaking, real. A Christian Scientist, however, in maintaining this, is not going any farther than the teachings of philosophical idealism, in which it is maintained, equally emphatically, that there is no reality in matter. Ultimately Christian Science parts company with philosophical idealism as completely as with philosophical materialism. It is, as a matter of fact, absolutely logical in its deductions, and never gets the length of destroying phenomena through phenomena, but always works to destroy the causes producing them. It is not only the only logical, but the only scientific way.

[Frank Bell in *Pittsburg* (Pa.) *Leader.*]

If my assertion that "the coming of good into consciousness accentuates the qualities of evil by comparison" were to be paraphrased so as to read, "the coming of intelligence into consciousness accentuates the qualities of ignorance by comparison," the fact that ignorance is merely negative, the absence or lack of intelligence, nothing, would not thereby be challenged. Every educational endeavor in the world is maintained in face of the admitted nothingness of that which it aims to destroy, namely ignorance, which exists only as a lack.

The educator applies to those who are willing to be rid of ignorance certain positive rules of intelligence, and the student, in proportion to his receptivity, comes out from under the so-called law of mental lack or ignorance; a radical change has taken place, though nothing truly real or eternal has been destroyed. The Christian Scientist applies to the conditions of evil which affect his pupil, or patient, certain positive rules of truth, and in proportion to the understanding of the rules and the receptivity of the pupil sin and disease are destroyed.

Christian Science healing results from the demonstrable understanding that all evil, sickness and sin inclusive, is in its final analysis negative. Any one who will may prove this in his individual experiences. Those who cling to the ancient superstition that evil of any sort is a part of the divine plan, are confronted with the necessity of some day trying to explain, to themselves at least, wherein they are justified in endeavoring to upset the plans of divinity by resorting to any means for the overcoming of evil.

[Lindley Fogg in *Tiffin* (O.) *Tribune.*]

It should be understood that Christian Science is not claimed by its Discoverer and Founder to be a discovery of anything absolutely new, but rather that it is a rediscovery of the proper interpretation and application of the eternal truths found in the Bible, as taught and practised by Jesus and his disciples, in destroying sickness and sin. Christian Scientists freely acknowledge the good done by those who do not belong to their own faith, and when
