In the morning the neighbor came in very early to see how we were, and was much surprised that the doctor had not been there, as they had left the message for him to come when he returned home. He was again called and came in a little while. He said that he would have to get another doctor to help him. This was done, and after the shoulder was set my husband was dressed and about the house the rest of the day. One of the doctors remarked while they were setting the bone that it was strange there was no discoloration, and the other one said, "Wait till tomorrow and it will be black." There was, however, no pain, soreness, or discoloration. We had to do our work in Christian Science alone till Sunday, when our friends came to us. My husband went back to his work in six weeks after the accident, and although he had very heavy lifting to do, he did not suffer in any way.

Some months after this, my husband came home in the forenoon suffering from a sudden attack of illness. He was unable to speak plainly and he could not understand what I was saying to him. I put him to bed, and I had to leave him alone when I went to summon a practitioner. In less than an hour she was with us, and when we went into his room he recognized the lady and I saw he looked better. At noon he got up, dressed, and ate dinner. He went to the reading-room in the evening and continued to improve steadily. He went to work the Monday following the Wednesday on which he had the shock. I will not speak of the alarming appearance he had when he came home, but will say that the action of the bowels which had stopped became normal in a few hours, and he has remained well.

We cannot find words to express our gratitude for even our slight knowledge of the truth that made us free.

FLORENCE J. M. FANEUF, E. L. FANEUF, Lebanon, N. H.

The peace and joy which has come to me through the study of Christian Science is far beyond any word I can say of it, but let my word carry what degree of blessing it can,—it may help some one, even as I have been helped by the word of others. When I come to bear witness, a hundred instances flash at once into my memory, any one of which would prove the Principle of Christian Science. With my four children various disorders have from time to time been overcome without material means. An ear trouble of many years' standing, and which came to be a daily annoyance to me, has entirely disappeared, and for the encouragement of those whose troubles may seem to cling a long time, let me say a word. For this ailment I went for help to experienced practitioners, and after weeks of treatment the trouble still appeared to be the same, and they both gave me the same answer, namely, the work would have to be my own. After the first had finished her treatment and given me this advice, with a faint hope I tried the second; but it proved to be as they said.

The fear of lack of employment and limited income has been overcome with the realization of an infinite source of supply ever ready and at hand to meet our needs. In my daily work in the home, I find that I can "run, and not be weary," for it is all, including the laundry work, done by my own hands. At the end of the heaviest of busy days, to be able to prepare the dinner for the family and enjoy with cheer the guests who come to join us there, and at midnight still be not aweary, is indeed a boon. If busy mothers and all workers would study the secret things of God, the hospitals and rest resorts would not be so full of nervous wrecks. For having found the secret, I am grateful, first of all to God, then to Mrs. Eddy, who has made so clear to us our true being—what we really are as children of God; then to our splendid band of workers in the Christian Science publishing house, who find the best there is and send it out to us for our daily help; and then the good workers in the field whose tidings bring inspiration and encouragement through our periodicals.

I keep the *Sentinel* ever at hand, whether in the kitchen or laundry, and I study diligently some portion of our weekly Lesson, making it my own and trying to keep in mind the suggestions for the daily discipline of our thoughts and acts as prepared in our Manual by Mrs. Eddy. My work is being done somehow, and my heart is joyous meantime, the thoughts not pinned to the work but often flying to the ends of the earth in the knowledge of the good being done, and the uplifting sense of peace within is restful. Thus we can make our work our footstool. This is a new sense of life to me. I have passed through the old, the time when the salvation of the family was vested in the family physician and all kinds of material props; now we have the one "great Physician" ever at hand, and oh, the joy of this knowledge!

KATHARINE M. TUCKERMAN, Framingham, Mass.

I feel impelled to give my testimony to the healing power of Truth, from a heart filled with gratitude and love. I wish to acknowledge a few of the blessings which have come into my life through the study of Christian Science, in the hope that others may be helped along the way. Three years ago I was suffering from rheumatism, vertigo, and a stomach disorder, and had been ill more or less for the last ten years. Through a friend I was advised to attend a Wednesday night meeting. I did so, I saw the truth, and was healed. I was healed of rheumatism in three treatments, also of a severe case of blood-poisoning, affecting both legs. I was also healed of the tobacco habit, and the truth destroyed the liquor habit also. I can surely say that the eternal God is my refuge, and "underneath are the everlasting arms." I can also say that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

For all the physical healing I am very grateful, but I am even more grateful for the spiritual quickening which I gained through the study of the Bible and the text-book, "Science and Health with Key to the Scriptures." It has lifted me out of mental despair, and has given me "a God at hand," to whom I can go at all times,—the never-failing Principle. Our dear Leader reminds us that "we must seek the undivided garment, the whole Christ, as our first proof of Christianity, for Christ, Truth, alone can furnish us with absolute evidence" (*Ibid.*, p. 142). Both my wife and myself have been lifted out of the sense of materiality to a spiritual plane never before attained, and we give the glory to God. I also desire to express my gratitude to Mrs. Eddy for bringing us this new-old truth. My daily prayer is for wisdom to recognize the divine leading, and to be able to demonstrate my faith by my works.

VALENTINE PETZOLD, Chicago, Ill.

I wish to corroborate the testimony of my husband given above, and to add my thanks for the many blessings which we have both received through Christian Science, as I have been healed of numerous ills through the application of the truth. I had suffered for many years from an abnormal growth, which was overcome in a very short time; also my eyesight is greatly improved; headaches have been met; also an attack of acute lung trouble, which was overcome in a day and a half.

For the physical healing I am truly grateful, but more so for the spiritual betterment. I have learned to look to God for my supply, and I find that in Him is abundance. The Bible and Science and Health have become our daily companions, though before coming into Christian Science we had not a Bible in the house. My heart goes out in praise and deep thankfulness to God. I am also grateful to our beloved Leader, Mrs. Eddy, for placing before us this great truth.—MRS. ANNA PETZOLD, Chicago, Ill.

[Translated from the German.]

It is one of the beneficent activities of divine Mind that changes take place from time to time in our environment, whereby our thought is turned toward things more serious. Whoever is desirous of making progress along spiritual lines must become acquainted with these things, for which, however, time and patience are required.

I wish to tell how I was healed of a wound on the leg of years' standing, through all-encompassing divine Love, which is made manifest under all circumstances through Christian Science. Last spring, on getting up one morning, I found myself unable to stand or walk. I immediately decided to telephone for Christian Science treatment. During this time I read the Bible, Science and Health, *Der Herold*, and the daily paper, the *Monitor*, and thereby began to see that it was not a physical trouble which needed to be healed, but my thought; thus the healing, thanks be to God, soon followed.

A. RUGGLE, SR., Floradale, Ontario, Canada.

I am glad to express my gratitude for the help Christian Science has been to me. Over a year ago I was suffering from an eye trouble and sleeplessness. I was under the care of a London specialist, who prescribed a course of treatment which I faithfully followed for more than a month, at the end of which time I was in a very bad way owing to lack of sleep and mental depression. For quite two months I had been unable to sleep, and was very nervous and run down in consequence. This was my condition when some one suggested that Christian Science might benefit me. Only too glad to try anything that might possibly afford me any relief, I obtained an introduction to a Christian Science practitioner and asked for help. With the first treatment I slept soundly the whole night through, and have never been troubled in that way since. The treatment was continued for a fortnight, by which time the eye trouble was overcome, the only physical manifestation remaining being a slight appearance of redness, which cleared up a few days later, leaving the eyes quite normal. A growth on the eyelid which the surgeon advised me to have removed by an operation has also disappeared, and I can truly say that I am brighter and happier and in better general health than I have been for years. The mental gloom has also vanished, together with the accompanying sense of nervousness and fear.

Christian Science has revealed to me the healing power of Truth, and is teaching me to understand life in an entirely different way. For this I am deeply grateful to God; also to Mrs. Eddy, who by her beautiful example has shown us the way which helped me in my hour of need.

EDWARD W. PARSONS, London, England.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY.

Following the world-wide publication of editorials and articles relative to the life and work of Mary Baker Eddy, and especially the excerpts from the editorials which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, requests came to the Publishing Society from all over the field that these articles might be preserved in a form that would be practicable for wide distribution, convenient for ready reference, and suitable for private and public libraries. The field will undoubtedly be gratified to learn, therefore, that a book (132 pages with index) containing the "Excerpts from Editorial Comments," also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding.

Prices for paper covered edition: Single copy, prepaid, 15 cents; twelve copies to one address, $1.50; fifty copies, $5.75; one hundred copies, $10.00. Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4.00; twelve copies, prepaid, $7.50.

FROM OUR EXCHANGES.

[Rev. Anson Phelps Stokes, Jr., in *Outlook*.]

No theologian of high standing claims that the historical person Jesus of Nazareth was himself the second "person" of the Trinity. That would mean at least two Gods, which is unthinkable. He is rather the perfect embodiment in place and time of the active principle, the *Logos* of God. That eternal Word is striving today to embody himself in your life and in mine as he did completely in the life of Jesus, but our selfishness prevents the completion of the process.

And so it is with the doctrine of the divinity. This is not necessarily bound up with any theory of Jesus' birth, or with any inherited dogma regarding his person. When I speak of the divinity, I mean that Jesus completely revealed the Father's spirit; that he perfectly showed the world the truth of man's kinship with God. In a word, that he is the incarnation. Athanasius was right in insisting that Jesus Christ is of one substance with the Father, but there is no adequate New Testament reason for doubting that this is also true of the spirit of man. We have not so much thought of our Master in too exalted terms as we have thought of humanity as too limited in its possibilities. The difference between the "man of Galilee" of the first century and the men of England and America in the nineteenth century, if I understand my gospels aright, is not in inherent capacity to draw near God, but in the relative degree of realization of a latent power common to humanity. It is this that has created the uniqueness of Jesus.

[Rev. William Adams Brown, D.D., in *New York Observer*.]

Theology, like philosophy, cannot create, it can only interpret; and the material with which it deals is religion. It is one of the unfortunate effects of the period through which we have been passing that this fact has so often been forgotten. Criticism has been exalted from a means to an end, and the great convictions by which the soul of man lives have been treated simply as curious historical phenomena, the unraveling of whose rise and fall constitutes a fascinating problem for the mind. This unsympathetic attitude is, I believe, one of the chief reasons for the widespread suspicion of the new theology, but it is a phase which is sure to pass. Indeed, I believe that it is rapidly passing. As the new view of the world becomes more familiar, and the results of criticism more assured, men will gradually come to see more clearly how impotent is thought apart from faith. They will value theology, whether new or old, in the measure in which it deepens, enriches, and purifies experience.

[Rev. W. W. Curry in *Universalist Leader*.]

As a matter of fact the equal rights of all men are not yet recognized or respected. Looking out on the world as it is, we are tempted to say that injustice and inhumanity are the rule, and justice and mercy the exception. But on a review of the history of the race we can discover that some progress has been made toward the good which the Lord has shown us. The world is growing better, not worse. Race hostilities still exist, and "man's inhumanity to man" still makes "countless thousands mourn." But Christian nations are becoming more civilized and just. Equality before the law is more generally conceded. There is "a good time coming," when justice and mercy will prevail. "The morning light is breaking; the darkness disappears." The time will come when all men will walk humbly with God, and in peace and fellowship with each other; when "the knowledge of the Lord shall cover the earth, as the waters cover the sea."

[*Christian World.*]

The twentieth century will prove, as previous centuries have done, that the seemingly passive periods are those where unseen forces, working far down beneath the surface, are shaping new manifestations; manifestations which, in all that concerns the real interests of the soul, will far surpass the old. The pause in the music is to give emphasis to the something higher that is coming. The new religious synthesis will have its own forms. There will be vast readjustments, revaluations in spiritual things, where much that is now up will go down, and much that is down will go up. Away with our fears for the religious future! The movement is always upward.

[William W. Guth in *Christian Advocate.*]

Every right act accomplished puts us in accord with the system of righteousness by which this world and humanity are moved. In this system the dictates of a quickened conscience perfectly fit, and ever more are we closely associated with a "spiritual order, larger, higher, worthier" than ourselves. This spiritual world becomes real to us and our faith therein unshakable. There are voices without and within prompting to a better life. We begin to understand these voices, we hear the divine presence breathing in our souls. For "he who does the right comes to see the good; and he who sees the good finds God and blessedness."

[R. S. H. in *Continent.*]

We are ourselves filled with unrest. We are not satisfied with what we are, or have, or know. We would be stronger, truer, nobler. We know we cannot realize any such ambition by adherence to a creed, or by attacking any one who does not hold to the creed that we do. The only cure for unrest is ceaseless activity, and the one activity that can satisfy a soul is that which makes one strive to realize the noblest things in Christian living. We will never cry to any Christian man, seeking honestly in his own way to satisfy the unrest of his soul, though in a way different from ours, "Thou art a sinner."

[*Congregationalist and Christian World.*]

To find God in the midst of the city's din and hurry, to find Him at the post of duty in the isolation of the farm, the household, the country parish—this is our daily problem, and our success in so doing is the test of the reality of our spiritual life. But our ability to find God in the midst of the day's busy activities will depend upon our taking Him with us there from the quiet moments spent alone with Him in our closets at the day's beginning. It is out of the life of secret habitual prayer that the power of spiritual discernment grows.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

There are times when we all get glimpses of that greater self, that self beneath the self, that life within our life that struggles for expression like a bird behind the bars of a cage, that soul within the soul which, as a fourteenth-century mystic puts it, "hath never consented to sin, nor ever shall." That is the real you, the real me, the real man in every man, and—praise God!—some day when our long probation is over we shall gloriously know it in the eternal kingdom of light and love.

[*Christian Commonwealth.*]

The most important truth concerning man still is that he is a son of God. If the churches could but see the bearings of this truth and work steadily at a social evolution of society that would be worthy of it, there is no doubt that the world would recognize them as indispensable to true progress. The failure of the church is the failure to realize deeply its own truth, and to lead society in the path of its actualization. We have got grand beliefs if only we lived in their power.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10x7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.60; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, *single copy*, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Experiments by the postoffice department for the last ten weeks show that the government can effect an immense saving by shipping a large part of its second-class mail matter by freight cars rather than in mail cars, as heretofore. The class of mail in which the change will first be tried is the semimonthly and monthly publications of the East, which it is planned to bring to six distributing points in freight cars. These six points are St. Louis, Cincinnati, Chicago, Kansas City, St. Paul, and Omaha. Bids from the railroads for the freight car service have been asked, to begin July 1. The saving effected at St. Louis alone, where the trial has been made, will mean an annual saving of eight hundred thousand dollars to the government.

As a result of geologic field examinations the administration has withdrawn 62,140,548 acres of probable coal land and has restored to agricultural entry 18,777,756 acres of non-coal land, which had been withdrawn from entry pending the geological survey's determination of its character. A single Montana withdrawal, made last July, included 20,208,865 acres. The amount of coal contained in this area is almost incredibly great. A single forty-acre tract, for example, contains over two million five hundred thousand tons of coal. The present outstanding withdrawals awaiting geologic classification aggregate 80,007,688 acres.

Extension of the time to arrange general arbitration treaties will be necessitated by Germany's expressed willingness to enter nenegotiations. It is assumed that each of the four powers engaged, France, Great Britain, Germany, and the United States, will insist upon knowing what the others are doing at every step, in order to make sure that no one power secures any undue advantage, and this will complicate the work.

Coincident with the closing of the term of the supreme court of the United States and the departure of the justices for their summer vacations, has been the planning of an immense amount of work for the court when it meets again next October. Thirty-five cases, some of them of far-reaching importance, have been advanced for hearing on the first day of the next term, "or as soon thereafter as practicable."

The board of estimate of New York city has authorized Commissioner Edwards of the department of street cleaning to rent a sufficient number of patent vacuum machines, which collect the street dirt without raising any dust, to clean one hundred and fifty thousand squares of one thousand square feet each. The expense will be about seventy-five thousand dollars, and the machines will be in use before Dec. 31.

The initiative and referendum have been adopted by eight states—Oregon, Oklahoma, Nevada, Missouri, Montana, South Dakota, Arkansas, Maine, and the territory of Arizona. In addition to this, there are seven states whose Legislatures voted last winter to submit initiative and referendum to the voters at the 1912 election—Colorado, California, Washington, Wyoming, North Dakota, Nebraska, and Florida.

The constitutionality of the law passed by the Massachusetts Legislature in 1907, directing that deposits in savings banks and trust companies, unclaimed for more than thirty years after the date of the last deposit and whose claimant was unknown, be turned over to the state, is upheld by the supreme court of the United States.

The supreme court by a unanimous decision has pronounced the American Tobacco Company and all the elements composing it, both corporate and individual, to be a corporation in restraint of trade within the prohibition of the Sherman antitrust law, and ordered its disintegration.

The recent decision of the supreme court in the Standard Oil and American Tobacco Company cases will result in a sweeping attempt to secure criminal conviction of violators of the antitrust law, according to Attorney-General Wickersham.

A committee of the House of Representatives is investigating the United States Steel Corporation.

International.

An irrigation scheme which it is hoped will make famine in the Deccan, the peninsular portion of India, a practical impossibility, is at present being carried out. The water that falls on the Ghats is being impounded in vast reservoirs, from which it is being led by long canals to the Deccan, and it is hoped by this means to make the area affected richly productive in ordinary years and at any rate productive in the driest possible years. This vast project has resulted, so far, in three different schemes. One of these, the Darna river project, should be brought into partial operation soon; the second, the Pravara project, is making good progress, and the third and greatest, the Nira right bank canal, project, has gone up to the government of India for sanction.

One of the first acts of President de la Barra, on assuming the duties of his office as provisional President of the Republic of Mexico, following the acceptance of the resignation of Porfirio Diaz, was to send notes to the representatives of aggrieved nations, telling them that a court of claims would be established immediately for the consideration of demands against Mexico for damages. It is said that the court will be in session within a month and claims will be considered according to diplomatic precedence.

The Chinese government has complied with the demands of the constitutionalists and the Grand Council has been converted into a ministry responsible to the National Assembly. Prince Ching, who has been president of the Grand Council, assumes the positions of premier and minister of foreign affairs. Six viceroys of important provinces will constitute an advisory board for the ministry. A Privy Council and a committee to draft a constitution have also been appointed.

The Persian National Council has adopted a proposal of the minister of finance, investing W. Morgan Shuster, the American financier, who recently was appointed treasurer general of Persia, with the most extensive powers for the control of the finances of the country. These will include the proceeds of the recent loans.

The total population of India on March 10 last, as given by the returns was 315,001,099, an increase of 20,640,043 on the figures of the census of 1901. The division of the population was 244,172,371 in British territory and 70,828,728 in the native states.

The British foreign secretary has informed the Portuguese representative in London that the British government is ready definitely to recognize the Portuguese republic as soon as the constitution is voted.

The acting premier of the commonwealth of Australia declares that Australia will never agree to admit Japanese immigrants.

Scotland has a population of 4,759,445, according to the provisional figures of the census just made public.

Industrial and Commercial.

More than seventeen million five hundred thousand dollars will be expended on municipal and railroad work and building operations in Spokane, Wash., this year, and of this amount the city's share is approximately six million dollars. The Chicago, Milwaukee & Puget Sound, the Northern Pacific, and the third division of the Oregon-Washington Railroad & Navigation companies have plans for work costing six million five hundred thousand dollars, and architects and contractors estimate that fully five million dollars will be invested in new buildings before the close of the year.

A plan to reclaim eighty million acres of swamp land east of the Rockies has been formulated by the Chicago council of the national irrigation congress. The value of the land to be developed will be increased a billion and a half of dollars. Reclamation of swamp lands by national drainage will be one of the important subjects on the program of the irrigation congress, which will hold its nineteenth annual session in Chicago next fall.

The production of cement in the United States has increased from 760,000,000 pounds in 1880 to 24,827,000,000 in 1909. This increased production has been accompanied by decreasing imports of that article from foreign countries. Thus imports in 1910 were but one tenth as much as in 1895, while exports of domestic cement in 1910 were thirty times as much as in 1895.

The custom of many American manufacturers and exporters of sending letters and packages by mail with insufficient postage is said by consuls to be the cause of much annoyance to foreign correspondents and frequently is responsible for failure to establish profitable relations with foreign commercial houses.

May 24 advertisements were authorized by the war department calling for bids within two months for three hundred and fifty thousand yards of carded woolens; and if this trial proves satisfactory, woolen instead of worsted will be the standard cloth for uniforms.

J. J. Hill, chairman of the board of directors of the Great Northern Railway Company, in a statement announces the execution of a first and refunding mortgage securing a total authorized issue of six hundred million dollars on the Great Northern and Chicago, Burlington & Quincy railroads.

The Pittsburg Coal Company has sold its coking coal lands to the United States Steel Corporation. This includes seven thousand acres in the Connellsville field and a lot of beehive ovens. The price was between fourteen and fifteen million dollars.

The White Star Line's great steamer Titanic has just been launched at Belfast, Ireland. The Titanic and the Olympic are each forty-five thousand tons register, 882½ feet long (one sixth of a mile) and 92½ feet broad, the largest steamers sailing the seas.

A cave has been discovered in the Big Horn mountains near Story, Wyo., which is said to rival the Mammoth cave in Kentucky.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PROGRESS, NOT REGRESS.

HON. CLARENCE A. BUSKIRK.

CERTAIN metaphysical thinkers are employing the phrase, "the eternal regress," to designate the supposed futility of pursuing a class of metaphysical questionings. The thinker who tries to solve certain primary problems, for example, the origin of sin, the origin of falsehood, the origin of what Paul calls the carnal mind, the origin of what Mrs. Eddy calls mortal mind, is told that such questions involve a process which always merely regresses but never gets forward. One metaphysician likens this to the futile efforts of an animal trying to jump out of too deep a hole, and always falling back to the place from which it seeks to escape.

However welcome such a summary disposal of difficult problems may be to those who think they have neither the time nor the patience to linger upon them, it may be useful to consider, nevertheless, whether it does not involve an unsuspected species of agnosticism. And it ought never to be forgotten that agnosticism has its origin and its end in mental discouragement. Besides, agnosticism is essentially illogical; for it involves the contradiction that in affirming that certain things are unknowable, it thereby affirms that they are knowable in at least one respect, namely, their unknowableness. If there is one thing, however, upon which more emphasis is laid in the Bible than any other, it is the fact that God may be known and His law demonstrated.

We have the right certainly to declare that we do not know, or may even venture to declare that no one now pretends to know, the answers to some questions; but all this is quite far from justifying the assertion that at some future time no others can know such answers. It is the indefensible "begging the question" which is so frequently encountered; as, for example, in the classification of certain physical sicknesses as "incurable." Materialistic physicians have the plain right to say that according to their discouraging experiences there seem to be certain incurable diseases, but this does not excuse their pronouncement that these diseases can never be cured by some method distinct from their own, especially since we have the unequivocal statement that Christ Jesus healed "all manner of sickness and all manner of disease" and even overcame death.

The truth is all that is knowable. The truth is the only thing that is not unknowable. The truth is manifesting its activities constantly, everywhere and in everything; it never shows any disguise or guile, but works in the open. If we fail to understand, the fault is with us. The origin and nature of sin has been regarded by metaphysicians as one of their most unknowable problems. They have never been able, nor have any others been able, to reconcile the existence of sin with the existence of God. When sin is understood, as Christian Science teaches, to be neither truth nor reality nor affirmative fact, the irreconcilable conflict in human thought between God's existence and sin's existence begins to disappear. Many of us have rested at this point. We have tried to be content with the thought that the explanation of sin as an illusory phenomenon settles the question, yet it is useful to meditate upon all that relates to the truth of man's being, and to seek to be able to distinguish between falsehood and truth.

The notion conveyed by the phrase "the eternal regress," however specious or alluring, ought not to be harbored. If we fail to find satisfying answers to some of our questionings, let us hold such questionings in patient abeyance, instead of impatiently declaring that their answers are unknowable.

We all recall the familiar childhood myth of the crock of gold that awaited the one who could find the precise spot on which the end of the rainbow rested, and there have doubtless been many who entered upon the quest of its discovery, persisting despite repeated disappointments. One thing, however, was an assured fact to the uplifted gaze of youth, namely, the promise of eternal hope, hence eternal progress, which was symbolized by "the bow in the cloud" that ofttimes spans the deluge of doubt and fear. In Christian Science we have not alone the hope which denies the possibility of regress, but the truth which declares for eternal progress, rising as it does above the floods of mere belief, and resting upon the mountain-top of scientific demonstration.

THE WORKS OF GOD MADE MANIFEST.

DOROTHY GRAFIN VON MOLTKE.

JESUS' disciples, seeing a man who had been born blind, immediately (like most of us today) looked to heredity for the explanation of his affliction. The Master, however, knew, as Mrs. Eddy has since so clearly pointed out to us, that "divine Mind is the only cause or Principle of existence. Cause does not exist in matter, in mortal mind, or in physical forms" (Science and Health, p. 262); and his answer therefore was that neither the blind man nor his parents had sinned, but "that the works of God should be made manifest." On another occasion, when speaking of Lazarus, he said, "This sickness is . . . for the glory of God, that the Son of God might be glorified thereby."

For a long while it was not clear to me what Jesus meant by these sayings, for I felt it was not possible to imagine that God had purposely created the man blind, in order that, after many years of suffering, he might be healed, and thus be the occasion, as it were, for the great Teacher to exhibit some of God's mighty works. This is an explanation which most thinking people have long since rejected. While puzzling over this problem, a sentence in Science and Health came to mind, bringing with it light and clarity, as each sentence in this "Key to the Scriptures" does when even partially understood. It was the following: "The very circumstance, which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares" (*Ibid.*, p. 574).

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

From this we learn that it is by realizing the unreality of our suffering and overcoming our sense of disharmony (not by passively being victimized by it, or believing it to be God-sent), that we are able to understand a little more of what the true spiritual creation is. Therefore, every time that we see the utter nothingness of evil and the allness of good, the works of God are being made manifest to our consciousness, and then follows their externalized manifestation. Moreover, it is the Son of God, Christ, Truth, who is being glorified when we overcome seeming discord. Living in the generally held belief that matter can give us both pain and pleasure, God's works are not being made manifest in us, although this manifestation really should be the one object and only lasting joy in our lives. A suffering sense, however, more frequently induces us to look for Truth and glorify the Son of God, than does a belief in the pleasures of material sense; so that it more often happens that we find the truth which makes us free when the circumstances are deemed "wrathful and afflictive."

In Christian Science great emphasis is laid upon the fact that in reality God is the only cause, and hence that all causation must be spiritual. This Jesus knew, and he was able to make it so clear to the afflicted man that he understood his true relationship to his creator and saw, not only physically but spiritually as well! Thus it was that the blind man, having a suffering sense, was able more quickly to realize the truth and manifest "the works of God" in so doing, than many of the rich and comfortable Pharisees who looked on at this demonstration of God's power, but who having eyes yet saw not.

Job, too, exclaimed in a moment of great spiritual insight, "In my flesh shall I see God;" that is, as Mrs. Eddy spiritually interprets this declaration, "Now and here shall I behold God, divine Love" (Unity of Good, p. 55), and this fact is being experienced by hundreds all the world over, thanks to the light and understanding which Christian Science gives us. Every time sin is destroyed or sickness overcome through the knowledge of the allness of God, good, in that moment do we see God, and this manifestation of "the works of God." This treading on holy ground is one of our most wonderful experiences in our journey from sense to Soul.

CHRISTIAN SCIENCE AND CITIZENSHIP.

W. W. TOTHEROH, LL.D.

CHRISTIAN SCIENTISTS who are readers of the periodicals which the wise forethought of our Leader prompted her to provide for their instruction and guidance, certainly have not lacked plain and forceful reminders of the demands, opportunities, possibilities, and duties that are brought to them in these times. From a variety of view-points watchful, alert, and capable students have been directing the attention of their fellow Christian Scientists to the needs of the present. History is fast being made, but what the story will be depends upon the fidelity with which the various obligations are being fulfilled by each one in his or her place. With the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," Christian Scientists are equipped to meet every responsibility wisely and efficiently, and often in so doing to afford to those about them practical and impressive demonstrations of the scientific basis of their religion.

Recently, due to peculiar circumstances, there has been "precept upon precept; line upon line, line upon line; here a little, and there a little," touching the obligations of Christian Scientists to themselves, to their fellows, and to The Mother Church and its government. But only inferentially has there been anything set forth that could be made applicable along the lines of the duties of Christian Scientists in the highly important matter of citizenship. It may seem strange and incomprehensible, nevertheless it is a fact, that there are some who hold the thought that because they are Christian Scientists they should eschew politics and everything kindred thereto; and if they persist in this attitude, they can but become apathetic, uninformed as to the methods of government, political issues, and public men, neglectful of their suffrage right, and therefore fail to have influence with those who are in authority.

According to the logic usually employed in such cases, it might be held that Christian Scientists should withdraw from business and from social relations with those who are not of their religious belief; but there is nothing, either in the Bible or in Science and Health or in any of the authorized literature of Christian Science, that fosters such a disregard of the responsibilities of citizenship. On the other hand, the teachings of Christian Science make for the best citizenship in every respect. Besides this, Mrs. Eddy repeatedly disclosed an active interest in matters of government, commended faithful servants of the people, and contributed liberally to public undertakings. Such was the spirit evinced by her in civic affairs that exceptional recognition has been accorded her in formal action by public officials.

Christian Scientists certainly owe it to themselves, to their fellow-citizens, and to their cherished cause, to be awake, intelligent, and active in meeting and discharging their political duties. They are in the world to be doers, but they need not necessarily be of the world. Here are applicable the words of Jesus: "Ye are the light of the world." "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." In these days when the public conscience gives evidence of sensitiveness, and when there are demands for reform in the interest of a clean, wholesome, safe, and beneficent administration of government in cities, states, and the nation, Christian Scientists with their high ideals, their understanding of divine Principle, and their Christ-consciousness, qualities that ensure power and efficiency, certainly ought to be found where duty calls, and especially where the need is so great that the healing power of Truth and Love be exercised. It is not for them, therefore, to sit with hands folded and complacently declare that all will be well. They should stand in the open, know and be known to those entrusted with political affairs, carefully use the ballot, and where qualified and adapted to serve in public station, if their services are wanted, they should if possible be ready to act for the common weal. Where conduct is governed by Principle, politics will not detract from spirituality, but on the other hand politics will be characterized by what is right and good and beautiful.

Of all citizens Christian Scientists ought to be the last to concede the power or the reality of evil in any place. They know that God reigns and that He is good, and that good will inevitably supplant evil, which has being only as mortal man admits of it. Patriotism is not religion, but pure religion with all its other blessings makes for a genuine and active patriotism.

"FORBID THEM NOT."

LAURA GERAHTY.

To mothers, and to teachers in our Sunday schools, there comes frequently a very intense longing to be better able to express to the little ones the means by which they themselves are enabled to quiet the uprisings of mortal mind and to quell the disturbances of human desire and temperament. The sorrows and disappointments of maturity are no greater than the sorrows and disappointments of childhood; the destruction of the humble violet crushed under a passing footstep is the same in degree as the destruction of the forest tree by the force of disturbed elements. Both are seemingly destroyed by the aggressive and unauthorized power of material forces, and each one is as real or unreal as the other. The torrential tears of passionate childhood carry with them exactly the same appeal as the quieter and more hidden grief of manhood and

Digitized by Google

womanhood, and likewise the simple desire to understand, the seemingly intenser desire to be able to impart.

Humanly speaking, the one requires no greater remedy than the other, for will not a tender word of Truth effectually cure them both? Scientifically handled, the subject is robbed of all its difficulty, for in God, infinite intelligence, we live, move, and have our being, and in that state of existence there can be no imperfection or incompleteness. Just as the swift passing ray of winter sunshine is part of the glorious and ever shining sun, so each one of us, according to his understanding, manifests something of the Mind which was in Christ Jesus, when we scientifically allay another's doubt, fear, sorrow, passion, or pain; and as we supply, however imperfectly, a child's simple spiritual need, so does he experience something of the result which is expressed in the sermon on the mount,—the divine assurance that those who hunger and thirst after righteousness "shall be filled."

"Jesus loved little children," Mrs. Eddy tells us, "because of their freedom from wrong and their receptiveness of right" (Science and Health, p. 236); and he said, "Suffer little children to come unto me, . . . for of such is the kingdom of heaven." Jesus suffered them—took them in his arms and blessed them—made the purity and simplicity of their little hearts the atmosphere of the kingdom of heaven. Is there any fear, then, that the children of today will fare less liberally than the children of Jesus' time? Surely it is only our own belief in the superiority of manhood that gives any semblance of truth to the belief that the needs of the children cannot be met by spiritual means today as they were in Jesus' time. Just as the small forget-me-not at the side of the stream drinks in exactly enough for its need, and the tall willow by the great river a sufficiency to refresh it to the top of its highest green leaf, so we know that each one of God's little ones can reflect enough of the divine intelligence to satisfy his spiritual longings, enough of the ever-present and inexhaustible truth to counteract any seemingly present error of belief in stupidity or ignorance; and instead of lying low ourselves in the belief of our own incompetence to impart the truth of being to these little ones, let us "rise in the strength of Spirit to resist all that is unlike good" (*Ibid.*, p. 393), all these temptations to be bound down by any fears or doubts of our own ability to preach the gospel and to heal the sick.

God is no respecter of persons, and Isaiah says, "Ho, every one that thirsteth, come ye to the waters." Out of five barley loaves and two small fishes Jesus fed a large and hungry multitude; fed them liberally, satisfied them completely, so that there were baskets full to spare. Why was he able to accomplish this task which seems so impossible for us to repeat today? Was it because he knew the divine supply to be infinite, and knew that this supply upon which he always implicitly relied was equal to any demand he chose to make upon it, capable of filling every one who hungered?

There have been times when our five barley loaves have seemed quite inadequate for the needs of the hungry ones, and there have been times also when the weary multitude have seemed quite incapable of stretching out their hands to the disciple to take their share of the "living bread." One moment's prayer (Jesus blessed the loaf and brake it), one moment's silent contemplation of the oneness of God and His ideas, the impartiality of divine intelligence, and we no longer hear the disciples' fearsome murmur, "What are they among so many?" In the satisfying presence of omnipotent Love there is always enough for all; the disciples' faces relax from an expression of fear to that of contentment as they hear again the invitation, "Make the men sit down." In some of the gospels we read that not only were the men fed on this occasion, but also the women and the children; and so it must be today.

Jesus knew, when he boldly broke the little loaf, that Love was the source of supply, else there would have been little more than cruel mockery in that hospitable command. Jesus knew also that though a thousand more demands were made upon his apparently inadequate supply, divine Love was there to meet the need; and no fear of defeat ever characterized the Master's proceedings, else his demonstrations could not have been so continuous and complete.

As we close our ears to the voices of doubt and gaze only upon the outstretched hands of Love, we are again invited to sit down and partake, and all fear of our own incompetence and all sense of limitation in either child or teacher will pass away and be absolutely lost in the nothingness of mortal beliefs, and there will be instant realization of plenty and to spare. Then our little ones will no longer seem perplexed or indifferent. They will gaze into the eyes of the willing and obedient disciple, whoever it may be, and stretch out eager little hands to take all they need from Love's abundant supply. And thus shall we obey that tender yet urgent appeal to "suffer little children," and effectually close the door on our own fears, that we "forbid them not."

VISIBLE AND INVISIBLE.

HELEN R. PLATT.

In Romans, St. Paul says, "For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made." We learn in demonstration that every effect has a mental origin or causation, and that things visible to this mortal vision may symbolize things that are invisible to this human sight. We get a chain of beautiful thoughts from David in the Nineteenth Psalm: "The heavens declare the glory of God; and the firmament sheweth his handywork." Whoever has traced the stars in their courses, noted the phases of the moon, studied the rising and setting of the sun, or trusted the seasons to come and go in their regular order, finds with proper study that each and all of this points to that invisible intelligence, the creator of the one creation. As we expand in thought and become more and more receptive, we discover new beauties and interests, thus receiving all we are ready to receive or have prepared ourselves to be capable of receiving, the world unfolding to us a grandeur and glory out of what was to us formerly emptiness or chaos.

In "Miscellaneous Writings" (p. 331) Mrs. Eddy very beautifully expresses her thought in these words: "As mortals awake from their dream of material sensation, this adorable, all-inclusive God, and all earth's hieroglyphics of Love, are understood; and infinite Mind is seen kindling the stars, rolling the worlds, reflecting all space and Life,—but not life in matter." We certainly get glimpses of the promise by seeing the beauty of human existence, in the same way that if we know and love our brother whom we have seen, we become more capable of knowing and loving God whom we have not seen. The world is only to us what we are conscious of, and often becomes one vast whispering gallery, though but a vacuum to the inattentive and heedless.

The artist must first feel and see mentally all that he would give to the public gaze upon his canvas, must absorb and study both consciously and unconsciously, voluntarily and involuntarily, all phases and conditions of his subject, until his whole being is filled to overflowing. Before he takes up pencil and brush his conception is matured, his work is done, and now his hands obey his will, the invisible is understood by that which is made. Likewise the sculptor masters first in thought every statue or monument by an indwelling communion with all the invisible beauties of his ideal, before he can or does eventually make the visible manifestation with tools that do his bidding, giving to the world the carved marble that glows with the inspiration of his genius. In "Miscellaneous Writings" (p. 86) Mrs.

Digitized by Google

Eddy tells us that "even the human conception of beauty, grandeur, and utility is something that defies a sneer. It is more than imagination. It is next to divine beauty and the grandeur of Spirit. It lives with our earth-life, and is the subjective state of high thoughts."

The poesy as well as the religion of the Bible shows forth grand lessons, teaching us that God's love, might, and majesty are made manifest, visible, in inexpressible loveliness of form and color; that the rainbow of promise outvies the painter's palette; that the lily of the field outrivals Solomon's glory and grandeur; that God the divine artist forms and colors His own ideas in all the beauty of His holiness, giving to man His glory as a model, His righteousness as the light, His truth as the teacher. The mentality of our daily life and living is our strength, yet we grasp the meaning of this very slowly. Correct views, or facts rightly and firmly held, bring to our thought or conscious vision what were before invisible, because our spiritual sight was dormant, not awakened. It has been said by an able writer that to see clearly is poetry, prophecy, and religion, all in one, and that right living is a fine art not mastered or controlled by the five senses.

A proof of the mentality of all our senses is made evident in the many cases of deaf, dumb, and blind receiving such wonderful enlightenment. Helen Keller, the noted deaf, dumb, and blind girl, says in an article written by her, that the Bible gave her a deep sense that things seen are temporal and things unseen are eternal. The experience of this wonderful girl certainly adds strong proof of the mentality of all senses. Her innate thirst and eagerness for knowledge, without any physical aid but touch to receive impressions, have given her grand opportunities to demonstrate the visible and invisible things of the universe. It has been told of Laura Bridgman that toward the close of her life she expressed this thought to one who had tried often to give her some evidence of her immortality: "Yes, I now see that I shall live forever." She finally beheld this truth which had seemed so difficult for her to grasp. No physical sense aided her, for she possessed none of sight or hearing; yet she now beheld the fact of man's eternal existence. From the outward world she had been an exile the greatest part of her life, but she at last heard the voice of God and beheld herself as a child of God with her full inheritance.

In the same line of reasoning Jesus was the visible manifestation of the invisible Christ, Immanuel or "God with us." Throughout the Old Testament, especially in the eleventh and fifty-third chapters of Isaiah, are promises and prophecies concerning a visible priest and king, one in fleshly form that should satisfy the prayers and demands of the Israelitish nation. The chronicles of the New Testament testify to the general lack of any understanding as to the Christ-appearing. The desire and expectancy for a temporal king, robed in "purple and fine linen," caused the people to overlook the spiritual, glorified Christ; also Jesus, the visible manifestation, became nothing to them in their blindness. They crucified him in thought and finally in deed; or, as Mrs. Eddy expresses it, "After . . . the crucifixion of the corporeal man, the incorporeal Saviour—the Christ or spiritual idea which leadeth into all Truth—must needs come in Christian Science, demonstrating the spiritual healing of body and mind" (Miscellaneous Writings, p. 163). Thus is spiritual being understood through the inspired writings of our revered Leader.

SOLVING OUR PROBLEMS.

FRANK B. HOMANS.

We learn in Christian Science that "Love is reflected in love," and again that "Love is the liberator" (Science and Health, pp. 17, 225), in perfect keeping with John's declaration that "perfect love casteth out fear." In these statements we have ample justification for saying that love is a most important factor in all human affairs.

Every mortal has his problem in life to meet. The banker counting his wealth or the farmer striving to make a living on his little patch of land, the mistress or the maid, the merchant or the porter, the teacher or the pupil,—each and all have their problems, and to each one Christian Science offers a method of solution which if followed will produce more satisfactory results than can be obtained in any other way. It is this: meet it with love! Whether the problem is wealth or poverty, loss or gain, buying or selling, collecting or trying to pay, hiring or serving, teaching or being taught, sorrow, sickness, or danger—whatever the case may be, we are to face it bravely; not with doubt, fear, hate, or with stubborn resistance against supposed fate, but we are to meet it with love!

We are also to treat it with love,—know that because God is good, because He is Love, and that as His children we have a lawful right to partake of His bounty, that we cannot be held in bondage by evil. It is ours to feed upon the First Commandment, also the Twenty-third and Ninety-first Psalms, and then to leave our problem with divine Love, knowing (not believing), trusting (not doubting), realizing (not fearing), that God doeth all things well. If we hold to this thought with a steadfast determination, in sincerity and truth, all mortal fears will vanish and the results will be beyond our expectations.

It is not wise to outline from a mortal standpoint the exact nature of results, as our ideas are frequently warped by error, and we may thus pray amiss that we may consume it upon our lusts; but we may hold firmly to this thought, that we do not wish anything, physical, financial, or social, be it health, wealth, honor, place, or power, save as it comes through and by divine Love. With this desire honestly held, we shall prove true the words of our beloved Leader: "No loss can occur from trusting God with our desires" (Science and Health, p. 1).

[Written for the *Sentinel.*]

TRUE CHRISTIANS.

CLARIBEL SCHOFIELD.

THE workers in His vineyard—blessed band!
Their lamps are ever trimmed, and brightly glow,
Shedding the light of Truth o'er every land;
Illuming all the paths where mortals go.

They find the sinner on the lonely road
That weary, wandering feet have ever trod,—
They gently help him cast aside his load,
And place him in the way that leads to God.

Beneath their hand the stony ground awakes
And yields a harvest bountiful and sweet.
The withered stalk breaks into bloom, then shakes
Its fragrance, as a tribute, at their feet.

Their hand it is that soothes the brow of pain,
Their voice that stills the troubled thoughts within;
They tell of God as Love, of life as gain;
The nothingness of sorrow, sickness, sin.

They lift the thought above its sordid dreams
Of life in matter, and they teach it how to rise
On strongest wings of faith where softly gleams
The morning star of hope through clouded skies.

And thus they shed a light where'er they go
That, striking through the mists of misspent years,
Reveals a radiant realm on earth below,
Wherein our God has wiped away all tears.

SELECTED ARTICLES.

[From an editorial in *Kansas City* (Mo.) *Journal*.]

The claim that there is no curative virtue in any but the "recognized" medical schools is contrary to the belief of large numbers of people who have rights in the premises that must be respected. Persons who have arrived at an age when they may, presumably at least, decide for themselves, have the right to invoke the methods of those who may not use drugs or other approved medical and surgical methods; and to brand as felons practitioners who do not subscribe to the doctrines of the "schools" is unfair.

Probably a large majority of people believe in sending for the doctor when they are sick and in taking the medicine he prescribes or submitting to the operations he performs; but this does not alter the fact that there is a growing belief in the efficacy of other means of curing some forms of disease or functional derangements. There may be nothing valuable in Christian Science, faith-curing, mental healing, and other so-called heterodox practices; then again, there may be a great deal. Legislation aimed at the belief of people of discretionary age is ill-advised, and the lawmakers have performed their full duty when they protect the people against quacks whose imperfect knowledge of drugs may result in imperiling human life.

[Alfred Farlow in *Indianapolis* (Ind.) *Star*.]

In an issue of recent date, D. H. Talbert expresses agreement with the statement that if the medical fraternity fails to save certain persons "in the incipiency of their troubles, they cannot reasonably complain because Christian Science fails to rescue them in the more advanced and formidable stages of their disease." He adds that "only good would result under such circumstances," and that "any case healed under these circumstances points to the fact that such a person had been overdosing in medicine, or had been applying material help in a manner out of harmony with natural law, in which case Christian Science does help, because it changes the patient's thought and indirectly nature is given a chance."

In the light of such an admission one might well conclude that thousands of persons die every day from "overdosing in medicine," or the "applying of material help in a manner out of harmony with natural law," who might be saved if they would turn to Christian Science. Under such circumstances, it seems to us that the critic would better spend his time urging those who are failing to recover under medical practice to turn to Christian Science rather than to spend his time in the condemnation of Christian Science. The gentleman declares that the danger of Christian Science lies in "applying it without reserve to innocent children." Are not children quite as frequently "overdosed" as adults, and are they not quite as liable to the "application of material help in a manner out of harmony with natural law" as adults, since the same physician makes the application to the child that makes the application to the adult? The "innocency" of children is respected quite as much in Christian Science treatment as in medical treatment. Moreover, Christian Science has proved itself quite as effectual in the treatment of children as in the treatment of adults. The children of Christian Scientists are quite as healthy as those of non-Christian Scientists.

It is reasonable to assume that almost the entire population of the globe, especially those of recent generations, have been trained to depend upon material remedies of some sort, that is, some means less than God, as a remedy for sickness, and yet all material remedies have eventually failed utterly. Most of the world's population has passed away while struggling to recover health by the use of material remedies. Thus it is shown that in a sense the failure of medical practice has been universal, and surely such practice ought not to claim the sole guardianship of the public health and insist upon it that the public shall not experiment with new methods. It cannot be shown that the world is any the worse for the experiment with Christian Science, either in the treatment of adults or of children. There are historical points which would indicate that Christian Science has increased longevity. It has been stated repeatedly, in the medical records and in the public press, that during the past forty years longevity has increased perceptibly, and this time covers the period of Christian Science practice. Certainly this situation does not indicate that there is any cause for alarm as the result of Christian Science in the world, but on the contrary that its teaching has been a benefit.

Wholly apart from the direct beneficiaries of Christian Science, it is safe to assume that millions have been indirectly benefited because of the moral effect of Christian Scientists, who are learning to depend more upon Spirit and less upon matter as a means of health. Christian Science has emphasized the importance of spiritual life and the insignificance of mortal existence, and has inculcated a love for the spiritual and a willingness to sacrifice unnecessary fleshly indulgences, and thus it may be noted, as we have said, that the benefits of this healing truth have extended far beyond the Christian Science church.

Our critic declares that one of the dangers of the movement is "the effort of overzealous persons to live up to the extremely false parts of its teachings when they are once thoroughly converted to the theory." Then he offers as an example Mrs. Eddy's teaching that fatigue is not bodily, but mental. We think that a large percentage of those who are outside the Christian Science movement are prepared by experience to endorse this conclusion. It is quite generally understood that the mental has much to do with the physical. Non-Christian Scientists are not able to disprove the facts of Christian Science, but are themselves proving the truthfulness of its teaching every day in a great or less degree. Christian Scientists are not more liable to "overdo" because they understand fatigue to be a mental condition, than they were when they believed it to be a bodily creation, for the new teaching does not inspire the ignoring of human ills, but simply offers a mental instead of a physical diagnosis of them. Christian Scientists recognize that evils exist in erring human experience and must therefore be intelligently dealt with.

Our critic did not need to wait for the advent of Christian Science to offer his criticism. He might have found quite as ample grounds for it in the Scriptural teaching. Jesus said: "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on." "But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Our critic might have said that there is extreme danger in undertaking to carry out literally the teaching of the Master to take no thought for the material, but any sensible person knows that every one is obliged to take some thought, and the text manifestly means that we are to take as little thought as possible today, and less tomorrow, still less when we have advanced to a higher degree of spirituality, and when the full stage of manhood in Christ is attained, then it will be possible to "take no thought" whatever from a material point of view, for one will have attained to that spiritual height wherein Spirit, God, and His manifestation, becomes to him the only reality.

Christianity has been in vogue nearly two thousand years, and no harm has yet come from the radical teaching which we have just named. Christian Science has been practised for about forty years and no harm has come from its teaching. If meanwhile there are fanatics who have misunderstood the demands of Christianity, or the demands of Christian Science, these cannot justly be held responsible therefor. Foolish folk will be foolish until through progress they cease to be foolish, but their mistakes should be

Digitized by Google

charged to their foolishness and not to the teaching of Christian Science which they fail to understand. Christian Science does not undertake to establish the spiritual law by ignoring the "natural law." It not only has regard for the spiritual estate to be attained, but also a wise consideration of the material and imperfect which is to be abandoned.

[Frederick Dixon in *Aberdeen* (Scot.) *Gazette*.]

Christian Science is indeed Science as taught and demonstrated by Jesus the Christ. "Jesus of Nazareth," Mrs. Eddy has explained, on page 313 of Science and Health, "was the most scientific man that ever trod the globe." He understood more of the Christ, of Truth, than any other man who has ever lived, and, understanding this, he understood spiritual law also more clearly than any one else, and this enabled him to demonstrate the truth of the law of that Science more fully than any other person. His teaching, therefore, was the Science of Christianity, for that teaching was summed up in his knowledge of God, his knowledge of absolute Truth. The writers of the New Testament realized this when they made use of a Greek expression commonly translated knowledge of God, but which should, of course, be translated full, exact, that is to say, scientific knowledge of God, and so of Truth. The writer of the fourth gospel recognized this, when, by a particular use of the Greek definite article, he separated absolute truth from a mere human relative sense of truth. The greatest of the medieval schoolmen perceived this when he spoke of theology, the word of God, as the only absolute Science, and declared that all others were purely relative in comparison. It is clear, therefore, that the knowledge of God is the most absolute truth that any man can attain, and something of this nature was undoubtedly in the mind of Wyclif when he translated the well-known passage in Luke, "to give knowledge of salvation unto his people," in the words, "to show science and health to his people into remission of their sins."

The natural scientist of today has a way of confining science to what he terms secondary causes or physical facts, and declaring that primary causes or spiritual facts are in the realm of the unknowable. Of course, such a definition is hopelessly unscientific, as it begins and ends by begging the question. Any one who determines that nothing can be known about primary causes is never likely to know anything, and has put himself completely outside the methods by which even all human knowledge has been acquired. If Newton had decided that nothing was to be known about gravitation, or Watt that nothing was to be learned about steam, or Darwin that evolution was an impenetrable mystery, these things would have remained so, to them at any rate. It happens, however, that there is a definition of science by Huxley which, though it is not one a Christian Scientist would endorse, our critic would not care to dispute. Science, Huxley declared, is the answer a man makes to the question, What do I know? Accepting this definition and applying it to what are termed the miracles of Jesus, we arrive, on Huxley's authority, at the admission that the miracles of Jesus were the answer to what he knew. Now Jesus' knowledge was spiritual. In the words of Mrs. Eddy, in the passage already quoted from, "He plunged beneath the material surface of things, and found the spiritual cause." He came preaching to the world the gospel of the Christ, and when the natural scientists of his day shrank back to their narrow definition of science as something confined to material things, he met them on their own basis, declaring that if they could not believe for the words' sake, that is to say, if they could not understand the spiritual teaching he was giving them, they must believe for the very works' sake, they must believe for the argument of the miracles which he was working in their midst. And so he healed the sick and fed the multitude, and walked upon the water, making the miracle the object-lesson, or demonstration, of the spiritual law he was endeavoring to explain to them, and which he summed up in the words, "Ye shall know the truth,"—"the" truth, the absolute and not the relative truth, and the knowledge of the truth shall make you free,—free from your own beliefs in sin, disease, and death. This is the Science of Christianity, and, like all sciences, the truth of it can be demonstrated.

[E. M. Ramsay in *Aberdeen* (Scot.) *Gazette*.]

Sixteen years ago Mrs. Eddy wrote the following words: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name" (Pulpit and Press, p. 22).

In your article "The Meaning of Christian Science," you draw attention to the increasing interest in mental healing, and to the efforts being made in some of the churches to keep people from going in for Christian Science by offering them something as a substitute. It will be a cause of rejoicing to every Christian Scientist to see the members of other Christian churches healing the sick in Christ's name, but so far we see few, if any, looking in the right direction. As people in general have little knowledge of what Christian Science teaches, your readers may be interested to hear a little of its methods, and will thereafter be in a better position to contrast them with those of other systems.

Christian Science starts with the statements that God is infinite, that He is Spirit, Love, lawgiver, the ruler of the universe. If He is the lawgiver and ruler of the universe, He must be intelligence, Mind; and if He is also infinite, then He must be infinite Mind, infinite intelligence. *This is* but another way of saying that God is omniscient, since it is plain that omniscience must be limitless, boundless, infinite intelligence. Considering this point a little more closely, we find that if we are really to accept this statement as true, then God must also be the only Mind, since there cannot be more than one Mind if this one is infinite. Christian Science, therefore, maintains that there is but one Mind, God, and that all true intelligence, wherever manifested, must be the reflection of this one and only Mind. The confusion which hides this great truth from the ages arises from the false belief that intelligence can be separated from truth, purity, and goodness.

The only one who saw this fact in its fulness was our Saviour, and he always disclaimed the suggestion that he had a mind or will separate from the Father, and constantly urged on his followers the purification of thought, that they too might be enabled to see God and to feel His abiding presence, protection, and guidance. "Let this mind be in you, which was also in Christ Jesus," said St. Paul.

Returning once more to the nature of God, we find that all Christians accept the Bible statement that God made all that was made, and is, therefore, the only creator, or First Cause. The only creator must be the source of life, and this view conforms with our Lord's teachings and practice concerning ill health and death. He always spoke of them as evils, and he destroyed them by recognizing that they were contrary to the will of God, unsupported, unsanctioned by His power. The Christian Science treatment of disease is founded on this understanding, and Mrs. Eddy again and again in her writings emphasizes the fact that it is not the personality of the healer, but the truth which he knows, loves, and practises that heals. "The battle is not yours, but the Lord's." God is on the side of the sufferer. Love is on his side, the supreme law of the universe is on his side.

All mental systems of healing which reject the Christian Science position that the only Mind is God, work through the supposed action of one human mind, so called, on another. Christian Science shows that all treatment by sug-

Digitized by Google

gestion is unscientific, and in reality harmful, even though the patient may appear to be helped, since it necessarily impresses him with belief in the control of one mortal by another, and thus leaves him more susceptible to evil suggestions than he was before. It will thus be seen that while such methods of cure may appear at first sight to have much in common with Christian Science, in reality they are farther from it than are the methods of *materia medica.*

[Charles K. Skinner in *Belding* (Mich.) *Banner.*]

In connection with a lecture recently delivered in your city against Christian Science, I desire to commend to the careful attention of the speaker and his hearers the seventh chapter of Matthew, where we read, "For with what judgment ye judge, ye shall be judged." It certainly will give food for thought. Some one has said that if every one would stop sinning in thought, word, and deed for one day, the millennium would be here. It is very certain that if all persons who felt it necessary to criticize the religious beliefs of others would investigate the subject carefully before publicly attacking them, there would be fewer foolish and unkind sermons preached.

The critic claimed to have read Science and Health, and quoted freely from it during the lecture. This, however, was no proof of an understanding of the subject. One might read the words of a book on mathematics from cover to cover, and yet be unable to demonstrate a single problem. An illustration of this came to my observation some years ago. A very intelligent gentleman and a good reader opposed what he believed Christian Science to be, and finding an intimate friend receiving treatment, ridiculed him severely; but, learning that he had been benefited, the gentleman concluded to investigate for himself. He secured a copy of Science and Health and read it to criticize every point possible. On returning it he said, "I have read the book; and, just as I thought, there is no sense in it." His friend replied, "Why, Mr. ———, I have always understood that you were a careful reader and a deep thinker. Is it possible that what so many people of all classes have discovered in that book has escaped you? Now go back and read the book." Although a skeptic and irritated at the rebuke, he was honest in his search, and he not only had his health restored but gained a clear understanding of Christian Science.

The critic said that Christian Science was "a foe to Christianity." Is anything a foe that reforms the drunkard, regenerates the sinner, heals the sick, and uplifts the heartbroken and sorrowing? We are told that Christian Science is contrary to the Bible. Christian Science is founded on the Scriptures and upon nothing else. When understood, it is found to be in entire conformity with the spiritual teaching of the Bible from Genesis to Revelation. Jesus proved his understanding of the prophecies by doing the works which they foretold. He said, "I came not to destroy, but to fulfil." He said to those about him, "Search the Scriptures, for in them ye think ye have eternal life, and they are they which testify of me." He commanded them to do the works which he did, and the only distinguishing mark he gave those who would be known as his followers was that they should do these works. Christian Science does this all over the world. Is this contrary to the Bible?

The absurdity of the assertion that Christian Science repudiates the teachings of Jesus must be apparent to every sincere reader. Jesus constantly reminded the people that it is "the spirit that quickeneth; the flesh profiteth nothing." He also said, "I can of mine own self do nothing;" "The Father that dwelleth in me, he doeth the works." This is the exact teaching of Christian Science. The speaker said that all the works which Christian Scientists claimed to do he would do any Monday morning. We are certainly glad to hear this assertion, and if it proves true the city of Belding is to be congratulated in having such a helper for the sick and suffering. Certainly his church will be filled if he keeps his promise. It is quite true that there have been occasional instances of healing by prayer all down the ages, but no system of healing since the third century, until the advent of Christian Science, has healed the sick through an understanding of the Christ-teaching. Christian Science claims no monopoly of the healing work. The field is open to all who will apply the rules, and rely upon God, divine Principle.

[Olcott Haskell in *Pacific Presbyterian.*]

Christian Science is not a new religion; it is Christianity reduced to practice. It does not teach that one can be comfortable under sin or error, and it has nothing in common with the shallow optimism which says, "Look pleasant, even if you have a toothache." It heals the toothache, and then there is a reason for looking pleasant. Christian Science deals with causes, not appearances. It purifies the stream by purifying the fountain. Those who are freed from disease by Christian Science testify that the physical healing is as nothing when compared with the moral and spiritual benefits received, which proves this healing to be in no way similar to work performed by "Pharaoh's magicians" or by "false prophets."

The question, "Do Christian Scientists recognize Jesus Christ as the only begotten Son of God?" is answered in the words of the Christian Science text-book (Science and Health, p. 497): "We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness."

[Ezra W. Palmer in *Denver* (Col.) *News.*]

In an account of the formation of a religious society recently, reference was made by one of its members to Christian Science, in which it was assumed that a Christian Science practitioner was essential to effect a cure of physical ills in Christian Science. Such an assumption is erroneous and misleading. It is true that a majority of cases of Christian Science healing are accomplished through the uplifting prayers of practitioners, but it is also equally true that many persons are healed through reading Science and Health, or through their own prayers after they have gained spiritual understanding through the study of the Bible and Science and Health. A practitioner is not necessarily essential to healing in Christian Science.

The further assumption of one of the statements in the article, that a Christian Science practitioner must be present with his patient to produce a cure, is equally erroneous. God is not bounded by human limitations of space, and the sincere prayer of the Christian Science practitioner is heard of God, and may be just as effectual when the practitioner is absent from the patient as when present.

[Written for the *Sentinel.*]

LOVE'S SUNSHINE.

CHARLES C. SANDELIN.

THE tender flower throughout the hours of day
Uplifts its face before the sun's warm light
With grateful joy; but with the fall of night
Its petals close till comes the dawn's glad ray.
So through the hours when Truth's great light doth play
Upon the waiting heart, thought, blossoming bright,
Love's beaming joys with gladness doth invite,
That vanish swift when error seems to sway.
Love, in Thy bosom, through the night of fears
When error's phantoms threaten, may we rest!
Amid the storm Thy voice in silence cheers,
And hope doth gleam within the troubled breast,
Till darkness ceases, and as morn appears
Thy gentle sunbeams all our thought invest.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

ANNUAL MEETING OF THE MOTHER CHURCH.

THE annual business meeting of The Mother Church was held on Monday, June 5. Following the opening exercises, the election of officers was announced by the clerk:

President, Judge Clifford P. Smith of Boston; first reader, John C. Lathrop of New York; second reader, Miss Grace E. Collins of Boston; treasurer, Stephen A. Chase of Fall River; clerk, John V. Dittemore of Boston.

The retiring president, William D. Baldwin of New York, introduced the new president, who thereupon took charge of the meeting. In his opening remarks Judge Smith laid special emphasis on the need of watchfulness on the part of all Christian Scientists, that they fail not in the hour of need. The treasurer's report showed the church finances to be in a satisfactory condition. In the clerk's report items of special interest to the field were as follows:

"The past year has recorded the greatest growth in the history of our church. The year 1906, which marked the dedication of the extension, witnessed the greatest increase in membership we had up to that time experienced. The year following, the number of new members dropped back to a fair increase over the year preceding the dedication. Each succeeding year has shown a generous increase, but never until now has the record of dedication year been equaled. The growth in membership during the year just closed has, however, exceeded the records of all previous years.

"The prosperity of the Christian Science movement being dependent upon the healing of the sick and upon what Mrs. Eddy has described in "Rudimental Divine Science" as its more "emphatic purpose,"—the healing of sin,—no better indication of our progress can be given than to note the increase in the number of persons devoting themselves solely to the practice of Christian Science.

"Our board of lectureship is carrying the gospel of scientific Christianity into all parts of the world. Our records show that approximately seven hundred thousand persons will have attended Christian Science lectures during the present lecture year.

"It is well for us to remember that the Christian Science movement is not local, but a world-wide movement. As we have perceived this and intelligently followed its progress, we have broken our limited sense and been enabled to fulfil better our duty to our church and to our fellowmen.

"Christian Scientists have more to be grateful for than any other people, but their heritage will only be secure by their untiring vigilance. Let us remember that our Church Manual represents the inspired demonstration of Mrs. Eddy; that its by-laws are adequate to cover every need in the progress of our movement; and let us strive, whether we be church officers, practitioners, or lay-members, to obey its provisions in spirit as well as in the letter, and maintain its integrity inviolate for the benefit of the ages to come."

Bliss Knapp, secretary of the board of lectureship, then read a sheaf of telegrams and letters from branch churches in the United States and foreign countries, including England, Australia, and South Africa, and verbal reports were given by William D. McCrackan, M.A., of Washington; Frederick Dixon and Bicknell Young of London, England; Miss Sue Ella Bradshaw, San Francisco, Cal.; Eugene R. Cox, New York; Allen H. Armstrong, Seattle, Wash.; Mrs. Clara D. Lyman, Cedar Rapids, Ia., and Frank H. Leonard of Brooklyn. Both the written and verbal reports showed marked progress in the growth of Christian Science during the year, and all were characterized by confidence and encouragement.

THE READERS OF THE MOTHER CHURCH.

As announced at the annual meeting of The Mother Church, the readers elected for the ensuing term of three years are:—

First reader, John C. Lathrop, C.S.B.
Second reader, Miss Grace E. Collins, C.S.B.

Mr. Lathrop comes to his work as first reader of The Mother Church thoroughly equipped for its duties. Born in Michigan in 1871, the son of Orvis C. and Laura Lathrop, he became a student of Christian Science in 1885, and was enrolled as a member of The Mother Church in 1895. He was a member of the last class taught by Mrs. Eddy, in 1898, and was twice called to be a member of her household for several months. Mr. Lathrop was in business from 1886 to 1896, when he began the practice of Christian Science in New York city, which has been his home for many years. In 1897 he was elected second reader of Second Church, New York, serving until 1902. In 1906 he was elected to the office of first reader in the same church, and served three years in that capacity.

Miss Collins is a native of Minnesota, and became interested in Christian Science while living in Duluth. She came to Boston about seven years ago to enter upon her work as practitioner and teacher. She is a graduate of the Massachusetts Metaphysical College and has been a member of The Mother Church since 1897.

BEING AND DOING.

"How much I wish I could be a practitioner!" "Well, why not?" said a listener. "Oh, I don't know enough, and then I have so much else to do."

The speaker was a very intelligent young lady, and most earnest in her devotion to Christian Science, nevertheless she seemed to have quite missed the all-important fact that the ability to heal pertains as certainly and as naturally to a knowledge of divine Truth as the ability to dispel darkness pertains to light. A ray, whether of light or of Truth, does not lose its identity or its power in reflection, provided the reflector is true, hence the legitimacy of Mrs. Eddy's statement, "It is the duty and privilege of every child, man, and woman,—to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness" (Science and Health, p. 37).

If one really apprehends the truth, the asserted limitations of its efficiency at his hands is but a suggestion of that false sense which would not only handicap growth and usefulness, but which dishonors God. Respecting this, Christ Jesus spoke very definitely. "He that honoreth not the Son," said he, "honoreth not the Father." We cannot be loyal to Truth, honestly yield ourselves to its government, without becoming an integral part of the divine order and instrumentality for the saving of men, and this teaching gives substance and definiteness to our thought of the cooperative relationship between God and man, and creates an altogether new interest in every divine enterprise. The possibilities of being begin to compass a larger and holier achievement in our forecast.

An asserted lack of time or opportunity to heal the sick may be simply a temptation by which error would have us yield ourselves to lethargy and spiritual retrogression. So far as it is an expression of honest conviction, it indicates a forgetfulness of the fact that the social intercourse which is incidental to every-day life is constantly presenting occa-

Digitized by Google

sions for the mental declaration (and outward expression in temper, bearing, and deeds, if not in words) of the healing truth, so that no would-be doer of the word can possibly pass a day without being privileged to contribute to the world's redemption.

While the realization of all this must enlarge and intensify one's sense of responsibility, whatever his surroundings or lot, it also awakens a sense of privilege which becomes an abiding inspiration. Christian Science brings immediately to the front the tremendous truth that all worthy believers are "kings and priests unto God," rulers over the claims of error and ministers of Christ to all men, and it thus gives a new meaning to the words addressed to Saul on his way to Damascus, "I have appeared unto thee . . . to make thee a minister." The mistake of the Christian church when it committed the healing work to a special class cannot be made unwittingly by Christian Scientists, and yet those who are putting forth no earnest and persistent effort to work out their own problems, at least, are practically affirming either that they do not "know the truth," or that the truth when realized and declared by them does not make free, *i.e.*, is not the truth of God. If it be true that Christ is born in us, and that every divine idea is sovereign over error, then it is true that every genuine Christian is called to heal every kind of sickness and sin, and he will address himself to this work with the courage which is begotten of a realization of the allness and omnipotence of Truth, and a sincere aspiration for at-one-ment therewith.

JOHN B. WILLIS.

KEEPING AND HOLDING.

THROUGHOUT the Scriptures we find many references which show the necessity of holding fast the truth once gained, these words of Christ Jesus being peculiarly impressive: "Blessed are they that hear the word of God, and keep it." In explaining to his students his parable of the sower, he emphasizes the same truth when he likens the seed sown on good ground to the truth dropped into the soil of "an honest and good heart;" and he says that such persons, "having heard the word, keep it, and bring forth fruit with patience." In what are called the pastoral epistles of St. Paul, we also find numerous injunctions to "hold fast" the word of Truth; but most impressive of all these admonitions is the Master's declaration, "If a man keep my saying, he shall never see death." Is it not of the utmost importance, then, that each one should diligently "examine himself," in order to discover to what extent he is daily heeding this demand.

We are all familiar with the legal phrase "to have and to hold" as applied to property rights, but do we always remember that the gifts of God "are without repentance,"—that what He gives is never recalled, but that we may temporarily miss our blessings by our own heedlessness? The writer to the Hebrews probably had this in mind when he counseled us to give earnest heed to the truths which we hear, "lest at any time we should let them slip." The great Teacher also warned his listeners that unless they guarded carefully the good seed which had been sown, "the wicked one" might come and take it away. This wicked one Mrs. Eddy characterizes as "the one evil, which declares that man begins in dust or as a material embryo" (Science and Health, p. 476). It thus happens, sometimes, that the false belief which holds to man's material origin begins to argue for material conditions, disease manifestations, even after healing has been realized in Christian Science through the understanding of spiritual law. This false belief would ignore man's divine rights as the child of God, and insist upon a material origin, possibly upon the asserted law of heredity, and then is the time for the one who has experienced Truth-healing to "keep it," to hold it fast as he would a priceless treasure, for this it truly is.

Here it is important to note just what the Master taught on this point in the thirteenth chapter of Matthew. He said: "When any one heareth the word of the kingdom, and understandeth it not, then cometh the wicked one, and catcheth away that which was sown." There are some who imagine that they want nothing of Christian Science but the physical healing: that is, they think so before they learn how much more than this Truth has to offer. Then when they come to see that God has spoken to this age, a great change takes place in their thought, and who would not desire to know all that he may about the message which is to be found in its majesty and power in the inspired pages of "Science and Health with Key to the Scriptures"? As of old (and forever), divine Love bids the thirsty to come to the living waters and find health, holiness, happiness; find, too, an understanding of the Mind whose thoughts are higher than all mortal thoughts, "as the heavens are higher than the earth." With this understanding they know how to guard the treasures laid up for them in heaven. In Christian Science we have an opportunity to "prove all things," and it rests with us to "hold fast that which is good."

ANNIE M. KNOTT.

THE LADIES' HOME JOURNAL.

The June number of *The Ladies' Home Journal* contains an article, "Mrs. Eddy's Unpublished Poems," which gives a new and interesting glimpse of our revered Leader's earlier years. The poems, also a number of letters, were found in a trunk which once belonged to Mrs. Eddy's brother, Col. George Sullivan Baker. The article is illustrated with a hitherto unpublished photograph of Mrs. Eddy, as she was about 1864.

AMONG THE CHURCHES.

LONDON, ENGLAND.

Second Church of Christ, Scientist, London, held the first service in its new church home on Sunday, April 23. The trustees of the church purchased in February last a plot of land in Palace Gardens Terrace, Notting Hill Gate, W., comprising an area of about ten thousand square feet. At present there are on this site three residential houses and a commodious church building capable of seating nine hundred and fifty people, with a large Sunday school room, readers' room, etc., attached. The whole is very well adapted for holding our services until such time as our new church building is erected on the site. The situation is in a quiet residential neighborhood in one of the best parts of London, close to the parks and within a few minutes of all the principal means of communication with the various parts of London. We are deeply grateful for the way in which our need of a church building has been met, and for the many wonderful ways in which the purpose of Mind in human as well as in spiritual affairs is being daily revealed to us.—*Correspondence.*

ROCHESTER, N. Y.

Although the breaking of the ground for the new Christian Science church has been delayed considerably, it is expected that the work will be started within a short time. The property at East avenue and Prince street was purchased several months ago, pursuant to a plan to erect an edifice that will compare favorably with the best churches in the city. For several years there were two Christian Science churches in this city, but in December, 1908, the congregation of the church in South Fitzhugh street decided to combine with the church at Alexander and Cobb streets. The latter has a seating capacity of six hundred, and it is expected that it will suffice for the needs of the congregation until the new church is finished.—*Democrat Chronicle.*

THE LECTURES.

THE LECTURERS.

APPOINTED FOR THE YEAR, JULY 1, 1911, TO JUNE 30, 1912.

Hon. Clarence A. Buskirk, C.S., 5548 Page boulevard, St. Louis, Mo.

Clarence C. Eaton, C.S.B., 719 Union avenue South, Tacoma, Wash.

Francis J. Fluno, M.D., C.S.D., 1368 Franklin street, Oakland, Cal.

Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Mass.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., Post Office Box 385, Concord, N. H.

Bliss Knapp, C.S.B., 4 Batavia street, Boston, Mass.

Frank H. Leonard, C.S.B., 81 E. Madison street, suite 707, Chicago, Ill.

William D. McCrackan, M.A., C.S.B., 406 Metropolitan Bank Building, Washington, D. C.

Rev. William P. McKenzie, C.S.B., Post Office Box 81, Cambridge, Mass.

William R. Rathvon, C.S.B., 1756 Grant street, Denver, Col.

Judge Clifford P. Smith, C.S.B., 16 Corey road, Brookline, Mass.

Virgil O. Strickler, C.S., 44 W. 96th street, New York, N. Y.

Bicknell Young, C.S.B., Whitehall court, London S. W., England.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a specific address is given.

SANTA ANA, CAL.

An audience that taxed the seating capacity of the Christian Science Church auditorium and overflowed into the reading-room adjoining, greeted Willis F. Gross last night [April 7]. He was introduced by Miss Margaret C. Von Essen, first reader of the local organization, who said:—

Your presence here this evening indicates in a measure the interest taken in Christian Science in this city. It may be asked, Why this wonderful interest in Christian Science? The answer is, Because tens of thousands of reputable men and women from every walk in life and from nearly every country in the world testify that through the ministry of Christian Science they have been brought out of sickness into health, out of sorrow into joy, out of misery into happiness, out of bondage into freedom.

I take this opportunity to speak briefly of my own healing through Christian Science, which occurred nearly seven years ago. Prior to my healing, I had been faithful to *materia medica* for a number of years, but without cure. At the second attack of appendicitis I was told that my only relief would be a surgical operation. To this I was unwilling to submit; yet life was a burden, as I was constantly filled with fear and suffering. At this time a friend suggested that I take Christian Science treatment. I was then a member of a Protestant church and entirely ignorant of the subject of Christian Science; in fact, all I had ever heard of it was in criticism. A dear sister urged me to try Christian Science, but I said to her that I would first investigate to learn if the healing came from God. I called on a Christian Science practitioner and asked him if Christian Scientists believed in God. He said, "Yes, we believe that God is Love and all-powerful." Next, I asked, "Do you believe in the Ten Commandments?" He said, "Yes; we believe that when we keep the First Commandment we keep all of them." This convinced me that Christian Science healing was based on the Bible, so I asked for treatment, and I am glad to say that I was completely healed. Words are inadequate to express my gratitude to God for my healing. I am also grateful to our dear Leader, Mrs. Eddy, for this healing truth, as taught in Christian Science, that does make us free.—*Santa Ana Blade.*

READING, MASS.

Tuesday evening [April 4] Prof. Hermann S. Hering lectured in Reading on "Christian Science: The Science of Salvation." First Reader Ernest W. Reynolds introduced the speaker in the following words:—

In introducing the one who will address you this evening, the thought comes, in relation to the subject, that no word in the world's history in its application to human affairs has been the basis of more contention, more strife, more opinion and belief, than the word God; and yet, divorced from material sense and considered impartially and impersonally, none in its true premise is more simple of explanation. Not, however, since Jesus' time, until Mrs. Eddy gave to the world its scientific interpretation, has it been recognized truly as divine, demonstrable, all-inclusive Principle. This scientific interpretation, however, has revealed God as the source of being and synonymous with Truth, as incorporeal substance; the revelation referred to by Jesus when he said, "Ye shall know the truth, and the truth shall make you free." It is the mission of the Christian Science lecture to explain how the application of this Principle to human affairs delivers mankind from the discords, the diseases of the flesh.—*Reading Chronicle.*

THE HAGUE, HOLLAND.

Under the auspices of First Church of Christ, Scientist, The Hague, Bicknell Young lectured on Tuesday, April 11, to a very large and attentive audience in the Diligentia Zaal, on Christian Science. In introducing the speaker Baron A. E. Mackay made the following remarks:—

The lecture committee has requested me to introduce the speaker to you this evening. I gladly respond thereto, and in the first place welcome you here. As Christian Science becomes more and more known in this town, it finds more supporters and opponents. A few of the latter have spoken in public on Christian Science, and in so doing have spoken against what they consider Christian Science to be. Such discourses may afford satisfaction to some, who therein realize the defense of their own religious views; to all who are in search of the truth, also of the truth regarding Christian Science, these discourses prove a disappointment.

What they desire to know is not alone whether a Christian Scientist thinks differently about God and man to what they do, but more especially how he regards God and man. What is the truth respecting God? What is the truth respecting myself? These are and remain the great problems. As to how a Christian Scientist thinks about such matters, one may perhaps learn from a non-Christian Scientist, but there is every possibility—experience has shown it to be so—that the information is incorrect. Remarks and criticisms are expressed in all good faith as to what is thought to be Christian Science, but in fact as to what by far it is not. Now we are visited by a gentleman who is a Christian Scientist. His words may of course be misunderstood, but we can accept his explanation of the teaching called Christian Science as correct. For the interpretation put upon it, for the reproduction of his explanation, however, not he is responsible, but every individual who gives his own rendering thereof.

It must indeed be a painful thing for a Christian Sci-

Digitized by Google

entist that from the orthodox Christian not only opposition is met with, but so much unreasonable misapprehension; all the more painful still, because the Bible is the book of God's revelation to both of them. No Christian honors the Bible more or lives nearer to the Bible than a Christian Scientist. He does not entertain a single doubt as to its containing the perfect "way of salvation." That God is the creator of all things, the only creator, is his supreme idea. That all power is God and from God alone, he has proved better than any one else. That Jesus of Nazareth is the Messiah, the manifested Christ, the Word in the flesh, he steadfastly maintains. The Word was in the beginning. The Christ is from everlasting to everlasting. Before Abraham was, the Christ was. He, the Christ, is with us today. These are all truths, living truths to the Christian Scientist, of inestimable signification; fundamental truths, and I know they are the same to the orthodox Christian.

How strange that there are so many points in common, essential points, and yet so much distrust, so much fear from that very direction. I acknowledge there are points of difference, and in my opinion they are not even brought out strongly enough by the opponents themselves. Resignation, in numerous instances, to what is called the will of God, the Christian Scientist does not preach. Salvation is the essence of the teaching of Jesus to the Christian Scientist. Redemption from sin, nothing more, nothing less; redemption by reconciliation of man with God.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Ashland, Ore.—Francis J. Fluno, M.D., Opera House, June 19.

Brooklyn, N. Y. (Second Church).—Prof. Hermann S. Hering, June 25.

Chester, Pa.—Prof. Hermann S. Hering, Washburn's Theater, June 15.

Duluth, Minn. (Second Church).—Frank H. Leonard, June 18.

Highland Park, Evanston, and Wilmette, Ill. Joint lecture).—Bliss Knapp, Ravinia Theater, Ravinia Park, 3:30 p.m., June 18.

Huntington, W. Va.—Prof. Hermann S. Hering, Carnegie Hall, 3:30 p.m., June 18.

Kenosha, Wis.—Bliss Knapp, Carpenter's Hall, June 19.

Oregon City, Ore.—Francis J. Fluno, M.D., Shiveley's Opera House, 2:30 p.m., June 18.

Pittsburg, Pa. (First and Second Churches).—Bicknell Young, Exposition Hall, 3 p.m., June 18.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY.

Following the world-wide publication of editorials and articles relative to the life and work of Mary Baker Eddy, and especially the excerpts from the editorials which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, requests came to the Publishing Society from all over the field that these articles might be preserved in a form that would be practicable for wide distribution, convenient for ready reference, and suitable for private and public libraries. The field will undoubtedly be gratified to learn, therefore, that a book (132 pages with index) containing the "Excerpts from Editorial Comments," also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding.

Prices for paper covered edition: Single copy, prepaid, 15 cents; twelve copies to one address, $1.50; fifty copies, $5.75; one hundred copies, $10.00. Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4.00; twelve copies, prepaid, $7.50.

TESTIMONIES OF HEALING.

It gives me great joy to tell what Christian Science has done for me. Before I understood its teaching my life was full of trouble and difficulty. Before I got over one trouble I seemed to have another, and sometimes it seemed altogether too much for me to bear, mentally and physically. I had studied religion all my life, and I knew very well that there was a state of heart and mind where all was joy and peace for the children of God, even in this world, but I could not get at it, although I sometimes had a glimpse of it which I enjoyed and realized for a short time. I had an inkling of it, but I could not get anything to meet permanently my difficulties.

When I first heard of the term Christian Science, I said to myself, "Science is all right, but what has science to do with Christianity?" Then, when a friend persisted in advising me to study it, I decided that as science is demonstrable, when I understood it I could prove it for myself; so I determined to find out what it meant. With that in view I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did not confer with flesh and blood at all, I simply read to learn, as a little child might do. Before I had read many pages I began to find that there was some kind of life-giving power in the book. I felt I was becoming a new man; my understanding was quickened and enlightened, and I did not get so tired after a hard day's walking as I used to before I began to study the book. I also overcame a poor memory, and as my work was full of little details, forgetting had caused me a great deal of trouble. Now I very seldom forget anything, and if I do I remind myself that I ought not to forget, for I have the omnipotent Mind with me and around me to help me in my work; then the thought generally comes back instantly, proving that there is an overruling power to govern all things.

As the study of Christian Science cured my bad memory, and also dealt effectively with other troubles of a domestic nature, I then began to wonder if God could make my shoulders straight; I knew that of course He could. I was very round-shouldered, as I had hurt my shoulders when I was ten years old carrying pieces of wood that were too heavy for me. The bones and muscles were not fully developed when this happened, and consequently were displaced. When I trusted God to heal my shoulders I was lying in bed, and as I almost involuntarily stretched myself out I heard little clicks in the bones, and this kept on for three days until all the bones had gotten perfectly in place. I remember some years ago a doctor examined me in the Radcliffe infirmary, and he asked me if I had ever hurt my back. I told him that I had when ten years old. It got worse as I became older, and I always suffered from it more or less. Now, the bones are perfectly in place; and they were put right by almighty power, through the understanding of Christian Science, or what St. Paul calls "the law of the Spirit of life."

A lady whom I met the other day said to me, "You know I hear a lot about Christian Science, but I can't believe in it." I said to her, "My good lady, you need not believe; you can prove it, for the truth is demonstrable. If you get 'Science and Health with Key to the Scriptures' and study it as I did, and it heals you as it did me, then you will know that Christian Science is divine." I am not afraid to say that I have proved it divine, and I am also sure that if any study it with an honest desire to learn it will cure them of anything that troubles them, whether it is a mental or a physical ailment. If we get to understand spiritual law and "live in the spirit," then all ills will flee, as dew flees before the sun.

FREDERICK STANDINGFORD, Oxford, England.

Digitized by Google

While my understanding of Christian Science is yet in its infancy, the blessings which my family as well as myself have received cannot be expressed by words. It is a little over three years since we opened our doors to this blessed truth, and during this time we have had less sickness than at any previous period of the same duration, and what we have had has been met in less time than the same was ever met by *materia medica*, with little suffering and without fear of results. In one week's treatment I was healed of stomach trouble of ten years' standing. Previous to accepting Christian Science, I had tried almost every known material remedy with but temporary relief.

While we cannot but admit that it affords us great joy to know there is freedom from physical ills, far greater is the joy to know there is freedom from mental ills. Since we began the study of Christian Science, fear, nervousness, and worry have been overcome; we have greater powers of endurance; our home is more harmonious; what were once great waves in the sea of mortal mind are now but ripples, and we know that with a better understanding even the ripples will fade away. But the real, lasting, and only joy is the understanding of God as ever-present infinite Love, as revealed through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," for which words are inadequate to express our gratitude to our beloved Leader.

MRS. LULU C. J. REIGHTER, Chicago, Ill.

It is with a sense of deep gratitude and unspeakable love that I add my testimony to those of the many who are daily thanking God through our periodicals. Nearly fifteen years ago I was healed, after having had two convulsions, and when I was very near the shadow of death. A dear friend who was an earnest Scientist came to see me, and she said to my sister that she would treat me. I had been unconscious for some time and could not choose for myself, so she gave me the treatment and in twenty minutes I was relieved and conscious. I shall never forget my awakening to spiritual consciousness, for I knew I was healed! Although it was some time before the manifestation of health was perfect, yet I never had any fear. I knew that God was my life; in fact, I had been born again, and the fear manifested by the rest of the family never touched me. Old things had truly passed away, and all things had become new.

Since that time we have used no material remedies in the family. Our little girl, thirteen years old, has never taken any medicine in her life. She has had many ailments overcome for her in Christian Science, and now she is well and happy all the time. My husband has had many beautiful demonstrations made for him also, and one was so wonderful that I would like to tell of it. He had an illness, and had recovered, as we thought, when one night he grew suddenly worse. I was awakened by his suffering about four o'clock and I treated him; but he grew worse, and I became more fearful, as he suffered with every breath. In the morning I called a practitioner and asked her to treat at once, as the pain had increased. In an hour I called the practitioner again and told her that he was worse. I was weeping, but she said to me lovingly, "What you need is God." If ever I tried to make the demonstration over fear I did that morning, and in one hour after I called the practitioner the second time my husband got up and called her himself, telling her he was healed. His first words were, "Praise God from whom all blessings flow." And he was healed! All the pain was gone, and he did not lie down again that day. We were told afterward by one who understands *materia medica* that the attack was of a most serious nature and usually considered fatal; but my husband was healed in two hours' time and we proved that God is indeed a very present help in trouble. This was over six years ago, and there have been no bad results from this illness.

We certainly are grateful to Mrs. Eddy for having shown us the way, and we thank God daily for all our blessings, which are more than we could ask or think. We are trying each day to count our blessings. While we appreciate the physical healing, the real blessing that has come to us is the spiritual, and the giving out of some of this truth that has meant so much to us.

MRS. DELLA A. MITCHELL, St. Joseph, Mo.

[Translated from the German.]

About two years ago I was unable to sit up even for fifteen minutes without suffering great pain. I was extremely nervous, had severe stomach and heart trouble, to which sleeplessness was added. My speech became unintelligible, the action of the heart weaker, and my memory seemed to fade away. The physician had told my wife that a serious attack might be expected at any time, and I myself felt that my days were numbered. For thirteen years I had been a strong adherent of a dietetic method of cure, until I found in my own case that this method, as well as those of all the sanitariums I had gone to, brought no relief. Finally I applied to a Christian Science practitioner; and how glad I am that I did! Whereas my health was rapidly failing, I recovered, despite the fact that I had hard service at the time. Since then I have been able to attend to my duties without interruption through illness.

My wife suffered a severe and deep burn on her arm, but through Christian Science treatment the wound healed up completely within two weeks, without suppuration. My daughter fell while playing in the schoolyard, and sustained severe injuries. We had the physician stitch the cut, and Christian Science treatment was then given, with the result that the wound healed within six days without any inflammation, much to the surprise of the physician, who for quite a while after feared it might set in. Last winter my daughter was taken ill with a severe throat trouble which according to prevalent beliefs can be healed only by having an operation performed, but thanks to Christian Science this trouble was overcome in a comparatively short time.

Besides the healing which we have experienced in a physical way, inward peace and a sense of security has been ours since that time. We no longer fear God, but we love and worship Him, and are more and more conscious of His sure and ever-present help. We certainly have every reason to be thankful to God, our shield and protection, also to Mrs. Eddy, our revered Leader, for the many blessings which we have received through Christian Science.

GEORG REINGARDT, Einbeck, Germany.

Many times have I thought of sending a testimony to the *Sentinel*, and at last my gratitude has found expression. Eight years ago Christian Science found my husband and myself slaves to *materia medica*, which afforded us scant relief from various ailments, such as chronic headaches, bowel, stomach, and kidney troubles; but these have entirely disappeared,—vanished into their native nothingness through Christian Science. Words cannot express the happiness, joy, and peace which have come into our home since we have found that God is not the creator of discord, but that He is Love, always kind and ever present. I had been taught from childhood that God punished us by sending sickness and sorrow for our good, and when I asked why it was so, I was told that some day (after death, I presume) I would understand. The day of understanding has come, and with it the knowing that God sends naught but good, and that sin, disease, and death are un-Godlike; therefore, unreal.

At present I am enjoying the blessed privilege of serving as reader in our society, and what it means to do this sacred work only those who have had the blessing can tell. My prayer daily is for that Mind to be in me "which was also

Digitized by Google

in Christ Jesus," and to do my work lovingly, meekly, prayerfully, for only by so doing can I show my gratitude to God, and to our dear Leader for the message of salvation which she has given us.

MRS. FLORENCE PEARSON KOONTZ, San Pedro, Cal.

I feel it my duty to tell of the help received through Christian Science in the eleven years since it came to me. I had what medical men called Bright's disease, one symptom which the doctors did not understand being severe pain in my back. It would take me so suddenly at times that I was helpless. I have been kept under opiates, administered hypodermically, for two and a half days. I had these attacks occasionally for about three years, but after the first treatment in Christian Science I had no further trouble with them. I had become a slave to the opiate taken for distress in the bladder, so that I depended upon it for strength to do my work. I had two young children at the time and my husband was getting only a small salary, so I was obliged to do all that I could.

My healing was slow; it was five years before the last symptom disappeared. I am now trying to show my gratitude by living the life of a true Christian Scientist as I grasp the understanding through study of the Bible and the Christian Science text-book. I am very thankful to God, and also to our Leader for the wonderful help I have received in Christian Science.

MINERVA DRAPER, Mankato, Minn.

[Translated from the German.]

In gratitude for what Christian Science has done for me, I herewith gladly testify to the following: For seventeen years I was a great sufferer with hemorrhoids, and during all these years was scarcely one day entirely free from pain; in fact, my suffering became almost unbearable. I tried various physicians and all sorts of remedies, and in the course of eleven years submitted to an operation twice. I had two good physicians at the time of the last operation in 1901, and I asked to be given chloroform, in order that a thorough operation might be performed which would really benefit me; but I was not helped permanently, and remained a sufferer, though I continued to try other physicians and took all kinds of medicine. At times I would experience some relief, but in July, 1904, my condition again became so serious that I was unable to leave my bed.

At that time I was somewhat acquainted with the teachings of Christian Science, and sent word to a practitioner who lived in our little town, asking for help. She lovingly took up treatment, with the result that I was relieved of the awful pain immediately, and felt very much better within an hour. I need not say that both the practitioner and I praised God with a loud voice. I slept somewhat during the following night, although I had not been able to do so for two days and two nights. After treatment had been given for eleven days I felt that I could take up my daily work, to which I have attended ever since. I have learned enough of Christian Science during this time to be able to overcome with the truth any attacks of error which have presented themselves. I have employed neither physician nor medicine on any occasion since I found help in Christian Science, as divine help is sufficient unto all needs. God is good, and Christian Science leads us to God; and he who approaches God with the right understanding receives what his heart desireth.

AUGUST BUCHHOLZ, Ripon, Wis.

I have had many striking proofs of the healing power of the word of God, and am very grateful for the understanding, the true knowledge of God which has come to me through the earnest study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and our other authorized Christian Science literature. I am also grateful for the spiritual interpretation of the Scriptures thus gained. I had drifted to that stage where I doubted all creeds and did not believe in God, but by reading the chapter on Prayer in Science and Health, I was healed of a bowel disorder from which I had suffered for over ten years; and from that time, now over four years, I have never used medicine in any form or felt the need of it. My healing from one of the so-called incurable physical ills came slowly, for which I am now truly grateful, as it awakened me from my apathy and necessitated much prayerful thought and study, bringing me to a better understanding of the Bible and God's wonderful promises.

A little over two years ago I accidentally drank a glass of acid supposed to be deadly poison. The words of the Master, however, came to me, "If they drink any deadly thing, it shall not hurt them;" also the words of our Leader (Science and Health, p. 473), "God is everywhere, and nothing apart from Him is present or has power." In thus trying to realize that God is ever present and has all power, the poison was proved to me to be harmless. I have seen all manner of diseases disappear into their native nothingness when the light of Truth was brought to them, but most of all I am grateful for finding a God who is Love and an ever-present help. I am grateful for being able to love all of God's ideas and for knowing that I have no enemies, and for the privilege of abiding in that perfect peace which passes all human understanding. Words cannot express the gratitude and love I feel to God, the giver of every good and perfect gift, to Christ Jesus the Wayshower, and to our beloved Leader, Mrs. Eddy.

ANNA LAURA CARTER, St. Louis, Mo.

In sending this testimony it is with a sense of gratitude and love for this saving truth which is being made so clear to me through "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. I also hope that my testimony will be read by dear friends in other states who knew me as a constant user of stimulants. I can now say that I have been absolutely cured of this habit and also of the use of tobacco, though both had been my constant companions for the past thirty years. I was also healed of a skin disease and an eruption on my ankle. Three of my children were healed of an attack of fever, but one of them being confined to bed, and that only for a few days. Their healing was accomplished in three treatments.

I will add that the physical healing is a small matter in comparison with the wonderful spiritual uplift which has come into my life, making me feel and know that I am a man among men, and that God does sustain me always.

R. A. GILBERT, Atlanta, Ga.

I feel I have delayed too long about writing to express in the *Sentinel* my loving gratitude to God for the health and happiness that have come to me through our dear Leader's wonderful book, "Science and Health with Key to the Scriptures." I heard of it first in March, 1898, through the healing of a friend. At that time I was very delicate, and I seemed to have lost all faith in the existence of God and the spiritual world; but as I read, the long-lost happy faith of childhood returned to me, I seemed to rise and go to the Father, and like the son in the parable, love and joy came to meet me.

I had been troubled for some time by rheumatism in my right arm, and one morning I awoke to find the arm quite well. Several other physical troubles disappeared as I read, and in 1902 I was healed of measles almost instantaneously through the help of a practitioner whom I had at that time never seen. This lady was telegraphed to for help by a relative who had become alarmed, as my illness seemed very serious. The help was quick in coming, as that evening

Digitized by Google

the fever left me, and the next day I was up and dressed, practically well, although still a little weak. I can never express in words my sense of the great debt I owe to dear Mrs. Eddy for showing me the way to escape from sorrow and suffering, for making me see the reality and power of the Master's words, "Ye shall know the truth, and the truth shall make you free."

MRS. LAURA C. ALLEN, Oxford, England.

As my niece, Mrs. Allen, has lived with me for thirty years, since she was a young girl, I can certify that every word she has written is true. Christian Science has been our help and comfort for twelve years, and I join in gratitude to our dear Leader for the wonderful truth she has taught us and which she has shown in her self-sacrificing life.—ANNA CUNNINGHAME GRAHAM, Oxford, England.

My heart is full of gratitude for the many blessings I have received through Christian Science. I seemed always to have known about it, as my grandmother was one of its earliest students and I received help through her understanding at different times, but was never brought to think seriously of it for myself until about six years ago. I was told by three different physicians that I could never be well without an operation,—what they termed a major operation,—and that it would mean a more or less lengthy hospital experience. My mother suggested to me that here was an occasion to try Christian Science again; and this I told my physician I was going to do. He said that it would be all right, because I would not be in condition to go to the hospital for a month anyway, and that during this time I might try it, but he would recommend that I continue to take a certain diet to get "built up."

I was confined to my bed when the Christian Science treatment was commenced, but the next day I was dressed and walked four blocks to the practitioner's house. From that time on I suffered no more pain or discomfort of any kind, so the healing must have been done at once. I continued treatment for about ten days, however, hardly believing that I could really be well again. After this I wanted to study for myself in earnest, and I can never cease to be thankful for my instruction. My babies have had so-called contagious diseases in appearance only, being covered with a rash but suffering no discomfort, and these ailments have not had to run the usual course allotted to them. The Bible is a new book to me. With Science and Health it is my dearest possession, and my hours for study are my greatest pleasure. I am deeply thankful to God, and grateful to Mrs. Eddy for Science and Health, and for all our Science publications. I am also thankful for our healing and uplifting church services.

JANE GRAVES MONSARRAT, Cleveland, Ohio.

About six years ago I took my first treatment in Christian Science for headaches, with which I had been troubled for several years. I had often been advised by my brother to give Christian Science a trial, but did not until the headache became so bad that I had it every morning, and every two weeks or so it would last for a day and a night. Much of the time I was obliged to sit up in bed, as I could not lie down. I took the first treatment one day when I felt the approach of a severe attack. The treatment was given me about eleven o'clock in the forenoon, and at two o'clock the suffering was entirely gone. I worked all the afternoon and woke the next morning free and happy. I bought a copy of Science and Health, and had not been reading it long before the liquor habit was destroyed, for which I am most grateful.

I want to tell of another demonstration of divine power, through my own understanding of the truth. One of my ears began to trouble me, and in about two weeks' time I could not hear in it at all. I did not tell anybody about it, not even my wife, but went earnestly to work in Science, declaring the truth as best I could. One day in harvest time, when I was cutting grain, I heard two loud reports as if some one had shot off a gun close by. I stopped my horses to see what it was, only to find that my ear was unstopped then and there. I know that there are yet some obstacles to be overcome, but as I grow in the understanding of this truth I am demonstrating it constantly and seeing them disappear one by one. I am a farmer and dairyman and live about eight miles from Minneapolis, but we drive three miles to the street car to reach our church; having some thirty cows, we are obliged to get up at five o'clock in the morning to be there in time, but we have not been late once in the six years we have attended. I would also like to tell about one of my horses that had a bad attack last spring, when we were busy with our work. This was in the morning, and as he seemed to have much pain I thought it best to call for help; so we called up a Christian Science practitioner by telephone, and in less than half an hour after she got the message the horse was quiet and I worked him in the afternoon. This showed me that every creature is under God's care.

To express in words my gratitude to God, and also to our beloved Leader, Mrs. Eddy, is impossible, but I strive to manifest it by living in accordance with the tenets of Christian Science as given on page 497 of Science and Health,—to "pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

H. S. SCHACK, Edina, Minn.

I desire to express my gratitude for what Christian Science has done for me. I had been troubled with a bowel disorder for over twenty years, and had relied on material means for relief in the past twelve years. When Christian Science was brought to us in the summer of 1909 by a friend, I decided to try it, and through the understanding of a practitioner I was healed of this condition in two treatments. I have also been healed of sleeplessness and nervousness. I will also state that through Christian Science peace and harmony were brought where discord existed in the settlement of an estate in which I was an interested party. This condition had existed for over four years, but it has been settled without strife or ill feeling of any kind, and all concerned are satisfied and happy.

For this, my healing, and many other blessings brought to us through the understanding of Truth, I am thankful to God, and to all who have helped us.

MRS. F. SUTTON, Chicago, Ill.

In November, 1906, I fell, striking heavily upon my right arm, which soon began to swell and become painful. I called upon a physician, who said the ligaments were severely injured. During the treatment which he recommended, the arm became much worse and the physician thought it doubtful if I would ever have the use of it again. Another physician suggested that I go to a hospital and have an operation performed. A surgeon suggested that I have the arm broken at the elbow; but none of them could assure me that either method would effect a cure.

I was very much disheartened, but my thought turned toward a gentleman who had spoken to me of Christian Science, and as I was wondering where I could find him I saw him coming down the street. I stopped him and asked if he thought Christian Science could do anything for my arm, and he said he thought that it could and advised my seeing a practitioner. I did so, and after the first treatment I had the most restful sleep I had known since my fall, some two months previously. Up to this time my arm had continued to grow more crooked and stiff, and had to be carried in a certain position in a sling. After treatment in Christian Science began the arm ceased to cause me pain,

Digitized by Google

but it continued in about the same condition of stiffness; so that I became very much discouraged, because I was not immediately healed. I happened to mention this fact to a Christian Science friend, who advised me to see the practitioner at once and tell her my condition of thought. I did so, and from that time the arm commenced to heal, the ligaments to relax, and in a few weeks it had become perfectly normal. Today, after a lapse of nearly three years, this arm is even stronger than the other.

About two years ago, while out walking, I was struck with what was nearly total blindness in my right eye. This condition continued for about three weeks, during which time I was unable to distinguish an object with it; but, having been so wonderfully healed in Christian Science of my former trouble, I asked for help from the same source. Again I was under treatment about two weeks, during which time my sight was gradually restored to me, and I can now see almost as clearly with this eye as with the other. I have also been healed of bronchitis, and have had a demonstration for myself over acute lung trouble and lesser ills.

I am grateful for the triumph over nervousness and worry that even a slight understanding of this truth has brought to me, and I have in a small way been able to help others. I am grateful to God for Christian Science, and also to Mrs. Eddy, who has made this Science demonstrable. My wish is to learn more each day.

MRS. A. E. BASSETT, Hornell, N. Y.

We wish to express our gratitude for what Christian Science has done for us, and especially for the healing of our little girl from as severe a case of brain and spinal trouble as I ever saw during the time I used to be a nurse. The child was taken ill on a Sunday, and our own treatment proving unavailing, we called in a Christian Science practitioner that night, whose help seemed to relieve the child somewhat. She took no nourishment, however, and had very little sleep up to Wednesday, when she suddenly took a turn for the worse and seemed to be failing fast. We had to call in another practitioner, as the first had gone out of town. When he arrived at three o'clock the child was in great pain. It had taken two of us to lift her from one bed to another during these three days and she could not bear to be touched. In exactly half an hour from the time that treatment began she was resting on her hands and knees in bed; and the next day she was up and dressed, entirely well!

Such a manifestation of God's power and presence makes us very humble, and very thankful for the lessons our Lord gave us during his ministry on the earth. It is no wonder all Christian Scientists express their gratitude to Mrs. Eddy for this wonderful truth she has made so plain to us that we can use it in our daily need, whatever problem presents itself.—MRS. ERNEST H. CARLMARK, West Orange, N. J.

I have reason to be grateful to God for Christian Science. Unlimited blessings and benefits are my share; a regeneration from misery, sorrow, and woe to peace and happiness. Physically I have been healed of a rectal trouble which five operations and the best of medical skill had failed to cure. I have also been healed of rupture, chronic bowel disorder, rheumatism, and some minor ailments. I have been greatly helped in financial matters so that losses were averted. The desire for tobacco and liquor disappeared entirely after two days' treatment. The physical healings were accomplished with one to three weeks' treatment. The Bible, a book which I had not opened for years, is now a cherished daily companion, together with the Lesson-Sermons. I am indeed grateful to God, also to Mrs. Eddy, and all the dear workers through whom I have learned of this glorious truth.—W. H. KRELL, Chicago, Ill.

FROM OUR EXCHANGES.

[*Continent.*]

"What insures the integrity of the church?" "The life of Christ in the lives of Christians." O excellent and comfortable sentiment—for times of quietude and concord! But when suspicion is abroad—when jealous churchmen think they see defection, disintegration, and apostasy threatening—is it enough to tie to then? In a real crisis will a merely spiritual defense prove sufficient defense for a visible church in a palpable world? With vital factors of religion at stake, does not loyalty call for something more humanly strenuous and militant? It is very natural, certainly, when concrete dangers seem to loom over the church, that men should want to resort to safeguards that are concrete too—to the creed, the appointed ceremonial, the denominational organization, the ecclesiastical court.

Nevertheless, this disposition, however natural, is a snare and temptation. If hazards of false teaching and mistaken ideals multiply, the church's need is not to rear higher its external defenses, but most solemnly to renew its reliance on the invincible and infallible spiritual leadership of the Master who dwells within it. When the presence of Christ in the church seems less potent for its protectic measures of ecclesiastical authority, the mood cries to for a livelier realization of Jesus Christ.

[*New York Observer.*]

Orthodoxy, which means simply right thinking and by implication teaching, is the desideratum in theology, just as much as it is in chemistry, biology, geology, or psychology. In any science there are always certain positions that are sound and others that are unsound, and to discover and support the former rather than the latter is to be orthodox in that science. In the interpretation of the Bible and the explication and application of the moral law there is a right way and a wrong way, and to hold or teach that in this matter any man's opinion is as good as any other's, is perfect nonsense, just as much as it would be to say that the opinions of a tyro in chemistry or a novitiate in philosophy are as good as those of a Helmholtz or a Bowne. We can all learn somewhat from one another, but in theology as in everything else we can best learn from those who know most about it, not in a merely technical or rationalistic way, but as having their learning wrought out under the influence of the Holy Spirit, and tested by a consistent and spiritual view of the whole tenor of revelation.

[Rev. Matt S. Hughes, D.D., in *Zion's Herald.*]

Jesus Christ in his world-ministry not only gave us a new moral ideal, and embodied that ideal in his own person, but beyond that he again parts company with all other religious teachers in providing for man's most desperate need. In actual experience it is discovered that a knowledge of duty is not the greatest provision for the necessities of human nature. It is not enough that we see the good and know the right, for there may be mental receptivity to the loftiest teaching coupled with moral inability as to the performance. He who "spake as never man spake" was not limited to the task of telling the blind they ought to see, the deaf they ought to hear, the degraded they ought to rise, and the sinners they ought to do good. He did not tantalize human weakness with impossible visions of excellence: but of all teachers, he alone promised power to willing souls, that they might make the splendid ideals of his teaching and example shining realities in their lives. His was the promise to disciples: "Ye shall receive power."

[Rev. A. W. Grose, D.D., in *Universalist Leader.*]

When we cease to claim for our Bible a monopoly of revelation, and put it, like all other books, squarely on its own merits, testing it by its proved value to the race, we

Digitized by Google

see how groundless have been the fears of those who dared not use their intelligence for fear that they might lose their faith. The Bible is no talisman to be framed in boards and gilt and placed on the parlor center-table as a substitute for Christian worship or Christian living,—it is the simple yet inexpressibly eloquent record of how some of the greatest souls of the ages found God and were found of Him. Through temptation and struggle, through discouragement and sorrow, in repentance and aspiration, in the winning of character and the overcoming of selfishness, doubt, and sin, we see the life of God coming into the hearts of His children, and our own hearts burn within us as we find there a message to our need.

[Rev. Anson Phelps Stokes, Jr., in *Outlook*.]

Our metaphysical relationship to God and the metaphysical relationship of Jesus to God may well be the same—we are both sons; but one has completely realized his sonship, the other has only begun to grasp its full meaning. The one has been completely filled by the life of the eternal Spirit, and the result is the divine Jesus, the incarnation; the others, you and I, have given God and the things of the Spirit a meager welcome to our hearts. The result is inefficiency and selfishness. This is the great human travesty and tragedy. If the experience of Jesus is a repeatable experience, then he means more to me than he ever could if I believed that he must be forever in a different category.

[Prof. A. Duff, M.A., D.D., LL.D., in *Christian Commonwealth*.]

The religious situation today is remarkable. On one hand the abandonment, within the churches, of old fancies, fancied duties, and fancied doctrines is going on by leaps and bounds. In thirty years the "Christian" attitude toward, say, church attendance or Scripture has changed enormously; yet those changes are nothing to what is at present being accomplished. But while that goes on within, there is without a marvelous eagerness to learn what Jesus was, what the Bible is; what God, life, man, goodness, society, righteousness are.

[*Christian Work and Evangelist.*]

Memorial day should, with the Fourth of July, become more and more a day for dwelling upon the subject of Christian citizenship. We say Christian citizenship, for that is the only kind that will save the nation. The fundamental distinction between Christianity and the world is that the world conceives everything from the point of view of what it can get, while Christianity approaches every relationship of life, asking what it can give or render.

[Rev. David Utter in *Christian Register*.]

"Awake thou that sleepest and arise from the dead," is a Scriptural exhortation attributed to Paul. But the death from which he would have those to whom he wrote rise, is indifference to life's greatness and worth. Rise up and be a man, find your work and do it gladly and well. Be alive to your responsibilities, your privileges, your duties, and your opportunities of vision and joy,—this I take to be his meaning.

[*Christian Register.*]

Modern salvation lies in doing rather than in believing something. A thousand old creeds are like the mummies: they are admirable to illustrate the path of humanity forward, but they are no longer rallying standards. What we want is to discover the basic principles of a right life. Jesus summed up the Old Testament law in the golden rule, and perhaps the real strength of Christianity is that it can be modernized.

[*Universalist Leader.*]

We do not surrender our wills to the self-centered and isolated will of Jesus Christ. We follow him, we surrender to him, we seek to obey him, because in him and through him we verily believe we get a glimpse of the eternal truth about the world beyond him, and about the heart of God.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel*.

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel*.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $3.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII. 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The rule of a railroad limiting its liability to a certain stated sum where a passenger loses baggage carried on his ticket, has been upset by the appellate division of the New York supreme court. A complainant brought suit against a railroad for five hundred and fifty dollars, alleging that was the value of the contents of a trunk which he lost on one of the defendant's trains. The railroad set up a defense that it filed with the public service commission a tariff wherein it was stated that the railroad was responsible for one hundred and fifty dollars only on baggage carried without charge. On demurrer to the contention the complainant got judgment, the supreme court holding that a railroad company cannot limit its liability.

A public utilities commission bill was passed, 20 to 9, by the Connecticut Senate last week, after six hours' debate. Its passage in the House is also predicted. It provides for a commission of three members at salaries of five thousand dollars each, to have supervision over the transportation, telephone, and telegraph lines and express, gas, electric lighting and water companies in the state. The bill passed was a minority report of the judiciary committee, the bill of the majority having called for two commissions, one of which would have been the present railroad commission, with broadened powers, and a separate commission to supervise other public service corporations.

The postoffice department, for the first time in nearly thirty years, is self-supporting, and Postmaster-General Hitchcock has accordingly returned to the secretary of the treasury the three million dollars which was set aside from the public funds to defray the expenses of the postal service in the current fiscal year. There is at present a postal surplus of more than one million dollars. When he assumed the cabinet position under President Taft there was a deficit of more than seventeen million five hundred thousand dollars, the largest in the history of the postal service.

Judge Gary, chairman of the board of directors of the United States Steel Corporation, last week told the House investigating committee that he favored government control of all great corporations engaged in interstate commerce. He expressed his willingness to submit the intimate and intricate business affairs of his corporations to a duly accredited branch of the government, and would be satisfied to permit such a government agency to fix the price at which the corporation's products could be sold.

A thorough investigation of Indian bureau affairs will be made by the House committee on interior department expenditures, through sub-committees, which will continue to work during the recess of Congress. The charge that the American Indian on the reservation is under the arbitrary and unlimited power of the Indian agent and powerless to complain, for fear of punishment, has been taken up by the committee.

Announcement is made that work will begin shortly on the new union passenger station which is to be erected by the Illinois Central Railroad Company at Main street and Calhoun avenue, Memphis, Tenn., on the site of the structure now used for the same purpose. The station will be modeled after the Pennsylvania one in New York, and will cost about three million dollars.

To safeguard the United States from the results of private ownership of land along the Panama canal in time of war, Colonel Goethals, chief engineer of the canal and the chairman of the isthmian canal commission, before the House committee on interstate and foreign commerce last week, advised that the government purchase every acre of land within the isthmian canal zone.

The new union station at Worcester, Mass., costing about a million dollars, was opened to service last week. The station is used, as was the old, jointly by the New York, New Haven & Hartford, the Boston & Albany, and the Boston & Maine railroads.

The national treasury made a much better showing for May than it did for April and its condition, as compared with a month ago, is materially strengthened. It began the new month's business on the basis of a small surplus, one million dollars.

The gift of one million dollars by Morton P. Plant of New London, Conn., to the Woman's College to be located there, was without restrictions, save that the income be used to pay the running expenses of the college.

Fifty postoffices, principally in western states, have just been designated as postal savings depositories to open July 3, making the total of such offices five hundred.

Twenty new national banks began business during May.

International.

A magnificent monument to King Victor Emmanuel II was dedicated in Rome, Sunday, June 4, in the presence of nearly a million people from all over Italy. The granting of the constitution by King Charles Albert in 1848 was also celebrated. The monument is the most colossal structure of the kind in the world and will have cost when completed about twenty million dollars. The plans were selected in June, 1884, yet it will not have been fully completed for some years. It occupies the left section of the Capitoline hill and opens into the very heart of Rome on the plaza where the palace of Venice stands. In front is the Corso, the leading thoroughfare of the city.

In order suitably to welcome their majesties, the King and Queen, on their visit to Calcutta in December next, the Hindu community is making preparations to celebrate the event in a proper way. This they propose to do by the ceremony of "tuladan" (weighing their majesties in gold), and also by the distribution of presents among the pundits, the feeding of the needy and the distribution among them of warm clothes, a musical procession, and the establishment of a permanent memorial. It is estimated that these celebrations will necessitate an expenditure of five hundred thousand rupees.

The coronation ceremonies in London have had little effect on the travel of American tourists. From Jan. 1 to June 1, 1911, as compared with 1910, 3,861 less first-class passengers left the United States ports for European ports. Second-class eastbound movement increased by 3,335 and the third-class by 44,439. From Jan. 1 to June 1, 39,824 first, 40,387 second, and 148,017 third-class passengers left American ports for European ports.

It is estimated by the United States consul-general that there are about seven thousand American residents in London. They are found in every walk of life in London, and a great many Americans are in business there. An element adding greatly to the American population of London is the large number of young men employed as managers or experts in British business houses and factories. This is particularly true of electrical concerns.

The volcano Colima in the state of Jalisco on the Pacific coast west of the City of Mexico, is in active eruption. This activity was preceded by a disastrous and violent earthquake that wrote seismographic records on instruments five and six thousand miles away.

Industrial and Commercial.

An amicable adjustment has been reached between the representatives of the carmen, boilermakers, blacksmiths, and sheet metal workers of the Southern railway and other lines. The machinists are to receive from one and one half to three cents per hour advance. The carmen are to receive a two-cent an hour advance flat. The boilermakers, blacksmiths, and sheet metal workers are to receive approximately the same increase. This settlement affects about eight thousand men and it is said the advance scale will apply, as it has done heretofore, to the Seaboard Air Line, Atlantic Coast Line, Norfolk & Western, and Chesapeake & Ohio, with nine thousand additional men. The approximate advance in wages is over one million dollars per year.

An English colliery proprietor has offered a sum of one thousand pourds as a prize for the best electric lamp suitable for the use of miners. The sum has been placed at the disposal of the home secretary. It must be so constructed as to render impossible the ignition of inflammable gas, either inside or outside the lamp, and the battery should be so constructed that any liquid it may contain cannot be spilled while the lamp is in use. The lamp must be capable of giving a light of not less than two candle-power continuously for at least ten hours and should be so locked that it cannot be opened without detection.

A "smoke dissipator" is a patented German invention for abating the smoke and gas nuisance of chimneys. It consists of a chimney carried to a proper height to insure a good draft. Above that point the chimney is built with small, funnel-shaped orifices, which allow air to enter from any direction the wind may be blowing. The diluted smoke escapes from the openings on the leeward side of the chimney and, becoming more and more diluted with air as it rises, finally passes out so mixed as to appear only as a darkened veil.

Over thirty million feet of logs, released by recent rains, have come into the booms in the vicinity of Fredericton, N. B., and hundreds of others are on their way down the rivers and streams. In many instances lumbermen had almost given up hope of being able to get the logs out this season because of the low condition of the rivers. More than forty-seven million feet are now stored there waiting to be taken to the sawmills.

The Canadian Pacific railroad transported from Quebec to Montreal, Toronto and the West during May twenty-nine thousand adult immigrants.

General.

In a ton of water from the Caspian sea there are eleven pounds of salt, in the Baltic eighteen pounds, in the Black sea twenty-six pounds, in the Atlantic thirty-one pounds, in the English channel seventy-two pounds, in the Mediterranean eighty-five pounds, in the Red sea ninety-three pounds, and in the Dead sea one hundred and eighty-seven pounds.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HEALTH PERMANENT.

CLARENCE W. CHADWICK.

WITHOUT explaining the meaning of the word health, *materia medica* has a great deal to say about how to keep well. It looks upon health as a condition of matter which is subject to change without notice from so-called natural causes. Not knowing the scientific explanation of health, the human mind has invented a thousand and one theories and opinions which are supposed to affect it.

Today, as never before, these theories and opinions are not only multiplying, but they are being thrust upon people as the only rational means for preserving the health of mankind. "The-doctor-knows-best" thought is so apprehensive of its future welfare in the hands of a progressive people that it is seeking national legislation in its effort to hold the health of the nation within the jurisdiction of matter. Fortunately, however, for the human race, a mighty wave of righteous protest against unjust legislation is sweeping over our country, so that the voice of the people is bound to be heard and felt. The inevitable outcome will again prove that the human mind cannot usurp the divine sovereignty. It can never solve the problem of health for the human race until it knows and can demonstrate what health is. This demonstration cannot take place until Christ, Truth, enters human consciousness and points the way to the spiritual kingdom on earth.

For centuries the wisdom of this world has sought in vain to find health and happiness in matter. What has been the outcome? A veritable tower of Babel, or confusion, has been reared upon the quicksands of human reason, from whose height not even a glimpse of the promised land has been obtainable. Through Christian Science the healing Christ-idea has again appeared in the world, and humanity is being shown the way out of the darkness of materiality into the light of spiritual existence, teeming with health, holiness, purity, strength, and happiness. The Science of real being eliminates matter and reveals and demonstrates the spirituality of health and happiness. Because of this demonstration unnumbered thousands are turning voluntarily from the god of medicine to the living God "who healeth all thy diseases" and "who forgiveth all thine iniquities." In holy and enlightened thought they are turning to omnipotent Love for guidance, and their prayers are being answered in improved moral and physical conditions. The practical availability of divine power to correct the wrong thinking that accompanies both sin and sickness has been so thoroughly tested that the onward march of Truth is an assured reality. The crisis has passed, and all mankind are bidden to step forth into the mental arena where cause and effect are seen to be spiritual and not material.

The wideawake physician must admit that material remedies are but tentative and that they fail to satisfy. He should therefore be the first to speak in favor of a higher order of healing. And he will be the last to compel his fellow-man to return to positions outgrown. The twentieth-century thinker is advancing Mindward. He has cut loose from the moorings of material sense and is steering straight for the haven of Soul. In an honest and conscientious effort to rely upon the power of divine Mind, he has found an unfailing remedy for all ills. "The germ theory" he finds to be only a theory of the mortal or human mind, and as such, destitute of intelligence, Principle, or law. He is more concerned with the mental germs of malice, envy, lust, and hatred, and he is working intelligently and unceasingly to eradicate these from consciousness.

In doing this work he is laying a sure foundation for health, happiness, and true success. His advice to young and old alike is, Beware of the mental microbes of sin in its myriad forms; keep thought pure and strong, dwelling only upon those things which make for righteousness and harmony; refrain from reading and discussing detailed descriptions of disease and of sin, and you will continue to advance toward the goal of perfect health and happiness. If we rob consciousness of its belief in and fear of disease germs, there can be no possible entrance through which disease can reach the body, for all trouble, whether it be called physical, moral, or mental, originates in and operates through thought; hence the necessity of reckoning primarily with thought in order to reach the seat of all trouble. Dealing with the effects of wrong thought while ignoring their cause, will never lead to the understanding of mental and moral health nor to the overcoming of evil with good.

The ability to keep well cannot be appropriated by the mortal or carnal mind which "is enmity against God" and "not subject to the law of God." Only through Christ, only through knowing man's relationship to God, can one gain the understanding of health and how to maintain it. How to keep well is a problem that demands the Christianization of thought and conduct, the overcoming of the last vestige of belief in the germ theory of supposititious life in matter. Too much cannot be said against the wholesale distribution of literature dealing with the subject of disease, filling the minds of people with uncanny and unholy mental images, which must necessarily be erased from the canvas of mortal mind if one would protect himself from the ravages of fear and disease.

The great need of the human race is to learn more about health and less about disease and sin. To study disease from the standpoint of its reality and fatality only tends to intensify belief in disease, and is prolific of untold suffering on the part of those who are ignorant of spiritual law and its operations. The world is fast awakening to the importance of spreading the gospel of good and of discarding evil,—everything that is unlike God. Could any one hope to establish the kingdom of Christ, Truth, on earth through a knowledge of sin, disease, and death? Did not Christ come, as the apostle tells us, "that he might destroy the works of the devil"—these very things?

The call of the hour to him who is looking into matter for both the cause and cure of disease is, "Awake thou that sleepest, and arise from the dead." Health was never in nor of matter, and can never be found there. Self-denial in the light of Christian Science will deprive so-called dis-

ease beliefs of their imaginary power and reveal the sanity of Christian faith and understanding in dealing with every known disease and sin of mankind. Health is experienced only through right living, and right living is the outcome of a correct knowledge or understanding of God. In order to keep well one must live above the physical senses, so called, and gain an impersonal or spiritual sense of both good and evil.

THOUGHTS FOR THE BEGINNER.

JENNIE IRENE BLATCHLEY.

It is frequently the case that the beginner in the study of Christian Science, having not yet risen to that spiritual understanding which will later prove to him that "the only real senses of man are spiritual, emanating from divine Mind" (Science and Health, p. 284), is likely to ask in the early days of earnest seeking questions similar to the following: If the structural life of material man is not the manifestation of God, if the physical senses afford no proof of God, then how am I to know God? What proof have I of God's immanence? These questions are quite legitimate in view of the fact that the material concept of God which this student formerly held has to his growing spiritual consciousness been found of little value, and that his, as yet, brief awakening to things spiritual has given him little basis from which to form new concepts. These questions are asked with sincerity, and the seeker should be pointed to the satisfying answers which are to be found in the teachings of Christian Science.

Should you ask this "seeker of the light," "Do the beauties of nature come by chance?" although young in spiritual understanding, he will at once reply, "By no means. There must be intelligence as the cause of all that is beautiful in nature." He is quite right, and it is this intelligence or cause which in Christian Science is called Mind, God, good. Should you again ask, "How long, do you think, will this intelligence or Mind exist?" he will at once reply, "Forever." But all this outdoor life which is a delight to his material senses will soon perish. Then the sense evidence cannot be of God's creating, for God's creation, made in His image and likeness, is eternal, undying, the same always. It is the intelligence or Mind which the varied beauties of nature manifest or reflect, that is the real, the eternal. God is not in the thrush's song, but the song reflects the divine attribute of harmony. So is it with all nature. The symmetry and grace of the elm tree, the stateliness of the pine, the endurance of the solid rock beneath the soil, the silence manifested in nature's growth, the constancy of the upward-playing fountain,—all these, being attributes of the creator of all that is eternal, are themselves the unchanging and eternal ideas of Mind. The objects of nature which are presented to us by the material senses are temporal, fleeting, but the things of God which they may symbolize to awakening thought, are eternal.

As the beginner in the study of the spiritual comes to see how it is that Mind, God, creates the beauties of nature, he will admit that God is good. As he progresses in the study of the Christian Science text-book and of the Bible, he will see that the term good as here used means vastly more than a mere quality; that it conveys an abstract idea quite apart from any material object. Gradually the thought, God is good, will mean to him, God is all goodness; and he will awake to the great fact that in proportion as he lives goodness, as he manifests goodness in his daily thoughts and their resulting actions, in that proportion is he living close to God, in that degree is he having his part in the great whole, the unity or oneness of God.

Mrs. Eddy tells us that "God is not separate from the wisdom He bestows" (*Ibid.*, p. 6). As with wisdom, so it must be with all God's attributes; God is not separate from meekness, love, patience, mercy, kindness, humility, unselfishness, forbearance, compassion, purity. He is not separate from any of those attributes which make up the divine character. The sum of these attributes constitutes the individuality of the divine nature. It is because God is not separate from these attributes that he who reflects them in his daily living is walking hand in hand with Him; is seeing God face to face. In the degree that he expresses these attributes in his daily contact with his fellow-men, in that degree does he take restful pleasure in the Scriptural truth expressed by the apostle, "In him we live, and move, and have our being."

The earnest beginner in the grand work of spiritual growth will be patient if he gains a little each day in the understanding of nearness to God. If today he has so adjusted his thinking that he has seen in one who may have spoken ill of him only the image of God; if he has looked upon this error of criticism as being separate from the true individuality, as forming no part of God's idea, then he is having his part in the Love which is God; for God is not separate from the love He bestows. If today he has manifested more patience than he manifested yesterday in dealing with some physical discord that he has not yet learned to know as an unreality, he is reflecting the divine character in greater measure than yesterday. If in his desire to know more of the spiritual life, he has today been led to put aside or deny self that Spirit may be glorified, there will come to him the peace which is proof of God's immanence.

The beginner who prayerfully seeks to know more of God and His spiritual creation will patiently follow our Leader's instruction to "hold thought steadfastly to the enduring, the good, and the true" (*Ibid.*, p. 261), even though he may not at first receive the rewards of such obedience; and she goes on to tell us what these rewards will be. She says, "You will bring these"—the enduring, the good, and the true—"into your experience proportionably to their occupancy of your thoughts." The Master, who knew better than any other the vast importance of right spiritual thinking, urged the same obedience and gave promise of the same rewards when he said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."

THE CONCORDANCES.

WILTON H. MC KERRAL.

In the Manual, Art. XIV, Sect. 1, Mrs. Eddy ordains the Bible and its commentary, "Science and Health with Key to the Scriptures," to be the pastor of The Church of Christ, Scientist, since these books furnish a full exposition of Christian Science. It was our Leader's appreciation of this fact that determined the form of Sunday services used in the Christian Science churches. A book becomes its own commentary when its various passages relating to the same topic are compared. These passages will be found mutually explanatory; and by their study in association the student may more nearly approximate the author's view-point and gain a more comprehensive perspective of the whole subject presented. To promote this method of study, our Leader early published a concordance to Science and Health. Satisfactory Bible concordances were already in existence.

The references supplied by the *Christian Science Quarterly* are designed to give direction to our search of the Scriptures and Science and Health, but not to fix limitations to this study. They should rather be a stimulus to such further investigation and study along these lines as may be prompted by the student's individual needs and interests. The desirable equipment for such study includes not only the Bible, the Christian Science text-book, the *Quarterly*, and a serviceable dictionary of the English language, which are essential, but also an unabridged Bible concordance, such as Young's or Cruden's, and the concordance to Science and Health. These greatly facilitate topical study by giving certainty and thoroughness to the search for related matter.

The Christian Science reading-rooms are much used for purposes of study by business men and women, who are thus able to spend most profitably the few leisure moments of the midday, and by traveling people and others who find here the best substitute for home conveniences. To these, and to those students who have not the advantage of such helps in their homes, the presence of the concordances upon the tables of our reading-rooms would be very welcome. Even where there seems to be no active demand for these works, their very availability will be found to be an incentive to their use.

THE EDUCATION OF HUMAN SENSE.

LOUISE K. FLEMING, A.M.

NOTHING, perhaps, furnishes a closer analogy to the activity of Christian Science practice than mathematics. To one whose work has accustomed him to the leading of young students over the rough places in mathematics, solving problems, correcting errors, replacing mistaken beliefs with the proper rule, pointing out an unvarying order, and basing all operations upon a changeless law, this comparison is full of meaning and helpfulness. In the case of the student of mathematics, erroneous results follow the ignorance or misapprehension of the rule involved, and no less surely, in the case of the student of life's activities, do discordant results follow a mistaken sense of law. In one case, if the student fails to see his mistake, the teacher supplies the correct rule; in the other the practitioner shows the right application of law; and in both cases harmony is the result.

How often a boy goes to his teacher, discouraged and defeated, with the statement, "I can't get the right answer," displaying a manifestly incorrect result, or perhaps merely a jumble of figures. Following out his work, the teacher soon discovers the mistake. "What is eight times seven?" is asked; "you thought it was fifty-four." The uncovering of the error may be enough to give him the start he requires; but the problem is not yet solved; right thinking is necessary from that point on in order to gain the final answer. Perhaps the difficulty is not so easily overcome; the mistake may involve some law not clearly understood and the boy may not see at once that he has been in error. Then there must follow a careful explanation of the law, its basic requirement, and the results, before he can apply it to the example in question. Then, as before, right thinking must bring the right result.

In like manner, the disheartened man, unable to work out his problem in life, goes to the practitioner of Christian Science. He may be sick; or perhaps his business affairs are discordant, or he may have suffered loss or bereavement,—whatever his difficulty it is due in some way to wrong thinking, just as was the boy's mistake in mathematics, for right thinking always produces harmony. Following out his thought, the practitioner soon detects the error. It may be only a slight slip, and then, like the boy's mistake in the multiplication table, it is at once recognized and corrected, and the problem harmoniously solved. But oftener there is a misapprehension of basic laws. Then must the divine Principle of the universe be pointed out, and an explanation of the unvarying law in its application to the problem in hand must follow, for on the basis of divine Principle and its idea, "perfect God and perfect man" (Science and Health, p. 259), all human difficulties are solved.

Admitting that wrong thinking is the immediate cause of all human discord, let us look a little deeper and see what is the basic error involved. A mistaken sense of things, in whatever activity, is the direct outgrowth of a belief in more than one mind,—in a human or mortal mind that is changeable, fallible, and even ignorant. The mistakes of the student in mathematics are the consequence of believing that he has such a mind as this. The disease, failures, and troubles of the student of life are all due to this same fallible mind,—or rather to his acceptance of the lie that man, the expression of divine Mind, can be the channel for a mistaken sense. This so-called mind thoroughly believes in itself as limited, fearful, and ignorant; and until it can be instructed out of itself and its false sense of life, into the understanding that Mind is God, infinite, omniscient, and forever reflected by man, it will continue to suffer from its beliefs.

The practitioner of Christian Science is, then, an instructor of human sense. No matter what the phase of thought, no matter what form it may take, he recognizes ever the same pupil. And he knows that his patience and vigilance must never cease until this pupil is thoroughly educated, led up and out of the darkness into a realization of his rightful heritage and true selfhood, "the glorious liberty of the children of God."

THE TIME OF FIGS.

J. M. TUTT, M.D.

ON the way from Bethany to Jerusalem, his objective point being the temple, Jesus found himself hungry. And seeing a fig tree in full leaf, he drew near, hoping to find fruit. Instead of figs wherewith to satisfy his hunger, however, he found nothing but leaves. Whereupon Jesus condemned the tree; and, its useless and barren life exposed, it presently withered, as Mark says, even from the roots. The apostle, in seeming attempt to justify the fig tree in its failure to meet the requirement of the Master, comments that "the time of figs was not yet." Now a study of the fig tree discloses the fact that it puts forth its fruit invariably before its leaves. In fact, the fig itself, having first made its appearance, is followed by the leaves, and when the fruit has quite fully grown, it is found to contain in its center a great number of minute white flowers, thus giving rise to the common belief that the fig tree does not really blossom at all. Jesus, therefore, seeing the tree in leaf, without regard to the season, reasonably expected to find fruit also.

The measure of success of any Christian or any church is based upon spiritual activity. If the individual or the church in any field be seen to put forth leaves, reaching out in splendor of seeming growth, and be found lacking in the fruit of the healing ministry, there can for such be no escape from the condemnation of divine justice in the plea: For the time of figs is not yet. The fruit of the Spirit, as enumerated by Paul, must be brought forth and first. Nor can success follow the attempted reversal of this divine order. The time of figs is now. Our Leader says in Science and Health (p. 55): "The time for the reappearing of the divine healing is throughout all time."

How beautifully does the fruitful fig tree typify the church active in Truth! Fruitage before foliage; works of love,—healing the sick, casting out evil, raising the dead in trespasses and sins to newness of life in Christ, such glorious fruitage, always preceding the outward manifestation of luxurious foliage, as expressed in beautiful edifices, large congregations, and services that are in truth benedictions, under whose shade the weary and sick and sin-laden rest!

When the disciples wondered at the destruction of the fig tree, Jesus said: "Have faith in God." He who has the spirit of the good Samaritan, whose daily doing is good and true, is not found wanting when the call to service comes from the Master; and he said, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Mrs. Eddy has written these immortal lines: "To live and let live, without clamor for distinction or recognition; to wait on divine Love; to write truth first on the tablet of one's own heart,—this is the sanity and per-

Digitized by Google

fection of living, and my human ideal" (Messages to The Mother Church, p. 76). To be found in simple faith, trustful and trustworthy, bearing the fruit of love and good works, is to have earned the "Well done, thou good and faithful servant;" then, from the blessings of all these things added, arises the perfume of the fragrant blossoming of a heart of peace.

PRACTICAL RELIGION.

HENRY JAMES DERBYSHIRE.

NOT long ago, as time is measured in mortal years, two American missionaries were sitting on a wayside rest in Japan. As they tarried they were approached by a woman bearing a very heavy burden. The woman was one of that class of people known to sociologists as the submerged tenth. Laying down her burden and addressing one of the missionaries she said, "Are you the woman that talks about the foreign God?" "I am the woman that talks about the foreign God," the missionary replied. The woman then asked, "Will your God make my burden lighter?" Had the missionary been a Christian Scientist she could have answered emphatically, "Yes! my God will make your burden lighter;" for divine Truth does make lighter our burdens. It matters not whether it be a burden of firewood such as this woman bore, a burden of sorrow, a burden of sin, or a burden of disease.

There is an old proverb which says: "The only road that leads to the house of forgiveness is the road of understanding." Christian Science is the highway to God, Truth—to "an house not made with hands, eternal in the heavens." In proportion as we understand God are our sins forgiven, destroyed. In proportion as we become conscious of God, good, do we become unconscious of matter and evil; but he who sets out in search of Truth must leave the valleys of human superstition forever; there is no turning back. We can no more return to a belief in God as a tyrant, and heaven and hell as localities, than we can return to a belief in a disease which we have outgrown.

It is frequently a long and toilsome journey from sense to Soul. The mountains of sensuality, suffering, and what seem to be material facts are high and hard to climb. When we have passed over them by the path of self-abnegation and self-denial, we may in a manner and for a time feel lonely, but Mrs. Eddy tells us that "this seeming vacuum is already filled with divine Love;" and again she says that "divine Love always has met and always will meet every human need" (Science and Health, pp. 266, 494).

Here we pause, and wait, before stepping across the barriers of time into eternity. When one uninstructed in Christian Science looks into immensity, he sees a seeming void. When a Christian Scientist looks out into this seeming void, it is teeming with intelligence—Life, God. When we reach this point of understanding, we become conscious of the God who heals all our diseases, lightens our burdens, and forgives our sins. Every time we overcome a burden of sin, disease, or death through our understanding of God, Christ, Truth, is speaking, and saying to us as surely as Jesus said to Peter: "Blessed art thou, Simon Bar-jona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven."

"THE CARNAL MIND."

RUTH INGRAHAM.

ONE afternoon, in trying to amuse a small and very wilful child who had been left in my care, I devised a plan which I felt sure would appeal to her little heart, and broached it to her, only to be met by a cold and stubborn refusal to cooperate. Quickly I felt a sense of resentment and a desire to conquer the child by force; but this feeling was instantly followed by one of shame to think I was capable of holding such a sentiment toward a child, and I simply left her to her own devices so far as was practicable, respecting a certain right of choice within her. At that moment it was clear to me that the same element in her which had resisted me, was present in me to resent that resistance—that the one evil, or mortal mind, had used each of us as a channel. In a further endeavor to disassociate evil from personality, and to realize all error as being one and the same lie, though seemingly manifested in a bewildering number of forms, I sought for an allegory or analogy which should illustrate the point more clearly.

It then came to me that all mythology and folklore furnishes again and again the very illustration I was seeking. How many stories center upon some huge dragon or giant which holds a community or perhaps a whole nation in a thraldom of fear. Through the mandates of this monster the people are forced to perform cruel tasks, and his insatiable greed drives them to greater and greater endeavors to please and propitiate him. With all their efforts they never win his commendation, but are frequently forced to the extremity of sacrificing in vain their dearest and best loved. Then there comes one without fear, a brave spirit under the protection of good in some allegorical form, who slays the dragon, and gives to its victims freedom and joy.

Has not this been the half-conscious attempt of the poets and story-writers in all ages to depict the workings of the mortal or carnal mind?—a seeming power which acts through persons, while being in no sense a part of any one's true character; making unreasonable, even atrocious demands upon them, causing them to suffer an anguish of fear, to labor frenziedly in attempting to appease its senseless, ceaseless, exorbitant appetite, to wreak acts of cruelty upon others, all in the vain hope of escaping mortal-mind penalties or winning its lasting praise. But in this age, the deliverer, usually prefigured in these allegories as a knight, has come in the form of a brave, heavenly-visioned woman, who has seen the powerlessness of the monstrous unreality of evil, and struck a fatal blow at its very heart with the two-edged sword of Truth. In its death throes, this carnal mind may still seem to be an enthralling and a destructive force, but we who bear witness to the power of Truth realize that the reign of terror is at an end, and that all must soon awake from their lethargy of fear to know this.

In Science and Health (p. 571) we read: "Clad in the panoply of Love, human hatred cannot reach you." Well did she who wrote these inspired words know their truth, for she proved them in the mighty endeavor which has again brought salvation to the world.

[Written for the *Sentinel.*]

LOVE'S FLOCK.

BELLE A. MUNDY.

SHEPHERD our thoughts, O loving One!
That they may follow Thee—
A white flock, treading in the steps
Of Christ's own purity.

The least of these, our little thoughts,
Shall raise a plaintive cry,
That haply wanderers may hear,
And find a brother nigh.

The tiny lamb upon Thy breast,
Too young to walk alone,
A symbol is of human thought
Till it hath stronger grown.

The lost sheep on the hillside bare,
Thou shalt seek out and find,
Folded again our thoughts shall be,
In the eternal Mind.

SELECTED ARTICLES.

[Frederick Dixon in *London* (Eng.) *Sunday Times.*]

The repentance which overtakes a man and replaces his physical sense of material creation with the spiritual sense of true creation is a mental one, and was expressed by Paul in the advice to "let that mind be in you, which was also in Christ Jesus," for exactly in the proportion in which a man acquires the Mind of Christ, he comes to understand that creation is spiritual and not material, and then, in the words of Mrs. Eddy, on page 312 of Science and Health, to which exception has been taken, he learns that "that which material sense calls intangible, is found to be substance. What to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears."

Now, because it is a scientific fact that causation is spiritual, this scientific fact can be demonstrated in practice. This practice was explained in the miracles of Jesus, miracles which were nothing but demonstrations of the truth of his theology, or his explanation of the word of God. He came preaching to humanity the message, "Repent ye: for the kingdom of heaven is at hand," and when the material sense of his listeners, fixed on the reality of the so-called matter around them, revolted from this, he performed the miracles, telling them if they could not believe for the words' sake, they must believe for the very works' sake. In this way he constituted the miracle not a supernatural occurrence, but a divinely natural one, for he constituted it the test of a man's understanding of the truth which was to make the world free, and so of his Christianity: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

[William J. Bonnin in *Birkenhead and Cheshire* (Eng.) *Advertiser.*]

Extraordinary as it is, it is nevertheless a matter of experience that the attempt to persuade the race to shake off the self-imposed shackles of evil invariably meets with suspicion and some degree of resentment. And so it is not surprising that human belief should rise in opposition to the declaration of absolute truth which Christian Science makes when it affirms that the one well-nigh universal superstition or false belief is that evil is some real entity or actual power. And it is quite in accord with precedent that the argument for the reality and power of evil should proceed along the exact lines that your correspondent adopted in his letter in your columns. For his letter amounts to nothing more than a defense of evil for that God has ordained it. "Both God the Father and the Son," says this critic, "have declared the existence of evil."

Now the truth is that neither ever did so. Of course one has to come to some understanding of the meaning of "existence" before this can be seen. No one dreams of denying that as a matter of human experience evil seems to exist, that according to material sense sin, disease, and death are stern realities. But, as one becomes able to differentiate between absolute truth and the mere human concept of truth, the claim to set up human experience or the human senses as an adequate standard, test, or criterion of reality or true existence, is seen to be nothing but mortal fatuity and presumption. So far from declaring that evil had any truth in it, Jesus said that the devil (*i.e.*, evil) was a liar, and that there was no truth in him. Now, a liar is one who pretends that something is or exists which in fact does not exist, and so in that statement Jesus relegated evil to the realm of false belief and declared its existence to depend, like that of a lie, on the measure of belief accorded to it.

This may all appear a mere drawing of philosophical distinctions and abstractions.. And the charge would hold if Christian Science stopped there. But it by no means does so. It declares that, just as darkness vanishes and is seen to be nothing before the light, the understanding of absolute truth, of the omnipresence and omnipotence of good, causes the evil of human experience to vanish and its nothingness to be exposed. It announces that when Jesus promised that the knowledge of the truth should set men free, he meant it. And if we but consider the point, there is only one thing for the knowledge of truth to set one free from. It could only set one free from the false, the lie, and as a lie cannot be known but only believed, it is from the bondage of our own false beliefs that we are to be saved. And this is now the experience of thousands who have given up the unprofitable practice of continually giving glory to the devil, or, in other words, of continually declaring the power and presence of evil, and have turned in Christian Science to obey the Bible injunction to give all power and glory to God, good, for these are finding that the false beliefs of sin and sickness are fading out of their experience, and that after all Christian salvation is salvation here and now from the woes that oppress mankind, and not a mere vague and conjectured salvation that one has first of all to die to attain to.

It is quite impossible to attempt to set this critic straight all along the line. Many of his statements totter of their own weakness. For instance, to allege that the existence of evil is necessary for us to recognize good by contrast, demands from one a merciful silence. And to aver that the Bible teaches that death is a necessary and indispensable antecedent to salvation seems strangely opposed to Jesus' words, "If a man keep my saying, he shall never see death." If life is knowledge of God, and Jesus declared it to be so, it cannot be that God wishes His children not to know Him or to cease to know Him; "I have no pleasure in the death of him that dieth, saith the Lord God; wherefore turn yourselves and live ye." Thus Ezekiel; and Paul defined death as "to be carnally minded"—to be spiritually minded, he said, is life and peace. These, taken with a passage this critic commends to my consideration and its subsequent elaboration, "Whatsoever a man soweth, that shall he also reap; for he that soweth to his flesh shall also of the flesh reap corruption; but he that soweth to the Spirit shall of the Spirit reap life everlasting," bear out most emphatically the Christian Science teaching that life is the real and positive, the true and spiritual, and that death is simply the negation of life, the lie of material sense about the truth of spiritual sense. The man who sows to the flesh, who is carnally minded, is the man who accepts the evidence of his material sense as absolute truth and looks ever to matter for intelligence, power, pleasure, and hope of salvation. To such a one, reaping corruption from such sowing, Christian Science offers its message of hope and assurance that a sowing to the Spirit will infallibly enable him to reap the fruit of the Spirit, love, joy, peace.

[James D. Sherwood in *Temple* (Tex.) *Telegram.*]

It is being daily proven by practical demonstrations of the healing of physical and moral diseases, that Christian Science is both scientific and Christian. Science is defined as exact knowledge; and if knowledge of things material is commonly denominated science, how much more should the knowledge of heavenly things be entitled to that distinction. Christian Science is the demonstrable knowledge of God and man and the Science of being, and proof of this is seen in the restoration of the sick and sinful through spiritual means alone. That Christian Science is Christian is recognized in its effects upon the lives of those whom it reaches and benefits. The sinner is reformed, the sorrowing comforted, and the thoughts of men are exalted to the apprehension of God.

It is difficult to understand how a professed teacher of Christianity can take pleasure in belittling the healing work of Christian Science when he remembers how the gospel records of the works of Christ Jesus teem with accounts

Digitized by Google

of his wonderful work of healing. When John the Baptist sent two of his disciples to Jesus inquiring of him, "Art thou he that should come, or do we look for another? Jesus answered and said unto them, Go and shew John again those things which ye do hear and see: The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them. And blessed is he, whosoever shall not be offended in me." That was sufficient for John the Baptist, and it is being found sufficient for many others at this time. At a great church congress a few months ago, one of the clergymen present said the jewel which had been thrown away by the church was picked up by a woman; and, after much discussion, a resolution was passed and a committee appointed to investigate and report upon the phenomena of mental healing that is so much in evidence today. The church is beginning to recognize the fact that "the stone which the builders rejected, the same is become the head of the corner."

In Christian Science, new birth is the regeneration that is mentioned by St. Paul, in Ephesians (iv, 22-24), where he admonishes: "That ye put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and that ye put on the new man, which after God is created in righteousness and true holiness." It is the process of transformation that is accomplished by what the apostle calls a "renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

Christian Science does not deny the existence of the claim of sin as a human experience. On the contrary, Christian Scientists understand that they must avoid even the appearance of evil. They are taught not to fear sin, and not to love sin, and never to indulge in the practice of sin. God made all that was made, and all that God made He pronounced "very good." Sin is not mentioned among the good works of God. There is no good in sin, and there is no abiding sense of pleasure in the practice of sin. Sin is a belief in evil, and as such it is an evil belief, and it can and it should be resisted and overcome, made void.

The charge that mercenary motives govern the acts of Christian Scientists is not borne out by the facts. No class of individuals is doing so much good for the world, and it is well known that many of the Christian Scientists have given up lucrative business pursuits and professions in order to be able to devote all their time and talents to the betterment of humanity in the way pointed out by Christ Jesus, and that today is known as Christian Science practice. This practice is not "the influence of one mind over another." Such a mental control is mesmerism, and mesmerism is no part of Christian Science practice. Mortal mind has no healing capacity in itself. It cannot heal itself nor can it benefit others. St. Paul said, "Let this mind be in you, which was also in Christ Jesus," and he also said, speaking of mortal mind, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." In Christian Science practice, healing is accomplished by the demonstration of Truth, proving that God is the natural healer of the sick.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch.*]

Christian Scientists accept the statement of Christ Jesus that the kingdom of heaven is within, and they understand this to mean that heaven is not a locality, but a condition of thought. Further, they understand our Lord's teachings to be that heaven is to be attained not by ceremonies and acts of worship, but by a process of improved thought, by turning constantly away from sin and toward Spirit. In order to test this process of thinking, the Master said: "These signs shall follow them that believe. . . . they shall lay hands on the sick, and they shall recover." Christian Scientists find that this saying is being verified in their experience, that their improved thoughts are manifested in improved health, and that they are able to heal others also. In this way a Christian Science student finds his health depends upon his right thinking.

If all in this town of Edinburgh thought thus, would there be more or less disorder, drunkenness, and crime? Would there be more or less civilization? It is universally admitted that drink and impurity are responsible for a great part of the disease in the country. The Christian Scientist, then, only goes a step farther when he maintains that all illness is the outcome of mistaken, inaccurate thought. Christian Scientists are most careful to observe the laws of the land and the regulations of the town in which they live, as regards infection, as in all other matters. Indeed we often do what we personally dislike and consider unnecessary, in order to be good citizens and good neighbors. If we keep our houses airy and clean from love of purity rather than from fear of microbes, need any one complain?

[Willis D. McKinstry in *Independence* (Kan.) *Evening Star.*]

Christian Science and mental suggestion are as opposite as the poles—one is human, the other is divine; therefore they can in no way be classified as one and the same. As commonly understood, mental suggestion is the exertion of the human will; it is the control of one human mind by another, and can be used for evil purposes; it is the operation of the "carnal mind," which "is enmity against God."

Christian Science recognizes the spiritual facts of being as did Paul when he said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Christian Science accepts as true the Scriptural record of man as created in the image and likeness of God, also that "God is Spirit." Therefore the demonstrations of Christian Science are upon a spiritual basis; they rest upon the unchanging fact that God is the only Mind. The Christian Science prayer which heals the sick is the spiritual realization of man's unity with God—God is, and man is His image and likeness. Cause and effect being inseparable, God and the real man coexist. Jesus understood this truth, for he said, "I and my Father are one." "All things that the Father hath are mine." As the Father is perfect, the Son must remain perfect; thus because of spiritual law the real man lives, has perfect health, and is happy, and not by reason of suggestion.

[George Shaw Cook in *Streator* (Ill.) *Free Press.*]

The critic's statement that Mrs. Eddy has substituted for the worship of Christ the worship of health is beside the mark. Christian Science as taught by Mrs. Eddy includes salvation from sickness as well as from sin, but any one at all familiar with the subject knows that the healing of disease is the smallest part of Christian Science work. Christian Scientists, while thankful for the added sense of health and strength which their understanding of Christian Science gives them, are most grateful for the spiritual enlightenment and knowledge of God which they gain through the study of the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through this understanding they are able successfully to resist and overcome evil in themselves and others, and are daily proving the truth of Jesus' promises. Mrs. Eddy's practical explanation of Scriptural teachings has brought help and comfort to a vast number of people and has contributed to the world's good.

[Louise Satterthwaite in *Philadelphia* (Pa.) *Telegraph.*]

The use of the word healing in connection with Christian Science is sometimes objected to, the criticism being made that a somewhat overreligious shading is thereby given. But when one looks into the work done by Christian Science for those who appeal to it for help, fault can no longer be found with the use of the word healing in that connection.

Digitized by Google

In the dictionary we find that to "heal" means to "make whole or sound; to restore to wholesome conditions; remove something evil or noxious from; purify; cleanse; strengthen," and here we have a very good definition of that which Christian Science does to those who come to it for aid. Or perhaps it would be more correct to say that its teachings lead them to that knowledge of divine Love which does this work; for Christian Science is but a name given to that system of thought based upon the work done by Jesus of Galilee. It is a religion in the highest and best sense of the word; a religion losing none of those beautiful and good things embraced by all true religions, but elucidating them so that their meaning becomes understandable and of a most wholesome and lovely service.

The sick person who takes a drug may or may not get rid of his physical disability thereby; the diseased one who submits to the knife may or may not recover. The question is, if he does so recover, is he permanently benefited in body and mind by these expedients? To this question, unfortunately, the answer cannot always be given in the affirmative. We know that drugs do not always leave a wholesome effect; nor do we see those newly risen from the operating-table buoyantly happy. Sometimes physically they may be shorn of that which offended, but in many cases there is depression of spirits; and most certainly they have not been brought to any better understanding of God by the ordeal. Sometimes, indeed, these agonizing experiences breed rebellion against the idea of Deity; and we not infrequently find the chronic sufferer, or the one lately passed through extreme pain, bitter in his thought against the idea of a God who can permit or make possible such dire extremity.

To the unaccustomed ear, the testimonies given at the Wednesday night meetings in Christian Science churches are astonishing, since they touch every phase of life. One hears of tuberculosis vanquished, as well as of the restoration of eyesight; then, perhaps, the next speaker will describe improved business conditions, evidently regarding unsuccessful financial efforts as a sort of ailment; the one who was beset by melancholy relates with a glowing face how happiness has been found; the atheist speaks of finding a demonstrable Principle; still another of the healing of a bad temper or perhaps a chronic grouchiness of disposition; then an account of how all desire for liquor fell away is told, and next a graphic story is related telling of the safe deliverance of a party lost in a forest fire, because of reliance upon that Mind which is omnipresent, on that Love which never faileth.

Here is healing work, indeed; and, as I have said, to note the gradual coming out, as it were, from the shadow into the light of those who apply to Christian Science for physical help is an enheartening spectacle; for there is a steadily growing happiness day by day. This person is being indeed "healed," he is being strengthened, cleansed, and made whole; he is commencing to get a grip of the realities of his existence and the reason therefor; and since he can prove the thing every day and step by step, for himself, his ever growing content is not without foundation. Such is, indeed, the perfect "healing," and those who see such healing long to taste it, for there is nothing more contagious than goodness, than the whole-souled cheer resulting therefrom, than health and prosperity. We all want these things; and those who are finding them are never averse to sharing the same. For, after all, the human heart longs, always and all the time, to help the brother traveling the same road.

[George A. Law in *Bridgeport* (Conn.) *Telegram*.]

As an article from *Leslies* which appeared in your issue of Dec. 20 may produce some misapprehension as to Mrs. Eddy's teachings, I would like to state that Christian Science does not teach a "denial of the physical experiences of life." It, however, teaches that God does not afflict man, for He created only good; hence, sin, sickness, pain, discord, or that which may interfere or disturb the harmony, peace, or happiness of man, does not emanate from Him, is not the result of the operation of spiritual law, has no part in the divine order of things; therefore it must be abnormal, and should be contended with and eliminated. Inasmuch, then, as these abnormalities are not of God, Spirit, but are temporal and fleeting, not being permanent, immortal, eternal, and enduring as are the things of His creating, they are not real; and it is in this sense that in Christian Science they are regarded as unreal.

The basic teaching of Christian Science is that God, Spirit, is the sole creator of the universe, including man, and that man is made in His image and likeness, with dominion over all the earth. It then becomes apparent that it is God's spiritual law which operates and governs all. Thus man governed by spiritual law enjoys the fruits of Spirit, health, happiness, peace, and contentment. Jesus the Wayshower (who showed man how to live in accord with the divine law), being willing to allow spiritual law to govern him in all his conduct, healed all manner of disease. He used no drugs, followed no medicinal or so-called scientific lines, but repudiating all material means he accomplished his "mighty works" solely by the natural operation of the divine law.

Spiritual law is absolute, unchanging, it operates for all time; therefore it is as available for healing the sick today as it was two thousand years ago; and many thousands are testifying to this fact, having been restored to health after every other means for obtaining relief had failed. It then becomes apparent that this spiritual healing, as taught and practised by Jesus, is not supernatural, not in opposition to law, but results from the activity of divine law and therefore is absolutely scientific, making Jesus, as Mrs. Eddy has written, "the most scientific man that ever trod the globe" (Science and Health, p. 313); thus healing through spiritual law is strictly scientific.

[Frank Bell in *Pittsburg* (Pa.) *Post*.]

With regard to recent despatches from Boston, in which the future of Christian Science is discussed with considerable freedom, permit me to say that much of the speculation indulged in on this subject fails to take into account several phases of the Christian Science movement which render extremely improbable the fulfilment of any of the unfavorable prophecies that have been coined out of the passing away of Mrs. Eddy.

In the first place, all questions as to the maintenance of the "organization" must take into account that Christian Science is essentially individual in its application and operation. Organization has ever been at a minimum in the Christian Science movement, a means rather than an end. The degree of the progress of Christian Science has always been dependent on the degree of the progress of Christian Scientists individually in the apprehension and demonstration of the Principle set forth in their text-book, and in the very nature of the case it must ever so continue.

If Christian Science were established upon nothing more substantial than personal leadership or a compact "business machine," as some appear to think, there would be small prospect of its escaping the fate which history shows to have been that of virtually all movements so founded. As a matter of fact, however, Christian Science is asserted to be what its name implies, an accurate setting forth of the law of the infinite Mind, or Truth. If it were not such, it could not succeed, though backed by the most perfect "business machinery" of which human ingenuity is capable. On the other hand, if it be what it claims to be, human "organization" must be impotent greatly to help or seriously to hinder its advancing demands on the intelligent consideration and acceptance of thinking men and women.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE LECTURE SERVICE.

SUPPLEMENTARY to the publication of the appointments to the board of lectureship for the official lecture year, from July 1, 1911, to June 30, 1912, in last week's issue of the *Sentinel,* it is fitting to call attention to Section 4, Article XXXII of the Manual of The Mother Church, which requires that each branch church shall annually provide for one or more lectures, and in this connection to note some of the details which make for satisfactory service.

Letters are frequently received from churches and societies asking for information as to the proper mode of procedure to be followed in securing a lecturer. The board of lectureship has prepared a printed circular designed to answer all questions that may arise with those entrusted with the responsibility of arranging for lectures, and the importance of these instructions requires that each church officer should be thoroughly familiar with them. Copies of this circular are therefore being mailed by the board of lectureship, simultaneously with this issue of the *Sentinel,* to the clerks of all churches and societies advertised in the *Journal.* A sufficient number will be found in each package to supply each officer of the church with a separate copy, and it is desired that the clerk, in whose care they are sent, shall distribute them to these officers for their information. Attention is especially directed to the following points:

Applications for lectures should be made by each church or society, through its clerk, to that member of the board of lectureship whose services are desired, at his address as given in this circular. The board itself should not be asked to designate any particular lecturer, and the board does not keep a record of the whereabouts of its members except as it appears in the *Sentinel* in the weekly list of "Lectures to be Delivered."

Provision for lectures should be made as a part of the regular business of the churches. Whenever preliminary action is customary, it should be taken early, as it is of great advantage to all concerned to have the applications for the coming year sent in as soon after July 1 as possible. Clerks should correspond with only one lecturer at a time.

Lecturers should not be consulted regarding the treatment of disease, nor be expected to give advice in the business of a local church or in the affairs of its members. Neither is the board of lectureship a judicial body, and it is therefore an impropriety to bring to the attention of a lecturer any local problems.

In order that the public may be able to distinguish between the authorized lectures and such as may be improperly given sometimes in the name of Christian Science, it is important in all advertisements, notices, and introductions to designate the lecturer as a *member of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts,* and capitalization should be observed as here given.

COOPERATIVE WORK.

IN last week's issue of the *Sentinel* we published a list of the members of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, together with their addresses, and attention is called above to certain instructions which have been sent out by the board for the information of the branch church officers who have in charge the arrangements for the lectures to be given by their respective churches.

Attention is specially directed to these instructions, because their purpose is to secure the hearty and intelligent cooperation of all the churches in making the lecture work a success, so that even greater results shall be obtained than in the past. The interest shown by the public in these lectures has been very great, and during the lecture year just closing about seven hundred thousand persons have heard the message of Christian Science delivered in this way. When we consider, however, that even this great number who have listened to the word of Truth represents only about one in every hundred and thirty-five of the population of the United States, to say nothing of Canada, Mexico, Great Britain, and the other countries in which lectures have been delivered, it is easily seen that there remains much more to be done before the work of this board will have accomplished what our Leader in establishing it intended it should do, in correcting the misconceptions and absolute ignorance of Christian Science which yet largely prevail.

The importance of the work of the lecturers lies in the fact that they are telling the truth about Christian Science to those who wish to know the truth, without undue regard to whether or not these people shall become Christian Scientists; and it is because of this unselfish attitude that their labors have done so much for our cause and for humanity. With the efforts of the lecturers intelligently and vigorously supported by the churches along the lines recommended in the instructions sent out, we have no doubt that considerably more than a million people will listen to the lectures during the coming year. The practice of the churches in the larger cities, of giving a greater number of lectures each year than the minimum prescribed by the Manual, is greatly to be commended, and when to this is added a liberal free distribution of our literature, the total good which results from the lecture work can scarcely be estimated. It is a field of endeavor wherein cooperation finds its most effective use in bringing to public attention the "good news" of Christian Science.

ARCHIBALD MCLELLAN

THE SOURCE OF HAPPINESS.

THERE is little doubt that the pursuit of happiness engages the attention of mankind more than aught else, at least until many disappointments make the quest seem hopeless to the majority of those who follow it, yet it is both natural and right to seek happiness. The very fact that so many find only a counterfeit does not disprove the existence of the genuine; rather does it show that they do not know the real nor where it should be sought. Christian Science, however, teaches us to find in every disappointment an incentive to greater activity and intelligence in our search for the real, all the while remembering the Master's unequivocal promise, "Every one that asketh receiveth; and he that seeketh findeth." In seeking happiness we must look for it from the only source of all that is enduring or true. Mrs. Eddy says, "Happiness is spiritual, born of Truth and Love" (Science and Health, p. 57).

In the Thirty-seventh Psalm we have a remarkable picture of human conditions, where the wicked plot against the just and watch for an opportunity to destroy the righteous. The psalmist says: "I have seen the wicked in great power, and spreading himself like a green bay tree;" but he adds that the end of this manifestation of error was close at hand: even its complete annihilation. The most important teaching is, however, as to the mental attitude to be maintained by the faithful during the period of apparent storm and stress. The instructions are remarkable for their definiteness as well as their tone of certainty. We are first of all bidden to "fret not," but to trust and wait, and to "rest in the Lord." This is not all, however, for it might at a casual glance imply long-deferred happiness, which

Digitized by Google

cannot be the divine purpose; so we read, "Delight thyself also in the Lord; and he shall give thee the desires of thine heart."

Here it is well to pause and remember that no phase of mortal belief has power to hinder us from delighting ourselves in God; indeed we are very apt to pursue the merest phantoms of mortal sense until we are rudely awakened from its dream and forced to seek safety in divine Love, and thus to find joy as well. Of old, when the Israelites were rebuilding Jerusalem, they wrought with a sword in one hand and a trowel in the other; but Nehemiah said to them, "Mourn not, nor weep. . . . neither be ye sorry: for the joy of the Lord is your strength." The record goes on to say that the people rose to the occasion and began "to make great mirth, because they had understood the words that were declared unto them." At a later day the great Teacher had much to say about happiness and how it may be attained. He spoke of it as an abiding possession, the full flowering of that peace which the world can neither give nor take away. At the very hour when he knew he must face the supreme ordeal of mortal existence, also the belief held by all around him in a life separate from God, he declared not alone for peace but for joy, the joy that is full and overflowing, the joy that no person, place, or thing can take from us.

Christian Science is proving every day and hour that the understanding of Truth not only heals the sick and reforms the sinful, but that it brings true happiness, that which comes from the source of all good,—from divine Love. It is therefore our privilege to offer this evidence to all whom we meet on the round of daily duty, and the greater the pressure the more should we "delight" ourselves in communion with our Father-Mother God, and go forth to meet the world with faces aglow, like that of Moses when he came down from the holy mount.

ANNIE M. KNOTT.

SERVICE AND SATISFACTION.

WHATEVER the field of human interest, in the last analysis that which begets envy and jealousy, strife and division, with all their attendant ills, is a false estimate of values, the failure to see that real achievement and real merit are determined not by the specific work one has performed, but by the spirit and efficiency with which he has performed it. To be considerate for always doing the part that has fallen to us, in an ideal way, is to deserve and ultimately receive that recognition for serviceability and worth which duly settles all questions as to our place and reward.

All this is so obvious as to be beyond dispute, and yet it is true that sensitiveness to so trivial a thing, perchance, as a question of rank may not only defeat a great army but imperil a great cause. The seductions of selfish interests, as they are conventionally catalogued, are very subtle, and they can be escaped from only as one finds his satisfying portion in conscious devotion to a service which yields its own reward.

In the presence of some great disaster, perchance, which has imperiled the lives of many operatives, it is not an uncommon thing for a large body of men to realize such an identification with the plan for rescue as immediately eliminates all consideration for self-interest whatever. Without hesitation or reserve they will offer to render any service which may be assigned them, however difficult or mean it may be to human sense, and that even though it involve the hazard of their own lives, in the interest of the valiant undertaking. In such a moment the spirit of an ideal brotherhood is disclosed, and men rise spontaneously not only above all pettiness, but above all fear, in their willingness to assume risks in order to save human life. Not long ago a disaster in a French mine near the German boundary presented an occasion for the immediate forgetting of all past feuds, all racial antagonism, and the near-by German miners rose to it and faced danger for their brother workmen in a way which thrilled the heart of the world and instantly begat a new confidence in the inherent manliness and worth of men.

And how surely does a kindred spirit of devotion to the effort to "glorify God," not only in our service but in the mood and manner of rendering it, remove all selfishness and jealousy as to preferments, and supply the true basis of communal harmony, namely, absorption in the larger and nobler enterprise, indifference to what we do, provided we are fitted to do it worthily and well. Our continuous question then becomes, "Whom am I serving?" and if the answer is ever, "The Christ," our contenting portion is with us, we have realized the true at-one-ment of service and satisfaction. Though one have an honest desire to labor in Truth's vineyard, if the hope and expectation of return identifies it with the gratification of any unspiritual sense or desire, any love of worldly privilege or power, he has missed the mark and cannot enter into the joy of his Lord. This is so true that the Master commanded his disciples that they were not to rejoice even in the phenomena of their efficiency, but only in the consciousness of their service, the assurance that their names were written in heaven.

Practical Christian Science insures perpetual peace for the reason that in its demonstration it supplies the unquestionable proof of that alignment with Truth which for the spiritually minded is the summit of satisfaction. Their successful doing of the King's business is witnessed to of heaven, in their every healing of sickness and sin, and hence their joy cannot be taken from them. Nothing so surely saves one from the distractions of pride and pettiness as grateful content in Christlike service.

JOHN B. WILLIS.

AMONG THE CHURCHES.

ST. LOUIS, MO.

Rapid progress is being made in the erection of the new edifice of Third Church of Christ, Scientist, on Russell avenue, just east of Grand avenue. The church is being built upon a handsome lot with one hundred feet frontage by a depth of two hundred and twenty-five feet. The church proper will seat seven hundred and fifty, and the Sunday school room will seat four hundred and twenty-five more. The building will cost eighty thousand dollars, and will be a beautiful piece of architecture. Third Church was organized in June, 1906, and has been meeting at the B'Nai El Church, at Spring and Flad avenues. It is the fourth one to erect its own building. Those already built are the edifices of First Church of Christ, Scientist, at Kingshighway and McPherson avenue; Second Church of Christ, Scientist, on Washington avenue, between Pendleton avenue and Whittier streets, and Fourth Church of Christ, Scientist, on Page boulevard and Montclair place.

St. Louis Star.

ONTARIO, CAL.

The local Christian Science society will open its new chapel on West B street and Palm avenue tomorrow [May 7]. The services will not be dedicatory, as it is not customary for Christian Scientists to dedicate their churches until entirely free from debt. The chapel is of frame construction, bungalow type, and cost about two thousand two hundred dollars. The auditorium is thirty-six by thirty-six. One hundred and sixteen chairs are being installed at present, but about one hundred more can be added if required.

The local Christian Scientists have held services for several years at the I. O. O. F. Hall, but have long desired a church edifice of their own, and persistent effort has achieved the end desired.—*Ontario Republican.*

THE LECTURES.

SEATTLE, WASH.

The subject of Christian Science was presented under the auspices of First Church of Christ, Scientist, at the Moore Theater, April 9, by Bliss Knapp. He was introduced by Oliver C. McGilvra, who said:—

The presence of this large audience is the best evidence we could have of the interest that is being taken in the search after truth. I have often marveled at the magnitude of the question propounded by Pilate to Jesus, namely, "What is truth?" Ever since then the thoughtful people of the world have been trying to answer that question. Naturally, for their answer, they have searched the inspired word of the Bible. While these searchers were wandering through a maze of darkness, with only here and there a ray of light, and while a waiting people marked time to the grand music of falling chains, struck from the limbs of helpless slaves, there stepped forth an American woman, holding in her hand a declaration for truth and against the bondage of sin, sickness, and death. This declaration we now know as "Science and Health with Key to the Scriptures," and the woman who presented it was the Discoverer and Founder of Christian Science, Mary Baker Eddy. I believe the world is growing better day by day, and that it will continue to grow better until at last we shall realize the omnipotence of an ever-present God.—*Correspondence.*

AKRON, OHIO.

A lecture on Christian Science was delivered at the Colonial Theater on Sunday afternoon, April 16, by Clarence C. Eaton. The lecturer was introduced by J. Edward Good, who spoke as follows:—

It is unwise to endorse or recommend any person or thing unless we know it is good. It is unfair to condemn or even ignore any person or thing unless we know it is not good. After years of silence, of timid approval or open antagonism, the daily papers, the magazines and periodicals, are today almost a unit in placing Mrs. Eddy in a class by herself for her remarkable executive ability and for the good she has done. Whether we agree with her wholly or not, if we have carefully observed, we know that her book, "Science and Health with Key to the Scriptures," has brought comfort to many.

Her followers, those who are interested in the church organization and the Publishing Society which she founded, are now numbered not by the thousand nor by the hundred thousand, but by the million. Take the wings of the morning and go to the uttermost parts of the earth: behold, they are there! They actually encircle the globe! They are doing a mighty work. They are a mighty force, a force to be considered. Among them are to be found the most humble, the most prosperous, the most enlightened, intellectual, fair-minded people of the earth; and whether we believe as they do or not, if we would keep in touch with research and investigation, if we would be in line with thinking people, it is our simple duty and ought to be our pleasure to take advantage of every opportunity to learn what we can of their methods and their progress. Today we have one of those opportunities.—*Correspondence.*

PUNXSUTAWNEY, PA.

A representative audience listened attentively to a most able lecture on Christian Science by Frank H. Leonard of Brooklyn, delivered in Jefferson Theater, Thursday evening, April 13. The speaker was introduced by Attorney Lex N. Mitchell, who said in part,—

Christian Scientists do not have a new Bible. The King James version of the Bible is the Christian Scientists' Bible. The same Bible which you and I were taught by our parents to be the inspired Word of God, is our Bible. And thus one of the tenets of our church reads: "We take the inspired Word of the Bible as our sufficient guide to eternal Life." It is true that Christian Scientists have a text-book called "Science and Health with Key to the Scriptures," written by Mrs. Eddy; but all that has ever been claimed for this book is just what its title indicates, viz., a key to the Scriptures, an explanation of the Bible, and this explanation has brought peace and health and happiness to thousands who were burdened with sickness and sorrow and sin.

Punxsutawney News.

ST. PAUL, MINN.

Prof. Hermann S. Hering presented the subject of Christian Science for First Church of Christ, Scientist, at the St. Paul Auditorium, Easter Sunday, April 16. He was introduced by Col. James H. Davidson, who said in part,—

Today, in the dim aisles of vast old-world cathedrals, in new-world churches, humble or grand, in all places of worship around the globe, ring grand anthems of praise to a risen Saviour. "On earth peace, good will toward men," is the sentiment and theme of every tongue. He who wrought miracles, healed the sick, opened blind eyes, unstopped deaf ears, made the lame to leap for joy, and raised the dead, expressly taught that even greater things than these might be accomplished by faith, which is now strongly maintained by Christian Science. The attitude of Christian churches toward these far-reaching and marvelous claims, which was at first bitterly hostile, is now becoming more tolerant; other church organizations are looking toward the healing, and encouraging a present faith in curing *disease*. A spirit of careful investigation seems to be taking the place of hostile persecution, or sarcastic ridicule and intolerance. Old superstitions are giving way more and more to a spirit of inquiry.

Christian Science bases its claim, if I correctly understand it, on the right interpretation of the Holy Scriptures and the teachings and the works of Christ Jesus; on evidence, on the testimony of living witnesses. It alleges that each man or woman may determine and know for himself or herself the truth or falsity of the claims made by Christian Science. You can listen if you please to witness after witness, who will testify to marvelous experiences in their own lives and things which they have seen in the lives of others; but in the end they say, "Put it to the test in your own life; demonstrate the truth, and it will make you (not some one else) free from pain, free from suffering in all its forms, and will transform your life into a life of love, joy, happiness; not tomorrow, but today; not in a world to come, but in the present world." It is a challenge that attracts attention. The whole human race covets these good things,—love, contentment, peace, joy, and happiness; we all agree as to our needs. These smiling faces, hopeful, happy hearts before me, create, or tend to create, an atmosphere of love, and these much desired mental states,—I can feel it in the air, as tangible as heat or cold!

In every community there are many witnesses, reputable men and women, who claim to have received the healing benefits of Science, physically and mentally, and all offer their own experiences as exhibits to prove their claims. There are more than enough such witnesses everywhere to challenge the most careful and searching investigation by those who sincerely desire to know the truth. The presence of this great audience today, many of whom are in this faith, and some of whom like myself are investigating these claims, bears evidence of a desire to know the truth, and the whole truth. The believer and the skeptic, if honest, desire to understand the basis of these claims made by Christian Science. We want to be shown!—*Correspondence.*

SAN JOSE, CAL.

The Victory Theater was filled last evening [April 14] to its capacity by an audience that had assembled to listen to a lecture on the subject of Christian Science by William D. McCrackan, M.A. He was introduced by R. C. Sheppard, first reader of the local Christian Science church, in the following words:—

Probably few will question the assertion that practically all mankind are looking for salvation, or freedom from some form of limitation. Discussing this subject with the Pharisees, Christ Jesus said to those who believed on him: "Ye shall know the truth, and the truth shall make you free." Manifestly, then, this question of salvation, or freedom, resolves itself into the old query put by Pilate, "What is truth?" In her great work, "Science and Health with Key to the Scriptures," on page viii of the Preface, Mrs. Eddy makes this statement: "The question, What is Truth, is answered by demonstration.—by healing both disease and sin; and this demonstration shows that Christian healing confers the most health and makes the best men. On this basis Christian Science will have a fair fight."

Christian Science is a reinstatement of primitive Christianity, preaching good tidings to all who have an ear to hear; binding up the broken-hearted; setting at liberty those who were in bondage to sin and disease, and who in many cases had tried and found wanting every other system devised for the relief of humanity's ills. It is bringing to mankind a practical knowledge of God and His laws applicable to every phase of material existence, and demonstrable to the extent that this Science is understood. Christian Science is proving itself by the test Jesus himself gave, namely, by its fruits.—*San Jose Mercury.*

KEOKUK, IOWA.

Francis J. Fluno, M.D., lectured in Keokuk last night [April 6] at the Grand. He was introduced by W. J. Roberts, who spoke in part as follows:—

There are many things about Christian Science that I like and highly admire. In the first place, while it is a faith, it is a practice as well. It touches life in its every-day phases. It makes for better men and women and better conditions of things here and now. In it the Ten Commandments are not a mere code of morals to be repeated on fixed occasions, but they are a vital code of right living. "To the pure all things are pure." And Christian Science certainly not only stands for pure thought, but it teaches it as a means to pure bodies and lives.—*Constitution-Democrat.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Arcata, Cal.—Francis J. Fluno, M.D., June 26.
Brooklyn, N. Y. (Second Church).—Prof. Hermann S. Hering, Avon Beach Hall, Bay 22nd street and Cropsey avenue, 3:30 p.m., June 25.
Chicago, Ill. (Third Church).—William R. Rathvon, Church Edifice, Washington boulevard and Leavitt street, June 26 and 27.
Chicago, Ill. (Sixth Church).—Frank H. Leonard, Pullman Theater, Pullman, 3 p.m., June 25.
Clinton, Ill.—Bliss Knapp, Court House, June 20.
Eureka, Cal.—Francis J. Fluno, M.D., Ingomar Theater, June 24.
Fortuna, Cal.—Francis J. Fluno, M.D., Christian Church, 2 p.m., June 25.
Hornsea, Eng.—Bicknell Young, Public Rooms, July 7.
Monmouth, Ill.—Frank H. Leonard, Opera House, June 20.
Warsaw, Ind.—William R. Rathvon, Warsaw Opera House, 3 p.m., June 25.
Wichita, Kan.—William R. Rathvon, Auditorium, June 30.

TESTIMONIES OF HEALING.

It is with the deepest thankfulness that I acknowledge the many blessings which Christian Science has brought into my life. I therefore add my testimony, with the sincere hope that it may encourage others to take up the study of this glorious truth which brings us out of all bondage. I began to look into Christian Science about six years ago. I had heard of it some time before this, but did not inquire about it, as I did not think it could help me, being hopeless about everything. My health was getting worse and worse, and was causing great anxiety to every one. I was so wretched that I often prayed I might die. All the doctors to whom I went were most kind, and I am sure did their utmost to try to relieve my sufferings. I tried the German "mud baths" for two years, and went to the best doctors there. I used to suffer terribly with my spine on and off for over eighteen years. I had tried many different remedies, but none had any lasting benefit. For three years I had a bad attack of pleurisy each winter, besides frequent and severe colds; then I was told that my lungs were in a bad state and my heart very weak; that I ought to be very careful, and winter in some warm climate. All my life I had been a sufferer from very severe headaches, and for many years from sleeplessness.

When I first began to study Mrs. Eddy's book, "Science and Health with Key to the Scriptures," seriously, I found it hard to understand; but I went steadily on reading it, although at times it annoyed me, when I was suffering, to come across some passage which would say that disease was only a belief. Often I have put the book down, and not looked at it for days; then after a few more days of suffering, I would feel I must try to read it again, as I knew of others who had been healed. After attending one or two of the testimony meetings, and seeing so many happy contented faces and hearing some of the simple and beautiful testimonies, it gave me courage to go on, and I found, as our dear Leader has said, that "to those leaning on the sustaining infinite today is big with blessings" (Science and Health, Preface, p. vii). For the last five years I have not taken any medicine or been to a doctor, and I am better and stronger than I have ever been. I am learning more and more every-day that all God's promises are true, and the greatest joy in Science is when we get to recognize and know that God is omnipotent and ever present, as this enables us to overcome the fears and doubts that used to come up and force us to believe otherwise.

Christian Science is lifting suffering humanity above itself into a purer atmosphere of thought. We realize that there is a divine Principle "which is equal to every emergency" (*Ibid.*, p. 406), and that the law of divine Love controls the universe. However feeble our efforts may seem to us at first, if they are honest they do most surely bring us peace and happiness, and we find it is useless to try to solve life's problems in a day. The Bible and Science and Health are my daily study. They have taught me to know God aright, and that He is our guide and helper in every hour of need. My greatest desire now is to put into practice the knowledge I have gained; then I shall be able to prove to myself as well as others that all things are possible to God today, if we are willing to do our part and follow our Master's teachings. I desire to be a channel which God will use in whatever way He may deem best for my growth; that I may learn to work with a fervent desire (God working with me) in this field of labor, where we shall all grow into the likeness of our Maker, and enter into that peace which passes understanding.

MRS. MARY E. DOBSON, Palmyra, Surbiton, England.

[Translated from the German.]

For the past seven years I have enjoyed in my home the blessed peace which comes through Christ, Truth. Jesus

Digitized by Google

said that if we would abide in him, we should dwell in peace. It was in my search for health that I found the truth as taught by our revered Leader, Mrs. Eddy. Christian Scientists believe implicitly in the declaration of Christ Jesus, that they who believe in him are able to do the healing works which he did. My healing of lung and heart trouble, as well as of gall-stones, was slow, as I was not able to read English; but I knew I had found the true way. I was hungry and thirsty after righteousness, and I learned to read the book "Science and Health with Key to the Scriptures."

I am especially grateful for the healing of my arms, which were burned while doing some cleansing with benzine. The benzine caught fire, and both my arms were severely burned, especially the left one. The right arm was healed on the following day, and the other with two weeks' treatment. I can say with a grateful heart that I did not lose half an hour's sleep, had no pain, and went out on the same day, as I had an appointment in town; neither was I kept from my work. I am grateful to God with all my heart for the many proofs of the power of Love and Truth. May Christian Science be to all as rich a source of blessing as it has been to me.

MRS. HELENE BUEHN, Pittsburg, Pa.

Some years ago, before knowing of Christian Science, I had what the doctors called a very severe attack of lung trouble. My father and mother were very much alarmed, as it was said that I could not survive a similar attack. In the spring of 1910 the same conditions appeared, but were overcome through Christian Science. I have had many other proofs of God's power to heal. My little girls of one and seven years of age have been healed of various ailments, such as measles and whooping-cough, without the use of any medicine. I am truly thankful to God, and to our dear Leader, Mrs. Eddy, for this truth which heals all diseases.—MRS. DELLA E. LINCICOME, Urbana, Ill.

[Translated from the German.]

After two years' earnest study of Christian Science, and having through the daily reading of "Science and Health with Key to the Scriptures" assimilated in some measure the spirit of the truth which maketh free, having furthermore experienced many blessings and also witnessed their coming to others, I feel that the time has arrived for me to express my deep gratitude to God, and also to our beloved Leader, Mrs. Eddy, by testifying to some of the experiences above alluded to.

I came to this life-giving source some ten years ago, after my sister had been healed through Christian Science treatment of a long-standing trouble. Although I fully trusted the truth as revealed in the Christian Science textbook, I was slow to grasp the spirit. Under the pressure of domestic difficulties and conditions which at that time seemed to me cruel and insurmountable realities, my thought was filled with fear, doubt, and gloomy images for the future. Various experiences in daily life brought up problems which seemingly could not be solved. Human relations upon closer examination proved to be unreliable. I could see neither aim nor purpose in material existence, with all its seeming sorrow, pain, and toil, and I was more than anxious to know what life really meant. Through occasional loving help from the Christian Science practitioner here, and the study of the Christian Science textbook, I have gradually found an answer to all my questions. The discouraging thought that material existence and the various duties therewith connected is without purpose has entirely left me, and I have since been a happier and more contented woman. I now greet every coming day with the joyful thought that there is plenty of useful work to be done in God's vineyard, and that no good thought which we think, no kind word which we speak to our fellow-beings, nor any good deed done, can be lost or be in vain, but that through all these minor and greater expressions of love we may help bring about the kingdom of God on earth.

I am truly grateful to Mrs. Eddy that, through revealing the truth as taught and lived by Jesus, she has shown us the way whereby we may lead a holy life, acceptable unto God. It is my most sincere desire to devote my time and strength to the cause of Christian Science.

SOPHIE ARGELANDER, Moscow, Russia.

I have felt for some time that I should send an expression of my gratitude for many blessings received through Christian Science. I have been studying it for over eleven years, and the farther I go the pathway brightens more and more; as I get hold of the truth, I am enabled to overcome self, which I find is a hard problem for many. I am especially grateful for the knowledge that enables me to help others. I find that the understanding of Truth is of constant benefit in helping me to overcome every inharmony, but I am truly thankful for the healing of a badly injured ankle, a bowel trouble, scrofula, and for the ability to rise above the various disorders that present themselves from day to day.

I feel, however, that my greatest blessing is in having been taught how to forgive. I am deeply grateful to our beloved Leader for the Glossary to Science and Health, as I find that the memorizing of the metaphysical definitions has been of great help to me when reading the Scriptures, and is of especial value in Sunday school work. I also wish to express my deep gratitude for the grand work of our Publishing Society. I thank God continually for the feast of good things which it supplies.

S. B. HOWES, West Pullman, Chicago, Ill.

It is with a thankful heart that I tell of the many blessings which have come to me through Christian Science. I was told with much patience and love of this beautiful religion, but at that time I felt too weak to read Science and Health by myself. I had suffered for twenty years from extreme weakness of the heart, which seemingly undermined my whole constitution, especially during the last years. It also began to oppress me mentally to a marked degree. I suffered continually with the heart trouble and had to take many different kinds of medicine, but with no result; everything I tried was in vain. In the last part of 1908 I was told by a specialist and a doctor that I was too weak to walk more than five minutes at a time, so I was obliged to sit the whole day long in my chair. Often I felt so ill that I had to keep my bed. We are told that "man's extremity is God's opportunity," and these words were again proved true. While in this serious state of health, a niece told me about the healing work done in Christian Science; I decided to try it, and began to take treatment the same week. After two weeks I began to feel a change, I could walk for longer distances, felt less tired, and my heart got stronger. I could go myself to see the practitioner, who lived in another town, and even this did not tire me much.

The improvement continued, and I became strong enough to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, desiring to get a clearer understanding of God as Spirit and the only power. After three months I felt so well that I no longer needed treatment. Two attacks of influenza, an illness from which I used to suffer very much, were overcome in a few days, although under medical treatment these attacks lasted several weeks and left me very weak afterward. Every one who sees me now as a happy and healthy woman (after having known me as an invalid for so many years), asks me the reason; and it is a great privilege to me to tell them of my healing by the power of Truth alone.

Digitized by Google

For all these blessings of physical and spiritual healing, I give all glory to God, who again proved to be the healer of all our diseases; and thankfulness to our dear Leader, who gave back to mankind the pure religion as taught by Christ Jesus.

MRS. M. DES TOMBE DE YONGE VAN ZWYNSBERGEN, Utrecht, Holland.

When I turned to Christian Science for healing I had had a long experience with doctors and medicine, but had only become weak, thin, and discouraged, being told after going through an operation for appendicitis that I was left with almost hopeless conditions. In this discouraged state I turned to Christian Science, and with the help of a faithful practitioner and the understanding of man's God-given inheritance of health, strength, and all things needful, as gained through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, sickness has vanished and I am now a healthy, happy woman. I have not only gained health and contentment, but have learned how to overcome sickness and discord, and am learning how to love my neighbor as myself. I am very grateful for the many blessings which have come to me through the study of Christian Science.

MRS. ANNA M. THOMAS, Cincinnati, Ohio.

As the *Sentinel* comes into our home week after week, and I read the helpful and beautiful thoughts of some of the earnest workers in the field of Christian Science, who have given of their store that in turn others may be blessed, I realize that I too must express my gratitude to God for what Christian Science has done and is doing for me. Over five years ago I was healed in one treatment of an organic disease of several years' standing, and in a few weeks several functional disorders disappeared. From a miserable existence of semiinvalidism I have been restored to a happy, robust womanhood.

Since the physical healing I have been trying to prove my gratitude by daily study of the Christian Science text-book, "Science and Health with Key to the Scriptures," and as I realize "that Truth is demonstrable when understood" (Science and Health, p. 323), new opportunities for progress open up before me and my joyousness can find expression only in demonstration of the truth. My constant desire is to eliminate from my thought all that is unlike God, good, and to become a more effectual instrument in the hands of divine Love to bring peace and gladness to hungering hearts. Thus can I best follow our beloved Leader, Mrs. Eddy, as she follows Christ, and in this way be a witness to my gratitude for Christian Science.

MRS. GRACE R. AHLBORN, Anaheim, Cal.

When I first heard of Christian Science I was suffering intensely from stricture of the throat and extreme nervousness, being obliged to have the throat dilated twice a week by a noted specialist. I had taken such quantities of medicine in past years that I had not only lost my faith in it, but was even afraid it would poison me. To say I was miserable does not begin to tell what a hopeless state I was in.

One day a Christian Scientist told me that God did not make me sick, that it was His will I should be well. This new idea was like a strong rope thrown out to a drowning man. I clung to it, commenced to read Science and Health, and took treatment immediately. In about three months I was entirely healed, and this was over ten years ago. A tendency to take cold frequently was also overcome. I was seldom free from a cold or sore throat, but I was healed in one night of a very severe attack of throat trouble.

One other instance of healing is so wonderful and beautiful to me that no words can ever half express my gratitude for it. A bladder and kidney affection had caused me much pain and inconvenience for a number of years, at times being almost more than I could endure. I had had much treatment from several practitioners, each giving me some relief. One day, when all the symptoms of this trouble were very much aggravated, I was sitting in my bedroom reading *The Christian Science Journal*, when like a flash of light the thought came to me that I was healed! Jumping up, I ran across the room. It was true! I was truly healed, and the healing was permanent. The joy of this sudden relief and uplifting was so overwhelming that words fail me when I try to speak of my unbounded gratitude.

I thank God for Christian Science, and I am grateful to our beloved Leader, through whom the truth came to us. My earnest desire and prayer is to be absolutely obedient to God's law, to love my neighbor as myself, that I may grow in the spiritual understanding of God, whom to know aright is life eternal. We have had many other proofs of the power of Christian Science to heal in our family.

VIRGINIA REED FARR, Atlanta, Ga.

Christian Science found me a physical wreck, having been a sufferer for over three years from heart trouble. I had consulted several specialists and taken a great many drugs, but no improvement was realized. At last I was obliged to go to a rest-cure, the doctor saying this was the only thing that could possibly do me any good. About this time a friend told us of Christian Science. I knew nothing about it, but I was tired of *materia medica* and hygiene, from which I had obtained no benefit. We called a Christian Science practitioner, and in less than a week I was able to get up and dress. As I continued to study the Bible, and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, all fear of disease left me, and my consciousness was filled with a peace which words cannot describe. In about three months I was entirely healed and was able to return to business.

I have also been healed through Christian Science treatment of weak eyesight. For some years I was obliged to wear glasses, and was told I must never go without them. I am now able, however, to do all I wish and have no trouble. I am indeed grateful to God, and to our dear Leader, Mrs. Eddy, for this physical healing; but I am far more grateful for the spiritual uplifting. The Bible, which I had formerly found uninteresting, is now a new book to me. My constant prayer is that I may strive for more purity and humility.—D. LUMGAIR, Selkirk, Scotland.

Having been wonderfully blessed through the ministrations of Christian Science, I wish to acknowledge my gratitude. My mother had been helped, and she advised me to try it. I was at this time sick in bed, expecting in a few weeks to pass through what had previously been the tortures of childbirth, with only the thought of death before me, as on a previous occasion the attending physician had said I never could live to give birth to another child. I had been under medical treatment for nearly two years, with only temporary relief; but as soon as the Christian Scientist began to treat me my fear and suffering abated and I was filled with peace and hope. I was soon able to be up, and at the end of two weeks the birth took place with but slight pain, the conditions being every way normal. I was not weak and felt able to go about as usual.

Several other demonstrations have been made,—a severe headache healed in a few minutes, and my daughter was healed of eye trouble in one day. We are greatly rejoiced to know that Truth heals and that all blessings are ours as soon as we are ready to receive them. Later, our baby was taken sick on a Sunday, and grew worse so fast during the night that we used material remedies, but the child

Digitized by Google

continued to grow worse. It seemed to be acute lung trouble, and as soon as it was daylight my husband went for the practitioner who had helped me. About the time they returned the little one seemed very low, indeed the breathing had apparently stopped. The practitioner began to treat her, in the understanding prayer of Christian Science, and in a few minutes the child began to revive like a wilted flower when placed in water. The Scientist removed the medicated flannel, and though for some time we could not tell whether the little one was alive or not, she gradually improved. Her recovery was the means of leading us away from dependence on the material and unreal, to the spiritual and real. The Bible is now illumined by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy; the *Quarterly; Sentinel*, and daily *Monitor*, and thus we have a continual feast of good things. Previously I could not understand the Bible and had sometimes questioned if there was any God, but with my new understanding the Bible has become very precious to me. For all of these great blessings and with a hopeful outlook for the future we are very grateful.—MRS. F. A. LIBBY, Corinna, Me.

I wish to express my gratitude to God for what Christian Science has done and is doing for me. It is now over three years since my eyes were healed in Christian Science, through the faithful reading of the *Sentinel*, as I could not at that time afford a copy of Science and Health. I read all the testimonies, and saw clearly that as God had healed others, He would heal me, for He is no respecter of persons; and it was with me even as with the centurion to whom Christ Jesus said, "Go thy way; and as thou hast believed, so be it done unto thee." I accordingly laid aside my glasses in February, 1907, and have not needed them since. The oculist who had prescribed my glasses (one of the best in Chicago) told me that I had needed glasses since I was eight years old, and must wear them constantly, as mine was a bad case of defective vision.

Shortly after my healing, I wrote my testimony for the *Sentinel*, but was informed that it could not be published as it had not been properly indorsed. I was glad of this, for I saw how much care is taken in sending out these testimonies; that the aim is to "prove all things." The two years and a half that I wore glasses seem only a dream to me, now that I know the blessed reality of sight as spiritual. The above is just one of many ills of which Truth has healed me, and for all these blessings I am very grateful to our dear Leader for having shown us the real man and illuminating the Bible for us.

MRS. MARY BELLE WILLS, Homer, Ill.

I feel it my duty to tell others what Christian Science has done and is doing for me. Six years ago I became interested in it, and from time to time would read articles on the subject, each time yearning more and more to become acquainted with this truth which makes us free. Now, the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy are the daily helps in our home. This truth has worked out every problem which has come to me and mine. Since childhood I was at intervals a sufferer from rheumatism, the attacks becoming more alarming each time until, thank God, Christian Science brought me perfect freedom. My healing was slow, for which I am now thankful, because the effort required has given me a spiritual quickening which I would not have gained otherwise than by obeying the words of our Master: "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein." During my struggle for health I sought the aid of a practitioner, with the result that frequent thoughts of discouragement and all other troubles were overcome.

My father has been freed from a so-called incurable malady. These and many other beautiful demonstrations are sufficient to prove to me the omnipresent power of Christ, Truth, as revealed to us in Christian Science. I am indeed thankful to God, also to Mrs. Eddy, for showing us that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

MRS. LUELLA CARPENTER, Los Angeles, Cal.

It gives me great pleasure to testify to the healing power of Truth. I came into Christian Science some ten years ago, through the healing of my mother of various nervous troubles, but it was not until August, 1909, that I had anything very serious to contend with, physically. I had evidently made a mistake in working out my problem, the result of which was a fever. I enlisted the services of a practitioner, as I was in business where the largest asset is time, and I did not want to waste any more of it than was necessary. At the end of three weeks I was well enough to go away to the country, where I remained for two weeks before going back to business. I went to business for a short time each day at first, but at no time during my illness did I spend the whole day in bed. To please my wife, who was not then a Scientist, I submitted to a medical examination, which confirmed the opinions of all my family, but which they did not wish to voice. When the examination reached the point where a sample of my blood was to be taken, I revolted and dismissed the doctor.

I suffered none of the after effects which are always claimed for this fever and fully regained my strength within a very short time. For this and for many demonstrations in business matters I am deeply grateful.

MONTAIGN MORGAN STERLING, Brooklyn, N. Y.

As I realize the many blessings which Christian Science has brought to my home, I feel that I would be neglecting a sacred duty if I should fail to acknowledge them. I did not come into Science for my personal healing, but was led by "a little child." Five years ago I stood by what seemed to be the death-bed of my month-old babe. The physician had given me very little hope of raising her, and she had been under his constant care, as well as that of a trained nurse, since her birth. When she was three weeks old she was taken very ill, the troubles being complicated. Everything that *materia medica* could do was done, but our babe grew rapidly worse. For thirty-six hours she was unable to swallow any nourishment, or even the medicine prescribed by the physician. The appearances were all very alarming, but not until I realized that mortal man could do nothing more for my child, did I turn to our heavenly Father for help. One morning, when it seemed that the child could not last more than a few hours, we telegraphed a Christian Science practitioner to treat her. An hour after the message had been received, the worst symptoms ceased, and the little form which an hour before seemed so racked with pain now lay quiet; the babe was peacefully sleeping. Surely "the word of God is quick, and powerful, and sharper than any twoedged sword." When the physician returned he was much surprised to see the wonderful change, and asked me to remove the child's clothing that he might examine her thoroughly. After his examination he laid the little one in my arms with the remark that she was normal. One week from that day we took the child on a journey of over five hundred miles with no ill effects. She is now a strong healthy child of five years, the very picture of health.

Another beautiful demonstration was in the case of our little boy. At the age of sixteen months he had whooping-cough, and when it was (according to *materia medica*) at its worst stage he swallowed a penny. For a while he seemed very ill, but I am thankful that I felt no fear. The following verse from Isaiah was such a comfort to me

Digitized by Google

at this time: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness." I seemed to realize that the verse was for me, and all I had to do was to know that the promises are fulfilled. With the help of a faithful practitioner the demonstration was made. The child was well, and gaining flesh rapidly, when he threw up the copper, which had been in his stomach for six weeks.

Surely no one has more cause to be grateful to Christian Science than I, for I feel that I owe the lives of both my children to this blessed truth. My heart is filled with gratitude to the one who spent so many years in untiring toil for the benefit of humanity. My daily prayer is that I may so live as to be worthy to be called a Christian Scientist.—MRS. ANNIE LEE KENNER, Anniston, Ala.

Words fail me when I attempt to express my gratitude to God for what Christian Science has done for me and my family. It was about nine years ago that it was brought to us by a dear friend who was a practitioner. My wife had been a great sufferer from a bowel disorder, and had tried some of the best doctors to be found, but with only temporary relief. I was at that time away from home, working at the mines, and when my wife told me that she had taken up Christian Science I ridiculed it, having no faith in it at the time, and told her that if I thought she needed a doctor I would surely bring one in; but she took no notice of what I said.

This went on for some five years. I could see a great improvement in my wife, but thought I did not need Christian Science myself. One day I was brought home with a very bad foot, the result of an accident that I had sustained some years before and which had given me a lot of trouble. The foot finally got so bad that I had to leave my work and come home. My wife and daughter wanted me to try Christian Science, but at first I would not listen to them. I finally gave in, however, and a practitioner was sent for. The results were marvelous. She came on Saturday, and on Wednesday I went up town: the following Monday I went to work, and felt no bad effects from it. It was then that the light of Truth was shown to me; I saw that I had something to live for, and I took up the study of Christian Science. I had always been a heavy user of tobacco and liquor, but these habits have been overcome with this healing truth, and innumerable blessings have come to us.

Christian Science has brought happiness in my home, and what seemed a gloomy outlook has changed to a brighter atmosphere. I am very thankful to God, and also to Mrs. Eddy for this wonderful understanding of Truth, and I shall strive to live more of the truth which she has so lovingly taught us.—A. E. PIPE, Salt Lake City, Utah.

Who drives the horses of the sun
  Shall lord it but a day;
Better the lowly deed were done,
  And kept the humble way.

The rust will find the sword of fame,
  The dust will hide the crown;
Ay, none shall nail so high his name
  Time will not tear it down.

The happiest heart that ever beat
  Was in some quiet breast
That found the common daylight sweet,
  And left to heaven the rest.

JOHN VANCE CHENEY in *Cincinnati Times Star.*

FROM OUR EXCHANGES.

[*Christian Register.*]

Some individuals and some churches see more than others, and the only excuse for being which any church can offer is that it holds as a sacred deposit some truth which the world needs which is not so well stated and so well applied by any other form of religious organization. The ages have been marked by the rise and acceptance of specific forms of truth, and by the birth and activity of men and women of great spiritual endowments who have been able to make these successive revelations acceptable to their fellow-men. Some of the revelations have been more important than others. Some of the revelators have been more highly gifted than others, both in native ability and in the perception and application of truth; but these all saw in part and prophesied in part, and the truths they uttered were only half truths, good only until more light was received and better statements were made.

This statement may sound shocking to some person, who will immediately apply it to Jesus of Nazareth, and will ask if here we have not that which is final, conclusive, and to be received by all men everywhere. But while we may with great confidence assert that some of the truths affirmed by him were of the kind which may be explained, expounded, added to, and confirmed by later revelations, but that will never be repealed, we must also remember that no word of Jesus comes to us directly from him; that we have this treasure in earthen vessels, that it is evident enough today that those who claimed to stand nearest to him and to represent him most accurately did not fully understand him; indeed, that there are many living today who stand closer in sympathy to the real Jesus and his thought than did they of his own family and the circle of discipleship.

[Principal A. E. Garvie, D.D., in *British Congregationalist.*]

When men dispute about verbal or plenary inspiration, they seem to be contending about irrelevancies. This inspiration is first of all personal. God enlightened, quickened, renewed seer, sage, or saint through whom any part of His message came. God inspired men and not books. Their writings are inspired in so far as the men received in themselves and expressed in their utterances the Spirit of God. But these organs of God's self-revelation stood in a succession; and so in the Old Testament at least inspiration is progressive. God reveals Himself more and more to men, and writings are to us inspired as they reveal God to us. Hence the inspiration is perfect in Christ alone, for he as Son had the Spirit without measure. And the New Testament writers are for us inspired as they stand nearer to or farther off from Christ. He who gives us most of Christ in his soul is for us most inspired. The Bible is for us inspired as it inspires us—that is, as it brings Christ to us, and so fills us with the Spirit of God.

[*Zion's Herald.*]

It is the penalty of leadership to be judged by the foibles of one's followers, just as it is the glory of the masterly to be measured by the achievements of their pupils. Jesus Christ, we might almost say, has staked his reputation in the world on what men who call themselves Christian do and say regarding him. As he is, so are we in the world. Our cause is bound up in his cause, and his with ours. Jesus may not baptize, but if we do, he is called a Baptist; Jesus may not falter, even before the cross, but if Peter swears off allegiance to him the kitchen maids of Jerusalem begin to gossip about the "failure of Galileanism." It cannot be helped—Christ rises or falls with us, with the fluctuations of our spiritual barometer, so far at least as the world knows about any Christ. The disciple ought to be as his Master; but if he is not, then, conversely, for the purposes of worldly appraisement, the Master is as the disciple.

[*New York Observer.*]

There is nothing so preposterous as to suppose that religion can be maintained without God, and morality without religion. The great "*prius*," the indispensable power, in all moral and religious strivings and strugglings, is the Jehovah whose revelation was given directly to the Hebrews, and of whose might and wisdom some of the nobler-minded of the Gentiles seem, under the impress of His Spirit, to have had glimpses. There is no truth worth more to the theories of philosophy, to the methods of science, to the esthetic sensibilities of the race, and to the salvation of sinners, than this splendid affirmation of the primacy of God in the life of man, thus securing to the finite creature an enduring connection with the true, the beautiful, and the good.

[*Continent.*]

Violent insistence that the creed must be upheld will neither restore harmony of believers nor renew supremacy of truth. The one thing needful in an hour of such unrest is not more creed nor more church discipline, but more life from the Lord. If, then, one fears that false doctrine is undermining the church, wisdom begs him not to summon courts to enforce the creed, but devotions to revive the fellowship of the church with its Master. And this holds as true of aberrations in the ministry as in the laity. Of course the church inquires more diligently into the qualifications of one who would teach in the kingdom than of one who desires only to be a disciple. But after all, the larger inquiry, like the lesser, remains in essence a search for outer tokens of an inner divine sanction.

[*Universalist Leader.*]

Religion is only a name for any experience wherein we report to ourselves or to the world what we have seen or heard or felt on those high levels of consciousness where the soul ranges free with the Spirit. Life is a mystery. The Spirit is a mystery. But deep calleth unto deep. That we know. In the most unexpected, out-of-the-way places we run upon signs of God's presence. There will be, there can be, no unity or agreement in the reports we bring back from such rare hours. Outside of the absolute knowledge which each soul has that God is there, we can make no classification of what is or what is not religion.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

You see how it is; you draw to yourself by your prayers the influences most closely akin to your desires. The higher the aspiration the greater the uplift of the soul. God does indeed hearken to the voice of a man; we are, in a sense, creators of our own destiny by the thoughts we think and the deeds we do. We are all different—so different that no man's life can be a rule for another's, but our goal is the same. "For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened."

[*Christian Work and Evangelist.*]

War, except in defense of home, is nothing more or less than international mass murder. For shame that any follower of Christ could have anything but abhorrence for it! The very theory of it, let alone its practice, controverts every fundamental truth of Christ's teaching, which was that all his followers were one, in a kingdom which knew no more of national restrictions than did he himself.

[*Congregationalist and Christian World.*]

The level of moral and spiritual life is rising. The type of life which Jesus represents never commanded more admiration. Never were there so many persons eager to substitute his standard of ethics for the world's code. Never were so many finding in him the way to God, and through him peace, pardon, and hope.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The House sub-committee on postoffices and post roads has taken up for consideration the Lewis bill, which provides for condemning and purchasing the express companies and adding them to the postal system, and establishing a complete system for the quick transport of packages and the eatable products of the farm and truck garden, etc. At their last conference in Washington the representatives of the business men of the country and of the Granges asked Congress to establish such a system, and representatives of these interests were present at the hearing before the committee.

The Episcopal cathedral of St. John the Divine in New York city has so far cost three million seven hundred and fifty thousand dollars of the ten million dollars it is expected to cost when completed. It is to be 520 feet in length, 206 feet across the transepts, and its spire will rise 425 feet; dimensions that rank with the greatest in the world. The temporary auditorium just opened will seat two thousand, but the completed building will seat eight to ten thousand.

With a view to insuring the widest publicity of all the expenditures of candidates for Congress, the Senate committee on privileges and elections is considering amendments to the House bill on this subject which will vastly broaden the proposed law. Much difficulty is being experienced in finding terms which will express the committee's purpose in making it applicable to the varying forms of primary as well as regular elections.

The second step in the gradual withdrawal of the armed forces of the United States from the vicinity of Mexico was taken last week, when President Taft approved a war department order which will return to their posts the four thousand soldiers at Galveston, Tex., and the one hundred and fifty at San Diego, Cal. This movement follows the withdrawal of the two thousand marines from Guantanamo, Cuba.

The deadlock over the appointment of the members to the newly-created public service commission of New Hampshire has been broken and the council confirms the names of Edward C. Niles and John E. Benton, two lawyers and progressive Republicans, and Prof. Thomas W. D. Worthen of the department of mathematics of Dartmouth College, a progressive Democrat.

The Senate committee on foreign relations has decided to report favorably the treaty between Honduras and this country providing for a loan of ten million dollars from banking interests of the United States to meet the Honduran debt. Of this amount seven million five hundred thousand dollars is to be forthcoming at once.

An expenditure of $257,400,000 by the city and private corporations for new subways, a sum more than three times the cost of the present extensive underground rapid transit system of New York, is proposed in the latest compromise plan just published by the public service commission and the board of estimate.

An investigation of the Pittsburg Coal Company and the Monongahela Consolidated Coal & Coke Company, a subsidiary, is being conducted by the government in an effort to ascertain if a monopoly in the coal trade is in existence.

Consideration of the proposed public utilities commission in the Connecticut House of Representatives was the occasion of an animated discussion. It was alleged that strong interests were at work lobbying to defeat the bill.

According to the preliminary schedule of assessments against seven thousand and eight miscellaneous corporations for 1911, just filed, these concerns must pay New Jersey $2,478,928 in corporation taxes.

Miss Ellen Fitz Pendleton has been chosen as the sixth president of Wellesley College. Miss Pendleton was of the class of 1886 and is the first graduate of Wellesley to be chosen president.

A bill providing that every newspaper must print in a conspicuous place the name of the owner or owners, publisher and managing editor, has been introduced in Congress.

The government's fifty-million-dollar Panama canal loan will probably be taken in the main by small investors. The bids came from all sections of the country.

The twenty-eighth national conference of charities and correction met in Boston last week.

International.

The international seal fisheries conference between Canada, Japan, Russia, and the United States is having some difficulty in reaching an agreement on a settled policy between nations regarding seal fishing. It is understood the only obstacle is Japan's insistence on a greater compensation for abandonment of pelagic sealing than the United States is willing to allow. Japan, it is learned, insists that the other nations interested in the question shall buy the fifty vessels now in the Japanese sealing industry, paying therefor three hundred and seventy-five thousand dollars. Besides this, Japan demands one third of the net proceeds which the land sealing nations receive from their seal industry. The United States and Great Britain have reached a tentative agreement, it is said, by which the United States government is willing to pay Great Britain twenty per cent of the profits of the seal rookeries in return for the relinquishment of her interest in pelagic sealing. For this reason the United States and Great Britain are inclined to accept the Japanese claim. Russia, however, does not seem disposed to yield to the Japanese demands.

The German government disclaims all responsibility for the steamer Consul Grostuck, which is reported as flying the German flag in West Indian waters, and announces that the blame for any complication that may result from the landing of Cipriano Castro, the exiled President of Venezuela, who is said to be on board, will rest upon the Haytian government. It is stated emphatically that the steamer has no right to display the German colors. It was formerly the Italian cruiser Umbria, and was purchased from Italy by Hayti, which country is the one now properly concerned with the movement of the vessel.

It is understood that a contract has been given to the Marconi Wireless Telegraph Company to install wireless stations at Jutogh, Delhi, Allahabad, and Calcutta. Soldiers will be employed for the actual working of the system, and in this way a corps of military wireless telegraphists will be brought into being. At present the system will be employed for exclusively military purposes, but as time goes on the system may be made available for the general public. Wireless telegraph stations are already in operation at Bombay, Calcutta, Alipore, the Andaman islands, and in Burma, and there is every likelihood that one will soon be installed at Colombo.

The National Council of Persia has adopted in its final stage the measure investing W. Morgan Shuster, the American financier who recently was appointed treasurer-general of Persia, with "direct effective control of all the financial and fiscal operations of the Persian government, including the collection of all receipts of every description and control of all government expenditure." The bill empowers Mr. Shuster to establish whatever departments and appoint all staffs that he considers necessary to the execution of his task.

The work of making the much needed improvements in the harbor of Chemulpo, Korea, was inaugurated recently with a celebration in which representatives of all the different nations residing there participated. The present plans involve the expenditure of two million five hundred thousand dollars and the employment of thousands of Korean laborers for several years. Chemulpo, the chief Korean landing-place for Japanese troops, is the best harbor in that country and is the port of Seoul, the capital.

Elaborate preparations are being made to take direct color cinematograph pictures of the coronation procession. Within less than three days the pictures will be shown in a majority of the centers of Europe, while London theatergoers on the evening of coronation day will see films covering the coronation itself and events correlated therewith.

The preliminary report of the census of Scotland gives the population of that country as 4,759,445, an increase of 6.4 per cent on the figures of the last census in 1901.

Industrial and Commercial.

Announcement from the executive offices of the Postal Telegraph Company that it is to enter the telephone field is being accredited as the opening of the long pending contest with the American Telegraph & Telephone Company which owns the Western Union. As a result of experiments that have just been completed between Salt Lake City, Utah, and Reno, Nev., and between Reno and San Francisco, its trunk telegraph lines are to be used for telephone messages between those cities.

One of the largest steamship mergers in the history of Great Lakes navigation has just been successfully carried out at Cleveland, O. The concerns involved are the United States Transportation Company, the L. O. Smith Transit Company, the Wilkinson Transportation Company, the Standard Transportation Company, and the American Transit Company. The new concern will have a paid-in capital of six million dollars. About twenty-one freight vessels are involved in the deal.

An additional thirty thousand acres of land in the lower valley of the Rio Grande is to be reclaimed by means of irrigation, according to the American Rio Grande Land & Irrigation Company, which already has about thirty-five thousand acres under its canal and ditch system. More than two million dollars have already been spent in carrying out its plans. The main canal is large enough to float a river steamboat. It has its intake on the Rio Grande.

Importation of diamonds and other precious stones through the port of New York for the fiscal year that will end June 30 is estimated at nearly forty-three million dollars. With one exception it is the largest on record.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LIFE THAT TELLS.

ROBERT NALL.

THE spiritual life is the life of doing. "Be ye doers of the word, and not hearers only." The habit of meditation may be usefully cultivated, but we have no right to be content therewith. It has become axiomatic that the best testimony to the truth of Christianity is that of a simple, earnest, practical Christian life. We are not to live in the clouds. We are called upon, however reluctant we may be, to engage in a great conflict; and the student of Christian Science will avoid much wandering into the wilderness of doubt and fear if he sits down and calmly ponders over what that conflict means, what it involves. Even though he has caught only a glimpse of what Christian Science teaches, that glimpse may have been sufficient to enable him to correct some of the errors of material sense. Previously these errors may not have been to him a matter of much concern, but the dawn of Truth always awakens that faculty of spiritual discernment which enables a student to differentiate between right and wrong thinking, and to associate his mental equipment with some insight into that which is real, as distinguished from the unreal.

More or less, we are all in a probationary state of spiritual thought. The acknowledgment of this should inspire us to further advance. There could of course be no progress, "man's distinctive mark alone," as Browning tells us, "were all it struggles after found at first and guesses changed to knowledge absolute." The servant is not above his master, and the conflicts of Jesus are those in a lesser degree of every aspiring follower. A study of the temptations to which he was subjected and of the victories which he won, a study yielding a mine of spiritual profit, will arouse in us a deep sense of gratitude that the way has been shown to us by which we may overcome all our enemies.

The spiritual power which made him more than conqueror is available to all mankind. Do we remember what all that means? He was in the wilderness; he was "with the wild beasts;" he was physically hungry—alone and in danger. Typical this of lesser men who have strayed into the "far country," and for long remained unconscious that the Father's house and the Father's arms were open to them if they would return. "Soul, take thine ease," is the comforting decision of the Laodicean and the materialist, but it should find no place in the thought of the Christian Scientist. The "wild beasts" of mortal mind, the false concepts of materiality, the carnal thoughts which come in like a flood upon the unwary one, must be scientifically met, and their assumed power, which, if acknowledged to be real, cannot be other than destructive of peace and happiness, must be shown to be purely fictitious.

The student often puzzles over this. The joy and gladness that attend the beginning of Truth's regenerative and illuminative work are legitimate, but a sense of self-sufficiency should be guarded against, lest it betray him into overconfidence and his mental focus become distorted, the path before him be pictured as one perfectly smooth if not always flowery, about which the sun will always shine and the birds will always sing, with nothing to mar or disturb the perpetual harmony. Anything like a struggle, the imperative call to be always on the watch and to pray would scarcely enter into his calculations. Mortal mind is a deceiver ever. There is indeed a time in human experience, in the "new heaven" and the "new earth," when the warfare ceases, for the crown of victory will have been won. But how? asks the student.

There is triumph in proportion to obedience. The way is shown clearly in the Bible; it is explained and the directions amplified in our text-book, Science and Health. The struggles with error, the victory over sin, the spiritual ascendance which leads to full understanding, and the consequent realization that Mind, having all power, "assigns sure rewards to righteousness" (Science and Health, p. 203), —these have been the experience of seekers after God in all ages. The divine promises, repeated over and over again in the Bible, never fail. We may feel the angelic touch during the time of our wrestling, as did Jacob, and a Peniel victory will be ours.

"This may be theoretically true," says some one, "and I believe it has been practically true in the experience of many people; but they must have been more spiritually minded than I am. I have had some proofs that it is possible to conquer error, but my failures are so many that I am beset with discouragement." And then he asks, "Will there ever come a time when I can say by blessed experience that mortal belief can be effectually overcome and destroyed, and when I shall know the true sense of daily victory?" Knowledge must be gained "line upon line;" growth must be step by step. The student who seeks to demonstrate from a place where he is not, will be called upon to consider his ways. There are conditions pertaining to progress and enlightenment that must be met scientifically.

For instance, merely to memorize certain parts of Scripture or passages from our text-book, and expect that the repetition of these will be weapons of warfare, is to court failure. This is a phase of material thought which misinterprets Science and must be classed as one of the errors of mortal belief. Science is spiritual and must be spiritually discerned. This does not mean that the student must strain after the spiritual. The basis of his demonstration must be the knowledge that God is Spirit and that the universe including man is spiritual. There is nothing else. A clear apprehension of the profound truths outlined in the "scientific statement of being" (Science and Health, p. 468) will remove doubt and fear. Without this spiritual concept the student may go mourning all his days because of his "leanness of soul." Where there is a willing and receptive mind, a spiritual disposition, a longing for a higher and holier state of consciousness, the divine sense of all things will become clearer, and the power to overcome will be proportionately increased.

Dominion over error is the birthright of every child of God. But dominion is based upon and is the result of solid conviction and a conscientious acknowledgment of Truth. Perfect sincerity in dealing with oneself on this important

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

matter is always necessary. The reward of faithfulness and obedience and spiritual growth may not always be just what is expected; it may be better. Mortal material thought will misjudge and mislead; what seems to be failure may be a false sense of the result. Growth in spiritual discernment will be accompanied by the knowledge of how God leads in the "way of righteousness, in the midst of the paths of judgment," revealing as a perpetual thought that divine guidance, wisdom, and strength are ours.

But it is well also to dwell upon the thought that while we may not remember thankfully all the benefits we receive in and through Christian Science, we are not to forget them all. Our lives will attest our sincerity and the measure of our acknowledgment of the source of all blessedness. It was they who "had gotten the victory over the beast" who sang the song of Moses and the Lamb, praising God for His holiness, justice, and truth; and it is they who by patient endurance, by daily searching, and by unflagging watchfulness, by feeding on the true bread of Life and drinking of the river of the water of Life, whose warfare over the flesh is a continual victory. And the ultimate, what is it? Hear what our Leader says on page 3 of "Pulpit and Press": "Our surety is in our confidence that we are indeed dwellers in Truth and Love, man's eternal mansion. Such a heavenly assurance ends all warfare, and bids tumult cease, for the good fight we have waged is over, and divine Love gives us the true sense of victory."

WARFARE WITH SELF.

HENRY J. HOSMER.

In "Miscellaneous Writings" (p. 118) Mrs. Eddy writes: "The warfare with one's self is grand." From the basis of material sense, to war with one's self seems a difficult task, and one quite uncertain as to its results. It is much like that of a man trying to pull himself up by his bootstraps. To the material senses man appears to have no eternal, abiding Principle of being, nor does there seem to be any definite science of life to guide him. He finds himself burdened, and at times overwhelmed, with sin, sorrow, and disease. They seem to be woven into the very fabric of his being, to be a part of himself, and his struggle to be free from these evils is carried on much "as one that beateth the air," as Paul says, and is generally disheartening. How, then, can the warfare with self be rendered grand in its operation and victorious in its results?

Mrs. Eddy counsels us to "labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love." "Truth is an alterative in the entire system, and can make it 'every whit whole'" (Science and Health, pp. 242, 371). What is this Love, this Truth? In the fourth chapter of the first epistle of John we read, "God is love," and the psalmist asked, "Whither shall I flee from thy presence?" thus declaring the allness, the infinitude of God. Obviously that which is infinite must be Truth, and in Christian Science Truth and Love are regarded as synonyms of God. Reasoning from these premises, we may understand how it is that God is divine Principle, for that which is infinite must include all and be expressed through all.

Thus we find that we have a divine Principle to aid us in our warfare against self. We learn that since God is All-in-all, there can exist nothing unlike Him, and that man is therefore made in God's image and likeness, as is stated in the first chapter of Genesis. Man possesses nothing underived from God, good, for God is the Principle of man. All that appears not good is not true in any respect, it is to be considered as entirely deceptive. These facts having been given us, it is for us to prove them for ourselves. And, armed with an ever growing knowledge of their divine import, we proceed to the warfare with self. This warfare is not a negative activity in its purpose, an endeavor primarily to eliminate evil; it is a gloriously affirmative activity, an endeavor to manifest man as he really is, that is, God's man. The apprehension of the nature of man, and of the perfectibility of human consciousness, begins to destroy the erroneous mortal concepts, as light destroys darkness.

This warfare does not lead to selfishness or self-centeredness, for it is an endeavor to get away from self and to find God. Its rule of action is contained in the First Commandment. Its motive is to establish in consciousness the knowledge that all being, intelligence, substance, and power are in and of God. It is in doing this work well that we truly help our neighbor, for in so far as we clear away evil thoughts and erroneous concepts and replace them with true and right ideas, in so far do we become an avenue for Truth. So far as we have cleaned our window-panes through which the light of Truth may shine, so far will we be able to illumine others who are in the darkness of mortal sense. Christ Jesus said that the second commandment, "Thou shalt love thy neighbor as thyself," was like unto the first, and Christian Science reveals to us Spirit's unchanging law, that as our love for God increases we more truly love our neighbor.

What activity could be grander or more worth while than this warfare with self? When we see sorrow, sin, disease, and death arising as the result of mortal material sense, is there a greater work to do than to conquer this sense—prove its falsity—and thus abide in the spiritual, the true sense of things. As the self of human belief is found to be nothingness, the allness of God is revealed and the manifestation of His goodness throughout man's entire being is recognized as an eternal fact.

"SINGING UNTO THE LORD."

OLIVE B. WILSON.

It is not necessary to search the Bible carefully to find repeated reference made to singing; offering praise in song was a common custom. The people were constantly reminded that they must "sing praises to God," and sing "with understanding."

The voicing of praise was so general that it is only natural to conclude of these Bible folk that they possessed a very practical knowledge of the value of singing. To give thanks in speech was not deemed sufficient; the heart filled to overflowing with gratitude for "his goodness, and for his wonderful works to the children of men," found unbounded satisfaction in singing of the mercies of God. The influence of this form of expression was doubtless so evident to them that any other mode of praise lacked the exalting, helpful characteristics of song. In consequence, when help in time of trouble was sought and they were wonderfully sustained through the trial, they would "sing unto God" their strength. Sometimes the seers would cry aloud, "Sing unto God a new song," as though the occasion demanded a song replete with deeper meaning, one filled with love for mankind, one that in every cadence should proclaim to the world their joy for the manifold blessings God had bestowed upon His people.

To sing seemed not more difficult than to speak, and the question which is presenting itself to this age is one of deep import. Why does not humanity look upon singing as did the people of Bible days? Has the universal ability to sing praises been buried beneath a belief of incapacity, as was the ability to heal the sick until Mrs. Eddy gave Science and Health to the world. Christian Science is not only delivering the sick from their distresses, but it is performing great and wonderful things in its reformatory mission to mankind. The business world is being aroused to more wholesome methods, the professions are feeling the silent influence of this glorious truth, while in the realm of music the thought of the world is being led away from the material

Digitized by Google

concept of this priceless art to the interpretation given it by our Leader when she says, "Music is divine. Mind, not matter, makes music; and if the divine tone be lacking, the human tone has no melody for me" (Messages to The Mother Church, p. 29).

For centuries we have lived under the belief that "voice" is a gift from God to the few, but through the study of Christian Science it is being discovered by the many that God is not a partial being, nor is He a respecter of persons. It is our right, our joy and privilege, to feel the exalting, restful influence of praise; to bestow and have bestowed the healing touch of song,—to sing with the spirit and with the understanding.

The herald of freedom which first attracted the attention of the writer is to be found on page 126 of our text-book: "The human mind never produced a real tone nor sent forth a positive sound." God, Mind, is the same "yesterday, and to day, and for ever," and as man is idea, reflection, he has in his possession now the ability to sing. "Voice" is the manifestation of intelligence; it is not dependent upon the throat, it is not physique; it is not person, but it pertains to every divine idea. As each tone bears a fixed relation to the key-note, and it is impossible for one to do the work of another, so each idea bears a fixed relation to Principle and cannot be misplaced or perform the duties designed for another. Only those who have wandered in the wilderness of human hopes and fears musically, can fully appreciate what it means to humanity to sing in the "new tongue," express the freedom and beauty of unfettered tone, live in the knowledge that Mind hears and Mind sings.

Our Leader has said that, "controlled by belief, instead of understanding, music is, must be, imperfectly expressed" (Science and Health, p. 304). In the past it has been material belief that has caused the inharmony, the seeming failure, the discontent; but the key-note of liberty has at last been heard all over the land, and each day swells the mighty chorus which proclaims divine harmony. "It is a good thing to give thanks unto the Lord, and to sing praises unto thy name, O most High."

A GENTLE REMINDER.

GEORGE P. BINGHAM.

How many times a seemingly unimportant circumstance has aroused the latent thought force to remove what to our mortal consciousness appeared an insurmountable obstacle, and to lift us out of a condition of abject fear and faithlessness, showing us that the divine presence is not only around and about us, but that whatever our problem may be, God is holding our hand and is helping us. These manifestations of Truth and Love "with us," frequently come through most unexpected channels, establishing again in this way the actuality of the divine omnipresence, and proving that with God "all things work together for good."

As I passed one day out into the street, on my way to my place of business, an overwhelming realization of the day's cares and burdens crowded down upon me, sweeping away, as it seemed, the last vestiges of strength, courage, and faith that remained. For a moment I was stunned, then with the hope that even a faint ray might light my path, I walked slowly along. As I turned into the next street I heard the plaintive cry of a dog; and looking ahead I saw a small Scotch terrier running along behind a coal wagon. Just at the same moment the driver stopped his horses and, looking back, called to the little animal, which had followed unknown to his master. The dog placed his feet on the hub of one of the wheels, and reaching down, the man pulled him up on the seat. The little creature manifested his gratitude by loud cries, displaying his affection by kissing the face and hands of his loving friend. As the man looked at him, a smile lighted up the smutted face, changing the hard, dull, careworn expression to one that was loving, bright, and even beautiful.

As for myself, I walked on for several blocks. Suddenly stopping, I asked myself where all my cares and burdens had been for the past quarter of an hour. They had absolutely disappeared; and all because a little dog had made a demonstration of love! He had found what I had been seeking,—the great secret; he had given it to his master, the master's smile had passed it on to me, and it had, as some one has said, "freed me from the hard bondage wherein I was made to serve." There was no more fear that day, neither doubting nor despair, for I recalled the teaching of Christian Science, that "divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy" (Science and Health, p. 304), and I knew that the presence of Love was with me and I was at rest.

"THE LOVING ACTIVITY OF GOOD."

CLAIR D. VALLETTE.

THE student of Christian Science is taught that God is good, the divine Principle, Love; and that, since God, good, is the one source of action, all life and activity is the manifestation of "the loving activity of good," as it has been aptly termed. Hence, because all activity is the manifestation of good, then evil has neither expression nor activity.

At a time when activity as expressed by conditions and events had resulted in disappointment and denial of things which it seemed to be right to have and to do, a student of Christian Science was aware of the belief of discouragement knocking at the door of consciousness. Such understanding as he had of the Science of the Christ, Truth, seemed futile and his use of it foolishness. While waiting to see a friend who was otherwise engaged for a short time, he walked down to the Chicago river and watched the clear water rushing tumultuously by. It was brought to his recollection that it ran from Lake Michigan into the drainage canal, and through the Illinois and Mississippi rivers to the Gulf of Mexico. This canal had been constructed to convey the sewage of Chicago. It purified its contents by the same law that running streams are purified, by flushing with additional quantities of pure water, in this case drawn from the lake, and by aeration caused by the agitation of the flow of the stream.

He remembered that only a few years before the river seemed to be a foul, evil-smelling, almost stagnant open sewer, emptying into the lake; but the sewage of the city was no longer forced into the lake to contaminate the water supply of the people, and the loving activity of good had reversed the current, replaced the defiled contents with cleansing waters, and purified and used the old channel as a means of good. Here he was reminded that Christian Science thus comes into the life of men. It turns their thoughts away from the defilements of materiality to the purity of spiritual reality. It makes thought which was foul pure through the cleansing "flood-tides of Love" (Science and Health, p. 201). It purifies and utilizes old channels as a means of good.

A chip floating on the surface of the river was caught in an eddy, and as it revolved rapidly in a small circle the thought presented itself to the student that like this chip his life, while it seemed to express activity, was ineffective for good, without adequate achievement, endeavor resulting in defeat and no victory being won. Thus the thought of discouragement claiming to be intelligent sought subtly to obtrude on good. But observation showed that the tiny chip progressed with the current. The meaningless eddy was soon destroyed, and the chip was borne out of sight by the purifying waters of the reversed flow. Then it came to him that thus is the student of the Science of Christ borne. He may seem to himself to be making no progress. His efforts may seem to result in defeat; nevertheless, he is being carried forward. If he looks away from his immedi-

Digitized by Google

ate surroundings, he will see by the landmarks of the larger view that he is progressing in truth, he has his part in the loving activity of good. Even when error seems most surely triumphant, we can see God, see Him in effects produced. Dealing with infinite Mind, we are led, taught, encouraged, and upheld by His angels, "God's thoughts passing to man" (*Ibid.*, p. 581), in every time of need and in ways always divinely simple, natural, and perfect.

To see the chip revolve in meaningless circles brought a sense of the ineffectual results that often seem to follow endeavor. To observe more closely, however, was to see that there was progress in fact. If the student is true to Science, persevering in study, constant in prayer,—the affirmation of spiritual truth and the denial of material seeming,—endeavoring to use whatever understanding he has, faithful to Love and trusting to its loving guidance, he cannot fail—the sweeping "flood-tides of Love" will bear him to a sure destination. That he cannot see this destination, discern more than the immediate way, need not concern him. Let him trust that God who is Love, for His loving-kindness endureth forever.

"I WILL GIVE YOU REST."

JOAN MACDONALD.

LONG ago, Christ Jesus sent out an invitation to the weary and heavy-laden which means no less today than it did when uttered; indeed, it has a wonderfully broad application to those who have accepted Christian Science. His words were recalled by a poem which appeared in the *Monitor* some time ago, and which was full of a sweet wisdom, especially the following stanza:—

> Not in event, restriction, or release,
> Not in scenes near or far;
> But in ourselves are restlessness or peace,
> Rest where you are!

When the senses tell us that we need a vacation, there is apt to creep in a vague sense of unrest and discontent to those of us who must needs stay at home. We can, however, help to destroy this thought by realizing the truth about rest and change, and that the remedy for weariness dwells largely in our own thoughts, that the rest and refreshment of green pastures and still waters are in clearer and wider reaches of spiritual truth. To find real rest in our present surroundings, we must go beneath the surface seeming to the spiritual reality of all that goes to make up our daily life. We must drop, not our work, but the anxious attitude of Martha, and adopt the serene, joy-abiding thought of Mary, the thought which never offends but is ever ready to entertain the Christ. Breadth of thought and clear vision in what seem narrow limiting ways, patient love and tenderness,—these redeem and glorify the common work of every day. It is simply astonishing to see what may be gained by watching oneself for a whole day, intent upon the purpose of finding rest in all our ways; rest in Christ, Truth, from all negative, wearisome thinking, by dwelling in the strong, positive thought of God respecting everything. ("God is light, and in him is no darkness [negation] at all.") We should rest from the little hurts and resentments by dwelling in that perfect sense of Love which "thinketh no evil;" rest from the sense of personal ambition and display by getting at the heart of things; by being ready to see the good in the neighbor, the "angel" in the little child at our side, ever ready to respond to the eternal child in us; rest from the sense of being conventional and grown-up, that this child spirit in us may awaken and lead us into the fair, unbeaten paths that tend only upward.

Instead of dwelling longingly upon the wide prospects of sea and land and sky which others may be enjoying, we should give grateful thanks for each little sign of beauty that comes to us daily. They are but the assurance of a beauty and fulfilment whose perfect unfoldment awaits each seeing eye. "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and the free and wide thoughts one holds today, even though in a seemingly narrow environment, will find sure expression in some unfoldment tomorrow, for "the earth is the Lord's," and its utmost beauty and fulness are for each of His children.

"HIS MARVELOUS LIGHT."

LINDA G. BAKER.

UNEXPECTEDLY we had plunged into a tunnel. Even the artificial light had failed us, the blackness and heat were almost overpowering, and as some of us were traveling a strange way, what happened next was as unexpected as the entrance into the tunnel had been. The train rushed out into the brilliant sunshine. We were above the broad, chafing Hudson. Across the water there arose the hills, and at their base the locomotive and houses seemed like a child's toys compared with the grandeur and the bigness of nature's work,—the hills and the clouds and the deep blue sky. We had not known of the beauty awaiting us—to us it was non-existent, though indeed it is always there. To our sense there was nothing but darkness until the train carried us into light and beauty and an elevation above the river.

Memory then took me back to an afternoon some years ago, when, as error seemed very dense and dark, pain very real, and the divine power and goodness very far away, I turned to the Bible, and to our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read for a long time. Yet I could not seem to get out of the tunnel, the mortal sense of discord. Duty then called me, and as I went to respond I thought that if I were well (as I knew my true self to be), I could do this work. Immediately I was in the light—the pain left me, and I realized the power of divine Love, the goodness of God. This had always been and always is. I was above the waters: the understanding of Truth had carried me to a realization of my birthright of health, peace, joy, to a larger conception of the grandeur of Mind's ideas, before which the pigmy illusions of mortal sense disappeared, were left behind. Peter says, in his first epistle, that we should "show forth the praises of him who hath called [us] out of darkness into his marvelous light."

[Written for the *Sentinel.*]

"A CUP OF COLD WATER."

CHARLES C. SANDELIN.

COME, brother, thirsting in a barren land,
Drink from this flowing stream where now I drink;
Turn not in sorrow, faint not, give thy hand,
Pause not from pride upon the very brink;
Drink, brother, drink, and on thy knees with joy,
Pray ne'er again that earthly thirst annoy.

Look, brother, look! What wonder here is wrought!
Seest thou green fields where desert did appear?
'Twas not in vain thy steps were hither brought,
Though till this moment all seemed waste and drear:
'Twas but the film of sense before thine eye,
And ever, brother, fruitful fields were nigh.

So let us, brother, turn away from sense,
And look with inward eye at Truth's fair realm:
Aye, in that moment is our recompense
When error's phantoms seem to overwhelm,
For, humbly trusting, knowing Love is All,
Within an instant shall gloom's mantle fall.

SELECTED ARTICLES.

[From an editorial in *Seymour* (Ind.) *Democrat.*]

It may be set down as a basic law of universal application, that to be so solicitous about keeping one's health, to be so anxiously apprehensive of the causes which threaten it, is a serious mistake. This is one of the respects in which Christian Science has been beneficial and one of the secrets of the amazing success which has attended its propaganda. Those who have accepted and are faithful to its doctrines are not constantly thinking about their bodily condition and fearing that they may fall sick. They have full faith that their good health will continue, and instead of worrying about eventualities entirely beyond their power to control, they take its continuance as a matter of course.

Our forefathers, knowing nothing about microbes, took no precautions against them, yet they enjoyed as good health as we do and lived as long. Let us set aside hysteria and be guided by the promptings of plain, ordinary common sense

---

[Frederick Dixon in *Saturday Review*, London, Eng.]

The truth is that there is nothing whatever hypnotic about Christian Science treatment. It is based simply, as it professes, on the teaching of the Bible, and to give it effect it is necessary to endeavor, in the words of one of the greatest of Christian writers, to let that Mind be in you which was also in Christ Jesus. It was the Mind of Christ, and not any human personality, which healed the sick in the first century, and it is the Mind of Christ which is capable of healing the sick in the twentieth.

Suggestion is simply the attempt of one human mind to dominate another. It is as old as the human mind itself. It was quite well known in the first century by its earlier names, such as magic, dealings with familiar spirits, necromancy, "*et hoc genus omne.*" The Jews, when they wished to discredit Jesus, fell back on this very means in the accusation that he cast out devils through Beelzebub. Jesus' reply settled the question of Christian healing once and for all. He declared that a house divided against a house could not stand; in other words, that a man who believed it was possible for the human mind to suggest healing, believed that it was also possible for the human mind to suggest sickness; and therein lies the real danger of hypnotism. Jesus, however, was never satisfied with a mere negation; he went on, as he always did, to affirm the absolute. He declared that if he by the Spirit of God cast out devils, then the kingdom of God was come upon men. The kingdom of God never yet came upon anybody, and never will, through mental suggestion from a mind filled with a belief in good and evil. The kingdom of God comes upon a man exactly in proportion as he gains the Mind that was in Christ Jesus.

Your correspondent takes certain cases given by a critic in a recent book, cases given without a shadow of proof, without any means of identification, and in defiance of every law of evidence usually adopted. In the few cases in which it has been possible to test them, they have not been found to be particularly reliable, and I have shown elsewhere repeatedly that this critic has been misinformed in the cases which I have been able to trace. Suppose, however, that they had all of them been true, suppose that Christian Science had failed in every one of them; what does it prove, except that Christian Scientists are perpetually dealing with cases which come to them after every medical means has been tried in vain, and that they are not always successful in curing them. Anybody who had the time to collect the information might, by a careful reading of the newspapers, without going any further, collect a series of cases against the medical profession which would reduce anything in this critic's instances to the merest shadow. To take one single instance, it is only a few months since this critic declared openly that "there is such a mania for the removal of the appendix on the part of all classes, and such desperate anxiety on the part of many surgeons to meet their patients half way, that nothing except the intervention of criminal law will prove effective in reducing the wholesale slaughter."

A movement which has grown to the vast proportions of Christian Science, and which numbers in its ranks many thousands of men and women of the highest intelligence and unblemished character, is not to be dismissed by a rhetorical flourish from an anonymous writer in a condition of mental irritation.

[C. R. Munro in *Kenora* (Ont.) *Miner and News.*]

Christian Science proves its right to be called Christian by not only teaching its followers to believe in the doctrines of Jesus but actually to put those doctrines and commands into practice, in so far as they understand them, in the healing of sickness and the overcoming of sin. Jesus taught us to judge men "by their fruits," and according to his standard Christian Science is fully entitled to be considered Christian; it is also scientific, because it is the science or true knowledge of God, and when understood can be demonstrated in a practical way as surely as can a knowledge of the science of mathematics.

Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is not a mass of illogical contradictions, as averred, but a consistent and logical treatise, absolutely in accord with and based upon the Bible and the teachings of our great Master. It teaches that God is All-in-all, the only Mind, Life, substance, and intelligence, and that He is Spirit; and every statement in Science and Health is a logical deduction from these premises. This book is daily read and studied, in conjunction with the Bible, by persons in all walks of life, from the highly educated to those with little or no education, and is understood sufficiently to prove the truth of its teachings by actual demonstration in the healing of sickness and sin. Christian Scientists do not place their text-book above the Bible, as any one acquainted with Christian Scientists knows. They accept it as a commentary on the Bible, or, as its title indicates, a "Key to the Scriptures," and value it because it has made plain to them the teachings of Scripture and enabled them to some extent to put those teachings into actual practice. The first tenet of all Christian Science churches is, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

[E. M. Ramsay in *Scotsman*, Edinburgh, Scot.]

In a recent issue of the *Scotsman*, the statement that "pain and death are only things of the unemancipated will" is given as the teaching of Christian Science. As a fact, this is the exact opposite of its teaching. Christian Science maintains that since sin, disease, pain, death form no part of the infinite, ever-present, indestructible "I am that I am," whom we call God, the creator of all things, they can form no integral or essential part of His creation, of His effect, of the man made in His image and likeness, and are thus not real in the absolute sense of that word.

In order to get rid of these evils, much more is required than a mere theoretical assertion of their unreality. "The old man with his deeds" must be put off; we must be transformed by the renewing of our minds. Science and Health shows us the scientific process by which thought may be corrected, but the letter without the spirit is of no avail; the ramparts of heaven cannot be stormed; men can now as of old enter it only by that path "which no fowl knoweth, and which the vulture's eye hath not seen;" by the strait gate of purity, humility, peace, and joy.

[Ezra W. Palmer in *Montrose* (Col.) *Press.*]

Christian Scientists do not employ hypnotism. Hypnotism and Christian Science are antipodal terms. Christian Science employs prayer to God, and prayer only, as a means of healing the sick. Hypnotism is the use of one human will to control the mentality of another. To suggest to a patient by persistent mental declarations that he is not sick, does not really heal him. He may be deceived by the false declarations so long as his thought is controlled by the mesmeric influence of another, but the healing is not permanent, and the usual result is that the patient lapses into a worse state than before.

Christian Science leads men to God, the giver of all good. It follows the teachings and practice of Jesus, who ever declared that all power came from God. Jesus never recognized hypnotism, never employed it. The effect of Christian Science treatment is to lead the patient into the freedom of "the sons of God," and in this regenerative process neither human will, hypnotism, nor mesmerism has any part. By Christian Science prayer the patient is lifted out of the control of the evil beliefs that depleted and weakened him, whether those beliefs be sickness, poverty, or sin. The Christian Scientist sees God as infinite, divine Love, who sends no evil on His children, and whom to know aright destroys all ills that flesh is heir to.

[Henry Deutsch in *Albert Lea* (Minn.) *Tribune.*]

It is hard to understand the indignation to which our reverend friend has given vent in his three-column article. Certainly no one who heard or read the lecture on Christian Science with a calm, dispassionate, conscientious desire to ascertain its meaning, could distort what was said into any of the deductions that have been drawn by our critic, who in his zealous effort to find something to criticize has apparently forgotten that the first duty of the Christian minister is to teach by example, by adherence to that greatest of all commandments: "A new commandment I give unto you, That ye love one another;" and to bear always in mind that golden rule of conduct prescribed in the thirteenth chapter of I Corinthians.

It is true that Christian Scientists do not have special missionary movements for heathen lands, but it is also a fact that the Christian Scientist "does go out into the heathen land and there try to bring the gospel of love to the darkened and the lost," because everywhere the Christian Scientist goes Christian Science goes with him, and his example and love bring that great light and sign of Love's gospel which has been responsible for the fact that in almost every land of the globe we now find the seed of truth sown and growing with astonishing virility. If our critic will come down to Minneapolis I will take him to the jail, to the workhouse, to the Old Ladies' Home, to the Soldiers' Home, to Bethany Home, and other places where Christian Science services and ministrations are regularly held, and where we receive the glad tribute of gratitude for the light which has come from the dissemination of the true gospel of love, that gospel which our Master so well defined as the gospel of works when he said in answer to the two disciples of John, "Go your way, and tell John what things ye have seen and heard: how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

It is true that we have full congregations and large memberships in our church, and they are due to the fact that the Christian Science church offers to those who come within its doors that for which they have searched vainly for many weary years. If our good friend will heal the sick, lift up the fallen, save the sinner, bind up the broken-hearted, give an understanding of the law of a present salvation and the ability to obtain a sense of the presence of the kingdom of heaven now, at this day, he will have no occasion to complain that any of his congregation have been coaxed away from his church.

It is the usual stock argument for our reverend friend to say that no person need deny his present faith, but only increase it to obtain all the benefits that are received from Christian Science. The unfortunate fact is, however, that for some reason or other men like our critic apparently lack in the ability to teach those who need it how to increase their faith and how to obtain these results which the Bible says shall "follow them that believe;" namely, "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." It is true that Christian Science denies the reality of sickness. It does this because the Bible says that everything that was made, was made by God, and therefore it is a perversion to say that God created sickness; and if He did not create it, whence came it into existence, except as a human concept? The man with delirium tremens believes that there are snakes all around him, and no argument can convince him to the contrary until his condition of mind is changed. The insane man is a victim of numberless delusions which take all sorts of forms and fancies, and he believes them real until sanity is restored. Sickness as well as sin is the product of the belief in a power opposed to God, and those who believe in their reality deny the omnipotence and the love of God.

Mrs. Eddy herself says, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (Science and Health, p. 460). So the blind man in the Bible was thought to be the victim of hereditary sin until the Master exposed the nothingness of that belief. We shall have sickness of all kinds until all the world is ready to recognize the Master's work and to believe that he meant what he stated when he said not only "preach the gospel," but "heal the sick," and, "Verily, I say unto you, He that believeth on me, the works that I do shall he do also."

In the mean time Christian Scientists are proving to the best of their understanding, and in a very marked and large degree, the truth of the Master's promises. We do not expect to usher in the millennium at once, but the fact that the full realization has not been attained during the forty years since its discovery is no more an argument against the efficacy of Christian Science or the truth of its teaching than it would be to say that there is no truth in Christianity because after a lapse of nineteen hundred years the world is still filled with sinners and there seems to be still a necessity for the preachment of the thousands upon thousands who occupy positions similar to that of our critic. In fact, if one were to credit the statements contained in the sermons from the different pulpits, he would be alarmed at the present apparently unsuccessful combat which the clergy are waging in their effort to bring sinning mortals into the kingdom of heaven.

[Willis D. McKinstry in *Topeka* (Kan.) *Capital.*]

Christian Science agrees with the Scriptures which declare that "all things were made by him; and without him was not any thing made that was made," and that "God saw every thing that he had made, and, behold, it was very good." From the religious tenets of Christian Science as found on page 497 of Science and Health we read: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Christendom accepts as true these words of the Master, "I am the way, the truth, and the life: no man cometh unto the Father, but by me."

Digitized by Google

"He that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber."

The wonderful works performed by Jesus demonstrate the omnipotence and omnipresence of God (that Truth is available now) and afford positive proof that a spiritual understanding and application of the Principle of being is the way of salvation; thus he declared, "He that believeth on me, the works that I do shall he do also." This Galilean Prophet or Son of God gave to the world that wonderful command, "Go ye into all the world and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This command is just as imperative, and the promise just as sure, today as when it was uttered by the Saviour, Christ Jesus. The ministry of the Master being one of works, he recognized sin and sickness as one and the same, for he said, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk."

Without doubt our clerical critic believes that prayer will save the sinner; then should not the prayer of faith—which is spiritual understanding—heal the sick? The Scriptures declare that "the effectual fervent prayer of a righteous man availeth much," also that "faith without works is dead;" and of the barren fig tree Jesus said, "Cut it down." It is presumed that our friend is well paid for his services, for prayers which reclaim the sinner; then it should not be thought wrong nor unchristian for those whose prayers heal the sick to receive compensation, as the "laborer is worthy of his hire." Christian Science has multitudes of living witnesses that God's power to heal disease as well as to destroy sin is available today—it is here and now; and an honest investigation will find many in this city who have been healed through Christian Science.

[Lloyd B. Coate in *Dayton* (O.) *News*.]

In a church paper published in Dayton, Ohio, Jan. 4, 1911, the attention of the readers was directed to the subject of Christian Science. While some few editors of religious periodicals have seen fit to speak disrespectfully of the Discoverer and Founder of the Christian Science movement, yet on the other hand the whole civilized world has been greatly edified by what most of the leading papers in this and other lands have said about Mrs. Eddy and the church she founded thirty years ago, which within this brief period has girdled the globe and is found in almost every city of importance in this land. These multiplied scores of able editors speak as outsiders, and though not identified with the movement, yet their editorials are as one pean of praise in acknowledging the good Mrs. Eddy has accomplished in the world. These editorials state that thousands of people have been restored from sickness to health through the teachings of this woman, and not only have the sick been healed and the sorrowing comforted, but the sinner and the skeptic have been led to God, and the drunkard reformed. The editors of the secular press acknowledge that the uplifting influence of this church is felt throughout the civilized world, and these marvelous achievements have been accomplished in this brief space of time under the most adverse conditions possible.

Much of the history of the Christian Science movement has been given in these editorials. They speak of the bitter, unrelenting hostility with which this church has had to contend. Surely nothing but the strong arm of God could have sustained Mrs. Eddy all these years, through so many trials, and prolonged her life until her work was permanently established. Notwithstanding the fact that the Founder of this great movement was a woman, and was a hopeless invalid before her healing through the power of God in the year 1866, from which time the Christian Science movement dates its origin, and notwithstanding her poverty and the lack of influential citizens to aid her in the beginning, yet she lived to see it accepted by many of the most learned men and women of this age.

In the same church paper was a marked article which contained many quotations from the Christian Science textbook, "Science and Health with Key to the Scriptures," that in their disconnection seem ambiguous and self-contradictory. If one were so inclined, he could take certain statements of Scripture in a similar way, and thus make the Bible appear ridiculous; that is, if taken in a literal or material sense. Tens of thousands who have studied Science and Health with a spirit of love and fairness have gained a knowledge of its spiritual import and found it to contain the most helpful and beautiful philosophy known to men. They have demonstrated this fact because through this understanding multiplied thousands have been healed of physical and mental inharmonies.

In Christian Science "man" is understood to be God's image and likeness, and not a bundle of flesh, blood, brain, and nerves. If one exactly understood the view-point from which a given statement is made, criticism would be withheld. If a critic has in mind a material sense of things, while the author refers only to the spiritual, of course to such a critic the author's statements would seem foolish. Jesus once said, "It is the spirit that quickeneth; the flesh profiteth nothing." The great Master also admonished us to "judge righteous judgment."

[Edward W. Dickey in *San Bernardino* (Cal.) *Sun*.]

Christian Scientists are fully awake to sin in all its phases, and they are taught by their text-books, the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, to be alert to all that deceiveth or maketh a lie. They have learned neither to fear nor love sin, and are therefore becoming victors over it. Christian Science teaches that evil is no part of God. More strictly speaking, it declares God to be infinite good, divine Mind, the only power. Sin is therefore without life, being, or intelligence —in other words, non-existent. However, mortals cannot overlook "the lie," as Jesus defined evil, but must overcome it. This overcoming is through Christ and Christian Science, which when followed will bring to pass the vision of St. John,—when "the former things" shall have passed away and shall no more come into mind.

[Frederick W. Carr in *Cincinnati* (Ohio) *Post*.]

Christian Scientists ask no quarter, but only fair play and unbiased judgment. If their religion does not "deliver the goods" in making men better and in healing the sick, it deserves to go down, and the quicker the better. Such, I am sure, is the attitude of every true Christian Scientist. Its million adherents do no more than to point to the words of Gamaliel: "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

[Editorial comment in *Memphis* (Tenn.) *News Scimitar*.]

Theirs [Christian Scientists'] is a very comforting and comfortable doctrine; optimistic, sanguine, and promises or offers the world ultimate freedom from sin, sickness, death, and in fact all limitations. Hence it would be a good thing to take hold of if one is able to grasp it.

To voice your gratitude is well,—and still
This is so easy that the world scarce heeds it.
You will not fully pay your debt until
You do a kindness to the man who needs it.

WARWICK JAMES PRICE.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A FREE-WILL OFFERING.

It has been requested that some definite word be given through the *Sentinel* in regard to contributions to the proposed memorial to Mrs. Eddy which was announced in this column a few weeks ago; namely, some indication as to how large an amount individuals may contribute, and as to the total sum that will be required.

It will readily be admitted, we think, that the first of these questions cannot be answered by one person for another. The entire proposition is one wherein individual desire and individual capacity must govern. There has been a very general desire expressed for a proper and dignified memorial to our Leader, not because stone or marble is necessary to the preservation of her fame, but because of the opportunity which would thus be given to those who wish to pay such tribute of love and gratitude as they may in this way to the one who has done more for them than has any other person in the whole of their experience. Who can say for another what contribution will fittingly express the measure of this love and gratitude?

We are taught in Christian Science that "to keep the commandments of our Master and follow his example, is our proper debt to him and the only worthy evidence of our gratitude for all that he has done" (Science and Health, p. 4), and Christian Scientists are fully aware that the highest measure of their gratitude for the blessings which have come to them through the self-sacrificing labors of our Leader is to be shown by daily and hourly demonstration of the truth she taught, by whole-hearted consecration to the upbuilding of the cause which is her true monument. And yet, through this memorial, they desire to give concrete expression, in some measure, to the love and honor so freely accorded our revered Leader; they would say with David, "All things come of thee, and of thine own have we given thee," for they realize that under the divine Giver they owe all they have of health and happiness to the Discoverer and Founder of Christian Science.

It is also to be borne in mind that the fund of which Mr. Chase is treasurer is the result of a spontaneous and general demand that an opportunity be given to contribute to the erection of a suitable memorial, and that anything but a voluntary contribution to this fund would be entirely out of harmony with its purpose. It is to be a free-will offering, a tribute from the people of her church and congregation,—"of every man that giveth it willingly with his heart." And it is to be given "after their ability,"—"every man shall give as he is able, according to the blessing." We must remember, too, the Master's commendation of the widow's offering, and that the smaller gift may be just as rich in love and gratitude as the larger.

Apropos of the question as to the total sum that will be required, it seems almost needless to say that Christian Scientists are not responsible for and have no sympathy with the exaggerated and unauthorized newspaper stories which have been published, to the effect that the most magnificent and most expensive monument possible to erect is in contemplation. Such a thing would be unnecessary, inappropriate, and in the poorest possible taste. Mrs. Eddy's name and fame do not need such a monument for their perpetuation, and the futility of attempting so to perpetuate any name which has not written itself indelibly by achievement, is well known. All that can be said at this time is that a memorial to the Discoverer and Founder of Christian Science should be simple, dignified, and beautiful, in perfect keeping with her life among us, and as it will be if we bring our gifts to the treasury in the same spirit that she gave to all mankind.

ARCHIBALD MCLELLAN.

"IF YE CONTINUE."

In the hour of temptation to discouragement because of the manifest inadequacy of our present realization of Truth to solve a given life-problem, we may find both illumination and rebuke in Jesus' words when he said, "If ye continue in my word, then are ye my disciples indeed." How gentle and yet how searching the reminder thus brought us of the past waverings both of our faith and our devotion, the lack of patient persistence which has marked our efforts to follow the Master, and how fully do our lapses from the ideal endeavor explain the failures which we so honestly deplore!

It is apparent that the Christ-mind cannot be attained unless there be a passing, in our habit of right thinking, from the intermittent to the continuous, from the spasmodic to the orderly, from the government of impulse to the government of Principle. The oscillations of mortal sense, of mood and temper, feeling and desire, are inevitably made manifest to our discredit and disadvantage in both conduct and achievement, and until acquired mental control and fixedness of faith have brought us the poise of understanding, we shall often be depressed by the sorrows of defeat when we might just as well have been uplifted by the joys of success. In Christian Science it is clearly seen that this spiritual poise which alone saves from the stumblings of impulse and mental vagrancy, is the mark of every truly cultured man, and that it is essential to the higher realization of divine Truth.

Of this fact the Scriptures present us with many illustrations, but none that are more pertinent than that found in the contrast between the character and experience of Job and of John. The hero of what has been spoken of as "literature's greatest epic," was ever a prey to the surging tides of contradictory sense, and he came into possession of an invulnerable assurance only after a schooling which proved a fiery trial of integrity. John, on the other hand, having learned early and well the art of unvarying response to heaven's gentlest appeal, seems to have soon reached and always retained that altitude of spiritual perception which enabled him to foresee the coming "day of the Lord," and herald its glories to the millions yet submerged in darkness below. Serenity of spiritual wisdom became for him, as it will become for all, a prism which reveals the otherwise hidden splendors of a light that is "above the sun."

It is a mere truism that continuous right doing can be realized only when there is continuous right thought, but it is not so clearly seen that persistent right thinking is dependent upon the possession of a true metaphysical basis, upon the habit of logical judgment therefrom, respecting all things, and upon that alertness to evil which not only knows it for what it is, but for what it claims to be. And here again the teaching of Christian Science comes with healing upon its wings to every aspiring heart. The mariner who knows well his chart and location, and that he has clear sailing, is undisturbed by the storm. He does not pray for rough weather, but when it comes he holds steadily to his course, and in his wisdom is often able even to profit by "the blow."

So, too, it is possible for the Christian Scientist who is sure of the truth of being, who keeps fast hold upon it in every determination of values and who is wide awake to the human situation, to maintain that supremacy over sense which, even in the greatest trials, enables him to go on thinking right and doing right regardless. "Grounded and settled," as Paul phrases it, in demonstrable truth, he continues in the faith and wins his crown.

JOHN B. WILLIS.

"THE PROMISE OF THE HOLY GHOST."

WITHOUT the gleams of light which come from spiritual intuition, the history of mankind would have been dark indeed; but happily these have come from age to age, and most vividly when most needed. In divine revelation we have the related elements of promise and fulfilment, even as these appear in our individual experiences. How barren would the lives of Christians be without the promises which enrich the pages of Holy Writ, and yet there appears to be in many cases a long stretch of desert wandering between the promise and its fulfilment; this due, not to any unwillingness on the part of God to bless, but rather to the unreadiness of mortals to receive the desired blessing, whether it be health, holiness, or happiness.

Our revered Leader tells us that we should have more faith in God, "and be more alive to His promises" (Science and Health, p. 373). A remarkable passage in the second chapter of Acts says that Jesus "received of the Father the promise of the Holy Ghost." This corresponds with his own statement that the Holy Ghost, or "Spirit of truth," would come and make perpetual the truth which he had declared and demonstrated. For some years this was measurably realized, and as a result human thought was revolutionized wherever the rays of divine light penetrated the darkness of mortal belief. As an outward result the sick were healed, the sinful reformed, and even the dead raised. Then came over the sense of mankind the deepening dream of life in matter, of life separate from God and unlike Him, and its darkness continued, with occasional but gladdening gleams of light, until a great awakening came with the revelation of Christian Science, which declares for and demonstrates the presence and power of the Holy Ghost, known to us today as divine Science.

As at an earlier day, Mrs. Eddy's declaration of Truth was the word spoken with power, which is ever the proof of divine revelation. Even the simple fisher folk witnessed to this in Jesus' time, when they said that "his word was with power," and thousands can bear witness to the same power expressed not alone in our text-book, but throughout our Leader's entire writings, notably so in many of the articles in "Miscellaneous Writings," which reveal unmistakably the might and majesty of Spirit, rebuking the illusions of material sense which would hold the race forever in bondage to sin, disease, and death. That the world awakened enough to listen (some to accept and others to reject) was indeed marvelous when we consider the import of the message; but the word was with power, and it accomplished the thing whereto God sent it, despite the resistance of error, which would fain prolong the dream of life in material sense.

It sometimes seems as if the students of our priceless literature missed their greatest opportunities for progress by forgetting to go to the vitalizing, energizing declarations of Truth found in our Leader's writings, and sought instead the opinions of those who are only working their way out of mortal belief. A teacher or practitioner may give out a thought which is helpful and illuminating to some one, but which would not necessarily meet the need of others whose problems were different; hence the unwisdom of pressing it upon their attention when a broader and more impersonal statement, based upon Principle, is required. This should not be understood as a criticism of any kindly effort to help another, but rather of the intrusion of some partial and personal view of the truth, which would turn thought away from the inspired and inspiring utterances that cover universal need and link promise to fulfilment. It is our privilege to read the living words of Truth, and with the promise of the Holy Ghost seek the illumination that comes from on high, and thus will Truth be seen "shining through the mists of materiality, and melting away the shadows called sin, disease, and death" (Miscellaneous Writings, p. 205).

ANNIE M. KNOTT.

AMONG THE CHURCHES.

AUBURN, N. Y.

The new home of First Church of Christ, Scientist, of Auburn will be opened to the public Sunday, June 4, when the church society will hold its first services in the remodeled Terrill house, 193 Genesee street, which was purchased by the society last August. The former cozy parlors on either side of the comfortable hallway are retained, and will be used as reading-rooms. The rear wall and partitions of the house have been torn away, and both the first and second stories have been replaced by a sunny auditorium forty-five feet square with a high arched roof. This room has three long pebbled glass windows on either side and can be artificially lighted from the sides and ceiling by both gas and electricity. Comfortable pews of dark oak, to seat two hundred and forty people, fill the space in front of the pulpit, which is in a recess in the north wall. The lot on which the building stands has a street frontage of sixty-six feet and is three hundred and thirty-six feet in depth.

Auburn Citizen.

BROOKLYN, N. Y.

An occurrence unique in the history of the Christian Science churches of Greater New York is the taking up of a special collection tomorrow [May 14] in each of the churches and societies for the benefit of the building fund of First Church of Christ, Scientist, in Brooklyn. The edifice now being erected by this church will cost about two hundred and fifty thousand dollars, of which one hundred and fifty thousand dollars has already been raised by the unaided efforts of the members of the congregation, and with the impetus given by the united contributions the church will very shortly be completed. It is situated on the corner of Dean street and New York avenue, and will seat about fifteen hundred. The wing to be used for the Sunday school is now being used as the church, and has a seating capacity of about seven hundred.—*New York Post.*

RUTLAND, VT.

Only the signing of the contract now remains to turn the first spadeful of earth for the erection of First Church of Christ, Scientist, in Rutland, it having been practically decided to begin work May 1. It is expected that the masonry and carpenter work will be completed in between eight and ten weeks and that the Lesson-Sermon will be read from the platform as soon as Sept. 1. Ten years ago the society organized. The people of Rutland of the Scientist belief were then holding gatherings in private houses. After the formation of the church meetings were held in the Ripley Block on Merchants row, later in the Buxton Block, then the Dunn Block, and finally in the Gryphon Building, whence the church went, about a year and a half ago, to its present quarters.—*News.*

SAN FRANCISCO, CAL.

The corner-stone of the new Christian Science temple at the northeast corner of California and Franklin streets was laid at seven o'clock yesterday morning [May 6] by officers of First Church of Christ, Scientist. The church building is being constructed of brick, the surface veneer of which is in a variety of harmonizing shades, with terra cotta trimmings and red tile roof, similar in effect to the early Italian churches of the transition period between the Byzantine and Renaissance. The church will seat twelve hundred persons.—*San Francisco Chronicle.*

THE LECTURES.

CHADRON, NEB.

A well-attended lecture on Christian Science was given at the Loomer Opera House Monday evening, April 3. The lecturer, Bliss Knapp, was introduced by W. L. Best, second reader of the church, who said in part,—

All Christianity recognizes two great lawgivers, the Hebrew prophet and the "man of Galilee." What church is there that does not teach the Ten Commandments? What church does not emphasize the commands of Jesus, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," and "thou shalt love thy neighbor as thyself." In demonstration of these great laws, Jesus lived the most exemplary life humanity has ever witnessed, living as never man lived, speaking as never man spake. In the ages intervening between these two great lawgivers, pharisaical creeds and doctrines caused mankind to forget that the fundamentals of life, health, and happiness are dependent on God. Jesus' teachings, reiterating those of the early prophets and demonstrating them as never before, were more than a perverse people could withstand; consequently he and his followers were bitterly persecuted. For some two or three hundred years the early Christians practised spiritual healing of both mind and body; then, midst the persecutions that followed, spiritual healing was abandoned.

Many times the heathen ask our missionaries if they believe that Christ healed the sick and raised the dead. Invariably the reply is, "Yes." "Then why do your people get sick?" they ask. "And, when they are sick, why don't you heal them?" Christians everywhere preach the words of Jesus, "Greater works than these shall he do; because I go unto my Father." Do they believe them? Mrs. Eddy, through Christian Science, has made plain the teachings and acts of the Nazarene, and we are assembled tonight to hear them briefly explained.—*Correspondence.*

ST. LOUIS, MO.

At a lecture on Christian Science delivered in St. Louis April 3, under the auspices of all Churches of Christ, Scientist, in this field, by Willis F. Gross, the introductory remarks by John Randall Dunn were as follows:—

The avidity with which the newly awakened public mind grasps, digests, and makes its own every forward movement in the progress of civic righteousness is a presage of that glad day when the teachings of our Saviour shall control the affairs of this world and bring to mankind freedom from all that is evil and the realization of all good. In this progressive age we are learning that economics and statecraft, equal rights and the square deal, as well as love for God and man, are elements of the religion of Christ, and never before has the golden rule played so great a part in the larger affairs of our national life. Within a single decade we have witnessed the rise and development of the new doctrine of the conservation of our physical resources, and its acceptance as an article of faith. And now, as a natural corollary to conservation, the matter of efficiency has become the subject of universal consideration. Efficiency may be defined as the best possible application of the gifts of God—talents, faculties, capabilities—as conserved and developed by use. Efficiency means the higher life, the helpful, fruitful life.

In the industrial arts and in commerce, today's greatest problem is the increase of the productivity of the available energy, and man, mind, and machine must everlastingly work to this end. Let us compare for a moment the present strenuous life with the conditions existing a half century ago. Then the average man's work was finished at fifty. The average woman settled down, in her dainty cap and laces, to knit away a placid old age—at forty-five! Today the man of sixty is on the firing-line in life's battles, the virile and dominant force in the world's activities, working, ever working, from the pure zest for useful endeavor. This wondrous change is due to a higher concept of duty, a broadening range of vision, the spiritualization of the mental forces which constitute the dynamo of our daily life. "But," you may ask, "what is the new impulse of these dynamic forces?" And I may venture to answer that it is the crystallized result of the world-wide dissemination and unconscious but very general acceptance of the teachings of an enlightened woman, a woman of brilliant mentality, possessing a keen and analytical intellect, a broad and loving sympathy for all mankind, and withal, a statesmanlike grasp of life's potentialities; a woman of profound learning and deep spirituality; the Discoverer and Founder of Christian Science, whose great work was accomplished after forty-five—Mrs. Eddy.

If there be friends present that would scoff at this claim, I ask them at least to extend the courtesy of loving hearts and open minds to the distinguished guest who is here upon our invitation as a representative of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, of Boston, Mass. I dare say his message will carry conviction where I may but hint at the truth. But many are here present who already have been compelled to withhold their criticism and accept the doctrines of Christian Science, and who gratefully testify to the enjoyment of freedom from sickness, to relief from the burdens of sin and sorrow in their lives.—*Correspondence.*

ONEIDA, N. Y.

The lecture on Christian Science by Frank H. Leonard in Park Theater in this city, Sunday afternoon [April 16], was well attended by an appreciative audience. The lecturer was introduced by Edwin Park, first reader of the local Christian Science church, who said:—

Jesus of Nazareth said, "Ye shall know the truth, and the truth shall make you free." Truth, the knowledge of which shall free men from all discordant conditions, has been likened to an open fountain, flowing freely, where all may come without let or hindrance. Yet the world today is staggering under a load of sin and shame, pain and disease, poverty and sorrow, crying to be delivered of its bondage. How, then, may men avail themselves of the power of Truth to obtain freedom from all these conditions, conditions which are quite generally admitted to be unnatural and abnormal?

It is the province of Christian Science to furnish a rule of demonstration whereby men may obtain this so much to be desired freedom. In the case of Christian Science the rule and its Principle must be understood, as in the case of any other science, in order to be intelligently applied to the problems confronting us.—*Democratic Union.*

LOVELAND, COL.

William R. Rathvon spoke here Sunday afternoon [April 16] on the subject of Christian Science. Attorney Romans in introducing the speaker said:—

While I am not sufficiently well acquainted with the teachings of Christian Science to attempt to discuss them, I will say that I believe the Christian Scientists are about the most consistent and earnest practitioners of what they preach of any denomination today. And I want to add a word, a testimonial, as it were, from an outsider in regard to the practical effects of the religion, as it has appeared to me. I have attended Christian Science meetings and lectures in Denver, both in the big church on the Hill and before it was built, and I know that Christian Science has done a great deal of good in this state, and especially in the last ten

Digitized by Google

years; and I am just as sure that the teachings have done no harm, which is justification enough for any great movement.

The reason I say that the teaching has done so much good, is not because of the many cures that have been made, but because of the cheerfulness and hope that have been brought to the thousands now practising this belief. And I want to emphasize the good to be derived from looking on the bright side of things in this world, where most of our troubles are imaginary. And also the good that comes from not talking about the faults of others, and being cheerful and refraining from gossip. These two things are enough to justify the time and expenditure of all the money that this church and people have spent.—*Loveland Herald.*

BERKELEY, CAL.

A lecture on Christian Science was delivered at the High School Auditorium on Tuesday evening [April 18] by William D. McCrackan, M.A. John G. Howell in introducing the lecturer said:—

Christian Science is not new; it is as old as creation. Its truths have been known by the spiritually minded in all ages. It is Christian because it is the teaching of Christ, Truth; Science because it is demonstrable knowledge. Its mission is the whole mission of Christ Jesus, who healed the sick, cast out demons, and thus destroyed evil. The practical workings of this religion, as applied to our present-day problems, were first shown to the world about forty years ago by Mrs. Eddy through her own example and writings. That it is bringing happiness and encouragement into thousands of lives formerly filled with fear and doubt, is the best proof that Christian Science is a religion of progress, which is the subject of the lecture for this evening.

Berkeley Gazette.

KALAMAZOO, MICH.

Francis J. Fluno, M.D., lectured here on Christian Science April 25. He was introduced by Judge Yaples, who said in part,—

I never saw the lecturer of the evening until a few hours ago, but I have long regarded him as my friend. I have read his lectures on Christian Science. Whoever reveals to us a new value of the day, or widens the horizon of life; whoever banishes fear from the heart, or gives us better courage; whoever awakens in us a greater love for the true, the beautiful, and the good, performs the service of a friend. While I am not a member of the Christian Science church, I gratefully acknowledge the physical and spiritual benefits which I have received from the study of Christian Science. Whatever may be our individual views respecting its claims and teachings, we must all admit that it is one of the most potent forces in history in spiritualizing the world's thought and life. It is a religion of hope, not of despair; of joy, not of sorrow; of love, not of hate; of life, not of death. It is demonstration, not doctrine; it is knowledge, not belief merely; it heals by preaching, and preaches by healing. It makes bad people good, and good people better. Only yesterday this church was the private thought of one woman. Today its morning prayer circles the earth. What is the secret of this miracle of growth? Simply this: Christian Science trusts God absolutely, and marches on.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

London, Eng. (Second Church).—Bicknell Young, Queen's Hall, Langham Place, London W., July 1.

Shawnee, Okla.—William R. Rathvon, Convention Hall, July 2.

Waupun, Wis.—Frank H. Leonard, Davison Theater, June 23.

TESTIMONIES OF HEALING.

I can say with the psalmist, "I will praise thee: for thou hast heard me, and art become my salvation;" and it is with a desire to help others that I write these lines. From 1902 to 1907 I was a great sufferer from a complication of diseases, imposed on me by mortal belief, though six different physicians tried their skill, but with only temporary benefit. Some advised one remedy, some another, then a surgical operation was recommended as the only hope, but they said that I was not likely to live over three years, as they were practically agreed that the disease was a malignant growth; so at last I returned home to die, as I could see no hope anywhere, for vain was the help of man.

Just at this time a book was sent to me by a dear friend who had long tried to interest me in Christian Science. It was "Rudimental Divine Science" by Mrs. Eddy, and I only glanced it over and then threw it aside; but the next day, as my husband was helping me into the front room, I sank down to rest and picked up the book, and what I read there gave me hope. I asked my husband to get me a copy of "Science and Health with Key to the Scriptures," and he said he surely would. The following Sunday night he brought the book to me, and I read a little in it, then pondered on what I had read as I lay on my bed. The next day at noon I was dressed and placed in the arm-chair where I had spent so many hours in hopelessness and pain. I called for Science and Health, and then I told my maid she might go home that afternoon, so I was left all alone. It was about one o'clock when I began to read, and from the first I saw God as Life in every line. I became lost as to time or place, but when I at last came back to my surroundings, I found I had sat there nearly four hours, and to me the room seemed filled with the glory of God. I could only say, "Our Father which art in heaven;" and then I heard the Master's sweet words, "Ye believe in God; believe also in me," and like Thomas I cried, "My Lord and my God," for I knew the ever-present Christ. I sat there, too happy for utterance for a while, then I rose from that chair perfectly healed, mind and body.

I cannot voice the unspeakable joy and peace that fills my heart as I go about the Master's business, but the way grows ever brighter, and I can hear the voice of Truth saying to every one who is sick or in trouble, "Come ye to the waters of life and drink and live." May God abundantly bless those who were instrumental in causing me to accept this great truth. I praise God for revealing to our beloved Leader the way, and we all will spend eternity loving and praising Christ Jesus for showing us the way back to our Father's house.—Mrs. F. R. Mason, Des Moines, Wash.

After reading the many testimonies of healing, and of love and gratitude therefor, which come to us so often and so speedily through our periodicals, I feel I would like to send a small expression of my own gratitude for all the help I have received through their pages. For many years before I heard of Christian Science, I rarely if ever knew what it meant to be out of pain. It is not necessary to go into details, but when the most eminent surgeons and doctors had to operate severely on many occasions, it is easy to understand that they must have thought it was necessary to take such measures. I am not ungrateful to the doctors for all their kindness to me in those dark days, but I had to learn, as many others have done in Christian Science, that there is but one healer, even God, divine Love, who as the psalmist saith, "forgiveth all thine iniquities; who healeth all thy diseases."

The time came when I heard of the wonderful healing in Christian Science of the daughter of a great friend of mine, so I determined to look into its teachings for myself, and was almost instantaneously healed from very discordant conditions upon reading the text-book of Christian Science,

Digitized by Google

"Science and Health with Key to the Scriptures" by Mrs. Eddy. Later I went to a practitioner for help, as an abscess had formed internally and to sense I was suffering great pain. Under absent treatment this condition was met and destroyed in a very short time, with no after effects or loss of strength in any way, and for this I was deeply thankful. It was indeed finding the truth which sets us free from so much that is unlike God, good. I have always found that whenever I have applied these teachings faithfully, honestly, and intelligently, for myself as well as for others, the human sense of discord, sickness, or sorrow has been lifted, and through the overcoming of each experience I have gained a higher and better understanding of the allness of God and His Christ, and the peace which passeth all understanding has followed.

During these years many blessings have come into my life, and I have to thank God for the greatest blessing of all, the blessing of a great sorrow overcome through the teachings of Christian Science. Eighteen months ago I received a cable from South Africa, telling me that my youngest son had met with a fatal accident. For a moment everything seemed to stand still (for he was my dearest on earth). Then I remembered God, and went to Him in silent prayer, as we are taught in Christian Science. During that night I got such a realization of God as Life, and of Life reflected in His creation, that all sense of personal possession left me, and I was able to give that child into the arms of divine Love, his rightful and eternal place, and when the morning came that sorrow was healed. I was able to go out and do my work all that next day, and indeed I can gratefully and honestly say that this has been a wonderful experience to me. Before testifying to this I have had to prove step by step that I had made no mistake, for to human sense there has been long waiting for details, inquiry, and later the saddest trial of all had to be met (and still that wonderful peace). It was just God—"God with us"—and I have also been learning better during these months the meaning of those words, "Whatever blesses one blesses all" (Science and Health, p. 206); and Paul's admonition, "Prove all things; hold fast that which is good." I thank God and His Son Christ Jesus for Christian Science, and for our dear Leader, whose wonderful writings and noble example have made it possible to apply the teachings of the Master to every-day life, and to enable unnumbered thousands to rise up and call her blessed.

It would be impossible to enumerate the many blessings that have come into my life since I became a student of Christian Science seven years ago, and although my sense of gratitude seems so small for all that I have received (for the great spiritual uplift and the physical healing which necessarily followed), yet I feel sure that God knows all that is holiest and best in it, and if I look ever to divine Principle for more wisdom and understanding to do God's work according to His will, I feel I shall be showing my loving gratitude to our dear and revered Leader in the way she would most gladly have me do; that is, by living in obedience to the law of Christ Jesus, to study well her inspired writings, which ever point up to divine heights, to give out loving help to all who desire it, even as I too have been helped, and to follow always her noble example. She has shown us the way to better living and better thinking, and I am grateful and thankful for every phrase she has lived and written, and whenever I think of her and her great life-work, these words of St. Paul to the Philippians come up to me in love and gratitude: "I thank my God, upon every remembrance of you."

MARIE STOKES, London, England.

About a year ago I was suddenly stricken with a severe attack of asthma, this being the season of the year at which I had been attacked for fifteen years or more. Usually I would be under the care of a doctor for weeks and often had to take opiates before I could get relief; but on this occasion my suffering was so great I could get no help till I wrote to a Christian Science practitioner telling her how I was suffering and asking her to help me by absent treatment. My letter was mailed early in the morning on Monday, and must have reached her that evening. I did not notice just what hour in the evening it was when I felt inclined to go out on the veranda for a while, though it must have been shortly after seven o'clock. I felt as though a great weight had been lifted from me, and a sense of peace and rest such as I had never before experienced came to me.

My friends all noticed the change, and asked me how I was feeling, and they were astonished to hear me say I was perfectly well. This was the beginning of the end of the asthma, which had heretofore lasted for weeks and even months. As I feel that I should make this statement brief, I shall not enter into the details, but so far I have had no pain and am improving all the time. I arranged to start on a long journey, alone, in a few days after the healing, and I had no fear, for I knew that God is Love and that He would be with me always and everywhere.

MRS. H. L. KING, Blue Earth, Minn.

I desire to give my testimony to the help I have received in Christian Science. When I seemed to be past all medical aid, Christian Science came to me and now I am well. In my weakness I fell from the top of a long stair and sustained some serious injuries. I had fallen upon a large pair of scissors, which ran into my face just below the eye. I had treatment in Christian Science, and my arm is now well and my face healed without a scar. Best of all, however, is the spiritual uplifting which has come to me, all of which I received through Christian Science.

MRS. MARY C. MCLEAN, Detroit, Mich.

After having for about ten years received help through Christian Science, I feel that it is truly time for me to make proper acknowledgment. I became interested through attending a testimony meeting, merely to please a friend, but soon after this I had three weeks' treatment for headaches that had troubled me from childhood, also for defective vision. I learned that Christian Science truly heals, and I at once laid aside the glasses I had worn for six years, but have had headaches occasionally up to within two years. Now I can say that all the fear has vanished, and as the understanding has come I have been able to do my own work, though slowly, owing, as I know, to my own lack of interest, or perhaps too much interest in business. We have two children, eight and eleven years old, who do not know of any other help for sickness or other ills but that which comes through our understanding of Christian Science.

I had formerly no use for religion as I understood it; could not see how spiritual things, so called, were to be discerned by mankind. Now I know that the real man is spiritual. I am indeed more grateful than I can tell for this great truth; grateful to God, and also to our dear Leader for so lovingly and patiently pointing the way.

A. GIFFORD, Riverside, Cal.

I consider it a privilege to speak of the good that Christian Science has done me. A few years ago I was a great sufferer from what the physicians pronounced a diseased condition of the stomach. I was under medical treatment for several weeks and was only temporarily relieved, while with one week's treatment in Christian Science I have been healed and am able to eat anything I like without its hurting me. I feel deeply grateful for the good which Christian Science has brought me.

J. S. KEITH, Muskogee, Okla.

Digitized by Google

Though some problems still seem to be unsolved, it is a great privilege to speak my heartfelt gratitude for healing in Christian Science and for all the benefits and blessings received through the reading of the Christian Science literature. The articles in the *Sentinel* are very helpful, as they often answer questions that have been puzzling me. Now, with the help of that illuminating and wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the teachings of the Bible which sometimes appeared contradictory and obscure are growing clearer with the growing of my understanding of the truth that makes us free.

I have a friend who is a Scientist, and it was through her that I became interested. As I had been educated in a God-fearing home, I did not like to investigate further without asking counsel of a clergyman whose opinion then was of weight with me. He called Christian Science a "delusion of the evil one." Having heard this sentence, and in the firm belief that he knew best, thinking myself a good Christian at this period, I shunned Christian Science as fire, and even refrained for a time from going to that dear friend as I should have liked to. But somehow I could never put the thought of Christian Science out of my mind, neither could I associate the verdict of the clergyman with the peace and happiness I had read on the face of my friend; it surely could never be the result of something bad! I pondered long over the matter, and not finding in the churches what I was hungrily seeking, I turned again to Christian Science and asked for literature, which was kindly lent me.

I had been reading Science and Health and attending the Christian Science services occasionally for a short time, when an abnormal growth of many years' standing and an obstinate bowel trouble with very painful complications made itself felt again; so I resolved to ask for Christian Science treatment, which was kindly given me. My healing was slow; I seemed unable to grasp the truth, especially the statement that "God is All-in-all." But as I slowly though steadily acquired a better understanding, and endeavored to put into practice what I learned, the thought of my ailments grew dimmer and dimmer, until it vanished into its native nothingness.

Words fail to express my gratitude to God, and also to dear Mrs. Eddy for giving the world this beautiful understanding of God as the only power and presence, and of the nothingness of sin and evil. May God reward her for giving us the "Key to the Scriptures" which through that means are becoming a "lamp unto my feet and a light unto my path." I am very thankful, too, for the patience and love with which I was guided on my journey from sense to Soul.

M.-Th. Jean Monod, Frankfurt a/M., Germany.

About five months ago Christian Science found me in a very bad condition. I had suffered for twenty years with a stomach and bowel disorder in its worst form, accompanied by severe pains in the back, and headache about once a week. For the past two years I had generally eaten but one meal a day, for if I ate more I suffered in consequence, although great care was taken as to the kind of food I ate. I had been treated by many physicians and had taken all kinds of medicine, but no one could or did relieve me—I steadily grew worse.

About seven years ago I quit all medicine except a cough remedy which I took at different times. I came to Austin on a business trip, and was led to ask for treatment in Christian Science. After the first treatment I commenced to eat two meals a day and at the end of a week I was eating three. I ate anything I wanted without distress, and have continued to do so. I can truthfully say that I was healed in three treatments, but I continued to take treatment for about three weeks. I do know that the method as taught by Mrs. Eddy will cure disease, and I cannot find words to express my thankfulness for what I have received in Christian Science. It is my daily study, and my daily prayer is that I may so live the truth as taught in "Science and Health with Key to the Scriptures" that I shall be able to do the healing work commanded by Christ Jesus.

D. F. Bomboy, Austin, Minn.

In November, 1908, I was taken suddenly with a very serious attack of spinal disease. This began on Wednesday evening, and Thursday help was called. That night the suffering was intense, and Friday morning all pulsation and heart action had apparently ceased, and although I knew my mother, also the practitioner, I could not answer when they spoke to me, nor could I move. The following Sunday relief came at last, though just at evening the hardest struggle of all came on, and this lasted until about six o'clock the next morning, when the battle was won. I had eaten nothing since the Wednesday I was taken ill, and there had been no action or movement during this time to show any signs of life. During this time I was so deaf that when any one wished to speak to me it was necessary to get as close as possible, and fairly shout. The deafness was the slowest to yield completely, it being some four or five weeks before I could hear perfectly. I am happy to say that when this had been overcome there were no other after effects, though these are dreaded as much if not more than the disease itself. To say I am thankful to God for this healing would but feebly express my thoughts.

I have had many other proofs of the healing power of Truth, which I have always found a very present help in time of need. I was completely healed in one treatment of a lifelong stomach disorder, and was almost instantaneously healed of a severely injured ankle. Quite recently I was thrown from an automobile and had my left arm badly injured just above the wrist. Although I had quite a number of black and blue spots on my body, there was no soreness whatever, and I lost practically no sleep from my arm and suffered very little pain. The setting was done without the use of an anesthetic, and was considered very unusual by those who helped and do not understand Christian Science. When the splints were removed the healing was pronounced perfect, and it was remarked that I had got along unusually well.

I could tell many more demonstrations of the healing power of Christian Science, as we have tested it most thoroughly in our family. My desire is to prove my gratitude rather than tell it, and thus show that I really am grateful to God; also to Mrs. Eddy, and to all those who have so kindly helped me.

Wilma Hazel Mather, Watertown, S. Dak.

I wish to corroborate my daughter's testimony, as I was with her through her illness. She was taken very ill on Wednesday evening, attended by the usual symptoms of this disease, the pain being most intense. In the morning she expressed a desire for a Christian Science practitioner to come to the house; but there was some delay in getting one, and she finally said in a way that startled me, "Mama, if she does not come soon, it will be too late." We at length succeeded in getting the practitioner, and when she reached the house my daughter was lying white and motionless, with no pulse-beat or heart action, and seemingly past human aid. I was lost to all sense of time, but when we saw indications of slowly returning circulation as well as respiration, our hearts went out in deep gratitude to God, the giver of all good.—Mrs. Lucy E. Mather, Watertown, S. Dak.

Words cannot express what Christian Science has done and is doing for me. I can only show my gratitude by doing as Mrs. Eddy has taught us, by reflecting God in

Digitized by Google

goodness, Truth in truthfulness, and Love in loving-kindness to our brother; and in proportion as I have been able to do these things I have received the blessings. I had been wearing glasses for over twelve years, but after reading Science and Health I found that my eyesight came back, which is now three years ago. Being a watchmaker, I use my eyes continually and read nights without feeling any weakness in my eyes. I also had chronic rheumatism in my arm, but this too has disappeared.

I have gained a clearer understanding of God and the Bible through the study of Science and Health; to know God as divine Mind, as Life, Truth, and Love, the Christ as the divine manifestation of God, and Jesus the Way-shower. I am daily longing and praying for that Mind to be in me "which was also in Christ Jesus," that I may know God aright and be a real Christian Scientist.

NIELS PEDERSEN, Los Angeles, Cal.

[Translated from the German.]

Five years ago Christian Science found me in a hopeless condition of physical suffering and mental depression. The first time I attended a Christian Science service the sense of certainty that God had heard my prayer for deliverance from an unbearable condition came to me like a beam of light bringing salvation. And how fully have my expectations been realized! I soon saw that I had to give up a feeling of hatred which I had cherished for years, and that the old man must be put off if I would experience the joys of divine Love. In less than six weeks the recognition of the truth had freed me of distressing rheumatism. Although doubts and severe struggles came, yet a peace unknown to me filled my consciousness, and with the growing understanding of God's omnipotence and of omnipresent Love, the nothingness of evil which seems so real to us, the fear that sooner or later I would share the fate of a near relative and become insane, disappeared. Sleeplessness was displaced by refreshing sleep, as the result of my thought being turned into healthy channels.

It became evident that the grain of truth which we had apprehended was bearing fruit also in our family, for loving-kindness, mutual understanding, and obligingness cannot fail to be manifested where every one tries to know his own faults and to destroy them. We have had no physician for the past five years, and have relied solely upon God as our helper in cases of appendicitis, acute lung trouble, and in many other ailments of our children. Last winter I had a stubborn attack of throat trouble, pronounced rather serious by the physician who had to be summoned to write a certificate, on account of my having to leave work. I declined his services, however, and with two weeks' treatment from a Christian Science practitioner here the trouble was overcome. Last summer our two-year-old boy was taken ill with measles, accompanied with high fever and severe bowel disorder. The child evidently was suffering a good deal, and we became fearful. This occurred during our vacation time, while we were up in the mountains, so we wired to a practitioner in Zürich for treatment, which was taken up at once. On the evening of the same day the child became less restless, and on the sixth day he was playing outdoors in the sunshine, well and happy, to the astonishment of the neighbors. We were surprised ourselves at the quick improvement, which was to us an indubitable proof that to divine power there is no space removal.

Christian Science has been a great blessing to me in my work, where it has been my privilege to see more and more that Love alone governs man and is more powerful than evil in all its phases. Thus I and my family owe unspeakable gratitude to God, and to our beloved Leader, Mrs. Eddy, who has again pointed out the way to Truth. I also wish to thank all those who work so fearlessly and with so much self-sacrifice for the Christian Science cause. We can prove our gratitude only through unflinching and faithful adherence to the path we have chosen, and which alone leads unto blessedness.

OTTO SCHALCHLIN, Zurich, Switzerland.

I am very grateful for what Christian Science has done for me. My first experience with its healing happened in the summer of 1907. I had at that time been reading the *Sentinel* for a year or more, and by trying to practise the teachings of Christian Science I began to find more joy in living, became more capable and performed my daily work more easily, and this by knowing each day that God gave me intelligence and strength to do my work. I had for nineteen years been troubled with dizzy spells and had often to be helped home from my work; and as I grew older these spells became more frequent, the last one being very severe. After three days' idleness, with very little improvement, I felt that I must get help. I had lost all faith in the healing power of drugs, so I applied to a Christian Science practitioner on Saturday afternoon. I worked the following Monday, and I have lost no time since on account of illness, but it was six weeks later before I was entirely healed; and I have been entirely free from the disease since then.

During the winter of 1905-6, I slipped and fell one morning, injuring my arm. It was examined by a medical student, who said that I should call a surgeon to remove a broken piece of the bone. As I was able to work, however, and suffered little pain, I did not do as he advised, and in fact forgot it. The following winter I again fell, striking the same elbow as before, and after that I suffered violent pain and my arm became weak. On account of the industrial depression there had been no work for me for some time, and for financial reasons I did not like to ask a practitioner to treat me, although I knew if I did the help would be cheerfully given. I was now attending Christian Science services regularly, reading the Lesson-Sermon and the other literature daily, and hoped that I would be able to overcome this condition myself. A few weeks later, a Christian Science practitioner learned of my condition and offered me treatment, which I gladly accepted, and got instant relief, though the pain returned time and again. At such times, however, as soon as I could get word to the practitioner I got relief, and later, when I got work, I was always able to do all that was required of me. I was treated for over a year before this trouble finally disappeared, but my arm is now strong and I am stronger physically than I have been for years. I am working every day at my trade, blacksmithing, and shall be seventy-three years of age in June. I cannot be too grateful for the good Christian Science has done me, physically and spiritually.

ALFRED NICKHOLDS, Sr., Pittsburg, Pa.

Christian Science has done so much for me that I desire to acknowledge publicly my gratitude for it all. In the spring of 1904 a copy of *The Christian Science Journal* was handed to me by a friend, who told me that it might help me. At the time I was greatly disturbed mentally, for I wanted to find God, but could not. Although I was a member of an orthodox church, I was not satisfied, for I had gone from one church to another trying to find Him.

As soon as I had read the *Journal* the thought came to me that this must be what I wanted, so I sent twice to the reading-room to buy some literature. Then the librarian arranged with a practitioner to meet me one afternoon. This kindly interest was a surprise to me, and after the practitioner talked to me so lovingly about God, I was convinced that this was the truth for which I had searched so long. While reading that wondrous text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, I was healed of a severe form of catarrh. Next I was able to lay aside glasses, after having worn them for thirteen years; but after laying them aside, fear crept in, and

Digitized by Google

I began to use them for reading and sewing. During the summer of 1909 a faithful practitioner helped me, and since then I do all my work without them. I have been able to help myself and others through my understanding of Truth, but the spiritual uplift has been more to me than all else. My heart is so full of gratitude to our Father-Mother God, and to our beloved Leader, Mrs. Eddy, that I am striving each day to reflect more of Truth and Love. The *Sentinel* and the *Journal* are both very helpful to me, and I am continually receiving valuable instruction from each.—MRS. HATTIE C. DAWSON, Texarkana, Texas.

While at home in Chicago on my Christmas vacation (1909) I was instantly healed of a severe pain in my head and stomach and a general feeling of illness. Two friends from out of town were visiting me, and though I had not been well all day and had felt wretched all the afternoon, I had been able to conceal it until early in the evening, when I was obliged to excuse myself and retire to my room. A member of my family who was leaving the house came in and gave me a Christian Science treatment, remaining about ten minutes. My next consciousness after her leaving the room was that I was perfectly well. I arose and returned to my friends, feeling absolutely no trace of sickness, and spent a pleasant evening.

ROBT. A. GILLIES, Cornell University, Ithaca, N. Y.

[Translated from the German.]

I have often experienced the divine leading, and three years ago, when I saw wonderful help coming where according to human judgment no help could be expected, I became distinctly aware of God's omnipotence and omnipresence. I had an intense longing to know more of God, and the firm conviction came to me that God would lead me. About eight weeks later I got a position in a home where after six months I became acquainted with Christian Science, my earnest desire thus being fulfilled. I soon discerned Christian Science to be the truth which Jesus said would make us free, the Comforter who would lead us into all truth.

Last spring error seemed to assail me in various ways. A sense of weakness manifested itself, which increased slowly but steadily and at times was so pronounced that I was afraid of falling suddenly. In June I had a few weeks' vacation, and during that time I studied Science and Health diligently. As I did not seem, however, to get the desired result, I applied to a Christian Science practitioner for absent treatment. About a week after my letter had reached her, the sense of weakness suddenly left me one day, and in another week's time I again enjoyed my work. I have time and again clearly seen and experienced that divine Love does meet our every need, and I am grateful for the rich blessings which have come to me through the study of Science and Health, the reading of the *Herold*, and the loving help of several Christian Science practitioners. "Divine Love is my shepherd" (Science and Health, p. 578), and I know that Love will continue to lead and sustain me, and help me to express by my life my deep gratitude for the revelation which has come to us through Mrs. Eddy.

ELISABETH LUCHT, Riga, Russia.

Always with us, joined hand in hand,
Walks even now an angel band.
God's thoughts are they, and all the day
They guide and bless and lead the way.

Then faint we not, our trust in God;
Strong in His strength, safe in His word.
His love shall guide, His strength shall stay,
His joy be ours—aye, all the way!

E. MCCANN.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

One cannot help believing, if he is a close reader of the gospels and student of the mind of the Master, that Jesus was often greatly perplexed before the mysteries and seeming darknesses of this world. The word "why" was occasionally upon his lips. In Gethsemane and on Calvary it finds direct expression. In other places it is easy to read it between the lines. God's purposes were not always plain to him, neither was he without moments when the way was dark and the clear skies clouded. In these times he immediately fell back upon one resource—the doing of the will of God. By the doing of this will in the momentary darkness he quickly rose again into the clear light of knowledge and understanding. As he himself once lucidly expressed it: "My meat is to do the will of him that sent me, and to accomplish his work." That is, the sustaining power in the day of perplexity was the doing of his Father's will, and the doing of the will of God led out to the understanding of God. So impressed was Jesus with this truth in his own experience, that he immediately propounded it as a rule of life. Were his disciples in perplexity, did their minds hesitate, was the darkness around them, were the doctrines incomprehensible, Jesus said: "If any man will do his will he shall know of the doctrine, whether it be of God, or whether I speak of myself." Is there any other way of light today? Is not this the universal law of the soul's experience? Is it not true that its best meat in darkness is simply to go on doing the will of God? Is there any straighter path to understanding and faith than the way of obedience? We believe Jesus was right—that the one fundamental rock for the doubting soul to rest on is the doing of the will of God.

[*Zion's Herald.*]

The miracle, then, is a means to set forth the majesty of the Lord—perhaps a special means—and not a snare and a shame to discomfit the scientists and the philosophers. It all resolves itself into a question of fact: How has God done things, and how is He doing them? It will never do for us finite creatures to set up our little fences and mark off our preserves, and say to the Almighty: "Thus far shalt Thou come, and no farther! This we will let Thee do, because it is 'natural,' but such and such a thing Thou canst not do, for that would be a 'miracle.'" The Lord will really have His own way in any case, and human philosophies would better not get obstructively in His path, for if they do some things may happen not wholly serviceable to those philosophic schemata. God gets glory to Himself in His own ways. We are not incredulous, then, when we read that Jesus manifested forth His glory by making a beginning of miracles in Cana of Galilee, for our view of God and the world makes it evident that, whether we term it in "special" or in "general" ways, the great and beneficent miracle-worker is busy still. We have not far to go to find the supernatural, for the supernatural, or the subnatural, or the connatural, is finding us every day. We live even now in "glory land," and must needs in all reverence veil our faces to endure the light.

[*Continent.*]

Has not contemporary Christendom indeed idled away its time in mystifying debate over the method and the manner of what it should say to men, and finally gone about saying it with an intolerable fancy for learned or literary elaboration and a fiddling precision about terms and accents? And all the while there are just two simple things needful to make the church's message effective and its mission triumphant in the world—a faith and a wish—the faith that Jesus Christ is able to make men righteous and the wish that men shall be righteous.

Digitized by Google

Even the "evangelistic movements" which the church undertakes for the express purpose of coming to results in this imperative direction are themselves obstructed by this very vice of "overtalking;" they are discussed and planned and arranged for and anticipated until the air is surcharged with expectations of "success" rather than with the spontaneous and unaffected longing for men and women to have life and have it abundantly. The church which turns sincerely from the futility of trying to build itself to the simple spiritual wisdom of asking its Lord to make it grow, is bound to be led out of barren wastes of anxiety for its own prestige into fields where the waiting harvest compels one sole concern—the gathering of "fruit unto life eternal."

[*Churchman.*]

We must allow always for the translation out of the context of ancient ideas into the context of modern ideas. Even the creeds that stand for the very principle of identity "must mean at one time something not quite the same as that which they meant at another—centuries before." But, just because it is their part to emphasize identity and unity, "they warn us not to dwell too much on that in which the present differs from the past. They compel us to think of that in which present and past are one. Can we expect to make both ends absolutely meet? Is there to be no margin that we are obliged to leave open? Is there to be no element of mystery, in which we must needs acquiesce as mystery, until we know even as we are known? If that were so, the field of religious belief would be different from all the rest of human life; it would have less in it of mystery just at the point where we should expect that it would have more."

[*Universalist Leader.*]

But if the heart is strong, and the vision is wide, and the soul is undaunted, all life shall be a transformation scene in which the soul makes its journey from the small to the great, from the insignificant to the divine. Every day shall bring us to some new mount from whence a farther landscape and a mightier vista will show us the pathway to the infinite. Here lies the glory of the prophet and the seer, and here is Israel's perpetual interest. It is not in what one foretold or the other did that their immortality lies. It is in their perpetual increase of spiritual capacity and desire. Men write their deeds in permanent and unchanging formulas. The prophets went forever on and on, transformed into an ever increasing stature of spiritual anticipation, until at last they passed, leaving as parting salutation: "I have not yet attained, but somewhere ahead with God awaits my crowning righteousness."

[*New York Observer.*]

The cause of Christ would go forward with far greater efficiency, and many misunderstandings and losses through friction would be avoided, if the servants of God would make fresh inventories of their talents, select the weapons of their spiritual warfare with great care, put on the whole armor of God, and develop to the utmost their own individual gifts and graces; not attempting the impossible, or envying another man his perhaps greater opportunity, but doing their best with the powers at hand and the faculties within, knowing that to every faithful David using his pebble and sling for Jehovah, and to every lad by Gennesaret bringing his loaves and fishes to the Master, will a crown be given at last for bravery on the field of danger or for faithfulness to duty in things small as well as large.

[*British Congregationalist.*]

We believe that if the church of Christ, in humble dependence upon its Lord, would resolve to keep step with him, the ancient miracles would be repeated.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn *that* a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A general investigation of the United States army by a joint committee of Congress is proposed in a resolution introduced in the House by Representative Julius Kahn of California. The resolution provides for the appointment of a commission to consist of five members of the Senate committee on military affairs and five members of the House committee on military affairs, "to institute and carry forward an investigation of the military establishment and its organization, proportions, strength, distribution, maintenance, and administration, and generally into all other matters that may be necessary to reach conclusions as to the cause of inefficiency and extravagance, if found to exist, and to suggest remedial measures."

The United States circuit court for the district of Delaware has handed down a decision declaring that the alleged powder trust, which is dominated by the E. I. Du Pont de Nemours Company, is a combination in restraint of interstate commerce in powder and other explosives, in violation of the Sherman anti-trust law, and that the combination shall be dissolved. The action against the powder trust was begun by the government in 1907. The company may appeal.

For the fifty-million-dollar Panama canal bond issue, all told there were ten thousand bidders and of these eleven hundred and eighty-five were successful. The accepted bids ranged from $110 down to $102.21. The bidders include a larger number of individuals than in any other bond issue in many years, and a good portion of the issue goes to several hundred bidders whose investments range from one hundred to five thousand dollars.

Many railroads are carrying the mails at a large profit, but others are furnishing the service at a loss, according to a statement by Postmaster-General Hitchcock. He believes the railway mail service can be readjusted to save the government approximately nine million dollars a year without doing injustice to any carrier.

A budget system for the United States may be adopted by the House. A committee on the budget would each year determine the amount of appropriations to be made and apportion it fairly between the committees having great appropriation bills in charge. The work of the budget committee would be subject to approval by the House.

In a message transmitted to Congress, President Taft scathingly arraigned the manufacture of what he denounces as "dangerous drug frauds" and urged Congress to amend at this session the pure food and drug law to strengthen that act in points recently pointed out by decisions of the United States supreme court.

Judge Carpenter in the United States district court at Chicago denied a motion of J. Ogden Armour and nine other Chicago packers for a rehearing of their motion to quash indictments charging violations of the Sherman anti-trust act. This means that the packers must stand trial.

The abandonment of all the navy yards on the Atlantic coast except three and the concentration of docking and repair facilities at these points, will be urged upon Congress by Secretary of the Navy Meyer at the convening of the regular session in December.

Approximately one million dollars has been expended by the department of justice to special counsel in prosecuting the trusts and allied cases during two years under the appropriation for the enforcement of the Sherman law.

Governor Foss of Massachusetts has signed the direct nominations bill, which provides for the direct nominations of candidates of all political parties for offices to be filled at state elections.

The Kansas supreme court has handed down a decision prohibiting three subsidiary concerns of the Standard Oil Company of New Jersey, from "combining to stifle competition."

The Burton resolution, extending for two years from June 29 the law protecting Niagara Falls from further diversion of water, has been adopted by the Senate.

The Senate has adopted the resolution by Senator Bourne providing for an inquiry into the parcels post question.

Irrigation projects in Idaho have added one hundred and eighty million dollars in value to that state.

International.

Reforms affecting millions of dollars' worth of American property in Chihuahua, Mexico, have been announced. Governor Gonzales said that under the new régime foreign concessions which might be regarded as monopolies would not be extended or renewed, and that every legal effort would be made to restrict foreign monopolies now existing in Chihuahua, one of the richest states in minerals and timber. The properties are largely controlled by American, British, and German interests. "Undoubtedly foreigners" said he, "including Americans, who profited so greatly under the Diaz system, will be hard hit by the new era, but the determination to upbuild Mexico and to improve the conditions of her poverty-stricken people will, I am sure, receive the hearty support of the great body of Americans."

The government of Venezuela has signed a contract with a native river and coast navigation company that is the most extensive in the history of Venezuela. It accords to the company the privilege of navigation for fifty years of all the rivers and lakes in the republic, and the exploitation and colonization of the entire Amazon territory, with a preference for the mining claims and the rich rubber country. It also gives the company the salt monopoly for five years. The company in return agrees to form a ten-million-dollar corporation. English capitalists have already begun negotiations to obtain a transfer of the contract.

Cuba is to have a three-hundred-mile electric railway traversing one of the richest agricultural districts on the island, and the power necessary to its operation is to be developed by the damming of the Hanabanilla river in the Trinidad mountains. The impounded water will cover an area of five thousand acres and contain seven hundred billion gallons. Governor Magoon some years ago recommended that the Cuban government should immediately undertake the work of irrigating the province of Pinar del Rio and enter generally upon an irrigation policy.

The most noteworthy result of the biennial conference of the International Institute of Agriculture, recently held in Rome, was the success of the American delegates in securing the adoption by the forty-eight countries participating of the American system of presenting crop reports. This action is a long step toward the realization of the dream of David Lubin, the promoter of this great organization, or doing away with "this giant evil, the evil caused by unnecessary price fluctuations."

The federal land tax of Australia, which applies to estates of over five thousand pounds unimproved value, will affect 12,541 landowners. It is estimated that the total amount returned will amount to £982,227. If to this amount are added the taxes paid by assessable absentee shareholders, the total revenue will be about one million pounds sterling. The greater portion of the tax will be paid by New South Wales landowners.

Industrial and Commercial.

The White Star liner Olympic, the largest vessel in commission, sailed on her maiden voyage to New York, June 14. Her sister ship, the Titanic, was launched on May 31 at Belfast. The gross tonnage of these vessels is about forty-five thousand tons, or about twelve thousand tons more than the Mauretania. Their length over all is 882 feet 9 inches, and between perpendiculars 850 feet: the extreme breadth is 92 feet, and the depth molded 64 feet 6 inches. They are to be propelled, at a continuous sea speed of twenty-one knots, by three screws, the two outer ones being driven by two sets of triple expansion reciprocating engines, while the central one is worked by a Parsons exhaust steam turbine. The total horse-power is about forty-six thousand. There are in all nine decks. The topmost of all, or boat deck, is about 492 feet long, and is at a height of 97 feet above the keel.

The first property to be developed in the promising oil field along the western edge of the Red sea and the Gulf of Suez was one at Gemsah, situated close to the southern end of the gulf. Here drilling operations were successfully carried out in April, 1910, when one well became a gusher at a depth of 1,265 feet. A second well became a gusher a few months later at a depth of 1,636 feet. It has been estimated by experts who have visited the property that its yield should be from six hundred to one thousand tons of oil daily. The position of the wells is most advantageous, as they are situated not more than a few hundred yards from the shore of the Gulf of Suez.

A movement is well on foot in New York state now for the conservation of water for power purposes. That is, to store the surplus water of the streams and rivers in reservoirs which may be drawn upon when the streams and rivers run low. Governor Dix has come out openly in its favor. He would have the state of New York own the storage reservoirs and control forever the power generated from them.

Rapid progress in the construction of the Grand Trunk Pacific railway is closing up the gap between the east and west ends of this new transcontinental road, the extension of the Grand Trunk system through central Canada. Many miles of new main track, many stations and bridges, and many miles of branch lines are included in the plans for this year, which necessitate the expenditure of seventeen million dollars.

The General Baking Company has been incorporated as a combination of twenty-one concerns engaged in bread and the general baking business in the larger cities of the United States.

The returns of German trade for 1910 give the value of imports, exclusive of precious metals, as $2,233,500,000 and of exports as $1,868,750,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LAW OF LOVING.

SAMUEL GREENWOOD.

LAW is a necessity, not an alternative. It is Truth's maintenance of the order, harmony, and continuity of being, and its attempted infraction by mortals carries with it the forfeiture of these essentials to liberty and happiness. In his reply to the lawyer Jesus epitomized all law as whole-hearted love for God and for one's neighbor, and elsewhere in his teachings showed that this love for others must not be limited to one's friends, but should include one's enemies, even those who attempt to do us harm, as well as those who may be distasteful or repellant. Mortals have sought to evade the spirit of this law by giving it a negative interpretation, declaring it to be sufficient if they inflict no outward injury, and believing they have the right to be counted among Christians if they refrain from any overt retaliation, even though they may cherish hatred in their hearts or rejoice in secret over another's failure or misfortune.

But the Master did not so teach. According to his rule, God's law is broken by sinful thought or desire, nor is it necessary to strike one materially to be guilty of his murder. Hatred, envy, all sin, have their root in mortal thought, and it is in this thought that the law of love must be recognized and obeyed. We must worship the Father in secret and fulfil God's law in our hearts if we would be rewarded openly. If we are not thinking love for others, if we are not kind, gentle, patient, forgiving, and considerate in our thought of them, we are not loving them at all. Even indifference transgresses this divine law, for indifference is a form of contempt and nourishes the germs of hatred. All who cross our mental threshold, all who claim our attention, should be kindly and lovingly regarded, and they will be without special effort if we are reflecting love impersonally, as the natural, spontaneous activity of recognizing God as our Life. Consciousness is not a negative condition, but implies ceaseless activity, and unless love is a positive and constant factor therein, hatred in some of its many guises will surely assert its evil influence in shaping our experience.

Christian Scientists should be the most loving and lovable people on earth, because they know that Love is God, the divine and only Principle of man's being, and in their daily study are brought face to face with this truth in its practical application to their relations with each other and with all mankind. In each day's prayer they earnestly declare that "Love is reflected in love" (Science and Health, p. 17), and as church-members they have subscribed to the sacred promise "to do unto others as we would have them do unto us" (*Ibid.*, p. 497). Therefore it is imperative that we lose not sight of the Master's command to love one another, for mankind must see that our religion is more than a name if we would convince them of its vitality and power. We owe it to God, to our cause, and to those needing our example and help, that this brotherly love be "without dissimulation," for the bane of Christendom is the profession of love without its practice. Notwithstanding one's effusive talk about Christian Science, if he does not honestly love his own brethren, those who are working with him in this great movement, he has nothing whereby to reflect love to those outside his church fold. Love must begin at home; and if the fountain there be empty, it is in vain that one's thirsty neighbors come hither to draw.

This law of love admits of no exceptions; to hate in one instance means its transgression and enthrones belief in evil. The moment light ceases to shine there is darkness; and the moment one ceases to love the heart is left in the darkened sense of God's absence. There is no salvation except in loving all the time. While most of us would shrink from deliberate malice in thought or speech, we may thoughtlessly become guilty of the more subtle forms of this evil unless we keep love a perpetual sentinel over our mental activities. Mrs. Eddy warns us that when in society we have our tongue to guard. (See Miscellaneous Writings, p. 126.) When two or three are gathered together, all goes well while love is in the midst, but if love depart, what is left to keep the heart and tongue innocent of evil? If the omnipresence of good is forgotten in social intercourse, there is danger of unloving thoughts creeping in under the guise of seemingly innocent gossip (since it is the common tendency of mortals to talk about their fellows), and this social talk may unwittingly merge into outright evil speaking. When a student is attending strictly to the demands of Christian Science, ready to bless all mankind and unwilling to harm any one by even a wrong thought, he is working out the rule of loyalty to the divine idea; but one who lends himself to evil suggestions, consenting to voice what should neither be believed nor spoken, is apt to become a mischief-maker instead of a helper. Since evil cannot speak for itself, those who declare it to have no intelligence or reality should not be found speaking for it.

Christian Scientists should know enough of the action and effect of thought to avoid being led into unfriendly criticism of others, for this too popular pastime is never inspired by love. To accomplish our own freedom from error requires all our attention, and our only concern regarding our neighbors should be to love them in our hearts and to help them at every opportunity. Speaking slightingly of another, disparaging his work, calling attention to what we think are his defects, suggesting suspicions, etc., are unworthy of students of the Science whose Principle is Love. Other things being equal, are we purer in thought or more Christlike in conduct than the one condemned? Egotism and self-righteousness are the animus of criticism, and these errors diminish as we apprehend the truth of man's being. Each step toward goodness renders us by that much incapable of evil, hence we are our own judges. If evil is not becoming less personal to us, it is not a sign of progress but of stagnation. We grow more loving, charitable, and forgiving as we follow the Master more closely, and this approximation to the Christ-mind alone fits us to pass judgment upon another's work, if this were necessary.

Our Leader throughout her writings advises students to substitute silence for censure whenever possible; and this should be the invariable rule when the person concerned is

not present. St. Paul warned the Corinthian church against "backbitings, whisperings," etc., and even human codes forbid the striking of another in the back. If it becomes necessary to rebuke or to correct another, it can be done lovingly and face to face. But before assuming the right to judge another, we should be very certain that under the same circumstances we would have done better ourselves. We do not know what the other has to overcome, nor what he is accomplishing. We do not know that he is not working out his salvation, doing good to others, loving his neighbor, in the way that he sees it, as faithfully as are we. Remembering our own many shortcomings and weaknesses, let us lay our finger on our lips before venturing to detract from another's work, for Jesus taught that only those who are without sin are in a position to cast a stone at the erring. Our own sense of good will increase if we diligently seek for good rather than evil in our fellows, but if we cherish evil in our heart toward another, in what spirit do we lay our gift of service upon Love's altar?

We should not forget that it is far better to be sinned against than sinning. The brother who may have fallen under our displeasure will work out his freedom from the added burden of our unkindly thought, and will gain in the process, but there is no compensation for the wrong thinker and doer except the suffering which his error brings. Our evil thoughts will surely revert to us, and what protection shall we have against them when, in our failure to fulfil God's law, we have discarded the only possible safeguard from evil? But why should we wish to make it a single degree harder for another to do his part in the work assigned to him? We have been taught in Christian Science how to make nothing of evil, in whatever guise, and how to love, as well as why; then let us journey on shoulder to shoulder, meeting the common adversary, having the same interests and the same goal, and practising from the heart that brotherly love which has been the golden rule of all ages, and which is the only means whereby to preserve one's hope of heaven.

PROMPTITUDE.

VIOLET KER SEYMER.

PERHAPS the first point to remember in connection with the text, "Agree with thine adversary quickly," is the significance of the word "quickly." Christian Science explains that the "adversary" is not a person, but a wrong thought, an evil suggestion, a fear, "one who opposes, denies, disputes, not one who constructs and sustains reality and Truth" (Science and Health, p. 580). Measuring every thought by this standard of Truth, any one may detect an adversary in a minute and dismiss it in the same minute. It takes no longer to think a right thought than it does to believe a wrong one, and if evil cannot dupe us, it can do nothing, for it is nothing. Furthermore, it matters not whether the adversary presents itself in the guise of a suggestion of fear, sin, illness, poverty, or any other calamity, or even in the subtler forms of criticism or condemnation of some fellow-creature; in any case it is destructive and not constructive in tendency, is not of God, and can therefore avail nothing. The suggestion is to be regarded as an ephemeral libel on God and on man, and immediately replaced with the substantial truth.

A Christian Scientist's agreement or compact with the adversary should be an instant disagreement with every evil argument that comes up to tempt him; and the more prompt his denial, the better in every case. In Science and Health our Leader says: "Suffer no claim of sin or of sickness to grow upon the thought. Dismiss it" (p. 390). Another important point to bear in mind is that there is no personal adversary, so that no claim should be referred to as a part of any one's being. The adversary is just the one impersonal temptation such as Jesus triumphed over in the wilderness; and how did he triumph? Through his firm insistence that so-called evil had no right nor might to tempt a child of God. It was only the human sense which felt the temptation; not the infinite Christ, in whom Jesus took refuge.

It is because procrastination is apt to result in accumulation that this text calls for a prompt and not a tardy denial. False beliefs are disposed of with comparative ease when they are dealt with singly and quickly, rather than collectively and slowly; but, after all, mountains are made up of molecules. Still another strong point in connection with the injunction is that the adversary is to be dealt with "whiles thou art in the way with him." This surely means that error is to be denied the moment it presents itself to our consciousness, the very moment it seems to get in the way of harmony. That same erroneous belief, if allowed to become latent or subconscious, as the father of lies claims it can, may be able to trip us unawares: but when quickly and persistently denied, until the temptation is overcome, it has no more power than the evil suggestions had over Jesus in the wilderness.

The writer is reminded of a lesson learned in the home of two friends, practitioners of Christian Science. Every floor-covering, every wall and picture-rail, every curtain and every piece of upholstery looked spotlessly clean, and there was a sense of freshness and freedom from dust such as one rarely meets with in the heart of a city. Inquiring into the reason of this, it was learned that a miniature vacuum cleaner, easily handled by the maid-servant, was in use every day, and moreover that its work was so thorough and searching, its removal of dust so absolute, that no annual spring cleaning was required. This little machine routed its adversary, the dust, quickly and repeatedly, allowing of no accumulation. The Christian Scientist is learning that, although he appears to be in the very midst of the débris of materialism, the reverse is the case, for infinite Mind and spiritual thoughts alone are real, and Immanuel, or "God with us," is the one infinite fact that excludes every falsehood, a fact which we do well to remind ourselves of and to rejoice over every hour. Every spiritual fact is universal, moreover, and is as much a fact for those who are not acquainted with it as for those who are. "Therefore acquaint now thyself with him, and be at peace: thereby good shall come unto thee." The awakening to spiritual reality comes gradually, but with the awakening comes the growing conviction that the portals of heaven are set wide open by divine Love, and that no adversary can ever shut them.

Some may lose time bewailing the accumulations of wrong thinking which they believe confront them as a legacy of the past. But the more quickly that adversary is shown the door, and the more vigorously we maintain the eternity of good, the more rapidly will sin vanish, and the conception of what we term past, present, and future melt into one omnipresent good and its omnipresent manifestation. The assertions of past error are no truer than the assertions of present error, and having detected them, it behooves every wide-awake student to see the utter nothingness of both varieties of the one falsity.

Christ Jesus said that one must work "while it is day: the night cometh, when no man can work." Night and day thus seem to be used to represent opposite mental conditions, only one of which is real, namely, the "day" consciousness. Until the belief in mental apathy and infidelity in little things is dispelled, mental darkness may be experienced for the time being, but this darkness, being a nonentity, cannot "work;" only truth is active. This state of error is to be replaced with diligence and vigilance; spiritual understanding and its corresponding activity are perpetual, "for there shall be no night there." Even though the human mind, so called, may have seemed clogged up with false fears and superstitions, it can be cleansed of every one of them through the mediating Christ, or spiritual idea, whose peace

Digitized by Google

and purity offer a haven to every one who seeks it, as well as to all those who do not. When Jesus spoke of the Father who "maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust," he was referring to the eternal Love which waits to bless every returning prodigal.

When a pilot is steering for a certain harbor, no doubt he turns his gaze constantly toward that point in the horizon, undismayed by the winds and waves that are buffeting him close at hand. He knows that those elements cannot seriously hinder him, and the peace of the haven is already in his breast. In the same way the discriminating Christian who silences the adversary in his own heart can compel even adverse circumstances to be a means toward the end in view, and he wins his individual heaven through "temptation overcome and followed by exaltation" (*Ibid.*, p. 581).

THE BUSINESS MEETING.

JANE STANNARD JOHNSON.

THE business meetings of every branch Church of Christ, Scientist, merit the support of church-members and others entitled to participate in them, for the reason that organization must be effected and maintained in a legal and orderly manner, conformable not only to the by-laws of the Manual of The Mother Church, but to the laws of the state as well. We cannot afford to overlook the legal foundation of the church or forget that law and order should characterize its government. Should Christian Scientists feel it unnecessary to attend the business meetings, it can readily be seen that its activity would cease. On the other hand, the larger the number of sincere workers who gather for these meetings, the greater the good which must necessarily result from their united action.

Not only does the business meeting bear direct relationship to the prosperity of the local church, but to the highest success of the Christian Science organization as a whole. It is also a matter of deep import to the individual Christian Scientist in working out his own salvation in accordance with the teachings of our revered Leader. Mrs. Eddy has given the business meeting a place in the Manual, and obedience to the by-laws relating to church organization and government is no less essential than obedience to any other rule or requirement in the problem of demonstrating Christian Science. In speaking of these by-laws in "Miscellaneous Writings" (p. 148), our Leader says: "They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science."

Careful study of the foregoing statement discloses the reason why the business meeting is a factor which cannot be separated from one's personal problem. It answers "the immediate demand," and its nature calls for a knowledge of church affairs and the details of management on the part of the church-member. It is legitimately expected that every member shall be familiar with the activities of his church and that he participate in these activities, and this information cannot be secured authoritatively elsewhere than in the meetings themselves, where all questions relating to the work in the local church and to cooperation in the work of the field are considered, where every contemplated forward movement is systematically outlined, the method of procedure is discussed, and every matter pertaining to the welfare of the church is duly submitted and acted upon.

By participating in these proceedings, the member is helping to provide, and to maintain in prosperity, the church and its services which he so greatly enjoys and through whose ministrations numbers are healed and blessed. He is obeying the mandate, "Bear ye one another's burdens, and so fulfil the law of Christ," and he is thus carrying not only his share of the burden, but is helping to bear the burden which would without his help be heavier for his brother. Besides his personal support, however, there is preparatory mental work to be done before the meeting convenes, if results are to be most successful from a scientific standpoint. Merely material results may not properly be termed successful, but where God reigns true success is manifested. It must follow that as the mental preparation is conscientiously and faithfully performed, the one Mind will be evidenced in the love and harmony of the meeting. In the realization which must come as a result of this work, the member will recognize perhaps as never before that the prosperity of the church and the stability of the cause depend upon the consecrated endeavor of the individual Christian Scientist.

On page 18 of Science and Health, Mrs. Eddy tells us that Jesus "did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility." In this light, would it not appear that the business meeting is a responsibility from which no church-member may be relieved? And in accepting this duty lovingly, is not the life of the Wayshower thereby exemplified? The Christian Scientist who goes on his way unmindful of the government of his church organization and the work which it necessarily entails upon all church-members, is not only neglecting his own progress but he is disregardful of his brother's. A share in the church work properly belongs to each and every member of the church, and the member who ignores this responsibility is overlooking one of the factors which make it possible for his church to continue to exist, and in so far is neglectful of the welfare of the cause of Christian Science. He may be seeking to work out his own salvation, but he is not mindful of the interests of the cause as a whole.

All the meetings of our church represent service rendered to God, and to it every church-member is sacredly obligated. No other member may do it for him or take his place. In the gift of church-membership, God has given each member his own place. It is individual, and no one else can fill it. That place includes every duty of church-membership, and all true Christian Scientists will be found mindful of its every obligation.

DOERS, NOT HEARERS ONLY.

WILLIAM BEARD.

WE sometimes hear it said, or even think it ourselves, "I read the Lesson every day, I go to church at least once on Sunday, I attend the meeting every Wednesday evening, and all the lectures which are provided for us; I subscribe for and read all the literature and periodicals which are issued by our Publishing Society, I give liberally to the church; in fact, I do all the things which are required of Christian Scientists, and yet I seem to be poor in this world's goods and possessions; while others around me who are doing much less than I am, are healthy, happy, and living in affluence." When we hear these things, or when our own consciousness is disturbed by such thoughts, do we stop to ask ourselves the questions, "Am I both hearing and doing the word? Am I not like the man who built his house on the sand, and when the rain came and the flood descended, it fell, and great was the fall of it? Am I imbibing the spirit as well as the letter of the law? Am I like the proud Pharisee, or like the lowly publican who, smiting himself on the breast, cried, 'God be merciful to me a sinner'?"

We are told that we should let the same Mind be in us as was in Christ Jesus. Did our great Exemplar go about with a long face and complain that he was not blessed as other men, that God looked after others in a more generous way than He did for him? In other words, did he

Digitized by Google

acknowledge more than one God? No, he knew that there was one God only, the Father of all, the infinite source of all good; that from Him came "every good gift and every perfect gift;" that He was unchangeable and eternal. He recognized one God only, and man in His image and likeness, God's perfect man, and he thereby healed the sick, lifted up the fallen, gave sight to the blind, opened the deaf ears, and raised the dead. He not only did these things, but he commanded us to do them also, and gave us the precious promise, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

How many of us ever stop to think, in all the efforts which we put forth, whether we are simply hearers and not doers of the word? Are we healing the sick, raising up those who fall, leading out of the darkness of materialism into the light of God's own day those who are blind to His word, and pointing out to those who have not heard of His precious promises the way of life, and by our living shown to them the truth that frees from the slavery of sin and death? or are we sitting idly by and seeking after worldly pleasures and material substance, thinking that if we are careful to observe the letter of the law, God will prosper and bless and take care of us, that we shall "be carried to the skies on flowery beds of ease"? If we are doing the former, we are not only hearers but doers of the word, and are building on the rock of Truth, against which naught can prevail; if the latter, we are hearers only, we are building on the sand, and our house will fall and great will be the fall of it.

Jesus said, "Seek ye first the kingdom of God, . . . and all these things shall be added unto you." If we are doers of the word, as well as hearers, we shall not have time to sit down and bemoan an unhappy fate; rather shall we be blessed so abundantly that our time will be occupied in imparting to others those blessed truths which we have received, and we shall be exemplifying the words of our dear Leader, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii); as well as obeying the injunction of our great Way-shower, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

A LITTLE EXPERIENCE.

LYDIA CUMMINS.

We often hear it said in the testimonies given at our Wednesday evening meetings that Christian Science helps so much in the little things of every-day life; and I think I never realized this more clearly than in searching for a way to overcome a little difficulty which presented itself when I was in a home where there were three girls, each manifesting a strong individuality. One day the fifteen-year-old daughter and myself were reading the Lesson-Sermon, when it suddenly occurred to her that the next younger sister had possibly forgotten that it was her turn to do a daily errand. She called the younger sister kindly, reminding her of the duty, but was answered with very resentful words. Her pleadings were constantly met by refusals, which grew more intense, until, almost in despair, the one by my side said, "I wish mama were here."

I began to wonder if I should try to settle the difficulty, but I had aimed at all times not to interfere with the government of the home, so I decided I must not do so now. With that decision, however, came the thought that I could at least know the truth for them. Then the question quickly presented itself, What is the truth, in this instance, for me to know? Still holding to my thought of non-interference, I saw clearly that hatred, bitterness, selfishness, were no part of God's creation, and I asked myself, If not of God, how could they have any power? At once the statement from Science and Health (p. 475), in answer to the question "What is man?" part of the definition being, "that which has not a single quality underived from Deity," seemed to flood my thought. I then realized that the mental qualities of unkindness and bitterness were no part of God's man (and in reality there is no other), for I knew they were not "derived from Deity." I also knew that God is Love, and that He is All-in-all; that there could be no other source of being, and that Love could not be the source of bitterness or unkindness.

For a few moments I seemed unconscious of my surroundings, until finally I was roused by my companion's starting down the stairs, saying as she left me, "If she won't go, I suppose I must." But she had gone only part of the way when the younger sister called very lovingly, "I'll go! I'll go! Come part of the way with me." As my young friend returned to me she remarked, "I wonder what came over her that she was so willing to go?"

This little experience proved to me that these discordant conditions can be destroyed, and that quickly, if we but stop to analyze the underlying thoughts and trace them to their seeming source. It also proved that if we do not realize the nothingness of discord, it is not because we lack the required understanding, but because a sense of apathy blinds us to the importance of the work. To the extent that we respond to it, we are not helping to destroy the bitterness and selfishness of mortal mind, which at times seem so overpowering, but which can be readily overcome by a clear sense of the truth of being.

THE LODGE-POLE PINE.

FRANCES MACK MANN.

There is an interesting tree in the Rocky mountain region which flourishes between the altitudes of seven to ten thousand feet. It is called the lodge-pole pine, because the Indians who formerly lived there used it as a pole for their wigwams. John Muir writes that "this wonderful lodge-pole bids fair to obtain possession of nearly all the forest ground in the West." This tree has a habit of hoarding its cones for many years. The seeds are carefully sealed by pitch and protected by the scales of the cones until a forest fire sweeps over the mountain-side, melts the pitch, unseals the scales, and the wind, a few hours after the fire, scatters the seeds over the barren waste. Soon the seeds germinate and the young trees commence the struggle for existence.

These trees and their habits have taught me many a valuable lesson. The hard struggle for a mere existence on a barren mountain-side; the hoarding of the seeds in the cones; the necessary liberation by fire; the abundant harvesting at the end,—all these conditions have pointed to the human life absorbed in its sharp conflict with the world, hoarding its treasures of thought and deed until some fiery test, perchance, sweeps over it, unseals its blessings and scatters them to germinate and bless humanity. Until Mrs. Eddy brought the truth as found in the Christian Science text-book, "Science and Health with Key to the Scriptures," to this age, many of us were like the seed of the lodge-pole pine,—self-absorbed and barren of good works; but God has, through the teaching of Christian Science, opened the sealed lives and made us helpful to others.

Opportunity will some day ring your bell—
Be ready;
She will not inquire if you are ill or well;
She will not stand waiting there
While you hasten to prepare;
She must hurry to where anxious others dwell—
Be ready.

ANON.

SELECTED ARTICLES.

["An Occasional Contributor" in *Edinburgh* (Scot.) *News.*]

The decline in church attendance, the thinning-down of church-membership, the frank breakaway from its teaching and practice on the part of the present and rising generations, are the chief topics of discussion at all church conferences, and recur even in the secular press with a frequency which argues a wide-spread concern and interest, and also a deep-rooted suspicion that in all this change and decay there are omens for the Christian churches. And so there are; but, unfortunately, there seems to be no readiness to recognize the real facts of the case. It is assumed simply that the heart of man is desperately wicked, and that for the time being spiritual things are being neglected, although the truth is that our society has already passed through its phase of intellectual materialism, and has entered upon a new one. And so we have much talk of lapsed masses, of corner boys, and parading of the streets, love of pleasure and sport, worship of Mammon. Now, the corner boy is older than the churches themselves, and in the ratio of population there was probably never much less of him than there is now. And if the modern mania for sport is abnormal, we may safely assume that its perfervid devotees are not procured at the expense of the church. The truth is that the corner boy and the football maniac do not touch the fringe of the problem. In the absence of corners to lean against, and football matches to watch and read about, their type would lie in bed, smoke, and read "Snippets" or a penny "blood."

The problem the modern church has to face is rationalism in the widest sense of the term. It came inevitably with popular education and the acceptance of a scientific theory of evolution which revolutionized philosophy. From the moment these things struck down fear and superstition, upon which the religion of our fathers so largely throve, religion had to base itself solely upon the higher emotions and reason. The best type of modern Christian holds his beliefs because they seem to him reasonable. Only the crudest type of secularist, however, will argue that rationalism gives uniform conclusions. It never does and never will; and what the churches fail to recognize is, that from this ferment of rationalism there are emerging new religions more adapted to modern needs than the old.

The problem of the Christian church, however, has to do largely with "the vulgar error of numbers," and from this point of view its most formidable rival of the future is unquestionably Christian Science. "Numerically insignificant in this country," say the clergy, refusing to hear the voice of the revolution thundering afar, until, too late, its waves engulf them. My proposition is that the churches are emptying today largely because thoughtful people (not indifferentists) are dissatisfied with their teaching, and are meantime going to no place of worship at all. These people are seriously looking out for a more satisfying religion, and the figures go to show that Christian Science will have to be reckoned with in this connection. What are the facts?

It is only thirty-two years since The Mother Church of Christian Science in Boston, Massachusetts, was founded and chartered. In March, 1904, after a quarter of a century of life, it had some six hundred churches and over two hundred and twenty societies from which its churches are formed. Today no less than twelve hundred and sixty such churches and societies advertise their meetings in *The Christian Science Journal*. It has planted itself firmly in every continent. Of the sixty-two churches in the British Isles only three are located in Scotland, but then it is only ten years since eight members of The Mother Church established the movement north of the Tweed by forming a society in Edinburgh—in east-windy, west-endy Edinburgh, where it takes almost ten years to get on nodding terms with your next-door neighbor. But even so the hall in Pitt street, which has housed the congregation hitherto, is shortly to be discarded in favor of a handsome church, seated to accommodate six hundred and thirty people. If the history of other towns is any guide, it will scarcely be well in use before funds will be required (and therefore immediately raised—they manage these things) for the founding of Second Church of Christ, Scientist, in Edinburgh.

Treating Christian Science as a fad, I never appreciated the bitter opposition of the medical profession to Christian Science until I studied the list of its practitioners, the accredited healers of the church. In America, the birthplace of this modern religion, there are some twelve hundred churches and societies, but the number of practitioners is vastly more. In Chicago, which has only nine churches, there are over four hundred practitioners. Boston, with one church, has over one hundred and fifty practitioners, and New York one hundred and sixty for twelve churches and societies. Even in the British Isles, recent though the movement here is, there are two hundred and twenty practitioners, including three in Glasgow and seven in Edinburgh. It may be noted that only a fraction of these are men, probably not more than a tenth of the whole, but none of them are half-timers, amateurs. It is a condition of certification as a practitioner that the applicant be not engaged in any other profession or vocation than Christian Science healing.

The constitution of this church is democratic. In Article XXIII, Sect. 1, of The Mother Church Manual the following provision appears: "The Mother Church of Christ, Scientist, shall assume no general official control of other churches, and it shall be controlled by none other. Each Church of Christ, Scientist, shall have its own form of government."

That people are healed through Christian Science no impartial observer can deny, and the orthodox Christian must without evasion answer two questions before he can deny the possibility of this. In the first place, is there any valid reason for assuming that when Christ gave his followers the command to heal the sick, he did not mean it literally? And if he did so mean it, did he limit the command to his immediate disciples, or was he commanding the impossible? On another plane, are all those who testify to it likely to be either deceitful, blind, or ignorant? Is it conceivable that up-to-date business America would support seven or eight thousand practitioners and a thousand highly expensive churches for the pleasure of flattering a cheap deception? Temperance enters into these matters. I am neither a Christian Scientist nor likely to become one, but, standing apart and viewing the facts judicially, I do think the orthodox churches should wake up and join issue with this new religion, which claims not only to be more scientific than they, but more Christian also. And let them beware of disparaging without investigation the "proof from healing," lest they be as the Jewish doctors contending with the man who was born blind. "A fig for your contentions, explanations, evasions," he said in effect. "One thing I know, that, whereas I was blind, now I see." Christian Science stands on that.

[Alfred Farlow in *Fitchburg* (Mass.) *Sentinel.*]

In a recent issue Bishop Thomas B. Neely of New Orleans is reported to have said, "Christian Science is two per cent philosophy, three per cent some kind of religion." Last year, at the Methodist conference in this vicinity, Bishop Neely made the statement, so the newspapers reported, that Christian Science contained "three per cent of philosophy and two per cent of religion." According to the report, the gentleman is able to see one per cent more of religion in Christian Science this year than he did last year, and this convinces us that at the end of ninety-seven years he will without doubt be prepared to say that Christian Science has one hundred per cent religion in it. That is rather slow growth, but that is the bishop's affair.

Digitized by Google

Since Bishop Neely made his attack upon Christian Science a year ago, at Attleboro, Mass., thousands of sick folk have been healed through Christian Science, thousands of sinners have been reclaimed. I personally know of several drunkards who have been reformed through Christian Science during the past year, and we think it is proper to ask our friend, "For which of those works do ye stone?" In the Master's day a tree was known by its fruit. Is it possible that we have reached an age when a religion which constantly bears good fruit is to be condemned simply because it differs somewhat from the religion of others? Whatever else may be said, it is a fact that Christian Scientists love the Bible and study it more than they did before they had Christian Science. They love the Christian religion, and it is anomalous to suppose that this increased interest in God's Word is due to the study of a book which advocates the opposite of the Bible.

[Frederick Dixon in *Oswestry* (Eng.) *Advertiser.*]

A critic asks why, if man is spiritual and not material, do Christian Scientists eat and drink? If he will forgive my saying so, he only puts that question because he has not grasped the meaning of the teaching of which it is the essence. Mrs. Eddy does say that man is the image and likeness of God, and that since God, in the words of the fourth gospel, is Spirit, this image and likeness is, therefore, spiritual. She does not, however, say that the sinning mortal, endowed with the carnal mind and sustained by food and drink, is the image and likeness of Spirit. What Science and Health, which is the text-book of the movement, does teach, is that in the exact proportion in which man gets rid of the carnal mind, and instead lets that Mind be in him which was also in Christ Jesus, the material man begins to give place to the spiritual man. The material man apparently needs food and drink to support him, because he is convinced that life is material. Exactly, however, in the proportion in which he attains the Mind of Christ, he learns that life is not material but spiritual, and begins to understand how Jesus could say, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

[Editorial in *Portland* (Ore.) *Spectator.*]

Christian Science continues to attract converts, despite opposition and evil report—probably because of them, to some extent. East and West, membership in the churches is increasing, and there is a growing demand for information as to what Christian Science means. To meet this demand lecturers go from city to city, expounding the faith and not infrequently instructing while chiding the ignorance that assails Christian Science.

A religion is no more responsible for the things said of it by its devotees than liberty is responsible for the crimes committed in its name. Those who do not know very much about Christian Science ascribe to it beliefs that Christian Scientists do not hold. It is probably because so much interest has been taken in it, that so much that is not true about it has been invented and repeated.

It probably would not matter if Christian Science did none of the things its followers know it does and all the things its enemies say it does; there would still be enough of a religion left to keep the world in pretty fair mental and moral condition. Christian Scientists are a genial, optimistic, smiling, sunny-minded lot, whose influence on the world must be good. Even if they are deceived when they walk upright and think they are cured of physical ailments that would lay other people on their backs, the delusion is not maleficent—indeed, its spread would be of great service to the race.

[John M. Dean in *Memphis* (Tenn.) *Press.*]

Christian Science is not opposed to sensible hygiene, sanitation, quarantine, etc. These things are practised by really civilized people everywhere, and a true Christian Scientist goes a step farther than the old proverb, and says: "Cleanliness is a part of godliness." We do not, however, believe in the attempted enforcement of promiscuous, unproved theories regarding which even the most eminent medical men are in constant disagreement with each other, and we sincerely believe that the state has no more right to force these empirical theories upon unwilling subjects than the Christian Scientist has to force others to practise his religion.

The meat in your editorial, however, is contained in the following statements: "The fate of Christian Science is ultimately to be determined, not by the courts, but by the common sense of the public. It will stand or fall, according as it squares or fails to square with that stern test of all physical, social, or moral reforms: 'Does it deliver the goods?'" This is but another way of giving the advice of Gamaliel, when the apostles were on trial before the hostile thought of that day: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: But if it be of God, ye cannot overthrow it: lest haply ye be found even to fight against God."

Christian Science asks nothing but "a fair field and no favors." It is either true or false. It is either good or bad. It either heals sickness and sin, or it does not heal them. If it fails to prove its worth along these lines, it is not worthy to exist, and will inevitably fall; but if it is good and true and healing in its ministrations, all the opposition that can be mustered against it will be powerless to harm it. Mrs. Eddy says, on page 474 in Science and Health: "Truth spares all that is true." Then, if truth cannot destroy truth, we certainly have nothing to fear from its opposite, error. But, just as truth is indestructible, error is perishable, and Christian Scientists everywhere are quite willing to have their religion judged by that infallible test. What more can the world require?

[From an editorial in *El Reno* (Okla.) *Democrat.*]

Those who did not hear the lecture on Christian Science yesterday afternoon, missed a fine opportunity for listening to a very capable and interesting speaker on a very interesting subject. Both the lecture, by Professor Hering, and the introduction, by Judge Harry Lee Fogg, were well received and highly appreciated by a good sized audience. After listening to even a brief explanation of this subject, one understands something of the difference between what Christian Science is and what it is often supposed to be, and also realizes that the loudest and most presumptuous critic is usually the one most ignorant of the subject. There are a great many of us who could use a little Christian Science to good advantage.

[E. M. Ramsay in *Montrose, Arbroath, and Brechin Review.*]

Far from being a substitute for Christ, Christian Science claims to be the very teaching of Christ, that Comforter or Spirit of truth which our Saviour promised should come later to guide us into all truth. The credentials it has to offer are those very signs of healing and of reformation which our Lord said should follow the true understanding of his teaching, and which few of the other churches are even attempting to produce. I was led to look into Christian Science by two remarkable cases of healing which took place in my own family; the healing was accomplished not by suggestion, but by that clear understanding of God's love and God's law which is presented in Mrs. Eddy's book, "Science and Health with Key to the Scriptures." During the many years which have passed since then I have found Christian Science not a stone, but indeed the bread of life.

Digitized by Google

raising me from illness and helping me to overcome sin as no other teaching can do. It is indeed the religion of the future, because it is the simple practical truth of the primitive Christian times to which all must return.

[From *Manufacturers' Record.*]

Permanent quietus should be given to the movement for the establishment of the national department of public health, "and for other purposes," now before the Congress of the United States. The intelligence of the country should lose no time in persuading the Congress not to embody the menace in legislation.

[From *Manchester* (Eng.) *Dispatch.*]

In the course of his sermon at the Manchester Cathedral last evening [April 23], Canon Green told of a woman who was on the fair way to recovery from cancer after having been prayed with by some kindly neighbors, though before that her doctor said she had only three days to live.

He might be told that he was preaching Christian Science, and he would retort that he had not the slightest objection to what the Christian Scientists did; it was their explanation of it which seemed to him to be faulty. The Christian Scientists could not have succeeded as they had done unless they had laid hold of a great truth—distorted though it might be—that great holiness and health went hand in hand.

[Rev. D. H. Bailey as reported in *Marion* (Ohio.) *Mirror.*]

I think it is due to the Christian Scientists to say this: that they have compelled the philosophers in the churches, and the theologians in the schools, to give an emphasis to the ever-present Deity. They also attach emphasis to looking on the bright side of things, and ignoring worry. Worry brings on many diseases incident to this life. If there is no soul rest, there is no rest of the body. We need something to stir us up until we cease to be grouchy and wretched and miserable, and if our Christian Science friends can help us in this trouble, God bless them. The state of the mind has a great effect on the state of the body. It is difficult to bring about a healthful state of the body with an unhealthful mind. We get into the habit of complaining. I think that behind this is a desire for sympathy. But, good health is an awful price to pay for sympathy, isn't it?

In summing up the teachings of Christian Science, we find they are communion with God; soul rest; elimination of anger. These teachings have so awakened us that we must acknowledge that the Christian Scientists are our benefactors. So we are not criticizing, and we are not praising. We are only looking out for truth; from whatever source.

[Rev. Alfred Veazie Bliss in *Bangor* (Me.) *News.*]

People are marveling everywhere at the remarkable growth of the Christian Science church in recent years. Nearly a hundred thousand people in the United States belong to this church. But there is really nothing remarkable about it. Christian Science claims to offer men a cure for worry, a bad disposition, wrong appetites, sensual passions, and all kinds of evil habits, and even bodily disease. And in thousands of cases men and women are cured of these mental and spiritual and bodily diseases. I believe that there are just as genuine religious conversions in the temples of Christian Science as ever occur in the halls of the Salvation Army. Only here, Christian Science has discovered and is making use of just the same power of God that has been committed to the church, but which the church, for some reason or other, has neglected to use.

[Col. W. E. Fell in *Hull* (Eng.) *Topics.*]

Mrs. Eddy has called Jesus of Nazareth "the most scientific man that ever trod the globe" (Science and Health, p. 313), and yet he departed from material law not partially, but wholly, recognizing all causation as vested in Mind, in Spirit. No natural scientist, who bases being on matter, can ever hope to emulate the works of this "greatest Scientist." In this connection it is true, as our critic says, that many natural scientists will have nothing to do with Christian Science. And the reason, as stated above, should be clear to him. To accept Christian Science is to discard all preconceived idea of matter as causative, and to recognize God, Spirit, as All-in-all, that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). This discovery of Mind as causation, or more correctly speaking this rediscovery by Mrs. Eddy, has resulted in infinite blessings to mankind, teaching them that the kingdom of heaven is, as Jesus declared, here and now, a mental condition and not a locality.

Christian Scientists do base their pronouncements "upon pure science," as well as on revelation, declaring that science must coordinate with revelation, and revelation with science. No critic has yet been able to escape from its rationale or find a flaw in its logic, as your intellectual contributor will at once discover when he takes up the study of the subject. Christian Science is destroying sin and suffering in a manner unrecorded since the time of the Galilean Prophet. Why should any one wish to criticize it? Surely whatever system honors God as Christian Science honors Him, is worthy of the support of every Christian man and woman.

This critic claims that the powers possessed by "Moses, Elijah, Christ, and St. Paul, have long since passed away." Not so. There are no miracles; all is divinely natural and in obedience to spiritual law. If one single man ever, at any time, has been healed through the understanding of God, then there is law at the back of it, and it is as possible today to make use of that eternal law as it was a billion years ago. Truth is changeless, for God is immutable law; as the Bible expresses it, "the same yesterday, and to day, and for ever," "who forgiveth all thine iniquities; who healeth all thy diseases."

[Edward W. Dickey in *Bakersfield* (Cal.) *Californian.*]

In a recent issue there appears a statement that "witchcraft, mesmerism, spiritualism, hypnotism, mind-healing, and other phenomena of the supernatural, all had their part in the making of Mary Baker Eddy and the Christian Science church."

The very oppositeness of Christian Science to all of the above-mentioned systems is an emphatic declaration that they were in no wise instrumental in the giving of Christian Science to the world. All of the so-called phenomena of the human or mortal mind are rendered null and void by Christian Science. It is not possible for the same fountain to send forth "sweet water and bitter," and therefore not possible for Christian Science to have had its foundation in something unlike itself. This Science is the Christ, Truth, come to this age, declaring and proving itself to be the message of Truth promised by the Master to lead his followers "into all truth."

[Editorial in (Okla.) *Oklahoman.*]

Whatever we may otherwise think of Christian Science, this much must be admitted by all: It is decreasing the number of people who tell you personally or by letter of their troubles, aches, and pains.

Earth's broken rest has failed,
Her earthly jewels paled,
And on the wayward wind
Her joys are flung.
What have I left to bind
The soul to earth? I find
This only, Father:
May Thy will be done!

CAPT. R. E. KEY.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"TEACH US TO PRAY."

How many longing and troubled hearts have echoed that humble request of the disciples: "Lord, teach us to pray,"—the instinctive confidence in God and His goodness that turns our thought to Him as a sure refuge in time of need, an unfailing tower of strength when the frailty of all human dependences, the unstableness of earthly hopes, bring to our lips the psalmist's acknowledgment of God's allness, "Give us help from trouble: for vain is the help of man."

The disciples had been with the Master long enough to learn that his trust in his heavenly Father was implicit; that whatever the perplexity or difficulty which confronted him, he turned unhesitatingly to the source of all wisdom for its solution. They had seen the sick healed of their diseases, the unclean spirits cast out from them that were afflicted, they had witnessed the wonderful draft of fishes that rewarded obedience to his command to "launch out into the deep, and let down your nets," the stilling of the boisterous wind and raging seas that calmed while it rebuked their fears, the restoration to the bereaved widow of Nain of her only son, and the marvelous feeding of the multitude with the five loaves and two fishes,—all these and many other wondrous works had been wrought as they stood by, believing yet amazed; and over and over again they had seen him turn to God in prayer as a necessary preliminary to these "mighty works."

The time had come when they were to go to the cities and villages round about,—to search out and succor "the lost sheep of the house of Israel,"—in fulfilment of the Master's command "to preach the kingdom of God, and to heal the sick." Is it any wonder that, thinking, perhaps, of the responsibilities of their commission, they should have preferred the request, "Teach us to pray," that they too might effectually address themselves to Him who, as Jesus himself declared, "doeth the works"?

In answer Jesus gave them the prayer which has come down through the centuries as a model for all human petitions, "the prayer which," as Mrs. Eddy has made so plain to us in her spiritual interpretation of its meaning, "covers all human needs" (Science and Health, p. 16). Invoking the all-wise God with this prayer of affirmation and declaration of His power and goodness, they could go forth, "strong in the Lord," to the overcoming of all evil. So long as their reliance was in the unchanging God, they could say with David: "I will fear no evil: for thou art with me."

It is because there is in human hearts today that unspeakable longing to know God, Spirit, as He is,—Life, Truth, Love, infinite and omnipotent; a reaching out to what seems a far-away and practically unknown God, in the desire to find Him "a very present help in trouble;" an acknowledgment that though they have prayed earnestly to God for deliverance, they have in some way asked amiss, since their prayers have remained unanswered, that so many have turned to Christian Science, and often to their surprise have found in the study and demonstration of its teachings the long hoped for surcease from sickness and sorrow; that "to those leaning on the sustaining infinite,"—to those who turn to God in true prayer, as Jesus taught his disciples to do,—to them indeed "today is big with blessings" (*Ibid.*, Preface, p. vii).

Christian Scientists have reason to be profoundly grateful that through the study and application of the teachings of Science and Health they have learned to pray the effectual prayer, the prayer that closes the door on every thought of evil and in spiritual communion with the infinite, omnipotent God sees and declares only His allness and goodness and the perfect man of His creating. In that wonderful chapter on Prayer in Science and Health, Mrs. Eddy tells us that "what we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds" (p. 4); and we may well ask our Father to teach us so to watch and pray that we may attain with striving that consciousness of oneness with Him which will make us a blessing to the weary and heavy laden, those who are burdened with sickness and sin, until they too have learned to pray with understanding, "Thine is the kingdom, and the power, and the glory for ever."

ARCHIBALD MCLELLAN.

DIVINE JUSTICE.

LONG years ago, Moses wrote in his immortal song this characterization of the most High: "He is the Rock, his work is perfect: . . . a God of truth and without iniquity, just and right is he." Later, the psalmist declared, "Justice and judgment are the habitation of thy throne,"—a truth which can never be lost sight of in Christian Science. If God could ever be less than just, then were our case indeed hopeless, since we so often find that mortal man must needs rise out of himself in order to learn what justice means. In mortal experience there are, unfortunately, those who do not know that justice is the true foundation of happiness and prosperity, and who do not hesitate to break the commandments in order to advance self-interest in every direction. Again, there are those who have a wholesome respect for God's law, and who strive to be just in their dealings with their fellow-men, who yet question divine justice, because to the material *sense of* things evil ofttimes seems to prevail and the self-seeker to prosper. It is hardly necessary to explain that neither of these mental conditions comes up to the spiritually scientific standard of right thinking, which requires us to look above sense evidence to the spiritual fact, in order to reach right conclusions and attain to harmonious living.

At this point it is well to ponder Mrs. Eddy's statement, "For right reasoning there should be but one fact before the thought, namely, spiritual existence" (Science and Health, p. 492). Lest this should seem too abstract, let the one who strives to be just, but who seems to suffer from injustice, ask himself whether he would be willing to exchange places with any of those who appear to prosper through wrong-doing. He would undoubtedly say, "No," and why? Would it not be because he instinctively felt that justice, which is a spiritual quality, is far too precious to be sacrificed for any material consideration whatever? This being admitted, all problems must be reasoned out and worked out on the basis of the spiritual fact. No one can rob a man of the justice which he has made his own, which is, so to speak, enthroned in his consciousness. In vain are fire and fagot,—all the assaults of mortal error against this citadel.

Christian Science, however, does wonders in proving the omnipotence of divine justice in ameliorating human conditions. Take, for example, the case of one who has been ill for years, held down by belief in some supposed law of disease, which he has been taught to believe has divine authority. He, very naturally, questions the justice of God, and the sorrow of so doing adds to his suffering, for an unjust God would be no God, hence his distress. Then comes Christian Science, to assure him with the spiritual fact that God never made nor authorized any law of evil,—disease or sin. Accepting this, he finds a God whom he can love and trust even for his healing, and healing follows the recognition of spiritual law, which is inseparable from justice.

It need hardly be added that this truer concept of justice

Digitized by Google

extends to all our human affairs, and each day should bring to us a broader and higher realization of its scope and power. A strong sense of justice tempered with love, that which rests with full assurance upon the impartiality and omnipotence of divine justice, is absolutely invulnerable. It is the basis of health and prosperity, and though heaven and earth should seem to pass away, we can know that God will so establish His justice in us and all others, that we shall echo Isaiah's declaration of God as "a just God and a Saviour."

ANNIE M. KNOTT.

"STAND THEREFORE."

ONE of the many unwinsome aspects of the mortal make-up which prove intolerable to nobility is that general limpness which tells of the lack of distinctive character. Witness the severely caustic terms with which St. John was instructed by the "great voice" behind him to scourge the Laodiceans for their inexcusable tepidity. "I would thou wert cold or hot. So then because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth." Whether it be the expression of false humility and self-depreciation, or of a sense of unworthiness, laziness, discouragement, or fear, the absence of vertebral assertiveness is sure to exhaust the patience of the saints and to be attended by inefficiency and humiliation.

The rebuke of this weakness is found in every least realization of the dignity and destiny of man, and for Christian Scientists it is forever put to shame by the heroic courage and faith, the decisiveness and devotion, which so signally marked the life of their revered Leader. It is, moreover, a fault which is absolutely out of keeping with their philosophy, and yet we are not infrequently tempted to give it place, especially in the presence of a wholly unanticipated defeat. It was on such an occasion that Joshua, the customarily courageous, was once found grovelingly blaming the Lord for the outcome of a gross act of disobedience; and the utter unworthiness of his attitude, as well as his complaint, was brought to his attention in words which have lost nothing of their fitness for the kindredly disposed: "Get thee up; wherefore liest thou thus upon thy face?"

Limpness always gives evidence of a forgetfulness of Principle, a conscious or unconscious reliance upon personality, and when through repeated failures the total inadequacy of this support is impressed upon human sense, he who has no scientific hold on God—for him the very foundations seem to be removed, and he becomes a prey to timidity and indecision, if not to indifference and despair.

Today, no less certainly than in the first century, the successful resistance of evil calls for the stanch and unfailing assertiveness of true faith. It is a time when, as Mrs. Eddy has written, "timid conservatism is absolutely inadmissible" (Science and Health, p. 167); and this fact renders the teaching of Christian Science the more significant. Hope or bravado may impel to many a fair-weather venture, but scientific apprehension alone can give courage and strength in the evil day. Whatever the odds against him to human sense, the true Scientist is invincible by virtue of his demonstrable knowledge of divine Principle. St. Paul calls the Christian life a warfare, and he established the parallelism in many telling likenesses, including his picture of the soldier who, fully panoplied and having done all, stands unflinchingly facing the foe, firm as a rock in the consciousness of the righteousness of his cause, the wisdom of his general, and the certainty of his final success.

Thus in all times have stood the heroes and patriots who in their loyalty to their highest concept of truth and duty have been ready to hazard their fortunes, their homes, and their lives. Men cannot help loving manliness, and quite regardless of the question of agreement or disagreement with their views, the men of nerve in life's crucial hours have won the encomiums of all mankind. Limpness is not only unmanly, and repugnant to every worthy sense, but it is a blight upon progress and a discredit to every professed follower of Christ, since it renders that personal exhibition which has been well named "the gospel according to you," an offense. He who would honor Christ must know well in whom he has believed, and be ready to stand up and be counted in every hour and every event.

JOHN B. WILLIS.

AMONG THE CHURCHES.

PHILADELPHIA, PA.

With services beautiful in their simplicity, the handsome church edifice of First Church of Christ, Scientist, Walnut street, west of Fortieth, was dedicated yesterday [June 4], when upward of fifteen hundred persons attended. Although the edifice has been in use a year, the formal dedicatory services were deferred until yesterday in obedience to an inflexible rule of the church, which does not permit of its dedication until every cent of indebtedness incurred by its construction has been liquidated. The structure and the spacious lot on which it is situated cost one hundred and sixty-five thousand dollars, and the congregation, in addition to raising this sum, exceeded it by several hundred dollars. Three services, all of which were identical in character, were held at 11 a.m., and 3:30 and 8 p.m. The following telegram was sent yesterday to the Board of Directors of The Mother Church, Boston:—

"On this day of the dedication of First Church of Christ, Scientist, in Philadelphia, we the members wish to express to you the deepfelt joy with which we humbly consecrate our desires and efforts toward making this a church in its highest spiritual sense. We would also express to you our united appreciation of your unselfish labors in behalf of the cause, and our loyalty to The Mother Church."

The church edifice is one of the handsomest in the city. Tons of steel structural material were used in its construction, while the exterior is finished in white plaster, with roof of red tile. The interior is finished in good taste, the seats of natural oak being arranged in a semicircle and slightly pitched. The auditorium comfortably seats twelve hundred persons.

It is probable that a fund will soon be started to erect a second church in North Philadelphia. While plans have not yet assumed any definiteness, it is known that residents of the northern section of the city, who have a long ride to reach the West Philadelphia edifice, are anxious to have a church of their own.—*Philadelphia Record.*

AUSTIN, MINN.

The dedicatory services of the Christian Science church in Austin occurred Sunday, May 21. The present church building was purchased in July, 1905, from the Universalist society at a price of twenty-five hundred dollars. Repairs and improvements since made brought the amount up to four thousand dollars. The last twenty-five dollars of the twelve-hundred-dollar mortgage was paid in by the Sunday school, in accordance with a vote of the children.

Austin Herald.

THE LECTURES.

EVERETT, WASH.

On the evening of April 11, Bliss Knapp delivered a lecture on Christian Science in the church edifice of First Church of Christ, Scientist. He was introduced by the first reader, Mrs. Nettie P. Sheridan, who spoke as follows:—

Christian Science is the eternal truth taught and demonstrated by Jesus centuries ago. It is the truth made practical, and to be demonstrated by each individual in the business, in the home, and in the every-day life; to be demonstrated according to the rule given in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science is a religion of love, come to this age as was foreseen by the prophets of old and promised by the Master, preaching good tidings, healing the sick, comforting the sorrowing, reforming the sinner; teaching how to love one's neighbor as one's self, how to overcome and rise above the evil and discord of this earthly existence; freeing mankind from bondage to sin, disease, and death and bringing them into the understanding of God and man's relation to Him, into the understanding of the "glorious liberty of the children of God."

Correspondence.

FRESNO, CAL.

The Barton Theater was crowded to its capacity yesterday afternoon [April 16] to hear the address on Christian Science delivered by Willis F. Gross of Boston. He was introduced by H. M. Cobbey, first reader of the local Christian Science church, who said:—

Christian Science has come into the world to offer a reasonable interpretation of the Scriptures, and an avenue of escape from sin, sickness, and death. It comes to the world with a message of hope and love. It brings us a larger thought of God, who is ever-present Love. It teaches man to love his neighbor as himself, and shows him how to do it. It is the truth that makes man free. Because Christian Science has brought so much joy into the lives of those who understand it, is it surprising that they desire to share with others that which has blessed them?

Every one may know of the blessing Christian Science has already brought to weary, sick, and sinning humanity, by looking into the literature lying on the tables of our free reading-rooms, or by attending our Wednesday evening testimonial meetings. In addition to these helps to enlightenment, The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., is sending forth messengers into the world to explain the demonstrable truths of Christian Science.—*Fresno Republican.*

FRANKLIN, IND.

Prof. Hermann S. Hering lectured on Christian Science April 18. He was introduced by Senator L. Ert. Slack of Franklin, who said in part,—

Many of man's thoughts are mixed with uncertainty, and there is an ever-present conflict going on in the mind of every intelligent human being while attempting to find out the real, absolute, and imperishable truth of all things. The highest and best thought of man is directed toward his own relation to God, and therefore man's thought through all the ages has been investigating this phase of our human endeavor. The all-absorbing question in the mind of each of us at this time is, What is man's relation to Almighty God? Above all things, we desire here to have an answer that is altogether truth. Where else should man go for this answer than to the Holy Bible which each of us, regardless of our present opinions or our environment, believes is the inspired word of God. We have a right, therefore, in this search for truth, to hear what great men have to say on this subject of man's relation to Almighty God, and I think we all deplore any blind or unreasonable prejudice that would deny the right of any person to hear what good and true men have to say concerning God's word.

Tonight we are to hear what Christian Science has to say on the subject of truth. Now Christian Science is not a mixed question of fact and supposition; it is one or the other, but not both. As I understand the teaching and Principle involved in Christian Science, it is entirely the true concept of the divine plan of all things; or, if it be not truth, then it is utterly without foundation in fact. The fact that Christian Science includes a certain, definite, and positive plan, a Principle concerned in everything and concerning which humanity may contemplate, as well as everything pertaining to the divine order of things, makes this religion, or science, or whatever you may be pleased to call it, either an absolute fact without equivocation or else a mere supposition minus anything of substance whatever. I will therefore respectfully listen to what may be said of the Principle and message of Christian Science, and I assert the right and privilege of every one else not only to hear this question discussed, but to search and find if possible whether it be fact or supposition.—*Correspondence.*

LONDON, ENGLAND.

A lecture on Christian Science, under the auspices of First Church, was given by Bicknell Young on the evening of April 20, at the Town Hall, Fulham, which was filled to overflowing with a most attentive audience. The lecturer was introduced by H. L. Stokes, who spoke in part as follows:—

This new-old religion, as it has been described, has brought happiness and the blessing of health to hundreds of thousands throughout the world. Its beautiful and logical teachings, as expounded by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," have brought to us a more spiritual and therefore a better understanding of the Bible, and have disclosed to us in this age again the healing power of the practical, operative Principle of primitive Christianity. Christian Science proves itself, by the works daily accomplished, to be a practical religion, and for that reason it is spreading in a wonderful way throughout the world. Among its ever increasing ardent followers and students are to be found men and women of all degrees, the deep thinker and the scholar, the artisan and worker, the adult and the child,—all are equally blessed in that truth which is no respecter of persons.

My own experience of Christian Science has brought me blessings for which I cannot be sufficiently grateful. A great healing was experienced by a member of my family over seven years ago, a change from semiinvalidism and anxiety so great that I could, happily for myself, no longer resist seeking to learn more of this power which the study of Christian Science brings to us.—*Correspondence.*

CAMBRIDGE SPRINGS, PA.

The music hall of Hotel Bartlett was filled to its capacity on the evening of April 21 to listen to a lecture on Christian Science by Frank H. Leonard of Brooklyn, N. Y. He was introduced by Clinton B. Burgess of Erie, Pa., who said in part,—

Nineteen hundred years ago Pontius Pilate asked of Jesus the Christ the momentous question "What is truth?" The result of the world's attempts to find an answer to this question is seen in the hundreds of sects and cults of religion and philosophy which divide men's thoughts today. To this question Jesus answered never a word; and why

Digitized by Google

should he? Had not his whole life-work been a complete and scientific answer? To the disciples of John who came to inquire whether this young man were indeed a messenger of Truth, he entered into no theological discussion, but, like a true scientist, pointed to the results of his teaching. Christian Science is not a religion of talking or exhorting, but of doing, and the gentleman who is to speak to us this evening will tell of a practical religion, adapted to the needs of every day and every hour and to the solution of all the problems of life.—*Correspondence.*

HIGHLAND PARK, ILL.

William R. Rathvon delivered a lecture on Christian Science in the church edifice, Sunday afternoon, April 23. He was introduced by George D. Forrest, first reader, who said:—

Through its board of lectureship, The Mother Church, The First Church of Christ, Scientist, of Boston, Mass., sends its members broadcast throughout the world, following literally the commands of our Master, "Go ye into all the world, and preach the gospel to every creature;" "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Thanks be to God, and to our Leader, Mrs. Eddy, that through the understanding of Christian Science all these blessings are being realized today.—*Correspondence.*

CHAMPAIGN, ILL.

A large and attentive audience which completely filled the edifice of First Church of Christ, Scientist, in Champaign, Thursday evening [April 27] heard the lecture on Christian Science by the Rev. William P. McKenzie. He was introduced by Philip S. Barto, first reader of the local church, who said:—

We Christian Scientists believe in the power and good in our religion with a firmness and a conviction which is not, I believe, exceeded by the followers of any other faith on earth. And the confidence which inspires us we have to possess through a personal and individual experiencing of the ability of this practical knowledge of God and His laws, as explained to the world by Mrs. Eddy, to heal sickness, destroy sin, and in general to set right the wrongs of this human experience. With such a faith in our religion it is small wonder that we take a peculiar joy in passing the word on to others.—*Times.*

[Written for the *Sentinel.*]

HAVE FAITH IN GOD!

WILLIS E. BLOOMFIELD.

Have faith in God! So spake a still small voice.
When pain doth most assail thee, then rejoice.
For still His love surrounds thee and His hand
Doth guide: Be still, and understand.

Have faith in God! When fears oppress thee sore,
Fear not, but only trust in Him the more.
For still are stretched beneath thee and above
The everlasting arms of Love.

Have faith in God! When earthly pleasures call,
Thou need'st to know that He is All-in-all.
There is no good gift that He doth not give;
Except in Him, none truly live.

Have faith in God! I heard the message sweet,
And so I follow on with willing feet;
Content and glad to keep His least command,
For now through faith I understand.

TESTIMONIES OF HEALING.

Deeply grateful to God for benefits received through Christian Science, I give the following testimony, which may be helpful to others placed in the same position. About two years ago I met a friend whom I had not seen for some years and who came to spend a few months in this city. In the course of conversation I discovered that she had become a Christian Scientist, and asked her to enlighten me on the subject, as I knew nothing about it. I was deeply interested in all she told me; in fact, I could not think of anything else and was always on the lookout to continue the same subject with her. I read Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and was treated by my friend for a stomach trouble of over twenty years' standing, as well as for a bad attack of rheumatism in the feet. I was soon cured of both complaints, for which I am most thankful. With the slight understanding I have of Science, I have with God's help been able to ward off many ailments and have never again taken any kind of medicine. What I am most grateful for, however, is the understanding of God's ever-present love and care, and the knowledge that He is All-in-all, and that no harm can come to His children.

The reading of Mrs. Eddy's book was overwhelming to me! It was so wonderful to think that we could get rid of disease and sin through the understanding of divine Truth, Life, and Love that I could not believe it; and more than once laid the book aside. It was a long struggle, but at last light began to dawn, and it has kept on getting brighter and brighter, thanks to the loving help of my friend, who, though far away, is always ready with an encouraging word. Quite lately, she also gave me absent treatment for a bad attack of bronchial trouble, the acute state lasting only three days, but the cough quite a while longer.

My ardent wish is to find myself some day worshiping with other Scientists in their church, but this as well as all other things, I leave in God's hands. A sister of mine has also been greatly benefited by having her eyes healed of a very painful complaint that had troubled her for several years. She was treated by the same friend for some months, was well for ten days without acknowledging it, and had a relapse. The treatment was continued for some time longer, then left off, as the practitioner thought she should realize the truth for herself. Through the continued reading of Science and Health she has been quite healed. She joins me in this testimony of deep gratitude for blessings received.—ALICE DURAND, Lisbon, Portugal.

My first impression of Christian Science was gained from the healing of my wife, many years ago. It was such a clear proof of the power of Truth to heal that I had to believe, and it brought the desire on the part of both my wife and myself to understand what had accomplished this marvelous cure. This led, eventually, to that dependence and reliance upon the one God which has since been the comfort and the joy of our lives. To recall the incident of long ago for the lesson it may teach, let me say that my wife was lying mortally sick. The old family physician, devoted and conscientious, had exhausted his skill and was baffled. My wife was a member of an orthodox church and I was an attendant at the services. The Bible was in our home, but it was a dead book, there was no life-giving meaning in it for us. In this connection I often think of that quotation from Science and Health (p. 241): "Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can moonbeams to melt a river of ice."

At this juncture, a kind neighbor, whom we knew but slightly, had the inspiration and the courage to come to our door. She saw my wife's sister and said to her, "Your

Digitized by Google

sister does not need to suffer. God is not making her suffer. There is a knowledge of Truth that will heal her. It is Christian Science." She also left some pamphlets and other Christian Science reading matter. The encouraging message was carried to the sick-room and instantly aroused hope in the patient. She wished to read for herself and soon gained sufficient strength. She seemed to recuperate with the sole idea of pursuing this subject further. To the wonder of all, within a few days she was able to go to a practitioner in a neighboring city, and after two weeks' treatment was entirely and permanently healed. From being a sick and ailing woman, she has ever since been one of the strongest. Such instances, which I have since found are not infrequent in Christian Science, certainly encourage us never to withhold the word that will lift our neighbor.

JULIAN SCHOLL, New York, N. Y.

In March, 1909, I was stricken with an acute attack of lung trouble, and not knowing that there was a Christian Science practitioner in the city, I lay for about forty-eight hours without food or sleep, and suffering terribly. I then learned of a practitioner, who was called, and I was relieved in a few hours. I was also permanently cured of a troublesome cough under her treatment.

I first became interested in Christian Science about four and a half years ago, when one of the most prominent physicians in this place, after four or five years' treatment and consultation with other doctors, advised me to take my wife to Kansas City to have an operation performed. He made the statement that she could never be a well woman until it was done. She was taken there, but concluded to have treatment from a Christian Science practitioner, and she was soon on the road to health. God is able and willing and does help those that trust in Him.

G. W. SNYDER, Alva, Okla.

In reading the testimonies in our periodicals, I have noticed that the most of them were given years after the healing was done. In my own testimony I wish to tell of a healing that might well be called a miracle. A little girl was born to us in October, 1909, and at first she grew and seemed to be in good health; then, as she ceased to retain her food, it was thought best to change it. This was done, but the child did not get any better. The doctor then said that her stomach was very weak, and advised still another change. This we did, but in a week the child was fast losing flesh and strength, as she could not keep anything down. She was then about three months old, and the doctor told us that she had not been normal at birth and that there was only a small chance for her to live.

On Jan. 21, 1910, the baby was not expected to live until the next morning. She had never been free from pain, and she seemed to be in agony from the time she could not retain her food. When the case seemed so hopeless we were advised to try Christian Science. A practitioner was within three minutes' walk of our home, and she came to see the little one that evening. The child was freed from pain at once, and has not had any convulsions since. After the second treatment she retained her food, and in two weeks she was well. In two months she was a different child and has remained perfectly normal ever since. We are truly thankful to God for Christian Science; it has saved the life of our child and made us see that our heavenly Father does care for His children, and will help and heal us when we ask Him in the right way and heed His commandments.

JOHN D. MCKENZIE, Buzzards Bay, Mass.

With an overflowing heart, full of gratitude for the knowledge of Christian Science, I wish to testify to a few of its many blessings. I have just entered college, and I feel that my path at every step of the way has been lighted by the light of Truth, as my mother was healed in Christian Science when I was four years old. When I was very small I cried a great deal, and as I grew older it was found that this was from severe headaches. I soon developed such a bad disposition that by the time I was five years old it was almost unbearable to my parents, brothers, and sister, and I seemed to have no control of my temper. After an outburst I would be morbid and morose, not saying anything to any one for perhaps weeks, and all that time I was as stubborn and wilful as a child could be, and I seemed to get worse and worse.

At this time my mother had just begun to study Science, but I was too young to understand much of it. As I grew older I was one of the most unhappy children in existence, and succeeded in making those around me unhappy also. As my mother gained more understanding of the great truth, she tried to conquer my disposition through love. This helped, but at times I would lapse into my old feelings and was seemingly worse than ever. I thought that every one hated me, and I was very certain that I hated every one else.

Through the help and love of my good mother, and her untiring zeal in leading me into the way that dear Mrs. Eddy has shown us, I am indeed thankful to say that those dark days of headaches and worse heartaches and bitter thoughts are long past. When I was about ten years old I began to enjoy attending our Christian Science Sunday school, and although I am as yet only a beginner, I am sincerely grateful that I have the glorious privilege and opportunity of studying this truth which has rolled away the stone from the door of my dark prison and broken the chain that bound me. Now, instead of wishing I were dead, I just cannot help feeling a great sense of love and gratitude to God welling up in my heart every time I look at the golden sunshine or feel the fresh air on my cheek. I cannot help but contrast my feelings now, and in fact for the last five years, with the bitter, black thoughts I had before, when I had no love for anything that moved or anything that grew. I just try to let love fill me, and I see and feel beauty and sweetness in everything. The world seems ever new, and the more I understand of divine Love the brighter everything appears and the easier my school work is.

I have hardly known what it is to have a headache for about ten years, and have not had one day in bed; while before that I suffered two or three days of each week and seemed to be completely overcome. I cannot put in mere words my deep gratitude to God; also to dear Mrs. Eddy, and to my mother, for what I know of Christian Science, but I can put my gratitude in each day's duties, as I can only know what I practise.

MISS MABEL J. BOND, Wichita, Kan.

[Translated from the German.]

We acknowledge with a grateful heart the good which has come to us through Christian Science. Some seven years ago I met with an accident and sustained a severe wound on the head. It healed, but from that time on I was subject to headaches and attacks of dizziness, besides having a feeling of cold in my head, so that summer and winter I could not be even indoors without some sort of a covering for the head, and the least noise seemed disagreeable and disturbing. (I might mention that I can now bear any kind of noise, and even the trains running over bridges under which I have to pass frequently do not disturb me.) In spite of all the physicians' efforts, they were unable to relieve me; but some two years ago I heard of Christian Science, and copies of the *Herold* were handed to me and I attended the meetings and services. The wonderful testimonies of healing which I heard every week made me feel that I, too, would recover my health some time. I diligently read the *Herold* and then applied to a Christian Science practitioner for treatment, which was lovingly taken up, with the result that with six treatments my troubles

Digitized by Google

disappeared. I feel well now, and rejoice in my deliverance from the terrible pain.

My wife, too, has been healed through Christian Science of two severe diseases. She had suffered for thirty years with her head and spasms in the stomach. Although we consulted many physicians during these years, she never was more than relieved, not healed. With a few treatments in Christian Science, however, she was restored to perfect health. We are both striving earnestly to prove our sincere gratitude through right doing, through increasing love of God, and the constant endeavor to understand more of the truth. We thank God for having freed us of these severe troubles, and we are grateful to our dear Leader, Mrs. Eddy, for having made us know the truth, and for pointing out the way of understanding whereby we may become better men and women.

WILHELM WENDLAND, Charlottenburg-Berlin, Germany.

From childhood I had been frail and ill most of the time, never knowing anything but discomfort and poor health. As I grew older I had a constant fear of passing away, for it seemed I could not continue in this state much longer. I had reached the point where I was completely discouraged and unable to attend to my household duties, having tried different physicians and all the material means that I knew of. I then decided to try Christian Science, with the result that I am a well woman and able to do whatever work comes to me.

I would like to say, for the benefit of those who think their healing slow, that my healing was very slow, for it seemed that I could not turn from the mortal sense of selfhood. All I wanted was the physical healing, and I wanted it at once! As I, however, began to realize that God is Mind and that all His manifestations are good, I felt that I must strive to rid my consciousness of everything unlike God, good. I then began to understand what Christian Science healing really means. From childhood I had been a church-member and thought I was living up to God's requirements, but the search-light of Truth, revealed to me through the study of the Bible and Science and Health, pointed out to me very clearly how far short of divine law I was living, and I was enabled to learn how we must reflect the harmony which is man's God-given inheritance.

I am thankful to God for this truth that sets us free, and to Mrs. Eddy through whom it has been revealed. My desire is the prayer of the psalmist: "Cleanse thou me from secret faults. . . . Let the words of my mouth, and the meditation of my heart, be acceptable in thy sight, O Lord, my strength, and my redeemer."

MRS. W. M. SHERRARD, Cambridge, Ohio.

I feel that I have delayed too long in writing my testimony, perhaps because being grateful for so many benefits received through Christian Science, it seemed difficult to state any especial one. My little daughter, now ten years old, has had no medicine since I came into Science, six years ago, and has been a stronger and healthier child since we have depended on spiritual means rather than material. She has had several attacks of seemingly serious illness, including throat and stomach difficulties, but all have been quickly overcome by this treatment. Christian Science has also raised me from a condition of despondency to one of cheerfulness. Whereas I once feared everything, I am now learning that to fear is to doubt God's omnipotence, and that there can be no power opposed to God. I have indeed been "born again," and for this awakening I am deeply grateful to Mrs. Eddy, who has shown us the Christ-way of healing.

MRS. ADELAIDE A. WOOD, Chicago, Ill.

Sincere gratitude impels me to tell what Christian Science has done for me. Two years ago a little daughter was given to me without pain, every so-called material law about childbirth having been broken by the realization of the truth of being. She is now two years old, and during that time has manifested perfect health and happiness. My greatest desire is to become a better Scientist and to reflect more and more of the one omnipotent Mind, our Father-Mother God. I am indeed thankful to dear Mrs. Eddy, whose teachings have helped me so much.

MRS. INEZ BERGS, New York, N. Y.

Although I have upon several occasions endeavored to give expression to my feelings of gratitude for benefits received through Christian Science, I take this opportunity to submit a testimony of my first healing, which I trust will help some seeker after Truth to realize the omnipotence of God. In the latter part of the year 1905, according to the testimony of several physicians, I was a nervous wreck. At their suggestion I went South for several months, only to return in the same or probably worse condition. I was having frequent and very severe attacks, and my fear of them was so great that it seemed quite impossible to leave home, no matter how short the distance, unless accompanied by some member of the family. The only relief I seemed to receive was from large doses of medicine.

At this point I decided to try Christian Science, as a last resort. After perhaps three or four treatments I was able to visit the practitioner alone, a distance of about six miles, and in two weeks I was prepared to do almost anything I had done previous to my sickness. In a very short time I resumed business, completely healed. Not only was I healed at this time of the nervous trouble, but was readily convinced of the absolute uselessness of eye-glasses, which I had then worn for about six years, the symptoms which were primarily the cause of their adoption having entirely disappeared. It is needless to say that I am exceedingly grateful.—D. A. GARBER, Pittsburg, Pa.

For more than two years I have wanted to tell others what Christian Science has done for me. I was a great sufferer from asthma and other ailments for more than forty years, and I feel sure that as many doctors treated my case, but to no avail. I used drugs as regularly as food and believed that they prolonged my life; but, thanks to our heavenly Father, three years ago I was persuaded to try Christian Science, and from the first day that I was treated I began to improve. In less than six months I was healed of all the diseases that physicians had declared to be incurable. They had even claimed at times that it would be impossible for me to live but a short while.

I am today a well and happy man, and I am also a better man morally and spiritually; and I prize the spiritual uplift more than the bodily healing. I love God more and love the cause of Truth better; I love the Bible and love my neighbor more than I ever did. I understand God better, and man's relationship to Him. I am also very grateful to Mrs. Eddy for all these blessings. I feel as if I had come out of a dimly lighted room into the bright shining of the noonday sun, into the glorious light and liberty of the children of God.—W. P. DUCKETT, Merkel, Texas.

[Translated from the German.]

Since Christian Science led me, two years ago, out of the darkness of doubt regarding divine justice to the light of ever-present and omnipotent Love, I have had every reason to be grateful for the treasures which have been revealed to me by the truth. It does bring peace on its wings, it replaces fear with confidence, hate with love, sickness with health, death with life, and many people to whom

Digitized by Google

I have since brought the glad tidings acknowledge the attendant blessings.

I greet the arrival of our periodicals with a feeling of gratitude and joy, and they always seem to contain just what I need. Words are inadequate to express my deep-felt gratitude to God, the dispenser of all good, and to Mrs. Eddy. One must be a doer of the word, and not a hearer only; and my endeavor therefore is to help my fellow-beings with my small understanding as far as they will permit me to, and to wait for those whose time has not yet come with the patience and loving-kindness with which I have been ministered unto in times of tribulation when I first took up the study of Christian Science.

CATHY BAZZIGHER, Chur, Ct. Graubünden, Switzerland.

It is recorded that Jesus said to a man sick of the palsy, "Son, be of good cheer; thy sins be forgiven thee;" to which he added, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Our beloved Leader also tells us on page 404 of Science and Health that "healing the sick and reforming the sinner are one and the same thing in Christian Science. Both cures require the same method and are inseparable in Truth."

When I first turned to Christian Science for help, I was in a pitiable condition, physically, morally, and mentally; I was literally steeped in selfishness; malice, envy, suspicion, and distrust were constant mental companions, and to sensuality and lust I had not been a stranger in years, all of which evils had produced marked results upon the body. My stomach refused to accept ordinary food, the sleepless, weary nights were spent in anxious fretting, and often I staggered on the street like a drunken man, from imperfect heart action; I was so nervous that frequently I was obliged to get up from the desk and go out into the street for a change of air and scene. In addition to all this I was wearing two pairs of glasses for what was pronounced a very serious condition of the eyes. I had been told by a prominent physician that the altitude of Denver was too high and that I would be forced to seek a lower level. I was in very deed consumed with fears and depressed to the extent of profound melancholy, with little if any hope, and almost without God in the world.

But through the purifying, uplifting, and redeeming power of divine Truth, as revealed to suffering and sinning humanity in the pages of "Science and Health with Key to the Scriptures," and the illuminating light which its teachings throw upon the Bible, and in not only studying these books but insistently desiring that their every statement might be made my very own, prayerfully intent upon knowing the will of God and His will only, these mental and physical disabilities have been entirely removed, and this is the effectual healing which Christian Science is doing in the world today. It is not merely the taking from us of a sense of great pain and distress; it is not merely dissipating our anxieties, worries, and fears; it is not merely raising up and relieving the sorrowing and afflicted, but it is Christ, Truth, the redeemer, coming to the consciousness, transforming and regenerating the carnal nature, until all that is unlike good is purged away; exemplifying what the Master said, "Except a man be born again, he cannot see the kingdom of God." This is the "making whole" process which accompanies the activity of healing in Christian Science, and is the fruit of the tree of life. Our beloved Leader says on page 186 of our text-book, "Christian Science destroys material beliefs through the understanding of Spirit, and the thoroughness of this work determines health." To the extent that the temptation to be sick, to sin, or be discordant, is put behind us momentarily, do we rise into that higher and holier consciousness, even to the mount of demonstration. I feel and know that I am a living witness to the power and efficacy of divine Truth, as revealed in Christian Science, to heal the sick and sinning, and I would most lovingly and tenderly direct the seeking thought to the pages of our text-book, knowing that if one will study it patiently and conscientiously in an unprejudiced state of mind, even as a child, that whether they be burdened with the evidence of some so-called incurable disease, whether they be distracted, worried, or discouraged, or it may be bowed beneath some load of grief, there will come into their tossed and troubled life a joy, peace, and rest such as they have never known; their physical and mental burdens will leave them, and one day, as they are faithful and obedient, as they listen for the "still small voice" of our Father, saying, "This is the way, walk ye in it," they will awake to the fact that they are free,—scientifically healed!

Words fail to express my gratitude to God, to His Christ, and to our revered Leader, than whom humanity has not had a greater or more beneficent helper since the days when Jesus so beautifully healed the sick and heavy laden in the hills and valleys of Judea. Christian Science has surely opened the door to this understanding of the healing Christ, and none may shut it; the gates of this city of Truth (the purified consciousness) shall not be closed day or night, neither shall anything enter it which defileth or maketh a lie.—CHAS. HENRY PHILIPS, Denver, Col.

It is over three years since the Christian Science text-book was brought into my home by a friend, and ever since that time life has had a different meaning for me. What used to be a weary, almost hopeless existence, has now become a beautiful thing, full of glorious opportunities and of joy and peace. I was not attracted to Christian Science because I consciously needed healing, rather because I was deeply sensible of a great want that I felt the services in the church to which I belonged should have filled, but which they did not; nevertheless, I had endured for seven years a pain (the result of a serious operation) which rarely left me altogether, and at times was very acute. This, however, had become so much a part of my life that it never occurred to me it might be cured; indeed, it was not until several months after its disappearance that I realized it had gone forever.

This healing came simply through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with the healing came a great sense of freedom from a fear which had made my life a misery ever since the operation, the doctors having told me that in all probability a second one would be necessary. This experience alone would be sufficient cause for gratitude, but it is only one of many physical benefits that I have received through Christian Science.

To know that God is Love, and not the author of our misfortunes, has meant everything to me. I had always tried to love God and to serve Him, even when I believed that all my trials were sent by Him, though often I found it very uphill work; but now, to realize that we are always in the actual presence of divine Love, that is protecting and guarding us from every ill save those which are brought about by our own wrong thinking, has truly been the rolling away of the stone from the mouth of the sepulcher and the illumination of consciousness with the knowledge of Life as God, good.

I am deeply grateful for this healing, practical truth, and am trying to show my gratitude by letting my life testify to the truth that is in me, in the hope that others, seeing what it has done for me, may be helped to rise above materiality and to seek the peace of God "which passeth all understanding." I cannot express in words my love and gratitude for our revered Leader, Mrs. Eddy. I know it can best be expressed in deeds, by being faithful to the Principle she has shown us. In this way, and in this way only, can her followers show their appreciation of what she has done for mankind.

ALICE E. D'EATHE, Sandymount, Dublin, Ireland.

Digitized by Google

When Christian Science found me I had been a sufferer for fifteen years, and had spent at least a third of that time in bed. When our little daughter was born, sixteen years ago, I had what the physician called blood-poisoning, which left me a nervous wreck all these years. We had the best physicians, and they all were very kind and did everything in their power for me. I had one operation performed, and a few years later underwent a more serious one. I suffered greatly, and for six years had terrible nervous spells, which came on at night and left me unconscious or numb and cold. This last operation did not seem to remove the difficulty, and I was afraid I would lose the use of one leg entirely.

At last a kind neighbor persuaded me to try Christian Science, and I went with her to see a practitioner. I had lost all faith in physicians, and thought I did not have a friend on earth. After the birth of our last child I had a growth which caused me a great deal of trouble, but after being treated for a few months in Christian Science it disappeared, also the accompanying soreness and burning, and my leg is now sound and well. The abnormal condition stopped in a short time, and I weigh more than ever before. I am surely made over anew, and am as happy as can be all day long. We are more prosperous than we have been for years. We had lost all our seven children except one, and he has been in a hospital for some months, part of the time at Manila. He will, however, be home soon, and I know he can be restored to perfect health through Christian Science.

My husband and I attend the Christian Science services in Los Angeles regularly, and my husband thinks them beautiful. We are both very grateful for all the blessings we have received since we have taken up Science. My husband suffered with boils for three months last summer, and after he had tried two doctors I asked him to take Science treatment. He at first laughed at me, but as he failed to improve under medical treatment, he went to a Christian Science practitioner, and in less than two weeks the boils had all disappeared, and he has been in perfect health ever since. It is a great blessing to know God aright. I am perfectly happy if I can study our literature; I do not care for the things I once thought I could not live without. At one time I was ashamed for any one to know that I was taking Christian Science treatment, and would not be seen with any of the literature, but now I would not care if Christian Science was written all over me, in all my looks and actions. I will try to be what a child of God should be.

MRS. GEO. E. BOYD, Los Angeles, Cal.

[Written for the *Sentinel.*]

LOVE'S MINISTRY.

MINNA MATHISON.

THE Love that fed the multitude,
Rebuking doubt and fear,
Will yield today its store of good,
Will bless the now and here.

The Love that stilled the troubled wave,
At the firm call of faith,
Potent today as then to save,
Its own encompasseth.

The Love that rolled the stone away,—
Revealed our risen Lord,—
All blessings promiseth today
To those who trust His word.

Oh, let me know that God is good,
That He is everywhere!
Then life is one beatitude
And every thought a prayer!

FROM OUR EXCHANGES.

[Rev. Charles New in *British Congregationalist.*]

The gospel is one of joy: "Take therefore no thought for the morrow," "Let not your heart be troubled," "Peace I leave with you," and so on. I fear some of our anxious looks and troubled lives are a sad disparagement of those sacred and binding words. If the world sees that we have no "peace and joy in believing," and that we reject the Saviour's authority when he commands us to have them, can we wonder that it feels free to reject his authority in other matters, and to doubt us when we say the gospel creates peace and joy? Must there not be a change in us Christian sufferers in this respect before we can hope to do good to the world?

I think there must be something else in us to reach this great end, the bearing of the other fruits of the indwelling spirit. I hardly know what to call it except spirituality as distinguished from morality. It is not easily defined. The natural man cannot attain to it. We may speak of it in the best sense of the word as other-worldliness. It is perhaps due to the union of "love, joy, peace, long-suffering, gentleness, goodness, faithfulness, meekness, patience, temperance." It is the "lily work" on the top of the pillars. It is that which makes others take knowledge of us that we have been with Jesus and discern in us what he is. The world will believe in the supernatural when it sees it in what we are, and in the miracle-working Jesus when it sees his mightiest miracle in the spirituality of our lives. Brethren, this, depend upon it, will produce a revival which no preaching can. The people will know God is the Lord, and to know Him is life eternal, when, as He says here, "I shall be sanctified in you."

[*Churchman.*]

The acceptance of miracles does not, Dr. Sanday insists, demand the affirmation of anything really contrary to nature. More than that, we have an assured faith that in the end the higher and highest laws of nature will not be contravened. But we are to hold this faith with the humility of those who are true at once to science and to religion. We are to hold it subject to the spirit of that great doxology to which all our searching should lead, in wonder at the "depth of the riches both of the wisdom and the knowledge of God." We are not compelled, Dr. Sanday concludes, to think of miracles as involving anything really contrary to nature. Where its laws appear to be neutralized or suspended it is only in the way in which, in our common experience, we see the intervention of some higher agency or higher law neutralize or suspend the operation of a lower agency or lower law. More than this Professor Sanday does not wish to claim, and this he believes all who hold to the supernatural should be able to accept, though there will always remain "a great many questions that cannot be answered, and that ought not to be answered by a plain Yes, or a plain No. This question of miracles," he adds, "is one of them."

[*Standard.*]

Frankly, we believe that the Christian world of today needs exactly the rebuke which Jesus administered to the Pharisees and scribes of his time. We do not seek as we ought for the growth of our souls. The thing which Jesus put first we are disposed to neglect, even our spiritual likeness to himself. From our pulpits we warn people against introspection and proceed to argue disputed questions of form. In an age when so few are at all disposed to examine their hearts, when all is hurry and bustle and hustle, when reflection is a lost art, it is nothing less than ridiculous for any Christian teacher to spend his time inveighing against the danger of becoming morbid from the practice of self-analysis. If there is anything that the Christian of

Digitized by Google

today needs to do it is to take account of himself as regards the things of the Spirit. We need to sit down alone and ask our souls such questions as, "Do I love God?" "Do I love my neighbor as myself?" "Am I forgiving?" "Do I do unto others as I would that they should do unto me?" "Am I merciful?" "Is my heart pure?" These and many other questions have to do with the real man. In their answer is found the revelation of character.

[*Zion's Herald.*]

The pure, loving Christ found opportunity even by a Samaritan well to save a woman whose conversion in turn was instrumental in saving a whole village; and when he went forth from the confines of the little bailiwick with which the Jews had no dealings, he left behind him a regenerated community, a new fount of faith and of pure religion. Whatever place our Lord passed through was the better for his once presence.

We have our Samarias in front of us. We would rather go to work in Judea or fish in Galilee, but Providence says: "Go through Samaria!" Let us, then, fearlessly confront our task, for who knows, if we are faithful, but that out of an Ahab we may make an apostle, and out of the "slums" a Salem? God orders for us our marches as well as our halts, and if we have the right spirit we shall, Jacob-like, make of every bivouac a Bethel, and of every environment a city of salvation.

[*Independent.*]

In religion the man who insists that others shall believe or worship as he does; who judges others censoriously who to the best of their light are doing right; or who refuses to show equal Christian courtesy to those who differ from him, is guilty of spiritual impudence. We have the right to condemn character and to punish bad men; Jesus did it. But to condemn and expel men from the church for their honest belief, men who are trying according to their best reason to make other men good, is intellectual arrogance and spiritual impudence and should be resisted. We are grateful for the rebuke to it in the parable of him who thanked God he was "not as other men, nor even as this publican."

[*Universalist Leader.*]

Perhaps what one has seen and heard and felt may be of value to another in his interpretation of his own experience. But in the last analysis religion must be our personal experience of divine things. No classification or definition can draw boundaries or limitations to that experience. Whenever and wherever a soul stands face to face with the mystery of life and feels the ground-swell of the mighty forces which move through the world, there is the perpetual possibility of a spiritual experience which may lie outside the nicely trimmed hedges that surround and protect conventional worshipers from the winds of the Spirit, which blow where they will.

[*New York Observer.*]

What is wanted in church and society today is more good people. It is a happy sign of the times that increasing emphasis is being put on lay character and lay effort, not to the disparagement of the clergy, but rather in corroboration of the pleas they advance in favor of holy and unselfish living. While the influence for good of a noble and saintly pastor is very great, that of a consecrated, whole-soul layman is fully as efficient as a practical proof of religion.

[Rev. W. E. Orchard in *Christian Commonwealth.*]

Half the pain of the world would be swept away and the remainder could be cheerfully borne, if man would only cease from his inhumanity to man.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Postal Telegraph-Cable Company, one of the principal subsidiaries of the Mackay Companies, with its millions of money and its thousands of miles of long distance telephone and telegraph lines, has formally declared a policy of general affiliation with the independent telephone companies of the country. The proposition of the Postal Company is as follows:

"In order to increase our facilities, our company has decided to make an offer to independent telephone companies, allowing them to string wires on our poles at the usual rental, varying according to the different localities, from four to six dollars per mile, per wire, per year, on the condition that we shall be allowed to composite their wires so strung on our poles where it will not interfere with their telephone use, and that we shall be allowed without charge to use the telegraph side of the composite circuit whenever we wish. We have at various places telephone circuits which we can lease at once, and are willing to lease to responsible independent telephone companies. At other places we have copper wires, which can be transposed, and we are willing to lease the telephone side of these wires. In all other places we are willing to string copper wires at our own expense, on our own poles, and lease the telephone side of the circuits to responsible independent telephone companies, provided: First, that the telephone company will in each instance contract to keep the lease for five years; and second, provided that the wires will probably be of use to us upon the termination of the lease—in other words, between commercial centers."

The practical significance of this proposal lies in the fact that a combination of this nature between the Postal and the independent interests, if adopted generally, will result in massing the strength of both as a unit against the combined strength of the American (Bell) Telephone & Telegraph Company and the Western Union Telegraph Company, which the Bell controls.

That the Guggenheim syndicate in Alaska can afford the loss of the Cunningham coal claims, provided it is able to get through an application now pending before the interior department for harbor privileges around Controller bay, Alaska, was the charge which impelled Senator Miles Poindexter of Washington to introduce a resolution in the Senate demanding that President Taft produce all records bearing on the Controller bay filing by all parties connected with the Controller Railroad & Navigation Company. If this claim goes through, it would ensure control of the only feasible outlet for the coal and have all the railroads in its grasp. The Cunningham claims have been in the public eye constantly for more than two years past. They brought about the Ballinger-Pinchot investigation by Congress and the dismissal from the public service of Chief Forester Gifford Pinchot, Louis R. Glavis, a chief of field division in the land office, and several minor officials.

Beginning July 1 every railroad conductor on trains running in Illinois assumed the duties of sheriff or policeman. All of the railroads with tracks within the state are preparing placards promulgating the law just passed by the Illinois Legislature, making it unlawful to drink intoxicating liquors or to be intoxicated in or upon railroad passenger cars in use for transportation of passengers, or about any railroad station. The law says there shall be no drinking in smoking cars, parlor cars, day coaches, or interurban cars and cabooses used for the transportation of passengers. Railroad conductors will be called upon to act for the state in arresting all violators they may see. Furthermore, they will become liable to a fine if they fail to arrest violators.

In the construction of an aqueduct for bringing into New York city from the Catskill mountains a daily supply of five hundred million gallons of water, the crossing of the Hudson river was a serious problem. The plan finally adopted was to sink shafts on either side to a depth of about eleven hundred feet and connect them through solid rock by a level tunnel. This really makes an enormous siphon. Preliminary borings showed that the river flows in an old glacial gorge that has been filled up with deposits of silt, sand, gravel, clay, and boulders to a depth of over eight hundred feet.

The two hundred and seventy-fifth anniversary of the founding of Providence, R. I., was observed by a public celebration of "Founders' Day," June 9, conducted under the auspices of the Rhode Island Citizens' Historical Association, assisted by civic, patriotic, and historic societies and associatons and by state and city officials. At the same time, in practically all of the public schools of the city and in many others throughout the state, special anniversary programs of readings, music, etc., were carried out.

The government's inquiry into the alleged wall paper trust began at Cleveland, O., last week, when a federal grand jury was summoned especially for that purpose. It is declared the investigation will be one of the largest the government has yet conducted. The grand jury will investigate at once the big associations of wall paper manufacturers and wall paper jobbers, which are alleged to be banded together to control prices.

The United States treasury had a surplus of approximately twenty-five million dollars when the fiscal year of 1911 ended, June 30. The fiscal year of 1910 closed with a surplus of fifteen million dollars. This year's showing will be the best since 1907, when a surplus seldom equaled—one hundred and eleven million dollars—was shown. The years 1908 and 1909 showed deficits of twenty and fifty-eight million dollars, respectively.

Gifford Pinchot, in a scathing criticism of the director of the United States geological survey, charges that by dilatory methods he has made it impossible for the commission appointed under the Weeks bill to contract for lands in the White mountain region, thus losing to the project hundreds of thousands of dollars which reverted to the treasury, because not expended before July 1.

Frauds amounting to several millions of dollars in duties on importations of cutlery during the last few years have been discovered by secret service agents of the customs service who have been working quietly in this country and in the Solingen district of Germany, whence most of the imports come to the United States.

Indictments have been returned by a special United States grand jury against fourteen secretaries of as many lumber dealers associations for alleged violations of the Sherman law. The secretaries of the retail associations constitute the lumber secretaries' bureau of information, incorporated in Illinois in 1905, and represent thousands of retailers.

No less than four hundred million envelopes will be needed in the next four years for the correspondence of the government service. Postmaster-General Hitchcock has closed a contract for the envelopes with a Cincinnati firm. The contract will amount approximately to $233,556.

The United States circuit court of the eighth district has handed down an opinion that the purchase of the Southern Pacific by the Union Pacific "did not amount to a direct and substantial restraint of either interstate or international commerce.

By a vote of 1,036 to 204 the taxpayers of Helena, Mont., have voted to buy, for four hundred thousand dollars, the Helena water works plant, now owned by the Old Colony Trust Company of Boston.

Appropriations made by Congress in the third session of the Sixty-first Congress amounted to $1,026,682,832.

International.

The completion of the last section (about fifty miles) of the western division of the Central Railway line of Japan and the opening of the whole road to traffic on May 1, was celebrated at Nagoya. The Central Railway runs from Tokio to Nagoya, through the central provinces, opening up entirely new territory, comprising some of the most beautiful and interesting scenery in Japan. The cost of construction of the 225 miles amounted to $17,500,000. The ninety-five tunnels total 113,378 feet. The Sasago tunnel, the longest in Japan, is over two miles. The 351 bridges have a total length of 24,265 feet.

The freedom of the city of Edinburgh was conferred recently on Lord Minto in recognition of the services he had rendered to the British Empire in Canada and India.

It is announced that Count Tolstoi's estate, Yasnaya Polyana, is to be bought by the government for the sum of fifty thousand pounds.

The new census gives the commonwealth of Australia a population of 4,449,495.

Industrial and Commercial.

The Connecticut river shad season, which has just come to an end, was the best for five years. Before the federal government undertook to aid the Connecticut shad fishermen, a few years ago, a ten-pound shad was a very great rarity, and one weighing half that was considered an excellent fish. The catch had dropped to some seventeen thousand shad a season. Upon the government's coming in and stocking the river with fry, the catch rose to where it had reached one hundred and twenty thousand a season, when government aid was discontinued. Now it has again dropped to twenty-five or thirty thousand shad a year. The season on the Connecticut lasts but forty days in all.

The longest underground cable in the world—nearly two hundred and fifty miles—is to connect Washington, Philadelphia, and New York. The American Telephone & Telegraph Company is now installing one hundred and thirty-five miles of conduit between Philadelphia and Washington. New York and Philadelphia are already connected. Seventy-four pairs of wires are contained in the sheath which forms the outer covering of the cable, and will be able to transmit simultaneously ninety-nine telephone and two hundred and ninety-six telegraph messages. The cable is expected to be ready for operation by next fall.

Canada took seventh place in wheat production last year. The total wheat product of the world was 3,651,866,000 bushels. Russia took first place with 776,000,000 bushels. The United States was second and British India third. The total production of all kinds of grain in Canada was 522,459,421 bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SCIENCE VS. SUPERSTITION.

W. D. MC CRACKAN, M.A.

IT must have proved an unpleasant surprise to the Athenians to be told by Paul that they were "too superstitious" (too religious, the Revised Version gives it). Athens was the recognized intellectual center of the ancient world, the seat of learning from which radiated whatever passed for knowledge among the nations of the earth. The fame of Athens rested largely upon the works of its philosophers, scholars, poets, and artists. Its mental atmosphere was reputed to be so keen and stimulating that the writer of The Acts describes its citizens as always eager "to tell, or to hear some new thing."

Superstition is not generally associated in the public thought with pronounced mental activity, but rather with density of thought, and Paul's estimate of the Athenians might well have seemed beside the mark even to unprejudiced hearers. But Paul was not judging from appearances; he was looking beneath the surface. To him it was evident that, in comparison with the profundity of spiritual understanding, mere intellectualism amounted to little more than shallow superstition. The man who wrote to the Corinthians, "The wisdom of this world is foolishness with God," could not be deceived by the glamour of Athenian life. He knew that one may have the wisdom of this world and yet worship an "unknown God," and do so "ignorantly." Now, to be ignorant of God is to be ignorant of Truth, because God is Truth. So-called knowledge, which bases itself on human hypotheses, on the testimony of physical sense, no matter how varied and extensive it may be, lacks a solid substructure and is "foolishness with God." Conclusions reached by the wisdom of this world may be styled scientific by those uninstructed in the Science of being, but under the lens of spiritual understanding they are seen to be mere superstitions.

Mrs. Eddy declares that "we need to understand the affirmations of divine Science, dismiss superstition, and demonstrate truth according to Christ" (Science and Health, p. 149). Mortal consciousness, working within its own circumscribed limits, knows nothing of the infinite possibilities of the divine Mind. Its supposed radius of action is insufficient to satisfy even human aspirations, much less the requirements of God. It tries to prescribe boundaries to man's capabilities, though the Scriptures assure us that man is made in God's image and likeness. It fills human hearts with longings which it cannot satisfy, and starts questions which it cannot answer; therefore mere intellectualism, being ignorant of God, or true substance, begets a sense of lack and loss, of want, and desire for something it cannot bestow.

In this predicament mortal consciousness invents explanations concerning God, man, and the universe. It fabricates laws and attempts to impose them upon mankind as valid. Not a few of these inventions are scrupulously obeyed by many people under the belief that they are natural laws, whereas they are mere myths and superstitions, emanations of the carnal and not of the divine Mind. False beliefs concerning God lead to scholastic theology, describing God as the creator of evil as well as good. A belief of power in matter leads to *materia medica*, a false sense of medicine. A belief of law as physical or material begets so-called physical science, although law in and of itself is wholly mental or metaphysical and cannot be perceived by the physical senses at all. The phenomena of law as expressed through material conditions are all that can be perceived by material sense.

It is refreshing to turn from the superstitions of material sense, from its false explanations and its mistaken reasoning, to the actual Science of being and its true understanding of imperishable facts, to brush aside the fiction of materialism in order to disclose the realism of Spirit, and thus to escape from the futile speculations and ignorant notions of mortal mind, which pursue each other in a vicious circle without permitting any real advance or actual progress to take place. As a rule, public opinion associates the word superstition with erroneous belief concerning religious matters, but the world is beginning to understand that superstition can creep into matters of medicine and physical science as well. Christian Science is leavening the "three measures of meal" (*Ibid.*, p. 117), transforming both science, theology, and medicine with the leaven of spiritual understanding. One glimpse of God, the first cause and governing Principle of the universe, including man, as infinite Love, suffices to dissipate the elaborate network of material law, so called, to nullify the most obdurate and settled convictions of mortal consciousness.

If, therefore, there be any who accept as true the commonly believed laws of disease, who ascribe to omnipotence the power to do evil, or who imagine that matter contains within itself the ability to act as cause and to produce results, such persons, like the ancient Athenians, are essentially superstitious and ignorant, though they may be deeply versed in the assertions of their own mistaken beliefs. But he who understands and is able to prove the power of Spirit over all so-called material obstacles, whose spiritual perception of the law of God equips him to speak to matter and evil as one having authority, who knows man as the son of God, and in a Christian and scientific manner exercises his divine rights, is truly learned, savingly intelligent, spiritually wise.

REFLECTING THE DIVINE LIKENESS.

J. MORLEY WYARD.

THE writer of the letter to the Hebrews, sounding a stern admonition, declares God to be "a consuming fire." The apostle John, on the other hand, reiterates, as though he delighted to hold the thought ever in his consciousness, "God is love." Here we have two brief statements of Scripture that seem to be irreconcilably antagonistic, and yet upon nearer examination they prove to be inseparably harmonious.

The prophet Malachi, of whom we know so little, indeed nothing beyond the inspired message which with the assurance of the near coming of the Christ closes the Old

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

Testament canon, says: "The Lord, whom ye seek . . . is like a refiner's fire, . . . And he shall sit as a refiner and purifier of silver: and he shall purify the sons of Levi, and purge them as gold and silver." The evangelist of the Old Testament, centuries before Malachi, with similar confident understanding of the truth, asks: "Who among us shall dwell with the devouring fire? . . . with everlasting burnings? He that walketh righteously, and speaketh uprightly; . . . and shutteth his eyes from seeing evil."

And again, the apostle of the new covenant assures us: "He that dwelleth in love dwelleth in God, and he in him." The imagery of Malachi is one of the most exquisite pictures of oriental symbolism, and though often quoted, loses nothing by the repetition. The fire of the refiner affects injuriously nothing but the dross that clings to the incorruptible metal. The more volatile constituents pass off in quick evaporation, and in the eliminating and perfecting ordeal the baser admixture is altogether consumed.

It must be clearly apprehended and understood that in this refining fire no change is wrought in the essential character of the differing contents of the crucible. In spite of the close association, the dross is never more than dross, and the silver is never less than silver. By no conceivable combination of circumstances can either ever become a partaker of the nature of the other. The dross can never reflect the image of the refiner, no matter how fierce the flame nor how prolonged or expectant the gaze of the operator. Neither can the pure metal ever lose its inalienable power of reproducing that likeness. In Science and Health, Mrs. Eddy says: "Objects utterly unlike the original do not reflect that original." And again: "Matter and mortality do not reflect the facts of Spirit" (Science and Health, pp. 506, 215). Like the master workman, God patiently waits and watches until His own image, divinely fair and perfect, is pictured in the crucible; and this not for His own enlightenment or encouragement, but for our profit.

The one who is a coworker with God has no doubt as to the results of his labor. He has no mental struggle regarding election or reprobation, no debate about the nature or occasion of the new birth, no prescription concerning typical or traditional holiness; he knows that in spite of the unattractiveness of the outward seeming and the evidence of worthlessness, the unalloyed purity will presently be demonstrated, and that the divine image will be evolved by the spiritual process employed. In a few pregnant words, Mrs. Eddy clearly defines the wide difference between the healing of Christian Science and its recent imitations: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (*Ibid.*, p. 477).

The perfect man can reflect only perfection; and with antithetical phrasing it can be truly said that perfection can be reflected only by the perfect man. God's perfect child cannot reflect sin, but must reflect holiness; he cannot reflect sickness, but must reflect health; he cannot reflect death, but must reflect life. The Lord Jesus did not purge the sinner or heal the sick or raise the dead by a recognition of any fact of sin or sickness or death, or through a belief that sin and sickness and death would be canceled because of his prayers. He understood that though mortal man is enthralled by his mortal dream of sin and sickness and death, God's spiritual and perfect child cannot be discomfited or defeated by either or all of this trinity of illusion and is forever immune to their assault.

Christ Jesus manifested Truth, and his doctrine is the application and operation of divine law as the test of the crude ore of human thought and conduct. Toward the children of men, ignorantly indulging, weakly consenting, or defiantly persisting, as the case may be, our God is indeed "a consuming fire." And he who determines to forsake the sin, who resolves to go to the Father, will find our God to be the welcoming Father-Mother. The truth destroys, but to restore; it wounds, but to heal; it troubles, but to gladden, and as we walk in the truth we walk with God.

When character is so sublimated that it naturally and simply irradiates spiritual purity and beauty, when the spiritual man appears to us clothed upon with the perfectness and power of Spirit,—then divinity is made manifest, and the "greater works" promised by Christ Jesus are in process of accomplishment.

"THY KINGDOM COME."

HELEN WARD BANKS.

To Jesus, sitting on the mount of Olives, came his disciples, asking, "What shall be the sign of thy coming?" They were looking, all of them, for a speedy and spectacular herald of the "forever coming of Christ" (Science and Health, p. 230); a material sign that should convince a material people against its will. In spite of Jesus' teaching, it was hard for them then, as it is for us now, to make real the fact that Truth is ever present, and the kingdom of heaven within. They had not yet learned that one never wins the kingdom of heaven by standing inactive, waiting for it to flash on his sight, but only by patient, insistent effort day by day in his own consciousness to replace wrong thinking with right.

Read in connection with this question of the disciples, in the twenty-fourth chapter of Matthew, the parable chapter that follows is full of significance. Every parable is an encouragement to faithful watching and working and waiting. There is no "Lo here!" nor "Lo there!" but each individual in thought and deed working out his own salvation, in order to bring the kingdom of heaven to *earth*. The wise virgins filled their lamps with oil every day, that they might be ready for the bridegroom's coming; the faithful servant, whether he had been given much or little to work with, daily utilized his portion to increase it against his master's return; those who were awaiting the final judgment fed the hungry and clothed the naked in daily, loving service.

The parables are for us in this day. We have seen the vision of Truth and it has shone on us almost bewilderingly, as the vision of the Holy Grail dazzled the eyes of Parsifal. But, like him, we do not find the truth itself till we have practically proved it in our daily thinking and living. Christian Science is not coming to convert the world by a sudden flare of light. It will convince and convert the world only through the individual living of its adherents. Mrs. Eddy tells us in Science and Health (p. 514) that "diligence, promptness, and perseverance . . . carry the baggage of stern resolve and keep pace with highest purpose." How easy all of us have found it in the light of our vision of Truth to conceive that "highest purpose," and how very difficult have we found it to keep "stern resolve" with his baggage train of "diligence, promptness, and perseverance" in pace with it.

But it is the only way. There is no royal road to Truth. We must keep to the highway, and we must, individually, walk step by step, day by day, to bring the kingdom of heaven to earth. This demands patience, but Christian Science patience is not the dogged, lifeless submission to which some of us have given this name; it is a steadfast courage that cannot lose its joy, an active waiting for accomplishment. The wise virgins doubtless sang over their daily task—they were so sure of the bridegroom's coming. The servants put their best thought and interest into their buying and selling, secure in their master's final "Well done." Those who visited the sick and gave the cup of cold water did it gladly, for they knew they were serving Truth. Not one individual thought he was doing a great work, and yet each one by his patient, faithful daily work was helping to bring the kingdom of heaven nearer.

Digitized by Google

There is a class of thinkers who deem they can reform society by overturning it. But when, after the overturn, they seek to form society anew, they find it is still made up of individuals, and unless each one in the new system who takes the high place has learned that life is spiritual and not material, unless each in thought and deed is bringing forth the "fruit of the Spirit" instead of the "works of the flesh,"—and St. Paul in his letter to the Galatians names them all very plainly,—the kingdom of heaven is no nearer, either to the rich or to the poor, than it was before. The kingdom of heaven is within, and only its growth in each individual means its growth in the whole world.

It is a wonderful thought that by our daily patient work to put every false belief out of our own consciousness, by our daily increase in love and gentleness and alertness, we are helping to bring the kingdom of heaven nearer! But so it is. It is only by each one's individual realization and utilization of the truth that the answer will come to the prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven."

THE TRAVELING MAN'S OPPORTUNITY.

LINDLEY I. HARRIS.

THERE is no class of men to whom Christian Science appeals more strongly than to traveling men. Their calling is beset with more vexations than the ordinary run of men have to encounter and their patience and forbearance are subjected to the severest tests. The traveling man certainly needs the strongest support obtainable to assist him in the proper performance of his duties and in their proper demonstration. What stronger support can he have than reliance upon divine Principle affords and obedience thereto in his dealings with his fellow-men?

I say this from personal experience. There was a time when I considered mesmeric will-power the proper medium to employ in selling goods, and this is an almost universal method among traveling men and is taught them by their firms and by some writers on the subject of salesmanship. I have found, however, in Christian Science that this is not an enduring method, and that it always results in erroneous conditions and dissatisfied customers, when you have succeeded in convincing them against their judgment and either sold them something they did not want or too much of the commodity you represent.

When I first beheld the light of Truth as exemplified by Christian Science, I saw the fallacy of animal magnetism and began the practice of the golden rule of doing to others as I would have them do to me. I demonstrated right from the start that this was far preferable to the old method, and it brought results far in excess of my most sanguine expectations, for the work was directed by divine Mind and only good can emanate from that source.

Christian Science offers to the traveling man relief from the erroneous conditions to which he is exposed. The sense of lack is overcome by the understanding that there is no lack in divine Mind, and it can be demonstrated that we are not dependent upon any personality for our needs, that Mind supplies man abundantly with all he requires, and the supply is not and cannot be hid by any asserted law of mortal mind. The feeling of depression is also met and overcome by reliance on God. Nothing can depress God's child nor cause fear of failure or lack.

The sense of loneliness, the longing for home and loved ones, is met by knowing that omnipresent Love abolishes the sense of separation, and we learn that one mighty arm encircles our loved ones and the other is around us, and therefore there can be no separation in Mind. The temptations which beset our paths,—the convivial glass, the card table, the profaning of God's name, the falsehoods about our sales,—all are swept away as mists before the morning sun when we learn the way of Truth in divine Science. The perfect healing which I experienced in Christian Science prompts me to give my testimony of the efficacy of this great truth to my brethren.

I was a hard drinker. The few talents I possessed were buried in the social glass with boon companions. I had the misfortune to be dubbed "a good fellow"—a mistaken application of the term, for I now know what a bad fellow I was. The usual consequences followed my riotous living,—loss of money, loss of friends of the right kind, loss of one position after another, and the loss of my manhood. Then I found that "man's extremity is God's opportunity." Christian Science found me, and two treatments, with the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, healed me perfectly. My desire for liquor and fast companions left me entirely, and though I have been exposed to the same temptations, there is no longer any desire. I know that my sin is forgiven,—destroyed by Truth. I am healed!

It is over four years since I was transformed by the renewing of my mind; old things have passed away and all things are become new; the peace "which passeth all understanding" abides with me; prosperity is dawning upon me, and I can say with the apostle Paul that I "stand fast" in the liberty wherewith Christ has set me free. I would advise all traveling men to try Christian Science: to get Science and Health, read it, study it, demonstrate the truth taught therein, and they will find the peace and happiness which I possess and which I want to share with my brethren. It is for this purpose that I pen this article, to do my share in advancing this glorious gospel of Truth taught and demonstrated by Christ Jesus and discovered anew by our beloved Leader, to whom we owe endless homage for our purification and uplifting.

AWAKENING.

BERTHA W. TIFFANY.

MRS. EDDY tells us that "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). In endeavoring to understand better what this "correct view" was, and how to attain it, several experiences and many lines of reasoning assisted the writer to draw nearer its right apprehension. One said to me that it was impossible to hold in thought an ideal, every step of the way to its attainment being unknown. In replying to this objection, the thought of what Columbus did not know regarding the perils of the voyage, the distance to be traveled, or what the land, if discovered, would be like, or when he would reach it, proved conclusively that we can and do hold ideals beyond the limited sense of our present experience.

When Columbus embarked on his voyage he began a crusade against the narrow view of the world that then obtained, and on making the discovery he healed the world of one phase of ignorance. He did not evolve a continent by imagining it to be there, but he lifted the veil of ignorance and exposed to view the fact that there was another continent; that it was as real as the old world, and that it always had been. The ignorance of the people regarding its existence had not affected its existence any more than does the ignorance of mortals respecting man's perfection and spirituality make man less than perfect. But, in proportion to our realization that there is one perfect, spiritual cause, hence but one perfect spiritual effect, we are better able to behold man as the image and likeness of Spirit, God; and having always been so, as neither sick, sinning, nor dying! Is not this, then, the "correct view" of man that heals the sick, reclaims the sinner, raises the dying, and demonstrates man's spiritual origin and status?

The healing of sickness or sin in Christian Science

Digitized by Google

is the lifting of the veil of ignorance about man's perfection,—past, present, and future,—and the awakening of human consciousness to the actuality of this fact, here, now, and everywhere. As Mrs. Eddy better states it, "This awakening is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick. This is the salvation which comes through God, the divine Principle, Love, as demonstrated by Jesus" (*Ibid.*, p. 230).

THE ELIMINATION OF EVIL.

NEWTON C. GILLHAM.

THE elimination of evil can but mean the destruction of sin, sickness, disease, death, of mortal mind and every material thing. Everything that is opposed to God, good, everything differing from infinite Mind, the sole and only creator, is outside the realm of the true, the real; is not of Spirit, and consequently is numbered with the seeming, the unreal. That which is positive is real, that which is negative is unreal. So in the elimination of evil we do not have a positive or real quality to deal with, but a negation only. When we prove that everything outside of God is unreal, its elimination is no longer the herculean task that it has appeared to be to those not in Christian Science.

The statements in the opening paragraphs of the first chapter of the gospel of St. John, which imply that "God is All," are the lever that may be used to lift a world of doubt from those tangled in the web of uncertainty. Let us take for our fulcrum the third verse: "All things were made by him; and without him was not any thing made that was made." This expresses a wisdom which is wiser than the great teacher of physics who said, "Give me a lever long enough, and a place to put the fulcrum, and I will lift the world." In the fourth chapter this beloved disciple, who was nearer to Jesus than any of the twelve, states that "God is a Spirit." In the Revised Version this is rendered, "God is Spirit," a much more acceptable interpretation and one that lends a tower of strength in proving the allness of God; and this statement we shall use for the long-sought place to put the aforementioned fulcrum.

Now since God is All, all must be whatever God is, and whatever the world, creation, aye, the universe may contain, whatever the component parts may be, whatever substance therein is, it cannot be different from, and in the nature of things must be, whatever God is; and if that which is of God's world, creation, or universe differs in one iota from what God is, then it is without the pale of what is,—is not like God, hence is not. If it were otherwise, God would not be infinite. Since "all things were made by him [God]," and in view of the fact that "God is All," then all things are not only made by God, but are made in and of God. By pondering these things we are led to see more clearly what Paul meant when he said, "For in him [God] we live, and move, and have our being." So we are not to think simply of God as being the only creator, but that all things are constituted in and of His manifestation.

Again, we must submit that since God is All, the only creator, and is Himself Spirit, then God's world, creation, or universe, created in and of Himself, is a spiritual creation, a creation which cannot possibly partake of anything unlike itself, which cannot contain anything unlike God, Spirit. Further, the teachings of Christ Jesus proclaim God to be good, a fact in itself which reveals God's creation to be good, "like unto himself," for God is the only cause and creator. This not only precludes evil from God's creation, but it reveals God, good, to be without an opposite, for we must look upon God as being, and do know Him to be infinite. Mrs. Eddy says (Science and Health, p. 469), "We bury the sense of infinitude, when we admit that, although God is infinite, evil has a place in this infinity, for evil can have no place, where all space is filled with God." Thus we prove the nothingness of evil by proving the allness of God. In entire harmony with all this, Jesus said, "Ye shall know the truth, and the truth shall make you free."

No, we do not propose to eliminate evil by argument, but by knowing we are made free. To know the truth makes it possible for us to live the truth, and living the truth eliminates evil from our lives in proportion thereto. As the world attains the Mind that was in Christ Jesus, in that proportion is the world eliminating evil, the ratio of which is changing slowly, gradually, but perceptibly and surely. We see its total disappearance prefigured in these words of our beloved Leader (Science and Health, p. 372): "When man demonstrates Christian Science absolutely, he will be perfect. He can neither sin, suffer, be subject to matter, nor disobey the law of God."

DOMINION.

IGERNA B. J. SOLLAS.

THE second of the new sayings of Jesus has been interpreted thus: "Jesus saith (Ye ask who are those) that draw us to the kingdom, if the kingdom is in heaven? . . . The fowls of the air, and all beasts that are under the earth or upon the earth, and the fishes of the sea (these are they which draw) you, and the kingdom of heaven is within you: and whoever shall know himself shall find it. (Strive therefore?) to know yourselves, and ye shall be aware that ye are the sons of the (almighty) Father: (and?) ye shall know that ye are in the (city of God?), and ye are (the city)."

The text is scanty and the meaning doubtful, but the association of the allusion to the animal kingdom with the command to discover the divine sonship of man, *that is, to* see in man the divine image, is suggestive that this saying is a quotation from Genesis i. 26: "Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth." If this saying is a free quotation of the Scriptures, as many of the sayings of Jesus were, then in putting it in this form Jesus was spiritually interpreting it. What he understood by dominion over the beasts he showed when he said, "Behold, I give you power to tread on serpents and scorpions;" "They shall take up serpents; and if they drink any deadly thing, it shall not hurt them." This dominion is found only by him who strives to know himself the son of God, who "waiteth for the manifestation of the sons of God," and it is one with the dominion over the carnal self.

Daniel's dominion over the lions in the den consisted in his knowledge of himself as a son of God, free from all thoughts of fear or of resentment against the king who had put him in a place of seeming danger, and "understanding the control which Love held over all" (Science and Health, p. 514). So Paul in his fearlessness was able to prove that the viper instead of hurting him could become a means to convince the people of his divine mission. He was drawn to the kingdom by the overcoming of false beliefs and by the vision of true being. Mrs. Eddy tells us that "the serpent of God's creating is neither subtle nor poisonous, but is a wise idea, charming in its adroitness, for Love's ideas are subject to the Mind which forms them,—the power which changeth the serpent into a staff" (*Ibid.*, p. 515).

Interpreted thus, this new saying is in keeping with other sayings of Jesus, and it is not surprising that he should have quoted and interpreted a verse which so directly supported his own teaching.

To pity distress is but human;
To relieve it is Godlike.

HORACE MANN.

SELECTED ARTICLES.

[Frederick Dixon in *City of London* (Eng.) *Observer.*]

In the report of the lecture on Christian Science by a clergyman, printed in a late issue, it is evident that he thinks Christian healing is a process of mental suggestion. Will you permit me to point out that if by a process of mental suggestion you can suggest what is supposed to be good to a person, you can with equal certainty suggest what is evil. For this reason, mental suggestion is about the most dangerous thing in the world, and is the absolute antithesis of Christian Science. Christian Science works, if it is possible to put it in words, by teaching a man the spiritual or absolute law. As he learns what this law is, he is able to overcome all physical ills, whether organic or functional, as these are alike mental in their origin.

The natural science idealist admits that matter is simply the result of energy, or of mind. If this is the case, it is obvious that disease, whether organic or functional, being caused by the human mind, must be healed through divine Mind. To convince the human mind by giving it a dose of medicine is simply a clumsy method of accomplishing something which can be done by teaching it the spiritual law, or absolute truth. Jesus said, "Ye shall know the truth, and the truth shall make you free." In the exact proportion in which man gains a knowledge of truth, he gains the Mind of Christ, and to the extent he gains this Mind of Christ he destroys all belief in the power or reality of evil, by proving good alone to be real. This is the way in which Christian Science healing is wrought, and it is something as absolutely antithetical to mental suggestion as anything it would be possible to conceive.

[Alfred Farlow in *Baltimore* (Md.) *American.*]

In a recent issue appears a letter signed "an Anti-Christian Scientist," which makes the charge: "The practice of medicine requires by law four or five years' hard study and a thorough knowledge of *materia medica* and human anatomy. On the other hand, no technical education nor study is required for the practice of healing by Christian Science." While on this subject the gentleman should have made the point that if Christian Scientists can heal the sick after a brief study of the Bible and the Christian Science text-book as effectually as the M. D.'s do after a four-year medical course, Christian Science should be commended. It certainly saves a great deal of time and a great deal of strain, and it cannot be denied that Christian Science does heal the sick, since there are many persons alive and well today because of the redeeming power of Christian Science, who had failed to recover in other ways.

It cannot be denied that the children of Christian Scientists are as healthy as the children of those who entertain other beliefs. It is said that a large percentage of the human race die in childhood. It is only necessary to deduct from this large number of children the few who have died under Christian Science treatment into order to determine the vast army of children which die under medical treatment, and thus it is shown that our veiled critic does not have to go outside of his own school of therapeutics to find ample ground for his criticism. And doubtless if he attempts to make a comparison, and it is the comparative value of Christian Science that the public desires to know, he will discover that, after all, Christian Science is the best latter-day method of curing sickness as well as sin. Christian Scientists may, indeed, be ignorant so far as medical diagnosis is concerned, but that they know a deal about the nature of disease is evidenced by their successful practice. They at least know something of the "good part" for which the Master commended Mary, and late experience is convincing that it behooves us to give more attention to the spiritual side of life, more attention to the cause of causes, to omnipotent God, who, above and beyond all material rules and regulations, has to do with the health and welfare of His creatures.

[Frederick W. Carr in *Cincinnati* (Ohio) *Journal and Messenger.*]

Without the Bible, there would be no Christian Science. No one is admitted to membership in the church who does not give his full consent to this first tenet: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). Christian Scientists believe implicitly in the Bible. They make it their daily companion. There is no reason why the future should ever see them abandon it. Were they to do so, they would cease to be Christian Scientists. Furthermore, the members of this church hold to the gospel as steadfastly as they do to the Old Testament Scriptures, and seek their salvation through Christ alone.

[William S. Campbell in *Washington* (D.C.) *Post.*]

A few days ago, before a Washington audience, a lecturer made this statement: "Christian Science teaches, 'All is mind; there is no matter.' And the Scriptures declare, 'Heaven and earth shall pass away, but my words shall not pass away.'" The speaker added: "Christian Science does not teach that matter is a reality which will some day be destroyed, for if matter were one of the factors of being it could never be cast out, but would remain fixed forever. It is not that the material universe was created to continue for a time, until it had served its purpose, then to be burned up and destroyed, but that it has no existence save in the mistaken belief of mortals."

This is not an assertion that the universe does not exist. On the contrary, Christian Science teaches that the universe does exist, and that it exists absolutely perfect and more beautiful than the material senses can comprehend. "Now we see through a glass, darkly," is the Scriptural way of expressing the mortal sense of God's universe. To many this explanation of matter may seem a strange proposition. That the Bible should be regarded as a text-book of science may seem stranger still. Yet it is upon this basis that the works of Christian Science are being performed.

It is a significant fact that human reasoning has never been able to define matter. It is something that can be seen and felt, perhaps tasted, possibly smelled; but to give a definition that will stand a scientific test has never been accomplished along material lines. It ought not to be difficult, however, to note that the only evidence there is of matter comes through the material senses. A step farther leads to the conclusion that when an individual has passed the stage in which he is dependent on the material senses, he has passed the stage where he has any evidence of matter. If this latter condition of consciousness is the real and eternal, then the former was unreal and temporal; and this is precisely the teaching of Christian Science.

According to the teaching of natural science, matter has been regarded as being composed of atoms, so infinitesimal that the microscope could not reveal them. These atoms were supposed to be constantly vibrating, but without coming in contact with each other at any time. This was held to be true whether the matter was that of a human body or the foundation of the most massive structure ever erected. More recent research along material lines has resulted in the theory that matter is composed of ions, and that an ion is many thousand times smaller than the atom. And what is an ion? Why, a point of energy.

The definition of matter, then, in natural science, is a theory, and in Christian Science it is that matter is a counterfeit of spiritual reality. Upon this latter basis results have been achieved that can be explained in no other way. It may be observed that the use of the Roentgen rays has made possible what was formerly supposed to be impossible

Digitized by Google

—the ability to see through matter. The rays of spiritual perception in Christian Science make it possible mentally to penetrate matter also, and to see that Spirit is All-in-all, and thus verify the teaching of the Bible.

The record of the acts of Jesus during the forty days following the resurrection, if studied as natural and not miraculous, throws light on this subject. One illustration will suffice: "The first day of the week, when the doors were shut where the disciples were assembled, for fear of the Jews, came Jesus and stood in the midst, and saith unto them, Peace be unto you." This record that matter had ceased to be a barrier to Jesus contains nothing supernatural or miraculous to the student of Christian Science. It is a proof that to the Master matter was becoming more and more unreal and Spirit was becoming more and more real.

Students of philosophy have been unable to account for matter. Thomas Huxley came to this conclusion: "After all, what do we know of this terrible matter except as the name for the unknown hypothetical cause of states of our own consciousness?" Prof. William Ostwald of the University of Leipzig, Germany, writes: "Matter is a thing of thought, which we have constructed for ourselves, rather imperfectly, to represent what is permanent in the change of phenomena." Grant Allen, the author, says of Professor Tyndall: "The charge of materialism could only be brought against such a man by those abject materialists who have never had a glimpse of the profounder fact that the universe as known to us consists wholly of mind, and that matter is a doubtful and uncertain inference of the human intelligence."

On page 277 of the Christian Science text-book are these conclusions, reached by Mrs. Eddy: "The realm of the real is Spirit. . . . Nothing we can say or believe regarding matter is immortal, for matter is temporal and is therefore a mortal phenomenon, a human concept, sometimes beautiful, always erroneous." The Bible says: "Behold, I create new heavens and a new earth: and the former shall not be remembered, nor come into mind."

[Charles D. Reynolds in *Cheshire* (N. H.) *Republican.*]

The advocates of materialism may not be willing to acknowledge the Scriptural teaching concerning spiritual power, and may not be willing to allow those who do so believe to rely upon and satisfactorily demonstrate the availability and reliability of this power in the overcoming of sin and disease; but it is proven, and rapidly becoming recognized, that there is not on earth today a teaching that is contributing more toward the solution of the sanitation and health problems that confront our state and local boards of health than is Christian Science. Real Christianity is the cleanest, purest, and most wholesome thing the world can possibly have. It begins upon the sanitary problems of our external environment by showing the necessity of first making clean the "inside of the cup and platter." "Cleanse first that which is within," was Jesus' first rule of sanitation and hygiene. It is not based on medical theory and practice, but it is thorough and complete, when applied.

There is nothing that repels and excites compassion in a true Christian like dirt and filth, lack of pure air and sunshine. They are suggestive of a mind gross and blinded with material darkness that indicates paganism, the absence of spiritual light and understanding. He sees in an unsanitary, disease-breeding environment a condition of mind and thought equally gross. The environment cannot be kept clean unless this state of the human mind is transformed. The sphere of so-called medical science is to mend, as far as possible, the discords so produced, until this mind is changed by the adoption of a more spiritual, ideal thought, which we call "the Mind of Christ."

Mrs. Eddy taught that one should always be sincere and honest with himself and others; that dishonesty and deception are plague spots and ruin men. She taught that man's first duty is to know and obey God, and she pointed out how this can be done by every one, and the blessings that will come to them if they are obedient.

[James Irwin in *Fairhope* (Ala.) *Courier.*]

The letter of J. F. Horne, in last issue of your paper, struck a note that interested me. When I first read Henry George's great book, "Progress and Poverty," there came to me a vision of the possibilities of a social life in which absolute justice prevailed; but it seemed to me that human nature must be changed before the ultimate of such a far-reaching reform as Mr. George proposed could be realized. Shortly after this I became interested in another wonderful book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. Through the study of this book and the application of the Principle which it inculcates, according to the rules therein, I became conscious of a power capable of regenerating our human nature and making possible the dream of a perfected social order on earth.

At the same time I realized that this external order was but the outward manifestation of an inward spiritual change wrought by the divine Spirit in the human heart. Since that time my only creed has been Christian Science, and as I note the wonderful progress which this new, yet old, idea, first exemplified by the great Teacher, is making throughout the world, my hope of a new earth, "wherein dwelleth righteousness," grows stronger, and faith in the government of an all-wise, all-loving, and omnipotent and divine Mind is confirmed.

The supremacy of the divine Spirit will finally be made manifest, and justice will prevail on earth. Of this my heart is assured and reason approves, and I am satisfied.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch.*]

Christian Science teaches that there is but one Mind, one intelligence in the universe, and that this Mind or intelligence is God. Thus all true intelligence manifested in the universe is but the reflection of that central Mind or intelligence, God. This great fact was constantly maintained by the Master, who again and again disclaimed the possession of a mind or will of his own, and declared that he did nothing but what he saw the Father do, and that it was the Father who did the works commonly ascribed to his own personality. Any one who is familiar with the Old Testament will remember that the power and intelligence manifested by saint and sage, by Moses, Solomon, Elijah, Daniel, were regarded as the power and intelligence of God, and that humility and obedience are mentioned as qualities essential to the manifestation of such intelligence. In other words, the Bible teaches that as man surrenders the belief in an independent, personal mind of his own, he is able to reflect or manifest the intelligence of God, the Mind "which was also in Christ Jesus."

Christian Science certainly teaches that man should be successful, that poverty and failure are not in accord with God's will, but the student of this Science learns that in order to meet with honorable success he must part company with selfishness, false ambition, pride and hardness of heart —with the qualities which are unlike the divine—and that by seeking first the kingdom of God, his material needs will be supplied. To "persist in consciousness" in order to obtain a material object is simply mesmeric suggestion. According to Christian Science, such a course of action would always be wrong. We think that most men will agree that such a system, practised by unscrupulous people, would lead to grave abuses, and we believe the time is not far distant when men will desire to learn how to protect themselves from the so-called force of hypnotism. When that time comes, let them look into Christian Science.

[Clinton B. Burgess in *Erie* (Pa.) *Dispatch.*]

The uncertainty which seems to exist in the mind of the writer of the editorial on "The Christian Science Organization," regarding the permanence of that organization, is not shared by those who have noted its continued steady, healthy growth since the passing of its Leader. During the last four months there has been an increase of twenty-one in the number of branch churches—an average of more than one a week for that period—and during the same time the number of applications for membership in The Mother Church has been equal to any similar period in the history of the church.

The test of the endurance of a great movement, founded upon an eternal truth, is the willingness of its adherents to follow Principle rather than to lean on and worship the personality of the one who points out that Principle. Jesus said: "If ye love me, keep my commandments;" and, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you." He saw that his corporeal presence, vividly before them, prevented in a measure their clear apprehension of the "Spirit of truth" which he represented and taught, and which they were to have proof of at Pentecost.

No one understood more clearly the danger to a cause of turning from Principle to personality than did Mrs. Eddy, the Founder of Christian Science, as is shown in her memorable article "Personal Contagion" published in the *Christian Science Sentinel* of July 7, 1906, in which she says: "In times of religious or scientific prosperity, certain individuals are inclined to cling to the personality of its leader. This state of mind is sickly; it is a contagion—a mental malady, which must be met and overcome. Why? Because it would dethrone the First Commandment, Thou shalt have one God. If God is one and God is Person, then Person is infinite; and there is no personal worship, for God is divine Principle, Love. Hence the sin, the danger and darkness of personal contagion. . . . Every loss in grace and growth spiritual, since time began, has come from injustice and personal contagion."

The few defections that have occurred in the Christian Science ranks have arisen from this cause; from following and leaning upon personality instead of Principle; but such defection, far from pointing to the disintegration of the Christian Science organization, has had exactly the opposite effect, it has resulted in a fraternity and united action among the churches that was not before possible. The permanence and growth of Christian Science depends, and will depend, on one thing only, namely, obedience to the command of the Master to preach the gospel and heal the sick.

[William J. Bonnin in *Warrington* (Eng.) *Examiner.*]

If he was correctly reported, a clergyman asked his congregation to accept his estimate of Christian Science, as he had "tried to read Mrs. Eddy's book." Equipped with this experience the reverend gentleman appears to have found no difficulty in asserting that Christian Science was neither Christian nor Science. Unfortunately it seems the rule rather than the exception with those who do not on their first introduction to the subject immediately lay hold of some measure of the truth of Christian Science, that they should be led into posing as authorities on the subject, and into an indulgence in that least admirable of all exercises of the human mind, the passing of judgment without knowledge. It does not seem to occur to them, all the eloquence of the Bible as to the preciousness and rarity of understanding and wisdom notwithstanding, that what appears foolishness unto them may be but the expression of their own want of understanding.

Christian Science is not a subject to be taken in at a glance. Its very name ought to protect any one from imagining such a thing possible, for it would be hard to find two words of more profound or comprehensive significance than the two great words which constitute it. And when one learns that all true science must necessarily be Christian if it is to be knowledge of the truth, then the irrefutable and eternal fact is recognized that absolute Christian Science is all there is to know. And so no one can possibly criticize Christian Science. The most that can be attempted is to criticize Mrs. Eddy's exposition of it, and the most that is actually attempted is the criticism of one's own mistaken conception of that exposition.

[C. R. Munro in *Hamilton* (Ont.) *Times.*]

In a recent address before the teachers in your city, a professor seems to have confused the teachings of Christian Science with hypnotism and mental suggestion. Had he studied Christian Science as taught in its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, he would have found that Christian Science is as far removed from anything in the nature of hypnotism as daylight is different from darkness. He would have found that while the hypnotist believes in the power of both good and evil, and the power of one human mind to influence another for good and evil, Christian Science absolutely repudiates the human mind or will as a factor in the healing work, and teaches that God, the divine Mind, is the only healing power; and in proportion as the Christian Scientist realizes the divine presence and power and the nothingness and unreality of any other so-called power or agency, and in the proportion that he subjects his human mind or will to the divine Mind, the Mind "which was also in Christ Jesus," can he prove God's allness in the healing of sin and sickness.

[Edward W. Dickey in *Los Angeles* (Cal.) *Herald.*]

Mrs. Eddy never claimed to be anything more or less than the Discoverer and Founder of Christian Science. She was simply the avenue through which Christ's Christianity is being revealed and repeats the ancient work of Christian healing. This healing is not only physical but moral, and is found making better men and better women. The Scripture says, "By their fruits ye shall know them," and her life-work has brought forth the fruits of righteousness to a greater degree than that of any other religious leader of modern times. It does not need arguments or discussions to sustain this fact, as the most evident results to be seen in all parts of the civilized world bear eloquent testimony of the truth of these assertions. These good fruits should forever forbid discourteous and unjust criticism of Mrs. Eddy. Nowhere in all of her life has she sought to do any one harm, and she always returned good for evil.

Christian Science does not teach that in the human sense of the term "there is no sickness." Disease and inharmonious conditions are not overlooked by Christian Science, but they are scientifically overcome.

Thank God! that I have lived to see the time
When the great truth begins at last to find
An utterance from the deep heart of mankind,
Earnest and clear, that all revenge is crime!
That man is holier than a creed,—that all
Restraint upon him must consult his good,
Hope's sunshine linger on his prison wall,
And Love look in upon his solitude.
The beautiful lesson which our Saviour taught
Through long, dark centuries its way hath wrought
Into the common mind and popular thought;
And words, to which by Galilee's lake shore
The humble fishers listened with hushed oar,
Have found an echo in the general heart,
And of the public faith become a living part.

WHITTIER.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE HEALING WORK.

THE apostle Peter counseled his followers: "Be ready always to give an answer to every man that asketh you a reason of the hope that is in you;" but there are many who, no matter how clearly a doctrine may be presented, refuse to be convinced thereby, and still demand, "Give me the ocular proof." Jesus apparently recognized this unwillingness to accept a merely verbal affirmation, for when he was questioned by John's messengers as to the validity of his Messiahship, he does not seem to have attached much value to words alone as a means to prove his claims. Instead, he showed the messengers, even as they waited for his answer, that through his ministry the sick were healed, the lame were made to walk, the deaf to hear and the blind to see; and then he bade them go tell John what they had seen and heard. Christian Scientists, therefore, as professed followers of the Master, should be able to make the same response to the question so frequently asked in regard to the truth of Christian Science; that is, they too should be able to heal the sick and the sinning who appeal to them for release from bondage. It should likewise be said of every Christian Science service that during its progress healing work has been done; and the full mission and usefulness of these services has not been attained unless this can be said.

Jesus declared, "Ye shall know the truth, and the truth shall make you free," and the truth should be presented at every Christian Science service with such understanding and conviction as to reach all who are in distress and who are honestly seeking for the benefits our Master has promised to "them that believe." It is in fact the right of those who attend a Christian Science service to expect to be healed, and to have this expectation realized; therefore it is the duty of the readers so to know the truth that they also will expect this result to follow the reading of the Lesson-Sermon. While it is true that the reading should be correct and scholarly, when judged by the world's standards, this is not the sum total of good reading. There should be such a clear understanding of the spirit of the Lesson,—the product of daily living "unspotted from the world,"—as will make the readers' repetition of the words not merely a formality, but rather an impartation of the truth which heals; or, as Mrs. Eddy has so forcefully expressed it, "that the mental atmosphere they exhale shall promote health and holiness, even that spiritual *animus* so universally needed" (Manual, Art. III, Sect. 1).

A careful study of the Lesson-Sermons shows that they consist of statements of truth topically arranged to elucidate some phase of man's relation to God, and that their mission is to clear away the erroneous impressions which have grown up through lack of understanding of His omnipotence, omniscience, and omnipresence. Every Christian Science practitioner expects that the realization of the truth of being, of the allness of good and the unreality of evil, which constitutes a Christian Science treatment, will have the effect of destroying the false beliefs which hold his patients in bondage, and there is equal reason for those who conduct a church service to expect that the reading of the Lesson-Sermon with the same realization of its truth will destroy the false beliefs of those who hear it.

The position of reader is one of great responsibility and labor, but the possibilities for good which it offers to those who humbly consecrate themselves to the work of thus preaching the gospel with signs following, are so great that they fully recompense those who are called to do this holy work. Nor should they shrink from these responsibilities as beyond their powers, remembering Paul's message to the Corinthian church: "Not that we are sufficient of ourselves to think any thing as of ourselves; but our sufficiency is of God; who also hath made us able ministers of the new testament; not of the letter, but of the spirit: for the letter killeth, but the spirit giveth life."

ARCHIBALD MCLELLAN.

THE LARGER LOVING.

HE was one of those to whom a holiday brings the coveted privilege of getting out into what at its best may be well named "God's own world," into the fields and woods, the unimpeded sunshine and sweet-scented air. Fortunate far beyond desert, he was welcomed to a delightful farmside that centered in white a surrounding maze of elms and pines, a veritable living green, through whose deep shadows, with much of turning and quiet laughter, a dear little river found its way to the near-by lake. The evening of his arrival brought him a renewed sense of the exceeding restfulness of nature's quiet, a quiet which was broken for him only by the plaintive and now seemingly near, now far-away, call of a whip-poor-will and when at bedtime he blew out his candle, parted the dimity curtains, and thoughtfully drank in the delicious stillness, he wished in his heart that every poor noise-disturbed mortal in the not distant city might share its benediction.

His most delightful experience, however, was reserved for the morning, when at four o'clock or earlier he was awakened by the incoming of a great tide of melody. King Day was entering God's umbrageous courts "with praise," and his feathered heralds were rendering a choral song such as ne'er was heard beyond the precincts of the cathedraled wood. The listener's pleasure was subdued, however, by his remembrance of the saddening and discreditable fact that these sweet singers who live, as it would seem, solely to bring us their glad minstrelsy, and relieve us of our pests, are being slaughtered even to their threatened extermination, as a result for the most part of the mandate of fashion, and that well-meaning Christian people are thus continuing an assault upon innocency which has become an inexcusable wrong.

The call of Christian Science to a life which is thoughtfully observant, and wholly inoffensive to all that is true and beautiful and good, is bringing about a great awaking upon this subject. It is leading its students to be more considerate of the rights not only of their fellow-men, but of their every least fellow-creature, and in this it is implanting and bringing into continuous activity the kindly impulses of brotherhood. They have been reminded by their Leader (Miscellaneous Writings, p. 36) that "beasts, as well as men," manifest Mind, though in a lesser degree; and he who knows and loves the birds and bees and butterflies will never question this statement. If therefore our creator is their creator, our rights are their rights under the divine government, and all destructiveness and unbrotherliness must pass away, in so far as that government is longed for and practically demonstrated.

Love alone can solve the human problem; this is the very heart of the gospel, and of Christian Science teaching, and he who is learning to manifest love in the little things of life will find himself the better able to manifest it in the larger. To cultivate the habit of interesting oneself in every manifestation of Mind is to become not only better acquainted with our kin, but more considerate of their rights; it is to become more kindly, more humanitarian, more just, more Christian, in all our relations and conduct. Jesus declared that the heavenly Father cares for all creatures, as well as for all men, and as one studies the pleasant and marvelously clever doings of the so-called wild things

Digitized by Google

about him, as he notes their exhibition of an instinctive intelligence that is simply unfathomable, he will begin to think of them as his little brothers, and he will more fully understand and more consistently practise that epitome of Christian Science, and of all true Christian living which reads, "And Love is reflected in love" (Science and Health, p. 17).

JOHN B. WILLIS.

THE LAW OF GROWTH.

MANY clear thinkers have studied the operations of the law of growth, and have given us some of the results of their study along lines biological, ethical, mental, and spiritual. The great Teacher said, "Consider the lilies of the field, how they grow;" and to this he added the significant statement, "They toil not, neither do they spin." The Scripture writers, too, have much to say respecting growth, and Paul tells us that "speaking the truth in love, [we] may grow up into him in all things, which is the head, even Christ." It is also interesting to note how in modern times some have seen this great truth and striven to explain it to others. Ruskin says, "Is not the evidence of ease on the very front of all the greatest works in existence? Do they not say plainly to us, not 'there has been a great effort here,' but 'there has been a great power here'? It is not the weariness of mortality but the strength of divinity which we have to recognize in all mighty things."

Throughout our revered Leader's writings we find many important references to the law of growth. She tells us that "growth is the eternal mandate of Mind" (Science and Health, p. 520), and again, that by availing ourselves of the supremacy of Truth over error, our "growth will go on until we arrive at the fulness of God's idea, and no more fear that we shall be sick and die" (*Ibid.*, p. 405). Is not this a glorious prophecy of human progress?

Some years ago certain lessons were learned in observing the growth of vines, the writer being indebted to Huxley's researches for many of these lessons. It was noted that the growth of most of the climbers was very slow and uncertain at the start. It seemed easier for them to cling to each other than to clasp the unyielding wall, and in such cases it often happened that the downfall of all involved was the result, until a friendly hand disentangled the tendrils and gave the vines a fresh start. This at the time appeared to be almost cruel and destructive, but it was the only way; and after a little while the vines were doing bravely, growing and climbing, although here and there one would turn back and wind tightly around its own stem, self-limited and disobedient to the law of its growth, thus symbolizing the experience of so many mortals. After a few years, however, the vines which obeyed the true law of growth were stately and beautiful beyond words, and had reached the roof of a Christian Science church, where they repeated to at least one onlooker the lesson of earlier days, and hinted at the growth of our great cause through the steady obedience of its individual members to spiritual law.

Here it is well to remember that although Paul may plant and Apollos water, it is God, divine Love, that "giveth the increase," and He never fails to do His part. Storms may arise and shake the tree and the vine, but this only causes the one to send its roots deeper into the soil and the other to cling more tenaciously to its support. To infinite Mind there is no storm, no destructful or baneful influence, therefore we should ever heed the Christ command, "Abide in me." In obedience to this command we grow because we live aright. The prophet Joel says, "Be glad and rejoice: for the Lord will do great things. Be not afraid, . . . for the tree beareth her fruit, the fig tree and the vine do yield their strength. Be glad then, ye children of Zion, and rejoice in the Lord your God."

ANNIE M. KNOTT.

PHOTOGRAVURE OF MRS. EDDY.

IN response to many requests for an authentic and satisfactory picture of Mrs. Eddy, the Publishing Society has secured, and now has ready for distribution, a fine photogravure, made by Littig & Co. of New York from a colored portrait painted by Miss Alice C. Barbour, which was based on a photograph of Mrs. Eddy taken by Mr. Bowers of Concord, N. H., in November, 1891, and with a rearrangement of her hair that was very pleasing to our Leader.

This admirable portraiture of Mrs. Eddy, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, is for sale at the following prices: 8-inch picture (mount 12x16), single copy $1; six copies $5.25; twelve copies $9.50. 12-inch picture (mount 15x20), single copy $2; six copies $10.50; twelve copies $19. 16-inch picture (mount 21x29), specially adapted for reading-rooms, single copy $3.50; three copies $9.50; six copies $18.50; twelve copies $33.50.

Address all orders for these pictures to The Christian Science Publishing Society, Falmouth and St. Paul Sts., Boston, Mass.

AMONG THE CHURCHES.

YOUNGSTOWN, OHIO.

Dedicatory services of First Church of Christ, Scientist, Bryson and Arlington, were held Sunday [June 11]. The day's program consisted of two services, the first being in the morning at the usual hour, half past ten o'clock, and the second at three in the afternoon. The only variation from the regular Sunday services was the reading of the history of the growth and development of the local organization, and a letter written by the Founder of the Church of Christ, Scientist, Mrs. Mary Baker Eddy, to the church of Lawrence, Mass., at the time the church in that city was dedicated.

The building is a brick structure, capable of seating about five hundred people. The architecture is of the colonial style. The interior finishings are in oak with a dull finish. The pews are fitted with green plush cushions. The basement of the building has been arranged for Sunday school purposes, and also includes two rooms in which is a library and general reading-room.—*Vindicator.*

OMAHA, NEB.

The two Christian Science churches of Omaha are to be consolidated, according to an agreement reached between First and Second churches. At the close of the regular meeting of Second Church of Christ, Scientist, held Wednesday evening [May 31], it was unanimously decided to dissolve the organization and unite with First Church, now worshiping at Twenty-fifth and Farnam but having a new church edifice in the course of construction at Twenty-fourth and St. Mary's avenue. Second Church has been worshiping at the Lyric Theater. This step was taken as a result of a joint conference of committees from both churches. These committees canvassed the situation thoroughly and agreed that the cause of Christian Science would be strengthened in Omaha by the union of all interests concerned.—*Omaha Bee.*

WINSTED, CONN.

The contract for the building of the new Christian Science church, corner of High street and Fairview avenue, was awarded this morning [June 14]. Work will be begun as soon as the dwelling on the premises is removed. The bids were not made public, but it is reported that the successful bidder's figures were in the neighborhood of ten thousand dollars.—*Winsted Citizen.*

THE LECTURES.

ABERDEEN, WASH.

Speaking before a large audience at the Grand Theater yesterday afternoon [April 16], Bliss Knapp of Boston expounded the doctrines of Christian Science in a most entertaining and interesting way. He was introduced by E. C. Miller, who spoke in part as follows,—

It must be admitted that the world is the gainer by any belief which tends to make its followers hopeful, helpful, and cheerful, in adversity as in prosperity. I believe that the Christian Science religion is doing much to make this a better and happier world for all. I have noticed that the members of the Christian Science church are looking always for the best in others—for the good in life. Many of my friends are Christian Scientists, and I have been impressed by the fact that without exception they seem to be happy, contented, generous, and hopeful. That Christian Science is cheering and satisfying is proved by the constantly increasing number of its adherents. If any of the statements made by the speaker who will address you this afternoon appear too good to believe, please remember that Christian Science asks you to believe nothing except that which can be proved.—*Aberdeen World.*

OXFORD, MICH.

Francis J. Fluno, M.D., lectured on the subject of Christian Science April 23. He was introduced by the Rev. John B. Whitford, author of "The Status of Christian Science in Denver" (which caused a sensation in orthodox circles a few years ago, and which subjected him to the charge of heresy). Mr. Whitford said in part,—

When the astronomer is about to examine the heavens, he finds it necessary to place his instrument on solid ground. The slightest tremor would render inaccurate his observations. There is a mental condition essential to the discovery and apprehension of truth. If the mind is beclouded with prejudice, warped by bigotry, or under the spell of tradition, it is not prepared to look upon the beauteous face of truth, for purity of heart is as indispensable in seeing truth as it is in seeing God. One of the characteristics of the present age is a passion for whatsoever things are true. Men are sifting the refuse of the ages, if haply they may find some golden speck of truth. We ought not to be afraid of the truth, for there is nothing more safe. The Christian Scientists have affirmed and demonstrated the remedial power of the truth, and a more intelligent, prosperous, clear-eyed, and sunny-hearted people cannot be found. The growth of Christian Science is without precedent or parallel. It has upheaved the foundations and toppled the superstructure of orthodoxy. Affirming the immanence of God in nature and in humanity, it finds no place for the permanency of evil, suffering, or death, for these are but passing clouds that fleck for a moment the eternal azure, and over all the sun of truth will shine with ineffable glory. A universe without evil, error, pain, or the loss of a single soul is the outcome, and this means the absolute supremacy of God. A thrill of ecstasy seizes the thought as it luxuriates amid the splendor of the vision.

We have with us today a gentleman who is an accredited representative of this denomination, so astonishing in its growth and in the character, culture, and wealth of its members. As I have studied this people from the Atlantic to the Pacific, and from Lake Superior to the Gulf of Mexico; as I have seen their spacious temples and all filled with reverent worshipers, I have read anew the ancient prophecy, "A little one shall become a thousand, and a small one a strong nation." But Christian Scientists affirm that what has been accomplished is but the prelude to a world-chorus of pure-toned, well-balanced voices. That a woman with years of almost hopeless invalidism should go forth like the crowned figure in apocalyptic vision, conquering and to conquer, is one of the marvels of history. Surely God was manifest in her work.

Let us forget today that we are Unitarians and Trinitarians, orthodox and heterodox, Quakers and eclectics, and be as eager for the truth as is the mariner in tropic seas for the appearance of the Southern Cross.

Correspondence.

SANTA MONICA, CAL.

The lecture at the Christian Science church last night [April 17] was largely attended and was a treat to all who heard it. The speaker, Willis F. Gross, was introduced by F. H. Taft, who said in substance,—

We are reckoned a Christian nation, and all the numerous churches and church organizations which are designated Christian are founded upon the teachings of the "Prince of Peace;" yet it has ever been the reproach of Christianity that so large a part of the energy and effort which presumably belongs to disseminating the saving doctrines of Christianity have been by their adherents directed against and wasted upon controversies with each other. It is therefore gratifying to find this organization, without flurry or ostentation, quietly gaining its foothold by assertive argument and effort, and not by negation and controversy.

It lies within my memory, and that of many whom I see before me tonight, when Christian Science as an organization was not. It is only a few years since it first took its place among the organizations of Christendom, but its growth has been marvelous, and that, too, not among the thoughtless and indifferent, who usually flock to new organizations, but in communities everywhere it has been seriously adopted by their intelligent and progressive people, until it has now attained an importance among the organizations of the world, where it must hereafter be reckoned with as one of the forces which make for progress. Especially is Christian Science to be commended for its achievements with respect to clean journalism. It has demonstrated the practicability of disseminating helpful news and at the same time ignoring and omitting all accounts of crime and scandal, whose tendency is necessarily to demoralize those who read of it; and if it had done nothing more than this for the world, it would be entitled to universal credit and approbation.

Although not professing nor adopting the tenets of Christian Science, I should be ashamed of my intelligence if I could not attend this meeting with an open mind and take from it that which may be good and helpful to me, even though I may not assimilate all that may be said; and this, I take it, must be the attitude of many who are here this evening—*Santa Monica Outlook.*

OAK PARK, ILL.

Frank H. Leonard gave us a lecture on the subject of Christian Science Thursday evening, April 27. George W. Woodbury, a prominent lawyer and an old resident of Oak Park, gave the introduction, saying in part,—

Three years ago I attended a Christian Science lecture in this village. The opening statement of the lecturer somewhat startled me. In substance it was this, that he had never known of a person who was opposed to Christian Science. I thought it could not be possible that I had heard correctly, and then the speaker added that he had known a great many people who were opposed to what they thought Christian Science to be, and that if Christian Science was what they believed it to be, he, too, would oppose it. The public entertains numberless misconceptions as to what Christian Science really teaches. Lectures such as will be given here tonight are for the purpose of affording to those who honestly desire to know, an opportunity to learn what is so taught.—*Correspondence.*

TOPEKA, KAN.

Under the auspices of Second Church of Christ, Scientist, Prof. Hermann S. Hering delivered a lecture on Christian Science in the Grand Opera House, April 30, to a large and appreciative audience. In introducing the lecturer, Judge A. W. Dana said:—

For nearly two thousand years the various sects and denominations of Christendom have been striving to convince each other and to show to the world that the Lord was on their side. Today the view-point is changed. People are not now asking so much if the Lord is on their side, as they are asking if they are on the Lord's side. No one now claims a monopoly of the divine truth, but all are anxious to know more of it. I do not by this mean that there is any danger that all religious denominations as such will be done away with, but that more than ever before the different sects and denominations of Christendom will resemble one vast army, composed, if you please, of various divisions and battalions, but all with one and the same object in view and all under the supreme command of Jesus Christ. This in my view is the way it should be, and is what we mean by worshiping God according to the dictates of our own consciences.

I do not have the honor to be a member of the Christian Science church and do not pretend to have any particular knowledge of its doctrines or principles, and shall not therefore presume to instruct you in either. I do know, however, that the growth of the Christian Science church has been most astounding and that it already numbers among its members fully its share of the most intelligent and best people in the land.—*Correspondence.*

EDWARDSVILLE, ILL.

The first Christian Science lecture in our city was delivered on Sunday afternoon, April 30, in Wildey Theater by the Hon. Clarence A. Buskirk, before an audience numbering about four hundred. The lecturer was introduced by R. D. Griffin, first reader of our society, who said in part,—

Christian Science claims to offer the solution of the problems of existence, problems which men have pondered over for ages, and its justification in works as practical Christianity is more generally recognized year by year. A subject of such scope cannot be adequately covered within the brief time at our command this afternoon, but the lecture will serve its purpose if in your thought any misconceptions of Christian Science are corrected and if you gain even a slight idea of what this Science really stands for. An understanding of Christian Science can be acquired only by conscientious study, but the Christian Science board of lectureship, of which our speaker is a member, was instituted to meet the need of inquirers and doubters who desire an explanation of some of the reasons for the faith of the adherents of this cause, and for those who want to know something of this religion which is making for freedom from the tribulations of mortal existence. Hundreds of thousands, throughout the world, testify that Christian Science has made their lives happier and better, and declare that through its ministrations they have been relieved from the fears and ravages of sin and disease sufficiently to cause great gratitude and rejoicing; and surely these attested results rightly demand our appreciative and kindly feeling.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Fremont, Mich.—Frank H. Leonard, Auditorium, July 21.
Vinalhaven, Me.—Willis F. Gross, Christian Science Hall, Main street, July 18.

TESTIMONIES OF HEALING.

Christian Science came to me over eleven years ago, since which time I have depended upon it for every need. I was sick and out of business, and in despair began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, through the reading of which I was healed. About two months after I began to read this book I was able to return to work. I continued to read until I was completely healed, which consumed a period of about a year from the time I first began this study. The physical healing was the overcoming of a complete breakdown from hereditary conditions, aggravated by living the life of what is termed a "good fellow." With this healing was also overcome the fear of taking cold on all occasions, as every winter I had been confined to my bed from one to three weeks at a time with severe colds. Since taking up Christian Science I have been kept from my business but once, and then only for three days.

All of this I am most grateful for, but for the spiritual uplift and for learning to know God as a God at hand, as a power in my daily life and available for every need, is beyond words to tell. During these years I have found the *Sentinel*, *Journal*, *Quarterly*, and now the *Monitor*, wonderful helps in unfolding more and more of this infinite divine Principle. I am grateful to God for this healing truth which is indeed "for the healing of the nations," and also to Mrs. Eddy, who was good and courageous enough to give us Science and Health, which has opened up the Scriptures and shown us a practical, available, demonstrable Truth and most loving God.

HORACE SEELY, Los Angeles, Cal.

It is with a sense of devout thankfulness to God that I wish to express my gratitude for the daily help which the knowledge of Christian Science has been to me. I can now say with all truthfulness, "He brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings." Since early childhood I had been troubled with deafness in both ears and head noises. I had been treated by three physicians, but could get no help. Then for years I did nothing, thinking it was of no use to try any more; but about four years ago I called upon and was examined by one of the leading ear specialists in this city. He refused to take my case, saying that the ear-drums were about gone, and with a heavy heart I gave up all hope of ever again hearing. One year ago, however, a *Christian Science Sentinel* was sent me, and I read and reread it. I thought the testimonies of healing were wonderful, and I also thought that what God could do for one, He could do for all who sought His aid.

It was in this state of mind that I called upon a Christian Science practitioner. She made clear to me the truth of St. John's words: "Now are we the sons of God;" and after the first treatment I knew that I was not dependent upon medicated cotton for my hearing; so I took it out. To my great joy I found that I could hear better than ever before, although the specialist had said I could not hear at all without it. The first Sunday that I attended church, I could not hear the reading of the service; but the practitioner told me that I must listen and be very grateful if I heard but one word and let that one word be my sermon. And so it was; I became as a little child, and waited patiently for the Lord. The next Sunday, there was one word that I heard plainer than all the others. It was the word "Love." I studied that word to see how much I could gain from it, and I found it was the life, the truth, the way.

This proved to be the awakening for me,—the dawning of a new day. My healing began at once, and I am happy to say that I am now a member of Second Church of Christ, Scientist, and that there are very few words that

Digitized by Google

I fail to hear at our Sunday service. The Bible and "Science and Health with Key to the Scriptures" are my daily study. I am not only thankful for the physical healing, but I am most grateful for the spiritual quickening that I have gained from my study of these books. I cannot find words with which to express my heartfelt gratitude to God, to Mrs. Eddy, also to the kind friend who sent me the copy of the *Sentinel*.

MRS. JOSEPHINE DRESSENDORFER, Indianapolis, Ind.

When I first heard of Christian Science I had been a nervous invalid for several years, and spent most of my time in bed or on the sofa. I had been under medical treatment more or less all my life, as I had never known what it was to feel really well. The doctors prescribed rest-cures, electric treatment, strict diet, etc., but nothing seemed to benefit me and I got worse and worse, until I had to be wheeled about the house in an invalid-chair; but I bore everything uncomplainingly, under the impression that it was God's will and was all for some wise purpose. I was not unhappy, because I always felt that God was with me and that in due time He would deliver me from bondage. And so He did.

A friend wrote and asked me to try Christian Science. I knew nothing whatever about it, and the name did not appeal to me; also I had heard it much ridiculed. Science in those days meant to me something that led away from God, and I was afraid the perusal of the Christian Science literature might do me harm, in trying to lead me out of the right path in which I thought I had been walking for many years, but to please my friend I got Mrs. Eddy's book, "Science and Health with Key to the Scriptures," although I did not like the latter part of the title at all. I, however, began to read it, and what was my joy to find in it the spiritual food my soul longed for, and that none of the churches had offered in a form that satisfied my cravings. I drank in every word and felt it was the truth. I could not put the book down, but studied it every waking moment, and by the time I was half way through, my ill health was at an end! I got up off my sofa and walked about, a free woman, and have remained so. My first act was to throw away all the medicine which I had been taking regularly three times a day. Since then I have never touched a drop, and this was six years ago. I felt that henceforth God would be sufficient for me, and so He has been. I have since had Christian Science treatment on three occasions for various ailments, and each time they have quickly vanished. Now that I know what Christian Science really is, I cannot understand any true Christian's opposing or doubting it, and as for its leading any one astray, it only leads them out of the various man-made creeds and doctrines into the straight and narrow way of Truth, into the path that Jesus trod.

No right-minded person can fail to feel grateful to the noble woman who has made the way plain to us through her great spiritual understanding, and those indeed are still "far from the kingdom of God" who can bear the least animosity toward her.

MRS. ANNIE M. MERCER, High Barnet, England.

Over eight years ago I was instantly healed of chronic stomach trouble through Christian Science treatment. I was directed to a practitioner, who told me that God gave man dominion over all the earth, and that I had only to turn to the first chapter of Genesis to find that statement. My answer was that I had known that chapter for a long time, but had never thought to apply it in this way. At dinner that day I had the first expression of freedom for many months. I had no more fear of what I ate, or what I drank. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but was not able to read much for ten days, as I was visiting and did not wish to mention a subject that seemed to be misunderstood, when I did not understand it myself. On returning home, however, I began in earnest to study this book, which has wrought such wonders in my consciousness. The truth seemed so natural, and I wondered why I had not seen it before.

I am indeed grateful for the daily unfoldment of the truth through the study of the Bible and our text-book. It has met my every need, and I am thankful to know even in a small degree that God is the only cause and creator, and that He makes my path straight.

ERMA LEE SNOOK, Philadelphia, Pa.

I desire to tell a little of what Christian Science has done for me. I had been a sufferer all my life until nine years ago. When I came here I had the pleasure of meeting a Christian Science lady the same day, and she invited me to attend the church services. I accepted, and was greatly interested. I also asked for help, though I had tried several physicians of good reputation but they said my case was hopeless.

My first healing was of five abnormal growths. At the time of healing my weight had increased greatly above normal, but I was healed of all that and a head trouble from which I had suffered for four years. There was a discharge out of the top of my head all the time. I was taken down with acute lung trouble, but was healed of it in a few treatments. A few months later, a horse ran away and threw me out of the carriage, seriously injuring my leg. I was thirteen miles from home, but I at once sent to the practitioner for help. At nine o'clock that night, when the practitioner treated me, the bone united and never moved out of place any more. The second day after, I felt as if my whole body had been injured; inflammation set in; but in one week my ills were all overcome, so that I was able to do my work.

Words cannot express my gratitude for what Christian Science has done and is doing for me. I am thankful that I can help others through the truth that has been revealed to me through the teachings of our beloved Leader, Mrs. Eddy.

MRS. IDA J. PEDEN, Laurel, Miss.

It is over nine years since I first became interested in Christian Science, and I wish to express publicly my gratitude for the many blessings I receive each day through the study and application of its teachings. My first healing was through absent treatment, after I had given up hope of being cured by *materia medica*. The trouble was a serious case of nervous breakdown, and the attending doctor told me I need never expect to be myself again. After this assurance I did not wish to recover, but my daughter came to me from an adjoining town, and after telling me of her healing by Christian Science said she wished to call a practitioner for me. I consented, and in a few days was perfectly healed. This healing was very wonderful to me, and it seems to me now that I only really began to live at that time. My life prior to my healing is like a bad dream of disease and suffering.

Christian Science has been our only physician since my first healing, and both disease and the results of accident have been dispelled for myself and family. Best of all, I have found God, and am beginning to understand a child's relation to its real Father,—a relation of love. Words fail to express my gratitude to God for this truth, which has taught me the way to help myself and others. I am also grateful to our Leader, who has made it possible for this age to understand and demonstrate the Christ-teaching. My prayer is for an understanding heart, that I may be able to do my part in the great work and thereby in a measure make some recompense for the good I have received.—SARAH FISCHLL, Pittsburg, Pa.

Digitized by Google

I wish to express my gratitude for what Christian Science has done for me and for my family. As for myself, two years ago I was a nervous wreck, unable to think long enough to accomplish anything about my work as a carpenter, which required both energy and confidence. These I tried to regain by using medicine, but as I gradually grew worse, I thought that perhaps it was God's will I should pass away. Those were very dark hours for me; but only sufferers who have been led out of darkness into light can imagine how I felt when, after four treatments in Christian Science, I was again a well man. Through the reading of Science and Health, which I have found to be most truly a "Key to the Scriptures," I have found that no matter what problem comes up, I have God to look to for help, and as an honest seeker, I find that we do not look in vain.

As I said before, I am not the only one in our family who is grateful for Christian Science. My boy, who for eleven years never passed over three months at a time without some sickness, and sometimes it was very serious, has never had, since we began to live in Christian Science, an attack of illness of any kind. He attends the Christian Science Sunday school regularly, and this seems to be a pleasure to him. My wife also has very high appreciation of Christian Science. Some years ago we joined an orthodox church, and lived up to its requirements the best we knew how; but we could not help noticing the inconsistencies in the sermons, therefore we withdrew from the church and united with First Church of Christ, Scientist, in this city, where we receive in every service more and more spiritual help, and love for the divine Principle of Christian Science; also love for our neighbor, which had been so long forgotten.

We are grateful to God for the numerous benefits, and the spiritual and uplifting thoughts we have gained. We are also grateful to our beloved Leader, Mrs. Eddy, for showing us the way to health and peace, which had been so long shut off from us.

JOHN AUG. LINDROS, Kewanee, Ill.

I feel that the spiritual method of healing which our dear Leader has established is no other than that which our Lord and Master practised nineteen hundred years ago, when he healed all manner of sickness, diseases of every kind and nature, for we have the same proofs today as of yore. Any one who doubts this may find the facts by a perusal of "Science and Health with Key to the Scriptures" by Mrs. Eddy. About seven years ago I was enabled to prove all her teachings to be scientific, and by living in obedience to divine Truth, great benefits were received. The tobacco habit of forty years' standing, both chewing and smoking, has been destroyed, while rheumatism, colds, chills, headaches, and stomach and bowel troubles, have vanished within a short time through an understanding of these teachings. Words are inadequate to explain all that this saving truth will do, if only one will give it a trial.

With what joy and gratitude can we express our devotion to the one who has led us out of darkness into the morning light of holiness. She has taught us to rely on the divine Mind, God, to aid us at all times, and as we come to know the truth, the truth will make us free.

THOMAS GLEASON, West Sand Lake, N. Y.

It is nearing six years since my first healing in Christian Science. At that time I was utterly discouraged, for after being under the care of a specialist for two years the condition of the stomach was not improved. Previous to treatment under this specialist I had carefully tried osteopathy with no result. Acting upon the advice of a friend, I went to a Christian Science practitioner, and from the first treatment I was able to eat whatever was set before me with no return of discomfort or suffering. The treatments were continued for ten days, as a bowel disorder and frequent bilious attacks had accompanied the other trouble. I have never taken any kind of medicine or used any material means since that first treatment. I had worn glasses for ten years, and had just had a new prescription filled for another pair when they were broken one Sunday morning. I telephoned the practitioner who had treated me a month previously and asked her to treat me for the headache which always resulted from not wearing glasses. I had no ill effects from their non-use, but because of my ignorance of Christian Science had them fixed the next day. I however found that I no longer needed to use them, the one absent treatment having overcome the sense of defective vision, also a muscular trouble for which at various times four of our leading oculists had treated me.

I cannot begin to express my gratitude to the dear Leader who so faithfully blazed the way that a knowledge of the true God, a God of Love, might be ours. I am sincerely thankful for all the blessings which have come to me since I have been a student of Christian Science; for the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which has made the Bible teaching practical, and applicable to my every-day needs.

BLANCHE ROGERS LOTT, Los Angeles, Cal.

In January, 1902, Christian Science was brought to my notice through a niece. I had been confined to the house for several months. I went to a noted health resort in Michigan with my husband, both of us expecting to take the baths, but at the first one I caught a violent cold. On my return home a physician was called, who pronounced my trouble asthma; he said that as it had come on late in life, I would never be well. I was compelled to sit up in bed, and while the physician did all in his power, I was not entirely healed until I took Christian Science treatment.

At the time of my illness the physician examined one of my eyes, as it was troubling me. At the age of thirteen I had lost the sight of my left eye, but was always able to see with the other. The physician said that an eye specialist must be called at once, that he would not be responsible for the sight of my eye, as I might become blind. This was done, and the specialist said that ulcers were forming on the pupil of my eye, which was closed and greatly enlarged. He prescribed the application of a remedy every two hours, a process which was very painful. I did not use my eye for three months, but I am now able to see nicely. From childhood I had suffered from severe headaches, being confined to bed for days at a time, but since I came into Science the headaches, which returned three times, have been entirely overcome. I have also been healed of catarrhal and heart trouble. The healing of some of these ills has been instantaneous. I am learning to understand God, and seldom need to call on a practitioner for help. I have also had some beautiful demonstrations for others. It is my earnest desire to be more Christlike. I have learned that the power of God is equal to every emergency and necessity, that He is available in all trouble. I am indeed thankful to God, and to our beloved Leader, for all the blessings that have come to me.—MRS. ELIZABETH GREEN, Cleveland, Ohio.

About two years ago I came to Christian Science for relief from sleeplessness, which had begun to trouble me about six months after I came to Berlin. The doctor said that change of climate and overwork were the cause of the trouble, and he prescribed all kinds of remedies, which did me no permanent good. When I had endured this want of sleep for about eight months, as a last resort, before giving up to discouragement and going back home, we decided to try Christian Science. We sought out a practitioner and I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. My cure seemed very slow. Often I became greatly discouraged and felt like giving up Christian Science, but the statements in the text-book had im-

Digitized by Google

pressed me so strongly as being the truth that I could not discard them as false, for even during this short period of study they had become my own convictions. When I finally came to realize this I stopped reading Christian Science merely for the "loaves and fishes," and studied it just for the interest and joy of seeking the truth. It was about two months before I noticed an improvement, but on looking back to that time now, I know that in two weeks, yes, after the first treatment, I felt lighter and freer, as if a heavy weight had been removed from me.

I am perfectly well now. I very seldom pass a wakeful night, and I am very grateful to Christian Science for the change it has brought about in my condition. This physical healing seems, however, very insignificant when I consider the other and far deeper results. Christian Science is to me a practical guide for every-day life, developing in me keener powers of observation and a clearer discernment of right and wrong in thought and action. The truth is conquering a great deal of self-consciousness and embarrassment which I suffered at meeting strangers, and is slowly rooting out other faults which made me miserable and which I had always despaired of overcoming.

That which I regard as the greatest blessing is what this understanding of Truth has brought to me mentally. The vastness of the universe filled me with an unfathomable sense of insecurity and dread, and I used to brood a great deal on the inconsistencies of a life which at one time seemed to be and the next moment to pass away into nothingness. The Bible, too, had been cast aside as a volume of contradictions. We did not attend the churches, for they did not offer any solution to these problems. Christian Science has, however, altered all this. I know that we are living in eternity right now, and that man is immortal even now. The consciousness of this lends a spur to activity; in the great light of eternal Truth, persons, events, and circumstances assume their proper level, and contentment and tranquillity have an abiding place in thought. I am especially grateful for this blessing, and I am indeed deeply thankful to Mrs. Eddy for her sublime perseverance in giving Christian Science to the world.

LORRAINE LABBERTE, Berlin, Germany.

I came to Christian Science, as a last resort, for the healing of a form of rheumatism pronounced by several physicians as incurable; in fact, they told me that there was not a case on record that had been cured with medicine. I am, however, perfectly well, and have also given up the wearing of glasses that I had used for years for relief from severe headaches. I was living in Los Angeles at the time, and applied to a Christian Science practitioner for help, the result proving that the truth does heal. I know this to be true, not only in my own case, but in that of others.—MRS. FANNIE H. WYLES, Santa Barbara, Cal.

During the winter one of the girls in the home of which I am matron became severely afflicted with a skin disease which spread rapidly over the body, also the head. It caused her much suffering, besides great mortification. We employed a physician, but she received no help from him, and continued to grow rapidly worse until the poor child became discouraged and said she wished she could have Christian Science treatment. I did not know to whom I could apply, because it was a case of charity; but I knew that divine Love would meet the need, and it was met.

The same morning, after attending Christian Science services, one of the ladies asked me why this girl had not attended a birthday party given for the inquirer's little daughter. I told her that she was in such a condition that she was ashamed to go out. The lady immediately replied that her daughter who had recently had class teaching would be glad to take the case, and before leaving the building arrangements to that effect had been made. Under the treatment of this most kind lady, in a short time the girl was completely healed, her skin being as soft as a baby's, without a scar or blemish. Not only for the physical healing are we thankful, but for the sweet spirit she shows in her daily life, for she is a changed girl.

MRS. ELNORA THORNBURG, Elgin, Ill.

Over two years ago I received my first help in Christian Science. In 1879, while living in the South, I had the "yellow fever" in a very malignant form, and an obstinate bowel disorder with hemorrhoids was a result. I suffered more or less for years from many other physical ills,—asthma, heart trouble, a bad cough which we felt was settling in my lungs, also headaches that caused me to endure days of agony and which were relieved only by the use of an anesthetic. During all those years from 1879 to July, 1908, I was continually under the treatment of different physicians. I have not, however, had a return of any of these ailments since the first treatment in Christian Science, except that I sometimes have a slight headache, the dreadful suffering being a thing of the past.

I feel that in time a clearer understanding of Christian Science and more faith in God, Spirit, will enable me to realize the nothingness of all discord, and I am truly thankful to God for my healing in Christian Science.

MRS. W. W. STANDIFORD, Woodward, Okla.

For some time before becoming interested in Christian Science, I had been in an attitude of mental protest toward all systems of religion. I was taught as a child to reverence the Bible, and I did love it, but as I grew older I found no satisfaction in it and much that seemed contradictory. What God was and where He was I saw no possible means of knowing, but I was sure there was a way out of the difficulties which beset mankind, and that some time, somewhere, I should find it. More than fifteen years ago, while visiting in Chicago, I heard something of Christian Science. Later on, I wrote to a cousin in that city, asking for treatment, and was healed of a chronic trouble from which I had suffered for years. This healing, however, was not permanent, perhaps because it was not appreciated, for I had no conception then of what Jesus meant when he said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Over eleven years ago, in the depths of despair, I turned to Christian Science in earnest, and commenced the study of Science and Health in connection with the Bible. Christian Science has explained Jesus' teaching to me; it has explained and made valuable the Bible; through it I have learned that God is divine Principle, all-inclusive—that the truth can be understood, defined, and demonstrated, that God is indeed omnipotent, omnipresent, and omniscient.

Before receiving help from Christian Science, I was almost constantly under the care of a physician, but since learning that the law of God is the law of harmony, the law of Life, the law of perfection to man His spiritual idea, that it is available in every hour of need and when understood and faithfully applied will cure disease of every kind, I have proved it for myself, and have been healed of two chronic ailments for which, under *materia medica*, I was treated without permanent benefit and with no hope of it. The healing was not accomplished quickly; it unfolded with my understanding, but I know that it is an eternal healing, that freedom which is knowledge of divine Truth. Nothing that the world has to offer could have given it to me, and nothing can take it from me. I am well and happy because Christian Science heals and satisfies.

I am indeed grateful to the one who founded the Christian Science movement; through whose selfless life the demonstrable knowledge of God has been revealed to this age; and when the straight and narrow way seems difficult, I think of the thorny path she has traveled to prove to the

Digitized by Google

world that there is but one power and that this power is Love; and to prove that all right action based upon this knowledge—no matter what the opposition may be—must result in the increase of harmony, for "the path of the just is as the shining light, that shineth more and more unto the perfect day."—BERTHA B. BUTLER, Columbus, Ohio.

[Translated from the German.]

Some two years ago, while going upstairs, I slipped and injured my knee. Swelling appeared at once, and after a couple of days I could hardly move my leg; but having heard of Christian Science shortly before, I applied for help by letter, with the result that after the second treatment the swelling disappeared, and within five days no vestige of the trouble was left. Shortly after this our eleven-year-old boy had a severe attack of fever, and the physician who was called in pronounced it an affection of the lungs. We did not, however, give the child any medicine, but wrote to a Christian Science practitioner to take up treatment, and the power of Truth soon became manifest. When the physician examined the child the next morning, he was very much surprised to find that the fever had completely gone, and four days later the boy was entirely well.

We are so glad to have found the truth which enables us to look above all seeming difficulties and see the light in God's light, and we are unspeakably grateful for the blessings which we have received through Christian Science. Next to God, we are thankful to the beloved Discoverer and Founder of Christian Science, through whom the truth has again been revealed to us.

E. KNOPF, Grünematt i. E., Switzerland.

My heart overflows with gratitude to God for the blessing that has come to us in Christian Science. Eight years ago I did not know what it was to have good health; rarely a day passed without my having to take medicine, and often no relief came, or at best it was only temporary. There seemed to be no relief for me, and I became weary and despondent. A kind friend then told me of Christian Science; and I finally concluded to try it, with the result that a bowel disorder disappeared with the first treatment. I had been told that this was, in my case, incurable owing to an injury in childbirth. I was also healed of heart trouble, and distressing headaches for which there was no relief in *materia medica*, besides stomach, kidney, and bladder trouble, all of which disappeared through Christian Science treatment. The complete healing took about one year, but the peace, the spiritual uplifting that came with it, cannot be described in words.

We have had many beautiful demonstrations of Truth's power since then,—over throat and lung diseases, hay-fever, etc.; and in every case the attacks were met very quickly. Words are inadequate to express our thankfulness for this beautiful truth that heals. I want my life to attest my gratitude to God, also to Mrs. Eddy.

MRS. KATHRYN E. CLEMENTS, Chicago, Ill.

Christian Science has been our reliance for about three years, and some good work has been done for us. My brother was healed of severe stomach trouble; a sister was healed of a running sore on her hand; her daughter was healed of a fever, and another sister was healed of cataract. We are members of Second Church of Christ, Scientist, of Los Angeles, and one sister and myself are members of The Mother Church.

ESTELLA M. GOLDENBEE, Los Angeles, Cal.

Brevity is the child of silence, and is a great credit to the old man.—HENRY WHEELER SHAW.

FROM OUR EXCHANGES.

[*Churchman.*]

Because spiritual leadership is now written without capital letters and without the directive guidance of some imposing personal power, even where it is not rejected it is apt to be viewed with apathy or a mild wonderment that such tremendous summons to mankind should be heard in such insignificant tones. The apostolic maxim, "Prove all things, hold fast that which is good," is being acted upon in a way that is bound sooner or later to shake the foundations of traditional Christian thought and practice.

Such self-searchings will have a stirring influence, for they are not the outcome of the pessimism that paralyzes and discourages. What is needed, and what is being prepared for, is the more thorough realization of the doctrine of the brotherhood of man and its full reinterpretation to a society whose moral fervor demands a program of action on certain definite principles. Such moral fervor is both the direct and indirect result of the incarnation. Christianity started as a progressive religion, ever advancing, even at the expense of being called hazardous and reckless. Caution has been overemphasized, as if it marked the Christian temperament. But there is nothing of this temperament in the Bible. Whenever and wherever, too, the church was doing its work, it was not fearful of innovation and did not hesitate to be revolutionary in a real sense. There are hosts of questions at this present moment in economic and political life, which cannot be solved in a Christian sense unless organized Christianity acts together to force a solution. Its solution is bound to antagonize many of the existing elements in society. There is no way except by the adoption of a positive program to lessen the amount of poverty and misery in the world and to do away with injustice and inhumanity. With a program made clear and intelligible, and promoted by the willingness of the church to learn the best way to reach the people through its services, the query why people do not go to church would lose much of its significance. But even so the positive question still persists, What is the meaning of church-going to the average man?

[Rev. Marion D. Shutter, D.D., in *Universalist Leader.*]

If we believed, as many do, in the existence of a personal devil, who for the last six thousand years has been having his own way in this world; who has so far beaten God in every battle that has been joined; who, by the common teaching on the subject, must now have a kingdom so vast that the kingdom of God is but a petty province compared with it,—I should not care to serve so helpless a God! What respect could we have for a being who, with all his omnipotence, so manages things in his own universe that Satan becomes virtual monarch and hell is in the majority? A helpless and imbecile king can inspire no reverence or zeal, whether his throne be on earth or in heaven. . . . But when we feel that some day the least and lowest creature who bears the divine image, blurred and marred though it be, shall be brought to the holiness and joy of the Father's house and presence, the fainting heart is revived and the falling arm is lifted. I do not understand how any one can be cheerful or enthusiastic who believes that, in spite of all our sermons and prayers, our churches and Sunday schools, our Christian associations and missionary societies, in spite of everything that is being done by earnest men and noble women,—multitudes of the responsible creatures for whom we strive are going down to ruin and misery, endless and hopeless.

[*Christian Register.*]

We talk much of love to God and love to man in our liberal assemblies, we write the words upon the church wall, we preach them and put them into our prayers, but have yet

Digitized by Google

to learn the way to make a vital religion of them. We have yet to learn that the fulness of our love to man will be the measure of our love to God; that love of His children is proof of our love to the Father. The other world is beyond our help. It does not seem to need our assistance, but this world is crying for all the help we can give it. The old church in certain instances is rebelling against itself, aware of its torpidity, its lifelessness, its want of adaptation to the time. It is ready to be transformed into something more effective, more cognizant of the open sores, the putrefying wounds of society. The redemption of the material life, the partial if not entire abolition of poverty as a basis for the salvation of the perishing classes, especially of the children, a just wage and equal opportunity for all,—these things as a means to a nobler race of men and women and the advancement of the kingdom of God,—all these things, we are told, are to be inscribed on the banners of the new religion.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

There is not a single soul that has ever lived whose natural disposition is in every point the same as that of any other. Do you not see what this means? It means that the moral task divinely assigned to every separate unit of the human race differs in some degree from that of every other, though the gain accruing therefrom belongs to all. Your battle is not quite mine, closely though it may resemble it, but the result of your victory will be mine and mine yours, for "we are members one of another." And, conversely, if you fail you have injured me; if I fail I injure you; and both of us injure the total life of the race and hinder the good purpose of God. Can you not see this to be true? None of us liveth or dieth to himself alone. What we are, or do, or leave undone is affecting for good or ill the corporate life of mankind, and furthering or delaying the grand consummation of God's mighty plan, which through countless ages has been moving toward fulfilment in that world in which sin and sorrow are known no more.

[*British Congregationalist.*]

The full Christian life is one that has not only seen a new ideal and heard a new teaching, but has felt the throb of a new power. It is a life that knows itself to be in touch with the Spirit of God, that has no room for doubt of the reality of the spiritual world, because it has felt the tide of spiritual strength flow into it and fill the shallows of the soul. It knows Christ not only as the way and the truth, but also as the life. It faces existence in the assurance of divine reinforcement. For it, religion does not mean merely following Christ or learning of Christ, but communing with Christ.

[Rev. Francis Brown, D.D., in *New York Observer.*]

The church needs to keep its soul open for new aspects of the common life. As the world revolves, fresh constellations come into view. The life of the church, in its devoted members, answers quickly to new phases of opinion, and particularly of emotion and purpose—which is the effectiveness of life. But official creeds and confessions answer very slowly to new impulses.

[*Advance.*]

Stripped of all vagueness and mystification which grow out of the attempts of men to think out the facts of the gospel in the terms of the science and philosophy of their age, the work and the mission of the church are very simple; she is to transmit from generation to generation the facts concerning Jesus Christ. "Ye are witnesses unto me."

[*Continent.*]

Is it contrary to divine law and order that theology should change? Nothing is necessarily true or false because it is either new or old. The test of truth is not age but experience.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00, six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0. 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The income tax bill, which has now passed both branches of the Wisconsin Legislature, provides that:

If an income is over $500 the recipient must make a return to the assessor; if one is unmarried the income will be taxed when it passes the $800 mark; married men are taxed on incomes over $1200. The tax is graduated, starting at one per cent on incomes of $1000 or any part of it and increasing one fourth of 1 per cent on each added $1000 until $12,000 is reached, when the tax is 5½ per cent. Over $12,000 the tax is six per cent.

The treasury department is preparing for what is not only the greatest building project in Washington, but the greatest building project in the country, and one of the greatest which the world has ever seen: the construction of buildings for the departments of state, commerce, labor, and justice. The group has been conceived and studied as a whole, each individual building subordinating itself to a group, and the plan has been approved by the national fine arts commission. It entails an expenditure of eight million dollars.

Figures compiled from reports of Fourth of July celebrations all over the United States show that the movement for a safe observance of the day resulted in the smallest number of casualties ever recorded. Statisticians at Chicago announce that 24 persons were killed and 881 injured, compared with 131 and 2,729 in 1910 and 466 and 3,983 in 1903. In Boston there was not a single casualty nor injury as a result of the celebration, which was of a patriotic and inspiring nature, although safe and practically noiseless.

The international seal conference was in session about seven weeks at Washington. The terms, as finally agreed upon, provide for the prohibition of pelagic or open sea sealing for fifteen years. As Russia and the United States own the seal rookeries, provision is made to compensate Japan and Canada for the amounts invested in vessels engaged in the open sea sealing. Under the agreement now concluded it is expected that the number of seals will be greatly increased and a regular supply of fur be assured.

The government will renew the attempt to disassociate the great coal-carrying railroads from their virtual control of mines, and thus vitalize the commodities clause of the interstate commerce law. The government contends that certain companies are not *bona fide* coal companies are merely adjuncts to the Lehigh Valley railroad, and are "devices for evading the commodities clause."

The first purchase of land under the Weeks forest reserve bill is a tract of 31,377 acres in north Georgia, purchased at the price of $207,821, or on an average of $6.62 an acre. The commission has under consideration an offer of a tract of ninety thousand acres in Tennessee at an average price an acre of three dollars.

The Bethlehem Steel Company, which was convicted and fined forty thousand dollars for accepting unlawful concessions on demurrage charges on freight cars, has paid the fine in the United States court. The Philadelphia & Reading and the Lehigh Valley railroads were convicted and fined forty thousand dollars each for granting the unlawful concession.

Approximately nine hundred million envelopes will be required to supply the government during the coming four years, and Postmaster-General Hitchcock has awarded the contracts for them. The cost was $630,922, a saving of $156,326, as compared with the contract prices of the past four years.

Women have full suffrage and political and property rights in Colorado, Idaho, Utah, Washington, and Wyoming; property rights in eight states, Delaware, Iowa, Kansas, Louisiana, Michigan, Mississippi, Nebraska, and New York, and school suffrage in twenty-one states.

In the last three years, beginning with 1909, duties collected on the baggage of passengers arriving from abroad at the port of New York have more than trebled. The increase was from $703,895 in 1909 to $2,305,562 in the fiscal year just ended.

That the United Fruit Company attempted to regain control of the Bluefields Steamship Company to restrain trade, in direct contravention of the antitrust law, is the opinion of Judge Rufus E. Foster of the United States circuit court.

Secretary Meyer of the navy department has instructed every department head and navy yard commandant in the country to observe the strictest secrecy. American navy yards will no longer be open to visiting officers and naval experts from foreign shores.

Federal indictments have been returned against nine wire pools, several of which have been out of business since 1909, and eighty-four wire manufacturers and their employees, on charges of restraining trade in wire products.

An interstate trade commission of five members to control industrial corporations as the interstate commerce commission controls the railroads, is advocated in a bill introduced by Senator Newlands of Nevada.

Complete returns to the department of taxes and assessments show the total assessed valuation of real estate in New York city as $7,858,849,164, an increase of $814,656,480 over the valuation for 1910.

An investigation of all of the express companies in the United States affected by the interstate commerce laws has been ordered by the interstate commerce commission.

President Taft has authorized the withdrawal during July of four regiments from the manœuvre division now at San Antonio, Tex.

International.

Russia and Japan have protested to the four powers against article sixteen of the currency reform and Manchurian development loan. The article objected to provides that should China require additional loans to continue the operations contemplated under the loan agreement, the American, British, German, and French financial groups interested will be first invited to provide the required funds. Japan and Russia contend that this operates to "shut the door of equal opportunity" against their nations in Manchuria. It is believed it may result in Japanese and Russian participation in future loans.

A conference of leading representatives of the steel industry of the world, having for its object a "gentlemen's working agreement" and presided over by E. H. Gary, chairman of the board of directors of the United States Steel Corporation, held a two-days session at Brussels last week. The main purpose of the conference is the formation of an international iron and steel institute, aiming at an ultimate control of prices and corporations, a world-wide steel and iron trust, along the lines of the American Iron and Steel Institute, eliminating all competition.

Petitions have from time to time been submitted to the Swiss government with the object of preventing the further disfigurement of the country by granting concessions for the construction of mountain railways. It is maintained by many, and especially by the Swiss Scenery Preservation Society, that a number of the magnificent passes and summits of many of the smaller mountains have already been disfigured by the construction of these railways, fourteen of which were recently awaiting action from the government.

Two years ago this month, when Louis Bleriot made the first aeroplane flight across the English channel, the world was amazed. Last week eleven aviators made the same flight in a matter-of-fact sort of way and with ease and precision.

An indemnity of six million dollars gold will be demanded of Mexico by the Chinese government for the slaughter of three hundred and three Chinese subjects and the destruction of their property in Torreon during the recent Mexican insurrection.

Industrial and Commercial.

The transfer of the last lot of silver ordered removed from the mint in New Orleans to the sub-treasury in the custom house has been made. In all $1,655,000 in gold coin and $7,087,241 in silver has been removed in daily installments since May 10. The mint in New Orleans is now a thing of the past and the old building in future will be utilized as a government assay office, principally for the handling of bullion from Nicaragua and other Central American countries.

Of the great unreclaimed swamp area of the United States eight per cent may constitute workable beds of fuel peat, with a total content equivalent to twelve billion tons of air-dry fuel. With the perfection of peat-briquetting machinery these beds may in future make valuable additions to the fuel resources of the country.

The Reece Shoe Machinery Company has been organized at Portland, Me., to manufacture, sell, or lease machinery, tools, and appliances for the making of boots, shoes, leather goods, etc. The authorized capital stock is one million dollars.

The production in 1909 of gold, silver, zinc, lead, and copper in Arizona was valued at $44,053,023; in California, at $28,841,050; in Colorado, at $33,907,140; in Idaho, at $15,660,849; in Montana, at $51,429,694; in Nevada, $30,072,932.

An order for four hundred thousand dollars' worth of shoes for United States soldiers, one of the largest orders ever awarded by the United States war department, has been given to a Boston manufacturer.

A piece of ambergris, said to be worth one hundred and fifty thousand dollars, was taken from a whale by the whaler Petriana, which recently arrived at Victoria, B. C.

The total quantity of Portland, natural, and puzzolan cements produced during 1910 in the United States was 76,934,675 barrels, valued at $68,052,771.

The season's gold output of the Tanana district of Alaska may reach six million dollars.

A record peach crop for Connecticut is predicted

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE ALL-KNOWING.

CLARENCE W. CHADWICK.

THE indisputable logic of Christian Science is rapidly dissipating the superficial argument of theologians, that because God is all-knowing He must be conscious of evil. It is gradually leading humanity to forsake its material or limited view-point and to accept the spiritual or divinely natural, from which it is beginning to catch clear glimpses of reality. These glimpses are so satisfying, accompanied as they are with quieting demonstrations of control over human conditions, as to require no further argument to convince one of the teaching of Christian Science, that God's view-point is the only one susceptible of scientific demonstration.

The very first steps of the Christian learner will be the struggle to think as God would have him think. If he attempts to approach divinity from the mortal standpoint of the reality and continuity of evil, his efforts at right thinking are likely to be barren of practical results. On the contrary, if he forsakes his own limited view-point and humbly and honestly acknowledges the infinitude of God's knowledge and power, he will readily and naturally find himself conforming to the channels of right thinking. He will find that a correct mental attitude toward God is the one thing needful to ensure his entrance into the realm of correct thinking, the kingdom of heaven or harmony. If through any human belief, theory, or doctrine he assents to the supposition that evil or materiality is a component of the all-knowing Mind which is God, he cannot hope to realize a large measure of power to demonstrate over his belief in evil. It is because of this erroneous concept of Deity that humanity today and in all ages has believed itself to be in the merciless grasp of matter and its assumed laws.

In its presentation of spiritual truth to the world, Christian Science can say in the words voiced by the prophet Isaiah, "For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." The materialist cannot hold to his materialism and at the same time understand spiritual truth. Until he surrenders his own view-point, from which human knowledge appears on a par with divine knowledge or understanding, he cannot advance into the realm of reality. The pure teaching of spiritual truth is above his head until he is willing and ready to admit that his material thinking is wrong and God's alone is right. He must see that good only can exist in the Mind of God; in other words, that good is infinite and therefore omnipotent, not finite and temporal. This will lead inevitably to the next step in the line of spiritual advancement, the acknowledgment of the allness of God and the nothingness of evil or matter.

From this view-point, turning neither to the right nor to the left, he sees and knows himself to be the joyful possessor of conscious power. Will-power, does some one say? Emphatically no, but power divine, the might of omnipotent good, the power of which Christ Jesus was conscious when he said, "I can of mine own self do nothing." Will-power is but the boasted pretender of mortal mind, declaring "Peace, peace; when there is no peace," and saying, "Lord, Lord," without crucifying "the flesh with the affections and lusts." Any outward manifestation of a physical betterment that is wrought from the standpoint of God's conscious knowledge of evil can be little more than the outcome of will force, a mortal belief, and is far from being a step forward in the line of scientific or right thinking. No true healing can take place without a sincere and intelligent acknowledgment and discernment of God's non-participation in any phase or form of evil or material belief. It would be grossly inconsistent to ask God to remove from human experience something of which He is conscious, or which He permits to exist for some wise purpose, for such a request would mean the attempt to change the will and plan of the creator.

God's law is unchanging in its operations, as much so as God Himself, and the secret of healing lies in becoming conscious of the eternal perfection and continuity of being, and not in any vain attempt to bring about a change in the divine order. Human thinking alone can change, and the sooner it changes the better for suffering humanity. It must turn radically from matter to Spirit if it would even hope to be the recipient of spiritual blessings. Spirit never calls upon matter to help out in any undertaking. Spirit and matter never blend in cause or effect. "Matter," Mrs. Eddy tells us, "disappears under the microscope of Spirit" (Science and Health, p. 264). Material thinking appeals only to a false or mistaken sense and is unknown to Spirit. The inspiration to be and to do good comes through the surrender of human thought for the divine. The daily spiritualization of thought is the only evidence of progress heavenward. This spiritualization can come only as we gain a correct concept of omniscience and of man's true relationship to this all-knowing Mind or intelligence. The real man, being created in the image and likeness of omniscient Mind, cannot possess any knowledge underived from God, good; and since God's knowledge is a knowledge of His own infinitude of good, man's knowledge of evil is absolutely forbidden. It therefore follows that a so-called knowledge or consciousness of evil exists only in the realm of supposition, and not in the consciousness of God.

What God knows or is conscious of exists as idea or reality. What He does not know can have no being or reality. To know spiritually, or to understand that God knows no such thing as disease, is the sure and only way of healing what mortals call disease. If God knows disease, men would have to know it throughout time and eternity. Since God knows it not, it is impossible for the real man to know it, and the scientific understanding of this great fact is what gives to humanity its only authority and power to "overcome evil with good." Nothing is more helpful or more needful for the practitioner than to understand that the all-knowing Mind knows all that there is to be known, and that such knowledge is infinite and all-inclusive good, besides which there is and can be no other knowledge or consciousness. To attribute any dual nature to the infinite Mind bars the door to the kingdom of heaven

and leads to the commission of manifold sins on the part of benighted humanity. If God knew evil, there would be no mental, moral, or physical escape from it; but because He knows good only, "to depart from evil is understanding," while to hold to evil is to "remain in the congregation of the dead."

REMEMBERING AND FORGETTING.

CASSIUS M. LOOMIS.

THERE must be a scientific boundary or legitimate use for the action of thought called memory. To the advanced student in truth, memory ought to be a faculty nicely adjusted to scientific usage. Properly cultivated, it becomes a talent most worthy. When we become followers of Christ, we are of one Mind,—"forgetting those things which are behind, and reaching forth unto those things which are before." St. Paul must have found it profitable, even in his day of persecution and worldliness, to forget many a hard experience to which a less spiritually minded man would have clung. Thus has every teacher of the past had his blessings to remember, as well as his woes to forget.

But do not the gospel truths of Paul's teachings concern us now as never before? Are we indeed worthy of the name of Christian? Are we letting go little indignities, petty words of careless import, even mentally denying the little drift of gossip which puts our neighbor in an unfavorable light,—forgetting all these because we know that God's perfect image is perfect still? Have we really attained to this degree of excellence in Christian Science? Then with the Master we can say, understandingly: "Blessed are the pure in heart: for they shall see God."

One of the most noticeable effects that the study of Christian Science has upon the beginner is the doing away with personal criticism. The reason for this is of course that the student begins early to realize that mortality is below criticism, and that God's perfect image is above it. In this event he quickly falls into the habit of forgetting his former alleged standards of judging people, and remembers that only the perfect, unfallen man of God's making is to be considered at all; therefore the criticism, should it be voiced, has no weight whatever. What a beautiful deliverance from error! Carrying this thought farther, must we not remember that the ministry of Jesus Christ—his healing work, his forgiveness of sin, his strenuous denial of pharisaical usages—was not the result of a scholarly intellect trained to commit to memory mighty secrets of storied wisdom? Rather did the Galilean Prophet glory in the thought that the most effectual truths of right living were sooner revealed to babes than to the doctors of law. His parables of greatest moment a child could memorize; his most stinging rebuke needed no explanation.

And now, after centuries of religious conflict, how speaks our beloved Leader in Christian Science? Obedient to the inner voice, she has clothed anew those same primitive truths of the gospel in a language so skilfully adapted to the needs of our times that a new trend of popular theology is everywhere invading modern thought. How has she done this? Has she fought evil with a cudgel of words? by a study of profound philosophies deduced from human reasoning? No; she has caught the echo of the Master's truest and simplest words, and by means of a clear spiritual insight has once more made the truth available to every willing doer of good.

Memory trained Godward never shirks a duty. It begins with the perfect concept and follows along the line of least resistance, which consists altogether in right thinking and right doing. Mrs. Eddy denies *in toto* the serpent story of error. Her teachings have made it easy for us to forget that there ever was a claim put forth that man has fallen from his high estate. There is one God who is Love, one Life unending, one power, and one spiritual universe of absolute harmony, and knowing these to be unalterable facts of creation, has she room for memories mortal and variable? On page 337 of Science and Health she says: "The visible universe and material man are the poor counterfeits of the invisible universe and spiritual man." Have any of our profoundest scholars ever put forth a truism more startling? Has this truth, as well as others she has given us, been evolved by clinging with a tenacious memory to an aggressive teaching? Has she not rather as a little child learned all she has given us by sitting meekly at the feet of the Master through a night of doubt and pain?

What may not a memory trained to habits of spiritual communion do for the devoted student in Christian Science. We feel the presence of a spiritually-minded person because an unselfed love moves him to acts of godliness. We know that though we did not at one time manifest the manliness we do now, he, with his spiritual eyes fixed upon the perfect image, has forgotten every past discrepancy, and forgiveness overspreads his loving countenance. We are even led to forget our own uncertain past, and so forgetting we find ourselves suddenly born into a new life of usefulness and regeneration. Once knowing that we are God's perfect image, and not the creature of uncertain origin and destiny we once thought we were, we, too, can read the sermon on the mount and remember that true Christianity cometh not through mighty avenues of learning, but through meekness, patience, and humbleness of spirit.

"GO UP HIGHER."

BELLE A. MUNDY.

THE first few years in Christian Science are sometimes spent in overcoming error, in demonstrating over the illusions of sense and in the elimination of the material sense of selfhood. Then comes a time of fruition, of peace and hope! While resting securely in this newly found haven, the storms of passion temporarily cease, and the bark of life is anchored in peaceful waters. Then through the quiet of a consecrated consciousness comes the command, "Friend, go up higher"! We are bidden to rise to a higher plane, to scale the highest peaks of holiness, to reach the very dome of the spiritual universe; and our mental pathway lies through infinite space.

As thought reverts to the parable which tells of the man who sat in the lowest place from choice, we see that humility is a necessity. But the master of the feast, wishing to reward him for his self-effacement, summons him to a higher position, even at his own right hand. Now this change of place would involve greater activity on the part of the one so summoned. His words must be more carefully chosen; his new associates must find him equal to the rank to which he has been exalted. Humility in the lowest place was a necessity; humility in the highest is a grace. Human pride will sometimes shrink from advancement, saying, "Now I shall be called upon to do more." Under the guise of humility self will say, "Oh, I prefer to remain unknown and forgotten." But why? In order to have an easy time? To such a one the voice of the Master comes not in invitation, but as a command, "Friend, go up higher"!

Truth will see to it that each is put where he belongs—not always at the foot of the table; at least, if one is faithful he certainly cannot remain there. Progress is the law, even of human life, and Truth compels us to make this progress. The mental condition which says, "I do not wish to be called upon to fill a prominent position," is not of God but of the flesh. True humility in the first instance makes us shrink from sight, but in the second causes us to come boldly forward to meet the demands of Truth. "I know what I can do,—all things, 'through Christ which strengtheneth me,'—and I am glad to do it," is the cry of the true-hearted when called upon to read in church, to lecture, to teach, to heal the sick.

Digitized by Google

Those who by study and prayer make themselves as keen-edged instruments fit for the hand of Truth, must expect to find themselves used. When each individual obeys the summons to "go up higher," he will find himself indeed the "friend" whom the Master calleth to terms of equality, and not, as heretofore, merely a guest.

"OUT OF THE MOUTH OF BABES."

MAJOR FAITHFULL CUMBERLEGE.

SWAYED by human passions of the nature and origin of which she was entirely ignorant, a child of six years turned on her mother with the fretful complaint that the afternoon's outing from which she had just returned had not given her "a bit of pleasure." The incident furnished a remarkable object-lesson.

The child's life had been one of almost uninterrupted sunshine. Brought under the influence of Christian Science before she was able to talk, she knew less of the ups and downs of human existence than do most children, even of her age. Taught to be useful, to think for others, to dress and "do" for herself as much as possible,—keeping her own room tidy for instance, dusting and sweeping,—little had entered into her life of the boredom that afflicts even the youngest when they have nothing to do but to try to amuse themselves, and she was as a rule supremely happy in all her manifold occupations. These were not, however, all of a very serious nature, and included a large proportion of fun and frolic, for her parents had deemed it wise that she should enter into the games and amusements common to children of her age, and had taken care to make opportunities for her to do so. Nevertheless, thus early in life she had witnessed to the inability of the world's amusements to satisfy the heart.

All are familiar with this sense of disappointment, but the Christian Scientist alone can interpret it. He alone is in a position to estimate the significance of this consciousness of nothing accomplished, no pleasure experienced, for he knows that materiality has no place in reality, and that resort to material things in the search for happiness must in the end prove a fruitless errand, doomed to disappointment from the start. The Christian Scientist knows that pleasure seekers, searching among material phenomena, seek something where there is nothing, and so they cannot possibly attain any good. At the end of their quest they remain where they were before they started; viz., still disappointedly seeking the substance—happiness—which they can never find in the illusive scenes produced by self-mesmerism. Their action is comparable to that of a man who might seek to quench his thirst at the pools that look so real in a desert mirage, and because there is no water there his thirst is not quenched, nor even lessened; rather is it possibly increased, owing to unrealized anticipations.

Because men have vainly sought happiness where it is not, they have naturally failed to see it where it actually is, even though it lies always within easy reach and in full view of understanding eyes. They have allowed false and unrealized notions of happiness to shut their eyes to the fulness of joy that is their right, and that can be brought into their experience so soon as they cast their nets on the right side. But, ever since man took on a mortal view of himself, parents have handed down to their children these mistaken notions, instead of true wisdom, and so have perpetuated the misfortunes and mischances which result therefrom and which no doubt characterized their own lives. Prominent among these notions are the belief that happiness can be found in selfish pursuits, and the unfortunate theories that work is not ordinarily pleasant in itself but that it is a stern necessity of human existence, being, moreover, as a general rule, an essential preliminary to enjoyment in its avoidance; that leisure and happiness go hand in hand; and that those mortals should be happiest who are in a position to work least.

Were happiness actually attainable in this way, there would be every excuse for mankind's adherence to this creed; but the experience of men is very far otherwise. The great majority must work hard to live, and they have little or no time for play. Having been brought up to take an incorrect and incomplete view of the purpose and results of industry, most men find little happiness in their work, because they are continually looking for it elsewhere. Often they hate their own tasks and regard enviously the occupations and amusements of others, in which for one reason or another they cannot share. Such thoughts effectually shut out all happiness. These poor people do not even know that most of those whose lives they envy fare in fact no better than themselves. Real happiness and work go hand in hand; the man who does not work cannot attain the happiness that satisfies, any more than can he who does work but robs himself of the reward for his labor by holding erroneous views about it, and by giving way to envy and malice.

What a terrible mistake humanity has made, and what a power for good now lies within the reach of the whole race through Christian Science! What a priceless boon the parents of today can confer upon their children! By educating them to understand God and His laws, they can spare the younger generation and generations to come much of the misery which those of past ages have experienced. They can implant in their children's minds higher ideals than they themselves were taught in childhood, and can teach them to order their lives in conformity with spiritual facts instead of material hypotheses, and so guide them to the finding of happiness in the wise and energetic utilization of the "talents" entrusted to them by their heavenly Father. What blessings would result to the rising generation if they could all be taught to look for their happiness and amusement where it actually may be found; namely, in honest and thorough performance of the daily routine. Today it may not, perhaps, be possible to accomplish very much, but a move in the right direction will benefit the individuals concerned and will have far-reaching consequences. The human mind may at first be inclined to recoil from a course which it would very likely describe as ascetic or Spartan, now and then even cruelty, or madness,—for it believes that a life of labor would doom a man to perpetual joylessness; but the truth is the very opposite of this; for happiness is the fruit of useful activity and of nothing else, and mortals must some time realize this great fact.

The unformed child-thought is as ready to find happiness, health, and harmony in what the mortal calls work as in what he terms play. Work *per se* is no task until it is described as such either in words or by conduct which implies it. Similarly play is but a habit which must be taught before it can become established. Work would be play and *vice versa* if mortal mind gave assent. Therefore, while recognizing the propriety of wholesome recreation, it is wise and truly loving to cultivate in the young tastes that "the trivial round, the common task," will satisfy. It is a necessity of human existence to work in one way or another. Work, moreover, is illustrative of the perpetual and tireless activity of true being, and is therefore eternal and must be omnipresent. Therefore let mortals look to find happiness in useful activity, and since they can have no lack of work they will have no lack of happiness. Real workers know that there is no happiness to compare with the contentment and peace of a mind that is conscious of duty well done, unselfishly and thoroughly and lovingly. But such workers are rarely found outside the ranks of those who have learned really to seek first the kingdom of God. If all parents would teach their children to do this from the very first, they would confer upon them a priceless boon

Digitized by Google

All work and no play cannot be advocated as a wise or practical order, but the human inclination when left to itself drifts in the direction of all play and no work. To offset this evil tendency Jesus said, "But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

THE ONLY AUTHORITY.

I. J. COPENHARVE.

ST. PAUL, out of his own wonderful experience, wrote: "To whom ye yield yourselves servants to obey, his servants ye are to whom ye obey," and the writer's own experience in overcoming the tobacco habit not only proved the truth of Paul's declaration, but was beneficial later in overcoming other bad habits and false beliefs.

For some months after having overcome the moderate but regular use of liquor, through the application of Christian Science, it was felt to be desirable also to let go of the use of tobacco. At first, not having personally grasped Christian Science sufficiently, it seemed easiest to give up smoking and retain chewing in order to satisfy the craving for the weed. For a time it worked, to the extent that the chewing of tobacco became more and more continuous; but the habit became more annoying, and at length smoking was again taken up in order to get rid of it. Finally, after working back and forth from the one habit to the other, a seemingly happy thought was suggested by mortal mind,—the victim would overcome both by substituting gum. This was taken up and continued until the jaws refused to respond. Then the thought came: What difference is it to me whether it is tobacco or gum? One is just as much a dictator as the other; I did not have dominion; I was under subjection, and to what? If gum and tobacco could command the almost entire attention, how could one expect to declare his dominion over greater things?

Here I began to see that I must first use the grain of truth already given and assert dominion over that which seemed foremost in the seemingly long line of dictators. Working from this point, the rest was easy, and it is now over two years since the writer has been in bondage to any of the habits mentioned. He saw the necessity for heeding the warning given on page 405 of our text-book, Science and Health, where we read: "Christian Science commands man to master the propensities, . . . Choke these errors in their early stages, if you would not cherish an army of conspirators against health, happiness, and success."

This experience later on brought to light one of the methods used to enslave mortal man to the beliefs of sin and sickness, and a method of procedure that may help others to see their way out of some of their false beliefs. If the ordinary person applies to a business concern for a position, and his services are accepted, he is informed that he must take instruction from the head of his department and is expected to look to this person for information regarding his duties. In some instances he will ere long become conscious of the fact that some self-appointed authority in his department will suggest other things to be done than those allotted to him by the real head of the department. At first he may find time and the inclination to accommodate the self-appointed dictator, and then probably others in the department will look upon him as an easy mark, and immediately appointing themselves "imitation authorities," pile their work upon his shoulders; until finally, roused to the true situation of affairs, the new employee declares himself as being under no authority but that of the real head of the department. He thus refuses to recognize any other authority, and immediately his burdens become lighter.

Now if suffering humanity would accept God as the only authority whom they will serve, and refuse to recognize any self-appointed and unreal authorities, such as bad habits, sin, and sickness, they would correspondingly lighten their burdens as they recognize the irresponsible source from which they come. By placing them in the same category as the self-appointed heads of department, imitators of the real, one would not long be troubled by their attentions, for he would proportionately recognize the imitative and unreal as he declares for the real.

TRIBUTE TO THE READING-ROOMS.

JULIAN SCHOLL.

CAN a man pursue spiritual aims while following a business life, is a question often asked. It would seem to be answered in the affirmative by the evidence we daily have of business men pursuing "the things not seen." The further question might follow, Is such pursuit detrimental to his business? This also is fully answered by what we see around us. There are so many instances of business men who are not supported by a knowledge of the teachings of Christian Science, breaking under the strain of business. Men who strive, push, work, give and take, ask no quarter in business, until suddenly their physical strength is exhausted; there is no reserve force left—nothing left to fall back on, no Principle, no God! Then they drop everything, leave all at a moment's notice, and are off to some remote region to try to win back a temporary relief. Thus they work by fits and starts, with nothing real to depend on, no reliance anywhere.

By contrast we see a fast increasing class of men,—hard-working men of business, too,—often beset by cares and difficulties, but always cheerful, with some hidden means of support, some wonderful reserve power, seemingly, that they draw upon; for they are always at their posts, always serene and masters of themselves. Where do they go to renew those founts of energy? We find them sometimes —any time—in the middle of a business day, perhaps, quietly going over the Lesson-Sermon in a Christian Science reading-room downtown. In the street below the rattle and crash of traffic is ceaseless, but it does not disturb the peace and harmony of this quiet haven. Now we know whence their vitality—their strength and serenity. We know, too, that they can spare this time or any time they choose to take in their business day. They have been early at work, clear-headed and alert, open to those guidings of divine Mind that ever accompany the scientific godly man who has learned from Mrs. Eddy's writings that "transformation of the body by the renewal of Spirit" (Science and Health, p. 241) is a present possibility.

May we be always grateful for the reading-rooms,—these halting-places in the desert, these green oases! Surely God is good, and His goodness is being more and more understood through Christian Science!

Into the heaven of Thy heart, O God,
I lift my life like a flower;
Thy light is deep and Thy love is broad,
And I am not the child of an hour.

I dare to say unto Thee, my God,
Who hast made me to climb so high,
That I shall not crumble away with the clod,
I am Thine, and I cannot die.

The throb of Thy infinite life I feel
In every beat of my heart;
Upon me Thou hast set eternity's seal,
Forever alive, as Thou art.

LUCY LARCOM.

SELECTED ARTICLES.

[Washington despatch to *New York Sun.*]

Senator John D. Works of California made a remarkable speech in the United States Senate today [July 6] in which he defended Christian Science and told his colleagues how he and members of his family had been healed of their infirmities by practising it. The senator's frank avowal of his faith in the efficacy of Christian Science treatment and his recital of his family experiences surprised and interested his colleagues. He was speaking in opposition to a bill introduced by Senator Owen of Oklahoma creating a department of public health.

The galleries showed a fair representation of Christian Science followers who came with knowledge in advance as to the character of the speech. They indicated their appreciation by smiles and nods of approval. Senator Works was heartily congratulated by Senator Clapp of Minnesota at the conclusion. The senator from Minnesota is a regular attendant at the Christian Science church in Washington and has been a believer in the healing power of the Christian Science faith for many years. His confidence is based on his own experience in being cured of an aggravated case of rheumatism that had baffled regular physicians. There is at least one other senator who attends regularly the Sunday readings of the Christian Science church, but he was not present today to hear Senator Works.

The senator from California declared that the bill to create a department of public health was designed to create a "doctors' trust." His opposition to the measure is shared by all of the Christian Scientists of the country, who have been petitioning Congress in opposition to the Owen bill and manifesting their hostility in other ways. Senator Works stated that he himself had been cured of a persistent malady which he feared threatened his death. As a last resort he placed himself in the hands of a Christian Science healer and was restored to health. His wife was also cured after an illness of fifteen years with a disease which regular doctors said would yield only to the surgeon's knife. She was restored to health in three treatments, said Senator Works. The third cure to be wrought in the same family was that of the son from the drink habit. The young man at the close of a long debauch declared he felt inspired, in view of the wonderful healing effect of Christian Science upon his father and mother, to try the cure himself.

"A Christian Science practitioner was called in and my son has not taken a drink from that time to this, seven years," said Senator Works. "Once before he had overcome the temptation for the period of eleven months, yet the craving was always with him, but since he took the Christian Science treatment this desire has been abolished. Senators may say to themselves, 'It is all a delusion,' but I want to say that if it is I hope the delusion will not be dispelled. It has healed the sick, saved men and women from suffering and sin, and frequently been more effective than the surgeon's knife." Continuing, he declared there was no antipathy between Christian Scientists and the regular medical profession, so far as the former were concerned; that Scientists recognized the medical profession as good and useful and its work as beneficial to mankind in relieving suffering and healing diseases.

In opposing the bill offered by Senator Owen of Oklahoma, providing for the creation of a national bureau of health, he charged that a bargain had been struck between the medical officers of the government and the American Medical Association as to the form of the bill. He wanted to know what this bargain was. He alluded to Dr. A. M. McCormick, chairman of the committee on organization of the American Medical Association, as "the walking delegate of the doctors' trust." Adverting to the series of articles recently appearing in *Collier's Weekly* on the subject of Christian Science and the proposed national bureau of health, he offered a mass of correspondence which he said had passed between the editor of *Collier's* and the officers of the National League for Medical Freedom, and also offered a number of affidavits which he asked to have published in the *Congressional Record.*

He mentioned the controversy over the adoption of a uniform system of charges by physicians in all parts of the country and read an article from Dr. McCormick urging such an agreement among all doctors in each community whether they were members of the national association or not. He said Dr. McCormick in connection with his work as a "walking delegate" was advocating this plan. Calling attention to the provision of the bill which prevented any "recognition of any school of medicine," Senator Works expressed the fear that this might be construed to give the right to refuse recognition to every class of healers except the regular medical practitioners.

Senator Owen of Oklahoma interrupted to ask if the bill could be perfected by the addition of any words making plainer the meaning that no discrimination was contemplated or could be practised. "I do not think it could," said Senator Works, "for the trouble would be inevitably connected with the control of the board by one school or the other." He said he would oppose as strongly lodging control of the board in Christian Scientists as in the regular school of physicians.

[Frederick Dixon in *London* (Eng.) *Morning Post.*]

Our critic's respect for mental suggestion is almost as complete as his dislike of Christian Science. Now the claim that it is possible to do good by means of suggestion is inseparable from the claim that it is possible to do evil. If it is possible by means of suggestion to remove pain, it would be just as possible to inflict it. If it is possible to will a man to do a right action, it would be just as possible to will him to do a wrong one. There is no avoiding this conclusion. The Founder of Christianity recognized this, for suggestion, under one or another of its many *aliases,* is far antecedent to the Christian era, and recognizing it described it as a house divided against a house, which could not stand. Jesus, however, was never satisfied with the utterance of a mere negative, and so he went on to express the positive. "If I," he continued, "by the Spirit of God cast out devils, then the kingdom of God is come unto you." The kingdom of God, it is quite certain, never came to a man by mental suggestion from a mind imbued with a belief in the power of good and evil. The kingdom of God comes to a man in the precise degree in which he acquires the Mind which was in Christ Jesus, and that is in the exact proportion in which he overcomes sin in himself. Death, Paul writes, entered the world through sin, and sin is, in turn, according to the writer of Genesis, the result of eating the fruit of this very tree of the knowledge of good and evil.

The statement constantly put forward today, that mental suggestion is a means by which only good can be accomplished, is worse than ridiculous; it is positively outrageous. The recognition of this is being made with increasing velocity in the law courts of the world. The verdicts given in these cases constitute, indeed, in a remarkable way a confirmation of the words of Mrs. Eddy, on page 105 of Science and Health: "When our laws eventually take cognizance of mental crime and no longer apply legal rulings wholly to physical offenses, these words of Judge Parmenter of Boston will become historic: 'I see no reason why metaphysics is not as important to medicine as to mechanics or mathematics.'" The fact is that no one has ever yet had the hardihood to deny that the human mind is not largely permeated with a belief in the power and reality of evil. Consequently when the theory of mental manipulation is imparted to this mind, it is let loose to thrust out suggestions of so-called good and evil in every direction. This is precisely the mental condition typified by Jesus as a house

Digitized by Google

divided against a house, and, as he said, such a house cannot stand.

In that terrific mental battle with the Jews recorded in the eighth chapter of John, which ended in the attempt to stone him, Jesus referred once more to this subject of the supposititious power and reality of evil, in order, in a way which has generally escaped attention, to expose its nothingness. "Ye are of your father the devil," he said, "and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Speaking in a manner which would be quite intelligible to those he was addressing, he personified evil in a way strange and almost incomprehensible to western ears. The Hebrew, however, who it has been truly said never opened his mouth without emitting a metaphor, took the substantive Satan or adversary, and personified it as a synonym for evil, just as he took the adjective Belial, worthless, and used it in the same way. Evil, Jesus said, was a murderer from the beginning, from the moment when the eating of the fruit of the tree of the knowledge of good and evil first brought death into the world. Yet, he added, the whole thing is a lie, which abode not in the truth because there was no truth in it. Take away the imagery of the east, reduce the phrase to the matter-of-fact English of the twentieth century, and what does it amount to but this—in reality the lie never existed, because there is no reality in it. This is the truth, and the truth in exposing the lie strips it of its claim to reality and power. "Ye shall know the truth, and the truth shall make you free." Thus is Christian Science healing wrought.

[C. L. Ramsay in *Aberdeen* (Scot.) *Gazette.*]

When I was at school, one of the teachers with whom I studied geometry used to impress upon the class that before attempting the solution of any problem, the first necessity is to get a thoroughly clear understanding of what it is that has to be done. If all those who undertake to criticize Christian Science would abide by this axiom, and begin by taking the trouble to assure themselves what Christian Science actually is, and what it is doing for mankind, I can confidently assert that there would be much less criticism of the system and much time and trouble saved.

Your correspondent who signs himself "Anti-Humbug" begins by quoting certain passages from the Christian Science text-book, "Science and Health with Key to the Scriptures;" so far, so good. But unfortunately, he next proceeds to interpret those passages, and here he goes sadly astray, and draws no doubt a very entertaining picture, but one which bears no relation at all to the subject in hand. According to him, Christian Scientists must be fit for nothing but a lunatic asylum, whereas, in actual fact, experience shows them to be a remarkably sane and sober set of people, going quietly about their business and accomplishing it much more satisfactorily than before, owing to the better health, larger sympathies, wider outlook, and increased power of self-control which the knowledge of Christian Science has brought to them. And here let me say that the time has gone by when it is pertinent to ask incredulously, "Does it work?" Most assuredly it does, as the ever increasing number of those who have been healed and reformed by its means can testify. For the last forty years Christian Science has been put to the test as no other system of theology or philosophy has been tested, and if it had not stood the test it would have disappeared from the world long ago: and the test is the same as that applied by the Master when he said, "These signs shall follow them that believe . . . they shall lay hands on the sick, and they shall recover."

Christian Science teaches that God is infinite Spirit, unchanging Love, ever-present intelligence or Mind, creating, sustaining, governing all. If He is infinite, there can be nothing that is not included in this infinity, and this explains the Scripture, "In him we live, and move, and have our being." It teaches that man's individuality is as immortal as that of God, in whose image and likeness he is made; that matter, sin, disease, all evil, being opposed to the nature of eternal Spirit, can be no real essential part of that which is the image or reflection of Spirit, and hence must be the result of misconception or error, which the true understanding of the nature of God and man must dispel and destroy. This understanding that the nature of the real man is essentially pure, and that sin is no part of him, has lifted many a one from the depths of despondency, and freed hundreds from bondage to every sort of sinful habit and desire. Christian Science is essentially a practical system; it means overcoming evil of every name and nature with good. Far from discarding prayer, the Christian Scientist acknowledges no other means whereby any good can be accomplished, and his constant endeavor is to gain that knowledge of God and His Christ which the Saviour declared to be life eternal.

In conclusion, I should like to assure "M. M." that there is no body of Christians who believe more firmly in the divinity of Christ than do Christian Scientists. They understand Jesus Christ to be the Redeemer of the world, and that "there is none other name under heaven given among men whereby we must be saved."

[John M. Dean in *Memphis* (Tenn.) *News Scimitar.*]

It should be borne in mind that in studying Christian Science we must remember Paul's injunction to compare "spiritual things with spiritual." For instance, the quotation given by our critic from page 393 of Science and Health, "Man is never sick," refers to the real, spiritual man, made in the image and likeness of God, according to the original account of creation, and not to the erring, mortal concept of man, or the man of flesh who "cannot please God." Will the gentleman assert that the image and likeness of God can be sick? Then if not, what is? Nothing but the untrue image or counterfeit of God's man. Christian Science does not deny that the so-called material senses are constantly striving to contradict spiritual truths, for the "flesh lusteth against the Spirit," but it does contend for the truth of being as against a lie that has become an overwhelming belief by constant repetition and practice throughout all the ages since Adam. It contends that in so far as man is mortal and discordant he has departed from his original state of Godlikeness, and that as God made all that was made and pronounced it "very good," He surely made nothing that could be dominated by evil.

Our critic should also remember that while Christian Science is always absolute in its statements concerning God, man, and the universe, it makes no claim that any one has yet succeeded in practising the ultimate of its teachings. Every science presents an infinite range of facts that are known to be true and yet have not been fully demonstrated. The beginner in mathematics knows that two times two are four, and that the same rule applied to the most stupendous problem will produce a correct result, and yet he can only demonstrate the larger problems as he works up to them. We know it is possible to climb the mountain-peak, but we have to take the first step and all the intermediate steps before we can take the last. Christian Science takes each of us just where it finds us—full of faults and imperfections—and it is only through earnest endeavor that we can ascend along the plane of infinite progression which is the key-note of salvation. Christ Jesus demonstrated the truth of being in all its perfection, but we cannot expect to begin where he left off. Then, if Christian Scientists fail to achieve perfection in their lives at one bound, no one need be surprised nor unduly critical.

A lie is never destroyed simply by characterizing it as

Digitized by Google

such without giving reasons for the statement. So it is with sickness and sin. They are untrue because unreal, and unreal because God never made them. That they are a part of mortal experience and thus seem very real to one who is in bondage to them, no Christian Scientist will deny, but we prefer to "let God be true, but every [mortal] man a liar." That two and two make five is certainly untrue, but he who believes it to be true is grossly in error and needs to be set right by having the truth stated to him. In this way the error is destroyed and he will never again suffer from that belief.

In Christian Science the term "mortal mind" does not apply to the mind of some one person necessarily, but to the aggregate of human opinions as affecting everything in mortal experience. In this way is brought about the sickness of infants to which our friend refers, and this explanation should commend itself to every thinker who stands aghast at the idea of taking the other side of the question and charging God with afflicting innocent babes.

The careless perusal of a book without an attempt to understand its contents will benefit no one, and no absurd attempt is made to produce the idea that the mere paper and printer's ink used in Science and Health ever did such a thing. However, when the spiritual teachings contained therein are taken into the consciousness of the reader and the dark places are lighted up by a consequent illumination of thought which produces a new understanding of God, man, and the Bible, discordant conditions frequently vanish into nothingness and the sufferer is healed. There are thousands of authentic cases of persons who were healed in just this way, and there are dozens of them right here in Memphis.

Though frequently compelled to answer unkind criticisms and erroneous statements, Christian Scientists are disinclined to controversy. They are too busy with their work of healing the sinning and the sick and striving to overcome error in themselves to have the time or inclination to attempt to "steady the ark" for their neighbors.

[Howard C. Van Meter in *Ashland* (Ore.) *Tidings.*]

The critic alleges that the teachings of Christian Science are contrary to the Bible. Had he said contrary to his interpretation of the Bible it would have been a fairer criticism. Passages in the Scriptures have been construed in all sorts of ways and made to justify the most peculiar methods, so that it naturally occurs to the inquirer, "How is one to tell which is the true interpretation?" Jesus said, "By their fruits ye shall know them." If Christian Science insists upon evidence today from the application of Christianity, that is in excess of the expectations of other religionists who are satisfied with the promise of heaven hereafter, its teaching must naturally differ from the others, but this difference should not warrant the implication that this teaching is wrong.

The impartial observer notes that the study of Christian Science arouses a deeper interest in the Bible. This is expected, since it is declared on page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." The Bible ceases to be a book of contradictions as heretofore, and with the continuance of the study, aided by the splendid commentary mentioned above, much that was mysterious and which he had been told he was not expected to know, becomes clear, and his aspiration mounts up to the approximation of such a knowledge of God and its accompaniment as Jesus voiced in the seventeenth chapter of John: "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

This exact or demonstrable knowledge he believes to be true Science. Jesus' utilization of it brought immediate and decisive results in abolishing evil and its effects, sin, sickness, and death, and in referring to this knowledge which characterized his true selfhood, he showed how universal it would become in the words, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." Jesus dealt with evil, but at no time recognized it as coming from God. In fact he spoke decidedly and emphatically to the contrary in the words, "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

Christian Science declares one God, Spirit, the sole creator, who maintains and controls the capacities expressed by man made in His image and likeness. It holds consistently to the relationship between cause and effect, and abolishes evil through showing that it is not power, since God, good, is all powerful and ever present. To regard evil as a part of the all-knowing Mind, God, would mean that it is eternal, and there would be no use trying to escape it. Christian Science repudiates such a view, and declares we may here and now obtain such a knowledge of good as will establish it firmly in our experience and rejoice in a measure of its glorious effects we have not heretofore possessed.

[John H. Wheeler in *Rolla* (Mo.) *New Era.*]

Christian Science is sometimes misunderstood, and criticized accordingly, but when it is learned that its one and only mission is to teach mortals to open their eyes to a divine heritage, to behold the spiritual verities as their natural possession, and to make plain the way in which they may be appropriated, then this criticism will be turned to gratitude, and no longer will they school their minds to resist in every way this potent fact which is knocking at their doors.

It is true the average mortal is badly handicapped in his concept of God's infinite nature by his own materialism, for as a man "thinketh in his heart, so is he," and the personal application of Christ Jesus' saving mission will continue to be hidden from him and inoperative. Our Saviour continually preached to the multitude that they must conform to the law of God, that the law is good only, and if evil enters into a consideration of any act it should immediately decide for him that there is a moral mistake in the solution of his problem, and immediately upon this discovery to reject the evil—thus "to have dominion over the world, the flesh, and the devil." So John's statement, "Now are we the sons of God, . . . And every man that hath this hope in him purifieth himself, even as he [Christ Jesus] is pure," clearly defines our present religious duty and the probationary period after physical death in which we must complete our work, undone or badly done here, through the continued opportunity to gain one's spiritual nature in the destruction of his sinful sense of spiritual existence. When this is clearly understood, the recognition of the necessity of eliminating whatever does not glorify God in human thought will give a new power and consequently greater appreciation of spirituality, until old things will have passed away, and all things become new.

We claim that Christian Science is demonstrably proven in the moral growth, together with the physical healing, of those who embrace its teachings and thus fulfil its mission to mankind in pointing the way which our Master taught to apply his instruction. It is God who heals and saves us, and the means of accomplishing this are fully proven by Christian Science to be divine, while they steadfastly point to Christ as our Wayshower after the manner so graphically recited by Paul: "Where the Spirit of the Lord is, there is liberty. But we all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

AN INALIENABLE RIGHT.

In another column we publish a short report of the speech recently delivered by Senator Works of California, before the United States Senate, in refutation of misstatements which have been made concerning the League for Medical Freedom. The full text of this able address by Senator Works was published in *The Christian Science Monitor* of July 11.

Quite in line with Senator Works' speech is the following editorial, which recently appeared in the *Pasadena* (Cal.) *Daily News,* and which shows by the words of the doctors themselves the *animus* of the demand of the American Medical Association for both state and national legislation. Following is the editorial in full:—

An editorial in the *American Journal of Clinical Medicine* advocates the theory that "the inhabitants of each community should be equally divided among the physicians." After announcing this rather startling plan, assuring prosperity to members of the profession regardless of qualification or the preferences of the dear people, the editorial goes on to say that "if there were no extra fees for surgery it is possible that operating would become somewhat less common."

Are we to infer from this high medical authority that surgical operations are superinduced by the expectation of financial reward? But this editorial writer continues: "The profession would [as a result of dividing the inhabitants of each community equally among the physicians] be more nearly approximated to the ideal of a fraternity; and while a few colossal incomes might be diminished, every member of the profession would have enough." Here we have as bold a proposal for public exploitation of suffering humanity and the personal aggrandizement of the members of the medical profession as one might expect to find.

This editor of the medical magazine quoted does not stand alone and unsupported in this theory that the interests of the public are secondary to the pet theories of a would-be medical trust. Dr. William J. Robinson, president of the American Society of Medical Sociology, in a public address recently said: "The public is not capable of judging as to who is and who is not a competent physician, any more than it is capable of judging as to who is and who is not a good steamship captain, a good electrician, chemist, engineer, astronomer, or mathematician." He further asserted: "No conciliatory attitude is to be adopted with the Christian Scientists, mental healers, absent treatment quacks, osteopaths, chiropractics, etc. The greater part of their claims is impudent fraud, while the grain of truth in some of the cults is incorporated in the regular system of medicine. There is no excuse or reason, except a selfish one, for the existence of different 'schools' of medicine."

Dr. Samuel D. Swope, in one of our American journals, recently wrote: "The public must be educated to take our advice in medico-political matters as they do our pills and powders, without knowing of their contents or effects, but with an abiding faith in their potency." It is unnecessary to quote further evidence of the foregoing character. Instances of the kind might be multiplied almost indefinitely.

A single school of medicine boldly proposes to dominate not alone health regulations and banish every other known means of relief, but it would go farther, if permitted, and invade the sacred precincts of the individual home and compel all to bow to the medical trust. There are people, intelligent, thinking, well-informed people, thousands of them, in every state in the Union, who, after exhausting every possible source of relief known to the old school physician, and after having been given up to die as hopeless sufferers, have found permanent relief and health, renewed life and energy, hope and restored efficiency in lines of relief repudiated as "fraud" by these all-wise advocates of the medical monopoly.

There are thousands of people in every state in this country, intelligent, well-informed people in every walk of life, including some physicians of the old school, who, after having been given up by physicians, and after having exhausted their resources in *materia medica*, have been absolutely and permanently healed by means of Christian Science, which is denounced as a "fraud" by one of the authorities already quoted. Scores of witnesses to this fact, people of character and intelligence, live right here in the city of Pasadena.

It ought not to be necessary to resort to misrepresentation and invective to sustain any theory capable of standing on its own merits. The people of this country are temperamentally so constituted that they will never submit to be deprived of the right of resorting to the means of relief from suffering which appeals to their individual judgment. This is more especially true in cases where *materia medica* confesses its inability to afford relief or has failed to afford relief. The people of this country are not going to submit to any medical tyranny or trust, or monopoly of any kind. They are not going to deliver their liberties into the hands of men who, while forced to confess their own inability to afford relief from suffering, would nevertheless prohibit citizens from a free exercise of individual judgment.

This proposed medical monopoly constitutes the most tyrannical and gigantic effort to throttle personal liberty ever undertaken, and it will meet with the public rebuke which it deserves. Human cupidity and self-interest have in this particular quite overreached themselves.

Undoubtedly the legislative year just closed or closing in many of the states, and in Congress, has seen greater activity in this line than ever before, and had it not been for the intelligent and effective work of the League for Medical Freedom, both in the state legislatures and in Congress, there might have been a different story to tell than that the doctors have suffered defeat in their efforts to secure monopolistic legislation in over twenty of the states, and also in Congress. Slowly but surely the people are awakening to their right to freedom from tyranny of every sort; to the fact that, as Christian Science teaches, "man is properly self-governed only when he is guided rightly and governed by his Maker, divine Truth and Love" (Science and Health, p. 106).

ARCHIBALD MCLELLAN.

"SPIRITUAL THINGS."

THE beginner in Christian Science is sometimes startled when he finds statements in the Bible which parallel those of the Christian Science text-book, but which he had never understood until he began to study the latter. An inquirer who attended a Christian Science service and listened to the reading of the eighth chapter of Romans, remarked at the close, "I see you have a new version of the Bible, arranged to harmonize with Mrs. Eddy's teachings." He was much surprised when told that he had been listening to the reading of the good old authorized version, as he took pains to discover, and yet, he said, it sounded quite different. His attention was then called to St. Paul's words (I Cor. ii, 12, 13): "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God. Which things also we speak, not in the words which man's wisdom teacheth, but which the Holy Ghost teacheth; comparing spiritual things with spiritual."

From the very start the student of Christian Science learns to look away from material things to spiritual realities, and in so doing he finds health, holiness, happiness. If he has been ill, he awakens to the fact that he had not been following Paul's advice in respect to claiming "the things that are freely given to us of God," or in "comparing spiritual things with spiritual," but that he has on the contrary been accepting material evidence as to lost health, and been comparing himself with all material, perishable things, and as subject to the law of sin and death. The upward trend of thought when spiritual being is once recognized in Christian Science cannot be estimated by those who insist upon holding to the belief in man and the universe as material, and the permanence of this new mental state is assured for those who adhere unwaveringly to the Science of being and are not swayed by the winds and tides of personal sense or mere religious emotion.

The tendency of the mortal mind ever is to attempt to materialize the spiritual, a practice which is the very opposite of Christian Science, and which was one of the phases of error that led to temporary loss of Christ's Christianity. It has also tended to make thoughtful people suspicious of anything that borders on the miraculous. Some Christian writers (such as Trench) have, however, seen the great difference between the gospel narratives of healing which point so unmistakably to spiritual reality, and the later traditions which obscure the spiritual sense and leave thought submerged in materiality. With this before us we cannot be too faithful in following the counsel of our inspired Leader, "Look away from the body into Truth and Love, the Principle of all happiness, harmony, and immortality" (Science and Health, p. 261).

Digitized by Google

Our growth as individuals and as a cause depends absolutely upon our spirituality, for spirituality means that clearness of vision which sees all things from the view-point of Spirit, and beholds Truth as forever triumphant; which gives strength to endure to the end of error, knowing that to God error is nothing and nowhere. The vision of the spiritual should vitalize all our thinking, dignify all our speaking, and give power to all our doing. Let us not fail to make the most of each day's opportunity to be true Christian Scientists by building upon Truth's spiritual foundation the "wood, hay, stubble" of materiality, when instead we should discern and grasp the things of God which are spiritual and "spiritually discerned."

ANNIE M. KNOTT.

CONSISTENCY AND CLEAR THOUGHT.

CHRISTIAN SCIENCE honors God in its adherence to the logical requirements of the divine nature, infinite and immutable good. Maintaining that the law of the divine activity is constant and unfailing, Christian Science not only declares that the divine power is always available, but it refuses to accept any statement or belief about God which is inconsistent with His perfection in wisdom, power, and righteousness; and the shaping influence of this fundamental position is revealed in all that it teaches respecting that divine manifestation which constitutes the real universe, the natural world, in contrast with the seemings of material phenomena.

The tremendous importance of this discrimination between the world of Spirit and the world of matter appears when one notes the disastrous contradictions into which theological writers are led as a result of the failure to be scientific in their discussions of nature as an expression of God. Speaking of nature as "the oldest Bible," a very well known minister and theologian has recently said that "if St. Paul is right in declaring that 'the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead,' then nature is a medium of revelation, and we ought to prize it along with Isaiah and the gospels as one of the unveilings of the mind and heart of our heavenly Father."

This is certainly true if by "nature" we are to understand the manifestations of the immediate activity of Spirit, which must of course be spiritual and perfect, since God could not project or manifest His unlikeness. This brother makes it clear, however, in his further statements, that by nature he means the material universe, the basis, substance, and law of mortal life. It is of this "nature" therefore that he goes on to say: "Everything written in this ponderous volume is trustworthy and incontrovertibly authentic. . . . With the making of the Bible man had a deal to do, and evidences of the imperfection and limitation are stamped upon its pages. But in the book of nature there is no blending of the divine and human; every sentence was written by the unassisted hand of the eternal."

This very remarkable delivery would lead one to think that its author had quite lost sight of the poison and pestilence, earthquake and flood, which are ever precipitating indescribable tragedies. He also seems to have forgotten the teaching of Christ Jesus, that sin brings suffering and death, and therefore, unless God be responsible for sin, the so-called material law which begets the cruel wrongs of heredity, and such unspeakable catastrophes as that of Messina, cannot be ascribed to a law of God.

Furthermore, if the finite sense of those who indited the revelation of truth found in the Bible is to be held responsible for the imperfections of that book, why should not the influence of ignorant or malicious mentality and not divine Mind be held responsible for the contradictions and inharmonies of the so-called book of physical nature?

Over against all this lamentable confusion of materialistic theology, Christian Science makes the simple and satisfying declaration that evil cannot come from good or be expressed by it, and hence that the nature which manifests and glorifies God is not the nature of material sense and so-called law. "In one sense," writes Mrs. Eddy, "God is identical with nature, but this nature is spiritual and not expressed in matter. The lawgiver, whose lightning palsies or prostrates in death the child at prayer, is not the divine ideal of omnipresent Love. . . . evil should be regarded as unnatural, because it is opposed to the nature of Spirit, God" (Science and Health, p. 119).

This gives a clear Biblical ground for that careful discrimination in the religious study of nature which it behooves the theologian always to make if he would escape the contradictions inevitably attending every effort to found upon the testimony of material sense a philosophy or religion which seeks to honor God.

JOHN B. WILLIS.

AMONG THE CHURCHES.

DUBUQUE, IOWA.

The laying of the corner-stone of the new edifice of First Church of Christ, Scientist, at the corner of Ninth and Bluff streets, took place Saturday morning [June 3] at half past six o'clock. The ceremony was extremely simple, as is customary for affairs of this kind with this particular denomination, and it was witnessed only by the members of the building committee, the board of directors, and the two readers of the church. A copper box containing a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, Founder of Christian Science, and a copy of the Bible, was placed in the stone, which was then rolled in place. The stone is inscribed with the words, "First Church of Christ, Scientist, 1911." It is expected that the new church will be ready for occupancy by Sept. 1.

Dubuque Times-Journal.

LAWRENCE, KAN.

The Christian Scientists have purchased the Gould property on South Massachusetts street for church purposes. They intend to do some slight remodeling of the house now there, and use it for church purposes for the present, and will take steps to move into it as soon as possible. Plans for a church building are under way, and it will not be long until they are matured and the society will build a suitable church building on the corner. The location is a very desirable one.—*Gazette.*

SUPERIOR, WIS.

The first steps toward the erection of a Christian Science church in Superior have been taken. The three lots at the southeast corner of John avenue and Nineteenth street have been purchased by First Church of Christ, Scientist. The consideration is given as three thousand dollars. It is the intention to wait a year or so before any further action is taken, as the structure which is to be erected will be a fine building and the financing of the project will be a big undertaking.—*Exchange.*

HORTON, KAN.

First Church of Christ, Scientist, of Horton, Kansas, announce to the field their dedicatory services, which were held Sunday, June 4, at eleven o'clock in the forenoon.

Correspondence.

THE LECTURES.

SPOKANE, WASH.

A lecture on Christian Science was delivered here April 17 by Bliss Knapp for First Church of Christ, Scientist. He was introduced by the Rev. H. Edward Mills, who said:—

We are assembled this evening to hear a lecture on Christian Science. If I am correctly informed, these lectures given from time to time in our own and other cities are not intended as a defense of Christian Science, but as an explanation of it. Christian Science like every other science must be and is its own defense. Men can do very little either for or against it. In fact its utter independence of both its foes and its friends constitutes to my mind its most remarkable characteristic. Some men have honestly felt that they ought to oppose and, if possible, overthrow Christian Science. After exhausting every resource at their command, what have they found? That this great movement, like the rotation of the earth, has gone calmly on, apparently unconscious of all they have said and done. Other men have felt called upon to champion the cause. What have they found? That Christian Science needs champions about as much as does the attraction of gravity. Could anything be a greater cure for that common malady, human conceit?

We have had idealism before, but it was impractical. We have had the ultra-practical, but it lacked the inspiration of a great ideal. Here the two are blended, or rather we are here told that the two are one. Is it strange that millions of men, wearied with the elusive pursuit of things, or surfeited with the hollow satisfaction with which wealth mocks them, are turning their eyes toward the bright dawning of this new hope? Is it strange that multitudes are testing the claims of Christian Science for themselves? Is it strange that great congregations welcome with eager gladness the words of any man who can speak to them on this subject out of a deep experience?—*Correspondence.*

PACIFIC GROVE, CAL.

Willis F. Gross of Boston gave a very instructive lecture on Christian Science in the T. A. Work Company Hall on Friday evening [April 21]. He was introduced by August Blohm, who said in part,—

When the apostles Peter and Paul were preaching in the synagogues of Jerusalem, healing the sick and raising the dead, they were but following the teachings of Jesus. In like manner Christian Scientists today are striving to follow the teachings of the Master. They do not claim to raise the dead as he did, but they do heal the sick and comfort the broken-hearted; they redeem sinners and bring joy to unhappy homes. Christian Science is not a new religion, but a revival of the religion as taught by Jesus and his apostles. The revered author of Science and Health, the authority on Christian Science, has declared again and again that the Bible was her only help and text-book; therefore there is nothing in the teachings of Christian Science that conflicts with the Bible in the slightest degree; on the contrary, all the teachings of Christian Science emanate from the Bible. It is the Christianity of Jesus. Christian Science is founded on truth, and it therefore is demonstrable, as is all science. This is the key-note of its success.

We are living in a wonderful age; the watchword of today is results—results not only in commercial pursuits but also in religion. Theories alone do not satisfy the people in these times. They demand practical results, and this accounts for the wonderful and I may say marvelous growth of Christian Science—because it is intensely practical. At the same time it is a very strict taskmaster. No one need expect to profit by Christian Science unless he earnestly and honestly follows its teachings; no half-way measures will answer. You cannot retain a few of your minor sins and vices and expect good results. Christian Science demands a complete and absolute surrender of all your sins and vices. You may deceive yourself in thinking that a little wrong-doing is harmless, but you cannot deceive God.

Christian Science is being embraced today by all classes of people. Its marvelous growth is really phenomenal when we consider that thirty-two years ago there was only one church with twenty-six members. Today there are over twelve hundred churches with an unnumbered membership. Besides this, there are many thousands of people who believe in Christian Science but are not yet members of any church.—*Review.*

MOBERLY, MO.

Frank H. Leonard lectured on Christian Science April 30 at the Opera House. He was introduced by the Hon. A. B. Chamier, who said in part,—

Many seem to think that the church to which they belong has a monopoly of truth; that they are stockholders in a great religious trust. Such a subjective investment will not bring religious dividends. Justice will force a dissolution of the corporation, because its charter comes not from God. Christian toleration and forbearance will draw the different schools of religious thought into closer sympathy and cooperation, and we shall live to see the beneficent results thereof. The rainbow with its many colors, which we behold with admiration, is but one light,—the light of the sun, refracted by small drops of rain. The Son of God shines through the hearts of men,—human rain-drops which refract divine light. This also is but one light, which is truth, and it comes to the world, like the rainbow, with many colors and through different mediums and forms; yet it is the same white light of God's love, which warms the world and floods it with sunshine.

Today we are assembled here to listen to the truth as it is interpreted by Christian Science. Although I do not subscribe to this faith myself, yet I am not so religiously blind that I cannot see the great good it has accomplished, and I am not so narrow minded as to contend that it is without merit. If it can help to make life's barren places green, cause light to shine where darkness once reigned, and flood lonely lives with showers of blessings, then I have no criticism to offer.—*Correspondence.*

MEMPHIS, TENN.

Clarence C. Eaton lectured on the subject of Christian Science to a large audience at the Lyceum Theater May 4. He was introduced by John M. Dean, as follows: —

Truth has always existed, but when it comes in some newly discovered phase, to overturn and set at naught long-established beliefs and hoary traditions, it is always met by violent opposition. Jesus came preaching truth and he was crucified. Galileo offered the world a great truth and he was cast into prison. The Christian martyrs were thrown to the lions or burned at the stake, and throughout the ages this resistance to truth has arisen, in varying form and degree, to combat every attempt to give the world something better than existing theories. This opposition largely arises from the fact that truth is usually misrepresented and misunderstood until its worth is proven and men are made to see that they have been striking the hand that would bless them.

If Christian Science were what many good people seem to think it is, it would indeed be silly nonsense and unworthy of the serious consideration of any thinking man or woman. Christian Science is no more an invention of Mrs. Eddy than was America an invention of Columbus—it is simply

Digitized by Google

a discovery or a rediscovery of a fact that always existed. The speaker of the evening will offer no apology for Christian Science—it needs none. It asks no favors, but certainly has a right to expect fair play. It has no fight against any man or set of men on earth, but it is waging a relentless warfare against sin and its effects, whether they be moral or physical. If it proves its worth it will stand forever, and if it fails to do this it will sink into merited oblivion. Those of us who are trying to be Christian Scientists have proved its worth to our own satisfaction and find joy in telling the good news to others. We never coerce, we never proselyte, we never even persistently persuade, but we are ever ready, as the apostle Paul admonished, to "give an answer to every man that asketh" a reason for the hope that is in us, and that is why this lecture is being given.

News Scimitar.

WINCHESTER, KY.

Prof. Hermann S. Hering, of Concord, N. H., delivered a lecture on Christian Science, at the Opera House, May 11. He was introduced by Tim Needham, editor *Winchester Democrat,* who said in part,—

You have been invited this evening to hear one of the most interesting and one of the most important subjects discussed that ever engaged the attention of mortal man, about which there are more opinions than about any other; and it may well be, because it is of so much more importance than any other that we ought all to be anxious to find the right about it, and having found it we ought to be willing to do it.

None of us can deny that the present statement of the subject for the evening, "Christianity and Religion," has been presented to us in all the ages, especially in the two thousand years since Christianity was presented to us in such a form and in such a manner that we have been utterly unable as a race to seize actually upon it and to rest contented and happy in our understanding of it. Some of the most unhappy people I have ever known in my life have been sincere Christian people. They have been so sincere that they were unhappy lest they might be mistaken, and they were so sincere that they knew that they could not afford to be mistaken.

The whole statement of the subject has always been given us in general terms. There has never been anybody able to state specifically and demonstrate exactly this most vital subject of Christianity to us, and so the strongest plea that has ever been made and the basis upon which we have accepted it, has been the basis of faith. We believe it, therefore, and trust it, and die in that confidence. Now there comes to us a strange phraseology in this new presentation of this old theme. They actually come and say that it is a Christian Science. If it is a science, it must be exact. It must be certain. It must be definite. It must be capable of being demonstrated and so that we cannot avoid accepting it and being satisfied with it. Now I have not been able yet to understand just how this qualification comes in; whether the word "science" added to Christianity is to modify it and give us a more definite, modified statement of Christianity, or whether Christianity is to modify science, injecting into it an element that would make it more attractive to us than any other science we have ever known anything about. I hope and am quite sure that the lecturer will give us some satisfying statement about this subject.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Galesburg, Ill.—Frank H. Leonard, Universalist Church, July 14.

TESTIMONIES OF HEALING.

So eagerly have I scanned the testimonials of healing in the Christian Science periodicals that I can no longer withhold an acknowledgment of Truth's healing power. From a material view-point my whole life had been filled with disappointments because of the lack of physical strength to carry out my hopes and ambitions. I suffered from nervous collapses, bilious attacks, rheumatism, and many other ills, among which was a throat trouble that physicians declared could be cured only by living in a certain climate. For a while the change improved the throat condition; but a serious stomach disorder developed, and after months of dieting and doctoring with no results, I had a most severe attack of neuralgia. It became necessary to extract one of my teeth, and an anesthetic was used. Being in such a weakened condition, I could not throw off the effects of the poison, and for five months I lingered between life and death. During this time I was not able to leave my bed except for a wheel-chair. No words could describe the suffering of that long siege. Physicians of all schools were consulted; I was taken to medical springs, only to return more hopeless and helpless than when I started from home. The last medical doctor employed bade me pray that he might find some remedy which might bring me relief. After thirty or forty different medicines had been tried, he then told me that all that he could do was to leave me in the hands of a just God.

I pondered over the healing work done when Christ Jesus was on earth, and saw the inconsistency of attempting to heal with medicine and then to turn to God. I could but believe that the healing was for this generation the same as for those who chanced to be on earth when the Christ walked among men. As kind friends came to minister to us in our long siege of affliction, and expressed the hope that I might soon be better, my heart would cry out for something more than the expression of a hope. I longed to know what that something was, to know it for myself and then give it to every suffering creature in existence. We had now given up all hope of any benefit being derived from medicine, and although we had heard of Christian Science, I had no thought of turning to it; still I was clinging to the hope of being healed by some unseen power. We had unfortunately been prejudiced against Christian Science by people who professed to be Scientists, but who had failed to grasp its teaching. Various experiments followed, but with no permanent results.

I could not eat, and the dreadful nightmare of my illness made life almost unbearable. The whole family were broken in health and spirits from the anxious months of care for me, and expenses had been so heavy that our means were almost exhausted; so when another friend came to tell us of a wonderful healing which she had just received in Christian Science, and offered to direct me to the practitioner who had delivered to her the glad message of freedom from pain, I said, "Yes, take me there, and let me see for myself if there is any good thing for me." In two weeks from the time I took my first treatment I went to a different part of the state and assisted in preparing our household goods for shipping. I ate heartily of all kinds of food, and while this did not digest perfectly, it did not cause me the intense suffering which I had previously experienced. I read "Science and Health with Key to the Scriptures" on this journey, and turned constantly to it as I felt fatigued from my work, the first I had done for a year.

Truly divine Love was a very present help in a time of trouble, but the battle for the acceptance of Christian Science had not been wholly won. I had never thought of this teaching as a religion, but merely as a mysterious healing agency. As I read, I saw that it differed very widely from that of the church to which I had belonged

Digitized by Google

for years. I had always had a dread of being led away by some new phase of belief in regard to the Scriptures, and some of my friends were amazed that I should think of taking up Christian Science, one even going so far as to beg me to burn the text-book which I had purchased. I, however, kept on studying Science and Health in connection with the Bible, and prayed that I might be guided by Truth. I had found the statement where Mrs. Eddy asks no one to follow her except as she follows Christ (see Messages to The Mother Church, p. 78), and I was determined to do this—no more, no less.

The burdens dropped off one by one. My husband, who had been unable to work for five years as a result of an attack of lung trouble, was restored to health. He had been a constant sufferer with heart affection, for which he had been treated with only temporary relief, but this and a number of other ailments faded from consciousness as our understanding of Science grew. My father and mother were lifted from a condition of despair to that of hopefulness, and a new lease on life was given them amid a host of misfortunes which had come to them in the past few years.

I could now read for hours without glasses, something I had not been able to do for ten years. I never had an attack of throat trouble after my first treatment; my general health improved, and I was able to do many things which I had never been able to do without suffering. After several months of study and testing of the teaching of Christian Science, I realized that I must take some decided action in regard to my past beliefs and my future course in regard to Christian Science. Behind me was a record of failures, suffering, and conditions upon which my friends in the old beliefs could only look and pity. My study had brought me a new life, new hope, a brighter spiritual insight into the "deep things of God" which I had always supposed I must wait to know until I had passed through death. New friends in Science spoke words of wisdom and encouragement, which helped to snap the chains of error that had so long bound me. I no longer hesitated which way to go, but stepped boldly out for Christian Science, not with the feeling that I was leaving my church or my friends of former years, but that I had simply found something which had enlarged my vision and enabled me to be more useful to the world.

After studying this great question for a year and a half I feel as one who has been born again,—yea, resurrected from a life of uselessness to one of usefulness,—and I have been able to overcome a sense of injustice for those who were not kind when I was struggling with a load of care which I was not able to carry. I am truly grateful for Science and Health, also for the *Sentinel* and the *Journal*. To those who may be seeking Science for the first time, I would give a message which I hope may help them: Rejoice over instantaneous healings, if you receive them, for they are good and encourage us sometimes when hope is almost gone; but do not be discouraged if you have to wait long for the blessing. Patience will bring you a more perfect work for the waiting, and you will have many added blessings for the perseverance in your search for the truth.—MONA E. HERIN, Portland, Ore.

During 1907 and the fore part of 1908 I was to mortal sense under a heavy business strain. The work upon which I was engaged so completely absorbed my time and thought that with the advent of the panic, and consequent failure of my plans, substantially complete mental and physical collapse resulted. I was, during the period above referred to, under expert medical care, which was unsuccessful in checking the progress of the trouble. At this point, through the suggestion of friends and the good offices of my wife, I attended a Wednesday evening meeting, and was impressed with the testimonies of healing. I was also much impressed with the following inscriptions on the wall of the church: "Divine Love always has met and always will meet every human need," that familiar quotation from our Leader's work, "Science and Health with Key to the Scriptures" (p. 494); also Christ Jesus' declaration, "Ye shall know the truth, and the truth shall make you free."

March 21, 1908, I bought a copy of the text-book and began the study of its wonderful philosophy of life, and improvement dated from that very day. During the period described by our Leader as "chemicalization," all the accumulated discordant thoughts and experiences of a lifetime seemed to be precipitated in a violent reaction, until after some time and what seemed serious relapses, the Science of being dawned on my awakened spiritual consciousness, with steady and consistent improvement of mind, reflected in correspondingly harmonious health. I am now, and have been ever since, in perfect health. Our entire household of eight, including four children, have become interested in Science. In the old thought we were entirely dependent on material means, and the family physician was almost a weekly and frequently a daily visitor, but Christian Science has for over two years met our every need, and we are now a household in which, due to its beneficent influence, harmony increasingly prevails.

I desire in this way to make my experience available to any who in similar or any other circumstances of health or fortune, can be assured of certain, complete, and permanent relief. I am also glad of the opportunity to record my gratitude to our Father-Mother God, to Christ Jesus the Wayshower, and to our dear Leader, Mrs. Eddy, for this beautiful truth which rationalizes to spiritual consciousness the chaos and inharmony of a materialistic conception of life.—J. ROBERT CROUSE, Cleveland, Ohio.

In an article in *The Christian Science Monitor*, these words occur: "There is something that can be done; we do not have to fold our hands and be resigned to error." This sentence seems to sum up for me the special message that Christian Science first brought me, over three years ago. The idea of a real way out, and that there always is a way out of every seemingly evil *impasse*, came to me as a ray of hope in great need. I was suffering from an illness diagnosed as a serious intestinal disorder, and after naming the disease the doctor seemed to be able to do nothing more for me at all. I had the best advice to be had, both in England and on the continent; I had gone through endless *régimes*, treatments, and "cures," and was finally resigned to taking a very drastic and tiresome "cure" every year, in the faint hope of regaining a measure of health. I had resigned myself to a life of invalidism, living for months in different health resorts abroad, with a hospital nurse and a devoted maid. I was inactive, useless, and unhappy, with every sort of discord in my life and my body.

One day a relative of mine cut out of a daily paper and sent me the letter of an English lady whose complaint was the same as my own, only in an even worse degree, and who stated that Christian Science had cured her in a few weeks. I was feeling pretty hopeless by then; the last specialist I had seen in Paris having told me that I might get better "with luck," but that he knew of no remedy other than those I had tried and found useless. Every known article of food had, I think, at different times been forbidden me, except a baked apple, though why this remained always unbanned I cannot say. So I was ready to jump at any chance of help, and I jumped at Christian Science, to find it not a mere venture, but a rock, a sure foundation. I returned to London, saw the writer of the letter, decided to take Christian Science treatment, and was benefited almost at once by the healing of pain and sleeplessness. Some manifestations of the old ills have been stubborn, they seemed to be tenaciously rooted in my mind as realities, but in spite of this I have long since been enabled to live

Digitized by Google

a happy, healthy, active life, doing more and experiencing less fatigue than before all the false dream of illness.

I have proved again and again for myself that evil is not real, and that there is in reality no danger anywhere, for God is everywhere, and that there can be no problem too hard for divine wisdom to solve. My whole life and being have been changed and bettered by the understanding that Mrs. Eddy has given to us through that wonderful book, "Science and Health with Key to the Scriptures," and her other writings. May my gratitude ever prompt me to live in the way Mrs. Eddy would most wish, namely, in obedience to the law of God, good.

MISS ELEANORA MONEY COUTTS, London, England.

[Translated from the German.]

From the time I was ten years old I suffered from spasms of the stomach, which kept growing more severe, and twice I had hemorrhages from the stomach, so that I seemed to be on the brink of the grave. I was in bed for a long while, had to be very strict in my diet, and tried innumerable remedies without being healed. In spite of all that was done, the condition grew worse all the time, till in the spring of 1908 I could not retain any kind of food. Another specialist then took my case, who prescribed absolute rest. For about eight weeks I abstained entirely from solid food, and kept in a reclining position, but the moment I began to move about the old pain would return, until I almost despaired of ever getting well again.

One day the book "Science and Health with Key to the Scriptures," and a few copies of the *Herold* were sent to me by my sister who lives in Berlin. She asked me to read the literature carefully, and said she knew that I would be helped, if I were to accept the truth. I had never before heard of Christian Science, but I was so struck by what I read, feeling as if it all had been written especially for me, that I can say I became well instantaneously. For the first time in a long while I felt hungry again, and ate what was set before me for supper. I cannot remember ever having eaten with such a good appetite, and after that I ate all kinds of food without any ill effects. I felt very well for several months, when I had a relapse, which was probably due to my not having continued to study as I should have done, and I had to apply for help to a practitioner. Absent treatment was given, the Scientist lovingly and untiringly pointing out to me my faults, and gradually I dropped the errors which were besetting me.

I had to work faithfully, and the healing was much slower this time; but this has been a great help to me, as I thus acquired a better understanding of the truth. The occasion has also presented itself several times to demonstrate the power of the truth for my children, and I am glad to be able to say that we have had neither drugs nor physicians for over a year. I have also been able this year to attend all alone to my household duties, including the care of three little children, and even to go through two big removals within six weeks last spring. I know that God is my strength and support, and that I can always rely upon Him. Both my husband and I are most grateful to God for this healing, and to Mrs. Eddy for the wonderful truth she has made so plain to us in our text-book. It is our wish that many sick people may by reading this book discern the divine presence and be healed.

FRAU MARTHA MENK, Altona, Germany.

This is a plain statement of facts in regard to my little daughter, who has been wonderfully helped by Christian Science. In July, 1909, this child, who was then fifteen months old, weighed only fourteen pounds. She had an intestinal disorder and was suffering from the cutting of teeth. She could only retain a special kind of food. In desperation I asked help of a Christian Science practitioner, although the lady was a stranger to me, and she said that God could help my baby. The first change we noticed was that the baby slept better, seemed to suffer less, then gradually the bowel trouble was better, and as I got courage I increased her food. She gained a pound in August, and cut six teeth, but many times I became discouraged and many times the Scientist came bravely to the rescue; no matter what time of day or night I called for help, she cheerfully responded. My little daughter gained steadily in weight; has had no physician, no help but Christian Science. In six months she could walk as well as any child of her age, could talk, and is perfectly normal in every way. I make no secret of my baby's having been helped by Christian Science, and am willing to have any one write me who is interested in the case.

MARY BLANDFORD FRENCH, Bradley Beach, N. J.

It is with deepest gratitude that I express the great benefits I have derived from Christian Science, which reveals Truth as the only permanent health-giving power. Although I had been under the care of many eminent physicians all my life, which means nearly forty years, I seldom found even temporary relief through drugs and stimulants, from sleeplessness and what physicians pronounced acute nervous trouble,—headaches, a stomach trouble, and internal organic disorders, from which I had not even temporary relief. I can indeed appreciate the difference between physical health and strength and an absolute and lifelong continued lack of them. I had been under leading oculists for increasing and serious eye trouble, causing intense pain and a consequent and constant necessity for different kinds of glasses since I was twenty years of age: but in Christian Science I was completely relieved of both the pain and the necessity for using glasses. My professional work having been art, including miniature work, and writing, I am indeed grateful for this healing.

It is not alone the physical help, but also the sufficient clearness of a religion which is practically adaptable to every human need, proving God to be indeed a "very present help in trouble" and demonstrating the truth that God is All, if rightly understood; for which I am sincerely thankful to God, also to Mrs. Eddy.

ADELAIDE HUSTED LONG, New York, N. Y.

I am truly thankful for Christian Science; not for myself alone, but for the dear ones in our home. One morning our little girl of eight complained of her throat. The evidence was a case of mumps, with high fever, headache, etc. My husband is a Christian man, but not a Christian Scientist, and when he was informed of her condition he became very much alarmed, and wanted to call a doctor at once. I had, however, some knowledge of Christian Science and its healing power, yet not enough to apply it myself, so I asked if I could call a practitioner. In a little while he said he had thought it over and was willing that I should have my way, provided that he could call a doctor if she did not improve very soon. I called a Christian Science practitioner, who came about three in the afternoon and gave the little one treatment. At night her fever was gone, she was able to eat some supper, and in two more treatments she was well, and went out of doors at her will.

Since this experience my husband, who had been opposed to Christian Science, has been cured of a severe throat trouble. We all rejoice at this healing and are grateful that we can turn to this wonderful divine power instead of trusting our lives and all else to medicine. I might say here that our medicine-chest with its contents was buried in the ash-pit, and we rejoice in knowing that God helps in the small things as well as the great, if we but trust Him.

MRS. CORA HINSDELL, Elgin, Ill.

Digitized by Google

It is over three years ago that I began the study of Christian Science. At that time I had a very serious nervous breakdown, and when Christian Science was offered to me the first treatment lifted such a burden of fear and despair I knew from that moment a new life had dawned for me. Ever since Christian Science has been a very real and practical help to me in my daily business life. It enables me to do my work without fatigue; in fact, without the exhaustion which almost always followed my day's work in the time before I knew of it. It has released me from the bondage of worry, from a sense of personal effort and personal responsibility, besides enlarging my capacities in every right way. I do not mean by this that Christian Science does one's work for him, without effort on his part, but I do mean that even a slight understanding of the ever-present divine Mind does give one a confidence and courage, when difficulties have to be faced and decisions to be made, which no amount of experience or training in the ordinary sense could possibly impart. Through the application of the truth in the business in which I am interested, I have seen the elimination of one discordant condition after another.

For a peace of mind "which passeth all understanding," for the altogether deeper, broader, fuller life, and the real joy which Christian Science has brought to me, I count it a privilege to express my deepest thankfulness to God, also my gratitude to Mrs. Eddy, who has rediscovered and unfolded this truth to the world and upheld it with such unswerving loyalty and courage. This, I know, can best be expressed by earnestly striving to follow her teachings.

ALICE L. HUNTER, London, England.

After some delay, I now come forward to give my testimony as to what Christian Science has done for me, and to pay a just tribute to its Discoverer, Mrs. Eddy. The circumstance to which I allude was a serious injury to the elbow of my right arm. It was pronounced a complicated break, and it looked ragged and ugly under the X-ray. The surgeon who set the fracture told me that I would have a stiff arm; that at my "time of life" (sixty odd years) he had never known in such cases of any other result. He was a man of wide experience, and would not have distressed me with such a verdict had he thought any other result possible.

A Christian Science practitioner then took charge of the case, and under her faithful application of its teachings the arm and elbow-joint are as good as new. The surgeon gave it no attention from the time he set the bone. I was under the daily care of the practitioner, and I lost no sleep, suffered no pain, although I wore the splints and bandage for a month or so. The doctor was sure my arm would be stiff, and so instead of taking them off myself, I called at his office and he unbound the arm with great care. I made no comment, but when he removed the splints, etc., I suddenly doubled up my fist and swung my arm over my head. He looked at me for a minute, then said it was wonderful.

All the time since I came from San Francisco to the country, where I now reside, I have done much heavy housework with no ill effect. I am glad to tell my friends of the power of divine Love as exemplified in Christian Science.—MRS. C. H. CHURCH, Coutolenc, Cal.

I have long felt that I should express in some way my gratitude for Christian Science and all that it has done for my daughter and myself, but it has always seemed difficult to find words that would even in a small way tell what I feel. My little girl was healed of a supposedly contagious disease. Not being able to make the demonstration myself, I telephoned to a practitioner, and in four days the child was healed. I am learning hourly to rejoice always in ever-present Love, and I am grateful to Mrs. Eddy for this truth.—MRS. SYLVIA MYERS, South Omaha, Neb.

I have long wished to give a statement of my healing in Christian Science. My blessings have been so many that words fail to express them. Over five years ago I turned to Christian Science for physical help, not at that time realizing how much more I needed the spiritual. Because I could not think of God as a corporeal being, I felt that I did not believe in Him. A God who created and then punished His offspring, I could neither believe in nor love. At length I was led to Christian Science, and during my second treatment, which was present, I found what I had long sought, a glimpse of what God is. After eight treatments my condition was so improved that I discontinued them, although I was not in what is termed a perfectly normal state of health. Overjoyed that I too could believe in God, I dwelt in this uplifted state of consciousness for weeks afterward, thinking very little of the material body, desiring above all else more knowledge of this truth, and knowing that the healing would follow as a divinely natural result; that man as the idea of God, governed harmoniously by Principle, would unfold to my consciousness in proportion to the understanding gained. Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

A question I had been asking for years was this: What is God? I felt satisfied for the first time when the practitioner replied, "God is good. Good is Mind" (Science and Health, p. 113). I commenced to understand when I knew that the omnipotent, invisible good is always with us, and that man is in His image and likeness, spiritual, not material. This knowledge gained, it served to lift me from darkness into light, from doubt and fear of sin and disease to confidence in God. From the first I knew I had found the truth, and even had my healing not followed as a result, this would not have shaken my faith, for I realized that Truth never fails. I tell of the spiritual uplifting first, for it has always been the most important to me; not that I would undervalue the physical healing, for it is the proof that the truth in Science and Health is the same that Jesus taught and demonstrated. He said that if we believed not the word, we should believe for the works' sake, and in gratitude for this proof of the truth, I give this testimony.

For eighteen years I had been afflicted with a chronic bowel and intestinal disease, called organic, and it had been pronounced incurable by eight well-known physicians. From this trouble I was in a very weakened condition, but the first few treatments in Christian Science filled me with strength. For one year I gradually gained in health, and at the expiration of that time the demonstration was complete; I was in what a physician would pronounce a perfectly normal condition. This was a happy year, the sun shone and everything had become beautiful to me, as when I was a child. The healing did not seem slow, for I was so uplifted with the study of Christian Science that I did not realize a year had elapsed until afterward. Words are inadequate to express my gratitude to God for giving to us the one whom I feel it a privilege to call our beloved Leader, who was pure enough to have revealed to her the truth of Jesus' teachings and make them practical for today, and for her loving guidance and spiritual perception, apprehending our present and future need, expressed in her writings. In loving her whom I have never seen, I have learned to love all.

I cannot close this testimony without adding my gratitude for all the Christian Science literature, which has brought blessings not into my house alone but into thousands of others. My daily prayer is for more of this truth, that I may share it with others.

MRS. ROSAMOND P. WING, St. Joseph, Mo.

Digitized by Google

I think it a duty to add my testimony to those of the thousands who have been saved by Christian Science. In November, 1908, I was laid up in a London nursing home as a result of one of many prolonged fits of heavy drinking. I had drunk more or less heavily for about ten years, and the habit had obtained absolute mastery over me through my having given way to it, and it often laid me up. I also took sleeping-drafts and opiates constantly. I used to pray in the old way, but had given it up, as there was no result. I saw many doctors, but none could show me any way out, so I eventually gave up hope and really was trying to drink myself to death. I had many near approaches to suicide, but was afraid of the unknown hereafter. I was a physical wreck, and had at any rate one severe ailment and great fear of its incurability. When laid up in London, the doctors, who were most kind, were not able to make anything of me, and talked of operating. Christian Science was then suggested to me, and I promised to try it, though I fear with great skepticism; but after having had a few talks and some help from a practitioner, all desire for alcohol completely left me.

I am now in perfect health and rely only on God in all cases of sickness and distress. The desire for tobacco, which was as strong and indulged as much as the other, left me over a year ago; moreover, I have been absolutely changed in my nature and am trying to live at peace with all men, whereas before it was mostly enmity. My outlook on life has been reversed, and I now wish to try to help others and to live nearer the Christ-way, brought to light again in modern times by our Leader. I cannot adequately express my gratitude to God, and am also sincerely grateful to Mrs. Eddy and to my friends for what is practically a resurrection.—CHRISTOPHER WADE, Hull, England.

I should like to express my great gratitude for the healing of my brother, as stated in above testimony. I bought a copy of "Science and Health with Key to the Scriptures" in 1905, and read it irregularly, with no clear understanding of its teaching. It was through an argument with a friend, who was opposed to Christian Science, that I was led to apply to a practitioner. I was healed of a chronic internal trouble, which I believed necessitated the use of quantities of medicine and for which I had twice had treatment from London doctors; also of a stomach disorder and severe internal chills and headache. I have not taken any medicine since November, 1907, and have never been so well in my life. I have also, I am grateful to say, been able to give up the drinking of wine, which I believed necessary to my health.

I am truly grateful for Mrs. Eddy's teaching, as set forth in Science and Health; for a better and happier outlook on life, and instead of a violent and unreasoning prejudice against what I believed to be religion. I have gained an understanding of the Bible which, although very small, helps me every day of my life.

MARY W. WADE, Hull, England.

To grow a little wiser day by day,
To school my mind and body to obey,
To keep my inner life both clean and strong,
To free my heart from guile, my hands from wrong,
To shut the door on hate and scorn and pride;
To open them to love,—the windows wide,
To meet with cheerful heart what comes to me,
To turn life's discords into harmony;
To share some weary worker's heavy load,
To point some straying comrade to the road;
To know that what I have is not my own,
To feel that I am never quite alone;
Be this my prayer, my task from day to day!

DOROTHY M. PORGES.

FROM OUR EXCHANGES.

[*Continent.*]

Can business be carried on unselfishly? It is unhappy that people are so ready to say no to that question without thinking. The mass of men appear to take it as an axiom that in order to do business in competitive conditions one has to be selfish or fail. And since Christianity is based on teachings of unselfishness, the idea is common that no successful business man can be a real Christian. Many doubt the genuineness of all business men who belong to a church. The burrowings of that suspicion work unfortunate results in a good many places, but the worst effect is on the men so doubted. Men in business, because they hear it said so often that they cannot be unselfish, take the declaration for true without thinking, and supposing themselves to be in the grip of necessity, harden their consciences to go on doing things they are at heart ashamed of and themselves consider inconsistent with religion. The dead weight of this tradition, abjectly surrendered to, is responsible for half the abuses in business. The captains of industry are not all so heartless that they prefer to have financial malpractice and human misery attaching to their enterprises, but the grip of commercial fatalism is so strong on them that they cannot dream of any use in trying to make things better. Such men, as much as any slaves that ever lived, need a bold, stout emancipation proclamation. Let it be spoken loudly, strongly, and far: Business can be unselfish. Competitive commerce does not have to be unchristian. It is not only possible but obligatory for men of Christian idealism in business to deliver trade and industry from the domination of self-seeking and unsocial motives.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

Health can be brought about as easily as holiness. The very wish and confident belief that this is the true fruit of life will bring forth in oneself and in another this fairest product. To be in God must mean that every thing and thought contrary to the sweet will of God will be sloughed off. That must be the banishment of sin and sickness and death, until they will all go like the mist of the morning when the light cometh. When we feel all the while that we live and move and have our being in God, and that God is ever within us, working out His own good pleasure, we know that our lives can in the end mean nothing but perfect holiness and perfect health. It is the very spirit of Christ within us, the hope of the unspeakable and everlasting glory. It will make our lives bloom and blossom like his who was the fairest of ten thousand, the one altogether lovely, the express image of the Father's glory, our joint heir with us in the life of the Father of all life and light. Living thus in God is the simplest creed in the world. It is the safest and soundest and sanest creed in the world. It satisfies; for it brings forth the fruit so longed for by every one. It makes you one with the Father, and one with everybody, in love and fellowship. You know you are your brother's keeper, and you so love the world of sinners lost, that you, like your Master, would sooner die than that any other one might perish.

[*Churchman.*]

The average man gets his idea of church-going from church-goers. The effect of church-going on them is the meaning of church-going to him. This is a simple, realizable, and ancient test. It is one that formal Christians dread, that real Christians need, that mankind demands, that our Lord imposes. Does church-going help people to become like Christ, to love one another as he loved them? Does it make church-goers friends, neighbors, citizens, saviors of humanity? This is a question more vital to a greater multitude than organized Christianity has yet real-

Digitized by Google

ized. It is being asked more widely, more open-mindedly, even more anxiously than in any previous period of Christian history.

Church-going means less to the people because it does not mean more to Christians. Worship is too much separated from fellowship. People do not believe that worship without fellowship is really the worship of God. They are quick to see that worship without fellowship is in fact worship without Christ. The incarnation has forever bound worship and fellowship, fatherhood and brotherhood into one indivisible unity. The attempt to worship God apart from the brotherhood, living and visible, is really to forsake Christianity and to return to pre-Christian times.

[Rev. Clayton R. Bowen in *Christian Register.*]

It is to break faith with her own ideal for the church to emphasize and encourage class consciousness, to preach to men as divided into antagonistic social groups, such as the directors and the performers of the world's brute tasks. Precisely because of the iniquities that prevail in many of these relations, is it imperatively necessary to preserve one shrine where the divisions cannot enter, one sheltered place where all are equal, where we can take refuge from the shames and inhumanities in the social structure that cry to heaven for their cleansing, where only men can come, where neither Jew nor Greek is known, neither bond nor free. The church must help to right the existing wrongs, in God's name, yes! But the most effective contribution the church can make to their nullification is to deny them place in her realm, to refuse to recognize their validity, even their existence. To make social classes part of her system, and to array them one against another as part of her warfare, is to give them a bulwark and an establishment which centuries cannot remove.

[Rev. Francis Brown, D.D., in *New York Observer.*]

The one organization, when it comes to its own again, will have abundant room for diversity of view, because diversity of view on a hundred matters over which Christians have fought and churches split is entirely consistent with union in the vital experience which alone constitutes qualification for the church. This means, obviously, that subscription to elaborate creeds ought not to be asked, because the elaborate creeds go far beyond the absolute requisite of the Christian experience, and although it is important for intelligent leadership that a man should have a connected series of opinions about religion—in other words, a definite theology—and should understand the creeds, experience shows that no one series of opinions has a monopoly of practical value.

[*Standard.*]

We greatly need a larger measure of devotion to the things of the Spirit. We need to add to our loyalty to external ceremonies intense interest in the cultivation and growth of soul-qualities. The needs of the age can be met only by a living apologetic. People grow weary of ceaseless contention concerning outward things while so little is said—and, seemingly, thought—about the graces of human character. Put into any community a body of Christians who live the life that Jesus asks, Christians who are ready to forgive, who walk among their fellows in real humility, who practise as well as preach the homely virtues, and there is a force that cannot be resisted and that will redeem the life of that neighborhood.

[Rev. Frank Oliver Hall, D.D., in *Universalist Leader.*]

Christ brought life and immortality to light. His faith and his experience raised this belief from a vague hope to a vivid and inspiring confidence. But God has not left any people, anywhere, at any time to struggle on in the hopeless dark. As far and as fast as men have been able to know the truth and cherish the hope, they have received the message.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

An annual appropriation of twenty million dollars for five years to improve the post roads and rural delivery routes of the government was urged in the Senate by Mr. Swanson of Virginia. He contended that, despite the amazing achievements in many directions scored by this country, it is notorious that the United States has the poorest public roads and highways of any civilized nation. He said he regarded the subject as the paramount one before the American people. His plan would open more than one million miles of roads to government aid, the states or local authorities would furnish an amount equal to that appropriated by the federal government, and the total would be divided among the states, according to population.

The Smithsonian Institution has recently sent out an expedition to Alberta and British Columbia, Canada, for the purpose of collecting natural history specimens for the national museum. The expedition is the result of correspondence with the director of the Alpine Club of Canada, outlining plans for an extensive survey of the regions about Yellowhead pass, Mt. Robson, and Jasper park, in which survey the Smithsonian Institution was invited to participate.

The Massachusetts Senate has passed a bill permitting the Boston Elevated to absorb the West End railway and authorizing extensive additions to the subways, which are to be built by the city of Boston and leased to the Elevated. The public, the Public Franchise League, and the improvement societies took an active interest in the matter and forced the acceptance of terms favorable to the public.

New York state has gone on record in favor of a federal income tax, ratifying the proposed amendment to the federal constitution authorizing such a tax. This brings the total up to thirty-one. Fifteen states have either defeated the amendment in one or both houses or have adjourned without taking action in one or both branches. This accounts collectively for forty-six states to date.

The Anglo-American arbitration treaty is ready for the signatures of the United States and Great Britain and ratification by the two governments. The signing of the treaty is being held open for ten days in order that Germany, France, Russia, and Japan, which have expressed a willingness to arbitrate all disputes, may have the opportunity of becoming parties to it.

The Massachusetts Legislature has before it a bill to appropriate nine million dollars for the improvement of Boston harbor. The passage of this bill is being urged by the Chamber of Commerce and other large commercial interests, and there is every prospect that the bill will be passed at this session.

Special agents of the department of justice, who have been investigating the Aluminum Company of America and other metal concerns, to determine if there is an aluminum trust, have finished work and their reports are now under consideration by Attorney-General Wickersham.

An investigation of the Knickerbocker Ice Company of New York, said to be the successor of the American Ice Company, which was not long ago dissolved by court action, has begun. It is charged by the independent dealers to be illegally restraining trade.

Work on the plans for the Richmond (Va.) College has begun. The new college will be located several miles to the west of the city on a tract of two hundred and eighty-four acres.

The city of New York may spend one hundred and twenty-one million dollars for subways without exceeding the debt limit.

International.

The London lawyer who defended Dr. Hawley H. Crippen, the wife murderer, has, after an investigation, been suspended from practice for one year and ordered by the divisional court to pay the costs of the inquiry. He was alleged to have abused his privilege as a lawyer by aiding and abetting the editor of a weekly publication and member of Parliament to publish false statements regarding the case, and also to have aided another paper to give publicity to similar untruths. Justice Darling, in announcing the decision of the court, said that the case had disclosed the gravest state of affairs, absolutely inconsistent with public advantage. Crippen, he said, was not defended as he should have been with a view purely to his defense. The case had been conducted largely for the purpose of making copy for the newspapers, which subscribed money for the defense. That a solicitor should lend himself to such practice was a very grave offense, the justice said, and added that in his opinion the newspapers connected with the affair equally deserve punishment.

The Anglo-American Developing Company, a corporation recently formed in London, is making a timber map of four million five hundred thousand acres of spruce lands owned by the company in Labrador in a region extending one hundred miles along the Labrador coast and seventy-five miles inland, the location being about two hundred miles north of Hamilton inlet. A thorough exploration of the region will be made, not only for the purpose of mapping timber, but for getting information as to logging conditions and data concerning the water-powers of the Fraser and other rivers. Arctic conditions prevail during a considerable part of the year in this region, there being at times but one hour of daylight, while the temperature often runs as low as sixty or eighty degrees below zero.

King George has given the award in the Alsop claim to the United States. The award concedes nine hundred and thirty-five thousand dollars to the American claimants. Early in August last the American ambassador and the Chilean minister at London presented to the British foreign office their respective cases on the Alsop claim, which has been submitted to King George as arbitrator. The claim is based upon large sums of money advanced to the Bolivian government in 1874. Chile agreeing to assume the obligations of Bolivia to the company when Arica passed to Chile.

A revision of the Anglo-Japanese alliance is regarded as the inevitable outcome of the Anglo-American arbitration treaty. There is reason to believe that negotiations for such a revision have been going on for several weeks. It is reported that Great Britain proposed to modify the clause providing for mutual assistance in the event of war, making the provision inapplicable in the event that either party to the alliance is fighting a nation with whom the other has concluded a general arbitration treaty.

Mexico's reserve amounted to $31,535,000 gold, on June 30, according to a statement made by President de la Barra. This is something like five million dollars more than was left in the treasury by Jose Yves Limantour when he resigned as minister of finance and was succeeded by Ernesto Madero, and is attributed to the adoption of a policy of economy.

The present mileage of railways in Korea is six hundred and seventy-four miles and the projected mileage, which is to be completed in a period of five years, will add three hundred and ten miles.

King George and Queen Mary, with the Prince of Wales and the Princess Mary, during the week of July 7 made a royal visit to Ireland, proceeding thence to Scotland.

According to the final accounts of the imperial central treasury of Germany for the financial year 1910, there is a surplus of $29,425,000.

Industrial and Commercial.

B. F. Yoakum of New York and a group of eastern associates have acquired controlling interest in one of the largest private irrigation enterprises and landed holdings in the country, the San Benito (Tex.) Land and Water Company. It is reported that the consideration involved in this transaction is upward of five million dollars. This irrigation canal system and the land that it waters are situated adjacent to that of the American Rio Grande Land and Irrigation Company's property at Mercedes, which is owned by Mr. Yoakum and associates. The latter have already expended more than two million in the construction of canals. The San Benito system comprises thirty-seven miles of main canal. This waterway is two hundred and fifty feet wide and twenty feet deep. More than one hundred and twenty-five miles of laterals branch out from the main canal, carrying water to all the farms on the fifty-thousand-acre tract. The canal is supplied with water from the Rio Grande by gravity through immense head gates. This is augmented by pumping plants. The canal system at Mercedes comprises twenty-seven miles of main canals which have a width of two hundred and eighty feet. There are many miles of broad laterals reaching out to the farms in all parts of the tract. All syphons, head gates, culverts, and conduits are of solid concrete reinforced with steel. The irrigated lands produce crops of various kinds such as cotton, corn, sugar-cane, and nearly all kinds of vegetables.

The proposal for the construction of a dam across the Colorado river at Austin, Tex., and the installation of a hydraulic plant has been accepted by the city council and a contract entered into, subject to ratification by referendum vote by the people of the city. The total proposed consideration is one million six hundred thousand dollars, to be paid in twenty-five annual instalments.

The Hoosac tunnel in western Massachusetts, which has been electrically equipped, was formally opened to traffic last week. The locomotives are fourteen hundred horsepower, capable of hauling a two-thousand-ton load. This equipment eliminates the smoke and gases of former years and renders the ride a novel and pleasant one.

The sum of twenty-five million dollars is to be available soon for carrying out extensive plans which the Hill interests have for the railroad development of Oregon. It will be used for the extension of the various affiliated lines, branches, and feeders of the North Bank road.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MEDICINE AND THE STATE.

HON. CLARENCE A. BUSKIRK.

LET us suppose that a man allows himself to get into a prolonged state of jealous anger, and thereby falls sick. The matter-physician is called to the sick man's bedside and discovers an accelerated pulse, a coated tongue, and other physical effects; whereupon he opines that he has made a needed diagnosis on which he can determine the size, frequency, and contents of the pellets of an inert and non-intelligent drug which he will put into the sick man's stomach in the experimental effort to restore him to physical harmony. If the man's jealous anger sufficiently subsides he will probably get better and finally be comparatively well, and the doctor and his diagnosis and drugs will receive the credit therefor. If the man be slow in recovering, the doctor will feel his pulse, look at his tongue again, and decide that he will try some other drug. If the man's anger in the mean time does not subside the bad symptoms which the doctor has been diagnosing (which withal are only effects and not cause) will continue; and other doctors may be called into a consultation. What for? To look again at the patient's tongue, *et cetera,* and decide upon a "change of treatment;" that is, a change of experimentation. Meanwhile, the patient's vigor is being undermined in various ways, especially by the weakening influence of fear.

Alas! how long will the countless victims of material thought remain content with so unspiritual and so inadequate an order and those who champion its rule be regarded with obsequious respect when they seek legislative aid to discourage and prevent the methods for overcoming sickness which were proven trustworthy by Jesus and his followers? Is it not evident that the right way to diagnose a case is to inquire into and discern the mental cause of the physical inharmony, instead of observing simply physical effects or symptoms? Moreover, is it not unquestionably true that no pill or other material remedy can destroy the mental cause of sickness? and is it not perfectly rational to assume that the remedy for mental discords is the true and right remedy for sequent physical discords? And yet, if this be so, what excuse or apology can be offered in behalf of those who would unite medicine and legislative authority to destroy that freedom of religious conscience and that enjoyment of personal liberty which the fathers so jealously guarded in the constitution of the United States?

It cannot be truly said that the cases of physical sicknesses which are to be traced unquestionably to mental causes are negligible in their number. The observations and often the personal experiences of most adult persons, if they will consider the subject without prejudice, lead to the conviction that such cases, on the contrary, are noticeably numerous, even if the contention of Christian Scientists that the primary cause of physical discord is mental rather than physical be disregarded. Are such cases to be consigned by legislative enactment to drug or other material treatment, and the opportunities for mental treatment be restricted and limited by law? Would not such a monopoly, in behalf of the drug physicians, created and sanctioned by law, be quite as tyrannous and unjustified as the creation and sanction by our laws of a monopoly of religious privileges in behalf of some particular religious denomination? In fact, to limit by law the opportunities of the citizen to worship God as his conscience teaches him is essentially the same thing as wholly to forbid him to worship God as his conscience teaches him. Likewise in fact to limit by law the opportunities of the citizen to have the remedial system for sicknesses in his home and in his own person which his conscience and judgment teach him to be most trustworthy is essentially the same thing as wholly to forbid by law his recourse to such remedial system.

We do not claim that the rights of others may not be protected by reasonable legislative enactments, as for example in what are termed contagious diseases. For the right of the majority, that their beliefs in such matters are to be treated as sacred, is identical in that respect with the right of the minority. Any argument which is based on the undisputed police power of the state to seek to protect the public health in instances of alleged contagious diseases, and in like instances, by reasonable legislation, has nothing to do with the sacred rights of the citizen whenever his choice of the remedial system for members of his household or for himself does not endanger the rights of others. The courts have manifested a strong inclination to leave the question of the reasonableness of medical legislation to the legislatures; hence, the legislatures need to consider with even greater vigilance and caution every measure which may threaten the personal or religious rights of any citizen.

It is evident that the legislative branch of a government has no right whatever to enact any law which is intended to favor, in the least particular, a special school of drug medication, for example, the allopathic, and to work to the disadvantage of another school of drug medication, for example, the homeopathic. And this is so notwithstanding the fact that these two schools are so diametrically opposed to each other in medical theories and practices that if the allopathic be conceded to be scientific and safe, then it follows that the homeopathic is unscientific and dangerous; while, on the other hand, if the homeopathic be the scientific and proper therapeutic system, then it follows that the allopathic system is a peril to life and health. But in the republican form of government the legislature cannot prefer by legislative enactment the allopathic over the homeopathic, or *vice versa.* To do so would be wholly and even absurdly apart from the functions of a republican government.

The same reasons apply to restrain a legislative body from enacting a statute under which the government would deserve to be called an allopathic government or a Christian Science government, rather than a Presbyterian or Methodist government. With a decent regard for the basic rights and privileges of citizenship, lawmaking bodies, either national or state, cannot enter into the determination of the relative merits or demerits of any system of medicine or religion, and if the views and beliefs of majorities at any

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

particular time were permitted by legislative bodies to influence in the least the character of the laws which affect religion or medicine, the government would thereby become so subverted that minorities would live under a mobocracy of the most pernicious description.

No line of distinction can be drawn between the right refusal of a legislative body to enact a law which discriminates between allopathy and homeopathy, or a law which discriminates between one religious denomination and another, and a law which discriminates between drug medication for physical diseases and a non-materialistic and mental system therefor, such as was practised and exemplified by Jesus and his followers for at least three centuries of our Christian era.

In this connection there is a consideration which ought never to be overlooked. Under a republican form of government the fundamental rights and privileges of Christian Scientists as American citizens involve the circumstance that their reason and religious conscience have taught them to regard Christian Science as both a system of therapeutics and of religious convictions united. It is a conviction of conscience with them that Christian Science comprehends the religion which was taught and practised by Jesus, including the obedience to his command to "heal the sick" according to his way, which was drugless and mental; and it is their conviction that reason and experience unite in demonstrating that the Christ-way of dealing with what are called physical ailments is the most successful and dependable way. Whether the Christian Scientists in their views may or may not conform to the views of the individual members of the lawmaking bodies or of any class or classes of other citizens, is just as impertinent in this connection as would be their views if they were allopaths or homeopaths, or Episcopalians or Baptists. Any invasion, direct or indirect, of their right to hold and enjoy their own views, religious or therapeutic, or both united, is an indefensible invasion of American citizenship, whether the citizen whose liberty is disregarded belongs to some particular school of medicine, some one church or to none.

A statute which discriminates against a believer in allopathy by seeking to lessen the number of the practitioners of allopathy (by providing penalties for their acceptance of pay for their time and efforts, for example, or by any other kind of indirection), is in its practical effects the same as a statute forbidding allopathy altogether. If a citizen has the right to choose an allopathic physician for his child or himself, then it is an invasion of that right for a legislature to enact a statute which is intended to diminish the number of allopathic physicians to whom he can apply for help. If this be true of the allopath or homeopath or eclectic, it is equally true in the case of the Christian Scientist.

PERSPICACITY.

EUGENE R. COX.

ON the first page of the Preface of Science and Health, Mrs. Eddy says, "The time for thinkers has come," and throughout the entire book it is apparent that her great desire is centered in having each of her followers do his own thinking intelligently and irrespective of dicta, suggestions, or importunities of others. The mental attitude which is always suspicious and carping about every statement made, is trying and objectionable, and it is natural, normal, and proper that we believe what is told us in the ordinary experiences of life. It would be sad if it were otherwise. Yet this should be done with thought and not by impulse.

The beginner in Christian Science who has experienced the spiritual exaltation which is usually incident to the healing of physical disease, but who has not become sufficiently familiar with the Science to know that the healing is in exact accord with divine law, is apt to look upon Christian Science and the healing work as supernatural. Such a one, when told that Christian Science is equally efficacious in business difficulties as in physical disorders, is apt to jump to the conclusion that any business with which a Christian Scientist is connected must perforce be immediately and immensely profitable, while the thinker, the one who reasons from cause to effect, knows that the operation of Science is the manifestation of Principle in accordance with divine law, and that business success must be in accordance with, and not contrary to, the strict requirements of the fundamental laws of commercial life.

To most of us money is the measure of substance, and when we read, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," we are inclined to expect very large additions in return for a very small amount of seeking. And so it comes about that the Christian Scientist, although declaring in a perfunctory manner that he reflects intelligence, is nevertheless often so carried away by the promise of large returns for an investment that he does not manifest intelligence in analyzing the business propositions which are made to him, or in fully considering the interest or incentive of the one soliciting the investment.

Mrs. Eddy says (Science and Health, p. 128): "A knowledge of the Science of being develops the latent abilities and possibilities of man. It extends the atmosphere of thought, giving mortals access to broader and higher realms. It raises the thinker into his native air of insight and perspicacity." This insight is, in fact, intuition, and as children of God both intuition and inspiration are our birthright, and we have them in proportion to the daily living of Christian Science. Such intuition or perspicacity is an invaluable and invulnerable armor when considering business propositions. Even though a person may talk persuasively of the investment, and may clothe his arguments in phrases familiar to Christian Scientists, and profess great devotion to the cause, we should always analyze the commercial value of every business proposition irrespective of the person who presents it, remembering that extraordinary profit and safety are rarely concomitants. Above all, we should most carefully analyze the thoughts and desires which seem to be the incentive to our taking up a business venture, lest we be tempted by the devil's suggestion of turning stones into bread.

To the practitioner who is at all times alert, the "still small voice" comes, and he instinctively knows the honesty or lack of it in those who come to him for help; whether the story is told frankly and fully, or a part is withheld; whether the patient is really willing to give up all and be healed of sin as well as sickness, or desires mere physical relief. Only through the activity of these right ideas are we assured protection against unwarranted demands upon our sympathy and interest.

THE POSITIVE MAN.

LOUISE K. FLEMING, A.M.

"THE good Lord made the positive integers, but man is responsible for all the rest of the numbers." So said Leopold Kronecker, the German mathematician, and an American writer who quotes from him remarks that this is about as accurate a statement of the truth about numbers as can be expressed in a single sentence. In very much the same simple way might be summed up the truth about man; for truly, God made the positive man, but mortals with their supposititious beliefs are responsible for all error. Even so was it summed up by the Preacher of the Old Testament; for after seeking through all the activities of life he concluded his search with the words, "Lo, this only have I found, that God hath made man upright; but they have sought out many inventions."

The positive, in any connection, stands for that which is; the negative for that which is not. It is always difficult to make pupils understand the meaning of a negative quantity.

Digitized by Google

A positive quantity they can handle and look at; a negative quantity they can only suppose. It may be represented to them in various ways, by a loss, a debt, or a lack of some kind; but, however represented, it always involves a supposition; it has to them a sense of unreality. Now, strange as it may seem, most pupils in the Science of Life take just the opposite standpoint. Every one will agree that goodness, health, and life are positive qualities; and few will question that evil, disease, and death are negative in result. The former add to man's lot, and fill it full to overflowing; the latter would take from him all. Mrs. Eddy says, "Evil is a negation, because it is the absence of truth" (Science and Health, p. 186). And yet to human sense the negative seems the real; the positive, the vague and suppositional.

This may be accounted for by the fact that mortal sense is in its very nature negative, reversing all things; it is that carnal mind defined by the apostle as "enmity against God." To see things in their true light, we must put off this carnal mind and put on that Mind "which was also in Christ Jesus." Then we shall know that, however mortal sense may twist things about and invert its own concept, the truth about man is as unchangeable as the truth about numbers; as in numbers the negative is ever the suppositional absence of that which is,—the positive,—so in man sin, disease, and death are but the suppositional absence of goodness, health, and life. In the science of mathematics the relation between positive and negative is based upon an understood fundamental law. They are forever separated; one can never enter the realm of the other; and woe to the pupil who mixes his plus and minus signs,—his problems will never work out. So in the Science of man, divine Principle forever separates the positive from the negative, ruling the latter into outer darkness, the realm of less than nothing; and alas for the student who fails to distinguish between the real and the unreal,—his problem of life can never be solved until he alters his signs.

But, some one may say, in mathematics two negatives make a positive; can two evils make a good? No; nor in that sense do two negatives make a positive in mathematics. Two minus quantities added together make a greater minus quantity, just as surely as two evils added one to another make a greater evil. It is when a negative quantity is subtracted that we have a rule relating to the two minus signs; and here still the analogy holds good; for when we subtract an evil, are we not moving in direction of the positive, good? Another sense in which this rule is used in mathematics is in multiplying two negatives together; but as multiplying a minus four by a minus five simply means the process of subtracting minus four five times, this case is, even as the last, the subtraction of evil, leading toward good.

By a process of distinguishing between the positive and the negative, the true and the untrue, must all the problems of life be solved. When by this constant application of Principle we reach the true stature of manhood in Christian Science, the negative will no longer seem the real, the positive the unreal. Throwing off the shackles of human sense, we shall see the man that God made, and there will be about him no negative element. Then shall we realize the truth about man as clearly as does the mathematician the truth about numbers, and we shall know that God indeed made the positive man, and "without him was not any thing made that was made."

"GREATER WORKS."

H. COULSON FAIRCHILD.

WHEN Christ Jesus told his followers that it was to be their privilege to do even greater works than those which he had done, they must have been astounded; but it is evident that they were not discouraged, for shortly after the resurrection they not only essayed to heal the sick and reform the sinning, but they actually did raise the dead; thus showing that they accepted the Master's command literally, and that it was not the opinion of the disciples that the healing power of Truth should disappear from the earth with the disappearance, to human sense, of the Master. In reading the consensus of opinion as expressed in the newspaper editorials from all over the country, it is evident that the progress of Christian Science will be judged by the proofs which Christian Scientists themselves are able to give of those "greater works" mentioned by Christ Jesus and reiterated to this age through the writings of our beloved Leader, whose works stand an eternal monument to the prophecy of Jesus.

In our progress in every walk of life there comes a time when all must meet the problems of being face to face and alone with Principle. In mathematics one student in the examination room is not even allowed to consult with another; he must demonstrate then and there how much he knows of the basic law of mathematics, and nothing can be substituted for this demonstration. In the study of music there comes a time when the student must either appear in public or before some one and demonstrate that the laws and rules of harmony are understood and can be demonstrated by him, else there would be no proof to the world whether or not he understood the science of music; and so it is demanded of Christian Scientists that they prove by their instantaneous healing of the sick or sinful their understanding of Christian Science. We must, therefore, redouble our efforts to do this thing; it must be done "quickly and wholly" (Manual, p. 92), without relapse or retrogression.

If all Christian Scientists do not actually engage to give so many hours each day to the healing of the sick, they should be always ready to take the cases that come to them, so long as these do not interfere with their other duties or obligations. Furthermore, it is necessary that they should increase their efforts to evangelize human thought, that it may be prepared to give up materialism and accept the truth. All the means so wisely provided for us must be used; we must make the most of all our Christian Science literature by circulating it intelligently and lovingly. We must be true to every demand of our church organization. If there are any today who think they can be true to the teachings of Mrs. Eddy and remain inactive or outside of the church, they are mistaken, and sh uld wake up at once to see their mistakes. Those who devote their time regularly to healing work can well afford to insert their names in *The Christian Science Journal*, and this action is not to be construed as a "material means" of letting the world know we stand for the truth; it takes a mental process to achieve this result, and the result has its metaphysical significance. These are but a few of the ways in which we may prepare to do the "greater works" which are being and will surely continue to be demanded of us by a waiting world.

"LIVING WATER."

MARTHA R. WHITE.

IN the exuberance of Bible imagery one finds many references to the "river of water of life." In the book of Revelation, St. John writes, "And he shewed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the Lamb." Christian Science teaches us that Life is Mind, and the understanding of this fact throws a vivid light on St. John's figure. It is a matter of universal experience that our thoughts form a never ending stream. We think, think, think, day and night, and it is only in our thoughts that we are conscious of the world, of each other, of our own existence even. The supply of thought is endless. The compulsion to think is inexorable. If we cease to think of one subject, another rushes immediately into the gap. How simple it becomes to understand that the "river of water of life" is a stream of

Digitized by Google

right and pure thought. God, the divine Mind, that goodness which underlies all creation, is the Principle of man, the divine source of his being; hence this river, "clear as crystal, proceeding out of the throne of God," must be pure and undefiled. The real life of man can never be vitiated; God being its source, there can "in no wise enter into it any thing that defileth."

St. John completes his figure by saying that the river not only proceeds from the throne of God but of the Lamb, which is the symbol of innocence and obedience. In this we have a hint of man's relation to God. The Father gives, the son receives, and innocence must be ever present, because the channel must be clear from all impediments of wrong desire in order that the water may flow freely and without interruption. Obedience is necessary, because faithfulness in following the direction indicated by the current endows one with the full power of the current, while any swerving from its course subjects one to its blow. As Mrs. Eddy says in Science and Health (p. 183), "Obedience to Truth gives man power and strength. Submission to error superinduces loss of power." When innocence and obedience have prepared the channel to receive the full measure of power and strength, then the divine Mind, the self-existent, pours its bounty with unstinted measure into the channel prepared. The Hudson river needs no aid to its resistless motion. Conditions being right, it simply flows to the sea. Even so the "river of water of life," "proceeding out of the throne of God," needs no aid from will-power on the part of the recipient. Life's activity is inevitable. It is also imperishable, since Principle is outside and above its idea.

Jesus' discourse to the woman of Samaria is intensely interesting in this regard. He began by asking for water to quench his thirst; then he went on to say that had she asked of him, he would have given her living water: that is, this water of life was at hand, if she or any one else but wanted it. He next said that any one who would drink of it,—who was willing to receive what he had to give,—would never thirst again, but would have an everlasting supply thereof. Then he became more explicit, and leaving the figure of the "living water," said that he who received his word and assimilated its meaning came into the true understanding of God, and was emancipated from the fear of death. Lastly, he wiped out the thought of death entirely by saying that all, even those whom the world called dead, were capable of receiving the truth. In other words, there are no dead.

Thus, in six verses, building simply on the figure of the water of life, Jesus gives a complete exposition of the nature of spiritual consciousness, the immortality of the spiritual man who reflects that consciousness, and the duty of man toward God. Jesus never taught anything which he was not ready to practise himself. He had seated himself on the well's brink, and asked the woman for water. They fell into conversation and she evidently forgot to give him that for which he had asked. When his disciples presently brought him food, he declined to receive it. He was already refreshed! The living water, his spiritual understanding, had restored him, even while he was awakening the woman to a new and purified sense of life.

Every one is conscious of the fact that the river of thought is constantly flowing. We must think something every instant. It is inevitable. It is the nature of Mind, man's source and support, to be omniactive. Every instant, therefore, we should think a good thought, a God thought, for it is ours to choose what we shall think. God's thoughts, and thoughts of God, are life-giving. They are the very substance of our being. They are precious beyond all else. As Jesus said, they spring up into everlasting life in the one who is receptive. The river of pure thought is here for every one who desires it unselfishly. Blessed, indeed, are they that are pure in heart (motive): "for they shall see God."

"THE NEW APPEARING."

LUCIA C. COULSON.

In all history there is nothing more beautiful than the story of the nativity. In the dead of night, when the rest of the world was wrapped in sleep, a band of shepherds and three wise men saw a great light, and led thereby came to worship at the manger where the young child lay who was to bring heaven down to human sense by overcoming the ills which denied the ever-presence of divine Love and Truth.

While considering the story the thought occurred of how vividly it is repeated in the history of every Christian Science church and society. May not each one of these be likened to the manger, the humble shrine which holds the Christ-idea? And the sleeping world! Is not mortal mind as fast asleep now as then—oblivious to the light, deaf to the cry, "On earth peace, good will toward men"? And now as of old, who gather round the manger "to greet the new appearing"? First and foremost "the poor in spirit,"—"the receptive thought" (Science and Health, p. 34),—the sick and sorrowful, those who have little to lose and much to gain. The kings of the earth are not quick to see the star and follow it. The shepherds were a company unnumbered, but there were only three wise men! Jesus said: "How hardly shall they that have riches enter into the kingdom of God," and of all his pregnant sayings surely none is truer than this. Wealth, success, mere physical health, beauty, genius; such as these do not readily seek the manger. The three wise men had a long way to travel, but they desired with a great desire the spiritual riches, and hence sought and found the Christ-idea.

Again, what are the gifts that are brought to the holy child? Gold and frankincense and myrrh. How wonderfully history repeats itself! The bitter myrrh may seem a strange gift to find at the altar of Truth—Truth clothed in light, with the singing birds of hope around her; and yet myrrh is never absent, for it typifies "the persecutions which attend a new and higher understanding of God" (*Ibid.*, p. 33). Frankincense stands for prayer; and those who come to Christian Science learn not only the true meaning of prayer, but its practical demonstration in the healing of the sick and the reformation of the sinning. Mrs. Eddy tells us that "desire is prayer" (*Ibid.*, p. 1), and it is that pure desire which each must bring to the Christ.

Lastly there is gold, symbolizing the Love which means abundance and the abundance which represents Love. Truth demonstrated is the offspring of Love. All who find the Christ share in its radiance, but it is well to remember that the pilgrims brought the gold with them. We must lay down our earthly affections at the manger—lay them down only to receive them again, purified and increased, for "whosoever hath, to him shall be given."

[Written for the *Sentinel*.]

A THOUGHT FOR EVERY DAY.

FREDERICK M. STEELE.

If you, my friend,—just you and I,—
Should smile instead of worry;
If, as the days and moments fly
Amid life's stress and hurry,
We aim to make our thoughts more kind,
Our hearts and words more tender,
To be to others' faults more blind,
For evil good to render:
Then what a change would come about
In all this dark world's story,
If thus the Christ through us shone out,
Revealing there his glory!

SELECTED ARTICLES.

[Editorial in *Los Angeles* (Cal.) *Examiner.*]

Senator Works' remarkable testimonial on the floor of the United States Senate to the value of Christian Science is of universal interest. His experience has, doubtless, been duplicated in the experience of thousands of Los Angeles residents. As a matter of contemporaneous interest, the *Examiner* would like to print some testimonials from people who have experienced Christian Science cures. Letters to the Editor, containing exceptional examples, will be printed if they do not exceed two hundred words. Names and addresses must be given in full.

[Editorial in *Sacramento* (Cal.) *Union.*]

We commend the courage that characterized Senator Works' defense of Christian Science on the floor of the Senate in opposition to the Owen bill proposing the creation of a federal department of public health. In doing so, we have nothing to say either for or against the teachings of the late Mrs. Eddy; but our admiration is aroused by an avowal obviously so frank and honest, and so bravely flung in the face of certain criticism.

Aside from any question of belief in Christian Science, the fight taken up by the junior senator from California was one in which the common people of the country have a deep concern. Senator Owen may not intend to create a medical trust for the advancement of one particular school, but Judge Works said that such would surely be the operation of the measure he has introduced. At any rate the Oklahoman has offered as a law the regulations for which the American Medical Association has been lobbying for years and which, if Judge Works was right, would work the rankest injustice to thousands of practitioners, not of allopathic or homeopathic training, but competent just the same to treat suffering humanity. We are all quite familiar with the persistent efforts of the association. We have read its magazine articles and followed its activity at each session of Congress. We even had the satisfaction of seeing defeated the attempt made before the recent Legislature by California physicians of the old school to advance their own interests through several bills, the worst of which was that fathered by Dr. Butler, an assemblyman from Los Angeles.

But it is the independence of Judge Works that most interests us now. His own and his wife's life having been saved by Christian Science, as he believed, and his son having been reformed, the senator did not hesitate to arise in his place and express his conviction and his gratitude in a manner that will immediately make him the target for virulent abuse. That was one strong feature of his speech, but, considering the fact that he entered the Senate only a few months ago as a progressive, it is noteworthy that he did not fear to challenge statements in *Collier's Weekly*, the generally accepted organ of the insurgents and progressives in national politics.

And, thus impressed with his courage, we recall his attitude toward the recall of the judiciary before he left for Washington. Although the men who had elected him senator were, almost without exception, demanding that this proposition be incorporated in the general recall amendment to be submitted to the voters of the state, Judge Works spoke of their efforts as "reform run mad," and in personal letters asked members of the Legislature to oppose the heresy. He was bitterly criticized for having dared to express himself antagonistically to the program of the political organization that had given him the senatorship. Evidently, we have a junior senator in Washington who is not afraid to say and do what he thinks right. We wish him more power.

[Frederick Dixon in *Belfast* (Ireland) *Witness.*]

The sermon printed in your issue of the 28th ultimo deals with a subject which looms very large in human thought at the present moment, and which the clerical critic has discovered it is impossible to brush aside with an *obiter dictum*. Eight or ten years ago this gentleman preached a sermon in criticism of Christian Science, and in it he attacked a line of reasoning which to a very considerable extent the world is admitting today. It would be difficult, indeed, to exaggerate the change that has come over human thought during the last decade. The critic, face to face with the conclusions of prominent orthodox thinkers, finds himself obliged to revise his former point of view. Every revision, however, of this point of view he will find will betray him into more hopelessly illogical propositions, until he is content to go the whole way.

Calvinism is a distinctly logical conclusion, however much people may revolt from its premises. Materialism, at the other extreme, is equally logical in its reasoning, however much men may in turn revolt from the conclusions drawn from its premises. Christian Science, again, is supremely logical, no matter what criticism may be brought to bear upon it. Christian Science, however, has this advantage over Calvinism, that it is not content with dogma, but goes forward to push its reasoning not merely to a logical, but to a demonstrable conclusion. It is this that entitles it to be called Science, and so brings it in accord with the teaching of the New Testament, since every one knows that the Greek phrase, *epignosis tou theou*, translated in the epistles as knowledge of God, should be translated, full, exact, that is to say, scientific knowledge of God, and so of Truth.

This, when it is understood, was the significance of the miracle of the New Testament. The word translated miracle never had a supernatural significance. It means, as it has always meant, either an act of power or a proof. It was an act of power, in so much as it demonstrated the omnipotence of good, and it was a proof inasmuch as it showed that the claim that good was omnipotent was no mere ethical *ipse dixit*, but a scientific fact. Jesus came preaching to the world the gospel which he summed up in the phrase, "Repent, for the kingdom of heaven is at hand." Now, the word translated repent means literally something causing conviction afterward, and so a change of mind. As this change of mind took place, men realized that the old theory of evil, which had led in the past to the worship of evil deities and to the attribution of power to evil, was a misconception, and changing their mind from this to an understanding of the allness of God and so of good, they found the spiritual law, which they were able to demonstrate not only in the overcoming of sin, but in the healing of sorrow and sickness, and of all that was unlike God, good.

Dr. ——'s sermon really traverses this teaching, and he puts forward a dilemma, just as he put forward another dilemma ten years ago, which, if it is a dilemma at all, is a far greater dilemma to his own teaching than to that of Christian Science. For what does this dilemma come to? Nothing more nor less than a demand to be acquainted with the origin of evil. The wise men and philosophers of the world have been debating over this, and searching for it for centuries, and they have never found it. What is more, they never will find it, for could the origin of evil be found, that moment evil would be proved to be real, the teaching of the New Testament to be untrue, and the salvation of the world an impossibility. Evil was summed up by Jesus in the only words in which it is possible to sum it up, as a lie; and a lie has no foundation in truth.

Now, the Christian Scientist faces the difficulty which this clergyman points out. He does not, however, do what the critic does, turn away from it and explain that it is an incomprehensible thing which people will never understand.

Digitized by Google

If it is an incomprehensible thing which people will never understand, what proof is Dr. —— going to give them that his teaching is accurate, that it is not a mere dogma with no foundation beneath it? The proof which the Christian Scientist offers them is the proof demanded by Jesus, "He that believeth on me, the works that I do shall he do also." In those words Jesus made the working of miracles, which it has been shown are only the demonstrations of the truth of a premise, the test of a man's Christianity, and no amount of explanation will ever get away from that fact. Not only in those words, but in the gospel of Matthew, and again in the gospel of Mark, speaking not of any particular age, but of all time; not of any particular body of disciples, but of his followers in all ages; not under any qualifications whatever, but absolutely without qualification, he declared that those who believed in him, that is to say, who understood his teaching, would be able to do the works he did, because those works were simply the proof of their understanding. Moreover, he said that they would be able to do these works because he would be with them always. This "he" was obviously not the human Jesus, but the Mind which was in Christ Jesus, the Mind which Paul prayed that the Philippians would let be in them. In the exact proportion in which that Mind dwells in man, will man be able to do the works which Jesus did, not through any power of his own, but because he has recognized and is taking advantage of the absolute or spiritual law.

Dr. —— recognizes that healing has been done by Christian Scientists, but he endeavors to escape from this in the way so many people are attempting to escape today, by confusing it with the power of the human mind. In doing this, he is not merely weakening but is destroying the whole basis of the New Testament teaching and is reducing the healing of Jesus to the level of the healing done by the "vagabond Jews." It is, therefore, well to discuss a little at length this question of spiritual and mental healing, and to understand something of the distinction, for it is a subject which is agitating human thought violently today, and will continue to agitate it until the truth is accepted by the world.

In discussing the question of mental suggestion, hypnotism, or any other of its various *aliases*, the one thing it is necessary to keep perpetually in the foreground is the fact of the utter unreality and powerlessness of evil. The necessity for this arises from the fact that for centuries the world has been educated into a belief that evil is real and constitutes power. Of late years, however, there has grown up a body of people who under the teaching of Mrs. Eddy have been learning to relegate evil to its true and consequently scientific position in the economy of human thought. These people have grasped the theory of the unreality of evil, and are beginning with ever increasing success to demonstrate this in practice. They realize that evil is unreal; that is to say, that it is the negation of divine Principle, or, as Jesus expressed it, a lie. At the same time they realize that a lie exercises a temporary effect on those who are deceived by it, and therefore that it needs to be exposed in order that its powerlessness may be proved. They do not, therefore, content themselves with mere blank denials, they exert themselves to know the absolute truth, conscious that, as Jesus told them, the acquirement of this knowledge will free them from the effect of any false belief in evil as a reality, and conscious also that the way to break the bondage of others is first to gain their own complete liberty. It was because Jesus had entirely mastered evil that he was able to loose the woman Satan had bound, and therein lies the secret of those words which he addressed to the disciples on the road to Gethsemane: "In the world ye shall have tribulation; but be of good cheer; I have overcome the world." That victory was for all time.

The story of the ministry of Jesus is contained in the Bible, and the Bible is an eastern book, in the writing of which all the metaphor and imagery of the East has been employed. It is the story, from Genesis to Revelation, of the evolution of the spiritual idea in the human consciousness, and as such it deals with the human belief of evil and the power claimed by those who believed in its reality. To the people for whom the books of the Bible were written, evil was very real and extremely powerful. They personified it under the names of many evil deities, and as these evil deities all became in time endowed with the power of afflicting the human race, there grew up in their train an army of false priests and false prophets, serving and proclaiming them. From the earliest times, the prophets and the kings of Israel waged a war of extermination against these wonder-workers, and after the captivity the struggle was renewed. These wonder-workers operated largely by means of incantations, what we should call formulas today, whereas Christian Science operates through a knowledge of absolute or spiritual truth. The one is an effort of the human mind to suggest, the other an understanding of spiritual law. Like all other occult workers, they appear to have called upon what were sometimes regarded as powers of light and sometimes as powers of darkness. It was this fact, coupled with the knowledge of the perpetual battle which had been maintained for centuries against "other gods," to which the scribes and Pharisees alluded when, in order to prejudice in the eyes of the "common people" the healing done by Jesus, they declared, "This fellow doth not cast out devils, but by Beelzebub, the prince of the devils." The reply of Jesus, in the light of the fact that exorcism was undoubtedly practised quite commonly and quite openly without reproof from the hierarchy, must have been crushing: "Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand: and if Satan cast out Satan, he is divided against himself; how shall then his kingdom stand? And if I by Beelzebub cast out devils, by whom do your children cast them out? therefore they shall be your judges. But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

Christian Science is founded entirely on the Bible, and anybody who will compare the words of Jesus with Science and Health will see how completely they agree. Mortal mind, Mrs. Eddy says, contradicts itself, and this is exactly what Jesus explained by describing it as a house divided against itself. Again, mortal mind, as she says, is the belief that mind is in matter, and is both good and evil. It was this very belief in the power of good and evil which Jesus exposed as a house divided against a house, and it was this very belief in the possibility of effecting healing through the action of the human mind, which is itself fully imbued with the belief in good and evil, that he repudiated in claiming that true healing was wrought by the Spirit of God.

The writer of the Jehovistic document of the book of Genesis put the same statement with equal force in the allegory of the tree of the knowledge of good and evil, the eating of which he said would produce death. This statement has been constantly quoted, without those who have quoted it perceiving what it fully implies. Death, Paul wrote to the Romans, entered the world through sin. It is therefore obvious that a belief in good and evil constituted what in Paul's opinion was sin, and it is therefore impossible to maintain from a Christian point of view that healing can proceed from a mind conscious of good and evil. What would proceed from such a course is, as the Bible clearly states, death, and so necessarily sickness and inharmony of every description. Now Jesus said that it was impossible to obtain figs from thorns, or grapes from a bramble bush. It is therefore as evident as anything can be that a mind believing in good and evil, and so disposed to death, is incapable of healing sickness. What does heal sickness Jesus put quite clearly in the very answer in which he disposed of the human mind as a healing agency. "If,"

Digitized by Google

he said, "I cast out devils by the Spirit of God, then the kingdom of God is come unto you." The kingdom of God never came upon any man by suggestion from a mind torn by human passions, and believing now in good and now in evil. The kingdom of God comes to man exactly in the proportion in which he acquires the Mind which was in Christ Jesus, for the possession of the Mind of Christ frees man from a belief in the lie of evil.

[*The Library Journal.*]

Libraries and schools are alike interested in protecting the children from the demoralization of comic supplements and the sensationalism of saffron newspapers, and two movements for "clean journalism" should interest both. In New York a mass meeting of a number of welfare organizations was recently held to take concerted action against the silly, vulgar, and generally abominable comic supplement of some of the Sunday papers; and in New England simultaneous meetings were held on March 27, in ninety-seven cities and other centers, in favor of "clean journalism." These were under the auspices of the Christian Science congregations, but were not confined to that sect, and in fact leading clergymen and other public-spirited citizens were among the speakers. The central feature of each meeting was an address stating the ideals and accomplishments of *The Christian Science Monitor,* the remarkable daily newspaper originated and in large part organized by the Leader of that sect, two years before her death. This daily, published in Boston, but circulated throughout the country and to considerable extent in other countries, refuses alike demoralizing news and misleading advertisements. It replaces the news of crime by the news of welfare, as for instance in the librarians' column, so excellently cared for by the lamented Foss, though he was not himself a Christian Scientist. While it has the advantage of ardent and wide support throughout the membership of its own cult, the success of the paper nevertheless emphasizes the value and the possibilities of journalism of positive character, divorced from crime and gossip. Libraries and schools which subscribe to any daily paper may well add this to their list, since, despite its origin, it is practically non-sectarian, confining itself to one distinctively religious article each day; and they should support every endeavor, local and general, in behalf of journalism of the better sort, thus overcoming evil with good. At the same time no effort should be spared to keep the comic supplement and the yellow journals out of libraries and schools and homes, until they are driven out of existence in a journalistic millennium, which may be nearer at hand than we are willing to suppose.

[Elizabeth T. Bell in *The State,* Columbia, S. C.]

When John the Baptist sent messengers to Jesus asking if he was the Messiah, Jesus replied: "Go and shew John again those things which ye do hear and see: The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them. And blessed is he whosoever shall not be offended in me." Such is the answer that Christian Science makes to twentieth-century inquirers, and the sense of tolerance which you have recently said is "the greatest characteristic of this century," is the mental attitude to which Christian Science presents its credentials.

The belief in an evil power, with its consequences of sin, disease, and suffering, is the problem over which the thoughtful of all ages have toiled in a fruitless effort to solve; until Mrs. Eddy, recognizing an absolutely good God as the Principle of Jesus' life and works, proved its truth and gave the rule in the text-book of Christian Science. The lifting of heavy burdens, the purification of character, prove the powerlessness of evil when God is understood. This work is not the result of hypnotic suggestion, but the proof through practical application of the spiritual law that God does indeed dwell among men, and that He can and does save to the uttermost; not in a future life, but here and now.

[Ezra W. Palmer in *Denver* (Col.) *News.*]

Christian Science is the spiritual understanding of the Holy Scriptures; it is the spirit and intent of Jesus' teachings made applicable to twentieth-century conditions. To know it, willingness to seek the Father in spirit and in truth must be paramount in the seeker, irrespective of creed or dogma. A student could never understand geometry, for instance, by studying works opposed to it, nor would this method bear fruit in astronomy, physics, or any science. It is apparent from our critic's article that his conception of the New Testament and of the life and works of Jesus differs radically from the Christian Science view-point. Christian Scientists understand that God is unchangeable, that He is the same yesterday, today, and forever, that He is Love; that man is spiritual,—the sons and daughters of God,—and because God is Love and unchangeable, that all His children partake of His bounty.

They also understand that sin and disease, being unlike divine Love, are destroyed by spiritual understanding, and that this healing is not confined to a few isolated cases in the time of Jesus, but is a part of man's heritage, equally applicable to all men who seek God in the manner and method indicated by Jesus. Our critic takes the view, as I understand his view-point, of scholastic theology, that although God is unchangeable and omnipotent, that healing was miraculous, a contravention of law,—"exceptional happenings," as our critic puts it,—given only to a few merely to avouch that Christianity was all right, and then withdrawn, leaving untold millions of future generations at the mercy of sickness, plague, and pestilence. Christian Scientists do not attempt to change the critic's view of the New Testament. This is his right. They merely wish that he grant to them the same Christian courtesy.

The attempt to bolster up the claim that *materia medica* is consonant with Christianity by reference to the admonition of James to anoint with oil is insufficient. Anointing with oil in the Scriptures was symbolic, expressive of the outpouring of the spirit of God and showing His favor on the one so anointed. This clergyman believes the oil did the healing. If that were so, if God so ordained it, Jesus would have employed it, and that method would be in use today; but even *materia medica* does not so employ it. Unfortunately for our critic's contention, St. James in the next verse settles the matter quite decisively by saying, "And the prayer of faith shall save the sick, and the Lord shall raise him up." Yet our critic declares that praying for the sick is "sheer perverseness"!

[E. M. Ramsay in *Montrose, Arbroath, and Brechin* (Scot.) *Review.*]

This is a practical age. People will not go to church unless they find themselves helped by going. Christian Science draws men by the same power which drew men to the Christianity of the first century. It proves the truth of the gospel teaching by producing the proofs of healing which the Saviour promised should be the sign of true faith. It explains the Bible in such a way that God ceases to seem "a God afar off," and becomes a living reality. The students of this Science become conscious of this great power of infinite Love and infinite wisdom, healing their diseases, lifting them out of their sins, guiding them, teaching them, leading them on. A Christian Science church is a place filled with the spirit of love, joy, gratitude, intelligence, confidence in good. Is it surprising that it attracts not only those who have hitherto found no comfort in religion, but also many of the best workers from the older churches?

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

PUBLIC SENTIMENT AWAKENED.

THAT public sentiment is awakening to the real meaning and purpose of the legislation which the doctors have been trying to get through Congress for the past year or two, and which they have advocated in their own interest for something like twenty years, is apparent from the number of newspaper editorials which have recently appeared, calling attention to the danger of further adding to government paternalism for the benefit of the few. A particularly pertinent editorial appeared in *The San Francisco Call* a few days ago, and we clip from it the following paragraphs:

> Generally speaking, the public is disposed to regard with some suspicion the movement for the creation of a federal health department with searching and extreme powers of regulation and restriction. . . .
>
> It is a distinct abridgment of the liberty of the citizen when one medical school or another sets up to impose its doctrines and practices on the whole people. The practitioners are no more able to agree among themselves about what is right and what is sound medical doctrine than are the theologians, and yet some of them seek to install a so-called scientific tribunal, sitting in judgment *ex-cathedra* and delivering decrees with all the force of federal powers behind them. The nation might with equal logic institute a department of theology, which would lay down such dogmas and practices as the American public would be constrained to accept under penalty.

It has also been apparent for some time that there is no public demand for such legislation, and the animus of the efforts to obtain the passage of the bills which have been before Congress and the state legislatures is clearly shown in the words of a prominent physician, who was recently quoted as having said: "The public must be educated to take our advice in medico-political matters as they do our pills and powders, without knowing of their contents or effects, but with an abiding faith in their potency." It would be hard to find in all history a greater disregard expressed for the rights of the people, or a greater blow to representative government than is contemplated by this gentleman and those who believe with him in the "divine right" of a few to coerce the many.

It is said that there are eighty thousand allopathic physicians in the United States, and to place them in a position where they could and would dominate the other hundred million of the population, as this doctor openly declares they should do, would be a sorry spectacle, so far as individual liberty is concerned. The very arrogance of such a position as the one stated is the key-note to the methods which would be used should the doctors succeed in their efforts to obtain a national health department, and thus have governmental authority back of them. Fortunately there is no reason to believe they will be successful, but this would not be a sufficient excuse for Christian Scientists or others to neglect their duty to render such success impossible.

ARCHIBALD MCLELLAN.

THE MASTER'S METHOD.

CHRIST JESUS was the greatest of teachers. He had entire command of his subject, its Principle and rule, and he showed his ability therewith to solve every life-problem. Furthermore, he was considerate for circumstance, the spirit of the times, the pupil's point of view, his native bias and mental limitations, and he had the wisdom and tact so to adjust his statements and method thereto as to awaken and retain interest. The common people, it is said, "heard him gladly," and this is explained when we note the nicety of his regard for their approachable side, his readiness to take advantage of any human relation, impulse, disposition, or prejudice which might serve as an avenue of approach to their thought.

How clearly all this is revealed in his talk with the woman at Jacob's well. He not only perceived her need, and showed frank friendliness in his bearing toward her, but his approach was marvelously tactful, it exactly fitted the case and immediately opened the way to her heart. He won by the wisdom of his words as well as by the authority of the truth he uttered. Like the woman, the most of his auditors were humble, unlettered folk, who were wont to find entertainment in listening to the tale-tellers that today as of yore, in the East, ply their trade at the entry-way and market-place of the city. He therefore eschewed dogmatics and philosophy and "spoke to them in parables." The incidents of common life were constantly used, in pertinent and poetic ways, to illustrate redemptive truths. He was great both in what he said and in the way he said it.

For parents and teachers, all indeed who essay to "preach the word," this method of the Master merits that careful and continuous study which St. Paul must have given it, if we may judge by the cleverness of his appeal to Philemon and the wisdom of his address on Mars hill. The Athenians, as the apostle knew full well, were alert and inquiring, but volatile and disputatious. They were very ready to enter into an argument with any one, for the simple satisfaction of airing their sophistries and laughing at the confusion of those entrapped by them. Paul therefore avoided contention by beginning his address not with didactic statements, but with a compliment which had the winsome flavor of all genuine courtesy. Noting their many altars, he called attention to them as an evidence that they were greatly given to deity reverencing, thus giving them credit for a most worthy instinct to which he would presently appeal. How wise thus to evoke their good will and stimulate their interest that he might win a hearing for the all-important things he had to say. This art of the true pedagogue is essential to our success as the exponents of Truth, and Mrs. Eddy has duly recognized its value in her saying that "the most just man can neither defend the innocent nor detect the guilty, unless he knows *how* to be just" (Miscellaneous Writings, p. 112).

Christian Scientists can rejoice that the presence and rule of divine Love which they proclaim, does make appeal even to babes, but they are sure to handicap Love's ministry if they forget for one moment that the interesting or uninteresting way in which the truth is expressed usually determines the attitude and responsiveness of those whom they would win. The intelligence of our address to awakening thought has much to do with the growth and success of this great movement, and if we are called and privileged, as we all certainly are, to enter this our Lord's ministry, we may thank heaven for the opportunity, regardless of any sense of present inadequacy, provided we are humbly and sincerely desirous of showing ourselves "approved of God" and are faithful in our study to do the Master's work in the wisdom of his way.

JOHN B. WILLIS.

HUNGER AND THIRST SATISFIED.

WHEN the psalmist said, "As the hart panteth after the water brooks, so panteth my soul after thee, O God. . . . the living God," it was no mere fervid fancy of the poet which he uttered, it was truly the cry of the human heart for the unknown source of being. So far from condemning this desire Christ Jesus said, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." The pity is that so few discover, until they have suffered long and become well-nigh hopeless, what it is that can satisfy every longing and make hope spring up anew, to unfold quickly into faith and understanding. Mrs. Eddy knew what this meant when she

Digitized by Google

wrote, as the spiritual interpretation of the petition, "Give us this day our daily bread," "Give us grace for today; feed the famished affections" (Science and Health, p. 17). The pity is that mortals have ever looked to matter for the supply of all their needs and to mortal mind to satisfy the heart's deep longings when nothing less than divine Love can do this.

We may, however, often remind ourselves that hunger and thirst are indicative of a healthful human condition, if the desire is for good, but in Christian Science we learn that desire can never be truly satisfied until it grasps spiritual reality. In the forty-second Psalm, already quoted, the writer pours out a deep sense of sorrow—tells of tears by day and night, while the senses seem to say mockingly, "Where is thy God?" And yet he tells us that he had gone with the multitude to the house of God, "with the voice of joy and praise." He had, however, to learn the lesson which is for all humanity, that until soul, spiritual sense, is satisfied in knowing God as the very Life of man, and the health of his countenance, the children of men faint and fail by the way; yet the Master said, "He that cometh to me shall never hunger; and he that believeth on me shall never thirst."

Here we may well ask ourselves how often we really "hunger and thirst after righteousness" with the ardent desire which impels men to toil for their earthly food? If we have not a keen desire for the truth, and an equal relish for its bestowments, we may find it worth while to discover whether we are in a healthful mental condition. Thoughtful physicians often pass by drugs in prescribing for patients who complain of poor appetite and loss of strength, and recommend exercise, sometimes even hard work. This should furnish a hint to the Scientist that greater spiritual activity may be his need; not alone the study which is so essential to his health of mind and body, but the work which may mean arduous labor for the advancement of the cause of Truth, and for the "healing of the nations." A homely proverb has come down to us from Paul's day to the effect that he who will not work should not eat. This is easily applied in Christian Science to mean that he who will not work spiritually, for himself as well as for others, will miss to a large extent the bread which cometh down from heaven and giveth life and health unto the world; and this, too, largely because his spiritual appetite is poor.

Christ Jesus said to the disciples at the last supper, "With desire I have desired to eat this passover with you." He knew that only the spiritual food could sustain him in the approaching ordeal, and so he sought new strength from the divine source—and found it, as will every faithful follower who seeks "first," last, always, the righteousness which is the very foundation of God's kingdom, who hunger and thirsts for it until the spiritual is realized and the promise fulfilled, "They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat, for the Lamb . . . shall feed them, and shall lead them unto living fountains of waters."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

COLUMBUS, OHIO.

On Sunday, July 9, was consummated the consolidation of the two church organizations in Columbus, which was lovingly commenced when the former Christian Science Society met with First Church on Easter Sunday, in response to an invitation extended by First Church. Hearing that the society would soon be seeking other quarters, as its place of meeting had been sold, and a joint committee of the two organizations being then in consultation as to the advisability of a consolidation of the two organizations, the members of the committee on behalf of First Church extended to the members of the committee from the society a cordial invitation to attend the services of First Church until definite arrangements had been made.

The invitation was unanimously accepted and on Easter Sunday the members of the society attended First Church in a body. At a subsequent meeting of the joint committee of six a resolution was passed which proposed that the society should disband its organization, first recommending its members for membership in First Church, and that First Church receive into membership at the communion service all persons so recommended by the society. The next evening after this action of the joint committee, both organizations at separate meetings unanimously adopted the recommendations of the joint committee, communicating their action, each to the other, by telephone, before either meeting adjourned. As a result of this self-consecrating action on the part of the individuals comprising the various committees, boards, and membership involved in this momentous undertaking for the cause of Truth, there was admitted to First Church on July 9, in the largest class in its history, as communicants and members of that church, practically the entire membership of the former Christian Science Society of Columbus. The occasion was one of great thanksgiving among the members of both organizations.

It is due to the society to mention the fact that in effecting the consolidation, the readers, trustees, and all officers of the church and Sunday school, voted themselves out of office, and that no provision was made for any of them to receive official recognition in First Church. It is due First Church to say that, without waiting for the consolidation to be formally completed, it placed on three of its important committees representatives of the society to aid in the extension of the united field work in Columbus. The members of the society accepted the organization of First Church as they found it; First Church accepted the members of the society as it found them; henceforth to be one, in Christ.

Correspondence.

ORANGE, N. J.

Simple but impressive services marked the laying of the corner-stone of First Church of Christ, Scientist, on Cleveland street, in Orange, at an early hour this morning [July 12]. The ceremony was attended by members of the board of trustees and a few of those connected with the church in official or ministerial capacities.

When completed, the new church will represent an expenditure in all of about $47,000. This includes the cost of the former unfinished structure. The church was informally organized in December, 1895, and incorporated on April 5, 1898, and its history is a progressive one. Through the Christian work of the destruction of sin and the healing of the sick by spiritual means, the interest of the community has been gradually aroused in the Christian Science movement in the Oranges. Toil, sacrifice, and rejoicing on the part of the band of earnest members and friends of the church have marked the periods of progress in the construction of this house of prayer and thanksgiving.

Daily Chronicle.

DENVER, COL.

The residents of the Park Hill district and east and south of City park are to have a new church. Third Church of Christ, Scientist, which was organized several years ago and which has been holding services in the Women's Club Building, has moved to 1720 Colorado boulevard, where services will be held. Negotiations are on for the purchase of lots in that vicinity for a building site, and it is planned to erect a new church there in the next few years.

THE LECTURES.

WINONA, MINN.

Prof. Hermann S. Hering lectured on Christian Science March 12. He was introduced as follows by H. M. Kinney:—

My attention was first seriously called to Christian Science several years ago, when, detained in one of our western cities over Sunday, I decided to attend the morning service at a near-by Christian Science church. Judge of my surprise when I was met at the door by an old friend, who was one of the ushers, and who I supposed was in the depths of despair and disgrace because of having left a position of responsibility and trust through the excessive use of liquor. His smiling face and joyous greeting told me more of the power of Christian Science than I had ever known or imagined. I was conducted to about the last vacant seat in that large auditorium, and as I glanced at the faces of those about me it seemed as if every one whom I saw must likewise have been released from some form of bondage. Such an atmosphere of trust and peace I had never before realized.

It has been my privilege to attend similar services in many parts of our country, and that same calm, implicit faith in God is the prevailing note. A number of times when inquiring the way to a Christian Science church I have been told to "follow the crowd," and it proved to be correct. Certainly this rediscovered religion, this revelation to Mrs. Eddy, this provable Christianity, has met with a wonderful growth over the entire world, and we are here this afternoon to learn more of it from one who speaks with authority.—*Correspondence.*

CALGARY, ALTA.

A lecture on Christian Science was delivered in the Shriners' Temple Monday night [April 24] by Bliss Knapp, of Boston. R. B. Bennett, K.C., M.P.P., presided and introduced Mr. Knapp, saying in part,—

We are gathered together this evening for the purpose of listening to a lecture on the subject of Christian Science. We are living in an age of speculation and investigation, and if by reason of this lecture we even in a small degree learn more of the great truth, it is indeed well that we have met together. Like many others here this evening, I know very little of Christian Science and am here especially for the purpose of listening. Christian Scientists, however, do accept the teachings of the Bible; they acknowledge one supreme God, and His Son. They may perhaps differ from other denominations in their method of applying the teachings of our Master with respect to healing the sick. In each great religious movement there has always been at least a degree of truth upon which it is founded. My only spiritual teaching was that which I learned as a boy at my mother's knee, and I assure you we all some day will have to return to a childlike faith.—*Provincial Standard.*

LINCOLN, ILL.

A large audience of representative men and women of the city filled the Broadway Theater Sunday afternoon [May 7] on the occasion of an address on Christian Science by Frank H. Leonard. The Hon. T. T. Beach presided and introduced Mr. Leonard, saying in part,—

It is not more than twenty-five years ago when those who attended a Christian Science lecture were regarded by the public generally as little less than incurable cranks, but today God's sunlight never leaves the Christian Science church, for this religion has encircled the entire globe, and its lectures, which are delivered in every civilized country in the world, are attended by audiences that are far above the average in intelligence and refinement. This proves not only the wonderful power of the religion, but also a remarkable change in public opinion, and the reason for it seems to me plain. An omniscient God of infinite love could have no higher desire than the perfect happiness of His own children, and therefore human happiness is the highest good. Christian Science has added so wonderfully, so beautifully to the sum of human happiness on this earth in the last twenty-five years, that thinking people are inquiring how that is and why it is. They are seeking that great truth, the knowledge of which, we are taught by Holy Writ, will make us free, and we are very fortunate in having with us this afternoon a gentleman who is qualified to give us light upon that most of all important question.

Lincoln News-Herald.

HORNELL, N. Y.

William D. McCrackan, M.A., delivered a lecture on Christian Science at the Woodbury Universalist Church May 8. He was introduced by Prof. D. B. Lake of Alfred University, who said in part,—

Your presence here tonight shows the interest which is being manifested throughout the world in regard to Christian Science, and your interest is but one of the phases of the many changes that are taking place with respect to human beliefs and opinions throughout the civilized world. In every human endeavor great effort is being made to utilize the broad practical fundamentals underlying every cause and effect. Instead of theorizing, we are practising; instead of believing, we are knowing. In the industrial world, in the scientific world, in the educational world, scientific and exact knowledge is taking the place of the previous inefficiency. Likewise in the religious world, if I may use that term, a great change is taking place in human conceptions of religious practices. Gradually there is dawning upon our consciousness the great fact that the religion which Jesus came to establish is a vitally practical one. It is a religion which satisfies every need which we may experience. It is, in a word, a religion which will teach men and women how to live here and now. This practical conception of religion has been set in motion by Christian Science, and there are many of us here tonight who can testify to the lasting benefits which we have received as the result of conscientious efforts to practise its basic laws.—*Correspondence.*

TACOMA, WASH.

On last Monday evening [May 1] Willis F. Gross of Boston delivered an interesting and well-attended lecture on Christian Science in the Tacoma Theater. He was introduced by Charles F. Kraft, chairman of the state committee on publication, who said in part,—

A little more than nineteen hundred years ago a man by the name of Jesus went about the towns and villages of Palestine, telling a most wondrous story, a story so wonderful that people by the thousands flocked to hear him. His career, brief though it was, ushered into the world's history a new era,—the Christian era. He claimed to be the promised Christ. Many theories have been advanced regarding this most remarkable man and the story he told, and as a result we see today and all down the centuries, numerous religious sects, differing more or less in theory yet all claiming to be Christians, followers of the Christ.

Jesus declared this story to be the truth about God and man; that truth, an understanding of which was to make men free; that should redeem the world from all its sorrow and sickness and sin. And he left this conditional promise: "If ye continue in my words, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." The material or personal sense of things to him was worse than valueless. He constantly pointed his

Digitized by Google

hearers away from his personality to the truth he was teaching and demonstrating. He declared, "It is the spirit that quickeneth; the flesh profiteth nothing." And when in after years materiality did creep in, overshadowing the spiritual import of the word, much of the vital power of his teachings was lost. And although now and then there have been those who have caught glorious glimpses of that truth, it was not until less than half a century ago, that a woman whom years of selfless searching for truth had fitted for the great work which lay before her, succeeded in uncovering the "hidden mystery," revealing again to the world the scientific Christianity taught and demonstrated in the early centuries, and which she denominated to this age Christian Science, a Science that has already brought multitudes of men and women out of bondage of every description into some realization of the freedom promised by the Master to those who should truly apprehend and follow him.

In order to correct in some measure the mistaken notions that constantly obtrude themselves concerning this teaching, the Church of Christ, Scientist, has instituted a board of lectureship, one of whose members we have with us this evening.—*Ledger.*

GOLDFIELD, NEV.

The Hon. Clarence A. Buskirk lectured on Christian Science May 19. He was introduced by T. J. Woodworth, who said in part,—

I am not a Christian Scientist, but from what little I know of it I am firmly convinced that its teachings will lead its followers onward and upward to a higher plane of spirit and intellect, and will also be instrumental in developing upon earth a grander civilization, a broader humanity, and a more perfect brotherhood between man and man. Any influence, I care not whence it emanates, that brings you and me into closer communion with our creator, that opens our eyes to a more perfect realization of the possibilities of our own spiritual and mental attainments, that helps us to comprehend more fully human sympathy and the good we may accomplish through the medium of a properly directed mentality,—certainly such an influence is worthy of our most serious thought and consideration.

I have never been particularly impressed with any religious belief based principally upon the fear of future punishment or the hope of future reward. It seems to me that the individual who obeys either the civil or the religious law through fear of punishment rather than through choice, or through the hope of future reward rather than from a sense of right,—it seems to me that such an individual would not add very much to the well-being of society here upon earth or to the dignity of heaven hereafter. It seems to me that a religion which enables us to be upon earth better fathers and mothers, better husbands and wives, better sons and daughters, better sisters and brothers, lighter and more happy hearted, with brighter and clearer intellects, sweeter and more helpful dispositions,—it seems to me that such a religion should be good enough for this life and for the life hereafter. I understand that the Christian Science faith leads to those conclusions.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Raymond, Wash.—Clarence C. Eaton, Philbrick Building, 2 p. m., July 23.

CORRECTION.

In the *Sentinel* for June 24 the name of the gentleman introducing the lecturer at St. Louis Mo., should have read James R. Dunn instead of John Randall Dunn.—EDITOR.

TESTIMONIES OF HEALING.

It is with deep gratitude for all the benefits I have received through Christian Science that I write this testimony. When I first heard of Christian Science, about two and a half years ago, I was in a very hopeless condition, having just received the verdict of several of the best doctors in the place that it was impossible for me ever again to return to my work, that of boiler making and steel ship building; or, in fact, to do any hard work, on account of serious trouble with my heart. I was unable to walk far, and had become a slave to the drinking habit during the very severe illness through which I had just passed.

A copy of the *Christian Science Sentinel* was sent to me by one who had heard of my illness, with a request that I read it. I did so and I at once realized that here was love, and if there was any truth in religion (which I had almost ceased to believe), it was here. I at once began to take treatment, with the result that I was very soon able to walk far and fast, to run up and down stairs, or do anything that I wanted to, as the freedom from fear was wonderful; and for this I am very grateful. The habit of using bad language, a very violent temper, and other moral ills were overcome in the first few treatments. The medicine which I was taking was given up at once, and I have not taken any since or used any strong drink. In about three months I was back in the factory, taking my full share of the hard work, and at times working for thirty-five hours at a stretch, only stopping for meals. I have remained at the same work ever since, under all sorts of conditions of ship and boiler repairs, this last winter working for a greater number of hours than I have ever done, and with much less fatigue than before I knew of Christian Science.

I have had many proofs of the healing power of Truth. Soon after returning to my work I was attacked by a severe cold and for a day suffered greatly from it. I tried to use what little I knew of the truth, but did not have enough understanding to meet it. I was at work, lying in the bilges of the ship, and at dinner time it was with great difficulty that I climbed the ladders to reach the deck. I could not eat, so sent to the practitioner for help, and was instantaneously healed. I returned to my work at two o'clock, feeling like a new man, and was able to finish my job (which was urgent) in good time. I lost no time that winter through sickness, although two thirds of our men took a turn on the sick-list during that time.

I was also instantly healed from the bad effects of a fall through an iron trap-door in a vessel on which I was at work. My leg was severely injured, but I tried to realize the truth that God is Love, that He does not send accidents to harm us when we are doing our duty; that "there is but one primal cause. Therefore there can be no effect from any other cause" (Science and Health, p. 207); and I continued at my work. I suffered very little pain, but after another long hard day's work I found that my leg presented an alarming appearance. Fear then presented itself, and I at once opened Science and Health, knowing that therein I should find my remedy. It opened at page 321, which I read, and by understanding the truth given there, I lost all fear and was immediately healed.

I have been able to use what understanding I have of the truth on several occasions, having instantaneous healing with my children in cases of coughs, skin diseases, and throat trouble, which have yielded rapidly to Christian Science. I am deeply thankful to God, and to Mrs. Eddy for giving us Science and Health; and for her life of self-sacrifice, through which we are enabled to know the truth that sets free. I am also grateful for the literature, which so often meets our need. For the spiritual understanding and uplifting I am more thankful than I can express. My one desire is to know more of this wonderful truth, that I may be enabled to use it for the good of others, and so

Digitized by Google

carry out the Master's injunction: "Freely ye have received; freely give." May my life attest my sincerity.
HARRY ERNEST MAFFEY, Southampton, Hants, England.

In reading the *Sentinel* recently, the thought came to me very vividly that I must give out some at least of the blessings which I had received in Christian Science, although these have been so numerous that I know not where to begin. Over a year ago I was delivered, practically without pain, of a little son. The child is strong and healthy and I am perfectly normal in every sense. About two and a half years ago, when living in Seattle, Wash., I was taken seriously ill with acute lung trouble, and not being able to meet the attack myself, I called in a Christian Science practitioner. She worked faithfully for me, but the conditions seemed very alarming, and I told the practitioner how I felt. She continued to pray for me, and in a little while read aloud to me from Science and Health. In less than twenty minutes I was free.

Many indeed are the blessings that I have received from my understanding of God as taught in Christian Science. I love the beautiful truths that Science and Health sets forth; and how different the truths of the Bible are to me now. Since I have the "Key" to this Book of books, I read it with unbounded joy and gratitude. I love Mrs. Eddy for giving us Science and Health, and pray that I may be more loyal and true each day to its teachings.

MRS. H. L. BROADBRIDGE, Los Angeles, Cal.

This is to certify that our little boy, five years old, was taken severely ill with acute lung trouble and fever. We called a Christian Science practitioner, and he was quickly healed. He played on the third day, and on the fifth day he was perfectly well. I send this with great love and thankfulness to God for all that our dear Leader, Mrs. Eddy, has done for us in giving us this healing truth.

MRS. NELLIE SHIPLEY, Bellevue, Neb.

I feel divinely led to write my testimony for those who cannot hear me speak in our Wednesday night meetings. Some twelve years ago, in my home in Cincinnati, a doctor told my mother that I had an incurable disease of the lungs, and we believed it. From being a healthy young woman, I became a sickly, ailing one. A friend of mine, in reading of Christian Science, spoke to me about it, but like a great many more I would have none of it.

In 1908 I went to Worcester, Mass., and became so very ill that a doctor said my days were numbered, that I could not live longer than three days at the most. I, too, felt that I was dying, and I said to my Christian Science friend that something must be done for my cough. I could not eat, and was very low. She asked if she might send for a Christian Scientist, and I told her to do as she thought best. She then telephoned for a practitioner, who came late in the evening, and I heard her say something about Jesus and the power of divine Love. At midnight my friend became anxious and again called the practitioner, who answered, "Fear not, for God is her health and her life; and I have the assurance that God has healed her."

The next morning when I awoke I was very hungry. The practitioner telephoned that I could eat anything I wanted, and requested that I come to see her at her office. I did so, and in the one visit I was healed. Thanks be to God, and to dear Mrs. Eddy's wonderful teaching.

When the doctor came to see if I was still living, my friend told him I had been healed by Christian Science and had gone up to the practitioner's office. Afterward I was examined by a doctor in the Worcester hospital, and he remarked to the nurses, "This is a fine type of healthy young womanhood." I told them I had been wonderfully healed by Christian Science. I say again and again, "Thank God for the priceless gift of Christian Science." Any one who desires to know more, may write to me and I will tell them of many other things that Science has done for me.

MRS. DAISY B. SHANNON, Nyack, N. Y.

Since I began to study Christian Science I have undergone so great a mental change that I scarcely know myself. The world is indeed a different place. As the result of burdens too heavy for my shoulders and responsibilities too great for my years, I became a nervous wreck. It was a case where the doctors were able to do little except to recommend outdoor living; but it was of no benefit, as my trouble was principally mental—a fact that I seemed to realize more clearly than any one else. I missed the significance of everything, my memory was almost gone, and I had lost the power of concentration. There seemed to be a heavy veil before my mental vision, through which I was constantly struggling to see. Life was not worth living, and all I asked was that it might end.

It has ended—but very differently from the way I had thought. After my first treatment in Christian Science the sense of depression, of hopelessness, had vanished like the morning mist, and I felt I had indeed been born again. The heavenly dove had descended on me, and with the apostle I can truly say that I have beheld a new heaven and a new earth.

EDNA PARTHENIA HALLORAN, Los Angeles, Cal.

Words are inadequate to express the great pleasure it affords me to be able to declare publicly my gratitude for the blessings which Christian Science has brought to my family and myself. After suffering for twenty-five years with various diseases, I finally found that four of the ills for which I had been treated during the last ten years of this period were steadily growing worse, and that I was unable to keep up any longer. I had reached man's extremity. I had taken almost every known medicine for these troubles and tried different climates, but to no avail. The physicians did all they could for me, but I continued to grow worse. Some of these diseases were pronounced incurable by physicians. I can assure the reader that I received the very best that *materia medica* could give me, as my grandfather was one of the foremost and best known doctors in this country. I was brought up among the prominent physicians in this city and the kindness these doctors bestowed upon me I shall never forget. I shall always be grateful for their efforts to help me, but the limit of their ability was finally reached, and it was then I turned to Christian Science and was healed.

Words fail to express how grateful I am for the deliverance from the physical suffering, but I am a great deal more grateful for an almost complete deliverance from one of the worst and most subtle enemies of mankind, and that is, temper. While this error is occasionally expressed on the outside, there lie hidden within jealousy, anger, hatred, pride, cruelty, selfishness, and many other forms of sinful thoughts, and where such qualities abide there can be no real love, and no health or happiness. I wish to say that I am a thousand times more grateful for the blessings I have received since I began to know our dear heavenly Father aright, which knowledge I gained from the careful study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I also wish to take this opportunity to express my love and gratitude to our beloved Leader for the blessings which have come to me through her teachings and her untiring efforts to help mankind; also to all who have helped me to understand this great truth about God and His eternal, unchanging love and kindness.

ELECTUS BACKUS WARD, New York, N. Y.

Digitized by Google

[Translated from the German.]

I give this testimony with a feeling of deep gratitude for all I have received through Christian Science. I became acquainted with this wonderful teaching through the healing of my son. Two years ago in January he was taken ill, and after the physician had treated him five weeks for typhus, his condition did not improve. An acquaintance of mine who is a Christian Scientist then happened to call; she at once asked to see the patient, and told me that he would improve right away, which I did not understand at the time, but during the following night there was a change; the fever abated, and he grew more restful. Some new symptoms, however, caused me to be frightened, and I immediately called upon another physician, who told me that the other doctor's diagnosis was wrong, and that we should make up our mind to have an operation performed, as the boy's lungs otherwise would be affected permanently. Thereupon we had the operation performed, and everything went smoothly until four weeks later, when a severe relapse occurred, so that the physicians themselves did not know how things would come out.

In my anxiety I prayed to God, according to the small understanding I then had of Christian Science, and there was an immediate improvement. On the following day the Christian Science friend again treated my son, and thus, with God's help, he recovered, to the surprise of the physicians, who did not know what to make of it. Later on my daughter was taken ill with a violent stomach and bowel disorder and very high fever. I immediately went to the Christian Science practitioner and asked for help, with the result that after two treatments my daughter was well.

My heart is full of gratitude to God, our all-loving Father, and I also think with greatest reverence of our faithful Leader, Mrs. Eddy, through whose spiritual illumination and selfless work the way to God, to Truth and Love, has been reopened to us.

FRAU ROSA MÜLLER, St. Petersburg, Russia.

At the dinner table one evening there arose a discussion upon the merits of Christian Science, and during the conversation my husband said, "One of the prominent physicians of New York told me there was no possible chance for my wife to get well. She does not look like that now, does she?" I had never heard my husband make this statement before, and while I knew from my own experiences that the benefits I had received from the ministrations of Christian Science had been unnumbered and blessed, this statement seemed to place before me a vivid picture of the past—the wilderness I had come through—and a consequent realization of the present height I had reached. It also awakened a new sense of gratitude for the wonderful work that has been accomplished for humanity by Christian Science.

The glorious fact revealed by the Science of Christianity, that God is Life, this was the truth to which I clung when death threatened and appeared to be an awful reality. "God is light," the apostle John tells us; and this was the truth to which I clung when clouds seemed dark and heavy. John also declared, "God is love;" and to this most simple and yet most profound statement I clung when all seemed cruelty and hatred. I knew that there was absolutely no hope for me, as the physician said, except—which he did not know—in that great truth which a sweet and gentle woman was patiently pointing out to the world. I accepted the teaching and began to "work out" my salvation, and to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261). In so doing I proved the words of the Master to be true, and then came the great joy of helping others. That the divine Mind is the only Mind I proved in one treatment. My husband also was healed of an attack of illness by one declaration of the truth of being. Upon another occasion he came with a very troubled look and described a seemingly serious condition of the bowels, but in a short time he returned with a smile and declared that all was well.

These are some of the many blessings that have come to me through the right understanding of God, and I desire to express my gratitude to the great power that is governing the universe, and to the wonderful woman who has made it plain to us what that power is.

ANNA C. THEW, New York, N. Y.

A few years ago I had a most painful attack, said to be caused by passing a kidney stone. At that time a physician was unable to relieve me except by giving me repeated hypodermics, and even then I suffered terribly for hours. Later, I had another attack, even more violent than the first. At seven in the evening a Christian Science practitioner was called by telephone to give me absent treatment, and in fifteen minutes after she had responded the pain was so much relieved that I was sitting quietly and was decidedly better. In half an hour I went to bed, and by nine o'clock the pain was entirely gone, and nothing remained of the trouble but a sense of extreme soreness in the kidney when I tried to take a deep breath. I was able by the next morning to get up as usual and go about my business. The soreness left gradually, the practitioner giving me two more treatments. On the third day after the attack I was entirely well. I had none of the after effects which had followed the attack a few years before.

I am glad of an opportunity to express my sincere gratitude for all that Christian Science has done for me, and is doing.—JESSIE F. BAUM, Philadelphia, Pa.

It is with a heart full of gratitude that I give the following testimony. Four years ago I was very ill with what was diagnosed as appendicitis and nervous exhaustion. The attending physician told my family that an operation was absolutely necessary. I could not, however, make up my mind to submit to it, and was at that time advised by a friend to try Christian Science. I did so, and in four weeks I was entirely healed. I was also healed of hernia for which I had worn a truss for eighteen years. After the third treatment I was enabled to lay aside the truss, and have never felt the need of it since. I feel that I can best express my gratitude to God, and to our Leader, as I understand and live the teachings of Christian Science.

BELLE BALCOM, Boston, Mass.

I am very grateful for the many blessings that have come to myself and husband through the study and application of Christian Science. My first experience with the healing power of Christian Science was a number of years ago, when I was perfectly healed in one treatment of a badly injured ankle. Later, I was healed of gall-stones, from which I had suffered for about seven or eight years; and at various times afterward of colds, hay-fever, and very badly burned hands and arms. In this last experience, the accident happened on Saturday, and as I was serving as first reader I had a fear of not being able to take my place Sunday morning as usual; but with some help in Science the fear was allayed, and all pain was overcome in about two hours. I read regularly in the church, also did my accustomed household duties, and in two weeks my hands and arms were well, and without scar or even redness.

My husband has been healed of a severe cold, and also of the smoking habit of twenty-five years' standing, and has been helped very much in business problems. It is impossible for me to write or tell of the many, many blessings that have come to us through Christian Science. Again I wish to express my loving gratitude to God, and to our dear Leader, Mrs. Eddy, for this healing truth which has brought to us light and understanding.

MARY DILLARD MICHEL, Ft. Scott, Kan.

Digitized by Google

I give this testimony with love and gratitude for what Christian Science has done for me. I have been healed of many ailments,—rheumatism, catarrh, and stomach trouble, also female weakness. In a case of poison taken accidentally, I was healed in twenty-four hours. In two instances I was not under treatment. In the case of ... poisoning the first thought that came to me was the text, "If they drink any deadly thing, it shall not hurt them." I repeated this many times, till at last I fell asleep.

The physical healing is not all. The spiritual sense of love became a higher consciousness to me, and many trials have been overcome, while they grow less day by day. I cannot express my heartfelt thanks to dear Mrs. Eddy for the good she has done mankind. I have received much help from the *Sentinel*. My desire is to live so close to Truth that others may see it and come also into Christian Science; that they may see that Truth's healing power is with us today even as when Jesus was on earth.

MRS. S. E. WEBER, Shelby, Ohio.

Over six years ago I was led to the study of Christian Science by the hopelessness of getting relief from my suffering through *materia medica*. I was told that my age stood in the way of my recovery. One diagnosis of the case was spinal, kidney, and stomach trouble. My back had been injured when I was only sixteen years old, resulting in a curvature. I had submitted to all kinds of treatment in the hope of being cured, but received no permanent help.

I determined to give Christian Science as fair a trial as I had *materia medica*, but I had to contend with an unaccountable dislike to Mrs. Eddy, and yet I had always believed myself to be fair-minded. I now know that it was the same evil which always has opposed itself to Truth and Love,—the old Adam hiding in its belief of personality. But this was overcome, and even greater to me than the healing of disease was the healing of a sense of sorrow. This sorrow seemed so great that life appeared a hideous nightmare, and death the only means of escape, when God in His loving-kindness brought to my remembrance a book that I had heard about eighteen years before, written by a woman whom I thought I disliked. This book was the means of saving me from a suicide's grave, and its teachings have opened the windows of heaven to me. O love unspeakable, unselfed love, what can I offer in return for the priceless boon given by our loving Father through Science and Health! In the words of St. Paul, I shall strive to "press on" to the high calling of God which is in Christ Jesus.—MRS. S. E. KERLINGER, Germantown, Pa.

Over two years ago a friend came to visit me one day, and found me in a critical condition, suffering with a distressing ailment. When she asked me if I had thought of trying Christian Science, I said I had not, that I thought it was good for those who were melancholy, but not for any one in great pain, as I was. At this time I knew nothing of Christian Science, but had tried every available material remedy, and the physician had done all he could for me, without my getting relief; so I decided to try Christian Science, as I felt sure it could do me no harm, even if it did not do me any good, as I did not have to take any medicine.

I had worn glasses for twenty years (I was nearly blind in one eye), and the optician said that I would always have to wear them, as he knew of no cure for the condition. Since taking up Christian Science, however, I have done fine needlework, reading, writing, or anything I wanted to do, even by lamplight. I have felt no need of glasses and have had no pain in my eyes. I can also see equally well with both eyes, and this is a great comfort to me. For nine years I had suffered from a bad skin disease, but found no physician who could diagnose my case, although they told me that it was a bad one. At times my face was in such a condition as to cause me much suffering and humiliation. I had tried many remedies, but nothing proved a permanent cure. I had at one time a very severe attack of spinal meningitis and had never fully recovered from it, much of the time being unable to attend to the duties of my home, having severe headaches which lasted several days at a time. Besides this I had bowel and kidney trouble, also a lung affection, having at one time been given up to die by one of the best of physicians; but, thanks to God and Christian Science, my lungs are strong again. Thin cotton clothing has taken the place of the heaviest woolen, and I have never felt the cold so little as in the past year.

All these diseases of long standing were met and overcome in one Christian Science treatment. In one hour from the time the practitioner began treating me, I was free from pain for the first time since I was a child; I could eat anything I wanted to without its giving me any distress, and have been practically well ever since. When any discordant condition appears, I take "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy, and with the truth as presented by her in our textbook, every condition has been quickly met. I am thankful to God for this truth which makes us free from the bondage of sin, disease, and death; also to Mrs. Eddy for her sacrifices in making it possible for us to gain this understanding as God has revealed it to her.

Through the teaching of Christian Science I am learning to be more charitable, loving, and kind to those about me. Surely "perfect love casteth out fear." God has promised to supply our every need, and He never will forsake those who put their trust in Him. I have proven this statement many times. I am grateful for the spiritual uplifting, which means more to me than the healing of my many diseases.

MRS. HARRIETTE J. D. HIBBARD, Kalamazoo, Mich.

I was led to investigate Christian Science through the healing of my mother of lung trouble in its worst form. My first reading of Science and Health cured my two children of periodical attacks of throat disease which had been very alarming. Two children have been born under Christian Science treatment, and the duration and severity of the experience were much less than on previous occasions. My strength never left me, and both times I joined the family at table the third day. I have seen severe bowel trouble, toothache, accidents, false appetites, and many minor troubles disappear under the application of this truth.

I thank God for the life of our Leader, also for the privilege of attending the church services, and for our periodicals.—NINA L. MANN, Redfield, S. Dak.

It is with a grateful heart that I tell what Christian Science has done for me. About three years ago I was told by a physician that I had an abnormal growth and would have to go to a hospital to have an operation performed. It was at this time that Christian Science was brought to my notice, and after hearing what it had done for others I decided to study it. Although I employed no practitioner, in about two years I was examined by another doctor who said I had no tumor whatever. Since the last examination I have given birth to a perfectly healthy child. In obedience to the law of the state a doctor was called, but the laws of *materia medica* were set aside so successfully that the labor really lasted only about twenty minutes and caused so little pain that I was able to treat myself all through it. For my healing and other smaller demonstrations in Christian Science I am indeed grateful to God.

MRS. WILLIAM F. SWIFT, Monument Beach, Mass.

I should like to add my testimony to the many that each week find their way to the *Sentinel*. I am very grateful

Digitized by Google

to God for giving this truth to the world through Mrs. Eddy, whose consecrated life has helped to bring us a demonstrable religion. I did not take up Christian Science for physical healing, but many ills have been overcome through the application of the truth. Before coming into Christian Science I was very unhappy and dissatisfied, and my disposition was far from being pleasant; but the understanding of God and His perfect creation has made a great change in my life. I am learning to be more patient and to love my neighbor as myself. We have also had some wonderful healings in our family. My father was healed of a chronic stomach disorder in about three weeks. My mother owes her life to Christian Science, for I know that but for this wonderful healing truth she would not be with us today. In the summer of 1909 my youngest brother was healed of an attack of fever in three absent treatments.

For all of these healings we are indeed very grateful, and also grateful for the every-day blessings. We are thankful for having been so lovingly and patiently helped on our way from sense to Soul.

EMMA GRAF, Los Angeles, Cal.

I feel it a duty, also a great privilege, to testify to the benefits I have received from Christian Science, for which I thank God. I have been helped both physically and mentally. When I first heard of Christian Science I scoffed at it, and thought that Christian Scientists were dreadful people, although I had never asked one of them what it taught; I had only gained my knowledge from non-Scientists.

Two years later, I was in need of physical help. I had been under a doctor for over a year, but he did me no permanent good. I prayed to God to take me to Himself, as I was a misery to myself and other people; but instead He gave me Christian Science, which makes it clear to us that in God man lives, moves, and has his being. How could I die if God is man's life? Christian Science has given me a sense of peace such as I never thought it was possible to have in this world; but I now know that God does not afflict man, for God is Love, and in Him "is no darkness at all." I never was so happy in my life as I am now! I have been cured of very severe colds, which were always accompanied by a most distressing cough, and I could get nothing to relieve me. I have had only one cold in the four years I have been in Science, and then the cough lasted only a brief time. I have been cured also of bowel trouble of many years' standing, besides nervousness, headache, toothache, and many other ailments. Christian Science is a cure for every ill, if it is applied in the right way!

Above all the physical help is the spiritual healing. It is such a comfort to understand God, and to know what the real man is. I know I cannot show my love and gratitude to God, or my appreciation of Mrs. Eddy, better than by trying to help others as I have been helped.

MRS. R. M. JENNINGS, Gt. Hallingbury, Essex, England.

This is to testify that I was healed of a severe case of rheumatism of long standing, through Christian Science treatment given me by my wife. I am deeply thankful to God, and grateful to Mrs. Eddy.

WILLIAM MCCRAITH, South Omaha, Neb.

Never alone! for the watchful eye
That notes each wandering sparrow's fall,
And a mighty and saving hand is nigh,
And a gracious ear to attend thy call.
When sorrow doth cloud life's prospects here,
Then oft is His tenderest mercy shown;
O seek then the Friend who would ever be near,
And ne'er shalt thou find thyself alone.

ANON.

FROM OUR EXCHANGES.

[Rev. H. N. Brown in *Christian Register.*]

Very often the man of today does not expect anything whatever from spiritual sources. Quite as often, though he may believe in a divine spirit, he regards every attempt to increase its ministrations as being foolish, if not impious. One person may think that God will never interfere with the natural sequence of things, or send us help outside the established lines of law and causation. Another person may think that, since God knows best what is good for us, and is already perfectly disposed to supply our wants, it is no better than a kind of faithlessness in us to proffer Him our petitions. Altogether, the old motive, which has so long sustained the upbuilding of religious institutions, probably has been quite seriously weakened in the public mind. Naturally, this being the state of the case, they into whose keeping the church has now come are frequently found groping about for some other motive to which they can appeal, some other valid and vital purpose which the church can serve. They try, for instance, to find a use for it as a means of promoting social and civic righteousness, which use may, perhaps, give it a new excuse for being. Or they surround it with an atmosphere of esthetic and sentimental interest, which they fondly hope will feed its life and sustain its growth.

I simply wish to record my own profound conviction that these endeavors, in the end, will prove mostly futile. Religion will have to stand or fall, I think, with that primal motive out of which it came. If it can do for men what they have believed it to be doing throughout the past,—that is to say, serve as a means of connection between this present world and another, higher world beyond our sight,—then religion will live. If it cannot do this, religion will die; and it is of no use whatever to try to varnish it up with any kind of ethical or sociological gloss. Certainly there is no reason, the church having an assured foothold, why it should not help mankind in many ways. I utter no protest against that kind of church which serves the community in every good work to which it can put its hand. But I say that nothing of this usefulness is likely to make up for the loss of its ancient function. It may mediate for man, in some fashion, between the seen and the unseen; and then, in addition to this, it may busy itself with all sorts of plans for social betterment. But it will have only a fading life if the attempt be made to substitute an interest in civic affairs for interest in the spiritual world, as the ground of its appeal for public support.

[*Standard.*]

The non-religious man on the street judges of religion very largely by what he finds in the religious man on the street, as he has a perfect right to do. His reverence for religion, his faith in its reality and power, his estimate of its value for man, are all based upon what he finds in the daily life of religious men by his side. He is told that he must not look at the disciples of Jesus Christ but at Christ himself; not at fallible followers but at an infallible Lord; not at Christianity in its imperfect expression but in its original perfection. That is all very well, but the man on the street will not heed it. He assumes, very naturally, that if there is anything in Christianity that makes a man more honest, more kindly, more patient, more forgiving than he would otherwise be, it will come to light in business life. If he does not find these qualities of character exemplified in the Christian men with whom he has to do, he cannot be blamed if he questions the practical value of religion. If any man is distinctly called of God to an important ministry, it is the Christian business man. It lies within his scope to preach with more power than the most eloquent minister, to affect men more profoundly and constantly than any evangelist. If the non-religious man

Digitized by Google

on the street is daily confronted with evidences of the power of Christ to make generous men of those who are naturally stingy, to make unselfish men of those who are naturally selfish, if he is set face to face with practical Christianity expressed in daily life, he will soon come to be a religious man on the street.

[*Advance.*]

The charge that past generations of believers have made God an absentee from His universe is hard to down. Nobody who believes the Bible can teach, say, or think that God is absent from His universe. Believers in the Bible never have thought so. The Scriptures are too full of the other view. Men who believe the declarations of the Bible believe in a present God. In fact, they might as well be accused of having no piety as of not believing that God is here. For the question of a present or absent God is not a question of philosophy but of piety. Much of the recent discussion about a present God has been a rolling over and over of words which does not move the church forward or lead anybody to repentance and faith. It would not convert a sinner in a thousand years, nor would it comfort the troubled heart of a saint. What is wanted is such a belief in God's presence as appeals, not to philosophical speculation, but to the hearts and hopes of men.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Apparently we are making our own heaven or hell every day we live, and although retribution may not overtake a wrong-doer in this world, it comes up with him swift-footed in the next. It is a preacher's solemn duty to warn people of this, little though the task may be relished. With the decline of belief in the horrible doctrine of eternal punishment there has come in modern times an amount of confusion of thought on this subject, and even indifference to it, which requires to be rectified. People need to be made to see the law that governs the relations of the soul to the righteousness of God. It simply is that we must equilibrate the balance in so far as we have falsified it; and no juggling with the facts, no indifference to the issues, no deadening of our moral sensibilities, will save us from having to do this in the long run, and to do it with sorrow and humiliation of spirit.

[*New York Observer.*]

There is an ideal for the church, even if there is not as yet an ideal church. That ideal for the church is found clearly indicated in the Holy Scriptures, which tell us how in the Old Testament days God gat Him a "congregation" or synagogue in the wilderness, how He cherished that spiritual community as its life centered around the successive temples in Jerusalem, how now, as the Saviour told the woman of Samaria, not in Samaria's mount nor yet in Jerusalem shall God be worshiped, but everywhere the spiritually minded find Him out, and how the work and worship of the Christian church shall be preserved through the centuries, and in turn, like salt, shall preserve society, until the coming of the Lord of the redeemed society, to set up His glorious kingdom, whereof the Lamb is the light. That Biblical ideal for the church cannot be too much studied, nor too sedulously imitated in practice.

[Rev. Arthur W. Grose, D.D., in *Universalist Leader.*]

Were it not for the lamentable success of the medieval theologians in so presenting Jesus to the world that many thoughtful men could not possibly accept their caricature of the real man, we should today be much farther along the road toward having a truly universal Christ. Men have rejected the ecclesiastical Christ, the mythological Christ, the Christ of the creeds. But whenever the real Christ has been presented to men they have not rejected him.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents: 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25	0: 9 : 3 ;	9.50;	11.60
2.50	0: 10 : 3 ;	10.60;	12.85
4.00	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Attorney-General Wickersham, in an address before the Minnesota Bar Association, declared that government commission is desirable to regulate great industrial organizations in the same way that the interstate commerce commission regulates railways; law of supply and demand no longer controls prices in the United States. Prices in all great staple industries are fixed by agreement between principal producers and not by normal play of free competition. Probably no one thing has done more to facilitate restraint of trade and the growth of monopoly than the departure from the early rule of law that one corporation cannot hold stock in another. By government control a national economic force may be utilized to the public benefit and to the general satisfaction of the commercial world. Under federal supervision thousands of small traders may, by regulated cooperation, protect themselves from the ruin of destructive competition on the one hand and from the constant apprehension of indictment on the other.

The treaty between the United States and Great Britain providing for the arbitration of pecuniary claims between the two countries in accordance with the general arbitration treaty, has received the ratification of the Senate. The treaty provides that within four months either of the governments may submit to the other any claims which it desires shall be passed upon. All claims not submitted within the time specified are to be barred.

An investigation of pipe lines, their rates, classifications, and regulations, has been ordered by the interstate commerce commission. Informal complaints have been made to the commission that certain pipe lines are being operated in an unlawful manner and to the prejudice of the interests of oil shippers.

An association of women has been organized in Minneapolis, Minn., to provide symphony concerts for children, with ten cents the admission price. The general public will also be admitted to these concerts, after the wants of the children in the way of seats have been satisfied.

Congress is making, through various investigations, a careful inquiry into the present and past development of the resources of Alaska. The result will probaby be the enactment of laws that will correct past misuses of privileges and insure honest methods for the future.

Guns that will carry their projectiles clear out of sight will be placed in the turrets of the new battleships of the New York type. With a muzzle velocity of twenty-four hundred feet a second the shell will have a range of about fourteen or fifteen miles.

Negotiations between the state department and the French government for a general arbitration treaty have reached a point which practically insures success, and it is expected that the state department will soon issue a statement to that effect.

Connecticut has passed a new law creating a public utilities commission of three members with power of direct order and control of rates of service by all common carriers and by electric, gas, telephone, telegraph, and water companies.

In the two years and a half of President Taft's administration ten bills in equity have been recorded in trust prosecutions and sixteen indictments obtained.

Four indictments charging conspiracy in restraint of trade have been returned by the federal grand jury against officials of wall-paper jobbing houses.

By a vote of 15 to 1 the board of estimate confirmed the vote awarding all New York subway contracts to the Brooklyn Rapid Transit Company.

More than a thousand banks have now been designated by the postmaster-general as depositories for postal savings.

Secretary of War Stimson last week made an official visit to the Canal Zone and went from there to Havana.

Oregon will benefit to the extent of four hundred and sixty-five thousand dollars in 1911–12 in corporation fees.

Over six hundred thousand acres of Indian lands in the Dakotas are to be thrown open to homeseekers this fall.

International.

A progressive policy of land settlement in South Australia has necessarily resulted in the destruction of large timbered areas, and the question of reafforestation has received close attention. For the 1911–12 season the different state nurseries have a total of 547,230 trees ready to be transplanted. During the 1910–11 season 312,522 trees were issued in response to 2017 applications, making a total of nearly eight million trees given away in the course of the twenty-nine years the practice has been in vogue.

The Belgian aviator, Olieslagers, in a monoplane last week made a flight of 388 miles at the aerodrome at Brussels without a stop. This beat the world's record for distance, in an uninterrupted flight, held by Tabuteau, 362 miles. Four days later aviator Loridan, piloting a small biplane at the aerodrome at Mourmelon, France, covered 465¾ miles, remaining in the air eleven hours and forty-five minutes. This is a new world's record for distance and time.

The government press of Japan is congratulating the ministry on the insertion into the treaty of alliance with Great Britain of Article IV. which practically excludes the possibility of war between Japan and America. This article was inserted in order to make possible the ratification of the Anglo-American arbitration treaty, as the old treaty provided that in case of war Great Britain should lend aid to Japan.

The veto bill, as amended by the upper house, passed its third reading without division in the House of Lords on the 20th. As the amendments made by the Lords would be rejected by the Commons, the King, on advice from the premier, promised to appoint, if necessary, as many new members to the House of Lords as would insure the passage of the bill in the form in which it came from the Commons.

The era of compulsory service was inaugurated in Australia last week with musters in all the training areas. One hundred and five thousand boys from fourteen to eighteen years of age have been brought under the immediate discipline of a training that requires at least four whole-day and twelve half-day parades and twenty-four night drills a year.

The American auxiliary yawl Sea Bird, a twenty-five-foot craft which left Providence, Rhode Island, on June 10, reached the Azores July 1. The trip of about thirty-three hundred miles across the Atlantic was made in thirty-five sailing days.

A review of irrigation in India for 1909–10 gives the total area irrigated at twenty-two million five hundred thousand acres, and the value of crops raised by works, for which capital accounts were kept, at about two hundred million dollars.

The Russian foreign office confirms the report that Baron Rosen will not return to his post as Russian ambassador at Washington. He probably will be given a seat in the Council of the Empire.

Field Marshal Viscount Kitchener of Khartoum has been appointed agent and consul-general of Egypt, to succeed Sir Eldon Gorst.

Industrial and Commercial.

A Boston organization, to be called the Charlesbank Homes, has applied to the state authorities for incorporation under the general law for the purpose of providing homes for working families of limited means. The object is to gradually do away with unattractive and inconvenient buildings in congested districts. The incorporators named are Edwin Ginn, Mrs. Ginn, Samuel B. Capen, Emma S. Blood, Charles H. Thurber, George W. Anderson, John Abbott, Flora H. Ayer, and Prof. W. T. Sedgwick, and the corporation is to be made self-perpetuating. Under the charter asked for the organization is to be allowed to buy or sell real or personal estate and to receive by gift or otherwise property to the amount of one million five hundred thousand dollars and such additional sums as the laws of the commonwealth may in the future permit. It is planned to begin building model apartment houses, which will be rented to deserving tenants of moderate means at a rate to bring in only a small profit. These profits are not to be taken from the corporation, but will be used to extend the work. As fast as funds are available it is planned to buy more land occupied by uncleanly and unfit buildings in crowded sections and replace them with fit and desirable buildings. The organization also proposes to establish reading-rooms, libraries, gymnasiums, playgrounds, and other public facilities of a similar nature.

The deal for the sale of the Home Telephone Company, which has some twenty-five thousand local subscribers and a large suburban and long distance plant, has been halted by the attitude of Mayor Brown of Kansas City, Mo., who demands that, in any deal of that kind, a new franchise be accepted by the Bell company which will give the city additional rights of regulation under state laws. The sale of the Home company cannot be consummated without the consent of the city. The city's demands in return for its consent are that both companies must first surrender all rights they now have under existing contracts; that if there is to be a merger it must be under an entirely new contract subject to the new city charter and the late state laws giving the city the right of control and regulation; that there must be an appraisement and thorough investigation of conditions as a basis for determining the rates, and that the contract would have to go to a referendum vote as a means of ascertaining whether the people desire a merger.

Tin plate makes a new record in two or three important particulars in the commerce of the United States for the fiscal year just ended. The imports are lower than in any year since the record of its importation was begun, the outward movement of American tin plate was larger than ever before, and the shipment of domestic tin plate out of continental United States for the first time exceeded the imports of foreign tin plate.

The municipal water plant of Kansas City, Kan., made a profit of $77,270.41 for the city, after paying all expenses for operation and maintenance, the first six months of this year.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OPPORTUNITIES IMPROVED.

WILLIS F. GROSS.

THE men and women who are successful in the affairs of this world are those who take advantage of and improve their opportunities. Herein lies the difference between success and failure. The successful person is awake to his opportunities and makes the most of them, while the unsuccessful fails to recognize his opportunities, or, recognizing them, neglects to improve them because he cannot see wherein they would contribute in any large degree to the success he desires.

There are too many people in this world who aspire to do great things, but are unwilling to devote themselves to the best accomplishment of the many comparatively insignificant things which are an important part of the life-work of all individuals. All who have been truly successful for good have laid the foundation of their success in the well doing of things which the great majority of persons have had the opportunity to do, and many of them under more favorable conditions. It has been truly said that "we learn how to do by doing," and no man has ever learned to do the big things who has not first been faithful in the performance of the little things. If today's opportunities are not improved, whence can come the ability to take advantage of the greater opportunities the future may afford? Mrs. Eddy says, "Unimproved opportunities will rebuke us when we attempt to claim the benefits of an experience we have not made our own" (Science and Health, p. 238).

The successful person is oftentimes the object of envy. There are those who believe they could do fully as well, or even better, if they "only had the chance." This may or it may not be true. In either case there is no occasion for envy. One is not called upon to bear the burden of the responsibility of the work that is not required of him, even though he could accomplish it with ease; on the other hand, he is spared the humility of the defeat which would be his if he has overestimated his abilities. No doubt there are abundant opportunities within reach which would enable him to accomplish even more for the universal good, if he would only improve them as he might, than would result if he had been called to the greater work. To desire to succeed in a good work is a worthy ambition, not because of the personal recognition and esteem that would be bestowed, but because of the lasting benefits conferred upon mankind in general, the great majority of whom may not even know who is their benefactor, while comparatively few of those who do know may bestow the justly deserved recognition.

Success along spiritual lines is desirable, and the things which make for success in spiritual attainments are much the same as those which gain the desired end in material undertakings. The basis of any success is work. Without work there is no progress and results are not forthcoming. There must be desire, perception, application. If one desires not spiritual things, there is no occasion to strive for them. One may desire, but if he does not perceive what is possible of attainment his efforts are not intelligently directed and he fails to reap the reward of his labors. When there is earnest desire, clear perception, faithful application, or well-directed effort, then there is achievement, and one is conscious that he has not labored in vain.

Salvation, either present or future, is the desired end of religious endeavor. The term salvation may have a broader meaning and application to some persons than to others, and there may be differences of opinion as to how much may be experienced or enjoyed, in the present, but all are agreed that without faith it is impossible to be saved. But faith is not all that is necessary. The apostle James tells us that "faith without works is dead," and Paul, fully realizing what is required of a man if he would be saved, left this wise counsel for all: "Work out your own salvation." The command to work out one's salvation is not contrary to Paul's admonition to the jailer, "Believe on the Lord Jesus Christ, and thou shalt be saved," for he who truly believes must of necessity do. What a man does, indicates what he really believes.

Since it is required of men that they work out their salvation, the question arises as to how or where we shall begin this all-important work. There must be a beginning, and the work must be carried on to completion. One should begin now, and he must begin right where he is. If he waits for a more convenient time, or more favorable conditions, he is not improving his opportunities and he has no reason to expect the reward of the faithful. It is the unerring and eternal law of divine Love that a man reap as he sows. The effort must be right if the end is to be harmonious.

Christian Science reveals the necessity of working out one's salvation and shows how it is possible to do so. One must begin his work right where he is, and Christian Science gives him something to work with. Many times a man is called upon to "walk by faith," but this does not mean that he is as one who walks in the dark and knows not where he is going. Rather does it mean that spiritual understanding, even though it be but a single ray of light, is to direct his steps. Christian Science imparts the true idea of God and man. This idea must be wrought out in human experience, and in proportion as this is done, harmony is established and salvation becomes a present possibility.

No one who has gained a slight understanding of the truth of being as it is revealed in Christian Science can truthfully say that he does not have an opportunity to live what he has learned or to apply the idea of Truth in correcting the errors of mortal sense. The term salvation implies something to be saved from. In Christian Science it is understood that man needs only to be saved from that which is unlike God. Error, or evil, is all that does, or can, enslave. The working out of one's salvation consists in overcoming error with Truth. The overcoming of all error is not possible to a limited understanding of Truth, but even a limited understanding will accomplish results which cannot be achieved in any other way. More is gained only as one puts into practice what he already knows.

A most helpful lesson is learned from the parable of the talents. The one who had received the five talents was a

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

faithful servant. He improved his opportunities, and when he was called upon to give an account of his stewardship he was able to report that he had gained five talents more. His commendation was, "Well done, good and faithful servant." The servant who had received two talents was just as faithful to his trust as was the one who had received five. He gained two talents more, which represented opportunities well improved, and he forgot the burden and heat of the day when he heard the welcome words of his master: "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord."

The servant who received but one talent was not faithful to his trust. He was probably one of those persons who aspire to do big things. The time and effort which should have been spent in the right use of the one talent, was probably spent in lamenting the hardness of his lot and regretting the lack of opportunity. He was unfaithful to his trust, and that which he had was taken from him.

The application is so evident that it scarcely need be made. The talents have been bestowed. To each is given "according to his several ability." It is required of him that he work out his own salvation. Abundant opportunities are afforded him, and he must needs be faithful. It is not required or expected of him that he perform that which is not possible, but it is expected and required that he make the best possible use of that which has been entrusted to his keeping. Greater opportunities, larger responsibilities, await him, and the "Well done, good and faithful servant," cheers and supports him along the way. If he continues faithful, his every effort for good is crowned with success, and his ability to perform is greatly increased as he realizes that, as Paul tells us, "it is God which worketh in you both to will and to do of his good pleasure."

THE QUICKENING TRUTH.

MARY TROXELL.

In June, 1899, it was my privilege to be numbered among the thousands who attended the communion services held in The Mother Church. The annual meeting of the church was held in Tremont Temple, Tuesday, June 6, following Communion Sunday, and it became known that Mrs. Eddy would be present at the meeting and address her church. On the morning of that memorable day I awakened too ill to get up from my bed. I had formerly been subject to similar attacks, which sometimes lasted several days, and except for my knowledge of Christian Science I should have expected certainly to be in bed all that day and probably much longer.

I knew that the friends upon whom I might have called for aid were all busy with preparations for the day; therefore I went to work for myself, stimulated by a great desire to be present at the meeting, not to see our Leader's personality, but from a longing to hear the audible word of Truth from this great spiritual teacher. I felt, too, that if I could only be there, I should be healed. After a couple of hours' mental work, I arose, and with patient effort dressed myself. I had not been able to eat any breakfast, so craving for something cool, I went out for some ice cream, the only food taken that day till evening. I then went to the hotel where friends were assembled, and thence with them to Tremont Temple. There was a throng outside, so that we were obliged to wait for admission, and it was only by steadfast declaration of the sustaining truth that I could stand on my feet. Even after I was seated, the distressing conditions seemed unabated, and it required all my understanding of God's power and presence to enable me to keep my place.

Soon after the opening exercises, our Leader came upon the platform, escorted by Judge Hanna. She addressed the meeting briefly—the printed words cover a little more than a page in *The Christian Science Journal* (July, 1899, p. 238)—and she immediately after retired from the platform, during the singing by the assembly of the doxology:—

Praise God from whom all blessings flow.

Words can never describe the effect of that loving, tender message of divine Love; one sentence especially seemed spoken directly and personally to my need; it was this: "Thou hast no longer to appeal to human strength, to strive with agony; I am thy deliverer." The wonderful sense of sweetness, calm, and peace, of the divine ever-presence, that came to me while Mrs. Eddy was speaking is best described in the stanza of a well-known hymn:—

Still, still with Thee when purple morning breaketh,
When the tired waketh, and the shadows flee.
Fairer than morning, lovelier than the daylight,
Dawns the sweet consciousness, I am with Thee.

How or when the sense of discord and suffering left me I know not; it was simply lost—forgotten in the exalted consciousness of those inspiring moments. Some time after, during the exercises, I realized that I was healed; all pain and distress had vanished as a shadow, and I was happy and free. Not only this, but for months afterward I was in better health, stronger and freer mentally, spiritually uplifted, and as a natural result did better healing work. Soon after my return home, an apparently difficult and dangerous case yielded in a few days to the enlightened understanding of Truth.

Among the many beautiful experiences I have had for others and for myself, this wonderful evidence of the power of the word of God, spoken with spiritual understanding, to heal instantaneously, glows in memory with imperishable light and glory, demonstrating to my consciousness the eternal verity of Christian Science. The testimony thereof is offered at this time as a heartfelt tribute of humble gratitude and deepest love to the one through whose spiritual teachings, consecrated life, and noble work, God has given to the world the great blessing of Christian Science.

THEORY AND PRACTICE.

RICHARD P. VERRALL.

Not very many years ago the terms "theory" and "practice" were generally regarded as opposed to one another. The theoretical man was depicted as a sort of dreamer or transcendentalist, whose schemes were wholly visionary and impracticable, while the practical man was supposed to be a materialist who earned his bread by the sweat of his brow. Even so great an authority as Webster defined "theory" as a "scheme of things, which terminates in speculation or contemplation, without a view to practice;" and in this belief he was not alone among lexicographers. On the other hand, Sir William Hamilton, the famous mathematician and astronomer, while conceding an individual domain to both theory and practice, takes the correct and widely divergent view. He speaks of "theory" as "a generalization of the principles on which practice proceeds," and establishes an inseparable relationship between the one and the other. It may be said that practice seeks to realize in action what theory proposes as true. Practice needs therefore to be combined with infinite patience, for it is required to prove all things and hold fast to that which is good.

The representative of any theory must of necessity first study its basic law, and its rule must be literally obeyed. The method of the ideal modern business man is a combination of theory and practice. His knowledge of the laws governing the particular business in which he is engaged enables him to solve practical problems in what would seem to the uninitiated to be a miraculous way. The expert electrician, directing what are termed the forces of nature to the use and convenience of mankind, is constantly put-

Digitized by Google

ting theory into practice, and proving that an idea is not merely a dream but the essence of something which may be realized in action. As an illustration of the power obtained through a proper blending of theory and practice, Sir William Arrol, builder of the colossal cantilever bridge which spans the Firth of Forth in Scotland, during the years of its construction was the indefatigable genius who kept theory and practice in constant relation. While dealing with men of varying grades of intelligence, he succeeded in inspiring them all to do their best work and had confidence in each man's ability to perform his appointed task. Sir William saw the finished bridge in his mind's eye always before him, and no problem that arose was too hard for him to solve. It is said by those who were close to their chief that he was never happier than when called upon to surmount some unprecedented difficulty. He would be lost in thought for hours at a time, but the vision always came and was seldom found to be impracticable.

The man who turns to the one Mind as the source of his power, even though he be unconscious of the laws of divine metaphysics as taught by Mrs. Eddy, touches the hem of the garment of Truth and is rewarded accordingly. Any attempt to break down the limitations of material sense, even through the exercise of what is termed human intelligence, must tend to emancipate mortals from the bondage of ignorance. The unprecedented industrial, educational, and scientific activity that took place during what is called the Victorian era helped to prepare the general consciousness for a more ready acceptance of the knowledge of God. Through the understanding of the divine Principle of being, as discovered, taught, and practised by Mrs. Eddy, the cause of progress has received a universal incentive.

The mental preparation along the lines of putting theory into practice has emancipated a very large portion of mankind from comparative slavery. Every man today is worth just as much as he can prove that he knows. Theory and practice are the basis of all successful achievement, and the individuals who combine them are finding their way to the front in all walks of life. In contrast with the old-time custom of preaching without practice, Christian Science reiterates the fact that "faith without works is dead." To emphasize this point Mrs. Eddy has caused to be written upon the walls of The Mother Church the following epigram, "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death" (Science and Health, p. 201). Carrying out this fundamental idea in all of the branches of Christian Science activity, she has provided for equal representation of the theory and practice of her teachings in the public worship of her church. On Sunday the services are confined to a statement of the Principle, and on Wednesday evening to the hearing of testimony illustrating its practice. Thus by a regular and healthy alternation between theory and practice the thought of the people is kept properly balanced.

While most human beings are inclined to lay too much stress on one side or the other, the fact remains that a perfect equilibrium between theory and practice is the ideal condition. A Christian who can show his faith by his works must be the kind that Jesus had in mind when he said, "By their fruits ye shall know them." Advancing from the human standpoint toward a knowledge of absolute Christian Science, it is inevitable that there should be some ups and downs by the way. The best student and follower must therefore be that one who takes least into account the hardships that beset him and keeps on advancing toward the ultimate goal. While human experience demands this painstaking process, it is at the same time most encouraging to note that the real man is not advancing toward the goal of perfection, as our Leader tells us, but is already there. Because of this fact it is within our power to know it and prove it, and to say with St. Paul, "Behold, now is the accepted time; behold, now is the day of salvation."

GOD THE TRUE SOURCE OF SUPPLY.

J. BEHRENS.

In my journey through the wilderness of human experiences, the glorious fact has been proven to me that God is the true source of supply when we apprehend and faithfully apply our understanding of our relationship to Him daily, in every need. About six years ago I was suddenly deprived of a certain monthly income, which provided not only for myself and daughters, but also for the monthly payment on our home, which had been purchased under this arrangement.

For a few minutes after the news came, a sense of utter despair seemed to take away from me my knowledge of the allness of God. Through a wonderful physical healing, I had learned to study faithfully the Bible, together with Science and Health and other Christian Science literature, thus gaining a knowledge of the omnipotence of God which I earnestly endeavored to apply to my daily problems, with "signs following," and in these moments of darkness and disappointment I wondered who could help me in my need. Then suddenly the truth came to my consciousness that my supply would come not from man, but from God. Our Leader's words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), comforted me greatly. I went to sleep, awakening in the morning refreshed and able to fulfil my duties that day, as I have every day since.

All my needs were met each month through my own earnings, nor did I ever want for a dollar, and the full reward of faithful trust and toil is now demonstrated. I have paid for a very comfortable home, and more recently have had the privilege of making a trip through the East, including the opportunity to visit our dear Mother Church. Many times I received special help from Mrs. Eddy's article, "Angels," in "Miscellaneous Writings" (p. 306). Her counsel that we should never doubt was held to faithfully when evil suggestions tried to enter consciousness from within or without. Another help was the article "Love Your Enemies," on page 8 in the same book.

I give this experience with the earnest desire to help those who are still struggling to reach the supply for their daily needs. The psalmist says, "Trust in the Lord, and do good; so shalt thou dwell in the land, and verily thou shalt be fed."

THE GOAL OF ASPIRATION.

GRACE SQUIRES.

Much has been said and many excellent articles have appeared in our periodicals corrective of a common misapprehension of the goal toward which the sincere Christian Scientist wends his way. That it is not merely the healing of his ills, his griefs, his limitations, his lacks, and his discords, but is first and last his demonstration of righteousness through which he blends or unites his thought with that of God, both Science and Health and the Scriptures reiterate and confirm. Perhaps the mortal tendency to work in the interests of the physical or material self, keeping the eyes focused on health or supply, blinded to the fact that "self" and not God is still concerning him, is what our Master meant when he said that "strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it." Certainly self-interests are not pursued by the few, but are lamentably prevalent.

Mrs. Eddy says in Science and Health (p. 4): "The longing to be better and holier, expressed in daily watchfulness and in striving to assimilate more of the divine character, will mold and fashion us anew, until we awake in His likeness." This holy, consecrated effort of the Scientist so to reflect the divine Mind that his entire character shall be remolded, and to reach God thereby, is the treasure

Digitized by Google

he lays up for himself which neither moth nor rust can corrupt, nor thieves break through and steal. Some one may say, "There is no lack in divine Mind and it is right for Scientists to have all that others have." The author of such a remark will see his mistake in time and will move onward and upward. In the mean time his influence needs correction, because he gives onlookers a wholly wrong estimate of Christian Science; and as for the young student, struggling for the first time to correct his false estimate of the relative value of things material and things spiritual, such a statement confuses and discourages him. He asks himself with some misgiving what really he is after, and concludes it must be the loaves and fishes which in some mysterious way have become legitimatized.

In "Miscellaneous Writings" (p. 204) Mrs. Eddy says that the influence of Truth gives mortals "new motives, new purposes, new affections, . . . a marked loss of faith in evil, in human wisdom, human policy, ways, and means." She adds that it "unselfs the mortal purpose." For a Scientist to say there is no lack in divine Mind is to speak truly or equivocally. There is no lack of truth in divine Mind, but there is a tremendous lack of materiality there, and to attempt to prove in one instance what he struggles to disprove in the next, is to give destructive evidence of the house divided against itself which cannot stand. One can always clear his mental view-point by studying the scientific translations of mortal mind. (See Science and Health, p. 116.) It will be seen that in the third degree, spiritual understanding, spiritual power, love, and holiness occupy the Scientist's every endeavor.

The Christian Scientist strives to let not the flesh but the Spirit be represented in him. He counts, therefore, his spiritual gains, and if he can point to quick demonstrations over resentment, to his entire willingness to let God rule, and to step out with his own dominant self-will, if he can be happy and contented in the midst of surroundings that argue loudly for unhappiness and discontent, he has found the truth which the world cannot see; he has chosen the "better part," and it shall not be taken from him.

Christian Scientists are not seeking what the world is seeking, or using spiritual vision for material ends. They are seeking righteousness and doing this with much earnestness and consecration. In this richness of spiritual good the desirability of much that the world prizes loses value. Truth does indeed give him new motives, new purposes, and they are never worldly or self-centered. He may sow and richly reap in his Father's vineyard, and yet have very little of what others have from a material view-point,—as little as the Master had. He may be able quite fully to subscribe to his Leader's Christmas wish in his "famine of sense," but her equal wish, viz., a "feast of soul" (*Sentinel*, Jan. 1, 1910), will be his, and he will find a rich recompense in his ability to say to the anguished and suffering, as Peter said at the gate Beautiful: "Silver and gold have I none; but such as I have give I thee."

LIGHT AND SHADE.

GEO. S. HADDOCK.

As the path winding up a mountainside leads, oftentimes, to an opening where the eye finds refreshment in the view, and then into the darkness of the wood; only to come out farther up and find revealings of greater beauty, so the journey out of material sense, with its doubts, fears, unsatisfied desires and unattained ideals, into the harmony and peace of Soul, is marked by periods of light and shade. The light is the dawn of Truth upon darkened sense; that which seems to be shade is the appearing of the suppositional opposite of truth and good, to be met and overcome, and in this overcoming the firm ground of understanding is reached.

In "Miscellaneous Writings" (p. 57), Mrs. Eddy says, "By the law of opposites, after the truth of man had been demonstrated, the postulate of error must appear." As warm sunbeams, after the rain, search out the dampness, causing it to rise in vapor to go into nothingness, so in the operation of the law of divine Love the children of God are liberated from bondage to material conditions. How loving, yet certain and strong, is this process of liberation. The error of belief must come out. There is no escape for it. And in coming to the surface, before the revelation of Spirit in Christian Science, it does so to go into oblivion. Thus we see our best good is ofttimes being worked out in the experiences which seem the most trying, and if at such times we stand strong, doubting not, clinging to the light of Truth and Love, the way will clear and greater freedom than before be ours. If this were more generally understood, there would be less turning back in trepidation and fear when one should be standing firm.

As the revelation of truth in Christian Science dawns, there is the joy of "the wide horizon's grander view;" the hand of Love draws aside the curtain of sense, and the enraptured eye gazes for a moment upon the glories of the Father's kingdom. The divine command, "Let there be light," is fulfilled. Are we not to rejoice and stand firm and steadfast, even if this light brings from under cover the lying belief in a power apart from God? And though the test seems severe, the way heavy and dark, do we not see that the dross is being burned, impurity chastened, the weak place in our armor strengthened, and that there and then we are finding the freedom that will bring us peace? At such times it is a joy to know that the darkest thing in our path, reversed, is the brightest in heaven.

Standing steadfast in the hour of test (the shade), faithful to God, knowing only the things of Spirit, the mist clears and a radiance greater than before comes into view. *Thus* we press on,—the light ever brighter and more glorious, the shade ever fainter, till through "the wholesome chastisements of Love" (Science and Health, p. 323) and the ever unfolding of the Christ-idea we are brought at last to the sunlit peak, above the storm and cloud, where joy and gladness reign and the shades have melted into light.

I awoke one morning with a very tired, weary feeling, a deep sense of discouragement. There was a great deal of material work to be done, and before beginning this work I took up the Bible and Science and Health, hoping to find some words of encouragement; but I seemed to find no comfort. While going about my work, however, these words kept coming to me, "Rejoice, and be exceeding glad;" "I will not leave you comfortless." All day these truths were with me, but personal sense argued that this was not what I needed. Was I to rejoice for a tired, sick body, and a lack of money for needed supplies, etc.? Still the voice of Truth kept saying, "Rejoice, and be exceeding glad;" and all day my heart was lifted to God in prayer.

Toward evening the clouds began to break, a light appeared, and again the command came to rejoice,—rejoice because the discord had never been real; because the harmony of the universe had never been disturbed and never can be, since God is governing it each moment, and His government is eternal. The evening brought the reward for faithfulness, with a sense of the peace that passeth all understanding, the peace which Christ Jesus said he would give—"not as the world giveth." The money that was needed so much for the morrow came in an unexpected way, and once again the promise was fulfilled, "Mine eyes shall be upon the faithful of the land;" "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

SELECTED ARTICLES.

[From an editorial in *Elizabeth* (N. J.) *Journal.*]

One cannot believe that the medical profession as a whole is so narrow as some members of it seem to be. The layman, holding for his family physician much the same regard that he has for the pastor of his church, does not wish to believe, and it is to be hoped has no reason to believe, that this welcome visitor in hours of pain is so lacking in breadth of view as to hold that the member of no other school of healing is entitled to any consideration. Yet it is the charge of the National League for Medical Freedom that this is the case, and it is further insisted that the members of the dominant school of healing are doing everything possible to bring not only moral but legal pressure to bear upon the practitioner who takes other means to bring about the same result.

Medical bigotry has no more place in this country than religious bigotry. There are many religious bodies here, some large and some small, but all which have for their purpose the betterment of mankind have a right to exist. Each has its place in the world, under present conditions. The same may be said of the healing art. The last word on the subject of medicine has by no means been spoken. Some day, perhaps, all medical wisdom will be embodied in the practice of one school, and all beyond that will be error. No intelligent person believes that to be the case at present. And until that day comes, medical tolerance is just as imperative as religious tolerance.

[William J. Bonnin in *Bury* (Eng.) *Times.*]

Mere talk and argument have a very small part to play in Christian Science. Is any one ever convinced by an argument against his own opinion, or won to a great truth by words? The churches have been trying to do this for centuries, trying to argue people into the kingdom of heaven and to prove that their own particular road is the only one. Now Christian Scientists have given that up, and are seeking to replace it with the method which the Founder of Christianity adopted to convince the world of the truth of his message, and which he so plainly insisted that his followers should also adopt. In other words, it is the duty of a student of Christian Science to let his works rather than his words speak for him and for his religion, and to let the world see that primitive Christianity, the Christianity which was continually being proved to be an actual protecting and saving power, is today ready at hand and to be availed of every whit as much as it was in the first few centuries.

Our critic accuses Christian Science both of attacking Christian principles and of insulting the medical profession. It would be quite impossible to substantiate such charges. Because Christian Science presents an interpretation of the Bible which differs from the various conflicting interpretations enjoying currency today, shall it on that account be held to be attacking those interpretations? Perhaps it is a little difficult for a faith without works to avoid a feeling of being stirred out of a more or less comfortable repose, and to resent this as an attack upon it, when it is face to face with a faith which insists that Jesus' last words on earth, reminding his disciples of the signs that should follow them that believe, are to be heeded today, and that a faith is dead which cannot be demonstrated by works. It is no good for such a faith to argue that those words were spoken to a select few at a select period, because Jesus also said that though heaven and earth might pass away his words would never pass away. So far from insulting the medical profession, Christian Scientists have nothing but respect for those who are laboring conscientiously for the good of mankind. That they do not agree with their methods by no means implies that they do not approve of their motives.

Recently the *British Medical Journal* asked all doctors to remember how great an evil fear is. When it is borne in mind that the race is being taught by medical science that it ought to be frightened of pretty nearly everything, and particularly of the all-powerful microbe, it is easy to see that medical science is in something of a quandary. One of the most universal experiences among those who have undertaken the study of Christian Science is the overcoming of fear by some measure of understanding of the omnipotence of divine Love, and until a more scientific way of destroying fear, and the disease and misery born of it, is forthcoming, it might be as well for those in the quandary I have referred to, to consider this offered remedy.

[Rev. J. W. Paull as reported in *Manchester* (Eng.) *Advertiser.*]

The mind is garrisoned by the grace of God only so long as prayer is its habitual atmosphere. Some of you know full well that this is true. And even those who do not know it for true by experience are conscious often of a sort of inward rebellion against the dominance of petty thoughts and cares and anxieties. The complex character of modern life tends to much tyranny of circumstance, and it is the revulsion from it that has given so much vogue to the teaching of what is called Christian Science. All the elements of truth in that teaching have been all along in the New Testament; and if we had not forgotten or neglected them, Christian Science would have had nothing to attach itself to in the way of appeal. In effect, its counsel is: Do not overthink yourself either as to your person or as to your circumstances. Fill the mind with higher and more ennobling thoughts and you will cease to be the prey of these petty and belittling worries. St. Paul has been exhorting us in the same way for a long time; and before him one greater than Paul said, "Take no thought, . . . for your heavenly Father knoweth." Could any words be found or devised more perfectly calculated to meet the need of the unrestful, ambitious, dissatisfied state of so large a part of society than these: "Be not conformed to this world: but be ye transformed by the renewing of your mind."

[D. M. Ely in *Cleveland* (O.) *Leader.*]

In the attack on Christian Science as reported, an evangelist is credited with the declaration that Christian Science "is but a slight improvement upon the philosophy of the Hindus." Nowhere in the writings of Mrs. Eddy or in the literature of Christian Science can the critic find warrant for such a statement. Every teaching in "Science and Health with Key to the Scriptures," the text-book of Christian Science, by Mrs. Eddy, is based on the utterances of the prophets and on the life and teachings of Jesus the Christ, whose sermon on the mount, as she declares, is the "essence" of Christian Science (Science and Health, p. 271). Christian Scientists realize with Paul that it is "the law of the Spirit of life in Christ Jesus" which sets us free from the law of sin and death and heals both sickness and sin.

[Editorial in *New York American.*]

The statute prohibiting the unauthorized practice of medicine expressly makes an exception in favor of the tenets of churches. The court of appeals has not yet interpreted this statute in its bearing upon the healing art as practised by Christian Scientists. Until such authoritative interpre- [illegible] had, through the prosecution of a single test case, that [illegible] found to support the Christian [illegible] to stop making indiscriminate arrests. That [illegible] of otherwise blameless lives, [illegible] persuading sick people to cheer up, looks to [illegible] like persecution.

The *American* protests against this as against every other [illegible]

kind of persecution. And, in the absence of a distinct law, backed by the interpretation of the highest tribunal, this newspaper will continue to believe that neither the constitution nor the spirit of American justice can brand as a crime the sincere prayer of religious faith or any honest application of mental therapeutics.

[Alfred Farlow in *Milwaukee* (Wis.) *Medical Journal.*]

You say that "in the most beautiful and healthful portions of our city, where no poverty obtains and the Christian Scientists are strong, there are at the present time so many cases of scarlet fever as to amount almost to an epidemic."

You might have made a stronger statement than this. You might have said that according to Biblical teaching God, who is even greater than a Christian Science community, is everywhere present; that no place can be found where God is not, and yet disease prevails.

David said, "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me." War, calamity, and epidemic besiege those who do not realize the divine, unseen presence sufficiently to avail themselves of His protecting care, while those who are awake to the divine presence find peace and health. It has been so in all ages of the world. One individual does not merit and reap the reward of the righteous because of his neighbor's goodness. He must merit his own salvation, he must merit his own pardon, deserve his own immunity, before it is granted him by a just and allwise Providence. Not because God is unwilling to save us from our distresses, but because we cannot be saved from them until we open our minds to spiritual truth and close them against that which is opposed to God.

No, Mr. Editor, the carrying out of "Christian Science to its logical conclusion" would not permit sickness but would make the world too good to be sick. It is not our goodness, but our materiality that is subject to sickness. Christian Science does not teach that one is immune from disease simply by believing in the omnipotence of God, but through spirituality, which is expressed by conduct in keeping with such belief. The immunity of the Christian Scientist, his ability to escape the ills of the flesh, is the only evidence that he is really and truly a good Christian Scientist.

[Frank C. Barrett in *Portland* (Me.) *Press.*]

A late issue contained a criticism of Christian Science by Bishop Neely, which, coming as it did from the presiding elder at the New England conference of the Methodist Episcopal church, is a decided contrast to statements made at the Protestant Episcopal convention last fall, when Christian Science healing was referred to in an editorial in the *Baltimore American* as "'a jewel which the church cast away and a woman picked up.' This was the concession made by one of the delegates to the insight of Mrs. Eddy, in perceiving that the church was failing to use one of its most potent instrumentalities and that it was neglecting one of the finest weapons of warfare, unmindful that it hung in the armory of the church as an obsolete piece of Christian equipment."

When it is remembered that the Master sent his disciples "to preach the gospel, and to heal the sick," and when it is further remembered that his preaching healed the sick as well as reformed the sinner, as did that of his disciples and followers for more than two hundred years afterward, then it becomes apparent that the early Christians found the "pearl of great price" a vital and practical element in the practice of their religion. In fact it was this sort of preaching "with signs following" which testified that they were true Christians, according to the standard of him who said: "By their fruits ye shall know them."

Inasmuch as Christian Science teaches those who understand it to do in word and deed all that Jesus said should attend the efforts of "them that believe," and inasmuch as Christian Scientists are today proving in large measure the efficiency of those teachings in the destruction of sin as well as the healing of sickness, it ill becomes a clergyman to speak slightingly of another's religious views, simply because one does not follow with him. In the gospel of St. Luke will be found the proper attitude for one Christian to hold toward other Christians: "And John answered and said: Master, we saw one casting out devils in thy name; and we forbade him, because he followeth not with us. And Jesus said unto him: Forbid him not: for he that is not against us is for us." Therefore the Christian Scientist never attacks the religion of others, for while he believes that Christian Science follows with the Master, he does not feel that it is right to condemn others because they do not follow with us.

[Frederick Dixon in *British Medical Journal,* London.]

In an article entitled "Decrease of Medical Students in America" you go out of your way, after the manner which is becoming almost inevitable in the press today, to attack Christian Science, and, if you will forgive my saying so, you lose sight of your logic in the effort. You put down the decline in the number of medical students to some various causes, among others to Christian Science, and then conclude with the deduction that the decline may be taken as a proof of the success with which the medical profession is fulfilling its aim. Now, as a mere matter of argument, if the decline is owing to the success of the medical profession, how can it possibly be owing to the competition of Christian Scientists? Furthermore, why, because you differ entirely from the methods of Christian Science, should it be necessary to speak of Christian Scientists as the personification of childish credulity, encouraging people to go to the devil? The best way to meet childish credulity is to ignore it, and when people are sure that their neighbors are childishly credulous they find it easy enough to ignore their claims. The persistent attacks which are made on Christian Scientists all over the world, and which seem to grow in intensity rather than anything else, are possibly the strongest proof that their opponents are perfectly conscious that Christian Science is not childish credulity, but is a great movement to be reckoned with.

[William S. Campbell in *Washington* (D.C.) *Post.*]

The current May number of *Health Culture* contains an article on "Mrs. Eddy and Christian Science," from the pen of Dr. T. J. Allen, whose contributions to the *Post* make his name a familiar one. Referring to Christian Science, he says: "It is entitled to great credit for popularizing the healing practice of the 'great Physician.'" He adds, "To dwell upon the sunny side, as Christian Science teaches, is not merely beautiful, but practical." Elsewhere in his article, Dr. Allen says: "In emphasizing the importance of the spiritual side of life, and especially of faith as a means of cure, Christian Science has done great good, especially in an age that has leaned too far to the material side; and it is apparent that its work is not yet finished."

These frank statements are from a member of the medical profession, and the doctor is to be commended for his honesty of expression. Still, there are some things that he assumes are included in Christian Science which do not meet with his approval, and in this respect he represents a large class of people. Some of these things are not included in the Christian Science teaching at all, but are mere misconceptions of its teaching; others are misunderstood, for the reason that the Christian Science view-point is always on the spiritual side, and the view from the material side gives the wrong perspective.

If one could get off the earth a sufficient distance to get

Digitized by Google

a correct view of the movements of the solar system, it would not be difficult to comprehend that the earth is not only circling around the sun at a terrific speed, but is also revolving on its axis at a rate that moves everything on its surface a distance of more than a thousand miles an hour. Standing on the earth, it is more difficult to comprehend this, yet it is the fact, regardless of whether one believes it or not.

In much the same way it is necessary to get outside of matter in order to get the right view-point of the real universe—the universe that God made and governs. The statement of the apostle Paul is, "Whilst we are at home in the body, we are absent from the Lord," and his advice is "to be absent from the body, and to be present with the Lord." Jesus said, "Take no thought for your life, what ye shall eat, or what ye shall drink." The personal habits of both these teachers showed that they intended their teaching to be practical. Paul advised that whatsoever is set before us, we are to "eat, asking no question for conscience sake." Jesus ate with his disciples, and in eating what was set before him he probably gave no thought to the subject of hygiene, for he was constantly absent from the body and present with the Lord—realizing the presence of divine power to govern all the phenomena of existence, even to the delicate texture and coloring of the lily.

Mrs. Eddy has stated in the Christian Science text-book, on page 478: "That body is most harmonious in which the discharge of the natural functions is least noticeable." And again, on page 388, "If mortals think that food disturbs the harmonious functions of mind and body, either the food or this thought must be dispensed with, for the penalty is coupled with the belief. Which shall it be? If this decision be left to Christian Science, it will be given in behalf of the control of Mind over this belief and every erroneous belief, or material condition. The less we know or think about hygiene, the less we are predisposed to sickness."

It is sometimes difficult at first to understand that Christian Science is a consistent whole. It can be seen that there is good in it, but in other respects it is at variance with material ways of thinking. But people are learning more and more that if any part of Christian Science is good, it is good all through. Its proposition is that it is Science, and the highest and most accurate form of Science, because its Principle or primal cause is God or Spirit. The system is therefore consistent, and if any part is good, it is good in its entirety. If the proposition is admitted that God is omnipresent, omniscient, and omnipotent, then all the deductions from that proposition will be found in harmony with the Christian Science teaching.

[John M. Dean in *Memphis* (Tenn.) *Commercial Appeal.*]

Christian Scientists rely entirely on God, and as His truth lives forever, they are not in the least disturbed as to the future of their religion. The entire trend of Christian Science is away from personality and toward Principle, and with this attitude they are so content as to be unruffled by dire speculative predictions which are fathered by a wish that they may come to pass.

Many of the statements made concerning Christian Science at this particular time would be extremely interesting but for one important thing—they lack the saving grace of correctness. However, we need not expect a logical or correct statement of Christian Science from an enemy, a misinformed person, or one who is disqualified by a lack of information; and to be a graduate of a theological seminary confers no greater qualification for correctly defining Christian Science, than would a perusal of the Christian Science text-book render one an authority on the tenets of another faith.

It is freely granted that Mrs. Eddy taught a religion of love and that she was ofttimes beset by enemies who sought to disturb her peace of mind, but this was also the experience of even Christ Jesus, the Founder of this new dispensation of love. Though the very embodiment of love and gentleness, he was maligned, persecuted, and finally crucified by a fanatical mob, which was incited by the intolerant clerics of that day. Love, preached and practised, always excites the opposite human manifestation of hate, and Mrs. Eddy's experience was no exception to that rule, which seems even yet to be operative under circumstances which should deter the most rabid critic from saying things as unnecessary as they are unkind.

Before presuming to make correct statements of Christian Science, the gentleman should have known that it does not teach the unreality of death in the sense that it is a mortal manifestation, but it does claim that, as God is not the author of sin, sickness, and death, they are unreal concepts which will gradually disappear before a correct realization of God's omnipotent truth, until we reach that day when "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

On page 254 of Science and Health, Mrs. Eddy says: "During the sensual ages, absolute Christian Science may not be achieved prior to the change called death, for we have not the power to demonstrate what we do not understand. But the human self must be evangelized. This task God demands us to accept lovingly today, and to abandon so fast as practical the material, and to work out the spiritual which determines the outward and actual." She never taught that she herself would be able, on this plane, to attain to the heights of her revelation. She simply stated a truth which is the ultimate goal of life, and said like Paul: "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

The great Baptist religion contains enough of truth to demand the entire time and talent of its ministers, and time devoted to widely advertised attempts to pull down a sister faith is a digression from that constructive policy which is the very essence of true religion and will result in nothing better than mere sensationalism.

[John L. Rendall in *Washington* (Ia.) *Democrat.*]

You ask the question, "What do Christian Scientists say about the charge, viz., that they claim there is no such thing as sin?" This is a fair question and is entitled to a fair reply. In the first place, Christian Scientists do not say "there is no such thing as sin" in any such sense as this minister uses it. Christian Scientists recognize very clearly that, according to human experience, sin, sickness, disease, and death are very real. They are part of the "carnal mind," of which St. Paul said, "to be carnally minded is death."

Mrs. Eddy states on page 447 of "Science and Health with Key to the Scriptures": "To assume that there are no claims of evil and yet to indulge them, is a moral offense;" and on page 448, "Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured. Under such circumstances, to say that there is no evil, is an evil in itself." There is no authority anywhere in Christian Science for the indulgence of sin, but in all its teachings there is the exhortation to forsake sin and to become so pure in thought, word, and deed that sin ceases to have even the appearance of power and reality. Only one who has attained to this desirable result can truthfully say, "There is no sin." This is in accordance with the teachings of Christ Jesus and is good Christian Science doctrine.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE RULE OF PRACTICE.

THROUGHOUT Mrs. Eddy's writings there is an insistence upon the necessity for having not merely a theoretical belief in Christian Science, but rather a demonstrable knowledge of it; and the reason for this is explained on page 323 of Science and Health, where she writes, "In order to apprehend more, we must put into practice what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated." This rule of practice is the key-note not only of intelligent action, but of all right endeavor. It is the rule for all Christian Science study and demonstration, and the guide by which we may expect to make further progress. Correlated to this saying of our Leader is another, on page 457 of the same book, viz.: "Christian Science is not an exception to the general rule, that there is no excellence without labor in a direct line. One cannot scatter his fire, and at the same time hit the mark." This saying also shows that mere theorizing about Christian Science, or a perfunctory acceptance of its teachings, is not sufficient, and that diligent study and application are necessary for those who are to become Christian Scientists in fact as well as in name.

Theory alone will never make one accomplished in any pursuit. Theory must be worked out, made practical, to be of any use. Mrs. Eddy discovered a wonderful truth, but she waited until she had proved the value of her discovery, until she had demonstrated the Principle and rule whereby Christ Jesus healed the sick and the sinning, before she gave it to the world; they might deride and scoff at a theory, but they could not gainsay its practice when before their very eyes the sick were healed and the sinning reformed. Over and over again, undaunted by sneers and ridicule, she proved that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear" the prayer of faith which heals the sick today as it did nineteen hundred years ago.

Our Leader has set before us a high goal, even the attainment of that degree of perfection which the Master commanded: "Be ye therefore perfect, even as your Father which is in heaven is perfect." There is one thing to be noted, however, in connection with this command, namely, that it is the conclusion, the result which is to be obtained by the practice of the precepts which precede it; in other words, it is the doing of his commandments that will work for, bring about, the perfectness which belongs to the divine likeness. Jesus made no secret to his followers that toil and struggle would be their portion,—"in the world ye shall have tribulation," he told them later; but behold the reward to them that do his commandments: "Whosoever shall do and teach them, the same shall be called great in the kingdom of heaven." They were to do them, that their teaching might have the sincerity, the effectiveness which comes only from practice.

Even so does our Leader tell us that the road to a full understanding of Christian Science is no royal road, but one of patient and persistent toil and endeavor. The end sought is not mere personal or worldly happiness, but rather the establishment of the kingdom of heaven upon earth, that all may share it. Its method is not that of will-power or blind faith, but is that complete realization of God's omnipotence which clears away the false belief of aught else than the infinitude of divine Mind,—the good which embraces, includes all,—and the consequent nothingness of any and every phase of evil.

As Mrs. Eddy has said on page 150 of Science and Health, "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing." This physical healing, however, is inseparable from the demonstration of the divine presence and power which constitutes the practice of Christian Science; that is, when the belief that there is power in anything else than God, omnipotent good, when the sin that has been indulged is overcome and cast out, in other words, when we have truly repented, and thoughts of Truth and Love have replaced the hatred, envy, and malice that once dominated us,—then the physical body can but respond to the healed thought, and the disease which so tormented us will find no habitation. The physical healing is the natural consequent of regenerated thought.

It is because of Mrs. Eddy's insistence that her followers should prove their faith by their works, that they should be faithful to the divine commission "to preach the gospel, and to heal the sick," that the spread of Christian Science, that marvelous growth at which the world wonders, has been accomplished. The sick and the sinning are all about us,—"the fields are white unto the harvest,"—and they that thrust in the sickle of Truth shall reap a rich reward. Thus, and thus only, will we as Christian Scientists prove to the world that the religion we profess is no mere theory, but a full salvation.

ARCHIBALD MCLELLAN.

"THE WORD OF TRUTH."

IN Paul's second letter to Timothy he warns him against mere wordy discussions, which only tend to mislead the hearers; then he adds, "Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth." There are a number of references to this "word" or declaration of truth in the Scriptures, one of the most significant being the statement by James, "Of his own will begat he us with the word of truth, that we should be a kind of firstfruits of his creatures."

It seems remarkable that for long centuries this divine idea, of such vast significance to humanity, should have been practically unknown, so far as its application to human need is concerned. Who, for instance (prior to Mrs. Eddy's discovery of Christian Science), would have thought of telling a suffering mortal that "the word of truth" could and would heal him? Yet this was always true, even as in Jesus' time, and no other fact is of such vital importance to the human race as this. Here some one may ask, as did Pilate, "What is truth?" So far as the record shows, no direct answer to this question was then given. The Master had demonstrated the truth throughout his whole earthly career, and had also taught others how to do so, little as the world understood his teaching; but those who were faithful followed the lines laid down by him, and by "the word of truth" they healed the sick and even raised the dead, and that for several hundred years. Then came the dark ages, when belief in matter and material means usurped the place of spiritual supremacy; truth was sought by material methods, and its quest began and ended with material evidence. This inevitably led to agnosticism, for if God is Spirit, as Christ Jesus declared, His existence cannot be proved by material evidence.

But at length there came a great spiritual awakening, the Christian Science text-book, "Science and Health with Key to the Scriptures," was given to the world, and again men "trusted in Christ" to do all for them. Paul says, "In whom ye also trusted, after that ye heard the word of truth, the gospel of your salvation;" and this has been the experience of unnumbered thousands who have been healed in Christian Science. They learn therefrom that the truth about God and man is the spiritual fact, and that this must be known before the truth about anything else can be rightly understood. As "the word of truth" is declared in Chris-

Digitized by Google

tian Science, the truth about man becomes apparent to human consciousness, and this never includes sin, disease, or death. It lays bare the falsity of mortal belief and uncovers all that needs to be exposed,—the hidden fear or sin which seems to delay healing or the restoration of harmony. The truth must first be known, then lived, then declared,—silently or audibly as the need requires,—but there is no doubt as to its power.

Truly says our revered Leader, "Divine Science, the Word of God, saith to the darkness upon the face of error, 'God is All-in-all,' and the light of ever-present Love illumines the universe" (Science and Health, p. 503). Who would deny this, or question the Christ-power voiced by an old hymn,—

Thy touch has still its ancient power;
No word from thee can fruitless fall.

ANNIE M. KNOTT.

ONE LAW.

THE moment one begins to think about law, in the light of Christian Science, that moment he begins to realize that the prevailing concepts of its meaning are confused and confusing to a degree which is most lamentable in view of the intimate, causal relation of law to life and conduct in human experience.

This word law is constantly being used in explanation of things, without there being any definite apprehension of the ideas to be conveyed or of the metaphysical facts of the case, and there results a vague and ofttimes self-contradictory sense of relation, where an exact sense is imperatively demanded. To ask the average person to give his definition of law is to hear perchance that it is "a binding practice or habit," or "the dictum of some authority," or "the order of nature's procedure," or "the commandment given to Moses," or "the demand of conscience." Every impulse, habit, tradition, prejudice, force, and philosophy, every human belief, indeed, and every physical phenomenon, asserts itself and makes its appeal in the name of law, and this clatter of tongues might well be named Babel.

That there is war to human thought in the realm of law cannot be questioned. Having the most venerated convictions, customs, and conformities for their sponsors and advocates, the claims of material sense are quite warranted in saying that they have been honored by every human tribunal, and that they have wielded a practically undisputed sway in all the centuries. Nevertheless, in the arena of every truth-awakened consciousness they are met face to face with the opposing assertions of spiritual sense, the decrees of the one divine law, and here every righteous human struggle finds its beginnings. This struggle is given an old-time and most dramatic setting in the story of the wrestling of Jacob upon the banks of the Jabbok. It is portrayed by St. Paul in his confessions of inner conflict, when he says: "I find . . . a law that, when I would do good, evil is present with me. For I delight in the law of God after the inward man: but I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin." This is a specific and yet all-inclusive statement of the nature of all the asserted conflicts of law, and the apostle makes it clear that he recognized not only the powerlessness and illegitimacy of this "other law," but its unreality, when in his next sentence he identifies it with "death," falsity, nothingness. He was, however, in the midst of the mental turmoil with which we are all so familiar, and he found freedom only in so far as he realized that, since God is the only source of life and authority, the activities of good, divine Mind, express the only law.

Reasoning from this basic truth, that God is the only lawgiver, Christian Science teaches that "there are no antagonistic powers nor laws . . . governing man through perpetual warfare;" that God, infinite good, "is not the author of barbarous codes" (Science and Health, pp. 231, 381), and that escape from disharmony, disease, and death is dependent upon our realization of their absolute lawlessness. In both his preaching and practice Christ Jesus taught that to annul the so-called laws of materiality to which mankind are so pitifully subject is the goal of all spiritual aspiration and endeavor, and yet how hopeless is this undertaking so long as their asserted validity and divine approval is accepted. The joy, inspiration, and stimulus to the assertion of their freedom which is gained by Christian Scientists is explained by the fact that they have awakened to an understanding of the teaching of the Master that there is but one law, the wholly good and saving law of Truth and Love.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CHICAGO, ILL.

Under the auspices of the ten Churches of Christ, Scientist, a free reading and writing tent, seventy-five feet long and thirty-five feet wide, has been fitted up for the accommodation of the soldiers and visitors who are attending the national military tournament at Grant park, Chicago, this week. We clip as follows from a letter recently received:—

"I am availing myself of the opportunity of writing the first letter written in the Christian Science reading-tent, erected in Grant park, on our lake front, as a reading-room where all our literature may be read, and where visitors may obtain, without money and without price, copies of our periodicals. The committee has provided the best of everything, including the stationery for free public use."

KANSAS CITY, MO.

The ground at the northeast corner of Fortieth and Walnut streets has been purchased by First Church of Christ, Scientist, and a new church, to be known as Third Church of Christ, Scientist, will be built there. The lot is one hundred and fifty-six feet on Walnut street and one hundred and fifteen feet on Fortieth street. It was purchased from the Kansas City Athenæum. The members of the Athenæum purchased the lot with the purpose of building a clubhouse there, but they decided that it was too far south.

Plans for the new church have not yet been drawn. The church which is to be built for the Scientists, who are now meeting in Morton's Hall at Fortieth and Main streets, will not, however, be as expensive or as large as either the First or the Second Christian Science edifice. It will face south and will be built along modern lines. Definite plans will be finished by the first of next year.

Kansas City Times.

LINCOLN, NEB.

The contract for the completion of First Church of Christ, Scientist, Twelfth and L streets, was awarded to an Omaha firm at a meeting of the church which was held Thursday evening [July 6]. Work will begin within a few weeks. The contract calls for an expenditure of at least $54,400, and the plans accepted from architects about four years ago will be used, without any material change.

Nebraska State Journal.

BALTIMORE, MD.

Plans have been finished for an edifice of Grecian design for First Church of Christ, Scientist. The building will be erected on University parkway, opposite Wyman park. The edifice will have an ornamental facade of marble, with tile roofing and concrete foundation. The interior will be finished in oak and mahogany.—*Baltimore Sun.*

THE LECTURES.

SEATTLE, WASH.

Willis F. Gross of Boston, Mass., delivered a lecture on Christian Science in Junction Hall, May 4, under the auspices of Second Church of Christ, Scientist. He was introduced by E. W. Craven, first reader of First Church of Christ, Scientist, who said in part,—

One of the misapprehensions about Christian Scientists is that they do no missionary work. As I understand missionary work, it is the bringing of the knowledge of God and of Jesus Christ, and of the salvation which is manifested through him, to the attention of people who do not understand it as we do. Christian Scientists do this kind of missionary work on a large scale. In this community Second Church of Christ, Scientist, maintains regular Sunday services and also a Sunday school, as other churches in this community do; also, for the purpose of diffusing a knowledge of Christian Science and thus doing missionary work, it maintains a free reading-room. It also gives a free lecture; and thus, as missionary work is popularly measured in dollars, it expends over three hundred dollars per year for that purpose. Is there another church in this community that spends such an amount for missionary work? If so, that church does well. I speak now of First Church, because I know more about it. It spends for publication work, for maintaining a reading-room, and for lectures the sum of $3,395. Is there another church in Seattle that expends an equal amount per year in cash for missionary work? If so, it does well. There are other benevolences, moreover, in which we have been interested as a body, such as the San Francisco disaster and the earthquake at Messina.—*Correspondence.*

SOUTH HAVEN, MICH.

Bliss Knapp delivered a lecture on Christian Science at the Opera House May 5. He was introduced by Lawyer L. Myrol Phelps as follows:—

We have gathered here this evening to listen to a lecture on a subject which is attracting world-wide attention among all classes of people. As for myself, I am not a member of any Christian Science church, but I am an interested student of Christian Science and find it to be a very beautiful religion. Many have termed it a new religion, or a new thought, but to those who have studied its text-book and watched its results in healing both sin and sickness, it appears to be the religion demonstrated by Christ.

We are all aware that Christian Science as well as every other new movement has been criticized by many who have not a thorough knowledge of the subject. Into the construction of every beautiful building, be it king's palace, state house, or cathedral, there enter rough stones, lath, and mortar, each of which has its office in sustaining the grace and grandeur of the structure. But suppose that the building is in some distant land and that you have never seen it, and some friend visiting the building breaks a stone from the foundation or tearing open a partition takes out lath or mortar. Returning to you, the rough stone in one hand and the lath and mortar in the other, he says, "Behold, here are samples of that wonderful building." You would straightway answer, "If I am to know something of the beauty of this building, I must enter into its halls. I must ascend its marble staircases and look out from its dome upon the surrounding landscape. I must measure its height, depth, its length and breadth. I must examine its foundations." So it is with many of these criticisms. A short sentence or paragraph is torn from its context and held up to the world as a sample of what Christian Science teaches, when in its proper place it is natural and beautiful.

In listening to this lecture tonight, as well as in your future studies in Christian Science, I ask you to be both open-minded and unprejudiced. Try to be in that frame of mind which a juror must have in trying a case. The attorney for respondent asks the juror if he will enter into the trial of this case believing the respondent innocent and continue in this belief until convinced beyond a reasonable doubt of his guilt. I ask you to investigate Christian Science, believing it innocent of the charges made against it, and to continue in this belief until you are satisfied beyond all reasonable doubt of its fallacy. If you will do this, I bespeak for you a wonderful conception of this religion and a great peace and joy in your life.—*Correspondence.*

STATEN ISLAND, N. Y.

Curtis Lyceum, St. George, was filled Sunday afternoon [May 7] to listen to a lecture on Christian Science by William D. McCrackan, M.A., of Boston. Eugene R. Cox, Christian Science publication committee of the state of New York, introduced the speaker, and said:—

We have all read the promise, "Ye shall know the truth, and the truth shall make you free," and throughout this broad land many thousands are earnestly, longingly, hungrily seeking for this truth, in the desire to be free from all of the distresses, diseases, and discomforts which seem to afflict humanity. We who have through the knowledge of God imparted by Christian Science achieved somewhat of the glorious liberty of the sons of God, and have found thereby healing of sorrow, sickness, and sin, are gratefully glad to let others know of the bountiful benefits which we have received, and so this church bids you welcome to this lecture, from which you may get a foretaste at least of the great emancipating truth.—*Staten Islander.*

LOS ANGELES, CAL.

Bicknell Young lectured in Simpson Auditorium Sunday afternoon and Monday and Tuesday evenings, May 14, 15, and 16, under the auspices of Third Church of Christ, Scientist. The seating capacity of the auditorium was taxed at each meeting, and many were turned away. Newell Darlington, first reader of Third Church, introduced Mr. Young Sunday afternoon, saying in part,—

We have gathered together this afternoon to listen to a lecture on a subject which is claiming the attention of thinking people of all nations, and which has become world-wide in its activities. Christian Science comes bringing a message of health and happiness and peace to a world sorely in need of relief from its distresses. It simply asks that it be accorded an unprejudiced investigation, to have that rule applied to it, to determine whether it is Christian or anti-Christian, whether it has value or is valueless, which Jesus gave to the multitude of his time and to us today, when he said in his sermon on the mount, "By their fruits ye shall know them."

T. N. Johnson of Third Church of Christ, Scientist, introduced Mr. Young Monday evening as follows:—

The momentous question of today, "What is truth?" was answered in the time of Jesus by "signs following," by the healing of all manner of sin, sickness, and disease. In this age Christian Science, the teaching of Christ Jesus, is replying to the question in like manner. It is unquestionably true that Christian Science has healed thousands of men, women, and children who had been pronounced incurable by physicians. Because of its beneficent healing ministry Christian Science is largely engaging the attention of the world today. It is, therefore, highly important that accurate and reliable information be given concerning its teaching and practice.

Digitized by Google

On Tuesday evening Mr. Young was introduced by F. E. Woodley of Third Church as follows:—

Since the time of Adam, men have been seeking for truth and freedom. The great desire has been to know the truth about God, man, and the universe, the truth which liberates men from the bondage of a belief of power apart from God, which keeps them from realizing man's real selfhood and holds them in subjection to sin, sickness, and death. Christian Science is the understanding of this truth; it teaches just what each and every one of us has been longing to know,—how to have that dominion over the ills of the flesh and over all discord which is our God-given right.

Correspondence.

DENVER, COL.

About twenty-five hundred people heard Francis J. Fluno, M.D., last Sunday afternoon [May 21] in Woodmen Hall and Monday evening in First Church edifice. John Horne Chiles, assistant district attorney, in introducing Dr. Fluno Monday evening said:—

Forty-five years ago Mary Baker Eddy, upon the occasion of an accident, called in her extremity upon the infinite to save her and restore her to health. Being of a religious nature and an earnest student of the Bible, the inspiration received by her as the result of her immediate recovery led to the discovery of that truth which she afterward named Christian Science. Mrs. Eddy discovered the same truth which the Christ had taught, the life-giving Principle, and she reduced it to a system of rules which is published and set forth in her text-book, "Science and Health with Key to the Scriptures." This book is an exposition of the truth, a spiritual exposition of the Bible.

The Master, in his teachings to humanity, set forth that corporeal or material man amounts to nothing, and that the real and substantial man is the spiritual man, who is not subject to sickness, sin, and death, but who lives eternally. Jesus demonstrated this in his teachings and in his daily life. Upon this basic truth Mrs. Eddy gave to the world the illumination of the Scriptures, which, carefully read in the light of this text-book, shows that the Principle is Life, Truth, Love, and which when sought for, and finally brought into the consciousness, has "healing in his wings," healing which produces health, prosperity, and happiness, and destroys sickness, sin, poverty, and discord.

Jesus said, "Heaven and earth shall pass away, but my words shall not pass away," and during all these centuries, although the human race in its mad chase for happiness, its pride and envy, hatred, malice, and strife, has lost the art of healing; although empires have risen and fallen, and nations have come and gone, the words which the lowly Nazarene spoke when on the earth have been preserved, and Mrs. Eddy apprehended the truth he taught and gave it to the world in her text-book, "Science and Health with Key to the Scriptures."—*Denver Times.*

As the glorious dawn of morning light
Brings forth the foreground into sight,
Revealing form and beauty rare
Of mountain, forest, flowers fair,
As guardian with protecting grace
Of tiniest nook or largest place;
So doth the glory of our Lord
Bring to our inner sight the Word
Made flesh, its truth and fullest grace,
Its depths of wisdom, sweetest face;
Of perfect Love, no great, no small,—
Our rereward, guardian, All-in-all.

ANON.

TESTIMONIES OF HEALING.

From 1898 to 1908 I suffered a great deal from heart disease, supposedly the result of a fever contracted when ten years of age. I had paid slight attention to it until after being examined by a doctor for an appointment, in 1897, when I was eighteen years old. The doctor pronounced my complaint an organic disease of the heart, and then the trouble grew worse, as my thought was centered upon the complaint. Being unable to secure the appointment (the doctor had kindly said that owing to my circumstances he would pass me for it, but I refused as it did not seem wise to go farther), I borrowed some money and went to South Africa in October, 1898.

In three months I was in a hospital in Cape Town, with the first acute attack of heart trouble. For the next three years I had occasional attacks, until in 1902, when in Pretoria, I was several weeks in a hospital. It was thought that Johannesburg would suit me better, so my employers arranged for me to take up an appointment there; but the day after leaving the hospital I was taken back. I had a relapse, and for several days my condition was extremely critical. This resulted in losing my appointment, as it was considered advisable for me to get back to sea-level; so I returned to Cape Town. In a few weeks I was again in a hospital, after which I obtained work, only to be laid up again in about two months. By this time my savings were almost gone, and I decided to return to England while I had the money, so I came home in March, 1903. For the next four or five years there was no improvement, and during this period I wrote to a friend to send me some money to have by me for funeral expenses, as funds were at bed-rock and doctors gave me no hope of improvement.

While in South Africa I had been interested in Christian work, and one day a lady visitor to the house where I was staying spoke about the power of faith. The subject interested me, as a couple of years before I had heard a slight reference to Christian Science and I had often pondered, while lying ill, about the healings of the Master; but no one could give me any light. In 1907 I had begun to take a more independent line of reasoning, the conflicting nature of the medical opinions in my case confirming me in the thought of the unsatisfactory understanding of disease and how to deal with it which all the doctors had exhibited, as compared with the healings of Christ Jesus.

In September, 1908, the pastor of the church of which I was a member announced a sermon against Christian Science, which was influencing the thought of some members of his flock; and although I had a great admiration for him, I felt this was something I ought to inquire into myself. We are bidden to "prove all things; hold fast that which is good;" so instead of going to hear his sermon I went to a Christian Science meeting. Being favorably impressed, I borrowed a copy of Science and Health, and the chapter on Prayer completely altered my attitude. I commenced the study in earnest, and in a few days my whole outlook on life was changed; I was a new man; the hideous dream of years had passed away, and I was at last experiencing that "peace of God, which passeth all understanding." This was over two years ago, and from that time to this I have not lost one day's work, but am proving daily what are the things "added" unto us by seeking first the kingdom of God. Whereas before taking up the study of Christian Science I was continually being bolstered up with drugs and plasters, avoiding rain and fogs, certain articles of diet, likewise hills and stairs and undue exertion, since relying "on the sustaining infinite" (Science and Health, Pref., p. vii), as understood and taught in Christian Science, I have not resorted to a single material remedy, I have lived the life of a normal, healthy person, and have been able to work at full pressure with comparative ease and comfort.

Digitized by Google

The very great cloud of fear and uncertainty which overshadowed the happiness of our home was one of the earliest things to be removed, and only those who have experienced this fear can appreciate the joy and peace of such freedom. So many ills have entirely disappeared that I am greatly encouraged to press onward, knowing that in proportion to my sincerity of desire for that Mind to be in me "which was also in Christ Jesus," I am following the path which leads to complete salvation. Apart from the physical advantages, I am most thankful for the spiritual uplifting which comes from the conscientious study of the Bible in conjunction with "Science and Health with Key to the Scriptures." I can gratefully say that even if Christian Science did not heal disease, I would "hold fast" to it for the purity of its teachings and the effect brought about by the better understanding of God and His Christ, which reveals the Father's wonderful love.

WILLIAM BAXTER, Bishopston, Bristol, England.

With an overflowing heart for what Christian Science has done for me, I hereby offer the following testimony: In the spring of 1905 I submitted to a surgical operation (abdominal) of a very serious nature. I grew worse after the operation and suffered severe pain for about a year, when the physician decided that I would have to undergo another. I again submitted, but this also failed to bring relief. A third operation was advised, but it was decided best not to perform it. I was then told that nothing more could be done for me and that I would always be a sufferer.

All this occurred within about two and a half years. My mental suffering during that time was beyond description, and I feared insanity, for that was held to be inevitable by physician and family. Life seemed a burden and death the only relief, and I had made all preparations to seek this relief when my husband called a Christian Science practitioner, realizing that if I was to receive help it must be at once. It is over three years since that time, and I remember as I look back how a sweet sense of peace and freedom entered my consciousness during the first treatment. My cry to God for rest and forgiveness was heard and answered, and the words of our Master came to me clearly, "Ye shall know the truth, and the truth shall make you free;" and thank God the truth did make me free!

When I commenced to take Christian Science treatments, I decided to be as fair and true to my practitioner as I had been to my physician. Following her advice, I immediately purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began its earnest study, as I was told this would aid in my recovery. I was practically healed in one treatment, but continued for about five weeks. My heart breathes a silent prayer of thanks to God for our inspired Leader, Mrs. Eddy, whom I think of as the anointed and appointed one to bring this truth to the world. More precious to me than the physical healing is the spiritual understanding of God as Love, Truth, and Life, and my true relationship to this infinite God, good.

The study of our text-book is teaching me to love my neighbor as myself, and to love God supremely. I believe the only way to show our gratitude is to live this redemptive truth, thereby helping others, and my daily prayer is to be a true Christian Science student. I feel grateful for our weekly Lesson-Sermons, as they enable me to gain a clearer understanding of the Bible, and I am also grateful for the *Sentinel, Journal,* and *Monitor.*

MRS. CORA A. GOODNOW, Kansas City, Mo.

In gratitude for what Christian Science has done for my wife, as she has stated above, and also for myself, I am impelled to append my testimony. I was in a very nervous condition, troubled with chronic rheumatism, a great slave to tobacco and a moderate user of liquor. I was also addicted to profanity. Now, thanks to Christian Science as revealed through Mrs. Eddy, I am well and free from these false appetites and habits; and I have received a spiritual uplift that I did not think was possible on this plane; for all of which I am very thankful to God.

W. H. GOODNOW, Kansas City, Mo.

I wish to tell how I came to Christian Science, but words cannot express my gratitude. My health had been failing for over a year, and our regular physician advised a change in climate, or perhaps an operation; but I kept at my duties until May, 1908, when I became much worse. I suffered indescribably for several hours, until the pain was overcome with an opiate. The next day the doctor diagnosed the case as appendicitis with serious complications. I had been unable to retain food for nearly two months, and several times had alarming experiences. The doctor insisted upon removing me to the hospital immediately, but I refused to go or to be operated upon. He came every day for two weeks and did all in his power to relieve my sufferings, but at last he gave up the case and told my husband that unless I was operated upon I could not live. We then tried another kind of treatment, and I was helped a little at first, but soon grew worse again. I was told not to try to eat even one spoonful of food, because I was vomiting almost constantly, and my fever was very high for weeks. After about sixteen days I was advised to get a surgeon, to save my life if possible. We then summoned the best surgeon in the city. He demanded an operation that very day; but this I refused to submit to, although he did his best to show me that it was "the only means of life." I was in a pitiful condition; could not even turn myself in bed, and had been in one position for seven weeks. According to the doctors I had tuberculosis of the bowels, appendicitis, etc., and the outlet of my stomach was said to be closed. I was terribly reduced and so weak that I felt unless something higher than human aid came, I soon must die.

A friend had been pleading for us to try Christian Science, and as a last resort my husband telephoned for a Christian Science practitioner. When she came I was too weak to talk, but she sat near the bed a few minutes and seemed to be thinking. Before she came into my room I could not have told where the pain was the worst, but in a few minutes, and for the first time in nine weeks, there was "no more pain." It had passed away so quietly that I did not know when it ceased. In half an hour when she asked me how I felt I could not tell, I was so astonished and happy and hungry. When she told me I could have something to eat, no wonder I doubted, as I had not tasted food for thirty-two days; but she was so sure it was all right, that I thought I would try. My family held their breath while I ate heartily, but there was absolutely no distress. Then I slept for over an hour and awoke hungry again. The third day I got up and walked alone the length of the house, the twelfth day I went down stairs alone, and in three weeks I walked three blocks. I gained thirty-five pounds in seven weeks and felt better than I had for years. Before my illness I had worn glasses to read, but I have not had them on since the first day of treatment. I was totally deaf in one ear, but my hearing is now perfect. I had been troubled since ten years old with a chronic throat difficulty, but I have not felt the least soreness since coming into Science. My daughters and my husband also have been cured of many ills.

The physical healing was grand, but far more beautiful was the mental healing and spiritual uplifting, and I feel that I never really lived before. Words cannot express my gratitude for the truth, but I try to show my love and gratitude in my daily living. I sincerely hope this testimony will help others to try the Truth-healing for themselves. I thank God for dear Mrs. Eddy, who has shown us how to reach again this light which lighteth "every man that cometh into the world."

MRS. BERTHA M. WRIGHT, Portland, Ore.

Digitized by Google

It is with deep gratitude that I give my testimony to the wonderful help I have received through Christian Science. It is over five years since I first heard of it. I had been laid up for ten months with what two of the best medical men in Exeter pronounced a malignant growth, and they gave me no hope whatever. I then took some treatment which required a strict diet, besides medicine and baths. I was under this treatment for eight months, receiving some benefit, but it did not remove the excessive fear from which I suffered. I was then introduced to Christian Science by a kind lady who said I could be healed. I gave up all medicine, diet, and baths, and put my trust in God for healing, for as soon as I had read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I knew I had found just what I wanted, not thinking very much about the physical healing, but seeking a higher understanding of God, which I saw I should get if I read and studied the book. This I gladly did, and not only received healing of body, but mental healing as well, which meant much more to me. I had treatment from the lady who lent me Science and Health, and in a short time I was in perfect health. Not only did I lose the fear of the growth, but lung and heart trouble of over twenty years' standing disappeared, also lifelong headaches. A poisoned finger has also been healed.

One year after I was healed, while out walking one stormy night, I fell heavily on the frozen road, fracturing the small bone of the leg and dislocating the ankle and foot bones. I asked help from a Christian Science practitioner, who treated me at once. I slept during the night, and in ten days I was able to put my foot on the ground, walking with a stick. In three weeks I was doing my housework as usual and feeling no bad effects, and in a short time I was again quite well. I am indeed grateful for all the help I have received in Christian Science. Through the reading of Science and Health I am gaining the true understanding of God, and learning how to overcome any difficulties that may arise by the understanding of Life and Love. To say I am truly thankful to God, and also to Mrs. Eddy, for this wonderful healing of mind and body in Christian Science, after all other means had failed, does not express fully my gratitude. I trust this testimony of healing may be the means of benefiting others as I have been helped. Christian Science has taught me to know that nothing is impossible with God. I am always grateful for the Lesson-Sermon and all of Mrs. Eddy's writings, also our hymns and the periodicals, as they are all helpful to me in my journey from sense to Soul.

MRS. MARY JANE SHORT, Exeter, England.

I am deeply grateful to Mrs. Eddy for her teaching of Christian Science, for her explanation of God as Spirit, as Love; and, because man is made in the image and likeness of God, he "is not material; he is spiritual" (Science and Health, p. 468). My concept of God had been man-made. In some mysterious way he was said to be a God of love, but also a God of vengeance and eternal punishment. This had been so emphasized that the balance was overwhelmingly with the latter, and I lived in constant fear—fear of everything. When I took up the study of singing, a succession of annoying colds was an almost constant experience, and because I had a supposedly inherited tendency to colds, I thought I could not escape them.

Four years ago, while studying singing in Berlin, Germany, I found myself unable to continue my work because of these colds, and having exhausted all medical means, Christian Science was suggested to me by a good friend, though not a Scientist. I hesitated, however, because of my prejudice against what I thought it to be, but I was so sorely in need of relief that I visited a practitioner. She told me in a simple, direct way what Christian Science really teaches, and soon I knew that this was the truth I had been seeking all my life. At once I was able to go on with my work, and am gaining more and more freedom as my understanding of this blessed truth unfolds.

Words cannot express my joy that I have inherited this great gift of the Father, that I can realize in some measure, now, the great love which "the Father hath bestowed upon us." I am sincerely grateful to all that has helped me on the way, whether this help has come through verbal explanation or through Christian Science literature.

JEAN MARIETTA SHUPP, Los Angeles, Cal.

Although not a member of any Christian Science organization, I deem it a duty to give testimony at this time to the undeniable fact that Christian Science is a very potent factor in the affairs of men. About two years ago I had a serious attack of rheumatism in my right shoulder and arm, including my hand, which incapacitated me for successfully attending to the requirements of business. Having some knowledge of Christian Science, derived from the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, a copy of which I carried in my grip, being a traveling man, I resorted to it for relief, but was helped only temporarily. I then realized that something must come to my aid soon, as I was unable to sleep because of the severe pain and it was with great difficulty I could turn over in bed; in fact, I could hardly hold a pencil when it was necessary to write, which was the main feature of my business. In the absence of any visible avenue of escape, I bought an alleged infallible cure for rheumatism, but after taking four or five doses according to directions, my stomach rebelled and I was unable to eat. I then threw away the medicine, and wrote my wife to ask the practitioner who on a prior occasion had healed me of a painful toothache to treat me.

Being separated by about two thousand miles, it took nearly four days for a letter to reach home, but the real source of the help was omnipresent, as the fifth night I slept soundly and in the morning could dress without difficulty. I soon regained normal conditions, and now have no more use for material means, since the spiritual are available and reliable. I feel very grateful to the one from whom has come to us the knowledge of this healing truth, we who have all these years been worshiping at the shrine of matter, ignorant of the real fact and source of life. To all who may be halting between two opinions, as to the truth or error of Christian Science, yet are honestly seeking light and believing there must be truth somewhere,—to such let me say, Throw off the mask of pride and self-righteousness, and investigate Christian Science for yourselves.—J. A. SWIFT, Fort Scott, Kan.

I rejoice that the opportunity has been given me to testify to the healing power in behalf of Christian Science, for I have seen many forms of error disappear under its declarations of the power of Truth. Several years ago I suffered from nervous collapse to such an extent that I could not walk across the room and had to be carried up and down stairs. Now I am able to help in the church work and do many things it seemed I would never be able to do. I have seen severe illness disappear into its native nothingness in a few treatments, both in myself and those of our household. An ulcerated tooth, which the dentist said could not be relieved for several days and that I must endure the pain, was healed quickly. A practitioner took up the work in the morning, and by the afternoon all pain was gone. The dentist was much surprised, and said the core of the abscess had come out as though it had been operated upon surgically. It certainly was a case of beautiful and quick healing. I feel none could testify to the sustaining power of Truth in passing through a great sorrow better than I, and I send this testimony with deep thankfulness to God.

MISS MARY H. SLAUGHTER, Webster Groves, Mo.

Digitized by Google

I wish to express my gratitude for the many benefits received through Christian Science. I was healed of a disease of twenty years' standing, which was diagnosed by a specialist as an affection of the stomach and liver. He thought he could cure the stomach disease, but said the liver would always trouble me. His remedies failed to help me, and since getting a little understanding of Christian Science I know why everything material failed, for the cause of the suffering being mental, it could not be removed by a senseless drug. My wife urged me to try Christian Science. She called on a Scientist to inquire where we could get "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was informed that a reading-room was to be opened here and that a practitioner would soon arrive. We then bought a copy of the text-book, and read it in connection with the Bible, and gained some understanding. As soon as we found that meetings were being held, we attended them. I had nine treatments, and was completely healed. Words cannot express my gratitude, but it shall be my daily endeavor to live so as to reflect Truth.—W. F. THOMAS, Pittsfield, Mass.

Impelled by deepest gratitude for the truth and all it has done for me, I send this testimony. Over six years ago, having for two years followed the advice of a leading physician in our city to live out of doors as much as possible, and failing to find relief for what he had pronounced a serious lung trouble, I turned for help to Christian Science. I at once realized a spiritual awakening, which resulted in an earnest longing to gain an understanding of this divine Principle, and through the daily study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, the physical condition was gradually overcome.

Wishing to follow as closely as possible in the pathway that our beloved Leader has so lovingly prepared for us, I accepted the privilege of class instruction. Through revelation Mrs. Eddy, as the God-appointed messenger to this age, has given us the truth as taught in Christian Science, which proves to be indeed the "pearl of great price." Words fail to express my gratitude for the many blessings received in our home through the realization of this truth.

MRS. ADELE R. MCCRAY, Minneapolis, Minn.

I wish to verify the statements of my daughter, Mrs. Adele R. McCray, regarding her healing of lung trouble. At the time it was diagnosed by our physician as such, I was familiar with and saw the evidence of the disease. I rejoice that I am able to testify to the fact that it was entirely overcome, as my daughter has stated. For this healing and many other blessings which have come to me through Christian Science, I rejoice and am very grateful.

MRS. REBECCA W. ROSE, St. Paul, Minn.

I wish to express my gratitude for the many blessings I have received from the testimonies in the Christian Science periodicals, for these were the first things I read. I did not take up the study for physical healing, but because I saw what it had done for my wife, who had taken up the study about three years before I did. She did not seem like the same person, for where before she was always sick and unhappy, now she is well and happy. I took up the study in earnest about three years ago, and it has helped me wonderfully in many ways. One of the ills overcome was kidney trouble, and this is entirely gone; also a slight throat trouble, and the use of bad language. The latter I made some effort to quit, but it seemed to be quite difficult. However, after I had been studying Science and Health for some time, I burned my hand quite badly, and the first thing I did was to laugh. I then noticed that the habit of profanity had left me. Meditation upon the truth contained in "the scientific statement of being" (Science and Health, p. 468), brought relief, and the burn did not trouble me in the least.

Another thing which has been overcome was a desire to work on Sunday. I used to enjoy working on Sunday more than any other day, but this desire has left me. One of the errors I had to overcome was the belief that Scientists worshiped Mrs. Eddy, but I now know that they do not, but only love her and are thankful to her for bringing to light this truth that has been lost so long, and for making it so plain that we can put it in practice the same as in Jesus' time. I am very grateful to her because she lived near enough to God to write Science and Health, which is indeed a key to the Scriptures, for it makes the Bible a new book to me. Before I took up the study of Christian Science I never read the Bible, but now I love to read and study it every day. I am also thankful for the Christian Science literature, especially the daily newspaper, the *Monitor*, which I think every Scientist ought to take. We feel that some of the papers contain articles that are well worth the price of a year's subscription. At the start, although I was not then a member of the church, I gave half of the only ten dollars I had in cash for a year's subscription. I felt happier and rejoiced because of doing this, and I am thankful to God, and to Mrs. Eddy for this truth.—J. W. ARNI, Pasadena, Cal.

In December, 1905, while living in Great Falls, Mont., Christian Science was brought to my notice, and I was healed in a very few days of diseases that had been pronounced incurable by physicians in this and another state. They told my husband to make life as pleasant as he could for me, since it would be very short at the best. Besides my husband I had two small children whom it seemed very hard to leave motherless. When a young girl my parents had been buried in one grave, and I dreaded to leave my babies to pass through even a small part of the trials and sorrows I had then endured, as my life had been anything but happy, owing to loneliness and grief caused by the loss of my parents and home.

I was a nervous wreck, and the physicians pronounced my case so serious that nothing more could be done for me. My husband, though not himself a Scientist, had for two years tried to persuade me to try Christian Science, but I did not wish to leave my church or to believe what I then thought Christian Science taught; but there came a time when I realized all had been done that could be by the physicians, and I very reluctantly consented to see a Christian Science practitioner, with the thought that it could do me no harm even though it did not help me. After the fourth treatment, however, I felt free from my aches and pains,—entirely free, and strong and well, after years of suffering! At this time I laid off glasses which I had worn for eight years. Three different specialists had examined my eyes and told me that I never should go a minute without glasses; but it has been over five years since I have had them on, and my eyes have been better in this time than they ever were, for they had been weak from childhood. In November, 1909, a son was born to us. Before his birth there were some discordant physical manifestations, but these were all overcome by the truth. There seemed to be many unfavorable conditions, but at the time of birth much harmony and love was manifested, and my every need was met far beyond anything I had expected.

For all these and countless other blessings, for the spiritual uplifting at the time of my healing, and for the different understanding of God, I am truly grateful to our Father, to the Wayshower, Christ Jesus, and to our dear Leader. I hope to live so that I may be worthy to be called a Christian Scientist.

MRS. C. H. MAYO, Kalispell, Mont.

This is to certify that I knew of the condition of Mrs. C. H. Mayo's health previous to her investigating Christian

Digitized by Google

Science, having boarded at the same home with her family after she was compelled on account of the condition of her health to give up housekeeping. I was intimately acquainted with her husband, who frequently talked with me in regard to his wife's health, and I know of several business changes he made solely on account of it. Mr. Mayo was the first party from whom I learned of her healing in Christian Science, and knowing her condition I was amazed when he told me that she was well. I thought he was joking, and so treated it until I questioned him. It was through this healing that I became interested on my own account, and was healed.—A. E. SCHWINGEL, Great Falls, Mont.

In writing this testimony I desire to express my heartfelt gratitude to God, and to our Leader for what Christian Science has done for me. Late in 1909 I was taken with a very severe attack of appendicitis. Two doctors were employed for about four weeks, also a nurse for a portion of the time. As soon as I was able I went home with my mother, who is a Scientist, and at this time I was receiving absent treatment from a Christian Science practitioner. A little later I went to the practitioner and received present treatment for one week, and was entirely healed. For this physical healing I am very grateful, but far more am I grateful for the spiritual uplifting that comes from a constant study and practical application of Christian Science as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures." "Thanks be to God, who giveth us the victory."—MRS. STELLA DONLEY, Enterprise, Ore.

I wish to express my heartfelt thankfulness to God for what Christian Science has done for me. For a number of years I suffered with acute attacks of rheumatism, the pain being very intense at times. A friend advised that I consult a Christian Science practitioner. I did so, and after having the rudiments of Christian Science explained to me in a quiet convincing manner, I was treated for a half hour. I cannot explain the effect it had upon me, but I experienced a wonderful feeling of peace, as if a great load had been lifted from me. After the second treatment the practitioner advised me to lay aside the glasses which I had worn constantly for over fifteen years. I did so, and was very much surprised to find that they were not necessary. At her request, I quit smoking while under her care, without any apparent effort, though I had used tobacco for twenty years and had often tried to stop, but seemingly could not do so. After discontinuing the treatment I felt free to smoke, so I lighted a cigar; but two puffs were sufficient to make me feel sick and dizzy, and I threw it away in disgust, being fully convinced that my craving for tobacco had been destroyed.

All symptoms of rheumatism have disappeared, and I am very grateful for the physical benefits received in Christian Science, which are as nothing in comparison to the spiritual uplifting I have experienced through its teaching.

C. J. ANNIS, Denver, Col.

[Written for the *Sentinel*.]

DE PROFUNDIS.

WARWICK JAMES PRICE.

FROM stormy deeps men cry to Thee for aid,
Their suppliant pleadings lost in ocean's roar,
Trembling and cowering, belittled, sore afraid,
Hearing God's anger in the sea at war.

Far fitter were it, in midsummer's calm,
When storms are still, and waves lie lulled in sleep,
And peace has spread old ocean's breast with balm,
To think again how Jesus hushed the deep.

FROM OUR EXCHANGES.

[Rev. John H. McKenzie, D.D., in *Living Church*.]

Revealed truth must stand and will stand every method of investigation, whether it be the scientific, the historical, or the exegetical. Instead of being losers by this method, we are the gainers, because it is bringing about an academic honesty and sincerity that we have not always known even in the church, and instead of the pulpit being, as it has been called, a "coward's castle," the pulpit will boldly proclaim the truth as this church has received the same, and not simply garble a few platitudes that are lifeless and not the application of Christianity to immortal souls of this generation. The brave and accurate preaching of God's word is the crying need of the age; that preaching which eliminates personal opinions and honestly proclaims the truth as God has revealed it to His church; and not simply the truth, but the whole truth and nothing but the truth; and when God's ambassador clearly discerns God's revealed truth and clearly expounds it to the faithful with the same assurance that St. Paul wrote to the Corinthians: "We know the things that are freely given to us of God, which things also we speak, not in the words which man's wisdom teacheth, but which the Holy Ghost teacheth;" when with this same assurance we preach and accept revealed truth, it will go far toward dispelling the unrest of the religious world in our day.

[*Churchman*.]

"Organic fellowship," "visible and organic oneness,"—these are not only ideals, they are not mere heights attained through faith and order. They are the fundamental facts in Christ upon which the church is built. They are the simple, sacramental basis of the church. It is surely impossible that that which is intended for the salvation of the world, that what is to be the means of reaching and saving common humanity everywhere, should be or can be a matter for historians or a matter for a few favored people, or in any sense a complex thing to be understood only by the few. In its original nature and character the church to be the church of the world must be simple. Membership in a family demands nothing as a prerequisite of the member born into it, but it demands everything of the member when born in order to fulfil the relations into which he is born. Membership in a nation demands conditions so simple of those who come into it or are born into it that practically citizenship in the nation is available to all. How can the analogy be resisted when universal citizenship in the eternal kingdom of God is substituted for that of the family and of the nation. Short-cuts, next-steps, philosophies and definitions must be subordinated to the ever-present fact—the governing principle of the family of God.

[Samuel Harden Church at Christian Church Convention, Pittsburg, Pa.]

The church universal for which I am pleading must be the church whose paramount purpose is the fulness of life on earth in accordance with the example of Jesus. We have got far away from that doctrine of the olden time that religion was devised to prepare men for death, the grave, and heaven. The kingdom of heaven is within you! We have got far away from the idea of a hell after death, which is a slur on the nature of God. Is it not a monstrous perversion of those attributes which alone would make God worthy of the love which we, His children, cherish for Him, to maintain that He requires a man either to believe or to do anything in subjection to Him, with the alternative of being damned after death? Yet some men have gone far beyond this in choosing certain accidental texts on which to erect a destiny of cruelty and blood. It is God's will that we suffer here for every conscious disobedience to those laws which our hearts tell us should be inviolate. That is all the hell that exists or that ever did exist; and

Digitized by Google

in destroying the power of the church to torture us either here or hereafter, we have compelled her to cease from tyranny and restore the Saviour's way of gentleness. That, or she must perish!

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

Christianity in its final, fullest, and most practical aspect is life. It is not primarily creeds, though often men have practically thus thought it; they are but the logical inference or logical incident of it. It is not a mere code of duties; that is but an ethical and essential expression of it. It is not merely building cathedrals or building almshouses and hospitals; these are but the esthetic and humane expressions of the mystery of godliness everywhere manifest. Christianity is foremost and fundamentally life—the life of God expressing itself in the life of men; so that they not simply rethink His thought, or redo His deeds, but relive His life, and become more and more fully the express image of the Father's glory—more and more fully the Immanuel —"God with us." If the signs of the time mean anything in the thought world, it is a demand to reformulate the message of the Messiah in the thought language of the hour —in terms of life; for this is the last word and lost chord of evolution, the most holy place of all creation, life abounding and triumphant. It is the key to the kingdom of all kingdoms, for it alone brings forth the practical product that means the true Eureka of the world's universal and most holy quest.

[William E. Rutledge in *Standard.*]

The truth is what we want. As Christian men and women, we want the truth as to our relations and our duty to politics. Truth is light. It drives away the fog. It gives us a clear sky. It elevates us. The truth makes us free. Many Christian men have come to view politics as a subject so low, so mixed with crookedness and corruption, that they would better leave the subject alone. To be in politics is to be looked upon as a dirty man, is the view many people take of it. Politics is the science of government. God is the author of government. Then politics is just as clean as the hand of God. Many Christian men say it will not do to mix politics and religion. If government has been authorized by God, we cannot separate politics and religion. It is not, as a rule, a good policy to mix too much politics in your religion, but you cannot put too much religion into your politics. You cannot be wrong politically and right religiously. You cannot aid or encourage a wrong principle in civil government and enjoy the right relations with God who authorized civil government. You cannot knowingly vote for a principle not in harmony with righteousness, and then pray from your heart to God, "Thy kingdom come. Thy will be done."

[*Christian Register.*]

The cast of mind that can recognize no virtue outside of what is traditional and sanctioned must always remain an enigma to the eager searcher for what is good in itself, and *vice versa;* although he who has shaken off the tyranny of custom is wont to be more tolerant of his adversary's peculiarities than is the custom-enslaved person of his radical opponent's unwillingness to bow to convention. The enlightened progressive will generally yield a good-natured acknowledgment that it takes all sorts to make a world, but the bred-in-the-bone conservative can see no good whatever in upsetters of the established order.

[*Continent.*]

The age of miracles is not past. Today, as in the days of the apostles, a church attested by miracle—that is, by the phenomenal intrusion of the power of God into the affairs of men and women—is the only church which can command the world.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0. 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

In what are known as the Spokane-Reno-Pacific coast cases the interstate commerce commission has ordered material reductions in freight rates from the East to points between Denver and the western terminals of the great transcontinental railroads. For many years the railroads have exacted from shippers to intermediate points, such as Spokane and Reno, higher rates on eastern freights than were charged for the much longer hauls to Seattle, San Francisco, and other Pacific coast points. The theory has been that the railroads must meet water competition to the Pacific coast. The higher rates to intermediate points, arbitrarily fixed, have been defended by a comparison with the coast rates, plus a theoretical back haul from the coast to the inland stations along the line. The commission recognizes the right of a railroad to meet water competition to Pacific coast points, but practically wipes out the back haul rates to inter-Rocky mountain territory. It lays down what it considers would be fair and just rates to various freight zones in the West and gives the railroads until Oct. 15 to adjust their tariffs accordingly. The commission also lays down the important principle that hereafter railroads will not be permitted to fix arbitrary market limits and that hereafter commercial conditions rather than the will of railway traffic managers shall control rates on transcontinental transportation.

Great efficiency and economy were shown by the battleship Delaware on her cruise to England for the coronation. The average speed for the round trip was 11.85 knots. The ship left New York on June 4 with 2,749 tons of coal and 282 tons of fuel oil. She arrived at Torbay, England, on June 16 and at Spithead on June 19. She left Spithead on June 28 and arrived at Boston on July 9. During her stay abroad the Delaware took no fuel, engineering supplies or stores of any kind, with the exception of some fresh water, and on reaching Boston she had remaining 607 tons of coal and eighteen tons of fuel oil. This shows that after a period of one month and five days, during which time she crossed the Atlantic twice, the ship had sufficient fuel remaining to steam fifteen hundred miles.

As the result of an investigation of the United Shoe Machinery Company, which has been conducted for the department of justice during the past five months and has just been completed, Attorney-General Wickersham has directed that the evidence obtained be presented to the federal grand jury, which was summoned in for that purpose this week. This investigation, conducted in secrecy, has been extensive, covering the United Shoe Machinery operations in the United States, Canada, and Europe, and the evidence is to be presented to a circuit court grand jury through a large number of witnesses. No witnesses from foreign countries have been summoned, but documentary evidence is in the possession of the government.

As battleships are built larger year after year, the navy department may recommend to Congress the construction of a mammoth drydock at New York or Norfolk exceeding in size any naval dock in this country. Tentative plans for the dock contemplate a length of one thousand feet, nearly two hundred feet greater than any American dock built or building: a beam of one hundred and ten feet, the width of the Panama canal, and a depth of thirty-four feet. Were the battleships Wyoming and Arkansas ready for commission at the present time, there would not be a dock at an American navy yard wide enough to accommodate them.

The roads of the country will be benefited to the extent of two hundred million dollars during the next five years if the House adopts and the Senate and President then approve a resolution which representative French of Idaho has introduced. It provides for an expenditure of twenty million dollars by the government for five successive years, the states to add an equal amount for improving their roads. The money would be divided among the states according to population, not counting cities with thirty thousand or more population.

How to reduce the high cost of living was solved last week at Des Moines, Ia., by three thousand consumers, who established there a permanent market-place. Following a campaign of several weeks, the city officials turned the city hall lawn over to the vegetable and farm produce venders. Nearly a half hundred hucksters were lined up on the plot. The rush of consumers began at six o'clock. Two hours later the hucksters had sold out. The prevailing prices were about half the retail market prices.

Evidence that eleven of the largest steel manufacturing companies in the country entered into a pooling agreement forming "The Steel Plate Association of the United States," through which the members were permitted to manufacture and sell a certain percentage of the total production of all the companies, was introduced before the House committee investigating the steel trust. The pooling agreement itself was dated Nov. 9, 1909. The committee believes it is still in force.

A new method of eliminating the express companies has been proposed by Representative Campbell of Kansas in a bill introduced in Congress. It forbids all railroads from issuing contracts for the carriage of parcels or merchandise of any kind and requires the railroads to perform all this service themselves after Jan. 1, 1913.

Congress will be asked soon by the war department to appropriate two hundred and fifty thousand dollars more to complete the work of raising the battleship Maine in Havana harbor. This will make a total expenditure of nine hundred thousand dollars.

Criminal prosecution and civil action for dissolution of the corporation are to be started by the government within four months against the International Harvester Company, known as a trust.

The grand total of excavation on the Panama canal to July 1 was 142,067,554 cubic yards, leaving to be excavated 30,570,312, or less than one fourth of the entire amount for the completed ditch.

Steel wire men indicted as members of a steel trust have pleaded guilty, and fines amounting to $42,000 were imposed. The government attorney pleaded for jail sentences.

International.

Owing to the favorable financial situation in Russia the Czar has confirmed the decision of the government to apply a sum of twenty-five million dollars out of the budget excess toward redemption of the 1884 five per cents and of the 1868 five per cent bonds of the Moscow-Jaroslav-Archangel railway. Though the Russian national debt exceeds four billion five hundred million dollars, more than one billion five hundred million dollars are represented by railway loans, of which over five billion have been incurred since 1889. The actual national debt has been incurred during the past twenty years as a consequence of redemption of loans before term, conversion and exchange of old debts, and for general needs of the Empire.

During the last session of the Australian state Parliament, in accordance with the policy of the present government, a bill to authorize the purchase of privately owned wharves and jetties was introduced by the premier, who made a strong speech in justification of state ownership. The bill provided for an expenditure up to one million pounds and the amount of compensation in each instance was to be arrived at by mutual agreement, or failing this, by the arbitration of a supreme court judge.

Miss Annie S. Peck, the American mountain climber, accompanied by Carl Volkmar and five Peruvians, ascended two peaks of the volcano Corapuna in the department of Arequipa on July 16. The Corapuna is one of a number of giant volcanoes in southern Peru, the elevation of which is given as 22,800—about one thousand feet lower than Huascan, which Miss Peck climbed in 1906.

Street rubbish is put to a variety of uses, part made into fertilizer, the rest assorted, and the paper, rags, metals, and glass sold to dealers. Amsterdam has a new idea. It proposes to convert the waste into fuel briquets, which can be sold at $1.40 a ton. These briquets can be produced at $1.15 a ton, making a profit of over twenty thousand dollars a year on eighty-five thousand tons of briquets which the street refuse will yield.

The population of Sweden in January of the present year amounted to 5,520,518, which shows an increase of 44,077 during 1910. According to latest statistics the number of persons who emigrated during 1910 was 27,679, as compared with 21,902 during the present year, while the emigration returns show that 8,018 people entered the country as against 8,071 during 1909.

Industrial and Commercial.

The plans for the new steamer Aquitania, which the Cunard company is building at Clydebank, have been amplified to make the vessel the largest in the world. Her length will exceed nine hundred feet (more than a sixth of a mile), and be ten feet greater than the length of the fifty-thousand-ton liner Imperator, which the Hamburg-American line will put into service in the spring of 1914. It is also stated that the Aquitania will be one knot faster than the German rival. She will accommodate four thousand passengers.

In the Bighorn coal basin in Alberta it is estimated there are six billion six hundred million long tons of coal in an area of about one hundred and eighty-seven square miles that are workable. The Bighorn basin is about eighty-five miles northwest of Banff, one hundred and forty miles southwest of Edmonton, and seventy miles south of the Grand Trunk Pacific and Canadian Northern railway surveyed routes.

The Atlantic Fruit & Steamship Company was recently incorporated under the laws of Delaware at twelve million dollars capitalization, chiefly by the officers of the Atlantic Fruit Company, which is superseded by the new corporation.

A ten-acre site has been selected in Portland, Ore., for construction of a beef packing plant to cost six hundred thousand dollars, for Schwarzschild & Sulzberger. It will be the largest and best equipped on the Pacific coast.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

TRUST GROWTH.

REV. WM. P. MC KENZIE.

MARY the mother of Jesus reached the sure understanding that God is the one source and origin of life, hence she was able to maintain peace of mind regarding her child through her trust in the growth made inevitable, by that life. The early history of her son is compactly stated in the words: "Jesus increased in wisdom and stature, and in favor with God and man." When as a man he began to reveal the mysteries of life to his disciples, he bade them trust to the power revealed by growth, when he said, "Consider the lilies of the field, how they grow;" indicating by his further explanation that if God so clothed in beauty the grass of the field, man having the greater need might more largely rely upon the supplying potency for all that he could possibly need.

It is not in the vanity of any man's mind to consider himself the origin of the flower he tends. He knows that there is a producing cause. He would not deny that it was, is, and ever shall be; therefore he does the work which his experience justifies, and trusts to inevitable growth. One wonders why it is that in dealing with human beings it is so difficult to have that compassion and patience which indicates trust in growth. Parents fail to comfort themselves by recognizing a continuing life for children, while in floriculture they would rely upon a producing cause ever present. Conceiving matter and personality as the source of man, they shut out the vision of life continuous and dwell within the boundary walls of superstition and fear which enclose a brood of monsters ready, as they believe, to pounce upon and end the feeble fluttering of life transient. They cannot be at peace, like Mary the mother, and allow divine Life to find its manifestation in man through the unfoldment we name growth.

Men and women are not patient enough with themselves, nor with others. Education is a process of discovery and development whereby we come to know what is true, and to be so much both in and of what is true that we become revealers of truth. The truth which becomes intelligence and life to us is not, however, either novel or transient; it is from everlasting. If we prove it and rejoice in it today, so also did the patriarchs in their time. Jesus could say to the Jews, "Your father Abraham rejoiced to see my day: and he saw it, and was glad." The truth which he was demonstrating was the same truth which Abraham discerned, and the father of the faithful was glad in the certainty that it would be demonstrated. May not we, like Abraham, be so friendly to God in this respect that we will trust the working out of good into universal manifestation. It is only when we look pervertedly at life that it seems to be "a ferocious struggle, a savage fight." It is valueless for a man to injure and embitter others for his own seeming advantage. All that is valuable and fine in life comes normally by way of growth.

"Trust growth," let us say, when we become impatient and angry with ourselves, seeing how little we have achieved, how imperfect we are. Much of our perplexity is due to ambition, and that is sometimes envy of another man's fruits, which to him came by natural growth. Envy must be guarded against, for it would seduce one with the temptation to take away what is his own from another. Rather let him learn more of the source of all good, and become related thereto in such a way that growth will be continuous and fruitful. Let every tree bear fruit after its kind, and let each man's life develop by natural growth to its individual enrichment and fruition.

UNDISTURBED.

MARTHA HARRIS BOGUE.

THE world is crying for peace, peace among nations, peace in families, peace in the heart. Is it willing to pay the price for it? Surely all who covet peace would do well to consider what the word peace means to them; what the peace they would have might mean to some one else. Peace signifies a state of quiet or tranquillity, calm, repose, security, ease; to rest in confidence, quietness of mind or conscience, and can one be quiet or tranquil if he is fearful, anxious, disturbed? Has he any right to be, if he has work left undone; if he is harboring any wrong thought?

It has been said many times by those who have put their hands to the Christian Science plow, "I thought by being in Christian Science I would find peace; but I seem to be more disturbed than ever. I find more to do than I ever dreamed there could be." Suppose a room dimly lighted by a faint gleam. One comes in and looks it over. There are easy chairs; the room seems richly furnished, spacious; it appears to be very inviting, very comfortable. He heaves a sigh of contentment and sits down to rest. It is very pleasant in this room, and he is quite satisfied to remain there, thinking he has found just what he long has sought. After a time the day begins to break; the light comes in more abundantly, and with its increase the visitor begins to see that the walls and ceiling are cracked, dusty, stained, and the corners full of cobwebs; the furnishings are shabby, faded, moth-eaten, marred; there is vermin everywhere. What is he to do? Shall he cry for the darkness to hide the defects, or welcome the light that has brought the uncovering? take the means he has at hand, go to work, clean and renovate the room, transform it entire by the right renewing? This will mean work, hard, patient, persistent effort on his part, but does any one question that it is worth while?

Science is the search-light of Truth. It reaches every nook and cranny, and will not leave one place for error of any name or nature to hide in: "I form the light, and create darkness: I make peace, and create evil: I the Lord do all these things." Respecting this, Mrs. Eddy says, "The prophet referred to divine law as stirring up the belief in evil to its utmost, when bringing it to the surface and reducing it to its common denominator, nothingness" (Science and Health, p. 540). To the deceived thought

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

that would be content with a false sense of peace in the unrenovated room, the light seems trying, it brings disharmony, for it brings to light the objectionable and distressing. Saith the prophet, "The chastisement of our peace was upon him; and with his stripes [to our peace] we are healed." The transgression of a false sense of peace and contentment, which is only another name for blindness (ignorance), is upon every one today, and Truth is declaring, "Let there be light."

If we would have the peace of Jesus the Christ, it must be the peace of overcoming, the peace that comes from first seeing the error to be overcome; that rejoices in the revelations of the light which uncovers, discovers, probes in our consciousness all that is unlike the anointed, the one "altogether lovely," tender and true. We must have the "stripes" which rebuke the erroneous belief of peace, and then we shall find in our very warfare the real peace for which we longed.

Some one has well said: "It is well to rise above violence, it is well to rise superior to anger; but if peace means final acquiescence with wrong, if your aim is less than justice and peace for every one,—then your peace is a crime." When one finds himself crying for peace, let him ask the questions, "Peace with what? peace in what?" He who is conquering fear, envy, ambition, anxiety, sensitiveness, anger, all the passions, the works of the flesh, is not crying for peace, because he already has it. He is free from agitation, from disturbance. His is not the world-given peace with error, a false sense of peace that is really the opposite of peace, but rather the peace that Jesus promised, the peace of conquered sin. The peace of the greatest conquest carries with it the peace of all other conquests. It attends the overcoming of self, the belief of a life apart from God.

It is ours to face the devil, evil, not run from it. It is ours to render to Cæsar the things which belong to Cæsar, as well as to render to God the things that are God's. Paul's understanding of Truth did not keep the viper from fastening upon his hand, but it did prevent his being poisoned. John's understanding did not keep him from being thrown into the boiling oil or being exiled to Patmos, but it did prevent the oil from doing him any harm, while on Patmos he received the Revelation. Daniel would not "defile himself with the portion of the king's meat, nor with the wine which he drank." He proved that he could eat pulse and drink water and remain strong and well; nevertheless, he was thrown in the lions' den. His understanding did not keep him from being thrown in, but it closed the mouths of the lions and brought him out unharmed.

The divine promise reads: "When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee: when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee;" and we find this correlative passage in Science and Health by Mrs. Eddy (p. 495): "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought. Let neither fear nor doubt overshadow your clear sense and calm trust, that the recognition of life harmonious—as Life eternally is—can destroy any painful sense of, or belief in, that which Life is not." It does not say in either reference, if you pass through the waters, or if the illusion of sickness or sin tempts you or the painful sense comes; it says "when." We have the whole path to walk, the whole race to run, and there are temptations to be overcome, the wilderness, the fire to go through, our fears to face, and right there we are to find Immanuel, "God with us;" right there we are to find peace, the true peace that passes understanding, because our understanding has been demonstrated.

Just so long as one is afraid of something, he is not at peace, and need not expect to be; he must rise in the strength of God, face the fear, go through the fire and prove it powerless, reduce it to its least common denominator, nothing, then his peace cannot be taken from him or fade away. If in the dim light there is something hidden, covered, we should want the light to uncover it. We should want the light to shine more and more, even though the uncovering does compel us to work, work, work. It is the only peace that is real, that is good for anything, a peace, tranquillity, that cannot be disturbed because it is ours through disturbance overcome. "Undisturbed amid the jarring testimony of the material senses," Mrs. Eddy writes, "Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle,—is unfolding Life and the universe, ever present and eternal" (*Ibid.*, p. 306).

We cannot separate the Scientist from Science; and so, amid the jarring testimony of the material senses, where the smoke of battle seems the thickest, right there it is ours to acquaint ourselves with God and "be at peace," the peace that will prove abiding and inviolable.

OUR SURE HERITAGE.

M. E. PRUTZMAN.

GATHERED about the table, at the close of that memorable supper in the upper chamber, Christ Jesus said to his disciples, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you; but if I depart, I will send him unto you. . . . Howbeit when he, the Spirit of truth, is come, he will guide you into all truth." Later, after the resurrection and after the disciples had witnessed the ascension, the record states that they "returned to Jerusalem with great joy: and were continually in the temple, praising and blessing God."

How could they, at that time, have "great joy"? Only those can know who through faithful, patient striving to put off the mental apparel of mortal concepts and beliefs have glimpsed the primal, spiritual, eternal verities which Christ Jesus brought, as it were, within the vision of the disciples, and which our beloved Leader has again disclosed to the present age. "Eye hath not seen, nor ear heard; neither have entered into the heart of man, the things which God hath prepared for them that love him." The sweetness and satisfaction of these glimpses of spiritual reality are beyond utterance; and to know that such consciousness alone is the native status of man created in God's likeness, is the only condition that can lead to real joy. To know that the divine purpose is moving irresistibly in the blotting out of all human sense of evil and in the quickening and the awakening of the whole human race to recognize man as "in Christ," in the spiritual order; to drop the concept of mortality, letting the divine energy of infinite Spirit sweep away all falsity and disclose the eternal verities which have been "from everlasting to everlasting,"—to be able to contemplate these things, and erect and joyful to bear the cross of our own overcoming, which wins the crown of spiritual realization, is rare privilege, and cause for deepest thanksgiving and praise. And these glimpses of the divine Science of being bring with them a spontaneous joy, crystal clear and beyond human utterance.

It is to be remembered that the outpouring of the Spirit, on the day of Pentecost, upon one assemblage, was after the Master had finished his earthly course and was no longer with his followers in the flesh; and also that Peter called to the remembrance of the multitude, gathered in "one accord" and marveling at this wondrous enduing, the familiar promise of the prophet Joel: "And it shall come to pass afterward," saith God, "I will pour out of my spirit upon all flesh." The record further shows that in the days following, through the spiritual enduing received, the apostles were enabled to effect a transformation of material conditions in what to the general thought were "many signs and wonders," and also that there ensued the first

Digitized by Google

general movement outward, from Jerusalem, of the Christian religion.

On page 166 of "Miscellaneous Writings" we read: "The monument whose finger points upward, commemorates the earthly life of a martyr; but this is not all of the philanthropist, hero, and Christian. The Truth he has taught and spoken lives, and moves in our midst a divine afflatus;" and on page 4 of "Pulpit and Press": "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this."

The joy of the divine Science of being, the enduing of the Spirit, and the unrestrained operation of the divine will and energies are never so near to human recognition and apprehension as when thought can no longer rely, either consciously or unconsciously, upon the human presence of the one through whom have come signal revealings and unfoldment of long hidden truth. In the degree that Christian Scientists are found "continually in the temple" (the sanctuary of uplifted, watchful, prayerful thought and striving), will they too have great joy and be found praising and blessing God. And in this degree will the world continue to be fulfilled in this day which is written of the apostolic days: "And the Lord added to the church daily such as should be saved."

SALVATION.

ELEANOR MONEY COUTTS.

THE teachings of Christian Science throw a clear light on what is meant by salvation. In all of Mrs. Eddy's writings we find the eternal fact reiterated that we are saved, here and now, by the spiritual understanding of man's real status as God's perfect child, made in His image and likeness; his Father being that Mind of whom Jesus spoke, saying, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

The word "saved" has sometimes been used to imply a very contrary teaching, however; in fact, the old Calvinistic doctrine would have us believe that there are two entirely different species of mankind, one "saved" and sure of eternal life, and the other eternally certain of damnation. It is most interesting to go even farther back than this and to study the constant use of the word as found in the book of Psalms, that wonderful compilation of poems by many authors and of widely different dates. We first come upon it in the Third Psalm, where we read: "Salvation belongeth unto the Lord." This is one of the few psalms which can be ascribed with any degree of certainty to King David himself, and the poem is thought to have been written by him at the time of Absalom's rebellion, when the king fled from Jerusalem. The psalmist speaks of the derision of those that "trouble" him and "rise up against" him; who say "there is no help [or salvation] for him in God." But David knew better, and the lonely fugitive begins at once to describe his calm trust and sweet rest even in this bitter experience in the face of seeming danger. Why is this? "Arise O Lord;" he cries, "save me, O my God: . . . Salvation belongeth unto the Lord." Knowing this, David knew his "salvation" to be absolutely unshaken trust in his highest understanding of God, good, and the consequent powerlessness of evil.

A note from Dr. Kirkpatrick's very interesting book on the Psalms is helpful in this connection: "In the revised version margin we read 'victory' instead of salvation. This unduly limits the thought, though no doubt it is the particular form in which David desires to see Jehovah's saving power manifested. 'Save' is the constant prayer, 'salvation' the constant desire, of the psalmists. The Hebrew words thus rendered denote primarily enlargement, liberation, from a state of confinement and distress; power to move freely and at will; and so deliverance generally. Such deliverance comes from Jehovah alone: it is eagerly sought as the proof of His favor . . . the word grows with the growth of revelation, till it gains inexhaustible fulness of spiritual meaning in the New Testament."

This "growth" can be traced, if we follow the evolution of the word through the Psalms, right up to the prophecy of the Messiah or Christ, Truth, "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). A few of these uses of the term "salvation" may be noted from the Psalms, but there are many others, and the study is most interesting, revealing a steadily rising tide of spirituality and a feeling after the truth enunciated by our Leader, that "man is not material; he is spiritual" (*Ibid.*, p. 468). "Thou art the God of my salvation." (This form, or "the salvation of God," occurs continually in the Psalms.) "The Lord is my light and my salvation; whom shall I fear?" "Say unto my soul, I am thy salvation;" "The salvation of the righteous is of the Lord;" "Restore unto me the joy of thy salvation." (This last is in David's great psalm of penitence for sin and prayer for renewal of the Holy Spirit, with its cleansing power and indwelling joy.)

Again we read: "God is my King of old, working salvation in the midst of the earth." "He shall cry unto me, Thou art my Father, my God, and the rock of my salvation; also I will make him my firstborn, higher than the kings of the earth." Respecting this last, Dr. Kirkpatrick notes: "Visible manifestations of God's providence, proving His care for His people, . . . especially the deliverance from Babylon. Each such manifestation was a harbinger of the final Messianic glory which is the goal of Old Testament hope. In the light of New Testament revelation the words of the verse gain a new and larger meaning;" as also the following: "The Lord taketh pleasure in his people: he will beautify the meek with salvation."

"JEHOVAH-JIREH."

MARY L. CUMMINS.

WHEN considering the question of supply for a dear friend, soon after coming into Christian Science, the story of the trial of Abraham's faith came to the writer with great helpfulness. In this account we read that the angel of the Lord called to Abraham, when Isaac had been placed upon the hastily built altar, "Lay not thine hand upon the lad, neither do thou anything unto him." Undoubtedly there came to Abraham then, as never before, the realization of God as a God of love. Isaac, so dear to the earthly father's heart, was still more dear to the all-Father. God did not demand the surrender or relinquishment of any joy or happiness which Love had bestowed. It is more than likely that Abraham entered at that moment into one of those glorious periods of clarified thought and apprehension of the real nature of God which we all have had at some time, and which are some of those "treasures" laid up in the heaven of spiritualized consciousness to which Jesus referred.

The Old Testament story goes on to say that "Abraham lifted up his eyes, and looked, and behold . . . a ram caught in a thicket by his horns." It is very probable that the animal which supplied Abraham's apparent need of the moment was there before he saw it, but it was not until Love had cleared his mental vision that he "lifted up his eyes, and looked" in the right direction. Some such experience as Abraham's becomes ours when through Christian Science we realize that the God whom we have perhaps been faithfully trying to serve for years, as a God of infinite love, is close at hand. When we realize that those who are near and dear to us are still nearer and dearer to our Father-Mother God, that whether they form part of the home circle or are to material sense far away, we know that they are provided for and cared for, held safe and secure in the one supreme law of Love.

Digitized by Google

With such realization as this there comes a clarifying of the mental vision, and not infrequently the means of supplying any seeming lack, our own or another's, is found close at hand,—so near, so natural, that its coming in this way never occurred to us until we came to see that good is always near and natural. Then, with Abraham, we are ready to call the name of that place—or experience—"Jehovah-jireh," which means, "The Lord will provide."

THE TRUE TEACHER.

RUTH F. RUNYON.

In the Sunday school class the little ones of Christian Science are learning to think right about God, about themselves, and about their neighbors; and to teach a class one must seek preparation,—not of the words to be spoken simply, nor of an outline to be followed, but a preparation of the heart. The teacher must not only study the Lesson-Sermon, but he must live Christian Science, or there will be obstructions in the channel through which Truth would guide these little ones into the attainment of right understanding.

Greater than deliverance from physical pain is the healing of wrong thoughts. Every child, no matter how much or how little of Christian Science he knows, has to uproot these weeds of error which have sprung from a wrong concept of God. To beget a wrong concept of God is worse than all the crimes we condemn; yet we know that unless we are living a life of love we are bringing this wrong concept to some one every moment. In the Sunday school the children should learn how to weed error out of thought, how to reflect love in their homes, their play, the schoolroom, so there will be no ground in which the plants of selfishness, jealousy, lust, envy, hate, malice, and revenge can spring up to bear fruit. If we look these several forms of error frankly in the face, and know them for what they are in all their phases, we can so turn to the light as to reflect Truth to these little ones, and thus awaken in them a right concept of God.

The question of discipline may seem difficult to those who have not had to do with children in the home or in the class-room, and an experience that came to the writer's notice may help those struggling with a problem and aid them to realize that all the training in the world is not equal to one clear thought of God as the only Mind. A young kindergartner fresh from normal school, the possessor of many theories and enough practice to secure her diploma, became an assistant in a bright little kindergarten. She was strong and capable, and many visitors remarked upon her apparent control and management. It was the director's duty to prepare her for a higher position, so after a few months' happy work together she offered the young assistant complete charge one morning, while she attended to the clerical work of the schoolroom. All was well for a short time. When a period of greater freedom was given, the children at once took the advantage it offered and riot reigned. For several minutes it raged. Then the assistant signaled the ringleader, picked up a little chair with the same energy with which she would have lifted a table, and in the calmest tone requested the little fellow to sit down; but there was only more noise, kicking, and punching added to the tumult.

Finally the director was asked to take charge. She was a student of Christian Science, so closing her eyes for a moment of quiet, she realized that discord could not be real, because God, the only Mind, governs; that this Mind is Love, fills all space, and is a law of annihilation to every sick belief of another power or minds many; "the Lord God omnipotent reigneth." Rising from her chair, she walked slowly across the room and placed her feet on the painted floor circle. Instantly thirty children were "toeing the circle." Not a sound could be heard, and each little face was upturned in happy expectancy of some good. God's voice had stilled the tempest. Later the assistant begged for an explanation, and she was asked what she was thinking when she lifted the little chair. "I was intensely angry with every one of them," was the reply. She then learned that her own wrong thought had stirred up wrath and aroused the belief of minds many.

Christian Science teaches us to look away from self, away from the belief that we of ourselves can do anything, to the Mind that is God, that we may be governed by that Mind alone, and so be able to stand before the little ones in a Christian Science Sunday school as clear channels for the truth. The lessons our Leader so wisely selected for us to teach are given to us, with Science and Health as our guide, to show us how to live every day, and only as we live the minutes and hours for God can we teach the children how to put away wrong impulse and thought, and help them to know that, as they remove these weeds along the way, the seeds of loving deeds will spring up and burst into bloom. The Sunday school whose workers are consecrated to the Christ-living can but become a beacon-light in the community.

FAITH IN GOD.

HELEN WARD BANKS.

Out of the humblest events of life, sometimes, we learn our deepest lessons. I had one day occasion to drive a horse that was said to be afraid of automobiles. Before going out, I remembered to declare that, as we learn in Christian Science, fear has no authority. When we had finished the drive and were approaching home without having met a motor-car, I was conscious of a sense of relief and thankfulness. Then the thought flashed into my mind, "There are two ways of making this demonstration: one by avoiding automobiles, the other by meeting them and proving that fear has no power over man or beast." I was conscious that I had been glad the easier method was mine on this occasion.

It is perhaps a bit of inherent laziness in human thought that makes us desire the easiest way of working out our problems, though we all know that harder work brings greater gain. When Principle, in its unswervingness, leads us through the experience instead of around it, we bring out of it always treasures of faith and love and confidence that we would not have gained merely by escaping a hard experience. Did the three young Israelites whom Nebuchadnezzar cast into the fire lament that their proof of God's power did not consist in escaping "the burning fiery furnace"? Yet, behold, in the furnace, the only thing burned was their bonds, and they walked through the flames free, in company with the Comforter whom they had not fully known till then. Would they ever fear fire again, however close it might come to them?

Human sense cries out for escape from the fiery furnace, but if we need to go through the flames to prove their powerlessness to harm us, let us be grateful for knowing that the very depth of the experience shows us the power of God. Purified, "as by fire," we come out with a faith that is not a blind belief, but a sure confidence in the "Father of lights, with whom is no variableness, neither shadow of turning."

I need not seek to find the ways
  By which the angels enter in,
Nor measure fast the weeks and days
  For Truth to triumph over sin,—
There is no need for me to know
  The path my loved one has to go,
Nor mine, however strong and brave,
  The only hand outstretched to save.

MYRTLE B. S. JACKSON.

SELECTED ARTICLES.

[Editorial in *Galesburg* (Ill.) *Mail.*]

It is a little short of remarkable that one of the largest churches of the city should be crowded on a summer night to hear a free lecture on Christian Science. Yet such was the case last evening. One of the ablest men of the Christian Science church delivered a lecture which was profound and philosophical and yet seemed to hold the interest of the large audience from start to finish. Only a few years ago Christian Science was regarded by a majority of the people as a passing fad and few busy men would go out of their way to hear its doctrine and teachings expounded. Last night's audience was made up in no small degree of busy men.

Long ages have humans grappled with the problems presented by sin, sickness, and death. Physical and metaphysical remedies have been advanced, changed, forsaken, or clung to. And yet a universally accepted solution has not appeared. Materialists have increased in numbers and in strength of their doctrinaire assertions. But there remains a something in man that no material explanation will satisfy, an almost indefinable confidence that over all and beyond all, Spirit rules. Upon the definition of this ruling power and its attributes disagreement seems to grow with additional learning.

Christian Scientists claim that this power—which they agree with Christians of other faiths in calling God—is Mind, and has dominion over all things material or spiritual. Such power, claim the Christian Scientists, extends over sickness and death, which are not eternal, and it is by such power that sickness and death can be overcome. What Christian Scientists claim they can do and show they have done, through God, is the basis of much dispute and at times has provoked much bitterness. It is true today, however, especially in the English-speaking world, that Christian Scientists are not attacked as they once were and that more interest is being shown in the teachings as laid down by the late Mrs. Eddy, Founder of Christian Science. Last night's meeting showed that this increase of interest extends to Galesburg.

[Frederick Dixon in *Pioneer*, Dublin, Ireland.]

Christian Science is the attempt to restore the teaching of primitive Christianity to the world, in a form adapted to the requirements of modern conditions. There is in certain religious quarters a tendency to regard the Old Testament as a *quantité négligeable*, and to base all modern religious teaching on the New Testament. Such a view is structurally impossible and historically incomplete. The New Testament grew out of the teaching of the Old as completely as Christian Science has grown out of the teaching of the New. The Bible, as we have it today, may be described as the story of the gradual evolution of the spiritual idea in the human consciousness. This spiritual idea is the Christ, and the Bible records the effort of the human race to gain a perception of the Christ, to hold that perception, and to demonstrate the meaning of it. Jesus referred to this, in a famous sentence, when he said to the Jews, "Your father Abraham rejoiced to see my day: and he saw it, and was glad." He did not, of course, mean to imply that Abraham had ever seen the physical Jesus, but he did mean to say that Abraham grasped the Christ, the truth about God, sufficiently to realize the eventual victory of the Christ when a knowledge of it was sufficiently gained to be developed and manifested in human form, as it was in Jesus the Christ.

Exactly in the same way, the book of Isaiah contains the Messianic prophecies. The word prophet referred originally to the priest who explained the oracles. He was the man who understood and gave utterance to a clearer sense of Truth than the world about him. The Hebrew prophets were seers in exactly this sense. Their vision of the Christ, or their understanding of Truth, was sufficient to enable them to foretell the inevitable effect of the struggle between truth and error. In this way, the writer of the Messianic prophecies was able to point the world to the conditions which must inevitably occur when there should arise in its midst a man so dominated by Principle as to manifest the working of Principle scientifically in his daily life. To the Jewish nation, wrapped, like the people about them, in materialism, the Messiah inevitably took the form of an earthly potentate, a form which the folklore of the world has disseminated in the myths of the sun god and in romances such as the Arthurian legends. To those, however, in its midst who had sufficiently divorced materiality from their thoughts, there was always present a more spiritual conception of the Christ, a conception which enabled them to rise superior to the evidence of the physical senses, seeing, with more or less persistency, "the chariot of Israel, and the horsemen thereof."

This understanding of Principle, this vision of the Christ, which Jesus was one day to define as the knowledge of the truth which would make the world free, came with more or less persistency to the Hebrew nation from the time when Abraham the historical father of that nation broke away from the polytheism of Babylon in his marvelous perception of monotheism. Then came the day of Moses, who, with a broadening perception of the Christ, held before the people in the desert the dominating power of Truth, feeding them with manna and healing them through the type of the uplifted serpent.

Thus there came a day when Isaiah could discard the sacrifice of animals, as Abraham had discarded that of human beings, and call upon the people for that true self-sacrifice which, in the days after the captivity, was to be preached by the Baptist in the baptism of water or purity. In such a manner the Old Testament became the story of the evolution of the spiritual idea, from the first dim perception of it in the allegory of creation, to the coming of the man who so clearly grasped the truth which Abraham had dimly perceived, that he was known as the Christ, that is to say, as the one who had made the knowledge of Truth essentially his own.

The whole story of the life of Jesus of Nazareth is the story of a man perceiving the absolute truth of being far in advance of the spiritual perception of his age, and demonstrating his knowledge to a people faltering between a wish to believe and an inability to accept. The ministry of Jesus was devoted to acquiring for himself, and for humanity, that absolute knowledge of Truth which was to make the world free. His struggle with the Jewish hierarchy was largely based on his attempt to show them that the title of the Christ was dependent upon his understanding of spiritual sonship, and not on his power to become a greater Joshua or Omri. He never made a claim to be the only son of God. He made the claim of sonship for all humanity, though the translations of the Bible are woefully misleading in this respect. I and the Father, he declared, speaking of God and spiritual man, are one, and therefore he bade all his followers, in all ages, to be perfect, even as their Father which was in heaven was perfect.

"Jesus of Nazareth," Mrs. Eddy writes, on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." It was precisely because of his knowledge of spiritual law that he was able to perform what are known as miracles, for the miracle, so far from being a violation of law, is the object-lesson in demonstration of the understanding of law. These miracles took very largely the form of physical healing, not because the aim of the gospel was essentially the healing of the sick, but because it was through the world's willing-

Digitized by Google

ness to be healed of sickness that the appeal to it to understand the spiritual and real law could most readily be made. Mrs. Eddy, acknowledging Christ Jesus as "the way," has used the spiritual healing of physical disease in exactly the same manner. Nevertheless, as she has written, on page 150 of Science and Health, "these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

Mrs. Eddy's own discovery was brought about through her recovery from the effects of what threatened to be a fatal accident. Entirely unable, as she told the physician who attended her, to explain the manner of her recovery, the spiritual significance of which was manifest to her, she withdrew from the world for three years, and with the Bible as her only text-book labored to discover the scientific explanation of the occurrence.

Her discovery amounted to this, that the supposititious physical law which had for centuries been the battle-ground of scientists and the basis of innumerable speculations, was in itself nothing but a misconception of the true law, and that, consequently, the statement made centuries before by Aquinas, that theology, or the word of God, was the only absolute Science, and that all branches of natural science were purely relative, was true, in a way he had never begun even to suspect. This law had been dimly perceived by Abraham, in the acceptance of monotheism, and had grown slowly in the perception of the Hebrew people, until it had been completely mastered and demonstrated before the world by Jesus the Christ. The miracle, understood in this light, became no longer a supernatural violation of law, but a supremely natural demonstration of law, so that to anybody mastering the spiritual law and living in accordance with it,—knowing the truth, as Jesus put it, and abiding in it,—it became just as possible to repeat the miracles of Jesus as it has been possible to apply steam to locomotion and electricity to the despatch of messages, when the ignorance which surrounded these branches of natural science had been dissipated.

This discovery Mrs. Eddy gave to the world in her book, Science and Health, a book which is not a special guide for a limited cult, but a text-book of spiritual law for all humanity. It is, indeed, a scientific library in a volume, since it contains between its covers the essential literature of a world movement. The building up of a scientific movement can only be based on an understanding of Principle. The Principle of Christian Science is God, the divine Mind which made all that was made. God and His creation, divine Mind and its ideas, constitute the cause and effect of all that actually exists. It is on an understanding of this, and of all that follows from it, that Christian Science is today standing, like the city built foursquare, because it is founded on the rock of divine Principle, and not on personality.

From the very first, Mrs. Eddy realized that the movement must be secured from personality. "There was never," she wrote in her article on "Personal Contagion," "a religion or philosophy lost to the centuries except by sinking its divine Principle in personality." With this end in view, she withdrew herself, so far as was possible, from the administrative work of the movement. In her self-sought seclusion, first in Concord and later in Brookline, she guided and built up the movement, teaching her followers to rely, not on her personality, but on their own understanding of divine Principle. She guided the movement with the utmost care and with the keenest scrutiny, but that care and that scrutiny were never permitted to interfere with the initiative of her lieutenants, but were devoted entirely to advising them on fundamental, scientific points, and to correcting the mistakes into which they were betrayed. In this way it was shown that the Christian Science movement was not dependent on her bodily presence, but, in her own words, written to one of its Associations, twenty years before: "You can well afford to give me up, since you have in my last revised edition of Science and Health your teacher and guide" (Miscellaneous Writings, p. 136).

This book was not given to the Christian Science movement as a mere philosophical study. It is, as has been said, the text-book of Science, and the Christian Science movement has attracted to it a vast number of capable men and women, for the very reason that the Science therein taught is demonstrable because it is Science. Mrs. Eddy has told us how the publication of this book was delayed while she was herself engaged in testing and proving her own premises, since she had realized the fact that the book itself could not be profitably studied unless it was based on demonstration. That was thirty-six years ago, and in those thirty-six years there have spread over the habitable globe a vast body of people who have experienced or witnessed the demonstration, not only of the healing of sickness, but of the overcoming of every form of inharmony, poverty, sorrow, ignorance, *et hoc genus omne*, through a true understanding of divine Principle. It is the sin, the carnal mind, of humanity which is always tempting it to believe in the power of evil, to believe in anything except the goodness of God. To overcome this temptation by emotion, by will-power, or by blind belief, has been tried again and again, and proved impossible. How to overcome it by a scientific understanding of Truth is the good news, or gospel, which Jesus preached to the world almost two thousand years ago, and the practical message of this, after having been lost for centuries in the mist of human materiality, is again being given to the world by the students of Science and Health, who, wherever they go, are fulfilling the demand of the Christ,—"to preach the gospel, and to heal the sick."

[Howard C. Van Meter in *Portland* (Ore.) *Telegram*.]

In the brief extracts, printed in a recent issue, of Dr. Cudlipp's paper read before the ministers at their monthly meeting, one finds much to commend, particularly when he declares, "There is a tendency to a more practical, a more sane conception of what it means to be a Christian." However, he immediately follows this by criticizing Christian Science, presumably for enabling a person to be just such a Christian. The teaching of Christian Science, when understood and practised, results in freedom from evil of all kinds, and thus the individual may express an activity that is indicative of obedience to God through an understanding of His law; and this is properly what a "practical and sane conception of Christianity" should do. If Christian Scientists believe that sickness as well as sin should be abolished through obedience to God, we may well ask the gentleman for which of these good works he is stoning us.

The gentleman declares Christian Science to be nothing short of pantheism. This confusion is due to failure to perceive the difference between Spirit and spiritual law and the material sense of things. When Christian Science teaches the reality and unity of Spirit and spiritual creation, it does not try to spiritualize matter and make it a part of God. The gentleman's regret because of the toleration which permits those in distress to avail themselves of a "practical and sane" teaching wherein God is shown to be an ever-present help in time of need, is scarcely in accord with the consideration which he is called to manifest toward that which is daily blessing thousands of our fellow beings. When he says "they [Christian Scientists] would have disease and death run riot in our streets," he may have intended to mean that contagion is ignored by the people of this denomination. I will say that any tendency to carelessness in this respect is inexcusable and wholly unwarranted by the teaching of Christian Science. A proper regard for not only the municipal requirements but also the beliefs of others is enjoined, and where this is not in evidence it is not the fault of the teaching. It is true, as the

Digitized by Google

gentleman states, that the practice of Christian Science does "aim at the sacred place called home," with which he concludes the above-quoted sentence, and the increase of happiness seen in homes where discord has reigned is one of the proofs of its potency for good.

[Ezra W. Palmer in *Leadville* (Col.) *Herald-Democrat.*]

Christian Science has been before the people more than forty years. It has proved itself a positive boon to people in practically every community of any size in the United States, healing them of so-called incurable diseases and bringing them peace of mind and a sense of harmony and security to which they were strangers before. It is safe to say that this critic is ignorant of the work of Christian Science, or he would not make such false statements. In refuting his charge that Christian Science is irrational it may be pointed out that Christian Science has been studied, applied, and accepted by college professors, doctors, editors, ministers, lawyers, and others engaged in the learned professions, whose ability to follow a line of logical reasoning is doubtless quite as good as that of the one who condemns it.

Instead of looking to the human mind as a cure for disease, Christian Science points steadfastly to God as the healer of all of man's diseases. Jesus healed by the power of God. He persistently declared that of himself he could do nothing, that God was his source of inspiration, and this ought to be sufficient evidence that hypnotic suggestion as a healing agency is anti-Christian. The Bible warns men repeatedly against sorcery and necromancy, which were the forerunners of modern hypnotism or mesmerism, and Christians today should be alert to its evil character.

[From an editorial in *Elizabeth* (N. J.) *Journal.*]

Whatever may be the legal status, or lack of it, of Christian Science, there is no reason, from the point of view of the believer in justice, whether he has faith in this particular doctrine or not, why an intelligent man or woman who desires treatment from a Christian Science practitioner should not be permitted to have it. His opinion in regard to what is good for him is just as valuable as the opinion of any one else on the same subject, and whatever may be the explanation of the cures, there can be no question in the mind of any reasonable man that remarkable results have been secured.

[Editorial in *Ohio State Journal.*]

Not long ago a Jewish rabbi spoke from a Methodist pulpit in Washington, and recently a Methodist preacher occupied a Unitarian pulpit. That is crossing sectarian lines with a perfect abandon. It ignores the ancient idea that religion is expressed in a creed, and takes Christ's broad view that humanity is the concern of religion and the value of a doctrine is the measure of the good it does to men and women.

We are fast getting away from mere forms and mottoes and putting our convictions into life. The true work of the church today is self-denial, helpfulness, companionship, purity, temperance, sincerity. That is what men subscribe to in uniting with a church. There may be some forms of doctrine, but they are incidental, the main thing being the doing of good, obeying the golden rule, and inspiring men with hope and courage. A church is not built upon an intellectual conviction, but upon faith in God and the final sway of His righteousness. The real orthodox teaching is expressed in the greatest commandment.

[George A. Law in *Stamford* (Conn.) *Advocate.*]

In reply to the statement as to the teaching of Christian Science regarding the "world," kindly allow me to state that Christian Scientists accept the Scriptural account of the creation as found in the first chapter of Genesis, where it is stated that God created the spiritual universe, and man in His image and likeness; spiritual. It is also stated that God saw that His creation was good. This spiritual universe, where all is good, where peace, harmony, and happiness reign supreme, is not apprehended in its entirety by mankind, with his immature sense of things; however, to the extent that he gains a knowledge of God, the universe, the true man, and the laws governing, to that extent is man able to discern the truth and exclude from his experience that which has no rightful claim to a place in the life of man as the image and likeness of God. This is in strict accord with the teachings of our Master.

If what God created was good, His creation certainly could not contain an element of evil, or anything having an evil or harmful effect; hence any such results could not possibly originate in God or emanate from anything which He created; therefore harmful effects must necessarily be accounted for in some other way. It is easy then to conclude that all such destroyers of the peace, happiness, and harmony of man, including sin, sickness, and death, are not the legitimate experiences of man; if they are, then certainly Jesus, whose mission was to show man how to live aright, would not have taught how to get rid of these disorders. By example and precept Jesus showed that, by allowing God's spiritual law to operate and govern the thoughts and actions of man, man's freedom from all ill, together with his right of "dominion over all," is established.

We feel that a careful study of the Christian Science text-book, "Science and Health with Key to the Scriptures," will reveal to any one the answer to the question "What is wrong with the world?"

[Eugene R. Cox in *Port Jervis* (N. Y.) *Gazette.*]

In a recent issue appears a report of a paper entitled "Christian Science *vs.* Medical Science," which indicates that the author did not have a very accurate knowledge of Christian Science. A Scientist would never so entitle a paper, because Christian Scientists are not against physicians, nor do they willingly enter into controversies or make comparisons. We recognize the earnest efforts of conscientious physicians to alleviate pain and to help mankind, and would do nothing to impede them in such work. When the statement is made, however, that lives are lost because Christian Science is employed instead of doctors, it is pertinent to ask what doctor can say that any given remedy will produce the same results in all cases, or what school of medicine would undertake to cure any certain disease at all times. In other words, were medical science an exact science and uniformly successful, there would be no turning to Christian Science except as a religion.

On the other hand, it is safe to assume that most of the sufferers who turn to Christian Science do so only after having exhausted the resources of *materia medica.* It is a sad fact that people are willing to turn to God for healing only after becoming hopeless of help through material means. Christian Scientists are content to be known by their works rather than words, and large congregations of happy, healthy, and contented people, in a chain of twelve hundred churches encircling the globe, testify weekly to benefits received through Christian Science. But few will be found to dispute the statement that it is better to heal an invalid and make him self-supporting than to bestow hospitals and dispensaries upon him.

I would not ask to know the way,
Save step by step and day by day.
Thy bow of promise in the cloud
Uplifts the heart that may be bowed,
And confidence inspires each deed
Since to know Love meets every need.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

WILLIAM B. JOHNSON, C.S.D.

IN Science and Health (p. 427) it is said that "if it is true that man lives, this fact can never change in Science to the opposite belief that man dies. . . . Man's individual being can no more die nor disappear in unconsciousness than can Soul, for both are immortal. If man believes in death now, he must disbelieve in it when learning that there is no reality in death, since the truth of being is deathless." We recall, and are comforted by these statements, even as we note the passing on of our friend and associate, the late William B. Johnson, C.S.D., formerly Clerk of The Mother Church and member of The Christian Science Board of Directors.

Mr. Johnson before coming to Christian Science had proven the sterling courage and loyalty which afterward marked his career as one of the most prominent and faithful of Christian Scientists. When his adopted country needed his services as a soldier, he volunteered, and was for three years with the army of the Potomac. Through his own healing he became convinced that Christian Science is the truth, and in 1884 he studied with Mrs. Eddy, its Discoverer and Founder, after which he entered upon the practice of Christian Science healing. Mr. Johnson was held in high esteem by his teacher, who recognized his worth, and in connection with his work for her he filled the office of secretary of the Massachusetts Metaphysical College Association and also acted as secretary of the National Christian Science Association. He held the office of Clerk of The Mother Church from 1887 until 1909, when he resigned both this office and that of Director, devoting himself successfully, from this time on, to the healing of the sick.

Through his long and faithful service to the cause in these various capacities, Mr. Johnson became well known to, and was beloved by, a great host of Christian Scientists, who were thoroughly appreciative of his loyalty and devotion to Christian Science, and to its Discoverer and Founder.

ARCHIBALD MCLELLAN.

HOLDING ON AND LETTING GO.

"THE fight has been such a long one, and sometimes I feel like giving up and letting go; but I know I simply can't, and then I take another grip and hold on for dear life." So much from the heart-to-heart tale of an innocent sufferer: and the situation thus frankly disclosed is well worth thinking about in the light of Christian Science.

The so-called grit which means nervy persistence of effort, the pluck which resists temptations to discouragement and stands by its guns in the face of fierce assault, is a quality which may fully merit the generous commendation it sometimes receives. It often distinguishes the faithful from the faithless, the brave from the cowardly, the self-reliant from the self-depreciating, the earnest and reliable from the superficial and indifferent. Nevertheless grit is not sufficient, not redemptive, and its failure often lends pathos to tragedy. It may put forth a splendid effort, make a heroic struggle, yet in itself it is but weakness in so far as it rests upon the sands of self-centeredness and self-will. If it is not grounded in divine Principle, it is without God—without an anchorage that will hold, and hence without hope.

Honest endeavor to lay hold of the truth expresses that improved belief which indeed paves the way to progress, but which must and will be passed over and beyond, as knowledge replaces good impulse and inquiry. He who has acquired even the beginnings of a demonstrable understanding of the truth, is freed in so far from the struggle of trying to hold on to the truth. The pupil who has made the multiplication table his own, has no further sense of the necessity of trying to keep hold of it. Instead of his straining to possess it, he is now possessed by it. It has become a part of consciousness, a factor of his true self. It asserts itself in all his thinking, and corrects every habit of stumbling in his calculations. He is constantly protected by that which he knows he has not made and cannot mar, because it is forever true and quite independent of him, but which, having been received into a good and honest heart, enables him to rejoice evermore.

All this may help us to understand the relation of Christian Science, the truth of God, to spiritual progress and peace. In a passage no less remarkable for its beauty than its truth, Mrs. Eddy expresses the philosophy of our realization of spiritual freedom when she says, "Christian Science silences human will, quiets fear with Truth and Love, and illustrates the unlabored motion of the divine energy in healing the sick" (Science and Health, p. 445). As this is apprehended, the conscious need of reliance upon right determination, the persistent will to do well, which has meant so much to our betterment perchance in the past, gives place to an attitude of acceptance toward Truth, a glad consent to the sovereignty of divine law, the righteous rule of the will of God, good. Thus awakening to the truth, we enter into its eternal peace, begin to realize for ourselves that response of heart which the ancient seers sought to evoke in their appeal that we trust in the Lord and wait patiently for Him. We no longer have to strain to hold on to the truth, but are held and sustained by it; we no longer struggle to do, but yield to that which hath been done "from the foundation of the world,"—the unlabored achievements of Truth and Love.

Thus to know for ourselves the truth which Jesus taught, is to rest now from the relatively unprofitable struggles of well-intentioned human sense. It is to feel the repose of the eternal triumph of good. Henceforth our letting go can have to do only with what remains of material self. To let go of the truth which we have proved true is simply impossible, since it holds on to us with a divine tenacity and will not let us go.

JOHN B. WILLIS.

THE SAND AND THE ROCK.

THE sermon on the mount is rightly regarded as the basis of all of Jesus' teachings, and its relation to his marvelous healing work is of great interest to the student of Christian Science. In Science and Health (p. 271) we read: "When the Science of Christianity appears, it will lead you into all truth. The sermon on the mount is the essence of this Science." Through the entire discourse we find an inflexible demand for obedience to the moral law, in spite of the opinion held by so many that Christ Jesus had a more elastic standard than did Moses, that he was more willing to make concessions to human weakness than were the upholders of the Mosaic teaching. Nothing could be farther from the fact than such an unwarranted assumption. The spiritual standard is always above the mortal sense,—"as the heavens are higher than the earth," —and it was to this that the great Teacher directed all thought.

At the very outset Jesus told his hearers that he had not come to destroy the law and the prophets, but to fulfil them, and Christian Science stands ever by this demand for their fulfilment in the most comprehensive sense. Christ Jesus said it was not enough that a man refrain from evil deeds, he must also abstain from evil thoughts, he must not hate any one, and he must not entertain any impure desire.

Digitized by Google

The Master was not content to demand a mere negative virtue, he asked for positive obedience to God's law in thought, word, and deed, and in making this demand he lifted thought away from the material up to spiritual reality,—the "treasures in heaven" which are within our reach here and now if we are willing to let go of the illusions of sense.

Here it is well to note that Jesus' teaching differed from that of Moses in respect to the infliction of penalties. He did not favor the proposition to put a sinful woman to death, but required of her that she "sin no more," and he knew that obedience to this requirement is possible to all who gain the true concept, viz., "perfect God and perfect man,—as the basis of thought and demonstration" (*Ibid.*, p. 259). This agrees with St. John's statement, "Whosoever is born of God doth not commit sin." Until the spiritual concept is gained, one is building upon the shifting sand of human opinion and the belief in mortal will-power, and when the testing time comes, as come it must, the entire structure will fall; so said the Master.

At the close of the sermon we are reminded of the absolute justice of divine Principle. We are told that all have equal opportunities, so far as God is concerned,—He sends rain and sunshine upon just and unjust alike, and in the final testing of character no favor is shown. The storms of adversity arise and shake the foundations of each house; the winds of mortal belief and opposition to Truth beat upon its walls, and even the floods come, but the house which is founded upon the truth of being stands, unshaken as the rock of ages upon which it rests. It is made very clear to us that only the one who does the will of our Father in heaven comes out of every ordeal unscathed. Christ Jesus did the will of God continually, yet in Gethsemane he prayed, "Not my will, but thine, be done;" and great was his victory over all evil, a victory which all may share who do the Father's will and work as the Master wrought.

Each day brings some test, and as we meet the lesser we are prepared to welcome the greater trial of our faith, wisdom, and obedience. Divine Science truly enables one so to build his house that, no matter what the storm, the result will be told in the Master's words: "It fell not: for it was founded upon a rock."

ANONYMOUS LETTERS.

Unsigned communications are usually consigned to the editorial waste-basket, but occasionally there comes to this office one which asks that a reply be made through the *Sentinel*. It is seldom that personal problems are of general interest, and as a rule they can be best dealt with individually. No one, in writing the editors, need hesitate to give name and address for a personal reply, as all letters are regarded confidentially and answered as fully as other duties will permit.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The Sunday evening service is omitted during July and August. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

ALBANY, N. Y.

Second Church of Christ, Scientist, of Albany intends to dissolve its organization on July 1, 1911. Second Church was organized in the spring of 1906. Every year since its organization has witnessed a substantial growth. The past year has been no exception to the rule. All obligations have been met, with a considerable surplus in the hands of the treasurer. At no time in its history have the meetings of Second Church been better attended than in the last six months, the church being in a substantial and flourishing condition.

The church felt, however, that the present need in the city of Albany did not call for more than one Christian Science church, and that throughout the field in communities where there are two or more comparatively small churches, the tendency is to consolidate them into one congregation, and that it is a mistake to form new Christian Science churches where one or more already exist, except as a matter of growth and the actual need of providing for the many that the older organization is unable to accommodate for lack of room. These reasons seemed sufficient for Second Church to dissolve its organization.

Albany Knickerbocker.

ORANGE, N. J.

Plans have been filed for extensive alterations to First Church of Christ, Scientist, of Orange. The changes, involving an expenditure of twenty-five thousand dollars, will make practically a new Indiana limestone structure out of the present frame building in Cleveland street. Work is to begin at once and be completed, according to the expectation of the contractor, by Oct. 1. Sessions of the church will not be interfered with by the construction work.

From its present width of fifty-six feet the church will be increased to eighty-eight feet and the seating capacity will be increased from three hundred to six hundred. In addition a Sunday school room thirty-two by forty feet in size will be added in front.—*Newark News.*

ATLANTA, GA.

Members of the Christian Science church of Atlanta are raising money with which to erect a church building on Peachtree Circle, near Sixteenth street. They have purchased a lot for sixteen thousand dollars for the purpose of making it a church site. They desire to erect a church building that will seat from one thousand to twelve hundred people and that will cost about forty thousand dollars. The lot that will be used as a site for the new building was bought some time ago, but payment for it has just been completed. It extends east two hundred and thirty-eight feet, south two hundred and twenty-five feet, and west two hundred and eighty feet.—*Atlanta Journal.*

WHEATON, ILL.

First Church of Christ, Scientist, of Wheaton, has purchased the lot at the southeast corner of Main and Center streets for a new church edifice. It is not understood that they will build immediately, but in selecting and purchasing this desirable lot a beautiful site has been reserved, and there is no doubt that when a building is erected it will be a credit to the city, for the style of architecture usually adopted by this denomination is both artistic and appropriate to its purpose.—*Wheaton Illinoian.*

CORRECTION.

We have been asked by Third Church of Christ, Scientist, Kansas City, Mo., to correct two erroneous statements in the item from the *Kansas City Times* in the *Sentinel* for July 29. The lot was not purchased by First Church, as stated, but by Third Church; also, that no plans will be considered until the lot is paid for.

THE LECTURES.

CINCINNATI, OHIO.

The first lecture in the new edifice of First Church of Christ, Scientist, on Walnut Hills, May 7, brought out an audience to hear Bliss Knapp which filled auditorium, foyer, and Sunday school rooms. The lecturer was introduced by the first reader of the church, A. J. Thorne, in the following brief statement of the purpose of the lecture:—

There is perhaps no great subject today that the general public is talking so much about, and yet really seems to know so little of, as Christian Science. The building of these magnificent churches all over the land is causing the public to realize that there must be something good back of this advancing movement, and Christian Science is being investigated now more than ever before. When our Saviour was on earth he gave this imperious command to his disciples: "Go ye into all the world,"—"to preach the gospel, and to heal the sick." This command was not limited to any particular period, place, or people, but was for all time. So Christian Science, by its teachings, is carrying out this command all over the world in healing the sick and comforting the sorrowing.—*Correspondence.*

LONG BEACH, CAL.

Bicknell Young of London, England, delivered a lecture in the Auditorium at Long Beach to an audience of about sixteen hundred people, on the evening of May 12. Herbert M. Haskell, first reader of First Church of Christ, Scientist, introduced the speaker of the evening, and said in part,—

Men and women have always sought for happiness, some through the accumulation of wealth, some through the so-called pleasures of sense, others through personal glory or worldly power. All these, if honest, must at some time admit, "This is also vanity and vexation of spirit." Christ Jesus, the best man that ever lived, came preaching this gospel, "On earth peace, good will toward men." His message to sin-sick and suffering humanity was one of good cheer. He said, "Ye shall know the truth, and the truth shall make you free;" and again, "The kingdom of God is within you."

Christian Scientists absolutely believe all this to be true. They believe because they are able to prove in their daily life many of the truths the Master taught. Many of us have been healed of sickness and great bodily suffering after all material means had failed. We also know we are happier than we used to be. Many can truly say they are happier than they ever expected to be. We have found a God who is Love. We are learning to love our brother more and ourselves less. We have found health, happiness, harmony, and contentment. And because we are happy and grateful for all these blessings, and also that the many misapprehensions as to Christian Science may be lovingly corrected, we are to have this lecture this evening.

Correspondence.

DES MOINES, IOWA.

The lecture at the Christian Science church last night [May 12] was attentively heard by about eight hundred people. The lecturer, Willis F. Gross, was introduced by George A. Wells, who said:

I candidly confess that I am not qualified to speak for Christian Science, but I have great respect for a people who calmly and without the use of sensational methods offer to their fellow men statements of their religious belief, leaving to each individual liberty of conscience and action; and I am deeply impressed with the significant fact that the Christian Science church has grown rapidly under the simple form of service thus established by its Founder. I also have great respect for a people who build their own churches with their own money and always pay their debts.

The business of making the world better and of uplifting humanity is not and never has been confined to a particular church or organization, but it is my personal observation that the Christian Science church is permanently establishing itself as one of the standard-bearers of Christianity, and that the sentiment of skepticism and criticism is giving place to a sentiment of recognition and commendation.

Des Moines Capital.

BUFFALO, N. Y.

Frank H. Leonard delivered a lecture on Christian Science on May 21. He was introduced by Wm. E. Robertson, who said:—

When I was first asked to preside at this meeting today, I hesitated, and took a day to consider the matter; the reason being that I could not see where the work of the Chamber of Commerce and a gathering of this kind could find anything in common. As the president of the Chamber of Commerce I am called upon to preside at and address meetings of various kinds, but these meetings heretofore have invariably been in connection with some subject of commerce. The more I considered the request, the more certain became my conviction that I would accede and preside here today, and that because the request came from a group of men many of whom are members of our Chamber of Commerce,—men of courage, men of high ideals, men of generosity, and men who can be depended upon to support every good movement for the uplifting of the community.

When I took into consideration the fact that I and my family had attended a number of your services and found there a happy, optimistic people of kindly impulse and courtesy, I felt that the least I could do to show my appreciation for the kindness which I have received when I have attended your church, and the cordial and loyal support of many of your members in the difficult work of the Chamber of Commerce during the past year, was to come here today, if it would be any service to you, and preside at this meeting.—*Correspondence.*

MEDFORD, ORE.

Clarence C. Eaton gave an interesting lecture on Christian Science under the auspices of the Medford branch at the Opera House Tuesday evening [May 16] to a large and interested audience. The speaker was introduced by Kirby S. Miller, whose introductory remarks were as follows:—

The only dangerous people in the community are those who are satisfied with what they know. They furnish the material for our rigid, inflexible systems in economics, art, and religion. In no other realm is the human mind so static as in religion, because it is supposed to be too subtle for the average mind. The unseen figures so largely in religion that we have been thrown back entirely upon our leaders. We have grown naturally to look for "authority" upon whom we can shift the burden of our thinking. Finer, greater things in religion are only possible when people are free to do their own thinking. Freedom entails great responsibility, and most men hesitate to claim it in religion; but until men are free to receive truth from any and every source, there is no chance for progress.

A few large minds and hearts have gathered unto themselves much more of insight and experience than the average life, and have been hailed as the saviors of the world. But no one mind or life has held all the wisdom and insight of the race. Groups here and there have developed now

Digitized by Google

this side, now that side of this many-sided human life; but no one leader or group or religion has covered the whole of the wonderful life of man or developed all his latent powers. Now and again in the history of the race we find a great but hitherto neglected truth brought into the consciousness of men, with the result that life is cleared, enriched, and revitalized. The great service of Christian Science is that it has brought and is bringing into the open for our consideration a great truth heretofore neglected. This service is very great to those who do not accept the system of thought built upon the particular truth emphasized. No system can contain all. Among many others, I gladly recognize my debt to those who have emphasized the truth which is the peculiar message of Christian Science. The open mind has much to expect yet from this large, almost unexplored field.

Human existence has not yet been wholly justified by human thought, and probably it never will be; but we are saved by hope and faith and love, and many lives are lived effectively and beautifully. Our minds and hearts have made long reaches into the nature of things, which wonderfully lightens the burden of life. Any one with real insight who can by even a little lengthen our reach into life's meaning, is very valuable to us all. I ask for the lecturer an open mind, assured that he comes not to recite history, but to present to you vital truths.—*Medford Mail Tribune.*

EUREKA, CAL.

The lecture given in the Ingomar Theater Saturday evening [June 24] to a large and appreciative audience was delivered by Francis J. Fluno, M.D. He was introduced by Will H. Fischer, who said:—

Inasmuch as we are Scripturally adjured to know the truth, and by the same authority are promised that it shall make us free, the pursuit of that which is true becomes the first concern of man. It is a peculiar frailty of humanity, however, often to seek its own beguilement in matters wherein great principles are concerned. Nations have held to the theory, too much, that might makes right. The adherents of faiths, philosophies, and creeds have frequently preferred the contemplation of numerical conquest to sober, sincere, and unbiased reflection upon the soundness or unsoundness of their professions. Individuals are prone to justify their prejudices, interests, and practices by the seeming success of operation, and to make fond wishes the parents not only of their thoughts but of their dearest beliefs.

An educated world, however, is getting to the point at which it demands reasonable proof and satisfactory demonstration of those who come before it as the professors of principles. Slowly, perhaps, but certainly, we are coming to be governed by reason and a desire to know the truth about all things. Christian Science, which is to be considered this evening, presents itself as demonstrable truth, denying as unrealities sin, sickness, and death, which humankind, throughout time, has regarded as its most distressing realities. It offers to man a new conception of his dignity, his purpose, his power, and his destiny, and is therefore worthy of the thought and attention of all people.

Humboldt Standard.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Cotuit, Mass.—Judge Clifford P. Smith, Freedom Hall, Aug. 14.

Los Angeles, Cal.—Clarence C. Eaton, Shrine Auditorium, 3 p. m., Aug. 7.

Randolph, Vt. — Bliss Knapp, Bethany Parish House, 3 p.m., Aug. 7.

TESTIMONIES OF HEALING.

It is over two years since I became interested in Christian Science, and words are inadequate to express my gratitude to God for the wonderful blessings He has showered upon me in that time. For over fourteen years I had suffered from an illness which the doctors called contraction of the nerves, and for six years I was unable to perform my household duties. I was bent forward so that I could not look up, and always walked with a stick. During my illness I had medical treatment almost constantly and tried a good many physicians (some of the best), two of whom advised me to go into a hospital. I was much opposed to this: but I knew that something must be done, so I said I would go. I was in the hospital a month, and my own doctor attended me. The doctor and nurses did their very best for me; and when I came out I did seem a little better in some ways. I was advised to go to the moors, where I stayed about two months and came home rather worse in some ways. I also had electrical treatment, but it was of no avail.

The first week I commenced to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, these words impressed me very much: "Cling steadfastly to God and His idea" (p. 495). There seemed to be fear, but I clung steadfastly; and then came the uplifting, the healing power of God, and I went on day by day "from strength unto strength," knowing that God has all power. By the loving help of a practitioner, within the first fortnight I was up and doing all kinds of work, such as I had not done for years. During my illness I could neither read nor write, but now, thank God, I can do both. For years I had never walked out alone, and when my sisters saw me they could scarcely believe it possible; and they told me afterward that they stood at the top of the street, watching until I got to the bottom. These are only a few of the many blessings I have received through divine Love, which meets all our needs. While there are yet some weeds of error to be rooted out, I have confidence to press onward. By God's tender love and watchful care we are encouraged to labor on, knowing that he who endureth to the end shall be saved.

For the physical healing I am very grateful, but more so for the spiritual healing,—the understanding of God as an ever-present help and the love for God and man which this truth brings to us. I desire to be not only a hearer but a doer of the word, because I realize that it is only by knowing and doing the will of God that we can help others. Not only myself, but my husband and also the two children have been healed of many ills through my understanding of God as the giver of all good. It is with a very thankful heart that I send this testimony, and my earnest prayer is that I may prove my gratitude to God, and to Mrs. Eddy, who has shown us the way to health and holiness.

MRS. F. WILSON, Scarboro, Yorkshire, England.

The mistake of thinking that I would wait for a greater demonstration of the truth, before giving my testimony as to the efficacy of Christian Science teaching, led me to defer what should have been acknowledged a year or two ago. I was taken the day after Christmas (1909) with what appeared to be a severe attack of rheumatism. It continued through the week and increased to such an extent that I felt I must cancel a dinner engagement with a friend for New Year's day. She lived not far away and I managed to get to her house the day before New Year's and tell her why I could not have her come. On returning to my home, I found it was with difficulty that I could get around, aches and pains being very evident. The thought then came to me that there was one thing that I could do, namely, to get my books and study the Lesson-Sermon, feeling that I could take just as much time as I wished without any like-

Digitized by Google

lihood of interruption. This experience showed me how much of the Lesson is lost when one takes it up hurriedly, while thinking at the same time of other things to be done, thus taking the mind almost entirely from the Lesson in the eagerness to attend to something else. It seems to me more profitable, if one is seemingly limited as to time, to give one section due thought and consideration, rather than to go through the whole Lesson in haste.

The subject of this Lesson was "God," and I found it unusually interesting. It seemed as if I had never received so much good from any other which I had studied. I was so absorbed in it that I thought neither of aches nor pains —in fact, I forgot everything but the Lesson, and when I had finished it I found myself up and in an adjoining room, and I then realized that I was free from all the former symptoms. I walked around the room in my accustomed way, making as it were a test of myself, and then I knew that I was healed, perfectly free from what less than an hour before was so painfully evident.

I then went back to my friend. I did not crawl this time, but ran and told her she could come, as I was perfectly well. She was so amazed that she laughed and said, "How is it that it is so quick, for only about an hour ago you were here so lame you could scarcely walk?" Not being a Scientist, she could not understand it. However, the healing made such an impression on her that she mentioned it to her friends as something she saw for herself, and it seemed to her wonderful. I will add that since then there has not been the slightest return of the rheumatism, and a friend called it a good demonstration of instantaneous healing.

With thankfulness to God for this manifestation of His power, and with grateful appreciation of the faithful labor and love of our Leader, Mrs. Eddy, I am endeavoring more and more each day to know what it means to be a Christian Scientist.—G. W. PARTON, Hudson, N. Y.

In Science and Health (p. 255) we read: "'Let there be light' is the perpetual demand of Truth and Love, changing chaos into order and discord into the music of the spheres." Christian Science has changed discord into music for me and mine, and I am daily learning of the perpetual demand of Truth and Love, since I awoke to know that the Bible and Science and Health point to the light of Truth. Five years ago I was at a neighbor's who was moving. About the house were scattered many books, so I picked out several medical books and a copy of Science and Health, remarking that perhaps now I could find a cure for my little boy. I studied the medical books and read Science and Health slightly, then discarded all of them. Shortly after this I was ill in bed, and the doctor was about to change the medicines when I remembered something about mind and medicine that I had read in Science and Health, and I thought I would like to read it again. I told the doctor not to call any more, and the next morning I got up and walked to a neighbor's to borrow some Christian Science literature.

When reading Science and Health the second time I felt that I wanted to go far and near to shout its praise. To be told that God did not cause sickness and sorrow for some wise purpose seemed to me wonderful, and yet all so simple and right. Our child was healed from sudden sick spells and weak stomach in a few treatments, after he had been under a doctor's care for over a year; also croup disappeared entirely from the children at my first effort to see God's child aright. When we moved to another state and out into the country away from church and other Scientists, both myself and husband realized that now we must work out our own salvation, and I cannot begin to tell of the many helpful lessons and the rough places that were made smooth by turning directly to Principle. A child was born without outside help of any kind, all being harmonious and with but little suffering. I arose that evening and washed and dressed the baby. The next day I was about the house, and the next was doing my usual daily work. A son nine years of age was suffering greatly from toothache. I worked throughout the night with him without apparent success, but in the morning I took the Christian Science Hymnal and began to repeat our Leader's hymn, "Shepherd, show me how to go." When I came to the words, "I will listen for Thy voice," I stopped, as then I saw clearly that I had not been listening at all; that we can but listen and follow. The toothache soon stopped and the swelling quickly disappeared.

When quite young I had suffered an attack of sunstroke which seemed to affect my head. As the years went by the pain I had to endure was so severe that I sometimes feared I should go insane. These spells gradually grew less severe after I began the daily study of our Lessons, and now have disappeared entirely. As the children grow up they reveal to us how near is infinite Love; they recognize God's government and naturally become obedient and helpful as day by day I throw off the fear, care, and worry of former years, that bound myself and them. I feel that I do but little when I teach my children to love a Leader who has so gently led the children into freedom, health, and holiness, while wisely pointing out to the mother her true relation to the child, thereby filling our homes with gladness and our hearts with peace.

Another beautiful lesson that Christian Science has taught me is the control of a restless, imaginative, discontented disposition. It has calmed the mad desire to grasp the top round of the ladder before placing my foot firmly on the lower round, while teaching me still to look high, but to love the humblest work. As I climb I find art in housework, beauty and love in everything at hand. I have also forgotten the dread of growing old, faded, and useless.

The Bible is now to me a delight to study. May I be found ever watching my thoughts, and showing by my daily life that Christian Science is a practical religion for all.

MRS. G. A. BAKER, Grants Pass, Ore.

I cannot express in words the thanks I owe to God, also to Mrs. Eddy, for having been spared to take care of my little ones. But for Christian Science I would not be with them, and I write this testimony hoping that Christian Science may help some other mother as it did me. When our baby boy was born we employed a physician, for whose kind attention I am deeply grateful. The child got along nicely, but I did not. Everything seemed dormant, and finally fever set in. The doctor changed the medicine, but I still grew from bad to worse. We heard through a Christian Science friend that a practitioner was coming to our town to visit, but by the time she arrived I was in an alarming condition. I could not retain the medicine, and the nurse said I would not recover unless there was a change before night.

I dismissed the physician and began to take Christian Science treatment, with the result that in a few days I was able to sit up; when suddenly an eruptive disease set in, with almost unbearable pain in the stomach and bowels. I could no longer see to read, but I clung to Truth and repeated what passages I had memorized from "Science and Health with Key to the Scriptures," especially the one on page 421, "I insist vehemently on the great fact which covers the whole ground, that God, Spirit, is all, and that there is none beside Him." I listened to the dear, untiring friends who were with me, giving forth the word of Life, until error gave way to Truth and I rapidly grew better. In a few days I drove eight miles to the home of a Christian Scientist, where I stayed for one week, then went home with my husband, three little girls, and my baby boy held in my arms. I was a well woman!

This was two years ago. In this time some ailments have been quickly met for the little ones, and they are

Digitized by Google

stanch Christian Scientists. Blessing has been added to blessing, while the spiritual healing and happiness in our home is more than all else.

WINNIE B. GIBSON, Bishop, Cal.

I add my testimony to that of my wife, as an expression of heartfelt gratitude to God, and to our Leader, for our many blessings. It is twenty or more years since I first learned of Christian Science through the healing of a sister when the doctor gave no hope of her recovery. She was healed in a short time in Christian Science. Nearly six years ago, our eldest daughter, then eight years old, was taken ill with scarlet fever. We were in a little mining town in Nevada, and sent for a doctor, some fifty miles away. He advised us to take her to the city, which we did, and called in the best medical aid we could find: but they could give us no hope, as she was lying in an unconscious condition. We then called in a Christian Science practitioner, and in the course of a few months the child was fully restored to health.

Although I thought I lived nearly right, having been a church-member for over thirty years, I began to see that we may read the Bible, go to church, help the church financially, and yet lack the practical understanding which heals the sick and makes us better in our daily life. I did not realize that I was letting impatience, anger, superstition, etc., rob me, and make those I loved unhappy. About a year ago I had an opportunity to think it all out, and to see that Christian Science was all right, but that there was something radically wrong with me.

One day a horse kicked me, injuring my leg severely. I called in a surgeon, but he had very little hope of saving the limb, and the chances were against my life, as on the third day gangrene made its appearance. As they were preparing to operate, I heard the doctor and the nurses saying: "He is getting pretty low; the chances are all against him." That aroused me, and I knew the "great Physician" could heal all disease, and I thought of my family. I sent for a Christian Scientist, and in about five hours the gangrene began to disappear. The Scientist returned home next day, and the surgeon operated on the limb, cutting away the remaining gangrene. He continued to treat it for about three weeks, but the results were not good, and the bone did not unite. I again called a Christian Science practitioner, and my recovery was very rapid. One of the sharp bones was uncovered, and there was a place that I thought could not heal as there was no flesh to cover it; but the practitioner told me that God could heal one thing as well as another, and could supply every need; and today the limb is as sound as ever, only a trifle shorter than the other.

I am truly thankful for the healing, but more thankful that I am a better man, and for the understanding I have gained in the past year. I owe it all to Christian Science.

HARRY M. GIBSON, Bishop, Cal.

"I have hesitated to write of my healing in Christian Science; but I am very grateful for it. I am also grateful that, as my understanding of Christian Science enlarged, my appreciation of all we owe to our Leader, Mrs. Eddy, is also enlarged, so that I can realize more and more what her life and work must have been to make it possible for her to manifest such patience and such love to all mankind as was needed to show us the way. For the help of any who fear to give up a personal sense of God, I will say that my father died while I was too young to have any recollection of him, and as I grew up my Father in heaven was to me a most real Father, to whom I could go with all my joys and sorrows; but at the same time I believed that all pain and sickness was sent by Him, and for some good purpose,—a blind faith in His wisdom and goodness which led me to bear as patiently and cheerfully as possible whatever came to me.

A number of years ago, while living in a western city, a very dear friend who was suffering from what seemed to be a hopeless case of mental and physical misery, was asked to try Christian Science; which she did, and at the end of about a month she was much improved. At the same time I was in a most miserable condition with stomach and heart trouble, but knew nothing of Christian Science excepting its name, and that had had no attraction for me; but I was much interested to know what had healed my friend. A sister with whom I was living was equally interested. We bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and my sister was blessed in realizing the truth of the spirit and letter in reading the book. On opening the book and reading the first statement, "To those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii), I was convinced that my former concept of God was not correct, and that the study of the book would give me at least a better one. I knew also that if this teaching was of God, it must be honest and true; so I told my physician of my intention to try Christian Science treatment, and that it would mean to rely on it alone; that is, to give up all material remedies. I shall always feel grateful to him for his faithful efforts in my behalf and for his generous hope that the treatment would give me the health which I had not received in the other ways. The practitioner who had helped my friend gave me some treatments, and what was much more, gave me an understanding of what the real healing should be, showing me how to work out my own salvation, helping me over many trials and into the better understanding of God, instead of a blind faith.

Christian Science has filled my every need, at times with help from others, but usually through my own study and effort. I have also been blessed by helping others out of some suffering and trouble. In place of my very personal sense of our Father in heaven, I gradually found a God who is Love, ever near, and ever willing to heal and help when my own consciousness or thought did not hide Him from me; a God who gives only good, who is the giver of all blessings, if we but accept of them. After years of health, in place of invalidism or death, I surely wish to thank God, and also Mrs. Eddy for her loving guidance, and to pray that I may live this truth and manifest more and more of real love to God and man.

MRS. E. L. CROLL, Ardmore, Pa.

I am glad to testify to the efficacy of Christian Science, to its healing power. I was suffering from pain in my stomach in a severe form, and asked a Christian Science practitioner if she could relieve me. She said she could not, but that God could; and the relief came almost immediately. I am grateful for Christian Science.

EARL M. COLLINS, Spokane, Wash.

While sitting alone one evening, reading the *Sentinel* and pondering over the many beautiful testimonies, a deep sense of gratitude and love came to me for Mrs. Eddy, the Founder and Leader of Christian Science, for giving us "Science and Health with Key to the Scriptures," not only because I myself have received such benefits, but also because all who will may come and drink of the water of life freely. For three years I was an invalid, said to have an incurable disease. My limbs were deformed, also my hand and arm, but these have all been straightened out through the truth taught in Science and Health and through the loving patience of a dear practitioner. After eight weeks my cane was laid aside, never to be used again. I have been able to realize the truth clearly enough to know that divine Love meets every human need, and thereby I

Digitized by Google

have been enabled to go to housekeeping, knowing that in God is my strength and activity.

All this has not been accomplished in a short time; I have had many struggles with self, but I find as I lay off old thoughts,—pride, fear, anxiety, sensitiveness, and so on,—I am being made stronger every day. I am truly grateful for the physical benefits, but I am even more grateful for the understanding of God, and of man's relation to Him as far as I understand it. It is my earnest desire to know more of God and to have more of the Christ-mind.

MRS. EVELYN HILL, Baltimore, Md.

In the *Sentinel* of March 10, 1906, is an account of my healing in 1898. Should I longer withhold my testimony as to the never-ceasing efficiency of Christian Science since that time, "the very stones would cry out." In working recently in an apiary (introducing new queens, strengthening weak colonies, etc.), it would have been an impossibility had I not had in some measure the spiritual understanding of God as the one Mind, revealed through the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

One lesson I gleaned from the bees, namely, that the colonies most inaccessible—overgrown with vines or small bushes, the entrance almost obstructed by long grass—were the ones that were strongest and yielded the greatest surplus of honey. This led me to ponder the thought of our Leader, that "the more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410). I have had very many beautiful proofs of the healing and saving qualities of Christian Science. When I fully realize that "all of God's creatures moving in the harmony of Science are harmless, useful, indestructible" (*Ibid.*, p. 514), I can work for days without getting a sting, and can help others. When I do get a sting I have an ever-present remedy, "divine Love, which makes harmless the poisonous viper" (*Ibid.*, p. 243).

After twelve years' experience of Christian Science, under severe tests, I can truthfully say it has not failed in any hour of need. Gratitude to our beloved Leader can be expressed only by daily efforts to put in practice what she has so lovingly and unselfishly taught.

MRS. M. E. JANES, Paducah, Ky.

It has often struck me that my neglect to acknowledge in print the benefit I have received from the teachings of Mrs. Eddy, is like the conduct of the soldiers of Clearchus, as related by Xenophon, who when danger threatened were only too happy to be under the confident marshaling of a general whom on cessation of hostilities they were inclined to desert for any other leader less firm and rigorous. In order, therefore, to rid myself of the taint of ingratitude, I hasten now to put on record some particulars concerning the influence of Christian Science on me.

I have found Christian Science a grand discipline against delusions. It has taught me that by carrying about with one a corrupt consciousness on any subject, all one's social service and so-called self-denials are but deceivings, having in reality the mad object of earning thereby an easy conscience for one's favorite idolatry. Ill does it behoove those of us who have been dragged out of the pit by Christian Science to forget in self-satisfaction at our new freedom that which should be our first consideration; namely, the pointing out to others still in the pit of the ladder by which we ourselves have been rescued. Morally and mentally, more especially, Christian Science has been my great salvation, and yet the physical realm has at the same time been by no means uninfluenced by "the divine energies of Truth" (Science and Health, p. 186).

At no time of my life have I been more capable of prolonged bodily exertion than I am now. I am able to take bicycle rides of over one hundred miles in a day, and similar hard exercise, without looking forward, as I used to do before I knew Christian Science, to probable suggestions of heart weakness. I have also received splendid help from Christian Science as a cure for headache and toothache, also in relieving subtle and distressing fears to which I had been subject from childhood, and which, owing to the belief of there being a tendency to mental disease in the family, were sometimes very depressing.

Although I have not yet found an all-rounded fulness of satisfaction, the fact remains that the worst time I ever had in my life was when I attempted to break away from Christian Science; but from any readings or talks on other religions that I may now have, my return to Christian Science is always like the change from a fevered debating hall to the open fields, beneath the crystal spray of stars. Considering my own great salvation in Christian Science, therefore, I can in all gratitude and confidence encourage the suffering and the sinning, in the words of the poet Sutton,—

> If my shut eyes should dare their lids to part,
> I know how they must quail beneath the gaze
> Of Thy love's greatness; no, I dare not raise
> One prayer to look aloft, lest I should gaze
> On such forgiveness as would break my heart.

DAVID FRANCIS THOMPSON, Oxford, England.

The healing of a member of my family led me to attend for the first time a Christian Science Wednesday evening meeting, and the memory of that night will ever be with me; it was indeed a feast of good things, such as I had never before experienced. To me it was also an assurance of divine guidance. I did not come into Christian Science for healing, but soon had occasion to ask for help of a kind practitioner, and the trouble was quickly met. One who was near and dear to me was suffering from a condition so terrible that it kept me in constant dread. It did not occur to me at first that Christian Science could help this particular case, as the trouble was an abnormal appetite, such as I had never heard of. It included a desire for straw, wool, wood, etc., and the victim was brought to death's door. Her physician, after bringing all his skill to bear upon the case, advised a strait-jacket; another physician said an operation would be necessary, as it would be impossible otherwise to dislodge the wool from the stomach. I spoke to the Christian Science practitioner in regard to the case, and she answered that to God all things are possible. She took the case, and after some months of patient loving work the apparent mountain of trouble was laid low, and the patient was restored morally and physically.

There have been many other cases of healing in my family, and I am truly thankful to God, also to Mrs. Eddy, for Christian Science. It has made life worth living.

MARIE E. CEFREY, Malden, Mass.

The following is an account of the healing of my wife, formerly of Providence, R. I., New York, and now of Manila, P. I. For seventeen years she had been under the care of doctors in different parts of the world, but not any of them could cure her. Five doctors in Providence told her they could not help her; one in Bristol, R. I.; several in the three best hospitals in New York; also one doctor in Mobile, Ala. They all said the same thing, namely, that she had stomach and bowel complaints, gall-stones, and a serious condition of the kidneys. She refused to have them operate on her because I was at sea, and I thank God for this. She then came out here to Manila, and the three hospitals here in which she was treated are claimed to be of the best. The doctors said she must have all of the operations which had been prescribed by the others, if she wanted to live.

Digitized by Google

I then bought her a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and from the time I gave her the book she commenced to get better, although she was having her stomach washed out every morning; but she did not take any medicine, and began to eat any kind of food. So I took her out of the hospital and she went to a Christian Science practitioner for treatment. From that time her sickness took wings. Now it would not be possible to find two happier people than we are, and I give thanks to God, and to Mrs. Eddy, for all of it. To any one who wants the particulars of my wife's healing, I will gladly give them. I would like our friends, and the doctors who attended my wife, to know that she is well and happy and strong, all through Christian Science.

CAPT. GEO. H. COOKE, Manila, P. I.

I gladly confirm the testimony sent by my husband, and give permission for its use in any way in which it may be of help to others. While some ailments have presented themselves, they have been quickly overcome, and I realize more each day that God is indeed an ever-present help. Words cannot express my gratitude for what Christian Science has done for me.

MRS. G. H. COOKE, Corregidor, P. I.

I feel that I must express my gratitude to God for the very many benefits which I have received since I began to understand what life really is. It is only through understanding that we are able to reflect Love and demonstrate the fact of Love's ever-presence and power. I have benefited very much both bodily and spiritually, and am now able to realize that "perfect love casteth out fear."

I was spending a day in the country with some friends who had several children staying with them. In the evening we let off a lot of fireworks, and in helping to amuse the children I had my hand severely burned. The pain seemed so great for the first few minutes that I asked another Scientist who was present to help me. I then went on letting the rest of the fireworks off, and no one else knew that anything had happened. When we had finished and I had washed my hand, which was quite black, I found it badly blistered, but as soon as I was able to realize the power of divine Love, I lost all sense of pain from the burns, and after the first ten minutes suffered no more from them.

This is only one instance of benefit received from the understanding of God's law, gained through Mrs. Eddy's discovery and the spiritual meaning of the First Commandment. I also know that the only true way of expressing gratitude is in deeds, not words. With James I say, "I will shew thee my faith by my works."

A. J. TWIST, Keresley, Coventry, England.

I have for a long time wished to send a few words to express my gratitude for the many blessings I have received through Christian Science. I was cured with very few treatments of a sudden deafness which came upon me during the summer of 1909. These few treatments not only took away all signs of deafness, but lifted me higher spiritually, into a fuller understanding of divine Love. Words cannot express my gratitude to God, and to our dear Leader for all the blessings I have received.

STELLA SWIFT, Fort Scott, Kan.

It was after I had tried many kinds of medicines that I finally came to the truth as found in Christian Science. I had been troubled for about three years with enlargement of the neck. I took a week's treatment from a Christian Science practitioner, and at once experienced relief. I am indeed thankful to God for Christian Science, and to our dear Leader, Mrs. Eddy.—EDITH SWIFT, Kansas City, Mo.

FROM OUR EXCHANGES.

[Prin. P. T. Forsyth, M.A., D.D., in *British Congregationalist.*]

The word is much more than the man. We have heard it said that the great thing is not the pulpit, but the man in it. That is more false than true. The great thing is the message for which the pulpit stands. It is lamentable and pathetic to see how when a popular man goes from a church the church itself melts. That is because it is the man who has been the attraction and not the message. What sustains a church is the word, the revelation, the message of the gospel, the Holy Spirit, the living and present Christ. The man is there for the sake of the message. The word must be a living word; not because it comes from a "live" man, but because it is the word of a living God. It is a question not of man's vitality or energy, but of the indwelling of the eternal life. We have not so much to improve men as to vivify them, to make them alive, to regenerate them; not only to teach them new ways of living, but to have the power of making new men by the word in our hands. The demand upon the preacher is more and more that his word should have the note of reality; not mere sincerity. A man may be wonderfully sincere to a word which is not real. We must do much more than practise what we preach; we must experience what we preach. We must do more than live it; we must live upon it. What we preach to our people, if we are preaching to good purpose, will only be the overflow of what we are presenting in our own soul to God.

[*Universalist Leader.*]

The trials that test our moral endurance do not create it; and unless we are prepared for their ordeal before it comes we are likely to fail. The oak proves its strength in the tempest; but it does not get its strength from the tempest. It gets it from quite different sources during the tranquil weather. Moral emergencies, when they come, demand the use of qualities of heart and mind which we have gathered from our outward blessings in the day of peace and joy. The temptations that assail us must be resisted by a strength already acquired. The inner worth that shall make us independent of our outward losses must already exist. The help required in time of trouble must be derived from sources with which we were familiar before the trouble came. It was because Job had enjoyed his blessings with a thankful heart, and used his prosperity, while it lasted, in just and generous ways, that his integrity issued triumphantly from the ordeal in which Satan had predicted its defeat. Because Jesus had been with God on the mount of transfiguration, he found Him more easily amid the shadows of Gethsemane.

[*New York Observer.*]

The cure for barbarity in the use of human materials in industry is first of all the more general diffusion of the sociological teachings of Christianity, a practise by every one of the golden rule, instruction as to improved protective devices and methods, and the passage and strict enforcement of laws to guard working men in their daily labor. The church of Christ should take up this cause as systematically, sympathetically, and scientifically as it conducts any other crusade of the cross. And, when all has been said, it is only the love of the merciful Christ, who had compassion on the multitudes, that will constrain men individually or in masses to use the talents and toils of their fellow men equitably and humanely.

[Rev. K. C. Anderson, D.D., in *Hibbert Journal.*]

The crucifixion is something that is to be worked out in every man, and it is this mystic but most real crucifixion that is the reality, though all others should be proved un-

Digitized by Google

historical. It is not the historical that is the foundation of the spiritual; it is the spiritual that is the foundation of the historical. Facts are nothing in themselves until they become symbols of spiritual truths. The crucifixion of Jesus would remain merely a brutal murder, without further significance, if we regard it merely as a historical fact. Even with those with whom it is a historical fact, it must become a symbol of spiritual truth before it can be an inspiration for the soul; both the idea of Jesus and the idea of crucifixion must cease to be looked upon as merely historical and become the outward manifestation of an inward experience.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

Perhaps one can come to a dead certainty of the divine consciousness of what the life in Christ is, in no better way than by accepting the fundamental fact that whatever the relation of Jesus is to the Father, is the only true relationship for all men, at all times and everywhere. This is the law of life eternal, as true and as universal in its sweep as the law of gravity. It is the law of God's universal love that holds all worlds in its grasp. We shall realize its universal glory as we yield to its universal power and love. That we might come to realize this rich, high purpose of God for all the race was Jesus' long, last prayer; whatever God was to him is his crowning glory-purpose to be to all of us.

[*Christian World.*]

It was the fortune of the present writer to form one of a quartet who spent many days together in Norway. The other members were an Anglican canon, a Roman Catholic priest, and a Unitarian layman. We formed the happiest society, in which we discovered to our continual wonderment what a vast area of common ground our souls occupied. "If we go on like this," it was remarked, "what is to become of all our political, our theological, and our ecclesiastical animosities?" What, indeed! The secret of the coming world-unity will lie in getting men together and in letting them talk at large.

[Rev. E. P. Powell in *Christian Register.*]

There is a lot of preaching going on nowadays, and much of it is outside pulpits and outside of churches altogether. The world drift is not toward atheism, as it is not toward churchism. It is a wholesome result of larger information and less imagination, applied to the spiritual and moral affairs of the world and the universe. It is speaking in purer political demands, in a cleaner social life, in a higher-keyed educational outlook, as well as in matters pertaining to the future life.

[*Christian Register.*]

It may be that the period of costly, elaborate, showy, unvitalized churches may come to an end in time, and something better arise, adapted to the needs of all classes; for we must confess that our fine sanctuaries are houses of exclusiveness, of classes, instead of the people. The new religion may break down these dividing lines. It will, if brotherhood is ever to become a reality instead of a meaningless shibboleth.

[Rev. Ransom A. Greene, D.D., in *Universalist Leader.*]

While religion never changes, men's views concerning it do change. Theology changes. What is considered religion in one generation, often has at least a question mark after it in the next generation. What is considered religion by some people is by others thought of as at best a form of religion, and sometimes it seems to be nearly empty of the reality.

[*Outlook.*]

We submit to ministers and churches, to councils and conferences, as a legitimate subject for discussion, in lieu of the oft-repeated question, Why do not people go to church? the more important but less debated question, Why do not the churches go to the people?

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year, in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

2.50—	0: 10 :	3 ;	10.60;	12.85
4.00—	0: 16 :	5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

A bill has been introduced in Congress by the chairman of the public lands committee, providing for leasing of Alaska coal lands, designed as the basis of conservation legislation and to prevent coal land monopoly. It fixes a minimum royalty of one cent per ton for low grade coal and three cents for high grade coal. It leaves the maximum royalty limitless. The same bill was introduced in the Senate by Mr. Works of California. Under its terms no lessee is to be permitted more than five thousand one hundred and twenty acres nor to lease the land for more than thirty years. In addition to the royalty, the government is to receive a rental for the land, amounting to twenty-five cents an acre the first year, fifty cents an acre the second year, and one dollar an acre for each year thereafter.

Requested by the attorney-general of Texas to give a report of his company's affairs in that state, the vice-president of the Postal Telegraph-Cable Company replies that the Western Union Telegraph Company and the Bell Telephone Company have entered into an unlawful combination in Texas, Oklahoma, Louisiana, and Arkansas to stifle competition, and that the Postal Company has not only suffered, but the general public has been deprived of the benefits of competition in telegraphy, and that scores of cities have been subject since June 26 to the domination arising from the control of telegraph and telephone wires by the Western Union Company.

President Taft has signed a proclamation reducing the area of the petrified forest national park, Arizona, from ninety-five to forty square miles. This reduction is made on the recommendation of the head curator of geology of the National Museum, who has just made an examination of the land for the interior department. He says in his report that outside of the new boundaries there is practically nothing worth preserving. Two large tracts within the park are also marked off from which museums and others authorized by the secretary of the interior may take specimens of the silicified woods.

Ground for the new Broadway-Lexington avenue subway—Manhattan's second underground artery of transportation—was broken last week. This subway is one of the important links of New York's projected subway and elevated system to cost nearly three hundred million dollars, which is designed to relieve traffic congestion in all boroughs. Eight thousand men will soon be engaged on the task. Part of the line will be double-decked. Four years will be required to complete the work.

In the interest of economy Secretary Meyer is contemplating a policy regarding the procurement of many articles required in the equipment of a ship which will further curtail the work done in the government navy yards. It has been found that many articles, such as ship fittings, headlights, hammocks, flags, paints, small boats, anchor chains, rope, and furniture, can be advantageously purchased from private manufacturers. A naval board is looking into the matter.

The Standard Oil Company of New Jersey is making preparations to break up into its original thirty-three companies. The stock of the various companies will be distributed to stockholders according to their holdings of record on Sept. 1. All of the new companies, it appears, however, will still be controlled by John D. Rockefeller and his associates, who are the holders of the majority stock in the Standard Oil Company of New Jersey.

The department of justice is planning immediate prosecution of all trusts and monopolies which do not dissolve or take other steps to obey the Sherman law as it has been interpreted in the Standard Oil, tobacco, and powder trust cases. Attorney-General Wickersham is authority for the statement that all such will be brought before the courts as soon as proceedings can be instituted.

Standley dam, said to be the largest of its kind in the world, is completed, and the entire equipment of a vast irrigation enterprise that is to supply water to two hundred and ten thousand acres north and east of Denver will soon be finished. The capacity of the reservoir is one hundred thousand acre feet of water.

From twenty-five to thirty thousand square miles of land in different parts of the United States are mapped each year by the federal topographers. About three eighths of the United States has already been covered by these surveys. These maps are sold at a price which covers only the cost of paper and printing.

Attorneys for the electrical trust have submitted to Attorney-General Wickersham a decree which, it is said, they are willing to have entered against the alleged combination in the government's suit for dissolution. This move means that the trust is willing to dissolve without a contest.

It is stated that experiments at the government firing grounds with armor plate made of molybdenum used in alloy with nickel and steel, proved it to be from fifteen to twenty per cent superior to the recognized armor plate standard in resistance of super-calibre projectiles.

The "money trust" of Wall street is to be investigated by Congress, in order to determine whether there is a great banking combination which has the power to control credit, exchanges, and deposits, and to bring on business depression and panics, as has been charged.

The arbitration treaty between the United States and France has been signed by Foreign Minister De Selves, with Robert Bacon, American ambassador to France and M. Jusserand, French ambassador to the United States, as witnesses.

In postal savings banks established in second-class offices, up to June 30, $777,748 had been deposited and $100,974 withdrawn. The average amount of the 26,889 deposits on June 30 was $57.57.

The bill providing for reciprocity with Canada has been passed by Congress, which was especially called in extra session for the purpose, and has been signed by President Taft.

The Legislature of Massachusetts has appropriated nine million dollars for the immediate improvement and development of Boston harbor.

International.

As an indication of the expansion which is going on in Australia, there are at present eight royal commissions appointed by Parliament to make inquiries regarding the best means of carrying out several important public works that have been recommended as necessary to cope with the great agricultural and industrial development which has taken place. Five of the bodies appointed are dealing with railways—chiefly those intended to open up new country, and the others have reference to wharves, education, and water supplies.

The English channel tunnel scheme, which has lain somewhat quiescent since the bill for its construction was rejected by the House of Commons, is again showing signs of life. Both the English and French Chambers of Commerce are very much in favor of the scheme. Hitherto the chief objections to it have been military ones. The people seem now awaking to the fact that there are other points of view quite as important as the military one.

A large number of architects and others have already applied to the Australian high commissioner's office for sets of the maps and other information as to the Yass-Canberra district, with the intention of sending in designs for the laying out of the future commonwealth capital. Prizes of seven hundred and fifty and five hundred pounds are offered for the best designs, which have to reach Melbourne by Jan 31, 1912.

The Turkish government announces the resignation of Sir William Willcocks, the noted irrigation engineer and British adviser to the ministry of public works. Sir William was the designer of the Assouan dam and also prepared the plans for great reclamation works in Mesopotamia.

A merger of many electrical properties in Canada has been completed by Sir William MacKenzie and R. J. Fleming, who are behind the various deals.

The amounts advanced for Irish land purchase under the different acts up to March 31, 1911, reached a total of $348,379,550.

Industrial and Commercial.

A machine has been invented for manufacturing net and lace, the liquid material being poured on one side of a roller and the fabric being reeled off on the other side. One factory is now producing a thousand yards a day, and the process seems capable of indefinite extension and application to various sorts of woven, knit, and reticulated goods. The raw material is cotton waste and the finished fabric is a good substitute for silk. As in the process of making artificial silk, the cellulose is dissolved in a cupro-ammoniacal solution, but instead of being forced out through minute openings to form threads, as in that process, the paste is allowed to flow upon a revolving cylinder which is engraved with the pattern of the desired textile. The turning of the cylinder brings the paste in the engraved lines down into a bath which solidifies it.

There are now more cultivated rubber plantations than there are of the wild. There are about one hundred and twenty million rubber trees on the various tropical plantations, practically all grown within the twentieth century. The value of the rubber raised in the Malay straits and Straits Settlements now amounts to over thirty million dollars a year. Ceylon has an annual production nearly half as great. There is plenty of land capable of raising Para rubber in the Philippines and in Panama, while within the borders of the United States proper the Guayule plant can be cultivated.

An effort to save the Alaskan fur seal from extermination is about to be made by the government experts at the New York acquarium. If the experiments are successful, it is probable that the government will establish somewhere on the Atlantic seaboard a colony of fur seals. For this purpose, it is said, the coast of Maine would be the most available. There a great rookery will be established, the animals being confined in an enclosure, until they become so numerous that it will be safe to let them migrate northward.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THINGS NEW AND OLD."

JUDGE CLIFFORD P. SMITH.

At the end of a wonderful series of parables on the kingdom of heaven, the Master said, "Therefore every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old." What did he mean? The kingdom of heaven is not a place in the universe set apart for the reception of the better class of people after death. Mrs. Eddy tells us that it is "a divine state of Mind;" that a man is in this condition of consciousness when "the divine understanding reigns, is *all*, and there is no other consciousness" (Science and Health, pp. 291, 536). The kingdom of heaven is within man because man is the expression of the infinite Mind whose individuality is divine good.

The so-called human mind is the belief in a kingdom of both good and evil; it is the belief in more than one Mind or source of thought; it is a divided consciousness. In Science such a condition of thought is impossible, since good only is real, as Mind or thought, and the seeming elements of evil in consciousness are unreal. The supposititious consciousness of both good and evil is, however, that which needs to be saved from its error. The unceasing action of the saving Principle, divine Love, has therefore revealed Christian Science to the human consciousness, unfolding to men the true concept of Mind and man and the mental practice by which salvation from the illusion of error has become possible. The student of Christian Science learns that God is the Mind of man and the only true Mind, and he endeavors to let this Mind supply his consciousness and exclude the belief in any other source of thought. Such a student is being instructed into the kingdom of heaven, and he has a treasure out of which he may bring forth things old and new.

Christian Science does not present itself merely as knowledge to be gained; rather is it the law of Life, to be understood and made one's invariable rule of thought. This involves both study and practice, and the latter is no less important than the former. Indeed Mrs. Eddy has said that "the Science of Mind-healing is best understood in practical demonstration" (Rudimental Divine Science, p. 6). It is therefore most important that the student become adept in the use of his newly gained spiritual knowledge, so that he may in all circumstances utilize the power of Truth against error and thus maintain a true consciousness. By so doing he will gain more and more of the kingdom of heaven for himself and for others. Did not Christ Jesus say, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you"?

The practice of Christian Science being scientific, it admits of progress from the beginning of a correct mental practice to the perfection that is beyond human experience. The student of this Science therefore begins his practice with his first effort to understand a spiritual idea as the fact in respect to an error; and he progresses in the degree that study, experience, and practice increase his spirituality and understanding. The intelligent student will not be content with repeating a set form of words for any idea, but will cultivate spontaneity of thought and idea, thus gaining the divine utterance. Ultimately "the spiritual power of a scientific, right thought, without a direct effort, an audible or even a mental argument" (*Ibid.*, p. 9), will bear witness to the truth and accomplish the healing work. (See also Miscellaneous Writings, p. 359; Science and Health, pp. 411, 454.) In this manner the progressive student will bring forth out of his treasure (his understanding of the Principle, rule, and practice of Science) "things new and old."

LOVE'S BURDEN-BEARING.

E. HOWARD GILKEY.

There is a general acceptance of the fact that to each individual there come periods when it would seem that the burdens of mortal experience are beyond his ability to stand up under them. They may be burdens of ill health, of domestic life, of business activities, or the cares of a professional career; in some one or other of the departments of human life each individual suddenly becomes aware in an unexpected moment that a burden has been fastened upon him through some mistake, perchance, of his own, and he is at once put to the task of removing it or else of suffering a continued inconvenience or disability.

It is the problem of removing these burdens which makes mortal experience unhappy and distasteful to all humanity at times. Not that one would get rid of life, it is only of the burdens which seem to accompany it that he would be free; but until one meets with Christian Science he has no reliable chart of life, and no unfailing rule of conduct is given whereby these burdens may be removed. Then the struggle arrives at the point in which human rules of conduct are discarded for that universal and eternal rule given by Christ Jesus, when he said, "Take my yoke upon you, and learn of me; . . . and ye shall find rest unto your souls." Until Christian Science was discovered by Mrs. Eddy, and was revealed to the world with such proofs of power that mankind willingly or unwillingly admitted Christian Science to a recognized place in its affairs, at least the modern world had no key to the real meaning of Jesus' words, nor did it do more than yield mere mechanical assent to them, hungering though men were to learn of him and find the rest he promised.

"Come unto me," said the Master tenderly, as with his understanding of human weakness and its great distance from spiritual Truth he gazed into the faces of the men and women who crowded about him to hear his words: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." He would give them the means of finding rest and relief from every burden which limited and saddened their lives; for with his great knowledge of the law of God he could help them to rise above the material sense of life and its small affairs, to make every so-called

Digitized by Google

yoke easy and every so-called burden light. But, for nineteen hundred years after Jesus spoke those words, men were taught to learn of Jesus through blind faith alone, and they sought to obtain the rest of which he spoke through material belief, through superstitious belief in religious observances, through husks of form and ceremony in which individual spiritual attainment was ofttimes forgotten in the effort to create organized sects and orders and associations, governing the religious activity of men in bulk. Until Christian Science came into the field of religious endeavor, bearing the torch of individual salvation by individual demonstration and individual perception of divine law, men had not realized that each one is responsible to God alone and that each has direct access to God, unimpeded by any intermediary, divine power being so vital a force in the experience of every man that it can be said, "In him we live, and move, and have our being."

Paul himself, after his conversion to Christianity, used the above quotation to convince the Greeks that God was not an unknown factor in daily life, but was the vital center of real being, though he did not realize the presence of God in the life of the individual until he had left the church of his youth and young manhood, so new and strange to human teaching had been the word of Jesus spoken under the dome of the tabernacle and in the shadow of that temple which was supposed to be the home of the true religion blessed of Jehovah. In this age it has also been found necessary to awaken men and women to a new realization of the fact that God is to every man a Father, that divine Love is to every man a Mother, that heaven is to every man a condition of spiritual understanding which in itself gives the solution of every problem of life and makes easy the "yoke" and light the "burden," even as the great loving Master said to the friends who in Palestine listened to his words of Truth.

A little more light may be thrown upon the thought of Jesus in this connection, by referring to his words concerning the day of ultimate attainment, when he said, "For the Son of man shall come in the glory of his Father . . . and then he shall reward every man according to his works." If every man is to attain perfection according to the works of that man, then it is not improper to assume as a spiritual fact that every man will be relieved of the burdens which impede his steps toward happiness in the measure of his spiritual understanding of the truth which removes the sense of unhappiness and gives men power a visdom. Individual advancement is attained by indiv.. d effort; individual effort produces individual results; ind.vidual reflection of divine Love opens the door to the "Spirit of truth," and through this door there comes into individual consciousness that power over evil which is evidenced in wisdom, patience, well-directed industry, gentleness, faith, unselfishness, and such like, these being the fruits of Spirit and leading one higher and higher toward that exalted thought which says with gentle encouragement to the struggling one, "Come unto me, . . . and I will give you rest,"—rest in spiritual activity.

This high goal is constantly before the individual who is seeking God; its attainment being, in the ultimate outcome, inevitable. Divine Love has led our Leader to persevere in the establishment of churches, periodicals, lectures; in the printing of text-book, manual, hymnal, helpful writings; in the ordination of lecturers, teachers, practitioners in their respective fields, but it must be borne in mind that unless the individual himself takes hold of his own affairs with an earnest longing to adjust them to the eternal law of infinite good, all of these helpful agencies will fail of their benefits to him because of his spiritual inactivity, his lack of spiritual receptivity, his unfamiliarity with good; and his burdens will be no lighter until he feels the touch of Love which impels him to unlock the closet in which he has been confining his God-given spiritual abilities. There is deep reason for this individual workmanship in the house of the Lord. "Let every man prove his own work, and then shall he have rejoicing in himself alone, and not in another," wrote Paul to the Galatians, "for every man shall bear his own burden." Every man must bear the burden of his own spiritual ignorance until by consecrated individual effort, wisely using the helps that have been so abundantly provided, he shall have displaced ignorance with a better understanding of God and the universe, including the real man, who is freed by Truth from burdens of every kind.

THE MONITOR.

SALLIE J. UPTON.

WHEN, in 1908, I read in the *Sentinel* that Christian Scientists were to have a daily newspaper, I immediately subscribed for a copy to be sent to a member of my family, but being myself in Honolulu, about six thousand miles from Boston, I thought I did not care to take it. Shortly after this, the announcement was made that our Leader requested that "every Christian Scientist . . . subscribe for and read our daily newspaper" (*Sentinel*, Nov. 21, 1908). Although abundant proof of her wisdom in leadership was not lacking, and I knew she had good and sufficient reason for making such a request (whether at the time I saw what it was or not), I confess I stopped to argue with myself, instead of sending in my subscription at once.

I argued that the paper would be old when it reached me; but immediately came the thought that Mrs. Eddy must have considered the fact that all Christian Scientists do not live in or around Boston,—that they were scattered all over the world and in places where it would take that paper days to reach,—and yet she had requested that *all* Christian Scientists read it. Then came the argument that I had so little time, and that I wanted to read the text-book, Mrs. Eddy's other writings, and the periodicals. I had to admit that Mrs. Eddy was aware how much all these meant to Christian Scientists, and yet she had requested Christian Scientists to read the *Monitor*.

About this time, in walking home from church one Sunday, two other earnest Scientists were with me, and I found they were using the same arguments I had employed; but, argue as I would, I felt that I was not doing right. It is well known among Scientists that the *Sentinel* and *Journal* are constantly meeting the needs of the field, both collectively and individually, and soon after this an article came out in the *Sentinel* which as I read between the lines opened my eyes very wide, and I immediately subscribed for and commenced to read the *Monitor*, and the other two did likewise. Since then I have almost gasped when thinking what would have been the result had I not responded, for I commenced at once to see something of what I would have missed had I not done so, besides the ingratitude and lack of wisdom I would have shown in ignoring our Leader's request.

The article to which I refer appeared in the *Sentinel* of Dec. 26, 1908, under the title "An Added Responsibility," and is mentioned here in the hope that if some who read this are still listening to similar arguments, or if others not then interested in Science have not yet availed themselves of the privilege of taking and reading our splendid newspaper, they may get from the article all that I did and whatever more there may be in it.

I believe it was in one of our periodicals that some one wrote she always felt "refreshed" after reading the *Monitor*, and I can say that I always feel "encouraged." For this clean, wholesome, instructive daily newspaper, I am very grateful to the faithful Leader who made its publication possible, as well as to the faithful workers at headquarters and to all who in any way contribute toward making it the great success which it unquestionably is.

THE FULFILMENT OF PRAYER.

LILLIE C. HANSON.

"VERILY, verily, I say unto you, Whatsoever ye shall ask the Father in my name, he will give it you." "Ask and ye shall receive, that your joy may be full." "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." These are the words of Jesus, in whose mouth was no guile, hence they must stand incontestable, entirely unaffected by human opinions or by the beliefs of individuals who have not yet experienced or demonstrated their truth. Very few, perhaps none, of those who study the Bible regularly would say that Jesus exaggerated in his promises; yet many have not wholly accepted these words as a basis for action, and really regarded them as reliable. And why? Simply because they have not understood, have not known and seen that every promise he gave, every word he taught, every healing he accomplished was based upon spiritual insight, upon his clear understanding of Truth, the eternal, immutable, divine, omnipotent Principle, God, who upholds and governs the universe.

Christian Science, the demonstrable knowledge of Truth, proves clearly that the words of Jesus are entirely true and practicable at the present time, even as they were nineteen hundred years ago; that God really is Love, and really does hear and answer prayer; really is omnipotent, and that this divine Principle, which can never cease to operate, which can never be changed or moved, must stand fast forever. Omnipotence can never lose its power. Truth must be true eternally; it cannot be altered in the least; it is immutable. Although we may have had the wrong concept of or have not understood it, it stands secure just the same. Men change their ideas on all subjects, also their belief of God and His creation, but God can never change, nor can He alter His thoughts, since they are perfect. In Truth there cannot possibly be any deception. It stands immovable, whether men believe it or not. Untruth (error), the lie, alone can deceive, and this is its only pretense of power. There is but one God, omnipotent, omniscient, omnipresent, regardless of the innumerable images of God formed in human thought. "Shall a man make gods unto himself, and they are no gods? Therefore, behold, I will this once cause them to know, I will cause them to know mine hand and my might; and they shall know that my name is The Lord." "Thou shalt have no other gods before me."

If all this be true, and it surely cannot be denied, then why have not these promises been fulfilled upon all who have prayed? The reply is given by St. James: "Ye ask, and receive not, because ye ask amiss, that ye may consume it upon your lusts." And again he writes, "Let him ask in faith, nothing wavering [doubting]. For he that wavereth is like a wave of the sea driven with the wind and tossed. For let not that man think that he shall receive any thing of the Lord." It is evident, therefore, that prayer offered to the one true God, who is Spirit, should be sincere and free from doubt. In order to be thus sincere, it must express the inmost desire, a hunger and thirst after righteousness that excludes all selfishness. This is real prayer, the prayer which the Holy Spirit teaches us, according to the word of God, the prayer which reaches God whether it is expressed in words or not. Usually prayer loses more or less sincerity when it is repeated aloud; our inmost thought is best adapted to bear our prayer to God. The Master said, "When thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret: and thy Father which seeth in secret shall reward thee openly."

This declaration is explained by Mrs. Eddy as follows: "The closet typifies the sanctuary of Spirit, the door of which shuts out sinful sense but lets in Truth, Life, and Love. Closed to error, it is open to Truth, and *vice versa*. The Father in secret is unseen to the physical senses, but He knows all things and rewards according to motives, not according to speech" (Science and Health, p. 15). In order to be pure and unselfish, our desire must be in harmony with the law of Love, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," and "Thou shalt love thy neighbor as thyself." Deity never comes in contact with a single sinful thought, for God is "of purer eyes than to behold evil." All desires, therefore, which are not entirely pure, fall to the earth; they cannot be answered, because they do not reach God.

Yet another condition for answered prayer is that it be free from doubt. In order to bring this about, it is absolutely necessary to know, to understand, that God is Love, is spiritual, good, and hence can send us only that which is good. "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." In divine Love it is impossible to find other than good. Isaiah likens God's love to a father's protecting power and to a mother's loving watchfulness. God is omnipresent and omnipotent—what then can we fear? Nothing but good can approach us when we know God as the omnipotent One, as Love, and so follow the words of Jesus to the Samaritan woman: "They that worship him must worship him in spirit and in truth."

We learn in Christian Science that to pray "in spirit and in truth" is to pray with the understanding, with the certainty that God is Spirit, omnipotent, immutable Life, Truth, Love, and that the real man is spiritual and perfect, created in the image and likeness of God. Then we shall understand the words of Jesus: "Your Father knoweth what things ye have need of, before ye ask him." In the strength of these words, we may learn to give thanks for the fulfilment of prayer before it is answered to the senses, as did the Master when he raised Lazarus. Before he bade Lazarus come forth, he said, "Father, I thank thee that thou hast heard me." Such prayer does not contain a single element of doubt and cannot possibly fail; it goes forth "in spirit and in truth" and is a true demonstration, the result of spiritual understanding. It is not sufficient to believe that God hears us; we must realize it, must know it.

This truth of God, which has existed eternally and which can never change, this same truth which the patriarchs and prophets understood, this steadfast truth which Jesus also taught, with "signs following," could not be ignored or thwarted in Jesus' time, nor can it be in our time, and it means the healing of sin, disease, and death, the destruction of error's seeming power. This saving truth is available at all times, and through Christian Science it again dawns for us as the "Sun of righteousness," which comes "with healing in his wings." To those who seek, but do not yet seem to have grasped the deep significance and divine origin of this teaching, we can send the message which Jesus sent to John the Baptist when the latter's disciples asked whether he was the one who was to come, or if they should await another; namely, we can show them the works which are wrought through an apprehension of the power of Truth.

When we begin to know God as Spirit, as Life, Truth, Love, and ourselves as His children, knowing also that our Father is all good, and that nothing but good can have its origin in Him,—then, and then alone, can we begin to understand that God's will is being done unceasingly, unhindered in its abundant power and blessing. It simply remains for our eyes to be opened, for our hearts to be chastened, for our innermost desire to reach out, in order to receive all the gifts which have been prepared for us since the foundation of the world.

VALUE OF QUIET WORK.

W. H. JENKINS.

MOST people's lives are largely made up of preparation for and the doing of some work. Sometimes we are called upon for an effort which tests us. The pupil in school may be suddenly asked questions to demonstrate his knowledge of a subject, the mechanic to do some difficult work, the teacher to explain some rule, the writer for an article on short notice, a speaker to make an extemporaneous address, or the Christian Science practitioner may be called upon to heal some case of great suffering. The ability to respond to such calls quickly depends on how well one has done his quiet work when alone.

No one can give what he does not possess. The desire to take our part in the world's work is right, but one cannot well help another to work his problem until he has worked out his own. The habit of going to God alone, and not to other people, should be established. It is well for students of Christian Science to counsel together and exchange helpful experiences, but neither this nor any public service can take the place of the work one should do alone. The word work expresses the right thought, for we must work for the understanding of truth. Mrs. Eddy tells us that Science and Health needs to be studied, not merely perused. We get little benefit from reading carelessly and only when convenient. We need to read, if possible, at stated times, as well as in our spare moments, and to concentrate thought on paragraphs which specially help us, reading them over and over carefully and prayerfully. This is study. Besides this, we should strive to come to the reading of the book in a childlike and teachable condition of mind, and continually watch to keep out the thoughts which would hinder the unfoldment of its truths. All this is work.

The best results follow if we work quietly, alone with God. We shall know, and others will also, that the motive is right, and not that of the Pharisee who prayed to be heard of men. It is well to go to our closet; but when this is not possible we can enter into our sanctuary, even when with other people, and shutting out the world about us can work quietly and so obtain rest and strength. This quiet work is a means of keeping our lives filled with the consciousness of Spirit, like the spring which is so filled by underground reservoirs that it overflows and makes all the vegetation around it luxuriant. When we thus pray continuously and conscientiously, the overflow of spirituality from our own life will bless others.

Many are restless and complain because of their isolation. They want to be doing some greater work, but their isolation and retirement may be just the opportunity needed in which to do their work well. This, if rightly used, will be their season of preparation, and some time, some where, in some way, when they are ready, they will be called upon to do greater work in the Father's vineyard, where the prepared workers are too few,—"to heal the brokenhearted, to preach deliverance to the captives." Mrs. Eddy's quiet work, alone with God, brought forth for us our text-book. Christ Jesus is our Exemplar in this respect. For thirty years he lived a quiet and simple life in the village of Nazareth, and often during his public ministry he went apart from the people to be alone with God. The value of this work and the spiritual power which resulted from it is attested by his teachings and in the healing of the sick, a result which may be ours to the degree in which we follow in his footsteps.

THE FIRST STEP.

M. F. EUSTIS.

No word surely is more often on the lips of Christian Scientists than love, and in their acts nothing should be more apparent; but for several years after accepting Christian Science as the truth, after trying to make it practical in my daily life, and receiving great benefit therefrom, I yet felt that I had not reached the heart of it, for the true sense of love was yet an unacquired treasure, notwithstanding Mrs. Eddy has so plainly told us how to gain it, and that "Love imparts the clearest idea of Deity" (Science and Health, p. 517).

When I asked some who seemed to understand this teaching, how to love, I was told, "You must love every one." But I answered that this was impossible, because the many were quite unlovable to me. A year ago, I again asked a Christian Scientist the question, "What is it to love? What does it mean? How shall I go to work to love?" He answered that to love is to feel kindly, then he told me how he once disliked the English sparrow; but when he awoke to the fact, he began to note its brave fight in the winter storms, and there was thus awakened a kindly feeling toward the little foreigner. He also spoke of the little thoughtful things that were done for and by him in traveling, things that always called forth a kindly response. I left this Scientist with my eyes opened to my first needful step. I must waste no more time in wondering as to what love is, but I must by kind thoughtfulness for others begin to reflect to human sense the Love that surrounds it but to which its eyes are not opened.

The next day had been set aside for shopping, a task which was so often accompanied with thoughtless acts and impatient words that I had more than once said to myself, "I am glad they do not know I call myself a Christian Scientist." But now in place of pitying myself for having to be in the crowded shops and cars I found myself watching for an opportunity to be kind; and what a different place town was! Such sweet smiles and hearty thanks as were given me, and each time I longed to say, "I'm a student of Christian Science. Isn't it beautiful?"

For years I had been meeting and passing by an old acquaintance with averted eyes, because of an unkind feeling I had cherished. One day, a few weeks after taking my first step on this kindly road, I found myself shaking hands and saying some pleasant words to him. I was pleased then, but oh, so grateful to Love for giving me the opportunity, when later I found I was not to meet him again. Opportunities to be kind have multiplied since then, and I have learned a new meaning for the phrase, "Blessed are ye;" for when one has proven his God-given ability to be kindly, to love, he then knows the God-given peace that no words can describe.

Another thought has helped me on the way heavenward, and it is this: we are governed every moment by divine power. If we realize that we are governed by Love, we are thinking, saying, doing the kind, thoughtful, selfless things. We are meeting a disagreeable remark or act with a kind one; not with the old idea of heaping coals of fire, but of eliciting something good and true from the person. And this one can do, so great is the power of Love.

When impelled by a spirit of unkindness, we are developing a get-even sense that meets a disagreeable remark with one of its kind; yes, we may even look for trouble in order to hit back. This sense is indeed "earthly, devilish;" but we can know Love, and Love will set us free when, as Jesus said, we do always those things that please the Father.

NOTICE.

Under the present ruling of the post office department, all unclaimed copies of periodicals are immediately destroyed, unless a forwarding order from the addressee is on file. It is therefore advisable that subscribers to our periodicals inform us in advance of any contemplated change in address; or, if this is not practicable, a forwarding address should be left with the local post office, that there may be no loss of our periodicals through non-delivery. The request for change of address should give both the old and new address and the name of each periodical for which change is desired.

SELECTED ARTICLES.

[Editorial in *San Diego* (Cal.) *Herald.*]

The Christian Science Publishing Society of Boston has compiled, in book form, the editorials on the life and work of the late Mary Baker Eddy. The compilation is designated "Editorial Comments" and contains the expressed opinions of the thoughtful editorial writers of America. The book is neatly printed and will furnish pleasant reading for members of the Christian Science faith. It will also be profitable reading to those who scoff at all religions, and also the members of other faiths who are unduly devoted to their own creed.

The achievements of this remarkable woman will be recorded in history as among the great events of the century in which she lived. Even history, which will be the expressed opinion of one writer, and one possibly of her own faith, cannot give the reader the same true estimate of the real merits of Mary Baker Eddy and her work as does this compilation, which is the expression of minds trained to measure men and events from an impartial standpoint.

There is nothing to indicate whether the book is gotten out for general sale or only to be sent to those who may be interested in this faith. However, it would be a valuable adjunct to any library. Not as throwing light on the faith or philosophy, but as the contemporaneous opinion of the merits and achievements of a remarkable woman.

[Mrs. Sue Harper Mims in *Atlanta* (Ga.) *Journal.*]

Mrs. Sue H. Mims spoke on "Why I Am a Christian Scientist" before an audience that completely filled the Universalist church, where ministers of different denominations have been invited to give the reason of their faith. There were many who stood in the aisles and at the rear of the church. Part of Mrs. Mims' address was as follows:—

I am a Christian Scientist because in an hour of great stress, when a despairing state of hopeless invalidism faced me, Christian Science came as the quickening "Spirit of truth," a beam from the "Sun of righteousness . . . with healing in his wings," answering every aspiration of the soul, every question of doubting reason, healing my body, lifting me from a state of dependence and almost despair into one of joy and hope and usefulness and the activity for which I had longed. It stimulated a passionate love of God and humanity, and of the establishment of His kingdom on earth. Old things were passed away; and new motives, new aspirations opened the way to an enlarged sense of good. I have every reason to believe that but for Christian Science I would not be here before you tonight, for that it has added many years to my existence on earth is a fixed conviction on my part.

I am also a Christian Scientist because of the knowledge that what Christian Science has done for me it will do for every being on earth today, and because the study of Christian Science will enable any one to prove this divine theology of primitive, practical Christianity that was ushered in with signs and wonders two thousand years ago. I am a Christian Scientist because the study and practice of Christian Science has so illumined the Bible to me that its pages beam with the light "that never was on sea or land"—making its pages luminous with spiritual health and inspiration.

Now, wherein do Christian Scientists differ from the other denominations? We all stand confessedly on the same definition of God. I am a Christian Scientist because I accept absolutely this definition in all that it logically includes, even the denial of matter, evil, disease, death—because these things are a denial of what we claim that God is. God is also understood in Christian Science to be the supreme ruler of man and the universe, the only lawmaker, whose "law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death," as St. Paul declared to the Romans.

[B. O. Flower in *Twentieth Century Magazine.*]

On the appearance of Science and Health, critics, as is the wont of materialistic scholars in the presence of metaphysical thought, declared the volume to be incomprehensible, incoherent, inconsistent, and absurd. This criticism is not wholly surprising, as it is the reception which has been given to practically all attempts to bring idealistic truth to the comprehension of minds accustomed to think in terms of materiality. It is much as if a traveler on the ocean, after inspecting a distant ship or headland, should hand his spyglass to a companion, who, taking the instrument, sees nothing clearly while the glass remains focused to meet the visual requirements of the owner. Christ Jesus, after trying to teach the Jews and finding that to them the truths so clear to him were unintelligible, declared that eyes had they, but they saw not; ears had they, but they understood not. And this fact will always be apparent when a teacher seeks to place the supreme emphasis on things spiritual.

But, though publishers were confident that the book could never pay for publication, and the critics scoffed at it, the author never for a moment doubted but what it would ultimately prove a success, because she believed most profoundly that it contained a message of health and life, in accordance with the divine laws of the universe. That her faith was not without foundation, is seen in the fact that no other serious work during the past century, devoted to the elucidation of religious concepts, has met with such phenomenal sales. Though in 1875 there were few persons who even cared to try to read it, in 1891 sixty-two thousand copies of this work, that has always sold at from three to five dollars a volume, had been called for; and by 1905 between three hundred and fifty and four hundred thousand copies had been sold. Moreover, the sales since then have steadily increased.

The success of Science and Health has been inexplicable to many persons. The following words of a friend well voice the feelings of a great multitude. "To me," said this gentleman, "one of the mysteries of our time is the success of Science and Health. If it had been a fascinating volume of fiction, or poetry abounding in fine imagery; or, on the other hand, if it had compromised with popular religious theories, so as not to have affronted those whose religious prejudices are strong, and if it had glossed over the sins of the flesh and catered to the easy-going materialistic conventionalism of our day, seeking to make peace with physical science, one might find a reason for the constantly increasing demand for the work. But it does none of these things, while being a metaphysical volume and in the nature of the case too abstract to be readily comprehended by the general reader."

We replied that to us there appeared several reasons for the reception of this volume. In the first place, the world was hungering after spiritual food. The church had become largely what conventional religion was in Christ's time—a worship marked by externalism and intellectual dry-rot, absorbed in form, ritual, dogma, and creed, and in intellectual quibbles and controversies, rather than aflame with a passion for righteousness and guided by the voice of spiritual truth. At this critical hour came this new message that placed the master emphasis on the spiritual verities, and it proved as manna in the wilderness to many hungering souls. Thousands who had been long in the far country of materialistic gratification, until they had learned that there is no enduring peace or true satisfaction to be found in the sensuous life, have discovered in this message that which the world and the conventional church failed to give. But without doubt the greatest immediate

Digitized by Google

factor that has contributed to the success of Science and Health and of the Christian Science movement has been the remarkable results that have come from the study of the message. Thousands of men and women who have been desperately sick, many of them having been given up by the best physicians in their communities, and others in the depths of affliction from whence there seemed no delivery, have patiently studied Science and Health until, often unconsciously to themselves, their whole thought world has been changed, and with the change has come health in the place of disease, life where death had seemed inevitable, hope and joyous confidence where depression held sway, and a newer, higher, finer concept of the meaning of life, which has turned their thoughts from sense domination to spiritual idealism.

Cures of a remarkable character have been effected in many hundreds of cases, and it is unquestionably true that a very large proportion of Christian Scientists have been led to accept its teachings through having been cured of diseases that have baffled the skill of physicians. But the curing of disease has been followed by the acceptance of a noble spiritual philosophy that has changed or transformed their lives, giving them a vital, living faith, purifying and ennobling their thought worlds and filling their hearts with love. This army of believers have become militant apostles of Christian Science. The curing of the sick has been a means of redemption, as it was when Jesus trod the sands of Galilee and solemnly enjoined his disciples to accompany their preaching of good tidings with the healing of all manner of disease. Mrs. Eddy clearly teaches in Science and Health that while it is a bounden duty for the true Christian to follow Christ's example and injunction, and heal the sick, this work is only a means to the great end of awakening man to a realization of his divine sonship, and so bringing him into rapport with God that he shall reflect in his being life, love, truth, and the beauty of holiness.

The key to the success of Science and Health, then, is found in its work in restoring the health of the sick and so transforming the lives of its disciples that they have become radiating centers for life and love, for purity and that moral idealism which is the oxygen of the soul for men and nations. It restores the vision without which life shrinks into pitiful egoistic vacuity and nations perish.

[Charles K. Skinner in *Grand Rapids* (Mich.) *Herald.*]

The statement of Dr. Vaughan, "No one who knows the fundamental facts of chemistry, physics, or biology can ever be a Christian Scientist," would amuse many men and women who have not only been well educated on these particular lines, but who have also held chairs in these professions or have devoted years of earnest work to the practice of medicine, and who are now Christian Scientists.

The whole thing resolves itself into the view-point from which the individual looks at Christian Science. To the one who sees everything through the eyes of a materialist, all must be subject to and respond to the laws of matter. To him, God (if he believes in God at all) must be in some far-away place, controlling the universe by material laws which are as changeable as the theories and specifics of *materia medica*. To such a person a spiritual universe and a spiritual man created and governed by an omnipotent God who is Spirit, divine Principle, is a myth and positively unthinkable. Call it faddism if you will, but remember that the truth of a theory or proposition is proved only by the results accomplished.

The facts concerning Christian Science—and which cannot be overturned by bald assertions to the contrary—are that vast numbers of people from every walk in life have proved the truth of its teaching through restoration to health after all other means had failed. Unlike the specific, serum, or drug of materialism, prescribed today and discarded tomorrow, the same divine Principle which healed the first one healed them all.

If learning how to regain one's health and retain it makes the "American people ridiculous in the eyes of Europe," let us all be faddists; we can well afford to be. The contention that "man has developed physically as far as he may," is but further argument that man is matter and governed by its asserted laws. Happily the world is fast awakening to the fact that man (the true man) was created spiritually and given as his birthright dominion over all, including the physical body which materialists call man.

To claim that "all we know we acquire through our nervous system," leaves God out of the universe entirely. It is nothing but the grossest materialism, and belongs to the dark ages. If there is a God, a supreme intelligence, as the Bible states, and man in His image and likeness, then man may acquire all the knowledge that he can use for right purposes, provided he realizes his God-given dominion here and now.

[Frederick Dixon in *Newcastle* (Eng.) *Illustrated Chronicle.*]

If Christianity is anything at all, it is the teaching of absolute Truth; and if absolute Truth is not scientific, then there is no science in the world. This was so patent to a well-known thinker that he declared that if Christianity was not scientific, or if science was not Christian, then one or the other was unnecessary. Jesus taught that Christianity would show men the truth which would make them free. In this way he further proved that Christianity was scientific, for he demonstrated the fact of divine law by means of the miracle, and thus made the miracle the object-lesson or proof of the truth of his teaching, for it must be remembered that the word miracle translated has no supernatural meaning, but means simply an act of power or a proof.

These miracles were devoted to the overcoming of sin and to the healing of sickness; in short, to the destruction of evil of every sort. Had this evil been real, nothing could have destroyed it. That which is real is necessarily eternal, and that which is eternal is indestructible. That sickness and sin seem real to the human consciousness no Christian Scientist would deny, but there is a very great difference between a relative sense of reality and actual reality. "Sickness," Mrs. Eddy writes on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

This right apprehension of the truth of being is comprised in the knowledge of the truth which Jesus said would make the world free. In the exact proportion in which a man acquires this knowledge of Truth, he acquires necessarily the Mind which was in Christ Jesus, and acquiring this knowledge he is necessarily able to demonstrate it, because this knowledge is scientific. "He that believeth on me," Jesus said, "the works that I do shall he do also," and in proof of this he overcame not only sin but sickness, and not only sickness but every form of evil; everything, in short, which is unlike God.

In Christian Science the word real is used to represent the creations of God. Evil is not a creation of God, it is simply what Jesus described it as, a lie, and because it is a lie it disappears the moment the truth is told about it. Truth alone is real, and therefore eternal. "Ye shall know the truth, and the truth shall make you free,"—free not only from sin but from sickness, free, in a word, from all the manifestations of evil. As the psalmist says, it is God "who forgiveth all thine iniquities; who healeth all thy diseases."

[From an article in *New York Observer* by Rev. A. R. Bickenbach.]

A stranger in New York is apt to find many contrasts. This one was the result of an accident. One Wednesday evening I followed a crowd and soon found myself courteously accorded a front sitting in a large and beautifully decorated auditorium. I was in a strange place and in a new atmosphere. Naturally I was all alert. The people sitting about me, and, in fact, all upon whom my glance fell, seemed to be of more than ordinary refinement.

As I was shown my seat the "first reader" was reading something, evidently the lesson for the evening, reading it coolly, devoid of any kind of animal magnetism, reading it as an automaton or a well-modulated talking machine could read it. There was no mumbling, every syllable was carefully enunciated. The audience, which packed the large auditorium, both floor and gallery, were quiet and apparently attentive, but my seat commanded a view of the audience, and the stray glances of many in the audience suggested that the reading was gripping the most of them as little as it did me. But the rest of the hour interested me, for the audience was alive, interested, and intense.

The reading finished, the reader said: "We will now have a few moments of silent prayer and then unite in the Lord's Prayer." A few bowed their heads, many made no change of posture, but I have no doubt that all "prayed," and it was silent. I did not time it, but from some former personal experiences I should judge the silence lasted at least two minutes and a half and it was silence, absolute, prolonged, but painless. It was new to me. Then the reader lifted his chin, shifted his footing, and as he uttered the first words a volume of sound came up from that immense audience such as I had never heard repeat the Lord's Prayer —steady, unchanged, not the faintest diminution when the words were said: "Forgive us our debts, as we forgive." The prayer done, they sang a hymn—again my eye traversed the audience as my ears caught the volume. With few exceptions, all were singing, some with books, some without, five verses they sang, both hymn and tune unknown to me. Then came testimonies. If the audience was awake before, now it was intense. There were a few painful seconds of waiting three several times, but for the most part no hesitancy.

Concerning the testimonies I will simply say that if the witnesses did not believe what they said, they must have been past masters in the art of deception. Each and all thanked God for what had come to them through Christian Science and their "beloved Leader." Another song like the first, and the beauty of the tune clung to me even while the audience moved out to the music of the great organ.

[Algernon Hervey Bathurst in *Brixton and Lambeth Gazette*, London, Eng.]

If there is one thing that Christian Science teaches more emphatically than anything else, it is the futility of attempting to rely on personality, or the control of one human mind over another. Indeed, such practice is the very antithesis of Christian Science, for to trust in the human, material, or mortal mind is to eat of the fruit of the tree of knowledge of good and evil, since it is the human mind alone that believes in the power of both good and evil, believes in a perpetual warfare going on between the two, giving as much, and frequently more, power to evil than to good.

The great message that Mrs. Eddy has given to the world in Christian Science is the message given by Jesus the Christ two thousand years ago, that "evil is not power" (Science and Health, p. 192). Christ Jesus and his disciples proved this, the latter because they had understood the teachings of the Galilean Prophet, and had realized that when he healed the sick, reformed the sinner, raised the dead, he did so not because he was changing what actually was,—that is, what was God-given, or part of the perfect creation of God,—but because he had come, as he said, not to destroy but to fulfil God's law.

Jesus proved two thousand years ago that Christianity was practical, scientific, by demonstrating the truth of what he taught. Those same teachings are as practical today as when they were first uttered to the disciples and multitudes in Galilee and Judea, and the mountains of physical deformity, disease, and discord are being removed today as they were during the first three hundred years of the Christian era, in the exact proportion that the teachings of Christian Science are understood. None of these things are accomplished by the endeavor of one person to control the mind of another, but they are accomplished by the willingness of the individual to become "as a little child," and to refuse to believe that God, whom all Christians agree in describing as infinite, omnipotent, and omnipresent, could possibly do that which even no human parent would be found guilty of, namely, permitting his children to suffer or be subject to misery of any kind.

Christian Science has revealed to multitudes scattered all over the face of the globe, that they not only have the power to do right, but that they can prove false the belief that evil is capable of accomplishing anything. Christ Jesus said, speaking to all men for all time, that those who believed in him, that is, understood his teachings, would be able to do, not only the works that he did, but greater works than these. These works are being accomplished daily, but those who have an understanding of the teachings of Christian Science no longer consider them miracles; rather do they realize that, as Mrs. Eddy writes on page xi of the Preface to Science and Health, "now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

[*Los Angeles* (Cal.) *Herald.*]

The new census shows that the only two religious denominations classed in the Protestant body that are making any real numerical progress in this country are the Christian Scientists and the Methodists, with the Baptists perhaps deserving a place in the category. Comparatively speaking neither of the other two approach the denomination founded by Mrs. Eddy—that is, in percentage of increase. The growth of the Christian Science movement has been the great religious phenomenon of the new century. It has done more than survive skepticism, derision, misrepresentation, and open opposition born of jealousy; it has triumphed over them so emphatically that today it practically leads all the non-Catholic bodies in ratio of growth, while its visible manifestations, the churches, as compared generally with new ones of other denominations, are incomparably superior as fitting temples of religion.

Mrs. Eddy's followers have reduced to a practical basis for a practical age the gospel of life. Jesus said: "The works that I do shall he do also." These works are healing the sick, saving the sinner, and helping humanity, and Christian Scientists are willing to be judged by the fidelity with which they follow him in this "gospel of doing." That they are successful is shown by their growth, by the testimonies of thousands who have been raised from hopeless beds of pain, by those eased from the bonds of appetite, by those uplifted from thoughts and acts of sin; and in so far as they do these things, ought not all Christians to rejoice instead of revile?

Love speaks when in our hearts appear
Thoughts tender, sweet, and pure;
And he Love's voice doth ever hear
In whom such thoughts endure.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE PROVINCE OF THE LECTURE.

It is impossible to estimate with any degree of accuracy the wide-spread benefit which accrues to humanity from the many hundreds of lectures on Christian Science that are given by the Christian Science board of lectureship annually, all over the world, under the auspices of The Mother Church and its branch Churches of Christ, Scientist; but the careful provision made in the Manual (Articles XXXI, XXXII) for the maintenance of this part of the great work of promulgating the healing truth, as embodied in Christian Science, is indicative of the importance attached by our Leader to a correct presentation of the facts about Christian Science and its Discoverer and Founder.

It will readily be seen, however, that while the lectures are doing a needed work in acquainting public thought with what Christian Science is and what it is doing toward the redemption of mankind, they can only serve as an opening wedge for the deeper truths which must be studied and demonstrated in proof of understanding. Indeed, when the present system of lectures was established by our revered Leader, she had already written in "Rudimental Divine Science" (p. 15): "Only a very limited number of students can advantageously enter a class, grapple with this subject, and well assimilate what has been taught them. . . . Public lectures cannot be such lessons in Christian Science as are required to empty and to fill anew the individual mind." In conclusion she declares that "lectures in public are needed, but they must be subordinate to thorough class instruction in any branch of education."

These statements clearly indicate that the function of the lectures is separate from that of class teaching; that is, the lectures are intended to stimulate an interest in Christian Science and to hold out a promise and hope, rather than to impart the rule and *modus operandi* of the deep things of Spirit. It is a fact, nevertheless, that a true lecture on Christian Science is a divine idea, reflecting infinite Mind, and imparting knowledge to all who hear and understand it. It heals the sick and destroys sin, because it corrects misapprehensions and supplants belief with understanding; and this is why it is no uncommon occurrence for the sick to be healed at these lectures.

The by-laws of The Mother Church provide that each branch church shall give a lecture at least once a year, and the blessings which come to the church, collectively and individually, as a result of obedience to this requirement, are beyond computation. In the smaller churches, where the giving of a lecture calls for special demonstration on the part of the members, the blessings received have richly repaid the effort expended; therefore the plan which many of the larger churches have adopted, of giving several lectures each year, has very much to commend it in the multiplication of opportunities which it presents of bringing this full salvation, this gospel of healing from sickness and sin, to the "millions of unprejudiced minds—simple seekers for Truth, weary wanderers athirst in the desert"—who, as Mrs. Eddy admonishes us, "are waiting and watching for rest and drink" (Science and Health, p. 570), and it is the privilege and duty of every Christian Scientist to have a part in giving these thirsty ones the "cup of cold water in Christ's name" (*Ibid.*) which our Leader bids us proffer.

To get the full value of a lecture, it must not be forgotten that every detail, from the selection of the lecturer to the securing of a suitable place in which he may speak, should be a matter of prayer and demonstration. If this rule is strictly adhered to, it will be found that intelligent action and forethought have taken the place of inaction and confusion, and that the lecture will have proportionably accomplished its purpose, instead of simply adding to the burdens of those who are in charge. It has occasionally happened, in the experience of some of the lecturers, that they have found a lack of forethought in regard to arrangements, and a waiting for the lecturer to do many of the things which properly come within the province of the lecture committee. This should not be, but on the contrary every detail should be carefully attended to before the arrival of the lecturer, not only that he may be spared all unnecessary labor, but that he may be free to devote his time and effort to such preparation as he should make in order that his contribution to the occasion may do its part toward a complete and helpful demonstration.

To sum up, it may be said that while the lectures do not supplant class teaching, in their own way they have a designated part in the promulgation of Christian Science, and this part is such an important one that mere form and routine cannot usurp the place of, or reap such rich rewards as attend prayerful demonstration of the demands of Truth and Love.

ARCHIBALD MCLELLAN.

THE NEW BIRTH.

THROUGHOUT Jesus' teachings, and also in those of his immediate followers, great emphasis is laid upon the new birth as essential to salvation from all evil. In mournful tones Job tells us that the one who is born of the flesh is "of few days, and full of trouble," and Paul goes even farther when he says, "They that are in the flesh cannot please God."

In John's gospel we read that Nicodemus, a learned and deeply religious man, came to Jesus to ask the meaning of his mighty works, saying, "No man can do these miracles that thou doest, except God be with him." He seemed to see much farther than did most of the theologians of his time, or of our day, in admitting this, and his words brought forth from the Master his memorable saying, "Except a man be born again, he cannot see the kingdom of God." Jesus went on to explain the wide difference between that which is born of the flesh and that which is born of Spirit, God. We find in the gospels, also the epistles of Peter, John, and Paul, as illumined by the teachings of Christian Science, that the one who is born of God cannot sin, neither is he subject to sickness or death.

It is not possible to overestimate our indebtedness to Mrs. Eddy for her profound and spiritual explanation of this subject, as given in the chapter entitled "The New Birth," in her "Miscellaneous Writings," an elucidation of the subject which is of inestimable value to the one who is seeking for the Christ-healing, and who may perchance be heavily burdened by ills which have come to him through belief in mortal inheritance. To such a one Christ, Truth, says as of old, "Ye must be born again;" and in the article to which reference has been made we read: "Nothing aside from the spiritualization—yea, the highest Christianization—of thought and desire, can give the true perception of God and divine Science, that results in health, happiness, and holiness" (p. 15).

Throughout this article, as everywhere in Science and Health and her other writings, our revered Leader shows the necessity for rising out of the belief in mortal and material existence,—that which is born "of blood," of "the will of the flesh,"—of the will of mortal man, as we read in the opening of the fourth gospel. Paul bids us "put off" this product of fleshly belief, even to the extent of dying daily to it, which in Christian Science we take to mean denying daily its false claim to life, substance, and intelligence. It is not enough to reach out with one

Digitized by Google

hand for the healing truth, and with the other to hold fast the desires of mortal and material belief, or to yield weakly to its doubts and fears. The one who is born of God realizes better each day his likeness to the perfect Father, and necessarily loses all resemblance to his former self. The law of Spirit is written within his consciousness, and it annuls the asserted "law of sin and death" which would hold one forever in bondage to suffering sense. As the spiritual idea unfolds, the Scripture is fulfilled, "The government shall be upon his shoulder." No longer will the body be the abject slave of fear and disease, but instead it will manifest the rule of the Christ, the dominion of which God's child can never be robbed.

Mrs. Eddy tells us that "the new birth is not the work of a moment" (Miscellaneous Writings, p. 15), and sometimes the process may seem slow to human sense, but the hours should all be gladdened with trust and hope, the days marked by some healing, and that acknowledged with thankfulness, for nothing else counts for all humanity as does the new birth, and all creation waits in glad expectancy "for the manifestation of the sons of God."

ANNIE M. KNOTT.

THE OFFENDING EAR.

THE habit of propagating error by what might be termed conventionally-good-form gossip, is very easily acquired and very generally consented to, but when one comes to think of the misunderstandings, bickerings, ill judgments, and alienations to which it leads, he wonders that every sensible person, not to say Christian, has not awakened to its blighting significance and begun a positive and continuous resistance to its temptations.

Many people who in social intercourse would instinctively recoil from introducing topics that "naturally" as we say, nourish this wrong, find themselves upon occasion too superficially courteous, or too inherently cowardly to place any noticeable obstacle in the path of an ignoble conversation which others have precipitated. They are thus unwilling hearers at the first of that to which, not having dared to be a Daniel, they soon become accustomed, and later on, perchance, traders in. Shocked by the discovery of some wretched outcome of this error-talking habit, they may honestly undertake to "quit it;" but though they succeed in checking their own impulses, unless they begin to curb the impulse of others by refusing to hear as well as to indulge in unideal comment, their best intentioned efforts at reform will remain hopelessly handicapped.

Said one, "I have seen the deplorable results of this habit and I want you to know that of late I have been mum as a mouse." "Well done, I believe you," was answered, "but you have made it quite clear in our conversation today that your self-education in this matter is not yet half complete, for what you have told me gives full proof that though you may have said nothing, you have been 'listening at large.' When you simply refuse to hear what had better never have been spoken, you will address your corrective effort to cause instead of effect, for if you allow no evil speaking to enter your door you will have no comments in store to receive the impress, possibly the distortion, of your own prejudice and be passed along to others."

Christian Scientists have been well instructed not to be hospitable to the products or the mesmerism of a busy tongue. "Learn what in thine own mentality is unlike 'the anointed,'" writes Mrs. Eddy, "and cast it out" (Miscellaneous Writings, p. 355). This will prove an exceedingly profitable business. "To keep the mental home a sacred place . . . white with purity," as one has said, is certainly to deny absolutely its use as a dumping-ground.

This refusal to listen to error always brings a double return in values. It not only cultivates the spirit of watchfulness over our own words, while lessening both the likelihood and the possibility of becoming pedlars of ill ourselves, but if the denial is tactful and loving we shall administer a rebuke to the thoughtless talebearer which will have a sweet savor of "the things that be of God" and not of men. To set up such a standard in many a home and community would be to inaugurate what might easily prove a beneficent revolution.

There are circumstances under which it may become necessary to be indifferent to a lot of mud in order to command the facts upon which we must base a just and legitimately demanded judgment, but apart from these rare necessities concerning which we have been counseled "never [to] breathe an immoral atmosphere, unless in the attempt to purify it" (Science and Health, p. 452), there is no hindrance to our reform, and we may well think of what it would immediately mean to our standing and influence for good, the respect we would gain, if we all took radical ground in this matter of an inaccessible ear to every unscientific or otherwise questionable and gratuitous statement. Our reputation for peculiarity in this respect would be of tremendous practical value to the cause, and surely prove entirely in keeping with both our pledges and our profession. "Take heed," said the Master, "what ye hear."

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The Sunday evening service is omitted during July and August. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

CHICAGO, ILL.

That the work of the Christian Science committee for the distribution of literature, in equipping and maintaining a reading-tent for the benefit of the soldiers during the recent military tournament was much appreciated, is shown by the following extract (which we are privileged to use) from a letter addressed to its chairman by the tournament manager:

"We wish to thank you for installing your tent, which was splendidly equipped and afforded much comfort and recreation to the soldiers encamped in the park.

"More than this, the work which you carried on contributed in a large measure toward the maintenance of good moral conditions, and we are correspondingly appreciative of your efforts."

BELMONT, N. Y.

The Christian Scientists of Belmont wish to report progress in the work of the movement in this town. In December, 1906, three people interested in Christian Science came here from different parts of the country, and began to hold regular services at the home of one of the number. From that time on other persons gradually became interested, and in March of 1910 we organized ourselves as a society. We were then holding services in a room in a private residence, but in December, 1910, we moved into larger quarters, in the parlors of Ward Hall, where our services are now held, with an average attendance of eighteen. While our growth may seem slow, we are not discouraged, remembering that we must not "weary in well doing: for in due season we shall reap, if we faint not."

THE LECTURES.

EAST ST. LOUIS, ILL.

Bliss Knapp lectured on Christian Science at East St. Louis, Ill., Tuesday evening, May 9, before a large and attentive audience. Alvin J. Mote, first reader, introduced the speaker as follows:—

Christian Scientists do not proselyte, but depend entirely upon the merits of their religion and its utility, its power, its effectiveness at all times and in all places, as demonstrated in their daily lives, to win it recognition. We welcome warmly, however, those seeking to know more of this truth, and gladly extend a helping hand to those who desire to investigate our teachings. Knowing as we do that knowledge means growth and that true knowledge consists only of the knowledge of God and His ideas, we are ever seeking by means of these lectures, our reading-rooms, and through our literature to disseminate the real facts about Christian Science and to correct any false reports or impressions that may be prevalent regarding our religion. Christian Scientists believe they have a message for you, and one that should command your earnest attention.

Correspondence.

JACKSON, MICH.

Willis F. Gross delivered a lecture on Christian Science at the Athenæum Thursday evening, May 18. He was introduced by the Hon. T. E. Barkworth, who spoke in part as follows:—

The past century has been the demonstrative age of the world's existence; largely, however, in the world of physics, but the strength gained from it will stimulate to effort in the century before us in things which pertain to the inner life. I do not hesitate to say that the questions which interest the promoters of this gathering are of importance to me and to every searcher after truth. Any investigation which has for its foundation the Bible, a book which I love and which I have studied for many years, is of interest to me, and the questions under discussion are fundamental and demonstrative. We do not necessarily agree with all of the utterances, even of those with whom we are in general accord, but I never listen to the discourse of an earnest advocate of righteousness without being helped by his spirit, even though I may differ from him in his philosophy.

This is a practical age. Experience and result are enlightening. The effect upon lives, physically, mentally, and spiritually, of the fundamentals of truth by which these lives are guided, is something to which right-minded persons should give attention; and I assure you that the gentleman to whom we shall listen represents a very scholarly and able body of men and women, and that he will discuss a subject of the deepest and most sublime import.

Correspondence.

SAN JOSE, CAL.

The lectures on Christian Science at the Victory Theater, provided by the local church, invariably have attracted large audiences, and the lecture last evening [May 19] by Bicknell Young was no exception, as the theater was filled to overflowing. Mr. Young was introduced by Harry A. Loomis, who said in part,—

Every earnest student of Christian Science knows that it is built on the Rock, Christ. He is confident that the everlasting arms of divine Love are upholding and guiding all its activities. Therefore, he realizes how little the cause of Christian Science is dependent upon any mortal. But he also knows, from his own experience, how greatly every mortal needs Christian Science. There are right here in our own city a large number of people who gladly testify to the fact that Christian Science is daily giving them a truer, brighter sense of life, and making them healthier, happier, and more useful.—*San Jose Mercury.*

MILWAUKEE, WIS.

William R. Rathvon delivered a lecture on Christian Science May 22 and 23. James Phelps, first reader of First Church of Christ, Scientist, under whose auspices the lecture was given, introduced the lecturer and spoke in part as follows:—

I voice the profound conviction of a host of intelligent people when I say that Christian Science is the most important theme before mankind today, for it affects our present and eternal welfare. It promises an escape from sin, disease, and death, from discord, dread, and fear. It promises peace, happiness, heaven,—here and now. In "Retrospection and Introspection" (p. 31) Mrs. Eddy writes: "From my very childhood I was impelled, by a hunger and thirst after divine things,—a desire for something higher and better than matter, and apart from it,—to seek diligently for the knowledge of God as the one great and ever-present relief from human woe."

How simple our problem becomes when viewed in this light! How important also that our knowledge of God should be correct, scientific! Christian Science has been on trial for forty-five years, and it is becoming understood by an ever increasing number of God-fearing men and women; it is exerting an influence for good that cannot be measured by the number of its avowed adherents.

Correspondence.

MINNEAPOLIS, MINN.

Frank H. Leonard delivered a lecture on Christian Science under the auspices of Sixth Church, Sunday, May 28, at the Auditorium, which was filled with an interested and appreciative audience. He was introduced by Ralph Wheelock, secretary to Governor Eberhardt, who spoke as follows:—

The one scheme of life, the one system of philosophy, the one code of ethics which has withstood the test of time and which has met all of the tests to which it has been submitted, is that embodied in the gospel of Jesus Christ and exemplified in his life while upon earth. The one thing about what is known as Christian Science that has appealed to me since I have become more or less acquainted with its spirit is that it seems to be based directly and simply on those teachings and the example of that life. That, to my mind, accounts for the wonderful growth of this organization, for the marvelous spirit of earnestness and sincerity of faith which marks the followers of this particular form, not of belief, but of the expression of a universal belief, for at the bottom of all religion is this simple, practical gospel of Jesus Christ; and any man or any teacher who starts with a clear understanding of that basic law has always a message which struggling and suffering humanity will receive and will profit by.—*Correspondence.*

BLOOMINGTON, ILL.

A lecture on Christian Science was delivered by Prof. Hermann S. Hering in the church edifice, May 29. He was introduced as follows by Miss Flora Schneider, second reader:—

The time is not far distant when the subject of Christian Science will need no introduction, for mankind is rapidly learning that "the law of the Spirit of life in Christ Jesus" does bring freedom from "the law of sin and death." The constant application of the absolute, unchanging law of God, as taught in Christian Science, enables man to manifest his God-given dominion over all physical and mental discords. The realization of this law, as demonstrated by Jesus, resulted in the so-called miracles, which were simply

Digitized by Google

the natural effect of an understanding of God's law, an understanding which resulted in the fulfilment of that law.

In Isaiah we read: "The work of righteousness shall be peace; and the effect of righteousness quietness and assurance for ever." Mankind is struggling, hoping, and praying for this peace and assurance of safety from all evil, and Christian Scientists are realizing that these can be gained only through righteousness, which is right thinking. They who love the law of God stand for the true peace movement, which means the destruction of all sin, sickness, sorrow, and death, as learned in Christian Science, and this is being echoed in the world's peace movements of today, which are being heard and felt in their loving attempts to unify nations and indeed bring "on earth peace, good will toward men."

Thousands are learning through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy that what was scientifically possible in the days of Jesus Christ can be effected now in proportion as one gains a clear, scientific understanding of God and man's relation to Him.—*Correspondence.*

SPOKANE, WASH.

Under the auspices of Second Church, the Hon. Clarence A. Buskirk delivered a lecture on Christian Science at the Auditorium, June 2. He was introduced by John M. Henderson, first reader of First Church, who said:—

We are here this evening to listen to an explanation of the teachings of Christian Science, and the presence of this large audience evidences its desire to understand these teachings. Some one has aptly said that "the final test of any religion is its inherent, spiritual dynamic; such a power is spring in the spiritual world, a breath of God which makes all things new."

Unearthed from beneath the mass of the dead rites and ceremonies of dogmatic theology, where it had lain dormant for centuries, and quickened into flower and fruitage, the evangel which Jesus preached in the land of Judea and by the sea of Galilee is proclaimed anew to our day and age through the system of Mind-healing demonstrated by Mary Baker Eddy, its Discoverer and Founder. And the mighty works done in the time of Jesus the Christ, which were the "signs" following those who believed (understood) the lessons taught by the great Teacher, are possible today and, indeed, are the badge of discipleship, for, as Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 494), "it is not well to imagine that Jesus demonstrated the divine power to heal only for a select number or for a limited period of time, since to all mankind and in every hour, divine Love supplies all good."

What marvelous changes have been effected in the affairs of the human family through the energizing influence of this inspiring message! The prophecy is fulfilled: "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined." The promised Comforter is come, and again the blind see, the deaf hear the words of the book, the lame walk, the lepers are cleansed, the sick are healed, the poor have the gospel preached to them, and the wanderer returns from the far land of famine to the feast prepared to welcome him back to the Father's house.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Biggsville, Ill.—Hon. Clarence A. Buskirk, High School Auditorium, Aug. 24.

Gloucester, Mass. (First Church). — Judge Clifford P. Smith, Bradford Hall, Y. M. C. A. Building, Aug. 21.

Randolph, Vt. — Bliss Knapp, Bethany Parish House, Aug. 17.

TESTIMONIES OF HEALING.

With an earnest desire to offer the cup of cold water to some weary traveler, and thus in the truest way express my loving gratitude for Christian Science, I give this brief testimony of my healing from the distressing effects of heat. With the first warm days of spring I became oppressed by a feeling of weakness and dizziness, which seemed to affect my head. I tried to resist it both by determination and by material remedies, for it interfered very seriously with my plans for work and pleasure, but at times I was so completely overcome as to be unconscious, and for days felt almost too weak to sit up.

When I received my first Christian Science treatment in February I did not mention this condition to the practitioner, as other needs seemed so urgent, but the eager study of our text-book, "Science and Health with Key to the Scriptures," began at once to unlock the treasures of the Bible, and for the first time I grasped the potent meaning of those familiar verses from the Psalms, "The Lord is thy helper: the Lord is thy shade upon thy right hand. The sun shall not smite thee by day, nor the moon by night." In our text-book I also found this healing thought, "The planets have no more power over man than over his Maker, since God governs the universe; but man, reflecting God's power, has dominion over all the earth and its hosts" (Science and Health, p. 102). I then saw that the heat of the sun could not make me a sufferer! On page 510 of the text-book I read, "The sun is a metaphorical representation of Soul outside the body, giving existence and intelligence to the universe." Then the sun could not deprive me of God-given intelligence, or consciousness, and energy. I could not be the victim of unconsciousness or even of weakness. Before the warm days came, this happy thought had become a solid conviction, and the ten succeeding summers have held no terrors for me, though I have spent eight hours a day in study during excessively hot weather and have labored in the yard at home for hours in the hot sun.

How can I be thankful enough for this healing, not only of physical misery, but of that feeling of dread and utter helplessness and uncertainty, which is replaced by harmony and confidence in God!—Renette K. Butler, Peoria, Ill.

Although we ourselves are not Christian Scientists, we are glad to corroborate our daughter's statement of her healing in Christian Science.

James N. Butler and Florence L. Butler, Peoria, Ill.

[Translated from the German.]

Since childhood I had been afflicted with all manner of disease, and when only a child underwent several operations. As I grew older, a trouble which the physician called scrofula again spread on the left knee, and later over the right arm. The physician prescribed some treatment which relieved the condition at first, but had no lasting effect. I was unable to use my right arm in working; the physician besides had told me not to move about at all, as in his opinion the least concussion might prove fatal. As I did not want to submit to another operation, we tried other treatment, but I experienced relief only for a short while. However, man's extremity is God's opportunity.

After we had tried everything else, relatives who were themselves seeking for health called my attention to Christian Science. Soon after I went to Berlin, and a practitioner treated me. After the first treatment I improved, and experienced a sense of peace and contentment unknown before. I was under treatment for two months, and during that short time was completely healed, although absent treatment was given for some time longer. During these four years inharmonious conditions which have tried to

Digitized by Google

manifest themselves have all been overcome with the help of a faithful practitioner, and I have also been enabled through my small understanding to prove the power of Truth.

Although I have taken but few English lessons, and had no knowledge whatever of this language before, yet I am able to read the text-book, "Science and Health with Key to the Scriptures," and enjoy doing so. I am very grateful for the *Herold,* which enables us to understand this teaching. As we have no opportunity of attending services, and are with our relatives the only Christian Scientists in this locality, we are grateful that we can hold our service alone, if required. I am grateful for the physical healing, but I am still more so for the spiritual blessings which Christian Science brings us. I am aware that there is much error yet for me to overcome, but I shall earnestly strive to prove my gratitude by becoming purer and better with advancing years. For all these blessings I am infinitely grateful to God, and to our beloved Leader, who has shown us the way to divine Love.

META POLLNOW, Naugard i. Pommern, Germany.

It occurs to me I have not been obedient in withholding my testimony to this late day, so I will try to put in practice the following from Science and Health (p. 393): "Rise in the strength of Spirit to resist all that is unlike good," and make good that which I have intended to do for fourteen years. The first time I heard of Christian Science was in 1886, when I was attending school in Boston. The night before school closed, a party of our class had been to Brookline for an outing, and on our way home a doctor said, "You girls have been to every place of interest except the Metaphysical College." I shrank from the suggestion, but the doctor said, "Oh, you must be broader than that!" It was of course ignorance which made me express myself as I did. While at school I had had teachers and classmates that were Unitarians and Universalists, and hearing them talk I felt they had better mental food than I had; so I wrote home to my parents to that effect. My mother replied, "You must remember you are a Presbyterian. Your father says you must be careful with whom you associate, for he had a cousin that went to Boston and got very much mixed in his thought."

In 1893 my mother was taken sick, and the physicians and all the family (except myself) declared that her time had come to die. I felt that God was not a good God to take away my mother. The thought came to me that perhaps if I were willing to pray "Thy will be done," she might be spared to us, not knowing then that it was God's will she should live; but I finally knelt and prayed, "Thy will be done," trusting that God knew best. Only a few hours elapsed and she was better. I held her thus in blind faith for one year, when she was taken sick again; and when she passed on I could not be comforted or reconciled. I felt it was not right.

I heard some of my friends speak in derision about Science and Health, the book which the Christian Scientists used. Some said it was a book not fit to be in any home. For weeks, every time I met the same ladies, they were discussing Science and Health, and finally I said, "If it is such a bad book, why do you talk so much about it? It creates a desire in me to read it, so I can enter into your discussions. Where can I procure one?" One of the ladies said, "I have one, which you may have to read." I borrowed it, read it, and sent for one of my own, and it has been my daily companion ever since. I felt the truth in every word I read in Science and Health, and came to the conclusion that the church triumphant would be demonstrated at once. In fourteen months from the time my mother passed on my sister was taken sick. Physicians diagnosed her case incorrectly and she passed on, being sick only one day. I called it a crime, yet I was silenced, and no one else dared to protest. In three weeks' time my father also passed on.

Three years later my brother, living in Philadelphia, Pa., was having Christian Science treatment, but gave it up, called in *materia medica,* and passed on very suddenly. The shock was so great that I collapsed; my husband and family called in *materia medica;* four physicians and three nurses held sway in our household. I begged for Christian Science treatment, but not until the doctors said, "We have done all we can," was a practitioner called. Absent treatment healed me; I was out riding in ten days' time. I had only two weeks' treatment.

Words fail me to express my gratitude to our Father-Mother God, that our Leader has been the pure channel to give the truth to this age; that I as well as all of humanity can be healed of every disease under which mortals are held by man-made beliefs. The physical healing is but little, compared with the spiritual uplift one receives from the healing of sorrow. I can truly say with our dear Leader that "sorrow never leaves us where it found us" (Science and Health, p. 66). We know that Mrs. Eddy has given us an exact rule in "Science and Health with Key to the Scriptures" and as we understand and practise the rule we can have harmony here and now. It behooves us to live as high as we know how daily, then more light will come. I know that as I grow to understand more about God I shall be able to realize the truth taught by our Saviour, Christ Jesus, and be free indeed.

MRS. MARY KATHARINE BEST HICKS, Williamsport, Pa.

I cannot sufficiently express my gratitude for all the blessings I have received since first hearing of Christian Science. For thirty years, previous to 1909, I had suffered continuously from numerous complaints, the chief of which were an internal displacement, heart trouble, and an affection of the eye. There were also several minor troubles, complications of the above, which caused intense suffering. For three years I could not lie down in bed properly; I was obliged to wear an abdominal belt, also an elastic bandage for varicose veins. At times dropsical conditions were very apparent.

At this time a friend invited me to a Christian Science testimony meeting, and after hearing the testimonies which were given I decided to ask for help. A practitioner took my case in hand and gave me treatment for several weeks, during which time I was greatly benefited. A few weeks later there was a return of the heart trouble during the early hours of the morning, at which time there was no means of reaching a practitioner; so, taking our dear Leader's words, "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea" (Science and Health, p. 495), as my guide, I was enabled to overcome the attack in a very short time, and have had no further return of this trouble. As I gained a clearer understanding, I was able to leave off the belt and bandages, also glasses which I had worn as protection for my eyes.

I am now perfectly healed, and my heart is filled with gratitude to God for the revelation of Truth gained through the teachings of Christian Science. My hope now is that my daily life will be always an expression of love to God, and of gratitude to Mrs. Eddy for the spiritual light which I have received.—MRS. EMMA SWIFT, Halifax, England.

In the fall of 1896 I was taken ill with what a physician pronounced an acute stomach affection. He gave me medicine, and I thought I was cured. In a short time, however, the trouble came back, but though the doctor again prescribed for me, the remedy gave me only temporary relief. This went on for some time, and at each recurrence the disease was more troublesome and difficult to expel, and the attacks were of longer duration. I finally had to diet, and frequent vomiting, with hemorrhage, caused me to be

Digitized by Google

in constant dread of everything I ate or drank. At length I became so thin and weak that I could scarcely attend to my business. Then I grew despondent, having lost all hope of being well again.

One Sunday, being alone, a stranger in a strange town (my family was in another state), I decided to take a short walk. It was very cold and the ground covered with snow, but as I strolled back to the hotel I passed a beautiful cottage, with mountains in the background, and I tried to persuade myself that I could enjoy the scenery. I thought how those who lived there must enjoy their evenings, not knowing that in this very home I was to receive the greatest blessing which could ever come to one—freedom from the fear of sickness and sin through the everlasting Truth revealed in Christian Science.

That evening, while sitting by the fire in the lobby of the hotel, the pain was so severe that I thought I should certainly die if I did not get relief quickly; so I asked a gentleman sitting near to direct me to the best doctor in the town. He gave me the names of two or three, but added in a brotherly way, "How would you like to try Christian Science?" I replied that I would try anything. We put on our overcoats, and he took me to the very cottage I had admired that afternoon. How cozy and peaceful it seemed to me when we were admitted. A small party of ladies were eating a cold lunch, and I thought if I should eat like that, it would kill me. On being introduced to the practitioner, I stated my condition and desire. She gave me a treatment, and told me to come again the following evening. I asked her what I should eat, and she told me to eat anything I desired, and to have no fear in doing so. I had some uneasiness about it, but thought I would test the rule. I ate heartily of substantial food, and was greatly surprised to find that I had not the slightest symptom of pain or distress. That night was the first in a long time that I had slept soundly and free from suffering. In four treatments I was perfectly well, and have remained so. Never before have I felt better than I do now, and the light is beginning to dawn on me in regard to what Jesus meant when he said, "Take no thought for your life, what ye shall eat, or what ye shall drink."

My little daughter was cured of an acute attack of illness in one treatment. Blessed are we indeed who have gained some understanding of Truth, Life, and Love, and God be thanked for the one who has given us the true meaning of the Bible as interpreted by our text-book, "Science and Health with Key to the Scriptures."

W. B. DUVIC, Bishop, Cal.

I feel it a duty as well as a great privilege to tell others what Christian Science has done for me. I came to it for physical healing, although I find that this is but a small part compared with the understanding it gives us of God, and enabling us to know that we live, move, and have our being in Him. From early childhood I was subject to a catarrhal affection. I had tried different doctors and taken different kinds of medicine, but nothing seemed to do me any permanent good. I would be relieved at times, but was never healed until I took up Christian Science.

My healing was slow, but I am grateful that it was so, because it awakened me from my apathy and necessitated a more prayerful study of the Bible and Science and Health. I was also healed of a very serious trouble with my foot; but through the understanding of God as revealed in Christian Science it was wonderfully met in ten days. I have had the privilege of attending the Christian Science Sunday school, which has been a great help to me. The Lessons which are taught there can be made practical in our everyday life. Christian Science teaches us how to keep the commandments, spiritually as well as materially. Every commandment means much to us, because Jesus said, "If ye love me, keep my commandments."

For the physical healing I am indeed very grateful, first to God, and then to Mrs. Eddy for revealing to us this saving truth which Jesus taught. If we practise this truth it will make us free, not only from physical ills, but from mental and moral ills as well.

MISS ELLA YORGER, St. Louis, Mo.

It is impossible for me to enumerate all the blessings that have come to me in Christian Science, for which I have reason to be grateful, but I shall endeavor to state the more important ones. The exactness of this invariable rule of right is to me the most comforting phase of this Science. We very soon learn that just in the ratio we apply the Principle and rule we get results; that God, good, is no respecter of persons; that it is not our emotion, our pleading, but our clear understanding and knowledge of Principle that accomplishes results. In multiplying we use our knowledge of the rule, and by industriously continuing the application of the rules of mathematics we may persevere until we become qualified mathematicians. In every case, in so far as the rule is faithfully applied it cannot fail to produce a correct result.

When I had been in Christian Science only a few weeks I was healed of a bowel disorder from which I had suffered all my life. In a half hour, through realizing that there is "no inaction, diseased action, overaction, nor reaction" in divine Mind (Science and Health, p. 428), the ailment of years was overcome and relief was almost instantaneous. After this proof I knew that the Principle of Christian Science is mighty and the rule operative, and I have been endeavoring to apply it in my daily life. I have made mistakes, but each mistake has helped me to see the reason for it, which has invariably been that I have leaned too much to mine own understanding and not enough on the divine. At the time of this healing I was tempted to call in a practitioner, but I reasoned that God is everywhere present, He was with me, and I had no need of other help. I then repeated the "scientific statement of being" (*Ibid.*, p. 468), and knowing that there is no inaction in Spirit, the help came.

Not long since I applied the Principle and rule of Christian Science in the case of a severe headache with almost immediate results. When I went home from the office in the afternoon I could hardly hold up my head, and when I entered my room I locked the door and seated myself with Science and Health. I kept on reading, and in about an hour I had completely forgotten that I had had a headache and went singing down to dinner. How grateful we should be to know that "Love never faileth," that the law of God is operative now, recreating the universe, that there is nothing that can hinder the perfect working out of the real man's perfection. When we think of our blessed Exemplar, Jesus the Christ, who overcame the world, and even when the hatred of the Pharisees resulted in his crucifixion proved once more the truth of what he had affirmed; when we think of our Leader, of how she toiled on alone, bearing her precious message of the healing power of Truth, and of her meekness and patience with the myriad manifestations of mortal mind in one form or another, it ought to make us individually more humble, more willing to wait, working patiently at today's lesson, leaving the results to infinite Mind. Let us rather rejoice in the full fruition of the work of our blessed Master and the great spiritual awakening consequent on the present declaration of this Science, and be grateful.

Throughout my entire family we have had abundant proofs of healing,—two cases of scarlet fever were overcome in a few treatments; one case of diphtheria; chronic rheumatism, alcoholism, the use of profanity, and a bad temper were healed in one case, nervous collapse in another; asthma so aggravated that the doctor gave the patient only a few days to live, was healed in a very short time and the patient lived

Digitized by Google

five happy years while studying Christian Science. For the help that Christian Science is to me in my business I can never return enough gratitude; in fact, I have proved the truth so often in this line that I have almost ceased to think of my business, and now realize that whenever we are proving Principle, no matter how material the work seems to be it is our Father's business.

The world is awake and hungry. Materiality is failing to satisfy the cravings of the higher nature, and everywhere I go over the country I find such a changed thought in regard to Science among educated people everywhere, such a tolerant attitude; and in many cases, where they know a little about it, an almost greedy desire to learn something that will help them. For this changed attitude I am most grateful, because I realize it has come from the faithful application of Principle by professing Christian Scientists, oftentimes in the face of bitter hostility. It has come from the lifting up of the Christ-idea, and verily it has drawn men unto it. As we humbly live this truth, as we daily strive to feed the hungry with the living truth, we find that the spoken word or unvoiced petition is never lost, that it will redound to His honor and glory some time, somewhere. We simply have to realize that this law is exact, and that not one jot or tittle can be added to it or taken from it by mortal mind. It is this certainty as to results which is its safeguard. The fact that as we sow we reap, that we can correct evil only with good, and that evil will continue to punish itself until all belief in it is destroyed, teaches us that hypocrisy is fatal. Mrs. Eddy tells us in "No and Yes" (p. 8), "We can rejoice that every germ of goodness will at last struggle into freedom and greatness, and every sin will so punish itself that it will bow down to the commandments of Christ,—Truth and Love." Realizing the truth of these words, we learn that our duty is with the now; that as we sow the seed of Truth, confidently trusting in Principle, there is no law that can operate to hinder its perfect work.—MINNIE LEE RYNEX, Salt Lake City, Utah.

I wish to testify to the healing I have received through Christian Science. For over a year I had been troubled with a very serious throat disease, and for quite four months before having Christian Science treatment I could not swallow any solid food at all; but thanks to God, after about six weeks' treatment my throat is quite healed. Christian Science has also aroused in me a desire to know the truth, and I am daily studying the Bible and our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I know that these books contain the truth, and that the truth is making me free, because severe headaches which have troubled me ever since I was a girl have entirely disappeared. I will also mention that an extremely irritable disposition is slowly disappearing under the influence of Truth. I am indeed thankful to God for the joy and brightness I see in those who follow the teachings of Christian Science, and this is worth a great deal to the world.

MISS HELENA JANE WRIGHT, Richmond, Yorkshire, England.

From a heart overflowing with love and gratitude for the many blessings which Christian Science has brought me, I send my testimony, with the hope that it may inspire other seekers after Truth. For five years I suffered from continual headaches, said to be caused by my eyes. I had the best oculists that a university town could offer, but they could only give me temporary relief. In July, 1908, when in a state of despair, with no hope of ever getting any permanent relief, I was led to Christian Science, knowing nothing about its teachings, but longing for escape from my physical and mental conditions. I commenced to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also to attend the Sunday and Wednesday evening services. About three months later, my glasses fell off, and I put them away and have never had them on since. During this time I have been perfectly free from headaches, see better than I ever did before, and I now use my eyes constantly.

I am truly grateful for the physical healing, but this seems very small compared with the spiritual healing which I have experienced. It has brought into my life joy, peace, and contentment which I had never known before.

ELDORA COOPER, Ann Arbor, Mich.

I am indeed glad to give thanks to God for His many blessings, especially for the truth which heals all our diseases if we trust in Him. I suffered for three years from an illness said by doctors to come from a relapse after an acute attack. I would be in bed from one to two days, with great distress in my head. Nothing would give me relief except hypodermics, and those for just a little while. The doctors said I might never get over these attacks. I got much worse, suffered in all my body, and could eat very little. I determined to consult another doctor, but he said he could not cure me, that he could only build up my system, and would have to perform an operation for a growth on the stomach which later he said was malignant. I told him I would take his medicine, but would never submit to an operation. I took the medicine, but it did me no good; in fact, I suffered more than ever, so that I could not sleep or rest.

I then met a Christian Science practitioner, who told me that God did not will His children to suffer, and that He had the means to heal me if I would trust Him. I was looking for some material means, but I told the practitioner that if she could do me any good, to treat me. She did so, and I never felt such a sense of rest in my life; I slept like a child from one week's treatment. I attended the Wednesday meeting, also went twice Sunday. All said I looked like a new person. My husband was suffering greatly from an injury to his back sustained some thirty years before. It had given him a great deal of trouble, and material remedies had been of no benefit. After my healing he consented to have absent treatment in Christian Science. The treatment helped him physically, and also made some financial and other troubles easier to bear.

The study of the Bible and Science and Health, with the Lesson Sermon daily, also the *Sentinel*, with its weekly messages, and the *Journal* have helped me more than tongue can tell to overcome many difficulties. I am striving daily to help others, that they may not grope in the dark as I did. Glory be to God that He led me to the truth by the overcoming of suffering. I thank God, and also the unselfed Leader who showed us the way to the Christ-healing. I will try to follow, and give God the praise.

SUSAN B. MERSFELDER, Texico, N. Mex.

Through the teachings of Christian Science I have found health, peace, and happiness, and it is with deep gratitude that I acknowledge the joy which Christian Science has brought to me. For nine years I was a sufferer, depending upon *materia medica*. I had fallen once, twice, yes, three times under the weight of my cross, and I was afraid I should not rise again; but after I had lain unconscious for fifteen days and was so weak that no one but the nurse was allowed to enter my room, the aid of a Christian Science practitioner was asked. In a few hours consciousness returned and my mind was clear, although I did not know for some time that I was under Christian Science treatment; but when it was made known to me, I gave myself up wholly to it and decided that I would understand this teaching for myself. It was some months before I was entirely cured of my bodily ills, but I am now, after three years' study, a healthy woman. I have gained greatly in flesh and my friends say they would not know me.

Digitized by Google

I have also found peace, "the peace of God, which passeth all understanding," and John's words, "I saw a new heaven and a new earth: for the first heaven and the first earth were passed away. . . . And there shall be no more death, neither sorrow nor crying, neither shall there be any more pain: for the former things are passed away," mean much to me. I am truly thankful to God for my healing, also to Mrs. Eddy, who was able and willing to make known to us the power of Christ, Truth, in time of trouble.

MRS. D. A. MATHESON, Provincetown, Mass.

In November, 1909, I was healed through Christian Science of a tubercular growth in the stomach. The torture I had endured I will not describe; two doctors had said I could not possibly get well. After I had been in bed fourteen weeks, and was getting worse daily, a very dear friend told us of Christian Science, and a practitioner was called in. After the first treatment the pain vanished, and on the second day I was able to get out of bed, dress myself, and walk about without any help. After a few days the growth began to disappear, and I have not had any pain or taken any medicine since.

This is not the only benefit I received, as I have been healed of varicose veins, hemorrhoids, and severe heart trouble which often caused me to faint; but now, thanks to God and Christian Science, I feel stronger than I have done for some years. I am able to do my work without feeling the least bit tired, and I hope that my testimony may be the means of bringing some poor sufferer to God for health and happiness such as I have myself experienced. My two little girls have been healed of whooping-cough, and I am very thankful that I heard of Christian Science.

ANNIE WILKINSON, Halifax, England.

Every hour of every day I give thanks to God for the gift of Christian Science; for the pure thought of our Leader which brought it to us, and lastly that I was able to see and accept it. On the seventeenth of June, 1910, in getting off a street-car I failed to look with care for vehicles, and as I was about to step to the pavement I felt myself hurled with great force to the hard paved street. I knew instantly that I had been struck by an automobile. It was stopped in time not to pass over me, though the wheel pressed me closely, yet I seemed to know no fear. Men lifted the wheel, then helped me up, and as I stood there the car conductor was demanding my name, a near relative (not a Scientist) who had been on the car with me was filled with terror for my probable injuries, the people crowded around me looked frightened, and yet I was able to announce calmly that I was not hurt. The owner of the machine and my relative begged me to get in and be taken home, and on seeing the sorry plight of my dress skirt, I gladly accepted. All the way I gave thanks to God for His protecting care of me, the ninety-first Psalm being constantly in my thought.

On reaching home I preferred to say nothing of the experience, I being the only Scientist. My relative besought me to "keep quiet," but I took up my usual line of activity, and among other things entirely repaired the damaged dress. The only evidences of the fall were bruises and abrasions of my arm. That night was one of my nights to see to the material needs of an ill and aged father, and during the early night I quickly fell asleep after attending him. Later, when the body was rested, the mortal thought began to put before me the "might-have-beens," but through the aid of passages from our inspired text-book, Science and Health, I was able to shut them out. Truly may we say,"Great peace have they which love thy law, for nothing can offend them."

MRS. MINNIE C. ALEXANDER, St. Louis, Mo.

FROM OUR EXCHANGES.

[*Continent.*]

Consider those who sink their lives in money-getting. "How small the world has come to be!" When the uttermost concern of a man is to multiply the accretions of his property, when the most eager and laborious use of his brain is in constant, cunning estimation of chances to turn a bigger profit in his next transaction, when with unflinching hardness of heart he listens to the grinding of the commercial machine that abrades new wealth for himself out of quivering flesh and blood; when money, money, and again money walls in the whole treadmill round of his life; when there is no fragment remaining in him of a gentle and mollifying recollection that other men also love life and hope for prosperity and desire comfort for their wives and children; when there is no consideration of the spiritual call to use wealth for human service, no sensitiveness to the finer business motives lying in the conception of trade itself as an instrument of blessing to the civilized world, no estimation of the greater wealth in true character and the unfeigned respect for one's fellows—nothing in all the horizon but self and gold—how small, how constricted, how mean has the money-getter's world become!

[Rev. A. E. Owen Jones in *Christian Commonwealth.*]

It is fair to assume, I think, that most of us have been influenced by the work of literary and historical criticism. We have come to look at the Bible as a far more human book than we used to consider it. But though criticism has made the Bible more human, it has not therefore made it any the less divine. It still remains the word of God, because it remains the production of men who were in closest spiritual touch with God. We can no longer accept everything it says as literally true, nor everything it teaches as equally perfect and sublime. We have to estimate its literal truth by reference to the discoveries of science and history, we have to estimate its spiritual teaching by reference to the standard of Christ. We see it no longer a single book, where every word is literally exact and every principle completely divine, but as a series of books, written at different times, and using very different methods of instruction, in which can be traced the process by which the knowledge of God was gradually developed up to the highest point it reached before the coming of Christ.

[*Christian World.*]

The mental struggle of our time may be described as a search for reality; and the revelation granted to our time —for we may call it that—is the birth in it of the sense by which we are discriminating between the real and the various wrappages in which it is concealed. The lesson has been a hard one, but we are learning it. And here science and not theology has been its guide. Its method, regarded by the earlier ecclesiastics as a revolt against religion, has been the saving grace of our day; it has opened the way not only to physical, but to the heart of spiritual truth. It has shown theology the disastrous error into which it had fallen; the error of being arrogant where it should have been humble; of proclaiming itself an infallible teacher where its attitude should have been that of a learner; the error of asserting what it had not taken the trouble to prove; the error of condemning men who had realized that truth and not falsehood was the only atmosphere in which the soul could thrive.

[George A. Johnston Ross in *Continent.*]

There never was a time when the thought of the true end of religion as sacrificial lovingkindness was so widely recognized as now. I do not think we acknowledge with sufficient gratitude this signal work of God's Spirit, that

Digitized by Google

over so wide an area love should be accepted as the touchstone and evidence of a real religion. What a distance man has traveled since the days when not even morality, not even decency had any necessary connection with religion! Now we have no right to quarrel with the fact that many to whom the vision of this truth has come are outside the organized Christian church. To ignore or decry the operation of God's Spirit outside the organized church is to commit once more the very sin which the Bible through much of its history and prophecy most labors to root out.

[*Churchman.*]

Theories of the ministry cannot produce the convictions that are leading to the establishment of better relations between a divided Christendom. What is involved and what is needed at present is not so much the construction of new theories or the introduction of old doctrines of the ministry, as the bringing of all doctrines and theories into subordination to Christ's words and commands. His work must be done as he directed it should be done, under the terms of such devoted personal loyalty and faith that the idiosyncracies of historic communions can be forgotten and forgiven in an overmastering enthusiasm to carry out today Christ's mission to mankind and to realize the brotherhood of Christians as the supreme law of all his followers.

[Rev. Thomas W. Barbour, Ph.D., in *Christian Work and Evangelist.*]

It is time we put aside the sickly sentiment that whatever comes is ordained of God, for then we must charge up to the Almighty the evil as well as the good, the wicked and vile as well as the pure and holy, and such sentiment is obnoxious to all right-minded men. What we want to know, and know we must, is whether we are to struggle to meet the evils of life and make them good, or simply to sink into the habit of leaving everything in God's hands for Him to make good. If we are here for a purpose, then we are here to be a help to God, and in all ways to make our lives worthy of the confidence and commendation of the all-wise Master.

[Rev. Charles R. Brown, D.D., in *British Congregationalist.*]

Every great thing, whether of the individual life or of an institution, or of a movement, has its hour in some little Bethlehem of Judah, its hour when it lies in the manger of some stable, its whole future undecided. It has its hour of helplessness, its danger of being slain by some cruel Herod. You do not know the undiscovered potencies of that life. No one knows save He who looks with the eye that detects every precious thing and who alone is able to make reply because He can bring out the unrealized possibilities of each life.

[*Christian Register.*]

We hear much said of the religion of common sense. It is only common in the sense that every soul is at times visited by gleams and glimpses of divine truth, intimations not to be explained by known laws, that engender convictions relating to the other side of us, the side not material, but spiritual, that can and does converse with God when we enter the sanctuary of conscience, of purifying pain, of deep-seated remorse, or of divine peace.

[*Advance.*]

"Every one that is of the truth heareth my voice." Jesus was willing to stake all on that. If men honestly set about being true in the things which they know, doing the truth which is at hand, he will trust to them to accept his teaching in regard to the things which they do not know. Walking in the light which falls upon earthly things, they will believe his revelation of heavenly things.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

A photogravure reproduction of The Mother Church edifices and the Publishing House, with the parkway in the foreground, on sale by the Society, is specially adapted to framing for the home, as it measures but nine by fourteen inches inside of mat. Price, single copy, $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Urging a constructive national policy in the matter of business, George W. Perkins, the retired New York financier, proposes the following questions as fit subjects for a congressional inquiry:—

"Has the cost of articles made by the so-called trusts increased or decreased? have wages increased or decreased? has labor been more steadily employed and better housed—more generally employed and better satisfied? have there been fewer failures in the lines of business involved? have the so-called trusts increased or decreased our foreign trade balances? have the so-called trusts devised ways and means and provided capital for saving and utilizing waste products which could not have been done by smaller concerns? is the tendency to have the ownership of these large companies and the profits made by them enjoyed by a few men or by many men? Is the tendency to have these corporations in the future create, by their profits, large fortunes for a few men, as was the case in partnerships under competitive methods, or is the tendency to distribute such profits more generally among the people."

In an address at the twenty-fifth anniversary of the Michigan School of Mines, Director George Otis Smith of the United States geological survey declared that the objects to be sought by amendment of the public land laws are, first, purposeful and economical development of resources for which there is present demand, with retention of such control as may prevent unnecessary waste or excessive charges to the consumer; and second, the reservation to the people of the title to all resources the utilization of which is conjectural or at least the need of which is not immediate. The means that are essential to the attainment of these objects are, first, the classification of the public lands; second, the separation of surface and mineral rights; and third, the disposition of the lands on terms that will insure the highest use, enforce development, and protect the public interest.

Suit has been filed by the government in the federal circuit court against six railroad companies and three coal mining concerns, charging a combination in restraint of trade and asking that the combination be enjoined from continuing business. The government alleges that the ownership by Hocking Valley Railroad's amalgamation of the capital stock of the Toledo & Ohio Central, the Kanawha & Michigan and the Zanesville & Western roads and its connection with the mining concerns named has crushed competition. The government's petition charges that the combination thus formed affects four of the great coal mining fields; namely, the Pittsburg, the West Virginia, the Kanawha Valley, and the Hocking Valley. It is alleged that the six railroads are affiliated and that the three coal companies are also, not only among themselves, but with the railroad companies.

As the federal and state appropriations amounting to seventy-eight thousand dollars have been nearly expended, owing to the unusual demands made upon them by the exceptionally dry season, large fires, and heavy expenses, the two hundred men patroling the wild lands of Maine, assessed at forty-five million dollars, will have to be discharged. The men at the twenty-four lookout stations will be retained to guard the property as far as possible.

William T. Hornaday, director of the zoological park, The Bronx, N. Y., has issued an appeal to the Boy Scouts to protect the birds and wild animals of the country. He urges them to watch sharply for the violations of the game laws and to help to bring such violators to punishment. His reason is that unless something is done quickly all the game animals and birds will be exterminated.

With the statement that no single movement before the country today promises such big returns on the money invested, President Taft has definitely informed the officers of the American Association for Highway Improvement that he will make an address on the subject of the improvement and maintenance of public roads at the convention of the association to be held at Richmond Nov. 20 to 24.

The United States Senate, to which they have been referred for ratification, has lifted the injunction of secrecy on the general arbitration treaties signed with Great Britain and France. The two European powers declare there shall be no future wars between them and the United States, and the United States gives pledge to each of its determination to avoid armed hostilities with them.

Concerning the attitude of Congress and the departments toward the United States Steel Corporation, it is thought that the Stanley investigating committee will not recommend the dissolution of the corporation, but will urge its disassociation from the transportation business in the ore fields and abolishment of interlocking directors with other corporations.

Augustin Edward, the Chilean minister to Great Britain, has paid over to Ambassador Reid at London approximately nine hundred thousand dollars, the indemnity awarded the United States in the Alsop claim against Chile under the arbitral judgment of King George.

Admiral Togo, naval hero of the late Russo-Japanese war, is the guest of the nation in a tour of the United States.

International.

A deputation, representative of twenty-seven Australian societies and institutions and twelve corporations and district councils, waited on the commissioner of crown lands recently with a request that the area of one hundred and forty square miles set apart on Kangaroo island as a preserve for Australian fauna and flora, should be increased to three hundred square miles. The island is regarded as an ideal region in which to preserve permanently valuable collections of the various wonderful animals and botanical species distinctive of the continent. The island is adjacent to the mainland, being only some six hours' steaming from Adelaide.

A scheme is being developed to irrigate the Gezira, the triangular tract of country lying to the south of Khartoum between the Blue and White Niles. A dam at Sennar would allow of the irrigation of practically the whole of that vast area, although the project would involve a vast expenditure. In order, therefore, to illustrate the value of the tract when subjected to irrigation, a large pumping station is being constructed on the Blue Nile, four miles from Wad Medani, which will allow of the irrigation of at any rate a portion of the area. It is confidently expected that the land will produce excellent cotton.

The latest estimate of the gross expenditure connected with the royal visit to India is nine hundred and forty-two thousand pounds imperial and one hundred and eighty-three thousand pounds provincial expenditure. This sum has been fixed upon as a mean between mistaken extravagance and failure to give proper expression to the feelings of a great people highly moved by a unique occurrence, this being the first time that the people of India had had the opportunity of welcoming their British Emperor and British Empress.

By a vote of 131 to 114 the House of Lords accepted the "veto bill" of the House of Commons. The hereditary house, for centuries a power in British history, thereby practically agreed to be shorn of its power. It adopted Viscount Morley's motion not to insist upon the Lords' amendments to the parliamentary bill, which practically limits the power of the House of Lords to a two-year suspensory veto and vastly increases the prerogatives of the House of Commons.

Industrial and Commercial.

Two monster presses costing thirty-six thousand dollars were recently installed at the government printing office at Washington for printing postal cards. These presses were designed and constructed for this work, and rank as the fastest presses of the kind in the world. Each is capable of turning out two million two hundred thousand complete post cards in an eight-hour working day. The two presses are now turning out between three million five hundred thousand and four million cards per day, this output being required to keep pace with the correspondence of the American people. The special paper for the cards is fed to the presses in the form of rolls each weighing twelve hundred pounds. Post cards turned out by the new presses are put up in packages containing ten thousand cards each. A surplus stock of seventy million post cards is kept on hand at all times in a reserve vault.

Work upon four of the eight dikes that are to be built into the Delaware river, the first of the many difficult engineering projects in the ten-million-dollar project of deepening the channel to a uniform depth of thirty-five feet, will be begun within a few weeks. Approximately five hundred and forty thousand dollars will be spent by the government in constructing these artificial water barriers. It will take a year and a half to complete them. When finished they are expected so to direct the river's course that the force of the current will maintain a depth where now there is necessity for almost constant dredging.

A general investigation into freight rates on live stock, packing house products, and fresh meats in effect throughout that portion of the country west and southwest of Chicago, has been ordered by the interstate commerce commission. The proceeding will begin at Oklahoma City on Sept. 11. The inquiry will be a wide one, and will affect directly not only the live stock and packing house product rates throughout the central West, but also those east of Chicago and west of Denver. The respondent railways number one hundred and sixty-two.

The interstate commerce commission has issued a supplemental order in the cases brought by the Florida Fruit and Vegetable Shippers' Protective Association against the Atlantic Coast Line and other railroads. In the original decision the commission ordered reductions to be made on citrus fruits from Jacksonville and other Florida base points to eleven points in General Freight Association and western trunk line territories, leaving it to the roads to make corresponding reductions to other points.

Exactly one hundred ships of the dreadnought type are now built, building, or ordered for the navies of the world. The number is spread over practically the whole of the world, thirteen nations contributing towards it. The first dreadnought was begun in 1905.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE MASTERY OF FEAR.

M. G. KAINS, M.S.

ALL who accept Christian Science can testify to its wonderful influence in overcoming fears of every sort. Mrs. Eddy tells us how the fear of disease may be rooted out by the truth of being. She also says that "mortals progress slowly for fear of being thought ridiculous." Again she tells us that "we should master fear, instead of cultivating it" (Science and Health, pp. 68, 197). Perhaps the greatest hindrance to progress in any career which involves one's appearing before audiences, is what has been aptly called "stage fright." No matter how gifted the speaker may be, no matter how well trained for the work in hand, or how well prepared for the special occasion, and no matter how small or how great the part to be played, if stage fright is entertained it will jeopardize the peace of mind of the performer and injure more or less the effort put forth. The argument that "there is nothing to be afraid of" has no weight with the afflicted one. He can truthfully say, "I know there is not," and yet he continues to tremble. What he needs is not condemnation for cowardice, either from friend or from conscience, but a means of overcoming his fears.

What, after all, is stage fright? The dictionary definition, "timidity before an audience," is not satisfying; it leaves us just where we started. We want something that will not only reveal the falsity of the malady but provide a satisfactory means of escape. Stage fright may be considered as an exaggerated or a special form of bashfulness. Whether this bashfulness arises from diffidence, a phase of self-distrust, or from modesty, that quality of humility which underestimates oneself in comparison with others, is of no consequence; the result is the same. But what is bashfulness other than supersensitiveness, a rooted conviction that one is attracting undue attention, that he has made a mistake, that he is making a spectacle of himself, that people are criticizing him adversely, or any one or several of a score of other self-raised, self-admitted, and self-sustained criticisms? The probability is that no such thing has occurred, is occurring, or will occur—except where the person first gives way to these criticisms himself.

Let us, however, take an instance. At a parlor entertainment the one whose function it was to describe and announce the various parts of the little drama, was more affected by stage fright than the actors themselves. The reason was that she supposed a certain member of the audience would expect much more than she felt herself capable of doing, whereas this member was mentally commending her introductory and explanatory remarks more than the performance itself. Of course, at the time she could not know this, and was forced to pay the penalty in mental discomfort the whole evening through. This may make it more apparent that stage fright is due either to an erroneously admitted thought and not actual inability to meet the requirements of a certain situation, or that it results from an overestimate of the importance of the role one must play. The former is self-condemnation; the latter, egotism. Here is the foe. How shall the battle be fought? By facing the enemy, and fighting "not as one that beateth the air."

After having discovered the foe, the next thing is to take account of one's self and of one's arms. The true self, or image and likeness of God, the ideal man endowed with unlimited intelligence, is incapable of fear because incapable of anything and everything of which his creator is incapable. The recognition of this fact, and also the fact that God created everything that really has existence,—"without him was not any thing made that was made,"—is the next important step, because it establishes the truth. Consequently, whatever seems to be opposed to this fundamental fact of the spiritual universe has actually no existence at all. It is an accepted but false belief, and needs only to be proved to be false in order to be routed from consciousness.

But how proved? How can one trembling in the grasp of any foe meet and master his false belief? By first becoming so conscious of his true self that the false belief disappears at least temporarily from his consciousness, then by actually doing the thing required before admitting the falsity again. The old habit may assert itself again and again until wholly subdued, but every victory however slight will aid in the final triumph. This is the testimony of one who for years was afflicted with stage fright whenever a public or even a semiprivate appearance had to be made; of one who tried all sorts of suggestions, based for the most part upon will-power, which always proved to be a broken reed, but who ultimately triumphed through the practice of Christian Science. It is submitted for the encouragement of any who hesitate to speak at the Wednesday evening testimony meetings and whose repeated hesitancy has too often developed into cases of chronic fear, which holds them as if glued to their seats.

For the benefit of such sufferers it may be said that even to get to one's feet is a victory in itself because it is an advance in the right direction. The next move will be easier. Speaking at a Wednesday meeting is not such a serious thing after all, provided one is prompted by right motives and remembers the essentials of a worthy testimony. Among right motives are a desire to bear testimony to the present availability of God in every emergency, a desire to aid or encourage others in accepting God as their ever ready physician and guide, and, ever and always, a desire to give thanks for the benefits received through Christian Science. With such motives as these to prompt one, the testifier will forget himself and think only of his message—the really important thing. No matter how well or ill it may seem to be worded, if the motive is pure it must do its work; for "so shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

The motive having been recognized as worthy, there remain to be considered only the three essentials of the testimony. The first is to have something to say. Every

one who has been healed or who has been helped by Christian Science is surely thus equipped. The second essential is to say it. Not a long preamble, nor a wordy description of symptoms, nor a dissertation on Christian Science, nor a panegyric on one's practitioner,—none of these; nothing but the direct message, warmed by the desire that it shall accomplish its mission. The third essential is to stop when the message has been delivered. Here is a point where stage fright often reasserts itself; it holds people on their feet after they have really delivered their message, and insists upon trying to bury their message in an avalanche of words. This form of fright is not nearly so common nor so unpardonable as the form that holds people who really ought to express their gratitude publicly for the benefit of others; but like all other forms, it can be conquered as effectually, as the same person to whom reference has already been made can testify, thanks to the aid of Christian Science.

PARENTS AND THE SUNDAY SCHOOL.

ELLA CELESTE P. BELDEN.

IN an editorial in *The Christian Science Monitor* of May 13, 1911, admiration was expressed for the firmness with which the compulsory education law has been enforced in Chicago with its beneficial effect upon the children. This statement is made therein: "It has taught the boy, right at the beginning of his schooling, to recognize and to respect authority." Is there not great reason for us, as Christian Scientists, to ponder this statement in dealing with our children? Are we wisely teaching our children to recognize and respect authority, or are we prone to humor them in evading it? Most parents will say that they are striving to teach their children obedience to the laws governing their schooling, and that they are insistent upon the children's persistence in the line of education which has been chosen for them. Certainly parents who are Christian Scientists should be no less insistent that their children shall abide by the same rule of perseverance in their Christian Science training.

A beautifully adequate place has been provided by the wisdom of our revered Leader, Mrs. Eddy, wherein children and young people up to the age of twenty years shall be taught the practical truths found in the Bible as interpreted in Christian Science; namely, the Sunday school. There are some among us, however, who are tempted to listen to various arguments, disguised as good excuses, to keep the children away from this school of schools, where they would be taught the things which would bring a benediction to their future lives as citizens of a great nation, and to these a kindly awakening word is addressed. Let us realize that the same kind of error, if entertained, would keep us away from church, prevent us from studying the Christian Science literature, and interfere with every effort we would make in the path of righteous endeavor. It is simply a false belief in a mind apart from God; and Science shows that such a belief is baseless, for "there can be but one Mind, because there is but one God" (Science and Health, p. 469).

A very subtle argument to which parents sometimes listen is that their sons and daughters who are eligible to the Sunday school prefer to attend the church services, but it may here be asked why Mrs. Eddy provided a Sunday school for such persons, if the church service is sufficient. Perhaps we adults need to manifest more obedience in following the helpful suggestions given in the Manual, for as we study Article XX we become familiar with the work which is being done in our Sunday schools, and should feel an earnest desire to cooperate with the teachers in their consecrated work.

Another argument which mortal mind advances upon this subject is that when children attain a certain age they seem to manifest indolence, apathy, indifference, self-importance, etc. Along with the appearance of these traits comes the suggestion that they do not need to go to Sunday school any longer; that they work hard all the week, and why cannot they rest (play?) on Sunday, and countless other suggestions which if heeded would keep them away from their rightful place. It is at this time the awakened Christian Science parent should be wise to win by love, recognizing all the aforenamed arguments as error, hence nothingness. He knows that the Sunday school is constantly busy instilling the truth and destroying the many so-called false beliefs which would hold his children in bondage. We may well ask ourselves, if we allow our children to conform in one instance to erroneous suggestions, how we are to prepare them to cope with the belief in so-called laws of disease.

It is well to remember for a moment that the period of attendance at the Sunday school is never more than an hour once a week, and to consider whether or not our children can profitably afford to miss spending that amount of time in thinking and talking about God and His relation to man and the universe. Love means that we shall be firm with our sons and daughters as we express our love for them. Children are quick to discern that true love is never separated from respect of authority, and their love for their parents is more apt to be deep and lasting if obedience is demanded and expected of them.

ELIJAH AND ELISHA.

WILLIAM LEANDER POST.

IN the Bible record of the closing scenes in the earthly life of Elijah, the greatest of the prophets, is a narrative of marked interest and suggestiveness, and especially to us Christian Scientists today. Elijah's work extended over the idolatrous reigns of several aggressive kings, and his activities and prophecies were directed almost wholly toward delivering the children of Israel from the worship of false gods and the disastrous results contingent upon their disobedience. For many years he patiently persisted in witnessing the word of God to an unhearing and unheeding nation. Misunderstood, maligned, and persecuted, his life was continually threatened, and even the recognized religious leaders were in league against him. Notwithstanding all this opposition, through undaunted faith in God he persisted in his work and was finally rewarded by the realization that his message was heard and somewhat heeded, as witnessed in the respectful tolerance, if not acceptance, of his prophecies by all Israel and the comforting love of those who more fully understood his teachings.

Among his faithful followers, none of whom sufficiently apprehended the message he brought or the works he did to approximate his standard, was a poor plowboy, Elisha by name, who after many struggles with self in parting with friends and familiar pursuits, had ardently applied himself to understand and demonstrate the truths he daily heard and saw practised by his beloved teacher. It is recorded that at last, "when the Lord would take up Elijah into heaven," Elisha accompanied him on his long journey among the people. Wherever they went on this farewell pilgrimage, the "sons of the prophets," who were skeptical as to Elijah and doubtless jealous of his success and of that of his companion, taunted Elisha with the question: "Knowest thou that the Lord will take away thy master from thy head to day;" as if to say, What will become of you when he whom you follow is no longer with you? But the courage of the young prophet-disciple failed him not, and invariably he replied, "Yea, I know it; hold ye your peace." Going on with his beloved teacher, they at last reached the borders of the land and the great Jordan stretched before them, stopping their progress; and Elijah with his mantle, a symbol of the all-powerful Truth which had clothed and sustained him in his many and varied experiences, smote

Digitized by Google

the rushing waters of limitation "and they were divided hither and thither, so that they two went over on dry ground."

Think you Elijah performed this last great work to verify to his own consciousness man's unabated control over material conditions through his realization of the "law of the Spirit," or was it done as a source of encouragement and further enlightenment for faithful Elisha, and of strength to the fifty doubting sons of the prophets who "stood to view afar off," wondering, no doubt, if what he had evidently foretold of his departure would come to pass? Whatever his reason, he certainly accomplished all these things by his act, and as they walked on after this positive demonstration of spiritual truth over mortal conditions, he is recorded as having said to Elisha, "Ask what I shall do for thee, before I be taken away from thee," to which Elisha immediately replied, "I pray thee, let a double portion of thy spirit be upon me." Recognizing perhaps in this request a certain clinging to personality, but also beholding through his spiritual intuition the earnest desire for Truth, Elijah replied, "Thou hast asked a hard thing: nevertheless, if thou see me when I am taken from thee, it shall be so unto thee; but if not, it shall not be so."

Elijah knew that if Elisha should still see him when he should be taken from him, still recognize and cling to his spiritual identity as man in God's image, after he had disappeared to material sense, this realization of the truth of being, taking the place in his consciousness of a hitherto personalized and therefore limited concept, would indeed baptize him with a double portion of the spirit of Truth which had so grandly wrought for humanity in his own experience. It would enable him, as the faithful follower of a great expounder of God's law, to take up the work his master had left, and enable him to attain by degrees the greater heights to which the inspired teacher's works and words had pointed.

Elisha did rise to a fuller consciousness of his own life-mission, and as Elijah ascended beyond his powers of penetration he gave up his human concept of a leader and teacher, and did not mourn, but shouted, "My father, my father, the chariot of Israel, and the horsemen thereof," for he realized in that sublime moment of spiritual exaltation that the same power which had carried and sustained Israel throughout all its history, and which would hereafter support him, had enabled his master to overcome mortality. With this sustaining thought Elisha returned to the banks of the Jordan, and calling not upon his departed teacher, but upon that teacher's God, he parted the hindering waters of doubt and went forward to his work of demonstration, confident that in the degree of his love and loyalty would his works measure up to the high standard set for him by his teacher and friend.

A careful study of these incidents, as found in I and II Kings, will prove profitable; and while the narrative nowhere states that Elisha continued to love and reverence Elijah, still we may be sure that the seeing of Elijah when he was taken from him must have included a right apprehension of the personal Elijah, as well as a clearer interpretation of impersonal Truth.

THE GLORY OF GOD.

RICHARD P. VERRALL.

IN praising God for His manifold blessings to the children of men, the psalmist sounded the key-note of awakened spiritual understanding when he sang, "The heavens declare the glory of God; and the firmament sheweth his handywork." Jesus seems to have been governed continually by the one ever-present desire to glorify his Father in heaven. His thought, like the needle of a mariner's compass, turned instinctively away from self-interest and pointed to the recognition of God's omnipotence as the objective point of spiritual attainment. When tempted in the wilderness to use his mental power to make bread out of stones, Jesus refused, saying, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." When, however, at the marriage of Cana, he saw an opportunity to glorify God, he did not hesitate to turn the water into wine. Again, when Mary and Martha sent word to Jesus that Lazarus was sick, Jesus said, "This sickness is not unto death, but for the glory of God, that the Son of God might be glorified thereby."

As Jesus drew the line at using spiritual power for personal ends and applied himself exclusively to the demonstration of God's likeness in man, so must his followers do. Every experienced practitioner of Christian Science does not fail to find that it is only in the proportion that he dedicates his mental work to the glory of God, that his efforts bear fruit in permanent healing. Mrs. Eddy writes, "If man should say of the power to be perfect which he possesses, 'I am the power,' he would trespass upon divine Science, yield to material sense, and lose his power" (Miscellaneous Writings, p. 184). Therefore, in order that a Christian Science practitioner's power for good may continue to multiply and replenish the earth and subdue all manner of evil upon it, he must in all his demonstrations keep the spiritual goal in view, thus obeying the divine mandate, "Thou shalt have no other gods before me."

Bearing in mind the fact that man's extremity is always God's opportunity, we are led to the conclusion that progress in Christian Science may be manifested in two ways, the one negative and the other positive. The negative is described by our Leader as "a stricken state of human consciousness wherein mortals gain severe views of themselves" (*Ibid.*, p. 203). This mental state seems to be the vestibule in which the mortal learns to let go of his belief in his own self-sufficiency, and is thus prepared to acknowledge that of himself he can do nothing. The positive gain comes as a natural consequence of humility; self-righteousness having been cleansed away by the furnace of suffering, divine Love finds its way through the mental transparency thus formed and expresses itself through man in God's likeness.

A story is told of a noted general who, after having served a term as the nation's chief executive, and having had ample opportunity of observing the fallibility of human nature, one day said to a friend, "What do you think is the most dangerous thing one can place in the hands of a man?" After several answers had been proposed, the general replied, "The most dangerous thing to entrust to one not strong enough to resist the temptations which go with it, is power." For this very reason it would seem that divine Love does not bestow its healing power on the worldly-wise or self-sufficient, for these would not glorify God's name thereby. On the contrary, God often selects the weak of this world to confound the mighty, and out of the mouths of babes He perfects praise.

Mrs. Eddy has told us that "mortal mind and body are one" and both are unreal; also that "God and man coexist and are eternal" (Science and Health, pp. 177, 336). This enables us to draw the line between right and wrong practice in Christian Science, and shows that divine Mind must not be employed to preserve materiality, although a discordant sense of life in matter can be corrected by an understanding of divine Mind. In summing up the whole question, one cannot fail to see that the only right motive for mental practice is to glorify God. This thought being held aloft as the standard under which we have enlisted to serve, nothing but peace and prosperity can attend the future of our cause. The impersonal divine Principle of the Christian Science movement lives and moves and has being in every right idea and every earnest and unselfish desire, and the effect of such right ideas and desires in human consciousness must eventually awaken men from the dream of materialism. As humanity become conscious of man's spiritual birthright, and as each individual man

Digitized by Google

attunes his thought to the Science of being, what an irresistible warfare will be waged against evil!

The common purpose of glorifying God by doing right and serving good only, instead of alternating between good and evil, must surely break down the ancient strongholds of ignorance and sin. As the Israelites broke down the walls of Jericho by shouting in unison, so must the materialism of our day yield to the growing unity among Christian Scientists. The time-honored belief in mortal mind called the world, the flesh, and the devil is rapidly giving way before the ever increasing understanding of God's spiritual universe, including the ideal man. Surely it is well worth the while of every Christian Scientist to strive ever more earnestly to lay self on the altar and unreservedly to give to God, divine Mind, the glory and honor which is His due.

THE QUESTION OF LABOR AND CAPITAL.

AGNES FLORIDA CHALMERS.

THE fact that a prominent local daily declares it is about to follow the worthy policy adopted some time ago by *The Christian Science Monitor,* of furnishing free advertising space to those looking for employment or for employers seeking help, gives occasion for rejoicing. Universal salvation may be defined as universal activity, rightly directed. The redemption of the race must come through honest service. The Biblical injunction, "Work out your own salvation," is the best practical solution ever offered of any and all labor problems and it will continue as law, unchanged and unchangeable, until the problem of labor and capital is finally solved.

A laboring man was the means of stopping a runaway horse, and thereby rescued three children of a well-to-do merchant. As a suitable reward for this service, the merchant proffered the man the most valuable gift in his power to bestow, congenial employment for life. A Christian Scientist who had very little in the way of worldly possessions, began to express mentally gratitude for being able to give even limited employment to the seamstress, the housemaid, and the laundress. As this gratitude was more deeply felt, many other employees were added to her pay-roll, such as the carpenter, the office assistant, the day-laborer, and the landscape gardener, and with this increased pay-roll came an added understanding of gratitude, activity, and supply.

It has been wisely said that liberty is not found in doing what one likes; it is in liking what one does. The greatest accomplishment is to gain a genuine liking for one's work. If the spirit of unselfishness and devotion go hand in hand, the working man will strive not alone for his own advantage, but for the state or community as well to which he belongs. Uniting readiness of service, consideration of others, and loyalty, the working man will find the question of labor solved. In using one's gifts for self-advancement only, whether these gifts be increased capital or skill, all progress both for the industrial development of the nation and for the state as a whole would cease. Well-organized technical schools are teaching their pupils the value of working for others. In these trade schools beginners are instructed to make use of skill in work and to find joy in work. It is impossible to separate skill and joy, for true joy in work can only grow out of the real capacity for it.

The skilled, unselfish, and contented laborer never "holds down a job." His work, always needed by society, is a dignified profession. It was once considered that the doctor, the lawyer, and the teacher were professional men and that few outside of these callings could be considered as such. Skilled labor is changing all of this, and is teaching society the world over that whoever does his work well is a professional man. As a guide to those struggling with individual labor problems, Jesus, the true exponent of work, has left these inspired statements: "My Father worketh hitherto, and I work. I must be about my Father's business." "He that believeth on me, the works that I do shall he do also; . . . because I go unto my Father." Similarly inspiring for every worker are these words of our Leader: "God rests in action. . . . The highest and sweetest rest, even from a human standpoint, is in holy work" (Science and Health, p. 519).

The labor question resolves itself into the individual's willingness to work in harmony with all men and for all men. The man who is satisfied to work becomes in turn the capitalist who is satisfied to give. The greatest man in the world is he who best loves his work. The richest capitalist is the most skilled workman. Significant of these stirring times are national conferences called to consider the vital question of the unemployed. The most fruitful conference of work and peace will be held on that happy day when all men are employed and are at peace with their work. The Christian Scientist realizes, through the loving ministry of Truth, that this great day is a present possibility,—"to those leaning on the sustaining infinite, today is big with blessings" (*Ibid.*, Pref. p. 1).

When all mankind realize that honest work and right thinking is the source of all capital, unfair industrial conditions and their resultant labor strikes will be forever at an end. The one all-wise, all-loving, all-just employer, God, directs the unceasing activity of His perfect creation, man and the universe, and every honest workman is a joint-heir with Christ in the unfailing dividends of the one employer, —eternal Principle. So shall we come to be, as one of our hymns so beautifully expresses it,—

One holy church, one army strong,
One steadfast high intent,
One working land, one harvest song,
One King omnipotent.

SEEING CLEARLY.

EVELYN G. BROWNING.

ONE afternoon, as I took up the Bible with a hungry longing to study its sacred pages more prayerfully, that I might learn more perfectly how to heal the sick and reform the sinner, my eyes rested upon the eighth chapter of Mark's gospel. The earlier part of the chapter gives an account of the feeding of the multitude by Christ Jesus, and farther on in the chapter the Master is alone with his disciples and discerns with sorrow how little they seem to understand his wonderful works, how material their thought still is, for as he warned them against "the leaven of the Pharisees, and of the leaven of Herod," they reasoned among themselves, saying, "It is because we have no bread."

The narrative goes on to say that a blind man was brought to Jesus, with the result that his sight "was restored, and [he] saw every man clearly." As I read these words, the perfect instruction given to us by our Leader came vividly to me: "Unless you fully perceive that you are the child of God, hence perfect, you have no Principle to demonstrate and no rule for its demonstration" (*Sentinel*, Sept. 3, 1910), and I knew that the great need of practitioner and patient was to realize this in every instance, until the blindness of mankind is humbly acknowledged and Christ, Truth, is sought as the only healer.

Then shall be demonstrated in the consciousness of each and all, even as the blind man "was restored, and saw every man clearly," that each will see man's true selfhood as the child of God,—perfect, pure, spiritual,—governed, guided, sustained, controlled, directed by God alone, the divine Mind that "thinketh no evil."

Bright guiding star, forever shine!
Fill other hearts with peace divine
And joy, as thou art filling mine.

[Frederick Dixon in *Lewisham* (Eng.) *Borough News.*]

In discussing the question of mental suggestion, hypnotism, or any other of its various *aliases,* the one thing it is necessary to keep perpetually in the foreground is the fact of the utter unreality and powerlessness of evil. The necessity for this arises from the fact that for centuries the world has been educated into a belief that evil is real and constitutes power. Of late years, however, there has grown up a body of people who, under the teaching of Mrs. Eddy, have been learning to relegate evil to its true, and consequently scientific, position in the economy of human thought. These people have grasped the theory of the unreality of evil, and are beginning with ever increasing success to demonstrate this in practice. They realize that evil is unreal; that is to say, that it is the negation of divine Principle, or, as Jesus expressed it, a lie. At the same time, they realize that a lie exercises a temporary effect on those who are deceived by it, and therefore that it needs to be exposed in order that its powerlessness may be proved. They do not, therefore, content themselves with mere blank denials, they exert themselves to know the absolute truth, conscious that, as Jesus told them, the acquirement of this knowledge will free them from the effect of any false belief in evil as a reality, and conscious also that the way to break the bondage of others is first to gain their own complete liberty. It was because Jesus had entirely mastered evil himself that he was able to loose the woman Satan had bound, and therein lies the secret of those words of his, which he addressed to the disciples on the road to Gethsemane: "In the world ye shall have tribulation: but be of good cheer; I have overcome the world." That victory was for all time.

All occult working is a species of mental manipulation. The witch of Endor did not reincarnate Samuel, but she did superinduce in Saul the belief that he was in the presence of the prophet; the vagabond Jews, the exorcists of Ephesus, certainly produced in the minds of those over whom they exercised their incantations some impression which expressed itself in a physical result. The whole process was one of mental suggestion, and that process, whether under the name of necromancy or exorcism, of astrology or divination, of enchantment or witchcraft, of mesmerism or hypnotism, is simply the result of that conscious or unconscious belief in animal magnetism which Mrs. Eddy has explained on page 103 of Science and Health in saying, "As named in Christian Science, animal magnetism or hypnotism is the specific term for error, or mortal mind. It is the false belief that mind is in matter, and is both evil and good; that evil is as real as good and more powerful. This belief has not one quality of Truth."

Christian Science is founded entirely on the Bible, and anybody who will compare the words of Jesus with Science and Health will see how completely they agree. Mortal mind, Mrs. Eddy says, contradicts itself, and this is exactly what Jesus explained by describing it as a house divided against itself.

[E. M. Ramsay in *Dundee* (Scot.) *Advertiser.*]

While appreciating the kindly tone of the article on Christian Science, I must point out that Christian Science, far from being akin to suggestion, is the one system which can lift man above being affected by it.

Christian Science teaches that there is but one Mind, one intelligence in the universe, and that this is the Mind which is absolute Truth, God. It then goes on to show us that this infinite Mind is not subdivided into innumerable independent minds, but is reflected or expressed in all good, true thinking. What we commonly call a man's mind is not an originator of thought, but a receiver. A genius, an inventor, does not create anything, but is one who perceives something which has not previously been discerned. In order to reflect more of this pure intelligence, we must endeavor to shut the door of consciousness on all suggestions of error, and constantly strive to know the truth which alone can make us free from the suffering which follows incorrect or sinful thinking.

[From *Glasgow* (Scot.) *News.*]

Wherever women's interests are seriously considered it will be found that religion and good works have not been neglected, and naturally this is as much the case at the Scottish History Exhibition as it is elsewhere. One of the pleasantest stalls, in artistic fawn and green, lightly furnished and cool and restful, a graceful if revolutionary tribute to the attraction of mere "matter," belongs to the Christian Scientists,—whose Founder, we have to remember, was a woman. The new religion of Mrs. Eddy is now of world-wide importance, and is constantly attracting believers, and it has a very fair quantity of literature of its own, which need not be bought, but may be borrowed by intending inquirers. The "Life of Mary Baker Eddy" is prominent at the stall, and pamphlets in many languages address themselves to people of every tongue. Like other sects, the Scientists have their religious library, and a neat row of volumes responds to the devotionalism of the adherents of the Christian Science tenets. The books displayed are "Science and Health with Key to the Scriptures," "Miscellaneous Writings, 1883-1896," "Christian Healing," "Unity of Good," the Hymnal, and the Bible. Whatever may be one's own personal attitude to the church which pins its faith to these books, it cannot be denied that it is a factor of the day and a curious tribute to the forcefulness of one woman's personality.

[John Herman Wishar in *Pacific Baptist.*]

Mary Baker Eddy has passed on. Her work completed, she laid aside the mortal, material mask. Her students do not mourn, nor do they show signs of grief, for she lives in their hearts, and the seed she planted continues to grow and bear bountiful harvests. "By their fruits ye shall know them," and the fruits of Christian Science are good. Thinkers throughout the world are turning their attention to "Science and Health with Key to the Scriptures," the text-book written by Mrs. Eddy. Common sense is the basis of the book, and the Bible is made clear by the spiritual interpretation. Demonstrations over (*i.e.,* the curing of) disease and sin, attest the truth of the fundamentals laid down by Mrs. Eddy. These demonstrations are made daily and hourly throughout the world, and bring peace, happiness, and contentment to throngs, according to reliable authority.

Christian Science churches are crowded to their capacity, and new edifices are constantly arising, mute testimonies to the steady and solid growth of Christian Science. The services are simple; theatrical ceremonies which appeal only to the superstitious and excite the imagination, are lacking. The intelligence of the congregation is appealed to and the true spiritual meaning of the Bible is brought home to all. The class of people who attend Christian Science churches proves the strength of this faith, for the communicants are all intellectual and prosperous. They are people capable of thinking for themselves; of digesting the facts laid before them and of arriving at an intelligent conclusion regarding metaphysical Science without the aid of minister or priest. In other words, they are self-reliant thinkers. This accounts for and explains the steady growth of Christian Science since the discovery of the new-old truth by Mrs. Eddy in 1866.

In the history of the world Mrs. Eddy stands alone. There is no standard by which her worth can be measured; there is no character similar by which a fair comparison

Digitized by Google

can be had. Famous women of history have been noted for their achievements in the world of arms, of diplomacy, or for their notorious lives. Semiramis, Cleopatra, Joan of Arc, various French and English queens, as well as those of other nations, won fame and their names will live, not so much for the good they accomplished as for the evil they wrought. In place of building up they tore down. They blazed their way across the pages of history, leaving a trail of blood and wrecked lives, no matter what actuated them. There was nothing lasting in their accomplishments. It required the nineteenth century, with all its marvelous advance of thought, its Babylonic lack of morals and fierce struggle for existence, to produce a woman who could rediscover the Science of being, of mental healing as preached and practised by the man Jesus two thousand years ago. Mrs. Eddy is the antithesis of other famous women; good was the key-note of her life.

Her discovery was the result of long study of the Bible; of deep thought while on the brink of the grave, with the result that she arose from what was supposed by her physicians to be her death-bed, a well woman. More study and research brought forth the text-book, "Science and Health with Key to the Scriptures." This was in 1875. Before her discovery Mrs. Eddy ran the gamut of human sorrow and suffering, from poverty to heartache and from sickness to discouragement. For months she lay racked on a bed of pain. There was no condition of human error and weakness she did not know. When the medical faculty had given her up and were waiting for death to end her agony, she discovered the Science of Mind-healing. Her students believe it was a divine revelation. Suffice it to say, she became well. She then secluded herself and devoted her time to a deep study of the Scriptures. The result was the text-book read by all Christian Scientists, and which ranks among the finest literature of the world, when viewed merely for its literary merits, and this book is now read by over a million of earnest students.

Christian Science is spreading rapidly in every city in the United States and throughout every hamlet and city of the world. The seed planted by Mrs. Eddy is giving forth a bountiful harvest; every advance is solid and substantial, and there is no retrogression. *The Christian Science Monitor*, a daily newspaper founded by Mrs. Eddy, is the only publication of its kind in the world in which clean and interesting news, free of scandal, murder, and evil, is furnished. Everything tending to interest and raise the standard of the reader's thought is printed, but details of low tragedies, of filth-reeking divorces, of crime and its penalties, such as are "played up" in the daily press, are avoided. The affairs of the world are set forth; the news of the day is told, but all that is evil and low is avoided. In this respect the paper fills a want long felt by parents, who are weary of having their children's minds polluted with tales of infamy set forth with all the ghastly details which poison young minds and warp their view-point. From its inception in 1908, the paper was a success. *The Christian Science Journal* and the *Christian Science Sentinel*, also founded and for a number of years edited by Mrs. Eddy, are publications which are read by all Scientists. These periodicals are devoted to uplifting manhood and womanhood. There is no attacking of others.

Christian Science is a lasting creed, and one which is constantly winning new devotees; men and women who have tried all isms and cults and all other churches and have failed to find elsewhere the spiritual peace and comfort afforded by the doctrines set forth in the text-book of the Christian Scientists, in conjunction with the Bible. Since the dawn of history religion has been possibly the most important factor in the development of the world. More good and more evil can be traced to the various religions and cults than to aught else. The Egyptian, Chaldean, and Persian creeds antedate all others. In their time millions acknowledged allegiance to the gods to whom their priests held services. Buddha, Confucius, and Mohammed were all good men, and won millions of followers.

Jesus of Nazareth was the first to practise and preach the art of healing by the power of Mind. His teachings were demonstrated. What he preached he practised, and according to histories—sacred and profane—his disciples learned the art of Mind-healing and taught others. This art was lost during the dark ages and the mere theory of what was preached by the Nazarene was retained. The art of healing—both sin and disease—was lost. The miracles performed by Jesus were deemed miracles indeed. It was not until nearly two thousand years later that the Principle and rule of mental healing was rediscovered by a frail little woman in Boston. She demonstrated the truth of her discovery by healing herself of what to physical sense was a fatal malady, and she then devoted her life to perfecting her discovery; to proving that what she had found was the truth, and preparing a system of rules whereby all who will can learn to free themselves of physical ailments and mental troubles as well as those of a moral nature. The result was the Christian Science text-book and the Christian Science church.

The twentieth century stands in the front rank of the world's history for mental advancement. Intelligence and thought are the watchwords of the age. The thinker is weighing and sifting everything, from ions to the planets. Mental darkness is being dispelled. Education is replacing blind faith and superstitions are giving place to a careful consideration of the relative values and merits of different beliefs. Mankind is no longer satisfied with the mere statement that God is good. Proof is wanted. The age grows materialistic. The light of education penetrates all nooks and crannies. It was into this hostile field of mental alertness that Mrs. Eddy entered, and came forth victorious. The fact that the religion she founded has stood the test of years and has constantly increased, drawing its adherents from the brightest classes, shows the strength of the church. The question naturally arises, "What will be the result if the Christian Science church continues to increase its membership and power at the same ratio that has characterized it in the last twenty years?"

It is now generally admitted to be one of the dominant factors in the religious life of the world. It draws its membership from all churches. They come voluntarily. There is no coercion. The membership steadily increases and new churches are constantly being built. Even the bitterest enemies of Christian Science admit that the influence of the church is good. Sharp-minded and sharp-tongued critics have sought in vain for a weak spot in the armor of good that shields the church. The Bible and "Science and Health with Key to the Scriptures," written by Mrs. Eddy, are constantly studied by Christian Scientists. Simplicity characterizes their church services as it characterizes their lives. They are optimistic and happy. Truly a religion that can bring peace, happiness, and contentment in this age of fierce strife, of brutal battles for wealth, of degradation such as the world has never known, and of skepticism unrivaled in the annals of time, is indeed a blessing.

At the present time America is the stronghold of Christian Science, although it has passed to all other countries and is steadily gaining strength. The fact that intelligent people are becoming affiliated with the church proves that the growth is not ephemeral. Christian Science does not feed upon superstitions; it appeals to the mentality; it strikes at the root of materialism, and has proved an emancipation proclamation to mankind, loosening the shackles of sin, disease, and discord. These things are being accomplished everywhere. What then will be the result? Will Christian Science replace other religions as the world progresses? Will not people leave beliefs which beget form and ceremony for the faith which brings practical results? If history is any criterion and if the power of good still

Digitized by Google

retains its strength, it is safe to prophesy that within a lifetime the church founded by Mary Baker Eddy will be the dominant factor in the religious life of the world.

[Algernon Hervey Bathurst in *Oxford* (Eng.) *Times.*]

The university sermon preached by the Right Rev. the Bishop of Pretoria refers to "Christian Science, falsely so called." It would be difficult to imagine any two words that could better describe the teachings of Christian Science than those selected by the Discoverer and Founder, Mrs. Eddy. It is true that the teachings of Christian Science do not coincide entirely with those of the Church of England, since the latter teaches that the reformation of sin is the special care of the church, while the sick man must turn to the doctor or surgeon for assistance. Christian Science, however, goes back to the teachings as uttered by the Master and demonstrated by him and his disciples two thousand years ago.

The healing of sickness and the destruction of sin are, he pointed out, one and the same thing, and Mrs. Eddy has always emphasized the absolute necessity of Christian Scientists proving their faith by their works; in other words, proving that the teachings of Jesus the Christ are scientific. Theory alone is of no avail. "Shew me thy faith without thy works," the apostle James said, "and I will shew thee my faith by my works." This, then, is the standard adopted by Christian Scientists, for what was true two thousand years ago is equally true today, in addition to which there is the clear and unmistakable declaration of the Master to the effect that those who understood his teachings would not only do the works he did, but even greater works than these.

It is true that the teachings of the Galilean Prophet were attacked by those who were either unable or unwilling to accept them, and history has certainly repeated itself in this respect. Nevertheless, those who have turned to Christian Science for help and obtained it, having perhaps failed to find it elsewhere, know that its teachings are not only Christian but scientific, and they realize that just in so far as they continue to strive to put into practice those teachings so clearly set forth in the New Testament, will they be able to accomplish the works which are so essential a proof of the fact that their religion is both Christian and scientific.

[H. Farmer Hall in *Eastbourne* (Eng.) *Gazette.*]

I have read the Bishop of Chichester's criticism of Christian Science. The criticism is remarkable, in that the bishop commences by acknowledging the need of a greater realization of joy in his own religion, continues by repeating statements from people who have found more joy in Christian Science than in their former views of Christianity, and concludes by saying that Christian Science is neither Christian nor scientific!

However one may respect the opinion of an individual, one is not prepared to accept a dogmatic assertion on any subject unless he has some proper standard by which to test its truth. The question, therefore, that confronts us is, What really constitutes a Christian? It is readily acknowledged that true Christianity is founded on the teachings of Jesus the Christ, and those teachings and practices that most closely follow his have undoubtedly the strongest claim to the name Christian. The difficulty, however, which has arisen in the minds of many seekers after Truth is to discriminate between the various sects of the Christian church, each one of which claims to have a particularly clear and correct interpretation of the Master's teachings.

Fortunately for us all, the Master himself left a key to the situation, which, when applied, greatly assists in arriving at correct conclusions. In the eleventh chapter of Matthew we have an incident narrated in which the disciples of John approached Jesus, asking whether he were the Christ or no. In replying to this question it will be noticed that Jesus did not make any claims on the basis of what he taught, but he rather asked John to base his judgment on the healings performed, which were the direct result of his teachings. This, therefore, was the test which Jesus applied to himself, the fruits of his gospel thus specified: "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them"—these must decide in the mind of John whether Jesus' claim to being the Christ was convincing.

Jesus not only applied this test to himself, but to all his followers, to all who had the right to call themselves Christians. He declared, "He that believeth on me, the works that I do shall he do also," from which one must draw the inevitable conclusion that he who does not do the works has an inadequate conception of the Christ. These works of healing his representatives must give to the world today, in the degree of their understanding, even as in the olden days. To "heal the sick" was a definite command and was to be in no way separated from preaching the gospel, for through the "signs following" the disciples "went forth . . . confirming the word."

The phenomenal growth of Christian Science is undoubtedly largely due to the fact that its teachings are confirmed by its works. Unnumbered thousands who have been bound by the fetters of sin and sickness are today joyfully testifying to the healing power of the Christ as understood in Christian Science, and as long as Christian Scientists are able to produce these proofs of their right understanding, so long will the criticisms which are launched against Christian Science run the risk of being thought to be the outcome of the critics' own inability to live up to the standard which Jesus demanded.

[Cornelius Fockens in *Pioneer Press*, St. Paul, Minn.]

There is no record that Jesus or his followers ever cast out of any person anything physical, although they healed all manner of diseases, and those who were healed had life more abundantly. Truth or reality is defined as "that which persists in consciousness," and Jesus spoke of his Father as "true" and as dwelling in him, and not only in himself but he also declared, "The kingdom of God is within you," that is, in all men; and so, when the prodigal was in a "far country" he was in a state of error, not conscious of Truth.

Nowhere in the writings of Mrs. Eddy does she claim an immediate fulfilment of all the promises of the Bible; on the contrary, she says that it may be many generations, even centuries, before true and exact knowledge of God will prove that Life and God are one. Nevertheless, a careful study of Christian Science shows the vastness of the work to be done, and that today is not too soon to begin the cleansing and purifying of each individual consciousness, making it a fit place for the Christ, who forever stands knocking and waiting to be recognized, to enter and live with that individual. Correctness in all metaphysical reasoning is essential, in order that we may be merciful even as our Father in heaven is merciful.

You will never be sorry for living a white life; for doing your level best; for your faith in humanity; for being kind to the poor; for looking before leaping; for hearing before judging; for being candid and frank; for thinking before speaking; for harboring clean thoughts; for discounting the tale-bearer; for stopping your ears to gossip; for asking pardon when in error; for being generous with an enemy; for being square in business deals; for giving an unfortunate fellow a lift; for promptness in keeping your promises; for putting the best possible construction upon the doings of others.—*Church Advocate.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FAITHFUL IN THAT WHICH IS LEAST."

CHRIST JESUS made use of many similes in his efforts to impress upon his hearers the truth concerning the kingdom of heaven. He had bidden the apostles to preach its near approach, even as John the Baptist had declared it and he himself had taught; but though they had been most intimately associated with the Master, had listened to his teachings and witnessed his healing of the multitudes from all manner of diseases "with the finger of God,"—even they were looking for the immediate coming of a temporal kingdom, a speedy reversal of conditions so far as rulers were concerned, and a triumphant entry upon the long-promised reign of the seed of Abraham. They had yet to learn that though the kingdom of heaven was indeed at hand, they must first be tested as to their ability to possess it, prove their faithfulness, when the Master had gone away from them, to the commission with which they had been entrusted. There was to be no slighting of the task, no delay in its execution, "for ye know," he told them, "neither the day nor the hour when the Son of man cometh,"—when they that are faithful shall hear the welcome invitation, "Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world."

In the parable of the talents the value of faithfulness is strongly emphasized. To each servant, "according to his ability," there was given that with which he might increase his master's store. All were to be diligent against his return, but each was to be accountable only for that which he had individually received. The master had departed, and there was only the desire to prove their faithfulness to spur them on in anticipation of his homecoming. At last the day came, and he who gained five talents and he who had gained two could welcome their lord in joyful assurance of work faithfully done, and hear with gladness the deserved commendation, "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things."

But no such happiness awaited him who had wasted his opportunity of gain in fear lest he should lose that which he had in charge, who had buried his talent in the earth of slothfulness and selfishness, and well might he tremblingly await the righteous judgment of his faithlessness. In his desire to excuse and explain his own failure to profit by the opportunity he had shared with his fellow servants, he even sought to thrust the blame therefor upon the master he had wronged; but his plea availed not, and he had to submit to have taken from him even that which he had, and to be cast out as an unprofitable and untrustworthy servant.

As Christian Scientists we may well take to heart the lesson of this parable. We have each our part to do toward the bringing in of the kingdom of God on earth, our talent to improve and use in the service of him who declared that his followers should be known by their fruits, should heal the sick and the sinning even as he had done, in fulfilment of the divine will. The reward truly is great, but it is to be won only by achievement and the goal must be kept ever in view. There can be no dallying with our trust, no time spent in repining that another has a better opportunity for gain than we; the seeds of selfishness, envy, malice, and injustice must find no lodgment in our thoughts, but daily, hourly the opportunity that is at hand must be improved. To each is given "according to his ability," and the Master declared, "Unto whomsoever much is given, of him shall be much required."

In "Miscellaneous Writings" (p. 340) Mrs. Eddy gives this counsel for our help and encouragement: "There is no excellence without labor; and the time to work, is *now*. Only by persistent, unremitting, straightforward toil; by turning neither to the right nor to the left, seeking no other pursuit or pleasure than that which cometh from God, can you win and wear the crown of the faithful." We must not forget that each day and hour is a testing time with us, and that only he who perseveres, who makes the most of the opportunities that come to his hand today, is in line for the greater privilege tomorrow may bring. The way to victory over sin, disease, and death is no royal road; there will be many a struggle ere the laurel wreath is won, the "Well done, good and faithful servant," falls upon our ears, but he that is "faithful in that which is least" may go forward in confident expectation that greater tasks and higher rewards await him who in the time of trial is not found wanting. The kingdom of our Lord is indeed at hand, wherein there is no room for the unprofitable servant.

ARCHIBALD MCLELLAN.

KNOWING THE DIVINE NEARNESS.

IT was a gathering of Christian ministers and their familiars, who were holding an evening service on the beach. The sea and sky formed an illimitable blend amid the tinted shadows of the gloaming, and in their presence the subject of thought, "How shall the divine nearness be more fully realized?" seemed most fitting.

Many interesting words were spoken, especially by one who emphasized the thought that since God is Love, we realize His nearness as we know more and exhibit more of love, become more gentle, more joyous, more compassionate. Another dwelt upon the thought that our sense of the divine presence must deepen as we realize His causal relation to every human experience, that His hand is to be seen in sickness as in health, in sorrow as in joy, in defeat as in triumph, in the earthquake as in the quiet dawn, in the cyclone as in the gentle shower, in death as in life. Then there came a pause, and when others were lovingly invited to speak, a Christian Scientist, who had been listening thoughtfully at a little distance, drew near and said:

"Friends, the protest which is being heard all round the world against the thought that God can be responsible for any law or order which would be pronounced unjust, unqualifiedly wrong, by the moral sense of mankind, voices my deepest conviction, and from the logic of this protest my most inspiring realizations of the divine nearness have come. If we cannot know that He who, as Amos declares, has made yonder "seven stars and Orion," is not only infinitely wise, but infinitely good, then we certainly cannot attach any value to that light which, as St. John affirms, 'lighteth every man that cometh into the world.'

"If, however, in honoring our highest moral sense we think of God as the absolute good, we will no longer seek for Him in the disease and devastations, the want and woe of earthly experience, but only in expressions of truth and goodness and beauty, in the things which are forever at-one with the revelation of God as too pure even to behold iniquity. We will find Him in the pure love, the unselfish impulse, the spiritual intuition and inspiration of our nobler selves. The divine nearness is realized by none other so keenly and continuously as it is by him who in his longing for and attainment of the Mind that was in Christ Jesus, is enabled to prove the verity of the divine presence and power by doing again the Master's works, even as he commanded. The infinite good which is God is thus manifest in Christ, in the redemptive truth which uplifts human consciousness.

"I am, therefore, in entire accord with the brother who has affirmed that love, molding our every thought toward

Digitized by Google

God and qualifying our every deed toward men, most surely begets in us a sense of the divine nearness. It was the teaching of Christ Jesus that sin brings death and the ills which lead to death; hence we have no occasion to think of these things as pertaining to the will or manifestation of Him who knows and can know no sin. Divine Love is to become for us the source and the fulfilment of all divine law. In loving ministry we are to find our near approach to God, and in the abiding presence and redemptive power of divine Love we must seek and find our escape, as did St. John, from all the ills which argue so insistently and yet so falsely for the absence of the eternal good."

The stranger ceased, and quietly turning his steps toward the moonlit sands, he went his way, leaving a great wonderment, it is reported, as to who he was and whether the things he had said were not quite true. To the aspiring sense of that vast company who have not found content of heart and mind in inherited beliefs, Christian Science comes as an unintrusive stranger who, if permitted, will disclose and demonstrate the logical and satisfying fulfilment of their noblest intuitions of truth, their highest hopes of God and man. In its anchorage of faith and uplift of spirit it "satisfieth the longing soul" with that abiding peace and joy which evidences the divine nearness.

JOHN B. WILLIS.

"WISE AS SERPENTS."

WHEN Christ Jesus sent out the twelve disciples whom he had equipped for the work of evangelizing humanity, he bade them "heal the sick, cleanse the lepers, raise the dead, cast out devils,"—a truly comprehensive program of service. He also bade them carry the peace which Truth bestows into every house they should enter, and he made it clear that where the message of peace was rejected it would not be lost. He said, "Let your peace return to you."

In addition to this, he provided for their protection. One might suppose that on such a mission no harm could even threaten these healers of mankind; but the Master knew better than this, he knew that the kind of healing which he had taught them to do would never bring peace to error, therefore he said, "I send you forth as sheep in the midst of wolves: be ye therefore wise as serpents, and harmless as doves." On another occasion he said, "Give not that which is holy unto the dogs [those outside of the spiritual fold], neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you." The relation between these statements is obvious, and they recall the words of our revered Leader, "It is wise to be willing to wait on God, and to be wiser than serpents: . . . to square accounts with each passing hour" (Messages to The Mother Church, p. 91). If all Christian Scientists heeded these admonitions, they would be spared many trying and needless experiences.

In the forceful language of Jeremiah we find this solemn warning: "Cursed be the man that trusteth in [mortal] man, and maketh flesh his arm." Did not the Master say that none is good but God? We therefore see the reason why we should go to God first with our joys and our sorrows, that the former may be purified, spiritualized, and the latter healed by Truth and Love. If we hasten to tell even our fellow workers of our blessings and our clearer realization of the truth, we may lose these and may hinder another from seeking the truth direct from its source. If we thrust upon the unprepared thought statements of truth, we are liable to be regarded as boastful, however clear they may be to us, and we need not be surprised if material belief turns upon us and rends us, even as the Master said. It goes without saying that we should be too wise to voice error. If we do this in any way, we may thereby bind heavy and grievous burdens upon others, as did the Pharisees of old. The work of Christ's followers is "to undo the heavy burdens, and to let the oppressed go free."

Last, but not least, we are commanded to "take up serpents;" and to do this unharmed we must of course be wiser than they,—our spiritual senses must be keen and alert, and the word of God, which is "quick and powerful," must be the weapon that we know how to use effectively. Then it will matter nothing if we are beset by hungry wolves, as Christ Jesus said, or by the more secret foes typified by serpents. Our victory is assured by Truth, for the promise from of old is that the seed of the woman shall bruise the head of the serpent,—shall destroy the illusion that evil, under any guise, can successfully resist the demands of spiritual law. Meanwhile we may remember the countless cheering promises of the Wayshower, who proved for us the powerlessness of evil and who said, "There shall not an hair of your head perish."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The Sunday evening service is omitted during July and August. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

CHICAGO, ILL.

Prof. Hermann S. Hering of Concord, N. H., lectured on Christian Science last night [June 26] before a large audience in the new building of Eighth Church, Michigan avenue and Forty-fourth street, which was informally opened for services last Sunday [June 25]. This new building is one of the finest of its kind in the city, and has just been completed at a cost of one hundred and thirty-five thousand dollars, with a seating capacity of approximately twelve hundred. The regular services of Eighth Church will be held in the new building in the future, but it will not be formally dedicated at present. This makes the seventh large church edifice to be erected by Christian Science congregations in this city. The building of Sixth Church will be completed some time during the present year.

Chicago Post.

RIDGEWOOD, N. J.

On Monday morning [July 31] at 6:30 members of the Christian Science church of this village assembled at Franklin avenue and Washington place, where their new building is going up, and laid the corner-stone. The services were simple. H. D. Hartley, the first reader, read selections from the Bible and from Science and Health and all repeated the Lord's Prayer. Then the corner-stone, a simple white marble block, was settled into its permanent position. It bears on one face the words: "First Church of Christ, Scientist." Under the stone is the usual metal box containing copies of the Bible, of Science and Health, of various publications of the church and of the *Ridgewood Herald* containing the cut and description of the new church edifice.—*Ridgewood Herald.*

THE LECTURES.

ST. LOUIS, MO.

About eight hundred persons heard a lecture last night, May 11, 1911, delivered at First Church of Christ, Scientist, by Bliss Knapp of Boston. He was introduced by John S. Willis, member of the local board of trustees, who said:—

This is an age of progress. In all walks of life and in all activities occupying the time and commanding the attention of the world's thinkers and workers of today, "progress" is the watchword and sounds the key-note of the times. Enterprises of great magnitude are being undertaken and carried through to success. The man who says a thing cannot be done is constantly interrupted in his statement by some one doing the thing declared to be impossible. This progress is not confined to things material, but is also manifested in a metaphysical way. The religious thought of the age is undergoing a change. People are ceasing to content themselves with impractical and outgrown theories. They are no longer satisfied with a religion that separates the ministry of preaching from the ministry of healing.

Intelligent progress toward improved physical and metaphysical conditions can only be made by gaining some understanding of the spiritual significance of the Scriptures and of the life, words, and works of our blessed Master, Christ Jesus. Christian Science is essentially a religion of works,—good works,—and it is educating its followers up to a higher understanding of God and a deeper insight into the truth taught in the Bible. It is teaching the earnest seeker after this truth that "faith without works is dead," and that "by their fruits ye shall know them."

Correspondence.

SAN FRANCISCO, CAL.

A lecture on Christian Science was given by Willis F. Gross, in Dreamland Rink, Sunday afternoon, April 23, under the auspices of Third Church of Christ, Scientist. The lecturer was introduced by Fred T. Berry, who spoke as follows:—

You have assembled here today to listen to a lecture on Christian Science, that system of ethics which we believe to be the Science of being. While this is without doubt the most important subject that can be brought before us, mankind in general gives it very little attention, seemingly satisfied to put off its consideration until some indefinite future time, or thinking perhaps that it would be definitely settled by passing through the experience called death. Now Christian Science claims to solve this problem just in proportion as its Principle and rules are understood and demonstrated. It is a system of right thinking that makes us better men and women, better husbands and wives, better fathers and mothers, better children, and better citizens. It is therefore just and proper that you should desire to hear its doctrine expounded by one who speaks with authority.—*Correspondence.*

WATERTOWN, N. Y.

William R. Rathvon delivered a lecture at the City Opera House May 28 on the subject of Christian Science. He was introduced by John A. Reese, first reader, who said:—

Although Christian Science is less than half a century old, hundreds and thousands have been healed through the understanding and application of this grand truth, after all material remedies had failed. So that it has been proven times without number that this is the truth that our Master referred to when he said, "Ye shall know the truth, and the truth shall make you free." And there is no longer any question but that it is the same healing religion which Jesus Christ personally demonstrated for mankind over nineteen centuries ago, by healing the sick, casting out evil, raising the dead, making the lame to walk, the deaf to hear, and the blind to see.

He also said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Again, he said, "Go ye into all the world." "Preach the gospel," and "Heal the sick." Now he did not mean merely that his immediate disciples were to go into the near-by towns and do this work. And was not his command to heal the sick just as imperative as it was to preach the gospel? Then what right have we to separate the Master's commands? Or what right has any man to say that the one shall be done, and the other left undone? This is the work that Christian Scientists are doing throughout the world,—everywhere they are preaching the gospel and healing the sick,—and their works speak louder than words. There is now scarcely a city or country where Christian Science is not represented and the healing work which Christ Jesus commanded being done.—*Correspondence.*

SAGINAW, MICH.

An interesting and instructive lecture was given at the Masonic Temple, Saturday night [June 3], by Bicknell Young of London, England. The lecture was given under the auspices of First Church of Christ, Scientist, of this city, and was largely attended by members of that body and their friends. C. P. Anderson in introducing Mr. Young said in part,—

There is a vast amount of agitation going on all over this country in universal peace movements, health laws, etc., which indicates that humanity is awakening to a desire for better conditions; but a correct underlying basis for the solution of all these problems must be had before they can be fully realized, and this basis will be found in the teachings and practice of the Master, as revealed through Christian Science. I am sure that we who have gathered will all carry something away with us tonight that will not only bless us as individuals, but enable us to help make the world better in consequence of our having been here.

Saginaw News.

BATH, ME.

A good sized audience gathered in the Universalist Church last evening [May 22] to listen to the lecture delivered by Prof. Hermann S. Hering, under the auspices of the local Church of Christ, Scientist. The close attention given the speaker throughout the entire address gave evidence of interest in the subject. Mayor Frank A. Small introduced the lecturer, speaking in part as follows:—

Any new ideas or teachings which serve to make men or women better, physically or morally, should be gladly received. If, then, Christian Science has demonstrated that its influence is of this beneficial character, why is not the world better for it? But history shows that every step in the way of intellectual and spiritual progress has had to be made against arrogant superstition and unreasoning prejudice. The Christian Science religion has been studied and accepted by a constantly increasing number of intelligent men and women of this country, and for that reason, if for no other, it seems worthy of thoughtful investigation.

Bath Times.

Digitized by Google

WEST CHESTER, PA.

William D. McCrackan, M.A., spoke in First Church of Christ, Scientist, last evening, June 11, on the subject of Christian Science, and was heard with much interest by a representative audience. He was introduced by Miss Edith S. Darlington of Faunbrook, first reader, who spoke as follows:—

Jesus said, "No man can come to me, except the Father which hath sent me draw him." Christian Scientists feel that the time is at hand for all to draw nigh to the Father, to utilize the mental power of the Messiah or Christ which enabled the great Master to heal the multitudes when he lived on the earth. This mental power, through spiritual law, is today healing all manner of disease among the people. Christian Science is not only healing the sick, but it is reclaiming the sinner; the sorrowful, the weary and heavy laden, it is refreshing, comforting, blessing, cheering, and sending them on their way rejoicing. Jeremiah said, "Thy word was unto me the joy and rejoicing of mine heart."—*Local News.*

EXCELSIOR, MINN.

Frank H. Leonard delivered a lecture on Christian Science on June 16 to an audience that taxed the capacity of the Opera House. Chartered cars brought Scientists from Minneapolis and St. Paul. Mr. Leonard was introduced by W. E. Hitchcock, who said:—

Christian Science has not come to attack or to condemn any religious belief or creed. Neither is it here to make war on the medical systems of the day. Christian Science comes rather with a message of peace and of hope and of love. We are here to listen to a lecture on this religion which is today healing the sick and the sinner throughout the civilized world.—*Correspondence.*

OREGON CITY, ORE.

A lecture on Christian Science was delivered in Shively's Opera House Sunday afternoon [June 18] at half past two o'clock by Francis J. Fluno, M.D. The hall was packed to the limits; every foot of standing room was occupied, and many were turned away who were unable even to look in at the door. A. O. Freel of the Oregon City schools introduced the lecturer. His remarks in part were as follows:—

It is with genuine pleasure that I welcome you here this afternoon, for indeed I know of no happier occasion than that which brings men and women together to listen to a discourse about God. Christian Science, or the one absolute Science of the one infinite divine Mind, has come to this materialistic and sin-ridden age with a message of healing for the sick, the diseased, and the sinful, and of hope and cheer and encouragement for those who are weary and oppressed with the seeming burdens of this world. Today there are tens and hundreds of thousands of intelligent men and women of every walk of life and in every civilized country under the sun, who are ready to bear witness to this healing truth.—*Morning Enterprise.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Charlevoix, Mich.—Judge Clifford P. Smith, Charlevoix Theater, Sept. 1.

Denver, Col. (First Church).—William R. Rathvon, Church Edifice, Logan street and Fourteenth avenue, Sept. 1 and 2.

Grand Island, Neb.—Hon. Clarence A. Buskirk, Bartenbach Opera House, Aug. 28.

Richmond, Cal.—Francis J. Fluno, M.D., Richmond Opera House, 3 p.m., Aug. 27.

TESTIMONIES OF HEALING.

I have been so often helped by the testimonies in our periodicals that for a long time I have wished that I might also have the privilege of helping some one in return. Three years ago I heard a lecture on Christian Science which convinced me there and then that at last I had found Truth, and I felt that nothing else mattered but to learn more about it. Our home was not a happy one at that time, as I had been a constant sufferer for many years, and had grown discontented and irritable. I had tried seven doctors, two of them specialists, and had been told that my troubles arose from liver derangement, brought on by malaria contracted when in my teens out in Asia Minor. The last doctor gave me no hope of a cure, only a diet list and many directions how to keep free from pain; I was assured that I could never be strong and healthy. In addition to this trial, my husband was always ailing, and besides that he was a great gambler and never happy unless at the card-tables. All this caused me to send our only child, a girl of eight, away to boarding-school, because I felt the home atmosphere was anything but good for her. Thus I was a lonely, sorrowful, suffering woman, sorely needing the wondrous message which reached me through that lecture, and at the close I remember thinking that if only I could get to know more about it all, perhaps I could help my husband and we should be happy. Those who read his testimony in the *Sentinel* of July 30, 1910, will know the result of my earnest desire, how it more than fulfilled my greatest expectation. In addition to his physical healing, and far transcending it, came a marvelous regeneration; he was indeed "born again"!

I obtained my physical freedom solely through the reading of the text-book, and it came very quickly. For this I am exceedingly grateful, but the best of all is the help which comes from the study of Christian Science in the casting out of sin, and slowly but surely exchanging the "lusts of the flesh" for "the fruit of the Spirit." This is a daily source of comfort and joy to me, and I think of Mrs. Eddy many times each day with gratitude, because her writings have enabled me to "search the Scriptures" and in them to find at least a foretaste of "eternal life;" whereas, before, I could not understand the Bible and it was of no help to me. Last, but by no means least, my little daughter is now an earnest student in the Christian Science Sunday school here, so our household is united and happy, instead of discordant and wretched. For all these blessings I do indeed thank our loving heavenly Father, and pray often that I may be found strong in the faith and giving glory to God.—VIOLET RHODES, Headingley, Leeds, England.

In gratitude to God, and to our dear Leader, and with the sincere hope that it may help some one else, I send this testimony of healing. A little over three years ago, I was practically a wreck, mentally and morally, and at times physically unable to do a day's work in any capacity. I had been addicted to the use of intoxicants for over twenty years, gradually falling until I was unable to control myself, although I strove for years to assert my manhood and live up to the teachings of my early life. The life I had led brought on almost all the ills that flesh is heir to,—stomach and heart trouble, liver complaint, rheumatism, and neuralgia being some of them. I was also subject to attacks of violent temper and fear, that would leave me on the verge of mental and physical prostration.

When I had reached the limit, as it were, and was unable to hold a position of any kind, had been a wanderer for years, had suffered untold mental agonies, I was led into Christian Science. A dear sister who had tried to keep in touch with me through all my wanderings, even going to the extent of advertising on several occasions, had taken up the study of Christian Science, and whenever she could locate me would send me a periodical or two and tell me

Digitized by Google

of the good it was doing. I was finally led by divine Love from southern Mexico to this city, and shortly after coming here I met with an accident, in which myself and six other men were injured by the collapse of a scaffold. We fell thirty feet, falling among machinery and débris of all kinds. A letter from my sister induced me to visit a Christian Science practitioner, and although I was in a state of extreme nervousness and manifesting the effect of excessive use of stimulants, I was practically a new man when I left the house of the practitioner an hour or so later. I had found healing for my body and a spiritual uplifting and faith in God hitherto undreamed of. All desire for liquor had gone forever, and the realization of my freedom brought an exaltation beyond the comprehension of any but one who has been raised as from a living death. I went to work after a day or two of rest, without any bad effects from the fall, although to mortal sense I should have been laid up for some time, as were the other men, some of whom never seemingly recovered.

In three weeks' time I was cured of the cigarette habit, which for nearly twenty-five years I had indulged, also of the chewing of tobacco. I was led to overcome my temper and demonstrate love in place of hate, and was then brought into a more congenial occupation. I also overcame the apparent loss of memory, and the fear that had so troubled me. All the diseases have practically disappeared, and if a shadow ever appears on the horizon, I know where the remedy is. Physically I am better today than I was fifteen years ago, and have proved it to my own satisfaction. I have also been greatly aided by Christian Science in severe work on my teeth; and my hearing and eyesight have both improved and are practically normal. There are many other things which this truth has done for me; in fact, every day of my life I need it, and to say that I can ever be thankful enough or tell all the good it has brought into my life would seem impossible; but I can and do strive each day to rise a little higher and nearer to Truth, and I bless the memory of our dear Leader for her unselfish life in our behalf.—EDWARD FOSTER, Los Angeles, Cal.

Because I am grateful for all the good which Christian Science has brought to me, I feel impelled to tell others how they, too, can drink of the same overflowing fountain of good. Four years ago I was without hope and without a God whom I could love or to whom I could look for help. A short time after taking up the study of Christian Science I had an opportunity of testing its power to heal. I was suddenly taken with an old and frequently recurrent attack of stomach trouble. My wife wired for treatment to a practitioner in this city, and my healing was instantaneous, for I immediately felt relief and that night slept soundly, which I had never been able to do for two or three nights after any previous attack. I have never had a recurrence of this ailment since that time, now nearly four years ago. I also found myself healed of another ailment, a close companion for many years, after studying Science and Health for six months. I had also worn eye-glasses for four years when Christian Science was brought to my notice, but this difficulty was also overcome through the reading of the text-book and without treatment.

Christian Science has met our every need in the home. In the case of one of our children, who was down with the measles, the evidence of the disease was very marked, but in three days after treatment all trace had gone and the child was as well as ever. Our little girl was quickly healed of a badly poisoned finger. The doctor who diagnosed the case said that unless the child had medical treatment, and at once, she would be dead in a week. A Christian Science practitioner was sought and treatment given, and in a very short time the finger was perfectly healed. Since hearing first of this healing truth, no material medicines have come into our home. For these and many other healings we cannot help but be grateful, and as each proof of God's power to heal is seen, we are made to exclaim, "Who is so great a God as our God?"

As our Leader has told us, the physical healing is the least part of Christian Science, and those who have felt and experienced the spiritual awakening which it brings know this to be true. Words are poor indeed to express in any degree the gratitude I feel for the true and expanding knowledge of God which Christian Science is revealing to me. The Bible, instead of being a book to read only on Sunday, I now find full of interest because I am reading it with a new and increasing understanding. I now find it possible to keep the commandment of Jesus to love my neighbor, because I have learned through Christian Science who and what my neighbor is; that he is God's child, and not a sinful mortal. This understanding of man has healed me of a criticizing habit, and I am more forgiving toward other people's faults. Many other sinful habits and desires have left me, and I am quite sure I am a better husband, father, and citizen than ever before. While much remains to be done before the Adam-dream can be wholly dispelled from my consciousness, and while this testimony is a slight token of my gratitude to God for having shown me the way through our dear Leader, I know I can best prove my gratitude in living the truth as far as I see it and so helping to bring the kingdom of God to others.

J. H. THOMPSON, Manchester, England.

I consider it a great privilege to be able to testify to the beautiful healing work that has been done for me in Christian Science. I was wonderfully helped at the birth of my little daughter, who is now three and a half years of age. An abscess in the baby's ear, which caused great fear among those in the family who did not understand the power of Christian Science, was very quickly overcome, and not only in the overcoming of physical ills have we been wonderfully helped and sustained, but in other respects as well. When the way seemed very dark financially, we asked for help, and it has been always most lovingly given and the difficulty quickly overcome. A great sorrow came to us recently, but death seemed to me, as the Master taught, absolutely unreal. The greatest sense of peace and comfort was with us all, and we realized that the everlasting arms were around us. I had declared many, many times the unreality of death, but never seemed to gain a clear understanding of it until the moment when everything seemed darkest. Then the beautiful light of Truth and Love was shining all the while, and the veil seemed to be lifted from my eyes. I had such a spiritual uplifting as I had never dreamed possible. For all these, and many other beautiful demonstrations, we give praise to God, and to our dear Leader, Mrs. Eddy.

MRS. ALICE S. HUTCHINSON, Webster Groves, Mo.

It is with a heart full of gratitude that I give my testimony of healing in Christian Science. Almost six years ago, when my little son was thirteen days old, a consultation of doctors decided that I had an obstruction in a vein of my left leg and that any movement of the leg would cause instant death. I was expected to remain in bed with the leg supported on pillows for three months or longer. A Christian Science friend then asked a practitioner to come to me; which she did, and talked to me of Christian Science. She came twice before giving me treatment, and after each of her visits I felt so much happier that the physician coming in and finding me sitting up in bed said, "You look so much brighter! Has an angel visited you?" I dismissed the physician and had Christian Science treatment for some weeks, the result being that in a few days I was able to sit up and in two weeks could go out. My physical condition improved in every way, and I also received great help mentally from Christian Science.

Digitized by Google

Three months later I was in Paris, and in telling my experience to a physician, he replied, "Well, if you had done as the doctors said, you would probably have had a stiff leg and might have required a serious operation. But I am surprised that you did not die, for you took a terrible chance!" Even after this wonderful demonstration of the truth I was not ready to realize Science in its greater import. Then came family troubles, loss of friends, backslidings, a general mental upheaval, in which error seemed rampant, until I felt life was not worth living. But the seed of Truth was not lost, for in my innermost thought I knew that when I was ready to stand for Truth and Christian Science I should have harmony and peace.

I can truthfully say that Christian Science has helped me mentally, morally, and physically, and has made life worth living. It is my earnest desire to learn more, and each day to demonstrate Christian Science, thereby to show my gratitude for the many blessings received,—gratitude to God for having given us this truth through Mrs. Eddy, and for her wonderful example.

LUTIE KINDERMANN, Berlin, Germany.

I have recently passed through an experience which has shown me anew the power of Truth and Love. On the twenty-first of April, 1910, I started downstairs with both arms full of books, and on the second step I lost my balance and fell to the bottom of the uncarpeted stairs. My two sons heard the fall and reached me almost as I landed, one of them repeating the "scientific statement of being" (Science and Health, p. 468). I was not unconscious, and as they lifted me I declared the truth of being. One ankle seemed to be seriously injured, so we telephoned for help in Science, also for a physician, who came and put the foot into a cast. He said the minimum time at which I could remove the cast and stand would be five weeks. This prediction and the picture he drew of the condition of the ankle, and the danger of using it too soon, planted additional fear in our thoughts.

Being the only Scientists in the immediate vicinity, I felt there would be much curiosity as well as sympathy and interest to know what Science could do. It so happened that I had been placed in the dining-room on a couch, so I saw every one who came to call. Before the physician left, two came in to talk over Science matters, and during the day there were fourteen callers, but there was no fever, nervousness, pain, nor depression. Joy and peace radiated from all, a sure evidence of a greater than human love watching over us. In "Miscellaneous Writings" (p. 134) I found a pearl of thought which was constantly recurring to me: "He who dwelleth in eternal light is bigger than the shadow, and will guard and guide His own." I was dressed every day but the first two; we had service each Sunday, as we have had for two years, some one else reading for me.

The day before the third week, I felt I could remove the cast. I was alone, except for a little maid, who brought me a pan of water. I removed the cast, bathed my foot, put it on a pillow and covered it up. When I opened Science and Health to find help to banish a sense of fear and weakness, I found a notation of page 390:4, to 6 next page. I read and reread it, and found strength and peace. Each day I took off the cast while I did my reading, replacing it at night. The fifth day of this treatment we called in the physician to remove officially the cast. He was greatly pleased at the healing and said that in a week I could stand, and in two I could walk.

The next day I found in Science and Health (p. 485:27) such good advice that I got up and took several steps. On the following Sunday, four weeks, I walked across the two rooms without crutch or cane, and stood and read Science and Health at the service. The fifth week I attended service in the hall in the adjoining town with scarcely a limp. One person who had been in to see me three times said, "I've never expressed sympathy, because it never occurs to me that anything has happened." I am thankful to have been able to show inquiring friends I had something which made life bright and peaceful, even in the face of seeming accident. I can truly say I am sorry that my understanding was not sufficient to prevent any physical manifestation of inharmony, but as it was not I shall work all the harder to understand the truth of man's being.

God is indeed all-inclusive and ever-present Love, and He has blessed us beyond expression in enabling our dear Leader, by precept and example, to show us how we may make Jesus' teachings available for our every-day needs.

FERMINE B. CATCHINGS, Long Island, N. Y.

It is with a deep sense of gratitude and thankfulness that I testify to the many blessings I have received through Christian Science. For eight years I was a sufferer, scarcely seeing a well day. In February, 1907, I took to my bed with lung trouble, a doctor saying that one lung was gone and the other nearly so. In the latter part of April the physician told me he could do no more for me; he advised me to make the best of my life, as I might live three weeks, and possibly not that long. In the eight years of my suffering I had had four different physicians, each one telling me that I had tubercular disease. At last a friend came to see me and advised me to try Christian Science. I had heard something of this teaching two years before, through a very dear friend who told me something of its results, but I had not then given up my faith in medicine.

I had, however, always been a firm believer in the Bible, and I wanted much to live, so finding at last that all material remedies were of no avail, I asked for the Bible, opened it at the book of Matthew, and read about Jesus healing so many sick ones. I realized that the Christ-spirit had never left the earth, and saw no reason why I, too, should not be healed. This was on Friday. When my husband came home he said he had been talking with a Christian Scientist, who told him that after I had gotten tired of material remedies, I ought to try Christian Science. I coughed all that night and had a bad hemorrhage, and the next day I felt that something must be done. At five o'clock my husband sent for a practitioner, who came to me with love and truth, earnestly saying, "God is your life." Realizing this truth as never before, I was awakened into newness of life. She treated me one hour, and while she was so engaged I read through the chapter on Prayer in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I was healed with the one treatment. She treated me absently on Sunday, and I went to her home on Monday, according to appointment, and had another treatment; but the healing was done in that first treatment.

During the three years since then I have been greatly blessed, and have had some beautiful demonstrations. I have gained greatly in weight, and the sense of discord which was formerly in our home has been destroyed. I am thankful indeed for the healing I have received, and I now know that what I most needed was to understand more about God. I am truly thankful to God, and grateful to our dear Leader for this truth which passes all understanding. I am also thankful for all the good literature that she has labored so earnestly to put forth, that all mankind might be benefited thereby.

MRS. CORA B. SMITH, Indianapolis, Ind.

My heart is filled with gratitude for the help and many blessings that Christian Science brings to me each day. For years I had been in poor health. I consulted six different doctors, took a course of treatment from each, but did not improve. Friends advised me to try different remedies, which I did until I was convinced that there was no help in medicine for me.

Digitized by Google

I was wondering what to do next, for all my efforts seemed in vain, when a friend advised me to try Christian Science. I did so, and called in a practitioner. During his first visit the words that impressed me mostly were his advice to take no thought for the body; to trust God and give up medicine. I seemed to hear those words long after he left, and that night, when I looked at the medicine I had been taking each night before retiring, I still seemed to hear those words. I gave up medicine, and from that night I began to improve. Now I eat anything I want to, rest well at night, and work is not a burden.

I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and each day it gives me a better understanding of God, each day it helps me to know more about Truth. As I continue to read and understand, I can feel the bonds breaking away one by one that seemed to hold me so long. I feel so free, and am very thankful that God has given us through our beloved Leader the truth which has made the way so plain that even a child can understand.—Mrs. Cora Stockton, Dayton, Ohio.

I would like to express my gratitude for the continuous help and pleasure that Christian Science has been to me for the past nine years. When I sought Christian Science it was for physical help. A dear friend who came from the West to make us a visit told me how she had been healed and made happy. A few months later I was in great need of this healing truth; I had been troubled with neuralgia when a girl, and it was thought to be inherited, as my mother had suffered from it most of her life, and passed on when it spread to other parts of the body. When I was the same age I suffered in the same way that she did, and though a physician would be called, no relief except through opiates was offered me during these periods of suffering.

As soon as I could secure a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I began not only to read but to study it, and in a short time all my ailments had disappeared, even before I had gained much understanding of what I was reading. I loved to read it, and read little else for more than a year. I thank God for this wonderful truth, and Mrs. Eddy for bringing it to the world again.—Mrs. Maria Chaffee, Danville, Ill.

Christian Science has done so much for me and my family that I can no longer withhold acknowledgment of my gratitude for it. Through the study of the Bible, in connection with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have gained an understanding of Life and a knowledge of God as ever-present Love, which is everything to me. It teaches me the nothingness of that enemy fear, and how it may be trampled upon. Through firm reliance upon Truth at childbirth, I found that every material law can be met and mastered and harmony prevail, and that the seeming discords of childhood can be dispelled and reduced to nothingness.

I am especially grateful for the knowledge that man as God's image and likeness expresses perfection, and that the varied dispositions of mortal mind do not belong to God's child. This means much to me in the daily care of my children. It is my sincere desire to live up to my highest understanding of Truth, that each day I may be fitted to receive more of that spiritual understanding which overcomes sin and sickness here and now. Only by so doing can I render proper thanks to God, and to our beloved Leader.—Nellie Heald Nute, Littleton, N. H.

Some time ago my little daughter had a large number of warts on her hands, and one day I read in a *Sentinel* that a little girl had been completely healed of this ailment through Christian Science. I then took fresh courage, and decided to write at once to a practitioner. I did so, and within a month the child was free, with not a wart to be seen. I am indeed glad and thankful for this healing. I also take this opportunity of expressing my thankfulness for the kindness and patience shown me in my early days in Christian Science. Words can never express the many blessings I have received in this truth, and I hope I shall be able some day to help others who are needy, even as I have been helped.

Mrs. Arthur Edwards, Watrous, Sask.

Like many others, my first healing in Christian Science was such a revelation of the power and love of God, that in gratitude I give it as one more proof of the present availability of the Christ-cure. In six weeks' treatment I was perfectly healed of an abscess in its most serious form, experiencing none of the distressing after effects which usually attend this ailment. The healing was accomplished under adverse conditions, as in the surrounding thought there was opposition, the result of lack of faith in anything but medical aid and surgery, and my own knowledge of Christian Science was very limited. My husband, however, was willing that I should have treatment, indeed we were convinced of the truth and efficacy of this mode of healing, since it proved God to be, as Christ Jesus taught, omnipotent and omnipresent; and we were desirous of being obedient to his teachings. Surely the reward was great, for not only was our confidence deepened into an understanding of God which has proved Him to be not only then but many times since "a very present help in trouble." Besides this, the eyes of others were opened to the truth. Thus the healing redeeming work goes on.

May my gratitude be expressed as our Leader, she who has brought this truth to us, would have it be, in the actions which express "more gratitude than speech" (Science and Health, p. 3).—Bessie W. Whittier, Everett, Mass.

[Translated from the German.]

It is with a grateful heart that I wish to tell of the blessings which have come to us through Christian Science. In the latter part of 1909 I had a severe attack of kidney trouble, and several physicians who examined me prescribed a strict milk diet, which I observed for about half a year, when a dear relative told me of Christian Science, and a few copies of the *Herold* were handed to me. I read them diligently, and also began to attend the services and meetings of the local church. I soon felt a sense of trust regarding Christian Science, and asked a practitioner to take up treatment, which she did at once. In about six weeks' time my trouble had completely disappeared. After the first treatment I did not diet any longer and was able to eat any kind of food without experiencing pain, as I had before. Another ailment of years' standing, which I had not mentioned to the practitioner, has not returned since I took treatment.

My husband too has experienced the power of Truth. He injured his arm in falling, so that it was swollen and became quite stiff, while the pain was almost unbearable; but with one day's treatment in Christian Science he was able to move and use his arm without pain. In the same way he was healed later on of a severe attack of liver trouble within an hour. For these and several other benefits which we have experienced through Christian Science, I wish to express our sincerest gratitude. We now look with full confidence into the future, for we know that God, good, is the only power.

Frau E. Giesecke, Hannover, Germany.

Christian Science found me almost a physical and mental wreck; but now, thank God, I am in excellent health, and every one in my household has received benefits. I will

Digitized by Google

mention two cases. One was that of my husband, who was stricken with a complication of diseases. His temperature was very high and he could take very little food. When the doctor asked me about notifying relatives I was very much alarmed. The doctor went out, saying he would return in about thirty minutes. A Christian Science practitioner came during his absence, and when the doctor returned he said the temperature was down to normal. We all saw the wonderful change. My husband continued to improve, and I knew it to be the work of Christian Science, but could not understand how it was done.

Another case was that of the baby. She had been failing slowly. Some doctors said it was on account of my health, and objected to my nursing the child. Others said it was flesh decay. We had several physicians, one being in regular attendance. We tried everything we knew, but found no help for the child. In desperation I wrote for help to the same practitioner. The following Sunday the child was so low that friends thought she had passed on, and thought me demented when I insisted on holding her. She was cold and apparently lifeless, but I still had faith in the power of God, though I did not understand. She became warm and signs of life returned; the doctor and friends seemed satisfied and left her to me, saying they could do no more. The babe was one year old, and weighed only ten pounds, but the work in Christian Science was done very thoroughly and I know it will stand.

I am glad of this opportunity to express my thanks for the many blessings we have received through this wonderful truth, given us through our dear Leader, Mrs. Eddy.

MRS. J. T. DOLAN, Chicago, Ill.

About two years ago I was led to investigate Christian Science through hearing a lecture in this city. As I passed out of the theater I was given a *Journal* containing a lecture, which I read several times. I then began to read the text-book, Science and Health, and in about one month a habit of twenty years' standing suddenly left me and I have not had the least desire for tobacco since. During the time I was using tobacco I had tried very hard several times to quit, with partial success, but I never lost the appetite for it.

I did not come into Science for physical healing, but I was searching for the truth and I am sure that I have found it in this wonderful healing and uplifting religion given to the world by Mrs. Eddy. It has been a great help to me in many ways, and I find that as I progress in the understanding of this Science, and put into practice its teachings, in that proportion do I receive blessings. I am indeed grateful for all these, but the best of all is that it helps me to be a better Christian. I now know that God is good, and that He does not cause us to be sick or sinful.

GEO. T. KIRKPATRICK, Washington, D. C.

[Written for the *Sentinel*.]

GRATITUDE.

HON. ELEANOUR NORTON.

I SAW the beauty of the sunrise fall
Upon a foam of blossoms red and white,
Stirring with nested birds whose little call
Of eager life gave exquisite delight,
And marveled at the heart of God! He knows
Love lies behind the flaming of the rose!

Perfume and color, and that most divine
And breathless holiness which morning brings,
Sank in my spirit till their peace was mine
And one with scent of leaves and stir of wings.
I felt the universe sublimely still,
Rounded in God's most pure and radiant will.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

The parable is a symbol of the soul's experience. The life is more than the raiment. Under the clothes of ancient literary costumes we shall find the beating heart of ancient humanity. The garment changes, the setting is modified, the language may be obsolete, but the great hope or the great fear or the great longing which awakened the genius of the ancient story-teller touches us close. If the author of Job intended to put into dramatic or story form his own great problem of disinterested service of God under the repeated blows of tragic fate, he succeeded so well that the story he wrote is as modern as yesterday's tragedy or tomorrow's uncertainty. Many who listened to Jesus had eyes to see and saw not, and ears to hear and heard not. They were too dull of sight and understanding to appreciate this great artist of the soul who drew for them those wonderful word-pictures which were so true to eternal life. And if we turn away from the parables of Jesus, or from the stories told by unknown authors back there in Genesis or Exodus, we shall be as dull of eyes and ears, and as slow of understanding, as those we criticize for their failure to appreciate the beauty and significance of the parables which Jesus spoke. Let us turn back, then, and read once more those ancient poems and stories and parables under the light of the great truth that even God Himself speaks to us only in parables. So, wherever we go in the world, we find that we must study Him in birds and flowers and trees and stars, each one of which is a picture or a parable of some divine truth.

[Hon. William Jennings Bryan before students of University of Pennsylvania.]

The first question is, How much money can a man rightfully collect from society? Place the emphasis on "rightfully." And I answer not more than he honestly earns; for when a man collects more than he earns he collects what somebody else has earned and money to which he is not entitled. Ordinarily we call this stealing, although sometimes we use the word "reasonable"! How much can a man honestly earn? That is another question. I answer not more than what fairly measures the value of his service to society. And therefore, if a man desires to collect largely and rightfully, he must prepare himself for large service to society. The schools, colleges, and other institutions of learning have as their chief object the enlarging of human capacity for service to society. If it could be impressed upon the young men that they are not to take from society a dollar except what they have conscientiously earned, they would be kept from most of the temptations which drag men down.

[*Christian Register.*]

The unrest of our time and the new critical attitude toward the church are largely the result of a new thought concerning the part that human providence has played in the affairs of this world. We are beginning to see that the divine providence can wait millions of years for the working out of its plans. Within this mighty sweep of infinite power man takes his place to learn, to grow, and finally to achieve all the glorious things that come to him in dreams and visions suggested by divine ideals. The process is slow, but at last we are learning that no good will come into human society that does not come through human agency. The new understanding of the church and of religion in all its forms is that from deepest root to topmost branch the church of the living God is a human institution; that it is the visible result of the aspiring soul of man rising above its physical limits and getting access to the stores of divine power and beneficence that abound in the spiritual world by which we are surrounded.

[Rev. J. A. Cottam, M.A., in *Christian Work and Evangelist.*]

One of the most striking facts in the story of time is the success with which Christianity has withstood the determined attacks of unbelief, and not only maintained but distinctly improved its position. Again and again, in the course of the period, has unbelief raised a premature cry of victory; but after the fury and excitement of the onslaught have ceased, and the smoke of the battle has cleared away, it has been evident that the defenses of the gospel remained untouched. It is true that many ideas which were at one time supposed to be essential points in the Christian system have either been abandoned or so far modified that their character has been materially changed, or, at all events, relegated to the position of those "doubtful disputations" about which earnest Christians may agree to differ. But this means only a change in human interpretation of the divine message. The foundation of God remains sure. The religion of the cross continues to give marvelous signs of vitality.

[*Watchman.*]

In the New Testament we find the apostles with their fresh, vital religion of the heart meeting the religiousness of the priests of the Jewish church. The same conflict is on in Russia between the established Greek church with its places, objects, and modes of worship and the earnest souls born from above of the truth of the word of God, who are struggling for freedom to express the fulness they have received. The Bible is on the side of the prophets. Its pages are a record of the struggles of prophets against priests, of men of the Spirit against the maintainers of formal religion. The Bible is dreaded instinctively by ecclesiastics, because it is the book that vitalizes souls and fills men with personal religion which is too free and too strong for the bounds set by men of other days. True religion is ever breaking over the little barriers of men. The truth and Spirit of God in human hearts impel them to large, free action.

[*New York Observer.*]

For the Christian, opportunity does not exhaust itself in one day or place, but is a perennial offering of ample occasion. The believer always has a fair chance to acquit himself well. The lesson, then, is to make the most of all lesser opportunities that are offered along the journey of life, tasking one's powers up to the point of a one hundred per cent efficiency, while never mourning or repining if unable to do some particular thing which now most attracts our finite wisdom and our human desire, but always having hopefully in mind that richer promise finally to come which is symbolized by the "door opened in heaven."

[Rev. Lyman Abbott, D.D., in *Christian Commonwealth.*]

You remember in the story of the shipwreck of Paul he said that they threw out four anchors and waited for day. I have thrown out in my life these four anchors—my faith in goodness, my faith in the possibility of men's accomplishment of goodness, my faith in Jesus Christ as the ideal of goodness, and my faith in the divine helpfulness in the world to help me to goodness. And then I have waited for day. Not all is clear; the universe is still an enigma, there is a great deal I do not pretend to understand. But the changes that have taken place in the last hundred years have only deepened and enlarged my faith.

[Rev. P. T. Forsyth, D.D., in *British Congregationalist.*]

A church has no meaning or use apart from the word that made and makes it. It will be as its word is. What is that primal word? If the Christian people perish, it is for lack of knowledge of it and certainty about it. If anything is deeply wrong with the church, the word which has created it alone can set it right.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society has secured, and now has ready for distribution, a fine photogravure of Mary Baker Eddy made by Littig & Co. of New York from a colored portrait painted by Miss Alice C. Barbour, which was based on a photograph taken by Mr. Bowers of Concord, N. H., in November, 1891, and with a rearrangement of her hair that was very pleasing to our Leader.

This admirable portraiture of Mrs. Eddy, printed in three sizes on India paper and mounted on heavy plate paper ready for framing is for sale at the prices shown on opposite page.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00, six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Encouraged by its success in its campaign for the national pure food law, the International Stewards Association is now planning for a hotel training school and promotion of the movement to protect consumers against short weight and measurement in the purchase of goods sold in containers. The purpose of the proposed hotel training school, which will be located at Indianapolis, Ind., is to prepare the prospective steward, chef, baker, hotel clerk, and housekeeper to become proficient in their chosen trade or profession by installing in them business morals, building up character so that they may understand that the first requisite of success is honesty in the handling of food materials and other property belonging to employers. Practical courses of instruction will be offered in all the departments of hotel and restaurant economy. The school will also furnish training to men actually engaged in the business. Once completed and equipped, the hotel training school will represent a property valuation of $500,000. Most of the equipment has been subscribed by manufacturing firms, who will furnish their latest product as advertisement.

Of the 60,000 post offices of all classes in the United States, it is reported that approximately 50,000 eventually will be designated as postal savings depositories. The total number of postal banks created is now over 1600. By Sept. 1 all the 1800 second class post offices will have been designated as postal banks. It is the intention of the post office department then to begin designating the 6000 third class offices as banks, probably at the rate of 500 a week. Gradually the system will be extended to offices of the fourth class, including only those which are money-order offices. At about ten thousand fourth class offices money orders are not issued.

Representative Littleton of New York has introduced in the House a bill for a commission to investigate the question of regulating by legislation the transaction of business by industrial and corporate concerns engaged in interstate commerce. He believes that the Sherman antitrust law is defective and that Congress, after due inquiry into conditions, should set about making up its deficiencies. The commission he proposes is to be called the industrial and corporate commission. It would be composed of five members of the Senate, five of the House, and five members outside of Congress to be selected by the President.

While the program for the annual conference of the governors of the states of the Union has not been completed, it is stated by former Gov. J. Franklin Fort, of New Jersey, who is chairman of the reception committee, that from acceptances received already, the indications are that it will be the largest conference that has been held since the first one called several years ago by former President Roosevelt. Thirty of the executives have already stated that they will be at the gathering, which meets at the New Monmouth Hotel, Spring Lake, N. J., on Tuesday, Sept. 12, and which will last until the sixteenth.

Attorney General Wickersham has been notified that the lawyers for the so-called electrical trust are about ready to go before the United States courts and enter a judgment dissolving the combination of which the government complains in a suit now pending. An agreement has been reached with the department of justice, after much negotiation, which is expected to give to the government a complete victory without a trial in court. The department of justice has been informed that the electrical pools all over the country, against which it was about to proceed, have been dissolved.

The national monetary commission, of which former Senator Nelson W. Aldrich of Rhode Island is chairman, must wind up its affairs by Jan. 8 next, if the House takes favorable action on the measure recently passed by the Senate, limiting the commission's life to that date. The action followed a storm of criticism that recently broke in the Senate over the commission's delay in making a report and its alleged extravagance.

The cost of the proposed new charter to New York city by increases in salaries and by new positions it would make mandatory would be $4,289,500. Of this amount $3,570,000 would be necessary for mandatory raises in the pay of a number of city officers and employees, from the mayor down, the greatest single item being the increase in the budget of the board of education for teachers' salaries.

Styling their crime mean and insidious, their greed despicable, and their methods merciless, Judge Rosalsky sentenced thirteen members of the New York Live Poultry Merchants' Protective Association to three months in the penitentiary and payment of fines of five hundred dollars on their conviction of a charge of conspiracy to control the live poultry market.

President Taft in a special message to the House of Representatives vetoed the joint resolution providing for the admission of New Mexico and Arizona to statehood. His reason for exercising the executive power of veto was based on his thorough disapproval of the recall of judges clause in the Arizona constitution.

There is left at present, for continuing the work in raising the Maine in the harbor of Havana, about $150,000 of the $650,000 appropriated for that purpose. It is estimated that $250,000 more will be required to complete the work and fully expose the hulk of the battleship now covered with mud.

Plans for the dissolution of the so-called powder trust are under consideration between Attorney General Wickersham and the president of the E. I. du Pont de Nemours Powder Company, which was recently adjudged by the United States circuit court to be in violation of the Sherman antitrust law.

The purchase of a tract of fifty-six acres, a part of which fronts on the Thames river, as a site for the Connecticut College for Women at New London, Conn., has been authorized at a meeting of the board of trustees of the college.

Complete figures show an increase of nearly $100,000,000 in the value of Chicago real estate for the year 1911 over the assessed value of 1910. The total value this year is $575,528,517.

An investigation of the election of United States Senator Isaac Stephenson of Wisconsin has been directed in a resolution passed by the Senate.

International.

According to the report of the registrar of joint stock companies in Bengal quite a number of purely Indian companies were started during the past year. These included six insurance companies, two banks, one railway, and one cooperative association, two printing companies, two dairy concerns, and two leather and tanning concerns. As the native of India is in the habit of hoarding his wealth, the fact that such companies have been started is considered a matter for congratulation, indicating that some of this hoarded wealth is going to support native enterprises and showing that the natives of India have confidence in the integrity and enterprise of their own countrymen.

Changes in the tax system of the city of St. John, N. B., were recommended by the committee on the mayor's inaugural address in a report to the council this week. The reduction of the tax on improvements by twenty-five per cent is advised, the deficiency in the assessment to be made up by the placing of a tax on land. This applies only to the first year, after which a further reduction of twenty-five per cent per year on improvements and a corresponding increase in land taxation is recommended, until the tax on improvements altogether disappears.

By a vote of 241 to 128, the House of Commons passed a resolution appropriating $1,260,000 for the payment of members' salaries for the coming year. This action was taken pursuant to the resolution passed Aug. 10, providing for an annual salary of $2000 for each member of the House of Commons. This is a radical departure from the principle of gratuitous public service which hitherto prevailed in the Commons.

The Irish leaders in Parliament are quite confident, since the passage of the veto bill, that the way is now open to home rule for Ireland.

The census for the union of South Africa shows a population of all races of 5,938,499, of whom only 1,278,025 are whites.

Industrial and Commercial.

The popularity of the motor-bicycle is increasing at such an unusual and unexpectedly rapid rate, and so many orders are being received by the numerous motor-cycle manufacturing firms in Coventry, Eng., that practically all of them are obliged to work overtime. Some of the firms have already promised the whole of their output for the next year. The total output of motor-bicycles from Coventry and Birmingham is estimated at one thousand per week, and it is expected that the number of bicycles will amount to one hundred thousand on the register when the next returns are announced, showing an increase of forty thousand over the number registered two years ago.

The success of the Kaiser Wilhelm canal, which connects the North sea and the Baltic, with Kiel as its eastern terminus, from a commercial as well as strategic point of view, is shown by the official returns for the year 1910-1911. In all 45,569 ships, with a net holding of 7,580,000 tons, used the canal, while the resulting revenue amounted to $875,000. Since 1889, reckoning by the ships' tonnage, canal traffic has doubled, and returns have correspondingly increased.

Constantinople is about to rebuild the section recently destroyed by fire and has advertised for bids for the construction of ten thousand houses. The United States consul at the Turkish capital says an excellent opportunity is thus presented to American contractors. Both the departments of state and of commerce and labor are interesting themselves in laying the matter before them.

The agricultural statistics for the western division of states and territories, which includes Washington, Oregon, California, Nevada, Idaho, Utah, Arizona, Montana, Wyoming, Colorado, and New Mexico, show, according to the late census, that values during the ten years have appreciated over two hundred per centum, and that large holdings have been cut up into small farms.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PROTECTION AGAINST TEMPTATION.

FRANK H. LEONARD.

ALL the processes of Christian Science are mental, and they lead one to that primal cause which we recognize to be God, good. What may be termed the processes of false belief are also mental, and lead back to the supposed negation of good. When we come face to face with our daily problems, we find we must turn to either one or the other; to Truth or to error. If we turn toward Truth, we find a protection which means to us in its ultimate all that is good; if, however, we turn toward error, we immediately seem to be flooded with discord and disharmony of all kinds.

The first view one gains of Christian Science, on being healed from sin or disease through its redemptive ministry, fills him, naturally, with joy and happiness. It seems as though he could never again be conscious of aught but good, and that existence must continue to be one calm, peaceful, undisturbed realization that he lives, moves, and has his being in God. He has accepted the allness of God, and realized that all things are mental in their conception and development, but failing to abide "in the secret place of the most High," and so falling from the high estate of protection in continued good works, he finds in his experience something discordant and inharmonious. As this condition presents itself, his first feeling is one of amazement; then follow distress, resentment, self-pity, discouragement, and at length wonderment, perchance, if there is any God after all.

Of course, when one reaches this mental state of seeming separation from God, he has reached the attitude of the muck-raker in "Pilgrim's Progress," who never lifted his eyes above the dirt and gloom beneath him. Finding that the distress remains so long as this continues, and being unwilling to suffer, the mental attitude is likely to change somewhat, and after a while there comes just a little ray of light; then the lifting of the thought reveals the "way," and the upward progress has really begun. He looks above instead of into evil. He begins to realize that somewhere there is a protection which stands always ready to shield from everything that is inharmonious and discordant. In order that he may realize this protection, however, every one of his downward steps must be retraced, and in this return he finds that as temptation, which claims to be power, presents itself to him, the protection is at hand which is his "shield and buckler,"—the "perfect love" which, as the apostle tells us, casts out fear and renders man unassailable.

As we learn to lift up our eyes unto the hills, and ask whence cometh our help, we realize the ever-presence of God, who is declared to be a "very present help in trouble," and we know that, though evil does seem a veritable Goliath, we are supplied with the weapon which can destroy it—the sure and certain eliminator of everything that is unlike God, good. Step by step with this realization, we find that the belief of evil grows less and less potent in its apparent activity and strength, until finally, having retraced all our steps, we discover that we had made the trouble seem real to ourselves because of our failure to seek always for the higher knowledge of Christ.

Another phase of temptation sometimes presents itself, as we grow in Christian Science work and become church-members, students, practitioners, and possibly church officers. It would have one believe that at least part of the responsibility for the success of this movement is on his shoulders, and that he has assumed a great personal responsibility, so that he must naturally expect to have proportionately more trouble and temptation to meet than ever before. Yielding to the temptation with a face woebegone and a voice tearful, he may be impelled to declare, "I have so much to meet now because of the position I occupy."

Temptation thus appears with a twofold aspect. It would make the one who accepts this false suggestion believe that the more truly we worship God and follow Christ, the more we must suffer; and this is used as an argument to frighten those who are just beginning to investigate Christian Science. What shall we name this temptation? Its name is vanity or self-glorification. When we accept and are governed by the suggestion that we personally have anything to do with upholding the ark of the covenant, we receive the same reward as did those who in olden times submitted to the same suggestion. We read that "to be carnally minded is death," and it is the carnal mind which says that we personally are responsible for the progress and support of this cause, which means *per se* that so long as we accept this suggestion and are governed by it, we are dead spiritually to the great truths of the Master's teaching and are not following him "in spirit and in truth."

In Science and Health (p. 468) Mrs. Eddy writes: "All is infinite Mind and its infinite manifestation." In an attempt to reverse this great truth, mortal mind says, "God may be Mind and He may have His manifestation; but I am mind also and have my manifestation, and one is as real as the other." In order that we may have the protection which comes through knowing that God is infinite Mind, we need to realize also that infinite Mind is infinite Love, and infinite Love means infinite protection. Only as we prove this realization are we really freed from the false sense of the power of evil to tempt us, and know its nothingness,—that it is neither a false claim nor a real claim, but just nothing claiming to be reality. The reduction of all inharmonies to their native nothingness is therefore to be accomplished only by knowing that infinite Love, God, *is*.

The more we serve God, the more do we awaken to know the infinite protection of perfect Love. The more we love God, the more do we find that we are clothed in the impervious armor of Truth, and are dwelling in the fortress wherein evil cannot find us, wherein discord may not enter, wherein darkness may not come, for God is the light thereof and there is none beside Him. Advancing in the

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

field work of Christian Science through righteous demonstration, we find that every forward step brings with it added joy, strength, and dominion over self and attendant suffering of all kinds. In Science and Health (p. 265) we read: "The pains of sense are salutary," and they are when they turn us to the divine protection which reveals to us the temptation that "doth so easily beset us," thus enabling us to meet and overcome it. Self-pity, *alias* sorrowful regret that we are not good enough to do work for God, is a besetting sin of the race. The recognition of God as the only creator, and of man as His image and likeness, makes it plain that the acceptance of such erroneous belief is a charge against God, a belief that He has created something less than perfect. It is literally taking the name of God in vain.

In Science and Health (pp. 120, 242) it is written: "Science reverses the false testimony of the physical senses, and by this reversal mortals arrive at the fundamental facts of being." "There is but one way to heaven, harmony, and Christ in divine Science shows us this way." Temptation hurled itself upon Christ Jesus as upon no one else who ever lived among men. It strove to take advantage of his knowledge of the wonderful power and dominion he had over all things through his apprehension of Truth, in the endeavor to persuade him to pervert that power into a physical or material force; but he met all temptation with the recognition of the one Mind, thus destroying the belief that there is any other mind, and so was without sin.

The Bible says: "Sufficient unto the day is the evil thereof," and this by inversion teaches that sufficient unto the day is the grace and the joy thereof. As a matter of fact, the belief that one has more to meet than another is simply a belief. There is but one problem to be worked out, and that is the problem of salvation. There is but one way in which it may be worked out, and that is by the realization of the Mind "which was also in Christ Jesus;" hence we may see that for the little child with its problem, there is evil belief enough to be met, but also there is grace enough to meet it; and whether one be a little child or an adult, whether he be a layman in Christian Science work or occupies some official position, the fact remains that there is but one problem to be solved and that there is always an abounding grace wherewith to solve it. The problem which presents itself to one is, proportionately to his knowledge of the truth, no greater, and the grace with which to meet it no less, than it is to another. Knowledge of this spiritual fact is one of the great steps toward the recognition of the universal brotherhood of man, wherein we seek our own in another's good and find the kingdom of heaven at hand.

The law of God is the law of eternal progress; therefore, putting all things else behind, let us "press toward the mark for the prize of the high calling of God in Christ Jesus," proving by our stedfast refusal to yield to temptation that we know the protection of "the everlasting arms." Thus shall we become avenues through which Truth and Love dispel doubt and fear and unbelief, and the allness of God and His infinite kingdom is seen to be established "in earth, as it is in heaven."

A LESSON FROM STARLIGHT.

KATHARINE J. SMITH.

WHEN Truth first challenges the resisting ardor of the human will, there sometimes comes this hard question to prove the student: If God is of purer eyes than to look upon iniquity, why did He send a predestined and proclaimed Redeemer to save the human race from its obvious evil? When we cast a backward glance upon the defeated major confusions and contradictions with which we have had many a wrestle, we can but remember that none was greater than our ignorance of God, and our sense of remoteness from Him.

The Bible offers many conspicuous examples of the living faith and inspiration possible to those who claimed communion with the divine presence. In Genesis we read, "Enoch walked with God." Abraham, in his ninety-ninth year, listened to the covenant from the almighty God, who presently "left off talking with him." Job, erstwhile willing to believe by the hearing of his ear, declared, "But now mine eye seeth thee." The Master, whose every word must find vindication in the ultimate demonstration of Christian Science, said, "He that hath seen me hath seen the Father." Following these testimonies and declarations comes the word of St. John the beloved, sage and divine, who twice declares, "No man hath seen God at any time."

John, the exalted and revered witness of Christian progression, was far from declaring sudden apostasy, nor was he admitting discouragement when he chose to include this startling statement primarily in his gospel and later in his first general epistle, nor did he make of little account or accidental the veracity always synonymous with the sacred names of Enoch, Abraham, Job, and Christ Jesus; he was warning a throng of new-made Christians whom he benignantly addressed as "little children," whose faith was menaced by the false prophets of personality, strife, and selfishness. He knew that the unrecognized lack of this throng was love, and that its presence could alone enlighten their ignorance.

The science of physical geography teaches us that no man has at any time seen a star, that the most searching and subtile telescope ever constructed by science has not yet disclosed the actual material body or substance of a star. The student will recognize this fact as no less definite and precise than is St. John's scientific statement of human limitation; nevertheless, through the dusk and gloom of incomprehensible leagues of aerial and ethereal space, comes to the eye of every one who looks up in the night that radiance which the astronomer tells us is not the star but rather the light which the star sends forth. The student is not depressed or disappointed if need be he go so far as the observatory of the college class to learn this; he is, on the contrary, impressed, and thereby rationally compelled to lay aside certain contentment with former opinions regarding laws and values of space and proportion; he is humbled, but humility should never be construed for discouragement.

There are countless magnitudes belonging solely to the physical universe which mortal man is slow to conceive of, or unable mentally to mount up to; one which must give us pause is that if the energy of the aforesaid star were instantly to cease, the light already projected into space would continue to travel toward our planet and others for hundreds of years, perchance, before the fact of its extinction could become known to our sense of sight. No man has ever yet seen a star, but by the light of its shining the courses of the world's seven seas are charted, and the desert grows familiar as the city street. If by this fact finite thought may become somewhat sublimated, shall the Christian Scientist, privileged to work on and up through Truth's light to its divine Principle, God, dare to say what altitude may be set for the more spiritual sublimation of his thought?

The relation of the Redeemer to God is as light to the unchanging star, immanent and coexistent; the relation of the Redeemer to mankind is as starlight to a night-engulfed world. Not of night, nor darkness, but that he may lose his way, is the traveler's fear, and in his need of guidance he accepts the pole-star and its light as one. Beholding the light, he is mentally poised for his course, whatever apparent obscuration may attempt to ensnare his feet. Thus may the student of Christian Science comprehend Jesus' assuring words to Philip concerning the

Digitized by Google

Christ-manhood, "He that hath seen me hath seen the Father." The student finds also that John's declaration, "No man hath seen God at any time," agrees with Jesus' question to Philip, "How sayest thou then, Show us the Father?" for God is discerned only through Truth's manifestation, even as the star is discerned only because of its radiance.

God's presence is known by Truth's effect upon spiritual ignorance, resulting in spiritual illumination, or all-inclusive healing. As light manifests the star, so does Christian Science, with its preaching, teaching, and proof of redemption, become God's complete and Christlike interpreter of Himself. All scientific progress exacts allegiance to the science involved, so far as science has enriched and exalted human thought. The magnitude of our spiritual knowledge waits upon our faithfulness and our teachableness. Our revered Leader, Mrs. Eddy, whose masterful work of service has won her Lord's "Well done," says, "Truth is revealed. It needs only to be practised" (Science and Health, p. 174).

THE REJECTED STONE.

HARRY WOOTTON.

WHEN Annas the high priest and his kindred had Peter brought forth from confinement, they sought to procure his condemnation out of his own mouth. Facing these "rulers of the people, and elders of Israel," the apostle gave strong and memorable answers to their questioning. They sought information as to the great and to them mysterious force which was at that time quickening the people of Palestine, turning them from the old ritual and belief, lifting them from the pleasure and coincident suffering of sense to the enduring joys of Spirit, opening the eyes of the blind and giving strength, health, and uprightness to the impotent and crippled.

To the unawakened sense of the priests some power, to them unknown, was daily manifesting itself among those who had in the past looked to them for guidance in all things seemingly spiritual, and thousands were believing and rejoicing in this new-found ideal with which they as priests and rulers had nothing in common. To the material sense of these men their temporal power and authority were endangered, their apparent ascendency over the masses by reason of an excess of culture and education was waning, and naturally against an unseen agency which threatened their self-created dynasty there went forth a cry of treason. With its usual cunning, mortal thought must select some person or persons as the target for punishment; hence the arrest of Peter and his associate, their confinement, and examination on the morrow.

The people were still wondering over the strange healing of the lame man at the Beautiful gate of the temple, and of this demonstration these rulers demanded information. The question thrust at the two servants of God, "By what power, or by what name, have ye done this?" brought forth the answer which may be repeated here daily and hourly as the answer to the same question constantly propounded by the modern self-constituted rulers of mortal thought: "By the name of Jesus Christ of Nazareth, even by him doth this man stand here before you whole. This is the stone which was set at nought of you builders, which is become the head of the corner."

What food for thought lies in this metaphor! What a keen rebuke of priests and rulers is contained in the words, "This is the stone which was set at nought of you builders"! With equal propriety this same phrase may be used today as an answer to the many questions and criticisms intended as attacks upon the system of Christian healing established by our revered Leader, Mrs. Eddy. Christian healing is the result of the awakening of each one of us to the Christ-idea. "By his name;" that is, by "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583), the broken-hearted are today as then made to smile in spiritual contentment, those despondent are uplifted to realms of joyous thought; the invalid and crippled are raised from beds of sickness, and the sinful sent forth to "sin no more."

Yet this is the "stone which was set at nought" by the builders of modern material thought, this is the stone not considered in the establishment of the modern system of cures and treatment of disease by material agencies; but, with the sureness and positiveness of all action guided by Truth, Christian Science taught and practised is reestablishing God's temple, and the truth "which is become the head of the corner" is the same Christ that came to uplift the helpless cripple at the gate of the temple and send him into that place of worship, "walking, and leaping, and praising God."

We are all builders, and in Christian Science we have had pointed out to us the stone "which is become the head of the corner," and as we give it the honored place in our consciousness our individual building will be a reflection of Truth, Love, and eternal Life; a refuge for tired, sick, and sinning humanity, who shall be refreshed, freed, and made whole, by being in the shelter of the temple which has Christ as "the head of the corner."

LOVE IMPARTIAL.

EMMA H. MCLAUTHLIN.

WE find in the book of Acts, Peter's emphatic declaration that "God is no respecter of persons," and an article on the finding of a home which appeared in the *Sentinel* a few months ago brought this vividly to my thought.

One night, more than four years ago, I had heard the writer of that article relate the experience in a testimony meeting at one of our branch churches, and it impressed me very deeply at the time as a beautiful illustration of our Master's words, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." It also recalled those words of our Leader, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). The morning after I had heard the testimony I repeated the narration almost word for word to a friend whose sister was having the same problem to solve, thinking it might help her, but little dreaming that I should soon need the help myself. That very afternoon, however, I received word of an occurrence which I knew would necessitate my finding a new home for myself, and that quickly, as I had just two weeks in which to make the change; but the testimony to which I had listened was very reassuring, and I tried to work along the same lines. At first there was no apparent result, and although friends advised my trying several places, I went to none of them. I felt that my home must be found first in Mind.

One morning I awoke early, with a troubled sense that I had only four days more in which to make the change, and I began to think that I could not have done my work aright, or I should have been directed as to what steps to take. Then I thought of those words which had helped the other woman, "In my Father's house are many mansions: . . . I go to prepare a place for you;" and I thought that my home was already prepared and waiting for me; that I had only to be directed to it. A sense of peace and assurance then replaced the troubled, anxious thought, and in a few moments I had an unmistakable intuition that my home was to be with two friends who were Christian Scientists. At first I could not remember just where they were living, nor did I know how they were situated, but I never doubted that I was to go to them.

During the morning the thought would present itself that these friends might not have a room to spare, or they might not be willing to take any one with them; but I

Digitized by Google

would not admit the doubt. I said to myself, "If that is the home prepared for you, it is ready for you." At noon I called on my friends, and found they would be glad to have me live with them. Thus was my faith in God's providence justified, and for more than four years I have had a happy home, with such friendship and love as it is rare to find. In Christian Science we find that these blessings are for all, for our dear Leader says (*Ibid.*, p. 13), "Love is impartial and universal in its adaptation and bestowals."

LOOKING TO TRUTH ALONE.

GRACE MAE TAYLOR.

WHILE studying our text-book, Science and Health, the thought contained in the paragraph on page 266 which begins with the question, "Would existence without personal friends be to you a blank?" appealed to me especially. I put the question honestly to myself, and was able to find some weeds which needed to be uprooted. This particular question I had often asked myself, and this time I was grateful that I found fewer weeds of personality to uproot than heretofore.

Many times have I been able to see clearly what it means to stand alone with God, with every material support taken away, and in humility and meekness realized the light of Truth dawning in consciousness. Every such experience means growth, and if we will but humbly consecrate ourselves to the honest endeavor to replace some phase of selfishness with a manifestation of love, we shall be able to crucify self, and every battle thus won makes us so much the stronger. If we pray, "Thy will be done," we should be ready to lay down all personal desires, all sense of self, for Christ, for when we thus pray we are declaring ourselves for Truth, and in proportion to our ceaseless striving to have the same Mind "which was also in Christ Jesus," do we prove our sincerity of purpose and our gratitude to our beloved Leader, through whose wonderful courage and clear spiritual perception it has been made possible for mankind to apprehend Christian Science. As we put our purified desires into active demonstration, we rise higher in the scale of Spirit, and where we once saw "through a glass, darkly," now we see more clearly, even "face to face."

The "peace of God, which passeth all understanding," comes only after we have finished our battle and entered the dawn of a new birth. Then, in the strength of our increased capacity to reflect and radiate Spirit, we may serve our beloved cause; not for the glory of personal sense, the exaltation of individual ability, but for the glory of God. As we look away from sense and keep our gaze steadfastly fastened upon the one enduring and true Love, we are able to see more clearly the especial need of the hour and to do our share toward the meeting of that need, whether the problem involved be political, civic, or religious. Constantly striving for a better and holier life, we become channels for the expression of joy and love, and lighten our brother's burden,—"seeking his own in another's good" (Science and Health, p. 518). In this way we bring into demonstration the brotherhood of man, self is forgotten in the joys of Soul, and the "existence without personal friends" of which Mrs. Eddy reminds us ceases to be a blank, for we are placing our trust, as a little child, in God and entering into the joy of our Lord.

PATIENCE.

A. M. WILDE.

ABOUT two years ago we moved into a new neighborhood, and looking out of the window one morning we noticed several fruit trees, all of which appeared to be thriving but one, and that one seemed to be entirely dead. A few days later we observed that the rest of the trees began to grow green and to blossom, but this particular one still seemed lifeless. Our curiosity soon died out, however, and we forgot the trees; but the next time I noticed this tree it had begun to leaf out, and in a short time was not only much more beautiful than any other tree in the yard, but later it yielded more fruit than any two. I learned a lesson from these trees; namely, not to keep watching daily for growth, but to leave the unfoldment to God, who surely will care for them and bring forth their fruit in due season. If we are but patient, growth will certainly follow.

Another object-lesson was gathered from the effort of three men to break a large rock which they wanted to use. First one man and then the other would strike it with all his strength, but the stone still seemed to remain the same, until all of a sudden it broke in two, and the men fitted it into its right place. This brought to my thought the workings of Christian Science. A patient goes to a practitioner to be healed, and the practitioner begins the treatment and works up to his highest understanding. The sufferer, however, becomes impatient and discouraged, and goes to another practitioner, and so on, until the condition is met and the patient healed. As a matter of fact, the work was going on as soon as the patient asked for help, and when he honestly worked with the practitioner the purifying process began to do its work in his thought. We all need the lesson of patience to do our work each day, knowing that the Principle of the healing work is perfect, and that the results of obedience to Principle must be perfect; but we must first begin to break the hard stones of selfishness, self-pity, malice, jealousy, irritability, pride, etc., for these are the stones that must be crushed before we can be healed.

Mrs. Eddy says that "self-love is more opaque than a solid body. In patient obedience to a patient God, let us labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love, —which wars against spirituality and is the law of sin and death" (Science and Health, p. 242). The Scripture tells us that no temptation has taken us but what is common to man, so our tribulations are way-marks to a higher understanding of God's Word. In Paul's epistle to the Romans we are told in several chapters how to gain patience, and we have reason to be grateful to our Leader, Mrs. Eddy, for showing us how to reach the mental condition in which we can hope and patiently wait for results. In "Pulpit and Press" she tells us that "the enemy we confront would overthrow this sublime fortress," the consciousness of God's allness, and asks how we can "defend our heritage" (p. 2); but in our text-book she has made the truth so plain that a child may understand it, and begin to make the demonstration of patience. Surely such a work can never fail. Its full fruitage may not be seen in a day, but we should leave it alone, like the tree, and God will give the harvest. I thank God each day for even the little I know of this truth, and I realize that if I am only patient, I shall gain more each day, for we learn in Christian Science that progress is inseparable from the law of God.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 3, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 25, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 2, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[B. O. Flower in *Twentieth Century Magazine.*]

The appeal of Christian Science was distinctly from the letter to the spirit; from externalism—from rite, form, and ritual and whatever appealed preeminently to the physical senses—to the great spiritual verities. It insisted on the recognition of the omnipotence, omniscience, and omnipresence of Deity and on acceptance of the Bible declaration that God is Spirit and that in Him we live, move, and have our being. It held that inasmuch as man was created in the image and likeness of God, the real man must be spiritual; and inasmuch as God had given to man dominion over all created things, such sovereignty was rightfully his, to exercise in accordance with the spiritual law of Love. It taught that Christ Jesus was the fullest embodiment of Deity that had appeared garmented in the flesh, and that his recognition of the sonship of man, his understanding of the imperial power of the Spirit of God, reflected in man, on the canvas of time, gave to those who realized their oneness with the Father the power to overcome disease and to reflect the life, love, and beauty which were the rightful heritage of sons of God and partakers of the divine Mind.

Plato, as all students of the great Greek know, held that the world of ideas was the world of reality, and the world of sense perception the shadow world. Emmanuel Kant held that "the corporeal world is nothing but phenomenal, and sense perceptions are the material out of which it is built." And so one might fill pages with extracts from master thinkers of the ages, showing strong points of resemblance to the teachings which came to Mrs. Eddy as a result of her profound study of the Bible. They show how pitifully shallow and ignorant are those critics who, steeped in materialistic conservatism or slaves of externalism, have ridiculed the teachings of Science and Health as incoherent, inconsistent, and wanting in philosophical basis or religious warrant. The difficulty which such critics experience is due to the fact that they judge metaphysical philosophy from materialistic philosophical premises. They allow their prejudices to warp their opinion, and they fail to study sufficiently Science and Health to gain a comprehensive grasp of the author's thought in its entirety.

What is the secret of this rapid and steady growth, at a time like the present, when intellectualism and materialism are moving hand in hand with externalism and formalism, and when, with all their wealth and multitudinous devices to attract and hold the congregations, the majority of Protestant churches are rarely filled and often almost empty? How can we account for the phenomenon of this new church, Sundays and Wednesdays, being thronged to the seating capacity of the edifices and often being compelled to repeat the Sunday services in order to accommodate the public?

That the remarkable cures are a chief factor in leading men and women to become interested in Christian Science, is unquestionably true; and when it is remembered that persons rarely turn to Christian Science until after they have vainly sought relief from physicians, we can easily understand that those thus restored frequently become active members in the new communion. They feel that they have a reason for the faith that is in them. Like the man who was blind from birth, whom Jesus healed, they have little patience with the partisans of *materia medica* or conventional theology who try to convince them that they have never been ill. The blind man knew and declared that whereas he had been blind, now he saw. He wanted no further evidence to convince him of the power of Christ. So this growing army of Christian Scientists will tell you that after long and vain searching for health through *materia medica,* they have been cured through Christian Science—many of them, indeed, after physicians of prominence had declared that they were suffering from incurable diseases.

But, aside from the means so constantly employed by Jesus and his disciples for awakening the sleeping spiritual nature, Christian Science offers little to attract a civilization absorbed in externalism and so largely under the spell of greed for gold. Take the service, for example. It is severely simple, and devoid of anything that would especially appeal to the popular imagination. Here we have congregational singing, silent prayer, followed by the repetition of the Lord's Prayer, and reading from the Bible and Science and Health. This is all the Sunday service offers. Here is no eloquent clergyman, no magnificent choir, no imposing ritual or gorgeous ceremony; and this church does not resort to the thousand and one expedients of other churches to attract and hold the interest of its members. And yet the buildings of this faith are each Sunday thronged to their capacity, and at the Wednesday evening testimony or answer-to-prayer meetings, while other churches can muster but a meager number, drawn merely by a sense of duty, to their prayer meetings, the Christian Science churches are crowded. In Boston, of a Wednesday evening, no matter how disagreeable or inclement the weather, there are rarely less than thirty-five hundred in attendance. This is probably more than twice as many as could be found in all the other Back Bay churches.

Clearly, then, the healing power, great and positive as it is as a factor in interesting and drawing many to Christian Science, is wholly inadequate to explain the growing hold Christian Science is taking upon serious-minded truth-seekers of today. Such success as is here apparent can only be accounted for on the hypothesis that this message satisfies the age hunger of a growing multitude who are weary of externalism and the husks of theories, creeds, and dogmas that fail to nourish the inner life. It is a message instinct with moral idealism. Its appeal is from the materialism of the age and the fleeting pleasures of the hour, to those spiritual verities that are eternal, and which ennoble, glorify, and enrich life.

[Algernon Hervey Bathurst in *Health Record*, London, Eng.]

A Christian is one who accepts and practises the teachings of Jesus the Christ, and it would be difficult to find a body of people to whom these teachings are of greater value and importance than the Christian Scientists. Again, it is hardly accurate to give as a reason for the statement that Christian Science is not Christian the fact that Christian Scientists deny the reality of matter. Christian Scientists are not the only people who do this, although they are the only people who do so on the understanding that the creation of God, the "First Great Cause"—the only creation—cannot be other than wholly spiritual, and is, therefore, not material. It must be admitted that the teachings of the Master are as scientific as they are Christian, and they are scientific because demonstrable. One of the generally accepted definitions of the word "science" is, "knowledge classified and made available in work, life, or the search for truth." Now, Christian Science is a faith known entirely by its works; that is to say, a correct understanding of Christian Science and an honest application of the teachings laid down, inevitably heals the sick and reforms the sinner. Christian Science is therefore preeminently scientific.

Christian Science is not something new; it is just as old as truth itself. Mrs. Eddy, the Discoverer and Founder of Christian Science, says, in the Preface to the Christian Science text-book (p. xi), "Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

Digitized by Google

Mrs. Eddy's only guide in the study of this great subject was the Bible, and through this study she was enabled to give these teachings to the world, teachings to which thousands upon thousands of men and women owe their very existence today, because of her spiritual perception of what Jesus meant in the numerous declarations he made in the New Testament as to the means of becoming free from the bondage to sin and sickness.

It is true that "natural science recognizes nothing but material things, and all its experiments are conducted by material means," but this statement no longer holds good when we refer to the Science taught by the Master two thousand years ago. He said, "Ye shall know the truth, and the truth shall make you free," and there are a great number of cases in the Bible of how men and women were made free by a knowledge of the truth; while a large percentage of the men and women who fill the Christian Science churches at the mid-week services, wherever they are to be found in the great cities of the world, have already been made free in exactly the same manner. Now, that knowledge of the truth was not the knowledge, so called, of what certain drugs could do, not the knowledge that good and evil are forever at war, and evil, more often than not, the victor; it was, however, the knowledge that, as Mrs. Eddy writes on page 468 of Science and Health: "Spirit is the real and eternal; matter is the unreal and temporal." Truth is unalterable; Christ Jesus revealed the truth to his disciples, and they were able to practise or demonstrate, his teachings in so far as they understood them. Mrs. Eddy, far from discovering anything new, has merely reminded humanity that those same teachings are as available to humanity today, and will meet their needs in exactly the same manner, as when they were first uttered.

In conclusion, it should be stated most emphatically that Christian Science and "suggestion" have nothing in common. The Christian Scientist is striving daily to follow the injunction of the apostle, to let that Mind be in him which was also in Christ Jesus, who healed the sick, fed the hungry, and raised the dead in direct opposition to the laws of that "carnal mind" which, believing in the power of both good and evil, is a house divided against itself. Jesus proved that an absolute and scientific understanding of God, of good, would result in the banishment of the false sense of any opposing power, whether sin or sickness, fear or want. It is this understanding, and this understanding alone, that Christian Scientists are striving for, and they are proving that they are attaining it in the exact proportion that they understand the great message Mrs. Eddy has given to the world.

[Frederick Dixon in *Sydenham* (Eng.) *Borough News.*]

Our critic apparently thinks that Christian healing is a process of mental suggestion; but if you can suggest what is supposed to be good to a person, you can with equal certainty suggest what is evil. For this reason, mental suggestion is about the most dangerous thing in the world, and is the absolute antithesis of Christian Science. Christian Science works, if it is possible to put it in a few words, by teaching a man the spiritual or absolute law. As he learns what this law is, he is able to overcome all physical effects, whether organic or functional, as these are both alike mental in their origin. The natural science idealist admits that matter is simply the result of energy, or of mind. If this is the case, it is obvious that disease, whether organic or functional, being caused by the human mind, must be healed through divine Mind. To convince the human mind by giving it a dose of medicine is simply a clumsy method of accomplishing something which can be done by teaching it the spiritual law, or absolute truth. Jesus said, "Ye shall know the truth, and the truth shall make you free." In the exact proportion in which a man gains knowledge of Truth he gains the Mind of Christ, and to the extent he gains this Mind of Christ, he destroys all belief in the power or reality of evil, by proving good alone to be real. This is the way in which Christian Science healing is wrought, and it is something as absolutely antithetical to mental suggestion as anything it would be possible to conceive.

[H. M. Mason in *Knoxville* (Tenn.) *Sentinel.*]

A student of Christian Science who can measurably demonstrate its teaching gains this understanding—that God created man in the image and likeness of Himself, spiritual and perfect. The material concept is nothingness, and unto nothingness shall it return. As figures are only material symbols of the perfect and unchangeable ideas of mathematics, so the changeable aspect of the material universe, which eventually reverts to dust, never changes the true ideas of spiritual life and the God-created universe. "The [material] law made nothing perfect, but the bringing in of a better hope did; by the which we draw nigh unto God." Thus "through faith we understand that the worlds were framed by the word of God, so that things which are seen [through this spiritual and demonstrable faith] were not made of [changeable, material] things which do appear [to material sense]."

Paul said, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." This undoubtedly refers to the material sense which Mrs. Eddy names "mortal mind," and, as it is not subject to the law of God, it necessarily brings forth disease and discord continuously, just as a sense of music not subject to the law of musical science could produce nothing but discord through various phases of imitation. As the basic law of music gives the student a reliable understanding of its consonance, so God, according to Paul's assurance, "hath not given us the spirit of fear; but of power, and of love, and of a sound mind," which cannot be dismayed.

In teaching and leading the human race out of its deluded sense which exists wholly in the realm of sin, Christ Jesus, the Wayshower, made plain the fact that "God is not mocked," and "whatsoever a man soweth, that shall he also reap." Even so "Christian Science demonstrates that none but the pure in heart can see God" (Science and Health, p. 337).

Christ Jesus must be held accountable for the doctrine which teaches the unreality of this sinning, dying sense of life—all that is unlike God. His plan of salvation demanded of his followers the doing of the works he did. Of course, he expected these works to be done through the knowledge and application of the truth which he taught, and, as it is the truth which he said shall make free, it necessarily follows that every form of bondage is based upon a lie. There are many interpretations of Christ Jesus' teachings, but there can be but one demonstrable understanding, and works necessarily must follow in verification. The power of healing according to the teaching of Christian Science is not purchasable, as Philip assured Simon the sorcerer. Christian Science makes the power of healing possible only through cultivation of thought, which brings spiritual discernment and makes right the heart.

Most people believe that an evil power exists, and while some of those who have given it the most serious thought have found themselves unable to determine its origin, nevertheless they have accepted the belief that it has a source, even if it be in the realm of unfathomable mystery. True worshipers of God believe the Supreme Being to be omnipotent, omniscient, and omnipresent. Accepting this as a basis of reasoning, and drawing logical conclusions therefrom, what else can be done with this so-called evil power than to find out that it has no actual creator or legitimate right in the economy of being?

According to Biblical history, the impossibility of harmonizing an omnipotent, omnipresent God and another

Digitized by Google

power diametrically opposite to Him became a problem concerning which no solution was introduced except in a prophetic way, until through the unfoldment of the realities of life, which human progress has ever enforced, the eternal truth was presented by Christ Jesus, who taught and demonstrated the "way" of life—the plan of salvation. He came to "destroy the works of the devil," and his effective work along this line included the destruction of the evil one himself. The general belief in an evil power, or some other power than God, has throughout human history presented many phases of workings. In comparatively ancient history necromancy, sorcery, divination, and witchcraft have been presented. The mysteries of these influences are perpetuated today through mesmerism, hypnotism, animal magnetism, etc. The critic says that animal magnetism is "the evil of the Christian Science faith, a Mefisto created by Mrs. Eddy herself." This assertion is certainly a misrepresentation of Mrs. Eddy's teaching. A student of Christian Science who can even partially demonstrate its teaching has learned to some extent by actual experience that "there is no power apart from God" (Science and Health, p. 228), and evil under the name of animal magnetism, or malicious animal magnetism, introduces to him no terror, for this teaching casts out "that old serpent, called the Devil, and Satan, which deceiveth the whole world."

It stands to reason that if a Christian Scientist demonstrates, in any degree, God, good, as the only power, he cannot alternate this scientific understanding with a belief in an evil power. It would be just as near a fact to argue that Copernicus became a victim of the Ptolemaic deception regarding astronomical calculations as to argue that Mrs. Eddy created a monster delusion known as malicious animal magnetism, and feared the effects of its workings. As a matter of fact, Copernicus uncovered the delusion regarding the untenable theory of the universe, and through his logical and scientific calculations supplanted in the minds of many the mistake so long believed with the fact regarding the solar system.

The careful study and proper development of the teaching of Christian Science has taught many people the fact that Mrs. Eddy discovered the demonstrable truth concerning God's allness, and thereby conversely uncovered the unreality of any power opposed to this divine intelligence. More than a mere acceptance of this teaching is necessary to demonstrate its force, but the conscientious student who has become a grateful beneficiary through his liberation from a so-called incurable ailment has proved for himself with "signs following" an infinitesimal part of the truth, and therefore by induction he consistently accepts Christian Science as a whole.

[John L. Rendall in *Manchester* (Ia.) *Press.*]

Jesus' disciples, also the apostle Paul and the early Christians for three hundred years after Jesus' time, healed the sick as an essential and fundamental part of the Christian religion. It is not recorded that they built hospitals for that purpose, neither did they employ the services of physicians and drugs, but depended absolutely upon the power of God. This is the interpretation which Christian Scientists place upon Christian healing, and it is logically sustained in the Scriptures. In the words of our beloved Master: "For which of those works do ye stone me?"

Discussions of doctrinal points and elaborations of man-made theology are of very little avail. All the theology that was ever evolved by human intellect never had one iota of the potency of divine Love as manifested in true Christian healing. Christian Science, as a religion, has brought healing to the sick, peace and blessings to those burdened with sorrow. It has reformed the drunkard, it has elevated human character, and brought forth the possibilities of infinite good which God has bestowed upon man, in hundreds of thousands of cases. It is reasonable, logical, practical, and satisfactory to those who understand it, no one of whom could be induced for one moment to decry or belittle its beneficent influence upon their individual lives and characters.

By what right, then, does one whose claim to knowledge of it is superficial and based upon misinformation and misconception, presume to belittle the religion of these people, which to them has meant so much? There is just one criterion by which a teaching can be properly judged—viz., results. Our critic will remember that Jesus said: "By their fruits ye shall know them," and Christian Scientists are more than willing to stand upon this basis of judgment. They have proved the certitude of God's promises. They have become absolutely certain, through demonstration, that what Mrs. Eddy has taught concerning the "Word of God" is true, they have learned the verity of Jesus' teachings concerning the healing of the sick and the overcoming of sin, and in this they stand conscious of the integrity of their motives and the purity of their endeavors; therefore, in the words of the Scriptures, "the gates of hell shall not prevail against it."

[William J. Bonnin in *Bury* (Eng.) *Times.*]

It is easy for the not very close investigator into Christian Science to gather an exaggerated impression of the importance Christian Science attaches to the healing of disease. It is the teaching of Christian Science that the mission of Christianity is to destroy the sins of the world. The destruction of sin can only be accomplished by establishing something in its place, and as sin is mental its destruction must be by the annihilation of wrong or false thoughts with good or true thoughts. Now it is infallibly proved in Christian Science that causation is mental, and that wrong thinking, or sin, is manifested in wrong or discordant conditions, and that these conditions may be replaced by harmonious conditions by replacing wrong thinking with right. So that the healing of disease, misery, and poverty is but the proof of the teaching, the test which the Founder of Christianity established for himself and his followers, and the neglect of which Christian Science shows to have been the origin of all schisms. Great importance certainly is attached to it as a test, but not as an end. Jesus said: "He that believeth on me, the works that I do shall he do also." Christian Science affirms that if one is in bondage to any sin or sickness or misery, it must be because he does not know the truth about his own being and his God, and it offers to these a scientific and logical statement, based on the omnipotence of divine Love, which every man can lay hold of and put into practice for himself, and himself test whether it is the truth which is to make free, and the bringing of which earned for Jesus of Nazareth the title of Saviour of the world.

FINE PHOTOGRAVURE OF MRS. EDDY.

The Publishing Society now has on sale a fine photogravure of Mrs. Eddy which will be valued as an excellent likeness of the Discoverer and Founder of Christian Science. The picture from which this photogravure was made had the approval of Mrs. Eddy as being to her the most satisfactory of recent years.

The photogravure is printed in three sizes on India paper and mounted on heavy plate paper ready for framing, and is for sale at the following prices: 8-inch picture (mount 12x16), single copy $1; six copies $5.25; twelve copies, $9.50. 12-inch picture (mount 15x20), single copy $2; six copies $10.50; twelve copies $19. 16-inch picture (mount 21x29), specially adapted for reading-rooms, single copy $3.50; three copies $9.50; six copies $18.50; twelve copies $33.50.

Address all orders for these pictures to The Christian Science Publishing Society, Falmouth and St. Paul Sts., Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FORGIVE US OUR DEBTS."

THERE is a wonderfully accurate balancing of the scales of justice in that petition we daily take upon our lips, though perhaps without fully comprehending all that is therein implied. We pray, "Forgive us our debts, as we forgive our debtors," but would we be satisfied if the Father were to take us at our word? Do we extend to our brother the forgiveness he needs, in a measure to offset our own claim for divine pardon?

Christ Jesus brought home the duty and necessity of forgiveness of our brother very clearly. In the sermon on the mount he points out the uselessness of the burnt offering, the propitiation for our own sins, so long as we are at fault with our brother,—we must seek reconciliation with him ere we ask forgiveness for ourselves. It was to impetuous Peter, however, that he gave the rule which sometimes seems to us so difficult of observance. Peter had asked, "How oft shall my brother sin against me, and I forgive him?" and possibly he felt he was conceding much when he tentatively asked, "Till seven times?" Then came the Master's sweeping declaration: "I say not unto thee, Until seven times: but, Until seventy times seven."

If we stop to think how many, many times we need to ask forgiveness, we may see more clearly the need of forbearance toward our brother. Would we dare limit our infractions of the Father's will even to the seventy times seven which the Master commanded? Paul, grand apostle of the faith that he was, had to struggle against "the sin that doth so easily beset us," and he humbly acknowledged, "To will is present with me; but how to perform that which is good I find not." We have need, then, in view of our own fallibility, to remember and be grateful that "Love is reflected in love" (Science and Health, p. 17).

We forget the divine law of justice when we say, "I could forgive anything but that." Whatever the offense, let us strive to forgive and forget,—"let Truth," as Mrs. Eddy bids us, "uncover and destroy error in God's own way, and let human justice pattern the divine" (*Ibid.*, p. 542). No matter how grievously we may think we have been wronged, we are not to recompense evil for evil, but forgive and forget, secure that the scales of divine justice will sooner or later balance, for "though the mills of God grind slowly, . . . with exactness grinds He all," and if we have done our part in forgiving, we may safely leave the adjustment to His care.

Perhaps we say, "I can forgive, but I cannot forget." Ah, but if we truly forgive, there will be no sense of injury to cherish. One may have betrayed our confidence even the "seventy times seven," and yet, if we have forgiven him, if of this discipline, this trial of our faith in God's goodness and justice, there have been wrought out for us the virtues of grace, meekness, patience, humility, gentleness, the love that "suffereth long, and is kind," we shall see in these blessings the hand of Him who is "of too pure eyes to behold evil;" that because evil has no entity, is but an illusion, there is nothing to remember.

Sometimes we find it easier to forgive an open offense than an unwitting or unacknowledged one: perhaps we pass it over in silence, but self-love intervenes and would have us think we should get credit for our virtue, and then it is that we need to be on the alert. We must not try to "steady the ark," do the debiting and crediting; it is ours to do right because it is right, and leave the accounting to God, assured, as our Leader points out, that "He who is immutably right will do right without being reminded of His province" (*Ibid.*, p. 3).

The greatest test of all is to be able to forgive unmerited abuse, to continue to love and do good under insult and injustice; but once again we must recall our own shortcomings, our trespasses against divine Love, the tender, compassionate Father-Mother God, who is good and good only, and then to pray that even as we have been forgiven, so may we forgive.

ARCHIBALD MCLELLAN.

"GIVE YE THEM TO EAT."

THE wonderful story of the feeding of the multitude by Christ Jesus is told by the four evangelists, and it is noteworthy that each of them prefaces his account with a statement of the healing work done at this same time by the Master. The thousands who had come out of the cities and villages were undoubtedly in a receptive mood, many of them ready for the blessings which he was always ready to bestow. He had announced to them, and commanded his disciples to announce, the ever-present kingdom of God, in which there is no sin, disease, poverty, or death, and of its presence he was prepared to furnish and did furnish ample proof. He taught them to pray, "Thy kingdom come," and never to doubt that their prayer would be answered in a manifestation of divine bounty and power.

As we read these accounts of the feeding of "five thousand men, beside women and children," by the Master, who thus revealed to them the one infinite, spiritual source of supply, we may learn many lessons. In noting the slowness with which the disciples apprehended their Master's teachings, we may well arouse ourselves and others to the need of laying aside the heavy weights of belief in material law, in a far-off God, and a consequent sense of lack,—lack of the necessaries of life, of health, of strength, of happiness, —when all needed things are assured to those who seek "first the kingdom of God," the supply, like its divine source, being ever close at hand.

We are also led to think of those who today profess to be followers of Christ Jesus, but who deny the divine power to heal as in his day, and who deny that human need can be met otherwise than by material means. They say all that is good in Christian Science may be found in the other churches. This being admitted, there can be no evasion of the Christ-demand, made to the disciples in that olden time, when the need of the multitude was pressed upon Jesus' attention. He said, "Give ye them to eat;" and today this same demand comes to every professed follower of Christ. If one must plead his own insufficiency, there is the other command, "Bring them hither to me,"—bring the hungry and the sick, bring the pitifully few loaves and fishes, but dare not to bar the way for those who are seeking the outstretched hand of divine Love.

If a professed follower of Christ has the truth which sets free from sickness, from poverty, from heart hunger, from darkest doubt, let him give it in God's name (and millions are praying for it, yes, dying for want of it in every land), but let him not deny that divine Truth is as potent today as it was when Jesus healed the sick and fed the multitude because he knew its omnipotence. Too often, alas, are the hungry seekers after Christ told that spiritual law is not available today, but after long wandering in the desert, one by one these seekers are finding that God has spoken anew to this age, and through an apprehension and application of the teachings of Christian Science they are being healed and fed.

Concerning her discovery of the Christ-Science, Mrs. Eddy writes: "Soulless famine had fled. . . . Being was beautiful, its substance, cause, and currents were God and His idea" (Retrospection and Introspection, p. 23). All the world over are to be found her followers, who in the

Digitized by Google

measure of their understanding heal the sick in Christ's name, and in teaching them the all-sufficiency of Truth and Love they are obeying the command, "Give ye them to eat."

ANNIE M. KNOTT.

"THE BATTLE IS NOT YOURS."

THE daring of David when but a boy he faced the mighty man of the Philistines, would seem presumptuous, illy authorized, were one to judge with respect to their disparity in physical prowess and fighting equipment, but its sufficient warrant is recognized when he is heard to say to the giant boaster: "Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the Lord of hosts . . . for the battle is the Lord's, and he will give you into our hands." Young as he was, uplooking faith and intuition had brought to David a consummate grasp of the truth of being, so that it was not hard but easy for him to rely upon the divine presence and power alone.

This is the lesson for all aspiring souls, and it was abundantly impressed upon the people Israel. In unnumbered experiences during their forty years of wandering, and thereafter, the fact of the inadequacy of their own strength for what they thought their struggle, had been made apparent. With the story of Gideon and the overthrow of the Midianites, in proof that God hath no need of human help; with the word spoken to Jehosaphat when Moab threatened Judah, "Be not afraid . . . for the battle is not your's, but God's," and with his mighty triumph in its fulfilment, even as Hezekiah triumphed over Sennacherib, the Jewish people were perfectly familiar, and yet when Christ Jesus came teaching and demonstrating the present availability of Truth, even the chief priests cried out against him! They were still hoping, as they avowed, for an arm of flesh which should redeem Israel.

This forgetfulness of the divine relation to the human overcoming, this association of the struggle against error with personality, still remains the chief explanation of human weakness and defeat. Practical reliance upon God for the overcoming of the enemies of our physical and spiritual welfare, is yet so much of an anomaly that even the assertion of its possibility is subject to ridicule at the hands of a great many Christian believers. The teaching of the apostle Paul that God is "able to do exceeding abundantly above all that we ask or think" is openly repudiated in this twentieth Christian century. True, Christians no longer expect to be saved by the sword; nevertheless, they still pray and trust that God may make one material force sovereign over another material force, that the divinely-enacted law of a drug may triumph over the divinely-consented-to law of disease, and in some respects this later expression of unfaith in God is more lamentable than the earlier. The belief of being too wise, too well versed in the processes and powers of materiality, to have any need of reliance upon spiritual truth for healing, has proved itself to be disastrous beyond compare.

Christian Science is again repeating and proving true this declaration of the ancient prophets and seers, "The battle is not your's." It is enabling men to see that the stumbling human never helps God save by getting out of His way. It is disclosing the impersonality of all struggle, it is making clear the fact that there is no warfare in the universe save "the mental conflict between the evidence of the spiritual senses and the testimony of the material senses" (Science and Health, p. 288), and it is bringing to the world a truer understanding of Christ Jesus' statement, "This is the work of God, that ye believe on him whom he hath sent." The only real overcoming is that of spiritual realization. The truth we demonstrably know is the one effective agent in the work to which we are called, and this truth is ours to use only; it belongs to God.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The Sunday evening service is omitted during July and August. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

WASHINGTON, D. C.

Construction of the new Christian Science church at the southeast corner of Euclid and Champlain streets, at the intersection with Columbia road, on a lot one hundred and fifty by one hundred and forty-three feet in area, will begin at once. The building will be placed in the center of the ground, the entrance portico being set back about twenty-eight feet for the approach by terrace and steps. The total cost of the edifice will be about one hundred and fifty thousand dollars.

After consultation with the architects it was decided that a classic type of building would be the most suitable to the site and also obtain the dignified and distinctive character desired for the exterior. As designed, the building, with an area of ninety-seven by one hundred and twelve feet, will be of fireproof construction, the materials for the exterior being white stone for the entrance portico and base of the building in combination with gray terra cotta and specially made cream-gray bricks three by twelve inches in size, laid in Flemish bond with wide recessed points. The roof of the building will be covered with Greek pattern unglazed green tiles and the windows will be glazed with cathedral glass in soft tints. A system of double glazing will be used which will exclude to a large extent the sounds of street traffic.

The three main entrance doors will be of bronze, opening into an entrance foyer sixteen by fifty feet, with curved ceiling, and at each end of the foyer will be placed a marble and bronze staircase leading to the gallery levels and to the church rooms in the basement. The basement contains the Sunday school room, library, superintendent's and class rooms, retiring and cloak rooms, and by reason of the slope in the sidewalk there will be an entrance to the basement on the level with Champlain street. The auditorium will have a curved ceiling about forty-five feet high, and galleries will be placed on three sides, the fourth side having the recessed readers' platform and organ loft, with private rooms for the readers and choir members. The side walls and ceilings will be decorated in simple cream-white and gray tints, and all the interior woodwork will be of Mexican mahogany, in combination with marble bases and parquetry oak floor.—*Washington Star.*

COLUMBUS, OHIO.

The Christian Scientists will very soon construct a fine new church on East Broad street. By a deal just closed the Christian Scientists have become possessors of the old Wetmore property on East Broad street, between Ninth and Washington avenues. The property is 149 x 284 feet in dimensions and is very nicely located. The Christian Scientists expect to sell their property on Broad street near Grant avenue and to build a new home, probably next spring.—*Columbus Dispatch.*

THE LECTURES.

MALDEN, MASS.

A lecture on Christian Science was delivered by Willis F. Gross May 28, in Malden Auditorium. Mr. Gross was introduced by the Hon. Harvey L. Boutwell of Malden, who spoke in part as follows:—

A great authority has said, "By their fruits ye shall know them." In temporal matters—in the business world—we judge all matters and things by the results produced. We measure men, to a very large extent at least, by what they produce. This same test may be properly applied to Christian Science. "By their fruits ye shall know" Christian Scientists. I have many friends who are believers in the doctrines and teachings of Christian Science. My observation leads me to believe that the teachings of Christian Science have produced certain common characteristics. I mention a few:

Sincerity of purpose. A real Christian Scientist is a sincere person. He has a sincere desire to make the world better and to be better himself. Christian Scientists possess an abiding faith which seems to be sufficient to enable them to maintain a wonderful poise during all the vicissitudes of life. These people appear to have charity for all—not that charity which consists of mere almsgiving, but a broader charity, a charity for all the frailties of human life. They seem to be willing to forgive those who trespass against them. Christian Scientists are an honest people. A genuine Christian Scientist can be trusted with your pocketbook. They believe in a square deal and a fair deal under any and all circumstances. They are an industrious people. They are an intelligent people. They are a law-abiding people. They seek to know the law, and knowing it, live within the strict rules thereof. They are a peace-loving people and filled with contentment of spirit. They desire to be at peace with all the world. These common characteristics tend to make men and women better husbands and wives, better fathers and mothers, better neighbors and citizens.—*Malden Mirror.*

LONDON, ENGLAND.

Bicknell Young lectured in the Queen's Hall, Langham, place, on Saturday, July 1, for Second Church of Christ, Scientist. He was introduced by Oscar Browning, M.A., Fellow of King's College, Cambridge; university lecturer in history and principal of Cambridge university day training college, and author of many standard historical works. Mr. Browning said in part,—

It is a great privilege for me to be permitted to take part in this meeting, held in support of the most powerful spiritual movement of modern times. To most of those whom I meet Christian Science is merely a form of healing, concerned chiefly with bodily health, enabling us to dispense with doctors and medicine; but to me it is something different. I do not wish to underrate the physical effects produced by that harmony which Christian Science brings about, nor lessen the value of that marvelous mass of evidence which is, every Wednesday evening, brought before the notice of the members of our church all over the world; but to me Christian Science is far more than a road to the attainment of physical health, it is a fundamental basis of morality, a guidance in the conduct of life, a morality founded on love, a course of life based on the omnipotence of Spirit and the nothingness of matter. There is nothing new in this; Christ has told us that all morality is founded on love to God and man, and that on these two commandments hang all the law and the prophets.

Nothing is more beautiful to me than a Christian Science service; it has a unity and solemnity of purpose which induces that powerful spiritual stimulus which is lost in the distraction of rituals. He who has experienced this spirituality rises a new man, invigorated and refreshed for the battle of life. Try this for yourselves, and you will find it to be true.—*Correspondence.*

BROOKLYN, N. Y.

Prof. Hermann S. Hering lectured on Christian Science for Second Church at Avon Beach Hall, Bensonhurst, June 25. He was introduced by Eugene R. Cox, who said:—

In the early history of this country, one of the colonies was reduced by want to the verge of starvation, and in their extremity the colonists appointed a day of fasting and prayer. On the morning of the day designated they found lying at anchor in their harbor a ship laden with provisions and friends. With alacrity they changed the observance of the day from fasting and prayer to thanksgiving and praise, and then and there was inaugurated our Thanksgiving day, the annual recurrence of which recognizes the peace and prosperity of this broad land, and when each shares with another of his abundance.

Many a heart-hungry and soul-weary pilgrim has found in Christian Science peace and prosperity, love and happiness, and in their humble gratitude for these blessings, and in the spirit of thanksgiving, they have asked you to this "feast of reason," by which you cannot fail to be benefited, for you will be told of God, good, and what you hear cannot be lost, because we read in the Bible that the word shall not return void.—*Correspondence.*

WARSAW, IND.

Under the auspices of the Warsaw church, William R. Rathvon of Denver, Col., delivered a lecture on Christian Science on Sunday afternoon [June 25] in the Warsaw Opera House. He was introduced by J. S. Shield of Chicago, who said in part,—

When the Master, Christ Jesus, was upon earth, he did many wonderful things. The Scriptures adopted by all Christian churches as authentic state that he healed the sick, gave sight to the blind, hearing to the deaf, feet to the lame, and that he even raised the dead. Because the method, rule, or law which Jesus used in doing those works was not understood or known to humanity, the works have been classed as miracles, and in modern times there has been much doubt and skepticism expressed as to their verity. This doubt and unbelief has grown to such an extent that the world has fallen into a deep sense of materialism. But when this sense seemed to be darkest, Christian Science came to the world and cried, "Rejoice! rejoice! for the light has come." The law, Principle, and rule by which Jesus demonstrated his mighty works has been discovered and is here, available to every man, woman, and child. The lecture of today will tell you something of this blessed truth, the truth which makes men free.—*Warsaw Times.*

LOS ANGELES, CAL.

Clarence C. Eaton lectured for the local Christian Science churches at Shrine Auditorium, Sunday afternoon, Aug. 6. He was introduced by G. M. Giffen, who said in part,—

We are living in an age of marvelous advancement along all material lines, and in this advancement or in this progress we find that mankind looks first for a basic law or method of procedure, and afterward he develops a rule for

Digitized by Google

the application of this basic law. We find in our material work that difficulty, failure, discord, defects are because of absence of a working law, or ignorance of its application; and in all these things we seek to correct the difficulty by establishing our basic law and then developing the right rule, order, or way. In all things but the activities of man himself have we looked for and developed this law; but mankind have been permitted to exist burdened with fear, worry, sickness, poverty, and other attendant miseries, and have striven to correct these difficulties without having a governing or practical Principle. Indeed we find that man has been ignorant of the existence of a mode or method of self-government, the operation of which would overcome the discords of life, yet it was clearly taught over nineteen hundred years ago by the greatest teacher who ever trod the globe, Christ Jesus, whose wonderful works were the demonstration of the law of life which he understood and proved.

It remained for a spiritually-minded woman of the nineteenth century to discover the Principle and state the rule or mode of procedure that enabled the Master to do the marvelous works he did; and today, through Christian Science, the Principle and rule of the Master is again given to suffering humanity, enabling a man not only to cure his fears, his sickness and sin, but also, through the understanding of its operation, enabling mankind to avoid them.—*Correspondence.*

LA GRANGE, ILL.

A very large audience greeted Bliss Knapp at First Church of Christ, Scientist, Monday evening [May 15], when he delivered a lecture on Christian Science. He was introduced by Avery Coonley, who said in part,—

Recent years have seen a remarkable change in the thought of the world. As a modern playwright expresses it, the world has grown up and no longer wants to be told "Thou shalt" and "Thou shalt not." It is making its own inquiry about right and wrong; about religion and God. This gathering is one of the evidences of that spirit of inquiry.

Suburban News.

HONOLULU, HAWAII.

The Opera House was crowded last evening [June 25] with a distinguished audience, every member of which paid the greatest attention to the lecture on Christian Science as delivered by William D. McCrackan, M.A., who has come direct from Boston. His address of last evening, he stated, was the first one he has delivered since he left that city. The Hon. C. M. Le Blond of Hilo made a pleasant introductory talk and then introduced Mr. McCrackan. The latter has a clear and very distinct enunciation and his words could be heard in every part of the crowded house, every seat from top to bottom being filled.

Pacific Commercial Advertiser.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Decatur, Mich.—Frank H. Leonard, Town Hall, Sept. 8.

Minneapolis, Minn. (Joint lecture, five churches).—Judge Septimus J. Hanna, Auditorium, Sept. 5.

Ocean Park, Cal.—William R. Rathvon, Masonic Temple, Sept. 8 and 9.

San Francisco, Cal. (Second Church).—Francis J. Fluno, M.D., Valencia Theater, Valencia street, between 13th and 14th streets, 3 p.m., Sept. 3.

TESTIMONIES OF HEALING.

It is with the deepest joy, and with gratitude to God, that I feel called to relate my first experience in Christian Science. It was in January, 1907, that my son, aged thirteen years, was healed by omnipotent, ever-present Love of what *materia medica* called an incurable heart disease and anemia in its worst form. His attendance at school had been broken for months, on account of his ill health. In the second week of October, 1906, he had been sent home from school ill. I was not then a Christian Scientist, and had no knowledge whatever of its teaching, consequently a doctor was called in, the best and most honored for medical skill in a wide district, and after a long and careful examination the above was his verdict. In addition, I was informed that my son would be subject to these breakdowns all his life; that he must not cycle to school any more, nor join in boys' sports save in a very mild way.

The outlook was rendered the more gloomy through my having lost my husband very suddenly five years before and chiefly from the same supposed cause. My husband's brother and father were afflicted in the same way and had been an anxiety to the mother and sisters for many years. I had four children, and this was the eldest. So heavy was my heart that only a widowed mother in like circumstances could know how I felt. For comfort our rector said, "It is a very heavy cross you have to bear," and when I turned to my late husband's relatives they mournfully informed me that it was a hereditary affliction. My boy had then been in the hands of the doctor three months, with no sign of improvement. During the last few weeks I had been hungrily absorbing "Science and Health with Key to the Scriptures" by Mrs. Eddy, brought to my notice by a very dear friend in Scotland. I read the book night after night, far into the morning hours; and gradually into my consciousness came the joy of hope through the dawning knowledge of the ever-present Christ-power to heal.

In the middle of January, 1907, on a never-to-be-forgotten night, as I sat in thought, the last remnant of the veil of fear and doubt was lifted, and I felt "all glorious within," filled with the radiance of Truth. I saw that God's promises and the words of Christ Jesus were not intended for that age and those peoples only, but for all who grasp the pure sense of the Master's teaching in all time. So now and here God could and was ready to heal my son! From that night he mended so rapidly that by the next week he had started in a new school, cycling ten miles daily instead of eight as before. He still attends this school, and has cycled the ten miles daily during the whole of these past three years. He has also entered heartily into all the school sports, is an enthusiastic cricketer, and has a hockey team of his own. Last February he joined the school paper-chasing game, running fifteen miles, and was the first to return to the starting-place. He then changed his clothes and cycled back to bring in one who had broken down. He experienced no ill effect whatever from his exertions. In July, 1909, before a certain bond could be signed, admitting him to student teachership, he had to conform to the law and undergo a rigorous medical examination at a scholastic office, as to fitness; and though the authorities had the facts of his former illness before them in writing, yet he passed as thoroughly healthy and fit.

Six months after the above healing, while on a visit to Edinburgh, as I was carried along in the car to the Christian Science hall, an awful doubt assailed me momentarily respecting my son's healing, and I saw as in a flash that all the joy and peace, all the spiritual knowledge I had grasped, were in jeopardy; my mind was chaos, darkness seemed to surround me, when suddenly a little book I carried, "No and Yes" by Mrs. Eddy, fell open in my lap, and my eyes lighted on the passage in which she quotes Jesus' words, as recorded by Matthew: "Ye do err, not

Digitized by Google

knowing the Scriptures, nor the power of God" (p. 37). Here was my answer from heaven, for all time. With a great gladness I felt borne on, my feet seeming not to touch the earth. That night I gave this testimony in the Christian Science hall, inspired by a power that was not my own. Filled with an indescribable joy and reverence, I seemed to stand aside and listen.

My heartfelt thanks are due to Mrs. Eddy, whose pure consciousness has shown us the way to the Father, "with signs following," that here and now we may feel and know the power and the glory of divine Love to heal and save. "Thine is the kingdom, and the power, and the glory, for ever."

MRS. MADELINE MACKINTOSH, Kirkby Mallory, Hinckley, Leicestershire, England.

With a deep feeling of gratitude I wish to testify to the truth of my demonstration as narrated by my mother, Mrs. M. Mackintosh. I fully corroborate all that my mother has said, and hope that with a still fuller realization of the truth I may achieve still wider and surer dominion over the delusions of mortal mind, and ever be confident in the omnipotence of divine Love.

JOHN C. T. MACKINTOSH, Barrow-on-Sowe, Loughborough, England.

Over two years ago I was called upon to read from Science and Health to one who was under Christian Science treatment. I knew absolutely nothing about its teaching, and commenced to read it just as I would read any other book; only I was not expecting to get anything out of it myself, not even entertainment. I was, however, healed of eye trouble of six years' standing, and also of goitre, without any treatment, simply by reading the text-book of Christian Science to another. I am very grateful for this healing, and for the many other physical blessings which I have had in the last year and a half; but all this seems insignificant compared with the spiritual uplifting, the perfect peace and happiness which has come into my life as a result of my study of Christian Science. I am trying so to live that I may prove, in a measure at least, my gratitude to God, and to Mrs. Eddy for Christian Science. I have not gone into detail, but will be glad to answer the questions of any one who desires to know more about my healing.

MRS. MARGARET L. WARD, Lincoln, Neb.

[Translated from the German.]

It was in the spring of 1908 that we first heard of Christian Science. My son-in-law was the first to ask for treatment, on account of a throat trouble and defective eyesight, and my husband and myself followed later on. My husband had been suffering for thirty years with weak eyes, and on that account was exempted from military service. The sight in his right eye was almost gone, and professors whom we consulted, as well as specialists, gave us no hope of recovery; so that we looked forward to a gloomy future. After the eighth treatment in Christian Science his eyesight returned, whereas the physician had told us that the trouble was incurable. He had stated that the sight did not extend beyond about three inches; but my husband can now see a distance of thirty-five yards. I myself had worn a truss for twenty-five years on account of a severe trouble, and had been under the care of several well-known physicians, which necessitated heavy expense. I do not believe I enjoyed health for three months in succession during thirty years; but after the third visit to the Christian Science practitioner I was freed of the terrible suffering, so that I laid off the truss, and have not worn it since. I have also been healed of a nervous trouble in Christian Science.

We thank God with all our hearts for His ever-present help, and we are equally grateful for the discovery of Christian Science and for the fact that through the application of its teachings the healing work of Christ Jesus is again made possible. We are grateful to our revered Leader, Mrs. Eddy, for the understanding of the power of Truth which we have derived through the study of the Bible and of *Der Herold der Christian Science.*

FRAU AUGUSTE RICHTER, Glogau, Germany.

Some time ago a passage in a testimony in the *Sentinel* brought home to me more clearly than ever before my great debt to our beloved Leader, and seemed to explain how it was that Truth had been revealed to me in the wonderful way in which it had been some years ago. I am therefore prompted to express my gratitude through the *Sentinel*, in the hope that it may help another. It is now over six years since I found myself in a most grievous condition, having lost under most trying and difficult circumstances all that went to make up my happiness, these circumstances making my daily life unbearable, yet I was unable to free myself mentally or physically; that is to say, no way was open for me to change my environment. Worst of all, I knew of no power that could help me; for I could not believe that God willed suffering.

After about eighteen months of this experience I went to pay a short visit to a very dear friend, and on being left alone in the drawing-room on my arrival, my eyes fell on a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, a book which I had never before seen or even heard of. I opened it, and my attention was at once riveted by two or three statements respecting Truth. In a flash it was perfectly clear to me that I had found what I had always been looking for—the knowledge of what Truth is, and in that moment I was wholly satisfied. One statement which has remained with me always came to me then with such great light that I felt stunned, as did Saul on the road to Damascus, for it told me that the "one way to heaven, harmony," was "to know no other reality . . . than good" (p. 242), whereas I had been believing only in evil, allowing evil thoughts to control me. A short time after this I returned to my home, and for six months Science and Health was my constant companion. At the end of that time I was able to get away for a long stay, and the following year found myself perfectly free in every sense of the word. Since that time very great blessings have come into my life; and above all, "the peace of God, which passeth all understanding," the knowledge that with every temptation the way of escape is provided.

In no way can I better express my gratitude to God, whose infinite love has made it possible for us to know the truth which makes free, also to our dear Leader for her faithfulness to her high trust, than by striving more and more for that Mind "which was also in Christ Jesus," that I may be enabled to give a cup of cold water to those in need.

ROSE A. BAINBRIDGE, London, England.

I had a long illness, was in bed, prostrated, for fifteen months, was in a hospital five times, spent hundreds of dollars, and was left a physical wreck, a cripple, scarcely able to walk, and still a constant sufferer. *Materia medica* said it could do nothing more. I turned to Christian Science as a last resort, and at first was so filled with material beliefs that it was difficult to gain an understanding of spiritual realities, so I went back to *materia medica.* I continued, however, to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, also my study of the Lesson-Sermon. Then I went to another practitioner, receiving very little physical help; after four months' treatment, I worked alone for four months. I next went to one who said, "We will say nothing about time: we will work as long as it is necessary." At first there was very little change, and then one after the other the ailments began to drop away. I had worn a special "heel" in one shoe, and I took

Digitized by Google

out two inches at one time. I had treatment just one year, and the physical help was as nothing compared to the spiritual understanding that came to me. I seemed to have been completely changed; some of the family say I am like a different person. Words cannot express my gratitude for the "contented mind," and with my study of Christian Science I find I have a continual feast.

I have had class instruction and I am very grateful for that opportunity. Our periodicals have been of great help to me in my passage from sense to Soul. So many times I have found just the help I seemed to need, in either the *Journal*, *Sentinel*, or *Monitor*. And now I am trying to show my appreciation of all these blessings in loving obedience and in telling to others, who come to hear, this blessed truth that saves us from sin as well as from sickness.

MRS. BELLE NORTHGRAVE, Fennville, Mich.

In writing this testimonial of gratitude for healing received through the ministrations of Christian Science, it is only possible for me to express a small part of the joy and blessings which have come to me in the last few years as a result of the physical and mental healing. From childhood I had suffered from an eruption on my face, and had doctored with many physicians for a number of years. I had also tried various medicines and home remedies, but without good results. I was healed of this disease through reading "Science and Health with Key to the Scriptures," the Christian Science text-book, by Mrs. Eddy. With the aid of a kind practitioner I was healed of an acute attack of kidney trouble in a very short time. I have also been healed of nervous collapse, severe headaches, and some minor ills.

Early in my investigation of Christian Science this passage of Scripture would persistently follow and trouble me, "Come out from among them, and be ye separate;" and it was only through patient study of the Bible and Science and Health, and an intense yearning to understand the truth contained in the above statement, that its meaning dawned upon me. I saw that our greatest need is to think rightly, thereby giving up the "belief of life in matter" (Science and Health, p. 74), and all that it includes. With this understanding came a gradual unfolding of the truth in my consciousness, making it possible to meet and at least partially destroy evil suggestions, malice, envy, jealousy, etc., on the ground of their illegitimacy. I saw that they had no right to place or power in any one's thought.

I am thankful for the church privileges I enjoy and grateful to the readers and officers. I am also grateful for our publications, and for the dear faithful *Sentinel* with its weekly feast of good cheer. Above all, I am grateful to Mrs. Eddy for Christian Science, not only because it has brought me out of darkness into light, but for what it is doing for countless others in the same way.

FRANCES A. HAUENSTEIN, Chicago, Ill.

In February, 1909, I was engaged in blasting trees from Boulder river, and in handling the powder became what is known as "blasted," that is, blind, and suffered from the worst headaches I had ever known. I asked for help from my mother, who is a Christian Scientist, about eleven o'clock, and in forty-five minutes I was asleep and have never had a recurrence of this trouble, although I have since been engaged in handling powder.—W. A. KIDNEY, Dillon, Mont.

In looking over the *Sentinel*, I see many testimonies from the northern states and only a few from the South, but I want to let others know that Christian Science is doing good here too. Until September, 1909, I had never felt enough interest in this religion even to want to know what it taught. It did not concern me, I thought, so cared nothing about it; but I am thankful now that I was not prejudiced against it, for after having been bedridden for more than three months, I was willing to investigate it, especially after having received a message from a friend about what it had done for different ones of her family and could do for me.

In the mean time my medical doctors said I would have to be taken to a sanitarium for two operations, so all arrangements were made for this. All the last week I was in bed I was reading the *Sentinel* and praying God to direct me aright, believing that He would guide me in the way I should go. For some days I wavered between the two, but finally, when my husband was helping to carry me out to go to the train, an aunt who was with me said, "I don't want you to have an operation, but I certainly don't want you to take up that Christian Science." I replied, "Well, I am going to try it, and if God fails to heal me, the sanitarium is near by, and I can still go there."

I want to say, however, that God did not disappoint me, and I fully realized that if we "draw nigh to God," He will draw nigh to us, and that it is God who heals all our diseases. When I first got a glimpse of the real meaning of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I wanted to give a copy to every one I knew, little dreaming that a book which did so much for me and for thousands of others, a book that made the Bible so much dearer because it made it understandable, would be refused by some, no matter what their religious belief. I find that those who seem to need it worst are often the most antagonistic, and the best way is to wait until they are ready for it.

While I have been helped in so many ways physically, the help received spiritually is worth far more, and this I know I never could have gotten except through "suffering or Science" (Science and Health, p. 296). While I know that there are good people in all the churches, still I see why it is they do not heal the sick as Jesus said all who believed in his teaching could do. To do this takes a higher faith and a better understanding than most people possess. I quickly saw how absurd it was to think that God expected people at one time to go to Him for healing, then in another age put material means here for them to use, when we are all taught that He is not changeable, but is "the same yesterday, and to day, and for ever." I have two friends who are medical doctors, and both of them said they knew that Christian Scientists followed the teachings of Jesus more closely than did any other class of people, because of the proof they give in the healing of diseases. These men are conscientious, and they know that no drug is equal to the divine Mind in healing.

Before I knew anything of Mrs. Eddy's teachings I thought her followers mentioned her name entirely too much, but after I understood even a little of what she has given to the world, I could see why all Christian Scientists are so grateful for this message of Truth which she has given.—MRS. A. S. MURPHY, Aliceville, Ala.

In Christian Science we learn that the truth is of God; hence its healing power. The spiritual and mental uplifting, the assurance of knowing that God does answer prayer, brings us nearer to Him than we ever were before, and we can realize the truth of Jesus' words, "Ye shall know the truth, and the truth shall make you free." Since coming into Christian Science I find myself free from many ills to which I was in bondage, and I am most grateful to Mrs. Eddy for that wonderful book Science and Health, which is indeed a "Key to the Scriptures."

About six years ago our little boy had a bad attack of mumps. My wife gave him treatment in Christian Science, and I proceeded to protect myself, for the thing we greatly fear generally comes upon us, and I had great fear of this disease. Next morning the swelling on the boy's face was not noticeable, and though he remarked that it felt queer, the discomfort was all gone by breakfast time.

Digitized by Google

In a few days I found that I had not eliminated all my own fear, for one morning I woke about four o'clock and found evidence of the disease. I did my mental work as well as I knew how, got up, ate breakfast, said nothing to the family, but on my way to work I stopped in a Scientist's office and talked with him a few minutes. He assured me there is but one creator and that His creation is perfect; he counseled me to do my part aright, and God would do the rest. By five o'clock that evening my trouble was over.

I cannot express my gratitude for the good Christian Science has done and is doing for me every day. Christian Science is a great help in every direction. As I am a contractor, I have all kinds of men in my employ, and I find Christian Science the best thing to use in settling any differences which may come up. I have learned that right thinking, based upon a truer knowledge of God, silences discord and brings harmony; that to know God better puts one in better condition to meet the world and to deal with the different phases of human experience. In my seven years' experience in this business, Christian Science has been a wonderful help; it is a religion for men in every line of business. We learn that all honest work is our Father's business, and the acquaintance with God which we gain in Science fits us to carry it on harmoniously and successfully.

To live Christian Science is a protection against all evil, and we can realize this here and now, for the closer we follow its teachings the better results we have. I am truly grateful for the knowledge I have of this truth.

B. M. DAWSON, Boulder, Col.

I am very thankful to testify to the blessings I have received in Christian Science. I did not come to it for any physical healing, although I was healed of various ailments, but for a better understanding of God; and it surely is sweet to know that God is Love. I greatly enjoy the daily study of the Lesson-Sermon, and know that if the truths taught in it are brought into my life I shall be able to help many weary mortals from darkness to light, and thereby glorify our Father in heaven. Recently I had a demonstration which helped me to understand God and His universe better than ever before. I am very thankful that in Christian Science is found the peace which passeth all understanding.—ADA DINKMEYER, Columbia City, Ind.

I wish to express my gratitude for the healing of my eyes. For more than five years I was compelled to wear glasses constantly, putting them on the first thing in the morning and taking them off the last thing at night. On Wednesday night before Thanksgiving, 1906, I attended the testimonial meeting of First Church of Christ, Scientist, Baltimore, and after the meeting, which was very helpful, my cousin advised me to take treatment. My cousin brought a practitioner to me, and after a short talk I decided to take treatment. I took my glasses off then and there, and have not used them since. At first I suffered some inconvenience, but after several months' treatment my eyes were normal.

To say I am grateful is not sufficient; I cannot express my gratitude in words, but am trying to do so in daily deeds and thoughts. I am grateful to God that I ever heard of this great truth, and also to Mrs. Eddy for all she has done for suffering humanity.

LOUIS H. SCHNEPFE, Brooklyn, Md.

I began the study of Christian Science about five years ago, and I was healed in a few weeks of numerous complaints, simply through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and attending the Christian Science services in this town. Since this healing I have had innumerable proofs of the power of Truth, and perhaps an account of one of them might be helpful to others.

One evening, about three years ago, in going down a step rather hurriedly I slipped and injured my ankle severely. The pain was so great that for the moment I lost all control over myself and fell heavily forward, knocking my arm and wrist against some obstruction. I soon saw that all this was due to a feeling of impatience because I had been called away from doing something in which I was interested, and I went more hurriedly than was necessary or I should have stepped down more carefully. The whole thing was very sudden and the pain acute, but I felt so conscious of the presence and power of God that I had no fear, and in a few seconds I was able to get up, although according to the physical senses it seemed impossible to put my foot to the ground. We are told in Science and Health that "the physical affirmation of disease should always be met with the mental negation" (p. 392), so I instantly met this sense of unbearable pain with the scientific statement of being. With this thought held firmly I managed to get back to the drawing-room, where my mother and a friend were waiting for me, and we went on with what we had been doing before.

For about ten minutes the pain was so severe that I had to strive very hard to overcome the inclination to faint; but as I continued to work mentally it gradually lessened, and in about half an hour, when it was time to retire, I was able to stand up and attend to several little duties that called for my attention. I must have gone up and down stairs at least four times before I was able to go to my own room, and when I got there, alone for the first time, I found that there was nothing for me to do, as all the pain had entirely disappeared from my ankle and wrist and arm; I did not feel the least bit shaken or upset, though it was less than an hour since I had had the fall. Later, when I took off my stocking, I found there was no evidence of the accident, the foot being perfectly normal.

An overwhelming sense of gratitude came to me as I realized how different the whole thing would have been before I heard of Christian Science. The fall in itself would have been quite sufficient to have made me feel ill for days. My ankle had always been considered weak, and in similar experiences I had suffered for days and sometimes for weeks, but never before had I experienced such agony as I had endured for ten minutes that night. I am quite sure that had it not been for the understanding of God as taught in Christian Science it would have been found that I had very seriously injured my foot. This is only one of innumerable proofs that I have had of the healing power of divine Love, and one's heart goes out in gratitude to our beloved Leader, who through her self-sacrificing love for humanity was able to stand firm and to teach us this beautiful truth which helps us in all things and at all times.

CATHERINE CRABBE, Brighton, Sussex, England.

With a very grateful heart I give the following testimony. For five years I was a sufferer from gall-stones and gravel of the kidneys, and was under medical treatment during that time. I had also been to the hospital and had two operations, but without permanent relief. The attacks would continue to manifest themselves periodically, and at such times my physical suffering would be most intense. In August, 1907, I was stricken with one of these attacks, and three doctors were called in consultation, who passed the death sentence upon me, saying nothing could be done for me, as I could not stand another operation. As I was suffering terribly all the time, the doctors gave me hypodermic injections which eased the pain somewhat, so that I could realize what was going on.

At this point I sent for a Christian Science practitioner

Digitized by Google

and requested her to give me treatment; which she did. In a few minutes, during the first treatment, the vomiting was stopped, and the pain and suffering were overcome entirely. That was Saturday night, and on Monday morning I got up and have never been in bed on account of sickness since. I did my washing, in connection with my other household work, that same week, and have been doing it regularly ever since. I feel that I owe a very deep debt of gratitude to God, and also to our beloved Leader, Mrs. Eddy, for the many physical benefits and for the spiritual uplifting which has come to me through the study of the Holy Bible, by the aid of "Science and Health with Key to the Scriptures." These two books are now my daily companions.—MRS. SUSAN I. MCKINEY, Alliance, Neb.

[Translated from the German.]

Nine years ago I became afflicted with a severe eye trouble as a result of overexertion. The physician gave me but little hope of recovery, and it became a question as to whether I would be able to continue my work as a music teacher. Cares were impending, and that not only so far as I was concerned.

I had heard of Christian Science several years before, and like many others had been astonished at its claims and derided it. However, I gave the subject closer attention as time went on, and through a friend became acquainted with many facts relative to this wonderful movement. In an hour of extreme suffering, while confined to a dark room for several weeks, I began to understand the meaning of the words: "Lift up your eyes." Desperate though I was, I soon experienced a wonderful sense of peace through the hope held out to me, and at length through the trust that God was able and willing to help, I applied to a Christian Science practitioner for treatment, with the result that my eyes ceased to pain me, and were healed, so that I was able to lay aside my glasses. I can now see better with the naked eye than I could formerly with strong glasses. Many other ills, including a stomach trouble and hoarseness, disappeared along with the chief trouble or were healed with a few treatments.

Since then I have been a well and buoyant woman, thankful for the comfort and help derived through the right understanding of God, and grateful to the noble woman who has taught us that He is our helper today and at all times.—HELENE GANZEL, Breslau, Germany.

When one's healing in Christian Science is slow, he need not be discouraged. It is not that Truth cannot heal, it is perhaps because he is consciously or unconsciously denying the truth which sets free. The majority of those who come to Science do so with a selfish motive—it is to get something—and if the healing does not manifest itself according to their planning, a doubt creeps in, and even though they may not voice this doubt, it hinders the work. When I came to Christian Science it was for the physical healing, and with a great deal of self-righteousness I would say to the various practitioners whom I visited that I had my own religion (having been a church-member for over thirty years), and that I just wanted to be healed. It is needless to say that I did not get the physical healing, but I did get a desire to know whether this was the truth, and after several months of close application to the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I learned that Christian Science is a healing religion. Then came the outward manifestation,—I was healed of a skin disease which had caused me great suffering for several years.

With a deep sense of gratitude to God, and appreciation of Mrs. Eddy, I wish to say that I rejoice that my healing was slow, because it gave me an opportunity to begin the working out of my salvation.

MRS. EMMA A. HAWKINS, Seattle, Wash.

FROM OUR EXCHANGES.

[Charles Samuel Tator in *New York Observer.*]

In all walks of life this is an age of chaos, an age crying aloud for leadership. It is the church's great opportunity. History shall record this period as that of the awakening of the world consciousness, and the bursting into full flower of the spirit of universal brotherhood, and great will be the name of the church if it is found in the van; but remorse will be its lot if it be found wanting in leadership, if it has closed its eyes to the vision and turned its back on the opportunity. God's work will go forward, as it went forward over the religious institutions of the ages past. The church as a religious institution must move forward with God's advancing purpose, or His hosts will march forward, marking their progress by the institutions left behind—we have history's attest to that fact. A religious institution may put the body of Jesus in a tomb, but it cannot hinder the progress of the Christ. If ministers will now have the courage to lead the people to the heights where their social consciousness may be awakened, where the cries and the prayers of the people mingle in the air as one clear call for leadership, the church will advance—a Gideon's band perhaps—but a force to whom the victory is already assured. There were churches in Christ's day, but one voice only that the common people heard gladly.

[Rev. T. Rhonda Williams in *Christian Commonwealth.*]

Religion today is suffering enormously because there are so many people who hold by opinions and theories which they do not faithfully work at in life; they will not discover their inadequacy because they are not sufficiently in earnest about them. I do not mean that they are consciously insincere, but that they are not in earnest in the sense that demands thoroughness in the application of theory to life. They hold their creeds, but their creeds do not hold them, and men who hold their creeds and are not held by them will probably continue to hold them all the days of their life. They only become earnest about them when some one attacks them, but the earnestness that is wanted is not the earnestness that defends the creed against attack, but the earnestness that puts the creed into life. There are thousands who, if they would only carry their theories and opinions to the real test that comes through living, would discover their inadequacy and would then become the leaders of some new expression of the old religious spirit. Today, when so much is said about the decline of the churches, what Christians need to do is to press in upon the center, to rediscover the very soul of religion, to possess it and be possessed by it, and then to find how far the present institutions and forms are adequate to express it.

[*Christian Register.*]

A man who does right because it is right, and not because his eternal welfare depends on following the edicts of a creed, this man will have a far different horizon than the zealot of the present day. He will behold the beauty of holiness. He will see the majesty of duty done. He will feel the sympathy which helps another as a thrill of pure joy. He will love because it is part of his essential nature to love. He will do good because it is the thing which makes the world habitable and which lifts man from the depths,—a boon to him who acts and to him who receives. This is far and away different from the narrow view which makes man believe that works are as nothing without faith. Character and destiny, then, being indissoluble, the man will look out on life with the eye of one who wishes to attain. He will be an immortal being according to the law, and he will merit the future which the law ordains. He will not be looking for some short cut to heaven. . . . He will be able to help himself and to make his own future as it is ordained he may make it and as he shall make it sometime and somewhere by the divine will.

[*Watchman.*]

Those who received the word of Jeremiah as the word of God were the serious, prayerful souls. They were willing to know the truth. They had hearts that were open to truth. They recognized in the prophet Jeremiah a man of piety, of prayer, of insight, of power, and they felt the force of his words. It is only those of godly hearts who can discern a prophet or receive the message of one of God's preachers. Our Lord said, "Every one that is of the truth heareth my voice." The pure in heart see God and also perceive His word on the lips of men. It comes to them with an evidence that they recognize. They feel its power. It finds them in conscience and heart. They feel the real peril of souls that are doing contrary to the holy and perfect will of God. They are not swayed by passion, nor blinded by bigoted superstition, nor biased by political, social, or ecclesiastical considerations, but are clear-eyed and clean-hearted to welcome the message of God.

[Ame Vennema, D.D., in *Christian Intelligencer.*]

The best reproduction of the life of Christ is not obtained when a man by his own unaided purpose and effort tries to imitate him. No matter how hard he tries, his conformity to Christ will of necessity be outward and artificial. To become like Christ we must have his spirit, we must possess his life. Then our conformity to him will proceed from within, outward. It will be natural, a growth. Then we will be like him not in a few particulars that may not be essential to character, that are mere accessories, but in the broad principles that underlie and outline Christian character. To be true Christ followers we need to be reconstructed, renewed, born again, inspired by his spirit.

[*British Congregationalist.*]

What a difference there is between a man mastering fear and sorrow and hardship because he wants to preserve his soul, and a man mastering hardship and fear and sorrow because he wants to serve others. In the one case what matters and what remains is the victory—a selfish thing. In the other, what matters and what remains is the holy purpose—an unselfish thing. Paul does not grapple with tribulation and anguish to save his soul; he has already lost his soul—to Christ. He grapples with them to fulfil his ministry and the result is more than conquest—it is the furtherance of the gospel. "Every way Christ is preached, and I therein rejoice and will rejoice."

[President Taft at Christian Endeavor Convention, Atlantic City.]

While this country has no state church and encourages the utmost freedom of religious belief and practice, it is a fundamental error to suppose that those who are responsible in any degree for the public welfare may not in every proper way encourage all instrumentalities for the betterment of the individual man, all moral and religious movements for his higher spiritual welfare without regard to the denominational jurisdiction in which such movements take their source or exercise their influence. They necessarily tend to a leaven of the whole community and to the righteousness that exalteth a nation.

[*Advance.*]

Social service, so much emphasized at present, has its important claims. But social service must not displace spiritual service. It is no proper substitute for it, for the simple reason that it does not reach the source of the evil. Men may have more wages and fewer hours and still be as bad as ever. The streets and alleys may be cleaned, but that does not cleanse the heart. Families may be put in better tenements, but fashionable flats do not cure the social evil. A poor woman may be working too hard at the washtub, but she may not be in half as much danger as the woman who has nothing to do.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society has secured, and now has ready for distribution, a fine photogravure of Mary Baker Eddy made by Littig & Co. of New York from a colored portrait painted by Miss Alice C. Barbour, which was based on a photograph taken by Mr. Bowers of Concord, N. H., in November, 1891, and with a rearrangement of her hair that was very pleasing to our Leader.

This admirable portraiture of Mrs. Eddy, printed in three sizes on India paper and mounted on heavy plate paper ready for framing is for sale at the prices shown on opposite page.

The field will undoubtedly be gratified to learn that a book (132 pages with index) containing the "Excerpts from Editorial Comments" which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding. For prices see opposite page.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are on sale by the Society. For description and price see opposite page.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON.
